Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On December 2nd applications at £99 15s. 6d. per cent. for bills to be paid for on any day except Monday of the following week were accepted as to about 18 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Monday at £99 15s. 7d. were allotted in full. £35.0 millions of Treasury bills are being offered on December 9th.

SHORTER COMMENTS

(Continued from page 577.)

Scottish Motor Traction.—Net profit for year to October 31, 1938, £292,430, against £198,858. Ordinary dividend 10 per cent. tax free against 10 per cent. less tax. Written off goodwill £7,582 (£8,950). To contingency reserve £110,000 (£30,000). To general reserve £110,000 (£40,000). Carry forward reduced from £76,081 to £7,148. A free share bonus of one ordinary £1 share for every four held is to be distributed.

British Industrial Plastics.—Net profits year to September 30, 1938, £22,185 (against £31,098) after £9,870 research expenditure, £11,331 depreciation, £752 capital increase expenses, £3,141 legal expenses; £10,000 has been set aside for income tax and N.D.C. Ordinary dividend reduced from 8 to 6 per cent. Carry forward raised from £4,173 to £5,698.

Sulphide Corporation.—Net profits year to June 30, 1938, before tax were £34,874, after £20,945 for amortisation and £53,815 maintenance. Net profit for preceding year £161,177. Preference share-

holders receive 5 per cent. absorbing £30,000. For preceding year 10 per cent. was paid on both preference and ordinary shares. Carry forward to accumulated profits account £4,874.

Ronco, Ltd.—Net profit for year to September 30, 1938, £52,108 against £73,751 for preceding 15 months. Ordinary dividends resumed with a 10 per cent. payment. Carry forward raised from £12,757 to £23,260.

British Overseas Bank, Ltd.—Net profit year to October 31, 1938, £29,823, against £52,454. To contingencies, £20,000 (£50,000). Carry forward increased by £9,823 to £81,424. Deposits £2,464,730 against £3,840,339.

Glass Houghton and Castleford Collieries.—Profits for year to September 30, 1938, fell from £123,193 to £67,612. To depreciation £20,000 (same). Ordinary dividend reduced from 12½ to 4 per cent. To reserve nil (£20,000). Carry forward raised from £4,518 to £8,272.

Raleigh Cycle Holdings, Ltd.—Net profit year to November 30, 1938, £224,383,

against £278,646. Ordinary dividend reduced from 25 to 20 per cent. Carry forward reduced from £3,624 to £3,257.

J. Brockhouse and Company.—Net balance, before tax, year to September 30, 1938, £97,287 against £137,891. Ordinary dividend reduced from 25 to 15 per cent. The 7½ per cent. interim for 1936-37 was on £52,000 less capital. Carry forward reduced from £44,454 to £22,278.

Swan Hunter and Wigham Richardson.—This company has obtained a contract (valued at £1,800,000) for constructing 11 vessels for Turkish merchant service totalling 14,000 tons.

Woolworth (F. W.) and Company.—At a meeting held December 15th it was decided to convert preference and ordinary shares into stock.

D. Smith and Sons (Meeting Adjourned).—Profit year to August 31, 1938, £7,378 against £1,496. To depreciation £3,637 (£3,959). Ordinary dividend nil against 15 per cent. Carry forward £2,849. The meeting held on December 6th was adjourned until January 17, 1939.

Transport Reform

THE proposals of the railway companies for the removal of the present legal restrictions on their freedom of charging have now been before the public for three weeks. They are being supported by a campaign of propaganda which must be without equal in skill or intensity, at least as far as private interests are concerned, and it will not be the fault of the companies' publicity departments if the man in the street and the man in the railway carriage are not fully informed of the case in favour of the "square deal." Formal progress with the proposals has been slower. The representatives of the companies have had a further meeting with the Minister of Transport, and their request has been remitted to the Transport Advisory Council for an opinion. In view of the composition of this Council, which has been in session this week, it would perhaps be over-optimistic to expect from it any precise and unequivocal decisions. The railway representatives on the Council will ensure that it does not render an unanimous adverse verdict. But the representatives of road transport, the canals, coastwise shipping, traders and transport labour will be chary of endorsing the railways' case without at least some modifications or provisos. The responsibility for a decision will come back to the Government, pre-eminently to the Minister of Transport; and the set of the wind in these quarters can be gauged from Dr Burgin's statement that the railways had made out a *prima facie* case.

The strength of the railways' arguments on the score of

abstract justice has been generally conceded—explicitly in most disinterested comment, by default in the statements of the road transport industry. But public opinion, especially the opinion of the trading community, has shown itself, as was only to be expected, less interested in abstract justice than in attempting to assess the probable practical consequences that would flow from conceding the railways' demand. The companies themselves, however, while exploiting to the full their strong moral case, have been remarkably coy about revealing what their detailed plans are. At the first meeting the Minister requested the companies to present a second statement amplifying their proposals for action. This second memorandum, however, carried the matter very little further. It gave certain negative assurances. The railways declared that they would not abuse the freedom for which they were asking. "The railways have no scheme in mind," the memorandum declared, "for embarking on an increase of rates, either in general or as affecting any particular industry; equally they do not contemplate making wholesale reductions and plunging into a rate war with other forms of transport." But when the Minister asked to be told some particular features in the present system of regulation which were felt as exceptionally galling the answer was that "the railways regret that they cannot follow the Minister into this field."

These declarations have unquestionably introduced an air of mystification into the whole affair. The public, informed

that the railways intend neither, in general, to raise their rates for those classes of traffic in which their competitive position is strongest nor to cut rates where their position is weak, is naturally left wondering what they *do* propose to do. For if rates are to be left substantially alone, the only way in which the railways can benefit will be by securing a larger proportion of the traffic to be carried at those rates. And how will greater freedom to compete help them to do that if they are not going to use their freedom in the most effective ways? The result is to give the onlooker a feeling, not exactly of suspicion towards the railways, but of being entirely without a guide to the probable consequences of acceding to their request. It is rather a blank cheque that Parliament is being asked to sign, without even a clear indication of whether it is to be the road transport industry or the transport-using public that will have to supply the funds from which the railways are so confident that they can draw benefit. The railways obviously have plans for the exploitation of the liberty they demand. It is only legitimate to ask that they should reveal them.

Since the public is, in effect, invited to join in a guessing competition (with the answer sealed away in four envelopes at Euston, King's Cross, Waterloo and Paddington) we may chance the surmise that the most likely immediate effect of the grant of freedom from restrictions would be the negotiation by the railways, using their enhanced bargaining power, of a far-reaching agreement on demarcation of function with a group of the larger road haulage companies. If a recalcitrant minority of small hauliers were left, it is not impossible that the railways and the large operators would combine either to buy out or to drive out this obstacle to co-ordination, being greatly assisted in so doing by the limitations imposed by the licensing system on entry into the industry. The monopoly of public transport would be re-established with a dual instead of a single head.

This would doubtless be the easiest solution of the transport problem. It would, if the calculations proved to be correct, assume a comfortable existence to the railways and to many road transport operators. And it would involve Parliament and Government in no painful efforts to think out the co-ordination of transport. But it is only reasonable to suppose that the first efforts of the transport industry thus "co-ordinated" would be to attempt to cover the charges on the whole of the capital of the two branches of the industry combined. The community might find itself

called upon to pay for its transport not only the prime costs of moving goods but enough to cover the full "standard revenue" of the railways and a substantial part of the cost of the roads. If so, the net economic effect of the development of road transport would be to saddle the community with the cost of maintaining a very large excess of carrying capacity in return for the doubtful privilege of having free choice between two alternative methods of carrying goods. And it may be added at once that the Labour Party's alternative of setting up a National Transport Board to take over both branches of the industry as they stand would only make matters worse. For, if past precedent and present proposals were followed, the effect would merely be to freeze the capital account at a figure almost certainly higher than the real economic value, for which fixed or semi-fixed interest would have to be paid.

The fundamental fact about transport would seem to be that there has been an over-investment of capital in the industry. The railway system as it existed in 1913 was adequate (some say more than adequate) to carry the transport of the country. Since then, however, a new form of transport has been invented, into which large sums of public and private capital have been sunk. Some of this capital, in one branch or other of the industry, is redundant and has no real economic value. The attempt to pay a full return on all of it, if it can succeed at all, can do so only at the expense of imposing on the community costs of transport greater than can be justified on any economic basis.

If this line of thought is correct, the only ultimate solution is for the community to decide—as, sooner or later, it will have to do—what varieties of traffic it wants to travel by what means; and, having done that, to ascertain what fixed equipment is necessary to accommodate the traffic moving by rail and by road respectively. It does not in the least follow that such of the existing capital as would be found by this means to be redundant should merely be left to starve; the community might well assist in its retirement. But to put the cost of supporting it wholly on transport—and with especial weight on transport that cannot escape to private vehicles—is to impose a very heavy burden, inequitably distributed, on the costs of productive industry.

The final judgment on the railways' proposals will turn upon whether they move, or assist the community to move, in this general direction. And in reaching its decision the public can justly ask the railways to be taken rather more fully into their confidence.

Tunis! Corsica! Nice!

THROUGH an indiscretion which cost Italian journalists their right to work for foreign newspapers, the news leaked out on the morning of November 30th that, when Count Ciano addressed the Chamber on foreign affairs in the afternoon, a band of party members in the visitors' gallery would interrupt his reference to Italy's "natural aspirations" with shouts of "Tunisia." And so they did; adding in their enthusiasm a few cries for Corsica and Nice. Count Ciano was speaking on the day of the French general strike, and the Fascist Party hoped to catch M. Daladier on the wrong foot. The ulterior motive is more obscure. Dictators, it seems, can afford to be wayward, so it is idle to ask how the Duce reconciles the cat-calls of his followers with the agreement to observe the Mediterranean *status quo* which he ratified with Great Britain only a fortnight earlier. Undoubtedly, Fascists harbour ideas of territorial expansion, but how do they expect to further them by clamouring for three cherished French territories, on behalf of any one of which France would most certainly fight? Here is a conundrum. The answer to it must be sought in a survey of Italy's prospects in the three areas.

If former proprietorship be a criterion, her best claim

is that to Nice, which she relinquished as lately as 1860 in order to reconcile Napoleon III (who had given vacillating but useful help in ejecting the Austrians from Lombardy) to the annexation of Central Italy by Vittorio Emanuele and Cavour. Before the surrender, Nice had belonged for nearly five centuries to the Dukes of Savoy. But Provence and, later, Paris, had never abandoned claim to it; thus it had for centuries been a constant battleground between French-speaking and Italian-speaking forces. The cession to France caused considerable heart-burning in Italy. Garibaldi, himself a man of Nice, labelled it "contrary to the rights of man," and accused the French of exercising undue influence on the inhabitants prior to the plebiscite which was to decide their fate. Doubtless his allegation is not unfounded, but, just as in the Saar, the majority was too great to be wholly attributable to pressure. On April 15, 1860, 25,743 Niçois voted "oui," the "nons" numbering only 160. Thus Napoleon III was able forthwith to visit his new territory without fear of bullets or black looks.

As anyone must know who has travelled the Corniche road to Mentone, Nice belongs economically and geographically to the coastal plain of Provence because,

beyond it, the Maritime Alps sweep right down to the sea. The new province was, therefore, easily woven into the texture of French economic life, and, though a separatist party survived the process, its members could not agree whether to work for autonomy or for return to Italy, and it died an early death. To-day, the province is French by sentiment and—in the rare places where this is not a determining factor—out of self-interest. Thinking, as it does, in terms of its tourist traffic and the Blue Train, it shows not the slightest desire to incorporate itself in a State where it would encounter restrictions, capital levies and competition from sunnier resorts.

The Corsicans, though they have been French citizens over a longer period, are less assimilated to Frenchmen, but this does not imply that they are in any way Italian. They are islanders, who talk of "le continent." They pride themselves on being fighters for liberty, made of the stern stuff which produced Columbus and Bonaparte. The Genoese failed to allure them to submission, and, nowadays, they pride themselves upon being, first, Corsican by race and, secondly, French by choice. The names on their war memorial or their map may look Italian, but they pronounce them in harsh accents that would offend the musical ear of the peninsula. Moreover, in character they are a people apart. They are dogged, unlike the Italians, unlike even the Sardinians, and if the Duce were to tamper with their destiny he would encounter hostility of a kind he has never met in Italy.

Tunis, third of the trio, constitutes the most delicate question, first, because Italy, now that she owns an East African Empire, is looking south-east and wants it most of the three, and, secondly, because 95,000 Italian citizens enjoy special rights in the territory, dating back to a treaty of some forty years ago.

The Italy of the Risorgimento considered that she had prior claim to a shore which was only eighty miles from Sicily, and since about 10,000 Sicilian peasants had emigrated there, felt entitled to ask that her consul should be more splendidly received than his fellows. This request was granted in the eighteen-sixties, while national poets sang of a "second conquest of Carthage" and compared Vittorio Emanuele to Scipio. Italy never recovered from the blow of the French occupation in 1881. Not until she was at her nadir after her defeat at Adowa did she consent to the treaty of 1896, which still regulates the right of Italian residents in Tunisia to maintain national schools and to retain Italian citizenship.

The exodus from southern Italy to Tunisia continued unabated, even though the French ruled the territory. In fact, France for many years encouraged it, for she had spent herself in Algeria, and lacked man-power for colonising the rest of North Africa. Most of the immigrants were poor peasants, who had nothing to regret in Italy and some, flattered by French attentions, were ready to accept the nationality of so great a Power. The chief exception to this type was a posse of some 3,000 Sephardic Jews who had migrated *en bloc* from Leghorn, and who, more intelligent than most of their compatriots, soon came to run the banks, clubs and Press of the Italian community and to account for most of its prosperity. These Jews, many of whom were Freemasons, lived on excellent terms with their French neighbours. In fact, all would have lived happily ever after but for the virus of nationalism.

In 1919 the French, alarmed at the rate of increase of Italians over Frenchmen, began to offer financial inducements to such Italians as cared to be naturalised. The device worked well, for where 6 per cent. only of the population had taken French nationality in 1921 the percentage in 1926 was 21. Then the Duce stepped into the arena. He was determined to retain the Italians as Italian citizens, and instructed the local consul to bring this about. Under the able auspices of a diplomat called Bombieri a campaign of Fascisation began in earnest. Fascism blossomed into a new Press, a handsome bookshop and the smartest Consulate in the town. The Italians, including the Jews, were deeply impressed. They began to wear black shirts, to display photographs of the Duce, to sing "Giovinezza," and to treat the French residents as equals instead of as masters. Such was the unsuitable atmosphere in which M. Laval secured the surprising agreement of January, 1935, by which Italians in Tunis were to renounce their rights to their schools in ten years and to their nationality in twenty. All Tunisia was amazed.

That ill-fated agreement won for the Duce an agreeable respite in which to conquer Abyssinia. Once France had paid lip-service to the sanctions policy he was able to disregard the other clauses. Since 1936 his campaign among the Italian community in Tunis has continued unabated. It has been whetted in the home-country by reports of "communist" riots among the Tunisian Arabs, and has in the last two weeks assumed the dimensions of a major international problem. It has received but one setback—the news that the Jews of Leghorn, the backbone of the community, have been so alarmed by Italy's "axis" be-

ITALY, 1859.

TUNISIA, 1938.

haviour that large numbers have in recent months sought permission to become Frenchmen.

Speculation is rife as to why Italy has chosen the present moment to raise her long-standing grievance. Is she being pushed to do so by Germany, who wishes to deflect her attention from lost Balkan markets, or is she making an effort to secure a prize before the Nazis become so strong that they can jettison their weaker partner, or is she adopting the well-worn bazaar technique of asking five times the sum you are prepared to take (in this case a controlling interest in the Jibuti railway, or a reduction of the Suez Canal dues, or belligerent rights for General Franco)? Perhaps all three motives are contributory causes.

If, on the contrary, her tactics are designed to bring about transfers of Mediterranean territory, they are over-optimistic. Italy's strongest argument is, perhaps, the economic. Tunisia has valuable iron ore deposits, producing nearly 1,000,000 tons of hematite ore, a large part of which now goes to the United Kingdom (France having her own supplies in Lorraine). There are also phosphate deposits near Gafsa. The possession of these commodities would help Italy far more than their loss would hurt France. But on the other hand, Italy's share in the trade of Tunisia is very small, amounting to 9 per cent. of exports and 3 per cent. of imports in 1937, while there is a thriving trade between France and Tunis.

In any case, the economic arguments are swamped by the political. France would not give up Corsica or Nice; she could not give up Tunisia without jeopardising her whole Imperial structure. In the first place, her naval and air base at Bizerta (which is only an hour's run from Tunis by car) is the keystone of her North African defence system, covering not only Tunisia but the whole of eastern Algeria. Secondly, though the Moslems of Tunisia, being professional grumblers, often carp at French rule, they infinitely prefer France to Italy because, like the Egyptians, they are well informed about the means which Italy used to conquer Libya. Moreover, they have two other reasons for disliking Fascism: one is that they have received more lenient treatment under the French Left than under the French Right; the other, that they are strongly nationalist and dislike the rival nationalism which is paraded in their streets by the Italian community. Were France to transfer any of them to Italy, she would lose control of all other Moslems in her African Empire. Lastly, if the Italians in Tunisia gain their way by clamorous behaviour, France lays herself open to the same onslaught from the Spaniards in Morocco, or, still nearer home, in Algeria. For these compelling reasons she is bound to fight rather than give in to Italian demands for territory. As likely of fulfilment is the French students' clamour for Vesuvius. While Italy is about it, why not ask for Soho?

Three Decades of Profits

ON later pages of this issue of *The Economist* will be found an extended study by Mr Hargreaves Parkinson of the statistics of profits that have been collected by this journal during the past thirty years and of the generalisations about the behaviour of joint-stock company profits to which the figures give rise. The figures of profits represent one of the chief services that *The Economist* has been able to render to the cause of increasing the fund of knowledge of our economic environment that is available both to theoretical economists and to practical business men. The profits series is not merely one of the oldest of our regular computations, it is one of the few which stand without competitor. Save for the Inland Revenue figures, which compensate for their completeness by being both tardy in appearance and confined to an annual series, there is no other source of information on the long-term course of profits to compare with *The Economist* figures. They richly deserve, after this long interval, the careful rearrangement and analysis which they receive this week.

The thirty years since 1908 have seen considerable changes not only in the practices of the accounting profession but also in the obligations concerning disclosure of information laid upon the directors of companies by the law, though the intention of the Companies Act of 1929 has to some extent been defeated by the great extension of holding, sub-holding and sub-sub-holding companies. What is meant, in actual practice, by profits in 1938 is something rather different from what was meant thirty years ago. Moreover, the actual inhabitants of that economic menagerie collectively labelled "joint-stock enterprise" vary from year to year both in species and in variety. It is impossible, in illustrating the trend of profits throughout any considerable period, to confine the calculations to any unvarying sample of companies. The profits experience of any sample of representative companies that could have been selected in 1908—even if all the companies had survived to 1938—would have been grossly unrepresentative of the movement of company profits in general. In point of fact, the sample of companies on which *The Economist's* figures are based varies from year to year and

is automatically determined by the identity of the companies whose reports are published. Each year's experience can thus only be compared directly with that of the previous year, and in order to obtain a comparable series of figures over any longer period of time recourse has to be taken to the statistical device of the "chain" index. With these imperfections both of the underlying data and of the statistical technique that has to be employed upon them, thirty years is as long a period for drawing comparisons as can be hazarded with any approach to accuracy. The shorter the period, however, the greater the accuracy; and it is proposed to publish in future a quarterly index of company profits which should be a valuable guide to the relatively short-term fluctuations in the earning power of British industry and commerce.

The fundamental difficulty in any study of profits, however, is not statistical. It consists in finding any generally accepted definition of profits themselves. Even if it were possible to assume that company directors and accountants, in drawing up balance sheets, had no other object at heart than the scientific enlightenment of the public, insoluble problems of definition would arise; difficulties would be encountered, for instance, in the treatment of specific and general reserves or in knowing at what point the provision of funds for depreciation begins to take on the character of concealed reserves and hidden profits. Since so many of these questions can only be decided on an estimate of the future, divergences of view are quite unavoidable. When, on top of these difficulties, directors are concerned to conceal trade secrets and the ingenuity of accountants is used to hide, rather than to reveal, the true state of affairs, it becomes an impossible task to arrive at any consistent meaning of profits that will apply to a majority of companies in any one year, or even, in some cases, to the same company in successive years. The statistician, in the present state of affairs, can do little more than throw in this hand and take as his definition of profits what directors, in their wisdom and in their knowledge of commercial and criminal law, choose to declare as such.

Yet profits, especially the profits of public limited

liability companies, play so important a rôle in our economy that there is an overwhelmingly strong case for subjecting them to as large a degree of standardisation as is possible. For reasons that are obvious, the compulsions of the law are of very little assistance in matters of definition when, with the best will in the world, circumstances manifestly alter cases—though that is not to say that the law could not go very much further in compelling disclosure, even if it cannot define exactly what it is that is to be disclosed. More could perhaps be done by the authority of the Stock Exchange. The success of the New York Stock Exchange in persuading American corporations to render their reports in more or less standardised form, with subsidiaries fully consolidated and at quarterly intervals (to English ears it sounds like a Utopian recital) should serve as encouragement to the authorities in Throgmorton Street. But in the last analysis neither the Law Courts nor Capel Court can force reform unless those who govern companies are broadly in favour of it. The only real solution is to be found in a growth among company directors of the realisation of their obligations in this matter to the community. By steady pressure the professional associations of the accountants might contribute greatly to this end.

One of the fundamental principles of our economic system, which is most unlikely to be affected for some generations to come by the slow encroachment of other notions, is that those who direct industry and commerce do so in the expectation of profits (the English language would be more direct if it were possible to say that the undertaker is a profiteer). But the receiver of profits is necessarily a residuary legatee. Most forms of business consist of the setting off of more or less variable receipts against more or less fixed expenses. Even many of the industrial expenses usually regarded as prime costs, or variable expenses, such as wages or the cost of materials, are, in fact, difficult to vary in the short period. The sums available for the remuneration of capital are thus inevitably a residuary margin, which bears the full brunt of changes in the relation between costs and receipts. Moreover, capital in the form of debt, such as debentures, has to receive its fixed interest before profits, in the sense of *The Economist* figures, are struck. Profits are thus the residuum of a residuum—and the profits applicable to equity capital, which are the perquisites of the governors of industry, and by that same token the main motivating force of the system, are crowded still further to the margin. It is therefore inevitable that profits should fluctuate widely between periods of good and bad trade; expressed as a ratio of nominal capital, profits as a whole appear to be nearly two and a half times as high at their peak as at their

trough, while the earnings on ordinary capital fluctuate within a range of well over 300 per cent. What is more, there is good reason to apprehend that this instability of profits is getting worse, since many items of industrial costs are becoming progressively more rigid, while the fluctuations in the general conditions of trade upon which receipts depend are getting larger.

Since profits—or, more accurately, the prospect of profits—directly regulate the volume of investment in new industrial equipment, this instability of profits is a serious weakness in the economic system. Two methods of reducing it would appear, in theory, to exist. The first would be to reverse the tendency towards the fixity of industrial costs, so that business enterprises could adjust themselves more readily to changing conditions. This has often been advocated, and as often shown to be impracticable without a fundamental abandonment of many of our most cherished social conceptions. The other remedy—admittedly only partial—would be to encourage industry to raise its capital so far as possible by the issue of equity securities. If debentures and preference shares can be dispensed with, two of the elements which give ordinary earnings their high gearing are removed. Such a change would, of course, reduce the possibility of the construction by promoters of "star-ypointing pyramids" of holding companies, in which an ever-swelling volume of money ostensibly invested at fixed-interest or on preferential terms is precariously controlled by an ever-dwindling proportion of ultimate equity. But though financial architecture might be the poorer, the financial community would be the sounder as a result.

In recent years profits have been somewhat out of fashion. A whole philosophy of economics has grown up on the double belief that they provide an inexhaustible fund for the rest of the community to raid and that their restriction is on every ground to be desired. In very large part, this belief arises from the confusion of profit-earning with the maldistribution of wealth. But if it was ever true that all profit-earners were rich men, it is certainly not true to-day, and is becoming less and less true with the growth of the institutional investor. Moreover, so long as the bulk of the investment of new capital follows the prospect of profits, any undue depression of profits will react adversely on the whole community. There is no paradox at all in the statement that any policy aiming at the improvement of the standard of living of the wage-earners should make it one of its first objectives to ensure the maintenance of an adequate level of profits. That it should appear a paradox is merely an illustration of the fog of misconception that overhangs the rôle of profits in the economic system.

Power over Opinion

NEWS is in the news. At home, Mr Kingsley Martin puts out a pamphlet in the old style,* catching up widespread fears about the use of the Official Secrets Acts against journalists; while, in Parliament, Mr Mander alleges pressure by Ministers and advertisers upon editors. Abroad, it is the controlled Press of the totalitarian States that offers and accepts the gambits of diplomacy, leaving only the end-games to be played out by statesmen. Last September, it was the fact that the people of Germany were cloistered in forced ignorance of what was going on which most menaced peace; and it was only when news of the mobilisation of the British fleet and President Roosevelt's appeal seeped through that mute acceptance was replaced by claustrophobic alarm. Here there is constant

vigilance for the freedom of the Press. In many other lands the State is in charge.

In England news and views are still free. But none more than the English should appreciate the power of propaganda. Herr Hitler himself has declared that "English poison raining down from God's clear sky" sapped the resistance of war-time Germany; and the 5½ million English leaflets that fluttered down behind the German lines in October, 1918, served as exemplars for the propaganda principles of the Führer's struggle for power. "A lost battle is a battle which one believes lost," said Joseph de Maistre. "A battle won is a battle that we can persuade the enemy he has lost," say the strategists. Both in the political arena and on the battlefield the propaganda arm, which has gained vastly in fire-power by the advent of wireless, the cinema and national journals, is in the first line of both attack and defence.

* "Fascism, Democracy and the Press." By Kingsley Martin. New Statesman. Pamphlet, 32 pages. 6d.

Mr Mackenzie has told the whole story of the new weapon.† The record runs from the defeat of German news on the world front between 1914-18 to the emergence of dictatorship and diplomacy resting upon propaganda backed by the entire resources of three nations. Russia, Italy and Germany control opinion by censorship and seek converts, commerce or conquest by exporting news; their young people are drilled and hypnotised. Post-revolutionary Russia was so vast and its millions of people so primitive that government by propaganda was inevitable; and Marxism was so dogmatically international that to export revolution to workers and Chinese was axiomatic. Fascism in Italy was not at first for export; education, as in Russia, was shanghai'd; and a decalogue of unswerving duty was imposed upon the people. But "Fascism is on the agenda for all countries," said Signor Mussolini eight years ago; and, as the vision of the Mediterranean as *mare nostrum* grew, Italy's power over opinion in the Levant, Africa and Spain advanced.

The Nazi campaign, within and without the Reich, is better-known. In the last war blockade and propaganda broke Germany. To-day the Four-Year Plan and the Ministry of Enlightenment and Propaganda, which spends £20 millions a year, are intended as safeguards. At home, education is pinched within the tenets of race and duty, while abroad the *Auslandsorganisation*, the D.N.B. news agency and *Transocean-Nachrichten* win trade, adherents and territories. In the dictatorships, censors and Press control are essential, as the people of Japan, Spain, Poland, Turkey, Greece, Hungary, Roumania, Portugal, Bulgaria, Iran, Syria, Palestine, Iraq, Brazil and Siam, as well as those of the great propagandist Powers, now know. Only the British Empire (apart from India, Palestine and parts of Canada), the United States, Holland, Belgium, France and the Scandinavian countries enjoy free news.

Mr Mackenzie has looked at this sorry scene with an analytical eye. He sees propaganda as a science with seven rules: ceaseless repetition, like the blaring anti-Semitic slogans of Nazism; colour, like the cartoons of Raemaker; a kernel of truth, like the German anti-Czech allegations last September; a slogan, like "Liberty, equality and fraternity," "Hang the Kaiser," or "Buy British"; a specific target, like Labour and Pacifist groups for Communist agitation in Britain, or Austria's minorities for the Allies during the War; concealment of motive, like armament manufacturers' serpentine publicity; and timing, like Herr Hitler's outbursts. Mr Mackenzie might have added an eighth—a gospel: the creed of ancient Islam, the faith of the Ironsides, the fervour of Jacobinism, the cult of Stalin and the proletariat, the myth of the Roman Duce, and the worship of German blood.

Mr Bertrand Russell has gone deeper, in an acute and learned study‡ of the ways in which men seek power. Only men among animals continue to strive when the primary needs of survival and reproduction are satisfied, and it is the desire for power and glory which inspires their activity when safety, comfort, fame or fortune has already been achieved. Power takes many forms; and Mr Russell tells a parable: of military and police power which is like the physical force used to hoist a pig with a rope round its middle squealing into a ship; of the power of persuasion seen when the proverbial donkey follows the proverbial carrot; and of the power of regimentation which is like the enterprised performing animals. He applies these Aesopian variety. It is the rise of Herr Hitler. The poor pigs are the throughout concentration camps. The carrot is the Nazi tions to any un the donkey the middle class. "The per-experience of any are the millions that make the Nazi could have been seleconverts a minority; force and pro-had survived to 1931." By A. J. Mackenzie. Gifford.

In point of fact, the sample o.s.s. By Bertrand Russell. *Economist's* figures are based vari-

paganda put them in power; force, propaganda and habit keep them there.

To Mr Russell the task of democratic civilisation is to tame power; to use it for social co-operation, not conflict; to elevate power like that of Buddha, Christ, Pythagoras and Galileo above the might of dictators, demagogues and bosses; to set up ring-fences of civil liberty, public ownership and control, and free education against the usurpation of force which is natural but disastrous. But, like Mr Mackenzie, he finds the vast power of propaganda at the centre of his political puzzle. Official propaganda can prevail almost against all reason; Kings' heads on coins, armies marching, flags flying, bugles blowing, these are old tricks; education on the Fuehrerprinzip, control of the Press, the radio, the cinema and the hoarding, these are new ones.

But both Mr Russell and Mr Mackenzie see light in the darkness. "The propagandist is a man who canalises an already existing stream. In a land where there is no water he digs in vain," said Aldous Huxley. "Propaganda is only successful when it is in harmony with something in the patient; his desire for an immortal soul, for health, for the greatness of his nation, or what not," says Mr Russell. Dictators must deliver the goods; they must, in the long run, hand over actual carrots. "The more the expectation of victory has been used to stimulate war-like ardour, the greater will be the reaction when it is found that victory is unobtainable." If official propaganda, which has no competition, inculcates belief in false propositions of which time will prove the falsity, it is in as bad a position as the Aristotelians in their contest with Galileo. "Lies need competition if they are to retain their vigour"; and the ultimate limit to the power of creeds is set by "boredom, weariness and the love of ease." Citizens under absolute rulers to-day are called upon by their newspapers, radio sets and superiors to live constantly at high tension, at a fanatic heat; yet the sentiment *cela est bien dit, mais il faut cultiver notre jardin* is natural to most men. "Spiritually they are sucked dry," says Mr Mackenzie. It was appropriately to the Foreign Press Association that the Prime Minister pointed out on Tuesday that no form of Government ever remains the same.

Yet no democracy to-day can afford to rely on the hypothetical spread of scepticism and weariness in the States whose power over world opinion is already an economic and military menace; or to wait upon breakdown after economic unwisdom. Germans and Italians are still loyal and enthusiastic, and their way of life is their own business. But Britain, France and the United States cannot go unarmed; their navies, armies, air forces and civil defences are slowly growing; economic weapons to protect trade are being devised. Only the propaganda arm is weak in all these countries. Its oppressive use at home would be fatal; here Mr Martin and Mr Mander are right. As Captain Liddell Hart once put it:

What is of value in England, and worth defending, is its tradition of freedom—the guarantee of its vitality. So many talk patriotism without thinking what their end is. Our civilisation, like the Greek, has, for all its blundering ways, taught the value of freedom, of criticism of authority—and of harmonising this with order. Anyone who urges a different system, for efficiency's sake, is betraying the vital tradition.

But propaganda overseas is an inescapable defence, if only to tell the world the truth about ourselves. Foreign language broadcasts, exhibitions and thrifty goodwill are not enough. Mr Mackenzie's plan is for the democracies to "consolidate the loyalty of their own citizens by progressive social policies"; to make themselves strong against military attack; and together to form a united propaganda front for peace and liberal ways, using all the arts and science of this modern trade to inform rather than to mislead. His plea is persuasive. Peace and democracy merit publicity in these days of idle boasting; and good news is always worth telling.

Topics of the Week

Mr Chamberlain Speaks.—"To-night I have nothing startling to say to you and nothing confidential." The Prime Minister's speech at the Foreign Press Association's dinner on Tuesday was the old story of appeasement told once more without apology. Again, with astonishing lack of understanding, he rebuked the critics of his policy of concessions as men resigned to the ultimate disaster of war. But there was a new note of exasperation, and it was provoked, not as is commonly the case by his opponents at home but by his Munich colleagues. Apart from the reproof administered to certain scurrilous German attacks upon Lord Baldwin, news of which caused the Nazi diplomats and journalists to boycott the dinner, Mr Chamberlain made no specific charges. But he spoke with deep feeling about the checks, disappointments and setbacks he had suffered; he proclaimed the transitory character of forms of government; he declared that in the history of nations attempts at domination had never been long successful; and he told the world that Britain was determined to be strongly armed and ready to meet her obligations—just as two days later he spoke of the power of our great financial resources in any possible war with Germany.

* * *

"As long as I am where I am, I will never leave off trying." The ring of sincerity in the Prime Minister's voice was unmistakable; but his patience is seemingly wearing thin. And for good reason. The Fuehrer told him at Munich that his territorial ambitions were ended; and now Memel threatens to shatter yet another pledge. Italy's Tunisian demands have shown what the consequences of appeasement can be; the British Government have to admit that Italian reinforcements are still going to General Franco; at no point since September has a dictator's hand been held out to meet Mr Chamberlain half way; the controlled Press of the totalitarian States has not abated its barrage of boasts and vaunting claims; and Herr Hitler has brought the whole world to its feet in shocked horror by the Jewish pogroms. Hopes are no longer high. The Prime Minister will go to Rome next month determined to cut a new step in the slow climb to peace. But, meanwhile, his attitude and that of his Cabinet has stiffened: Mr Stanley and Mr Hudson have been speaking of carrying the trade war into the enemy's camp; and many Ministers have spoken of the sad disillusionment which the last two months of German recalcitrance have brought. No better commentary could be made on Mr Chamberlain's words on Tuesday and on their diplomatic background than the audience's own response. They clapped the mention of the Anglo-Eire Agreement; they applauded the Anglo-American Agreement; they cheered to the echo the Prime Minister's statement that Britain's relations with France went far beyond legal obligation "since they are founded on identity of interest." The Munich trinity—the Czecho-Slovak settlement and Germany's two declarations of peace with Britain and France—was greeted with utter silence.

* * *

The river of appeasement is frozen at the source, and Mr Chamberlain himself has lost the confidence which brought him flushed and smiling from his plane to the microphone on September 30th. But this is no time for defeatism. The choice has never been, as the Prime Minister sometimes suggests, between appeasement and certain war; the true alternative to the Munich policy is a diplomacy based on strength, firmness and justice, before which the fires of aggression might pale. Even now, when British opinion and policy have assumed a new note of sharpness, Dr Schacht has hurried to London. It is not too much to suppose that he comes with something like an olive branch in the matters of trade and Jewish migration; and Dr Schacht has worked wonders before. But there will have to be a revolutionary change in the dictators' policy if Mr Chamberlain is not to find himself faced at Rome with blackmail which this time he will be unable to pay.

* * *

Belligerent Rights for Franco?—In certain organs of the British Press that are firm in their support of Mr Chamberlain's policy, there have been hints, during the last few days, that the next instalment of "appeasement," payable when Mr Chamberlain visits Rome next month, may be a British concurrence in the Italian view that the time has now come for granting the Spanish Nationalists belligerent rights. Considering that the signature of the Anglo-Italian agreement is "predicated upon" the hypothesis that a "settlement" has already been achieved in Spain, it is difficult to see how, in strict logic, Mr Chamberlain can now admit that there is a war going on in the Peninsula which would justify the grant of belligerent rights to anybody! As evidence of a "settlement" Mr Chamberlain accepted an Italian assurance that 10,000 Italian troops had been withdrawn. That sort of thing, he has told us, is what he had meant by a "settlement" all along. Fortunately, however, in the matter of belligerent rights, the Prime Minister has not left himself so free a hand to give subsequent interpretation of his own plain words. He is bound by his own British plan for the withdrawals of volunteers which was proposed last July and has been accepted by all concerned, except General Franco. Now, in this plan, the conditions in which a grant of belligerent rights to the two parties in Spain is contemplated are exactly and explicitly laid down. It is not contemplated until at least 10,000 foreign troops have been withdrawn from the side with the smaller number of foreign troops in its service, and a proportionate number—proportionate, that is, to the verified totals on each side—has been withdrawn from the side with the larger number. To-day the facts are that the Spanish Government has disbanded and is in process of evacuating *all* its foreign troops, and has given facilities for inspection to test whether it has been as good as its word, whereas the Insurgents have given no facilities for inspection, have not even pretended to have evacuated more than 10,000 Italians, and have not even accepted the British Plan except subject to reservations that make nonsense of it. This equivocation and intransigence have proved to be bad policy; for the foreign troops whom General Franco has retained have not succeeded in breaking through the Republican front. It is easy to see why, now, General Franco's eagerness to obtain belligerent rights has become so desperately urgent. He knows now that he cannot defeat the Republican forces in the field, and that his only hope of victory lies in starving them into surrender. His eagerness is itself suspicious, as the Spanish Nationalists themselves have not nearly enough ships to establish an effective blockade of the Government; is it to be presumed that foreign destroyers would "volunteer" to help him? The right British policy is to refuse to consider his demand until he has executed his part of the British Plan from A to Z. We hope Mr Chamberlain will stand firm on his own plan.

* * *

Uncertainty in France.—There are clear signs of renewed confidence in France, on social, political and financial grounds alike. But the crisis is by no means past. M. Daladier boldly confronted the reassembled Chamber a week ago with a call for confidence in his policy as a whole, and he secured a majority of 315 votes to 241. The drawn-out chain of strikes came to an end early this week, when the seamen at Havre resolved to return to work. And M. Reynaud can claim that, since his decrees were published, some 6 milliards of francs of French capital have come home. Yet none of these successes is unqualified. In the Chamber the Popular Front has indeed been broken, but no alternative has yet emerged. The Premier's majority is a chorus of dissonances; in the Cabinet deep divisions on foreign policy exist, widened by Herr von Ribbentrop's recent visit, the Anglo-French declaration of amity, Italy's claims on Tunis and General Franco's drive for belligerent

rights; and, ominously, some 47 Left wing Radicals and Republicans abstained from the vote of confidence. There is no unbroken backing for M. Daladier, and if France is to be governed by a Cabinet avowedly of the Right M. Daladier will not be the man to lead it, unless he is content merely to take orders. It is still doubtful, too, whether M. Reynaud, whose plans are pleasing to neither the extreme Right nor the extreme Left, will be proved to have been successful in wooing the timid owners of capital. The Finance Committee of the Chamber approved his Budget for 1939 on Tuesday and accepted his decrees. But the reflow of capital for which he claims credit was in the main the repatriation of technical funds for technical reasons that have now gone. And nothing is yet known of the wider consequences of his plans. The situation has greatly improved, but the way is not yet clearly open for political stability and economic revival.

* * *

Steel Prices.—The reductions in steel prices published at the end of last week, which are to apply for the first half of 1939, turned out to be much as expected. The actual percentage reductions are shown in a Note in the Industry and Trade Section on page 620, and except for some varieties of pig iron and billets, the reductions are, on the average, rather smaller than had been expected. The steel-consuming industries will, of course, be thankful for any mercies, however small. But the reductions now contemplated are not nearly enough to remove the conviction, which is almost universal outside the ranks of the steelmakers themselves, that the high prices charged for British steel are a severe handicap on the competitive power of British industry. The Federation has made an effort to base its prices upon an ascertainment of costs of production. In any such attempt much depends upon whether the costs chosen to serve as a guide are those of the most or least favourably placed plant. Moreover, in an industry where fixed plant is as important as it is in steel, a great deal depends upon the rate of production which is assumed for the purpose of calculating costs. According to some remarks made by the deputy-chairman of the South Durham Steel and Iron Company, Ltd., on Wednesday, the Federation is following an enlightened policy in these respects; that is to say, they are selecting relatively efficient companies and assuming a reasonable rate of production. Mr Talbot complained that, as the result of these methods, "the new selling prices are in no way correlated to the average cost of production of the industry." If this is so, it speaks in the Federation's favour. But if the new prices, which remain considerably above the prices at which steel could be bought from abroad were it not for the tariff, really are based not on the average costs of the industry but on the costs of its more efficient members, the light that is cast upon the relative technical efficiency of the British and foreign industries is even more startling than was generally believed. Some considerations bearing on this point will be found in an article on page 606.

* * *

The leaders of the steel industry are apt to assume an air of injured innocence when their prices are criticised as being too high. Our prices, they say, are based on our costs, and their reasonableness is proved by the fact that the average level of profits now being earned is not excessive for such a cyclical industry. All these facts may be admitted, without touching the fundamental reality of the position. That fundamental reality is that steel prices, which rose by 18 per cent. in comparison with the average of all industrial prices between 1930 and July, 1937, have since then remained stable while average industrial prices (of which they form part) have fallen by nearly 12 per cent. Even after the reductions announced last week, steel prices will be something like 15 per cent. higher in relation to all industrial prices than they were in 1930. In these circumstances costs are irrelevant. A normal industry has to accept what prices it can get in free competition and either adjust its costs to the competitive position or admit that it cannot compete. Costs, in fact, are not the

starting point for a calculation of prices, but the finishing point. Steel is in a peculiar position only because the community has given it the privilege of being exempted from competition. The tacit bargain struck between the industry and the public was that the public would pay rather higher prices for its steel for a period if during that period the industry increased its efficiency sufficiently to provide cheap steel. But, in spite of all the money spent on technical re-equipment, the movement of the price indices suggests that steel is tending, if anything, to fall still further behind. The fact is that no body of producers, given the power to fix its own prices, can resist the temptation to fix them too high. And if our new economic policy means that each industry is to be allowed to determine its own costs and fix its own prices, with neither the check of competition nor any substitute check of rigorous independent inquiry, then indeed we shall be more planned against than planning.

* * *

Scottish Government.—Scotland is too closely related to the rest of Britain in every aspect of its life to withdraw its troops from Westminster, and too poor to stand comfortably on its own feet. Nevertheless, the Government of the Northern Kingdom has been bungled ever since the Union of Parliaments two centuries ago. Despite the existence of a standing committee of Scottish Members of the Commons to examine Scottish Bills, the general direction of Scottish affairs is insufficiently considered in the mere two days devoted annually by Parliament to Scottish estimates; and the actual administration of Scotland is so haphazard, scattered, anomalous and remote that Scots can be pardoned for attributing some part of their country's parlous economic plight to the loose and ill-organised character of British bureaucracy. The lamentable condition of Scotland's Highlands, fisheries, housing, health and staple industries is a poor advertisement for present methods; and the Government's Bill to centralise health, education, agriculture and home affairs for Scotland in the Secretary of State, whose office is now over fifty years old, and to locate the Departments together in Edinburgh, which received a second reading in Parliament this week, is the obvious and necessary first step towards the planned policy which Scotland needs.

* * *

Mr Morrison in Retreat.—The Milk Bill having been abandoned, in the face of a clamour in which the interests of the community played no part at all, the Minister of Agriculture finds other troubles descending upon him. He was treated at Lincoln last week to an astonishing display both of bad manners and poor logic when a crowd of farmers denied him a hearing and abused this Government (which has been far more lavish with aid to agriculture than any other) of treachery to their cause. The latest source of trouble is barley, and the nature of the case sheds a light on the psychology of the present agricultural agitation. Last year there was a shortage of malting barley and good prices were accordingly paid. As a result, the acreage under barley increased, and this increase, coupled with favourable weather, has produced a glut of barley and a slump in prices. The farmer's misfortune is thus compounded in part of his own miscalculation and in part of his bad fortune. (Imports, which are being blamed, as always, have very little to do with the case, since the bulk of them consists of feeding, not malting, barley.) It is very difficult indeed to see how the plight of the barley-growers is, even in minor degree, the fault of the Government. Nevertheless, so firmly has the farming community been indoctrinated with the belief that it has a right to live on the Government's bounty that Mr Morrison is being held responsible for the whole matter. Partly influenced, perhaps, by the imminence of a by-election in a barley-growing district, he has offered a subsidy of ten shillings an acre, to cost about £400,000. This charity (for such it is, since it serves no purpose of the community and carries with it no constructive agricultural idea) has been rejected as an insult. It is true that ten shillings an acre is not very much, when some farmers are losing six times as much. But if there is

CHANGE of NAME

of the

Skandinaviska Kreditaktiebolaget

The foreign business of this bank has developed in recent times on a scale which could not have been foreseen when the bank was founded nearly 75 years ago. Though the name of the Skandinaviska Kreditaktiebolaget is, of course, well known to our numerous foreign business friends, it has nevertheless been felt to be a drawback that the name does not contain the word "bank," and that it is not composed of words of international currency. For these and other reasons, the shareholders of the bank have resolved that the bank's name shall be changed to

SKANDINAVISKA BANKEN

AKTIEBOLAG

The change of name, which takes effect from the 1st January, 1939, will not entail any change whatsoever in the bank's business operations.

Telegrams: SKANDINAVBANK, Gothenburg, Stockholm, Malmö, etc.

any insult it has been offered by the farmers and suffered by a generous Government. It is doubtful which is the more deplorable spectacle, the growing immoderation of the farmers' representatives in presenting their demands or the growing weakness of the politicians in running away from that defence of the community's interests which, at intervals and in the abstract, they proclaim.

* * *

The Premier's Panel.—The Prime Minister turned a deaf ear a month ago to the critics' call for a Ministry of Supply to co-ordinate the manufacture of arms and expedite output. Instead, he decided to set up a committee of business men to receive representations about delays, defects and difficulties in supply or production, to propose remedies and to recommend general improvements in procedure. This week the panel's personnel has been announced. The members are Mr J. S. Addison, managing director of Courtaulds, Ltd.; Sir George Beharrel, chairman of the Dunlop Rubber Company; Mr Peter F. B. Bennett, president of the Federation of British Industries and chairman of Joseph Lucas, Ltd.; Mr J. O. M. Clark, chairman of J. and P. Coats, Ltd.; Sir Geoffrey Clarke, president of the Associated Chambers of Commerce; and Mr Francis D'Arcy Cooper, chairman of Lever Brothers, Ltd. It is an impressive list of eminent people, but it is not a substitute for a Ministry of Supply, for the chosen six are given no executive authority. The very eminence of the committee's members in other fields will preclude their attention to any but the broadest outlines of the defence programme. They should have been put in charge of contracts, planning and production, or they should have been left at their civil lasts. Advisory bodies are the hall-mark of half-hearted administrative action; and, in the perilous seas of rearmament, Mrs Partington's mop still flies at the Government's mast-head.

* * *

The Lima Conference.—The Pan-American Conference, attended by delegates of the United States and of the twenty Latin-American republics, opened at Lima on the 10th and resolved itself into committees after listening, at the opening meeting, to inaugural speeches from the United States Secretary of State, Mr Cordell Hull, and from the Argentine Minister for Foreign Affairs. The novel feature of this American gathering was that, for the first time, perhaps, since the original proclamation of the Monroe Doctrine more than a hundred years ago, the affairs of the New World were dominated, in American minds, by a menace from the Old World. "The ominous shadow," said Mr Hull to his Latin-American colleagues, "falls athwart our own hemisphere"; and he declared in plain terms that "Mankind is tragically confronted once more with the alternatives of freedom or serfdom, of order or anarchy, of progress or retrogression, of civilisation or barbarism." Whether its results are positive or negative the Lima Conference can hardly fail to be of importance. It would be important if it resulted in the consolidation of a Pan-American united front against the menace of aggression on the part of "the Triangle Powers." It would probably be equally important if the hopes of the United States in this direction were disappointed; for nothing would have such an effect in bringing home to the man in the street, not only in New York and San Francisco but in Chicago and Kansas City too, the reality of the threat to the United States herself. The Monroe Doctrine is a cardinal point of traditional United States foreign policy to which every citizen is sensitive; and public opinion in the United States will not be consoled as the reasons for Latin-American reluctance emerge. There is a Latin-American wish not to jeopardise profitable trade with Germany; there is a wish (in those republics that have large German and Italian elements in their population) not to court trouble on the home front; and finally there is perhaps a secret envy

of the impunity with which Germany, under the Nazi regime, has pursued, in the financial field, her delectable policy of repudiation and confiscation. Mexico has already followed suit—at the expense of the two great English-speaking democratic Powers. Some of her nineteen sisters might one day like to do the same. A guarantee that military force shall never be employed for the purpose of recovering foreign property that has been expropriated by any American Government—this seems to be the form of security on which some at least of the Latin-Americans are now bent, and it is the English-speaking Powers, not "the Triangle," against whom the point of this project is directed.

* * *

Lord Baldwin and the Refugees.—Lord Baldwin is at his best when he is speaking, not on politics, but on the humanities—in both the literary and the philanthropic sense—and there is no one in England who could have made, with greater dignity or with sincerer feeling, the speech on behalf of the present victims of racial and religious persecution which he broadcast on the 8th, as the preface to an appeal for relief funds. Lord Baldwin spoke with particular force about the tragedy of the forcible breaking-up of families and about the plight of children uprooted on the threshold of life and thrown upon the world without home or prospects. The speech, as we have said, was not political; but inevitably the speaker had to explain to the public, to whom he was making his appeal, how these refugees came to be standing destitute on their doorsteps. Refugees do not make themselves. "I have," said Lord Baldwin, "to ask you to come to the aid of the victims not of any catastrophe in the natural world, not of earthquake nor of a flood nor of famine"—he was thinking of the objects of many such appeals in the past—"but of an explosion of man's inhumanity to men." That was the sole reference, in Lord Baldwin's speech, to the political circumstances that had made his appeal a necessity; but it was enough to bring down on his head a deluge of vituperation in the Nazi Press. The passage just quoted was described in the *Lokalanzeiger* as "street Arab talk," and the speech as a whole was declared "to set up a new peak of mendacious 'humanitarian' hypocrisy," while the speaker himself was depicted as armed "with the revolver of humanitarianism" as he went about his gangster's work. This is the kind of invective that betrays the bad conscience of those who stoop to it. Meanwhile, the manipulated Press of the Reich has perceptibly changed its tune. Since Germany wants to be rid of the Jews she is willing, it is suggested, to co-operate with other nations towards the attainment of this German end. It almost looked like a hint that Germany might be willing in the future to allow the refugees to take some fraction of their property away with them; and this would, of course, greatly facilitate the process of re-settlement. But the exchange difficulty rules that out, and the hint materialises in a suggestion that the non-German Jews might conveniently provide the requisite foreign exchange. The organisers of the Lord Baldwin Fund have done well to make it clear that the money subscribed will not be used to fortify the German Government's finances under the guise of extricating Jewish property—that would, indeed, be a piece of "humanitarian hypocrisy."

* * *

Pseudo-Democracy in Yugoslavia.—The Government of Dr Stoyadinovich was returned for a second term of office in last Sunday's general election, its candidates having polled 59 per cent. of the votes cast against 40 per cent. by those of Dr Matchek's Opposition "popular front." Apart from a small increase in Dr Matchek's total, the elections went exactly to plan. A method of voting which requires an elector to declare his preference in a loud voice—in the hearing of Croat "Peasant Guards"

or Serbian officials as the case may be—is almost as effective from the dominant party's point of view as the methods of a modern German plebiscite. The Radical Union carried for the Government Slovenia, Bosnia, Serbia, and old Montenegro; while the Croat People's Party was victorious in Croatia and Dalmatia. Scarcely less expected was the defeat of Serbian Opposition leaders, for the Nationalists like General Zhiykovitch are a spent force; and the democrats, swimming hard against a political tide which set in with the collapse of sanctions in 1936 and reached gale force at Munich, were bound to lose a good deal of private sympathy in a system of public voting. All things considered, the Opposition did very well, and though Dr Stoyadinovich will have an overwhelming majority in the Skupshchina, he cannot delude himself that he has a united nation behind him. But for the time being the issue of federalism ceases to be practical politics.

* * *

The Elections in Memel.—Elections were held last Sunday in the Memel district of Lithuania; and the Nazi German Party, although final results do not come out until to-day, appear to have improved on the 24 seats out of 29 which they already hold. The probable—but not entirely certain—sequel will be a demand—with the whole force of Greater Germany behind it—for a restoration of the Memelland to the Reich; and resistance on Lithuania's part would be so hopeless that she is almost certain to accept Germany's terms—especially as these are expected to include an offer of facilities for the continued use, by Lithuania, of Memel Port. If the Memel question could be divorced from the vastly larger one of Herr Hitler's designs against the liberties of Europe, the German case for the restoration of the Memelland would be a strong one. Memel itself is a German city; and the inhabitants of the rural districts, though Lithuanian in speech, are Protestants by religion and largely German in culture owing to the fact that the Memelland has been an integral part of East Prussia since the Middle Ages. If, at the Peace Settlement, the allocation of this Lithuanian-speaking district of East Prussia had been settled by plebiscite, it might have voted—as the Polish-speaking Masurian district did vote—for remaining part of the Reich. Actually, the Memelland was detached from the Reich, without a plebiscite, in the Versailles Treaty and was wrested out of the hands of a wholly inadequate French garrison, in January, 1923, by a "Jameson Raid" of Lithuanians over the border. As in the case of Vilna the Principal Allied Powers recognised the military *fait accompli*; but for the Memelland they did draft a statute of autonomy. This was accepted by Lithuania, after she had whittled it down as far as she could; but it cannot be said that she has ever observed its terms in the spirit or even in the letter.

* * *

If this were the complete story, then there would be everything to be said for a return of the Memelland to Germany now, so long as this was accompanied (as it may be) by arrangements for Lithuania to retain the full and free use of what is her only port. As things are, however, we may expect to see the *Anschluss* of Memel to the Reich followed by the establishment of a German domination over Lithuania on the Czecho-Slovakian model—and as in the Sudeten question it appears to be the diplomatic aim of extending German influence in other States rather than the racial aim of incorporating Germans in the Reich that is put first in Berlin, for great care is being taken to see that Lithuania falls into the arms of Germany rather than of Poland, and the formal *Anschluss* may even be postponed to secure this result. Just as Czecho-Slovakia provided Germany, in Carpatho-Ruthenia, with a base of operations for launching an Ukrainian national movement under German auspices, so, across Lithuania, Germany will be able to work upon the nationalism of the White Russians in the Vilna district and in the adjoining parts of the Soviet Union. The tentacles of the German

octopus are working their way round Poland now from the north as well as from the south.

* * *

British Capital Abroad.—Sir Robert Kindersley's end-of-term reports on British overseas investments stand alone in their subject. A year ago, reporting progress in 1936, Sir Robert struck a warning note: our overseas investments were being depleted and their quality was falling off. In this month's *Economic Journal* Sir Robert's survey of 1937 is even more foreboding. It is true that he estimates last year's income from dividends and interest on quoted overseas investments at £176,600,000, the highest return since 1930, though considerably below the record level of £212,400,000 estimated for 1929; and income from private and unquoted investments at £21,100,000, compared with £19,600,000 in the preceding year. The total nominal amount of overseas investments in quoted securities he computes at £3,353,000,000, compared with £3,364,000,000 in 1936. But these investigations disclosed disquieting features: income from overseas Governments and local Governments fell from £58,900,000 in 1936 to £54,600,000; and fixed interest receipts from company investments also declined. Conversion operations were, in fact, responsible but, unless some settlement of the problem of defaulted bonds is made, no recovery in interest on Government and municipal loans can, in Sir Robert's view, be expected. There may indeed be some slight rise in overseas investment and income in the current year, since the peak of the latest trade cycle did not come until more than half-way through 1937. But a striking feature of recent investment overseas has been the increasing share of equity holdings; these variable profits have lately expanded most; and Sir Robert contends that by, say, 1939 and 1940 the mining and plantation companies from which an appreciable part of this variable income is drawn may distribute sharply reduced dividends. The movement from bonds to equities, in search of capital appreciation or immediate large dividends, is fraught with danger:

the very conditions that have made investment abroad perilous have caused investors to prefer those forms which in previous years would have been regarded as most speculative.

At present we are deeply anxious about the prospects for our export trades; we ought to be at least equally worried about our overseas investments, because we need the income from them to close the gap in our balance of payments between export receipts and disbursements on imports which, in view of accelerated re-armament, are of growing importance. *The Economist's* Supplement on Overseas Lending published on November 20th last year reached the conclusion that, unless the income from our investments abroad was maintained, some downward adjustment of the standard of living would be inescapable. Sir Robert Kindersley's latest calculations show the same red light.

Inquest on America's Economy

NEW YORK, December 6.—To say that business and financial circles have awaited the opening of the Temporary National Economic Committee's hearings with anxious concern would be no exaggeration. The T.N.E.C. is better known as the Anti-Monopoly Committee, but its terms of reference are so broad, and monopoly by any recognised definition so rare, that the term is anything but descriptive. The formal designation for the Committee is far more apt than the colloquial, for the Committee is authorised to make a comprehensive study of the entire functional structure of the American economy. It appears to be intended to make an inquiry into the business structure analogous to the monumental work of the National Monetary Commission thirty years ago. Considering the unfortunate record of the American economy over the past ten years, during which it has suffered a dizzily alternating sequence of booms and slumps, which have added up to a net retrogression, one might suppose that such an inquiry would be welcomed rather than feared by the sections of the community most vitally concerned. Nevertheless, apprehension rules.

The reason is readily explicable. Joint Committees have a long and familiar history. This particular Committee is composed of 12 members: three Senators, three Congressmen and six representatives of Government departments. Such Committees are often compared with British Royal Commissions, but the analogy is imperfect; for the composition of the groups and the methods of procedure are entirely dissimilar. Under the American system, the Committee or Commission is essentially political, and its methods of procedure are so far from being standardised that its approach to the problems before it depends entirely upon the personalities of the members.

Fears of Inquisition

Commonly the terms of reference are so loosely drawn that the hearings can be diverted into any channel that piques the curiosity or arouses the animosity of the Committee. When a hearing takes this form, it is colloquially termed a "fishing expedition," a "witch hunt," or a "Star Chamber proceeding." These terms are accurately descriptive; for the Committee has certain of the powers or prerogatives of a court, while the civilians who appear before it lack some of the rights or privileges accorded to a defendant in a proper court of law. The result is that one of the most useful mechanisms of government, especially of democratic government, has acquired a pretty bad name. The average business man who might be expected to welcome the opportunity to take the stand before an impartial board of inquiry has come to regard that stand as a sort of pillory to make a politician's holiday. One may deplore this attitude among business men, or one may accept it as *prima facie* evidence of acknowledged culpability. But that is approximately the prevailing attitude. The Joint Resolution authorising the T.N.E.C. was

approved by the President on June 16th; and the Senatorial members were immediately named by Vice-President Garner—Senators O'Mahoney (Democrat from Wyoming), Chairman; King (Democrat from Utah) and Borah (Republican from Idaho). The House members are: Summers (Democrat from Texas), Eicher (Democrat from Iowa) and Reece (Democrat from Tennessee). Except one, all are from States west of the Mississippi. The administration members are: Mr Patterson (Assistant Secretary of Commerce), Mr Frank (Securities and Exchange Commission), Mr Oliphant (General Counsel of the Treasury), Mr Lubin (Commissioner, Bureau of Labour Statistics), Mr Arnold (Assistant Attorney General), and Mr Ferguson (Chairman, Federal Trade Commission). From the first, the Chairman, Senator O'Mahoney, has made formal efforts to assure nervous business men that the T.N.E.C. was no "witch hunt," and while these assurances have certainly relieved the tenseness of apprehension, the fears still stand.

The Hearings Begin

The sessions opened with an elaborate statistical description of the American economy, given by Mr Lubin, of the Bureau of Labour Statistics. His thesis was that the historic trends of American production and income had been broken in 1929, and that since then the economy had been continuously submerged, or subnormal. He was followed by Mr Thorp (now of Dun and Bradstreet, Inc.), with an account of the structural organisation of our economy—individual enterprise, small corporate enterprise and large corporate enterprise. The third part of the exposition was made by Mr Henderson, who offered an interpretative comment on the two earlier statements, with special emphasis upon the function of competition, or the functional consequences of the absence thereof. It would appear that these three statements were in the nature of a general preface, for they throw no direct light upon the future course of the hearings.

In somewhat the same way, this rather extended comment on Joint Committee hearings in general, on the prejudice that has developed toward them on the part of the business community, and on the composition and initial procedures of the T.N.E.C. is intended as a preface to future comment as the hearings proceed. For, on the whole, it seems likely that this Committee will make history. The somewhat cynical forebodings of last summer—that the Committee would stage a pre-election "ghost dance" as part of the campaign—have been completely dispelled. Its protracted preparations, its deliberate methods, and the total absence of announced preconceptions have given it prestige not always accorded such bodies.

The current business indices suggest that the upturn has flattened out. With automobile production up to about 100,000 cars a week, the motor industry has presumably reached something of a ceiling, and, for the present at least, is not exerting further upward influences on the economy. A period of consolidation is not beyond logical expectation, in which it might be expected that industry and trade in general would catch up with those elements that have so far led the recovery.

France

Parliament's Approval

PARIS, December 15.—After a further period of government by decree and an unusually long recess, Parliament has resumed work. Its first meeting with the Government concluded with the carrying of a vote of confidence by 315 votes to 241, nearly the same as the vote recorded at the beginning of October, when full powers were accorded to MM. Daladier and P. Reynaud to prosecute economic and financial recovery by decree. For the first time the Socialists voted with the Communists against the Government, while 29 Radicals and 18 members of the Socialist Republican

Union abstained. Briefly, a Conservative-Centre-Radical majority was disclosed. This was due to three factors: the popularity in the country of the Prime Minister's policy of peace and authority; the confusion and errors of the Left parties; and the refusal of the great majority of the Radicals to destroy the Government's majority.

Meanwhile, M. Reynaud obtained a favourable vote from the Finance Committee of the Chamber for his Budget Bill by making certain concessions, principally on the new taxes. And M. Daladier obtained approval from the Chamber for an expedited procedure for the voting of the Budget. Encouraged by these developments, and by happier economic signs both at home and abroad, the franc is firm, capital is coming back and rates of interest on bonds are still going down. The following table shows the movement of interest rates in recent months:—

	Rediscount Rate of the Bank of France	National Defence Bonds 2 years	Bons de la Caisse Autonome 18 months	Treasury Bonds		
				1 year	6 months	75/105 days
Before Nov. 4	3 %	4.50	4.50	4 %	3.50	3 %
On Nov. 4 ...	3	4.25	4.25	4	3.50	3
" 9 ...	3	4	4	4	3.50	3
" 14 ...	3	4	4	3.75	3.50	3
" 18 ...	3	4	4	3.75	3.25	2.875
" 25 ...	2.50	3.50	3.50	3	2.75	2.375
Dec. 2 ...	2.50	3.50	3.50	3	2.75	2.25
" 4 ...	2.50	3.50	3.50	3	2.75	2.25
" 6 ...	2.50	3.50	3.50	3	2.75	1.75
" 7 ...	2.50	3.50	3.50	3	2.50	1.75

Extra hours of work and new capital will no doubt lead to a revival of business which is indeed already perceptible. But the success of M. Reynaud's liberal methods is not yet assured: will they be adequate to cover the budgetary expenditure? Many critics are clamouring for new and more stringent economic plans. But the Government seems to fear that inflation and a reversal of the present favourable trend in the exchange market would result, if such a plan were launched before financial recovery is accomplished.

Improved Exports

Wholesale prices are still almost stable. The slight rise in November was seasonal; and the index of the cost of living in the same month stood at 124.3 (1930 = 100) compared with 118.6 in August. In general, French prices remain lower than foreign prices, as the following figures show:—

GOLD INDEX OF WHOLESALE PRICES (1913 = 100)

	1935	Averages 1936	1937	Sept., 1938
France	69	76	69	53
Great Britain	64	68	78	69
United States of America	68	69	73	66
Belgium	60	61	71	65
Netherlands	76	75	79	72
Switzerland	90	85	78	73

This means a revival in exports of all categories, which was particularly noticeable in November:—

(Francs 000,000 omitted)

	Nov., 1937	Oct., 1938	Nov., 1938
Imports:—			
Foodstuffs	1,012	1,152	1,099
Raw materials	2,339	2,237	2,216
Manufactured goods	586	489	555
Totals	3,937	3,878	3,870
Exports:—			
Foodstuffs	354	455	509
Raw materials	802	869	925
Manufactured goods	1,229	1,505	1,624
Totals	2,385	2,829	3,058
Deficit	1,552	1,049	812

If trade with the French colonies is excluded, the import surplus in November was no more than 584 million francs against 1,172 millions in November, 1937, and the present deficit is certainly more than met by invisible exports. This improvement, however, is less satisfactory if tonnage is taken into consideration. The import surplus has actually been diminished because imports have fallen from 4,720,000 tons in November, 1938, to 3,453,000 tons last month; and imports of raw materials have notably fallen, from 4,009,000 tons to 2,830,000, largely because of lower coal consumption. These figures are certainly symptoms of the world crisis,

but they are also signs of the rise in French costs and of the social legislation which considerably impeded deliveries from French industry.

Production and Prices

The Statistique Générale has just published its monthly figures showing industrial production in France (1928 = 100):—

	Oct., 1937	Aug., 1938	Sept., 1938	Oct., 1938
Index for seven groups (Groups No. IV, V and IX excluded) ...	86	72	78	...
I. Mines	94	70	90	93
II. Chemical industries	100	96	98	...
III. Paper	177	109	157	157
IV. Textiles	88	...	...	...
V. Leather	70	...	...	...
VI. Iron and steel	88	55	61	65
VII. Engineering	86	69	70	71
Automobile	83	86	99	...
VIII. Building	56	62	62	61
IX. Gas and electricity	126	125	123	...
X. Miscellaneous	113	97	101	...

In the motor industry, 13,892 automobiles were put on the road in October, against 11,246 in September and 11,480 in August.

Wholesale prices:— (1914 = 100)	Nov., 1937	Sept., 1938	Oct., 1938	Nov., 1938	Dec. 10, 1938
General Index	590	648	654	658	654
Domestic products ...	636	669	670	678	681
Imported products ...	506	612	626	623	607
Foodstuffs	591	635	635	637	629
Industrial products ...	590	660	670	678	677

Retail prices (1914 = 100)	Nov., 1937	Sept., 1938	Oct., 1938	Nov., 1938	Dec. 10, 1938
Lighting and heating	113.2	123.2	123.2	123.4	...
Clothing	102.3	100.4	100.7	102.0	...

In the week ended December 3rd, the number of persons unemployed was 367,834 against 367,106 in the preceding week and 337,983 a year ago.

Germany

The State's Needs

BERLIN, December 13.—The wealth and property of the Jews having been either already taken over by the State by tax, fine or levy, or so regulated that the authorities can seize it upon any new pretext, such as the Paris murder, the sceptical German is now asking what will be the next new source to be tapped. Most people seem agreed that "political Catholicism" offers the necessary excuse and that Herr Hitler will be a Henry VIII to the rich Austrian monasteries. Their wealth in land alone would ensure a large annual income (Klosterneuburg Monastery, for instance, owns a great portion of Vienna), and make possible the building of many new agricultural settlements, especially in Salzburg and the other Eastern provinces of the recently annexed State. The forest land they own would also be very useful for the German artificial silk industry. The need for securing this added wealth for State purposes becomes clear when one realises the large percentage

ESTABLISHED 1810

of the national income which is already being taken by the State. Dr Rudolf Brinkmann, Under-Secretary of State in the Ministry of Economics, recently stated that taxes, Customs duties, social insurance fees, etc., amounted in 1937 to Rm. 23,790 millions. This is the equivalent of 33.5 per cent. of the national income. During the present year these items will show a 22.3 per cent. increase over 1937, which means that the State is eating still more into the national income since the latter has not increased appreciably in the interval. In 1925, the percentage of national income taken by taxes was only 22.2.

The circulation of money and other instruments of credit has increased considerably during the past year, as is shown by the following figures:—

	Total Money in Circulation (in Rm. millions)	Total Reichsbank Paper Holdings (in Rm. millions)
October 31, 1937.....	7,282	5,628
October 31, 1938.....	9,856	7,574

This represents a 35.3 per cent. increase in money, and 34.5 per cent. in the paper holdings and collateral of the Reichsbank; and the annexation of Austria and Sudetenland is not sufficient to explain the increase.

No official statements about the Budget or the Reich's total indebtedness are available. In the many unofficial estimates which have been made, there seems to be general agreement that the total of the direct, consolidated and floating debts amounts to between Rm. 45 milliards and Rm. 50 milliards, which is not an unduly great burden *per capita* in the new Greater Germany of 80 million inhabitants. Many of the larger estimates which have appeared abroad have included indirect liabilities in the form of guarantees for exports, etc. But the exact amount of these is probably not known even to the Reichsbank officials themselves, and many of these debts will automatically disappear in the normal course of business.

Export Difficulties

The unfavourable trend of German export trade, the new Anglo-American Trade Agreement, the announcement of a British export offensive and the efforts of the United States in the South American market have created alarm in the Third Reich. While, as a consequence of the satisfactory exports of last year, imports in the first ten months of this year could be maintained at a level of about Rm. 4,497 millions, compared with Rm. 4,456 millions in the first ten months of 1937, exports in the same period have fallen from Rm. 4,826 millions to Rm. 4,324 millions.

This decline is the more severely felt, because while world prices were rising and the purchasing power of primary producing countries was increasing, German exports could only be maintained by large subsidies, which on the average amounted to some 30 per cent. The German economy can only contribute from internal trade some Rm. 800 to Rm. 1,000 millions for special export subventions, and the State itself has hitherto had to contribute some Rm. 500 to Rm. 800 millions. It provides itself with these sums by the re-purchase of blocked credits and foreign bonds.

Now the Reich sees itself, owing to the political situation, committed to an immense armament programme and, for reasons of internal politics, the Government is carrying through a gigantic building programme. Subsidising exports becomes correspondingly more onerous. In these circumstances it is understandable that the Export Credits Guarantee Bill, introduced into the House of Commons by the President of the Board of Trade, Mr Oliver Stanley,

and the contemplated formation of export organisations and campaign funds in England have called forth great disquiet. It will be hard to parry the British offensive without further financial strain. The German Press, which welcomes the granting on the part of Germany of extensive credits for goods to various countries in South-Eastern Europe, designates the prospective English guarantees as pure political credit.

In Germany itself extensive measures for promoting exports will be taken. While it has hitherto been possible, through the mobilisation of foreign credits and by means of the Austrian and Sudeten German reserves of gold and exchange, to maintain imports, in future still higher exports will be needed to pay for raw material imports. Apart from a war chest that cannot be touched, there can be no appreciable amounts of gold and exchange now available. The chief troubles which face German exporters are too high prices; difficulties in getting raw materials; overlong delivery periods because of excessive State claims upon capacity; official control of raw materials and exchange; and finally political, Customs and exchange difficulties in foreign markets.

Because the claims on German industry made by Government orders of all kinds are overwhelming, there are really only two ways of increasing exports, each of which requires the assistance of the State. The first method involves the reduction of Government orders, whereby capacity would be freed for exports. Nazi politics and the prosecution of a "dynamic" foreign policy make any reduction in Government orders improbable. The second method consists in the reduction of the supply of goods for internal consumption. The supply in the internal market of certain goods is already inadequate, and a further reduction can only be effected by drastic intervention by the authorities.

Dr Schacht's Mission

The visit to London of Dr Schacht, president of the Reichsbank, has important implications, although the visit will be officially designated as private. As is well known, Germany has declined to welcome the Commissioners of the Jewish Relief Organisations, to negotiate about Jewish emigration. The persecution of the Jews in November, however, has prejudiced business relations with foreign countries to such an extent that the Government now sees the need to come to an understanding with other countries about Jewish migration.

It is, in fact, semi-officially admitted that Dr Schacht will discuss the Jewish question in England. Hitherto the German Jews have been turned out practically without means; in future they will be allowed to take with them the tools of their trade to earn a new livelihood in foreign lands. The difficulties of this plan lie in the attitude of foreign countries to the import of German goods in the hands of emigrant Jews.

Possibly Dr Schacht will also discuss the question of an international loan, from the proceeds of which Jewish emigration might be financed. Because Dr Schacht is opposed to involving the Reich in fresh debt to foreign countries, however, the Jewish loan is hardly likely to be concluded.

Dr Schacht will also initiate discussions with the competent British authorities about the revival of international trade. He has set himself the task of expounding in London the idea conceived by Herr Funk of a three-sided trade agreement between Great Britain, the United States and Germany. The chances of such an agreement are not regarded very optimistically, because of the fear that England in return for business engagements will demand political concessions from the Third Reich. As a third object Dr Schacht hopes to bring about an increase in British-German trade.

The introduction of British export subsidies has resulted, according to the German view, in a noticeable setback in the negotiations for an international coal cartel. In the long protracted negotiations between Great Britain, France, Belgium, Holland, Poland and Germany it was in the end possible to work out at least the outline of an understanding, as promoted by the European Coal Export Convention in the summer of last year. While England in the Coal Cartel had a quota of 20.9 per cent., against Germany's 48.4 per cent., England claims in the Coal Cartel a quota of 50 per cent. As base year Germany would like to have 1937 or, at most, the last three years, while on the other hand England wants a ten-year base period. Both demands become intelligible, if it is borne in mind that English exports of coal between 1930 and 1937 fell from 55.76 to 52.09 million tons, while, on the other hand, German exports rose from 20.31 to 38.61 million tons.

Eire

Decline in Population

DUBLIN, December 3.—The following figures show that the balance of trade is improving, although it would be more satisfactory if the reduction in the import surplus were the result of an increase of exports rather than that of diminished imports.

	Imports £	Exports £	Import Surplus £
Oct., 1936–Sept., 1937	43,897,901	23,200,288	20,697,613
Oct., 1937–Sept., 1938	41,741,627	23,006,707	18,734,920

The Registrar-General estimates that the population of Eire in the middle of this year was 2,948,000, which is 20,000 less than a year ago. As the natural increase of births over deaths was 11,402 the emigration must have amounted to about 31,000. This emigration is part of the general movement away from the countryside; another part of the same stream flows to the Irish towns, particularly Dublin, and is responsible for much of the urban housing problem. The gloomy forebodings of the Banking Commission about the housing programme are proving to have been justified, as the Dublin Corporation has announced its inability to proceed with its schemes, unless the Government's financial contribution is substantially increased. An experiment is being made in charging economic rents in certain zones, but, even if this be a complete success, the problem remains very serious, if not insoluble. The trouble is partly caused by the high cost of building, which is itself the result of trade union restrictions.

It is not only in the building industry that the attitude of organised labour is the subject of complaint. The success of the new protected industries is threatened by inflated labour costs. Mr Lemass, who is responsible for the protective policy, has recently warned both employers and employed that they have been abusing the shelter of the tariff, and has expressed doubts whether his industrial programme can succeed in overcoming the numerous obstacles it has encountered.

The study of Mr Lemass's speeches during the last six years would form an interesting study in protectionist psychology. From a tone of unbounded optimism, they have shown the development of increasing dissatisfaction and the growth of a disposition to blame employers, workers and the consuming public for the difficulties he has experienced. He has now reached the stage of stating that, if his policy does not succeed, the Irish people will have been proved "unfit for nationhood." It is possible, of course, that what is wrong is not the people but the policy.

The Plight of Farming

What is really at the root of most of the difficulties of the secondary industries is that agriculture is far from prosperous. Although the agricultural price index has risen during the year from 106.3 to 114.1 farmers' costs have also risen, and production is in many cases barely profitable. The Government has decided to set up a Commission to investigate agricultural conditions, and there is no doubt that this is sound—provided that the right type of commission is chosen. The problems to be solved are technical rather than economic, and there is need of a thorough overhaul of existing methods of production in the light of the most modern advances in agricultural science and technique. If a body of experts is selected with orders to do its work rapidly, there is every reason to hope that the income of the farmers could be improved in the course of a few years, but a commission composed of politicians would probably do no more than recommend relief from rates and other superficial palliatives. Recent utterances of some of the Ministers give ground for the belief that the vital importance of encouraging exports—visible and invisible—has at last been appreciated, and it is not perhaps too much to hope that, on this occasion, the commission will be select in its composition and businesslike in its procedure. Certainly the necessity of reconstructing the Irish agricultural export trade cannot be stated with sufficient emphasis.

Until politicians learn that an individualist economy depends for its working on the maintenance of an equilibrium between costs and prices mistakes will continue to be made. This lesson is being painfully learnt in France, and the time is coming when it will be learnt in Ireland. Unfortunately it is the public that has to pay for this expensive education of its masters.

Hungary

Wealth of the New Areas

BUDAPEST, December 3.—With the restored territories Hungary's area has been increased by 12,400 square kilometres with over one million inhabitants; and the total population now exceeds 10 millions. The density of population in the restored territories is 86 per sq. kilometre, compared with 95 in the rest of Hungary. Fifty-eight per cent. of the new population is on the land, which means that the country's economy is more than ever weighted towards agriculture. The 16,173,000 registered acres of Hungary's territory suitable for agricultural production have been increased by 2,160,000 acres, or 13.3 per cent. To two million acres of forest-land in Lesser Hungary are now added 470,000 acres, a welcome increase of 23.5 per cent.

The increase of arable land in the various branches of agricultural production is as follows:—

Wheat growing land	350,000 acres, an increase of 13.5 per cent.
Rye	164,000 " " " 15.6 "
Barley	190,000 " " " 23.4 "
Oats	90,000 " " " 22.4 "
Potatoes	96,000 " " " 18.9 "
Sugar beet	45,000 " " " 54.7 "

The average wheat production, which is 20 million quintals, increases by 2.5 million quintals, this having been the average wheat production of the restored territory. Hungarian surplus wheat for export, the disposal of which was a matter of great concern in the past (through the maintenance of artificial internal prices Hungarian wheat was unable to compete in the world market), will thus be considerably greater. For this reason Hungary will be linked economically even more closely to Germany, which is the largest consumer of Hungarian wheat.

Industrially, the timber, iron-ore, magnesia, antimony, caolin and limestone stocks in the restored areas will much facilitate the supply of raw materials to Hungarian producers. The number of industrial establishments is very small in the restored areas, for their development was not supported by Czechoslovakian economic policy. According to the Czechoslovak statistical returns for 1930 the manufacturing industry of the territory now restored gave employment to 25,000 workmen, while the number of industrial workmen in Hungary amounts to 275,000. The greatest number of workmen, 9,300, are employed by the industries producing foodstuffs; clay, stone and glass industries employ 4,000 workmen, iron and machine industries 2,700 and the paper industry 1,200. The territory is most valuable from the point of view of the Hungarian consumption goods industries (textile, clothing, leather), for it will provide an attractive new market.

Growth of Industrial Exports

In the first ten months of 1938 Hungary's imports of finished industrial products amounted to 98.8 million pengös (about £3.5 millions at par) and the exports of finished goods to 103.8 millions (about £3.7 millions at par). This is the first time that the exports of finished goods have exceeded imports, proving that Hungary is becoming industrially more and more self-sufficient. The most significant item in this class of export was the 64 million pengös received for machinery and electrical goods and the products of the iron and metal industries. Imports of textile fabrics were 10.3 million pengös, while exports were 10.2 millions.

According to the returns of the Hungarian National Bank for November 23rd, notes in circulation are 740 million pengös, while the liabilities of the State amount to 265 million pengös. Of these liabilities, 74 million pengös were employed to exchange Czechoslovak currency in circulation in the restored areas.

Books and Publications

Australia's Income

The national income of a country may be measured either by adding together all the incomes received by persons, firms, institutions and governments, or by estimating the net value of all goods and services produced. This book* gives detailed estimates, worked out by the latter method, for Australia in recent years, and also detailed estimates for 1928-29 to 1934-35, calculated by the former method. The two approaches give very similar results, the first yielding a figure about 5 per cent. lower than the second, and the discrepancy is due mainly to evasion of income-tax.

Australia's national income reached a temporary peak of some 768 million Australian pounds in 1928-29. It fell to 528 millions in 1931-32, and thereafter rose every year until, in 1937-38, it reached the vicinity of 814 millions—higher than ever before. Internal prices in 1937-38 were still slightly below the pre-slump levels; and the authors suggest that

real income produced in the last three years has apparently reached a ceiling, and temporarily at any rate seems incapable of further expansion.

The figures quoted exclude transfer payments, such as old-age pensions and interest on war debt. Nor do they include indirect taxation—quite rightly, for the value of the services produced by the Government, and paid for out of tax receipts, is included.

The estimates of "incomes received" are based on income tax returns and on various data relating to the incomes of

wage-earners and others below the level of exemption from income tax. They are more reliable than any previous estimates, largely because the authors have had access to the results of an extensive inquiry (yet unpublished) by Mr S. T. Carver into non-taxable incomes.

The estimates of "production," too, seem to have been carefully made, although a number of somewhat arbitrary decisions, notably about depreciation, have been unavoidable. The authors admit that "shrewd conjecture" is still indispensable, but their book carries conviction (reinforced by their reputations) that the estimates are fairly near the mark.

Australia has what is virtually a census of production every year, and in the past it has been fairly common practice to regard the resulting figure for the net value of the output of goods as indicating the trend of national income. This, the present volume argues, is misleading. The part played by services ("tertiary production") has tended to become more important: and at present it accounts on the average for something like half the national income; and services account for a bigger proportion of income in slump years, when commodity prices are low, than in boom years, when they are high.

One interesting feature of the book is the comparison made between the average income available per head of the working population in different countries (reduced to dollars with the purchasing-power they had in the decade 1925-34). The United States heads the list with 1,397 dollars per head. Great Britain comes fourth with 1,069 dollars per head, and Australia sixth with 1,012. Taxation, both central and local, is low in Australia compared with other countries. During recent years it has stood at about 16 per cent. of the national income, against 25 per cent. in Great Britain.

The authors express surprise at the marked upward trend which their researches reveal in the Australian national income, beginning in about 1921. They attribute it mainly to the diversion of workers, under the stimulus of tariffs, from "primary" production into "secondary" and "tertiary" production. The meaning of their statement that "the years from 1890 to 1920 were years of diminishing returns in primary production" is, however, very obscure. It may perhaps conceal a sound argument for protection, but if so it conceals it very well. The growth of prosperity after 1921 was surely due to technical progress, external borrowing, and high export prices. The fact that real income per worker is still lower in Australia than in Great Britain—the authors guess that it was about 8 per cent. lower in 1937—despite the greater resources per worker, is not a very good argument for seeking greater self-sufficiency.

There are interesting chapters on investment and savings, the multiplier, and national income in relation to future policy. State expenditure on rural investment and on housing proposed as "a counter-measure against possible depression."

Shorter Notices

"An Atlas of Far Eastern Politics." By G. F. Hudson and M. Rajchman. Faber and Faber. 160 pages. 7s. 6d.

Luminous text and simple telling maps set Japan's aggression in China in the full context of Chinese history, geography, economics, politics and strategy. One pole of the world's destiny rests in the Far East, and this book will notably contribute to that understanding of Far Eastern questions which is more and more widely sought.

"International Combines in Modern Industry." By Alfred Plummer. Second Edition. Pitman. 302 pages. 10s. 6d.

Dr Plummer's straightforward survey of industrial associations which cut across State frontiers was first published four years ago. Since then raw material cartels and armament rings have made more history, and the new edition incorporates their activities. Coke, steel and the Vickers combine now have pride of place.

BRITISH INDUSTRIAL PROFITS

A Survey of Three Decades

(By Hargreaves Parkinson*)

THERE are a hundred and one ways of describing profits. They are the goal of business effort, the fountain of dividends, the basis of Stock Exchange values and the raw material of Budget surpluses. They are both the stimulus and the reward of successful business administration. They determine, in the last resort, the location of industry, the organisation of labour and the size of the business unit. They are a lodestone drawing men to great cities or tropical deserts. They are a key to unlock the treasure chests of investors. Without them, black type has no prospectus appeal and company balance-sheet valuations of capital assets have no meaning.

I. The Economist's Figures

FOR the last thirty years *The Economist* has analysed, uninterruptedly week by week and quarter by quarter, the published reports of a considerable number of British companies whose shares, for the most part, are dealt in on the London Stock Exchange. Thanks to the courtesy of company secretaries and our own pertinacity, the size of our representative sample has grown from 775 companies with net profits of under £47 millions, received in 1908, to 2,279 companies with profits of £281½ millions, published in 1937. The last-mentioned figure is equivalent to rather less than one-fourth of the total profits assessed for income tax under Schedule "D," and about 5 to 6 per cent. of the total national income as defined by Professor A. L. Bowley or Mr Colin Clark. The computations of "profits" are obtained, in each case, after allowing for the payment of debenture interest but not of preference or ordinary dividends.

The figures are not identical, however, with those rendered by the companies to the revenue authorities for inland revenue purposes. In the first place, income-tax allowances for "wear and tear" are somewhat arbitrary, and the amounts actually deducted by the companies in their published accounts are likely, over periods of years, to be nearer the true requirements for depreciation and obsolescence. In the second place, the profits figures disclosed to shareholders are subject, before publication, to adjustments by way of allocations from or to unspecified "internal" reserves, whose effect is to iron out fluctuations in real earning power, to some extent, from year to year. Our totals, again, do not necessarily reflect the true aggregate earnings of holding companies, where the latter's subsidiaries make their own reserve appropriations and the parent companies bring in, as profits, only the net balances which the subsidiaries declare as dividends. Finally, taxation and the extent of the provision made for its incidence, frequently in advance, are disturbing factors whose importance has increased with the growth of taxation in recent years.

Subject to such limitations—which are inherent in the nature of the data—the figures may claim to afford a picture of earnings in an increasingly representative cross-section of British industry. The results are the more useful, contemporarily, because they are available as a rule, anything up to two years before the publication of the corresponding inland revenue figures, and, historically, because

* Mr Hargreaves Parkinson, who is now Editor-in-Chief of *The Financial News*, was until June last Associate Editor of *The Economist*.

they are the only available source of detailed evidence on such questions as the extent to which profits are paid out in dividends or put to reserve, the dimensions of prior charges, etc. It is proposed, therefore, in the following pages, to use the figures as the basis of a detailed survey

II. The Trend of Profits, 1908-1937

ALTHOUGH the size of *The Economist's* sample of British company earnings has increased progressively during the last thirty years, its internal make-up has remained, in essentials, remarkably similar throughout the period. Table I shows that, at various key dates, before and since the Great War, domestic industry has provided approximately two-thirds of the total profits in each year's sample, while industry carried on mainly overseas has provided about one-eighth to one-tenth and commerce and transport and finance, respectively, about the same proportion. The figures, incidentally, do not include the results of banks, or of home or foreign railways or of gold- or base-metal mining enterprises. The "weighting" of individual groups of industries, within these broad classifications, has varied considerably from time to time, in harmony with the vicissitudes of fortune in different groups of industries. On the whole, trades whose operation involves the employment of large amounts of capital have tended to seek the facilities of the Stock Exchange on a wider scale than those in which individual skill in management and other non-

of the trend of British industrial profits during the past thirty years. The survey will first examine the course of profits from the year 1908 onwards, and subsequently relate their trend to the course of interest rates and Stock Exchange values during the same period.

the purpose of such an enquiry. The resulting figures will have an unknown time-lag; for an interval of weeks or months may elapse between the closing of a company's books and the subsequent preparation, auditing, certification and publication of its accounts. How long is the interval? To answer that question two detailed analyses

CHART I.—DATES ON WHICH BRITISH COMPANIES MADE UP THEIR ACCOUNTS

(based on 2,271 companies, whose reports were issued during the twelve months to June 30, 1937)

have been made of the 2,271 company reports issued during the twelve months from July 1, 1936, to June 30, 1937—a more or less "normal" year, lying midway between recent periods of depression and boom. The results are set out in Table II. The first enquiry, which involved an examination of the accounting date of every company, revealed that company accounting has well-marked periods of peak and off-peak "traffic." If the sample is accepted as representative, it appears that, of every 100 British public companies, 38 close their books on December 31st, 15 on March 31st, 11 on June 30th and 10 on September 30th. In other words, some 74 per cent. of accounts are made up to one of four dates each year, leaving only one-quarter of the whole spread over the remaining 361 days. The diagram above (Chart I) explains why the accounting profession would welcome a measure of "staggering" to obviate the inevitable congestion which occurs, particularly in the early weeks of each year. Using an average weighted by the number of companies at every accounting date, we find that the mean

TABLE III.—LARGE AND SMALL COMPANIES
(Based on analysis of reports published during 12 months to June 30, 1937)

* Weighted by numbers of companies.
† Weighted by amount of profits.

material factors are proportionately more important. The sample, therefore, tends towards under-representation of groups like retail trading, food and catering and some branches of the textile industry; and, possibly, towards over-representation of steel, engineering and other "capital goods" trades whose profits are liable to wider cyclical swings. To some extent, however, this will be offset by the smoothing-out effect of directorial adjustments before striking profits. And the close correspondence of the totals with the make-up of the Stock Exchange Lists makes them particularly relevant as a basis for generalisations in an investment, as distinct from an industrial, context. In the later war years and immediate post-war years, company profits, being shown after Excess Profits Duty, and Corporation Profits Tax, understated the industrial profits of the period. In 1921, conversely, E.P.D. repayments tended to raise published profits above true earnings.

PUBLICATION AND ACCOUNTING DATES

The essential traits of *The Economist's* figures having been described, their behaviour in the last three decades may now be discussed. The objective is a series of index numbers of profits earned, as nearly as possible within each calendar year. Clearly, a conglomeration of reports published between January and December will not serve

date of reports published in the January-March quarter is December 21st; in the April-June quarter, February 8th; in the July-September quarter, April 27th; and in the October-December quarter, August 17th. The average accounting date of reports published during the twelve months ended June 30th is October 31st of the preceding year.

The present inquiry, however, is concerned not with individual companies, but with aggregate profits. As Table III shows, a small minority of big companies is responsible for much the greater part of each year's earnings. In the period under review a handful of "millionaire-profit" concerns, representing less than 2 per cent. of the total, provided over a third of all the profits; while companies with £100,000 or upwards of annual earnings, representing only a little over one-fifth of the whole by number, secured more than four-fifths of the total profits. A supplementary analysis has, therefore, been made of the accounting practice of these large concerns, and the resulting averages have been weighted by the profits earned, to each accounting date, by every company with a figure of £100,000 or more. This calculation gives December 5th as the mean date to which 82 per cent. of the profits declared during the twelve months to June 30th, 1937, were made up. We may conclude, therefore, that by taking the reports issued during the twelve months to June 30th in any year *x*, we shall get a reasonably accurate basis for indices of profits earned in the calendar year *x-1*.

PROFITS CYCLES

We are now, accordingly, in a position to assemble the data accumulated by *The Economist* since the beginning of 1909. The figures appear in Table IV, and are graphically set out on Chart II. As the constituent companies in *The Economist's* sample are not identical throughout, the profits index has been calculated by using the "chain" method. The year 1935 has been chosen as the base for the index as being the date of the last Census of Production. It is intended to publish a chain index of profits calculated in this manner in each quarterly summary of profits in future, and the use of the 1935 base should tend to facilitate comparison with other indices of British economic life. Incidentally, 1935 is the base year at present employed for *The Economist's* index of Business Activity.

The results of the preliminary survey of the data are striking. They suggest that from 1908 to 1913 profits were rising steadily; that the Great War probably inter-

rupted a cyclical downswing, and raised earnings to a point far above anything previously achieved; that the collapse of trade activity and prices in 1921 brought down earnings, in the course of a single year, to the lowest level since the early days of the War; that the pace of the ensuing recovery was perceptibly checked when Great Britain went back to the gold standard in 1925; that the depression of 1930-32 cancelled all the gains of the nineteen-twenties; and that it was only in 1937 that profits at long last exceeded the level attained during the post-War boom.

The figures bring out at least one fact with startling clarity. Industrial profits are among the most sensitive of phenomena to the fluctuations of the trade cycle. Within two years, between 1929 and 1931, our index of aggregate profits declined by as much as 37½ per cent., from 112½ to 70½ (1935 = 100). During the five recovery years 1932-37, the index rose nearly 100 per cent., from 66 to 131½. So long as profits are susceptible to variations of this magnitude, there can obviously be slight hope of stability in Stock Exchange prices or in the income of individuals or institutions holding ordinary shares, or in the considerable part of the total revenue of the British Government which is drawn—directly or indirectly—from profits.

COMPARISON WITH INCOME TAX RETURNS

In view of the fact that *The Economist's* sample of companies has been increasing in size throughout the whole period covered by the figures, it may be worth while to check its course by that of some other index compiled under different auspices. The most satisfactory index for the purpose is obviously the return of Schedule D profits assessed by the Inland Revenue for income tax purposes. The returns of gross income from pre-war days to the date of the latest return are set out in Table V. As the footnote to the table shows, the Inland Revenue figures include various trades and professions that are excluded from *The Economist's* returns. Other factors—such as changes in exemption levels, the inclusion of weekly wage-earners in the figures for 1908-09 to 1915-16, the use of the "link" method to take account of the exclusion of Southern Ireland from the figures from 1922-23 onwards, the assessment, before the financial year 1926-27, of profits on a three years' average, and, above all, the fact that the last available figures are estimated and not actual—also serve to stress the rough-and-ready nature of any gross profits index which may be constructed from Inland Revenue

data for checking purposes over so long a period. Nevertheless, if the income tax assessments made in 1936-37 are taken as relating to profits earned mainly in 1935, the assessments of 1935-36 to profits of 1934, and so on, and are expressed as an index (income earned in 1935 = 100), it will be found that the income tax figures are something like a smoothed out curve of *The Economist's* figures. No great scientific accuracy can be claimed, obviously, for the Schedule D index, nor is it necessary for the present purpose. All that is required is a rough—but independent—yardstick to test the representative claims of *The Economist's* sample of results.

An examination of the two series, which are contrasted in Chart II, reveals that the Schedule D returns show a considerably smaller drop than *The Economist's* figures (which, of course, are based on annual, and not on "smoothed-out" triennial average profits) in the years between 1920 and 1925, and similarly a less marked setback between 1929-1932-33. Indeed, during the post-war period there is a tendency for the Schedule D

figures to run higher than *The Economist's* figures, which suggests that, on the whole, the more depressed post-war industries have been somewhat overweighted in *The Economist's* index. On the main issue, however, the comparison is reassuring; for it shows that the use of a changing and increasing annual sample of company returns in *The Economist's* index does not vitiate the broad conclusions which may be drawn as to the general trend of profits during the thirty-year period—though the 1908 figure must obviously be less accurate than, say, the 1934 figure, when compared to a 1935 base through a "chain," which leaves room for cumulative distortion.

POST-WAR CHECK TO PROFITS

If a ten-year moving average be taken of *The Economist's* chain index figures of profits, and be charted in such a way that the figure shown for 1912-13 is the arithmetical average for the years 1908-17, the figure for 1913-14 is the mean of those for 1909-18, and so on, the

disturbing effect of eight to ten-year cycles of profits is eliminated, and the general direction of earnings throughout the period can be perceived more clearly. The moving averages are given in Table VI and shown graphically in Chart II. A glance at the chart shows that whereas the trend of profits was rising steadily during the years before, during and immediately after the war, it subsequently became almost stationary. If the average rate of progress maintained by the figures between 1908-17 and 1918-27—which was almost exactly 3 per cent. per annum—had been maintained throughout, the figure for 1928-37 would have been 127½ instead of 107.4, the figure actually recorded. For some reason, the growth of profits was sharply checked in the post-war period. The effect of wartime inflation of profits on the ten-year average is clearly not, in itself, an adequate explanation. The returns from, say, 1921 onwards are free from that influence, but the average for 1928-37 is only 107.4, and the average for 1927-36 only 104.9, against 105.4 for 1921-30 and 105.7 for 1922-31.

What, then, were the forces which applied the brake to profits after the war? Industrial earnings are the resultant of many differing factors, the most important of which obviously is the prevailing rate of business activity at any given time. The volume of national production, we know, was rising steadily before the war. It was considerably (though unequally) expanded during, and immediately after, the war. In the nineteen-twenties its rise was, on the whole, much more gradual, with many vicissitudes. Only in the 'thirties, after another temporary setback, was its

annual rate of growth again really striking. Messrs G. L. Schwartz and E. C. Rhodes have calculated (London and Cambridge Special Memorandum No. 47) that the output of the factory trades comprised in the Census of Production increased at an average annual rate of 0.9 per cent. between 1924 and 1930, and at an annual rate of 3.5 per cent. between 1930 and 1935. In the former period the net annual rate of increase in profits, according to our chain index, was negligible and in the latter period it was less than 1 per cent. per annum (the recorded figures being: 1924, 95.6; 1930, 95.9; 1935, 100). Profits appear, on the whole, to have risen more than in proportion to the growth of industrial production during the war and the years which immediately preceded and succeeded it, and to have risen in less than due proportion in more recent years.

This brings us to the second basic factor in the determination of industrial profits, whose importance is subordinate only to that of the volume of production. Table VI and the ten-year averages in Chart II show that commodity prices rose sharply when profits were increasing and declined steeply in the period when profits stagnated. Here, it would seem, is one key to the disappointing course of profits in the decade-and-a-half after the war. Rising and falling prices affect profits directly through changes in inventory values and in the proceeds secured by "marking up" selling prices by fixed percentages of prime costs. Indirectly, they tend to modify business psychology, competitive power in export markets and ultimately the volume of production itself.

III. Profits and Interest Rates

THE course of profits from the special viewpoint of the Stock Exchange may next be examined. At the outset it is necessary to obtain some common measure between profits and "capital" in the special Stock Exchange sense. Under British law all company securities—shares, stock or debentures—must have a nominal monetary value, and that value is adopted by the Stock Exchange as the base of its quotations. Interest paid on debentures has been deducted in all cases before the striking of the profit figures which form the basis of this Survey. The "capital" on which these profits have been earned is, therefore, the paid up preference and ordinary capital of all the constituent companies taken at par. Of the true capital, in the economist's sense, employed by these companies in their businesses, there is no measure.

What has been the average return on "capital," defined in these legalistic accounting terms, during the last three decades? The data necessary for an answer appear in Table IV, where particulars appear of total preference and ordinary capital, the amounts paid each year in preference dividends, the dimensions of residual profits available for ordinary shareholders, and finally the overall rates of return, per cent., on total capital and on ordinary capital. The course of earnings rates from 1908 to 1937 is shown graphically in Chart III, on which appears also a third curve, showing the trend of interest rates (as measured by the average yield on 2½ per cent. Consols, according to the figures set out in Table VII).

The first significant feature revealed by a comparison of the trend of the chain index of absolute profits, used in the preceding section of this survey, with the trend of earnings rates on total capital and on ordinary capital (in the accountant's sense) is that while all the curves have the same timing for their fluctuations, their trends are not identical. It has already been shown that, over the whole period of thirty years, the trend of absolute profits has been on the whole upwards, though the net rate of progress has been slower in the second than in the first half of the period. The curves of earnings both on total capital and ordinary capital, however, reveal, on the whole, a tendency to rise before and during the war, and to become stationary or actually to decline since the war. The reason is, obviously, that the curves are based on ratios of earnings to "accounting capital," and, since the war, earnings have

tended to increase less rapidly than capital. In other words, British industrial companies as a whole have tended to become more highly capitalised.

CHART III.—RATE OF EARNINGS ON SHARE CAPITAL 1908-37

This tendency is clearly shown by the smoothed-out curves of absolute profits and earnings per £100 of total capital and ordinary capital respectively, based on the ten-year moving averages set out in Tables VI (b) and VIII and plotted (on a logarithmic scale) on Chart IV. How far the rate of return on *true* capital in the economic sense has varied during the last thirty years one cannot say. On that point the figures are inconclusive, but there is a strong presumption that the trend has, in fact, been broadly similar to that of percentage earnings on accounting capital. The period covered by our survey is sufficiently

TABLE VII.—AVERAGE YIELD ON 2½ PER CENT. CONSOLS

1922	4.41		
1923	4.29		

lengthy to allow long-term influences to have play. And in the long run there is certainly a tendency for accounting capital and true capital to approximate to each other. In the short run a company's accounting capital is relatively constant, and the apparent earnings return upon it fluctuates mainly under cyclical influences. In the longer run however, if a company's shares are quoted well below or well above their par value on the Stock Exchange, its directors will tend either to write off a considerable part of its accounting capital as having been "lost" or to issue bonus shares which, by "watering" the capital account, bring the apparent earning power ratio nearer to what is considered to be the norm. Thus, in the long run, accounting capital tends to be based on actual earnings which, it

1918-27	11.10	14.45	4.6				

may be argued, are themselves the best long-term index of the value of true capital.

So far so good. But there is a further influence which, in fact, determines the multiplier used in determining at what figure a given amount of profits shall be "capitalised," and that influence is the trend of general interest rates. When interest rates are high the number of years' purchase at which companies capitalise their earnings level (when they are adjusting their capital account) will be less than when general interest rates are low. Thus, in the long run, the curve of percentage earnings on accounting capital will tend to be a function of interest rates. In fact, interest rates were gradually rising before the war, and they rose considerably during the war years. Since the war, however, their tendency has on the whole been downwards, though their decline was arrested for a time in the nineteen-twenties and was accentuated in the early nineteen-thirties.

That these long-run tendencies have been operative in

CHART V.—PROFITS AND SHARE PRICES

the period embraced by the present inquiry is revealed by the obvious correlation between the interest curves and the ten-year moving averages of the percentage return on total and ordinary capital ratios.

A further point emerges from the figures. It will be observed that, during the whole of the thirty years, the return on ordinary capital—the risk-bearing "equity" portion of the companies' total capitalisation—has been higher than the return on total capital (including preference shares). The disparity between the two, it will be seen, tends to be greatest (a) when profits are high and (b) when interest rates are high. Its existence is due to the effect of "gearing"; that is, to the fact that part of the total capital (i.e. that which takes the form of preference shares) is entitled to an identical monetary return in good times and in bad.* From the investor's point of view, there is an important rider: that the best time to buy ordinary shares is when profits are low. The reason is that the market invariably bases its quotations on prospective earnings yields, and in bad times the effect of "gearing" in prising up the apparent percentage return on ordinary capital is less considerable than in years when total profits are high.

* Actually, total preference dividends tend to fluctuate to some slight extent with current earnings levels, since in bad times a certain number of marginal companies fail to earn or pay their preference dividends. This tendency, however, does not affect the aggregate figures to any serious extent.

IV. Profits and Share Values

To what extent have ordinary share prices followed the upward trend of profits during the last thirty years? The question has high practical importance for investors. Modern theory tends to stress the dynamic rather than the static aspect of Stock Exchange investment. In the long run, it is argued, holders of a portfolio of ordinary shares, spread over a relatively large number of different industries, can look forward to securing substantial appreciation of their capital, which will be denied to holders of fixed-interest capital. This argument is subject to two provisos: first, that the shares are held for a fairly considerable time (the argument is long term, not short term); and, secondly, that the trend of industrial activity and profits shall be generally progressive. The experience of the past thirty years satisfies both conditions. Have the average

TABLE IX.—ORDINARY SHARE VALUES, 1908-37 (London and Cambridge Index of Industrials, 1935 = 100) (a) Yearly Averages

Year	Index No.	Year	Index No.	Year	Index No.
1908	40	1918	64	1928	103
1909	40	1919	76	1929	102

1914-23	59	1921-30	80	1928-37	90

prices of ordinary shares tended, in fact, to rise *pari passu* with industrial profits?

Table IX shows the course of Stock Exchange prices for representative ordinary shares during the last thirty years, according to the index compiled by the London and Cambridge Economic Service. In Chart V the figures are contrasted with those of the chain index of absolute profits used elsewhere in this survey. The results obviously go a considerable way to confirm the claims of the ordinary share as a progressive medium of investment in an expanding economy. During the past thirty years (taking the yearly average figures of Table IX in every case) the index of ordinary share values has had four separate "highs"—in 1911-13, 1919-20, 1928-29 and 1936—and each peak has been higher than its predecessor. Incidentally, there has been a tendency for rising share values to be arrested in each major Stock Exchange cycle some few months before profits took their downward turn. Cyclical fluctuations in share values have been considerable, but on the whole they have been less extreme than fluctuations in profits.

It is obvious that interest rates have had an important influence on the course of share values throughout the period (as will be seen by a comparison of Charts V and IV). In the period of rapidly rising interest rates, during and immediately after the war, the tendency of holders to demand a higher average income return on their ordinary share holdings resulted in a less well-marked increase in share values than in profits. The same tendency continued, but became less well-marked, in the decade after the war, when interest rates, though still relatively high, were lower than at the peak of 1919-20. Since the War Loan conversion operation of 1932 set the seal on lower interest rates,

however, profits and share values have shown a close correspondence, though the latter turned downwards in 1937 while the trend of the former was still upward.*

IS THE "EQUITY THEORY" JUSTIFIED?

The conclusion which is suggested by the facts elicited in this section of our survey is that while ordinary share values do reproduce broadly in the long run any persistent upward tendency in industrial profits (and to that extent

TABLE X.—"EARNINGS YIELD RATIOS" (Chain Index of Profits ÷ Index of Share Values)

Year	Yield Ratio	Year	Yield Ratio	Year	Yield Ratio
1908	0.90	1918	1.38	1928	1.05
1909	0.94	1919	1.41	1929	1.10
1910	0.99	1920	1.54	1930	1.17
1911	0.98	1921	1.29	1931	1.10
1912	1.09	1922	1.32	1932	1.07
1913	1.41	1923	1.19	1933	0.99
1914	1.36	1924	1.33	1934	0.99
1915	1.71	1925	1.30	1935	1.00
1916	1.99	1926	1.27	1936	1.01
1917	1.56	1927	1.17	1937	1.22

are a more progressive medium of investment than debentures or preference shares in periods of prosperity), the average level of interest rates is a factor of secondary, but very considerable, importance in determining their course. This will be apparent if "earnings yield ratios" are calculated by dividing the profits index, in each year, by the ordinary share index. The "earnings yield" is the return, by way of earned profits, on a share or group of shares purchased at the prevailing market price. Thus, if both indices are standing at 100 (as in 1935), the "earnings yield ratio" is 1, but if the profits index is 131½ and the share index 108 (as in 1937), the ratio is 1.22 (i.e. 131½ ÷ 108). If these ratios, calculated throughout the period covered by the two indices (see Table X) are compared logarithmically with the curve of interest rates (Chart VI), the correlation between the two is readily apparent. Thus the survey suggests the following rules: A rising profits trend will produce a more than proportionate rise in ordinary share prices if interest rates are simultaneously tending to decline (as they were, for example, in 1932-33). It will produce a less than proportionate rise if interest rates are also rising (as in 1915-20). The argument in favour of long-term investment in ordinary shares depends on the assumption that, in the future, conditions in both respects will continue to be favourable—in other words, that profits will continue, on

CHART VI.—INTEREST RATES AND THE EARNINGS YIELD FACTOR

the whole, to rise (even though, e.g., the population may become stationary or begin to decline), and that interest rates will continue, on the whole, to fall. The course of profits will itself be a function not only of general business activity, but of the trend of commodity prices as a whole.

* It is necessary, in making comparisons of this order, to contrast the trend of ordinary share values with that of "absolute" profits rather than with earnings on a given amount of ordinary capital in the Stock Exchange sense. Every index of share values which is correctly computed must take account of capital bonuses and "rights," whose effect over a period of years is to increase the nominal amount of a given Stock Exchange holding.

THE BUSINESS WORLD

Monopoly as an Investment

LAST winter many people found diversion in a game with the name of "Monopoly." The object was to win a "token" fortune, while the remaining players achieved "token" bankruptcy. The moral, if any, seems to be that in the game of monopoly there are more blanks than prizes—that monopoly, in fact, is not a good investment risk. That conclusion, in the wider context of Stock Exchange business, in real pounds, shillings and pence, is the thesis which the present article sets out to examine.

At the first glance, investors might be tempted to assume that the securities issued by a company holding an ostensible monopoly in any essential public service must necessarily be almost gilt-edged. The public, it may be argued, cannot dispense with the service offered; and none but the company can provide it. In fact, the abuse of monopoly in Tudor and Stuart times was largely responsible for the hedging about of many modern monopolies by all manner of stringent restrictions. It is not always possible to tell exactly where monopoly begins and ends. Indeed, there is some element of monopoly in a very large number of industries and perfect competition exists in hardly any. But for the purpose of this article the word can be restricted to those businesses whose monopoly status derives, directly or indirectly, from the law. The legislature, broadly, permits monopolies, in this sense of the word, to exist only in the public interest, where something more vital is at stake than the profit-earning capacity of the monopoly itself. A patent, for example, is a monopoly granted for a limited term, not primarily to reward the patentee but to encourage the making of new inventions. Some industries must be carried on by monopolies, otherwise they cannot be carried on at all. The supply of water through pipes to one's house is a service which clearly cannot be left to the play of unrestricted competition. In theory, admittedly, the grant to a company of the benefits of monopoly status should be required by the assumption of the obligation not to exploit it. The majority of those companies whose monopoly rights are more complete than the mere possession of a patent and have required more detailed application to the legislature, are subject to some statutory limitation of dividends. There is no exact name to distinguish this group of companies, enjoying a legal monopoly and subject, in return, to limitations on their dividend policy. For convenience, however, they may be called public utilities, and it is with them, rather than with the wider field of monopolies as a whole, that we are mainly concerned here. The constitutional and financial theory of the matter is that, for example, the water supply companies are made for the consumer, not the consumer for the companies. Their reward, therefore, ought to be just sufficient to cover the capital essential to the carrying on of their operations—and no more. If the working profits of the public utilities run above this minimum, a sliding scale commonly comes into operation, under which a lion's share of the surplus profit is passed on to the consumer by way of lower charges, and only a very small part can be retained to finance increased dividends.

Is this type of monopoly a good investment? Obviously, recognition of a monopoly, conducting a public service, involves, under these conditions, a serious limitation of equity possibilities, on which modern investment practice, in general, is apt to lay considerable stress. Only a minor

part of the fruits of the business genius of Lord Nuffield would have accrued to the advantage of shareholders in Morris Motors if the business of motor manufacture had been scheduled by the State as a monopoly and treated as such. On the other hand, monopoly should be a bull point for the fixed-interest investor. If revenue is assured year by year, and is immune from the risk of the violent fluctuations which affect many commercial enterprises—then its risk premium should be minimised and it should be possible for a public utility concern to raise capital for its requirements at a correspondingly low cost.

How far are these general conclusions borne out in practice? The following table relates to the junior stocks of a number of British enterprises falling within the category of "monopolies" as the term has been defined in this article. The table shows the amount of the particular class of capital outstanding, the percentage dividend paid according to the last report, and the current Stock Exchange valuation:—

Company or Authority	Class of Capital	Amount of that Class Outstanding	Date of Last Accounts	Rate of Div. Paid (%)	Par Value of Shares or Stock	Present Stock Exchange Quotation
Gas Light & Coke... Newcastle-on-Tyne	Ord.†	19,169,963	31/12/37	5½	£1	23½
Gas... S. Metropolitan Gas.	Ord.	2,430,267	31/12/27	5½	£1	22½
	Ord.	6,709,895	31/12/37	5½	£100	104½
L.M.S. Ry. London Pass. Transport Board	Ord.	95,202,441	31/12/37	1½	£100	13
Cable & Wireless Holding	"C"	25,698,802	30/6/38	4	£100	74½
	Ord.	6,883,103	31/12/37	4	£100	36½
Metropolitan Water Board	3% "B"	31,851,874	31/3/37	3	£100	86
Port of London	5% 1950-70	6,975,000	31/3/38	5	£100	114
Central Electricity Board	5% 1950-70	9,934,209	31/12/37	5	£100	110½

† 5% Basic ordinary stock.

The total capital represented in this table is £204.8 millions, and the average dividend paid in the latest period of operation is 2.98 per cent. The latter figure is far below the average equity payment for ordinary commercial enterprises in the same approximate period. *The Economist's* records show that some 549 companies, whose reports were published in the quarter ended December, 1937, paid average ordinary dividends of 11.2 per cent. In the three succeeding quarters companies numbering 646, 805 and 374 declared average ordinary dividends of 10.2, 9.4 and 9.1 per cent. respectively.

The three undertakings at the head of our list are representative of the gas industry as carried on in its most favourable economic setting—i.e. by old-established companies of considerable size in densely populated areas. The dividends paid by these companies under their "sliding scales" are, it will be noted, the highest shown in our table. The gas industry which, since its inception early in the nineteenth century, has been consistently operated as a public utility, providing a public service under private capital ownership, has operated on the whole to the satisfaction alike of consumers and investors. Demand has been characterised by a long-term expansive trend, and by comparative freedom from short-

term fluctuations. Even so, the growth of large operating units has been the exception rather than the rule. The typical unit has remained small and highly localised, and within recent years efforts to secure the physical amalgamation of plants into larger units on any large scale have been hampered by statutory restrictions with which certain prominent members of the industry have expressed open dissatisfaction. And although every gas company still enjoys a monopoly, in the sense that no other concern may produce and market gas in its particular area, it has ceased to be a monopoly in the broader economic sense, in view of the development of electricity as a serious competitor. This form of competition is likely to increase rather than to decrease in intensity in the future. Though the gas industry is fully capable of rendering a good account of itself in such a situation, its earnings position to-day might have been less satisfactory but for the increasing contribution made to receipts by the chemical and residual products side of its business, whose development was certainly not within the cognisance of the legislature when the statutory regulations relating to the industry were first framed.

The last three undertakings in our specimen list are public boards concerned with three essential services—the provision of water in metropolitan areas, the construction and operation of facilities in the Port of London, and the running of the National Electricity "Grid." Financially, these undertakings have the typical "Public Board" organisation. They have no equity stock, but the immunity of their receipts from serious annual fluctuation confers on their stocks something akin to gilt-edged status. In the case of the Metropolitan Water Board and the Port of London Authority, this enviable position has been validated by long experience; in that of the Central Electricity Board the trend of receipts, under the Board's development programme, is still dynamic, but the position of all the Board's stocks is treated, under that programme, as being assured.

It is the position of the remaining three undertakings shown in our table—and of certain others of which they may be regarded as typical—which has caused most questioning of the advisability of applying "monopoly" treatment to services which, though of a public utility character, are subject to outside competition and are liable to fairly intensive short-term fluctuations in receipts. The L.M.S. Railway is the largest of the four groups into which the main line railways of this country were amalgamated under the Railways Act of 1921. That Act, for the first time, introduced the principle of standard dividends into railway operation by its provision that the return on capital should be limited, broadly, to that achieved in the last complete pre-war year, 1913. The London Passenger Transport Board, created under an Act of 1933, had a standard dividend limitation imposed on its junior or "C" stock, with the proviso that if, after two years of grace, the Board failed for more than two years in succession to pay the standard dividend of 5½ per cent., holders of 5 per cent. or more of the stock might apply to the Court for a Receiver. The ordinary stock of Cable and Wireless also had standard dividend limitations.

In the event, not one of these undertakings (and not one of the three other main line railway groups) has succeeded so far in attaining its standard receipts. That is the same thing as saying that none has succeeded in maintaining its earnings at their earlier level; for the standard was based in every instance on the actual earnings of a datum period. Since there is no suggestion that the administration has not been efficient, the investor is forced to the conclusion that the monopoly powers which the legislature believed to be inherent in the activities of these undertakings have, in fact, proved insufficient to protect their revenues against hostile forces from outside. The nature of those forces is well-known to all investors. The L.M.S. Railway undoubtedly enjoys a monopoly in the sense that, e.g. there is no other railway whose lines run from London to the Kyle of Lochalsh. But it has no monopoly of transport facilities between those or any other two points. Actually, the standard revenue provision of the 1921 Act was introduced at a time when competition from road transport was on the point of becoming acute. The London Passenger Transport Board is nearer to being a monopoly

in the wider sense, though it has no power to prevent competition in its area from the privately owned motor-car—or the pedestrian. The Cable and Wireless group had, and has, a monopoly of its own cable and wireless stations and installations, but its sphere of operation is international, and competition there is keen and unceasing.

On the whole, investors must needs conclude that there are monopolies and monopolies. A true monopoly undertaking, administering a permanently indispensable public service, may offer sound stock for the conservative investor, though its equity interest may be negligible. But a public utility which, in fact, is vulnerable to competition from other services, may become a bad investment risk if the principle of maximum dividends is injected into its capital structure. The result may be that in bad times, stockholders have no protection against a fall in earnings well below the standard rate; whereas in good times so soon as earnings reach the standard, the law operates to prevent stockholders from obtaining compensation for their earlier losses. If revenue can be raised to the standard level by an increase in charges—well and good. That possibility may exist in the case of London Transport. But as yet no satisfactory remedy from the stockholders' viewpoint has been devised. The right to apply for Receivership on failure to obtain the standard dividend is peculiar to the London Transport Board, and the omens are against its being introduced in any future instance. The alternative of reducing the standard dividend, which has been adopted in the case of Cable and Wireless, scarcely survives scientific investment analysis. For if the standard dividend is relatively low, the stock to which it applies is unlikely to reach or maintain a par quotation, with the result that future increases of capital will have to be raised by way of senior fixed-interest stocks. In the long run, such a policy can scarcely make for a sound and balanced capital structure. Altogether the question of the correct financial treatment of monopoly and quasi-monopoly public utilities is likely to be a source of considerable future difficulty in Parliament and in the City.

The Steel Industry's Efficiency

THE prices determined by the British Iron and Steel Federation for 1939 are the subject of comment elsewhere in this issue of *The Economist*. It is not intended in this article to engage in the controversy over the rightness or wrongness of the new prices. That controversy turns, fundamentally, on the question whether the British steel industry is technically as efficient as its competitors in other countries and whether it is making sufficient progress in that increase of efficiency which has many times been promised. The degree of technical efficiency of any industry is difficult to establish with any precision; but the difficulties are unusually great in the case of steel, owing to the complicated nature of the technical processes involved. All that is possible is to seek what glimmering light is shed by established facts; and none of the figures that follow can be regarded as setting up a conclusive case or as providing more than a general indication of the ruling tendencies.

There can be no doubt that since the grant of tariff protection in 1932 an enormous impetus has been given to the technical re-equipment of the industry. Ten years ago there was a very high proportion of obsolete plant in all sections of the industry, and, though much of this still remains, a growing proportion of the total output is now produced in modern and, in many cases, fully integrated plant. Old plant is coming more and more to be regarded as a standby. International comparisons are difficult to make fairly, since the circumstances differ from country to country. In the United States the industry provides for a larger total demand, and it is economic to build very large plants with capacities running into several million tons a year. The considerable distances to be travelled by land also give transport considerations an importance in America that they do not have here. Germany acquired a lead in technical efficiency as a result of the period of intense capital re-equipment following the mark inflation, but this lead was disappearing by 1932. Since then capital equipment has been directed not so much towards the attainment of technical efficiency as of self-sufficiency—as, for instance, in the Hermann Goering works at Salzgitter, which are to use low-grade ore and so reduce dependence on Swedish and other imported ores. Nevertheless, when all these national divergences have been taken into account, it is possible to hazard two estimates: first, that the technical efficiency of the British industry is still considerably behind that of other countries; and secondly, that a great deal has been done since 1932 to increase its efficiency.

These judgments are supported by an examination of known facts about the different sections of the industry. One obvious measure of efficiency is fuel economy. There has been a reduction between 1929 and 1937 of 4 per cent. in the average consumption of coke per ton of all varieties of pig iron and ferro-alloys (27.74 cwt. to 22.77 cwt.). In the case of basic pig iron, which is the variety chiefly used in steel-making, the reduction has been 15 per cent. (26.76 cwt. to 22.73 cwt.—the earlier year in this case is 1930). The cost of production of metallurgical coke has also undoubtedly fallen, though precise figures are difficult to quote because of the complicating factor of demand from outside the steel industry both for coke and for coke-oven gas. There has, however, been a notable tendency for the size of coke-ovens to increase and for more of them to be located at the steel works, both of which tendencies can be taken as increasing efficiency. Thus, of coke-ovens ordered in the four years 1934-37, ovens representing a capacity of 17,725 tons a day were for steel works and only 9,773 tons for collieries. The proportion of new ovens to the total can be estimated from the fact that the average amount of coal carbonised in coke ovens in 1937 was about 62,000 tons a day. A large proportion of coking capacity is still, however, obsolete. Out of a total capacity of rather more than 22 million tons

per annum, only 6,720,000 tons consists of installations capable of over 20 tons per oven per day (i.e. efficient modern plants), while about 10,125,000 tons is still in ovens of less than 10 tons per oven per day and as much as 4,300,000 tons consists of the entirely obsolete waste heat ovens. In the consumption of raw coal, similar progress has been made. If, as a rough-and-ready measure, the consumption of raw coal (or the coal equivalent of coke) in steel and iron works other than blast furnaces is compared with the output of steel ingots, it will be found to have fallen from 0.925 tons of coal per ton of steel in 1929 to 0.688 in 1937—a decline of 25.7 per cent.

Improvements are thus being made in fuel economy. But the British figures are still a long way behind those of other countries. The consumption of coke per ton of pig iron and ferro-alloys in 1936 was 19.6 cwt. in Germany and 19.0 cwt. in Belgium. In the United States consumption of coke per ton of pig iron, excluding ferro-alloys, was 18.06 cwt. in 1937. The British figure for 1937 (including ferro-alloys), as already quoted, was 22.77 cwt. If a similar comparison could be made of the consumption of coal burnt raw, it would probably be even less favourable to Great Britain. Fuel economy, indeed, has only recently received the attention it deserves in this country. In the most modern practice, coal is not used except in the first process of producing coke. In the succeeding stages, according to a table prepared by Mr F. Kennedy, the gas from coke ovens and blast furnaces is more than sufficient to dispense with coal.

The size of plant is not an infallible guide to its efficiency; but it is, nevertheless, a good rough indication. The following table shows the average size of blast furnaces in this country by districts:—

U.K.: BLAST FURNACE OUTPUT PER FURNACE PER ANNUM BY DISTRICTS, 1930 AND 1937
(000 tons)

	1930	1937
1. Derby, Leicester, Notts, Northants, Essex ...	43.1	70.1
2. Lancs (other than 10), Denbigh, Flint and Cheshire ...	41.1	57.6
3 & 9. Yorks (incl. Sheffield) other than 5.....	58.0	75.7
4. Lincs.	58.9	70.6
5. N.E. Coast	24.6	31.2
6. Scotland	33.4	49.7
7. Staffs, Shropshire, Worcester and Warcs. ...	114.2	136.2
8. S. Wales and Monmouth	65.9	85.3
10. N.W. Coast	49.4	68.5
Average	49.4	68.5

The improvement is obvious, but so is the small average size of plants in many districts. Some districts (especially districts 1 and 6), where a large proportion of the total output consists of foundry and forge pig iron (not used for steel) are never likely to go in for large integrated plants of high capacity, nevertheless, the fact remains that the average size of British blast furnaces is still almost certainly too low for maximum efficiency. In the case of open hearth steel furnaces the proportion of total capacity represented by furnaces large enough to produce more than 75 tons per heat has risen from a quarter to a half. This is rapid improvement, but the proportion is still small.

Further light can be gained from figures of output per head. The average steel ingot production per year per man employed has varied as follows (in thousand tons):—

1930	75	1934.....	79
1931	65	1935.....	85
1932	64	1936.....	76
1933	77	1937.....	83

Part of the increase between 1930 and 1935 was merely due to higher total production, as the labour force was more fully employed. Conversely, the drop since 1935 may be due to the use of older plant. But there was probably some genuine increases in efficiency. A measure of production in the different sections of the industry can be given by comparing the index numbers of employment and production.

The following figures are indices of the production index of each branch divided by the employment index*:—

	Pig Iron	Tinplates	Wrought Iron and Steel Tube Strip
1929	127	145	...
1930	115	134	...
1931	104	118	...
1932	113	123	...
1933	143	126	107
1934	157	123	109
1935	169	117	135
1936	184	134	175
1937	177	158	155

The effect of the new pig-iron capacity and of the tardy improvement in tinplate can be clearly seen.

The story is, in rough outline, the same in the case of rolling mill practice. Some figures recently given for the cogging, billet and slab mills at the Templeborough works of the United Steel Companies show that the percentage of cobbles (rejected material) has been cut in three between 1933 and 1937 and the weekly mill record increased by about 42 per cent. But on the other hand, it was stated in the Import Duties Advisory Committee's report that, in 1936, 33.2 per cent. of the total production of semi-finished products was rolled elsewhere than in the producer's own works; after making full allowance for the specialist functions of the re-roller, this is an unduly high percentage.

* The indices of employment are those of the Ministry of Labour and are on the basis 1923 = 100. The base year for the indices of production varies, that for pig iron being 1923, for tinplates 1920 and for tube strip 1933. The resulting figures are thus not, strictly speaking, index numbers, but they suffice to show the trends.

Finance and Banking

British Overseas Bank.—Mr A. C. D. Gairdner, whose retirement will be universally regretted, was able to give further details at this week's meeting of the changes referred to in this bank's report. As some of the assets had become difficult of realisation, arrangements had been made for a deferred deposit of a sufficient amount, together with the bank's liquid assets, to cover the outside liabilities of the bank. This deposit and the cash it represents will figure in future balance sheets of the bank, but until the cash is actually required—which has not yet been the case—it has been placed at call with the banks making the deposit. Thus it neither earns nor costs any interest, and it is best regarded as a guarantee, or rather, in Mr Gairdner's words, as a shield behind which the bank's not readily realisable assets can be dealt with to the best advantage. A further change has taken place, affecting the ownership of the bank's share capital. Hitherto the "B" shares, amounting to £1,000,000 of paid-up capital, have been held by Williams Deacon's Bank, the Union Bank of Scotland and the Prudential Assurance Company. These have now been transferred to trustees, who will hold them for the benefit of the "A" shareholders, consisting of the general public and representing a further £1,000,000 of paid-up capital. Any future profits, therefore, which normally would have accrued to the "B" shareholders, will be available for the benefit of the "A" shareholders. The advisory directors, who largely represented the interests of the "A" shareholders, will disappear. The result is that the interests of the bank's depositors are fully protected, while those of the "A" shareholders are looked after, as far as possible. Meanwhile the various interests who held the "B" shares have cut adrift from the foreign field covered by the B.O.B., and they can hardly be blamed for doing so. Owing, no doubt, to technical delays, the deferred deposit only became available after the date of the bank's latest balance sheet. Otherwise it would have told a very different story, for, in place of attenuated cash holdings, it would, as Mr Gairdner pointed out, have shown cash in excess of deposits. As matters stand to-day, the

bank has a heavier shield than it requires. This shows that the interests of the depositors are not only protected against current difficulties, but also have a substantial margin of safety against future contingencies.

Perhaps the biggest departure in rolling mill practice undertaken in the last decade is the new continuous strip mill at Ebbw Vale. Although several authorities consider that the expansion of continuous strip rolling capacity in the United States of America was overdone (these plants cannot economically be put down with a capacity of less than about 250,000 tons a year) there is little doubt that the sheet rollers in this country were far too slow in adopting the new technique. By the time (December, 1937) that Richard Thomas, Limited, purchased Armco, Limited, from the American Rolling Mill Company (the originators of the continuous strip process) fifteen years had elapsed since the first of these mills was erected, and most other main steel-producing countries had installed them.

A final measure of the amount of modernisation undertaken can be derived from figures of capital expenditure. The I.D.A.C. committee estimated in 1937 that thirty-seven public concerns, accounting for 86 per cent. of the total output of steel in 1936, had a total capitalisation—after very heavy writings off in the preceding decade—of about £126.7 millions (of which 24 per cent. debentures, 25 per cent. preference shares and 51 per cent. ordinary shares). It has been authoritatively estimated that the total expenditure on capital requirement over the period 1934-38 was about £30 millions, which, in relation to the capitalisation of the chief companies, is certainly an impressive figure. The British industry has not in the past either made financial provision for the depreciation of its plant at the rates accepted in America or Germany or made actual replacements rapidly enough to maintain its position. There should be no resting on laurels in the future in this respect, and in any international comparison of costs, care should be taken to include comparable provisions for this purpose.

In many ways the most interesting part of Mr Gairdner's speech was his description of how these difficulties have arisen. The tragedy is that while most of the bank's clients remain sound—and, indeed, in themselves provide most desirable connections from the banking point of view—they are domiciled in countries such as Germany, Hungary and Spain, where exchange restrictions make it impossible for their debts to be regarded as immediately realisable. Mr Gairdner alluded to the gradual recommercialisation last year of the German Standstill Agreement, and indeed from every point of view this is the best solution of the problem. If bills drawn under the Standstill Agreement, and similar arrangements with other countries, can be related specifically to current shipments of goods, then the bank is able to perform its normal function, and the only remaining difficulty is the fact that the liabilities created by such bills cannot be called in. On the other hand, so long as the bank's debtors preserve their standing, there is no need to call in these liabilities or close down the credits against which those bills are drawn. Spain, perhaps, is in a rather different category, for the civil war brought the Anglo-Spanish clearing to an abrupt end, with many debts due to British bankers still outstanding. Here again the standing of the individual Spanish debtors is beyond question, and the one thing needed is peace. In short, the B.O.B.'s difficulties are political, not commercial, due to national exchange restrictions and not to any weakness of the bank's individual clients. They are beyond the bank's power of solution, and they must await a more settled state of the world's political and economic affairs. Meanwhile, the guarantee provided by the deferred deposit will bridge the gap and enable the bank to carry on its legitimate business. In this way both

the B.O.B. and those who are helping it in its time of undeserved trouble are making their own contribution towards the maintenance of sane international finance and trade.

Floating Debt Changes.—During the fortnight to December 10th the Exchequer not only had to provide the half-yearly War Loan dividend of about £35 millions, but also had to issue £8,500,000 under the Defence Loans Act, representing re-armament expenditure covered by borrowing. It is not surprising, therefore, that the floating debt increased by £47.5 millions. The Treasury bill tender issue, however, has shrunk by £15.0 millions, and the whole of this new money, and more, has been found through an

expansion of £61.2 millions in the tap issue of Treasury bills. Actual movements are shown in the following table, which also gives the floating debt position for August 20th:—

	Aug. 20	Nov. 26	Dec. 10
	(£ millions)		
Treasury bills:—			
(a) Tender	555.0	522.0	507.0
(b) Tap	296.2	404.1	465.3
Ways and Means Advances:—			
(a) From public departments ...	41.9	45.4	46.7
(b) From Bank of England	...	...	...
Total	893.1	971.5	1,019.0

It is not easy to explain the big movements of the past

MONEY MARKET NOTES

Foreign Exchanges

THE London market has been very dull. The New York rate has hovered between \$4.68½ and \$4.65½, being quoted on Thursday afternoon at \$4.67½. The Control has been operating both ways, merely so as to counteract fluctuations. There has been a certain amount of liquidation of dollar positions by those who desire to replenish their sterling holdings for their balance sheets at the end of the year. Three months' dollars, however, are at 2½-2 cents premium, equal to nearly 2 per cent. per annum. This leaves a useful profit upon sales of forward sterling against forward purchases, so that if this premium persists until after the end of the year, there may be a fresh demand for spot dollars. Francs have on the whole been offered, and the spot rate rose at one time to Frs. 177½, coming back later to Frs. 177½. Three months' francs also weakened from Frs. ½ to Frs. ¼ discount, returning by Thursday to Frs. ½ discount. Nevertheless, except on Tuesday when it bought a few francs, the French Control has been a seller. Spot belgas moved with the dollar, with little net change on the week. Forward belgas have strengthened, the one month's rate being now practically back at par. This recovery is no more than the reaction from last week's nervousness over the internal political situation. There has been practically no business in guilders, while Swiss francs have followed the dollar, again in an idle market.

The Bank Return

THIS week's return shows a continuance of the Christmas increase in the note circulation, offset to a small extent by some further dishoarding. The note circulation is now only £6.7 millions less than it was last year, and probably the whole of this decrease is accounted for by the dishoarding which

has taken place during the past twelve months. The Reserve has fallen during the past week as the result of the growth in the circulation. It is £15.5 millions greater than a year ago, but then the fiduciary note issue is £10 millions larger.

No real attempt has been made this week to neutralise the increase in the note circulation, for while the Reserve has shrunk by £7.6 millions, Government securities have only risen by £2.3 millions. Public deposits are £3.0 millions lower, but even so bankers' deposits have fallen by £3.4 millions. It may be that their present level of £99.5 millions is thought to be high enough, but it was noticeable that this week the money market was not over-well supplied with funds.

The Money Market

ALTHOUGH the syndicate last week dropped its tender price from £99 15s. 6d. to £99 15s. 3d. per cent., thereby raising the average tender rate to ¾ per cent., it obtained a 52 per cent. allotment of Treasury bills for which it had to pay this week. The banks were only buying bills sparingly, while the Bank return shows that this week only a very partial attempt was made to offset the currency withdrawals from the bank. All these factors combined to make money less easy. Bond-money, it is true, was relatively plentiful at ¾ per cent., but there was a good demand for loans against bills, practically all of which fell on the clearing banks. There was also a steady demand for money into the New Year, and the rate has hardened since last week from 1¼ to 1½ per cent.

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Bill rates are also firm. Hot Treasury bills were freely offered at ¾ per cent. The week's general quotation for three

months' bank bills was 1½ per cent., but while this would be shaded early in the week, by Thursday it had become effective.

The Bullion Market

THE bullion market has been relatively quiet. Dealings in gold were limited, partly because of a very languid arbitrage demand, and partly because of a reluctance to add to commitments immediately before the end of the year. This last factor has also been the cause of a certain amount of selling by holders who wished to improve their cash position. On Saturday the price rose to 1½d. premium, but this was due to a special order from the Continent which had to be met in a very narrow market. The Control has not done much. It made no attempt to fix the price, and also abstained from after-fixing offerings. The general note has been one of dullness.

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.
† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market has also been quiet. Many operators believe that current prices are too high, and when bear-covering lifted the price above the American parity, there was immediate re-selling by American holders. The market is still waiting to see if Washington will announce a reduction in prices at the New Year. In the forward market India has been operating both ways, and there has been some American forward buying. One view is that most of the world's demonetised silver has now been absorbed, while none of the North or South American production now reaches London. This means that London has to operate on a much smaller volume of business than in past years.

fortnight. The French repatriations gave the Exchange Account additional sterling, whose re-investment is undoubtedly reflected in the fortnight's increase in the tap issue. Also the relatively large size of public deposits during the latter part of November probably represented accumulations of Exchange Account cash, which were being held in readiness to cover the heavy expenditure of the past fortnight. This money has again been invested in tap Treasury bills, which is the way in which it is put at the Exchequer's disposal. The origin of that money is partly the support given to sterling during October and November and partly the maturities of tender issues of Treasury bills bought in the open market during September and October. Further maturities of this kind can be expected next month, when they will be superimposed upon the seasonal reduction in the tender issue. For these reasons a better picture of the crisis and its aftermath is found by comparing August 20th and December 10th. This shows an increase in the tap issue of about £170 millions. It is small wonder that the tender issue has shrunk by £48 millions, and the more serious question is what decrease in the Exchange Account's gold reserves is indicated by this enormous expansion in the tap issue.

The Bank and Municipal Bills.—The issue raised last October by the clearing banks' refusal to accept as security for money market loans municipal bills that were ineligible for rediscount at the Bank of England has been settled this week by a considerable widening of the Bank's eligibility provisions. In the past the only municipal bills taken at the Bank as security for market loans or eligible for rediscount were those bills—four issues in all—which were placed through the Bank itself. As soon as the clearing banks adopted this criterion for discriminating between what was, and what was not, acceptable as security for their own money market loans, the Bank's rule clearly became arbitrary, and called for immediate remedy. In future, therefore, the Bank will rediscount or accept as security for market loans all municipal bills issued by virtue of Acts of Parliament giving the local authorities concerned specific powers to borrow by way of bills. This general undertaking is made subject to two conditions. The first is that the bills are drawn for periods of six months or less. The second is that they represent a genuine self-liquidating debt, in proof of which the local authorities concerned must be wholly free of bill indebtedness for at least 60 days in every year. These conditions will call for some amendment in the methods of municipal bill financing. Many issues in the past have been in the form of yearling bills. These will have to be adjusted to the new requirements. Moreover, in certain cases bills have been renewed automatically at maturity. In future this automatic extension will have to be avoided. The amount of municipal bills specifically authorised by Statutes is about £18 millions. The new regulations are evidently intended to exclude bills issued by municipalities under Section 215 of the Local Government Act of 1933. The ruling given on this point confirms the market's doubts that municipalities issuing bills under the provisions of this Act were, in fact, acting *ultra vires*.

Bank of London and South America.—At this year's meeting Lord Wardington made some interesting comments upon the downward trend of British trade with South America. He admitted that the purchasing power of many of these countries had shrunk as a result of the decline in the prices of wheat and their primary products. The falling off in these exports had also forced some of these countries to intensify their exchange restrictions. But Great Britain's share of the import trade of the South American States had also shrunk—in the case of Brazil from 20 per cent. in 1932 to only 10 per cent. for the first half of last year. This Lord Wardington ascribed partly to the growing industrialisation of

those countries, but mainly to the development of trade with Germany financed by aski marks. Germany and Italy had also been granting direct subsidies to exporters. In certain cases the flood of subsidised goods had become a menace to the importing countries themselves, for Chile had established a quota for imported woollen goods while the Argentine Government had introduced an anti-dumping bill for consideration by Congress. There was also competition of a legitimate character from the United States, assisted first by her comparative immunity from political anxieties and second by her geographical proximity. Argentina and Uruguay also held to-day large unabsorbed stocks of cotton textiles. Lord Wardington did not make any definite suggestions for the removal of these difficulties, apart from an allusion to the fact that a new Anglo-Argentine Trade Agreement will have to be negotiated next year. What he has done is to place clearly before the public the nature of the new difficulties with which our exporters to South America are confronted.

Commercial Bank of Scotland.—In the absence of the Earl of Mar and Kellie, Lord Milne presided at the annual meeting of the bank. He pointed out that there had been a slight drop in deposits during the year, but that deposits at the Scottish branches alone showed an increase. Cash, call money and investments amounted to 80 per cent. of the bank's liabilities, which he claimed represented a very strong and liquid position. Commercial bills were £240,000 less than in the previous year. Advances were also lower by £1,160,000, but this drop was fortuitous as during the greater part of the year they had been in excess of the balance sheet figure. The chairman took a guarded view of the future, which was coloured by the prevailing international political uncertainties. He welcomed, however, the Anglo-American Trade Agreement, which in the course of time must bring substantial advantages over a wide field.

Non-member Dealings.—Study of the modifications to the proposed alterations to the Rules, which were originally passed on July 25th, and which, in their new form, are now due for confirmation on January 3rd, shows that the Committee for General Purposes have been compelled to bow to the weighty criticisms levelled at the original proposals. In their revised version, the changes governing non-member dealings will meet little opposition for, on the main issues of contention, they leave the position—at least, in principle—unchanged. The standing stipulation remains—that a broker shall not execute an order with a non-member unless thereby he can deal for his principal to greater advantage than with a member. In future, it is specifically enjoined, the broker must be prepared to justify all outside dealings to the Committee if called upon to do so. This, however, merely puts in black and white an obligation which is ever present in the mind of brokers and jobbers alike in all their transactions—the reality of which is exemplified by the appreciable number of dealing queries which are, in fact, referred to or brought to the notice of the Committee. An important change of procedure, however, is involved in the special marking slip on which brokers will, if the alterations are confirmed, be obliged to record, for bargains with non-members, the time of the bargain, and the time and particulars of the quotations obtained in the market, together with the names of the jobber or jobbers involved. The principal object of this provision, no doubt, is to facilitate inquiry into disputed cases. As such, the only objection is that it will involve brokers in a good deal of trouble, especially as it is specifically provided that outside bargains must be marked “without delay”—an injunction involving practical difficulties in times of active business.

* * *

The amended alterations contain two significant restrictions on the applicability of certain commission concessions allowed by the present Rules. A broker doing arbitrage business for a non-member arbitrageur may charge not less than one-half the usual commissions. The new proposal is to limit this to cases where the deal is done with a member of the Stock Exchange. The originally proposed modification was to limit the concession to deals done with a jobber, and this would have impeded an important class of dealings between brokers acting for outside arbitrageurs and brokers having special outside connections. As now drafted the concession will only be withheld in cases where a broker acting for a non-member arbitrageur undoes the bargain with his own outside clients. The new provision that a broker, when transacting business between a country broker and a member of the public, is to be considered as acting as the agent of the latter, is on parallel lines. This secures that one full normal commission shall be paid and eliminates a certain amount of under-cutting, e.g. in dealings with provincial centres. In sum, the proposed alterations, as now modified, hardly touch the fringe of the problem of outside competition and the re-attraction of business to the “House.” It is probable that only a small proportion of the deals which at present by-pass the “House” are within the affected area. Some members assume, therefore, that the Committee may devote further attention to the root problem and propose new methods of approach.

* * *

Uniform Dividend Announcements.—It has been known for some time that the Stock Exchange Committee wished to effect an improvement in the manner in which company dividend announcements are made. It has indeed played its own part by installing new recording apparatus in the “House” itself. The majority of the announcements issued by public companies, *via* the news agencies and the “House” notice boards, are lucid and

give rise to no misunderstanding. But on occasion (investors may recall the *contretemps* which attended the declaration of the Burmah Oil dividend, cash bonus and share bonus last May) considerable confusion and unrepresentative market prices may result. The Stock Exchange Committee has accordingly dispatched, for the consideration of the 7,000 companies represented in the Official Year Book, two specimen statements covering interim and final dividends. In an accompanying letter the Committee show that the avoidance of ambiguity and the inclusion of preliminary profits figures, even where these are provisional, make for a proper market price and serve the investor's interests. The suggested interim dividend statement contains provision for setting out the rate per cent. actual and the amount per share, less income tax at the relevant figure in the pound. This information would prevent any confusion in interim dividend announcements of annual rates with actual interim payments, and would also show the operation of any relief for Dominion income tax. The final dividend statement covers the same points, with additional provision for the full year's dividend. It also provides for cash bonuses, the terms of rights and bonus issues, and includes a comparative statement of net profits for the latest and previous financial years. The latter point is of very considerable importance, since a declared dividend may be the only market factor determining the value of the share concerned for a considerable period prior to the publication of the company's profits. It will rest, of course, with company directors and secretaries to make use of the suggested forms if they choose. But since they have been evolved by the Stock Exchange Committee, in consultation with representatives of the British Banking Association, the Chartered Institute of Secretaries, the Institute of Chartered Accountants, the London Chamber of Commerce and the Society of Incorporated Accountants and Auditors, it will be seen that they are backed by powerful professional opinion. Their adoption as a minimum standard would greatly assist investors and their professional advisers.

* * *

Sharepushing Bill Progress.—The Prevention of Fraud (Investments) Bill concluded its Committee stages this week. Clause 10—the revised version of the offending Clause 9—was approved without major change. Facing critics who wished to strengthen its provisions, the Solicitor-General admitted that the Clause was weaker than in the original form, and accepted Mr Johnston's amendment to add dishonest concealment of material facts to the list of offences. Moreover, offenders under the Clause will not be liable to summary conviction. Hence, the maximum penalty of seven years' penal servitude faces every transgressor under the amended Clause. An amendment to substitute the word “document” for “circular” (which has not been legally defined) in Clause 11 was withdrawn. But provision has been made not to exclude “documents” in the form of newspapers or periodical publications from the definition of “circular,” merely because of their form. It remains, of course, to introduce further amendments, as promised by Mr Oliver Stanley, when the Bill returns to the House. Clause 14, for example, is to be modified to make provision for safeguards for unit trusts. And there is no lack of detailed points which still require stricter definition.

* * *

Back to Fixity.—The Municipal and General group was the first to introduce the fixed trust into this country, and also the first to introduce the flexible unit trust. This week the same sponsors have introduced the New British Fixed Trust. Before the investor leaps to the conclusion that flexibility has been abandoned, and that fixity

Company Notes

Turner and Newall Profits.—The preliminary profits of Turner and Newall for the year to September 30th last must be regarded as very satisfactory, in view of the general setback in the constructional trades during the past year. Net trading profits, after providing for depreciation and income tax have, in fact, reached a new record of £1,361,694 compared with £1,333,489. N.D.C., which is set out as a separate item, requires £84,000, compared with £40,000 for 1936-37, and thus absorbs more than the past year's increase in profits. Earnings for the ordinary stock, as the following table shows, amounted to £1,166,596, against £1,182,391, and the ordinary dividend, maintained at 20 per cent., is covered by slightly reduced earnings of 22.6 per cent.:—

	Years to September 30th		
	1936	1937	1938
Total profit	£ 1,343,527	£ 1,543,876	£ ...
Depreciation	120,418	122,117	...
Income Tax and fees	59,801	88,270	...
Net profit	1,163,308	1,333,489	1,361,694
N.D.C.	...	40,000	84,000
Staff Funds	10,000	10,000	10,000
Preference dividend	101,098	101,098	101,098
Ordinary stock—			
Earned	1,052,210	1,182,391	1,166,596
Paid	847,689	1,065,690	1,065,756
Earned %	23.0*	22.9	22.6
Paid %	17½*	20	20
To reserve	200,000	100,000	100,000
Carry forward	99,069	115,770	116,610

* On £4,843,933 capital.

Perhaps the most instructive feature of the preliminary statement is the stability of the group's earnings during recent years. Technically and geographically, its interests have been extended and the company now serves a range of trades which, in itself, provides a considerable degree of industrial diversification. On the preliminary figures, the £1 ordinary shares finally settled at 77s. 10½d. and the yield, based on the 20 per cent. dividend and Dominion income tax relief of 9d. in the £ on the final dividend of 16½ per cent., is £5 7s. 3d. per cent. gross.

* * *

Bowater's Paper Group Results.—In August, 1937, the Bowater's Paper group reached agreement with newsprint users covering an increase in the contract price of newsprint for 1938 from £10 to £11 10s. per ton. It was then understood that the increase would not fully offset the increased prices of raw materials for which the group had contracted—a point recognised by the provision by the parent and constituent companies of £230,000 as a special reserve to cover increased costs in 1938. The

has been reinstated, he may be advised to study the constitution of the new trust in detail. It may, perhaps, be not unfairly described as a fixed trust enjoying some of the attributes of flexible trust operation—particularly those which (as the Municipal and General group has always claimed) attach to “Cash Funds.” It is certainly not a fixed trust, in the automatic and rigid sense of the earliest creations in this field. It imports a new concept into unit trust affairs—the “Unit of Investment.” For practical purposes, this is the familiar panel of the fixed trust, and consists of 33 industrial, metal, and commodity shares, which appears to be well chosen. The trust is first constituted by depositing one Unit of Investment with the trustee, and calculating the initial price of the sub-units as 1/10,000th part of the cost, adding the preliminary charge of 2½ per cent. and rounding up the price to the next 1½d. Subsequently, however, the offered price is determined by dividing the replacement value of the deposited property by the number of sub-units in issue, together with preliminary charges and adjustments. In other words, valuation is conducted on the general methods adopted for a flexible trust. It follows that “Units of Investment” are not necessarily and automatically bought as a complete whole, but may be constituted or unwound by stages. With the exception of the preliminary charge of 2½ per cent., the trust receives all cash subscriptions, and price adjustments, while the managers are entitled to a charge of ⅓% of one per cent. of the fund each half-year. Rights may be taken up by employing cash holdings, or if realised, the proceeds are added to the trust fund. It would appear that the trust combines the publicity value of a fixed list of securities with well-designed (though technically complicated) provisions to safeguard the investor's interests.

* * *

Building Societies' Interest Rates.—The report of the National Building Society is accompanied by an announcement that the rate of interest allowed on the “B” shares (and also on future investments in completed and uncompleted shares) will be raised next year from 3 to 3½ per cent. Following the announcement of a similar increase on Woolwich Equitable D2 shares, and changes by certain other large societies, the statement suggests that building societies are now finding it necessary to take account of the rise in general interest rates that has been taking place since the beginning of 1937 in order to attract new money. There have been recent signs of intensified competition for building society funds, and it is possible that money withdrawn during the September crisis (moderate though it appeared to be) requires some additional incentive to return. We summarise below certain recent changes in investment rates and conditions announced by the larger societies:—

Society	Class affected	Tax free rate %	
		Old	New
Halifax Permanent ...	No change		
Abbey Road†	No change in rates		
Woolwich Equitable..	D2 shares	3	3½*
Leeds Permanent ...	12-mth. deposits over £500	2½	3
National	“B” shares‡	3	3½*
Huddersfield	Private depts.	2½	2½
Leicester Permanent..	Ltd. co's depts.	2	2½
Co-operative Perm....	Paid-up shares	3	3½*
	3-yr. deposits over £100	3	3½

* As from January 1, 1939.

† Limit on individual share holdings raised from £50 to £1,000, temporarily. ‡ New rate applies also to future investments in completed and uncompleted shares.

In three instances the increases do not operate until 1939, but the Huddersfield Society increased its rates early in 1938. It will be noticed that the Halifax and the Abbey Road Societies have taken no action in regard to rates, though Abbey Road has, as a purely temporary measure, raised its limit on an individual shareholding from £50 to £1,000. And the interest announcement by the National Society (whose shares outstanding are slightly reduced compared with 1937) includes a statement that share investments will be accepted up to a £4,980 maximum.

Funds exceed £25,000,000

latest reports, for the year to September 30th, show sufficient earnings to meet debenture interest and preference dividends, but leave no margin for the equity. And in each case the profits of the three operating companies—Bowater's Paper, Bowater's Mersey, and Edward Lloyd—are supplemented by a credit from last year's allocations against increased costs. From the respective balance sheets it would appear that these reserves are not exhausted. This is a point of some importance, since newsprint prices will be reduced from £11 10s. to £11 5s. per ton from March 31st next, while the contraction in consumption has tended to increase costs, and also to delay the full absorption of high-priced raw materials. These factors suggest that the current year's profits outlook is not expansionary. The results of the five constituent companies need to be consolidated before the actual position of the parent company's equity can be assessed. The group as a whole has £1,800,000 of debentures, £6,700,000 of preference capital, and £1,000,000 of ordinary capital in public hands. The debentures require £63,000 gross; debenture premiums (for Bowater's Mersey) involved a special charge of £24,000 last year; while preference dividends absorb

£413,500 gross. The total sum slightly exceeds £500,000, and appears to have been covered with a small margin, to judge by disclosed profits.

Future Prospects.—It is evident that ordinary dividend prospects remain dim for the current year; that, at least, is implicit in the current price of 11s. for the £1 stock units. But there is no apparent reason why the 6½ per cent. and 7½ per cent. preference stocks of Bowater's Paper should not continue to receive their due dividends. The longer prospect will be determined to no small extent, by the results of the Bowater-Lloyd Newfoundland developments. This company, by acquiring control of International Power and Paper, has, in effect, insured the group against fluctuations in raw material prices and supplies. The first part of the finance was provided by the issue of £1,250,000 4½ per cent. debenture stock last July, which is jointly and severally guaranteed by the constituent companies of the group. At the end of November, however, the company acquired further timber areas, from which it will ship unmanufactured pulp wood, on the understanding that sulphite production at Corner Brook is increased. Reports have been in circulation that the price involved was of the order of \$3,500,000. These developments are highly important. But they do not suggest that Bowater's Paper ordinary shares are likely to return to the dividend list in the immediate future. They are essentially reserved for the speculative long-term holder.

Seager Evans Questions.—The £1 ordinary shares of Seager Evans enjoyed a burst of activity in October which took the price up from 34s. 3d. to 44s. 9d. At the end of that month the board issued a statement that negotiations were in progress, which were calculated to prove to the ultimate benefit of the group. Accompanying the report to July 31st (which has been delayed by two months) comes a statement that the "contemplated plan" is not to be proceeded with for the time being, owing to international factors. It will be recalled that the same reasons were adduced for the abandonment of the Callender's Cable-Crompton Parkinson negotiations a few weeks ago. Fuller explanation of the position, however, is promised for the annual meeting next week. It is also probable that the chairman will find that shareholders are no less interested in other aspects of the report. They will notice, in the first place, that no consolidated balance sheet and profit and loss account is presented this year. The directors, indeed, point out that owing to the larger and more widespread interests which have been acquired, the accounts are presented in a somewhat different form. But the absence of consolidated figures renders interpretation of the accounts extremely difficult. The profit and loss account shows that the parent company's profits during the year to July 31st are halved, from £101,587 to £50,815. But whether this fall is representative of the experience of the group as a whole cannot be divined, despite the statement under Section 126 of the Companies Act, without some inkling of the consolidated earnings of the group. The balance sheet exhibits even more conspicuously the need for a consolidated statement of assets and liabilities. The liquid position at the end of July last shows a significant deterioration, though it may subsequently have improved. Net current assets, which amounted to £117,000 at July, 1937, have been reduced to £21,000. A year ago, Seager Evans itself held £39,968 in cash. By last July, the balance had been reduced to £769, while the creditors' item had been increased from £75,126 to £338,658—the latter figure including an unstated bank overdraft. Apart from the general advisability of including an item for bank overdraft among trade creditors, the report raises questions which are not fully answered by the statutory balance sheet alone. Distillery and trading acquisitions account, so the shareholder is informed, for £300,000 outlay during the past year. But a consolidated balance sheet is essential to show the nature of the assets acquired. Shareholders may also

be inclined to ask how long the Development Account is to be continued. This account is charged with a further sum of £47,000 for expenditure during the past year, though the total amount capitalised is offset by specific reserves. The fall in the ordinary shares from 35s. to 28s. 9d. on the report suggests that these points have attracted the concern of investors.

A.B.C. Setback.—A decline in profits has again been experienced by the Aerated Bread Company. The 1937-38 total profits are the lowest recorded since 1929-30, and they are 13 per cent. lower than a year ago. In this respect, the directors refer to the general depression in trade, to rising costs, and to the effects of the European crisis. The company's profits record, however, does not show that earning capacity in the recent past has been sensitive to trade fluctuations, though the stability revealed may be in part due to the fact that profits are struck after contingencies. But additional difficulties were caused by the inevitable dislocation due to rebuilding of the Camden Town bakeries. The course of profits in the past three years is shown in the following table:—

	Years to end September		
	1936	1937	1938
Total profit	234,935	217,262	189,406
Depreciation	73,120	67,247	66,881
Tax and N.D.C.	45,000	42,000	37,000
Other expenses	2,602	9,145	9,509
Preference dividend.....	36,604	36,009	35,116
Ordinary shares—			
Earned	77,609	62,861	40,900
Paid	48,876	48,075	46,473
Earned %	7.9	6.5	4.4
Paid %	5	5	5
To reserve	25,000	18,500	...
Carry-forward	48,337	44,623	39,050

Although there is some saving on the tax provision, the 5 per cent. dividend is short-earned by about ½ per cent., no allocation is made to reserve and the carry-forward is drawn upon to the extent of £5,573. Certain changes due to the rebuilding programme appear in the balance sheet. A reserve of £110,000 for obsolescence arising from the reconstruction scheme was set aside in previous years, and has now been used for writing down the fixed assets. And as the result of a taxation settlement, a surplus of £50,000 has been released and has been transferred to a new development reserve for reconstructing and modernising branches. Additions to buildings and plant have been on a larger scale than in 1936-37, entailing £207,263 for property, £141,029 for plant, and increasing fixed assets (other than investments in subsidiaries) from £2,714,337 to £2,885,748 net. Since 1929-30 the company has regularly paid a 5 per cent. dividend, and the £1 ordinary shares yield £5 16s. at a current price of 17s. 3d.

Decca Record Scheme.—Decca Record is faced with a capital loss of £503,912 to make good, and has debentures due for repayment next year for which funds are not available. Since its inception in 1929 the company has paid neither preference nor ordinary dividends. The reconstruction scheme now proposed involves changes in all three forms of capital, which consists of £249,290 6½ per cent. debentures, £230,417 in 8 per cent. £1 preference shares and £395,331 in 3,162,648 2s. 6d. ordinary shares. It is proposed to defer repayment of the debentures until 1961, but in compensation to repay them at 110 instead of par, and to raise their interest to 6½ per cent. A cumulative sinking fund, of about 1 per cent. for three years and about 3 per cent. thereafter, is also to be established. These proposals are reasonable and inevitable. As for the shareholders, the ordinary capital is to suffer an 83½ per cent. cut to £64,232 (consisting of 1,284,633 1s. shares), of which £11,521 (or 18 per cent.) is to be

transferred to existing preference shareholders. Each existing 2s. 6d. ordinary share is thus cut to 4d. Preference dividend arrears from March, 1933, are to be cancelled, and the nominal value of preference share holdings is to be reduced by 75 per cent. But besides receiving 230,417 1s. ordinary shares, preference shareholders will receive a 10 per cent. cumulative dividend on their new 5s. preference shares (i.e. 2½ per cent. on the old basis), with participating rights to a further 6 per cent., so that the maximum preference dividend represents 4 per cent. on the old preference capital. The exact relationship between the ordinary and participating preference rates of dividend, however, is obscure. A new Article, defining the new preferential rights, says only that the preference shares are entitled to a cumulative 10 per cent. "and in respect of any financial year . . . in respect whereof the company shall pay a dividend to the holders of the ordinary shares to a further non-cumulative dividend . . . of £6 per cent." Apart from this point, it hardly appears that preference shareholders' sacrifices are compensated by an 18 per cent. share in the equity. It is true that about two-thirds of the present ordinary capital was subscribed in cash in 1937, and that the proceeds were used in part to repay loans which otherwise would now rank before the preference shares. But subscription of ordinary shares rather than prior securities was presumably undertaken deliberately, and the solid sacrifices invited from the preference shareholders include a permanent halving of their maximum dividend rights and the abandonment of arrears. That the scheme will divide opinions, however, is indicated by the fact that the Shareholders' Protection Association has announced its approval.

December Kaffir Dividends.—Record outputs and a record valuation price last month have encouraged Kaffir shareholders in a moderate degree of optimism regarding the December dividends. But, for a number of reasons, expanded operations have not been followed by

a corresponding expansion of profits, and the December declarations suggest that directors have decided to be conservative. In several cases, such as Consolidated Main Reef and Durban Deep, where expansion in tonnage has been accompanied by growth in profits, no change has been made in the dividend rate. Modder East provides the most notable increase among the Rand Mines—Central Mining group (whose dividends are set out below), although the increase is scarcely what had been expected in view of the great saving in capital expenditure envisaged in the last report:—

	Dec., 1937	Total, 1937	June, 1938	Dec., 1938	Total, 1938
<i>Rand Mines—Central Mining</i>					
Rand Mines (5/-)	4/-	8/-	4/-	4/-	8/-
City Deep (£1)	1/-	2/-	1/-	1/3	2/3
Consol. Main Reef (£1)...	2/6	5/3	2/6	2/6	5/-
Crown Mines (10/-)	9/6	19/-	9/6	9/6	19/-
Durban Deep (10/-)	1/3	2/6	1/3	1/3	2/6
East Rand Prop. (10/-) ...	1/9	3/6	1/9	1/9	3/6
Goldendhuis Deep (£1) ...	3/-†	5/-	2/-	3/-	5/-
Modder "B" (5/-)	1/3	2/6	1/3	1/3	2/6
Modder East (£1)	3/-	6/-	3/-	3/6	6/6
New Modder (10/-)	2/9	5/9	2/9	2/6	5/3
Nourse (£1)	2/-	4/-	2/-	2/-	4/-
Rose Deep (£1)	1/3	2/3	1/3	1/6	2/9

† Includes 6d. per share bonus from Eastern plant clean-up.

Expansion in the earnings of City Deep and Rose Deep is reflected in small dividend increases, but the high price of gold has not prevented a further cut in the New Modder rate.

"Johnnies" and Union Corporation Dividends.—Despite the decline in profits, Government Areas, in the "Johnnies" group, has maintained its rate at the reduced June level of 1s. 9d., making a total of 3s. 6d. for the year as compared with 4s. 6d. in respect of 1937. With the assistance of another bonus from sale of land, Langlaagte is able to pay 1s. compared with 2s. twelve months ago. Development uncertainties at Randfontein have not affected the usual 2s. 3d. payment, while Witwatersrand Gold has increased its distribution by 6d., though no material change in monthly profits was reported until November, when the total was about £800 above the average of preceding months. The "Johnnies" payments are set out below:—

	Dec., 1937	Total, 1937	June, 1938	Dec., 1938	Total, 1938
<i>"Johnnies" Group</i>					
East Champ d'Or	...	...	-/6	-/9	1/3
Govt. G.M. Areas (5/-)...	2/3	4/6	1/9	1/9	3/6
Langlaagte Estate (£1) ...	2/-*	3/6	1/-	1/-*	2/-
New State Areas (£1) ...	3/-	6/-	3/-	3/-	6/-
Randfontein (£1)	2/3	4/6	2/3	2/3	4/6
Van Ryn Deep (£1)	2/6	5/-	2/6	2/-	4/6
Witwatersrand Gold (£1) ...	2/6	5/-	2/6	2/6	4/6

* Including, respectively, 1/- and 6d. bonus from sale of land, etc.

Thanks to the progressive growth in profits, due to rising revenue and reduced costs per ton, East Geduld is able to pay an additional 6d., making 11s. 6d. for the year as against 9s. 9d. in respect of 1937. The additional receipts on the company's holding of these shares enables Geduld Proprietary to repeat its 1937 distributions; and Modder Deep, which went into liquidation some two years ago, is again paying 6d. The distributions are summarised below:—

	Dec., 1937	Total, 1937	June, 1938	Dec., 1938	Total, 1938
<i>Union Corporation Group</i>					
East Geduld (£1)	5/-	9/9	5/6	6/-	11/6
Geduld Proprietary (£1) ...	7/6	15/-	7/6	7/6	15/-
Modder Deep†	-/9	1/6	-/6	-/6	1/-
Van Dyk (10/-)	...	...	...	-/3	-/3

† In liquidation.

They include a distribution by Van Dyk—a small payment which is a precursor of better things. November's profits of £40,740 compared with £7,610 in June, illustrate the rapid progress of the company.

"Gold Fields" Payments.—It is unfortunate that the recent new issue by Simmer and Jack should have involved postponement of the dividend declaration until next week, because the announcement of this member of the Gold Fields group had been awaited with particular

interest. It has been intimated that a small increase in payments in the near future could be anticipated, with larger additions to come. Despite the expansion in profits of the Robinson Deep and a reduction in the amount required for meeting the "A" shares, the "B" shares dividend remains the same as in the four preceding half-years. For 1939 the rate on the "A" shares will remain at 9d. per half-year, but in respect of 1940 the total will be only 6d. per share, since repayment is due on January 1, 1941. The increase in profits has encouraged more activity in the shares of Rietfontein Consolidated, but the company repeats the reduced payment of June on the increased capital. No surprise would have been created by a small cut in the Luipaards Vlei rate in view of the expansion in capital during the half-year, but shareholders are again to receive 6d. The company, though for some time past administered by Gold Fields, is not actually a subsidiary. The Gold Fields' and miscellaneous distributions are summarised below:—

	Dec., 1937	Total, 1937	June, 1938	Dec., 1938	Total, 1938
<i>Gold Fields Group</i>					
Luipaards Vlei (2/-)	-/6	1/-	-/6	-/6	1/-
Rietfontein Cons. (5/-)...	-/10‡	-/10‡	-/7‡	-/7‡	1/3
Robinson Deep "A" (1/-) ...	1/3	2/6	-/9	-/9	1/6
Robinson Deep "B" (7/6) ...	2/6	5/-	2/6	2/6	5/-
Sub Nigel (10/-)	7/6	15/-	7/6	7/6	15/-
<i>Miscellaneous</i>					
New Kleinfontein	2/-	4/-	2/-	2/3	4/3
Nigel Gold	1/6	3/-	1/9	1/9	3/6
Rand Leases (10/-)	-/9	1/6	1/-	1/3	2/3
Wit. Deep	1/9	3/6	1/6	1/3	2/9

Outstanding among the miscellaneous producers' declarations are the progressive increases by Rand Leases and the further cut in the Witwatersrand Deep rate. The former company is supervised jointly by the Anglo-Transvaal Consolidated and the "Johnnies" undertakings. Witwatersrand Deep is a low-grade mine, whose results in the early part of the half-year were adversely affected by an accident.

Anglo-American and General Mining.—The Anglo-American declarations include, for the first time, "Sallies," which started crushing in July and reported a profit for November of £41,090. The rate of the first announcement is 14½ per cent., or 6d. per share of 3s. 6d. A distribution at this stage had not been fully expected. The shares of the parent company, the Anglo-American Corporation, are to receive 3s., and those of the Anglo-American Investment Trust 1s. 6d., as compared with 4s. in each case twelve months ago. The Anglo-American and General Mining declarations are set out below:—

	Dec., 1937	Total, 1937	June, 1938	Dec., 1938	Total, 1938
<i>Anglo-American Group</i>					
Brakpan (5/-)	1/6	3/-	1/6	1/7‡	3/1‡
Daggafontein (5/-)	1/2‡	2/5‡	1/3	1/3‡	2/6‡
New Era Consol. (5/-) ...	-/9	1/3	-/6	-/6	1/-
S.A. Lands (3/6)	...	...	...	-/6	-/6
Springs (5/-)	1/3	2/7‡	1/3	1/4‡	2/7‡
West Springs (£1)	1/3	2/6	1/3	1/3	2/6
<i>General Mining</i>					
Van Ryn Gold (10/-) ...	1/6†	3/-†	1/3†	1/3†	2/6†
West Rand Cons. ord. (10/-)	1/6	2/6	1/-	1/6	2/6
Do. deferred	85/-	141/8	56/8	85/-	141/8

† Subject to British income tax, less Dominion relief.

The Van Ryn rate is repeated. West Rand Consols ranks among the companies which, despite a continued expansion in profits, is not changing its disbursements.

The Week's Company Profits.—Reports have been issued this week by 55 companies. These companies show net profits of £5,098,000, a reduction of 2 per cent. compared with the £5,208,000 earned in 1936-37. Aggregate net profits of 2,361 companies reporting this year amount to £294,539,000, against £273,800,000—an increase of 7½ per cent. The week's results are discussed in preceding Notes and on page 617 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 628. Speeches at the annual meetings of the *Bank of London and South America*, the *British Overseas Bank*, and the *Commercial Bank of Scotland*, are discussed in our Finance section. Addressing shareholders of the *Canadian Bank of Commerce*, Mr S. H. Logan stressed that in the past decade Canada had shifted from a mainly agricultural economy to one based on a combination of agriculture, mining and manufacturing. At the *Orient Steam Navigation* meeting Mr I. C. Geddes pointed out that the bigger the ships built for carrying traffic in the season, the greater would be the percentage of passage money absorbed by Suez Canal dues in the off-season voyages. At the *Trust of Insurance Shares* meeting the Rt. Hon. Charles A. McCurdy disclosed that during the crisis units offered for sale by holders did not amount to more than one-half of one per cent. of the total issued by the group. Addressing *J. Brockhouse and Company* shareholders, Mr J. T. Brockhouse said that during the past year the company had taken on more armament work, but domestic trade remained more important. Sir Edmund Davis, at the *Wankie Colliery* annual meeting, disclosed that coal sales had achieved a record, advancing 99,086 tons above the figure for the previous year. At the *Nelson Financial Trust* meeting Viscount Goschen said that on practically all the Trust's holdings of foreign bonds, full or partial interest was being received. Addressing shareholders of *Wiluna Gold Corporation*, Mr John A. Agnew said that large-scale tests on the new roasting method evolved at the Lake View and Star mine were being conducted, and that if results were satisfactory an increased profit of 3s. to 3s. 6d. per ton of ore could be made. At the *National Bank of Scotland* meeting, the Marquess of Lothian drew attention to the very liquid position shown in the balance sheet. Cash, call money, etc., represented about 28 per cent. of deposits and note circulation together. The national importance of a scheme for insuring property against war risks was stressed by Mr Philip E. Hill at the *Second Covent Garden Property* meeting. *Glass, Houghton and Castleford Collieries* shareholders were informed by Mr A. Woolley-Hart that large economies were expected from two new installations. Mr Kenneth M. Chance reported to *British Industrial Plastics* members that in both October and November sales of Beetle powder had exceeded those for any month since March. At the *Agar Cross* meeting, the chairman discussed the effects of certain Argentine exchange decrees. At the *Messina (Transvaal) Development* meeting, the chairman drew especial attention to a new mine of much promise, the Campbell mine.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
DECEMBER 20 DECEMBER 22

ALTHOUGH business has not expanded dramatically this week, the tone of the London Stock Exchange has on balance improved. The motive factors are diverse. The fact that the present

Account is the last complete one before the end of the year tended to encourage bear closing at an early stage, the effects of which were particularly noticeable on Tuesday. At the same time, the moderation of the German attitude towards Memel, Dr Schacht's visit and Sir John Simon's optimistic references to trade, together combined to stiffen the resistance of the market. It was significant, moreover, that the net effect of

Mr Chamberlain's speech was slightly bullish on Wednesday, despite the reading into some of its passages of a certain modification of British policy.

Support for *gilt-edged market* was very small at first and even on Tuesday the recovery was not fully held. In mid-week this atmosphere of dullness continued, but on Thursday a small rally occurred in the Funds, which was attributed in some market quarters to

the accumulating weight of investment money. Further falls were recorded in Australian issues, pending the closing of the conversion lists for the latest issue.

★

In the *foreign bond market*, German loans were a rather weak feature, and selling of Japanese bonds continued. Quotations for Brazilian issues were marked down, but business was small.

Home rail preference and guaranteed stocks showed sharp recovery on Tuesday when bear closing was encouraged by Dr Burgin's view that the railways had established a *prima facie* case for de-restriction of charges. Support continued on Wednesday, despite the substantial traffic loss, when L. & N.E. debentures and guaranteed issues led further recovery. The latter company's second guaranteed stock also provided a feature on Thursday. Some improvement was recorded in the Argentine railway market, where the debenture stocks responded to buying on the good crop outlook.

★

Dull opening conditions in *industrial shares* were relieved by the brighter tone on Tuesday. The improvement was technical in origin, but it was accompanied by a modest improvement in business. Iron and steel shares recovered at first on hopes that the price cuts would bring an increase in business, and bear-closing together with the higher output figures also helped. There was, however, no strong impetus in the movement, and an easier tendency returned in mid-week. Thornycroft continued in demand. Coal shares were irregular; Powell Duffryn were firm on maintenance of the interim dividend, and there was support for Chinese Engineering on the dividend increase. Engineering issues also made an irregular showing. Motor shares were no better, and the undertone was uncertain. While aircraft shares were unexciting they were firm or better in the early part of the week, but became subdued later in common with other sections. Electrical equipment issues were dull, and supply shares fell at first, becoming steadier towards mid-week. Movements in textile and rayon shares were small. Breweries became a little steadier after a weak start. Seager Evans gave way before and after the report, but Newcastle Breweries rose sharply on the higher profits. Though the firm tone was not maintained throughout the week, tobacco shares were a relatively good market. Provision and catering issues continued irregular, and A.B.C. weakened on the report (discussed on page 613). Store shares followed the general trend of the market. Though the miscellaneous group was firmer on Tuesday, the undertone remained irregular. On the whole, cement shares were a little better. Shipping shares made a mixed showing.

★

In the *oil market*, a dull start was followed by a better tone. Apart from a small public demand for the dividend-payers, business was again confined to professional dealings. Rubber shares were once more in too lethargic a condition to move in sympathy with other sections. Prices were a shade firmer on Wednesday, but the turnover remained negligible. In the tea market also conditions were a little brighter in mid-week, after a very idle start.

The *mining markets* behaved similarly to other groups, though if anything Tuesday's recovery was more marked than in other sections, Kaffirs had been on the down grade, until the improved political outlook on the eve of the Prime Minister's speech induced buyers to come in at the lower levels. Quieter conditions but fairly steady prices returned in mid-week. And as in recent weeks, Paris and the Cape were important factors. West Africans followed the tendency of Kaffirs. No special trend emerged in Rhodesian copper shares, but quotations moved within narrow limits. Other base metals remained subdued.

ACTUARIES' INVESTMENT INDEX

The tendency for prices to drift slowly is again shown by the Actuaries' index of 151 industrial ordinary share prices, which on Tuesday, December 13, 1938, stood at 61.3, compared with 62.4 a week ago and 63.8 a month ago. The corresponding average yields are 6.13, 6.03 and 5.83 per cent. We give below a selection of the component indices:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High
	Nov. 15, 1938	Dec. 6, 1938	Dec. 13, 1938	
Banks, etc. (10)	110.7	109.3	108.1	117.0

New York

ENCOURAGED by the slight rally at the end of last week, and by the further rise in the Federal Reserve Board's index of industrial production from 96 to 100, Wall Street opened with a considerable display of strength on Monday. Investment buying was attracted at first, though towards the close the appreciable gains of the morning had been lost owing to tax selling. The tendency towards recovery, however, has been tenacious. On Tuesday, turnover again topped the million mark and the

Dow industrial average showed a rise of nearly one point. After the laggard movements of recent weeks, the technical action of the market was regarded very favourably and provided the incentive for a further rise in turnover, practically to the two-million mark in mid-week. The Dow industrial average broke through a resistance point with a jump of 2½ points to 151.83, and prices closed at the best levels. Rail stocks were strong as a result of favourable October earnings and partly on reports of Federal assistance and a revision of the rating structure. Steel shares were encouraged by the forecast that the decline in steel activity would go little further, and that output would pick up in January.

Capital Issues

An active week in the new issue market has included offers of 4 per cent. preference stock at par by *North Metropolitan Electric*, and £1 ordinary shares at 43s. 6d. by *County of London Electric*. An appreciable portion of each offer was left with the underwriters, although both are plainly in the highest grade. The 6 per cent. preference shares of *Weston Foods*, issued at 21s., are a high yielding security of a general industrial character. The biscuit trade is competitive, but this group, to judge by its expanding profits record, appears to be setting the pace. On the latest year's profits (which themselves showed a 50 per cent. increase on 1936-37) the dividend on the issue is covered more than 3½ times. The small mixed issue of *Scottish Stamping and Engineering* will probably appeal more particularly to the local investor. Profits have shown a spectacular advance during the past three years, but a somewhat lengthier profits record would have been of assistance to the subscriber. Statements for information have been published on behalf of *Inter-State Royalty Corporation*, *House Property and Investment*, and *A.C.E. Machinery*.

PUBLIC OFFERS

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

The Plight of Shipping and Shipbuilding.—Alarm at the grave outlook for the British shipping and shipbuilding industries is growing. The decline in international trade since last year has led to a marked increase in unemployed shipping tonnage and to a sharp fall in freight rates. The deterioration in shipping, in turn, has led to a severe curtailment of new orders placed with shipbuilders, who were also handicapped by the high price of steel. Both shipowners and shipbuilders, moreover, are suffering severely from subsidised competition, against which they are individually almost helpless. On Wednesday last week representatives of the workers' organisations in shipbuilding met Members of Parliament from shipyard constituencies to discuss the steady fall in orders experienced this year and the present almost complete lack of liner, tanker and cargo ship work. The managing director of Cammell Laird and Company, speaking on the same day at the launch of a submarine, said that his firm had received one small civil order in over twelve months. In twenty years the number of workers in shipyards has fallen from 312,000 to 172,000. In 1929 the shipping tonnage under construction in Great Britain was equal to the tonnage building in the rest of the world. To-day the rest of the world is building twice as much as British yards; and Britain herself is building less tonnage on foreign account than foreigners are building on hers. No wonder that the demand for Government action is growing more insistent. On Tuesday this week Viscount Runciman announced in the House of Lords that a fact-finding Committee, composed of representatives of the coasting, tramp and liner sections of the shipping industry was investigating the problem. The Government, alive to the danger of a further contraction in Britain's mercantile fleet, is now awaiting the industry's recommendations. Clearly, there is a case for speedy action.

The Reduction in Iron and Steel Prices.—The maintenance of iron and steel prices at boom levels throughout 1938, when the trend of free-market prices was downwards and when general business activity was declining, has been severely criticised. The growing disparity between the prices of steel and other industrial products is revealed by the Board of Trade's indices. In July, 1937, when the Board of Trade's index of the prices of all industrial products stood at 116.1 (1930=100), its index of iron and steel prices was 137.6. In November this year, the two indices stood at 111.7 and 138.3, respectively. While iron and steel prices have thus remained practically unchanged since the onset of recession, those of all industrial products have fallen by

no less than 11.7 per cent. Some of the reasons for this disparity are given in a leading article on page 606. The reduction in iron and steel prices from January 1, 1939, announced on December 9th, will reduce this disparity, though only to a moderate extent. In contrast to the current prices which were fixed for the whole of 1938, the new price list is subject to revision at the end of June, 1939. An estimate of the extent of the reduction in the principal products is given below:—

PERCENTAGE REDUCTION IN PRICES OF IMPORTANT MATERIALS			
	%		%
Basic pig iron	7.5	Ship-plates	7.6
Hematite pig iron	9.4	Joists and sections ...	5.7
Billets, untested	6.4	Rails	6.2
Billets, tested	8.2	Black sheets	6.3
Sheet bars	6.4	Galvanised sheets ...	6.8

Like those of steel products, the new prices of basic and hematite pig iron and of scrap used in the manufacture of steel, have been fixed until the end of June, 1939. The cut in scrap prices, from £3 7s. 6d. per ton to £2 19s. per ton, was announced prior to the issue of the new price list for iron and steel.

The Consumption of Steel.—The reduction in iron and steel prices, though welcomed by consumers, is unlikely, by itself, to bring about a major revival in consumption. The extent to which it will reduce costs of production in consuming industries will depend on the ratio of the cost of iron and steel to the total cost of production in individual industries. In the following table we have analysed, for a number of important steel-consuming industries, the ratio of the cost of steel (a) to the total value of their output, and (b) to the cost of the materials (including fuel and electricity) consumed by them. The analysis is based on the results of the 1935 Census of Production:—

STEEL CONSUMPTION AS A PERCENTAGE OF (a) THE TOTAL VALUE OF OUTPUT, AND (b) OF THE VALUE OF MATERIALS

	Total Value of Output	Value of all Materials consumed (incl. fuel & electricity)
Shipbuilding*	11.2	20.5
Mechanical engineering†	16.0	38.6
Electrical engineering	3.6	7.8
Motor cars and cycles (steel products only)	7.8	13.3
Motor cars and cycles (incl. consumption of ready-made parts)	15.9	27.0
Hardware, hollow-ware, metallic furniture and sheet metal trade	22.0	44.5
Chains, nails, screws and misc. forgings	33.1	67.1
Wire	37.4	59.5
Tools and implements	18.7	50.7
Railway carriage and wagon building	21.9	38.2
Railways	9.6	28.6
Aircraft	4.1	11.1
Building and contracting (structural and reinforcement steel)	1.7	3.1

* Excluding steel contained in purchased machinery.

† Including prime movers and boilers (other than marine); marine engineering, textile machinery and accessories, machine tools, printing and bookbinding machinery, agricultural machinery, other mechanical engineering products, constructional engineering, repair work and work done for the trade.

The importance of steel in the cost of production and, hence, the incidence of the cut in prices, varies considerably from industry to industry; but the reductions have been too small to make much impression on the total cost of the major consuming trades, unless they are accompanied by special concessions arising from the standardisation of requirements.

Lancashire Cotton Campaign.—The campaign launched in Lancashire for the purpose of drawing attention to the serious condition of the cotton industry is gaining in intensity. At the request of the trade unions, the employers have agreed to take part in a joint deputation to the Government, and on Tuesday next week there will be a meeting in Manchester of leading employers and trade union officials, when it is expected that a letter will be sent to the Prime Minister asking him to receive the deputation. Meanwhile, representatives of the various branches of the industry are passing resolutions which are being sent to the Government and the Lancashire Members of Parliament. These resolutions urge that all sections of the industry should combine to demand from the Government a more realistic treatment of the problems which confront the cotton industry. Satisfaction has been expressed that agreement has at last been reached between the Joint Committee of Cotton Trade Organisations and the Government with regard to the Cotton Trade Enabling Bill, and it is understood that the revised proposals will be circulated to the trade at the end of this week. It is already pointed out, however, that although an Enabling Bill would assist the industry, the Government should make more determined efforts to find markets for Lancashire goods. Meanwhile, the employers in the weaving section of the industry have definitely refused the demand of the Weavers' Amalgamation for a minimum wage of 8½d. per hour or 35s. for a full working week of 48 hours. The employers announced that in their opinion the difficulties of granting the request were insurmountable. The operatives are dissatisfied with the refusal, and the decision of the employers will be discussed at further meetings of the members of the trade union.

Overseas Trade Maintained.—For six months or more, the monthly value of British imports and exports has varied very little. The value of imports has lain between £70 millions and £80 millions, and that of British exports between £35 millions and £45 millions. The returns for November show that this stability continued

U.K. IMPORTS AND EXPORTS (£000)

	1936	1937	1938	Change between 1937 and 1938
November				
Total Imports	78,680	97,268	78,028	- 19,240
British Exports	38,441	45,183	42,923	- 2,260
Re-exports	4,343	5,306	5,114	- 192
Total Exports	42,784	50,489	48,037	- 2,452
Excess of Imports over Exports	35,896	46,779	29,991	- 16,788
Transshipments under bond..	2,724	3,406	3,106	- 300
Eleven Months ended November				
Total Imports	765,872	935,723	846,948	- 88,775
British Exports	400,254	477,980	432,001	- 45,979
Re-exports	54,596	70,224	56,808	- 13,416
Total Exports	454,850	548,204	488,809	- 59,395
Excess of Imports over Exports	311,022	387,519	358,139	- 29,380
Transshipments under bond..	26,046	34,385	29,756	- 4,629

in that month. Compared with October, imports were smaller by £1 million, British exports increased by £0.5 million, and re-exports fell by £0.3 million. Compared with a year ago, the value of imports in November fell by a fifth, and that of British exports by 5.4 per cent.; the much greater fall in the value of imports, due partly to the fall in prices, reduced the excess of imports over exports by more than a third of that in November, 1937.

Overseas Trade by Commodities.—Quantitative changes in the imports and exports of important materials are shown in the accompanying tables. Of the eighteen items listed in the table of imports, the intake of only five—of which iron ore and scrap, petroleum and lead are the most important—was smaller than in

RETAINED IMPORTS—MONTH OF NOVEMBER

Item and Measure	1936	1937	1938
Wheat	9,293	8,149	9,447
Beef and veal	944	1,034	1,028
Mutton and lamb	317	367	510
Sugar (unrefined)	4,264	3,375	3,752
Iron ore and scrap	535	787	245
Raw cotton	1,533	2,194	837
Sheep's and lambs' wool	538	435	516
Flax, hemp and jute	31,163	29,960	32,941
Crude petroleum	39,786	50,508	34,549
Hides, wet and dry	152	158	169
Wood pulp	215	176	176
Rubber	-17	288	21
Unwrought copper	27,988	39,372	32,134
Pig lead	24,503	37,824	22,761
Tin: Ore and concentrates	4,292	6,637	3,682
Blocks, ingots, slabs and bars	336	680	454
Iron and steel manufactures	90	272	69
Machinery	8,998	11,513	9,784

October. Compared with a year ago, there was an increase in imports of wheat, meat, wool and flax, hemp and jute. Imports of raw cotton showed little change from October, but were only 38 per cent. of those in November, 1937.

BRITISH EXPORTS—MONTH OF NOVEMBER

Item and Measure	1936	1937	1938
Coal	2,920	3,512	3,292
Iron and steel scrap	16,300	8,722	40,654
Pig-iron and ferro-alloys	7,548	14,002	16,085
Railway materials	13,196	17,468	16,595
Total, iron and steel manufactures ..	193,311	198,008	181,228
Textile machinery	4,827	7,561	5,554
Total machinery	31,997	40,275	37,688
Cotton yarns	12,424	11,374	11,911
Cotton piece-goods	154,414	150,686	119,946
Wool tops	4,936	2,957	2,487
Worsted yarns	2,460	1,734	2,409
Woolen tissues	5,178	5,353	4,475
Worsted tissues	3,181	3,108	2,159
Linen piece-goods	7,180	5,247	4,551
Leather boots and shoes	39,685	38,541	34,006
Leather	20,896	18,926	23,384
Paper and cardboard	349,161	386,654	327,529
Locomotives and parts	1,182	766	2,547
Motor vehicles and chassis	9,016	8,217	6,127

Exports were generally larger in volume than in October; only exports of wool tops showed a marked decline compared with that month. Exports of iron and steel scrap, of pig iron and ferro-alloys, of cotton yarns, wool tops, leather and locomotives rose in November compared with the corresponding month of 1937; shipments of the other items declined.

Brighter Prospects for Oil.—When we surveyed the outlook for the oil markets on page 187 of *The Economist* of October 22nd, the scene was dominated by the cut in the price of American (Mid-Continent) crude oil from \$1.22 to \$1.02 per barrel and by the weakness of Gulf export prices. We indicated, however, that Gulf export prices would have to fall a good deal further before the British motorist could expect to reap the benefit in the shape of cheaper petrol. Actually export prices in the Gulf are now slightly lower than they were then; nevertheless, the likelihood of a cut in British petrol prices appears to be receding owing to the gradual improvement on the American market. The consumption of petrol in the United States was stimulated by the persistence of mild weather until well into November, and stocks are now slightly below the level of a year ago, despite the maintenance of refinery operations at a high level. Meanwhile, largely in consequence of the retention of the five-day week in Texas, crude oil stocks are now not far above the economic minimum of 250 million barrels, as calculated recently by the Bureau of Mines. The one really dark spot

in the picture is the magnitude of gas and fuel oil stocks which, at around 150 million barrels, are practically 25 per cent. up on the year. Prospects are now regarded more optimistically than for some considerable time. Thus, the statisticians of the American Petroleum Institute recently calculated that domestic sales of petrol would be 4 per cent. higher in 1939 than in 1938, assuming the continuance of the present upward trend of business activity in the United States. Sales of light distillate fuel oils (for domestic heating purposes) are expected to rise during the six months to March 31st by as much as 15 per cent. compared with the 1937-38 season. And, with the wheels of industry turning more quickly, sales of lubricants and of heavy industrial fuel oils should begin to pick up in the near future. Stocks of these products would thus be reduced to more manageable proportions. Export requirements of finished products are more difficult to forecast, since the demand of European Governments is incalculable; but there seem to be solid grounds for expecting a marked expansion in total demand for American oil products in the near future. Whether this increase will be followed by an improvement in prices must be dependent in the main upon the level of refinery activity. According to the president of the American Petroleum Institute, the refineries' throughput of crude oil should not exceed a daily average of 3.1 million barrels between now and the end of March. Operations are still rather above this level; but if the necessary adjustment is made, a gradual improvement in the oil markets should result.

* * *

British Coal in France.—The Anglo-French Trade Agreement of June, 1934, provided for a barter arrangement for the exchange, quarterly, of 120,000 tons of coal for 80,000 tons of pitwood. The price of the coals to be supplied under this agreement was not subject to any

specific arrangement; it was to follow the trend of market prices, but provision was made for the quarterly determination of the price of the pitprops by a joint committee representing British coal producers, French coal importers, French pitwood exporters, and British pitprop importers. It was also a part of the specific provisions of the general agreement that the French Government guaranteed to the United Kingdom its then existing percentage (49.5) of the "normal" quota of foreign imports under the French licensing system. This "normal" quota does not include bunker coal, metallurgical coal or supplementary allocations, and because of the exclusion of these classes the "normal" quota applies to only about 50 per cent. of the coal equivalent of the total coal, coke and patent fuel imports of France. Last June representations were made by British coal exporters that these undertakings had not been fulfilled and that licences granted originally for the import of British coals had been transferred to cover imports of fuels from Continental countries. Moreover, it was complained that while British colliery owners had complied with their obligations under the coal-pitwood barter agreement, France had not taken her full quota of coals, the accumulated arrears now amounting to approximately 450,000 tons. As a result of the representations made last June the transfer of licences has been stopped, and Britain's share of the French import trade has increased. It is, however, still considerably less than it was when the French import licensing system was first established in 1931. For the ten months ended October, 1938, Britain's share of French crude coal imports was 34 per cent., compared with just over 50 per cent. in the datum period 1928-30 adopted for the purposes of the licensing system, and her share of the intake of coal, coke and patent fuel was 29.5 per cent., against just over 40 per cent. This development has been receiving the attention of the French and British Governments, and it is anticipated that the position of British coal in the French market will be improved in relation to that of other foreign coals under the revised conditions now in contemplation. The French Government, however, has intimated to the British Government that the exigencies of the foreign exchange position compel it to encourage the consumption of domestic instead of foreign coals; if the French Government's efforts to increase domestic production succeed, the intake of British and other foreign coals may be further restricted.

* * *

Iron and Steel Production in November.—The iron and steel production returns for November, given in the accompanying table, show that the improvement in the industry has been maintained. The fall in the output of pig iron is explained by the fact that November contains one day less than October. Calculated on a daily basis, the output of pig iron rose from 15,142 tons in October to

PRODUCTION AND TRADE IN IRON AND STEEL
(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4

" September	420.8	754.7	61.8	138.0
" October	469.4	854.0	52.4	139.1
" November	461.5	860.0	65.9	181.2

15,383 tons in November, and that of crude steel from 32,877 tons to 33,077 tons. The number of blast-furnaces in operation rose from 76 at the end of October to 79 at the end of the past month. Both imports and exports of iron and steel materials showed an increase last month; exports, in particular, showed a welcome improvement.

* * *

Copper Supplies and Consumption.—After rising from 191,000 short tons in September to 200,000 tons in October, the world's apparent consumption of copper fell sharply to 178,000 tons in the past month. The improvement in demand in October, which caused the price of standard copper to rise above £48 per long ton, prompted the co-operating copper producers to remove the restriction on output from October 15th. Conversely, the sharp fall in demand in November and December, which drove the price of copper below £43 per long ton, and threatened a further decline, induced the co-operating producers to reimpose restriction, at the rate of 105 per cent. of the agreed tonnages from December 15th, and at 100 per cent. from January 1, 1939. It remains to be seen whether the reduction is sufficient to maintain prices at about £45 per long ton, the level apparently desired by the co-operating producers. Owing to the fall in apparent consumption last month, world stocks of blister copper showed an increase; but this is not yet reflected in stocks of refined copper which remained unchanged at 425,000 short tons, equivalent to less than three months' consumption. A revival of demand in the United States would undoubtedly

arrest the fall in prices, though, at the moment, there are no indications of an early resumption of the re-stocking movement across the Atlantic.

* * *

Brazil's New Coffee Policy.—One year has passed since in November, 1937, Brazil abandoned her fixed price for coffee exports, and the change in policy has met with more favourable results than most observers dared to expect. It is true that the price of Brazilian coffee has fallen considerably; the London quotation for Santos Superior declined from 47s. 6d. per cwt. in November to 27s. 6d. per cwt. in April last. Since then, however, there has been a steady improvement, and at present the price for this grade is about 34s. 6d. per cwt. But this decline in price has been more than compensated for by a marked increase in Brazil's exports of coffee. Exports from Rio and Santos in the first five months of the present season—from July to November—totalled 5.7 million bags, an increase of 2.4 million bags or 70 per cent. compared with the corresponding period of 1937. Part of this increase has been at the expense of other producers of coffee, but the greater part of it represents an increase in demand; in these same five months, world deliveries totalled 11.1 million bags, against 9.5 million bags in the corresponding months of the previous seasons. Brazil has also been favoured by a small world crop of mild coffees, grown largely in other countries; consequently, it is expected that Brazil will be able to dispose, in the remainder of the current season, of increased quantities of her own crop, which is more than sufficient to supply any reasonable expansion in demand.

INDUSTRIAL REPORTS

The event of the week has been the publication of the iron and steel price list which will be in force during the first half of 1939. The reduction has been welcomed by consumers, and while it is unlikely, by itself, to cause a major revival in consumption, the volume of purchases is expected to expand after the removal of uncertainty. In the tinsplate industry output has been sharply curtailed to the lowest level since last August. Reports from coal-mining centres point to the dearth of forward purchases. There has been no expansion of new business in the cotton trade, and the campaign for Government assistance is growing in intensity. The wool textile trade remains fairly active and jute manufacturers remain busy, despite the lull in new business.

Coal

Sheffield.—Collieries are approaching full-time working on the higher quota, and stocks are being accumulated to meet requirements during the period when the pits are shut down for the Christmas holiday. Industrial demand is steady, but deliveries to steel-works are easing in view of the approach of stocktaking. Small coal is moving freely to electricity generating stations. Gas coal is better, and house coal is much more active. South Yorkshire hards are quoted at 18s. to 19s. per ton at pits. There is a fairly good demand for large selected patent-oven coke and graded coke of all sizes, but blast-furnace coke is easy around 22s. per ton on rail at ovens.

Export business continues quiet, and bunkering business hangs fire. Shippers would like to see completed the arrange-

ments for the co-ordination of district prices, giving a better chance to trade through Humber ports compared with Scottish and North-East Coast ports. The suggested levy of 3d. per ton on outputs to provide a subsidy on export coal is welcomed. It resembles the scheme adopted successfully in the Midlands before the passing of the Coal Mines Act.

*

Newcastle-on-Tyne.—Most collieries in the North-East coalfield have sufficient trade to the end of the year, but there is little inquiry ahead, and at the moment there is not as much trade booked for next year as is usual in December. Northumberland steam collieries are well placed for large screened coal, but there is still much difficulty in finding an outlet for smalls. The Durham market is fairly steady, but some collieries need prompt trade.

*

Glasgow.—There is still a scarcity of new business, and the collieries are now having to rely largely on their contract work. Buyers in general appear to be holding off to see whether prices will be reduced. The market, however, remains steady in tone under the control arrangements. Shipping trade has presented no new feature. Only a small inquiry has come forward so far for next year's deliveries, and this branch of the trade is closing the year on a distinctly quiet note, with the tonnages dispatched well down on last year. To date the total shipment figure is 10,115,000 tons, compared with

11,589,000 tons a year ago. Land sale trade is moving fairly steadily.

*

Cardiff.—There is no sign of the usual pre-Christmas expansion in the production and supply of South Wales coals, and many collieries are working at a lower percentage of capacity than at any other period this year. Shipments in the foreign and coastwise trades during the past four weeks have averaged nearly 20 per cent. less than in October, and in the week ended December 11th they totalled 360,000 tons, compared with 429,254 tons in the corresponding period last year. The chief cause of the weakness is the contraction in trade with France, but it is also partly due to the expiration of 1938 contracts, and to reduced deliveries to foreign coaling depots. New contracts, however, are being arranged for next year, and those reported this week include an order for 160,000 tons of anthracite duff for Dutch electricity works and another from Greek consumers who have during the last two or three years been obtaining their supplies from Germany. Duff grains and other sized coals are a firm and improved market, but for most other qualities the demand is weak. Prices are nominally unchanged.

Iron and Steel

London.—The announcement of the new prices for the first six months of 1939 has been favourably received by the market, says the official report of the London Iron and Steel Exchange. Although it is yet too early to see the effect the reductions will have in stimulating business it is realised that

LIVERPOOL

The port of the North—with easy access to the Midlands—just over three hours from London—and everything necessary to the smooth running of modern industry.

Labour, warehousing, power, transport (by ship, rail, road, air or canal) all 'laid on'—in planned factory estates.

Build your factory in the ideal spot—Liverpool Corporation have sites available and can help to finance the cost of land and buildings

for industry

Manufacturers and Industrialists are invited to write for illustrated brochure "INDUSTRIAL LIVERPOOL" which will be sent on request. Application should be made to the Town Clerk, Corporation of Liverpool, Municipal Buildings, Liverpool 2

taking into consideration the present costs the steelmakers have gone as far as could be expected to meet consumers.

In the pig iron department a fair amount of inquiry has been put into circulation; but many consumers have still to take delivery of material contracted for in the earlier part of the year. The new prices for foundry iron have yet to be announced and business in that market remains largely in a state of suspension.

The demand for semi-finished steel continues to broaden and should be helped by the price reductions. Whilst some firms still hold substantial stocks, a fair volume of business has been placed with British producing works, most of which have improved their position.

Business in the finished steel section of the market shows signs of improving and after the announcement of the new prices a considerable volume of inquiry developed. The works, however, are not well employed and for the time being are able to give quick delivery. Most of the business is still of a hand-to-mouth character, but some of the inquiry circulating is for delivery well into 1939.

★

Sheffield.—The iron and steel market has accepted the various reductions in the stabilised prices of iron and steel with quiet satisfaction, and there has been some improvement in the volume of business this week. The approach of the holidays, however, has had a counteracting effect, and no great development is expected until they are passed. Complete delivery of many contracts will not have been taken by the end of the year as a result of the recession earlier in the year, so that a good number of consumers may not find it necessary to come immediately into the market.

There has been some buying of basic pig iron on the reduction of 7s. 6d. per ton, but demand for forge and foundry iron, concerning the prices of which no announcement has so far been made, is very limited. Business in hematites shows some improvement at the new quotations—a reduction of 12s. 6d. per ton, plus reduced extras.

Price reductions in steel, ranging from 10s. to 25s. per ton over the first six months of next year, are mainly at the expense of the manufacturers, seeing that raw material costs are in most cases unchanged. There has been a fairly good inquiry this week for basic billets, and some expansion of business is confidently expected. Makers of fine steels are but little affected by the new prices. Structural steel, wire rods and cold rolled strip are in good request.

Output of steel in this area is expanding, and the heavy branches of local industry are fully employed, mainly on home orders, although a fair volume of overseas business is coming to hand.

★

Middlesbrough.—The long-awaited announcement regarding prices of certain classes of pig iron and steel for delivery over the first half of next year was made at the end of last week. The price of foundry pig iron for delivery after January 1st has not yet been an-

nounced, but it is expected to be known early next week; and anticipations are that the reduction will be about 7s. 6d. to 10s. per ton.

East Coast hematite has been reduced by 12s. 6d. per ton, so that the basis price for No. 1 grade of iron, delivered in this district after January 1st, will be 120s. 6d. per ton, less the usual rebate of 5s. per ton to loyal consumers. Basic iron is reduced by 7s. 6d. per ton, but actually this does not come on to the market in this district, the production being consumed at the local steelworks.

The reductions in steel prices vary from 10s. per ton on semi-finished steel up to 25s. per ton on galvanised sheets.

Some large orders for rails, tubes and other heavy steel were secured by makers in this district towards the end of last week, and it is hoped that the reduction in steel plate prices will bring forth new ship orders for the shipbuilding yards. The November output of steel ingots and castings again showed an increase and was actually the highest since May, 1938.

As blast-furnace coke prices are now based on a sliding scale varying with the price of steel, makers will be able to secure their fuel at a lower price next year. The agreed basis price for Durham blast-furnace coke is 24s. 3d. per ton at the ovens. The reduction of 8s. 6d. per ton in the price of heavy steel scrap, operating from January 1st, brings the quotation for No. 1 quality down to 61s. per ton delivered at works. Owing to the approach of the holidays, deliveries of scrap to steelworks are being reduced.

★

Glasgow.—Business in steel materials is quiet and deliveries from steelmakers and others consist mainly of small parcels required by users for their immediate needs. It is anticipated that, after the announcement of price reductions from the beginning of January, there will be increased activity at the plants. Inquiries on the market indicate that there is a large amount of business to be placed. Within the past week some substantial orders have been placed in the West of Scotland with engineering firms, tube makers, and locomotive builders.

★

Cardiff.—The announcement of the reduction in the official prices of billets, blooms, bars and sheets has cleared the air in regard to supplies of tinplates and other finished materials during the first half of the New Year, but it has had little, if any, immediate effect on the volume of business on the Swansea Metal Exchange and operations have been curtailed at several of the works in West Wales. The returns of the tinplate pooling scheme show a further decline in production, and the rate of operations at 40.33 per cent. of capacity for the week ended December 3rd is the lowest recorded since August. The market for black sheets is relatively more active than that for tinplates, and more forward business is being done in pig iron and steel at the new prices. Shipments of tinplates at Swansea last week totalled only 5,500 tons, compared with 8,634 tons the previous week, but owing to the decline in production,

stocks show no increase and those in warehouse and in vans are considerably less than they were at the end of 1937.

Textiles

Cotton (Manchester).—Spinners and manufacturers have experienced another unsatisfactory week, and very few producers have been able to sell their reduced output. In certain quarters there has been increased pressure for contracts and more weakness in prices. Wider fluctuations have occurred in raw cotton prices. The revised estimate of the crop by the United States Government has caused very little interest, the figure of 12,008,000 bales, against 12,137,000 bales a month ago, being about equal to expectations. Farmers have voted to the extent of 84 per cent. in favour of the 1939 control plan. Dissatisfaction is being expressed at the effect of the Farm Act, and it is reported that some changes may be made in the coming session of Congress. Less satisfactory advices have come to hand with regard to the Indian crop, estimates of the output being reduced.

The yarn market has been generally flat. Only hand-to-mouth buying has occurred in American counts. Egyptian numbers have moved off slowly. During the last few weeks there has been increased curtailment of production in the Egyptian branch.

Demand for piece-goods for foreign outlets has again run on small lots to meet urgent wants, bulk lines being decidedly scarce. Only occasional transactions have been arranged for India. The improved demand for Egypt and the Near East has been maintained, there being freer buying of light bleaching descriptions. Irregular operations have taken place in dyed goods for South America and the Continent. Home trade demand has been rather quieter, but negotiations are pending for further Government contracts.

★

Jute (Dundee).—New business in the jute trade has continued quiet. Spinners and manufacturers, however, are busy and the New Year holidays will be very short, the majority of the mills taking only two days off and some only a day and a half. Prices remain remarkably steady, in spite of the fact that there is so little business passing.

Raw jute prices have wavered a little during the past fortnight, but with a very steady undertone. The Indian jute mills have bought 3,500,000 bales of the fibre since July 1st, and it is anticipated that they will require to buy another 2,500,000 bales to meet their requirements for the whole season. Though the imports of raw jute into Calcutta for the five months ended November 30th were 5,350,000 bales, compared with 5,300,000 bales during the same period last season, they are now stated to be falling off, and the total is not expected to reach that of last season of approximately 10,000,000 bales. The final official crop forecast of 6,696,000 bales is to be well exceeded this season, and private estimates in Calcutta expect a yield of about 9,500,000 bales. The total consumption

of the world is likely to be about 10,500,000 bales, so that stocks in the hands of consumers are probably to be further reduced. In spite of this, the Bengal Government has intimated that it will again endeavour to restrict sowings next season.

Daisec-2/3 has varied around £18 10s. per ton and Tossa-2/3 £19 12s. 6d., while yarn prices are firmly maintained at 2s. 2d. for common 8 lb. cops, and hessian cloth prices are unchanged at 2½d. for 10 oz. 40 in. and 2½d. for 8 oz.

THE COMMODITY MARKETS

THE movement of the prices of the principal primary products has shown no definite trend this week. Moody's index of the prices of staple commodities in the United States, for example, stood at 140.4 (December 31, 1931 = 100) on Wednesday, against 140.0 on the corresponding day last week. Consumers are not inclined to cover their requirements for longer periods ahead, though the volume of purchases has sufficed to maintain the prices of the majority of commodities around last week's level.

The markets in wheat and raw sugar were slightly firmer. Raw cotton, too, is slightly dearer on the week and the market in rubber was also a little firmer. The prices of non-ferrous metals, on the other hand, were lower on Wednesday than a week ago.

Metals

Copper.—The price of copper fluctuated within narrow limits and closed on Wednesday 7s. 6d. down at £43 per ton. Owing to the quiet season, the demand was very slow, but the undertone of the market was comparatively steady, a fact which seems to indicate that a revival of buying will lead to an immediate improvement in prices. The November statistics of the American Copper Institute, published this week, showed a considerable deterioration on the preceding month. Both the mines and smelter output were up sharply, while consumption showed a seasonal setback. Nevertheless, the world supply and demand remained in equilibrium, so that the level of world stocks was reduced slightly by 174 short tons to 424,537 short tons. Meanwhile, the restriction of output has been resumed outside the United States, where reports speak of a reduction in mining activity. No serious increase in stocks is, therefore, likely, and as consumption is bound to show a seasonable improvement in the first quarter of next year the outlook remains favourable.

★

Tin.—The price of tin lost £1 to close on Wednesday at £214 per ton. The demand showed a decline this week, but the supply is so limited that the undertone remained firm. The buffer pool has now accumulated about 8,000 to 9,000 tons of tin, but so far no pool sales have been noticeable. A rise in the tin price to about £230 per ton is

anticipated during the next three months, when the market will become dependent on buffer pool releases.

★

Lead and Spelter.—Lead lost 10s. to close on Wednesday at £14 12s. 6d. per ton, while spelter declined by only 1s. 3d. to close at £13 12s. 6d. per ton. The demand for the two metals has fallen to very low levels in the last few days, but supplies were also limited. At the Sulphide Corporation's meeting Sir John Sanderson again mentioned the introduction of the lead scheme and stated that there is every expectation that the effect of the restricted output will bring about an improvement. He added that at the moment international affairs have much more influence on prices than consumption and production figures. It was learned this week that the opposition of consumers and the reservations of the London Metal Exchange to the application for a higher import duty on spelter have delayed a decision and that another month may pass before this question can be settled. This uncertainty naturally tends to have a depressing influence on the zinc market, although it is highly probable that the I.D.A.C. will eventually decide in favour of a higher duty.

Grains

THE Government of India imposed as from December 7th an import duty of 1½ rupees per cwt. on wheat. This action brought a slight easing in the Liverpool market, since it will reduce the Indian imports of Australian wheat. Compared with a week ago, however, prices for wheat are generally a little higher; there has been a good demand for the better grades of American and Manitoba, while Roumanian and Russian wheat have been bought for feeding. Unofficial estimates of the area sown to winter wheat in the United States give a reduction of 10 million acres from the estimates for the 1937-38 crop. The advance in maize prices continued last week, though it slackened off later; supplies are limited except in the United States, where growers do not seem inclined to sell except at considerably higher prices. Barley prices also advanced in sympathy with those of maize by 3d. to 6d. per quarter compared with a week ago.

Other Foods

Provisions.—Bacon prices advanced sharply at the end of last week and the market continued active at the higher level. Butter prices also rose. Trade in meat has been very slow; Irish turkeys are selling at Smithfield at 11d. to 1s. 1d. per lb.

★

Colonial Produce.—The futures market in raw sugar has been firm and prices of refined were raised by 1½d. per cwt. at the end of last week. There has been little change in other markets.

★

Fruit and Vegetables.—Trade has improved during the past week in most lines. Demand for apples, oranges,

pears and nuts was brisk and there was a fair market for the various Christmas specialities. Potato prices were unchanged and business in vegetables was rather better than of late.

★

Milk.—The following table is compiled from statistics issued by the Milk Marketing Board. Compared with a

	Nov., 1937	Sept., 1938	Oct., 1938	Nov., 1938
Prices (per gall.)	d.	d.	d.	d.
Liquid	18	15	17	17.5
Av. manufacturing ..	7.525	6.950	7.199	7.111
Av. pool	15.30	11.84	14.0	15.07
Contract sales (mill. galls.)				
Liquid	50.4	50.6	52.9	51.0
Manufacturing	12.1	24.2	20.6	15.2
Total contract	62.5	74.8	73.5	66.2
Used by farmhouse cheesemakers	0.9	2.8	2.2	1.0

year ago liquid sales in November increased by 600,000 gallons; total sales under contract rose by 3.7 million gallons, and there was an increase of 3.1 million gallons in the quantity sold for manufacture.

Miscellaneous Commodities

Oilseeds and Oils.—The market in linseed has been under the influence of conflicting estimates of the size of the new Argentine crop; prices have remained firm, though there was an easier tendency in the market on Wednesday. The balance of old Plate crop available for export has been reduced to 65,000 tons. Dealings in new crop have hardly begun. A steady trade was done in Egyptian cotton seed at rising prices. The markets for other vegetable oils are quiet.

★

Rubber.—The rubber market remains steady and, after small fluctuations, the price of standard sheet on the spot closed on Wednesday at 8½d. per lb., an increase of ½d. per lb. compared with last week. American consumption continues to improve; the latest figures estimate that deliveries rose from 40,333 tons in October to 46,048 tons in November, while stocks declined by 15,619 tons to 254,318 tons. Reports from the automobile industry are also encouraging.

★

Furs.—On Monday the Hudson Bay Company opened in London the December sales of silver fox, in the course of which a total of approximately 60,000 skins was offered. There was a large attendance both of London and Continental buyers. Most prices rose by about 7.5 per cent. compared with November, but in the cheaper grades up to £4 per skin the improvement in prices was much larger. Most of the offerings were sold. A better sentiment is also noticeable on the free market and appears to be due to the low level of stocks in the wholesale and retail trade after the small demand in recent months. Whether the improvement can be maintained depends primarily on the political position in Europe and the business trend in the United States.

COMPANY MEETINGS

THE BRITISH OVERSEAS BANK, LIMITED

SATISFACTORY PROFITS IN A DIFFICULT YEAR

A DEFERRED DEPOSIT TO ENSURE LIQUIDITY

DIFFICULTIES CAUSED BY EUROPEAN CONDITIONS

MR A. C. D. GAIRDNER'S REVIEW

The nineteenth annual general meeting of the British Overseas Bank, Limited, was held, on the 14th instant, at 33 Gracechurch Street, London, E.C.

Mr Arthur C. D. Gairdner (the chairman) presided.

The Secretary (Mr A. E. Thorne), having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen—May I take it that it is your pleasure that we should consider the report and accounts as read? (Agreed.)

It is my intention to-day to confine myself solely to the material interests of the bank as I feel that this is what you will expect. In the first place, you will no doubt desire me to make some explanation of the paragraph appearing in our report, which I shall now read for the benefit of any shareholder who may not have noticed it:

"As a result of conditions ruling in several of the countries in which the bank has done business, some of the assets of the bank have become difficult of immediate realisation. Arrangements have therefore been made for the provision of a deferred deposit of sufficient amount, together with the liquid assets, to cover existing liabilities of the bank to its creditors and depositors."

The growth of the difficulties to which I have referred has made it urgent that some means should be found of increasing the liquidity of the bank and providing a shield behind which the not readily realisable assets may be dealt with to the best advantage.

With this end in view it has been found possible to arrange for a deferred deposit which, after taking into account the liquid assets, will enable the bank to meet its liabilities to the public at whatever time they may become due. This deferred deposit ranks after the bank's liabilities to its ordinary depositors and other creditors, though, of course, like other deposits, before the capital and reserves. The deposit can only be reduced or completely paid off on an auditors' certificate that it is no longer required. The arrangement has been embodied in a formal agreement and places the British Overseas Bank in a position of unquestionable liquidity.

These negotiations had not been concluded at the date on which we closed our books and the deferred deposit is not, therefore, shown in our figures. The agreement is, however, now in force and henceforth the deposit will appear in our balance sheet figures.

POSITION OF "B" SHARES

Arising out of this there is a further change to which I must refer. The events which have made this protection desirable have brought the two banks who are "B" shareholders to the conclusion that it is undesirable for them as deposit banks to hold an interest in a banking institution whose business lies mainly in the foreign field. They have accordingly decided to terminate their connection with the British Overseas Bank. This change could have been effected in various ways but they, and with them the Prudential Assurance Company, have felt that it should operate in favour of the "A" shareholders, for whose benefit the "B" shares will now be held.

Until such time as the purposes for which the deferred deposit was designed are considered to have been fulfilled, the shares will stand in the names of trustees, who will exercise the voting control attached thereto in the general interest of the bank.

The new position will involve further changes. Obviously the advisory directors become an anomaly as the purpose for which they were appointed no longer exists. There are other changes which may also be desirable, but for the moment the position is completely dealt with by the procedure I have described.

DIFFICULTIES IN GERMANY

You will want to hear something about your property, and I will first deal with the assets which have been giving trouble.

In Germany our commitments, at the date of our balance sheet, amounted to £1,300,000, of which £600,000 represents acceptances

and £700,000 advances. Our difficulty in Germany was brought about by the inclusion in the Standstill of all kinds of obligations, not only those of this country but those of other countries. Had discrimination been shown at the beginning and the banking commitments dealt with on their merits, this would have been to the great advantage of both countries. In so far as commercial acceptances were concerned—and it is not suggested that all acceptances came into this category—all that was necessary was that Germany should have continued to make use of them in the same way as they had always done. Commercial acceptances are the rock on which the trade and finance of all countries is founded, and represent the foreign commerce of all countries who come to London in order to obtain the cheapest form of finance available.

This form of credit was, and is, necessary for Germany, and it is also a form of credit desirable for this country to grant if grave financial disturbance was, and is, to be avoided. Consequently there should be no question of repaying such obligations as if they were investments. The floating balance of bills ought to represent the trade being done at the moment and should fluctuate therewith. In place of this, the Standstill was administered in terms of its least desirable items, and an unsound position was created. This had the effect of forcing Germany to ask for commercial credits outside the Standstill, which were refused or frowned upon.

A CHANGE FOR THE BETTER

After some years this was realised, and last year we saw the first attempt to put matters on a sound banking basis by the re-commercialisation within the Standstill of acceptance credits which had deteriorated. I am glad to feel that I have had some part in bringing about this change, which has already proved successful in loosening the knots tied by the Standstill Agreement. There is no reason whatsoever why it should not be carried to its logical conclusion and commercial acceptance credits taken out of the Standstill, where they are overwhelmed in red tape, and dealt with in the ordinary way of business.

Cash advances of whatever kind are, of course, in a somewhat lower category, but as they are, without exception—at least in so far as we are concerned—granted to institutions of the highest standing in Germany, the settlement of these debts presents no insuperable difficulty. From this you will realise that no question of banker and debtor arises between us and our clients, who are all first-class German debtors. A rather striking illustration of this came before us a few weeks ago when we received a sterling remittance through the Standstill for the repayment of debt. After we had dealt with certain items we were left with a balance which we were at a loss how to apply, as all our debtors appeared to be quite first-class and we could detect no difference between them. It is not a question between banker and client but solely one of the credit-worthiness of Germany.

POSITION IN HUNGARY

In Hungary, our total commitments amount to £1,060,000, of which £922,000 is on account of commercial acceptances. The obligations in connection with them are now held as collateral against a cash advance of an equivalent amount. The same principles in regard to these figures apply as in the case of Germany, just as they do in any country. All our obligants are first-class Hungarian debtors, and again it is a question not of banker and client but of the credit-worthiness of Hungary.

The position in Hungary differs slightly from that in Germany as, owing to circumstances into which I need not enter, the amount of commercial acceptance credit necessary to deal with her trade became redundant. However, even at the worst moment a considerable percentage of the acceptance credit formerly available could have been made use of in this way, and the acquisition of fresh territory will ease the question considerably in so far as Hungary

is concerned. Why Hungary should insist on repaying commercial credits by sterling remittances when she could use them in the ordinary course of business and get rid of the obligation without the loss of a penny of exchange, I confess I am at a loss to understand.

BUSINESS IN SPAIN

In Spain, as I mentioned a year ago, we have been surprised at the extent to which our clients have been able to meet their obligations. The total figure outstanding—originally about £600,000—is now reduced to £268,408, but against this sum we have sterling balances and securities, balances in the clearing, etc. It is impossible to put an exact figure on this, and the uncertainty of the amount of our actual cover is still further complicated by large peseta deposits, some of which carry the direct obligation of the Centro to remit the sterling while others are only covered by its general obligation. What this cover, either in sterling or pesetas, is worth is, therefore, largely a matter of opinion, and, according to the point of view, our debt is either covered or leaves a substantial shortage. It is, however, not from these material things that I feel confidence in regard to the future. There is no more honourable debtor in the world than the Spaniard, and it is beneath the dignity of the average man to fail in such obligations. That is the traditional attitude, and it is for that reason that I have confidence in the future. Of course, we may have here and there cases of victims to circumstances beyond their control, but, just as in Germany and Hungary, I believe that our ultimate loss will be trifling.

In addition to these commitments we have a certain number of investments that are difficult to realise, but I do not feel that any purpose would be served by going into the matter in detail. We have also a certain number of accounts repayment of which is made at stated periods, a certain number of blocked accounts, and so on, but the amount is not large, probably less than the normal experience of any bank in our field of activity. Our British Government securities (£420,390) are valued at the prices ruling on October 31st.

AUSTRIA AND CZECHO-SLOVAKIA

On turning to our balance sheet you will see that our acceptance figures show a substantial diminution as compared with those of a year ago, and you will naturally want to know something on that subject.

When Austria was occupied by Germany in the spring we were doing an active and excellent business in neighbouring countries. The occupation naturally made political considerations of predominant importance, and your board reconsidered the position from this point of view. We came to the conclusion that, while the business in itself was first rate, political tension made it undesirable. We therefore regretfully decided to call up all our credits in that area. On this point I feel that I need only say that every credit we called up was repaid at maturity, and when the crisis occurred in Czecho-Slovakia we were not involved. Our clients met us in a friendly and frank spirit that could not have been improved upon. No doubt they felt a certain sense of annoyance but, on the other hand, they realised later that through our action they were enabled to ride the storm in safety with furled sails.

It is interesting to reflect on the fact that only a few short years ago the problem to which your board gave the most serious consideration was the extent to which it was desirable to allow our commitments to go to the stage of development we had then reached. To-day we find that, while the countries, clients and business are there, political considerations are such that the confidence is lacking which is necessary to enable the business we did formerly to be carried through. No doubt in the future the present moment will appear only as a bad nightmare, but for the moment it is very real.

PROFITS NOT UNSATISFACTORY

In these circumstances you will not expect to find that our profits have been maintained, but I also think you will feel that to have earned those we have shown is not unsatisfactory. In the conditions I have mentioned you will realise it is not possible for us to distribute a dividend.

The only other point that it seems desirable to refer to are our cash resources. These at the date of our balance sheet had dropped to an unusually low figure but recovered a day or so afterwards to what we regard as normal. As mentioned earlier in my remarks, we would have had to add a large sum to our cash resources if the document which was signed subsequently to October 31st had been signed before that date. That would have placed us in the unique position for a bank of having to consider not what percentage our cash resources ought to bear to our deposits but what percentage our deposits bore to our cash resources. In a world that

is to a large extent upside down, such a situation seems entirely in keeping.

TRIBUTE TO PRIME MINISTER

When I was a boy I once had a chance meeting with Joe Chamberlain. This meeting kindled my youthful imagination, with the result that I was an enthusiastic adherent of this great and far-sighted man until his death. To-day a son is our Prime Minister, and again a Chamberlain points out to us the path that ought to be followed. In his effort our Prime Minister has gained the gratitude and thanks of every unprejudiced person. It may, perhaps, seem strange that admiration for his achievement is more universal in other countries than it is in his own, but that, after all, is only natural. In his own country, owing to proximity, from certain points of view, the wood cannot be seen on account of the trees, and its magnitude therefore remains unknown. The Prime Minister's effort has been of such vital importance that I feel I cannot allow an occasion of this sort to pass without paying my tribute.

You will see from our report that Mr Meinertzhagen has been appointed deputy chairman. A change has also been made in regard to our procedure on this question. While your board was entirely satisfied with the manner in which the present arrangement worked—you may remember this involved a different member of the board occupying the post of deputy chairman each year—it was felt that Mr Meinertzhagen's wide knowledge and experience were not being taken full advantage of. Mr Meinertzhagen is at present chairman of our two produce companies, and he also pays special attention to the business connected with his old firm, but he holds no executive post in the bank. The board have accordingly appointed Mr Meinertzhagen a full-time deputy chairman, and I am sure that this will meet with your warm approval.

RETIREMENT OF THE CHAIRMAN

If you will allow me, I would now like to touch upon a personal matter. Over 31 years ago I was appointed manager of the London office of the Union Bank of Scotland and two years later became general manager. Since that time I have been the executive head of either the Union Bank of Scotland or the British Overseas Bank, in the latter institution under varied official designations. That is a long time in which to be the responsible head of any institution—indeed, I believe that, so far as this country is concerned at the present moment, it is unique. Times have not been easy, and for some years I have felt that when the right moment arrived I should be glad to pass my responsibilities on to younger men and enjoy some of the leisure which has been denied me during my official career. From what I have told you to-day, it is obvious that that moment has arrived, and when the necessary arrangements have been made I shall be glad to take advantage of it. I should like to take this opportunity of thanking you all for the support and encouragement you have given, and to my colleagues on the board and on the executive my grateful thanks for the loyalty and help which I have received from them to the utmost limit, and without which my task would have been an impossible one. To my many shortcomings you and they have been very kind, but whatever they have been, I can assure you that I have never had any thought but the interest of the bank. Thank you. (Applause.)

I beg to move:—"That the report and accounts for the year ended October 31, 1938, as audited and certified by your auditors, now before the meeting, be approved and adopted."

Mr Louis E. Meinertzhagen (deputy chairman): I beg to second that motion.

SHAREHOLDERS' QUESTIONS

Mr D. S. Savory: May I ask one or two questions, sir? There are two items in the balance sheet which I should like explained. First of all, there is an item of Government securities at market prices. Are those entirely British Government securities?

The Chairman: Yes.

Mr Savory: It is not so stated on the balance sheet. May I suggest that it would be better to put in the word "British"?

The Chairman: I think that is a good suggestion.

Mr Savory: My other question is with regard to the bank premises. Does that item refer to premises in this country?

The Chairman: Yes, the building in which we are meeting to-day.

Mr Savory: Then I have a third question, if I may presume on your kindness. You have told us what is going to happen to the "B" shares so long as the deferred deposit system is in existence, but you have not told us what will happen after that deferred deposit has been repaid.

The Chairman: The "B" shares are held for the "A" shareholders by trustees.

Mr Savory: In your speech you said they were held by trustees so long as the deferred deposit was outstanding, but you did not say what would happen when and if the deferred deposit was ever repaid.

The Chairman: Of course, there are many ways in which the "A" shareholders might get possession of them, and it has not yet been determined. They might be held and the dividends on the "B" shares paid over to the "A" shareholders. I want you to understand that I am now expressing only my private opinion. Another method might be by placing the money to reserve. I do not yet know what will be done.

Mr Savory: Thank you very much.

THE DEPOSIT

Mr L. W. Western: Perhaps it would be desirable for you to tell us with whom this deposit is made.

The Chairman: With us.

Mr Western: Who has made the deposit?

The Chairman: Before severing their connection with the bank the former "B" shareholders had to see that it was absolutely sound, and the deferred deposit was made with that object. It has been placed at call with the banks making the deposit and we can have it any time we want. This support has never been required and I do not suppose we shall ever need it, but, if we do, there it is.

Mr H. J. Stockton: Am I to understand that there are now no "B" shareholders? Have they ceased to exist?

The Chairman: The "B" shares are now held by trustees. The paragraph in that part of my speech which was contributed states: "Until such time as the purposes for which the deferred deposit was designed are considered to have been fulfilled, the shares will stand in the names of trustees, who will exercise the voting control attached thereto in the general interest of the bank." I had previously said: "They felt that it should operate in favour of the 'A' shareholders, for whose benefit the 'B' shares will now be held." Thus, the rights pass to the "A" shareholders.

Mr Stockton: You acquired the business of Frederick Huth and Company with interests in Chile. Have we any commitments in Chile, any debtors?

The Chairman: No; nothing.

The resolution was then put to the meeting and was carried unanimously.

The Chairman: I now call upon Sir James Caird.

RE-ELECTION OF DIRECTORS

Sir James Caird, Bt.: The directors retiring by rotation are Mr A. C. D. Gairdner, Mr Louis E. Meinertzhagen and Mr Duncan A. Stirling, and I have been asked to move their re-election. Those gentlemen are so well known to you that I do not think any words of mine are needed to gild their already golden reputations as bankers, and I am therefore content to move their re-election, and I will ask Sir Nigel Campbell to second it.

Sir Nigel Campbell: I have much pleasure in seconding that.

The resolution was unanimously passed.

The Chairman: Will a shareholder kindly move the reappointment of the auditors?

Mr Stockton: I have much pleasure in proposing: "That the retiring auditors, Messrs George A. Touche and Company and Messrs McClelland, Ker and Company, be reappointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of £750." It is very desirable that we should have good auditors and I believe that these two firms are excellent.

Mr L. H. J. Tomsett: I beg to second that.

The resolution was unanimously adopted.

VOTE OF THANKS

Mr Sydney Stewart: Gentlemen, as an "A" shareholder I should like to express regret that we are losing Mr Gairdner as our chairman. I am sure we should all like to pass a vote of thanks to him. He has had a very trying time as things have not gone really well since about 1932 or 1933. I am sure we are all very much indebted to him. (Hear, hear.)

Mr Walter Scott: Mr Chairman and gentlemen,—I had the privilege of saying a few words at the last meeting. To a certain extent I expressed disappointment at the passing of the dividend and I said, as you may remember, sir, that I should have to be content with a pigeon instead of a turkey for Christmas. This time, instead of a pigeon I am afraid it will have to be a sparrow. (Laughter.) However, let that be. I am very sorry—and I am sure all the shareholders here are—to hear the words spoken by you to-day, sir. I have attended all the meetings since the inception of the bank and I have always found you most courteous in your

answers to questions. I am sure that the shareholders could not have wished for a better chairman than you. (Hear, hear.) We shall all be extremely sorry when the time comes for you to resign.

I hope you will be good enough to pass on our appreciation to your colleagues and the staff for their attention to our business, which makes for success. I do not think I have anything more to say, but I wish you all a very merry Christmas and an especially happy New Year. (Applause.)

The Chairman: Ladies and gentlemen, I thank Mr Stewart and Mr Scott for their kind remarks and you, gentlemen, for the way in which you have received them. This is the sort of thing which must come to everyone; no one can go on for ever, and this appears to be a fitting moment for me to leave the fortunes of the bank in other hands. I am glad to be able to do so when the position is as strong as it is to-day. I thank you all very much. (Applause.)

The proceedings then terminated.

TRUST OF INSURANCE SHARES LIMITED

THE "BANK-INSURANCE" GROUP OF UNIT TRUSTS

MR McCURDY'S REVIEW

The fourth annual general meeting of Trust of Insurance Shares, Limited, was held, on December 9th, at 30 Cornhill, London, E.C.3.

The Rt. Hon. Charles A. McCurdy, K.C., the chairman, who presided, said:—Four years' experience of the workings of this group of Unit Trusts have cleared up many doubts and uncertainties which formerly existed in my mind. It is now clear that the Unit Trusts, so far from being a source of weakness to markets in times of depression, have proved to be a stabilising factor.

As regards the "Bank-Insurance" group of Unit Trusts, there is no question that our tens of thousands of unit-holders are genuine investors seeking security of income and stability of capital in a world in which security and stability have almost ceased to exist. Speculation in our units is unknown. Stock Exchange crises and international alarms leave our unit-holders undisturbed.

UNIT TRUSTS AND THE CRISIS

On this point I will give you some definite figures showing exactly what happened to our Trusts during the recent crisis, when trenches were being dug in the London parks and it was obvious to everyone that we were on the brink of war. During that period, from September 12th to the 30th, when, if ever, we might have experienced the predicted rush of unit-holders to realise their investments, the units in our Trusts offered to us for sale by unit-holders did not amount to one-half of one per cent. of the units in issue. Units to the value of £47,722 were repurchased by us; applications by fresh investors for the purchase of fresh units amounted to £112,047.

At a time when dealings in any kind of securities on the Stock Exchange were difficult and restricted, the units of the "Bank-Insurance" group of Trusts remained freely marketable at surprisingly close prices.

The average net margin between bid and offered prices, after deducting brokers' commission and transfer duties, both of which are borne by the company, was just over 4½d. per unit—a figure only comparable to the margins maintained at that time on purchases and sales of British Government stocks.

THE CORNHILL TRUST

The principal event of the year for the "Bank-Insurance" group was the phenomenal success of our Cornhill Trust—a Trust whose investments are limited to British insurance and bank shares and British Government stocks.

The Cornhill Trust was specially devised to give investors a choice of two widely differing types of investment. On the one hand, a short-dated investment fully secured and guaranteed—the Cornhill £1 redeemable debenture units, and, on the other hand, the Cornhill deferred units, offering exceptional prospects of capital appreciation as a long-term investment.

INSTANTANEOUS SUCCESS

The success of this Trust was instantaneous. On the first issue of debenture units 600,000 were subscribed within a few hours, and on the first public issue of Cornhill deferred units 350,000 were as promptly subscribed. The issue of units in this Trust to-day amounts to 1,410,000 debenture units and 1,540,000 deferred units.

I may say of this Trust, as of the other Trusts managed by Trust of Insurance Shares, Limited, that our unit-holders are by no means limited to the class of small investors and that more than £150,000 worth of our units are held as investments by directors and members of the staff of the managing company.

THE COMMERCIAL BANK OF SCOTLAND, LIMITED

SATISFACTORY RESULTS OF A DIFFICULT YEAR

STRONG AND LIQUID POSITION

FIELD-MARSHAL LORD MILNE'S ADDRESS

ASSETS

The annual meeting of the shareholders of The Commercial Bank of Scotland, Limited, was held at Edinburgh on December 15, 1938. In the absence of The Earl of Mar and Kellie (Governor of the Bank), Field-Marshal Lord Milne presided.

TRIBUTE TO LATE DIRECTORS

Before commencing the business of the meeting the Chairman said:—

I would like to refer to the great loss which we have sustained during the year through the deaths of Lord Mackenzie, Mr William Babington and Sir William C. Johnston. Lord Mackenzie's interest in the bank was lifelong; the son of a former manager, he was for a considerable number of years an extraordinary director, and latterly deputy-governor. Mr Babington and Sir William Johnston each rendered valuable service to the bank as ordinary directors. Mr Babington resigned his seat on the board on his appointment as law agent of the bank in 1929, and, following his death during the past year, Sir William Johnston accepted the law agency and resigned his directorship. We greatly regret that Sir William's tenure of office as law agent was so short. Each of these gentlemen was regarded by all with whom they came into contact with the greatest esteem and affection, and their presence is greatly missed.

In submitting the report the Chairman said:—

I have pleasure in presiding at the annual general meeting of the shareholders of the bank, and in submitting a report by the directors which, notwithstanding the uncertain and difficult times through which we are passing, will, I feel satisfied, show that the business of the bank continues to be conducted with the same care and success as in past years.

PROFIT AND ALLOCATIONS

The profit for the year, after payment of all expenses, and after making provision for all bad and doubtful debts, contingencies, income tax and National Defence contribution, amounts to £381,155, which is £14,509 less than the previous year. Looking to the increased rate of income tax and the provision for National Defence contribution, on this occasion covering a full year, the moderate reduction in profit to which I have referred is not surprising. Out of the profit the directors have applied to the reserve fund the sum of £50,000, which makes this fund £3,150,000, which is £900,000 more than the paid-up capital of the bank. That is a very substantial figure, but as the times through which we are passing are uncertain, your directors are satisfied that a large reserve is more than ever desirable. A sum of £50,000 has been applied to property accounts; £30,000 to the trustees for the officers' pension scheme, and £10,000 to the widows' and orphans' fund scheme. The staff pension scheme makes provision for retiring allowances as a right to employees of the bank upon a non-contributory basis, and the widows' fund provides pensions for widows and orphan children of members. These funds, administered by trustees, are steadily growing and the advantages enjoyed by the staff and their dependents, I have reason to believe, are very greatly appreciated.

BALANCE SHEET ITEMS

Turning to the balance sheet, our note circulation is the highest of the Scottish banks, and although the figure of £3,727,000 is about £41,000 less than last year, that is a small fluctuation which has no significance.

Deposits and other credit balances you will observe amount to £44,739,000, which is approximately £1,300,000 less than last year. It may be observed, however, that the deposits at the Scottish branches at the date of the balance were actually higher than at the corresponding date a year ago.

Acceptances and engagements on account of customers and banking correspondents (including foreign exchange forward contracts) at £4,069,000 are £689,000 higher, which reflects the greater activity in our foreign exchange department, the importance of which has steadily grown in recent years.

Turning to the assets side, cash, Bank of England and other balances, money at call and short notice, and our investments—which are almost entirely British Government securities—produce a total of £38,672,000, equivalent to almost 80 per cent. of our liabilities to the public in respect of deposits and notes in circulation. That, I have no doubt you will agree, is a very strong and liquid position. Our investments have been carefully selected with due regard to maturity dates, and the market value is in excess of the figures appearing in the balance sheet.

Bills discounted at £937,000 show a reduction of approximately £240,000. These are all trade bills discounted in the ordinary course of our business.

Loans and advances at £13,472,000 show a reduction of £1,160,000. It may interest you to know that during the greater part of the year our advances figure was substantially higher than the amount on the annual balance day. We have experienced a steady and increasing demand for loans of moderate amount throughout the year and the directors regard the advances as being in a very satisfactory condition. It can be readily seen that with the large liquid resources which the bank has available it is in a position to meet all reasonable demands from its customers.

Heritable property appears in the balance sheet at £975,000, which is £25,000 more than a year ago. The policy of modernising our offices, which was embarked upon several years ago, has been continued during the year, and we have reason to believe that the improved conditions resulting from our operations are appreciated not only by the customers but by the staff.

DIVIDENDS

Interim dividends have been paid on the "A" shares at the rate of 16 per cent. per annum, and on the "B" shares at the rate of 10 per cent. per annum, and it is now proposed that a further distribution on both classes of shares be made at the same respective rates, subject to income tax. After payment of these dividends and allocations to which I have referred, the carry-forward to next year's account amounts to £70,299, approximately £2,000 more than the amount brought in.

THE FUTURE

It is customary at these meetings to refer generally to trade conditions and prospects, but under present uncertain conditions in the field of international politics it is, I think, of little profit to indulge in speculations as to future prospects. When last you met here the Governor pointed out that there were indications that the upward movement in industrial activity was beginning to exhaust itself, and it is not surprising, as the international political situation became more unsettled during the period, that normal business should be adversely affected. An encouraging recent feature has been the conclusion of the Anglo-American Trade Pact, and the indication which it conveys of a desire for closer co-operation between our American friends and ourselves has more than normal significance at the present juncture. Although immediate results may not be seen, there must almost inevitably in course of time be substantial advantages over a wide field.

NEW DIRECTOR

During the year, Mr James L. Mounsey, W.S., was nominated by the board as an ordinary director, in room of Sir William Johnston, and upon Sir William's death Mr Mounsey accepted the invitation to become law agent, and thereupon resigned his directorship. In place of Mr Mounsey, Mr J. Ellis Inglis, W.S., was nominated an ordinary director, and his appointment falls to be confirmed by the shareholders. We are very pleased to welcome Mr Inglis at this meeting.

RE-ELECTION OF DIRECTORS

It is proposed that the Earl of Mar and Kellie should be re-elected Governor, that I be elected Deputy-Governor, and that

the extraordinary directors whose names appear on the list in the report be re-elected. It is also proposed that Mr Candlish Henderson, the ordinary director who retires at this time, be re-elected. Mr Macfarlan and Mr Annan, the auditors, being eligible, offer themselves for re-election for the current year.

The Deputy-Governor then moved the adoption of the report and the motion having been seconded by Mr Archer, was put to the meeting and carried.

At the close of the meeting, on the motion of Mr R. A. Bruce, W.S., a vote of thanks was accorded to the directors and the staff for their services during the year and acknowledgment was made by Mr Durham on behalf of the directors and by Mr Erskine, the general manager, on behalf of the staff.

GLASS HOUGHTON AND CASTLEFORD COLLIERIES, LIMITED

ABNORMAL MARKET CONDITIONS

MR A. WOOLLEY-HART'S ADDRESS

The ordinary general meeting of the Glass Houghton and Castleford Collieries, Limited, was held on Wednesday, December 14th, at the Charing Cross Hotel, London, W.C.2.

Mr A. Woolley-Hart, the chairman, in the course of his speech, said:—When we met in November last year the outlook was quite favourable, but soon after the beginning of the year there were signs of a recession, although it then appeared to us that such recession would be only of a temporary character. However, all the summer conditions were, if anything, rather worse, and it must be borne in mind that our accounts are made up to the end of September, thus covering the whole of this period, which compared most unfavourably with that of the previous year. I think I am accurate when I say that we have experienced, certainly from the point of view of our coke business, one of the worst periods in the history of the undertaking.

As an indication of the sudden change in the situation, the output at Glass Houghton for the first six months to March last was reduced by only 1.8 per cent. and appreciable profit had been made, so much so that the board felt entirely justified in paying an interim dividend. Unfortunately the outputs permitted under the selling schemes during the second half of the year resulted in a reduction in output of 80,939 tons, or 19.9 per cent., and great inroads were made in the profit that had been earned in the earlier period.

As you will see, the profits are down by £55,581.

Whilst we have experienced an advantage by virtue of the slightly higher selling prices received during the year, this was more than wiped out by the very heavy increases we had to bear in wages and the concession of holidays with pay.

It is a matter of regret to your directors that they have been unable to recommend the payment of a final dividend, but they do not consider it expedient to adopt such a course in view of the uncertainty as to the outlook in the near future and bearing in mind the expenditure to which they are committed.

The first part of our programme provides for a new central washery, which will enable us to do away with the bulk, possibly even the whole, of our existing screening plants. The next is a water tube boiler installation with which we shall ultimately be able to raise at Glass Houghton Colliery the whole of the steam at present raised by three separate batteries of boilers. Both these installations should effect large economies.

Considerable expenditure has also been authorised in connection with the Pontefract Collieries, where development of the new area of approximately 5,400 acres, referred to in the circular letter sent you in May last, is proceeding according to schedule.

Our future programme includes consideration of a new battery of coke ovens of modern design to replace the existing plant which has been in operation for 25 years. Your directors are of the opinion that a modern battery will show an appreciable economy. The present by-product plant, workshops, stores and washery will be retained.

The chairman having replied to questions, the report and accounts were unanimously adopted and the retiring director, Mr A. Woolley-Hart, re-elected.

The auditors having been re-appointed, the proceedings terminated with a vote of thanks to the staff.

THE NATIONAL BANK OF SCOTLAND LIMITED

SATISFACTORY RESULTS

The 113th annual general meeting of the proprietors of The National Bank of Scotland, Limited, was held in the bank's head office, on the 15th instant, The Most Honourable the Marquess of Lothian, C.H., the governor of the bank, presiding.

The Marquess, in the course of his speech, said:—The directors are pleased to report results which they consider very satisfactory. The net profit of £292,600, which is £16,600 in excess of the figures of the previous year, has been arrived at after making full provision for all bad and doubtful debts as well as for income tax, National Defence contribution, rebate, interest, and so forth.

On the assets side of the balance sheet, cash, money at call and short notice and balances with the Bank of England and other banks total £11,536,000. This represents practically 28 per cent. of the deposits and note circulation taken together—a very liquid position indeed. The bank's holdings of British Government securities stand in the balance sheet at £17,699,000, which is less than their present market value. No account has been taken of the substantial investment reserve fund, which has been built up over many years. Advances, represented by commercial bills discounted (including a considerable holding of British Government Treasury Bills), loans against marketable securities, and overdrafts on current account exceed £14 millions. This is an increase of £250,000 over the previous year's figures, although advances on current account are actually lower at the date of the balance sheet by £500,000. Bank buildings and heritable property taken together stand at the heavily written down figure of £564,000 despite considerable expenditure during the last twelve months, and apart from expenditure on the new head office building, the whole cost of which has already been provided for in the past. The total resources of the bank as shown in the balance sheet amount to almost £48 millions, which constitute a record in its long history of 113 years.

The Governor concluded by moving the adoption of the report and the payment of dividends at the rate of 16 per cent. per annum less tax on the consolidated capital stock and of 5 per cent. per annum less tax on the "A" stock. This was seconded by Mr R. K. Blair, W.S., chairman of the board, and was unanimously agreed to.

NELSON FINANCIAL TRUST, LIMITED

DIVIDEND MAINTAINED

The ordinary general meeting of Nelson Financial Trust, Limited, was held, on the 12th instant, at Southern House, London, the Rt. Hon. Viscount Goschen, G.C.S.I., G.C.I.E., C.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said on the assets side of the balance sheet investments, as classified, showed various changes as compared with their previous report. British funds standing at £77,805 showed a reduction of £8,465; Colonial stocks were £2,203 up, and foreign bonds at £52,399 showed very little change. On practically all their holdings of foreign bonds they were receiving whole or partial interest. The railway group stood at £56,235, and one need hardly remind stockholders of the disappointing position with regard to earnings common to nearly all railway systems.

Banks and insurance companies were £14,158 less and investment trusts £5,656 more than last year. Cable, electric and lighting did not show much change; but both financial, land, etc., and general mining were lower by £5,434 and £18,618 respectively. In the mining group, 53 per cent. was in gold shares, 9 per cent. diamonds, and the balance in tin, copper, lead and manganese. The whole of these investments, standing in the books at £741,525, which under ordinary conditions would be considered stable income producers, amounted to 49 per cent. of our total holdings.

In view of the fact that there had been a constant deterioration in market values throughout the year, it was not surprising to find that they had a depreciation of 16.3 per cent., as shown by the market quotations for their securities on October 31st last.

The actual result of the year's working was a decrease of £1,048 in gross revenue, but after adjustments in income tax they were enabled to recommend a final dividend on the ordinary shares of 2½ per cent., making 5 per cent. for the year, the same as last year.

He did not think any of them would expect him to prophesy about the current year. They hoped there would be less apprehension and more settled conditions.

The report and accounts were unanimously adopted.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

SATISFACTORY RESULTS IN A DIFFICULT YEAR

BRITISH EXPORTERS AND FOREIGN COMPETITION

LORD WARDINGTON'S REVIEW

The annual general meeting of the Bank of London and South America, Limited, was held, on the 13th instant, at the head office, 6-8 Tokenhouse Yard, London.

The secretary (Mr J. A. Stark) having read the notice convening the meeting and the report of the auditors,

The Rt. Hon. Lord Wardington, chairman of the bank, in the course of his speech, said: The past year has been marked by the most serious international political crisis since 1914. The swift march of events in Central Europe which culminated in the fateful days of last September will be still clear in your minds. The heartfelt good wishes of us all, I am sure, go out to our Prime Minister in his indefatigable pursuit of a policy of appeasement and co-operation. (Hear, hear.) It can only be hoped that the combined wisdom of statesmen in all countries will provide solutions of the problems which confront us, and chiefly those which spring from the prolonged phase of intense economic nationalism. Until this phase passes, with all its attendant burdens of heavy armament expenditure, increasing taxation, and the dislocation of world trade and currencies, return to general international prosperity must proportionately be delayed. An inspiring feature of the September events was the effort made by the leaders of the great nations of the New World to use their influence in the cause of European peace, and I would say how much we appreciated the prompt manner in which the Presidents of both Argentina and Chile associated themselves with Mr Roosevelt towards this end.

Future developments, it must be hoped, will lead to a return of that confidence which is essential for the revival and stability of all markets. The necessity for this return of confidence is nowhere better illustrated than among the foreign exchanges, the recent widespread flow of capital to the United States from Europe having confronted the Washington Administration with many complex problems including a sharp appreciation in the exchange value of the dollar. Should this flight of capital continue on an important scale, the reaction on the principal European currencies will be correspondingly severe. For this reason, and due to the fact that many of the currencies of the South and Central American countries are directly related to the dollar, you will readily understand that we must follow with special interest financial developments in the United States.

IMPROVED TRADING CONDITIONS IN THE UNITED STATES

Trading conditions in the United States did not show any substantial improvement during the year under review, but it is encouraging to observe a better tendency recently. Gratification is afforded by the signing on November 17th of the Anglo-American and Canadian-American Trade Agreements, not only by reason of the trading benefits which they confer, but also because of the demonstration of mutual goodwill and of the example set towards reducing international trade barriers. A further indication of a return to normal conditions is the reopening of the North American capital market to foreign borrowers, Argentina having last month successfully placed in New York a ten-year loan for U.S.\$25,000,000, thus becoming the first foreign Government for several years to raise new capital in the United States by means of a public bond issue.

EXPORT TRADE DECLINE

Last year I was able to refer to the expansion in South American export trade compared with the 1935-36 period, but the recession which began in 1937 has persisted, with the result that our financial year now under review witnessed a definite setback in the value of products exported. Actually, the fall in the total value of exports, as officially recorded in local currencies, was as great as 38 per cent. in the case of Argentina, 26 per cent. in Chile, 20 per cent. in Uruguay, nearly 13 per cent. in Peru, and about 2½ per cent. in Brazil. Since this trend coincided with a general rise in the value of imports, the favourable trade balances recorded in 1936-37 were either substantially reduced in 1937-38 or converted into import surpluses.

Generally speaking, the setbacks in exports were real, that is to say that shipments were lower in actual volume as well as in

value. Brazil, however, was an exception, thanks to the recovery in coffee shipments.

The rise in imports does not, as may at first sight be thought, indicate that the South American countries, encouraged by the short-lived approach towards prosperity in 1936-37, made any substantial increase in their purchases from abroad in 1937-38. The fact is that the actual volume of imports in no ascertainable case showed marked expansion, but substantially higher prices had to be paid for goods purchased from abroad. It is observed, however, that imports of machinery and equipment for the manufacturing industries, particularly in Argentina, Brazil and Chile, have been more extensive, and this is a factor which must inevitably influence the volume and lines of imports of finished goods as time goes on.

With regard to the remittance position, there has been no relaxation of exchange control restrictions, which, indeed, show a tendency to become intensified—a feature which is perhaps not surprising in view of the recent trend of trade.

BRITISH TRADE OUTLOOK

In these days, when the income from British overseas investments is so very much reduced, the maintenance of our export trade assumes greater importance than ever in our national balance of payments. Therefore, the recession in our export trade which has taken place this year cannot be regarded with equanimity, whilst, so far as certain of the Latin American markets are concerned, I feel it incumbent upon me once again to stress that, if Great Britain is to improve upon its present depleted share, British manufacturers and exporters must intensify their sales efforts notwithstanding the admittedly abnormal competitive factors which at present have to be faced. It will be sufficiently enlightening if I tell you that in the case of Brazil the proportion of imports emanating from the United Kingdom has fallen from 20 per cent. in 1932 to under 10 per cent. in the first half of this year, whilst almost exactly the same drop occurred in Peru.

Apart from the growing industrialisation of South America, this loss of trade—especially in Brazil, Chile and Peru—has been due largely to special devices employed by certain competitive countries. Germany, for instance, has continued to make great headway in many Latin American import markets on the basis of the "Aski" mark, which gives German exports the advantage of a large currency depreciation. Germany and Italy have also undoubtedly been granting direct subsidies to exporters to Latin America so that goods are often sold at under cost price, whilst in certain competitive countries wages and working conditions are said to be far inferior to what would be tolerated in this country. This "dumping" has been largely responsible for a glut of various lines of goods—textiles from Japan and Italy for instance—which has prejudiced not only United Kingdom exporters but also local manufacturers. Indeed, this has already led to the establishment of an import quota system for woollens in Chile, whilst an "anti-dumping" Bill is now before the Argentine Government to Congress.

The chief supplying country to the Latin American markets as a whole is the United States, although competition from that source is, of course, conducted on legitimate lines. It must be frankly recognised, however, that the United States enjoys two fundamental advantages over European countries; firstly, comparative immunity from the political troubles of the Old World, and secondly, geographical proximity to the South American markets. The latter factor especially assists in fostering both political and economic relations with the Southern Continent, particularly in view of the recent great improvement in transport facilities. The global increase in exports from the United States to the whole of Latin America in the year ended June 30th last was 20 per cent. over the previous twelve months. Undoubtedly even greater efforts will be made in future to consolidate these gains, and, in addition to the trade treaties concluded or in process of negotiation with several of the Latin American Republics, an official scheme is being studied for granting long-term credits to American exporters especially for the sale of heavy goods and railway equipment.

Generally speaking, the River Plate countries are those in which British goods are least confronted with the competitive devices already mentioned, due to the United Kingdom being the chief market for their products.

BALANCE SHEET FIGURES

On coming to the examination of our figures we find no striking variation in them as compared with those shown to you a year ago, despite the fact that banking business is increasingly competitive and interest and commission rates continue at a low level. We remain in the same satisfactory state of liquidity in respect of our ratio of cash to our deposits. Acceptances on account of customers and bills for collection show reductions of £340,000 and £610,000 respectively. I have no doubt you will be agreeably

WANKIE COLLIERY COMPANY, LIMITED

RECORD COAL SALES

SIR EDMUND DAVIS'S ADDRESS

The meeting of the Wankie Colliery Company, Limited, was held, on the 12th instant, at the Abercorn Rooms, Liverpool Street Hotel, London, Sir Edmund Davis (chairman and managing director) presiding.

The Secretary (Mr H. W. Lampard) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said that the profit for the year amounted to £268,433, from which had been deducted taxation reserve £20,000 and the three dividends, each of 6 per cent., paid during the year, leaving £45,128 to be carried forward. There had been a substantial improvement in their coal business, though a serious decline in the coke sales, during the year under review. The coal sales had proved to be a record by being 99,086 tons above the figure for the previous year, and they confidently hoped—in view of the developments which were taking place in Northern Rhodesia—that at no distant date they might still further improve upon that.

COAL PRICES

Referring to the publicity which had been given in Southern Rhodesia to the price of coal, and to the exclusive rights held by the company on what was known as the Gwaai area, the Chairman said that on the question of comparisons which had been made with the price of coal in the Transvaal, it was sufficient for him to state that the average price realised in the Transvaal for 1937 for all coal, including coal supplied under contract, varied from 4s. 11.94d. to 5s. 5.99d. per ton. But the general pitmouth price to non-contract consumers was about 8s. per ton. There had been recently an advance in the price of coal to the large consumers in the Transvaal, as well as to the domestic trade, which advance had been approved as thoroughly justified. The point, however, which critics neglected was the difference in the value of the coal supplied by the company when compared with that of the Transvaal, the Orange Free State and Natal. A large part of the better value of their company's output was due to the careful treatment the coal received, naturally followed by an increase in cost of production.

GWAAI PROSPECTING AREA

As to the Gwaai prospecting area, with a view to meeting the criticism in Southern Rhodesia—though he did not consider that it was warranted—the company had come to an arrangement with the Southern Rhodesian Government by which they had agreed to surrender one-third of the area now and one-fourteenth in each year commencing on September 1, 1939, on the distinct understanding that the Government would not work the area nor give any other assistance than that normally granted to the mining industry through the loan fund account of the Mines Department.

HEATING POWER OF WANKIE AND TRANSVAAL COALS

In conclusion, the Chairman, referring to the comparative heating powers of Wankie and Transvaal coals, said:—

"I think that at any rate those residing in Bulawayo might save themselves a great deal of trouble by going to the railway station and witnessing what I saw early this year—that is, locomotives in from the Union using Union coal compared with other locomotives using Wankie coal. The tenders carrying Union coal had to have their sides boarded up in order to take additional coal, whereas if Wankie coal had been used the tender capacity would have been sufficient for a similar mileage. In this connection, may I just point out that the calorific value of the coal in our contracts is specified at 13,600 British thermal units, with a tolerance of a plus or minus of 2½ per cent., giving a minimum of 13,260 and a maximum of 13,940.

"Perhaps it is better that I should state that coal produced by the Transvaal collieries varies tremendously in quality, its heating power being from round 9,000 B.T.U. to 13,000, whereas Wankie run of mine coal is 13,000 and when clean washed coal up to 14,000.

"Taking into consideration for heat content the great tonnage of Transvaal coal which is about 11,000 B.T.U. and comparing this with Wankie of about 14,000, you are faced with the fact that about 11 tons of Wankie coal are equivalent to about 14 tons of Transvaal, though for locomotive purposes, due to its physical properties, Wankie is very much the superior coal."

The report was unanimously adopted.

surprised that our business has stood up so well to the strain of another difficult year. Our gross profits, which are arrived at after providing for bad and doubtful debts, are down by some £44,000, but, on the other hand, by our unremitting attention to economies we find our charges at head office and branches are lower by £48,000, so that our net profit of £466,000 is slightly better than last year's return of £462,000.

Under the disturbed conditions through which we have passed, I consider this a satisfactory result, and, if some of you have felt that it justifies a more generous dividend distribution, I would explain the reason why this course is not deemed advisable for the present. It lies in the fact that, by the very nature of our business, principally carried on overseas where our capital is employed, our profits are almost wholly earned in foreign currencies in countries where rigid exchange restrictions are in force to such an extent that in some cases those currency profits cannot at present be remitted to this side. We must hope that in time there will be some relaxation in this respect, but, meanwhile, our dividend policy must be influenced by the measure of profits that we can reasonably expect to produce for you in terms of pounds sterling. The directors now recommend a final dividend of 3 per cent., making 5 per cent. for the year, a transfer to contingency reserve of £260,000, and to carry forward to next year £173,476.

THE FUTURE

With regard to future prospects, there is little I can add to my opening remarks, so much depends upon international political developments. Commodity markets certainly have shown signs of greater stability since the close of our financial year, and it is in that direction that we look most anxiously for some tangible improvement.

The process of consolidating our position as the only English bank in South America continues, and it may not be inopportune to mention at this juncture that, including our European branches and agencies, we have as many as 78 officers in 17 different countries. The diversity of our interests and the manifold problems which have to be faced daily can well be imagined. I am quite sure, however, that in our management and staff we have an experienced personnel ably equipped to carry on the bank's business to the best advantage, despite prevailing difficulties.

The report and accounts were unanimously adopted.

CANADIAN BANK OF COMMERCE

CANADA'S CHANGING ECONOMY

The president of the Canadian Bank of Commerce, Mr S. H. Logan, said at the bank's annual meeting, on the 13th instant, in Toronto that Canada experienced a comparatively moderate and short recession in business during the past year, a decline of 15 per cent. extending only from November, 1937, to the spring of 1938; a period of relative stability then ensued, followed by a slight recovery.

Resistance to unfavourable factors abroad and Canada's ability to resume progress were due to a remarkable transformation of Canadian economy. Within the last decade Canada shifted from a predominantly agricultural economy to one based on a combination of agriculture, mining and manufacturing.

In the expansion of non-agricultural industries in the last decade mining had led the way with production aggregating \$2,900,000,000 (an amount not far short of the present net direct debt of the Dominion Government), and had helped greatly to enlarge the field of industry. In 1928 non-ferrous metal smelting and refining was in tenth place, but it now led with a gross annual output exceeding \$200,000,000. Canada was the world's fourth largest source of refined copper and pig lead, second in importance in reduction of zinc ore of domestic origin, while a good proportion of nickel was refined before it was exported.

Canada's exports, including gold, he continued, were \$1,020 millions in the 12 months ending October, notwithstanding the short wheat supply in 1937 and depressed conditions in U.S.A. Grain shipments were one-half of the preceding 12 months, and trade with the U.S. had declined \$145 millions. Export trade with other countries was well maintained.

Many essentials for economic recovery were now present, and if peace between the major Powers was preserved and exports continued to expand on reasonably satisfactory terms, Canada would experience substantially improved business conditions during the coming year.

In his address Mr A. E. Arscott, the general manager, said that a comprehensive analysis of industrial activity showed that operations on November 15th were only 9 per cent. below a year previous, and that was regarded as satisfactory.

BRITISH INDUSTRIAL PLASTICS, LIMITED

A RECENT RECOVERY

The annual general meeting of British Industrial Plastics, Limited (formerly the British Cyanides Company), was held, on the 14th instant, at 20 Aldermanbury, London.

Mr Kenneth M. Chance (chairman and managing director) said that the net profit amounted to £22,184, against £31,098. During the past twelve months the plastic moulding industry, and in particular that branch interested in thermo-setting moulding powders, had suffered a recession, which was probably the most severe it had had to face in this country since the earliest days of its growth. One result had been that a large number of firms engaged in moulding, and one in the manufacture of moulding powders, had been forced into liquidation. It was becoming generally recognised that the plastic moulding industry was a growing one, and such troubles as they had seen during the past year were inevitable in a new industry and had no lasting effect on future development.

As to the effect which those conditions had had on the revenue of the company, in the interim report issued in March an account was given of the excellent business done during the six months from October to that date. Then had come the invasion of Austria, the addition of 6d. to the income tax, the Czecho-Slovak crisis and a sunless summer, with the result that sales of Beetle moulding powder had suffered the first real setback since it was introduced to the market by the company. While it lasted it had been severe but for the new lines developed during the last few years, whose sales had continued on the upgrade, with the result that the gross profit realised was only some 8 per cent. less than the record figure of the previous year.

As to the future, since the latter part of September the sale of Beetle moulding powder had completely recovered. For each of the two months October and November sales had exceeded those of any months since March and also the excellent sales for the same months of last year, while November had given a new record in sales of Scarab. Another excellent feature was the good demand for moulds from their Tyburn Road Factory. Unless this generation decided to use the marvels of modern science for its own destruction, the progress of the plastics industry and the company's activities within that industry were as certain as anything could be in this unstable world.

The report was adopted and a dividend of 6 per cent. approved.

AGAR, CROSS AND COMPANY, LIMITED

FURTHER RISE IN SALES

The thirty-second ordinary general meeting of Agar, Cross and Company, Limited, was held, on the 15th instant, at Dorland House, Regent Street, London.

Mr Stuart C. Sheppard (the chairman), in the course of his speech, after dealing with the balance sheet in detail, explained that, whilst there had been a further improvement in the net trading profits of some £53,000 (£195, against £142,000) for the year under review—the gross debit balance being reduced from £310,195 to £115,408—it was not possible to resume payment of dividends on either class of preferred stocks, nor, meantime, to put forward any scheme for reconstruction, although this had been considered by the board.

YEAR'S TRADING

The Chairman then dealt with the year's trading, explaining how the fluctuations in the prices of cereals in the Argentine had affected the company's business, and stating that, despite this, sales had been further increased and collections well maintained.

He also touched upon the exchange question, and its effect upon the company's trading operations, as well as upon the crop prospects for the forthcoming harvest; and explained the effect of the recent decrees of the Argentine Government regarding exchange and also of the minimum prices fixed for wheat and linseed.

Sales to date for the present financial year were being maintained, and were only very slightly below those for the corresponding period of last financial year, which, he mentioned, were peak figures.

The accounts were duly passed, and the retiring directors and auditors re-elected, the proceedings terminating with a vote of thanks to the chairman, directors, and staffs at home and abroad.

SECOND COVENT GARDEN PROPERTY COMPANY, LIMITED

PROBLEM OF WAR RISK INSURANCE

The fifth ordinary general meeting of this company was held, on the 15th instant, at the May Fair Hotel, London.

Mr Philip E. Hill (the chairman) said that the revenue from properties, dividends and transfer fees for the year ended November 30, 1938, amounted to £181,322, as compared with £171,461 for the previous year, an increase of £9,861. It was proposed to pay a final dividend of 4½ per cent. actual on the ordinary share capital, making 7½ per cent. on the year.

It had always been the policy of the directors only to purchase properties let to the most desirable type of lessee. As a result, 90 per cent. of their property was supported by the very valuable collateral security in the form of covenant of first-class multiple shop companies, banks, insurance companies and others. The balance of the properties was occupied by satisfactory lessees. He would like to refer to a question which was causing anxiety to every owner and occupier of freehold or leasehold property—that was, the absence of any facilities for insuring against damage caused by war. He felt that was a risk that, as far as property damage was concerned, should be insurable. The fact that no insurance scheme was available was having a detrimental effect not merely on property values, but also in the transaction of that vast volume of business appertaining to property. In view of the strength of their lessees' covenants, that was not a vital question to the company, but it was of outstanding importance to so large a section of the community that it could be described as of great national importance.

The problem was not an unsolvable one. While individual insurance companies might not feel justified in accepting so formidable an unknown risk, it should be simple for them to do so in conjunction with the Government, the insurance companies bearing a percentage of the risk and the Government the remainder, and the premium being divided in an equitable manner. In the last war the Government had arranged for such insurance and doubtless would do the same again were the country faced with similar conditions, but the move should not be delayed until actually needed.

The report was unanimously adopted.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

ADDITIONS TO ORE RESERVES

The annual general meeting of this company was held, on the 14th instant, in London.

Lieut.-Colonel John P. Grenfell (the chairman), in the course of his speech, said: The receipts from sales of copper and from sundry revenue amounted to £498,493, compared with £536,407 in the preceding year. Although our production of copper was actually greater, the reduced price obtained for it accounts for the difference.

The ore reserves of all three mines have increased, and the Messina mine has earned its share of these increases, but I wish more particularly to speak to you of the Harper and Campbell, where results have been more spectacular. From the 14th level to the 19th level in Harper we have developed large stopes of increasing grade, and the latest information tells us that in the Harper's lowest level, i.e. the 20th, they have driven 70 ft. in ore 30 ft. wide, averaging 6 to 8 per cent. Cu, and there is promise of more to come.

But I especially wish to draw your attention to the Campbell mine, a new mine of great promise, and of which we have large expectations. Last year there were ore reserves of 37,000 tons in this mine, which at June 30th had swelled to 184,000 tons of 2 per cent. Cu, and our latest information is that the reserves have increased during the last five months to 260,000 tons of 2.21 per cent. Cu.

These are very large advances, but when I tell you that all this ore has been developed above the 350 ft. level, your imagination will tell you what we have a right to expect when we have reached the 550 ft. level and the 700 ft. level horizons which we are driving to now. The area of Campbell ore bodies on the 350 ft. level is 24,000 sq. ft., whilst at the Harper mine at a similar depth it did not exceed 6,000 sq. ft. This leads the management confidently to report to me that the Campbell mine is likely to grow steadily bigger.

To sum up the operations of the year, we have made very large advances in the ore reserves without in any way diminishing our financial strength. We have been able to pay an interim dividend of 7½ per cent., and we propose now to pay a further 15 per cent., making 22½ per cent. for the year.

The report was unanimously adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED

IMPROVED RESULTS

The thirty-ninth ordinary general meeting of this company was held, on the 13th instant, in London.

Mr I. C. Geddes (the chairman) said that the working profit and income from investments at £430,560 showed a very considerable improvement on the corresponding figure of £351,011. On the other hand, they had incurred a loss on investments realised during the year against a profit for the previous year, and the depreciation to be provided was increased on account of "Orcaades," which first came into service in July, 1937. They recommended a dividend of 5 per cent., free of tax, on the ordinary shares, and in order to pay that they would have to draw on the balance brought forward, and would carry forward only £15,395 to next year against the £36,082 brought in.

The account they submitted was healthier than its recent predecessors, but still not good enough to pay for the progress that they and their clients desired. The debit side of the account was almost as important as the revenue. They found their operating costs had risen, and if the standard of housing on shore—and ship followed shore—was to continue advancing as rapidly as it had done in recent years they would be faced with a still further increase in cost and diminution of earning power.

Of their standing debts, one might instance Suez Canal dues as being a major expense. They paid grateful acknowledgment to the Suez Canal Company for the development and skilful management of their great undertaking, which enabled their ships to pass from the Mediterranean to the Red Sea with regularity and safety. When the Canal Company could reduce the dues, as they recently had done, they were thankful, and took it as a sign that they were not unmindful of their clients.

Passenger traffic through the Canal was highly seasonal; that fine ships should be built was in everyone's interest—that was the way to encourage traffic—but the bigger and finer the ships which were built to carry the traffic in the season voyages the greater would be the percentage of passage money absorbed by Canal dues in the off-season voyages, as they could not, for climatic reasons, materially increase the traffic at those times. Apart from the small head tax on passengers, the Canal Company did not differentiate between passengers and cargo—total space was the measure. He had worked out roughly the dues which would be paid by a cargo steamer carrying the same amount of cargo as one of their passenger vessels. The difference between that sum and the amount their vessel actually did pay represented the charge on passenger space. On that basis the charge made by Suez Canal on passenger space was 13 per cent. of their gross revenue from passengers passing through the Canal for the year—a not unsubstantial figure. If, however, they looked at the off-season transits, it was not unusual for the Canal charge on their passenger space, most of which was empty, to become 20 per cent. to 30 per cent., and indeed in one ship last year it amounted to 47½ per cent. of the gross earning from passengers for the whole voyage of six weeks. He submitted it would not be inequitable to grant the passenger ship some consideration in respect of those burdensome off-season transits.

The report was unanimously adopted.

J. BROCKHOUSE AND COMPANY, LIMITED

CONTINUED EXPANSION

The forty-first annual general meeting of J. Brockhouse and Company, Limited, was held, on the 14th instant, at West Bromwich. Mr J. T. Brockhouse, J.P. (chairman and managing director), presiding.

The Chairman, in the course of his speech, said that the report presented was in some measure a disappointment, but in other respects the progress of the company had been eminently satisfactory. For the first six months of the financial year they showed a record profit, but there was a general slackening off in trade during the last three or four months. This, together with the fact that their financial year ended at the time of the crisis, considerably affected the market price of their investments and they decided to create a special investment reserve. Another important factor was a hold-up owing to modifications in their Government contracts which temporarily seriously affected turnover in three of their works. They had, however, made a good start in the 1938-39 period. The company was in a very sound financial position, and the reserve funds amounted to approximately £500,000.

The West Bromwich works continued to be fully occupied. The profits in this department were slightly less than last year's record, but with the state of the order book at the present time there was every reason to anticipate a further record in the present financial year. R. Berry and Son, Smethwick—by far the largest manufacturers of laminated springs in the country—had suffered somewhat from the recession in the motor trade. The spring service departments in Leeds and Birmingham still enjoyed the full confidence of road users in the country for repairs and replacements and had continued the profits they expected from them. Their other branch in Glasgow, although showing a small profit, had been a disappointment, but reorganisation had been promptly taken in hand.

During the past year they had taken on more and more armament work. They would like to feel that their domestic trade was a greater percentage of their turnover than it was. Taking the company as a whole, however, the domestic trade was still by far the biggest proportion of their business.

The report was adopted.

WILUNA GOLD CORPORATION, LIMITED

MORE FAVOURABLE OUTLOOK

Presiding at the annual general meeting of the Wiluna Gold Corporation, Limited, held in London, on the 9th instant, Mr John A. Agnew (chairman) said that the operations of the Wiluna Gold Mines, the operating company, had shown a net profit of £109,614, which, with £171,594 brought in, made an available total of £281,208. After writing off various items, there was a balance of £121,657. As the year's net profit was unrepresented by available funds, the payment of a dividend was not possible, and this balance has been carried forward. The financial position of the Australian company showed a substantial improvement on that of a year ago. Developments had disclosed a better picture than he had put before them last year.

Having outlined the amount of driving, sinking and cross-cutting carried out and the ore shoots which had been disclosed in the main mine, he said that a bore-hole had exposed ore 18½ feet wide to the west of the West Lode. That was an entirely new occurrence, and tended to strengthen their belief in the potentialities of the southern area. Developments on the Bulletin section had been of a highly satisfactory character. At the lowest level—1,200 feet—there had been exposed to date a new shoot of ore 350 feet long, averaging 6.2 dwt. over a width of 9½ feet. The western shear had been proved by drilling to extend to the 1,200 feet level and to the south of the Bulletin shaft. The work on the Bulletin lease showed that values were well above the average grade of the ore reserves.

In the Happy Jack section drilling had disclosed an important ore body at depth, the exposures averaging 7.6 dwt. over 33 feet width for a length of 600 feet. Much development work had been carried out on the main mine, and, whilst no substantial ore body had been disclosed, the small blocks of ore encountered would prove a useful addition to ore reserves which were estimated at 1,920,000 tons, averaging 4.3 dwt. per ton. That estimate did not include any ore from the new disclosures in the main mine, and only a small portion from Bulletin. Large scale tests on the new roasting method evolved at the Lake View and Star Mine were being conducted. If results were satisfactory it was estimated that an increased profit of 3s. to 3s. 6d. per ton of ore treated could be made.

Summing up, he said that while results at depth in the main mine were not good, development in the Bulletin and Happy Jack sections gave every promise of furnishing very substantial tonnages of good grade ore and the promise of a reduction in treatment costs afforded good grounds for believing that, if the corner had not yet been turned, it was clearly in sight.

The report and accounts were unanimously adopted.

Peace or Appeasement?

"PEACE on earth, goodwill towards men." If the efficacy of prayer is proportionate to the heartfelt intensity with which it is offered up, the Christmas message will never render a greater service to the human race than to-day. There have certainly been few times in living memory when peace on earth was so precarious, and goodwill towards men of different races or nations so largely at a discount, as to-day—and few times, too, when they were more passionately desired by the common man and woman of every creed and colour. The world has had in 1938 the narrowest possible escape from immeasurable disaster, and no one of the millions who, last September, felt the approach of the angel of death and heard the beating of his wing will fail to give thanks this Christmas for deliverance.

Those dreadful September days—as glorious autumn days as ever went unnoticed—are now three months away. The interval is long enough, and the Christmas holiday provides an appropriate occasion, for a somewhat less hurried survey of the diplomatic horizon than is possible in the press of events from week to week. Somewhat the same thought doubtless moved the Parliamentary Labour Party to initiate, on Monday, a broad debate on the whole field of the Government's foreign policy.

The House of Commons occupied itself with looking backwards as well as forwards, and it held one more inquest on the Munich Agreement. The historian of the future may be able to judge Munich with a simple Right

or Wrong. We cannot yet do so, largely because the verdict on Munich will very largely turn on what happens next. But it is probable that, if the historian of the future has criticisms to make of the policy of the British and French Governments in 1938, they will relate not so much to what was done by London and Paris in September as to what they did not do earlier in the year. The indictment will lie not against the methods adopted to get out of the dangerous situation that arose in September so much as against the inertia that allowed such a situation to develop. It was proved in September that, when it came to the point, Britain and France were not prepared to fight to preserve the inviolability of Czecho-Slovakia's frontiers. That being so, true statesmanship would have discerned it in May, or even earlier. Looking back, with all the admitted advantages of hindsight, we can clearly see that Britain and France, on May 22nd at the latest, should either have warned Germany that they would fight or have warned Czecho-Slovakia that they would not fight. The world was dragged to the precipice because they did neither. The fault lies with the incurable predilection of British statesmen for the policy of stalling for time in the hope that problems will solve themselves. And it is hardly reassuring to reflect that precisely this is the avowed policy of the British Government at the moment.

Whatever may be the ultimate judgment on the events of September, some of their practical results can already be seen. Germany is manifestly not satisfied with what she

obtained at Munich. It is safe to say that the German-Czech frontier finally established is very much more favourable to Germany than was contemplated by the visiting statesmen at Munich or even, in some particulars, by Herr Hitler at Godesberg. Economically, politically, ideologically Czecho-Slovakia lies at Germany's mercy to an extent that was unimaginable three months ago. British Ministers continue to claim that the state of Czecho-Slovakia is better than it would have been if war had broken out. But the best judges of that are presumably the Czechs themselves, and returning visitors report that the ordinary Czech citizen now regrets that his country did not fight. In any case, the substantial point is that the particular method chosen for the solution of the Sudeten problem has had the effect not merely of incorporating the Sudetens (and a million Czechs) in the Reich, but also of putting Czecho-Slovakia's economic resources, and specifically her excellent armament industry, at the Nazis' disposal and turning the country into little more than a German colony. The bastion of Europe has not merely lost its outworks; it is being demolished.

Germany since Munich

If the German domination of Czecho-Slovakia has gone faster and further than was generally expected, however, the extension of Germany's influence over the other States of Eastern and South-Eastern Europe has not proceeded so successfully as was widely forecast. Hungary, it is true, has little freedom of action left and has formally joined the Axis. But Roumania and Jugoslavia are not proving entirely complaisant, and Poland—several moves in the game too late—is actually bestowing her smiles on Russia. But the politics of all these countries are dominated—and those of Switzerland and the Scandinavian countries are strongly influenced—by apprehensions about Germany's next move. The air is alive with rumours of trouble brewing for February or March, and, to judge by their actions, there is no one of Germany's neighbours who puts any faith in Herr Hitler's verbal assurance to Mr. Chamberlain that he has no further territorial ambitions in Europe.

Germany, then, is manifestly not satisfied. She is clearly not appeased. Almost from the morning of Munich there has been a mounting stream of venom issuing from Dr Goebbels' regimented mouthpieces towards Great Britain. Herr Hitler himself gave the keynote by his threat that Messrs Churchill, Eden and Duff Cooper must not be given office. The campaign was continued with the invention of the crudest atrocity lies about the conduct of British troops in Palestine. And it reached its height with very thinly veiled sneers at Mr Chamberlain uttered by no less a person than the Fuehrer himself. There is no sign of mental disarmament here.

Germany is not recovering that moral balance which it was hoped would be the result of granting her demands. On the contrary, the outbreak of revolting barbarism and calculated cruelty against the Jews has put the Nazis once and for all beyond the pale of modern civilisation.

The fundamental assumption of the policy of appeasement is that if Germany's demands are granted we can afford to overlook the fact that they make her more *able* to wage war because they will make her less *ready* to do so. But it must be set down, both in sorrow and anger, that the upshot has been quite otherwise. The Czecho-Slovak thorn having been removed from her side, Germany's strategic position is unquestionably stronger than it was. But the achievement of unity has only made the Nazis more truculent. Germany is more of a menace to the safety of the world than ever, while the world is losing its power to menace Germany's safety in return, save as the outcome of a long war.

If the effects of the policy of concessions to Germany are

to be measured by the developments of the last three months, we may well ask what advantage it contains for any but the Nazis themselves.

Slightly more promising results can be claimed from the policy of appeasing Italy. The Bari broadcasts have stopped; Italian agitation among the Arabs has been withdrawn; and official relations between London and Rome are friendly. But with Italy, as with Germany, appeasement will not have succeeded until the aggressive dictator State has settled down to live in peace with its neighbours. Signor Mussolini, however, has recently repeated that he does not believe in peace, and has proved it by instigating the rather more than semi-official clamour for Tunis. "Appeasement" is revealed at its most naked in relation to Spain. In their Iberian policy, indeed, the British Government cannot escape the charge of either having deceived the British public or of having been themselves grossly deceived by Signor Mussolini. Never have words had their meanings so flagrantly inverted. "Non-intervention," as the world now knows, means *intervention on one side only*. And when a "settlement of the Spanish question" was made the pre-requisite of the ratification of the Anglo-Italian Agreement, it was certainly not taken by Parliament or public to mean the withdrawal of 10,000 unwanted troops, while enough men and material are left *in situ* to assist General Franco in planning his biggest offensive. "Recognition of belligerent rights," in its turn, means something very different from what it means in the debates carried on in the correspondence columns of the daily Press by the eminent international lawyers. In realistic terms, it means permission to Italy to intervene on General Franco's behalf at sea on the same scale as she already intervenes on land and in the air. This being so, it is satisfactory that the Prime Minister has undertaken (though not in entirely hermetic terms) not to grant belligerent rights except after fulfilment by General Franco of the conditions of the British Plan. But this undertaking removes the last of the possible concessions that Mr Chamberlain might have offered Signor Mussolini when he visits Rome next month. Tunis, Somaliland, belligerent rights—all these are ruled out and there remains only the Suez Canal, and it is inconceivable that more than a token concession, if that, would be offered to Italy in that direction. If there is nothing to give Signor Mussolini, there will be nothing to receive in return. Appeasement has not manifestly failed in regard to Italy, as it has *vis-à-vis* Germany. But it requires the hardest optimism to envisage its success.

The Prospect

Where, then, do we go from here? Mr Chamberlain argued once again on Monday that there are only two possible policies—one the continuance of the policy of appeasement as defined by him, the other acceptance of the inevitability of war. If this really were the choice, then the outlook would be gloomy, for appeasement has got us nowhere since Munich and does not look like getting us anywhere. Its practical results have been the Nazi domination of Czecho-Slovakia and the treatment of the Jews in Germany and the demand for Tunis in Italy. Indeed, there are signs that the Government themselves are tiring of the negative results of their policy. Their supporters' restlessness is showing itself in the growing pressure for more energy and resolution in organising the nation for defence, and the rebelliousness has now spread to the Ministry itself. There has been a noticeably firmer, almost a minatory, tone about Mr Chamberlain's recent speeches. In the Far East, there are at last signs—in the eighth year of Japanese aggression—that Great Britain is beginning to recognise a practical distinction between the guilty and the innocent by giving aid to China. Mr Stanley and Mr Robert Hudson are openly talking about economic hostilities with Germany. This new attitude of exhausted patience was clearly shown to Dr Schacht last week. When

he put forward the argument, never previously unsuccessful, that economic concessions to Germany were necessary to strengthen the moderates' hands, he appears to have been told, in effect, that we had heard that story before. And when he propounded a scheme for releasing the property of emigrant Jews to the extent of one-third of the value of additional exports from Germany, and less than one-half of the gain thereby to Germany's foreign exchange resources, he met with an indignant refusal that was not concealed by the empty courtesy of referring the plan to the Inter-Governmental Committee on Refugees. Dr Schacht is reported to have been surprised at his reception. If so, his surprise is itself surprising. The fact is that the course of events since Munich has estranged British public opinion to an extent that is apparently not realised in Germany. When even Lord Londonderry is to be heard in criticism and protest, it can safely be said that the pro-German party has disappeared.

If Mr Chamberlain's choice of Appeasement or War were in truth the full measure of the alternatives before us, all this would mean that there is nothing left but to prepare ourselves for inevitable conflict. But the Prime Minister is too pessimistic. There is another possibility, though he himself shows some obstinacy in refusing to see it or to appreciate that the devotion to peace of those who advocate it is as great as his own. This is the policy that is urged by both the Oppositions and, within the Conservative Party, by men as diverse as Mr Churchill, Mr Duff Cooper, Mr Amery, Lord Lloyd and Mr Eden. There is no need, if this alternative policy is to be followed, to seek out conflicts with any nation or to breathe defiance to any dictator. Those who pursue it can be as assiduous as Mr Chamberlain himself in the search for peaceful solu-

tions, as untiring as he in personal discussions, as patient as he in returning soft answers. But the difference is that where Mr Chamberlain is studiously non-committal (as regards Spain or Tunis, for example) the alternative policy would be clear beyond mistake, and that the method of discussion would no longer be held to be synonymous with the granting of 98 per cent. of the dictators' demands, however unreasonable. Whereas now nobody can say where Great Britain stands—Herr Hitler can think that we will bribe him to let the Jews go, and Signor Mussolini can imagine that we would let him take Tunis—the alternative policy would draw a clear line in the sight of the world and take Britain's stand on that line with all her resources.

This is the technique of firmness; it involves onerous commitments and painful decisions. But if the line is once resolutely drawn, there is good reason for hoping that no one will dare overstep it. That Signor Mussolini should risk war, with three armies on the other side of seas he does not control, with his long indefensible coastline and his almost total lack of materials, is ludicrous. That Herr Hitler would deliberately court a long war with the democracies is highly unlikely. The danger comes not in drawing the line clearly, but in obscuring it, for the sake of appeasement, and running the risk of having one or other dictator discover, too late, that, in his anxiety for booty, he has crossed it unawares and cannot retreat—as Herr Hitler discovered in September and as Signor Mussolini may well discover in Tunis. A policy of clarity and firmness, administered by men who believe in it, and backed by a defence drive that abandons once and for all the comforting belief that we can re-arm in our spare time—this is the formula which, even in these desperate days, holds out a more than equal chance of preserving the peace.

Home Market *versus* Exports

THE British public has been made familiar by constant iteration with the sad state of our export trade, with the consequent deterioration in many of our staple industries and, in general, with the difficulties which beset those engaged in commercial relations with foreign countries. The growth of the home market, on the other hand, is not so widely appreciated. An improvement is generally acknowledged to have taken place, but few people have any precise quantitative notion of the change which has come about in the relative positions of the two markets. The diagram on the next page represents what is believed to be the first published attempt to estimate the difference. The method of calculation is briefly explained in the note appended to the diagram, and it is only necessary here to point out that it refers to industrial production only (including mining and construction, but excluding services), and that it is not the absolute size of the markets that is compared but their relative changes in recent years.

The contrast between the two lines is even more startling than might have been expected. The great depression of 1930-32, which caused unemployment in England to mount to almost a quarter of the labour force, was apparently barely reflected in the volume of output for the home market. The onslaught of the slump merely checked the expansion of this branch of our activity, and held it stationary for three years. The brunt of the depression fell on production for export. Output for the foreign market fell in just over a year by 35 per cent. in volume, and has been reluctant to recover. In 1933, on the upturn of the cycle, output for the home market reacted in a spectacular fashion with a rate of increase considerably greater than in the years before 1929. In the five years of recovery ending in 1937 it grew at an average rate of 10 per cent. of the 1929 level each year. Output for the foreign market recovered slowly and painfully at only a third of this

rate, and more slowly even than the quantum of world trade as a whole. Even at the peak of the 1937 boom, when world trade reached the 1929 level and output for the home market was half as large again as in 1929, our foreign output was still 15 per cent. below 1929.

The movements of the past twelve months are also of the greatest interest and significance. Production for export has once again been falling more rapidly than production for the home market. The fall in the year in the volume of exports has been as much as 15 per cent., while the decline in production for the home market of those industries covered by the Board of Trade index has been only 9 per cent. But another basis of comparison would be to compare the behaviour of each index in 1937-38 with its behaviour in 1929-30. Output for export has recently been falling slightly less rapidly than eight years ago. But output for the home market, which showed hardly any setback at all in 1929-30, has recently suffered its most serious relapse in a decade and a half.

The shift of British production from export to domestic use has deflected the growth of new industry and realigned our population. While the first necessity for an export trade is to combine a suitable locality for production with easy access to the coast, a domestic industry has to be conveniently situated for the home market, which in general means large and prosperous centres of population. The export areas, being depressed, could not exercise this attraction without special inducements such as are supplied by the trading estates. Hence the magnetic attraction for industries since the war of the big metropolitan markets, Greater London and the Midlands round Birmingham, and the slower industrial growth or even (as in the case of Wales) cessation of growth of the old centres. The relative economic pull of the different regions can perhaps best be seen in the regional employment figures. Between 1933

PRODUCTION FOR THE HOME AND FOREIGN MARKETS
(1929=100)

The basic material on which these estimates are based consists of the Board of Trade's indices of total industrial output and of the volume of exports (both have been corrected for seasonal fluctuations and for the varying number of working days). The indices were converted into value figures on the basis of (a) Mr Colin Clark's estimate of the value in 1930 of the output covered by the Board of Trade index (including building), and (b) the value of total British exports in 1930. The difference between the value of output at 1930 prices and the value of exports at 1930 prices was taken to be the value of production for the home market at 1930 prices.

and 1938 the insured labour force in London, the South-East and South-West increased about four times as fast, and in the Midlands about two and a half times as fast, as in the remainder of Great Britain.

The curve of output for home consumption, striking though it is, in fact understates the rise which has actually taken place. It is based on the Board of Trade Index of Production, and hence does not include distribution, miscellaneous services, commerce, banking, insurance and finance or national and local government service, all of which have grown considerably faster than industry as a whole since 1929 (many of them more than twice as fast), and faster still than manufacturing industry. In the industries which are included in the Board of Trade's estimates, however, the most noticeable growth—apart from the steel boom of 1937—has been recorded, as might be expected, by industries which produce entirely or largely for home consumption, such as building, gas and electricity, and non-ferrous metals (whose chief markets are industries producing for home consumption). This growth is shown further by the employment statistics. The majority of the manufacturing industries where employment has grown more than the national average since 1929, apart from re-armament, are various types of electrical work, the building trade and its ancillaries, and trades such as carpets and furniture, which depend to some extent on a building boom. The extent, thus revealed, of the home market's dependence on building and construction is a cause for serious consideration at the moment.

It is clear from the foregoing chart that the collapse of exports which has been experienced since 1929 has only been prevented from exercising a disastrous influence on the national economy as a whole by the rapid expansion of the home market. The home market is now more than ever the mainstay of our economy, and the supreme object of economic policy must be to maintain its purchasing power.

But equally it remains true that the obstinate core of our unemployment is in the export industries and in the regions which built their past prosperity on export, and by far the best hope of securing a rapid reduction of unemployment is to bring about an increase in the volume of our exports. British economic policy is thus necessarily two-headed, and neither aspect of it can safely be ignored.

The two markets are linked, to a very much greater extent than is commonly realised, by the factor of prices. The volume of our exports depends partly upon the prosperity of our customers (which in turn fluctuates with the prices we pay for our imports), and partly upon the degree of our success, by quoting competitive prices, in capturing an adequate share of the world market. Thus the volume of our exports depends not so much either on export prices or on import prices as on the relation between them, or the margin of manufacturing cost between the price of raw materials and the price of manufactures. The following chart shows both how direct is the correlation between the so-called Terms of Trade and the volume of our exports and also how grievously the export industries have been hit by the rise in recent years of the manufacturing margin:—

TERMS OF TRADE AND VOLUME OF EXPORTS,
U.K., 1924-38

The curve of the Terms of Trade represents an index of the average value (prices) of British imports divided by an index of the average value of British exports.

The prices we pay for our imports affect the home market almost as directly as the export trades. What provided the impetus for the great expansion of domestic production after 1932 was the fact that the standard of living of the British people had been considerably enhanced by the fall in the prices of imported foodstuffs and raw materials.

The level of prices is thus of supreme importance to both branches of activity. The home market depends upon the prices of imported necessities being low; the export trade depends upon the prices of imports being high relatively to the prices of exports. The requirements can be saved from paradox and both branches of the British economy can be kept prosperous only by making every effort to reduce to a minimum the margin between raw material prices and the prices of exported manufactures.

Unfortunately, the tendency of economic policy in recent years has been all the other way. To the handicap of wages higher than many of our competitors pay we have added the further handicaps of high and rigid prices for coal and steel and enhanced transport charges. One after the other, our export industries are asking for subsidies either out of the public purse or out of the pockets of the domestic consumer. It is time the public realised that the need for these subsidies arises directly out of the economic policy pursued by British Governments in the past decade. We earn a substantial part of our living by converting raw materials, which we buy from others, into manufactures which we sell to others. We cannot expect to stay in business if we charge more for the service of conversion than others.

Torts and Corpses

ON April 21, 1937, a tramcar belonging to the Liverpool Corporation collided with a hearse which was carrying a coffin to the cemetery and damaged the hearse considerably. The collision was due to the negligent driving of the tram, and the Corporation's insurers doubtless paid in due course for the repairs to the vehicle. As nobody was injured in the smash that payment seemed to be the close of the incident.

It was not, however, the close; for behind the hearse there was a car; and in the car there were four mourners, all of whom were related to the dead man by blood or marriage and (though not themselves involved in the accident) they had the unpleasant experience of seeing the coffin shifted in the hearse. It was not thrown from the hearse, but it was dislodged; and they were called upon to watch "the imperilment of a coffin containing the corpse of a near relation," thereby suffering (as they maintained) an acute nervous shock. So bad, in fact, was this shock, that they felt themselves compelled to claim compensation for "an untoward accident to the trappings of mourning," and brought an action for damages in a Liverpool Court against the Liverpool Corporation. In that Court they failed, on the ground that English law recognises no liability for suffering by shock, unless such shock arises from an apprehension of injury to a human being. Against this view of the law they appealed, and in the High Court they won their case and were awarded damages for shock sustained by the sight of a coffin shifting from its proper place in a hearse.

The mourners who successfully brought this action were the aged mother of the corpse, the uncle of the corpse, a cousin of the corpse, and the husband of the cousin of the corpse, and the damages ran as follows:—

The aged mother	£75
The uncle	£15
The lady cousin	£100
The husband of the lady cousin.....	£11
Aggregate	£201

From these figures at first sight it looks as though the aged mother had been scurvily treated. Why should she, own mother to the corpse, get only £75 when a mere cousin gets £100? Is not a mother of more worth than several cousins? And if a cousin's husband, who had no claim but that of marriage into the corpse's family, got £11, can the mother be reasonably compensated with £75? The explanation of the anomaly is that in these cases a plaintiff is indemnified, not because of his personal interest in the accident or his kinship with any one concerned in it, but in virtue of the injury to his nervous system which may or may not vary with his natural relationship to the event. A stranger with weak nerves does better than a parent with strong.

So the way the law now stands is this: If a mechanically-propelled vehicle negligently does something which shocks the nerves of an onlooker, whoever he be, then the onlooker can recover damages from the owner or driver of the vehicle or from his insurers. There is no need to be involved or interested in the accident yourself or to have any visible injury to display before the Court. All that is necessary is to provide satisfactory medical proof that something which the driver negligently did caused a shock to your nerves. The law will do the rest.

In future then, the intelligent citizen has a plain course to steer. As he walks about the streets he must keep his eyes and his ears open for any untoward incident calculated to "disturb him disastrously," and when such untoward incident occurs he must bring an action against the author of the incident. Let him watch the traffic and listen to the traffic closely. If he should see a hearse in collision. If he

should catch sight of a case or bale of goods dropped negligently from the tailboard of a lorry. If he should be at hand when a car mounts the pavement and charges the wall of a house. If he should hear unexpectedly the report of a tyre exploding or the back-fire of an exhaust. If he should observe a dog escape by a tail's length from an approaching motor-cycle. If any of these things should happen, then let him ask himself if his nerves are as good as they were before the incident and whether he is not suffering from shock. If he decides that his nerves are affected, let him at once (having first taken the car's number) consult a good doctor and tell him the facts. If the doctor says yes, he is suffering from shock, let him move across the street to a good lawyer who will tell him on the strength of this case that he has a reliable claim for damages against the hearse, the lorry, the car, or the motor-cycle, and all that remains is to arrive at the figure of compensation. It will be of no use for the defendant to prove that the plaintiff was in a nervous condition before the incident. That avails nothing—in fact, less than nothing. And if the intelligent citizen is so fortunate as to have a weak heart and die of heart disease after the shock, then not only will his dependants have a claim for the loss of his support, but he himself on the strength of the Law Reform (Miscellaneous Provisions) Act will be able to claim through his executors for his loss of expectation of life—an easy and prosperous passage from this world to the next.

And that brings us to the one flaw in this Liverpool case. What of the corpse itself? Why was no word spoken, no claim advanced for the corpse? Under the Law Reform Act as interpreted by the House of Lords in *Rose v. Ford*, a dead person's representatives can recover the damages which he would have claimed, if he had been alive, for the loss he suffers through being actually dead. The logic is obscure, but the law is clear; and it really looks now as though it will have to be extended to provide for the rights of a dead man shaken in his own coffin *en route* for his own burial by the negligent behaviour of a colliding vehicle. The law already assumes that at the same time a man can be both alive and dead, and on that assumption there is no reason why a corpse should not be regarded as playing a leading part in its own funeral and participating in the shock, the discomfort and the unpleasantness which spring from the collision of a hearse, of which it is the sole occupant, and a tramcar. So when next the House of Commons turns its attention to the reform of the law of torts, here unmistakably is one line of approach—another and an admirable opportunity of extending the liability of insurance companies and underwriters who now do so splendidly out of the third-party section of their motor policies. The corpses ask for a square deal NOW.

Topics of the Week

National Service.—In three months' time the Government's plans to organise the nation's man-power by voluntary means will be passed under official review to determine their effectiveness. But, even after Tuesday's debate in the Commons, the country knows little or nothing about the schemes it is being called upon to support and, doctrinaire as ever, the Labour Party are sorely troubled about the possibility of conscription which, apparently and unfortunately, they need not fear. Apart from Mr Ernest Brown's very general and obvious statement of the key occupations from which men and women could not be spared for other duties, few individuals know more than they did in September about what their position in an emergency would be. On Tuesday, the Minister of Labour was speaking to the House about plans which none of the Members had seen, and our representatives in Parliament, like ourselves, must presumably wait until the appearance of Sir John Anderson's handbook next month and the commencement of his vigorous recruitment campaign to learn how the very widespread eagerness of most citizens to co-operate in national service is to be canalised and co-ordinated. In matters of labour supply, in the apportionment of men and women between the services, the export industries, essential civil trades and home defence, the Ministry of Labour is, inevitably, to be Sir John's executive agent; lack of such a single central organ was a serious cause of waste and confusion in 1914-15. But this is not to set up a Ministry of National Service. So long as the postulate of the Government's planning is that no steps to exceptional organisation can be contemplated until an emergency is actually upon us, so long will their resolution be suspect, and so long will there be critics in their own following, no less than elsewhere, who call for firmer measures, not because they are not democrats, but because they believe that democracy is too precious to endanger by half measures.

* * *

Air Raid Protection.—The Government move slowly in matters of defence, but they scarcely perform wonders. Once again, after intransigent delays, they have yielded half-heartedly to their critics. In September they hurriedly conceded trenches and urban evacuation, as well as the gas-masks and buckets of sand on which they had previously rested their air-raid precautions. Now, long after the great majority of citizens was convinced that shelter against high-explosive bombs was a *sine qua non* of A.R.P., Sir John Anderson announced on Wednesday this week that a sum of £20 millions was to be spent on the provision of steel structural supports for basements and portable steel lean-to shelters for houses without basements. Works, factories and offices are to be responsible for protecting employees against bombs; persons caught in the street during air raids will find shelters available; those at home will have these steel structures to protect them. Having conceded the principle of shelters against explosives, the Government may yet take the other, and logical, step of deciding to provide really bomb-proof shelters underground for all citizens in vulnerable places. Meanwhile, the steel pent-houses, which will protect against splinters, will clearly be better than no shelters at all. There may be financial problems when they come into supply. The intention is for those who can afford it to pay for them, and there will be difficulties of definition here as well as difficulties of deciding the responsibility of tenants and lessees. Meanwhile it is all-important that poor people should be guaranteed the best possible protection free of charge, and that the shelters, which now exist only on paper, should be actually made. Sir Kingsley Wood tells us that the output of airplanes has lately been doubled, but hitherto we have had small reason to rely upon the ability of the Government to deliver the goods speedily. At any rate the steel industry will benefit: about 1½ million tons of steel will be needed; and employment will be increased.

Credits to China.—There are indications to-day that in Eastern Asia, as in Europe, "appeasement" is not producing the results expected of it by those who practise it. In the minds of the Japanese, the fall of Hankow evidently marks the end of the regular warfare in their vast aggression against China, and the beginning of a process of gathering in some economic harvest to compensate for the military outlay. In the outlay stage the brunt of the Japanese offensive was borne by the Chinese (though Sir Hughe Knatchbull-Hugessen and the "Panay" and the "Ladybird" came in for their share); in the harvesting stage it is already clear that the brunt is to be borne by the Western nations that have economic interests in China. The Japanese are now intimating their intention of squeezing the Westerners out of Intra-Mural China, as they have already squeezed them out of the eastern provinces of the Chinese Republic on the Manchurian side of the Great Wall. The Japanese plan is, in effect—whatever Mr Arita may say about the "vast fields of commercial and economic activity" which will be open to foreigners in some unspecified future—to turn the whole of China, by force of Japanese arms, into a closed preserve for exclusive Japanese exploitation; and at this moment they are putting the plan into practice at Tientsin. As a result of the war, the trade of Tientsin has latterly been gaining at the expense of Shanghai; the Japanese are now running a *cordon sanitaire* round the foreign concessions at Tientsin in order to gather all the trade of the port into their own hands.

* * *

In thus setting out to take for themselves the whole of the Chinese dragon's skin, the Japanese have been imprudently hasty. For, after all, the elusive creature is not dead. The Japanese may proceed to occupy the last still unoccupied stretches of Chinese railway; the Chinese guerillas will still control the huge enclaves of unoccupied country within the meshes of the very loose network of the Chinese railway system. Again, the Japanese may eventually push westward through Inner Mongolia and Shensi until they have cut the last connections between free China and the Soviet Union; there will still remain the link, through Burma, between free China and the Western world; and this link is fortified by the announcement that the United States Export and Import Bank has just given a credit of \$25 millions to a Chinese trading group for the purchase, not indeed of arms, but of lorries and petrol which will help the Chinese to maintain their life-line along the new Yunnan-Burma road that keeps South-Western China in communication with ports on the non-Japanese side of Singapore. There is now also talk of a British export credit of £500,000 to China, as the first instalment of some larger amount. The comment of the Japanese Foreign Minister, Mr Arita, on the American move on China's behalf is that it is "a regrettable act" than which "nothing will be more dangerous." The West and China will retort by asking: "Dangerous to whom? To themselves? Or to the Japanese?" The truth is that, in their immense westward sweep, the Japanese are now near the line at which the geographical, strategic and economic factors will no longer tell in their favour.

* * *

M. Reynaud's Progress.—The tide is still flowing in M. Paul Reynaud's favour, and in the last few days almost all the economic barometers in France have been rising. On the Bourse, there has been a continued rise in securities, especially in Rentes, to such a degree that the first of what it is hoped will be a series of conversion issues has been announced. M. Reynaud also claimed, in a speech to the Chamber on Wednesday, that there were signs of revival in retail trade and in the heavy industries. As for the foreign exchanges, the forward franc now stands, for the first time in quite a while, at a premium against

sterling. This, it is true, is as much a reflection of sterling weakness as of franc strength, but there is no doubt that capital is returning to the country and is seeking investment there. M. Reynaud's political prestige can be relied upon to fluctuate in direct proportion to his economic success. Accordingly, the estimates for 1939 have this week had a relatively easy and substantially unscathed passage through the Chamber, even though the crucial vote on Thursday was carried with the very narrow margin of seven votes. It would clearly be rash to conclude that M. Daladier's Government is firmly in the saddle. There have been rumours that the Socialists, having broken with the Radicals, are now seeking friends still further to the Right among M. Tardieu's group. The link between them is, of course, common distrust of M. Bonnet's foreign policy. The irony of the present situation is that it is the economic success of M. Reynaud which is keeping M. Bonnet at the Quai d'Orsay, although M. Reynaud himself is known to hold very different views on foreign affairs. The effort to find a majority with coherent views both on economic and on foreign policy is apparently beyond even the formidable matchmaking skill of the Palais Bourbon *coullisse*.

* * *

The Nation's Needs.—Shaken twice in eight years by economic depression and faced now by the many-sided challenge of totalitarian regimes, the great democracies are taking stock. A month ago M. Paul Reynaud laid bare the conspicuous weaknesses of the economy of France. In the United States a Committee of Congress has embarked upon an inquest on the whole of America's economic life. Here the Royal Commission on the Geographical Distribution of the Industrial Population is sifting the causes and consequences of the changing pattern of British industry. "We must re-arm and rebuild at the same time," declared Mr Eden in the Commons a few short weeks ago; and the Reports of the Commissioners for the Special Areas of England and Wales and Scotland* come aptly this week to illustrate and underline the work of reconstruction which must go forward *pari passu* with re-armament. In the Special Areas of England and Wales the number of wholly or partly unemployed persons rose between September 13, 1937, and September 12th this year from 205,814 to 234,424; expressed as a percentage of the total number of insured persons, whole-time unemployment two months ago among persons aged 14 and upwards was 30.6 in South Wales, 30.3 in West Cumberland, 23.0 in Durham and 19.8 on Tyneside (where munitions work was active), compared with 13.1 in all England and Wales. "There seems little doubt that, but for the re-armament programme, the situation would have been much worse," comments Sir George Gillett, the Commissioner. In the Scottish Special Area the number of unemployed persons

* H.M. Stationery Office. Report for England and Wales, 2s. 6d. Report for Scotland, 1s. 6d.

rose from 58,318 in mid-1937 to 64,435 in mid-1938, and the unemployment percentage is just short of 20. In all the Areas the position is better than it was four years ago, when the machinery of special provision was set in motion, but rock-bottom was reached last year when, at the height of recovery, the number of unemployed persons was close upon a quarter of a million, and present policy is clearly unable to resolve a problem which is not in fact local but national. The old export industries upon which all the Areas have relied are now seriously contracted. The current trend of industrial development is the marked growth of light industries and services; but these have not gone to replace the old trades in the depressed districts whose abnormal unemployment and low purchasing power make them unattractive markets; with the mobility induced by modern achievements in transport and power they have gone to London and Birmingham, the South-East and the Midlands. It is a vicious circle. In the Special Areas industrial decline is cumulative; in London and other prosperous places industrial growth begets ever more growth because purchasing power there is expanding. The consequence is poverty and distress in some places and costly congestion and crowding in others. Three years ago Sir Malcolm Stewart, first Commissioner for the English and Welsh Areas, called for control of London's growth and better regional distribution of Britain's industries. Sir George Gillett, in advance of the Royal Commission's report on the subject, echoes this plea; and it is a policy which cannot be operated in the arbitrarily delimited localities of the Special Areas. It must be nation-wide.

* * *

A Development Plan.—It would be untrue to write down the present Special Areas legislation as a failure. In it is the model for a wider scheme. In four years the two Commissioners have spent over £10 millions on industrial development and social rehabilitation in the Areas; they are committed to spend £10 millions more. The public health and sanitary services, which fell in efficiency as industry, employment and prosperity drifted away, have been remodelled. Harbours and quays have been developed; industrial sites have been cleared and improved; trading estates for new industrial undertakings have been established and assisted; regional development councils have been set up to foster new enterprise; remissions of rates and taxes have been financed; housing, mainly through the North-Eastern Housing Association, Limited, has been aided to the tune of more than £1 million; small holdings, group holdings, allotments, land drainage and subsistence production schemes have been helped. Trading estates in South Wales, on Tyneside and near Glasgow have been conspicuously successful in attracting a wide variety of new light trades; and capital assistance (which is not needed by new industries only in the Special Areas) has been given to new industries by the Nuffield Trust (£1,609,500), the Special Areas Recon-

struction Association (£570,000) and other sources (£254,000), as well as by the Treasury (£954,000). Much has clearly been accomplished to remove the social and geographical disadvantages of the Areas and to divert industrial development from the crowded centres by financial inducements. Much, too, has been done to facilitate industrial migration: in twelve months since September, 1937, nearly 28,000 persons left the Areas of England and Wales, and over half were moved under Ministry of Labour schemes. But the root problem of the Special Areas remains no nearer solution, simply because it is a long-run problem of national industrial change and movement. "There is no solution in short-term methods," writes Sir George Gillet. He might have added that there is no solution in localised methods. There are districts like Lancashire scarcely less depressed than the Special Areas, and whole regions like Scotland with their vitality drained away for lack of complementary light trades to balance their depressed industries,* and lack of employment for their capital equipment and labour resources; and the overgrown and vulnerable state of London is part and parcel of precisely the same problem. The Special Areas experiments have introduced new principles of conscious planning and deliberate discrimination into national policy without having much effect on industrial maladjustment. Only a revival in exports of an unlikely size could redress the balance swiftly; nothing but philanthropic care can aid the core of long-term elderly unemployed. But the new policy might be made nationally effective by being nationally applied—to curtail industrial growth where social and strategic reasons frown upon it, and to encourage it where industrial decay has left gaps.

The F.B.I. and New Zealand.—The President of the Federation of British Industries has addressed a letter to the President of the Board of Trade in which he accuses the New Zealand Government of intending to use its announced control of imports to give protection to secondary industries to an extent that would violate the Ottawa Agreement. Mr Savage and Mr Nash, the New Zealand Prime Minister and Finance Minister, have promptly denied that there is any intention of throttling imports from Great Britain; they declare that the new system is made necessary by financial considerations and that its effect will be, if anything, to increase the preference given to British goods. There is, however, some substance to the F.B.I.'s complaint. There can be no doubt that the encouragement of domestic industry forms part of the New Zealand Labour Government's programme and that such encouragement is detrimental to that free exchange of Dominion primary products for British manufactures upon

THE ECONOMIST BY AIR

To meet the growing demand from overseas readers for *The Economist* by air, we are introducing special subscription rates applicable to those countries to which Letter Mail is now normally transmitted by air. These are as follows:

	12 months	6 months
	£ s. d.	£ s. d.
Europe	4 17 6	2 8 9
Empire Air Routes	6 10 0	3 5 0

These rates include all supplements, but the latter will be sent by the surface routes and not by Letter Mail.

Unexpired subscriptions may be transferred to the new category on application to

THE PUBLISHER, THE ECONOMIST,
8 BOUVERIE STREET, LONDON, E.C.4

which the economy of New Zealand, more than that of any other Dominion, depends. But it might be very difficult to prove that anything that is now being done violates the Ottawa Agreement, since Labour legislation in New Zealand has so considerably increased local costs of production that even the established industries of the Dominion could put forward a claim for increased protection to place them on equal terms with British imports. And, in any case, it seems to be a little remarkable that the F.B.I. have made such a firmly-worded protest before, on their own showing, any damage has been done to their interests, while they have not taken such violent action in the case of Australia and Canada where the policy of protecting local industries against British competition is an accomplished fact and has gone to much greater lengths than anything that is contemplated by New Zealand. The suspicion that the difference in treatment is due to the fact that New Zealand has a Labour Government is increased by remarks by officials of the F.B.I. that have been reported in the Press. If it appeared that the F.B.I. was allowing itself to be influenced by political rather than commercial considerations, its intervention would rightly meet with the hottest resentment in New Zealand and the severest condemnation here.

* * *

Congress and the Indian States.—The conflict between the Congress Party and the Indian States has sharpened very considerably during the last few months and seems to be working up to an acute crisis in the near future. It is a fundamental conflict which cannot be avoided, if Congress persists in its claim to an all-Indian supremacy. Mr Gandhi, writing in *Harijan* three weeks ago, declared that "there is no half-way house between a total extinction of the States and the Princes making their people responsible for the administration of their States," and went on to say that, whatever might be the legal rights of the States, "man-made law becomes a dead letter if it is in conflict with the natural law"; as a corollary of this doctrine, "if the Congress feels that it has the power to offer effective interference [with the internal policies of the States] it will be bound to do so when the call comes." This is a direct challenge to the very existence of the Indian States as hitherto constituted, and it may be expected that some of the Princes will take up the challenge with consequences which may be far-reaching. The plain fact is that, in spite of all the devices of British constitution-makers for producing a synthesis of the Provinces and the States, the continued existence of the Indian States is quite incompatible with the unitary, republican, nationalist India towards which Congress is working. The more clear-sighted among the Princes are well aware that there can be no future for them in a Congress-controlled India, and some would probably be quite ready to renounce their thrones, if they could put their money abroad and live in retirement on the Riviera. But there are others who will not yield power so easily, and there are influential office-holding families in the larger States who represent a formidable vested interest. They have it in their power to wreck Federation if they cannot obtain immunity from Congress agitation in the States, and it is even possible that some of them, if they do not receive the support they expect from the British Raj, may look elsewhere for backing against Congress democracy. Here is a very difficult and dangerous problem for the Paramount Power.

* * *

Federal Problems in Canada.—The feud between Mr Mackenzie King and Mr Hepburn, Liberal Prime Minister of Ontario, came out into the open a few weeks ago, was intensified by a rapid exchange of public recrimination, and reached a head on December 19th, when a meeting of the Ontario Liberal members of, and candidates for, the Federal Parliament gave Mr King a vote of complete confidence and Mr Hepburn an intimation that he had better mend his manners. It is not an elevating story; but it is one which has lessons for students of government by federation. Mr King accused Mr Hepburn,

who has long made known his impatience of Mr King's conduct of affairs, of conspiring with Mr Duplessis, Prime Minister of Quebec, to form a federal government "which would be largely controlled by the Provincial Ministries of Ontario and Quebec"; and in denying this Mr Hepburn took occasion to repeat his charges against the Federal Government, accusing it of being inefficient, behind the times, and unresponsive to outside suggestion. What sympathy he might have gained for his views was forfeited, however, by the manner and language of their presentation; and those Liberals who might have supported him did not do so for fear of undermining the Liberal Party's position and Federal good credit. Although the issue is essentially a personal one, its existence does underline the antinomy of interests between the wheat Provinces and industrial Ontario and Quebec. It is natural for Liberals in the East to see things at a different slant from those in the West; but the pressure on Mr King to keep the scales well balanced is indicated by the persistence in the West of feelings of resentment such as that which brought to life, not long ago, the old project for Western secession. What with these problems and with Mr Aberhart's antics in Alberta, the Royal Commission on Dominion-Provincial Relations, now sitting in Ottawa, is not finding that its task grows easier.

* * *

Land Reform and Hungary's Future.—The precise motives behind the recent Hungarian political crisis are now beginning to emerge. The Government was defeated on a motion of confidence because 68 deputies went into opposition. They did so because they said that M. Imredy's proposed amendments to procedure revealed a wish to govern without Parliament, and because the Prime Minister was unwilling to deal sternly with Right extremists. Their manoeuvre failed only because the Regent would not accept M. Imredy's resignation (as the Prime Minister must have guessed): but the dissentients were successful, at any rate for the time being, in securing the withdrawal of the offending amendments to procedure. In reality their motives were less pure than appeared on the surface. No doubt some of them, men like M. Eckhardt, may genuinely have feared that the Prime Minister would get caught in the toils of the extreme Right, for democracy is a delicate plant in Hungary; but most of the 68 were Conservative landowners who thought that what influence they still possessed to modify M. Imredy's programme for land reform would be destroyed once amendments to procedure had weakened their grip on Parliament. They feared for their possessions. They disliked the intention to create a "National Front" including not merely the Roman Catholic workers' organisations, but also certain politicians of the extreme Right, who attack landowners equally with Jews. For the moment the landed Conservatives have got their way. But what was once a comparatively mild popular demand for the breaking-up of big estates is now, after the redemption of Southern Slovakia, an acute national issue. The restored territories have benefited by the Czechoslovak land reform and a thoughtful agrarian policy and their peasants have even tasted good things like social insurance: production is higher than Hungarian farmers can achieve, and a recent estimate put the difference for wheat at an eighth, and for rye, barley, oats, and sugarbeet at as much as one quarter. Land reform cannot be long postponed; and in resisting too much, Conservatives in Hungary risk losing all.

* * *

Meanwhile, M. Imredy is doing what he can for the irredentist cause. M. de Kanya, charged with the failure to draw a common Polish-Hungarian frontier, has gone from the Ministry of Foreign Affairs. He was trained in the Ballhausplatz; and great events discovered his old age. Count Csaky succeeds him, and almost at once announces to Count Ciano, visiting Budapest, that Hungary has joined the Axis, hinting broadly that Yugoslavia is also "a friend of ours." This might mean that the Rome Protocols had been resurrected in new guise; but report has it that Berlin has ordered a visit from Count Csaky, and even if the report were exaggerated, a Hungary resting

on the southern end of the Axis is no longer conceivable. But it is interesting that Signor Mussolini, even after his weakness at Vienna when Ruthenia remained in Czechoslovakia, should still hope for diplomatic influence north-east of the Alps.

* * *

German-Roumanian Trade.—The new German-Roumanian trade treaty signed a fortnight ago, which is referred to this week by our Roumanian correspondent, will regulate a volume of trade between the two countries that has been swollen by the annexation of Austria and the Sudetenland. In 1936, for instance, Czechoslovakia exported to Roumania goods worth Kc.380 millions (about £2,300,000 at par), much of which was from the Sudeten areas. According to present indications, Germany's share of Roumania's imports will rise from the 1937 figure of 40.1 per cent. to about 50 per cent., and the proportion of Roumanian exports going to Germany will rise from 27.1 per cent. to about 33 per cent. German reports claim that out of this year's heavy Roumanian harvest the Reich will take 900,000 metric tons of cereals (400,000 of which will be wheat), more than 12,000 cattle and 200,000 pigs, and in future 25 per cent. of Roumanian oil production. As from December 15th the value of the Reichsmark against the lei is raised from 38 to 40½-41½ lei, but in the circumstances of German Roumanian trade any rate of exchange is necessarily a conventional figure. The recent agreement, which is retroactive from October 1st, is designed to avoid money payments altogether, and therefore the accumulation of debts on either side of the clearing. In fixing exchange-rates, it seems that all the competent authorities have done is to decide on the approximate volume of trade which should pass, reckon in outstanding payments due to Roumania, and strike a balance accordingly. The effect of the change, however, is clearly to alter the terms of trade *pro tanto* in Germany's favour; and there are reports that the German authorities at first asked for a rate as high as 55 lei. In future, we may have the spectacle, not of "blocked marks" but of "blocked guns" or "blocked wagon-loads of steel," which, at a pinch, the Roumanians will have to unfreeze by writing down the lei against the Reichsmark.

* * *

The Embargo on Foreign Loans.—The Chancellor of the Exchequer announced in the House of Commons on Tuesday that the relaxation of the embargo on issues of capital for transfer abroad which was conceded in February last has now been withdrawn. This decision was reached on the advice of the Foreign Transactions Advisory Committee, but it is obvious that the main consideration that has led to it has been the continuing pressure on sterling, which lies outside the Committee's purview. A number of issues has been made under the more liberal dispensation that has been in force for the greater part of

this year, and though the total amount of sterling sold as a result is only a fraction of the turnover of the foreign exchange market, it is easy to understand the desire of the authorities, at a time when sterling is under severe pressure and the gold holdings of the Exchange Equalisation Account have been considerably reduced, to eliminate this particular source of weakness. It is permissible, however, to hope that when easier conditions return the relaxation of the restrictions will not be so long delayed as it was last time.

* * *

More New Judges.—The forthcoming appointment of two additional judges of the High Court, announced in the Commons a week ago by the Attorney-General, is the necessary corollary of steps taken in October to reinforce the judicial bench in face of the gathering congestion of work which has been a disturbing feature of the Courts for several years. Two new judges were then chosen to strengthen the King's Bench Division of the High Court, but, as three justices of the High Court were made Lords Justices of Appeal to man the new third Appellate Court, the net effect was to weaken the High Court itself. The overloading of judges on circuit has been especially noticeable in recent weeks, and although an appreciable part of the pressure has been due to the Matrimonial Causes Act which came into force this year, the increased duties have, in fact, been spread widely over the gamut of the law. The latest proposal is to raise the number of judges in the King's Bench from 17 to 19. When it has been ratified by resolutions from both Houses of Parliament, according to the procedure established by the Supreme Court of Judicature Act, a much-needed step will have been taken, not only to lighten the heavy burdens laid on judges, but also to lessen the costly delays which press hardly upon litigants.

* * *

Safety in Mines.—Coal-mining is a sorry trade. For half a generation it has been declining and depressed; and the annual toll it takes of life and limb is unique among British industries. No miner is reasonably safe from unemployment, death, disease or injury, and his wages, at the best, are low. Yet Britain's prosperity was built on coal, and coal remains a staple fuel and power. The compendious Report of the Royal Commission on Safety in Mines, which appeared this week, almost precisely three years after the Commission's appointment, sets out in its 179 recommendations the least the community can do by legislative or administrative provision for greater safety. One in every 900 mine employees is killed each year, and two in every eleven receive compensation for injury or disease; contrary to experience in most other countries, there has been no improvement for some fifteen years. The perils are legion: accidents such as falls of ground, haulage mishaps and explosions caused by naked lights, shot-firing, electricity or faulty lamps; diseases and afflictions such as nystagmus, silicosis, beat hand, beat knee, beat elbow, synovitis of the wrist and dermatitis. Clearly, as the Commission emphasise, the responsibility for the hideous by-products of coal-mining cannot be laid upon any single section of the industry; negligence is found in owners, officials and workmen alike. But, again and again, the Mines Department's inspectors have reported that many accidents are in fact avoidable; and, while a higher standard of careful conduct must be imposed upon all parties, the first principle of State regulation should be to make rules and apply sanctions to ensure that mines should be rendered by owners and officials as safe work-places as possible.

The Commission's Proposals.—Proposals to re-organise the inspectorate, to increase inspectors' powers, to enlarge the Mines Department and to expand research into problems of health and safety are obvious and belated. Recent large-scale pit disasters, which are only the highlights of a daily process of slaughter and maiming, and the Chief Inspector's revelation last year of stricter regulations in France, had made the Commission's recommendation that ventilation standards should be tightened up inevitable. To make mineowners responsible, as in factories, for breaches of the law is a necessary first step to proper enforcement; the Commission propose it should be taken. The worst sufferers from present perils are boys and youths: 279 lads under 16 per 1,000 employed were killed or injured underground in 1936, against 208 per 1,000 at all ages; 237 youths between 16 and 18 per 1,000 employed were killed or injured underground in the same year. The Commission propose that no boys under 15 should go down the pit; the limit might have been set higher. They further suggest that the practice of putting young workers through preliminary courses of safety instruction should be made universal: this is essential, but the actual condition of the pits must provide the maximum possible protection for inexperience and enthusiasm. The recommendations of the Report are not unduly drastic, though some of the items, such as the ventilation reforms, may be too costly for mineowners to accept easily; but given general goodwill and co-operation, vigilant and strict inspection and ruthless enforcement with appropriate penalties, the statutory rules they foreshadow should do something substantial to remove a very grave blot from our national economic life. They must be wholly and wholeheartedly applied; and an indispensable sequel is the complete overhaul of the workmen's compensation laws, on which another Royal Commission is now sitting.

The Structure of Big Business

NEW YORK, December 13.—Last week's letter was taken up with describing and commenting on what is called the Anti-Monopoly Hearing. This week's letter is intended to describe something of the background of the subject of the Hearing, namely, "monopoly and the concentration of economic power" as it occurs in the American economy.

The first general use of the corporate form in this country was in the railroads, but by 1890 the corporation in its various aspects was sufficiently conspicuous to cause apprehension. The consequence was the enactment of the Sherman Anti-Trust Laws in 1890, prohibiting conspiracies and combinations "in restraint of trade." For fifty years this legislation, amplified by other legislation such as the Clayton Act (prohibiting inter-locking directorates), and amplified also by judicial interpretation, has remained the formal legal, political or social expression of our attitude towards Big Business.

During these fifty years there have been two conspicuous developments. First, the corporate form has been generally adopted, partly for its convenience, and partly by reason of differences between personal and corporate income taxation, with the result that very small, or relatively small, enterprises are now in corporate form. There are now about 500,000 corporations in active business in the United States, and, according to the testimony of Dr Willard Thorp at the Hearing, in 1935 some 55 per cent. of all corporations had assets of less than \$50,000. In other words, the corporate form has largely replaced individual ownership or partnership, even among concerns of comparatively small size.

Secondly, big business has at the same time tended to become bigger. In 1935 some 780 corporations each represented assets of \$50,000,000 or more. Yet, as was emphasised at the Hearing, few of these corporations—even the largest—could be described as monopolies. Rather, the evidence showed that a number of industries had inclined toward the grouping by merger of what were formerly a large number of units into a comparatively small number; and that these together comprised the industry. It was even stated that the Anti-Trust Laws had induced these amalgamations, since, although "co-operative understandings" between several units were obviously illegal if they represented collusion among competitors, these "understandings" became legal if the units were combined in a single corporation.

The Anti-Monopoly Hearings

The evidence offered to the Committee went further in stating that, in industries dominated by a small number of large corporations, a state of virtual cartelisation had grown up. The word cartel is not in general use in this country, and anything that could be termed a cartel would apparently be an open violation of the Anti-Trust Laws. Whether or not the cartelisation of American industry has proceeded to the length intimated in the preliminary survey of the Committee, as well as in the view of some academic commentators, will probably be disclosed as the Hearing continues. In general, our industry has been regarded as uncartelised, or cartelised only to a very limited extent; perhaps an even fairer statement would be to say that cartelisation (even of a *sub rosa* and informal type) has been commonly regarded as exceptional, whilst the preliminary survey of the Committee intimates that it is widespread, if not general.

Looking back over the fifty years of the Sherman Anti-Trust Laws, one can see that they have been in continuous conflict with the economic tendency of the time. The inherent nature of the conflict has been revealed by spasmodic and intermittent policies of enforcement—the "trust-busting crusades." These crusades, or the threat of them, have struck periodic terror into the business community, which in the intervals had evolved practices whose legality was genuinely in dispute. Some of the test cases have likewise

widened the "twilight zone"; for example, the famous decision a generation ago introducing the "rule of reason," which held that only "unreasonable" restraints of trade were prohibited.

Industrial Europe has generally accepted the cartel. Legally America has opposed it; one of the deepest objections to the N.R.A. was that it more or less suspended the operations of the Anti-Trust Laws and encouraged, or forced, the organisation of industry into a kind of cartelisation. But even though the N.R.A. was formally abandoned over three years ago, the impulse which it then gave to cartelisation was more or less derived from the economy itself, adding further complexities. Another impulse toward cartelisation has come from the wider organisation of labour; and, when the labour of an industry is organised on an industry-wide basis, the problems of employers are complicated by their being prohibited from organising themselves similarly.

An Analogy with Prohibition

It may seem unpleasant, but there exists a certain analogy with prohibition. A law expressing a certain social concept was placed on the statute book; but because this law did not reflect sufficient public sentiment to ensure its enforcement, in spite of zealous crusades by agencies of Government, the result was that certain "trade practices" developed in response to popular demand. For years the Prohibition laws were neither enforced nor repealed; we may say that they could not be enforced.

For almost fifty years the Anti-Trust Laws have been on the books. They have prevented the growth of monopoly, of recognised cartels, and of certain forms of "concentrations of economic power." Under them business has developed an indefinite number of unrecognised cartels and various forms of "concentrations of economic power." The evidence of history, in this and other countries, indicates that advantages do derive from the cartel system and other "concentrations of economic power," but all the same a considerable body of opinion is still devoted to the spirit of the Anti-Trust Laws. It is conceivable that the disparity between economic fact and legal aspiration may continue indefinitely; it is possible to imagine a resolute enforcement of the existing Laws, or their strengthening in such a manner as would enable enforcement of smaller, more competitive units; or, again, it is possible to imagine the abandonment of our historic legal attitude, and a recognition or even an enforcement of cartelisation and more complete concentration.

The first Hearings of the Temporary National Economic Committee were directed towards the influence of the patent laws upon "concentration." It was found that in the motor industry there is a virtual pooling of patents. In the glass industry, however, the control of patents appears to have developed a kind of integration of the industry analogous to a cartel. It seems that the Hearings have tried to set these two industries in contrast with each other; but the conclusions of the Committee from this, its first exhibit, are not yet manifest.

France

Boom in Public Funds

PARIS, December 22.—While the Chamber examines the Budget expeditiously, public funds are booming on the Bourse. The Budget, which allows for 66,000 million francs of expenditure, will be sent to the Senate at the end of the week, after 66 hours of continuous session, so that the public accounts for 1939 can be voted in due time at the end of the year. The firm declaration of M. Bonnet that "not an inch of territory will be ceded," in reply to the Italian claims, has won new support for the Cabinet.

The speedy passage of the Budget and the recent international calm, coming, as they do, after earlier political success by the Government, are likely to lead investors to take a hand in recovery. Proposed conversions of foreign loans in Amsterdam and London will afford the support of foreign capital for the Government's operations. The course of the public funds this year has been as follows:—

	Capital nominal	Lowest of the year	Nov. 15, 1938	Dec. 20, 1938
3% perpetual	17.0	65.30	80.70	86.00
4% 1917	8.5	62.25	82.00	89.20
4% 1918	18.5	62.40	81.10	89.50
4½% 1932 A	41.3	68.20	85.10	92.60
4½% 1932 B	39.7	68.60	83.25	91.25
5% 1920	15.3	88.60	103.00	120.40
4% 1925	5.7	104.00	140.70	165.50
4½% 1937	8.1	103.75	139.95	157.40

The greater part of French funds is represented by the 4½ per cent., with a capital value of 80,000 million francs. A profitable conversion should lead to the substitution of a 3½ per cent. loan. The 4½ per cent. 1937 with an exchange guarantee (for sterling and the dollar) is not convertible before 1942. The 4 per cent. 1925 with a sterling exchange guarantee is repayable on the basis of five times the last coupon, or about 180; while the 5 per cent. 1920 is repayable at 150 per cent.

The following table shows the concurrent recovery of various French debentures on foreign markets:—

	Oct. 21	Dec. 19	Dec. 20
Amsterdam:—			
City of Paris 5% 1933	95½	100½	100½
Chemin de Fer Paris Orléans 6%	90	98½	99½
" 5% 1928	81½	96	97½
" Alsace Lorraine 5% 1929	79½	95½	...
New York:—			
Chemin de Fer du Nord 6½%	100½	102	101½
" P.O. 5½%	91.63	98½	99½
Zurich:—			
Alsace Lorraine 4% 1932	26	39½	42
" 4½% 1932	84	104½	110
Midi 4% 1930	27½	39½	42½
P.L.M. 4½% 1932	88½	106½	111
P.O. 5% 1930	93	98	98½

Need for More Output

Cheaper money and extra hours of work will aid production. Will these steps be sufficient? Almost certainly not. The critics adduce recent fiscal receipts as a proof of the need for further governmental action. The revenue returns for October were as follows:—

	1937	1938
Direct taxes	856	1,633
Indirect taxes	3,304	3,736
Estate duties	88	56
	4,249	5,426

NORANDA MINES, LIMITED DIVIDEND NOTICE

Notice is hereby given that an interim dividend of \$2.00 per share, payable in Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable December 22nd, 1938, to shareholders of record at the close of business December 5th, 1938.

By order of the Board. J. R. BRADFELD,
Toronto, Nov. 18th, 1938. Secretary.

Total fiscal receipts from indirect taxes only, for the first ten months of this year, have been 31,000 million francs, which is 6,000 millions more than in the same period of 1937, but 700 millions less than the estimates. All items, except the taxes on income derived from stocks, show a deficit on estimates. The rise in prices and the additional taxation have thus failed to fill the gap, and the fiscal problem is unsolved. It is consequently imperative that production should be greatly increased. Cheaper money, after the conversion of State loans, should stimulate private company borrowing, and lead to an expansion of credit to industry and business. But the State will have to assist, and the financial Press is anxious to know what means will be adopted.

This is also the chief anxiety of the *rapporteur* of the Finance Committee of the Chamber, when he asks in his report on the Budget how a further rise in prices will be offset after the increased taxes and higher wages have led to an increase in costs. "The true remedies (the report says) lie in a rational organisation of our production, in a wise orientation of national economy to expand our foreign trade, and finally in a more intensive exploitation of our Empire."

All these remedies have been announced in recent speeches by M. Reynaud, the Minister of Finance, M. Gentin, the Minister of Commerce, and M. Mandel, the Minister of Colonies, but no subsequent steps have been taken. Why this delay? Officials declare that financial recovery must come first, and that intensification of production will follow as soon as the conversions have been made.

Wholesale Prices Steady

Wholesale prices continue to show appreciable stability, after two years of steady increase:—

	June 25	Dec. 17
General index	652	654
Domestic products	685	679
Imported products	592	610
Foodstuffs	656	627
Industrial products	649	678

Retail prices, however, after the seasonal stability of summer, now show a tendency to rise, which is partly due to the increase in taxes. Nevertheless, French prices are still in general 20 per cent. lower than English prices, which favours French exports. Industrial profits are improving, as a result of the regained stability of wages and the cost of living. Figures of industrial activity show a perceptible improvement, and the index of railway traffics has regained the level of last June, which was, however, still 10 per cent. lower than at the same time in 1937.

In the week ended December 10th, the number of persons unemployed was 371,920 against 367,834 in the previous week and 345,095 a year ago.

Germany

Dr Schacht's Journey

BERLIN, December 19.—After the return of the President of the Reichsbank from England opinion in Berlin is that his negotiations in London were impeded by more serious obstacles than had been expected in Germany. These difficulties are attributed not to any personal animus against Dr Schacht, but to the English reaction to German treatment of the Jews and to the Reich's foreign trade policy. The official statement that at the beginning of January the Evian Committee will discuss in Berlin measures for the relief of Jewish emigrants suggests that the Reich is now prepared to assist emigration.

This readiness is intensified by the poor figures for foreign trade in November. Compared with the same month of 1937, exports fell by Rm. 80 millions. This figure should be qualified by the fact that this year's figures embrace Greater Germany and not, as last year's, only the old Reich. Discussions of British-German trade and the problem of foreign trade policy will have to be postponed, because at the moment the psychological conditions for agreement do not appear to exist.

Despoiling the Jews

Rather than prejudice Dr Schacht's negotiations and the chances of a subsequent agreement, the authorities have refrained from applying or announcing further anti-Semitic measures. In particular, the creation of a ghetto and the ban

on Jews living in certain streets have temporarily been dropped; and there appear to have been no more arrests.

The measures already in force, however, are being pressed forward. A decree published early in December by the Ministry of Economics made compulsory the "aryanisation" of businesses under Jewish management, including Jews absent from the country. This compulsory liquidation is carried out through a State appointee; and the decree applies not only to private firms but also to agricultural and forestry enterprises; not only to German and Jewish persons who have lost their citizenship, but also to the Jewish citizens of foreign countries.

The Ministry of Economics has further set up a deposit bureau for Jewish securities. For payment of the fine imposed on account of the Paris assassination, Jewish securities may be sold under exceptional circumstances, but in that case, to avoid affecting the stock market, the securities must be disposed of through the Prussian State Bank. It is finally forbidden for Jews to acquire, sell or pawn gold, platinum, silver or precious stones if the value of any such article exceeds Rm. 1,000; deals of this kind may now be made only through official bureaux; and a similar regulation covers works of art.

In all cases it is compulsory for Jews to invest a part of the money received for the businesses or possessions they have sold in Government bonds or coupons. The rate of interest which they will receive is not yet fixed.

In the matter of Jewish emigration, interest is centred at present on the two years' old Warburg Plan. This was an idea of Dr Schacht's. It provided that emigrated Jews should have at their disposal a certain sum of money, and that foreign countries should advance the necessary foreign exchange. Germany would be obliged to service this credit by exports, and, over a long period, to pay it back.

Heavy Import Surplus

Greater Germany's imports in November were valued at Rm. 522 millions and exports at Rm. 453 millions, leaving an import surplus of Rm. 69 millions. The import surplus for the past eleven months amounts to Rm. 426 millions. In the old Reich alone, total imports in the eleven months were valued at Rm. 4,958 millions, against Rm. 4,938 millions in the same period of 1937; while imports thus rose by Rm. 20 millions, exports fell by about Rm. 600 millions, being valued this year at Rm. 4,753 millions, against some Rm. 5,359 millions last year. Thus, instead of the export surplus of Rm. 422 millions recorded in 1937, the old Reich has now an import surplus of Rm. 205 millions.

A number of important buyers placed noticeably smaller orders in November even than in October. Exports to the United Kingdom fell between October and November by Rm. 7.4 millions, those to Switzerland by Rm. 3.4 millions, those to Holland by Rm. 2.9 millions, those to Norway, Sweden and Denmark by Rm. 2.8 millions, and those to the United States by Rm. 2.1 millions. Trade with Canada and British India also fell off sharply, and exports to Hongkong declined by Rm. 4 millions.

Trade negotiations with Italy are going on in Rome with the object of new trade agreements to take account of the inclusion of Austria and the Sudetenland in the Reich. And the thorny problem of harbour facilities at Trieste has not yet been solved. It is hoped that German exports to Italy, which rose in value between 1932 and 1937 from Rm. 223 millions to Rm. 311 millions, will further expand in the coming year to Rm. 350 millions. Germany now takes 40 per cent. of all Italian oranges and citrus fruits, and this is set against German sales to Italy of 36 per cent. of her coal, 20 per cent. of machinery and 9½ per cent. of iron, steel and metal goods.

Berlin is also expecting a trade delegation from Turkey. Herr Funk's export credits agreement with Turkey has yet to be signed. Under this agreement Germany provides Turkey with a credit of Rm. 150 millions with which to buy industrial and military supplies. This credit corresponds in form and content to those recently granted to Turkey by Great Britain.

More Debt and Fewer Houses

Between April and November of this year German tax and customs revenue amounted to about Rm. 10,935 millions, against Rm. 8,956 millions in the same period of 1937. Although current revenue is thus higher by Rm. 2 milliards than last year, the Reich's debt has again risen. At the end of October the total debt stood at Rm. 25,676 millions, compared with Rm. 17,574 millions in October, 1937. Within a year her floating debt has risen from Rm. 2,397 millions to Rm. 4,890 millions. These figures show the effect of the

vast expenditure on building plans and the Four Year Plan.

The great volume of State building has left residential housing very poorly provided for. In particular, the demolition of numerous houses in Berlin in preparation for the new North-South and East-West streets has proceeded without the provision of alternative accommodation. Residential building has likewise suffered from the great calls made on all available materials by fortifications, official, army and party buildings. Some 19.3 million householders in Germany have only 17.8 million dwellings.

During the next ten years, if requirements already apparent and current demolitions are counted in, about four million dwellings will be needed or, including Austria, about 4½ millions. The greater part of these will be workers' houses and will have to be cheap and State subsidised.

Jugoslavia

Trade with Germany

BELGRADE, December 18.—With the change of the Central European map, the renewed British interest in the South-East, and the impending trade negotiations with France, the problem of foreign trade relations, and especially of relations with Germany, has come to the forefront. In 1937, Germany took 1,361 million dinars' worth and Austria 848 million dinars' worth of Yugoslav exports; together they bought about 33 per cent. of total exports valued at 6,272 millions. Imports from Germany and Austria were valued at 1,694 million dinars and 538 million dinars, respectively, or about 42 per cent. of total imports worth 5,234 millions.

With the extension of the German frontiers, some increase in the volume of this trade was expected, although it was thought that it would require some time for this to take place, in view of the fact that trade in some lines had become dislocated. German timber orders, for instance, were transferred from Yugoslavia to Austria. In the event, however, Germany began to buy Yugoslav foodstuffs and raw materials to an unprecedented scale—even before Herr Funk's visit and the announced trade drive. Thus, in July, Germany's purchases were valued at 116 million dinars, or 41 per cent. of total exports, worth 283 millions; in August, at 279 million dinars, or 60 per cent. of a total of 462 millions; in September, at 188 millions, or 47.5 per cent. of a total of 397 millions; and in October, at 273.5 millions, or 50 per cent. of a total of 464 millions.

Beneficial as such heavy sales may seem, they are not without their disadvantages. For one thing, Germany is paying prices above world prices, and is thus seriously affecting the course of prices in Yugoslavia, which have now reached a level at which exports to other countries have become increasingly difficult. Thus, not only have Yugoslav wholesale prices maintained last year's level, the index fluctuating from July to October between 76.8 and 78, against 75.3 and 80 last year, but retail prices in the ten largest towns have also risen from 88.3 to 92.1 in the same period.

The rise in prices is the more serious because it is not uniform, and tends to be greatest in the case of goods most needed by Germany. Unless arrested, therefore, the rise in prices will tend to establish a price structure so closely in

line with German requirements that the Yugoslav economy will become still more dependent upon sales to Germany.

Need for Free-Exchange

Thus, the first direct consequence of high prices is a sharp fall in exports to free-exchange countries which are not willing to pay the same premium on imports as Germany. During the first ten months of 1938, exports to these countries dropped from 1,933.6 million dinars in value to 1,341 millions, despite the fact that Yugoslavia imported from them goods to the value of 1,285 million dinars, or 70 millions more than in the same months last year. The fall in the export surplus in trade with free-exchange countries from 718 million dinars to 56 millions has led to a great shrinkage in the influx of *devisen* upon which the National Bank has to rely to finance foreign trade.

Nor is Yugoslavia getting compensation in the form of cheaper German goods. The prices of German goods remain below world prices only until they are established in the Yugoslav market. Then they rise. Yet, in spite of this, importers are obliged to buy German goods for preference, partly because of the shortage of *devisen*, and partly because of the desire to diminish the German clearing debt.

This state of affairs has stimulated serious study of ways and means to increase trade with free-exchange countries. And it was this consideration which dictated the introduction, first, of a special exchange rate with the pound sterling for the export of turkeys, and then a general export rate of 262 dinars to the £ against the previous free rate of 238 dinars. Such measures, however, can only be regarded as temporary unless a lasting fall in the value of the dinar is contemplated. The need of inducing countries with free exchanges to engage in governmental bulk-buying is, therefore, attracting increased attention.

A rise in prices must ultimately affect industry through a rise in wages, and the development of industry is a vital necessity for a country which cannot find sufficient remunerative employment for its growing population. The population is now estimated to have passed the 15 million mark; and, up to the present, industry, with 754,775 workers against 716,675 in September last year, provides employment for only about one-fifth of the population. Industry, however, has not yet been affected by the upward movement of prices, the average daily wage of insured persons having risen only slightly, from 23.42 dinars to 24.23 dinars, between September, 1937, and September, 1938.

Roumania

Trade Bonds with Germany

BUCHAREST, December 17.—Roumanian exports consist mainly of cereals, petroleum products and timber. These are the main sources of the country's revenue, but they are now labouring under considerable disadvantages. The first of these is common to all Roumanian products; they are sold in the home market at very high prices, prices which are frequently above the level of world prices. The reason for this lies in the heavy burden of taxation imposed upon industry; the high customs duties levied on imports; and the heavy freight charges made for transport both on the railways and by sea, since the Roumanian ports of Constantza, Galatz and Braila are very remote from the principal ports of Western Europe—more distant even than the Atlantic ports of Canada and the United States of America.

Since 1935 Germany has been seeking to turn this situation to her own advantage, in accordance with her need for raw materials and expansion Eastwards. Her totalitarian regime has made it possible to concentrate all commercial initiative in the hands of the Government, which has accordingly pursued a consistent policy of purchasing more and more of Roumania's cereal and petroleum products every year. The difference between the prices ruling in Roumania and those in the world market is covered by the German Government so that the Roumanian exporter loses nothing. This is achieved by means of the agreement with the Roumanian Government, whereby Germany's purchases in Roumania are not paid for in cash but in kind; that is, by deliveries of manufactured goods and machinery of all sorts, as well as supplies for the oil industry and plant for munition factories—and even munitions manufactured in Germany. Recently, also, a large contract was obtained by a German

firm for the construction of grain silos in Roumania and for the manufacture and installation of the requisite plant.

Thus Roumania pays for all these things with the credits she has amassed in Germany for her exports to that country, and Germany is enabled to recover the losses incurred in paying high prices for Roumanian products. This year, however, the Roumanian Government woke up to the fact that her exports to Germany amounted to between 32 and 35 per cent. of her total exports, and her imports from Germany to 41 per cent. of her total imports. It seemed evident that, if these percentages were maintained or increased, Roumania would shortly be almost entirely dependent upon Germany for her trade—which was considered undesirable for political reasons. An attempt was made to turn trade into other directions, and the Ministry of National Economy instructed the Foreign Trade Department that permits for compensation business with countries having a weak currency were to be refused as far as possible.

Diminished Trade with France and Britain

This hit Germany; and great optimism was then felt about the possibilities of increased trade with France. It was believed that increased business with France would compensate for loss of trade with Germany. Unfortunately, the political situation in France and the introduction of reduced working hours there had an adverse effect upon French industries, and orders could no longer be completed within the prescribed time, nor, owing to the threat and danger of strikes, could manufacturers guarantee delivery at any fixed date. At the same time, Great Britain, who had recently been a good customer of Roumania for timber, once more directed her orders principally to Canada.

That was in the beginning of 1938. Since then there has been a marked decline in Roumania's export trade, as shown by the following figures:—

	Metric tons		
	1936	1937	1st 10 Mths. 1938
Cereals and vegetables and oilseeds.....	2,072,100	2,224,600	1,009,318
Petroleum products	7,059,822	5,829,874	3,757,799
Timber.....	1,066,000	1,176,300	773,964
Total exports of cereals			1,009,318
Total exports of cereals to Germany			396,878

Thus Germany purchased about 39.3 per cent. of total cereal exports.

New Agreements with Dictatorships

In October this year, the German Government sent an economic delegation to Bucharest to negotiate a new trade agreement. The proceedings began under favourable auspices, but difficulties were encountered when the German delegation proposed raising the lei rate of exchange for the Reichsmark. After several weeks' negotiations, however, the agreement was signed on December 10th. Under its terms the rate of the Reichsmark is 40.5 to 41.5 lei, and a total volume of trade amounting to 10 milliards of lei is accepted by Roumania as admissible. This represents the maximum reached in former years under the old agreement, and now covers not only Germany but also Austria and the Sudeten provinces. Germany reserves the right to purchase in Roumania 40,000 wagons (of 10 metric tons each) of wheat, and 5,000 wagons of other cereals. The purchases of petroleum are fixed at 25 per cent. of the total value of trade between Roumania and Germany.

In the meantime, a French economic delegation arrived in Bucharest. Their object was to study the possibilities of increased trade with this country, and they were mainly interested in petroleum products. Roumania prefers to sell her refined products, thus benefiting her own refineries, while the French wanted to buy crude oil and have it refined in France. The French Government was ready to make concessions and made an offer to buy 500,000 metric tons of motor oil, 50,000 tons of gas oil, 10,000 tons of lamp oil and 80,000 tons of crude oil. The Director of the French Foreign Agreements Department has returned to Paris for a few days for fresh instructions, and it is hoped that upon his return the agreement will be signed.

A third delegation, this time from Italy, was more fortunate. A few days sufficed for them to complete their negotiations for an agreement based upon an exchange of products amounting in annual value to 7 milliard lei. The Italians undertook to purchase in Roumania 35,000 wagons of wheat and 70,000 wagons of crude oil. The rate of exchange for the Italian lira is fixed at 7.172 lei, and this agreement is regarded here as very favourable to Roumania.

Letters to the Editor

British Profits

TO THE EDITOR OF THE ECONOMIST

SIR,—The publication in your issue of December 17th of the admirable survey of the profits of British companies by Mr Hargreaves Parkinson still further increases the debt which everyone interested in recent British economic history already owes to its author and to *The Economist*. The survey is especially valuable because of the detailed summary which Mr Parkinson gives of his methods of estimation. To anyone acquainted with the present chaotic condition of British income statistics the trouble to which he has been put in converting a wide variety of fiscal year data to a calendar year basis will seem little short of fantastic.

A simple reform would ease Mr Parkinson's and *The Economist's* problem immensely: the publication by companies of quarterly statements of their income. If this were done on a basis comparable to their present annual income accounts, it would then become possible to place three-quarters of the sample (those at present closing their books at the end of a calendar quarter) on a calendar year basis straightaway. Still more important, the construction of a quarterly index of profits could then be undertaken.

I am not an accountant, and I do not pretend to know how much extra work such a reform would entail in the case of the average enterprise. I do know, however, that there are now over five hundred companies in the United States, spread over a wide field, which regularly publish quarterly or (in a few cases) semi-annual income data. The amount and character of the information available concerning short run movements in the level of profits—a subject of the greatest interest both to the investor and to the student of industrial fluctuations—is therefore incomparably superior in the United States to anything available in this country.

Is it too much to hope that some influential body, either the Royal Statistical Society, the Institute of Chartered Accountants or the Stock Exchange itself, will give this matter the publicity which alone will lead to reform?

Yours, etc.,

HAROLD BARGER.

London.

TO THE EDITOR OF THE ECONOMIST

SIR,—In the article "Three Decades of Profits" in the current number of *The Economist* (December 17th), you draw attention to one of the most disturbing features of our post-war economy—the increasing instability of profits. You enumerate two methods which, in theory, might be employed for reducing the range of fluctuation of profits.

First, a greater flexibility of costs of production, which you rightly rule out as impracticable. Secondly, the substitution of equity securities for debentures and preference shares in the capital structure of business companies. You admit that this would be only a partial remedy, and I submit that, failing some degree of legal compulsion, there is little prospect of it being adopted by the majority of company promoters.

There is a third method of approach to the remedy for instability of profits, namely, the greater stability of prices. In his concluding sentence, Mr Hargreaves Parkinson writes: "The course of profits will itself be a function, not only of general business activity, but of the trend of commodity prices as a whole." This seems to cut right at the root of the matter, for whenever we have seen a pronounced fall in the general level of prices we have experienced a slowing down in business activity and a falling-off in the profit-margin. It can hardly be otherwise, so that the maintenance of general prices at a level which is consistent with the full employment of our factors of production appears to be a necessary condition for the maintenance of business activity at its natural maximum, and for the stability of profits at a level coincident with such degree of activity.

The means by which stability of prices might be attempted lies outside the range of your article on profits, but such stability is, I submit, fundamental to the greater stability of profits.

Yours faithfully,

W. M. WIGGINS.

Manchester.

Power over Opinion

TO THE EDITOR OF THE ECONOMIST

SIR,—In your interesting article "Power over Opinion" (on page 585 on December 17th) I read that only the British Empire (apart from India, Palestine and parts of Canada), the United States, Holland, Belgium, France and the Scandinavian countries enjoy free news. I beg your pardon, but *Switzerland* is also a country with free news.

Just now we are fighting against a German offensive on our neutrality. Nearly every day German newspapers demand from Switzerland a totalitarian neutrality, i.e. a neutrality of the State and of the mind as well. The German Press wants to read in the Swiss papers only good news about Germany, its Government and the NSDAP.

Last week Dr Motta, of the Federal Council, clearly explained in Parliament that our neutrality is only a neutrality of the State, and the thinking of the Swiss citizens can never be neutralised.

This is the opinion of all Swiss newspapers, which will fight vigorously for the freedom of the Press.

I am, yours faithfully,

HERMANN SCHUTZ,

Editor, *Der Bund*.

Berne.

[It is with pleasure that we print this letter to correct the unfortunate and erroneous impression which an omission in the article referred to may have given.—EDITOR.]

French Financial Policy

TO THE EDITOR OF THE ECONOMIST

SIR,—There are a few points open to objection in Dr Balogh's last letter on this subject, published in your issue of December 3rd (on p. 480)—in particular when he taunts me with saying that the franc is over-valued, which I never did. But controversies are best when not too long. However, let me at least assure him that there is no "lop-sidedness" in French protection, if by this he means, as he apparently does, that protection has been used by the Right to defend a few "entrenched interests." Actually, the exclusion of cheap imports has been one of the few subjects upon which Right and Left have never quarrelled. This unanimity is no proof, of course, of the economic soundness of our commercial policy: it only shows that "old-fashioned" arguments about free trade are unpalatable to twentieth-century public opinion.

The same applies to the unpleasant requirements of budgetary equilibrium. Our next problem, says Dr Balogh, will be to combine "open-market operations" with stable prices. There are still some people in France who can call a spade a spade, and inflation after its own name, and fortunately M. Paul Reynaud is among them. But I am sure that if inflation really does not injure the consumer, M. Reynaud would be happy to have Dr Balogh's recipe.

Yours sincerely,

ETIENNE MANTOUX.

Paris.

Bank Rate

JUST over a century ago relaxation of the Usury Laws left the Bank of England free to vary its rediscount rate at will, and the history of Bank rate as an instrument of monetary control began. It is appropriate that Mr Hawtrey should have taken up the task of expounding the motives and consequences of changes in Bank rate since those early days, because he remains unrepentantly a believer in Bank rate as the most desirable and effective tool of credit policy. This study* comes in the direct line of descent from Bagehot's "Lombard Street."

For the most part, however, Mr Hawtrey is content to let the facts of history speak for themselves. Only a third of his notable book is devoted to the author's own views. The chief part records the reasons stated at the time by the Bank authorities for the policy pursued in the past, and sets out in clear detail the context and consequences of all the changes in Bank rate for over a hundred years: the state of the Bank's reserves, gold movements, the course of exports, prices and fluctuations in the funds.

In late years, the abandonment of the gold standard has shaken old axioms. The usefulness of Bank rate changes is no longer taken for granted; new ways and means of influencing the money market and business activity have become fashionable; and Bank rate has entered the field of controversy.

Mr Hawtrey stands in that field to make a confession of faith; and it is a conservative confession. He does not believe that the alternatives to Bank rate policy are equally effective methods of regulating the supply of money; the Bank's buying or selling of securities in the open market will only increase or diminish the money in circulation if the joint stock banks adjust their loan or discount policy accordingly, as Mr Harrod admitted during his recent advocacy of open market purchases as a remedy for recession; and public works expenditure and flexible Budget policy can only be useful within limits. Mr Hawtrey may underestimate these devices because no Government has yet used them in a properly planned way; cyclical budgeting, for instance (except perhaps in some degree in Sweden), is still little more than a theory.

The truth is that Mr Hawtrey differs widely from the contemporary pundits in the views upon which his proposals rest. He is not concerned, in his definition of credit policy, with the influence of long-term interest rates upon long-term investment. It is investments in stocks of goods, or changes in traders' balances, which, in his exposition of the trade cycle, most directly affect business activity; these stocks and balances are financed by bills and advances at rates closely related to Bank rate, changes in which accordingly afford a mode of direct control.

Probably the difference of opinion is largely one of emphasis. Certainly, Mr Hawtrey admits that Bank rate policy can be, and often has been, misused and ill-timed. He has now to find an answer to the Oxford economists who, having painstakingly interrogated sampled business men,† conclude that changes in short-term interest rates do not noticeably influence business decisions.

Shorter Notices

"Food and Welfare." By F. L. McDougall. League of Nations Studies of Nutrition and National Economic Policy. Geneva Research Centre. 56 pages. 1.75 Swiss francs.

The realisation that nutrition is capable of precise measurement is spreading from the laboratory and clinic to Parliaments and Government departments. The fact that millions of people in most countries are not adequately fed has become widely known. Mr McDougall shows how it is now

possible to use the state of national nutrition as a test of national economic organisation and policy. He summarises the valuable work of research and enlightenment done by organs of the League of Nations; he states succinctly the nature of nutrition, the vital constituents of a satisfactory diet and the importance of food habits; and, in a sense most important of all, he relates nutritional needs to the requirements of world agriculture and trade. "The five aims of an improved level of nutrition, higher standards of living, freer international trade and an increased volume of trade together interlock to form lines of policy which should ensure economic and political stability to the nations . . . and help to promote the peace so desirable. . . ." The way to world peace and prosperity is *via* milk, fruit and vegetables.

"The Baltic States." A Survey of the Political and Economic Structure and Foreign Relations of Estonia, Latvia and Lithuania. Royal Institute of International Affairs. Oxford University Press. 7s. 6d.

Memel, Lithuania and the Baltic provinces are once more in the news. This book from Chatham House, published on the eve of the Central European crisis, sets the debatable lands between Nazi Germany and Soviet Russia in their full historical, political and economic context. Here are three countries set on their own feet after the Great War and successfully developed since then, only to be overshadowed now by the Imperial advance of the new Germany in trade and politics. Their historic place has been for centuries between the hammer and anvil of Teuton-Slav rivalry, and along their borders to-day the history of our own times is being written, no less than in Poland, Bohemia, Danubia and the Balkans. This survey shows how worth-while their independence has so far been.

"A Short History of International Affairs, 1920-1938." By G. M. Gathorne-Hardy. Oxford University Press. 487 pages. 8s. 6d.

Mr Gathorne-Hardy's objective study of the post-war world, intended as a commentary in retrospect on the material provided by Professor Toynbee's Annual *Surveys* of International Affairs, initially ended in 1934 with Hitler in Power in Germany, but not yet in Europe. The new and enlarged version comes down to our own days and takes in the Czecho-Slovak crisis of September. Even among the dust and heat of current issues the book loses none of the insight, clarity and fairness which marked the first edition; it ends with the German armies marching unresisted into the Sudetenland, symbolic of the new Europe which a bare five years have built.

"Indian Finance Year-Book, 1938." Annual Supplement to Indian Finance. 20 British Indian Street, Calcutta. 454 pages. 5 rupees.

It is six years since this annual survey of India's economy was first issued, and the latest number, embracing all aspects of the finance, currency, commerce, trade, industry, transport and population of the sub-continent, of necessity breaks new ground. The separation of Burma and the institution of provincial autonomy have given a fresh twist to social and economic life in India, and special articles point the way to the assessment of these influences. Elsewhere the "Year-Book" is as comprehensive as ever and will serve as an authoritative and exhaustive book of reference for both economists and business men.

"The Corn Trade News." Golden Jubilee Volume. 112 pages. 7s. 6d.

This, the first special issue of the "Corn Trade News," celebrates the golden jubilee of the founding of the paper in 1888. It contains a brief account of the life of the founder, Mr George Broomhall, who died in June of this year, and a series of articles illustrating the developments in the world's grain trade during the last fifty years.

"Taxation" Manual. Published by Taxation Publishing Company and Pitmans. 328 pages. 10s. 6d. (11s. post free.)

A reference work on income-tax law and practice, this manual is designed, not only to expound the present state of the law, but also to explain it simply with examples, and to keep contact with future changes by means of amendment slips to be sent free to purchasers from time to time.

THE BUSINESS WORLD

Investment in the Mandates

EACH reference to the restoration of ex-German colonies in Dr Goebbels' Press is read with concern by the Stock Exchange. For several months, even before the September crisis, Germany's colonial pretensions have contributed to the market's uneasiness. Rand gold shares—which, on any factual reading of Germany's claims, should be reckoned immune—have in fact suffered the worst. It is desirable indeed to discover the exact scope of the British investor's interests in territories which formerly belonged to Germany, and the stage of economic development in these areas.

It may be said at the outset that, whatever the ultimate importance of former German colonies, it is certainly not due to the size of the British investor's stake in those territories. It is impossible to give exact figures of the capital which has been invested in these areas, but, on the most generous assumptions, it is clear that they are small relatively to British investment in other Imperial countries. Companies with international, or at least inter-colonial, scope prevent any accurate territorial division of financial interests. Thus, despite its name, Tanganyika Concessions has (on the chairman's own statement) only a small interest in Tanganyika itself. Again, part of the income of the South-West Africa Company is derived from securities, as distinct from its own operations, while the alluvial gold mining holding company, Placer Development, Limited, has interests as far apart as New Guinea, Colombia and Australia. No less important are the companies (such, for example, as Hudson's Bay Company) which are primarily associated with other countries but have trading, banking or merchanting interests in ex-German colonies. When every item is counted in, it is impossible to assemble many millions of existing capital investments in former German colonies.

Secondly, a large proportion of the capital from all sources which has been sunk in these territories has been publicly invested and does not concern the British investor directly. The only mandate loans listed on the London Stock Exchange are the Tanganyika Government 4 per cent. guaranteed stock (of which £3,000,000 is due 1951-71 and £500,000 is due 1952-72) and £2,070,000 4½ per cent. stock of 1948-68. Both issues carry the British Government's guarantee of interest and capital. With unimportant exceptions, the railways in the areas concerned are State-operated, and in Africa railway investment exceeds any other class. The important phosphate deposits in the Pacific island of Nauru (bought from the Pacific Phosphate Company for £3,500,000 in 1919) are under the control of the British Phosphate Commission, and the proceeds of operation are divided between the mandatory Governments of the United Kingdom, Australia, and New Zealand in fixed proportions. When allowance has been made for these classes of capital, the balance representing the investors' share is not of impressive size. For Africa south of the Sahara, something is known of the destination of new money subscribed from abroad, thanks to the researches of Professor Frankel in his latest book, "Capital Investment in Africa."* The following figures showing listed and unlisted capital invested in Africa south of the Sahara from 1870 to 1936 are extracted

from this book. Stock Exchange securities are shown as private listed capital, while public listed capital consists of direct Government investment:—

	(£ millions)			
	Public listed capital	Private capital listed	Non-listed capital	Total listed and non-listed
S.W. Africa.....	21.6	7.2	2.9	31.7
Tanganyika	31.2	15.8	4.9	51.9

* Of which £260 millions for mines.

The investor, however, is not concerned merely with the size of his stake. There are other factors of equal interest, such as the terms upon which companies operating in ex-German colonies acquired their original assets. Such terms would have an obvious bearing on any detailed discussion of German colonial claims. As a matter of historical record, government property was confiscated after the War, without any form of compensation. And no part of the public debt incurred by Germany on behalf of her colonies, on which the annual charge was 34 million marks, was taken over. The Versailles Treaty also permitted private property to be liquidated, but such sales (after deducting claims) were to be compensated in the form of an offset against reparations. Thus certain sisal estates in Tanganyika were auctioned for £1,381,300, and 268 plantations in New Guinea eventually realised £3,350,000. These measures, however, have no relevance for the investor who has since acquired interests in the areas. Nor does it follow that capital at present sunk in former German colonies was mainly of German origin. In fact, with one important exception, it is broadly true that most of the present listed capital has been of non-German origin. The exception is Consolidated Diamond Mines of South-West Africa, which was formed to amalgamate the chief German limited companies engaged in diamond mining, for which purchase considerations of £1,900,000 cash and £1,775,000 in £1 shares were paid. The South-West Africa Company has always been, technically, a British company. It obtained its concession from the German Imperial Government, but since 1,218,913 ex-enemy £1 shares out of a capital of £2,000,000 were purchased and cancelled, it is evident that German interests in the company were considerable. This company, moreover, granted a concession to the Otavi Mines and Railway Company, which was largely restored in 1920. Otavi was, and remains, a German company, but the shares are dealt in both in London and Berlin, and were converted into sterling denominations in 1921. As for pre-War Tanganyika, Tanganyika Concessions was not interested in the German colonial territory, but Lewa Rubber did in fact operate in Tanganyika. The chief mining and sisal concerns in Tanganyika have been formed since the War. Gold-mining in New Guinea is entirely a post-War development.

In the table at the foot of the next page we set out some particulars of companies operating in ex-German colonies. Our list does not claim to be exhaustive, and it

* Oxford University Press. 10s. 6d.

must be stressed in particular that the interests of these companies are not in all cases confined to the mandated territories.

South-West Africa is clearly of chief concern for the investor. Consolidated Diamonds (controlled by De Beers) accounts for well over half the listed capital computed by Professor Frankel. Diamond production is restricted under the quota scheme, but although part of the quota from other areas has been assigned to South-West Africa, diamond exports from the area are small both in relation to the present world output and to pre-war production. In 1937 Consolidated Diamonds paid an ordinary dividend for the first time since 1929. Preference arrears of £1,092,000 were paid off in 1936, but the change in conditions is marked by the payment of only six months' preference dividend to June last. South-West Africa was originally an important land company (it still has rights over 1,200,000 acres), but since 1920-21 its interests have been primarily in mining. Although the company holds securities with a book value of £749,185, the chief source of revenue at present is from the sale of vanadium ore from the Abenab mine, where production was suspended between September, 1932, and 1935. Otavi, which is chiefly a lead and copper producer, has also started up again after suspending ore production at the Tsumeb mine between 1932 and 1937. The subsidiary prospecting company, Otavi Exploring Syndicate, is now in liquidation. In an entirely different sphere, Hudson's Bay Company now has an interest in South-West Africa through a company with a small capital, Hudson's Bay Company (Proprietary), Ltd., which handles the growing fur business. As a result of the increasing demand for Karakul sheep pelts (South-West Africa Persian lamb), of which over 1,000,000 were exported in 1937, against 10,000 in 1926, hides and skins now rival diamonds and other minerals combined as staple exports. The livestock industry also provides Imperial Cold Storage and Liebig's Extract of Meat Company with interests in the region.

So far, Tanganyika gold mines have produced little in the way of dividends, though this is partly because certain of the mines are not yet in a producing stage. Tanganyika Concessions and Kentan Gold interests are represented by the developing mines owned by Geita Gold Mining Company, and certain concessions (on which so far little work has been done) held by Saragura Development Company, Ltd. Tanganyika Concessions' interest in the mines is indirect, firstly through its holding of 444,345 10s. Kentan shares (out of 2,500,000 shares); secondly, through its 50 per cent. interest in Geita Gold Mining £421,000 8½ per cent. debentures (of which Zambesia Exploring Company

holds the other half); and, thirdly, through the 451,175 Kentan shares held by Rhodesia-Katanga Company, in which "Tanks" hold 435,729 out of 1,181,414 shares. Kentan holds 1,468,912 out of 1,625,000 5s. shares in Saragura, which in turn holds 200,000 out of Geita Gold's 780,002 10s. shares, of which Kentan holds the rest. Both Tanganyika Central and Tanganyika Diamond and Gold are South African companies. To date, the sisal plantations of Tanganyika have brought shareholders a larger dividend return than the mines, but fluctuations in profits have proved severe.

Former German New Guinea is still largely undeveloped, and its only interest for British investors is through its gold production. In 1936-37, gold accounted for three-fifths of exports and copra for most of the rest. This industry, however, is unique, for it has been made possible only by air freight transport. That part of the island formerly in German hands is now under Australian mandate, and the little development that has taken place is due mainly to Australian initiative. The only Australian share quoted in London is New Guinea Goldfields, whose gold sales amounted to £303,302 gross in 1936-37. Even the important Bulolo Gold Dredging is not a British company but a Canadian concern which acquired its concession through, and was formed by, Placer Development, a British Columbian company which exploits alluvial gold in various countries. And Placer Development acquired its rights from the chief pioneer company, Guinea Gold N.L. Bulolo, which owns its own aeroplanes (worked by Guinea Airways, Ltd., by a management agreement), won bullion to the value of \$4,731,000 gross in 1937-38, and is one of the few companies in our table which has paid regular dividends since production got into its stride. The company has a straight capitalisation of 5,000,000 \$1 shares. Placer Development's chief asset consists of 306,278 of Bulolo shares, which were valued at \$9,476,000 in April, 1938, though a small part of this interest has since been sold. The British company, Oroville Dredging, with a capital of £250,000 in 4s. shares, also holds 73,843 Bulolo shares, valued at £134,556.

From this survey, it should be evident that the investment scope of the ex-German colonial problem is quite limited. Colonies are not, on its showing, automatically remunerative assets—indeed, the appanage of Empire is more frequently a liability. But so long as they continue to be more valuable to those nations which lack them than to those which own them, so long must the investor be prepared for vigorous demands and flaming headlines. They may be an economic figment; but they are certainly a disturbing political symbol.

A Coming Dearth of Bills?

REPEATED attention has been called in *The Economist* to the key position occupied in the British monetary system by the bill of exchange—and with each year that passes the Treasury bill increasingly becomes the dominant element in the total supply of bills available for the Money Market. The outlook for the market in the next few months is sufficient warrant for returning once more to the subject.

A glance back over the current financial year shows that between March 31st and December 17th the total floating debt increased by £184 millions, but tender issues of Treasury bills—from which the market draws its supply—decreased by £12 millions. The explanation, of course, lies in the Exchange Equalisation Account's heavy gold sales, which have led the Account to add considerably to its holding of Treasury bills issued through the tap. By December 17th the tender issue had shrunk to £500 millions, and there has since been a further drop to £493 millions. Furthermore, the period of heavy revenue collection is now at hand, during which there is normally a substantial redemption of the floating debt. For these reasons there is a danger lest by March 31st the discount market will be seriously short of Treasury bills. It is the purpose of this article to examine the extent of this danger.

The Economist of October 15th contained a chart showing the approximate division of tender issues of Treasury bills between the market syndicate and other holders. (Bills issued to "outside" holders do not generally come on to the market.) This chart showed that on October 1st £152 millions of the tender Treasury bills then outstanding had originally been allotted to the syndicate and £369 millions to outside holders. The basic calculation behind this chart, namely, that the syndicate applies for £30 millions of bills each week, makes it possible to calculate the syndicate's payments and maturities week by week from October 1st onwards; for the percentage allotment to the syndicate is regularly published.

These calculations yield the following results:—

TENDER ISSUES OF TREASURY BILLS			
	(£ millions)	Dec. 17	Dec. 24
Held by—	Oct. 1		
Syndicate	151.8	170.7	159.0
Others	369.2	329.3	334.0
Total	521.0	500.0	493.0

The first point of interest is that the reduction in the total tender issue between October 1st and December 24th was confined to those bills held by "others." The market syndicate, in fact, has increased its holding, even though it has lost ground during December itself—a time, incidentally, when it is not anxious to take up bills. This shows that during the recent outflow of funds the Exchange Equalisation Account proved an extremely successful cushion. In effect it took over the bills realised by foreign bankers who were withdrawing their funds from London, with the result that the past quarter's switch-over from tender to tap Treasury bills has not so far affected the supply of bills available for the discount market.

Nevertheless, the market's holding of Treasury bills ought normally to have increased during the past quarter, and in any case it is due to contract during the ensuing quarter. The next step in the calculation is to estimate the possible magnitude of that impending contraction. To do this it is necessary to regard revenue and expenditure prospects for the rest of the financial year. On December 17th the deficit for the financial year to date was £242 millions. If, for the sake of argument, the year closes in three months' time with a final deficit of £20 millions, then the intervening period will witness a revenue surplus of £222 millions. Simultaneously, only £10 millions of the £115 millions of defence expenditure to be financed by loan have yet been issued from the Exchequer. This leaves a further £105 millions due to come by March 31st, but

quite likely only £90 millions of this will be used. Add a further £8 millions, representing miscellaneous capital repayments by the Exchequer (this figure is deduced from previous years' experience), and there emerges the following very tentative calculation:—

Dec. 17, 1938–March 31, 1939
(£ millions)

Revenue surplus, say	222
Defence expenditure financed by loan, say.....	90
Net revenue surplus.....	132
Deduct net capital repayments	8
Balance, applied to reduction of floating debt.....	124

The suggestion, therefore, is that by March 31st the floating debt will have been reduced by £124 millions.

The next step is to look at the present and future composition of the floating debt. In arriving at the estimates for March 31st it has been assumed, *faute de mieux*, that Ways and Means Advances, tap issues of Treasury bills and "outside" holdings of Treasury bills all remain unchanged (these assumptions have been broadly correct in the first quarters of the last two calendar years). The table also ignores any disturbances that may affect the composition of the floating debt on the last day of the financial year. This table follows at the head of page 664.

On the confessedly questionable assumption that the whole brunt of the impending seasonal reduction in the floating debt will fall upon the market and the banks, these calculations lead to the conclusion that by March 31st these holders will be left with only £47 millions of Treasury bills. Admittedly, this is probably too bad to be true, and in any case many of these figures must be re-

garded as purely illustrative. Still, there appears no doubt that by March 31st the discount market will be seriously short of Treasury bills.

It is not easy to see a remedy. No one would suggest that the Government should increase expenditure or delay the collection of taxation simply to help the money market out of a difficulty. Theoretically, if notice were given at once, the £100 millions of 1 per cent. Treasury bonds could be redeemed just before the end of March, but as these are a "money market" security, the cure would be worse than the disease. The trouble is that during recent years the money market has been partly living upon Treasury bills

Finance and Banking

In Aid of Sterling.—Two semi-official measures taken in recent weeks in order to help the resistance to the pressure against sterling have come to light in the last few days. The first is a request made to the clearing banks through the usual channels to discourage, as far as possible, the raising of credit against the security of gold. The complete ban against loans secured by gold was raised in May of this year. It was followed by a fairly substantial gold re-hoarding movement, which found considerable support in the facilities freely offered by the clearing banks. In addition, the readiness to advance clearing bank money against gold provided the main pillar on which the forward gold market in London was built up in the latter part of this year. As part of the recent speculative and hedging pressure against sterling has taken the form of spot purchases of gold financed by London banks, or of forward purchases of the metal, the authorities have evidently seen fit to restrict to a certain extent the working of this particular machinery. The request is of special importance at the moment, in view of the maturity of fairly heavy forward purchases of gold effected during the final week of September, when the pressure against sterling was at its height. As a result of the restriction of facilities available to finance this gold, a good deal of the metal in question is being resold spot as contracts mature. These re-sales have been an important factor in the gold market during the past week.

* * *

The second of these measures is the request which was also made to the clearing banks to abstain from operating on their own account in the forward dollar market. The premium on forward dollars has recently risen to a figure equivalent to an interest-rate of 2½ per cent. per annum, and London banks have naturally been attracted by this return into keeping part of their liquid funds in New York—however meagre the immediate direct yield on the dollar assets. Any extension of such "swap" operations by London banks, however, would have the two-fold effect of adversely influencing credit conditions in the London market and of making it cheaper for speculators against sterling to back their views by buying dollars forward. Hence the request which has been made to the clearing banks by the authorities.

* * *

Forward Business in Bills.—Of greater significance than the unusually sharp and prolonged seasonal rise in money and bill rates this year-end has been the rising

issued to finance the Exchange Equalisation Account's gold holdings. These halcyon days for the moment have come to an end, and the only alleviation is that the disappearance of foreign money from London, which is the cause of the Account's recent gold losses, has also reduced the total demand for Treasury bills. It is clear, however, that this is only a partial alleviation. It equally appears that either the money market will have to grin and bear it or else the Government will have to find some new way of increasing the supply of Treasury bills.

There is, however, one final point of more general importance. If the banking system is starved of Treasury bills, it will either suffer in liquidity or else have to contract its investments and advances. There is no need to labour this point at the end of this analysis, especially as it is well known that the banks measure their liquidity by their discounts and call and short loans as well as by their cash. Still, the point is of some cogency, if the regime of cheap and plentiful credit is to be maintained. For these reasons neither the authorities nor the public, any more than the discount market, can view next spring's prospects entirely with equanimity. This analysis, in fact, is a warning of an impending development, for which it is not easy to see a remedy.

tendency in the last few days of the rates at which forward business in discounts is arranged. Such forward business may be ranged into two classes. First, there is the short-term business which only occurs around the year- or half year-end. Recently that business has taken the form of selling the March bill—which the market has been tendering for, and has not been able to sell spot to the banks—for delivery in the first days of the New Year. Until last week such forward business was being done at ½ or ⅞ per cent. These rates implied the unquestioning belief of the market that once the seasonal pressure was over the bill rate would revert to the irreducible minimum which obtained during the greater part of the past year. This week, however, this mood has changed and forward business in the March bill has not been feasible at under ¾ per cent. The second type of forward business is of the long-term type engineered so largely by the Eastern banks. This is a business which is going on regularly throughout the year. These banks know that their acceptances to Eastern trade bills will be leaving their London offices in a fairly regular rhythm, and as far as possible they try to arrange the discount of these bills three or even six months in advance. Business in such three months' bank acceptances for delivery six months ahead could have been arranged a week or so ago at ¾ to ⅞ per cent. This week it could not have been done at a better rate than ¾ to ⅞ per cent. As portents of a fundamental change in the money rate structure, these higher forward rates may be charged with significance.

* * *

Dr Schacht's Proposals.—Although statements in Berlin and London took pains to emphasise that Dr Schacht's visit to Mr Montagu Norman in London was purely personal, it is understood that he submitted last week to Mr Rublee, the head of the Inter-Governmental Committee for the Jewish refugees, an official offer from his Government indicating the terms on which the German Government was prepared to transfer part of the property of the Jewish emigrants. According to the proposal, an international loan would be issued, secured by the Jewish property in Germany, which would be pooled. The service of the loan would be met out of the proceeds of additional exports which the Governments concerned with the fate of Jewish refugees would agree to take. These Governments would also have to guarantee the loan in order to make it marketable. Dr Schacht is believed to have suggested a

IMPORTANT ANNOUNCEMENT TO INVESTORS

*New Issue at Increased Yield by
London's 85 Years old Building Society*

Following a highly successful year's business, the Directors of the Temperance Permanent Building Society take pleasure in announcing that on and from January 1st, 1939, a new issue of Fully Paid Shares of £25 each will be made, bearing interest at the increased rate of—

3½% **INCOME
TAX PAID**
equivalent to
£4. 16. 6
per cent where
Income Tax is pay-
able at 5/6 in the £

With the Three Prudent Essentials of
ABSOLUTE SECURITY
FREEDOM FROM FLUCTUATION
WITHDRAWALS AT SHORT NOTICE

In financial strength, the Temperance Permanent Building Society believes itself to occupy the premier position among Building Societies throughout the country. Reserves now represent nearly 19% of the combined share and deposit capital and are greatly in excess of those of any large Building Society with Assets of £2,000,000 or over. An application form and full particulars will be sent on receipt of the coupon below.

first that something like 70 or 75 per cent. of the proceeds of the additional exports should be allocated to Germany and only the balance to the service of the loan. Since some of the Governments were inclined to reject this proposal out of hand, however, it was subsequently modified to the extent that Germany's share would only correspond to the value of the imported raw material contained in the manufactures representing the additional exports. Even so, the scheme has the great disadvantage of amounting to an undertaking on the part of the guarantor Governments to maintain their purchases of German goods at an increased level for the whole period of the loan. A decline of their imports below the agreed level would entail a reduction or suspension of the service of the loan, which would then become a charge on the Budgets of the guarantor countries. It is feared that under such an arrangement Germany might relax her efforts to push her exports, and the guarantor Governments would have to go out of their way to encourage German imports in order to avoid having to pay up under their guarantee.

* * *

A New Standstill Grievance.—In addition to numerous grievances of old standing, Standstill creditors are now burdened with a new one. This arises from the disappearance of some of the Standstill debtors through

their absorption by other German banks, when the Standstill debt of the absorbed firm is added to that of the absorbing bank. In some cases, such changes are disliked by Standstill creditors. Although there is a widespread belief that, owing to the high degree of Government control in Germany, all debtors are equally good or equally bad, this is not the view taken by British bankers abroad. The risk of insolvency by any individual debtor, as distinct from the insolvency of Germany as a whole, is a real one, and it is only natural that foreign banking creditors are not keen to put too many eggs in one basket—even though they may be frozen eggs. There is, however, no remedy under the existing agreement. If the Standstill creditors were too insistent, the result would be that the Standstill liabilities of the disappearing firms would simply be transferred to a rump organisation retained mainly for that purpose under the name of the original firm. If the choice lies between this solution and the increase of the Standstill liabilities of the absorbing banks, then the latter solution seems to be distinctly preferable. In all fairness, however, Standstill creditors should be given the option of the repayment of the liabilities of the disappearing firms, even if such repayment could only assume the form of payment into registered mark accounts. This would not necessarily entail increased selling of registered marks, since many creditors would retain their holdings with the Gold Discount Bank.

MONEY MARKET NOTES

The Bank Return

THERE has been a further expansion in the note circulation to £503.0 millions, but this week's figure represents the Christmas peak. Actually the circulation is £6.3 millions less than last year's peak, but during the intervening year more than £6.3 millions of notes must have been dishoarded. This means that this Christmas's active note circulation is greater than it was a year ago.

As a result of the Christmas currency withdrawals, the Reserve has dropped to £53.4 millions. This week's decrease has only been partially neutralised by fresh acquisitions of Government securities, but disbursements have reduced public deposits by £3.1 millions. There has therefore been only a small reduction in bankers' deposits, which are also the same as they were last Christmas.

The Money Market

THERE was a strong demand for money this week, and on Monday the clearing banks had only just enough to go round. Loans were renewed this week by the clearing banks at their normal rates, but new money was charged for at $\frac{1}{4}$ per cent. for loans against bills and $\frac{1}{4}$ per cent. for loans against bonds. Bond-money from outside lenders has been a firm $\frac{1}{4}$ per cent. Conditions were a little easier on

Thursday, and one or two of the banks were ready to lend at $\frac{1}{4}$ per cent. against bills, but others were still charging $\frac{1}{2}$ per cent. There has been a keen demand for January money at $\frac{1}{4}$ per cent., but the clearing banks are not lending, and so there is not as much as the market wants.

Others	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{7}{8}$
Discount Rates:			
Treasury bills	11 $\frac{1}{8}$	7 $\frac{1}{8}$	15 $\frac{1}{8}$ -1
Three months' bank bills	23 $\frac{3}{4}$ -34	15 $\frac{1}{8}$	15 $\frac{1}{8}$ -1

* Viz. $\frac{1}{2}$ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{3}{4}$ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The reasons for this shortage of money are, first, the Christmas currency withdrawals, which have not been fully neutralised by the authorities; and, second, the fact that the market held few mid-December maturities. This last is the consequence of the special buying at the time of the crisis. On Wednesday some relief was given by the special buying of early January Treasury bills at $\frac{1}{4}$ per cent. and late Januaries at one per cent. Market discount rates are firm at $\frac{1}{4}$ —1 per cent. for all three months' bills.

The Bullion Market

BUSINESS was very limited during most of the week. On Wednesday there was an arbitrage demand, combined with some purchases stimulated by the reaction to the Chancellor's statement on foreign lending. This was met largely by Continental re-selling, and the Control only had to meet about one-fifth of the day's demand. Otherwise the Control has had to find very little gold, as

a small demand from arbitrageurs and the Continent has been met out of Continental re-selling—partly arising from the maturity of previous forward purchases.

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.

The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market is having a quiet close for the year. There is still some uncertainty as to Washington's policy of silver prices for the New Year, but there are relatively few open positions. Up to December 17th, when the last boat sailed to reach New York before the end of the year, there was some arbitrage buying and bear covering, balanced by Indian selling. This week there has been no arbitrage, as the silver would arrive in the New Year, by which time the American price may have been changed. There was, however, a special order from America, which probably represents silver required for coinage. This absorbed the Indian silver on offer, and also kept the price above the American parity.

Foreign Exchanges

THE market has been very idle, with practically no business in belgas, guilders or Swiss francs. These rates have followed the dollar, Thursday's

Investment

Foreign Issues Embargo Reimposed.—The offer of 2,200,000 shares in F. W. Woolworth at the beginning of November involved a transfer of £6,084,250 to the United States at a time when sterling was weakening appreciably. This offer is the outstanding example of a type of transaction specifically covered in last February's relaxation of control over foreign lending. Greater latitude was also given at that time for issues involving British or Empire funds for acquiring assets or developing enterprise in foreign countries. These relaxations were justified by the Chancellor of the Exchequer by the prevailing position of the exchanges. By contrast, their withdrawal obviously arises from the persistent loss of gold to the United States. From the investment aspect, the withdrawal of relaxations is probably more important than the continuation of the other features of control which have never been officially relaxed—including, in particular, issues by foreign governments. Yet apart from such large transactions as the Woolworth offer, it may be doubtful if the strain on the pound arising from security dealings permitted last February exercises a determining influence on the exchanges. Total subscriptions for issues whose proceeds were destined for foreign countries amounted to only £2,820,000 this year, compared with £6,343,000 for 1937. Contrasted with the capital transfers of the autumn, such sums are insignificant. But if stricter control is called for (and many observers expected it some weeks ago) it is well to have it explicitly stated from the Treasury bench. In fact, it involves no change whatever in the machinery of the Foreign Transactions Advisory Committee, to whom all projects have been referred, even since February. Indeed, the general ban has remained operative ever since 1931, for the F.T.A.C. has undertaken the detailed work of supervision only since 1936. The technique of control has evidently come to stay, but whether it should be perpetuated in its present informal shape is another matter.

* * *

Unit Trusts and the Ban.—The recovery in Wall Street during last summer was accompanied by several unit trust formations offering the British investor an interest in American securities. Three trusts of this type have made their units available to the public, while the recent offer of Supervised Shares Incorporated also falls within the Treasury's purview. Indeed, the offer for sale showed that London and Boston Securities (the selling agents) have given an undertaking to the Treasury to discontinue the sale of the shares at any time on the request of the Commissioners. It is understood that the unit trusts specialising in American securities have been permitted, in the first place, to sell up to 500,000 units, and so far no request appears to have been made that they should discontinue business before this limit is reached. The terms of the Chancellor's statement on Tuesday, however, are such that few managers would care to advertise an investment in American securities in flat contrast to the wish of the authorities.

quotations being Bel.27.66 $\frac{1}{2}$, Fl.8.58 $\frac{1}{2}$ and Frs. 20.66 $\frac{1}{2}$. The dollar has also been an idle market, but sterling fell to \$4.65 $\frac{1}{2}$ on Wednesday, as the result of the announcement of the tightening-up of the restrictions on foreign lending. On Thursday sterling rose to \$4.66 $\frac{1}{2}$. The main trend this week has been the continued liquidation of maturing forward positions in dollars, which were opened during the crisis three months ago. This liquidation is partly due to a desire to hold sterling over the end of the year, but it is reported that steps have been taken to discourage new for-

ward purchases of dollars, on the ground that the open position in dollars has lately been too large. With spot dollars coming on the market, buyers have been holding back in the hope of a better rate, and the Control has been buying quietly up to an amount which may have totalled \$100 millions during the past fortnight. The real question is whether a new demand for spot dollars will arise after the end of the year. The existing premium of 2 $\frac{1}{2}$ cents on three months' dollars offers a tempting profit, while the need for making-up at the end of the year will have passed. On

British-American Tobacco.—For the six years from 1931 to 1936 British-American Tobacco paid regular 20 per cent. tax-free dividends, in each case slightly exceeded by disclosed earnings. For the year to September 30, 1937, a $\frac{1}{4}$ per cent. tax-free bonus was added to the usual payment, but for 1937-38 the market had regarded this bonus as being at least in doubt. These doubts have been confirmed, for the distribution is reduced to the former level; but the accounts, as usual, provide scant guidance to the company's fortunes last year. Disclosed net profits and dividends have been reduced from £5,760,480 to £5,590,886—a movement which emphasises the reduced prosperity of many overseas markets and the upheaval in the important Chinese trade. Perhaps the omission of any provision for benevolent fund (which received transfers in such favourable years as 1929, 1936 and 1937) reflects the directors' views of the year's trade. The profits of recent years are analysed in the following table and chart:—

	Years ended September 30		
	1936	1937	1938
	£	£	£
Profit	5,541,756	5,760,450	5,590,886

BRITISH-AMERICAN TOBACCO PROFITS—1929-38

the other hand, free sterling balances are mostly held by those who will not be anxious to do anything to the detriment of sterling. French francs were bid all the week, as the result of the continued repatriation of French funds, and the French Control was a steady buyer of sterling. There was no sign of any attempt to convert this sterling into dollars. On Wednesday the spot Paris rate was allowed to drop to Frs. 177.10, but it has since come up to Frs. 177.20. One month's francs have been at par to a very slight premium, with three months' francs at Fr. $\frac{1}{4}$ discount.

The balance sheet provides the usual exhibition of financial strength, though, with nearly £37 millions out of £50 millions total assets in subsidiaries, "Bats" has to be judged by its dividend record rather than its reported results. Apart from a rise in stocks from £3,811,959 to £4,389,102 and a corresponding fall in cash, there is no significant change to record in the balance sheet. At the current price of 93s. 9d. "Bats" ordinary yield £5 17s. 9d. gross per cent. The advantage of 10s. per cent. gross in the yield, compared with Imperial Tobacco, is a fair compensation for the predominant export interests of British-American Tobacco.

Fairey Aviation Progress.—Although the increased dividend and profits of Fairey Aviation have provided a signal for profit-taking, the results are in every way satisfactory. Net profits, struck after providing for the service of the 5 per cent. notes, have jumped from £248,678 to £395,708. The taxation reserve provision shows a proportionate jump from £85,500 to £135,000—it may, in fact, cover a hidden reserve, for in the past three years the amount provided has regularly exceeded one-third of disclosed net profits. The following table shows that ordinary earnings have advanced from £162,678 to £260,125, covering the 15 per cent. tax-free ordinary dividend with the generous margin of more than 10 per cent. :—

	Years to September 30th		
	1936	1937	1938
Trading profits and divs., after 5 per cent. Note service	55,196	248,678	395,708

† Free of tax.

* Includes £5,480 profit on sale of investments.

In an expanding balance sheet the increase in stocks and work in progress, less advances against contracts, is outstanding. The net total has increased from £351,398 to £571,181. Debtors have similarly increased from £240,727 to £374,444, and, despite the substantial increase in the taxation provision, the creditors' item shows an advance of no more than £21,000 to £437,843. A significant change has occurred in the subsidiary companies' financing, for the amounts due to the parent company, including dividends receivable, have been reduced by approximately one-third from £947,011 to £651,539. This may well be due to the progress of the Stockport company. Now that the aircraft industry has established firm financial relations with the Government, the current high level of output should ensure satisfactory returns for the leading producers in the next year or two. A gross yield of £7 12s. per cent. on Fairey Aviation 10s. shares at 27s. 3d. may be regarded as reasonable.

United Molasses Outlook.—Tanker replacement policy occupied an important section of Mr F. K. Kielberg's speech at the United Molasses meeting on Decem-

ber 16th. Three tanker steamers are to be replaced by three new motor vessels, specially designed for the molasses trade, at a total cost of about £600,000. This sum, however, will be comfortably met from the company's own resources without help from additional finance. The decision to order new tonnage at a time when many tankers are lying idle is an act of long-sighted faith, for by the time when the tankers are ready for service two years ahead, the board hopes to see trading conditions improved. The sale of Macfie and Sons' business at Liverpool to Tate and Lyle last year was also connected with the question of replacement. For economical working, United Molasses would have been called upon to reconstruct and relocate the plant at a cost which could not be justified for a business so recently acquired. In view of this week's interest in Parliament in power alcohol, and fears that the use of molasses for this purpose might be killed by legislation, Mr Kielberg's references were particularly interesting. He explained that since the 9d. duty had been imposed, the company had followed the policy of selling molasses at a very narrow profit margin in order to encourage the use of power alcohol. And while the chairman is not of opinion that the Government would be likely to jeopardise the use of power alcohol, he emphasised that, if the worst should happen, the company's earnings would be little affected. Shareholders will note that trading during the current year has been reasonably hopeful. October and November showed a 20 per cent. increase in deliveries, compared with the same months in 1937, and except for two vessels under repair, the whole of the company's fleet is in commission.

Seager Evans.—Our comments on the Seager Evans report last week were tempered by the hope that the chairman would provide a comprehensive explanation of defects in the accounts. On no major issue, however, did he satisfy this expectation on Wednesday. The omission of the consolidated accounts was extenuated by the old argument that competitors might discern valuable trading information from the figures. This argument is in any case inadequate; but also it is not an obvious paraphrase of the statement in the report that "owing to the more widespread interests which have been acquired, the accounts are presented in somewhat different form." Last week, shareholders were promised a full explanation why the negotiations which had been in progress since October were postponed. They learned that "one of the strongest groups in the industry" had approached the company, that a darker European outlook intervened, but that both sides were still in "close touch." The chairman, however, appealed to stockholders not to press at this juncture for detailed information. On the subject of the development account, Sir Allan Horne declared that it was neither possible nor practicable to tell "to what major extent" the company's business has improved since 1934 (when the Development Account was first created). The number of active customers has apparently doubled in the period, but in the absence of any indication of turnover such statistics are not of great use. Similarly, the goodwill of the parent company may stand in the books at £1, but that gives no indication of the book value of the group's goodwill, which stood at £42,183 at July, 1937, after deducting a capital reserve of £45,246. Despite the failure of the recent negotiations (whose success would have strengthened the financial position), the present cash stringency is to be relieved by a funding operation to replace bank indebtedness, though this will not involve a public issue. On the report and speech, stockholders can only regard the present position as unsatisfactory.

Bowater's Paper Prospects.—Mr Eric Bowater's review at the Bowater's Paper meeting on Thursday concluded on a moderately hopeful note. The past two years have been a period of considerable trial for the group, confronting it at first with high raw material prices and lat-

year by falling newsprint consumption (which actually compelled considerable short-time working). The group still has high price raw materials contracts to complete, as we suggested last week, but raw material prices are falling. Prices for ground wood and sulphite pulp reached a peak of 82s. 6d. and £16 5s. per ton respectively in the middle of 1937, but the quotations for next year's delivery are no higher than 52s. 6d. and £8. In this connection, the acquisition of control of the Corner Brook mills and the Gander River timber limits may be regarded as a species of insurance policy, protecting the group against an undue advance in raw material prices. Mr Bowater did not examine the earnings prospects of the group in the near future, though he declared that the directors looked to the future with greater confidence than had been possible twelve months ago. From the end of March newsprint prices will be reduced 5s. per ton to £11 5s.—a reduction which should be offset by lower costs. But the resumption of ordinary dividends belongs, at the earliest, to 1939-40, and will require higher newsprint consumption.

Anthracite Scheme Withdrawn.—The decision of the board of Amalgamated Anthracite to withdraw the reorganisation scheme (which was criticised in these columns on December 3rd) does credit to their discretion and fairness of mind. Following as it does the rejection of the Fine Cotton Spinners' scheme (which we criticised on the same ground as being insufficiently drastic), the abandonment of the Amalgamated Anthracite proposals suggests two principles for observance in framing capital schemes. In the first place, to write down assets to a valuation basis is not sufficient unless the residual capital is brought within reasonable sight of dividends. And, secondly, directors should give some indication, wherever possible, of the probable course of future profits, so that the relevance of their proposals may be tested. Preference shareholders' rights, it is too often forgotten, are rights in perpetuity. Unless there is a reasonable chance that the shareholder's participation in future profits will be comparable with the rights he sacrifices, inequity will result. The fact that two such important schemes have not become effective is a welcome object-lesson of the force of reasoned criticism in our financial democracy.

Malayan Tin Prospects.—From the profits aspect, Malaya's tin quota does much to offset its direct benefit—higher prices. This point emerges clearly from Mr C. V. Stephens' addresses to Malayan Tin and Southern Malayan shareholders, in which he examined the effects of the international restriction scheme. Malaya, of course, presents a special problem as a low cost producer, but Mr Stephens was emphatic that the restriction scheme had done the industry generally the greatest service. The standard tonnage allotted to Malaya when the scheme started in 1931, in Mr Stephens' opinion, did "scant justice" to her productive capacity, though the rise in the standard from 71,940 to 77,335 tons as from July 1, 1938, had done something to remedy the position. Dissatisfaction had been caused in Malaya by the fixing of the domestic quota at only 25 per cent. of capacity (apart from production for the buffer stock), as against a rate of 35 per cent. fixed by the Restriction Committee. But this, in Mr Stephens' view, arose from internal causes—in particular from allotting excessive assessments when the scheme started, and from the number of assessment tonnages granted since. On the other hand, the sale of quotas, with its danger of abuses, came in for strong criticism. Profits of representative tin companies were as good in 1931-37 as in the pre-restriction period, 1924-30; hence, substantial profits were obtained in this period with a minimum output, and resources were conserved. Mr Stephens is also a supporter of the buffer stock scheme, as he explained to Southern Malayan tin shareholders. It is evident, indeed, that he is satisfied with the effectiveness of control. But the investor who requires more generous earnings and dividends must await an expansion in demand, whose absence, at the

moment, is attested by the necessity for building up a buffer stock.

The Week's Company Profits.—The number of companies publishing results this week is seasonably small, and our analysis of profit and loss accounts on page 692 covers only 20 reports (excluding one company for which comparable figures are not available). British American Tobacco profits, however, swell the total to £6,493,000, representing a fall of 2½ per cent. compared with profits of £6,651,000 earned by these companies a year earlier. Aggregate net profits of 2,381 companies reporting this year amount to £301,033,000, against £280,450,000, an increase of 7½ per cent. The results are discussed in preceding Notes and on page 671 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue reports of company meetings begin on page 680. At the Mexican Railway Company meeting, Mr Vincent W. Yorke remarked that only pressure on the Government by the National Railways of Mexico would provide a favourable solution of the company's problems. Reviewing the year's working of *Carreras, Ltd.*, Mr Edward S. Baron reported that home sales had expanded in all parts of the country, and that export sales had also increased. Mr F. K. Kielberg's address at the *United Molasses* meeting is discussed in a Note on page 668. At the *Ind Coope and Allsopp* meeting, Colonel the Right Hon. Sir G. L. Courthorpe explained the reasons for increasing the company's capital. Public-house improvement had cost money, and it was thought advisable to replenish the company's funds. At the *Stoll Theatres Corporation* meeting, Sir Oswald Stoll discussed the effect on the values of certain properties produced by the lack of facilities for insurance against war risks. Members of the *Industrial Credit Company* were informed by Mr J. P. Colbert that the company had under consideration the underwriting of a substantial amount of new issues. At the *Scottish Australian Company* meeting, Mr J. C. Inglis explained that the large increase in the clip had not been enough to counteract the fall in world prices of wool. Discussing the liquid position of *Booker Brothers, McConnell and Company*, Sir Alfred P. Sherlock showed that the main subsidiary had investments of over £250,000, in addition to £232,000 lent to the parent company. At the *Ariston Gold Mines* meeting, Mr Francis Allen described the nature of the capital expenditure which was to be met by the new share issue. Viscount Elibank reported to *London and Rhodesian Mining and Land Company* stockholders that the farming and ranching interests had shown improved results. Mr C. V. Stephens' comments on the tin restriction scheme at the *Malayan Tin Dredging* and the *Southern Malayan Tin Dredging* meetings are discussed in a Note on this page. At the *Killinghall Tin* meeting, Mr W. Arthur Addinsell emphasised that the year's adversities cast no reflection upon the potential value of their properties or upon the operations of the dredge. Mr Eric V. Bowater's comments at the *Bowater's Paper Mills* meeting are discussed in a Note on page 668. At the *Aerated Bread Company* meeting, Viscount Greenwood explained that the obsolescence reserve had now been used for the purpose for which it was created, and future profits would not be subject to any further charge. Addressing *Mitchell Cotts* members, Mr Alexander Hamilton expressed satisfaction with the results of the Fraser and Chalmers (S.A.) acquisition. *Anglo-Ecuadorian Oilfields* shareholders were informed by Mr. H. C. R. Williamson that the shallow drilling area had continued to develop on satisfactory lines.

SETTLING DAYS

TICKET ACCOUNT
JANUARY 10 JANUARY 12

THE new Account which opened on Monday is technically the first of 1939, for settlement is not until January 12th. Business naturally opened quietly and as the week progressed the diversions of Christmas, coupled with postal delays, reduced the level of turnover to a minimum. *Gilt-edged stocks* opened easier, and fears of a stringent year-end in the Money Market, coupled with the weakness of sterling and small amount of cash selling, led to a further fall in prices which continued on Wednesday morning. An appreciable recovery, however, was recorded in the afternoon, and War Loan gained $\frac{1}{2}$ on the day. The improvement, however, was not fully held on Thursday. In the Dominion market, the new Australian scrip weakened further from 3 discount to 4 discount.

*

The return of the Czech Financial Mission was followed by a fall of six points in Czech 8 per cent. Loan on Monday and further losses were recorded later in the week. French railway bonds made excellent progress, but German issues tended to lose ground on the trade outlook. Chinese bonds became firmer on the British and American credits, but Japanese issues remained dull.

A fair demand for *home railway* prior Tuesday, however, the business was reduced to a minimum and small losses resulted from a complete lack of investment interest. The market received the poor traffics calmly and, although the senior preference issues were affected, debenture stocks were maintained and the guaranteed group showed quite small declines. A further setback was reported in London Transport "C" stock.

*

The Argentine rail market remained active and the debentures received good support on the favourable crop prospects. Although buying in mid-week was not important, the tone remained firm and some prices advanced further. Idle conditions in the *industrial shares market* were naturally intensified

this week. Steel shares provided almost the only special feature towards mid-week, on Sir John Anderson's announcement of a £20 millions steel shelters programme, which produced gains for Guest Keen, Dorman Long, and Colvilles. Thornycroft reacted slightly after their long climb. Coal shares hardened a little after early neglect. Amalgamated Anthracite preference and ordinary gave way on Tuesday, though the preference issue recovered on the news that the capital plan had been dropped. Engineering and electrical equipment shares were irregular. In the motor section, there was some support on Monday for the "heavies," but other movements were mixed. After a small reaction, Leyland became firm in mid-week in anticipation of the preliminary results. Business in aircraft shares was quiet, but prices remained steady. Imperial Airways went ahead, but encountered some profit-taking in mid-week. Textile and rayon shares continued neglected. Breweries were steady early in the week, though many shed a few pence on Wednesday from absence of support. Tobacco shares were dull and undecided. In the provision and catering group, Manbré and Garton and Lovell and Christmas were firm. Miscellaneous shares were easier for choice, especially in the building material section, but Associated Portland Cement made a useful advance on Thursday. Shipping shares were quiet, but firm.

*

Business in *oil shares* was again negligible, and inquiry was confined to the leaders. Though firm at first, prices sagged from neglect in mid-week. The tone of the rubber share market remains heavy, and the few price changes were downward.

*

The turnover was reduced in *mining shares*. Kaffir prices were firm at the opening, but succumbed to holiday conditions in mid-week and lost ground. Neither Paris nor the Cape was a decisive influence, but both centres were sellers when they dealt at all. Initial interest in "Palms" and Western Holdings was not maintained throughout the week. Rhodesian coppers did not maintain their early firmness. Base metal shares were again neglected, but for some revival of interest in wolfram issues.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 151 industrial ordinary share prices stood on Tuesday, December 20, 1938, at 61.1, compared with 61.3 a week ago and 63.8 a month ago. The corresponding average yields are 6.15, 6.13 and 5.87 per cent. A selection of the component indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Price 1938 High

New York

INDUSTRIAL stocks held steady for the two opening days this week, but on Wednesday the Dow industrial average again descended below the resistance level of 150 which it had broken through only a week earlier. Turnover fluctuated around the million mark, but stocks moved within narrow ranges. The reduction in steel mill activity from 57.6 per cent. to 51.7 per cent. of capacity according to the Iron and Steel Institute came as a discouragement to the market, though it was attributable to end-year influences. Steel shares and aircraft issues were among the firm features at the beginning of the week. On Tuesday the market failed to maintain its firmest prices. Rails improved temporarily in response to the "Square Deal" legislative suggestions of the "Informal Committee" but became more hesitant later. In mid-week, stocks again opened with firm appearance, only to lose it in the later dealings. Rails were encouraged by optimistic market talk, though there was no real buying force at work.

Capital Issues

ONLY one new issue has competed with normal Christmas attractions this week. This consists of the $5\frac{1}{2}$ per cent. £1 preference shares (issued at par) and 2s. ordinary shares (issued at 2s. 6d.) of *Thomas Hardman and Sons*. The company manufactures machinery cloths, used in paper making and the laundry and printing trades. The offer is remarkable for the disclosure of the company's profits for a period of no less than fifteen years, in which period earning power has been maintained at a very satisfactory level. On the latest profits, the preference dividend cover is satisfactory, and the earnings for the ordinary shares amount to 17 $\frac{1}{2}$ per cent. on the issue price.

BY OFFER FOR SALE

Thomas Hardman and Sons.—Offer for sale of 100,000 $5\frac{1}{2}$ per cent. cumulative £1 preference shares at par and 125,000 2s. ordinary shares at 2s. 6d. Makers of woollen, etc., machinery cloths. Profits, after depreciation: 1935-36, £27,589; 1936-37, £31,666; 1937-38, £29,138. Net assets £288,971, bought for 100,000 preference and 1,000,000 ordinary shares, of which this offer part. Whitehead Industrial Trust take issue for £100,000 and expenses or preference at par and ordinary at 2s. 4d. net. Lists closed 9.1 a.m. December 20. Oversubscribed.

ISSUE TO SHAREHOLDERS ONLY

Amalgamated Banket Areas.—Issue of 1,400,000 5s. shares at 7s., in the proportion of one new share for five shares held.

BONUS SHARES

Ashanti Goldfields Corporation, Ltd.—A capital bonus is to be issued to all shareholders on registers on January 31, 1939, in proportion of one new share for every five held.

RESULT OF ISSUE

Australian Four per Cent. Loan.—Underwriters of the £2,517,800 4 per cent. conversion stock, 1955-70, had to take up 60 per cent.

SHORTER COMMENTS

Company Results of the Week.—Despite the reduction in tariffs, gross revenue of **ADELAIDE ELECTRIC SUPPLY COMPANY** rose by 2.3 per cent. to £986,618 in 1937-38, but owing to higher expenses net profits are £30,000 lower at £365,592. The general slackening in business activity has affected the hotel and catering trades. **FREDERICK HOTELS** trading profits amount to £111,083 against £142,561, and out of net profits of £23,583, only a half-year's preference arrears are being paid. A 12 per cent. drop in net profits, from £49,532 to £43,409 has also been experienced by **R. E. JONES, LTD.** One of the few companies this week to record higher profits is **BRITISH VACUUM CLEANER & ENGINEERING** whose earnings amount to £81,818 against £73,587. An issue of ordinary shares is to be made to provide for further development. A loss has again been made by **HUNZIKER (GREAT BRITAIN)**, although it is appreciably smaller than in 1936-37; after depreciation, the net loss is £17,479 against £30,151. In view of the low rubber quota prevailing in the past year, it is satisfactory that **NAMØ TONGAN RUBBER** ESTATES net profits of £30,008 are only £5,000 lower than in 1936-37.

MISCELLANEOUS

Temperance Permanent Building Society.—This Society is making (as from January 1, 1939) a new issue of fully-paid £25 shares, bearing interest at the increased rate of 3 $\frac{1}{2}$ per cent. tax paid (equal to £4 16s. 6d. where tax at 5s. 6d. is borne). It is announced also that reserves now represent nearly 19 per cent. of combined share and deposit capital, and that Mr. A. W. Betts, F.C.I.S., joint manager and secretary, has been appointed sole general manager as from January 1, 1939. Building societies' interest rates were discussed on page 611 of *The Economist* of December 17, 1938.

Standard Life Assurance Company.—Each year for the last twelve years the company has declared a 42s. per cent. annual compound reversionary bonus. In 1938 this yielded for the year to many of the older members over 80s. per cent. on the original sum assured.

Cable and Wireless Traffic Index.—The traffic index for November, 1938 (on basis of 1929 = 100) was 68.0, against 68.7 for October, 1938, and 72.5 for November, 1937.

Imperial Chemical Industries.—It is understood that an important internal development will take effect by Imperial Chemical Industries from the beginning of 1939. Five persons, already in the company's service—Messrs W. A. Akers, F. W. Bain, W. F. Lutyens, A. J. Quig and F. Walker—will become executive managers. Though they will not have formal status as members of the management board, they will attend the board's meetings.

British Vacuum Cleaner.—Net profit year to September 30, 1938, £77,513 (£77,282). To reserve for tax and N.D.C., £10,000 (£7,736). Ordinary dividend, 40 per cent., as before. To development reserve, £10,000 (nil). To staff pension fund, £2,500 (nil). In 1936-37, £25,000 was put to reserve. Carry-forward raised from £8,450 to £13,717.

Cannon Iron Foundries.—Trading profit year to September 30, 1938, £32,962, a fall of £29,186. No ordinary dividend, against 10 per cent. To general reserve, nil (£5,000). To tax reserve, nil (£2,500). Carry-forward reduced from £10,988 to £7,943.

Apex Trinidad Oilfields.—Preliminary statement for year to September 30, 1938, shows oil profits, £482,875 (£489,714). Amortisation of wells, £158,604 (£138,754). Net profit, £237,377, a decline of £32,497. Ordinary dividend reduced from 45 to 40 per cent. Carry-forward raised from £118,556 to £128,371. The report and accounts will be issued January 3, 1939.

(Continued on page 692)

INVESTORS' INCOME & RESERVE TRUST

The new unit trust with the unique reserve plan

Against a common portfolio of no less than 175 first-class preference and ordinary shares, two types of sub-units are presented, on one of which 2/5ths of the income arising is held to reserve. You apportion your investment to suit your needs and you can change from one type of sub-unit to the other.

Sub-units may be purchased at approximately 20/9 and sums from approximately £50 can be invested.

Apply for the booklet D34, obtainable free from your stock

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in C.N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis.
 (h) Yield on 4½% basis. → Based on payment of 2½%.
 Yield worked on a 5½% basis. (i) To redemption price in year shown. (o) Yield worked at 8% of face value.
 ↑ Free of Income Tax. (y) Yield based on 47% of coupon. (z) Yield on 5½% basis.

* Bid and offered prices are free of Commission and Stamp Duty. (a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield on 20% basis.
(m) Including bonus of 5% free of tax. (p) Annas per share. Latest annual dividend equal to about 6.945% tax free. (e) 8½% paid free of income tax.
+ Free of Income Tax. (r) Yield worked on 6% basis. (f) Allowing for rate of exchange.

Industry and Trade

New Anglo-French Coal Agreement.—The coal-mining industry has now been informed of the new arrangements, under the trade agreement of June, 1934, for the purchase of British coal by French consumers, which will come into operation at the beginning of 1939. The difficulties which have arisen over the imports of British coal were discussed on page 622 of last week's *Economist*. There has been no material change in the French quota system, but the French Government has agreed that French railways and gas and electricity undertakings, hitherto excluded from the quota, shall also purchase 49.5 per cent. of their foreign requirements from Great Britain. Another important modification is the undertaking that licences to import coal into France shall not be issued in excess of the current demand. In the past the issue of excess licences has enabled French importers to cover their requirements from other countries than Great Britain. It is believed that this practice was mainly responsible for the fact that in the first nine months of 1938 British licences for approximately 700,000 tons were unused. It has also been agreed that transfers of foreign purchases from the country designated on the licence to other countries shall be limited in future to amounts not exceeding 3 per cent. (instead of 80 per cent.) of the total. The terms of the coal-pitwood exchange agreement have also been amended; coal import licences issued under this arrangement will not in future be valid for more than eight months, and the accumulated arrears of France's intake, amounting to about 450,000 tons of South Wales coal, are to be liquidated by amounts not exceeding 120,000 tons in any one quarter.

THE FINANCIAL NEWS IN 1939

New and Essential Services to Investors

Next week's issue of *The Economist* will contain an important advertisement by *The Financial News* announcing several new features designed to interest the Investor and the Business Man, which will be appearing in its columns in

1939

The concessions made by the French Government should increase Britain's coal exports to France by more than 1½ million tons per annum, on the basis of the quota percentages operative during the past twelve months. On the other side, the British Government and coal-owners have agreed to two new and important provisions. First, a Joint Consultative Committee is to be appointed which will deal with complaints by French importers of unreasonable prices. Its investigations are to have regard to the relation between the prices quoted by British collieries in France and other export markets. Secondly, the French Government has been given the right (after consultation) to terminate the agreement (a) if British imports of iron ore from French sources fall by more than 5 per cent. below those in 1938 and (b) if the European coal markets are regulated by an international coal cartel or by an agreement between Britain and Germany concerning quantities and prices of coal exports.

* * *

A Cotton Enabling Bill.—Last Tuesday, Mr Oliver Stanley, President of the Board of Trade, informed the House of Commons that the Joint Committee of Cotton Trade Organisations had submitted to him a revised draft of its proposals. The new draft does not differ materially from the previous one, discussed on page 559 in *The Economist* of December 10th, which, in order to obtain a greater measure of agreement within the industry, had been shorn of many provisions embodied in the original scheme. In their somewhat emasculated form, the proposals now provide only for two types of scheme, one for the elimination or reduction of redundant plant and the other for the establishment of minimum prices or margins. The provisions for pool and quota schemes and for the legalisation of wage agreements had already been eliminated. The latest draft is also *minus* the provision for "scrap and build" schemes. The various organisations represented on the Joint Committee have been asked to express their views on the revised proposals not later than January 14th. Moreover, the Executive of the Joint Committee was authorised to ascertain also the opinion of individual firms. Mr Oliver Stanley expressed the hope that it would be possible to complete the drafting of the Bill early in the New Year so that those concerned might have an opportunity of expressing their views. Meanwhile, the improvement in the cotton trade, noticeable in October and early November, has not been maintained, and the volume of new orders has again fallen to small dimensions. Although many members of the cotton trade believe that an Enabling Act would assist the industry, they do not expect that it will bring back prosperity and are consequently urging that the Government should assist the industry to increase its exports.

* * *

Cotton Yarn Price Agreements.—The proposals of the Enabling Bill lend interest to a review of the existing price agreements in the spinning section of the industry. The first move was made in August, 1934, when spinners of coarse American counts, known as the Royton branch, comprising about 30 mills with 3,000,000 spindles, decided to put into operation minimum prices for yarn. On the whole, this scheme has been well maintained, although two weeks ago it was found necessary to reduce the margin by ¼d. to ½d. per lb. The new prices, however, are still remunerative to producers. In December, 1936, a price agreement was brought into operation for the 42's American weft range of yarns, the number of mills and spindles

involved being 60 and 4,500,000 respectively. A few weeks ago, when this scheme was due for renewal, four firms resigned, and there were fears that the agreement would break down; it now appears to have been renewed to the end of March with some slight modifications. In October, 1937, spinners of 56's American weft range of counts followed suit by concluding a price agreement comprising fifteen mills and 850,000 spindles. In November, 1937, the position of one of the most difficult sections was tackled and an agreement was reached for medium American ring yarns among the owners of 75 mills containing 4,500,000 spindles. But, owing to dissensions among members, this agreement had to be abandoned last September, and its termination was followed by severe price-cutting. In order to obtain orders, some spinners in this section reduced their prices by 2d.-2½d. per lb. In the Egyptian spinning branch of the industry a price agreement between producers of mule yarns came into operation in March, 1937. Initially this agreement was made for six months, but it was subsequently renewed for twelve months to September, 1939. This section comprises 150 mills, with about 13,500,000 spindles. Negotiations are now taking place for an agreement among Egyptian ring spinners, there being 70 mills containing about 2,000,000 spindles in this section. At present there are in Lancashire about 20,000,000 spindles producing yarns made from American type cotton, and about 8,500,000 spindles are covered by price agreements. In the Egyptian branch there are about 15,500,000 spindles, including 13,500,000 mule spindles and 2,000,000 ring spindles. The owners of about 11,000,000 mule spindles are selling under a price agreement, but there is no price agreement for ring spindles. On the whole, therefore, some 55 per cent. of the yarn spun in Lancashire is now sold under price agreements.

* * *

International Steel Cartel.—The Committee of Comptoirs of the International Steel Cartel have held several meetings in Brussels at which a number of questions mainly connected with the organisation of export markets were discussed. The plan to alter the sterling-gold conversion rate, on which prices are based, has been abandoned owing to the recovery of the pound. The prices of Continental steel materials for the British market, which were reduced only a few weeks ago, will have to be cut again for the first quarter of 1939, as a result of the reduction in British domestic prices. In order to further the collaboration with producers outside the Cartel it is contemplated to send delegations to British India and Australia with a view to discussing the competition of foreign materials with domestic products. The improvement of the arrangements with American producers was again on the agenda, and it was reported that American competition has diminished. Further discussions concerned a convention with the Scandinavian steel merchants on the regulation of sales to these markets; changes of the exports quotas for Great Britain and Czecho-Slovakia; measures against unauthorised exports by French exporters; the allocation of special quotas to the Belgian re-rollers, and a corresponding increase in the total export quotas of the Belgian group. Price questions were not extensively discussed as incoming orders are satisfactory for this season and because no appreciable increase of purchases is expected from a reduction of prices.

* * *

Sheep and the Government.—In the House of Commons on Tuesday Mr Morrison announced the Government's remedy for the slump in English sheep prices. He proposes to authorise the Empire Beef Council, set up in April, 1937, to regulate the imports of beef, to regulate also, from January next, imports of mutton and lamb. Mr Morrison apparently believes with the National Farmers' Union that increased imports are the

main cause of the fall in sheep prices, though, on the facts set out in the table below, it is difficult to see a rational

U.K. IMPORTS OF MUTTON AND LAMB				
Imports into U.K. (Jan.-Nov.)	1937	1938	1938 as % of 1937	
Mutton	'000 cwt. 1,416	1,479	+ 4.4	
Lamb	'000 cwt. 4,809	4,761	- 1.0

basis for this view. Further, as was pointed out in *The Economist* of November 12th, the prices of imported mutton and lamb have hardly fallen in the past year; the slump has been confined to home-grown meat. In the eighteen months of its existence, the Empire Beef Council, which is composed of representatives of the British Government and of the countries mainly concerned in the British beef market, seems to have taken a wise view of its responsibilities to the British consumer. It is to be hoped therefore that the Council will not allow itself to be pushed into a drastic control of mutton and lamb imports, which would directly raise the prices of imported meat and only indirectly, and to a much smaller degree, raise those of British sheep. The truth is that sheep farming, like pig keeping, suffers from a recurring cycle of boom and depression; after the unprofitable years of 1932-34, two years of rising prices and slowly increasing numbers, culminating in the very profitable season of 1937, have brought their own reaction, which is likely to be continued into 1939. The census of livestock held in June, 1938, showed an increase compared with 1937 of 10 per cent. in the number of ewes kept for breeding, so that another large crop of lambs is now expected.

LIVERPOOL

The port of the North—with easy access to the Midlands—just over three hours from London—and everything necessary to the smooth running of modern industry.

Labour, warehousing, power, transport (by ship, rail, road, air or canal) all 'laid on'—in planned factory estates.

Build your factory in the ideal spot—Liverpool Corporation have sites available and can help to finance the cost of land and buildings

for industry

Manufacturers and Industrialists are invited to write for illustrated brochure "INDUSTRIAL LIVERPOOL" which will be sent on request. Application should be made to the Town Clerk, Corporation of Liverpool, Municipal Buildings, Liverpool 2

Land Fertility Committee.—The provisions of the Agriculture Act, 1937, for increasing the use by farmers of lime and basic slag, met with general approval, as measures likely to increase the efficiency of producers. The Land Fertility Committee, which was set up to administer the Government subsidy, recently issued its first report, covering the ten months from August, 1937, when the provisions came into force, until May, 1938. During this period, some 140,000 occupiers of agricultural land in the United Kingdom applied for a subsidy in respect of 1.4 million tons of lime and 409,000 tons of basic slag, and received a trifle over £1 million in subsidy. Compared with the total acreage under crops and grass in England and Wales, one in every 2½ acres benefited in these ten months from a ton of lime and one in 70 acres from a ton of basic slag. The distribution of lime has proceeded efficiently; the number of suppliers is large, new sources of supply have been tapped, and the maximum prices laid down by the Committee (and revised upward in April to meet increased wage costs) have given satisfaction. Trouble has been experienced with the supplies of basic slag, the output of which is largely dependent on the activity in the iron and steel industry. There has been very considerable delay in many cases between the approval of an application and the actual delivery of the slag, with the result that the fertiliser has had to be applied at the wrong time of the year. The maximum prices for basic slag for the year June, 1938-May, 1939, were reduced by order of the Ministry of Agriculture by amounts ranging from 8d. to 2s. 6d. per ton from the level ruling in the first period; it is hoped that these reductions will stimulate the demand from farmers. It would also be a great advantage if the Committee were empowered to give grants in aid of field drainage, an operation which is needed on probably as many acres as lime and slag.

Increase in Egg Supplies.—During the whole of the current year British imports of eggs in shell have been at a higher level than in 1937, the excess in the eleven months January to November amounting to 2.8 million great hundreds, or 12.5 per cent. of the 1937 imports. Prices, however, were well maintained in spite of these larger supplies, until a few weeks ago; the very mild weather during the autumn months stimulated the British output (which accounted in 1937 for about 60 per cent. of total supplies) at a time when production is usually at a seasonal minimum. Consequently, wholesale prices are now considerably below the levels ruling last year, as is shown in the table below, which is taken from *The Weekly Dairy*

WHOLESALE PRICES OF EGGS IN LONDON (s. per gt. hundred)

† Average of three quotations.

Produce Notes. The sudden change in the weather, however, is likely to reduce supplies in a few days and prices may again improve.

Wholesale Prices Steadier.—The past fortnight has witnessed a slight strengthening of British wholesale prices. The complete *Economist* index has risen by 0.4 per cent. and the primary products index by 0.3 per cent. For the United States, *The Economist* primary products index has fallen by 0.1 per cent., while the complete Irving-Fisher index is unchanged. French wholesale prices are also unaltered.

Grain and meat prices are firmer than a fortnight ago, but in the other food group a rise in tea was offset by declines in coffee, cocoa and cheese. Cotton yarn and cloth prices are lower, but there were slight increases in flax and jute. In the minerals group copper and spelter were higher. Among miscellaneous materials there were declines in Swedish timber, hides and tallow, but some improvement in linseed oil and rubber.

British coal industry that France was not taking her share of British coal guaranteed by the trade agreement of 1934.

Coal

Sheffield.—On the eve of the holiday the market has been quiet, and demand generally has been slow. The cold snap brought a slightly improved demand for house coal, but requirements have been smaller than usual at this time of the year. There has been little

business in industrial steam coal, and the coke trade has been exceptionally slow. Blastfurnace coke prices will automatically fall in the New Year under the sliding-scale agreement regulating furnace coke prices with those of pig iron. Coke makers are not inclined to reduce prices of other sorts.

★

Newcastle-on-Tyne.—The severe weather has brought a keener demand in the inland and domestic coal trade of the North-East coast, but there is no additional inquiry from abroad. Northumberland steam collieries continue to work fairly regularly, screened grades being firm, but there is still difficulty in the disposal of smalls. Durham manufacturing coal is offered fairly freely, whilst gas qualities have a steady demand in the home market. Shipments of patent oven coke to the Scandinavian countries are good but there is no greater activity in the home market.

★

Glasgow.—There has been no marked change in conditions in the Scottish trade. Generally, new buying is very restricted, both in the home market and for export, and the only feature has been some activity on end-year account in Fife, where supplies are now well booked for the remainder of the year. In all other districts there is still a surplus of supplies, but prices remain steady under the control arrangements. Business still remains disappointing.

★

Cardiff.—The severe frost has led to a partial interruption of work both at the docks and at the collieries, and this has further accentuated the depressed condition of the market. Shipments in the foreign and coastwise trades at the South Wales docks last week totalled only 331,800 tons, compared with 456,489 tons in the corresponding week last year, and notwithstanding the approach of the holidays no substantial improvement is anticipated in this week's loadings. There is very little current inquiry, but although discussions are proceeding between the colliery owners and shipowners over f.o.b. bunker and depot prices for 1939, a fair number of long-period contracts have been renewed. The market in sized coals, especially in the smaller grades, is firm, but the market is not absorbing other grades, and stocks have increased. Satisfaction is expressed with the terms of the new Anglo-French Trade Agreement, but it is qualified by the fear that the general import quota may be further reduced, unless there is a substantial increase in French coal consumption early in the New Year.

Iron and Steel

London.—The British iron and steel markets are closing the year in more cheerful circumstances than might have been expected even a few weeks ago, says the official report of the London Iron and Steel Exchange. The reduction in prices to domestic consumers which was followed by a corresponding drop in export quotations for Empire markets has created a favourable impression amongst buyers. There has been no great increase in the actual volume of business as yet, but this is not surprising in view of the approach

of the holidays. A noticeable expansion in inquiry has taken place, however, for delivery in 1939 and it seems likely that the demand for most descriptions of steel will improve in the New Year.

In the pig iron market the reduction of 10s. per ton in the price of foundry and forge iron has stimulated buyers' interest.

Business in semi-finished steel has broadened and most producers have a fair amount of work in hand. Consumers, who have been buying from hand to mouth for a long period, are now showing more inclination to place forward contracts.

In the finished steel section of the market indications point to a considerable improvement in the demand after the holidays. Inquiry is active, and consumers are taking more interest in forward delivery.

No further market reports will be issued by the *London Iron and Steel Exchange* as it has been decided to wind up the organisation at the end of this year. For some time it has been apparent that owing to the changes in trading consequent upon the reorganisation of the iron and steel industry, the Exchange could no longer fulfil many of the functions for the performance of which it was established.

★

Middlesbrough.—Business has tapered off with the approach of the holidays. There is, however, an optimistic feeling and confidence that there will be increased activity early in the New Year.

The announcement regarding the reduction in the price of forge and foundry pig iron was made early this week, the reduction being 10s. per ton from January 1st; the duration of the new price has not been specified. The price of No. 3 Cleveland foundry pig iron from January 1st will be 99s. per ton delivered in this area. East Coast hematite will cost 120s. 6d. per ton for No. 1 quality delivered in the North-East area. Although foundries in this district are closing down for the holidays, it is not expected that this will lead to substantial accumulation of pig iron at the makers' yards. One furnace has been transferred from basic iron to hematite and two blast furnaces which have been idle for some months will be restarted early in the New Year on foundry and basic iron respectively.

Producers of semi-finished steel are expecting increased demands as the stocks which had accumulated during the early part of the summer at consumers' works have now been liquidated. Manufacturers of finished iron and steel are hoping for substantial orders as a result of the recent reductions in prices. Most of the works and rolling mills are closing down for holidays for three or four days.

There is no change in the foreign iron ore position, buyers being well covered, but the increase in the number of blast furnaces in operation will lead to an increase in the consumption of blast furnace coke. Deliveries of heavy steel scrap from now until the end of the year will be severely restricted, partly on account of the holidays and partly because of the lower prices which will come into force on January 1, 1939.

★

Glasgow.—Since the announcement of the cut in prices more interest

has been shown in the markets, and producers are hopeful that the early part of the year will see plants very fully employed. The only weak spot is the consumption of shipbuilding material. Bar re-rollers and sheet makers are not very busy, but buyers are, of course, holding back all but urgent demands until the reduced prices become operative. Tube makers remain busy and present indications point to a fairly long spell of steady work for the Lanarkshire tube plants. Holidays which commence next week will be of normal duration. Only where repairs and alterations to be carried out are on a big scale will plants be closed down for a longer period.

★

Sheffield.—On the eve of the holiday there is stagnation in the iron and steel market, and until the opening of the New Year the effect of the cut in iron and steel prices cannot be estimated with any degree of accuracy.

A little forward business in hematite iron has been arranged, and for special qualities the demand is moderately steady. There is little business in bar iron pending an announcement concerning prices.

There has been limited buying of basic steel billets, but elsewhere conditions have been quiet. So far as can be ascertained the prices of fine steels in which Sheffield has a big business will remain unchanged.

Most of the works here will close down until Wednesday next week, but at some establishments the holiday may be rather longer to permit of overhaul and repair to plant which has been running continuously for some time.

★

Cardiff.—Although the price of steel bars has been cut, an announcement has not yet been made concerning the f.o.b. and inland prices of tinplates in 1939. This delay appears to have hampered business in tinplates. The local manufacturers have held meetings to consider the matter, but they have not yet reached a decision. Current sales, partly out of stock, have not contracted appreciably, but production has continued to decline, and in the week ended December 10th equalled only 37.70 per cent. of capacity, compared with 70.65 per cent. during the corresponding period last year. Shipments at the Swansea docks last week were smaller than for any other normal week during the year, and for the fifty weeks ended December 15th the decrease in the volume of the export trade was 40 per cent. The position in the other re-rolling branches of the iron and steel industry, as well as in those of pig iron and steel ingot manufacture, is relatively much better.

Textiles

Wool (Bradford).—Manufacturing conditions continue to be only moderately satisfactory, and much machinery is still standing idle. Lean margins are the outstanding feature of this year's operations, and profits are non-existent. In the struggle to keep combs, spindles and looms running, prices have been cut to the bone, and the business done is so unremunerative that balance sheets

(Continued on page 686)

INDUSTRIAL REPORTS

The sudden onset of "Christmas weather" has found the country as unprepared as for the international crisis in September. There has been a run on articles rendering the cold less unbearable; on the other hand, the building and other trades involving outdoor work, as well as traffic, have been seriously hampered by the cold weather. The volume of new business has declined with the approach of the holidays. Apart from a spurt in the demand for house coal, the coal trade has been

dull. Consumers of iron and steel have not yet shown much response to the reduction in prices, though purchases are expected to increase next year. The Government's proposed provision of air raid shelters involving an expenditure of £20 millions and purchases of steel amounting to some 1½ million tons, will assist the iron and steel industry. Similarly, the new arrangements made between the British and French Mines Departments, discussed on page 674, have largely met the complaints of the

COMPANY MEETINGS

STOLL THEATRES CORPORATION,
LIMITED

CONDITIONS IN ENTERTAINMENT INDUSTRY

SERIOUS EFFECTS OF TAXATION

SIR OSWALD STOLL'S VIEWS

The tenth ordinary general meeting of the Stoll Theatres Corporation, Limited, was held, on the 21st instant, at the London Coliseum, St. Martin's Lane, London, W.C.

Sir Oswald Stoll (chairman and managing director) presided.

The Secretary (Mr Roland J. Bentley, F.C.C.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Ladies and gentlemen,—I rise to move the adoption of the report and accounts, which I assume may be taken as read.

Comparing the items of the balance sheet with those of the previous balance sheet: On the share capital and liabilities side—the ordinary share capital is the same. The management share capital is the same. Loans secured by sub-mortgage of mortgages, and interest thereon—the liability is down by £3,016. Bank overdraft is up by £1,200. Bills payable are up by £641. Creditors are up by £522. Subsidiary companies are up by £6,524. As to the profit and loss account, the credit balance is better than last year by nearly £5,000.

On the assets side: Investments in and advances to subsidiary companies are down by £152,780. Lease of Tyne Theatre and interest in Liverpool site are up by £14,964. Sundry stocks on hand are down by £55. Debtors are up by £57. Cash at bank and in hand is down by £408. As to the item of £148,937; this is a new item relating to the realisation of the Alhambra. This company held the bulk of the shares in the Alhambra Company. In the realisation this company received £1 6s. 6d. for each £1 share which it held. But as the Alhambra Company shares were originally taken over by this company at a higher price in paper than £1 6s. 6d. there is this difference of £148,937, which we look to being made up as times improve.

Without allowing for such sum of £148,000 odd being so made up, the statement of assets and liabilities of the group appearing on page 3 of the directors' report shows a surplus of assets of £1,457,875 against the share capital of £1,531,486 held by the shareholders, excluding the shares held by our own subsidiary companies. This represents about 19s. per share for the shareholders.

PROPERTY AND WAR RISKS

The certificate of values has been left as last year. Messrs Douglas Young and Company were of the opinion that the position throughout the country, and especially the disturbed state of the property market, made the times so abnormal that another year should elapse for settled conditions to materialise.

In our judgment it would not be right to calculate values of properties which cannot be insured against war risks. As is pointed out by the directors in their report to the shareholders, the declared policy of the board is for the properties in which it is interested to be realised.

The Government has been approached on the question of insurance against war risks. The Federation of British Industries, the City of London Court of Common Council, local authorities, and many business organisations have been urging the Government to carry out a national scheme of insurance against war risks.

In this connection I do not think that I can do better than quote what the chairman of a large property company said only last week in addressing a meeting of shareholders. He said that he regretted the absence of any facilities for insuring property against damage done by war and that the problem was not unsolvable, and that while individual insurance companies might not feel justified in accepting so formidable an unknown risk, it should be simple for them to do so in conjunction with the Government, the insurance companies bearing a percentage of the risk and the Government the remainder, with the premium divided in an equitable manner.

VALUES OF PROPERTIES PREJUDICED

The confidence of investors has been shaken for a considerable time owing to the disturbed international situation. This, together with the fact that no insurance against war risks is possible at present, has prejudiced the values of properties owned by the sub-

sidary companies and this company. It is expected that a national scheme of insurance against war risks will be formulated shortly which will no doubt help the property market considerably. These factors have also affected unfavourably the attendances at the theatres.

It is of course well known that the broadcast for A.R.P. Volunteers last March was extremely good, but on the other hand it was bad for business. The B.B.C., it is said, is about to submit a private report to the Government. In such report a demand will be made for a refund of the £1,100,000 which the Treasury deducted from radio licence revenue this year. It will also be suggested that as the Treasury has benefited to the extent of £12 millions from radio licences during the lifetime of the B.B.C., and does nothing in return for it, a Treasury grant of £2,000,000 should be made to meet B.B.C. development.

There is a decline in the profits of the B.B.C., no doubt due to its shortage of cash by reason of the increase in the number of licences not being maintained and the fall in the profits of its publications, falling income, and rising expenses. The B.B.C. is also to demand payment from State funds for certain State services rendered by the B.B.C.

LARGE AMOUNT PAID TO GOVERNMENT

This is almost like a statement of the case against Entertainments Duty which we ourselves could justly make. Our company and its subsidiaries have paid in Entertainments Duty more than £3,000,000, and the Government has done nothing for it. Of this sum at least £1,000,000 ought really to be refunded, if only because it is Entertainments Duty on the living stage which should never have been imposed, even if the duty could be justified against the cinema.

As to the other companies than ours, it is not for me to discuss the affairs of particular companies, but I should regard with doubt all stories of great success in theatres and cinemas, because the theatres where the artistes appear in person at every performance remain subject to Entertainments Duty.

I am surprised when I am told that others choose to pay dividends in spite of the duty and notwithstanding fierce competition subsidised by banks, on the guarantees of insurance companies, and notwithstanding higher rates and other adverse circumstances. When I inquire, I learn that things are said to be booming (though as a matter of fact they are not booming at all), but that the capital situation is difficult. The shares of some companies rise like rockets: then the whole situation is changed.

One company claiming great things has, I find, written down its capital by about one and a-half million pounds, but it never says anything about that. Under Entertainments Duty no entertainment can get satisfactory results. This amounts to a substantial slice out of the life of all entertainments.

The question of dividends is naturally of interest to all shareholders, including yourselves. So far as the board is personally concerned, this, of course, is of great interest, because we have a great stake in this company and naturally feel acutely the lack of dividends. The entertainment business such as we carry on is, under normal circumstances, a most paying one, and extremely good dividends are yielded by that class of business. I must mention two of the abnormal circumstances which militate against this company and also against other companies and concerns in the same line of business as ourselves.

These abnormal circumstances are foreign politics combined with the general international problems and also the Entertainments Duty which affects so grievously all entertainment enterprises.

PRUDENT FINANCIAL POLICY

You will see that the credit balance in the profit and loss account is to be carried forward, and the board think it only prudent to do this. At the same time, I am personally of opinion that the Entertainments Duty will be abandoned by the Government so far, at any rate, as it concerns the living stage.

My view in regard to the effects of foreign politics and the general international problems is clearly that, threatening though at times the outlook seems, there are strong hopes for believing that this particular cloud will disappear, and, of course, if it does, the country would be in for a long period of prosperous trade, and naturally the amusement industry would be the first to benefit.

This is quite apart from the obvious benefit which would at once accrue to this company on the abandonment of the Entertainments Duty.

But, of course, the main policy of the board is to ensure, as soon as possible, the carrying out of its policy, which is to realise the properties owned by the subsidiary companies and this company.

I beg formally to move: "That the directors' report and balance sheet at September 30, 1938, and profit and loss account for the

year ending that date be approved and adopted, and that the balance of £114,485 18s. 11d. at credit of profit and loss account be carried forward to the current year's accounts."

Mr Douglas McCraith seconded the resolution.

The chairman, having replied to questions by shareholders, put the resolution to the meeting, and it was carried by a large majority.

The retiring directors were re-elected and the auditors were reappointed.

MEXICAN RAILWAY COMPANY,
LIMITED

RELATION OF RECEIPTS TO LABOUR COSTS

The one hundred and forty-seventh ordinary general meeting of this company was held, on the 21st instant, in London.

Mr Vincent W. Yorke, who presided, in the course of his address, said: There has been no change for the better in our affairs since our meeting in June last and the very gloomy anticipations which I held out to you then have been fully realised. There have been few developments in the last six months either in political or commercial circles, and our own situation has continued steadily to deteriorate.

As regards the half-year under review, both passenger and express receipts show increases amounting together to some P53,000, and national goods traffic an increase of P39,000, but foreign traffic, which is the best paying traffic which we carry, is down by no less than P298,000. Working expenses, however, in spite of the volume of traffic being slightly decreased, show an increase of P345,000, or 4.5 per cent. We show a truly deplorable result of a loss of P75,000 for the half-year.

As regards the current half-year, gross receipts show the serious decrease of P651,000 at the end of October and P703,000 at the end of November.

The question is constantly present in our minds as to how long we can keep the business alive in the face of continuous losses. We can resort, of course, to the usual expedients adopted by companies who get into low water; neglect the upkeep of the property and get such extensions of credit as we can from our suppliers. But it is difficult to neglect such a property as we operate without allowing it to fall into a dangerous state.

The only favourable solution of the problem that I can imagine, and it certainly is not in sight to-day, is that pressure may be brought to bear on the Government by the National Railways of Mexico. These railways were expropriated by the Government last year and handed over to a syndicate of employees last January. Their management is suffering from exactly the same troubles as we are, and it is difficult to see how this large system is to be worked with any degree of efficiency under present conditions. There would seem to be two remedies open to the Government, to apply either an increase in rates or a cut in wages. Any measure in either of these directions would necessarily have to be applied to our railway also, and might offer some relief from our present disabilities. Unless, however, some action of this sort is taken by the Government every railway in the country must fall not only into financial but physical bankruptcy in the not remote future. So far the property has been maintained in quite fair order.

As regards general conditions the situation is still dominated by the oil question, which seems to be no nearer a settlement than it was six months ago. The output of oil, which is of immense importance to the Government as a source of revenue, has seriously diminished, and they are finding great difficulty, it is understood, in disposing of such oil as is not needed for internal consumption. Exchange, which stood six months ago at 3.95 to the United States dollar (after having been pegged at 3.60 for three years or more), has now fallen to nearly 5 to the dollar. This fall in exchange hits our business very hard. It appears to me impossible to-day to find any point on the Mexican horizon from which to derive any comfort.

Our debenture holders approved last month of an extension of the existing scheme of arrangement for a moratorium for a further three years.

The report was unanimously adopted.

EST. 1795
V.S.O.P.
LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

UNITED MOLASSES COMPANY,
LIMITED

STRONG FINANCIAL POSITION

FAVOURABLE PROSPECTS

The thirteenth annual general meeting of the United Molasses Company, Limited, was held, on the 16th instant, in London.

Mr F. K. Kielberg (chairman and managing director), in the course of his speech, said:—The first point I shall deal with is the sale to Messrs Tate and Lyle, Limited, of Macfie and Sons' refinery, Liverpool. Owing to the age of the plant and the unfavourable location, it had become increasingly difficult to operate Macfie's refinery economically, and we recognised, even at the time of our purchase of the controlling interest in that company, that it would be unavoidable at an early date to scrap the plant and build a modern refinery in a more suitable location. This would have involved a large capital expenditure and the transfer of the business to another port. Such a transfer would have meant a serious loss to Liverpool, and would have caused great hardship to many business interests directly or indirectly connected with the activities of the company. To have incurred so large a capital expenditure so soon after our acquiring the controlling interest in Macfie's might furthermore have made it very difficult for your company to make adequate provision for compensation and pensions to the old employees of Macfie's. The sale to Messrs Tate and Lyle, Limited, greatly helped to solve this grave problem. Their refining capacity in Liverpool was sufficient to absorb the Macfie business without any capital outlay on new plant, and made it possible to include in the purchase price a sum sufficient to make suitable provision for old employees.

NEW TANKERS ORDERED

In consequence of the sale of the motor vessel "Athelchief" and the need of replacing within the next few years the company's two tank steamers "Athelmer" and "Athelstane," of 8,300 tons deadweight capacity each, we have recently invited tenders for three motor tank vessels—two of 10,500 tons deadweight capacity each, and one of 12,500 tons deadweight. The total cost of these three vessels will be approximately £600,000. No question of additional finance arises, as the company's resources are obviously ample to meet this capital expenditure, which will be spread over approximately two years. Although the present position of the tanker market is far from satisfactory, and a large amount of tonnage is lying idle, your directors have sufficient faith in the future development of the company's business to consider it advisable to place the orders for these three tankers now. We feel convinced that the company will need the additional tonnage by the time the vessels can be ready for service in two years' time.

CAPITAL AND ASSETS

Some disappointment has been expressed at our failure to submit to this meeting a recommendation to write up the nominal value of the ordinary shares to at least 10s. in order to bring the issued capital more into line with the capital actually employed in the business. From the ordinary stockholder's point of view it makes, of course, no difference whether the nominal value of the company's shares is 6s. 8d., 10s. or 20s. The actual net value of the assets and the earning power of the company are the facts which are of importance to the stockholder, but I must admit that it frequently proves a handicap to the management of a company to have an issued capital much below the true value of the assets employed in the business. This tends to create an exaggerated idea of the company's prosperity, and to be a cause of embarrassment to the executive in many different ways.

On the other hand, a company with world-wide interests cannot, in questions of financial policy, afford to ignore the disturbed international situation prevailing throughout the world to-day. That is the main reason why your directors have decided for the time being to postpone the consideration of this question. We want to feel satisfied that the world barometer is set fair before even considering so important a step. Some stockholders have expressed the fear that legislation may kill the use of molasses in the production of power alcohol, and the company's earnings in consequence suffer a severe setback. Personally, I see no reason to fear that the Government will adopt measures likely to kill the use of power alcohol in this country, but should this happen, the effect on the company's earnings would be hardly noticeable.

Deliveries during the first two months of the current financial year showed a 20 per cent. increase over deliveries during the corresponding period of last year, and prospects appear reasonably promising.

The report was unanimously adopted.

AERATED BREAD COMPANY, LIMITED

THE NEW BUILDINGS

LORD GREENWOOD'S SPEECH

The eighty-fifth annual general meeting of the Aerated Bread Company, Limited, was held, on December 16th, at Caxton Hall, London.

The Rt. Hon. The Viscount Greenwood (the chairman) said that it was common knowledge that the year covered by the accounts under review that day had been one of difficulty to all engaged in the catering industry. The general recession in trade which had intensified as the European crisis in September approached, and the higher prices for commodities which had had to be paid, had taken toll of profits throughout the trade. This company had borne its share of the common burden. In addition, and in particular to this company, the year under review had been one of transition. Their old bakeries and factory had disappeared. In their place and on their site now stood one of the most modern plants in existence.

After explaining the differences in the various items in the balance sheet, he went on to say that the reserve for obsolescence on reconstruction of factory, which last year had amounted to £110,000, had been utilised for the purpose for which it had been created, namely, to write off the total book values of all the buildings demolished and all the plant scrapped or rendered obsolete. Future profits would not be burdened with any further charge in that connection.

The development reserve, £50,000, had been created out of the balance available from their taxation settlement. It would be utilised in providing for the obsolescence which inevitably arose in the reconstruction and modernisation of branches. Such modernisation was a fundamental requirement in the progress of the business. The general reserve at £43,300 remained unaltered.

DIVIDEND OF FIVE PER CENT

The balance from trading account after all expenses amounted to £179,415. Increased prices of foodstuffs only had cost the company nearly £18,000 more in 1938 than in 1937, and increased rates £1,600 more than in the previous year and nearly £13,000 more than three years ago. Dividends from subsidiary companies represented a return of 7½ per cent. net, equal to more than 10 per cent. gross.

That was the ninth year in succession in which a dividend of 5 per cent. had been paid. Over those nine years the net assets of the company had been increased by over £130,000 after the provision out of profits of more than £672,000 for depreciation and obsolescence and the distribution of nearly £700,000 in dividends to shareholders. The total number of ordinary shareholders was over 7,500 and the average holding was slightly over 160 shares each.

A LONG-TERM POLICY

In his address two years ago he had said that they did not limit their vision to the immediate future. They had planned and were pursuing a deliberate long-term policy for the extension, development and the improvement of the whole business. That policy included the reconstruction and modernisation of their branches and the rebuilding and re-equipment of their bakeries and factory. Many of their branches had now been reconstructed and modernised. Many more would be undertaken and completed in the current year and in the future. The past year had seen the peak of their effort in connection with their bakeries and factory. The current year would see the final completion of that portion of their task. They were now in a position to concentrate their efforts on the further improvement of their products, the reduction of their costs and to giving even better value to their public. They did not enter into full possession of their improved manufacturing facilities until next month. The current year could not receive the full benefits ultimately to be derived from their new plant.

THE FUTURE

Shareholders generally expressed a desire to hear something about future prospects. It was seldom wise to take up the rôle of prophet and he could not call to mind in his long experience an occasion or period when the realm of prophecy was less safe than it was to-day. He regretted that there was in some quarters an unjustifiable timidity which seriously affected the trade of the Metropolis and a loud pessimism which might slow down the influx of visitors from the provinces and all parts of the world. Those visitors made for the prosperity of London and were in a large measure potential customers. As far as the board of the company was concerned, they declined to be pessimistic. They were determined to continue their long-term policy of development and, subject to interruption from causes beyond their control, their confidence in the future of the company remained unabated.

The report was unanimously adopted.

BOWATER'S PAPER MILLS, LIMITED

RESULTS REFLECT TRADE RECESSION

The annual general meeting of Bowater's Paper Mills, Limited, was held, on the 22nd instant, at Southern House, Cannon Street, London.

Mr Eric V. Bowater (the chairman of the company) who presided, said that a year ago he had had occasion to refer to the recession in business beginning to make itself apparent, due, he suggested, to the unsettled international situation. The prolongation and intensification of those unsettled conditions had been accompanied by a falling off in trade which had become more pronounced as the International situation deteriorated during the course of the year. It was not to be expected that their industry would escape the far-reaching effects of such a universal recession in trade.

Dealing with the results of the associated companies, the chairman said that the combined trading profits of those companies for the year under review, excluding inter-company dividends, had amounted to £775,000, which, after providing £270,500 for depreciation and £63,000 for debenture interest, had been sufficient to cover the £413,500 required for preference dividends with a margin of £28,000.

ACQUISITION OF CORNER BROOK COMPANY

A year ago he had spoken of negotiations with the Government of Newfoundland and other interested parties in connection with the acquisition in that country of a permanent source of supply of raw materials, of which their requirements aggregated approximately 1,000,000 tons per annum. Those negotiations had envisaged the acquisition of the Cander River timber limits on the east coast of Newfoundland, and the erection of a sulphite pulp mill with the appropriate housing accommodation for employees, and so forth. Early in the present year, however, it had been intimated to the board that the International Paper Company of America was disposed to consider the sale of its holding of the entire common stock of the International Paper and Paper Company of Newfoundland, owning pulp and paper mills at Corner Brook, and extensive timber limits on the west coast of Newfoundland. On examination of that project it had been found that much of what they themselves needed and regarded as necessary could be obtained therefrom both sooner and on a more economical basis.

As shareholders had been informed, negotiations for the acquisition of the common stock of that company were brought to a satisfactory conclusion during the summer.

The Government of Newfoundland had been immediately informed of the change in the company's plans, and negotiations in regard to the Cander River limits had recently been satisfactorily concluded on terms that did not necessitate the erection of a sulphite mill on the east coast of Newfoundland, and the Corner Brook Company had also entered into an agreement for the acquisition of the Cander timber limits from the owners thereof. For the purpose of financing the acquisition of the common stock in the Corner Brook Company, their company had formed Bowater-Lloyd, Newfoundland, Limited, which company had made an issue of £1,250,000 4½ per cent. debenture stock. In connection with the operation a large measure of support had been received from their many stockholders, and they had also been accorded the whole-hearted approval and co-operation of their newspaper customers in this country.

A MAGNIFICENT BUSINESS

Shareholders would have gathered from his remarks that they possessed a magnificent business, resting on wide and firm foundations. As a result of the acquisition of the Corner Brook mills, they were now the largest newsprint manufacturers in the world, with mills equipped with up-to-date plant and machinery, and capable of meeting any fair competition, and they enjoyed the goodwill of the newspaper and publishing industries. The past two years had been undoubtedly the most difficult through which the company and its English associates had ever passed. The fact that during that period they had been able, after providing out of revenue approximately a million and a quarter pounds for maintenance and improvement of plant and machinery and depreciation, to earn sufficient to pay debenture interest and the full dividends on all their preferred capital, must be regarded as some indication of their earning power in normal times.

There were signs pointing to some revival in world trade, and, granted a period of tranquillity and reasonable trading conditions, the directors looked forward to the future with greater confidence than had been possible twelve months ago.

The report was unanimously adopted.

CARRERAS, LIMITED

ANOTHER RECORD PROFIT

The thirty-fifth annual general meeting of Carreras, Limited, was held, on the 19th instant, at Arcadia Works, Hampstead Road, London.

Mr Edward S. Baron (chairman and managing director of the company), who presided, said: Ladies and Gentlemen,—The net profit for the year, after charging all expenses, including the full amount of advertising and making full provision for depreciation on buildings, plant and machinery, is £1,604,634, an increase of £253,038 on the previous record reported last year. The amount brought forward was £1,026,671, making the total sum available £2,631,305.

A contribution to the superannuation fund for the men has been provided for on the usual basis, and your directors propose that a further sum of £20,000 should be allocated to the female staff pension fund, making the fund £45,656. Your directors are confident that the shareholders will be in full agreement with their desire to strengthen this fund from time to time.

ISSUE OF BONUS SHARES

After making provision for income tax and National Defence Contribution, the preference shares dividends and a dividend on all classes of ordinary shares at the same rate as last year, there remains a balance of £1,484,681 to be carried forward. Your directors have given very careful consideration as to how this balance should be dealt with, and have come to the conclusion that a further step should be taken towards adjusting the capital of the company so that it may be more commensurate with the magnitude of your business. They therefore recommend that £1,240,100 be capitalised, which will permit of bonus shares being distributed in the proportion of four "B" ordinary shares for each ordinary and/or "A" ordinary share and one "B" ordinary share for every two "B" ordinary shares held by shareholders on January 4, 1939.

This is our thirty-fifth annual meeting and it finds your company in an even stronger financial position than at any period in its history!

It may not be inappropriate to repeat words used by the late Mr Bernhard Baron ten years ago at the twenty-fifth annual meeting, when he said: "I think you will agree that as shareholders we are fully justified in being proud of our record and in giving and receiving congratulations on the results of twenty-five years of successful work." The successes of those earlier years have been continued through a further decade, and prove, I hope, that we have not only availed ourselves of the lessons taught by past experience, but have endeavoured to adapt our policy to the requirements of modern conditions.

In the industry to which we belong there has been and continues to be strong but healthy competition. The results of the past year, however, show that our brands have steadily grown in public favour; our home sales have expanded in all parts of the country, and export sales have also increased in spite of the very difficult world conditions.

Members of the board have visited U.S.A., Canada and Continental countries during the year and these personal contacts have been and are invaluable in the development of our export business.

INCREASING POPULARITY OF BRANDS

The progress of our business is primarily due to the increasing popularity of our brands and their consistently high quality, but there is another factor which is of great benefit to the company. I refer to the increased efficiency which we are always striving to attain through improvements to our plant and general organisation. The service we receive from our factory and office workers and from our sales and publicity staff at home and abroad is worthy of our appreciation and thanks, and, as a tangible expression of that appreciation your board has decided to make a Christmas gift of two extra weeks' wages to every employee who has been with us during the whole of the past twelve months, and of a proportionate amount to those with shorter service.

This business has been built up by courage, optimism and a progressive spirit; also a constant vigilance to ensure quality and value to the public, and a considerate attitude towards the staff. With the continuance of the policy which the board are pursuing, we face the future with confidence.

With regard to the coming year, I am happy to say that so far sales are in advance of the same period a year ago—and, if general conditions remain fairly normal, your directors hope to be able to maintain and still further develop the prosperity of your business.

The report was unanimously adopted and a final dividend making 35 per cent., less tax, on all classes of ordinary shares was approved.

MITCHELL COTTS & COMPANY, LIMITED

A HIGHER DIVIDEND

The ordinary general meeting of Mitchell Cotts and Company, Limited, was held on the 20th instant, in London.

Mr Alexander Hamilton, chairman and managing director, said that the balance of £69,518 available for reserve and dividend had been earned on ordinary capital of £379,648 as compared with £29,019 on an ordinary capital of £200,000 a year ago. A final dividend of 7 per cent. was now recommended, making 11 per cent. for the year, compared with 10 per cent. a year ago.

Last year he had referred to the difficult conditions prevailing in South Africa which had hampered the company's coal business in Natal. Those difficulties had eventually passed, and they had been able to reap some benefit from the better trading conditions, as a result of which profits from their coaling business had shown a satisfactory improvement. The steamers owned by the subsidiary companies, the Saint Line and Sun Shipping Company, had done well, and though the present world freight situation was less favourable than could be desired, the future of British shipping was receiving careful attention from shipowners and Government.

The results from their acquisition of Fraser and Chalmers (S.A.), Limited, were very satisfactory, and the present year promised also to be good. The other general operations of the company's subsidiaries in South Africa remained very helpful to the successful working of the whole organisation.

All days and Onions had also had a successful year, and the extra expenditure authorised a year ago on extensions and improvements now approaching completion it was believed would add considerably to the earning power of those works. The board were continually on the look-out for new sources of revenue and for that reason, and also because it fitted in admirably with many of the company's existing ramifications, they had had no hesitation in acquiring the shares of Contomichalos Darke and Company (1929) Limited, with its subsidiaries which operated mainly in the Sudan and Egypt. Shareholders would be asked to authorise an increase in capital to provide for that purchase and for other future purposes.

The report was adopted and the increase of capital approved.

IND COOPE AND ALLSOPP, LIMITED

ANOTHER GOOD YEAR

The twenty-sixth ordinary general meeting of Ind Coope and Allsopp, Limited, was held, on the 20th instant, in London.

Colonel the Right Hon. Sir G. L. Courthope, Bt., M.C., M.P. (the chairman), said that the company had had another good year. Explaining the considerations which had led the board to increase the ordinary stock issued by £218,213, the chairman said that they had been spending a lot of money on public-house improvement and rebuildings, a policy which had been thoroughly justified by experience, but it absorbed a lot of cash and they thought it advisable to replenish their coffers before they got too low. They wished at the same time to give something by way of bonus to the stockholders. They also wished to bring the issued capital into closer relationship with the actual amount of working capital employed in the business.

With these considerations in view the board decided to offer existing stockholders one share for every eight held at the price of £3. This gave them a substantial bonus, provided the company with over £600,000 in cash, and enabled them to add over £400,000 to general reserve. This addition would enable them to issue a further share for every five now held, to write off a substantial sum from certain wasting assets, and to retain the general reserve at the satisfactory figure of £1,000,000. This proposed issue must not be regarded as having a bonus value.

The trading profit for the year showed an increase of nearly £25,000. The board recommended a final dividend of 20 per cent., less tax, on the ordinary stock, making a total of 27½ per cent. for the year. It was also proposed to capitalise £392,782 by the issue to the ordinary stockholders of one share for every five now held.

There now appeared to be some recovery in trade conditions which justified an optimistic view of the future, and he was confident that they would obtain their full share in any improvement which took place.

The report was unanimously adopted, and the proposed capitalisation of reserves was approved.

At an extraordinary general meeting held subsequently a resolution was passed adopting new articles of association.

BOOKER BROTHERS, McCONNELL AND COMPANY, LIMITED

SATISFACTORY PROGRESS

The annual general meeting of this Company was held, on the 21st instant, in London.

Sir Alfred P. Sherlock (the chairman) said that the profits amounted to £98,604. That was somewhat better than anticipated when he addressed shareholders a year ago and, in view of the conditions which had existed were, he thought, extraordinarily good. One of the most satisfactory features was that those profits included only a moderate dividend from their main subsidiary, Bookers Demerara Sugar Estates, Limited.

Their general business had been well maintained, but, as the colony in which they were principally interested had to restrict the cultivation of its staple crop under the International Sugar Agreement, he was afraid they could not look for much, if any, increase of business, because he did not see immediate prospects of any very great development in other directions.

It was unwise to-day to make any forecast, but unless something unforeseen happened he hoped the excellent results achieved this year might be repeated, although their estates company would not do so well. Their business was of its very nature speculative, but the company was in a better position to-day to meet setbacks than at almost any period of its existence.

One criticism he had sometimes heard was that their position was not liquid enough, but that was more apparent than real because, if they took the business as a whole, their main subsidiary had, in addition to the £232,000 cash lent to the parent company, investments of over £250,000, of which £150,000 were realisable at any time and therefore had an investment and interest income of over £20,000 per annum. There was a further reason for the proposed issue of 40,000 new 6 per cent. cumulative preference shares, which was that, in view of the excellent year, they were anxious to give the ordinary shareholders a small bonus and were not willing to borrow money to do that. Preference shareholders, however, need have no anxiety about their security.

The report was unanimously adopted.

THE INDUSTRIAL CREDIT COMPANY, LIMITED

RESTRICTION OF UNDERWRITING ACTIVITIES

The fifth annual general meeting of this company was held at 9 Leinster Street, Dublin, on the 15th instant.

The Chairman, Mr J. P. Colbert, in moving the adoption of the report and accounts, said:—We present the accounts to you this year in a slightly different form. We show the amount of our loans and advances in the balance sheet after providing for reserves, and the figure shown for investments is also after deducting reserves. The amount appearing in the balance sheet in respect of our investment portfolio is substantially under the market value of the investments according to the most recent market quotations. Also we are of opinion that the intrinsic value of many of the investments is in excess of the present depressed market values.

Turning now to the profit and loss account we report, in respect of the latest year, a gross profit of £32,995, being a decrease of £5,630 on last year. The net profit, at £25,207, shows a decline of £5,781. The reason for the decline is that during the year our underwriting activities were restricted owing to the serious depression in the stock markets. The flotation of the £10 millions financial agreement loan and the international tension during portion of the year brought about a situation in which we considered it would be advisable to defer the bringing out of industrial issues. In consequence, our revenue from the underwriting of public issues has shown a decline, and the board have reluctantly come to the conclusion that the final results for the year, though very satisfactory in the circumstances, are not sufficient to justify the payment of a dividend. At the moment, however, we have under consideration the underwriting of a very substantial amount of new issues.

Deducting the provision for income tax and corporation profits tax from our net profit, and adding the balance brought forward from last year, there remains a total to be dealt with of £28,090. Of this sum we propose that £10,000 be added to our reserve fund and £7,500 to the investment reserve, leaving a balance to be carried forward of £10,590.

Our total underwriting turnover since the commencement of business is now £4,597,107, making a total of issues by companies in the Dublin market since we were established, amounting to £7,490,249.

SCOTTISH AUSTRALIAN COMPANY, LIMITED

ADVERSE PASTORAL CONDITIONS

The annual general meeting of the Scottish Australian Company, Limited, was held, on the 16th instant, in London.

Mr J. C. Inglis (chairman and managing director), in the course of his speech, said:—This year we do not have to go back to the bad figures of the year 1935, but, as compared with £75,000, we have come back to a net profit of not quite £300. You will naturally inquire how this has come about. First, the seasons were most unpropitious, for we had drought conditions which have been stated to have been the worst for nearly forty years.

It is true that in the year we are dealing with we had a large increase in the volume of our clip, thanks to the reasonably full stocking of all our stations. That was not sufficient to counteract the entirely inexplicable and unjustifiable decline in the world prices of wool.

The real problem before the board was whether in all the circumstances a dividend should be paid on the consolidated ordinary stock. In the past the ordinary stockholders have been the real contributors to a considerable part of the reserve fund, and it therefore seemed to us that the comparatively small call we have made on the reserve fund to pay a dividend of 3 per cent. on the ordinary stock was in accordance with the spirit of our regulations.

You will now wish me to speak of the future. What about the price of wool and the seasons? Although we have got a fine clip of wool for disposal, and competition is quite keen, the price of wool is not what the commodity requires.

As regards the seasons, at present we have no pronounced lack of rain, except, perhaps, on some of our wheat-growing properties, but the pastures have grown dry, and we should warmly welcome bounteous rains in all parts of Queensland and New South Wales. I am glad, however, to tell you that our big new freehold property in New South Wales is enjoying a better season. Though the results of the past year were disappointing, there is no need for discouragement. Our balance sheet shows how strong we are financially. We have many fine properties, ably managed. Every year the quality of our wool improves. With decent seasons and reasonable prices for wool our results should be satisfactory to us all.

The report was unanimously adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED

PRODUCTION AND PRICES

The twentieth annual general meeting of Anglo-Ecuadorian Oilfields, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London.

Mr H. C. R. Williamson (the chairman), after referring to the effect of the action taken by the Ecuadorian Government early in 1938 under a series of what he described as arbitrary decrees directed against foreign companies, and to the recent election of Dr Mosquera as President, said that political conditions in Ecuador remained exceedingly uncertain. It was, however, anticipated that an early return to normal conditions might be looked for, and the directors were not without hope that, in this event, favourable consideration might be given by the authorities to the various questions which were still at issue between the Government and the Company. Work on the field had proceeded normally, but they had not been fortunate in their ordinary deep drilling, only one deep well having been brought in during the year. Nevertheless, production from the old wells had not only been maintained, but actually increased. The shallow drilling area had continued to develop along satisfactory lines.

With regard to the oil market, the prices of crude oil at the wells in the Texas and mid-continent fields were reduced in September and October last by, in all, 20 cents and 25 cents per barrel respectively. These cuts, if maintained or aggravated, could not but have an adverse effect upon the Company's profits. In view of the good statistical position of the industry in the United States as regards stocks of crude and some products, one would have expected that crude oil prices could have been maintained. What was required was co-operative action in the United States, but this was difficult in view of the anti-trust laws. They could only hope that the efforts now being made to overcome the existing difficulties would be successful and so result in better world prices for crude oil.

The report and accounts were unanimously adopted, and a dividend of 10 per cent., less tax, was declared.

MALAYAN TIN DREDGING, LIMITED

DIVIDEND OF 65 PER CENT.

The twenty-seventh annual general meeting of this company was held, on the 16th instant, in London.

Mr C. V. Stephens (the chairman), in the course of his address, said:—The average permissible output for the year worked out at 64.75 per cent. of assessed production, a decrease of 8.25 per cent. when compared with the previous year's average. The quantity of ground dredged, 11,617,300 cubic yards, was nearly 1½ million cubic yards more than in the previous year. The average recovery of concentrates was 0.33 kati per cubic yard. The total quantity of tin ore produced was 2,303 tons. The average price realised for ore sold was £131 7s. 3d. per ton, as against £145 4s. 11d. for the previous year.

The net profit for the year is £157,745. The directors recommend payment of a final dividend of 10 per cent., making 65 per cent. for the year, and leaving £71,589 to be carried forward. The total dividend paid for the year of 65 per cent. has been exceeded only twice in the history of your company.

At the last annual meeting I was able to inform you that the company had entered into an agreement to prospect an area of some 6,000 acres, with the right to select up to 3,000 acres. The prospecting of this land was started towards the end of last year, and the progress already made justifies us in entertaining the hope that we shall be successful in proving an area large enough to make a very substantial and valuable addition to the life of the property.

It has always been my opinion that the standard tonnage allotted to Malaya at the inception of the Restriction Scheme in 1931 did scant justice to her productive capacity. Nevertheless, I consider the scheme has from its inception proved to be of the greatest service to the tin industry of that country, and I regard the raising by the International Tin Committee of the standard tonnage from 71,940 tons to 77,335 tons as from July 1st last as placing the production of Malaya on a much more equitable basis.

The year under review started with a permissible domestic quota of 80 per cent. in the F.M.S., but owing to the severe recession in American industrial conditions, the International Tin Committee found itself compelled to reduce from time to time the permissible production percentage.

The report was unanimously adopted.

SOUTHERN MALAYAN TIN DREDGING, LIMITED

BRIGHTER OUTLOOK FOR THE INDUSTRY

The twelfth annual general meeting of this company was held, on the 16th instant, in London.

Mr C. V. Stephens (the chairman), in the course of his address, said:—The permissible output in Malaya for the year averaged 64.75 per cent. of assessed production. The quantity of ground dredged during the year was 15,499,900 cubic yards, 1,670,700 cubic yards more than in the previous year. The average recovery of concentrates was 0.35 kati per cubic yard, and the total quantity of tin ore produced was 3,201 tons. Sales of ore realised an average price of £127 3s. 4d. per ton. The balance available is £36,346, out of which the directors recommend payment of a final dividend of 2½ per cent., making 38½ per cent. for the year, and leaving £25,533 to be carried forward.

Last year I referred briefly to the detrimental effect of the abnormal fluctuations in the price of tin. I suggested that the introduction of a buffer stock scheme would impart a reasonable measure of stability to the price in the interests of both producers and consumers. The scheme was subsequently brought into operation under the auspices of the International Tin Committee, and although it is somewhat early days I consider the influence it has already exercised on market operations during recent months has greatly assisted in raising the price from £170 to the present figure of £215 per ton. I believe the scheme will prove to be of great benefit to the consumer in ensuring him his supplies at a reasonable price, and to the producer in giving him a fair price for his produce. In addition it should ease in some degree the drastic quota changes to which operations have been subject in the past.

Your company possesses a fine fleet of dredges and a very valuable property, and it is in a better position than most companies to withstand the strain of adverse economic conditions. With the armament programme in operation in this country and the large expenditure which is shortly to commence on armaments in America, we have reason to think that the worst stage of the trade recession is now behind us and that we may look forward to a return of more healthy conditions for our industry.

The report was unanimously adopted.

KILLINGHALL TIN, LIMITED

DIVIDEND OF 15 PER CENT.

The ninth annual general meeting of Killinghall Tin, Limited, was held, on the 20th instant, at 7 Martin's Lane, London.

Mr W. Arthur Addinsell, the chairman, said in the course of his speech:—The net profit amounts to £26,782 (after charging the annual premium of £7,900 on the capital redemption policy), equal to about 17½ per cent. on the issued share capital, and it savours somewhat of ingratitude to describe the results as disappointing. Yet that is a fair description when comparison is made with previous years, and especially last year, when the profit amounted to £103,620, equivalent to over 68 per cent. on the issued capital.

Last year the sales of tin ore amounted to 675 tons, as compared with 1,084 tons in the previous year. The average gross price realised per ton was £136 as compared with £177. The average recovery per cubic yard was 0.57 lbs. against 1.11 lbs. The working cost per ton rose from £33 to £52 as a consequence of the decline in recovery. The adversities of the year do not reflect upon the potential value of your property, the operations of the dredge, or the efficiency of the local administration.

The company has entered into an arrangement with the Killinghall Rubber Company to acquire a mining sub-lease over a further 104 acres. The area is described by our general managers as likely to prove payable under favourable conditions. To what extent the whole will be dredgable has not yet been ascertained, but clearly it will add to the life of the mine.

An item appearing for the first time is an investment in Felspar Prospectors, Limited, representing a holding of 8,000 shares of \$1 (2s. 4d.) each, on which 30 cents (approximately 8½d.) per share was called up to the date of the accounts. Felspar Prospectors, Limited, was registered in the F.M.S. under the auspices of Messrs Osborne & Chappel, and its objects are, as its title implies, to prospect tin-bearing areas in the Malay Peninsula and elsewhere. The shares were allotted to the group of companies under the local management of Messrs. Osborne & Chappel, approximately in proportion to their assessments under the Tin Restriction Enactment. I need not dilate upon the advantage secured by this unity of policy and control, and I trust it will prove a profitable investment.

The report and accounts were adopted and a final dividend of 2½ per cent., making 15 per cent. for the year, was declared.

ARISTON GOLD MINES (1929), LIMITED

INCREASE OF CAPITAL APPROVED

The ninth ordinary general meeting of the Ariston Gold Mines (1929), Limited, was held, on the 20th instant, in London.

Mr Francis Allen (the chairman) said that to-day their ore reserves of 1,082,833 tons stood in their books at a cost of 2s. 1d. per ton, as against their previous year's figure of 929,907 tons at a cost of 2s. 8d. per ton. An interim dividend for the current year at the rate of 10 per cent., less tax, would be paid on January 12th next.

They were asking shareholders to approve an increase in capital to meet heavy capital expenditure, already incurred, and to meet further capital expenditure which would be necessary to complete the new shaft to the 20th level ready for use and also continue the sinking of the shaft to the 24th level, together with the further necessary equipment for dealing with the increased tonnage. They had to finance the development south from their new shaft and to open up the Anfargah property and also the deep drive northwards. That explained why they were asking for £280,000.

The most important feature was the persistence in depth of their main orebody and the discovery of their No. 2 orebody, as also payable values encountered between their north shaft and their new shaft, but it was too early yet to bring in any additions to the ore reserves from those sources other than the No. 2 orebody. The reduction in working costs and the increase in the ore reserves they considered most gratifying.

Close investigation had provided that further careful exploratory work should be carried out at Broomassie and they had been in consultation with the Marlu and Gold Coast Selection Trust companies and their technical advisers on the question of forming a separate company. In any new company Ariston would have a very substantial interest, but its financial obligation would be limited to driving their deep levels from the north shaft out to Broomassie. Under the new scheme the Marlu company would carry out an intensive prospecting campaign over the Ariston area to investigate the value of known occurrences of crush zones similar to those deposits now being so successfully worked by the Marlu company.

The report was unanimously adopted and the increase of capital to £900,000 by the creation of 800,000 shares of 2s. 6d. each was approved.

LONDON AND RHODESIAN MINING AND LAND COMPANY, LIMITED

SATISFACTORY PROFIT

The ordinary general meeting of this company was held, on the 16th instant, in London.

The Right Hon. Viscount Elibank (deputy chairman), in the course of his speech, said that the result of the year's working was a profit of £104,540, which must, in view of the conditions which had been ruling, be considered satisfactory. The addition of the balance from the previous year made a total available of £152,292, of which stockholders had had £100,000, being at the rate of 10 per cent. for the year, distributed as to 5 per cent. interim dividend and 5 per cent. final dividend.

There was an increase in the total of their investments of roughly £26,000. Those investments had a total valuation at June 30th of £783,785, or an appreciation of £200,000, which was really a further unrealised profit. Of the total of the investments at £583,926 approximately 90 per cent. was dividend or interest earning securities.

Even on the basis of last year's figures, when times had been by no means propitious, they had a revenue coming in of about £85,000 a year, apart from any profit on ranching or profit from the sale of shares. Their usual dividend of 10 per cent. should therefore, unless something unforeseen occurred, be maintained. He was pleased to advise stockholders that the directors had now declared an interim dividend in respect of the current year of 5 per cent. actual, less tax.

After dealing with their various share interests, he said that royalties from mining interests amounted to £14,001, compared with £15,474, there being five fewer producing properties. As to their real estate, they had sold 19,883 acres during the year, and had disposed of Taramal House and Agency Chambers in Bulawayo at satisfactory prices. With regard to their farming and ranching interests, they were able to report that they had had improved results; the price realised for the stock sold coming out at £5 17s. 11d. per head, compared favourably with £4 14s. 9d. in the previous year and £3 18s. in the year before. They expected, therefore, that owing to the more favourable conditions they would receive a better return on their investment in ranching after all the bad years they had been through.

The report and accounts were unanimously adopted.

(Continued from page 677)

at the end of the year will show serious losses. However, the worst is past, and the outlook is better both with home and export markets. The trade welcomed the reduction in the heavy American duties on semi and fully manufactured materials and is looking forward to an improvement in exports to the United States in the coming year. It is reported that the Government of the United States is contemplating a reduction in import duties on raw wool in order to develop a bigger export trade with Australia.

THE COMMODITY MARKETS

ALTHOUGH there was no appreciable increase in the volume of purchases, the movement of the prices of many important primary products in this country and in the United States has been in an upward direction during the week ended last Wednesday. The firmer price trend is due mainly to the improvement of business confidence in the United States and to the sustained recovery in the pound in terms of dollars. Thus, Moody's index of the prices of staple commodities in the United States (December 31, 1931=100) rose from 140.4 to 141.3 during the week ended last Wednesday. Since many consumers may be expected to increase their purchases of raw materials early in the New Year, the outlook for prices seems now more favourable than in recent weeks.

Wheat, exceptionally, showed a further decline in price after the publication of the official estimate of the yield of the Argentine crop. Raw sugar was again marked up. Cotton was dearer on bearish crop news from India, and linseed was marked up following the publication of the first official estimate for Argentina, which was lower than expected. Among non-ferrous metals, tin was unchanged in price, but copper, lead and spelter registered an advance.

Metals

Copper.—The price of standard cash closed on Wednesday at £44 per ton, showing a net gain of £1 on the week. The demand was very small as a result of the pending holidays and the end-year preparations. Simultaneously, however, offerings showed a sharp con-

traction so that the undertone of the market was remarkably firm. Reports indicate that the domestic price in the United States will probably be maintained at its present level of 11.25 cents per lb., as the reimposition of restriction outside that country on December 15th had a very encouraging effect on United States sentiment. At 11.25 cents per lb. the U.S. domestic price shows a substantial premium over the London quotation, so that exports from that country are being discouraged.

Tin.—The price of tin closed unchanged on Wednesday at £214 per ton. The price fluctuated within fairly wide limits during the week. The activity of the Welsh tinplate industry has declined in the last few weeks, but reports from the United States speak of a pending increase in the employment of tinplate mills there. It is believed that consumers' stocks on the other side of the Atlantic have fallen substantially in recent months and need replenishment. The tin outlook, therefore, remains encouraging, particularly as an increase in buying will make the market dependent on pool releases and the pool will hardly sell at current prices.

Lead and Spelter.—The price of lead rose by 10s. to £15 2s. 6d. per ton, while spelter gained 5s. to close at £13 17s. 6d. per ton. In both cases the rise was more or less due to the strength of copper prices. The Metallgesellschaft figures of the world's lead smelter output for October are disappointingly high and do not indicate any restriction of output. At 106,775 metric tons, the October output was 294 tons up on the month and 2,805 tons up on the monthly average of 1937. The extra-U.S.A. production for the first ten months of the year reached 1,071,540 metric tons, against 1,030,971 tons in the corresponding period of last year. As production already exceeded consumption last year and consumption has fallen considerably this year, there must be a substantial oversupply of lead at present.

Grains

The Argentine wheat crop has been officially estimated at 39.5 million quarters, the second largest crop on record; the final estimate of the 1937

crop was 23.1 million quarters. This news naturally had a bearish influence on the grain market, and with a small demand prices for c.i.f. wheat are about 1s. per quarter lower than at the end of last week. The colder weather, which will improve the demand for animal feeding stuffs, steadied the market in maize, which was also helped by reports that navigation on the Danube will be suspended for some weeks, owing to ice.

Other Foods

Provisions.—Egg prices have fluctuated with the changes in weather and are now higher than a week ago. The bacon and butter markets have been firm. Demand for chilled beef was good over the week-end, but trade in other types of meat has been slow.

Colonial Produce.—Refined sugar prices were raised by 1½d. per lb. at the end of last week and again on Monday. At the last sales of the year, prices for tea were well maintained. Markets in coffee and cocoa have been steady.

Fruit and Vegetables.—Trade improved during the week. Supplies of green vegetables have been damaged by frost and prices have risen. Demand for oranges and apples has been good.

Miscellaneous Commodities

Oils and Oilseeds.—The Argentine linseed crop was officially estimated at 1,620,000 tons, compared with a final estimate for the 1937 crop of 1,585,000 tons. The increase was less than had been expected, but the forecast had little influence on prices, as crushers are well supplied until after the holidays. Demand for Egyptian cottonseed has slowed down, but prices remain steady at £7 per ton for December loading. Trade in other vegetable oils is poor.

Rubber.—Little business has been done in the market, except for nearby rubber; rubber afloat to the Continent and for December-January shipment obtained at one time a premium up to ½d. per lb. over spot. On the week, spot prices show little change.

World Trade in Raw Cotton

We present below two charts illustrating world trade in raw cotton in 1937. The areas of the circles indicate the quantities exported from the principal producing countries in the upper panel and the quantities supplied to the principal importing countries in the lower panel. The figures of German imports include the whole of Austria's imports and half those of Czecho-Slovakia. Source: International Trade in Certain Raw Materials and Foodstuffs, 1937. League of Nations and Allen and Unwin. Price 5s.

Finance

GOVERNMENT RETURNS

For the week ended December 17, 1938, total ordinary revenue was £14,389,000, against ordinary expenditure of £18,635,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £241,704,000, against a deficit of £165,487,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On December 16th applications at £99 15s. 0d. per cent. for bills to be paid for on any day except Monday of the following week were accepted as to about 27 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Monday at £99 15s. 1d. were allotted in full. £35.0 millions of Treasury bills are being offered on December 23rd.

SHORTER COMMENTS

(Continued from page 671.)

Frederick Hotels, Ltd.—Net profit year to June 30, 1938, £23,582, against £39,452, and 2½ per cent. is being paid off dividend arrears, bringing payment to June 30, 1935. For previous year 11 per cent. was paid on the preference shares. Carry-forward increased from £56,832 to £66,664.

P. and O. Banking Corporation.—Shareholders approved, on December 16th, the sale of the undertaking and assets for £2,594,160 to the Chartered Bank of India, Australia and China.

R. E. Jones, Ltd.—Net profit, after tax, year to October 31, 1938, £40,300, compared with £44,929. Ordinary dividend maintained at 5 per cent. To property reserve, £15,000 (£10,000), raising total reserves to £78,121. Carry-forward reduced from £11,167 to £8,446.

Bankers' Industrial Development Company.—It is confirmed that this company (a subsidiary of the Bank of England) is to co-operate in the link-up between the United Steel Companies and John Summers and Sons. It is stated that details of the scheme will be put before shareholders in the next few weeks.

Baltimore and Ohio Railroad.—Net operating income for September, 1938, incorrectly stated on page 406 of *The Economist* of November 19, 1938, to be \$1,715,000, was \$2,715,000, a decrease of \$81,600 on September, 1937.

Savory and Moore, Ltd.—It is proposed that this company should purchase part of undertaking of Pharmaceutical Products, Ltd., whose ordinary capital they already own wholly. Consideration would be £160,000 in 6 per cent. non-cumulative redeemable preference shares. This is a new class, ranking after existing preference,

but before ordinary, thus affecting 7½ per cent. preference shareholders' participating rights. Class and general meetings, January 10, 1939.

Royal Bank of Canada.—Total assets November 30, 1938, \$908,064,712, an increase of \$38,526,600, or 4.43 per cent. Deposits at \$804,108,757 are higher on the year by \$48,019,060. Net profits, \$3,696,233, a decrease of \$15,146. The usual dividend of 8 per cent. has been paid, absorbing \$2,800,000, \$300,000 to pensions and \$200,000 for bank premises. Carry-forward \$2,721,409, an increase of \$396,234.

Cleveland Petroleum Company.—For the year to October 31, 1938, dividends are: on ordinary stock 22 per cent. for year; on deferred 46½ per cent. Net profits £290,719. For previous year, after allowing for different method of providing for income tax, the net profit was £437,225.

MONTHLY TRADE SUPPLEMENT

Export Weapons

THE two Ministers responsible for Britain's export trade have in the past month been using bold language about the Government's determination to protect British trade against unfair competition from the totalitarian states. Mr Hudson has spoken of beating the Germans at their own game, Mr Stanley has even given his intentions a deliberately jingoistic air. There is plenty of evidence that these declarations have caused concern in Berlin. No secret is made there of Germany's urgent desire to conclude a new Trade Agreement with Great Britain, and there seems to be a new willingness in the last few weeks to have it embrace not merely the direct trade between the two countries, but methods and markets elsewhere. If such willingness is shown, it may be a genuine desire to come to terms with Great Britain. Or it may be an anxiety by a judicious concession or two to direct the energy of British Ministers to other topics than the prosecution of a campaign against German methods of trade. These methods are by now so closely interwoven with the fabric of economic control erected by the Nazi Government that the latter explanation seems the more likely. To judge by the German Press, the Nazis believe that the bold speeches of Messrs Stanley and Hudson are no more than bluff to frighten Berlin into an agreement.

It is possible that the two Ministers do not fully realise what the adoption of "the Germans' own weapons" in-

volves. But there is no reason to believe that they are not in real earnest. That being so, it becomes of urgent importance to examine the next steps that can be taken in the campaign, since the provision of a fund of £10 millions for export guarantees is so manifestly only a beginning. The line of development at which Mr Hudson has hinted is the formation by each exporting industry of a co-operative organisation to supervise, and possibly even to conduct, the export business of the industry. It is suggested that an industry, having formed such an export organisation, should arm it with a fighting fund which could be used to counter the subsidies given to German exporters.

Co-operative organisation for export is a gospel that has been preached at the export industries ever since the war, and there can be no doubt that it would be the means of securing a much more aggressive representation of British industries in foreign countries, as well as obviating the patent wastes of competitive solicitation and bidding. Some such structure of export associations, in fact, is a necessary part of any wider scheme for developing British exports, and it is all to the good that the movement is being pushed by Government Departments.

At the same time, frankness compels recognition of a number of defects in such a scheme if it is intended as the main content of a programme of defending our exports. The only way in which British industries can be expected to raise funds for export subsidies is by levying them on

the domestic market. The proposal involves, in fact, the deliberate penalisation of the domestic consumer to assist the exporter. The effect of our national economic policy in the last seven years has already been to put heavy burdens on the domestic consumer, as the experience of the steel and coal industries indicates, and before we go much further along the same line it would be as well at least to raise the question whether, granted that funds have to be raised for assisting exports, this is the best way to do it. If the raising of the funds is to be left to industry, there will inevitably be large inequalities. *Prima facie*, the industry with the large domestic market and the small export trade is in the best position to raise an effective fighting fund; but these industries are, by definition, those that are least likely to be interested. Industries which concentrate on exports have no domestic market to levy on. And is purely domestic industry not to play its part in a policy that is of national benefit? The levy on German industry, out of which export subsidies are paid, has been Rm. 800 millions (£66 millions at the official rate of exchange) and is, according to report, to be doubled. Is there any prospect that private industrial subscriptions in this country will reach any comparable amount? Furthermore, even if the money can be raised in adequate amount, there will be difficulties in its dispensing. A fund raised by an industry at large and held by an export organisation as trustee for the industry as a whole can hardly be spent with that swift and arbitrary discrimination that is the secret of successful economic warfare.

These comments are not intended to suggest that Mr Hudson's proposals are devoid of merit. Far from it; but they clearly require supplementation if we are to wield the Germans' weapons with any success. There will clearly have to be public money to assist the private fighting funds—if only because those industries that most require the help of fighting funds are least able to raise them. But it would be not only wasteful and ineffective but also wrong in principle merely to hand over public money to export industries for distribution among their members. We must beware of creating conditions in which exporting becomes a "soft option" at the public's expense. The most effective solution would seem to be that an independent officer, or a small independent committee, should be appointed for

each group of exporting industries (or possibly for each geographical area where commercial warfare breaks out), with full power to use the public fighting funds in the public interest. This would secure not only the necessary rapidity of decision, but also the essential co-ordination between different exporters and exporting industries.

Co-ordination, however, does not stop short at exports alone. It is agreed by nearly all students of German methods that the most spectacular successes have been won not on the side of artificially cheapened exports but on the side of artificially enhanced prices for imports bought in bulk. And it is a commonplace that Britain's supreme weapon is her buying power. We shall be tying our right hand behind our back if we fail to use our import trade as a means of maintaining our exports. In many of the countries where Germany has been most successful (e.g. the Balkans) no amount of reduction in the prices of British goods will be of avail unless the Governments concerned can be persuaded to grant favourable rates of exchange and an adequate volume of import permits for British goods. No new principle is involved even for this country, since the group of Scandinavian Trade Agreements made in 1933 were tacitly based on the principle that British goods would be bought at above the competitive price in return for entry to the British market. It is probable, in fact, that a given amount of money and organising energy will produce better results if it is applied with the leverage of our imports than if it is devoted merely to subsidising exports. The fact that we are to fight Germany with her own weapons need not mean that we should refrain from choosing out of the extensive Nazi armoury those in which we have an advantage.

It is well that this whole subject of commercial defence is now receiving intensive examination both in private and in official circles in Great Britain. It is well, too, that the difficulties are being faced and the very wide scope of the new methods that will be required is being realised. To talk as if the task will be easy and can be accomplished by a part-time committee or two is dangerous; for it encourages the German strategists to treat it as bluff. And a country which has to import, and pay for, such a large proportion of its supplies of food and raw materials cannot afford to be caught bluffing.

Lima, Washington and Berlin

THE Pan-American Conference at Lima came to an end, after a fortnight's session, on Tuesday of this week. By the statesmen and the Press of the participating countries the results have been hailed as a success. In the German Press they have been hailed as an exposure and a rebuff of "Yankee Imperialism." A British observer, who can appreciate the relations between the American republics in the light of the somewhat analogous relations between the States members of the British Commonwealth, will dismiss the German verdict as a piece of wishful nonsense and will judge that the Lima conference has been successful in the same measure and manner as our own Commonwealth conferences are apt to be. It has been a substantial success, on which all concerned may fairly congratulate themselves. But at the same time it has naturally not conjured away the problems inherent in the relationship between the parties. These problems are the product of an historical evolution, and they can only be solved through further processes of growth, not by strokes of magic wands.

Before parting, the delegates at Lima passed 110 projects, all cast in the form of resolutions and declarations, not treaties. The most important of these is the Declaration of Solidarity which, in its final form, was drafted by the

Argentine delegation. In this instrument the 21 American Republics reaffirm their continental solidarity and their determination to maintain the principles on which it is based: namely, desire for peace, respect for international law, equality of States, and respect for individual liberty without racial or religious discrimination. On this "ideological" basis, the parties reaffirm their decision to oppose any foreign intervention or activities likely to threaten their sovereignty; and if the peace or security or territorial integrity of one of the American Republics is threatened, the signatories proclaim their intention to render their solidarity effective by consultation, by conventions and, finally, by the adoption of measures rendered advisable by the circumstances—every government acting independently as a sovereign state.

It will be seen that the relation established, or, rather, confirmed, by this Declaration of Lima is that of an entente expressing itself in inter-governmental consultation. The Pan-American organisation is no more a defensive alliance than the British Commonwealth is a federation. But would-be mischief makers from outside would be deceiving themselves if they were to assume that, because an association was loose in form, it could not be effective in action.

The analogy between the British Commonwealth and the Pan-American organisation is indeed illuminating. In each of these two groups of States there is a fundamental common interest powerfully holding the parties together. The American Republics, like the nations of the Commonwealth, have a common heritage, partly spiritual and partly material, which they are, all alike, determined to defend against possible attacks—and these, in both cases, could only come from reactionary military Powers on the Eurasian Continent. In both cases, again, the necessary mutual esteem and confidence exists for vindicating these common interests by common action if the need were to arise. At the same time, there is in both cases one delicate and ever-awkward factor in the situation; and that is the preponderance of one of the partners over the rest in population, wealth, power and international experience.

This means that for the United States, as for the United Kingdom, the problem of co-operation is simpler than it is for her junior partners. The senior partner has only one consideration to take into account, namely, her desire to make the co-operation as effective as possible. She has no more fear of being overshadowed than she has any impulse to domineer. But the other parties' desire to co-operate with their gigantic partner in defence of common interests is tempered by their desire to maintain and assert their own national sovereignty. And while (*pace* Dr Goebbels) the Latin American Republics do not imagine that the United States entertains insidious designs against their sovereign independence, they are naturally on their guard against unintended and automatic effects of the sheer difference in material magnitude. The Latin American countries, like the Dominions, are young nations, in whom the sense of nationhood is correspondingly strong and sensitive; and they have not yet urgently felt the need to subordinate the wish for national self-expression to the necessity for collective security—partly because they are geographically remote from the world's present principal danger spots, and partly because they are politically protected by their association with the very Great Power by whom they are anxious not to be overshadowed.

In Latin America the protagonist in the movement for the assertion of national sovereignty is Argentina, who is as remote from Europe as she is from the United States and is at the same time populous, prosperous, strong and progressive. Moreover, Argentina has a trade with European countries which is a vital element in her national economy. Argentina's attitude of aloofness from too exclusively Pan-American designs has been shown in the past; it does not in the least arise out of any particular sympathy felt in Argentina for Fascist or Nazi philosophy and ideals.

On the contrary, Argentina has the most settled democratic and liberal tradition of any Latin American State. By contrast, the movement for closer relations with the United States has its protagonist in Brazil, even though Brazil is, internally, much more infected by dictatorial methods than Argentina. Brazil does most of her foreign trade not with Europe but with the United States, and she is uncomfortably close to the Old World. If Africa were to pass out of French and British into Italian and German hands, Brazil would soon feel the breeze. Her compact German and Italian colonies also make Brazil understandably nervous lest the power of racial propaganda should undermine the new and composite nationalism on which all the South American Republics are built. This, of course, is a problem that would affect Argentina, Chile, Uruguay, and the United States itself, if ever a conflict were to arise between the Americas and the Continental Powers of Europe.

The possibility of such a conflict appears to have been brought perceptibly nearer by the sharp and sudden worsening of relations between Washington and Berlin. Ambassadors were mutually withdrawn last month in the aftermath of the pogrom in Germany. The tone of American references to Germany has been rising ever since. Mr Kennedy, the American Ambassador in London, Mr Ickes, the Secretary of the Interior, and Senator Pittman, the Chairman of the Senate Committee on Foreign Relations, are some of the leading personalities who have expressed the dislike felt by themselves and the American public for the Nazis and their methods. Mr Ickes' speech led to an official German protest; but even the protest was turned against the Germans by the surprisingly flat and outspoken rejection it received from the Acting Secretary of State. Relations between the two countries are now about as bad as they could be without a formal rupture. Whether or not this development is part of the Nazi plan, the attitude of the German Press is doing everything possible to exacerbate matters still further. The Nazis, in fact, are doing what Herr Hitler himself in "Mein Kampf" criticises in the Kaiser's policy: they are deliberately adding the English-speaking peoples to their enemies. *Quem deus vult perdere . . .* That the present drift of affairs will ultimately be fatal to German aspirations can hardly be doubted. For German actions since midsummer have performed the miracle of shaking the United States out of isolationism, and there is even evidence of strong support among the American people for a definite alliance among the democratic peoples. The entente concluded at Lima may yet be of very much more than Pan-American significance.

Unemployment in Great Britain—I

Our Changing Industries

THE ability to adapt economic resources to changing circumstances is the test of a modern progressive society, and there is no economic indicator that should be watched with greater care than the speed with which resources both of labour and of capital are moved from industries where the demand for them is declining into industries which are still in the flood-tide of expansion.

The existence of heavy unemployment in Great Britain ever since the war is conclusive evidence that the problems of transfer and adjustment have not been fully solved. But it may very well be that the failure arises not from any obstruction in the process of transfer but rather from the magnitude of the problems of adjustment that have been presented. Immediately after the war, the country

had to cope with excessive supplies of labour in the industries that had been expanded during the war as well as in the export trades which never succeeded in recapturing their pre-war position. In spite of all hesitations, the problem was being solved by 1929, but the onset of the Great Depression led to another bout of economic indigestion. Once again, adjustment was gradually accomplished in the recovery years 1932-1937. Now we stand at another period of hesitation, when there is a risk that the task imposed on the machinery of adjustment may for a time exceed its powers. These changes have been so rapid that the wonder is not that complete success has not been achieved, but that the disorganisation has not been worse.

The chief source of information on the shifting

distribution of our national labour resources is in the Ministry of Labour's annual census of the number of men and women included in the unemployment insurance scheme in the different industries. These figures show a remarkable diversity of experience from industry to industry.

The total number of insured persons aged 16 to 64 in employment in the United Kingdom rose from 10,930,000 in June, 1929, to 12,327,000 in June, 1937. During the same period the insured population grew from 12,094,000 to 13,697,000. Despite the remarkable expansion in business activity between 1932 and 1937, the proportion of insured persons unemployed in June last year was 10 per cent. compared with 9 per cent. eight years previously. The growth of employment has thus not fully kept pace with the increase in the number of insured persons. More important than the relation between employment and activity have been the far-reaching changes in the distribution of Britain's resources. These changes are illustrated for the principal industries by the diagrams accompanying this article. They show index numbers of the number of insured persons aged 16 to 64 employed in the United Kingdom between 1927 and 1938, as well as changes in the proportion unemployed in each industry.

The separate diagram in this column, showing employment in the so-called productive industries (mining, building and manufacturing) and in distribution and services, reveals one of the outstanding long-term tendencies in Britain. Between June, 1929, and June, 1938, the proportion of Britain's labour resources devoted to distribution and services showed a continuous increase, from 34½ per cent. to 37 per cent. of the total. The number of insured persons aged 16 to 64 employed in mining, building and manufacturing rose by 393,000, or 5.5 per cent., during this period, while employment in distribution and services rose by 687,000, or 18.3 per cent. Moreover, whereas the growth of employment in distribution and services has been almost continuous, despite the wide fluctuations in general business activity during this period, mining, building and manufacturing have felt the full impact of changes in general business activity. Between June, 1929, and June, 1932, when the number of insured persons employed declined by 963,340, the number employed in manufacturing alone declined by 823,550. Again, between June, 1937, and June, 1938, employment in manufacturing fell by 323,820, while total employment showed a reduction of only 298,780.

A comparison of changes in employment and in the proportion of insured persons unemployed in individual industries is no less striking, for it reveals the increase in the proportion of the national resources devoted to the home market and the decline in the export trades. There

EMPLOYMENT IN THE UNITED KINGDOM

has been a marked influx since 1927 into the building, public works contracting, motors and aircraft, entertainment and distributive industries. Except in the case of the motor and aircraft trades, the expansion of these industries, however, has been accompanied by an increase in the proportion unemployed. This tendency has been particularly marked in public works contracting since 1931. The influx of labour into metal manufacture and engineering has been less marked, a decline in some branches having almost offset an increase in others, such as electrical engineering, for example. On the other hand, there has been a substantial efflux of labour since 1929 from the coal, shipbuilding, cotton and wool textile industries. In the case of cotton and wool the decline has been due largely to the fall in exports. In shipbuilding the shrinkage has also been accentuated by the loss of foreign orders. The reduction in the labour force of the coal-mining industry has been due, in no small measure, to the rapid increase in mechanisation since 1927. Despite the movement of persons from the declining into the expanding industries, the proportion of unemployment in the former remains fairly substantial. On the whole, however, the experience of the past ten years shows that the mobility of labour has remained greater than might have been feared. Industrial changes have been especially rapid during this period and fortunately the expansion of industries such as building and public works contracting, which can employ large numbers of unskilled or semi-skilled workers, has facilitated this movement.

Changes in employment between June, 1937, and June, 1938, when business activity was declining, are indicative of current tendencies. The chief movements in and out of individual industries during the past year are shown below:

CHANGES IN EMPLOYMENT IN IMPORTANT INDUSTRIES

(a) Expanding Industries	Increase between June, 1937, and June, 1938	
	Per cent.	
Public works contracting	28,810	14.8
Motor vehicles, cycles and aircraft ...	23,150	6.4
National Government service	12,490	9.2
Distributive trades	11,090	0.5
Entertainments, sports, etc.	10,500	8.5
Explosives	7,390	33.1
Tramway and omnibus service	7,020	3.5
Railway carriages and wagons	6,930	13.6
Constructional engineering	5,670	14.6
Ship-building and ship repairing	5,160	3.7
(b) Contracting Industries	Decrease	
	Per cent.	
Cotton	120,560	30.7
Woolen and worsted	43,350	19.5
Steel, etc.	26,290	15.7
Textile bleaching, printing, dyeing ...	23,150	24.6
Railway service	20,780	11.9
Linen	18,260	25.7
Building	14,660	1.5
Stove, grate and general iron founding	13,440	12.6
Tin plates	13,010	49.6
Footwear	11,890	8.8
Hosiery	11,160	8.8

The group of expanding industries, it will be seen, includes, apart from "non-productive" trades, those industries on which defence expenditure is largely concentrated. On the other hand, the list of contracting industries is almost confined to the principal export trades, though it also includes building, where activity is now gradually declining owing to the fall in private construction.

A number of important conclusions can be drawn from this survey of long-term changes in employment. First, the number employed has not fully kept pace with the growth of the working population, but the impact of falling activity may have been mitigated by a reduction in working hours. Secondly, the proportion of our labour resources devoted to service industries has shown a rapid increase in recent years, and this tendency has continued during this year's recession. Thirdly, the movement of labour out of contracting and into expanding industries shows that labour has not lost its ability to adapt itself to changing circumstances. If adaptation has appeared slow, industrial change in the present decade has been very rapid.

The Republic of Andorra

SMALL States are the small change of diplomatic currency. But size in international politics is very relative. The old Czechoslovakia, before its borders were shorn, covered 55,000 square miles, which was a scant area by contrast with the 213,000 square miles of France or the 182,000 square miles of Germany, but vast compared with the 60 square miles of the Principality of Liechtenstein, the 38 square miles of the Republic of San Marino, the mere four square miles of the Principality of Monaco and the almost imperceptible 109 acres of the Vatican State. It is often hard to understand by what grace of statesmanship these political *minuscule* are permitted to persist in being.

The Republic of Andorra, with its 175 square miles of territory, is lordly among Europe's really small fry. But in a Europe where frontiers, carefully contrived from every angle, ethnic, linguistic, strategic and economic alike, notably fail to survive the passage of even fifty years, it is especially puzzling to explain the survival as an independent entity of a State through which the main road from France to Spain is less than 32 miles long, whose inhabitants by no conceivable reckoning in of foreigners can be added up to more than 5,000 persons, and whose natives are Catalans, indistinguishable from the people who dwell in Spanish Catalonia. Catalan is the local speech, with French a poor second. Yet Andorra is a separate Republic—though owing allegiance, it is true, to two co-princes: the President of the French Republic, who exercises his authority from Perpignan, through the prefect for the Eastern Pyrenees; and the Spanish bishop of Seo d'Urgel, within whose diocese Andorra is itself only a single parish.

Historical accident alone can explain why neither of these potentates has seen fit to annex Andorra outright. It is true that the twin over-lords have not always been in agreement. Since 1930 there has been talk of the French co-suzerain's desire to assume all temporal power for himself, leaving to his ecclesiastical opposite number only the cure of souls. It has even been said in Spain, and in Andorra itself, that the "invasion" of 1933, carried out by French *gardes mobiles*, had some ulterior motive beyond the settlement of a dispute about the telephone service. To-day, the *gardes mobiles* are once more in control; but this time they have come at the invitation of the Bishop himself, as well as of the Andorran National Assembly, to provide protection against strategic surprises in the ebb and flow of the Spanish Civil War.

The symbols of this dual overlordship are two *viguers*, or bailiffs, one appointed by each co-prince. These important personages dispense justice among the Andorrans, but crime is happily rare. Indeed, there are only seven policemen—a workmanlike body dressed in corduroy and black berets and armed with revolvers, numbering only 0.14 per cent. of the population. Prison accommodation, too, is restricted. In Andorra itself it is limited to three cells on the ground floor of the Casa del Valls (the Parliament House), where criminals, when incarcerated, receive sympathetic visits and gifts of food and wine and other comforts, even enjoying the privilege, if married, of receiving their wives for one hour daily.

The Casa del Valls itself, where the rare prisoner lives thus at ease, marks the fact that, despite suzerains and their judicial emissaries, Andorra is still independent—in a sense. The National Council does not make Andorra's laws, and originally it constituted a Court to give judgment on problems relating to inheritance and the law of property. Now it deals with more weighty matters, such as

the granting of concessions to foreigners; for instance, the plea addressed some years ago to the people of Andorra by a Chicago millionaire, offering to purchase the right to be King of Andorra for some fabulous sum, came within its purview. It may be recalled that, although reared in perennial poverty, the counsellors very properly decided that the acceptance of this offer would constitute treason to their joint over-lords; to substitute a trinity of rulers for the present duopoly would invite untold complications as well as the world's ridicule.

Yet the Andorrans do not sit altogether easily under the actual control of outsiders. There is a party strongly in favour of full autonomy. Even anarchist doctrine has an appreciable following. And among less extreme reformers there is much support for a modification of the present system of election to the National Council. At present this body is composed solely of the heads of households—*caps de casa*. It is true that, after the age of seventy-five, veteran householders may resign in favour of their heirs, but this step is quite voluntary; and, in any case, the "Youth of Andorra," many of whom are fathers and even grand-fathers, are calling for a greater share in government. Five years ago an important concession was made, and adult male suffrage now exists for all over the age of 25. Before 1933 the right to vote as well as the right to sit in the Council was vested solely in the patriarchs.

If the most striking thing about Andorra is the bizarre and mediæval character of its political system, the country's most fundamental feature is poverty. It is a source of wonder to the casual visitor that the Andorrans manage to exist at all—until he learns that the income which it is possible to derive from contraband is not inconsiderable. In a few outstanding cases, the proceeds of this illicit traffic run into millions of francs, and smuggling is so well recognised as a source of income that the Andorran counsellors have sagely imposed a tax upon it. But, apart from smuggling, Andorra lives almost entirely on a restricted and unremunerative agriculture. Even on the Spanish border the country is over 3,000 feet above sea level and extremely rocky. Tobacco of poor quality is grown in small quantities, and the timber resources which exist have been too rapidly exploited for some decades. Deforestation is a serious source of anxiety to the authorities. There is a certain amount of pasture land, but a serious outbreak of foot-and-mouth disease has lately curtailed supplies of cheese and butter; and, indeed, butter is scarcely obtainable at all. In short, Andorra has nothing to export and cannot support herself on her own resources.

Industry is practically non-existent, but the chief Andorran waterway has been harnessed for profit. The river Valira, which flows from the pass of the Port d'Envalira on the French frontier through the whole length of the country into Spain, provides water power which, since 1934, has been exploited by a company, operating with French and Spanish capital, under the title of Forces Hydro-Electriques Andorranes Société Anonyme. This company supplies electric light to the valleys and, until the pressure of the Civil War caused the Spanish Government to cease payments, it also supplied electric light to Barcelona. Its establishment had one outstandingly important result: in return for the grant of the concession, the company constructed a main road from the French pass into Spain, and thus opened up Andorra from the French side. Although the road is blocked by snow for seven months in the year, it is possible in the remaining five to go by car to L'Hospitalet or Latour de Carol, both towns connected

by rail with Toulouse. Thus Andorra has now some chance of adding to her income by the receipts of a tourist traffic in the summer. The country may even develop winter sports, catering for those ski-ers who are sufficiently expert to ski over the pass—a height of 8,000 feet.

In the short run, however, the road has not been very helpful. It is the fact that the road to France is blocked in the winter that has made the Spanish civil war so serious a matter for Andorra. The Spanish frontier, across which supplies of all sorts, and especially food, were normally imported, has been closed since the outbreak of the war. Threatened invasion by the opposing armies in Spain has been made unlikely by the presence of the French police, but a daily invasion of refugees goes on; and these diminish still further resources that are already slender.

In fact, the Spanish war portends important changes in minute Andorra, no matter which side wins, when the

fighting ends. Orthodox public opinion, under the influence of the Prince Bishop, is for General Franco. But opposition to this view is not lacking, and in the absence of the Prince Bishop temporal power has heaped up in the hands of the French co-Prince. If General Franco is victorious, the bishop will have a tangled skein to unravel, and if the Spanish Government wins, the bishop's own position in Andorra may be a little precarious.

All in all, there is room for change in Andorra. The country is a museum piece and it needs spring cleaning. There is much poverty and not a little discontent. Its form of government is outmoded and anomalous. Its economy is primitive. But, whatever reforms are carried out, it is to be hoped that the introduction of modern civilisation and material progress will not be permitted to sweep away that priceless amenity, not enjoyed (it is believed) by the inhabitants of any other State in the world, namely the free dispatch and delivery of letters within the valley.

Topics of the Week

The Weather.—Those who like their Christmas with snow on the ground have had their wish this year—but they must be in a minority, at least in England, where the tradition of a white Christmas is so traditional that, when it arrives, it takes the community by surprise. The cold of the last few weeks has succeeded in establishing some new industrial records: the load on the national electricity grid reached 6,714,000 kilowatts, the highest figure ever recorded, on Tuesday, December 20th; and the output of gas in the week ended the 22nd was also the highest in the history of the industry, the biggest day's output being about 1,500 million cubic feet. For transport undertakings, the severe weather brought many difficulties and heavy financial burdens. The London Passenger Transport Board alone estimates that it lost over £100,000 in additional expenditure and reduced revenue. This sudden onset of low temperature has naturally revived interest in the probable duration of the long spell of warm weather, which has been our general experience over the past five years or so. That 1936, 1937 and 1938 have all been warmer than the average for the standard period 1881-1915 is clear from the chart on page 731. Actually, since 1932 three months out of every four have been warmer, whilst no whole year since 1922 has been more than fractionally colder than the average of the standard period. As between months, the readings of the last decade provide some comfort for those who like to take their holidays in August. In each of the years 1924 to 1928, July was the hottest month, but since 1929 July and August have been running neck and neck. August was notably the hottest month in 1936, 1937 and 1938. On the other hand, from the standpoint of sunshine, August comes off less well. Sunbathers should take their holidays in May, June or July. This year, the average number of hours of sunshine per day was actually highest in April at over six. For those who like dry weather, August is the worst of the summer months. On the average, April would appear to be the driest month—as it was this year—but there is great variation from year to year. Even December, usually the wettest month, was the driest in 1926 and 1933. During the last fifteen years March was more often the driest month than any other—though on the average it loses to April—while October, November and December have shared the honour of being most often the wettest. For the least sunshine, December wins nearly every time, and although, on the average of 1881-1915 January should be the wettest month, December has held this place most often since 1924.

Health in Schools.—In thirty-six years the nation's expenditure on social services has risen thirteenfold; between 1920 and 1936 it grew from £306,634,000 to £494,145,000. To-day is opportune for stocktaking, for recent improvements in the measurement of nutrition have

provided a yardstick to reckon the efficiency of public spending. An essential item in the programme of public provision for the people is the thirty-year-old School Medical Service, once more reviewed in the annual Report issued last week by the Chief Medical Officer to the Board of Education. The Report makes striking reading. Last March 2,671,056 children in England and Wales were receiving milk in schools; in twelve months from March, 1937, 1,696,527 children passed through routine medical examinations; and deaths due to infectious diseases have fallen to less than a fifth of what they were twenty-eight years ago. Of the children examined, just under 90 per cent. were reported to be in a state of normal or excellent nutrition, and fewer than 1 per cent. were put down as patently badly nourished. Yet the picture has another aspect: more than a quarter of the children in Pontypridd were subnormally nourished; over a fifth in Gateshead and Glamorganshire; and more than a sixth in Whitehaven and Jarrow. In the luckless Jarrow as many as 6 per cent. suffered from definitely bad nutrition. The key to the nation's nutrition is in the schools: allowing for variable, empirical and subjective standards in the clinical assessment of schoolchildren's nutrition, we may safely say that a perceptible part of the 73 per cent. registered as normally nourished stand precariously on the border-line; and it is now very well known that a gravely large section of the population does not receive, even in work, earnings large enough to cover bare family needs. The children need cheap and plentiful milk at home and in the holidays as well as at school; and, on the Chief Medical Officer's own showing, they need the public meals provided at school, the cheese, eggs, vegetables and fruit their normal diets lack, instead of the interminable stews and hashes actually given. Most important of all, if the necessary spending of our democracy is to be worth-while and wise, the nation needs surties that no child shall go without sufficient and suitable food. The needs of national defence are rightly in

A NEW YEAR SURVEY**

the forefront of public policy; but it is because butter is so much more important than guns that we are wholeheartedly willing to make guns as never before. It is our standard of living and way of life we are eager to protect.

* * *

France and Italy.—It became known on December 22nd that, in answer to an inquiry from the French Government, the Italian Government had replied that the Franco-Italian (Laval-Mussolini) Agreement of January 7, 1935, must now be regarded as null and void, and that it was therefore incumbent on the French Government to make fresh proposals, in lieu of the terms agreed in 1935, for implementing the London Agreement of 1915. Since then there have been rumours in Paris—deprecatd in Rome—of Italian troop concentrations on the borders of French Somaliland, and French naval and military reinforcements have been sent to Djibouti, the port in French Somaliland from which a French-owned railway runs up-country to Addis Ababa. The London Agreement of 1915 was concluded between Italy of the one part, and France, Great Britain and Russia of the other, and was the treaty in virtue of which Italy intervened in the World War. One article provided that if, in the peace settlement, France and Great Britain were to make territorial gains in Africa, they were to give Italy "equitable" (not "equal") compensation in the shape of African territory. This clause was rightly held to have been brought into operation through the acquisition under mandate, by Great Britain and France, of the former German colonies, and after the peace settlement both Powers accordingly made African cessions to Italy, in full sovereignty, of territories already under their own flag before the War. Great Britain ceded Jubaland, formerly part of Kenya Colony; France ceded some salients in the hinterland of Libya. Italy accepted the British cession as a full settlement of her claim, but not the French—and it is true that the Saharan territories ceded by France on that occasion consisted of "very light soil." In the 1935 Agreement Italy was to receive from France two further pieces of territory—another strip of the Sahara and a spot of Somali coast, as well as an island, fronting the Straits of Bab-el-Mandeb—together with some shares in the French-owned Djibouti Railway and a prolongation, till 1945, of the precarious status of the Italian residents in Tunisia. This 1935 Agreement was never ratified (sanctions supervening): but the railway shares were duly handed over, and in December, 1936, when Abyssinia had been conquered by Italy and the sanctions had been called off, Signor Mussolini said in public that "all African accounts had been settled to the last farthing." At the time unkind critics assumed that, while the French cessions and concessions of 1935 were not much more handsome than the first instalment, made soon after the War, Signor Mussolini nevertheless regarded himself as having now been adequately paid by France in Abyssinian coin, if not in French; and certainly M. Laval, on his side, represented to his own countrymen that his agreement with Signor Mussolini, combined with his complacency towards Italian aggression against Abyssinia, had indeed produced a final settlement of Franco-Italian accounts. It now appears that M. Laval compromised his country's honour for nothing. Signor Mussolini has discovered that there are at least two African farthings still due to him from the French. As one of these farthings is called Tunis and the other Djibouti, it seems that a farthing can be quite a valuable coin.

* * *

The Centre Succeeds in France.—M. Reynaud is proving that nothing succeeds like success. His Budget is through the Chamber without serious amendment—at one point, it is true, only by seven votes—and its passage through the Senate is virtually assured by his announcement of a new and important loan conversion. The returning flow of capital has swept beyond the mere professional operators to include a large number of timid souls whose money now returns to France for the first time in years. M. Reynaud's methods may not go un-

criticised even by comparatively unprejudiced politicians, his Budget may remain far from balanced; but these disadvantages are swallowed up by his enthusiasm and self-confidence. And that confidence is spreading outward in widening circles. The success of a small conversion in Amsterdam of Moroccan railway stock is now followed by the announcement that a group of foreign banks, Mendelssohn and Co., the Nederlandsche Handel-Maatschappij, the Crédit Suisse, and the Société des Banques Suisses have agreed to issue in Holland and Switzerland a French State loan paying 4 per cent., issued at 95 and redeemable in thirty years. All railway bonds with interest rates between 4½ per cent. and 6½ per cent. issued in Holland, Switzerland and the United States may now be converted or repaid. M. Reynaud pointed out that the sum involved was 175 million guilders (3,500 million francs, or about £20 millions), and although the saving to the Treasury would be only about 85 million francs, "the significance of the operation lay in its effects on French public credit." This air of confidence and forward-looking is in sharp contrast with that of the Socialists at their extraordinary Christmas Congress. Here all was doubt and confusion. The Congress turned on opposing resolutions sponsored by M. Blum and M. Faure, the one declaring for "resistance to the dictators," the other for "traditional Socialist pacifism." An effort at compromise failed, and with 1,014 absentees M. Blum received 4,322 votes and M. Faure 2,837. Inverted commas are needed to label these resolutions, for they were theoretical, long-winded and inconclusive. On the one hand M. Faure admitted that national independence must be defended, but said that "to fight Fascism it is not necessary to make war on a Fascist nation"; on the other, M. Blum wanted mutual assistance pacts, a strong France, etc.; and both ended by suggesting an international conference. The only real difference would seem to be in the degree of willingness to compromise with the established facts: M. Faure came out the purer Socialist, and M. Blum, though not by much, the abler politician. In any case, neither resolution can be thought to have had the slightest practical importance: the net effect of both of them is to emphasise the confusion of thought and aim which exists among the Socialists. It is a sad detraction from the bright picture presented by M. Reynaud that the largest political group in France should be so bare of political realism.

* * *

The Japanese Peace Kite.—On December 22nd the Japanese Prime Minister, Prince Konoe, published a statement of Japan's peace terms to China. There are four positive demands: first, China is to give diplomatic recognition to "Manchukuo"; second, she is to join the Anti-Comintern Pact; third, "as an anti-Communist measure" Japanese troops are to be stationed on Chinese soil for the duration of the agreement, and Inner Mongolia, in particular, is to be designated as an anti-Communist area (in which these Japanese troops are presumably to be stationed in force); fourth, Japanese subjects are to have freedom of residence and trade in the interior of China, with facilities—especially in Inner Mongolia and in Northern China—for the Japanese development of Chinese resources. It is in the light of these antecedent positive demands that we must interpret Prince Konoe's subsequent disclaimers: Japan seeks no cessions of territory, no war indemnity and no economic monopoly; she will not demand that China shall limit the interests of those third Powers "which grasp the meaning of the new East Asia and are willing to act accordingly; at the same time, out of respect for China's sovereignty, Japan is prepared to consider the abolition of extra-territoriality and the rendition of foreign concessions and settlements. On these verbally generous points in Japan's programme we may observe that Japan does not require to demand cessions of territory if anyway she may station her troops where she pleases in territory nominally remaining under Chinese sovereignty. Nor does she require to establish an economic monopoly in terms if Japanese business men are to be free to reside and trade where they please on Chinese soil, while other foreign men of business are confined, as at present, to residence in treaty ports, or

are perhaps even to lose all foothold whatsoever in China through the rendition of foreign concessions and settlements to a China who will herself be under Japan's thumb.

* * *

A statement rejecting the Japanese terms was made at Chungking by the Chinese official spokesman on December 24th, and the Japanese pill was so thinly sugared that Prince Konoe himself can hardly have expected the Chinese Government to swallow it at one gulp. His intention may, however, have been to conquer by dividing; for in 1937, at the time of the Japanese occupation of Nanking, there was reported to be a section of the Kuomintang which was in favour of making the best of a bad business and accepting any Japanese terms that gave China some chance of saving her face. Prince Konoe's announcement has promptly been followed by a journey on the part of Mr Wang Ching-Wei from Chungking to Hongkong via Indo-China. Mr Wang is perhaps the leading figure in the Kuomintang next to President Chiang himself; he and the President have sometimes been at variance in the past; and these facts in themselves would be enough to account for the rumour that Mr Wang's purpose is to negotiate for peace. No doubt, even if the rumour proved correct, it would not follow that Mr Wang could carry the Government and the Party with him. The President has once more declared for uncompromising resistance, and he must be heartened by Japan's increasing difficulties with other Powers. There are the American and British loans and the Burma road, on which we commented last week; and there is fresh trouble with Russia over the Japanese lease of the fisheries off the Siberian coast, which are one of the main sources of Japan's food supply. If President Chiang's watchword is "he that endureth to the end shall be saved," it may be difficult for Prince Konoe to prove that the text does not apply to China's present case.

* * *

New Offensive in Spain.—At dawn on December 23, General Franco attacked the Catalonian hills on a 55-mile wide front. After six days of continuous fighting, during which he claims to have taken 5,000 prisoners, caused heavy casualties, and advanced over an average distance of 12½ miles, his troops are in possession of two deep salients in the Republican line. The first and more northerly of these salients is based on a line between Tremp and the Segre River, and the second on an offensive aimed at the Granadella and thence at the coast near Tarragona. The battle opened after a short sunrise bombardment and a general infantry advance accompanied by air bombing of Republican communications, the Ebro heights having apparently taught General Franco that prepared positions cannot be shelled out of existence. The course of the battle is obscured by the usual cloud of reports and exhortations: the Republican lines appear to have held along the greater part of the front and to be reformed behind the two main points of entry. Since an initial success in trench warfare proves very little, the crux of the battle will probably turn on the Republican capacity, or lack of it, to develop a counter-offensive as soon as the insurgents have spent their force. They are holding extremely strong positions, and if General Franco cannot break through this line both sides know that he is not likely to succeed for a long time to come; it may even be that the Republicans are congratulating themselves on being attacked in Catalonia and not in the southern provinces, for it was a successful insurgent push towards Valencia which had to be abandoned last summer to cope with the Ebro side-show. Political factors have presumably influenced General Franco's choice of objective; and that choice, as well as the scale of the operations, leaves no doubt that this is the threatened "big push" which is to take him to Barcelona before the winter is out. He is throwing into it all his resources, including six army corps, four Italian divisions, and with them his hope of belligerent rights, and, not least, his own credit as a general. Whether he succeeds or not—and at present there are no secure grounds for predicting

success—this may be General Franco's last attempt to subdue the whole of Spain and win a "totalitarian" victory.

Guaranteed Prices for Agriculture.—No Government in the last hundred years has done so much for British agriculture as the present National Government, and yet political discontent among the agricultural community has grown apace in the last few months. That the Government's agricultural policy has been haphazard and not always well considered is undeniable, but that is not the chief criticism of the farmers and their representatives. Having tasted a few of the sweets of tariffs and subsidies, the leaders of farming opinion are now pressing for financial assistance to agriculture on a large scale, while rejecting such feeble attempts as the Government has made, notably in the ill-fated Milk Bill, to reorganise the industry in the community's interest. The National Farmers' Union recently put forward proposals for a system of guaranteed minimum prices to protect agriculture from the worst effect of a future slump. The Conservative Agricultural Committee have now gone one better and have sent to the Prime Minister and to the Minister of Agriculture a recommendation for standard prices for all agricultural produce at a level which "will cover the average costs of efficient production." If agriculture is indeed to become a poor relation and to subsist on public charity, some such system of minimum prices, subsidised by the State, would be preferable to the present mixture of import quotas, tariffs and State grants. But the danger is that farmers, backed by the political pressure from the Conservative Agricultural Committee, will use the resources of the State to run agriculture to their own profit, and will continue to ignore the demand of the urban consumers for more and cheaper milk and less of the expensive British sugar. The Minister of Agriculture has promised to spend the recess in deep thought on the plight of British agriculture. After his recent experiences, it is only too likely that his thoughts will be directed to the placation of the farmers rather than to the development of policy in the interests of the country as a whole. In such an urban nation as this, exaggerated demands from the farmers will inevitably be followed, sometime, by a severe reaction from the urban consumer. But that time is apparently not yet. The tide of agricultural protectionism is still rising.

Ulster Transport: the Next Step.—The Northern Irish Government have virtually accepted responsibility for the failure of the Northern Ireland Road Transport Board, as revealed by the reports of the two investigating committees. They have decided to act quickly, and a Bill to curb evasions of the 1935 Act was hurried through both

Houses of Parliament in the space of four days before Christmas, while a Joint Committee of the Ulster Senate and the House of Commons has been set up to study the reports of the McLintock Committee and the Recorder of Belfast. This Act is designed primarily to prevent illegal competition with the Transport Board, by ensuring that persons whose undertakings have been acquired shall not use the compensation money to enter into fresh competition in another way. A special register of goods vehicles is being prepared, and traders holding goods vehicle licences are required to give particulars of the trade or business carried on and the nature and extent to which their vehicles are used. It seems pertinent to ask why this elementary precaution should have been overlooked in the original scheme. The Act also sets a time limit to the period during which owners of transport undertakings not yet acquired by the Board can make good their claims to have them taken over. The long-term policy of the Government must wait on the findings of the Joint Committee, and although the Government is anxious that it should lose no time in getting to work, it is thought that many months will elapse before the Committee has completed its task. The choice before Northern Ireland is ominously clear. Either the policy of transport co-ordination will have to be pursued to its logical end of a public board owning and operating all forms of commercial transport, or else there will have to be a reversion to complete *laissez-faire*, which would probably turn out to be, in another French idiom, *sauf qui peut*.

Central European Communications.—A study of new frontiers drawn in Central Europe since the *Anschluss* of Germany with Austria impresses by the change made in transport facilities. When new roads and canals already in blue-print are matters of fact the movement of goods and passengers from the Baltic to the Black Sea, now that Czecho-Slovakia is within the German orbit, will be unified to an extent unrealisable even under the "Second" Reich and the Dual Empire. With last month's completion of the Midland Canal joining the rivers Ems and Weser and their North Sea ports with Hanover, Magdeburg, Berlin and Stettin, the Reich commands an integrated

system of waterways which embraces the whole north German plain and stretches by means of the Elbe and the Oder into Bohemia and Silesia. In 1945 the final stretch (Bamberg to the Danube) of the Rhine-Main-Danube canal will be opened; and if General Goering's plans are fulfilled Vienna by that time will be a "Hamburg of the South," a great port equipped with massive storage and docking facilities, its commerce protected by a flotilla of river gunboats, its waterways serving the North Sea, the Baltic (via the projected Danube-Oder canal across Moravia), the Balkans, and the Black Sea. Whilst Germany has gained greatly, Czecho-Slovakia has lost correspondingly much. Most important of her losses is the railway junction of Bohumin, which has passed into Polish hands. Any doubt of its value was laid to rest when the Poles, evidently fearing that the Reichswehr might get there first, marched in from Teschen two days before schedule. As a railway junction its key position is brought out on our map, and if the Poles mean to carry through their plans for a new industrial centre in Galicia that position will obviously be again enhanced in value; but Bohumin has also another claim to importance. The projected Danube-Oder canal must run up the valley of the March to Prerau and thence, as we show, down the valley of the Oder until, near Moravska Ostrava, the river becomes navigable. The original plans were evolved in 1901, and included two other canals, which are also shown on the map, from the Elbe to the Oder and from Brno to the Oder; but unless the Reich is prepared to see its strings of barges pass through Polish territory at Bohumin, the canal line will have to be re-drawn across the western half of the valley until it regains the river at Ratibor. The plans for the other two canals are likely to go back to their pigeon-holes; the heavy industries of Brno, for instance, may no longer be in a position to manufacture a sufficient quantity of goods to warrant better transport facilities. The development of road communications shows a similar movement towards unity on a Central European scale. A few days ago Herr Hitler opened the three-thousandth kilometer of *autobahn*; and when projected roads are built, and notably the *autobahn* across Moravia between Breslau and Vienna, a network of first-class roads will exist where before were virtually no long-distance roads of any kind.

COMMUNICATIONS IN CENTRAL EUROPE

Poland and Her Neighbours.—The rulers of Poland continue to pile weights on the Russian end of their political scales. Setting aside the rumours of an even closer Polish-Soviet *rapprochement* than that reached in November, the trade talks now in progress at Moscow emphasise the importance which the Polish Government attaches to maintaining its balance against the German eastward push. Early reports speak optimistically of a very large increase in mutual trade, possibly by as much as 130 million zlotys. In the first ten months of 1938 Polish imports from the U.S.S.R. were valued at 9,000,000 zlotys and exports to the U.S.S.R. at 1,300,000 zlotys, compared respectively with 12,000,000 zlotys and 4,000,000 zlotys in 1937. The Poles presumably wish to find an outlet for their newly-acquired Teschen production, which is proving an embarrassing jewel in the national crown: but it is clear that any increase of trade will be made for political rather than economic reasons. The move towards Russia has been accompanied by sharp notes to Germany's protégé Czecho-Slovakia which serve to conceal the harsh treatment of the Czech minority in Teschen, whose protection vanished when Poland denounced the Minority Treaty with Prague which, in the days when there was a Polish minority in Czecho-Slovakia, she was glad to have. It would be very rash, however, to assume that Poland is in process of turning to the Left either in domestic or in external policies. The Government is in the saddle; and there is no doubt that Colonel Beck would far rather come to terms with Berlin than with Moscow. The question is whether he can. As was expected, the Ukrainian provincial autonomy bill went no further in the Sejm than the Speaker's table: in view of Ukrainian unrest, charges of bloody persecution by Ukrainians against Polish gendarmerie, the German opinion that there are ten million Ukrainians in Poland, and the magic significance which the word "Ukraine" is rapidly gaining all over Europe, this intransigence is intelligible. Armies and gendarmerie apart, Polish national unity is not quite complete; and striking evidence of this appeared in the recent municipal elections, at which *Ozon*, the National Unity Party, lost ground to the Opposition parties only a few weeks after the Parliamentary elections had seemed to show the reverse. The difference was that these municipal elections were held under more liberal electoral procedure; and the inference is scarcely favourable to the heirs of Pilsudski.

Balkan Changes.—Another "national unity" movement which is not all it would seem to be at first sight is that of King Carol's one-party political system, introduced into Roumania two weeks ago. Superficially, the new single party, formed on what the Italians claim to be "corporate lines," has strong backing, but in fact it does not count any of the influential Bratianu party or politicians such as M. Maniu; and even Professor Jorga, a member of the Crown Council, thought it wise (and found it possible) to publish a newspaper article condemning the new system. M. Petrescu-Comnen has been sent to the Vatican, and M. Grigore Gafencu follows him at the Foreign Ministry. Yugoslavia, too, has changed governments after the general election of December 10th. Dr Stoyadinovitch remains at the head of a new Cabinet; and the only important alteration is the appointment of M. Atchimovitch in place of Father Koroshetz as Minister of the Interior. The Slovene leader resigned "for reasons of health," and to keep the Slovenes happy another of their number, M. Snoya, enters the Cabinet as Minister without Portfolio. But by and large these political changes alter nothing; all the governments of Eastern and South-eastern Europe are pirouetting while they wait for Germany's next move.

Canadian-American Trade Agreement.—The text of the Trade Agreement concluded by the Canadian and American Governments simultaneously with the British-American Trade Agreement on November 17th has now been published in this country. The British-American Agreement was facilitated, it will be remembered, by

Canada's consent to the modification or abrogation of her preferential margin in the British market on a number of articles (wheat, apples, pears, honey, chilled or frozen salmon and patent leather). In return, Great Britain agreed to waive certain of her preferences in the Canadian market. The following table gives details of what has been done in the Canadian-American Agreement with respect to these commodities. The columns of "old" and "new" rates of duty relate to the duty levied by Canada on American goods before and after the new Agreement.

ITEMS ON WHICH THE U. K. GOVERNMENT AGREED TO WAIVE THEIR RIGHTS UNDER THE U. K.-CANADA TRADE AGREEMENT OF 1937

Commodity	Rate of Duty		Canadian Imports 1936 (\$000's omitted)		
	Old	New	Total	U.S.A.	U.K.
Bicarbonate of soda	25%	12½%	198	145	52
Bichromate of soda, sulphite and chlorate of soda	20%	12½%	178	146	11
Sheets, plates, hoop, band or strip (iron or steel) coated with tin, n.o.p.	20%	17½%	980	18.8	960
Do. do. coated with zinc, n.o.p.	20%	17½%	938	279	596
Sheets, plates, hoop, etc., of rust, acid or heat resisting steels, at no less than 5c. per lb.	20%	17½%	340	146	194
Sheets, plates, etc., imported for use in the manufacture of sheets, etc.	20%	17½%	499	2	496
Tyres of steel, rough, not drilled for railway vehicles	10%	7½%	502	163	339
Ball and roller bearings	25%	17½%	875	587	115
Motor cycles, or side cars and parts	20%	17½%	280	179	98
Diesel engines and parts	25%	20%	1,391	564	690
Trawls, fly hooks, etc., for fishing	25%	20%	255	129	123
Complete parts of aircraft	25%	15%	945	517	426

The British industry that will be chiefly affected is the steel industry. The Agreement contains much more than these grants to the United States of part of the previous British preference. The two schedules of concessions are of a length second only to that of the schedule of the British-American Agreement. Of the Canadian concessions to the United States, the most important are the stabilisation of existing duties (or free entry) on motor-cars, coal, petroleum and raw cotton. Some of the more important reductions in duty are on steel rolling mill products, electrical apparatus and agricultural machinery. Most of the items are small. The American concessions to Canada include the maintenance of free entry for newsprint and chemical wood-pulp (an item of importance in view of the development of newsprint production in the South-eastern States) and the conventionalisation of the duty on whisky. The duty on nickel is reduced from 3 to 2½ cents a lb. Both sets of concessions are, of course, generalised through the operation of the most-favoured-nation clause. But, in fact, they have mainly been chosen from the long list of commodities which Canada imports only from the United States, or the United States from Canada. The reduction in the American duty on aluminium may benefit the small British trade in this item. This Agreement completes the British-Canadian-American triangle. Taken together, the agreements probably constitute the largest operation in trade liberalisation that has ever been undertaken.

A Successful Conversion

PARIS, December 29.—Six weeks after the decree-laws were passed, the Minister of Finance announces the issue through a group of Dutch and Swiss banks of a French loan of 175 million florins, at 4 per cent. redeemable in 30 years, the produce of which will be used for the conversion and reimbursement of practically the whole of the external debt of the French Railways, including Nord 6½ per cent. 1924 in dollars; P.O. 6 per cent. 1927 in florins; P.O. 5½ per cent. 1928 in dollars; P.O. 5 per cent. 1928 in florins; P.O. 5 per cent. 1930 in Swiss francs; P.L.M. 4½ per cent. 1932 in florins and Swiss francs; Alsace-Lorraine 5 per cent. 1929 in florins; Alsace-Lorraine 4½ per cent. 1932 in florins and Swiss francs.

This operation will save in the next Budget a sum of about 85 million francs, and the lowering of the rate of interest will also open the way to an increase of production.

The Senate is now examining the Budget which was passed in the Chamber by 341 votes against 217. The Budget shows an expenditure of 66,000 million francs against a national revenue of 250,000 millions. The report to the Finance Committee of the Senate points out that although economies are possible, the true solution is in an increased revenue.

What of the political atmosphere? The decree-laws were voted by a majority of only seven. Though this is very small, the significance must not be misinterpreted. The authoritative policy of M. Daladier may be approved by the country, but when sacrifices are demanded, the difficulties begin. At this point 26 Radical-Socialists added their votes to those of the Socialists and Communists against the President of their own party. If there was in Parliament no majority to overthrow the Prime Minister, it was because members knew that no alternative to him now exists. The Communists are out of court for their bellicosity of last September; the Socialists and Trade Unionists for the fiasco of the general strike of November 30th, besides which, it is to be remembered that the trade unions have lost half of their members since the peak-point of 1936. The Radical-Socialists are split in two: though it should be added that the leftist section has no confidence in the Socialists, who were unable to conclude their extraordinary Christmas congress with a unanimous motion. In brief, the dangers abroad, internal party dissensions, and the support of the Senate—which might give M. Daladier the 225 votes necessary for a dissolution—are strong factors in the Cabinet's favour, and its main legislation will probably pass with a narrow but faithful majority. And good financial news may well calm the flutter which events abroad might otherwise provoke in business circles.

Low Private Issues

Disharding, a return of expatriated capital, moderate inflation and possibly the aid of foreign capital will help to improve industrial production. That ten years of losses on markets at home and abroad, of devaluations and high taxation, have seriously affected French savings, is shown by the following table:

	Old Companies		New Companies		Average Rate of Debitures Per cent.
	Stocks	Debitures	Stocks	Total	
1913	47	96	76	220	5.36
1929	610	531	83	1,224	5.67
1935	65	155	11	231	6.34
1936	42	48	4	94	6.68
1937	100	193	3	296	7.30
1938 to Nov.	12	...	3	15	...

This apathy in private issues results from a lack of confidence after various political and social troubles, but also from a contraction of personal property which accompanied

the fall of the franc. The 3 per cent. Rente is now at its highest level since the war, but it represents only 9 francs at the 1914 value. And after the strong rise on the Stock Exchange, which has taken place since M. Daladier came into power, the index of stocks is still very low.

STOCK EXCHANGE INDEX (1913=100)

	June, 1935	December, 1935	June, 1938	December, 1938
Coal mines	166	165	151	177
Iron and steel	62	61	85	97
Alimentation	472	439	398	359
Stores	83	89	65	78
Chemical industries	181	176	276	312
General index	192	180	213	246

Production Increasing

A stable Government, the help of foreign markets in converting public funds, a steady recovery of industrial production by means of new capital investments: such are the lines along which French prosperity may be regained. And if a comparison is made between the beginning and at the end of 1938, M. Reynaud may, with justice, say that serious progress has already been made.

METALLURGICAL PRODUCTION IN NOVEMBER

	(tons)		
	November, 1937	October, 1938	November, 1938
Iron	688,000	493,000	518,000
Steel	673,000	511,000	538,000
Iron ore	3,471,000	2,655,000	2,678,000

French coal mines in November produced 4,290,535 tons in 22.5 working days (with two supplementary days), against 4,335,332 tons in October (23.6 working days) and 4,165,452 tons in November, 1937 (22.8 working days). Thus, the average daily production was 190,013 tons, against 183,869 tons in October, 1938, and 182,394 tons in November, 1937. The number of men employed was 248,405 at the end of November, against 250,316 in October and 248,671 in September, 1938.

The production of coke at coal mines was 367,181 tons in November, against 373,074 tons in October, and 372,390 tons in November, 1937.

For the week ending December 17th, unemployment stood at 379,114 against 371,920 in the preceding week and 351,129 a year ago.

The Bank of France has announced a dividend for the second half of 1938 of 160 francs, or 320 francs for the whole year, against 285 francs in 1937, 250 francs in 1936, and 244.31 francs in 1935.

Italy

The Farmer's Year

TURIN, December 20.—With the end of the year in sight, one is better able to assess Italy's general economic trend. Only basic production factors will be considered in this letter; and by far the best of these is that of agriculture. Contrary to widespread impressions and even to official prophecies earlier on, the wheat yield was a record at 8.1 million tons, against 8.06 millions in 1937, 6.1 millions in 1936, and 7.6 millions in 1935. The increase was reaped in Central Italy (1.53 million tons in 1938, against 1.48 in 1937), in Southern Italy (1.97 millions, against 1.84 millions), and in the Isles (1.36 millions, against 1.22 millions); whilst in the North of Italy the yield fell from 3.51 million tons to 3.23 million tons, this fall being due to a smaller acreage

sown (1,426,677 hectares, as against 1,523,943 hectares), and to poor sowing conditions in the plains in autumn, 1937. In not a few hill districts, even in the North of Italy, there were old men who could not remember so plentiful a year. As the price was raised from about 1,150 lire to 1,400 lire per ton for soft wheat, agriculturists had reason to rejoice over the financial results of the year, even if the spring drought obliged them to sell a part of their cattle at declining prices.

Later rains and the present good weather may keep the total harvest at the level reached in spring, 1938. For lesser cereals yields were variable (in thousand tons): rye, 112.7 in 1938, against 120.3 in 1937 and 145.8 in 1936; barley, 247.7, against 233.3 and 254.8; oats, 629.1, against 619.7 and 596.9; spring maize, 2,743.5 (estimate), against 3,059.2 and 2,727.6; rice, 686.5 (estimate), against 740.2 and 733.6. Hemp yielded 108.6 thousand tons, against 108.4 thousand tons and 87.3 thousand tons; linen (fibre), 3.6 thousand tons, against 2.8 thousand tons and 3.2 thousand tons; raisins, 5,832.4 thousand tons (estimate), against 5,514.2 thousand tons and 5,518.7 thousand tons.

The increase of fertilisers has probably played a notable part in these improved results; 1,364.1 thousand tons of per-phosphates were consumed in the agricultural year 1937-38, against 1,358.6 thousand tons in 1936-37; 209.7 thousand tons of sulphate of ammonia, against 190.6 thousand tons; 218.6 thousand tons of calcium cyanamide, against 181.5 thousand tons; 41.7 thousand tons of nitrate of ammonia, against 16.1 thousand tons; 124.0 thousand tons of nitrate of calcium, against 111.1 thousand tons; 43.1 thousand tons of potassic salts, against 31.3 thousand tons. The only noticeable decrease refers to nitrate of sodium; 59.1 thousand tons in 1937-38, against 89.0 thousand tons in 1936-37 and 83.6 thousand tons in 1935-36. But nitrate of sodium has to be imported.

Industrial Production

Indices of industrial production are mixed (basis 1928 = 100):—

	Average Monthly Indices			1937		1938		
	1935	1936	1937	July *	Sept. †	Mar. †	Aug. *	Sept.
Textiles	76.8	70.1	83.7	48.9	98.9	104.2	45.7	76.2
Iron and steel ...	112.2	106.0	114.1	124.6	121.9	120.3	130.8	134.3
Engineering	101.9	120.0	131.8	134.2	132.2	134.9	131.0	136.1
Paper	139.7	123.2	150.0	166.6	156.6	143.6	125.8	142.4
Building	162.3	91.9	95.9	102.0	99.8	82.6	95.0	98.1
Electricity, gas, etc.	135.8	140.5	154.6	157.9	169.6	147.9	162.1	169.5
Minerals, etc.	98.9	110.3	127.8	138.0	134.9	133.0	136.4	141.7
Chemicals	99.6	107.4	133.2	129.9	148.4	136.0	114.9	138.1
General Index ...	102.4	95.5	108.7	93.8	117.7	114.7	88.9	108.6

* General index at lowest of year. † General index at highest of year.

As in other countries there is noticeable in 1938 some slackening of industrial production. The 1938 bottom (August) is lower than in July, 1937; and the highest point

ITALY'S TRADE BALANCE

reached (March) is lower than the 1937 maximum (September). But the recession has not shown the same potency in

all industries. Most affected was the textile group, where even rayon's index fell from 457.6 in September, 1937, to 350.0 in 1938. Growing difficulty in obtaining raw materials is said in industrial circles to have caused the diminished activity, but it is felt that the search for substitutes may produce results before long. Important men in this as in other industries which aim at autarky say, in effect: "We are now in the first stage of the process, and must deal with quality and with costs; in the second stage, which we are nearing, we shall deal only with costs; and in the third stage we shall be able to offer better quality and lower prices. Then the consuming public will be conquered. Only results will tell if we shall be successful with all industries." To-day it can only be said that the best brains in industry are making strenuous efforts to discover new methods and new products.

The Terms of Trade

For the first time in many years the deficit in foreign trade was reduced in October almost to vanishing point (in million lire, exclusive of trade with the colonies and East Africa):—

	1937			1938		
	Imports	Exports	Deficit	Imports	Exports	Deficit
January	890	516	374	1,113	609	504
February	905	590	315	982	649	333
March	1,064	596	468	996	649	347
April	1,228	687	541	917	645	272
May	1,327	603	724	870	596	274
June	1,536	787	749	1,071	744	327
July	1,076	554	522	859	592	267
August	1,091	714	377	774	618	156
September	1,029	673	356	743	633	110
October	1,094	705	389	755	747	8

While the monthly deficit rose in 1937 to 749 million lire and was never less than 315 million lire, in 1938 it fell continuously until in the last quarter it rapidly sank to the insignificant figure of 8 million lire. This result was mainly achieved by reducing imports. In some cases the bounty of nature was responsible. Thus wheat imports in 1938 were only 24,632 tons, against 164,789 tons in 1937, and maize imports 4,302 tons, against 11,762 tons. In other cases there was a change-over from foreign to national sources. Thus imports of oleaginous seeds decreased during the same ten months from 335,066 tons in 1937 to 155,664 tons in 1938. Again, lower prices made it occasionally possible to maintain or even increase quantities imported at a lower total cost (in thousands of tons and million lire):—

	Changes in	
	Quantity	Price
Cotton, raw	+ 2.1	— 164.4
Scrap iron	+ 387.8	— 32.0
Copper	— 0.1	— 74.7
Nickel	+ 516.8	+ 2.2
Tin	+ 771.8	+ 2.4

On the export side, good prices were obtained for fresh fruits and horticultural products. For instance:—

	Changes in	
	Quantity	Price
Vegetables, fresh	+ 2.2	+ 27.3
Oranges and mandarines	+ 2.8	+ 18.1
Lemons	+ 11.0	+ 21.8
Fruits, fresh	+ 15.8	+ 62.4
Flowers, fresh	+ 0.2	+ 4.2

It seems that constant efforts are bringing deserved rewards to these enterprising farmers. In other directions it was necessary to bring some pressure on prices to find markets. For instance, exports of rayon and other artificial fibres decreased from 38,538 tons in 1937 to 31,848 tons in 1938 (first ten months), or by 17.4 per cent.; but their value fell from 488.8 million lire to 398 million lire, or by 18.5 per cent. The number of motor cars exported decreased from 29,281 to 17,048, or by 42 per cent.; but their value fell from 570.9 million lire to 213 million lire, or by 63 per cent.

A complete and exact index of the general change in the terms of trade does not exist. But if the calculation of the Confederation of Industry, which includes trade with the colonies and East Africa, can be taken as representative of the special trade with foreign countries, it appears that while the index of import prices decreased from 71.3 in the third quarter of 1937 to 62.0 in the corresponding quarter of 1938, the index of export prices increased from 46.9 to 47.7.

It is too early to draw conclusions from so short a period; future development in the present trend of regulated foreign trade will tell if this favourable reversal of the general terms of trade will become permanent.

Canada

Provincial Problems

OTTAWA, December 12.—The Royal Commission on Dominion-Provincial relations, whose Chairman, Chief Justice Rowell, has now definitely resigned owing to ill-health has been engaged in holding its final series of public hearings at Ottawa. The representatives of various Provinces have come forward to advance new arguments for more generous treatment. But the Governments of Ontario, Quebec and Alberta are continuing their boycott of the Commission. Mr. Aberhart, Premier of Alberta, has, however, been in Ottawa seeking the assistance of the Federal Government for re-undoing operations. In an interview, he discussed the question of a pipe line through the Rocky Mountains to bring the oil of the Southern Alberta field, which cannot now be disposed of locally, to the Pacific Coast. He declared that, as far as his Government was concerned, the British Government could have first call upon Alberta's oil but that, if the projected pipe line was built by private capital, the Provincial Governments through whose territory it was built (and not the Federal Government) should control it and share the profits.

The Canadian Pacific Railway, realising that the opposition of the railway workers' unions was a serious obstacle to the consummation of a merger of the country's two railway systems, has now induced the leaders of the unions to confer with C.P.R. officials to examine certain proposals designed to remove fears about a possible curtailment of railway employment as a result of fusion. It is now expected that friends of the C.P.R. will induce the Senate to resume its investigation of the railway problem.

More Business

Winter has now descended upon Canada and the whole country is covered with a blanket of snow. The Bureau's index for the physical volume of business during October was 118.6, compared with 127.4 for October, 1937, a decline of 6.1 per cent., and slightly below the figure for September, 1938. The weekly economic index of the Bureau continues to fluctuate as the recent data given below show:—

Week Ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Nov. 20, 1937	72.6	83.5	90.6	105.1
Nov. 5, 1938	72.3	73.6	93.4	108.2
Nov. 12, 1938	68.4	73.5	87.0	106.5
Nov. 19, 1938	69.1	73.6	93.7	108.4

Thus the index in mid-November was higher than at the corresponding date in 1937. The adjustment of business to winter conditions has now been accomplished and there is general relief at the removal of the atmosphere of uncertainty created by the delay in completing the trade negotiations at Washington. The business community is busy trying to adapt its plans to the agreed tariff changes and, until this process is accomplished, no great further improvement can be anticipated.

The delicate international situation is another disturbing factor; it militates against any appreciable expansion of exports, which are an important factor for Canadian prosperity. But internal purchasing power remains high and merchants are making preparations for as large a Christmas trade as a year ago. Dealers in motor cars also report that the prospective demand for new cars is at least 25 per cent. greater than a year ago and motor manufacturing plants are increasing their output.

Active Mining and Building

The mining industry still remains one of the stoutest bulwarks of the national economy.

	EXPORTS		
	Copper Cwts.	Nickel Cwts.	Zinc Cwts.
October, 1937	384,925	159,437	304,708
September, 1938	495,083	190,850	238,853
October, 1938	481,881	185,838	288,190

In October the production of newsprint was 254,872 tons, compared with 231,940 tons in September and still far below the output of 314,554 tons in October, 1937. In October last exports of planks and boards amounted to 144,296,000 board feet, compared with 139,448,000 feet in September.

Building construction is being surprisingly well maintained and the value of new contracts placed in November was \$15,019,700, compared with \$14,716,300 in November last year. For the first 11 months of the year the total value of

contracts placed was \$176½ millions, compared with \$213½ millions in 11 months of the preceding year.

The latest employment bulletin of the Bureau of Statistics reveals a considerable contraction of employment in October; during the month the number of people on reported payrolls fell from 1,120,068 to 1,100,263, and the decline exceeded the average for October in recent years. On November 1st the Bureau's employment index stood at 114.6, compared with 116.7 on November 1st and 125.2 and 111.0 on November 1st in 1937 and 1936, respectively.

Poland

Critical Voices

WARSAW, December 15.—An exceedingly impassioned speech was delivered at the opening of the session by Dr Vasile Mudryj, leader of the Ukrainian Parliamentary group from Eastern Galicia. In language never before used by a Ukrainian on the floor of the Polish Sejm, Dr Mudryj denounced the treatment of the Ukrainian minority (of about 5,000,000) in Eastern Galicia, and renewed the demand, first made in subdued tones in 1935, for regional autonomy for the Ukrainians.

Stern measures, the extent of which is not yet known, were undertaken some weeks ago by the authorities in Eastern Galicia to suppress Ukrainian separatist activity, an activity which appears to be deriving much moral encouragement from the so-called Autonomous State of Carpatho-Ukraine on the other side of the Carpathians. One of the measures adopted, it is understood, was to intensify the work of "Polonisation" in the Eastern districts.

One of the first consequences of the Polish-German Agreements concluded early in 1934 was to check the open and active support by Germany of Ukrainian revolutionary movements like the one led by Colonel Eugene Konowalec, who was the victim a few months ago of a bomb "accident" in Holland. While accepting German support, Ukrainian hopes of "liberation" were encouraged by what at times seemed a likely prospect of a Polish-German assault on the Soviet Union. Recent developments in Carpatho-Ukraine indicate that German influence is now very active there, while the Polish-Soviet declaration of November 26th seems definitely to rule out any possibility of joint Polish-German action against the Soviet Union.

The situation has thus changed completely since the Czecho-Slovak crisis. It should have been foreseen in Warsaw that a Czecho-Slovakia detached from Soviet Russia and thrown into the lap of Germany would raise a hornet's nest—both for Poland and Russia—in the Ukraine. The common frontier with Hungary on which Poland gambled, even if it had been realised, would have been a very doubtful barrier to German expansionist activity in Eastern Europe. Poland, it seems, had not fully understood the internal weakness of Hungary; but there are no illusions here about the internal weakness of the Soviets.

Trade with Germany

In the first ten months of this year imports were valued at 1,082 million zlotys and exports at 946 millions, compared with 1,036 millions and 976 millions, respectively, in the corresponding period of 1937. Trade with principal countries was as follows:—

	JANUARY TO OCTOBER (Ten months) (In millions of zlotys)			
	1937	1938	1937	1938
	Imports	Exports	Imports	Exports
Greater Germany	from 195	to 177	from 247	to 215*
United Kingdom	126	180	122	188
United States	121	86	138	52†
France	34	42	38	38
Belgium	46	58	45	40
Sweden	31	62	37	58
Soviet Russia	12	4	9	1

* The excess of imports over exports probably represents payment by Germany in goods for railway transit charges across Pomerania.

† The import surplus in trade with the United States is largely, if not entirely, off-set by emigrant remittances.

Since the "normalisation of relations" in 1934 the value of Poland's imports from Germany (including Austria) has risen from 165 million zlotys in 1935, 188 millions in 1936, and 240 millions in 1937, to about 300 millions in 1938—with a further substantial increase indicated for next year as the result of recent new agreements.

The latest agreement is one between the Upper Silesian engineering combine known as *Wspolnota Interesow* and a German group of motor manufacturers for the assembly and distribution of motor vehicles in Poland. Assembly operations are expected to begin early in 1939, and, with Poland having only about 35,000 motor vehicles in use for a population of 35,000,000—the lowest *per capita* figure in Europe—the possibilities for trade expansion in this field are clearly considerable, the more so as Germany provides an almost unlimited market for agricultural exports from Poland. Whatever happens in the political field, it seems inevitable that Poland will grow economically more and more dependent on Germany.

It is hoped, however, that the Polish-Soviet Agreement of November 26th will lead to an improvement in trade between the two countries. Actually, Polish-Soviet trade has now almost ceased, but efforts are to be made to find a market in Russia for some of the metallurgical output of the Teschen-Silesia district, thereby relieving the economic problem which has arisen there since the annexation of the territory.

Lithuania

Good Harvests

KOVNO, December 12.—Although this year's general economic position is not as good as that of 1937, there is no marked falling-away. This is chiefly because of the excellent harvest. Total wheat crop for this year is estimated by the Bank of Lithuania at 1.6 million metric tons, against 1.36 million in 1937; flour is up from 39,000 to 40,300 tons, and linen fibre from 33,900 to 35,900; while general quality has also improved. With foodstuffs more plentiful, last year's scarcity may be said to have disappeared, and this is partly through increased production of fats. A mid-year figure showed 1,164,000 cattle, 1,186,000 pigs, and 1,241,000 sheep.

All districts report increased milk production; and plans for a greater egg production are well advanced. Peasant purchasing power is stronger, but prices, on the other hand, have revealed unfavourable tendencies. Agricultural wages have risen, while prices for a number of products (wheat, flax, hides) have fallen. Improved purchasing power has meant a brisk demand for agricultural machinery and capital goods. Imports of artificial manure in the first eight months of 1938 reached a high point of 100,000 metric tons.

Improved Foreign Trade

Industry has felt the influence of governmental and communal building plans. The propaganda for using stone instead of wood is having results witnessed to by the good business being done in bricks and by increased cement imports. The foundation of a large State building concern is in preparation.

With home and foreign markets weak, the timber industry has gone back; and in the Memelland the cellulose and veneer industries have lost from ten to fifteen per cent. of their trade. The number of industrial concerns employing more than five workers has grown from 1,247 last year to 1,441, and the number of workers from 36,593 to 40,818. The sugar-refineries have produced during the year 1,900 metric tons of sugar from 134,000 of beet. Following the dissolution of the tobacco syndicate the tobacco-producers' union is planning the erection of a modern tobacco factory for the marketing of home-grown tobacco.

This year's foreign trade is good. Exports in the first nine months were worth 175 million lits against 148 million lits for the same period of last year, imports being 165 millions against 156 millions. Butter exports have increased by 16 per cent. and egg exports by 18 per cent. over last year, the trade being with the United Kingdom and Germany. Now that trade relations with Poland are to be resumed, the importance of Memel as a transit centre, which Polish merchants have been studying for some time, is becoming clear.

The New Budget

Home trade has shown improvement and recession according to commodity. Textiles in particular have suffered, and for the most part it is foreign creditors who have had to stand the loss. Deposits in Lithuanian private banks have risen during the year, while those in State banks have fallen. Total bank credits are about 11 per cent. higher, and in this direction State initiative has played an undoubtedly important part. A new internal loan is announced by the Government for the beginning of 1939, to the amount of 20 million lits, for building construction needs.

The 1939 Budget, balanced at 369 million lits, has been

laid before Parliament. Expenditure is apportioned as follows (in millions of lits): Defence 90; Ministry of the Interior 34; Ministry of Finance 43; Ministry of Agriculture 42; Ministry of Education 59; Ministry of Transport 74; and Foreign Ministry 5. The Government is preparing a Bill for the collection of a capital levy, in which bank investments and other bank deposits will be taxed for the first time.

Palestine

Partition Dead

JERUSALEM, December 19.—The conclusion reached by the Partition Commission probably surprised no one. The only support the policy of partition enjoyed was derived from its acceptance by the British Government. The more the policy and its implications were studied the less practicable it seemed. This conclusion was obviously reached in Government circles as well, and when the terms of reference to the new Commission were published, those with a close acquaintance with conditions in Palestine felt certain that the function of the new Commission would be to bury partition as decently as possible. They were not mistaken. The Commission reported, in effect, that it was impossible to produce a satisfactory scheme of partition. They put forward a scheme because they were instructed to do so, but they damned it with very faint praise.

The Arabs had consistently refused all suggestion of the mutilation of their country. The revolt during the past year has been mainly one against such a mutilation. The Jews—or rather the majority of the Zionists—brought very reluctantly to accept a scheme of partition, announced that the Royal Commission's proposals were not acceptable and that the frontiers of the proposed Jewish State must be enlarged. On the other hand, the Partition Commission reduced them most drastically, with the certainty that the Jews would reject their proposals without consideration. The rejection by both peoples of both the proposed Arab and Jewish States clearly made partition impossible.

The British Government must start afresh. It hopes to find some measure of agreement between Jews and Arabs and to build on this. Such a measure of agreement must be found, for no scheme of settlement that has not a considerable amount of both Arab and Jewish acceptance is worth while. To attain this agreement a compromise is necessary: one that will give neither side everything it demands, nor either side anything to which the other objects strongly.

Crucial Financial Issues

The proposal for partition broke down on many counts, and not least on that of finance. The Commission, on the rough and ready basis of a normal revenue and expenditure, came to the conclusion that while the proposed Jewish State would show a surplus of £600,000 per annum, the other two States would show a combined deficit of about twice as much. In fact, they foresaw that partition would impose a permanent burden on the British Treasury of £1,250,000 per annum.

This was not all, for these proposals allowed nothing for defence. In normal circumstances the cost of defence to Palestine has been small. Local funds have simply defrayed the difference between the cost of the forces in Palestine and in Britain. Since the outbreak, however, with the presence of large forces in Palestine, this difference has been considerable and is now beyond the power of Palestine to support. After partition, the whole of the cost of military and air forces would, or should, fall on the respective States.

The Jewish State, at any rate, would set up a consular, perhaps even a diplomatic, service and this would be expensive. The cost of the social services would also increase, for

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

their extension has always been demanded by the Jewish section of the population. Moreover, the Jews, even against their better judgment, would have to increase immigration largely and, in the absence of new markets, of which none are in sight, this would very greatly increase the burden of unemployment and its cost. Presumably, part at least of the services at present paid for out of foreign charitable funds would also have to come out of the funds of the Jewish State; a State dependent on foreign charity could hardly be described as either sovereign or independent.

Thus, not only would the Budget deficits of the Arab State and the British Mandatory territory be still further increased by inevitable military expenditure, but the assumed surplus of the Jewish State would disappear and be replaced by a deficit. The three new States would have all commenced life inescapably insolvent.

India

A Gregorian Trade Survey

CALCUTTA, December 3.—The Review of the Trade of India in 1937-38 has just made its appearance over the signature of Dr T. E. Gregory, the newly appointed Economic Adviser to the Government of India. Roughing in the background to Indian trade the Review takes the line that, while the world situation at the beginning of 1938 was not as satisfactory as it had been in 1937, it is not desirable to exaggerate the extent of the recession. There was a definite check to the downward movement in the middle of the year when the decline in prices was arrested; and, over a large part of the world, economic activity is still considerably above the peak attained in 1929. Unhappily for India, however, this is not so in the United States of America, which in 1937-38 accounted for 10.1 per cent. of India's exports and next to the United Kingdom was India's best customer.

Pointing out that the trade cycle has hitherto been construed in terms primarily of the constructional industries, Dr Gregory avers that the cycle which appears to have culminated in 1937 shows some marked features of its own not, perhaps, given recognition. The cyclical fluctuations of the constructional industries are not determinant in India, which in spite of her rapid industrialisation in the last quarter of a century is still predominantly agricultural. In the depression years of 1929-32, the Indian cultivator was in sore distress on account of the disastrous slump in agricultural prices. When the upward movement started in 1932-33, the rise in commodity prices was painfully slow and halting, and it was only in the middle of 1936 that primary commodities began their definite upward movement.

As the year advanced, the rise became almost a boom, and primary prices rose to levels which they had not touched for many years. By the spring of 1937 they had attained peak levels. The sudden reversal of the trend of prices that then set in, a movement which Dr Gregory traces to the unhealthy conditions under which the commodity boom of 1936 started, had a serious effect on Indian agricultural conditions. The full effect of the fall in prices was not felt in India till the middle of 1937, but conditions in the case of most of India's agricultural commodities then deteriorated rapidly. The average fall was more than 25 per cent. in a period of only a few months, and this has been fully reflected in the reduced purchasing power of the agriculturist. Much the same story can be told about Indian industry, which managed fairly successfully to resist the first onslaught of depression but, after October, 1937, lost ground and succumbed to the general depression in the commodity and share markets.

India's Customers and Clients

Analysing the direction of Indian trade, the Review shows that, while the course of Indo-Burma trade remained unchanged, there have been significant changes in India's trade relations with other countries. There is a growing tendency on the part of the United Kingdom to purchase more and more from India and, although imports from that country are also on the increase, the excess of imports over exports, which had been a feature of India's trade with the United Kingdom in 1935-36 and earlier years, has now been transformed into a favourable trade balance. Again, in value, India exported less goods to Japan (whose trade is now largely regulated by exchange control) than she imported from that country in 1937-38, and the balance of trade there has turned against her.

In 1937-38, as compared with 1936-37, a reduced proportion of India's imports was drawn from the British Empire,

which accounted for 55 per cent. of total import trade, against 59 per cent. in the earlier year. There were comparatively small increases in purchases from Canada, South Africa, British East Africa and Australia, which were offset by appreciable declines in imports from the United Kingdom and Burma. Imports from each of the five principal European countries, Germany, Belgium, France, Italy and the Netherlands, were proportionately greater than a year ago; and a relatively large increase was also recorded for the United States of America, while the proportion received from Japan and China showed decreases.

	IMPORTS		
	1935-36 Per cent.	1936-37 Per cent.	1937-38 Per cent.
United Kingdom	31.7	31.0	29.9
Burma	17.5	19.3	14.9
Japan	13.0	13.3	12.8
Germany	7.9	8.2	8.8
United States of America	5.6	5.3	7.4
Iran, Arabia, Iraq, Asiatic Turkey and Sumatra	2.0	2.1	3.0
Kenya and Zanzibar	2.3	2.4	2.6
Straits Settlements	2.0	2.2	2.2
Belgium	1.4	1.7	1.9
Italy	1.3	0.8	1.5
Ceylon	0.9	1.2	1.0
Switzerland	0.9	1.0	1.0
Australia	0.8	0.8	1.0
France	0.8	0.8	0.9
Netherlands	0.7	0.7	0.9
Canada	0.6	0.5	0.6
China	1.2	0.9	0.6
Union of South Africa	0.2	0.2	0.3
Java	1.1	0.3	0.2

On the export side, the increased shares taken by the United Kingdom, Burma, Canada and the Union of South Africa were sufficient to raise the percentage for the British Empire, as a whole, from 47 to 51. Among the principal European countries, Germany and Italy increased their shares of Indian exports, while the three remaining countries, France, Belgium and the Netherlands, reduced theirs. The most important decrease occurred in the case of Japan, while the United States of America and China took a larger proportion than in 1936-37.

	EXPORTS		
	1935-36 Per cent.	1936-37 Per cent.	1937-38 Per cent.
United Kingdom	29.9	31.0	33.3
United States of America	10.7	9.9	10.1
Japan	13.6	15.0	10.0
Germany	5.5	4.8	5.8
Burma	6.0	5.4	5.7
Belgium	3.3	3.8	3.7
Italy	2.2	2.7	3.0
France	4.8	4.4	2.9
Ceylon	2.9	2.5	2.9
Netherlands	2.0	2.6	2.1
Australia	1.9	1.7	1.7
Argentina	1.4	1.7	1.5
Straits Settlements	1.0	1.0	1.4
Iran, Arabia, Iraq, Asiatic Turkey and Sumatra	1.1	1.5	1.4
Canada	1.1	1.1	1.3
China	0.8	0.5	1.1
Union of South Africa	0.9	0.7	0.8
Spain	1.2	0.4	0.1

The following table shows the distribution of Indian overseas trade and the balance of trade with various units:—

Country	1936-37			1937-38		
	(In Crores of Rupees)		Net Imports (-) or Exports (+)			Net Imports (-) or Exports (+)
	Exports	Imports		Exports	Imports	
United Kingdom	60	44	+ 16	64	52	+ 12
Burma	11	27	- 16	11	26	- 15
Other British Possessions...	20	13	+ 7	24	17	+ 7
Total British Empire ...	91	84	+ 7	99	95	+ 4
Europe	39	23	+ 16	37	33	+ 4
United States of America...	19	7	+ 12	19	13	+ 6
Japan	28	19	+ 9	19	22	- 3
Other Foreign Countries ..	15	9	+ 6	15	11	+ 4
Total Foreign Countries ..	101	58	+ 43	90	79	+ 11
Grand total	192	142	+ 50	189	174	+ 15

The effect of the separation of Burma on the general disposition of India's overseas trade is well brought out.

MONTHLY
ILLUSTRATED

The Crown Colonist

ONE
SHILLING

The January, 1939, Number contains a Special Colonial Survey

Foreword by the RT. HON. MALCOLM MACDONALD, M.P.,

Secretary of State for Dominion Affairs and Secretary of State for the Colonies

"I am convinced that both for the general reader and for the student and specialist, an up-to-date, condensed and attractive Colonial Survey, such as is presented in this special issue of THE CROWN COLONIST, should prove invaluable."

Present Situation and Prospects in the British Dependencies Overseas

A series of Articles specially contributed by Governors and other leading authorities in the Colonies, Protectorates, Mandated Territories, etc.

Way Now Open to New Development in Kenya

A young country already equipped with modern services but needing a broader economic basis.

By Sir Robert Brooke-Popham, G.C.V.O., K.C.B., C.M.G., D.S.O.,
Governor and Commander-in-Chief of Kenya

A Programme of Modernisation in Uganda

Consolidated financial position enables Protectorates to face a period of low prices for cotton and coffee.

By Max Nurock, O.B.E.,
Acting Deputy Chief Secretary for Uganda

Confidence in the Prospects of Tanganyika Territory

Maintenance of agricultural and mineral production and measures to conserve and develop natural resources.

By Sir Mark A. Young, K.C.M.G.,
Governor and Commander-in-Chief of Tanganyika Territory

New Developments in Northern Rhodesia

As well as being in a state of economic transition, the Protectorate's future is under consideration and the country may be more closely linked with neighbouring territories.

From a Correspondent

Nyasaland and Its Need of Help in Development

A fertile Protectorate with an advanced native population, dependent largely on its export crops.

By Sir Harold B. Kittermaster, K.C.M.G., K.B.E.,
Governor and Commander-in-Chief of Nyasaland

Extending the Range of Zanzibar Production

Attention is being devoted to the possibilities of cash-crops additional to cloves and copra.

By J. Hathorn Hall, C.M.G., D.S.O., M.C.,
British Resident, Zanzibar

A Hundred Years of British Rule over Aden

Attention is now being devoted to agricultural, water and road developments in the Protectorate.

By Sir Bernard Reilly, K.C.M.G., C.I.E., O.B.E.,
Governor and Commander-in-Chief of Aden

Three Main Problems of British Somaliland

How a country which is lacking in agricultural and mineral resources is developing its principal asset.

By H. W. Claxton, O.B.E.,
Treasurer and Chief of Customs, Somaliland Protectorate

Economic and Cultural Trends in Anglo-Egyptian Sudan

Country in a sound position. Improving quality of exports and progressive social organisation.

By Sir Stewart Symes, K.C.M.G., K.B.E., D.S.O.,
Governor-General of the Anglo-Egyptian Sudan

Sound and Healthy Condition of Nigeria

A country of peasant farmers who are being shown how to adapt themselves to the modern world.

By Sir Bernard H. Bourdillon, G.C.M.G., K.B.E.,
Governor and Commander-in-Chief of Nigeria

Clues to the Future of the Gold Coast Colony

Recovering from the cocoa dispute setback, the Colony is going ahead with social and economic development.

By Sir Arnold Hudson, K.C.M.G.,
Governor and Commander-in-Chief of the Gold Coast

Sierra Leone as I See It. The Governor's Survey

The development of mining has brought big changes in a country of peasant cultivators.

By Sir Douglas Jardine, K.C.M.G., O.B.E.,
Governor and Commander-in-Chief of Sierra Leone

Progressive Activities in the Gambia Colony

Air services—development of cattle industry—improved health and social conditions.

By Sir Thomas Southorn, K.C.M.G., K.B.E.,
Governor and Commander-in-Chief of the Gambia

Progressive Policy of Production in Jamaica

Tendency towards a better balance of agricultural economy. Social reconstruction has proceeded apace.

By A. C. Barnes, C.M.G., B.Sc., F.I.C.,
late Director of Agriculture in Jamaica

Great Change in the Economy of Trinidad

New export crops, increased production of foodstuffs for local consumption and £3,000,000 works programme.

Specially Contributed

Intensive Cultivation of Cash Crops in Barbados

The perplexing problems of an over-populated island and some fresh endeavours to find solutions.

By E. J. Waddington, C.M.G., O.B.E.,
Governor and Commander-in-Chief of Barbados

Fortitude of the Windward Island Colonies

More remunerative markets needed for produce of Islands dependent on agricultural pursuits.

By Sir Henry Popham, K.C.M.G., M.B.E.,
Governor and Commander-in-Chief of the Windward Islands

Advances and Setbacks in the Leeward Islands

Development in peasant production: Improvement of local and inter-island communications.

By Sir Gordon Lethem, K.C.M.G.,
Governor and Commander-in-Chief of the Leeward Islands

Bright Hopes for Prosperity in the Bahamas

Development of the tourist trade and measures to assist the sponge and agricultural industries.

By Sir Charles Dundas, K.C.M.G., O.B.E.,
Governor and Commander-in-Chief of the Bahamas

Production and Potentialities of British Guiana

The decline in sugar emphasises the need for a widening of the basis of productive industry.

Specially Contributed

New Phase in the Progress of British Honduras

With the construction of new roads giving access to markets, scope for agriculture will be extended.

Specially Contributed

Malaya Profiting from Lessons of the Depression

Secondary industries are being developed and the basis of agriculture is being broadened.

By Sir Shenton Thomas, G.C.M.G.,
Governor and Commander-in-Chief of the Straits Settlements and High Commissioner, Malay States

The Role of Hong Kong in the Pacific

Despite the embarrassments of the Sino-Japanese conflict, the British Colony in the Far East is making progress.

By Sir Geoffrey Northcote, K.C.M.G.,
Governor and Commander-in-Chief of Hong Kong

Development of New Industries in North Borneo

Staple exports of the State are being supplemented and social services expanded as finances permit.

By Charles R. Smith,
Governor of North Borneo

Consolidation of Communal Prosperity in Seychelles

Features of a programme which is designed to place the Colony on a broader economic basis.

By Sir Arthur Grimble, K.C.M.G.,
Governor and Commander-in-Chief of Seychelles

Utilising the Many Natural Advantages of Ceylon

An island of rich and varied resources where agriculture is being fostered and manufacturing industry is making rapid strides.

Specially Contributed

Progress of Palestine under the British Mandate

Doubled population, rapid extension of transport facilities and public utilities, and the development of primary and second industries.

Specially Contributed

Promising Prospects for the Maltese Islands

A satisfactory expansion in productivity, developing tourist traffic, and new expenditure.

By Sir Charles Bonham-Carter, K.C.B., C.M.G., D.S.O.,
Governor and Commander-in-Chief of Malta

Cyprus Sheds Conservatism and Makes Rapid Progress

Improved methods of cultivation win new markets.

By Sir Richmond Palmer, K.C.M.G., C.B.E.,
Governor and Commander-in-Chief of Cyprus

Fijian Progress and Influence in Western Pacific

A fertile Colony with a contented population and hopeful prospects.

By Sir Harry C. Luke, K.B., C.M.G.,
Governor and Commander-in-Chief of Fiji and High Commissioner for the Western Pacific

THE CROWN COLONIST, 33 TOTHILL ST., WESTMINSTER, LONDON, S.W.1

Letters to the Editor

Railway Problems

TO THE EDITOR OF THE ECONOMIST

SIR,—I had hoped that a worthier pen than my own would contribute a letter to your columns drawing attention to the obvious contradiction contained in the argument put forward in Mr Gilbert Walker's letter published in your December 10th issue (on page 540). He states that: "To free railways from 'undue preference,' with road haulage restricted as it is at present, will perpetuate a grave inequity between traders."

It is indeed hard to understand why railway rates should remain subject to undue preference limitations, while the competitive road haulage rates are not so subject. There is nothing to prevent a road haulier quoting a low rate per ton-mile where railway competition exists, and to quote a much higher rate per ton-mile to another trader who has not the benefit of competitive rail services.

The restrictions on road haulage to which Mr Walker draws attention bear no relationship to the question of undue preference. He hints that the demand for road transport is greater than the supply, owing to artificial restrictions; if such was the case, one would have expected to find the road haulage industry a very prosperous one, a fact its members seem at pains to deny. One would also have expected that, owing to shortage of units, concentration would have been made on those services where rail competition would not have depressed the ton-mile rates; yet this is obviously not the case. If any shortage of public road transport facilities does exist, it would appear to be caused by the rapidly extending use of "C" licence (private carrier) vehicles, a cause, and not a result, of the fall in the number of public haulage vehicles.

May I remind Mr Walker that regulations—though he would probably term them restrictions—on road transport date back long before the birth of railways. Prior to 1700, rates of carriage by highway had to be settled annually by the justices of each county. We have travelled far since those days in railway legislation, but in road transport legislation we appear to have forgotten the wisdom of our ancestors.

Yours faithfully,

C. E. R. SHERRINGTON.

Belmont,
Surrey.

A Dearth of Bills?

TO THE EDITOR OF THE ECONOMIST

SIR,—The *Economist* of December 24th contained (page 664) the following sentence:—

"Theoretically, if notice were given at once, the £100 millions of 1 per cent. Treasury Bonds could be redeemed just before the end of March, but as these are a money market security, the cure would be worse than the disease."

It is true that the Treasury 1 per cent. Bonds were issued for the benefit of the money market, but the discount market has never liked them. As the discount market is so dependent for its business on borrowed money, it will avoid any short bond that is especially vulnerable to any rise in Bank rate. Thus, if Bank rate rose to 3 per cent., Treasury 1 per cent. Bonds, which at present yield £2 1s. 2d. per cent. to redemption with a 2 per cent. Bank rate, would presumably have to yield 1 per cent. more to maturity. The bonds would accordingly fall by just over 2 points. A holder would not be able to write off this loss in his annual accounts by using part of the coupon, since this is only a 1 per cent. coupon, and he would make an actual running loss at the higher rate of borrowing from his bank. Consequently, no one wants to be a holder if there is any uncertainty about Bank rate. Accordingly, 4½ per cent. Conversion Loan, 1940-44, with its large coupon and close double dates has become the money market short par excellence.

The main holdings of Treasury 1 per cent. Bonds are probably divided among the banks, the Public Departments and investment reserve funds of companies which require cash in two years.

The *Economist* of November 6, 1937, showed that the holdings of Treasury 1 per cent. Bonds of the Public Departments were £36 millions, but no later figures have been published in *The Economist* since that date. There are no figures of bank investments in Treasury 1 per cent. Bonds, but a pure guess is about £15 millions. Where the remaining £50 million bonds are is unknown, though some may be in the Issue Department of the Bank of England.

Consequently, the repayment of £100 millions Treasury 1 per cent. Bonds during 1939 would not affect the discount market. On the other hand, it would give some additional cash to the banks, and it would put the Public Departments in funds in time to help with the conversion of the much more substantial 4½ per cent. Conversion Loan in July, 1940 (of which there is £363 millions in issue). Finally, the repayment of bonds bearing interest at 1 per cent. and their replacement by Treasury Bills at approximately ½ per cent. makes a nominal saving to the Treasury of £500,000 a year.

Yours, etc.,

BROKER.

London, E.C.2.

TO THE EDITOR OF THE ECONOMIST

SIR,—*Apocryph* the article in your issue of December 24th, can any difficulty caused by a "Dearth of Bills" be more than technical? For instance, the National Debt Commissioners, if given power to borrow on the cheapest possible terms for the purpose of redeeming debt at a profit—say, by the purchase of Consols at a discount—could spend an amount limited only by the approach of the yield of Treasury Bills to that of long-dated stocks. Ultimate control would still rest with the Bank of England and the fiscal policy of the Government; but would cease to be exercised by the Treasury in the supposed interests of traders.

Would not such a solution in fact meet the views of all save those for whom monetary restriction is an end in itself?

Yours faithfully,

A. C. DOBBS.

Killiney,

Co. Dublin.

TO THE EDITOR OF THE ECONOMIST

SIR,—The writer of your article foresees a coming dearth of bills, but can not suggest a remedy. At the same time the market for Government bonds is weak, and new issues are almost regularly under-subscribed. It seems clear that the position both in the bill market and in the capital market would be greatly improved if "the Authorities" sold a part of their holding of bills and replaced them by long-term bonds.

Yours faithfully,

W. B. REDDAWAY.

Clare College,
Cambridge.

Back to Fixity

TO THE EDITOR OF THE ECONOMIST

SIR,—Your Investment Note of December 17th on the New British Fixed Trust (on page 610) shows the usual *Economist* penetration in its description of a new structure. The inevitably condensed form of your description may, however, mislead some of your readers on two cardinal points. May I therefore make the two following comments?

Home Market versus Exports

TO THE EDITOR OF THE ECONOMIST

First, this is essentially a fixed trust. For the essence of fixity for buyers of fixed trust sub-units has been the spread of their money in roughly equal amounts over two or three dozen unchangeable securities.

In the old fixed trusts the unduly simple hope was entertained that fixity would take care of itself; fixed trusts were generated in a mood of violent reaction against "management," and their creators, in enthusiasm for the new, or in spite against the old, went to the other extreme, and substituted for the excommunicated "management" a dogma of neglect.

The possible and probable effects of neglect may be illustrated by an example: an old-type fixed trust which had, say, 4 per cent. of its funds in Bristol Aeroplane before the recent issue of new capital, would now only have 3 per cent. if it had been old-type cumulative, 1.7 per cent. if it had been old-type distributive. Over a life of 21 years in a world of investments, which like other worlds is inconveniently not static, some old-type fixed trusts may be found more or less to belie their name; on the other hand, the New British has power under its Trust Deed to preserve its essential fixity through the manifold chances and changes which lie ahead—*fixissima inter fixas*.

Secondly, I want to say that the New British is at all times a Cash Fund, in which the Managers act solely as agents, both in the issue of sub-units and in the purchase of underlying securities. Not even the first unit was constituted by the deposit of securities; sub-units of the first unit were sold for account of the Trust, and the underlying securities were bought from the market for account of the Trust, just as in all the subsequent units.

I am, Sir,

Your obedient servant,

I. FAIRBAIRN,

Director,

Municipal and General
Securities Company, Limited.

London, E.C.4.

[We should be sorry if our Note (itself headed "Back to Fixity") had misled any reader regarding the essentially fixed nature of the New British Fixed Trust. If it did so, the explanation must be that we were too intent on describing the application of the "Cash Fund" method of operation to a fixed trust. While, in the context, the use of the words "Cash Fund" may have been elliptical, our Unit Trust Survey of April 17, 1937, described their meaning in detail. —EDITOR.]

"Settlement" in Spain

TO THE EDITOR OF THE ECONOMIST

SIR,—Your reference to Spain on page 587 of *The Economist* of December 17th suggests an up-to-date translation of a famous sentence in Tacitus: *desertum faciunt pacem appellunt*. "Italian planes bomb Spanish civilians and the British Prime Minister calls it a settlement."

Yours faithfully,
H. C.

The Reform Club,
London.

British Profits

TO THE EDITOR OF THE ECONOMIST

SIR,—In view of the suggestion made by Mr Harold Barger in the letter you published on December 24th, your readers may be interested to know that the next issue of the *Journal of the Royal Statistical Society* will contain an article by Mr A. Stanley Carruthers, A.C.A., on "The Trend of Net Profits." In this article he calculates indices for the profits of the years ended December 31, 1928-37, and draws attention to the need for reform in the dates of accounting periods, and to the advantages which would result from the publication of quarterly reports.

Yours faithfully,

E. C. SNOW,

Hon. Secretary.

If is, of course, very difficult to measure general changes in output, but an extremely rough calculation that I have made, based partly on figures given by Mr Colin Clark in the September issue of the *Economic Journal*, suggests that a figure of 25-30 per cent. for the rise in total output for the home market would be much nearer the mark. Your article, which suggests that the increase was probably more than 50 per cent., gives the impression of a rise perhaps twice as great as that which actually occurred.

Might I also suggest that your article may give a misleading idea of the proportionate rate of recovery in the export trades? The volume of exports increased between 1932 and 1937 by roughly 30 per cent., i.e. at about the same rate as total output for the home market.

You claim that your article contains the first published attempt to compare quantitatively the relative changes in the home and the export markets, and I have ventured to make these suggestions simply because your estimates will, no doubt, be widely quoted. I am in agreement with the general nature of the conclusions reached in the article.

Yours faithfully,

G. D. A. MACDOUGALL.

The University,
Leeds.

A British Expeditionary Force?

TO THE EDITOR OF THE ECONOMIST

SIR,—In war it is impracticable to be strong at every point, so in preparing for war the less must be sacrificed to the more essential.

Sea power has won all her wars for Britain including the last. The employment of a great conscript army on the Continent of Europe is a misconception of the use of sea power which should rather give support and, above all, mobility to a small but highly trained and equipped Expeditionary Force, skilled in amphibian operations, and ensure the passage of, not men, but munitions to France.

So strong is the defensive in modern war that with adequate fire power France should hold her enemies at bay with her own forces. Her adversaries, committed to the offensive, unable to determine how, when and where our Expeditionary Force would be used, would suffer by distraction an effect out of all proportion to its size.

Our resources are great but not inexhaustible. Let us employ them so that they will exert the greatest effect on the enemy at the least cost to ourselves. This is our historic strategy, from which, as Captain Liddell Hart has shown so ably, we departed in the last war and bought victory at the cost of crippling ourselves, both morally and physically, for a generation.

I am, Sir,

Your obedient servant,

LAWRENCE MACLEWEN.

Isle of Muck,
Isle of Eigg.

Books and Publications

Marx To-day

THE Liberal democratic State, a rarity in the contemporary world, derives its theory from the "Two Treatises on Civil Government" and the "Contrat Social." The Fascist States can claim Hegel and Sorel as their spiritual parents. The final consequences of the "Communist Manifesto" cannot yet be predicted. The Stakhanovite and the Chinese peasant of the Eighth Route Army, the Social Democrat or Communist workman of Western Europe, the energetic C.I.O. organiser in the United States, all are the children of Karl Marx. If we cannot be certain that the words of Engels at the grave of Marx—that his name and work would live through the centuries—will be justified by the future, we can at least say with the author of a new short life of Marx* that 'throughout Europe and America and Asia a man's approach to the problems of his time is symbolised by his relation to Marx.'

The publication at a popular price of Mr Sprigge's excellent and scholarly little biography and the appearance in the famous series of "Day to Day" pamphlets published by the Hogarth Press of Mr Palme Dutt's able exposition of the official Communist point of view† on world politics, show the extent of popular interest in Marxism to-day. The bitter years of depression, the victories of Fascism in Europe, have created a public necessarily eager to fathom the doctrines of Marx.

If Marx has critical friends such as Mr Sprigge, devoted followers such as Mr Palme Dutt, he also makes enemies, now as in the course of his fascinating and stormy life. M. Boissonnet is one of them.‡ He looks on Marx as the father of the material and moral ruin of his country and of the world. His economic views can be stated briefly. Throughout the post-war period workers, nurtured on Marxism, have demanded as their share of the national wealth more than the possibilities of the economic situation permitted. Their intransigence has been flattered by supple neo-Socialists like Mr Lloyd George and encouraged by Social Democrats like M. Blum. In Russia the total collapse of the Tsarist order permitted the ferocious surgeons of Marxism to dissect the living body of the Russian economy.

M. Boissonnet concludes that the patient is likely to die. Marxism, in its integral form and in the revised version of Social Democracy, has by its interference with the smooth operation of the law of supply and demand created disequilibrium and chaos. The remedy? A return to the classical liberal economy with its keener edges blunted by a Catholic Corporatism after the fashion of Mussolini or Salazar.

As a critique of Marx's economic theory, or as a commentary on post-war economic policies, the book has little value. It is, however, interesting as a revelation of the French *bien-pensant* type of mind. The increased power of the working-class in France has thrown these people into the hungry embrace of Hitler and Mussolini. M. Boissonnet vilifies Jews and Freemasons quite in the style of the dictators whose policies he admires. He thinks that exceptions should be made where Jews fought in the front line in the last war. One seems to have heard this somewhere before.

Mr Charles Vincent also analyses the French situation.§ Unlike Mr Palme Dutt, who puts up a good case for the change in Communist tactics since 1935, he condemns the theory and practice of the Popular Front. He admires the policy of M. Pivert's new party, and believed at the time of writing (before Munich) that M. Daladier, having robbed the French workers of the gains made in 1936, was (as a

"result of pressure . . . from French heavy industry and the banks") about to lead the French nation into an Imperialistic war like that of 1914. Events have shown how barren is this analysis. Mr Vincent should read again Marx on the Paris Commune. The governing classes of France and of other democratic countries are seemingly pacifist to the point of defeatism when they are confronted with an aggressive Fascism.

Shorter Notices

"Russia Without Illusions." By Pat Sloan. With a Preface by Beatrice Webb. Frederick Muller. 7s. 6d.

Pat Sloan is well known in the Communist movement as a simple, lucid and sincere speaker on Russia, the editor of *Russia To-day*, and the author of a short book "Soviet Democracy." The present book, with its witty preface by Mrs Webb, will be regarded by many as his best achievement so far. In it he performs two tasks. First, he describes his own experiences in the U.S.S.R. as a teacher, guide and trade union organiser during the period 1929 to 1936, and his final visit in 1937, and this descriptive part of the book is intimate, extremely simple and straightforward, if occasionally laboured. Secondly, he sets out to reply to the many books by disillusioned Socialists and Communists which have appeared during the last two years, and to defend the orthodox standpoint on the trials. Mr Sloan has read all of these books with great care. Trotsky, Ivan Solonevich, Eugene Lyons, Andrew Smith, Sir Walter Citrine, Andre Gide, F. Beal: each is examined in turn and found wanting in some essential quality or other. Mr Sloan does not examine any of the actual arguments of the Right-wingers and Trotskyites about the agricultural question or the first Five Year Plan. Hostile critics and the trials themselves have weakened the Communist movement in many ways, but they have made stauncher Communists of those who remain true to the cause. This generalisation applies well to the writings of Mr Sloan.

"The Human Factor in Business." By B. Seeböhm Rowntree. Third Edition. Longmans. 244 pages. 4s.

The first edition of Mr Rowntree's study of the place of workers in our present industrial system was published thirteen years ago, and at once became widely known as an important analysis of the knotty problem of securing that industry should serve the consumer satisfactorily, give employees a square deal and at the same time pay. The book has now been almost entirely rewritten to set the experience of Messrs Rowntrees' factory at York in the full context of contemporary labour relations. It is an argument for industrial democracy under paternal guidance, and its emphasis on the importance of a higher status as well as better remuneration in the workers' claims has been further developed.

"Oxford Economic Papers." Edited by R. F. Harrod, H. D. Henderson, J. Marshak and R. Opie. Number One. Clarendon Press. 123 pages. 3s. 6d.

This new publication is designed to put out from time to time the results of research work in economics conducted in the University of Oxford. It is not only because Oxford economics is commonly less in the limelight than Cambridge or London economics that the new venture is to be warmly welcomed. As this first number makes clear, the researches which are proceeding at the Institute of Statistics and elsewhere in Oxford are commendably realistic in their blend of advanced theory and observed fact. The rôle of interest rates in actual business behaviour, for instance, is here examined, not solely as an exercise in logical analysis, though current high theory is kept closely in mind, but also as a synthesis of the conclusions derived from a careful questioning of a sample of business men. National income studies are appreciably aided and advanced by the calculation of index of real turnover, i.e., of the physical amount of goods and services traded. Another paper applies Mr Keynes's "liquidity preference schedule" to the observed movements in the assets held by the London clearing banks; and a final contribution measures differences in the mobility of labour by statistical reference to actual migration from various areas into Oxford.

"International Trade in certain Raw Materials and Food-stuffs, by Countries of Origin and Consumption, 1937." League of Nations. Allen and Unwin. 176 pages. 5s.

This new collection of statistics covering the world's trade in raw materials has been prepared in a very convenient form. It is possible from the tables given to discover, not only the total quantities of the main raw materials exported from or imported into the principal countries, but also the quantities exchanged between any two countries. Thus, German imports of cotton from Brazil can be as rapidly distinguished as Germany's imports from all places and Brazil's exports to all destinations.

"The Atlas of To-day and To-morrow." By A. Radó and M. Rajchman. Gollancz. 209 maps, 93 pages of text. 10s. 6d.

The general idea of this Atlas and the diagrammatic devices employed are excellent, though the details are open to considerable criticism in several places. The successive territorial divisions of the world since 1875; the economic and political alignments of to-day; the distribution of raw materials, gold, armaments and man-power; the economic and political aspects of present-day Empires; the struggle for world markets and for control of routes by sea, land and air; racial, religious and minority problems; forms of government and social organisation—all these are thrown on to a clear-lit screen by statistics, maps and charts. But no sources are given for the figures used which, as in the case of comparative national incomes, for instance, seem to be definitely misleading. In several cases, too, a certain political bias has apparently been permitted to distort the representation of facts. The project of a pictorial exhibition of current social, political and economic dynamics is inspiring; many of the maps and figures are valuable; but the Atlas is not entirely trustworthy.

THE FINANCIAL NEWS IN 1939

NEW AND ESSENTIAL SERVICES TO INVESTORS

I LEADING INDUSTRIES REGULARLY REVIEWED:

IN VIEW of the direct influence of industrial development on the course of share values, arrangements have been made for a complete review of current conditions—as regards output, new orders, prices, prospects, etc.—in all the leading industries of Great Britain.

Each group of industries will be dealt with regularly weekly throughout the year, in the following rotation:

MONDAY: Coal, iron and steel, and shipbuilding.	THURSDAY: The building trades and transport.
TUESDAY: The textile trades; cotton, wool, linen, jute, rayon, etc.	FRIDAY: General industries—chemicals, pottery, boots and shoes, etc.—and retail trades.
WEDNESDAY: Engineering, motors, electrical engineering, aircraft and the radio industry.	SATURDAY: Agriculture.

II EXCLUSIVE INDUSTRIAL SURVEYS:

IN VIEW of the profound changes in the structure, location and technique of great industries, "The Financial News" has appointed a Special Commissioner to tour the leading industrial districts of this country and America, to visit the works of manufacturers, large and small, and to present the results in a series of exclusive reports for the benefit of readers.

The first of these special articles will deal with the prospect for American industry in general, in 1939, and will appear in "The Financial News" on January 2nd. A second article will be based upon a visit to leading American steelworks and will present certain important conclusions, based on personal discussions of policy, methods and prospects with those in control. This article will appear in "The Financial News" on January 3rd. A similar article, on January 4th, will deal with the outlook for the American automobile industry.

Later articles will deal, in the same intimate and authoritative way, with British industries like Cotton, Engineering, Shipbuilding, Chemicals, Tinplate, etc.

"THE FINANCIAL NEWS" is a nationally circulated newspaper and is on sale throughout the country at all bookstalls and branches of Messrs. W. H. Smith & Son, Ltd., and Wyman & Sons, Ltd., and at the leading local newsagents. No difficulty should be experienced in procuring the paper, but the one certain way to avoid disappointment is to place a standing order with a newsagent for the regular daily delivery of the paper. Place your order TO-DAY.

III SPECIAL ARTICLES FOR THE INVESTOR:

IN ADDITION to the regular reviews of leading industries and the exclusive industrial surveys which "The Financial News" will publish throughout 1939, a large number of exclusive articles by special writers on a variety of topics, which directly concern the investor and the business man, have been planned. The following brief list will give some idea of the variety of subjects which it is intended to cover:

HOW RETAIL TRADE IS FINANCED:

(This will be a series of special articles and will include the following trades:—Motor, Furniture, Radio, Refrigerators, Lawn Mowers, Bicycles, Gas and Electric Stoves, etc.)

HOW THE TAXPAYER'S MONEY IS SPENT.

GERMANY AND THE COLONIAL PROBLEM.

REARMAMENT AND THE INVESTOR:

(The latest figures.)

GAS VERSUS ELECTRICITY.

INVESTMENT AND A FALLING POPULATION.

CAN WE INCREASE OUR TRADE IN SOUTH AMERICA?

IV "THE TALK OF THE MARKETS":

TO PRESENT accurate news and comment on Market events must always be the primary aim of a financial journal. Nevertheless, readers are clearly entitled to know all that the Market is saying about present and future developments that may affect the value of individual shares. Only too often the general investor finds that news of a forthcoming bonus or an increase in dividend, or a coming merger, has been anticipated by quarters in close touch with the Market, long before any public announcement is made.

"The Financial News" believes that its readers ought to have access to all information of this character whose source appears reliable, disinterested, and *bona fide*. Every day, therefore, a new Market feature will appear, summarising what the Market is saying about particular shares and discussing the likelihood and significance for investors of that advance information.

It will be appreciated that although "The Financial News" has its own opportunities for checking the reliability of all market reports, it cannot, for obvious reasons, assume direct responsibility, financial or otherwise, for their accuracy. The new column will accordingly appear each day under the heading: "WITHOUT PREJUDICE"

THE FINANCIAL NEWS

(TWO PENCE DAILY)

THE BUSINESS WORLD

Machines on the Farm

THE mechanisation of agriculture is not a development of the twentieth or even of the nineteenth century. The invention of the first spade, the breaking-in of the first ox to the plough, the introduction of wheeled vehicles were the early stages of a process which has continued for centuries. But it is true that the pace of that process has been immeasurably quickened in the last fifty years, first, by the invention of machines to perform specific tasks, such as drilling, reaping, threshing or milking, and secondly, by the general application of mechanical power, in the form of steam, electricity and the internal combustion engine.

The introduction of machines to carry out a specific task is the older of these two developments. Practically all the cultivations involved in arable farming can now be executed by machinery; the latest development is a machine to lift and top sugar beet, an operation which has hitherto been carried out by casual labour. Hay cutters, sweeps, swathe turners, elevators, food mixers, cake crushers and milking machines are now also available for the dairy farmer. On the other hand, machinery has hardly touched the grazier, except for accessory implements for haymaking or food preparing; we cannot yet mechanise the growth of an Aberdeen-Angus into beef or the daily care which is given to a flock of lambing ewes by the shepherd and his dogs.

The growing use of these specialised implements for the dairy and arable farmer has not been statistically traced, but the Ministry of Agriculture has counted at intervals, on holdings of one acre or more, the number of stationary and movable engines, from which mechanical power is obtained.

AGRICULTURAL ENGINES IN ENGLAND AND WALES

	1913	1925	1931	1938
Engines :—				
Steam	7,719	3,731	2,246	...
Oil or petrol	16,284	56,774	65,725	...
Electric	262	700	2,475	...
Other	4,978	5,679	5,000	...
Total	29,243	66,854	75,446	...
Motor Tractors :—				
For field work	...	14,565	16,188	43,000
For stationary work	...	2,116	2,466	3,420
Total	...	16,681	18,654	46,420

In 1938 one out of five farms of more than 20 acres in size in England and Wales had a tractor, though this proportion was higher in the arable districts and lower in the mainly dairying or grazing counties; every third farm had some kind of stationary engine.

The most spectacular recent manifestations of mechanisation are the specialist corn-growing farms, with their huge fields cultivated by tractors. But quantitatively far more important in England has been the gradual and inconspicuous adoption of machines and mechanical power on the thousands of "mixed" farms, in whose economy crops and animals each have a place. This slow process was hastened after 1930 by the pressure of falling prices; the table given above shows a striking increase in the number of farm tractors between 1931 and 1938.

Mechanisation is often regarded primarily as a means of reducing costs by substituting mechanical for human labour.

But the decision of a farmer to buy a new machine or to install a tractor does not solely depend on his estimate that his costs will be thereby reduced. A new machine may, indeed, enable him to dispense with casual labour for harvesting or root lifting, or may even enable him to reduce the number of his regular workers. But just as often the introduction of a tractor will give the farm a better distribution of labour requirements throughout the season, and will thus increase the amount of work which can be done. Although total costs may even increase, total output will be increased more than proportionately, so that the farmer obtains an increase in his net profits. Or a machine may give a certain insurance against the risk of bad weather, whose value will only be proved in a bad year; the length of time necessary to cut and carry the corn or hay is appreciably reduced by the employment of tractors and accessory implements.

Nor must it be overlooked that convenience is often the main motive for further mechanisation. Studies by the Agricultural Economics Research Institute at Oxford indicate that costs of milk production do not vary significantly between farms with and without milking machines, although the distribution of total costs among the various items is different. Farms with milking machines tend to have not only higher charges for fuel and repairs, but also higher feeding costs and a more rapid wastage among cows. Yet latest estimates indicate that something like 15 per cent. of all cows in England and Wales are now milked by machines, which are used even in small herds of ten cows or less. Machine milking is quicker than hand milking; it reduces the peak demand for labour at milking time and it provides on small farms an insurance against interruption with the milk supply because one of the two or three workers is temporarily unavailable.

Yet, when all these factors have been allowed for, it is probable that the increasing burden on the farmer of rising wages has been the main factor in stimulating the use of agricultural machinery. Minimum rates of agricultural wages have increased slowly but steadily since the Agricultural Wages Boards Act of 1924; even the depression six years later brought only a temporary halt to a rise which has been hastened since 1935 by a definite shortage of agricultural labourers. Working hours have been reduced, payment for overtime has been enforced, and some of the County Boards have now begun to arrange for holidays with pay. The introduction of more machines and of more mechanical power has been one answer to the problems created by higher wages and falling prices.

The high capital cost of field tractors and cultivators is still perhaps the main deterrent to further mechanisation. On a medium-sized farm an implement designed for some special purpose can often be used on only a few days in the year, so that its overhead costs of depreciation and repairs are very high per unit of output. The overhead costs of a combine harvester, for example, which will be used for one month a year are far higher per unit of output than those of a milking machine which is used twice a day every day. One remedy is to adopt a system of hiring, as is often done with threshing equipment or with the modern gyrotiller, though even so year-round employment is naturally impossible with many machines. Another method is to concentrate on machines which can be used for different purposes. A tractor is far more adaptable than

a hay elevator, but is still less generally useful than a team of horses; the recent surveys of East Anglian farming showed that in 1932, although the tractors available on the farms concerned represented nearly as much horsepower as the horses, the tractors only supplied 26 per cent. of the power actually used, while the horses supplied 70 per cent. It must also be admitted that, while many farmers in this country take an interest in machinery, there are probably more who are definitely not "mechanically minded"; consequently, they do not get full use out of such machines as they have, and their costs both of working and of repairs are needlessly high.

There are many non-agriculturalists who seem to think that the mechanisation of farming involves most drastic changes in the traditional structure of British farming, even to the complete eradication of hedges, horses and the muck-cart. This idea seems to be derived from the abrupt appearance in England of the entirely mechanised corn farms. But such enterprises will remain the exception in this country, whose agriculture is tending more and more towards dairying and market-garden crops, and in which soils, climate and markets vary so enormously from district to district. Further mechanisation will continue in the future, as in the past, by the gradual application on one farm after another of machines and mechanical power to the processes of agriculture. The pace of this change in the five years between 1931 and 1936 can be gauged from

the following table, which is based on data collected in the survey of East Anglian farming mentioned before:—

	Per 1,000 acres				Per Manual Worker*	
	Manual Workers*	Work Horses	Tractors	Cars and Vans	Value of Output	Volume of Output
1931	31.8	28.5	2.6	2.5	100	100
1936	29.9	23.7	3.8	3.6	150	127

* Including manual work of occupier; casual and part-time workers have been included as an appropriate fraction of full-time adult workers.

The process is being hastened as agricultural engineers bring out smaller, cheaper and more adaptable machines, suited to the small size of the majority of British farms; it is noteworthy that manufacturers have recently produced a series of small tractors suitable for the larger market-garden or for field vegetable crops. The pressure of still higher wages and shorter hours is also likely to increase rather than to diminish in the immediate future and will further increase the stimulus towards mechanisation; if the agricultural worker is to obtain a standard of living equal to that of the employed townsman, his efficiency must be increased by giving him better tools and more mechanical power, even if that development involves the employment on the land of a decreasing number of persons.

Capital Market Problems

AN American financier once declared that nothing is so shy as a million dollars. It is this aversion from economic and political risk which makes capital issue statistics the most feverish among economic records. The year now closing has seen falls of 17 per cent. in the prices of equity securities, of 4½ per cent. in fixed-interest stocks, and of 6½ per cent. in business activity, two major political crises in Europe and an unending succession of disturbing incidents. But none of these movements compare with falls of 28½ per cent. in the amount of capital raised by direct public offer, and of over 40 per cent. in the total computed on our "new basis," which takes account not only of public issues but also of placings and issues to shareholders on bonus terms.

The "old basis" figures (which are analysed by domicile in Table I and by industries in Table II) show a reduction during the past year from £251,642,000 to £180,105,600. New issue activity has fallen to the lowest level for four years, and the 1938 total represents less than half the amount raised in 1928—the best pre-depression year. Home borrowing shows the full burden of the fall; for the Empire's quota has remained steady, and foreign borrowing (despite the liberalisation of the Treasury's "requests" during the greater part of the year) is microscopic. The "new basis" totals (which are summarised in Table III and set out in detail in Table II) show a more violent reduction from £458,056,700 to £273,123,700. It must be recalled, however, that in 1937 the "Government" total was swollen by £46½ millions of Tithe Redemption Stock, and bonus issues by industrial companies have been much less frequent during the past year.

Fluctuations in industrial enterprise can be roughly measured in Tables V and VI, both of which analyse the company issues in recent years (on "new" and "old" bases) into fixed-interest and equity capital. Broadly speaking, 1938 was a typical recession year, in the sense that borrowers made greater use of fixed-interest issues—though admittedly not for the classical reason that interest rates became cheaper. But since the average yield basis on equity shares (according to the Actuaries' Index) rose from 4.91 per cent. to 6.15 per cent. during the year, the bias was still in favour of fixed-interest securities. Hence it is no accident that (using the "old basis" figures) ordinary share issues represented 52.7 per cent. of this year's lean total, compared with 62 per cent. or more of the company borrowing in 1936 and 1937. And the

decline in indirect industrial financing is plainly visible from a comparison of these two tables. In 1936, indirect financing (represented by the difference between our "old" and "new" bases) accounted for £231.6 millions; in 1938, it has accounted for only £89.5 millions. Nor is the further decline in conversion issues (particulars of which are set out in Table IV) in any sense remarkable. The conversion of over £750 millions of Government and other stocks during the previous four years has vastly reduced the scope for conversion issues. And the latest year's total would have been even smaller than £23.6 millions but for the conversion of several home corporation issues bearing 6 per cent. interest.

The greater emphasis on prior charge borrowing during the past twelve months is illustrated in the supplementary table appearing on page 736, in which the principal issues of the year and their subsequent fate are shown. The second instalments of defence borrowing last June provided £78.4 millions of new money, compared with £99½ millions in 1937 (a fact which fully explains the fall in British Government borrowing during 1938). But while the Treasury chose a short-dated stock (1944-48) for the 1937 issue, the second was of a medium-term character (1954-58)

carrying the significantly higher rate of £3 2s. 8d. per cent., against £2 11s. per cent. With scarcely an exception, the leading issues of the year stand to-day below their original prices. A sequence of corporation borrowers were able to tempt the underwriter, if not the investor, with 3¼ per cent. stocks with a maximum life of 26 years, but not a single corporation issue has appeared since the beginning of August. And for an obvious instance where an adverse risk factor has been working in conjunction with a rising tendency of interest rates, the fate of Australia's two issues, the first in May and the second early this month, is revealing. Many of the year's industrial issues have taken the form of preference shares, while Hawker Siddeley and United Steel have neatly exploited the prevailing trend for their special financial requirements by issuing short-dated notes and debentures. Finally, many important electrical supply issues must be ranked, for investment purposes, at the prior charge end of any equity share list.

During recent weeks the shadow of future defence borrowing has been cast over the capital market. The Chancellor of the Exchequer has already stated that the Government will take powers at the "appropriate time" next year to raise the present defence borrowing limit above £400 millions. Including the current year's appropriations, approximately £180 millions has been earmarked under existing powers. Even on fairly optimistic assumptions regarding the total burden, and its allocation between borrowing and lending, the unused borrowing powers of

£220 millions might be fully absorbed in next year's defence bill. And it is conceivable that this sum might be insufficient. Hence the gilt-edged market will provide the lead for the entire capital market during 1939 and after, unless there is an unexpected revival of industrial issues. The authorities will clearly be faced with a real problem, for the 3 per cent. National Defence Loan, which was issued last June at 98, to-day stands at 95¼, while the 2½ per cent. bonds of 1944-48, issued in April, 1937, at 99½, are now 97½. To keep the gilt-edged market "sweet" when the Treasury is bound to be a large borrower will prove difficult, even with the exercise of superhuman tact. Some part—possibly a considerable part—of the borrowing may conveniently be done through the bill market, at least in the first instance. But sooner or later the long-term market will have to provide the accommodation, and in any case (as the past few days have shown) gilt-edged stocks now display greater sensitiveness to any threat of dearer money rates. So long as the new issue market remains ignorant of the total defence borrowing which it will be called upon to absorb, and of the precise form which borrowing will take, it will hardly be capable of staging a rally on its own account. Uncertainty may have one advantage which is claimed by the advocates of capital market control—by damping down competition for new money it will leave the Treasury with the best possible wicket. But, even so, it will not be a comfortable one to play.

Finance and Banking

Year-End Pressure.—Expectations of an unusually stringent end of the year in the money market are being fully realised. The reduction of working days in the final week of the year (owing to the incidence of two bank holidays) led the discount market to begin its precautionary borrowing at the Bank of England on Saturday of last week when the accommodation had to be taken for nine days in order to carry the maturity into January. On the resumption of business after the Christmas holidays market borrowing at the Bank began to operate at approximately capacity level. By Wednesday afternoon the market, according to the evidence of the Bank return, had borrowed about £13,500,000 from the Bank. Of this approximately £10,000,000 was probably taken on Wednesday—a total which more than exhausted the quota of seven-day money available to the market for any one day and which involved a certain amount of borrowing for eight days. On Thursday another "large" amount was borrowed and by the end of this week the market's temporary indebtedness outstanding at the Bank is likely to be well in excess of the £25 millions to £30 millions which in the past was regarded as the normal amount for which the market was "in the Bank" at the end of the year. The first reason for this unusual recourse to the lender of last resort this year lies in the incidence of the calendar—the fact that December 31 falls on a Saturday making it impossible for the market to shift any part of the year-end financing to the Treasury by delaying its payments for new Treasury bills until January—as was done last year. The last occasion on which this incorporation of the whole of the final working week of the year within the calendar year occurred was in 1933, when December 31st fell on a Sunday. It will occur again next year, when once more the final day of the year will fall on a Sunday.

There are, however, other factors to account for the unusual severity of the year-end stringency this year. One of them is the dearth of December maturities in the hands of the market. In spite of the attractive rates at which these bills were issued many members of the syndicate abstained from tendering owing to the menacing uncertainties of the international situation in September. Moreover, many of the December bills issued to the market had to be resold to the Bank of England or public departments in order to tide over the situation created by the substantial calling of money from the market at the time. In addition, the clearing banks have this year been even less keen buyers of bills during December than is their wont in this month. The effect of the withdrawal of foreign deposits is still making itself felt on their cash positions. For the same reason the "outside" outlet for bills has been virtually closed during the greater part of the month. Finally, the authorities have taken no steps to alleviate the position by open market purchases of bills.

Christmas Currency.—The following table gives a comparison of Christmas currency needs for the years 1937 and 1938:—

	1937 (£ millions)	1938
November 23rd*	480.4	476.1
December 21st*	509.3	503.0
Christmas increase	28.9	26.9

* A day later in 1937.

Last year the Christmas expansion in the note circulation amounted to £28.9 millions, but this year it was only £26.9 millions. Last year's Bank return, it must be remembered, fell a day nearer to Christmas, while this year shopping in the early part of the week before Christmas was un-

doubtedly retarded by the very cold weather. Allowing for these differences, this year's currency needs were much the same as those of 1937. The Christmas peak of the note circulation this year was £6.3 millions below the 1937 peak, but this comparison is subject to certain qualifications. First, there is the question of the currency held in the tills of the joint-stock banks and also as cover for the Scottish and Irish bank notes. Ultimately the Bank of England calculations of these amounts will be published. But present indications are that there has not been much difference in this respect between the two years. More important is the influence of foreign hoarding of British currency. On balance there must have been considerable dishoarding since last April, especially of currency formerly in French hands. The extent of this movement is unknown, but it would not be surprising if it were found to be in excess of the amount by which the 1937 circulation peak surpassed that of ten days ago. If so, it follows that the effective note circulation of Christmas, 1938, was greater than that of the previous year. This shows that in spite of the recession and the pessimistic reports of Christmas shopping in London during early December, the national volume of spending was a little greater than in 1937. The December retail trade returns should be of some interest, when they appear in a month's time. Meanwhile it is satisfactory to find at least one indication that the recession and the world's political uncertainties have not spoiled the nation's Christmas.

Silver Suspense.—Nowhere in the City is the turn of the year awaited with greater suspense and uncertainty than in the silver market. The cause of the uncertainty is the United States, whose Treasury continues to dominate the world market for silver with an omnipotence for which economic history can find no adequate parallel. This monopolistic body must in the next few days make certain important decisions, of which no semblance of leakage has reached the market. Hence the suspense. In the first place, a decision must be made regarding the renewal or termination of the special agreements under which the United States purchases silver from Canada, China and Mexico. Secondly, the prices at which the U.S. Treasury buys domestic and imported silver are due for revision. There is general anticipation that the agreements will be renewed for at least sufficient periods as to involve no revolutionary reorientation in the price to be paid for domestically produced silver. Equally general appears to be the anticipation of a reduction in the price to be paid for domestically produced silver by the U.S. Treasury. A year ago this subsidised price was reduced from 75.57 cents to 64.64 cents per ounce. A further reduction should not influence the international market, which looks to the price paid for imported silver. Since last March, when it was reduced from 45 cents to 43 cents, the import price has been unchanged at the latter figure. The chances of a further reduction are thought to be about evenly divided. Certainly, the argument that the price of silver has been maintained at an artificial level by the United States and that this has militated very seriously against normal absorption of the metal in such countries as India is in favour of such a move. The United States must surely wish to facilitate such normal absorption and not to be left alone carrying a silver baby which is already exceptionally heavy and promises to put on weight at an alarming rate.

In view of these uncertainties, the London silver market has been exceptionally "jumpy" since the departure of the last steamer which could carry silver to New York before the close of the year. Last week, after this departure, some American buying of silver lifted the London price well

above the dollar parity and was regarded as highly significant as indicating "no change" in the import price. The buying in question, however, appears to have been connected with a coinage order for Cuba and for this reason no unusual significance need be attached to it. This week the effect of this special factor had worn off, and on Wednesday both spot and forward prices fell by $\frac{1}{16}$, the former to about the parity of 20d. The forward quotation has maintained itself at a discount of $\frac{1}{2}$ d. under spot, fully justified by the uncertainty which will always affect the silver situation as long as the U.S. Treasury holds the metal at an artificial price.

* * *

Bank of Montreal.—The annual meeting of this bank is always the occasion for a review of Canadian business conditions by the president and general management. This time the note struck was one of cautious optimism. The president, Sir Charles Gordon, said that the 1938 grain crops had been the largest since 1932, while mining had been the sheet-anchor of Canadian economic life. Lumber, however, had had a difficult year, and the production of newsprint was less than the year before. Export trade had suffered from the disturbed world political conditions. The Anglo-American and Canadian-American Trade Agreements were welcomed. They would give Canadian primary producers a free access to the

United States market, and Sir Charles Gordon hoped that the resulting advantage to the Canadian economy would off-set the heavier competition which many manufacturing industries would be called upon to face. Mr Spinney, speaking for the joint general managers, alluded to the affairs of the bank. Deposits had risen by \$44.8 millions to \$725.8 millions, while quick assets, including securities, were \$620.3 millions, representing 77.8 per cent. of the bank's liabilities to the public. Mr Spinney added that he would like to see this percentage reduced through an increase in advances, and he said that current loans and discounts in Canada had risen during the past year by \$27.8 millions to \$178.7 millions. There had been a substantial increase in the number of commercial borrowers. Loans to provinces and municipalities had risen by \$5.5 millions to \$37.0 millions, while those outside Canada had fallen by \$9.7 millions to \$10.3 millions. Investments, at \$440.9 millions, were \$3.2 millions higher. Mr Spinney emphasised the need of keeping public borrowing within bounds and also of specifying more clearly the object of each new loan. The bank's profits of \$3,398,000 were much the same as in the previous year, and under present conditions it was difficult to effect any improvement. Still, Mr Spinney held that money management in the present form was a comparatively recent development, and that it could not be taken for granted that the current level of interest rates could be maintained indefinitely.

MONEY MARKET NOTES

Foreign Exchanges

On Wednesday there was a demand for sterling over the end of the year. The spot New York rate was \$4.66 $\frac{1}{2}$, and there was a considerable amount of selling of spot dollars against purchases for the New Year. One operator is reported to have paid a premium of $\frac{1}{2}$ cent for dollars three days ahead, and this is equivalent to 13 per cent. per annum. In most cases, however, the cost only equalled 3 per cent. per annum. On Thursday the demand for sterling suddenly subsided, possibly because many operators had over-bought, and the spot rate subsided to \$4.66. One month's dollars are quoted at $\frac{1}{8}$ - $\frac{3}{8}$ cent premium and three months' dollars at $\frac{1}{8}$ - $\frac{1}{2}$ cents premium. There is still a demand for forward dollars from those who expect sterling to weaken in the New Year, while the decision of the British banks to refrain from spot purchases against forward sales means that less forward dollars are on offer. There has been a limited demand for French francs, met out of official sales, and on Thursday the French control dropped the spot rate from Frs. 177.10 to Frs. 177.04. Belgas, guilders and Swiss francs followed the dollar.

*

The Money Market

THE outflow of foreign money has left the market in ill shape to meet the year-end squeeze, and money has been in keen demand. Borrowing at the Bank began on Christmas Eve, and by Thursday the market was unable to borrow for less than eight days. The clearing banks are neither buying bills nor lending money into the New Year. Old loans are renewed at $\frac{1}{2}$ per cent. from day to day, and 1 per cent. for a week, while $\frac{3}{4}$ per cent. was charged by the clearing banks for new day-to-day money. Outside money cost $\frac{1}{2}$ - $\frac{3}{4}$ per cent. for loans to January 2nd, and 2- $\frac{1}{2}$ per cent. for a week, but the French

banks in particular had very little to lend. Day-to-day bond money was $\frac{1}{2}$ - $\frac{3}{4}$ per cent.

	Dec. 30, 1937	Dec. 22, 1938	Dec. 29, 1938
Bank Rate	2	2	2
London Deposit Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan Rates:			
Clearing Banks	$\frac{1}{2}$ - $\frac{1}{4}$	$\frac{1}{2}$ - $\frac{1}{4}$	$\frac{1}{2}$ - $\frac{1}{4}$
Others	$\frac{1}{2}$	$\frac{7}{8}$	$\frac{1}{2}$ - $\frac{3}{4}$
Discount Rates:			
Treasury bills	$\frac{9}{16}$	$\frac{15}{16}$ -1	$\frac{11}{16}$
Three months' bank bills	$\frac{9}{16}$ - $\frac{5}{8}$	$\frac{15}{16}$ -1	$\frac{11}{16}$ - $\frac{1}{8}$

* Viz. $\frac{1}{2}$ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{3}{4}$ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Discount rates were $\frac{1}{16}$ - $\frac{1}{8}$ per cent. for three months' bills, while some early March bills were taken at 1 per cent. Bills were offered forward at $\frac{3}{8}$ per cent. for delivery and payment next week.

*

The Bank Return

RATHER unexpectedly, the peak in the note circulation has come this week instead of last. Wednesday, the date of the Bank returns, was the first working day after Christmas, which meant that by then there had been no time for the Christmas currency to return from circulation. Another influence was the cold weather in the early part of last week, which caused Christmas shopping to be delayed until the last few days immediately before the holidays.

	Dec. 29, 1937	Dec. 14, 1938	Dec. 21, 1938	Dec. 28, 1938
Issue Dept.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	326.4	326.4	326.4	326.4
Notes in circulation	505.3	495.3	503.0	504.7
Banking Dept.:				
Reserve	41.9	61.1	53.4	51.7
Public Deps.	11.4	15.6	12.5	15.9
Bankers' Deps.	120.6	99.5	98.3	101.0
Other Deps.	36.6	36.0	37.3	36.8
Govt. Secs.	114.6	68.4	72.1	69.2
Discounts & Advances				
Other Secs.	9.2	16.8	14.9	28.5
Proportion	20.9	21.7	24.8	21.5
	24.8%	41.1%	36.6%	34.1%

Market borrowing explains the week's increase of £13.6 millions in discounts and advances, but its effects are distributed

over most of the items in the banking department's return. In consequence, bankers' deposits have only risen by £2.7 millions.

*

The Bullion Market

THERE was a limited arbitrage demand for gold, except on Wednesday, when it disappeared completely owing to the general need for sterling over the end of the year. On that day there was a fair amount of re-selling, and the Control bought most of the gold. There is an impression in the bullion market that the banks are only ceasing to lend against gold until the opening of the New Year, and that it was only suggested that they should do so as a temporary measure to strengthen their cash reserves over the end of the year. But less money will be available for this purpose in future, owing to the withdrawal of foreign funds from London.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Discount	Amt. dealt in	Cash	Two Mths.
1938	s. d.	d. pm	£'000	d.	d.
Dec. 23	148 11	$\frac{1}{2}$ pm	231	2014	1916
" 24	149 1	$\frac{1}{2}$ pm	423	2016	1911 $\frac{1}{2}$
" 28	149 0	$\frac{1}{2}$ pm	723	20	1912
" 29	149 0 $\frac{1}{2}$	par	516	1915 $\frac{1}{2}$	1916

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.

The New York price of silver remained at 43 cents per ounce .999 fine during the week

The silver market has been uncertain, pending the news of any change in American official prices. India sold throughout the week. Bull purchases of forward silver against spot sales of old positions explain the narrowing of the margin between the cash and forward prices.

Investment

London Transport and Receivership.—A meeting of London Transport "C" stockholders was called last week on the initiative of Mr J. F. Heaton, chairman of Thomas Tilling Ltd., and one of the largest individual holders of the stock. The meeting was addressed by Mr Heaton, who expanded several of the points which he had made previously in letters to the Press (which were discussed in *The Economist* of November 26th). He put forward two arguments which might be submitted in any application to the Court for the appointment of a receiver. The Board, he urged, had undertaken lavish expenditure on new capital works at a time when they were incapable of meeting their statutory charges; and, secondly, the Board had failed, despite the 1933 Act, to fix fares so as to defray all charges, including the standard rate on the "C" stock. Mr Heaton, however, made it clear that he had not arrived at any final conclusion regarding the action which might be taken by dissident "C" stockholders. He rehearsed, for example, the arguments in favour of a Government guarantee for the "C" stock, mentioning at one point the effect of a 4 per cent. guaranteed stock upon fare concessions. On the ground that the Board was founded by a Government measure, and that Government taxation policy may conflict with the obligations of the Board (as the Board has reason to complain), the case for a guarantee can be presented with some plausibility. But the rights of the "C" stockholders are already protected by Statute, and it is difficult to suppose that Parliament would be ready to extend these rights into a sphere which has no reference to the Act of 1933. In fact, it is probable that the committee which was appointed at last week's meeting will have to consider hard and long before reaching a decision on an appropriate line of action. This committee consists of Messrs J. F. Heaton, John Harrison, P. D. Leake, Ernest L. Taylor, and Sir Christopher Magnay.

* * *

United States Rail Reform.—The broad programme of railroad legislation put forward by President Roosevelt's "Informal Committee" is certainly the most powerful plea for assistance which has been made in recent years. Altogether, the schedule for Congress embraces the creation of a Federal Transportation Board, with regulatory powers over all forms of transport; entire revision of rate-fixing procedure, on a basis clearly more favourable to the railroads; restoration of the railroads' power to initiate consolidation and reorganisation procedure, with the establishment of a special court for reconstruction; tax relief, subsidy "adjustments," and liberal loan terms for maintenance, equipment and modernisation expenditures. If the programme does secure the assent of Congress, the future of the American railroad system will obviously be much brighter than any analysis of recent working would suggest. A national Transport Board would, no doubt, reject any sensational "blanket" advance in freight rates in view of the rapid process of industrial decentralisation which threatens all competitive transport services, but it would be empowered to make material adjustments over some grades of traffic, and it would presumably bring important economies by co-ordination of competitive services. But by far the most important relief would spring from the modernisation of equipment, and from the consolidation of existing rail systems which now carry a heavy burden of competitive mileage. The whole programme, energetically pursued, could solve the problem of most railroads for many years ahead.

* * *

Apart from a speculative nibble at some lower-priced issues, however, Wall Street has accepted the proposals without very much enthusiasm. Such caution is amply justified. For six years the Roosevelt Administration has preached railroad reform, only to shirk the issue at critical

times. And for years powerful Congress bodies have obstructed the path to relief. Any advance in freight rates meets the powerful opposition of industrial and agricultural voters, and any plea for consolidation and loan relief is faced with the opposition of those who fear that a wide programme of assistance might bring a return to the abuses of former years. The labour unions, too, have naturally opposed any previous moves towards consolidation. The present proposals, however, appear to enjoy the blessing of most labour representatives—the committee included three union delegates and three railroad executives—and the Administration is certainly more conscious than ever before of the serious long-term problems which the railroads now face. There seems to be more than an even chance that the roads will secure important benefits from Congress this year, even if the full proposals of the "Informal Committee" are not wholly acceptable.

* * *

Maturities in 1939.—The coming year is rather unfruitful in large amounts of stock falling due for repayment and at present prices there are few Government or corporation loans which can be regarded as certain candidates for conversion. We give below a list of some leading stocks which mature next year, and also show some loans which may be redeemed, though most of them are "possibles" rather than "probables":—

Item	Stock	Due	Amount Outstanding	Price Dec. 28
1	1% Treasury bonds	1939-41	99,999,900	97 $\frac{1}{2}$
2	Bombay Port Trust 4% debts.	1939	500,000*	101
3	Port of Calcutta 4% debts.	1939	681,000	101
4	Pretoria 4% stock	1939	796,110	100
5	Sydney 5% debts.	1939	1,000,000	100
6	Osaka 5% stg. bonds	1939-39	1,828,220	91 $\frac{1}{2}$
7	Sudan 5 $\frac{1}{2}$ % stg. bonds	1939-59	5,220,900	108
8	Australia 3% debts. and stock	1933-41	13,469,981	99
9	Ceylon 4% stock	1939-59	1,000,000	101
10	Gold Coast 4% stock	1939-59	1,035,000	99 $\frac{1}{2}$
11	Abo 6 $\frac{1}{2}$ % stg. loan	1939-59	430,520	102 $\frac{1}{2}$
12	Glasgow 2 $\frac{1}{2}$ % stock	1925-40	499,100	99
13	Tasmania 3 $\frac{1}{2}$ % stock	1920-40	4,156,500	100 $\frac{1}{2}$
	Tasmania 3% stock	1920-40	448,300	99

* A further amount of £500,000 is redeemable in 1940.

The 1 per cent. Treasury bonds (item 1 in our table) are in a category of their own, for they are not finally due until February 1, 1941, although the Treasury may call them in whole or in part on three months' notice after January 31st next. Items 2 to 6 are stocks which are definitely repayable at some date in 1939 and a conversion offer has, in fact, already been made in respect of the South Australian 3 $\frac{1}{2}$ per cent. stock due January 1, 1939. The Pretoria 4 per cent. stock matures on the same date. In addition to the stocks shown in our table, there are a number of small Dominion corporation loans due in 1939, such as Hobart Tramways, New Plymouth Harbour Board, Nelson and Pietermaritzburg. There are small balances still outstanding of certain Perth, Chester and Christiania stocks, and redemption of £697,540 Belgian 3 per cent. sterling loan 1914 is due to be completed by February 5th. The Sudan 5 $\frac{1}{2}$ per cent. bonds (item 7), guaranteed as to interest by the Imperial Government, are redeemable between October, 1939 and 1959, at 105. The Sudan 4 $\frac{1}{2}$ per cent. guaranteed stock is dated 1939-73, but in this case it is only the sinking fund which begins to operate in 1939. Items 8 to 11 are possibilities for conversion, though current prices and the general course of interest rates may qualify their chances. But if the trend of rates becomes definitely unfavourable to borrowers, it may be that Glasgow and Tasmania (items 12 and 13) would prefer to call their loans in 1939 in anticipation of the latest date, 1940.

* * *

Chilean Debt Payment.—The announcement that Chile is to pay interest on her foreign debt at the rate of £2.0925 (41s. 10.2d.) per cent. for 1938, compared with

£0.786 (15s. 8.64d.) per cent. for 1937, has greatly exceeded market expectations, which were pitched no higher than £1.3 per cent. In January, 1935, a law was passed providing for the partial resumption of foreign debt service to be met from the Chilean Government's 25 per cent. share of nitrate profits and its revenue from the copper tax, half the proceeds being devoted to payment of coupons and half to redemption. The course of these revenues during the past three years, and of the relative coupon payments, are set out below:—

IN U.S. \$				
	Share of Nitrate Profits	Copper Tax	Total	Coupon payments
1936.....	2,671,068	2,248,505	4,919,573	0.605
1937.....	2,981,957	3,124,794	6,106,751	0.786
1938.....	2,792,306	11,343,268	14,135,574	2.0925

It is evident that the 18 per cent. tax on copper profits has provided the unexpected bounty during the latest year, though the revenue was actually earned during the year 1937. A repetition of this satisfactory rate of payment could hardly be expected a year hence. Moreover, the fact that important features of the Debt Law have expired with the end of this year must obviously lead to caution in the market. By converting her external creditors into equity shareholders, Chile has at least been able to provide some return for them in a period of difficulty. But coupon service has also been accompanied by the dubious principle that, in times of adversity when bond prices are specially deflated, the debtor should be able to divert service moneys from interest to sinking funds, and so redeem her debt at bargain basement prices. This principle, or at least the "fifty-fifty" basis on which it has been operative, surely calls for reconsideration in a new scheme.

Industrial Profits in 1938.—Week by week during the past year our analysis of profit and loss accounts (which appears in this issue on page 736) has provided a cumulative comparison of the course of company profits with those of the same companies in the preceding year. With this week's issue the results of a full year are completed. We have received reports from 2,395 companies during 1938 (excluding banks and companies for which comparable results in the preceding year were not available) whose total profits, after debenture interest, amount to £302,413,000. This figure shows an increase of 7.3 per cent. on the profits of £282,065,000 earned by the same companies in their previous financial years. Of the year's total profits, some £48,561,000 has been required for preference dividends, while ordinary shareholders have received £157,766,000 in dividends, and reserves have been strengthened to the extent of £96,086,000. The latter figure represents 31.8 per cent. of the total profits of the period, and suggests that the caution of company directors has been fully maintained during a year of record earning power. The figures for the year will be analysed more extensively in a forthcoming leading article.

Company Notes

Baird Television Finance.—During the first decade of its operations, Baird Television has incurred inevitable losses. The risks of pioneering work in an undeveloped technical field were never more clearly revealed. In the period ended June, 1936, a big jump in expenditure suggested that much of the initial spade work had been done and that development was proceeding faster. In 1936-37, the loss of £111,902 covered, for the first time, the net results of production and sales, and although there is a deficit of £103,274 for 1937-38 (increasing the "general development account" to £663,776) it is some satisfaction that the loss is smaller. But hopes that in 1937-38 television would develop commercially were unfulfilled, and only since last June have indications become slightly more en-

couraging. But the general development account, together with patents, trade marks, etc., amounting to £539,416, account for the whole of the issued capital of £1,087,500—which itself was substantially reduced two years ago. The possibilities of television in cinemas may be of great importance for Baird and Gaumont-British, but their value cannot be assessed unless and until agreement is reached with the B.B.C. Prospects of commercial development have again emphasised the need for additional finance, and it is proposed to submit a scheme next month. Total liquid assets at the end of June, 1938, were no higher than £13,000, and during the year to that date loans and interest due had risen from £39,000 to £159,000. The need for replenishing resources has clearly become urgent, and meanwhile a quotation of 1s. for the 2s. 6d. deferred shares can only be described as optimistic.

Brewery Company Results.—The main impression to be gathered from recent brewing results is one of fair stability for the industry as a whole. Actually the results are mixed, but they show no marked tendency towards falling profits. Indeed, changes are usually small, and the investor has the consolation that most dividends have been maintained—with exceptions like Benskin's Watford and P. Phipps. In the following table we show the course of profits of some of the larger companies:—

Company (years to Sept. 30)	Total Profits	Earned for charges	Earned for Ord. Stock		Div.	Present	
			Amt.	Rate		Price	Yield
	£'000	£'000	£'000	%	%	£1 shs.	%
Ind Coope—

Brickwood & Co.—							
1936.....	354.0	168.4	129.4	23.0	14		
1937.....	358.2	177.1	138.1	22.6	15	52 0	5.77
1938.....	377.8	175.5	139.5	23.6	15		
*Newcastle Brw.—							
1936.....	135.8	129.0	90.0	26.1	11		
1937.....	175.9	154.9	115.9	33.6	15	56 3xd	5.71
1938.....	198.9	177.1	138.1	41.1	17½		

* Years to October 31st. † Of which 20 per cent. final on £1,963,911; also 20 per cent. capital bonus. ‡ Of which 7½ per cent. interim on £1,475,698, and rest on £1,745,698. § After £20,000 income tax provision.

The change in Ind Coope and Allsopp's profits is in the right direction, though it does not suggest that further substantial benefits have matured from the acquisitions in 1936 and 1937. Owing to a saving in depreciation—the 1936-37 allocation included a special item of £80,000 to write down the bottling plant—some £49,000 more is available for ordinary stockholders, who in addition to their 27½ per cent. dividend receive a 20 per cent. capital bonus. This bonus—made to bring capital more into line with assets—absorbs £392,782 from capital reserve, and £100,000 has been transferred from that reserve to write down certain wasting assets. H. and G. Simonds record a satisfactory rise in total profits of 7 per cent. To finance new acquisitions, the company has issued some £474,000 nominal of capital in various forms during 1937-38. It is not apparent from the report to what extent these have contributed to the rise in profits. Benskin's reduction in dividend is dictated more by a conservative policy than by the trend of earnings. The chairman has pointed out that sales improved further in 1937-38, though the extra profit was absorbed by the higher cost of barley. A higher turnover is also reported by Brickwood's, but increased tax and pensions provisions absorb most of the increase in trading profits. On the North-East coast, recovery returned late and per-

sisted longer, but even so the rise from £175,915 to £218,938 in Newcastle Breweries' total profits is an agreeable surprise. The risk of higher taxation still oppresses the brewery share market, and recent legal judgments may well have important consequences. The "Robinson" decision has already led to higher assessments. And the "Weston" decision, which (unless it is reversed) requires a new licence for extensions beyond the existing limits of properties, is a severe hindrance to the improvements policy adopted in recent years by brewers. Current yields of about 5½ per cent. on sound shares show that the market has given weight to these various factors.

Alvis Prospects.—Although 1937-38 was a difficult year for specialist motor manufacturers, it is disappointing that for the year to July 31, 1938, Alvis recorded the heavy loss of £64,950. In the previous period of 19 months, a loss of £26,244 was reported, owing to difficulties in making car deliveries. It is, however, the aero-engine section of the business which is responsible for the severe setback to profits in 1937-38. The factory is, of course, wholly dependent on Air Ministry orders, but its equipment stood idle until last July—that is, until the end of the financial year. And even after agreement has been reached with the Ministry, part of the plant is not in full use, since complete engines are not being produced. Expenditure on the aero-engine branch has continued at a heavy rate. In the 1935-37 period some £140,351 was spent on aero-engine development, but the proceeds of the share issue were available to meet it. The latest year's expenditure of £83,760 (which, with transfers from other accounts, raises aero-engine development expenditure from £140,351 to £306,118), together with additions to other equipment, have led to an increase in the bank overdraft from £91,473 to £308,335. Interest thus requires £11,200, and after providing for preference dividend payments up to the end of 1937, there is a deficit of £89,763, against £56,272. Nearly £89,000 is allocated to certain special reserves, and the effect of various changes in the balance sheet is to leave the carry-forward almost unaltered, to transfer £179,499 from share premium account to wipe out the year's total loss, and to use the rest of that account to raise the general reserve from £50,193 to £115,000. Fortunately for shareholders, the outlook for the current year is considerably brighter. Aero-engine expenditure is no longer a deadweight, and should make some contribution to profits. The mechanisation branch of the business is developing satisfactorily, and there should be a useful saving in interest, for the print of the chairman's speech, accompanying the report, expresses the belief that the bank overdraft will be reduced in the near future. The 5s. ordinary shares now stand at 2s. 7½d.

Morrell Estates and Development Position.—The history of this housing estate company has been short, and from the investor's point of view, unsatisfactory. Incorporated less than 3½ years ago, the company is now being put into voluntary liquidation—a step which closely follows the liquidation of the subsidiary building company, and the amalgamation of its business with that of the parent company. The Estates company, whose assets consist almost solely of its interests in Morrell (Builders), Limited, received a dividend of £110,812 in its initial trading period, but paid no dividend, although 47.9 per cent. was earned for the ordinary shares. In 1936-37 there was a small trading loss, and the latest circular, after referring to the adverse effects of the international situation and building society litigation, states that trading in the past year has resulted in an adverse balance. As long ago as January, 1937, it was found necessary to put the subsidiary into liquidation to conserve its assets, and at a creditors' meeting of Morrell (Builders), held about a year later, it was agreed that, if further finance could be raised on debenture by the parent company, the creditors' claims would be satisfied by 5s. in the £ in cash, 10s. in bills of exchange, and the rest in unsecured notes of the parent company. The necessary debenture issue for this scheme was made last May (when £75,000 of 5½ per cent. debenture stock was

placed at 98), and the building company's assets were then transferred to the parent company. The latest circular, referring to the liquidation of the parent company, says that recently the directors were faced with the position that unless £20,000 of additional working capital was forthcoming, the business could not be carried on. Holders of the £75,000 debenture stock have appointed Sir Harold Moore as receiver, and the creditors' committee concerned with the liquidation of the Builders company has approved the board's action in proposing the liquidation of the Estates company.

Diamond Finance Reorganisation.—From the details of the capital rearrangement of Diamond Corporation and Diamond Trading Company, which have been agreed between the Anglo-American Investment Trust and the Barnato Brothers' group, on the one hand, and De Beers (and possibly Consolidated Diamond Mines of S.W. Africa at a later stage), on the other hand, it is difficult to appreciate the statement of the De Beers directors that it will be possible, as a result, to meet the company's preference charges with a smaller volume of trading than has been needed in the past. The rearrangement, indeed, is reminiscent of a "swap" transaction. In the first place, De Beers are to acquire from Anglo-American Investment and the Barnato Brothers' group 2,500,000 £1 shares in Diamond Corporation (which holds large stocks of diamonds in connection with the marketing scheme). The purchase consideration for these shares will be 125,000 deferred shares of De Beers (taken at £10 per share, compared with £2 10s. nominal, and a current quotation of 8½), an immediate cash payment of £250,000, and a further payment of £1,000,000 at the end of 1939. But, secondly, it is stated that this purchase is part of a large scheme, by which Anglo-American Investment Trust and the Barnato Brothers' group have agreed to subscribe for £1,000,000 of new capital for the Diamond Trading Company. The latter concern acts as the marketing organisation for the whole diamond combine, and its shares are entirely held by the Diamond Corporation. Hence it would appear that De Beers itself will ultimately provide the additional capital for the Diamond Trading Company, and that Anglo-American Investment and the Barnato Brothers' group will exchange a holding in Diamond Corporation (the parent company) for one in Diamond Trading (the subsidiary)—together, of course, with the De Beers shares which are to be taken over. There may well be special reasons underlying the particular method adopted under the scheme, but they are not apparent on the surface.

Australian Pastoral Companies.—Recent reports from pastoral and merchant companies bear witness to the transformation in Australian conditions since the summer of 1937. Their difficulties have arisen primarily from the sharp drop in wool prices during the 1937-38 season, while severe drought in various parts of Australia necessitated increased expenditure on artificial feeding. Dalgely and Company report that production of wool in Australia in 1937-38 was a little higher than in 1936-37 at 3,338,038 bales, but sales, which amounted to 2,793,164 bales, realised £A16,506,815 less at £A44,045,757 compared with the previous season. The total profits of this company, however, were only 6 per cent. lower, at £879,853, but of this sum expenses and fixed charges represent a high proportion, and earnings for the ordinary shares, at £82,374, amount to only 5.5 per cent. against 8.3 per cent. Consequently, the 6 per cent. dividend was

not quite covered. The report of Australian Mercantile Land and Finance also stresses the severe decline of 25 per cent. in wool prices in the 1937-38 season, and shows profits for the year to June 30, 1938, of £371,292 against £423,390. The dividend is modestly reduced from 6 per cent. to 5 per cent., but earnings have fallen from 10.7 per cent. to 6.1 per cent. Similar difficulties, of falling wool prices and drought, have reduced the amount earned for fixed charges by New Zealand Loan and Mercantile Agency from £204,012 to £150,365, and almost the same rate of decrease is shown by Australian Pastoral net profits.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
JANUARY 10 JANUARY 12

THE resumption of business on the London Stock Exchange after an extra Christmas Bank Holiday and with the prospect of the New Year holiday to come was not attended by either professional or public interest. The Mediterranean breezes also tended to restrict business and Wall Street's holiday movements were not regarded as exceptionally encouraging at first.

In the *gilt-edged market*, the year-end squeeze in Lombard Street was not regarded so seriously as before the holiday and, with the assistance of bear covering, the Funds, particularly the undated stocks, made progress, rises of $\frac{1}{4}$ being recorded in War Loan, Old Consols and Locals. Some improvement was recorded in the new Australian scrip.

Although the conversion scheme for French railway bonds does not affect the sterling issues, the latter rose at first in response to the announcement but declined in later dealings on Wednesday. Egyptian bonds were a weak feature, being affected by fears of possible repercussions from the Italian colonial demands. With the exception of German issues, European bonds were reactionary, while Japanese bonds were marked down on nervousness regarding the economic outlook. Chilean issues jumped on Thursday in response to the unexpectedly favourable debt payment for 1938 (discussed on page 721).

★

Home rail traffics published on Thursday were more favourable than the market had expected (though the comparison with 1937 was biased) and the junior stocks improved slightly as a result, prior charges remaining very

New Zealand and Australian Land, which has a more direct interest in farming, reports a 29 per cent. reduction in total profits for the year to March 31st to £186,838. Earnings of 1.5 per cent. for the ordinary stock are distributed in full. There has been no dramatic movement in wool prices recently, but the current year's clip (and its quality) appears to be lower than last season's. Wheat is of secondary importance, but in view of the heavy Northern Hemisphere crops, prices will be unfavourable. Hence conditions are not propitious for a recovery in pastoral company profits at the moment.

firm. The progress of Argentine railway stocks was arrested; while the ordinary stocks remained unchanged, some of the preference and debenture issues were marked down slightly.

In the *industrial market*, prices remained firm, though under holiday influences the turnover was still very small. Iron and steel shares were again the chief feature, on hopes of mass production of A.R.P. steel shelters. Guest, Keen and Colvilles were prominent, but small gains were general almost throughout the group. Coal shares also were firm. Engineering issues again made a mixed showing, and electrical equipment companies were no better. In the motor section, Alvis fell back on the poor report, but rallied later and ended little changed. Leyland declined further, and movements in other motor shares were mixed. Aircraft issues remained steady but unexciting. Textiles were a shade harder, and hopes of an announcement concerning British Celanese and Courtaulds helped both shares. There was a little support for provision and catering issues, while the stores were mostly easier on the lower retail trade figures for November. Brewery shares were firmer on provincial support. Miscellaneous shares were steady on the whole, and there was some show of interest in banking shares on the approach of the dividend season.

★

Business in *oil shares* continued on a small scale. Changes were small, but the undertone was satisfactory, and there was modest improvement on Thursday. Rubber shares were slightly firmer, with some enquiry for the leaders. Turnover in tea shares was too small to test quotations.

The *mining market* behaved similarly to other sections, with quiet trading but a good undertone. A little Paris and local buying helped the dividend-paying Kaffirs, and later some of the develop-

ing mines improved on Cape support. West African issues were brighter than in recent weeks. Small gains were general among Rhodesian copper companies, and other base metals were firm though neglected. Diamond shares were unaffected by the De Beers deal.

ACTUARIES' INVESTMENT INDEX

Owing to the closing of the London Stock Exchange on Tuesday, December 27th, the Actuaries' index of industrial ordinary share prices has not been computed this week. The index for December 30th will appear in next week's issue.

New York

WALL STREET closed for the Christmas holiday distinctly encouraged by the findings of the "Informal Committee" for relieving the present difficulties of the railroads. Rail stocks failed to hold their earlier levels when business was resumed this week, but in mid-week further gains were recorded. Tax selling was still influencing the market when the market reopened on Tuesday, but with the last day of such operations on Wednesday, the market staged a general rally, in which the Dow industrial average gained a point, and turnover exceeded the two million mark. The market was not disturbed by the estimate of *Iron Age* that steel ingot production for the current week is running as low as 40 per cent. of capacity, compared with 53 per cent. last week, since the fall is attributed to holiday and year-end influences. An improvement in automobile demand is expected during January. In a dull bond market, speculative rail issues took the lead.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American

values calculated on closing prices (1926 = 100).

† Free of Income Tax.

BRAZILIAN TRACTION COMPANY.—No dividend action with respect to ordinary shares can be taken because of cessation of remittances from Brazil.

BUTTERLEY COMPANY, LTD.—Ordinary dividend reduced from 2 per cent. to 1½ per cent., tax free.

DE BEERS CONSOLIDATED MINES.—A dividend of 10s. per share is to be paid on the £2 10s. preference shares in respect of the six months to June 30, 1938.

JUTE INDUSTRIES, LTD.—A dividend of 3 annas 4 per cent. is to be paid on the preference shares.

STATE OF BAHIA SOUTH WESTERN RAILWAY.—No payment at present on account of interest out of surplus revenue on 8 per cent. prior lien debenture stock for half-year ended October 31, 1938. Revenue balance to be carried forward.

UNITED DOMINIONS TRUST.—Interim dividend on ordinary shares 6 per cent., as before, but is payable on £100,000 more capital.

SHORTER COMMENTS

Company Results of the Week.—Owing to increased taxation, net profits of COBBOLD AND COMPANY are nearly £9,000 lower at £45,379. During 1937-38, some £70,550 has been spent on improvements to properties and plant, and new premises. Total profits of HENEKEYS are only slightly lower at £64,934, but distribution is conservative, as the dividend is reduced from 19 to 17½ per cent. Total profits of UNITED

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

The Activity of Industry.—The wheels of industry have been slowed down last week for the Christmas and New Year holidays. Many industries, such as iron and steel, utilise the holidays for overhauling and repairing their machinery. In the absence of any important developments in industry and on the commodity markets we have omitted our usual commercial reports this week. The usual lull has this year been accentuated by the sudden fall in temperature, as a result of which business was temporarily dislocated, and outdoor operations had to be almost entirely suspended for a few days. The latest developments in the principal industries, as well as the course of general business activity are discussed in the *Trade Supplement* accompanying this week's *Economist*. In addition to our usual monthly report on the trend of business, we have prepared a special survey of Britain's economic position and outlook, given on pages 18-21 of the *Trade Supplement*. The survey reaches the conclusion that the early months of 1939 may witness a decline in activity and an increase in unemployment, but that sustained revival in America and increased defence expenditure may possibly contrive to push the business indices upwards in the summer.

* * *

Reduction in Tinplate Prices.—A decision has now been reached concerning the prices of tinplates after the end of this year. From January 1st the inland price was fixed at 20s. 4½d. per basis box (f.o.t.), compared with the current price of 21s. 1½d.-21s. 6d. per basis box. So far as export prices are concerned, no final agreement has yet been reached, but current quotations for delivery next year are based on 20s. 3d. per basis box, compared with the old official price of 21s. 6d. per box. It remains to be seen whether these cuts will lead to an improvement in demand. As the table below shows, the Welsh tinplate industry has been seriously hit by the recession in general business activity this year :—

	PRODUCTION, SHIPMENTS AND STOCKS OF TINPLATES		
	Week ended		
	Dec. 18, 1937	Dec. 10, 1938	Dec. 17, 1938
Production—per cent. of capacity	76.27	37.70	43.93
	Week ended		
	Dec. 23, 1937	Dec. 15, 1938	Dec. 22, 1938
Shipments	5,201 Tons	1,608 Tons	5,301 Tons
Stocks (warehouse and in vans)	8,253	6,857	5,223
	Fifty-one weeks ended		
	Dec. 23, 1937	Dec. 22, 1938	
Shipments	404,352 Tons	244,874 Tons	

Operations in the industry had to be cut down to less than 50 per cent. of its capacity. Shipments during the first 51 weeks of this year were nearly 40 per cent. smaller than during the corresponding period of 1937. The drastic curtailment of output, however, has prevented the accumulation of surplus stocks, and production would, therefore, quickly respond to an improvement in demand.

* * *

Coal Mines Reorganisation.—The Commission created under the 1938 Coal Act is contemplating a new procedure in the discharge of its amalgamation functions. There have been considerable changes in the structure of the industry since the original Gowers Commission was given qualified statutory powers in 1930 to make more effective the provisions of the Mining Industry Act, 1926, for facilitating the reorganisation of the industry. Substantial progress has been made in the direction of integration. Approximately 70 schemes, in addition to

those arranged without recourse to the Reorganisation Commission or to the Board of Trade, have been completed, and it was reported by the Mining Association towards the end of 1937 that 77 per cent. of the national coal output was then being produced by 129 undertakings, compared with 84 per cent. by 323 undertakings in 1923. In some districts the whole of the output, and in others the greater part of it, is now under single control. The other great change has been the regional control of the sale and supply of coal under the central selling schemes introduced in 1936. Nevertheless, mechanisation and concentration of production have made less progress in the United Kingdom than on the Continent. The whole of the Ruhr output of 128 million tons in 1937 was produced by 33 undertakings; in Belgium 30 million tons were raised by 86 concerns, in France 36 million tons by about 100 concerns, and in Holland 14.3 million tons by five undertakings. The disparities in mechanisation and more modern underground working methods are revealed by the fact that the output of coal per man-shift increased between 1929 and 1937 by 20 per cent. in France, 28 per cent. in the Ruhr, 33 per cent. in Belgium, 36 per cent. in Holland, and 51 per cent. in Poland, compared with only 7.5 per cent. in the United Kingdom. The new Coal Commission, apparently, is taking steps to foster the concentration of production on the more efficient collieries and districts by voluntary schemes before using the compulsory powers granted to it by last year's Act. It is seeking the co-operation of the industry for this purpose, and the various regional associations of colliery owners attached to the Mining Association of Great Britain are at present considering a suggestion made by Sir Ernest Gowers, the Chairman of the Coal Commission, for the institution of District Committees "to advise on the question of voluntary amalgamation proposals under the Coal Act, 1938."

* * *

Coal-mining Royalties.—The Coal Act of 1938 provided for the nationalisation of coal-mining royalties and the compensation to be paid to existing royalty owners was fixed at £66,450,000. A Central Valuation Board was set up to divide Great Britain into "valuation regions" and to allocate to each of these regions its share of the total amount to be paid in compensation. The Board has now completed its task, and its decisions have been published in a White Paper (Cmd. 5904). The "valuation regions" and the distribution of compensation are shown below :—

Valuation Region	Compensation
1. Scotland	£8,512,245
2. Northern region	13,515,930
3. Western region	5,409,030
4. Yorkshire	10,306,395
5. North Midlands	6,645,000
6. North Staffordshire	1,315,710
7. East Midlands	1,475,190
8. West Midlands	1,628,025
9. South Wales	16,446,375
10. Southern region	1,196,100
	£66,450,000

In defining the boundaries of these regions the Central Valuation Board has taken care that they do not intersect existing coalfields. The completion of the Central Valuation Board's task is another step in the long-drawn out process of the reorganisation of the coal-mining industry.

* * *

Agriculture in 1938.—For British farmers 1938 has been a year of contrasts. The long spring drought, which involved protracted winter feeding for livestock and a poor hay harvest, was followed in the autumn by a spell

of mild damp weather which lasted until the week before Christmas. Dairy farmers obtained in the summer an increase in wholesale milk prices to meet the extra expense of the drought and the Milk Marketing Board succeeded in consolidating this gain, at the expense of the consumer, for the ensuing season of 1938-9. The withdrawal of the Milk Bill, whose terms were outlined eighteen months ago, has left uncertain the future of the dairy industry. The beef subsidy has worked satisfactorily and the proportion of animals which obtain the quality payments continues to increase. The new bacon contracts, revived in December after a lapse of nearly two years, provide pig feeders during the next three years with guaranteed prices for bacon pigs varying with the cost of feeding stuffs. Even with this inducement, the Pigs Marketing Board only obtained contracts for 1.4 million pigs in 1939, and much dissatisfaction has already been expressed over the allocation of pigs between factories. Sheep farmers have undoubtedly had a very bad year, with very low prices for fat lambs and sheep, and the further increase in the number of breeding ewes shown in the June returns indicates that the glut will continue in the coming year. The results of arable farming have been patchy. A good corn harvest benefited the wheat grower, with his guaranteed price, but brought a slump in barley prices, which has induced the Government to double the barley subsidy. The yield of sugar beet has been disappointing, and an excellent potato harvest has involved the Potato Marketing Board in drastic but unpopular marketing regulations. The livestock farmer has seen with relief the drop in the prices of cereals and concentrates from the high levels reached in 1937, but the rise in agricultural wages and the shortage in many districts of both regular and casual labour continued unabated in 1938.

* * *

Fall in Retail Trade.—The latest returns published by the *Board of Trade Journal* show that the average daily value of retail sales reported in November was 1.3 per cent. less than in November, 1937. This is the first decrease recorded for the value of total trade since September, 1933, apart from declines in the spring months due to the varying dates of Easter and Whitsun. All districts registered a decline in November, except Scotland, where the value of retail sales rose by 2.5 per cent. compared with a year ago. Part of the general fall in the value of retail sales may be ascribed to the very mild weather, which delayed the purchases of winter clothing and fuel, but even sales of food and other perishables, which have been consistently higher in 1938 than in 1937, registered only a fractional increase. For the ten months of the present season, from February to November, the value of sales of food rose by 4.3 per cent. compared with the corresponding period of 1937, in spite of a fall in prices during the current year; on the other hand, the value of sales of merchandise other than food in these ten months declined by 0.6 per cent. It seems, therefore, that the rise in the volume of food sales during 1937, which was noted on page 243 of *The Economist* of April 30th, was continued during 1938, while the volume of non-food sales has slightly fallen, since average retail prices were a little higher than in 1937. The decline in the value of these sales in November, it may be noted, was not greater than that recorded in previous months of this year.

* * *

Stocks of Butter.—British supplies of imported butter (which provide nine-tenths of all butter consumed in this country) are drawn in about equal proportions from the Northern and Southern Hemispheres. As supplies from Australia and New Zealand are subject to greater seasonal variations than those from Europe, total imports tend to be heavier in the months from December to July than during the remainder of the year. Consequently, prices of New Zealand butter rise to a peak in the autumn while stocks usually increase during the spring and early summer and then fall gradually to a minimum in December. The accompanying chart shows average variations in the stocks

STOCKS OF BUTTER IN COLD STORAGE

of butter in cold storage in 1934-36 as well as changes in 1937 and 1938; the statistics are those of the Imperial Economic Committee and are believed to cover more than 95 per cent. of all cold stores. As the total consumption of imported and home-made butter in Great Britain is about

LIVERPOOL

The port of the North—with easy access to the Midlands—just over three hours from London—and everything necessary to the smooth running of modern industry.

Labour, warehousing, power, transport (by ship, rail, road, air or canal) all 'laid on'—in planned factory estates.

Build your factory in the ideal spot—Liverpool Corporation have sites available and can help to finance the cost of land and buildings

for industry

Manufacturers and Industrialists are invited to write for illustrated brochure "INDUSTRIAL LIVERPOOL" which will be sent on request. Application should be made to the Town Clerk, Corporation of Liverpool, Municipal Buildings, Liverpool 2

10½ million cwt. per annum, it will be seen that, even at the seasonal peak, stocks do not normally exceed 6 or 7 per cent. of the annual intake. The very low level of stocks recorded in the winter of 1937-38 was due largely to the relatively lighter imports in the autumn of 1937; their subsequent increase has been caused by a small increase in imports, compared with 1937, and by the continuation of the downward trend in consumption, which began at the end of last year. Estimates indicate that the consumption of imported butter in the first nine months of 1938 was about 12 per cent. lower than in the corresponding period of 1937.

* * *

Rise in Sugar Prices.—For the first time for eleven months the c.i.f. price of raw sugar on the London Terminal Market has exceeded 6s. per cwt. In April of this year, raw sugar prices fell below 5s. per cwt. for some days, but the agreement over export quotas reached by the International Sugar Council in July brought a recovery to nearly 5s. 6d. per cwt. Since October, there has been a fairly steady improvement, due mainly to the unfavourable conditions for the European beet crops. The latest estimates, published by M. Licht early in December, places the beet crop in Europe (excluding Russia) at 6·7 million tons, compared with the previous estimate of 7·0 million tons, and an estimated production in 1937-8 of 7·2 million tons. The British crop is now estimated at 325,000 tons, a reduction of 60,000 tons on the previous estimate, and as Britain is the largest "free" market for raw sugar, this reduction in domestic supplies will have a considerable influence on prices in the coming months. The next meeting of the International Sugar Council, which is to be held in London on January 12th, will, therefore, find the prospect for the world's sugar industry considerably improved since its previous meeting six months ago. There is, however, no prospect of any shortage of supplies since export quotas, which were considerably reduced in the current season to meet the expected surplus, could easily again be adjusted upwards.

* * *

Cocoa Difficulties.—The cocoa market has been very depressed during the last few weeks. The London terminal market quotation for March is now down to 21s. 6d. per cwt., compared with 22s. 6d. a month ago and 24s. 11d. on September 30th, the end of the 1937/38 season. The chief reason for this weakness is the low level of demand. Naturally the limited purchases by consumers have also induced the shippers not to hasten their current shipments, particularly as their stocks are still substantial after the heavy purchases in the summer. So far only slightly over one-third of the new Gold Coast crop has been marketed, although at this time of the year the West African selling season has usually passed its peak. Official West African production figures are not yet available, but it is known that the new supplies are again large. Unless the West African crops are moved more rapidly within the next few months, their sales may again coincide with the beginning of the hedge sales of the Brazilian crop, a coincidence which would, of course, entail a further depression of prices. Meanwhile, the Gold Coast Government has appointed a special Committee to make recommendations on the steps to be taken by the Colony in connection with the recently published Cocoa Inquiry Report. The Committee is composed of a high Government official, a Native chief and a representative of the Co-operative Wholesale Society, the only large shipper which did not join the so-called Buyers Pool. There is a growing feeling in official circles that the introduction of co-operative cocoa marketing in West Africa as recommended by the previous Committee might prove a costly experiment, and that it would probably not bring about the desired rise in prices. The world price of cocoa is naturally determined by international supplies and demand, but so far nothing has been heard of any international action by the cocoa producing countries.

COMPANY MEETING AMALGAMATED BANKET AREAS, LIMITED

CONSIDERABLE PROGRESS

The annual general meeting of Amalgamated Banket Areas, Limited, was held, on the 29th instant, at River Plate House, London.

Mr H. G. Latilla (the chairman) said that after three years' work they had no fewer than five partly developed mines, namely, Abbontiakoon, Tarquah, Mantraim, Pepe and Akontansi, each representing a mine of considerable value in itself. Only a comparatively small part of the huge field covered by the company's areas had already resulted in proved ore reserves aggregating 3,289,842 tons, with the promise of substantial additions in 1939 and progressively thereafter.

They had distributed over £65,000 in dividends during the year under review, and also in the previous year. There must be a break in those dividends in the current year, but that should only be a temporary lapse, as they would soon have a vastly increased revenue from the first 30,000 tons per month unit of the new treatment plant, which was scheduled to come into operation by mid-1939. Costs of production would show a satisfactory decrease when their modern plant was operating. When they met next year the mines should be on the eve of the 60,000 tons per month mark foreshadowed last year.

SATISFACTORY DEVELOPMENTS

They were in constant receipt of satisfactory development news from the mines and the latest concerning Akontansi was very good. There was every indication that the ore reserve position there would be greatly augmented during the coming year. Perhaps the greatest tonnage of ore would be developed on the Pepe section, where they had already proved 1,897,524 tons of 2.35 dwt. ore and where, owing to the shallow nature of the deposit, costs of mining and milling should not exceed 6s. per ton. Developments of great significance to them were taking place on properties adjoining some of their ground, which contained the deep levels of Taquah and Abosso, Gold Coast Banket Areas and South Banket Areas. The continuation of those ore bodies in depth should enter this company's property in due course.

Two years ago he had said that they might contemplate the formation of perhaps two or three subsidiary companies, and that still held good. Up to now they had concentrated on areas which could supply a central mill. As they went further afield and opened up new ground, the question of separate companies would be considered.

They owned a vast property—perhaps comparable in some ways to what was originally owned by the West Witwatersrand Company—although really no comparison was possible for several reasons. One was that they owned 100 per cent. of the ground, whereas in the Union the Government owned the predominant share. Also it should be remembered that whereas their ore bodies existed and were worked from the grass roots, those of West Witwatersrand were very deeply seated—some 3,000 to 4,000 feet below the surface, thus necessitating much greater expenditure in deep shaft sinking and equipment. There was another point: they, on the Gold Coast, would not have the temptation to lower grade as and when the price of gold rose. Their fixed policy would be to mine and mill whatever was the settled average grade of ore.

MR ROBERT ANNAN'S VIEWS

Mr Robert Annan, in the course of a review of the mining operations, said that during the greater part of the past year development in the Abbontiakoon mine had been pushed ahead as rapidly as possible. The vertical shaft had reached the horizon of the seventeenth level. He would like to make it clear that the prospects for Pepe were not limited to the area to be worked from the surface. The reefs were the same as those worked in Abbontiakoon, and when the limit of surface working was reached they could be followed by underground working towards the bottom of that mine with comparable grade and working cost.

Referring to the map accompanying the report, he said that there existed under their property several conglomerate beds of a nature similar to those on the Rand, in which shoots of payable ore occurred. On the section shown by the plan alone they had some twelve miles of outcrop on which they were developing five separate mines. That gave some idea of the magnitude of the property and of the prospects as yet undeveloped. He thought shareholders would share their opinion that as development and equipment proceeded they would build up a mining enterprise of very considerable magnitude.

The report was unanimously adopted.

A resolution was unanimously passed increasing the capital to £2,300,000 by the creation of 2,200,000 shares of 5s. each.

The Weather

The following charts may be read in conjunction with the note appearing on page 699. In each of them the experience of 1936, 1937 and 1938, represented by a continuous line, is compared month by month with the average for the standard period 1881-1915, represented by a broken line. The figures used are averages for all the British Isles.

Finance

GOVERNMENT RETURNS

For the week ended December 24, 1938, total ordinary revenue was £10,396,000, against ordinary expenditure of £11,190,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £242,497,000, against a deficit of £167,549,000 a year ago.

* Revenue required to meet expenditure.
† Excluding Post Office and Broadcasting and £112,900,000 under Defence Loans Act.
‡ After concessions of £100,000 made during passage of Finance Act.
§ After adding Navy and Air Supplementary Estimates, Consol. Fund increase under Eire Act and reduction by revised Civil Estimate (net increase, £2,150,000).

After raising Exchequer balances by £164,158 to £2,793,982, the other operations for the week (as shown below, but excluding £3,250,000 issued under the Defence Loans Act), raised the gross National Debt by £4,208,000 to about £8,401 millions.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On December 23rd applications at £99 14s. 6d. per cent. for bills to be paid for on Wednesday, Thursday, Friday and Saturday of the following week were accepted as to about 44 per cent. of the amount applied for. Applications at higher prices were accepted in full. £35.0 millions of Treasury bills are being offered on December 30th.

SHORTER COMMENTS

(Continued from page 725)

United Tobacco Companies (South), Ltd.—Net profit year to September 30, 1938, £1,052,350 against £1,048,536. Preference dividends, £56,500 as before. Ordinary and deferred ordinary dividends absorbed £960,000 (same). Rate, 40 per cent. (as before), free of South African tax. Carry-forward raised from £521,479 to £557,329. A first interim dividend of 3½ p.p. cent. (as before) is being paid on ordinary and deferred ordinary. Cash, £1,079,779 (£1,212,592). Stocks, £1,217,115 (£1,000,553). Debtors, £442,591 (£317,995).

National Insurance Company of New Zealand.—Net income increased in 1937-38 from £289,679 to £321,117. Underwriting surplus, £26,239 (£20,169). Interest, rents, etc., £31,040 (£28,460). Dividend, 9d. per share for year as before. To reserve, £3,500 (£6,500). To reserve for unexpired risks, £14,500. Written off premises, £1,908 (£4,537). Carry-forward reduced from £37,628 to £37,499.

Leyland Motors, Ltd.—Preliminary statement shows net profits for year ended September 30, 1938, before tax and contingencies, of £643,261—the highest since 1929. Net profit for 1936-37 was £631,597. To general reserve, £100,000 (£150,000).

John Crossley and Sons, Ltd.—Owing to unremunerative prices for carpets and abnormally heavy falls in wool prices, the year's trading has resulted in a loss of about £48,000, against a net profit of £59,586 for 1936-37. Final dividend on payment of 5 per cent. cumulative preference stock for year to December 3, 1938, is payable, but no ordinary dividend; for 1936-37 7½ per cent. was paid.

Trinidad Consolidated Oilfields.—Second report shows loss of £22,248 for year to September 30, 1938, subject to tax against profit £16,768 for period February 13, 1936, to September 30, 1937; debit balance forward, £5,480. Year's output of crude from company's Fyzabad field, 729,230 barrels.

Butlin's, Ltd.—Trading profits, including dividends, have increased to £121,796 in the year ended October 2, 1938, compared with £78,024 for period January 30, 1937, to October 2, 1937. Tax provision raised from £21,000 to £37,027, and leasehold amortisation and depreciation up from £7,530 to £21,000. Life assurance premium absorbs £1,112. Net profits £51,367, compared with £42,450. Ordinary dividend 20 per cent., less tax, on the increased capital, compared with 15 per cent. actual, carry-forward up from £6,261 to £15,183.

Western Ground Rents Purchase.—Property valued at about £5,000,000 owned by the Marquess of Bute in Cardiff and Penarth changed hands on December 23, 1938. Western Ground Rents, Ltd., have taken over the property. The chairman of the company is Lord Kennet. The properties include the Cardiff Shipping Exchange, the works of Guest, Keen, Baldwins, and the Mount Stuart Dry Docks—all ground rents.

Helbert, Wagg and Company, Ltd.—As from January 1, 1939, Sir Max J. Bonn, K.B.E., will retire from the board, whilst remaining a director of Helbert, Wagg Holdings, Ltd.

Lex Garages, Ltd., and Moons Garages, Ltd.—Agreement has been reached between these companies for forming a joint company, in order to place their pooled experience at the disposal of the authorities in connection with air raid shelter schemes.

Securities Exchange Commission and International Nickel Company.—The directors of International Nickel have voted in favour of keeping the company's stock listed on the New York Stock Exchange.

British Banking Trends

THE past six months have witnessed a new phase in British banking. The first point of contrast with the preceding half-year lies in the check to the downward trend of the business curve. Trade is still in a state of recession, but the position is little worse than it was last spring. The second point of difference is that whereas up to the early part of this year we were steadily gaining gold, since last May the banking system has from time to time had to deal with large and sudden losses. The first of these was occasioned by the French repatriation of last May, while later came the August drain of gold to New York, followed by the huge outflow of the September crisis. Other banking problems were also created by the crisis and the threat of war, but they are hardly relevant to a discussion of recent long-term trends. It may be wise, however, to add the warning that the crisis may have initiated a new phase for British banking, the trend of which is not yet apparent.

The main task of the authorities has remained the maintenance of cheap and plentiful money, and on the whole they have succeeded. It is true that the heavy gold losses of May and September threw a temporary strain upon our monetary mechanism, chiefly because the Exchange Equalisation Account could not immediately replace its gold losses by acquisitions of Treasury bills. A new technique was successfully evolved, including open-market purchases of bills by the Exchange Account and not the Bank, and also the under-allotment of Treasury bills at the weekly tenders. Even so, a certain time-lag between gold losses and bill acquisitions proved inevitable, and during this interim period there was a temporary transfer of cash from the banking system to the Exchange Account. This caused public deposits to gain at the expense of bankers' deposits, and so led to a temporary stringency in the money market.

During the September crisis, the Exchange Account was able to release its large accumulations of cash much more quickly than might have been expected, while further open-market purchases by the Bank compensated for the clearing banks' heavy withdrawals of notes for the reinforcement of their own currency reserves. The crisis increases in discount rates were as much due to the natural reluctance of the banks and others to buy fresh bills as to the reaction of the Exchange Account's heavy gold sales. But the complete banking history of the crisis has still to be written.

As the first of the charts published on the opposite page shows, the Bank of England has on the whole succeeded in preserving an even keel. There has been no change in its gold reserves since June, 1937, for the Exchange Account has been able to stand the recent gold drain without having to buy back from the Bank the gold sold to it during previous years. The continuance of the trade recession, coupled with a tendency for foreigners to dishoard British currency, is at last beginning to reduce the note circulation. Early in the year the circulation was running some £20 millions higher than it was twelve months before. By July and August the circulation had fallen to below the parallel figures for 1937. This downward trend of the circulation was compensated for by a parallel decline in the Bank's holdings of Government securities. This was a deliberate act of policy, designed to minimise changes in the size of the credit base and in total deposits in the banking department.

With total deposits remaining fairly constant, bankers' deposits were largely at the mercy of fluctuations in public deposits. The latter were affected by such passing events as subscriptions to the Defence Loan, gold sales by the Exchange Account, and so on. Nevertheless, bankers' deposits have only undergone minor fluctuations. In general the smoothing-out process has been much more successful than might have been expected. On the whole bankers' deposits are slightly higher than in 1937, but the increase is not very marked. A fair comment is that the cheap and plentiful money regime has been maintained, but no attempt has been made to counteract the recession by a contraction of the credit base.

Confirmation of this view is found in the second chart, showing the position of the clearing banks. Until September cash and deposits continued to run ahead of their 1937 levels, but the increase is not very large. There have, however, been certain significant changes in the trend of the three chief categories of earning assets. Thus discounts, though still below their 1936 level, have recently shown a tendency to increase. This tendency persisted right up to August, in spite of the fact that tender issues of Treasury bills had been shrinking ever since the end of June. The September statements naturally revealed the effects of the crisis. Both deposits and cash were lower, and there was a marked decrease in the combined total of call and short loans and discounts. These movements were due to the rapid outflow of funds from London, offset by the Exchange Equalisation Account's heavy gold sales and purchases of Treasury bills. As the third chart shows, the shrinkage in the tender issue is in part due to the second Defence Loan issue, which for the time being has reduced the floating debt; but it is mainly due to the recent big increase in the tap issue. This latter movement is due to the Exchange Account's gold sales, necessitated by the withdrawal of foreign funds from London.

Meanwhile the recession has now reached the point where it is beginning to affect the demand for advances. Last January advances were running £82 millions ahead of the previous year. Since then the twelve months' increase has gradually tapered away, until in August, a year after the recession began, advances only showed an increase of £1,000,000 over those of twelve months before. This change in the advance trend has reacted upon the trend of investments. The banks first began to reduce their investments early in 1937. There was a very significant correlation between this and the simultaneous increase in the yield on Consols, which is the best measurement of the long-term interest rate. By January, 1938, bank investments were £36 millions less than the year before, but since then the year's decrease has gradually tapered away, until by August it only amounted to £4,000,000. There has, in fact, been little change in bank investments during the past year.

If there is any truth in the argument that active trade requires a low long-term interest rate, these new trends may be of some importance. It may be permissible to regard the recent recovery and recession from a new angle. As trade revives, the demand for advances increases, though only with a time-lag. Sooner or later the need for advances reaches the point where either the credit base has to be enlarged or the banks have to realise their investments. This point was reached roughly at the beginning of 1937, when bank investments began to decline, the long-term interest rate rose from just under 3 to about 3½ per cent., and when, incidentally, the first signs of impending recession became apparent. Again there was a time-lag between the trade curve and the trend of advances. The demand for bank loans continued even after trade had turned downwards, and the peak was only reached at the end of 1937. Since then the reaction in trade and the fall in prices have at last begun to reduce the demand for loans, and this year advances have ceased to expand.

Once the growth in advances was at an end the banks were no longer under the compulsion to reduce their investments. They have not done so during the current year, and apart from the September crisis there has been no fresh increase in the long-term interest rate. The question for the future is whether or not the continuance of the recession will cause a definite contraction in advances. If so, the banks will presumably add to their investments, and in doing so will create conditions favourable for a drop in the long-term interest rate. There are many imponderables affecting this line of inference, the most important of which is the extent of new Government long-term borrowing. Yet it may be permissible to speculate on the possibility that by 1937 recovery had outrun the growth in the credit base, and that this may have been one of the main

causes of the subsequent recession. There are now indications that, owing to the recession, the credit base is once more adequate to our needs. If so, our banking position, which two years ago created conditions conducive to a recession, may now be such as to favour a new revival. This line of thought is tentative in the extreme, and ignores many over-riding influences both at home and abroad. Still, it may serve to indicate the significance of recent banking trends.

This article was necessarily written at a time when the country was only beginning to emerge from a state of crisis, but it may be useful to add a footnote, written two days before this issue went to press. The floating debt statement for October 8th shows that since August 13th tap issues of Treasury bills had increased by £42 millions, while the Exchange Equalisation Account must also hold to-day large quantities of tender Treasuries bought in the open market. Its gold losses must be of the order of £120

millions, even after allowing for its crisis acquisition of dishoarded and French gold. That implies a withdrawal of funds from the English banking system of between £100 and £150 millions.

Now the cash lost to the British banks through these withdrawals has already been made good by the Exchange Account's purchases of Treasury bills. It follows, therefore, that the technical position of the banks is probably more liquid than it was before the crisis; for their deposits are lower while their cash is probably unchanged. For confirmation of this view we must await the October clearing bank returns, but if it is correct, it adds even more force to the suggestion made above that our credit base is once more adequate to our needs. The credit base, in fact, has no longer to carry a mass of foreign "hot money," and so is all the more able to support a fresh expansion in accommodation to British commerce and industry.

The Irish Banking Commission

(By a Correspondent)

TWO events of outstanding importance have occurred in the last twelve months: the settlement of the dispute with Great Britain which was concluded in April, and the publication of the Report of the Banking Commission in August. The former event, which put an end to the so-called "economic war," has been of great assistance to the economic life of Eire, as it was followed by a revival of the agricultural export trade, the discontinuance of the export bounties and a renewal of confidence in the future. The latter event, namely the publication of the Report of the Banking Commission, has also been productive of confidence, since the Report has recommended the continuance of the link with sterling, has discountenanced all attempts at monetary experiments, and has established high standards in the domain of public finance. There is no reason to doubt that Eire is entering on a period of relative prosperity after six years of hardship and pressure.

Whether the two events referred to in the previous paragraph were connected with each other is a question on which opinions differ. It is frequently asserted that the Report of the Commission—the contents of which were known to Ministers in the spring—exercised considerable influence in the settlement of the Anglo-Irish dispute by its insistence on the debilitating effects of the economic war on the Irish economy. This has been denied by the Government, who assert that defence was the outstanding consideration that moved them to seek for a settlement and that they had not read, much less digested, the Report at the time when the negotiations were opened. Whatever may have been the case, one thing is certain, namely that the settlement of the economic war has not rendered the Report obsolete or out of date, as it is the fashion for Government spokesmen to assert. Many of the matters dealt with in the Report—for example, borrowing for housing and for land settlement—have nothing to do with the economic war and remain as problems to be solved in spite of the settlement.

From the banking standpoint the main interest of the Report arises from its recommendations that the consolidated bank note issue should be abolished and that the Currency Commission should be elevated to become a Central Bank. The abolition of the bank notes is of no real importance, as the issue has been unprofitable in recent years owing to the high rate at which it has been taxed. The proposed central banking functions of the Currency Commission will not interfere with the banks in any essential respect, and the suggested Central Bank is designed to control the Government's financial operations rather than the banks. Far from being an additional and sharper weapon in the armoury of economic nationalism, the proposed Central Bank will act rather as a brake upon financial folly and as a counsellor of sound and orthodox practice. Indeed, many of those who were most enthusiastically in favour of a Central Bank when it was believed that such a bank would facilitate inflationary experiments, have been somewhat disappointed to discover that the main object of the Commission's suggested bank is the tightening of the link with sterling and the imposition of a conservative prudence in the financial sphere.

It is too early to attempt to assess the good results that will arise from the settlement of the economic war. Presumably the adverse balance of trade, which for the twelve months to May amounted to £22,460,046, will show some diminution with the revival of exports. The cost of living may also be slightly reduced if the Prices Commission does its work well. Many difficulties, however, still remain. The railways are in a very unsound position, industrial costs are too high, borrowing is proceeding, largely for unproductive purposes, and, in spite of emigration, unemployment remains as an obstinate problem. It would be a mistake to

allow the feeling of immediate relief at the settlement to induce an optimistic or even a complacent frame of mind. It may perhaps be suggested that such an error was committed by some of the bank chairmen at their half-yearly meetings held during the summer, in spite of the fact that their own profits show a downward tendency and that one bank has reduced its dividend.

A comparison of the banking return for the June quarter of this year with the return for the same quarter last year shows that deposits are lower by about £2 millions. The withdrawal of deposits was largely in respect of subscriptions to the Financial Agreement Loan of £10 millions which was most successfully floated in May at the reasonable rate of 3½ per cent. Loans and advances increased by about £4 millions, mainly arising from an increased demand for accommodation by the new protected industries and by farmers as the result of rising prices. The decline in deposits, together with the increase in loans and advances, accounted for a decrease of £7 millions in the banks' holdings of Government securities. The slight reduction in liquidity caused by this redistribution of assets is neutralised by an increase of nearly £2 millions in cash and money at call and short notice. The net sterling assets held by the banks declined from £71 millions to £67 millions, this reflecting the growing disequilibrium in the balance of payments. This decline in the net sterling assets tended to slow down in the middle of this year.

The total monetary circulation in June was £16,745,401, compared with £16,151,537 in 1937 and with £15,211,342 in 1936. This signalises the internal expansion that has been taking place as a result of the Government expenditure on housing and other public works. Every addition to the note issue involves a reduction of the banks' sterling assets, since Irish legal tender notes are issued only in return for sterling, and in this respect the Banking Commission recommends that the present system should continue subject to minor changes. The same tendency towards internal expansion is revealed in the statistics of bank debits. The total debits (excluding debits on Government accounts) in the first six months of the present year amounted to £265,248,000, compared with £259,199,000 in 1937 and with £244,997,000 in 1936. Debits on Government accounts during the same periods were as follows: 1938, £111,063,000; 1937, £87,550,000; 1936, £83,704,000. The Dublin banks' clearings of notes, bills and cheques show a similar upward movement from a weekly average of £5,912,342 in the first half of 1937 to one of £6,270,237 in the same period this year.

The Report of the Agricultural Credit Corporation for the year ended October, 1937, states that the aggregate of loans issued by the Corporation from the opening of business in 1927 amounted to £1,620,804. The number of loans comprised in this total is 18,185, of which 17,915 are for sums under £500. The Corporation's lending rate was retained at 5 per cent. The Report of the Industrial Credit Company for the same period states that during the year the company undertook five capital issues, the net cash involved being £428,707. The net cash total of the capital issues undertaken by the company since its incorporation in 1933 is £4,397,107, of which the underwriters were called upon to take up 14.6 per cent. The activities of these two bodies are fully reviewed in the Report of the Banking Commission, which makes important recommendations regarding their future.

The report of the Currency Commission for the year ended March 31, 1938, states that the volume of the legal tender note issue fluctuated during the year between a minimum of £8,842,556 in August and a maximum of £10,292,123 in December, the latter being the highest figure ever attained by this issue. The surplus income of

the Commission amounted to £193,821, an increase of £6,124 over the previous year, due chiefly to the higher earnings of the Legal Tender Note Fund as a consequence of increased circulation. The Banking Commission recommends that the Currency Commission should be given the title and the functions of a central bank, that its membership should be increased, and that it should have a department for statistical research. In September of this year the Currency Commission purchased £2 millions of gold

bullion as an emergency backing for the note issue during the period of international crisis.

The amount of Savings Certificates outstanding on March 31, 1938, was £7,928,000, compared with £7,868,000 in 1937. This popular form of saving was fully investigated by the Banking Commission, which makes important recommendations regarding the backing that should be held against the certificates, which represent a demand liability by the State.

Gold and the Crisis

(By a Correspondent)

THE London gold market, regarded as a barometer, is not easy to read, as it often reacts unexpectedly to political or economic events. Purely national political or economic troubles in Europe usually cause a rush of gold buying in London by private operators anxious to safeguard their capital against possible losses from such events. But should such troubles show signs of developing internationally, these Continental holders of gold in London become apprehensive as to the fate of their holdings there, especially when there is a possibility of this country being involved in a war on a large scale. Whether such fears are well founded, it is difficult to say, as there is no precedent.

Towards the middle of August the demand for hoarding purposes—a prominent feature during the previous month or two—which had raised the total amount of gold stored in London on foreign account to a figure probably in excess of that obtaining before the gold scare of 1937, showed unmistakable signs of easing. The cause of this lay first in the fact that such demand had more or less reached saturation point; and second in the gathering clouds which had already begun to darken the European political horizon.

Still the approaching European crisis had up to then had

little direct effect on the market. Indirectly the market was affected because, as a result of the British Control's efforts to stem the rather rapid appreciation of the dollar against sterling, official daily offerings began to increase. With the easing off of private demand such sales were largely absorbed by arbitrage buyers for shipment to New York. Although the daily fixed prices, when compared with the U.S. exchange rate at the "fixing" time, showed little margin, the gradual improvement of the dollar allowed arbitrage operators to work more or less "on tendency" and as a rule showed them some profit, even though they usually bought their gold before covering their exchange.

It was not until September that there was any sign of large-scale sales by Continental gold hoarders. Then there began a steady flow of refugee funds from gold into U.S. dollars. Sales of gold became so large that private arbitrage buyers found it difficult to absorb all offerings and the "Control" had on occasion to absorb the surplus. This official support maintained the price at about the dollar parity until on September 14th the growing danger of a European war caused the London insurance underwriters to give notice that existing rates quoted for war risk insurance on gold shipped to New York were

BROWN, SHIPLEY & COMPANY

LONDON

MERCHANT & ACCEPTING BANKERS
Commercial Credits

Founders Court
Lothbury, E.C.2

Established 1810

cancelled. They also announced that they could only cover such risks on steamers sailing within 48 hours. Up to that time the rate ruling for war risk on gold to New York was 6d. per cent.

This step seriously hampered arbitrage operators wishing to acquire gold for shipment to New York. Previously it had been possible to obtain provisional war risks cover for a week or two ahead at an agreed rate, and the intending operator, having acquired his gold, had only to worry about covering the necessary exchange or vice versa. Henceforward, he also had to estimate the cost of insuring his gold.

The war risk rate on gold to New York rose almost immediately to 2s. 6d. per cent., which added about 1½d. per fine ounce to the cost of shipping to the United States and automatically lowered the "dollar parity" price by that amount. For the next two or three days following September 14th the gold price was fixed round about this new parity and supplies were readily absorbed by arbitrageurs, especially as war risk insurance had in many cases been *definitely* covered for the next two or three steamers at the old rate of 6d. per cent. When war risks cover at the old rate of 6d. had finally been used up, arbitrage buyers could safely buy for shipment only on the day previous to the departure of a steamer owing to the fact that the new war risk cover was only valid provided the vessel sailed within 48 hours from the time of arranging the insurance. Consequently, if no suitable steamer was scheduled for the next day, buyers were scarce and the Control had to come to the rescue. Even then the price sagged several pence below the dollar parity calculated on the fresh war risk rate.

Towards the end of September, when the European situation had become very grave, the war risk rate rose to 5s. per cent., and even at this rate it was not easy to obtain cover. At the same time, European holders of gold in London panicked, and very large quantities of gold were offered in the London market. Most of the sellers turned the sterling proceeds of such sales into dollars, causing that currency to appreciate sharply against sterling. Private arbitrage operators, hampered as they were by insurance and finance difficulties, could not possibly absorb these offerings, and the authorities had to come in as buyers. On September 27 and 28 offerings of gold to the extent of £2,342,000 and £2,267,000 respectively were practically all taken by the Control. On the last-mentioned day the price of 147s. per fine ounce, which was the highest fixed since March, 1935, was nearly 2s. under the dollar parity, even when allowance was made for the prevailing war risk insurance rate of 5s. per cent.

Since that date, as the European tension eased, the gold market has gradually returned to more normal conditions. On October 1st the war risk rate was reduced to 1s. 3d. per cent. Arbitrage buyers began again to operate freely, and the London price moved back again once more to "dollar parity." Still the chief lesson remains. In times of extreme nervousness, arbitrage between gold and the dollar tends to become impracticable, while even gold itself becomes suspect, and is jettisoned by its holders in favour of dollars or any other "safe" currency. Thus the British Control can no longer rely upon the London bullion market as an auxiliary to its own efforts to support sterling. These lessons may be of value, if ever a similar emergency arises.

The Reform of Banking Statistics

(By a Correspondent)

THE gradual evolution since 1931 of a new monetary technique has made it more important than ever that frequent, regular and complete information should be available regarding the general monetary and banking position. Up to a point that need has been met. The Bank of England's weekly return is a much more informative document than it was up to ten years ago. Two of the eleven clearing banks have long ago adopted the more detailed form of accounts recommended by the Cunliffe Committee. Since eighteen months ago one corner has been lifted of the veil hiding the Exchange Equalisation Account's operation, for a six-monthly statement of the Account's gold holdings is available, though only with a time-lag of three months. Last but not least, the Bank of England has adopted a suggestion of the Macmillan Report, and now publishes a Monthly Statistical Supplement which contains much new and valuable information.

In these circumstances it may appear ungenerous to ask for more, but it cannot be gainsaid that our regular supply of banking and monetary statistics contains many gaps. Some of these admittedly cannot be filled, for every banker is under an obligation of secrecy to his customers. Still, a lot more information could legitimately be provided, while that already available is sadly impaired by its haphazard method of presentation.

The three main sources of banking information are the weekly return of the Bank of England, the weekly statement of Exchequer cash receipts and payments and also of the floating debt, and the monthly averages of the eleven clearing banks. The first point to notice is the complete lack of synchronisation between the three statements. The Bank return shows the Bank's position at the close of business on Wednesday. The revenue returns and the floating debt statement relate to Saturday. The clearing bank averages are even more complex. The final table is an aggregate of the returns supplied by each of the clearing banks. Each such return is an average for the month of the

weekly balance sheets of each clearing bank. Now, as is well known, each clearing bank chooses its own day of the week for the preparation of its accounts. One bank chooses Monday, another Tuesday, several Wednesday, and one Thursday. Nor, if a bank has five of its particular days in a month, does it necessarily prepare accounts for the fifth day. Again, each bank used to call from the money market for "making-up" purposes, so as to show what it regarded as an adequate supply of cash on its particular day, and so there was always a certain amount of cash marching round from bank to bank like a stage army, as the Macmillan Report expressed it. This practice of making-up each week is now partly in abeyance, but is not entirely extinct. It follows that the omnibus return showing the aggregate monthly averages of all the clearing banks counts a certain amount of cash many times over, possibly at the expense of call and short loans.

The first suggestion, therefore, is that all three statements should be published weekly and should relate to the close of business on Wednesday of each week. This would render possible a correlation of the three statements, and would greatly clarify the picture. Admittedly some difficulties would remain. It is a matter for consideration whether the Treasury bill week should be altered, so that payments and maturities would run from Thursday to Wednesday, instead of from Monday to Saturday. Also, if all banks made up on the same day, they would have to abandon finally their practice of window-dressing. That in itself would not be a bad thing.

The next need is for greater uniformity, as well as for more information. The Bank of England might begin by sub-dividing Government securities, whether held in the issue or the banking department. The obvious line of demarcation is Treasury bills, Ways and Means advances, and other Government securities; and Treasury bills should also be shown separately when carried under discounts and advances. Public deposits should be divided into Exchequer

balances and other accounts. Other deposits should show as a separate total balances held by overseas central banks and similar institutions.

The clearing banks should all adopt for their weekly accounts the detailed form of accounts prescribed by the Cunliffe Committee. *Inter alia* this would show their holdings of Treasury bills as distinguished from other bills. It would also introduce some very necessary uniformity into that very vague item "acceptances, endorsements, guarantees, etc." To-day some banks only show acceptances, others give an omnibus figure for all these items, while others give two separate figures, one for acceptances and confirmed credits, and the other for endorsements, guarantees, etc. There is also need for the uniform handling of forward exchange contracts. To-day, it is impossible to arrive at a combined total for all the clearing banks which has any meaning at all.

It is possible to make further suggestions. Cash should be divided into till-money and balances at the Bank of England. Cheques in course of collection should be separated from balances with other banks. Call and short loans could be usefully divided into money market and Stock Exchange loans, and the former could again be split into loans against bills and loans against bonds. The analysis of advances according to the type of borrower, already made by one or two of the bank chairmen in their annual addresses, should be adopted in a uniform manner by all the banks and issued quarterly without too long a time-lag. Finally, current and deposit accounts could be shown separately, and the banks might now overcome their reluctance to reveal how much of their deposits and advances consists of internal balances. As a separate adjunct, the weekly return of clearings should be supplemented by a weekly total of debits to individual accounts.

The weekly revenue returns are in themselves explicit, so far as they go, and provided that it is realised that they are no more than a statement of cash receipts and payments

by the Exchequer. The chief suggestion here is that the floating debt statement should segregate tender issues from tap issues of Treasury bills. Incidentally, it would be helpful to know the total of Treasury bill maturities and payments on each day, again segregating tender from tap. But the Government could usefully provide much more information than this. Nothing is known regularly of the extent and composition of the assets of the chief public departments. Here a quarterly return would be invaluable, and it should be sufficiently detailed and uniform to render it possible to form some idea of the quantity of cash, Treasury bills and each class of long-term security held by the department in the aggregate. In fact, the real need is for a special table showing the total amount of cash, Treasury bills and the various Government securities held "inside."

There remains the delicate question of the Exchange Equalisation Account. Twice a year we are told the amount of gold which it holds, though only after a lapse of three months. Let it be granted that secrecy was essential in the early days of the Account, but to-day when our gold reserves are so large, secrecy is much less imperative. In fact, it might create rather than disturb confidence, if it were known how much gold we were gaining and losing week by week. Already incomplete information is available in the shape of the daily returns of gold dealt in at the fixing and the weekly returns of gold imports and exports. Also, the American monetary gold stocks are disclosed each week. It is notorious that incomplete and possibly misleading information tends to impair confidence.

If the provision of adequate information were the sole consideration, it would be possible to argue in favour of a weekly return of the Exchange Equalisation Account, to be dated each Wednesday in conformity with the general plan. Such a return should be complete. It should show not only gold, but any foreign currencies and also the Account's

Guinness, Mahon & Co.

BANKERS

DUBLIN, C.1

AGENTS AND CORRESPONDENTS THROUGHOUT THE WORLD

sterling assets. The last should be divided into Treasury bills, ways and means advances, other securities, and balances at the bank. The return should also show each week the Account's accrued profit or loss to date.

These suggestions only touch the beginning of the problem. There are the cases of those banks and similar institutions which play a large part in our financial machine but which are not members of the Clearing House. There are the very vexed questions of the amount of Empire and foreign money in London, and the way in which it is

employed. Also the suggestions already made are in many respects debatable, and indeed may be regarded as a counsel of perfection. Still there is no doubt that more information is needed, and that such information is of importance to the general public as well as to bankers themselves. To-day in this all-important field of financial policy we are still largely walking in the dark. More light would create confidence and not dispel it, and would also make it easier for the general public to take a correct view in the ordering of their daily affairs.

American Banking Policy

(By a Correspondent)

THE central banking history of the United States during the past two years can be divided into three distinct periods. The first lies between August 15, 1936, and May 1, 1937, and covers the period in which, by the doubling of reserve requirements and the institution of the Inactive Gold Fund, excess reserves in the Member Banks were reduced from about \$3,000 to about \$800 millions. The second phase ran for almost a year. It was characterised by a partial reversal or modification of previous policy in the direction of stimulating expansion (or, perhaps better, arresting an unanticipated contraction) by increasing excess reserves. In September, 1937, \$300 millions of gold were released from the Inactive Fund. Later, there were small open-market purchases by the Reserve Banks. Finally, in February, 1938, it was announced that gold would be monetised (from imports or domestic production) to an amount of \$100 millions per quarter. These manoeuvres increased excess reserves by over \$400 millions to a total of well above \$1,000 millions.

The third phase dates from mid-April, 1938, when the entire Inactive Gold Fund (\$1,200 millions), plus about \$200 millions of other gold, was monetised through the Reserve Banks, and reserve requirements were reduced by about 13 per cent. This was a definitive programme of stimulating the expansion of bank credit. In actual operation, however, this programme was not pushed to its utmost capacity. Thus in the first place the release of the Inactive Gold Fund to the Reserve Banks increased their holdings of "gold certificates" and also Treasury deposits, but between April and early September these deposits were reduced by the redemption of maturing Treasury bills, and the entire sum (\$1,400 millions) has not yet been utilised. Second, although the Inactive Fund has been abandoned, the Treasury has not made it a practice to release all incoming gold to the Reserve Banks. As a consequence, the increase in Member Bank excess reserves since mid-April has been less than the sum of (a) the reserves released by the change in reserve requirements (about \$750 millions); (b) the liquidation of the Inactive Gold Fund (\$1,400 millions); and (c) new gold (about \$300 millions). Nevertheless, at the end of August, 1938, excess reserves were just under \$3,000 millions. This meant that they were more than \$2,000 millions above the figure of the end of August, 1936, and approximately as high as they were in August, 1936, when the initial increase in reserve requirements was made. These \$3,000 millions of excess reserves are bank cash, over and above the required reserve, which is still 87 per cent. higher than that required prior to August 15, 1936.

The following table shows relevant items in successive Reserve Bank statements during the past year:—

RESERVE BANK ITEMS (\$000,000)				
	Aug. 12, 1936	May 5, 1937	Mar. 30, 1938	Aug. 31, 1938
U.S. securities	2,430	2,526	2,564	2,564
Gold certificates	8,225	8,843	9,213	10,632
Gold stocks	10,661	11,838	12,794	13,135
Member Bank reserves	6,116	6,882	7,312	8,179
Of which, excess	3,170	890	1,560	2,940
Treasury deposits with F.B. Banks	338	97	292	720

Minor, or at least relatively minor, items (formerly their magnitude would have entitled them to recognition) had some influence—the changes in "due to foreign banks" and "other deposits" and the continued issue of large sums of silver certificates. But the items given above and the dates selected present a fairly comprehensive picture of the changes attributable to direct management. The centre of gravity of the period is excess reserves. Between August, 1936, and May, 1937, they fell from over \$3,000 to under \$1,000 millions (they dropped to about \$750 millions in August, 1937, for incidental reasons). Subsequently, a partial reversal of policy (combined with incidental influences) doubled them by the end of March, 1938; and between the end of March, 1938, and the end of August they were doubled again.

The following table shows the experience of the reporting Member Banks over the past two years. Instead of tabulating the usual Reporting Member Banks aggregate, the tables are divided into New York banks and those outside New York. The object of this is to emphasise the fact that in this particular instance, the lead was clearly taken by New York. Evidence of contraction appeared in New York months before it appeared elsewhere, and the same is true of the later evidence of expansion.

ITEMS OF THE REPORTING MEMBER BANKS
(\$000,000)

New York City					
	Aug. 12, 1936	Dec. 30, 1936	Aug. 11, 1937	Mar. 30, 1938	Aug. 31, 1938
Total loans and investments	8,621	8,749	8,323	7,576	7,751
Total loans	3,160	3,656	3,996	3,158	3,007
U.S. and guaran. securities	4,341	4,030	3,353	3,263	3,664
Other securities	1,120	1,063	974	1,155	1,080
Reserve	2,355	2,467	2,342	2,958	3,425
Demand deposits	6,229	6,448	5,968	6,100	6,446
Inter-bank deposits*	2,425	2,380	1,858	1,956	2,500
Outside New York City					
Total loans and investments	13,703	14,182	14,008	13,234	13,110
Total loans	5,192	5,533	5,921	5,613	5,263
U.S. guaran. securities	6,316	6,449	6,032	5,671	5,780
Other securities	2,195	2,200	2,055	1,950	2,067
Reserve	2,500	2,676	2,780	2,797	3,260
Demand deposits	8,523	9,123	8,946	8,168	8,942
Inter-bank deposits*	3,533	3,629	3,025	3,127	3,458

* Domestic.

Over this period the Reporting Member Banks show fluctuations, which may be certainly described as *post hoc* and which many describe as *propter hoc*. This period may, again, be divided into three phases. The first phase runs from August, 1936, to the end of that year. During this period bank credit (total loans and investments as well as deposits) continued to expand. This was followed by the second phase, from the end of 1936 to the end of March, 1938, during which bank credit contracted sharply. This in turn has been followed by the third phase (from the end of March, 1938, to the present date), during which total loans and investments have showed little change, but demand deposits have risen meteorically. These three phases are quite distinct, but when the detailed figures are analysed the first two become blurred in two ways. First, the contraction appeared first in the New York City banks and only later in the interior banks. Second, the contraction in the New York banks was relatively more severe, partly because of their monopoly of the call loan market, which shrank by half during the period. The collapse of the stock market reduced brokers' loans from over \$1,000 millions in the middle of 1937 to about \$500 millions a year later,

and accounted for about two-thirds of the cyclical loan reduction of the New York City banks. Analysing the experience of these banks in greater detail, there was first a phase in which holdings of Government securities were rapidly reduced while loans were increasing. During the second phase brokers' loans were rapidly reduced. The third phase witnessed a reduction of commercial loans. Finally, there is, as was said above, the current period, which is almost the reverse of the first, with the banks increasing their purchases of Government securities at a time when loans are still falling, or are stabilised, and with brokers' loans rising materially before there is any clear evidence of an upturn in commercial loans.

In short, the Reporting Member Banks over the last two years offer a remarkably clear example of cyclical credit behaviour. The expansion of the last months of 1936 continued a trend initiated many months earlier. The calendar year 1937 and the first half of 1938 reversed this trend and brought a material decline in loans, investments and in deposits. In the second quarter of 1938 this trend was in turn reversed by the monetisation of the Inactive Fund, which brought of itself a great and rapid increase of deposits and cash in the Member Banks. To date this has been followed by some increase in bank investments with, so far, evidence of a stability rather than an increase in loans. The trends in deposits are clear—rising deposits to the end of 1936; falling deposits for 15 consecutive months through March, 1938; and rapidly rising deposits since March 1938.

The clarity of the cyclical movement of deposits becomes more blurred as one analyses the other side of the balance sheet, but the movement was far more pronounced in New York City than elsewhere, and was proportionately more severe. This is largely attributable to the stock market collapse, referred to above.

There can be no dispute as to the cause of the rise of \$1,000 millions in deposits between April and August this year. Loans and investments in New York rose \$150

millions, with loans falling and heavy buying of the guaranteed securities. Outside New York, total loans and investments have fallen almost as much as they have risen in New York, as the increase in investments was less than the decrease in loans. The increase in deposits is represented on the asset side by the rise in reserves, which is mostly the consequence of the monetisation of the Inactive Fund.

As a footnote it may be observed that in money rates it would be hard to find a corresponding cyclical phenomenon. The usual quotations—call money, commercial paper, Treasury bills, customers' loans—have been so insensitive that they did not conform to the required pattern. Oddly enough, the yield corresponding to the issue price of the five-year tax exempt Treasury notes comes closer to following an analogous course. This appears in the following table:—

FIVE-YEAR TREASURY NOTES

	Per cent.
June 15, 1936	at 1½
December 15, 1936	1½
June 15, 1937	1½
September 15, 1937	2
December 15, 1937	1½
June 15, 1938	1½
September 15, 1938	1½

Up to the issue of December 15, 1936, the rate had been steadily falling; for example, the four-year notes of September 15, 1934, had gone at 2½ per cent., after which there was a suspension of that type of paper until March, 1935, when the rate was 1½ per cent. for a five-year note. The rate rose from its low point of December, 1936, to a peak nine months later, and has since suffered a fresh relapse. Thus its fluctuations conform closely to the cyclical pattern of the bank deposits of the period, and it would appear that during the period the five-year Treasury note was the typical sensitive investment in the money market.

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

SINCE the establishment of its London Office forty-one years ago the Guaranty Trust Company of New York has aimed at the constant development of its services in order to render its customers the greatest assistance possible in their commercial and financial transactions both in and between Europe and America.

Every phase of modern banking business is undertaken and the management at any of the offices will be glad to explain the Bank's facilities in detail.

Australian Banking

(By a Correspondent)

UNTIL quite recently Australia continued to enjoy a level of prosperity equal to that of the best pre-depression years. Internally, Australia had thus far been immune from the recession in her customer countries overseas, even though that had brought with it a steady fall in her export prices, which was accelerated between September, 1937, and March, 1938, but retarded since that latter date. A further factor which might have been expected to diminish prosperity was the recent severe drought. This fortunately is now over, although it has reduced the quantity of primary products available for export in the current season. The period of lag between the appearance of these adverse forces and their effects on the internal economy is now drawing to a close, and in the absence of an immediate stimulus from improved export prices and increased capital imports, it seems that Australia in the ensuing year must expect an appreciable recession. As is shown later, in the absence of central bank action, it is doubtful if the trading banks can do much to counteract this anticipated recession.

The overseas trade returns for 1937-38 show a decline in exports of only £A4.9 millions from the very high level of the previous year, a marked fall in the export prices of wool and wheat having been largely offset by increases in the volume of these and other exports and by higher prices for some other exports. Imports, as is usual, following a good export season, increased considerably, reaching £A139.6 millions in 1937-38, compared with £A113.5 millions in the previous year. After providing for external interest on Government and local government debt, amounting to about £A27.5 millions in each year, there was a deficit of £A13.1 millions in 1937-38, compared with a surplus of £A17.9 millions in the previous year. The slight fall in exports did not materially affect business activity during 1937-38, although together with the marked increase in imports, it was partly responsible for the trading banks being placed in a tight position internally.

Externally, the banking position is still very strong. The combined London funds of the Commonwealth Bank and the trading banks are estimated to have been reduced over the year by the moderate amount of about £A10 millions from their previous high level of £A89.9 millions. This comparatively satisfactory result was partly due to the London loan of £7 millions sterling raised last May, £5 millions sterling of which was applied to improving the liquid position of the Commonwealth Bank. On present indications there will be a further reduction during the current year in London funds, owing to a lower export income and a high, though reduced, level of imports.

The following table, which shows the changes in assets and deposits of the trading banks between the June quarters of 1937 and 1938, helps to give a rough idea of the credit policy pursued.

AUSTRALIAN BANKING AGGREGATES (Nine Trading Banks)

Change between June Quarter, 1937, and June Quarter, 1938

	£A. millions
Increase in advances	+24.4
Decrease in Treasury Bills	- 5.7
Increase in Government securities	+ 5.5
	- 0.2
increase in internal earning assets	+24.2
ase in overseas assets	-12.0
U.S. sec.in total earning assets	+12.2
Gold certifi. reserves in Australia	- 4.9
Gold stocks	
Member Bank R.....	+ 7.3
Of which, exccs	
Treasury deposit from the table that the trading banks	
F.B. Banksir assets so as to take up Government	

securities, believed to be securities maturing at the end of this year, in place of Treasury bills bearing a lower rate of interest. These two items almost cancel out. Of the remaining increase of £A24.2 millions in home earning assets, £A12 millions (deduced from the other figures, which come from official returns) had the effect of offsetting the internal credit displacement, which was the counterpart of the drop in overseas assets. The principal factor responsible for this decline in overseas assets was the continued high level of imports. This was partly the reflection of the high exports of the previous year. It was also due partly to the financial and banking policies pursued in an earlier period, and partly to the influx of overseas capital and re-armament.

The increase in advances was due in part to demands arising indirectly from the overseas trade position, to finance for farmers and graziers made necessary by the drought, and to industrial demands stimulated by the good 1936-37 season and also by re-armament. To provide these advances the banks were forced to pay out some of their cash reserves in Australia. Their cash reserves declined by £A4.9 millions, most of which was drawn from their deposits with the Commonwealth Bank. The net effect of all these movements was an increase in customers' deposits of £A7.3 millions.

The conclusion to be drawn from these figures is that the trading banks more than neutralised the potentially adverse effects of the overseas trade position and the drought upon the Australian economy. They have been known for some time to have been following a "selective" advance policy, but apparently they have been unable to restrain the urgent demands arising from the drought and re-armament. Now, however, in view of a worsening in their liquid position over the past year, there can be no alternative for them but to discriminate still more closely in the future. The ratio of cash to deposits, after rising from 10.61 per cent. in the June quarter of 1936 to 12.3 per cent. in the June quarter of 1937, declined during the year 1937-38 to 10.5 per cent., or to the lowest June quarter average for many years. Seasonally, the liquid position should be strongest in the June quarter. Over the same period, the ratio of advances to deposits, which had improved from 89.9 per cent. to 83.3 per cent. in 1936-37, increased to 88.98 per cent. in the June quarter of 1938.

The Commonwealth Bank in its Report for the half year ended June 30, 1938, mentions that one cause of the decline in liquid assets was "the building up of Government deposits with the Commonwealth Bank from recent loan flotations." The influence of this temporary factor will wear off with the spending of the loan moneys, but only in the third and fourth quarters when liquidity generally is seasonally at its lowest. The liquid position of the banks, therefore, is likely to remain poor in spite of the impending disbursement of loan money, and this will preclude a liberal lending policy in the current year. Thus, very little assistance is possible from the trading banks in meeting the recession unless the Commonwealth Bank considers it desirable to increase the credit base.

It is now over a year since the Banking Commission presented its Report, the main recommendations of which were discussed in *The Economist* Banking Supplement for October, 1937. Although the Banking Bill, supposed to embody the main proposals of the Commission, has not been presented to Parliament, action appears already to have been taken on the lines of some of the Commission's recommendations. The amount of £5,000,000 sterling handed to the Commonwealth Bank in redemption of Commonwealth Government sterling debentures in its portfolio increased the supply of London funds available for meeting Australian overseas interest commitments, at the cost of increasing the long-term external debt. The Commonwealth Bank had

stated that it felt handicapped through not holding the bulk of the overseas assets of the Australian banking system, and one member of the Commission recommended the above step as a means of increasing the proportion of Australia's "London funds" held by the Commonwealth Bank. Its proportion has increased considerably from the 53 per cent. at the end of 1937, which was shown by the statistics given in the Commission's Report.

The Banking Commission recommends the gathering of additional statistics, and it is to be noted with approval that the Commonwealth Bank has subsequently extended its research activities, some of the results of which are embodied in a regular monthly Statistical Bulletin, which it now issues, as suggested by the Commission. The recommendation of a mortgage bank has been accepted in principle by the Government, which considers that it should take the form of another special department of the Commonwealth Bank.

It will be remembered that the Commission had something to say about the choice of directors for the Commonwealth Bank, recommending that they should be chosen for capacity and diversity of interests instead of, as pre-

viously, as representatives of special interests, and also that the Governor should be the principal executive officer of the Bank and not necessarily a former member of the staff of the Bank. It is not clear to what extent the Commission's recommendations led to the decision to appoint Sir Harry Sheehan, C.B.E., at the end of 1937 to be Governor and a member of the board. Sir Harry is not a banker, but he had a distinguished career in the civil service and was formerly a member of the board *ex officio* while Secretary to the Treasury.

Prior to formulating its Banking Bill, the contents of which are something of a mystery, the Government called a conference of representatives of the Commonwealth Bank and the trading banks to discuss the recommendations of the Commission. Since then there has been some controversy over what the Bill is believed to contain, although the Government resolutely denies that its critics know the contents, which, it also asserts, do not include many of the things to which the critics take exception. At the moment of writing, the presentation of the Bill to Parliament is held up owing, it is believed, to delays the Government has encountered in bringing forward more pressing legislation.

Canadian Banking

(By a Correspondent)

CANADIAN business conditions have inevitably been adversely affected this year by the sharp slump in the United States. General manufacturing activity has declined by something of the order of 20 per cent., and the important newsprint industry is working at only two-thirds of the level of last summer. Although relatively unimportant for Canada, it is interesting to notice that her textile industry has experienced as severe a slump as that of Great Britain. Even the index of mineral production shows some decline, though the decline in the average figure is largely due to nickel and zinc, while many other items have increased. Counteracting the depressive external influences have been two internal factors—the prospect of an extremely heavy wheat crop and the continued progress of copper, silver and gold mining. The wheat crop is expected to be just twice as big as that of 1937, and the prospect has led to relatively heavy purchases of farm equipment, etc. The tourist industry had a very good season in 1937, but early reports of the new season suggest that depressed business across the frontier may reduce tourist receipts this year by about 10 per cent.

The Bank of Canada has continued its cheap money policy without any spectacular development. The following table shows the most important items in its returns, at the end of each of the last five quarters:—

BANK OF CANADA RETURNS

	Sept. 29, 1937	Dec. 29, 1937	Mar. 30, 1938	June 27, 1938	Sept. 28, 1938
				(millions of dollars)	
Notes	161	167	149	154	174
Government deposits	26	13	24	21	25
Bankers' deposits	180	196	195	195	206
Gold	179	180	181	182	184
Sterling and U.S. dollars	26	19	23	31	31
Government securities (Canadian)	159	174	161	166	194
Other securities	11	12	12	1	—
Reserve proportion	56.5%	53.3%	55.6%	57.4%	52.8%

The gold is valued each week at the current market price. Government securities have recently been much increased. There has been a tendency over the last two

ERLANGERS LTD.

BANKERS,

4 Moorgate,
London,
E.C.2

years to increase the foreign exchange reserve appreciably, although lately this has been effected partly at the expense of "Other Securities" (British and United States short-term securities). Returns have shown marked changes from week to week in the foreign exchange holdings. These changes may frequently be connected with Government dividend payments to external bondholders; but it is generally accepted among Canadian bankers that the Bank of Canada has been consciously acting as a stabilisation fund. The Canadian dollar has been held very close to parity with that of the United States (and has therefore tended to appreciate in terms of sterling). The Bank has also busied itself with facilitating Government debt operations. Its holdings of Dominion Treasury bills are continually varying, and it makes itself felt in the market for long-term bonds almost every week. The Bank of Canada earned somewhat higher profits in 1937 than in 1936. The dividend at the legal maximum of 4½ per cent. absorbed \$454,000 (just over half going to the Government as shareholder). Of the balance, amounting to \$1,814,096, one-third was retained as reserve capital and two-thirds were placed to Government account, in accordance with the Bank's Charter.

As a result of controversies in the Saskatchewan election campaign, the Liberal Government announced in May its intention of buying out the private shareholders of the Bank of Canada, at the average price of the stock during the early part of 1938. Two of the five non-Government directors have retired and their places are not being filled. The process of nationalisation may therefore be described as virtually complete. It has caused some heartburnings in conservative banking circles, but there has been no suggestion that the change has had any influence on the Bank's operations.

While the turn in the business tide has checked the rise in the note circulation, the Bank of Canada has greatly increased its assets, so that the chartered banks have found themselves with somewhat slightly higher cash reserves. The outlet for loans has expanded further during the last year (possibly owing to farmers' anticipations of big receipts from wheat sales), and current loans have increased from \$728 millions in June, 1937, to \$786 millions in June, 1938. Investments in the same period rose from \$1,442 millions to \$1,462 millions, and deposits in Canada from \$2,430 millions to \$2,484 millions (a slight fall in demand deposits being more than offset by a rise in time deposits). Cash reserve ratios remain far above the legal minimum. This improvement in the chartered banks' earning capacity is reflected in the 4 per cent. increase in their published profits. All dividends remain at the levels to which they were reduced by 1934.

The slight improvement in earning power in 1937 must

not, however, be allowed to obscure the fact that the chartered banks are still doing very poorly as compared with their experience in the nineteen-twenties. This is made clear by a comparison of the two boom years—1929 and 1937. The estimated national income was \$6,072 millions in 1929 and \$4,870 millions in 1937.* The chartered banks' current loans averaged about \$1,300 millions in 1929 and rather more than \$700 millions in 1937. Investments (much less profitable for the banks) rose from \$500 millions odd to \$1,400 millions odd. The secular change in bank loans relatively to the national income is probably to be associated with the great decline in the contribution of agriculture and forestry to the national income, while mining has become more important. (The value of mining production now approaches half the value of agriculture's output.) Certainly the change is too pronounced and has gone on too long now to be ascribed to the accidents of particular years. The banks have met the situation partly by the drastic closing of unprofitable branches. The total number of branches was reduced from 4,083 in 1930 to 3,398 at the end of 1936 and further to 3,336 at the end of 1937. But this action has done no more than moderate the fall in profits and dividends. The gradual substitution of Bank of Canada notes for chartered bank notes (already noticeable) is bound to reduce earning power further, though this factor may easily be exaggerated.

Both imports (at \$808 millions) and exports (at \$1,125 millions) were higher in 1937 than in 1936. The increase in exports was spread over all the main items except wheat, the quantity of which dropped from 243 million bushels to 96 million bushels, though the rise in the price made the value decrease, from \$227 millions to \$125 millions, much smaller. Exports of newly-mined gold were again higher, and in value actually exceeded wheat, being second only to the very valuable tourist traffic as a Canadian export in 1937. The net balance on tourist account was \$170 millions. The final balance on current account for 1937 was probably again over \$300 millions. This is slightly less than the 1936 balance, for the shrinkage in the value of wheat exports was not fully offset by the expansion in the other items. In 1938 the value of wheat exports, despite lower prices, will be higher, as will also gold exports; but tourist traffic has declined. Canada's position as a large-scale exporter of capital (largely in the form of repurchase of Canadian securities held abroad) is so strongly entrenched that it has survived even a poor wheat year. In the more favourable conditions of 1938 no difficulty is being experienced in holding the Canadian dollar close to parity in New York.

* Official estimate for 1929, and unofficial for 1937. The two figures are perhaps not precisely comparable.

Indian Banking

(By a Correspondent)

BANKING conditions in India during the past year have been largely influenced by the downward trend of commodity prices. The general index number of wholesale prices (Calcutta, July, 1914=100), which in October, 1937, was 104, had fallen by January, 1938, to 100 and by April to 94, around which figure it has since remained fairly steady. Export prices during the busy season from October to April were thus seriously affected, and the favourable balance of trade in merchandise for India and Burma fell from Rs. 77 crores in 1936-37 to Rs. 43 crores in 1937-38. On balance there was no variation in the net transactions in treasure as between 1936-37 and 1937-38, reduced exports of gold in the latter year being offset by smaller imports of silver. The dwindling trade balance, however, did not affect the exchange rate until April, 1938, largely owing to the fact that the Reserve Bank continued to maintain a minimum buying rate for sterling of 1s. 6½d. Though owing to the fluctuating trading position, considerable variations were shown throughout the exporting season in

the weekly amounts of sterling tendered to the Reserve Bank by the scheduled banks, it was not until April 12th that the Reserve Bank lowered its minimum buying rate to 1s. 6¾d. Later it suspended altogether its weekly purchases by tender, and offered to buy sterling on tap at 1s. 6¾d. Speculative action, however, had by this time rendered the latter rate ineffective, and the rupee exchange fluctuated below 1s. 6d. during May and June, settling down finally at about 1s. 5¾d. On July 5th the Reserve Bank reduced its minimum rate still further to 1s. 5½d., and with the improved trading position which has been in evidence during the last few months exchange has strengthened sufficiently to enable small purchases of sterling to be made at this rate. The amount of sterling purchases by the Bank in 1937-38 was about £25 millions, compared with the Government of India's requirements for the year of £37 millions, the deficiency of £12 millions being met from the Bank's sterling reserves.

In spite of the decline in export activity, internal trade

remained fairly brisk, the active note circulation averaging Rs. 186 crores in 1937-38, compared with Rs. 176 crores in 1936-37. Advances and discounts of the scheduled banks which in September, 1937, were Rs. 112 crores, rose to Rs. 132 crores in April, 1938, and at the moment are about Rs. 113 crores. Telegraphic transfers issued at the offices of the Reserve Bank amounted to Rs. 234 crores in 1937-38, a decline of about Rs. 33 crores compared with the preceding year, but the total of cheque clearances at Rs. 2,051 crores was higher than in 1936-37. The indices of manufacturing and productive activity, as in the previous year, also generally recorded increases, especially in connection with the manufacture of cotton yarn and cloth and the production of iron and steel. This upward trend, notwithstanding the fall in agricultural commodity prices, is undoubtedly an important factor in the maintenance of the advances of the scheduled banks at their present high level. Monetary conditions throughout the exporting season remained very easy, and call money rates rarely rose above ½ per cent. to 1 per cent. No change was made in the Bank rate, which has remained at 3 per cent. since November 28, 1935.

The cash balances of the scheduled banks, expressed as a percentage of their demand and time liabilities, averaged 14.69 per cent. in September, 1937, and the proportion fell gradually to about 8.29 per cent. in February, 1938. With the onset of the slack season from May onwards the percentage has risen again to about 13 per cent. As the cash supplies of the banks were sufficient to finance such seasonal accommodation as was required, no occasion arose for currency expansion during the winter months. In early December, owing to its inability to obtain sterling tenders, the Reserve Bank allowed the three months' Treasury bill rate to rise sharply from about ¾ per cent. on December 7th to 1½ per cent. by the end of that month, from which level it advanced to Rs. 1.9 annas 9 pies per cent. on March 22nd, gradually falling again as market resources increased. The yield at present is about 1 per cent. The total of Treasury bills outstanding with the public rose during

this period from Rs. 23 crores in December to Rs. 26 crores in February. After falling to Rs. 16½ crores in August, the amount has been allowed to rise again to about Rs. 23 crores, no doubt owing to the repayment of about Rs. 8 crores of 5½ per cent. 1938-40 loan on October 1st. In recent months several of the Provincial Governments have also come to the market for ways and means finance by the issue of small amounts of six months' and nine months' Treasury bills. With conditions in the Government security market entirely favourable, the Reserve Bank issued, early in May, on behalf of the Central Government, a 3 per cent. cash cum conversion loan at 98, repayable in 1963-65. By this means some Rs. 11 crores of 5½ per cent. 1938-40 loan and Rs. 8 crores of 5 per cent. 1939-40 loan were converted, and cash subscriptions to the amount of Rs. 6 crores were also accepted. Recently also both the Punjab Government and the Madras Government have issued loans through the Reserve Bank, the first-named offering a 3 per cent. loan for Rs. 100 lakhs at 99½, repayable in 1958, and the second a 3 per cent. loan for Rs. 110 lakhs at 99, repayable in 1953.

Banking profits on the whole have been well maintained during the past year, in spite of the low money rates. The slight rise in the yield of the three months' Treasury bill during the year, and the steadiness of the Government security market, have been favourable factors. The Reserve Bank's profits for the year ended December, 1937, however, dropped sharply owing to the expiry in April, 1937, of the term during which it was enabled to invest in British Government securities of a longer maturity than five years. This necessitated the large sterling assets of the issue department being held in short-term securities, the yield on which was very low. In December the Bank's agricultural credit department issued the Statutory Report under Section 55 (1) of the Act on the question of the extension to the indigenous bankers of the provisions relating to scheduled banks. The indigenous bankers, however, as a class, show little disposition to avail themselves of such discounting and other facilities as the Reserve Bank can

offer them. It is clear that in these circumstances the large volume of credit which they supply will for the present remain outside any controlling influence of the Central Bank. The Reserve Bank is, therefore, directing its efforts to establishing an open bill market, and at its request the Government has consented to reduce the stamp duty on inland bills to a uniform level of 2 annas per thousand rupees. In this connection it is possible that the utilisation of a standard form of "Hundi," the widespread use of which would be facilitated by a differentiation in stamp duty, would bring quicker results.

In recent weeks an important banking crisis has arisen in Southern India owing to the suspension of business by

a scheduled bank with about 80 branches in various parts of India and with deposits from the public of about Rs. 3½ crores. The loss which the compulsory winding up of this concern will entail will, it is feared, fall mainly on a large number of small depositors, and this is bound to react unfavourably on public confidence in Indian banks. Arising out of this unfortunate occurrence, the Reserve Bank has issued a circular to scheduled banks inviting them to supply it with classified information twice yearly regarding their advances, their investments and the persons for whom they are negotiating bills. If this were done the Reserve Bank would be able to render quick assistance in the event of any emergency.

South African Banking

(By a Correspondent)

DURING the past year South Africa, like the rest of the world, has suffered a check to the rise in business activity, which in that country had been rapid and continuous since 1933. In the particular case of South Africa the check may be ascribed to two main causes—the after-effects of the "gold scare" of April, 1937, and the shrinkage in world demand for some of the most important of South African export products, especially wool and diamonds. The importance of the first cause is shown by the fact that despite the increasing output and price of gold, business indices frequently show as great declines in the Witwatersrand as in the districts more dependent on the prosperity of the farmers. That the commodity price fall has hitherto had much less effect on farming incomes than in 1929, the

last period of comparable price movements, is due partly to the increased diversification of modern South African farming, so that a smaller part of total farm output consists of the old staple products; partly to the fact that up to the end of June the fall had been confined mainly to prices of raw materials, while prices of foodstuffs were fairly well maintained; and partly to the unusually large 1937 maize crop, which was sold at quite good prices. In spite, therefore, of the heavy fall in prices of wool and other pastoral products, total exports of farm produce were only slightly smaller in 1937-38 than in 1936-37.

The statements of the South African commercial banks for the end of June, 1938, reflect the decline in South African business activity only to a very small extent.

Advances in South Africa have fallen back a little from the peak reached at the end of 1937, but are still above the figure for June, 1937. Deposits in South Africa have risen since last year, and have enabled the banks to expand still further their South African holdings of Securities. Perhaps the most interesting feature to those who remember the events of 1929 is the very trifling fall in the banks' reserves of cash and foreign exchange, which is in striking contrast to the heavy fall in the Union's favourable balance of trade, due, as in 1929, to a continued rise in imports for many months after the rise in exports had been checked, and also to a fall in imports of capital. The explanation of why in 1937-38 the banks' reserves have been unaffected, whereas in 1929 a similar movement caused them to be severely depleted, seems to lie in the financial operations of the South African Government. In both 1935-36 and 1936-37 the Government paid off substantial amounts of overseas debt. In 1937-38 these repayments ceased, with a consequent relief to the South African balance of payments. The way in which the Government has timed its financial operations so as to prevent fluctuations in the banks' cash reserves is striking, and it would seem that those in charge of the operations have either been very lucky or very skilful. The effect on the estimated South African balance of payments is indicated in the following table:—

BALANCE OF PAYMENTS		(£mn.)	1936-7	1937-8
Exports of merchandise			37.3	36.9
Gold produced			80.8	82.5
Imports			118.1	119.4
Export surplus			94.3	102.3
Estimated net balance of other payments on income account			23.8	17.1
Estimated balance of payments on income account			28.0	27.0
Estimated provision for repayment of Government's overseas debt			-4.2	-9.9
Reduction in S.A. banking system's holdings of gold and foreign exchange			10.0	...
Estimated net inflow of capital			-14.2	-9.9
			1.5	1.0
			12.7	8.9

The absence of pressure on the banks' reserves has on this occasion permitted them to wait passively for the upward trend in imports to reverse itself, whereas in 1929 the depletion of their reserves compelled them to hasten

it by restricting credit. In point of fact, the rise in imports stopped at the end of the first quarter of 1938, and imports are now falling. It is possible that the speed with which the rise was checked was due to the accident of last year's "gold scare." If the effects of the depression had been felt solely through the fall in world prices, it seems likely that the rise in imports would have been more persistent and might have affected the banks' reserves more seriously, though in view of their still very high level it is unlikely that any stringency would have resulted.

For the coming year prospects in South Africa seem to depend largely on the course of world prices of farm produce. Even if present prices are maintained, average prices of South African farm exports will be lower than those for 1936-37, while the new maize crop is much smaller than last year's and will leave comparatively little surplus available for export. Farm exports and incomes are therefore likely to be appreciably lower. On the other hand, the gold-mining industry, upon which an even larger proportion of the national income now depends than was the case before 1933, will benefit both from increased production, facilitated by more adequate supplies of native labour, and probably from a higher average price for gold. On balance it seems probable that, in the absence of a further heavy fall in prices, both exports and national income will be only moderately below the level for 1937-38. Imports, however, may well continue to fall fairly substantially for a time, though they are hardly likely to go far below the level of 1936-37. The position of the banks remains exceedingly strong, and though both advances and profits in South Africa may show some decline, the falls are not likely to be at all spectacular. Indeed, it seems probable that the banks will be able to look to the South African section of their business as their best hope of maintaining their total profits in the vicinity of their recent high levels.

MACMILLAN

Mathematical Analysis for Economists

R. G. D. ALLEN, *Lecturer in Statistics, London School of Economics*"Has all the neatness and clarity of argument which is the fascination of the subject itself."—*Economist*. 31s. 6d.

Soviet Trade and Distribution

LEONARD E. HUBBARD, *Author of "Soviet Money and Finance"*"This factual investigation is much the best work that has yet been done."—*Financial News*. 12s. 6d.

The Significance and Basic Postulates of Economic Theory

T. W. HUTCHISON, *English Lecturer at the University of Bonn*

8s. 6d.

Wage Policy in Relation to Industrial Fluctuations

A. G. POOL

12s. 6d.

An Introduction to the Study of Prices

SIR WALTER T. LAYTON and GEOFFREY CROWTHER

This is the third edition of a book which has earned a very wide circulation.

8s. 6d.

Poverty and Population

RICHARD M. TITMUSS

A factual study of contemporary social waste. It attempts to assess the extent, character and causes of social waste and to relate the findings to the problem of an ageing and declining population. 10s. 6d.

Outlines of Economics

RICHARD T. ELY and RALPH H. HESS

The 6th edition of a standard work. Such momentous changes have taken place since the last issue appeared that a rewriting has been necessary; consequently, it is almost a new book. 15s.

Economic Problems of War

PAUL EINZIG

Dr. Einzig examines in detail the various aspects of war economy, and makes a series of suggestions as to how the mistakes made in the economic sphere during the last war could be avoided. 7s. 6d.

The Middle Way: A Study of the Problem of Economic and Social Progress in a Free and Democratic Society

HAROLD MACMILLAN, M.P.

"An exhaustive and intelligent study of the means by which we can obtain economic liberty without sacrificing political liberty."—*Harold Nicholson (Daily Telegraph)*. 392 pages 5s.

Commercial Banking Legislation and Control

A. M. ALLEN, *Assistant Secretary to the Institute of Bankers*

S. R. COPE, L. J. H. DARK and H. J. WITHERIDGE

"Done with admirable fullness and clarity. This is an invaluable reference book for students and business men."—*Spectator*. 18s.

ANGLO-INTERNATIONAL BANK, LIMITED

The directors submit a report for the year ending December 31, 1937, which states that the net losses on the realisation of assets and sundry provisions amounted to £51,850, and expenses in connection with the liquidation of foreign branches amounted to £2,874, making a charge to profit and loss account of £54,724;

from this sum has been deducted the surplus of interest, dividends, commissions, etc., over general expenses and directors' fees, £12,954, leaving a debit balance for the year of £41,770, which, added to the balance brought forward from the previous year, £487,023, makes a total debit balance of £528,794.

BANK OF NEW SOUTH WALES

ESTABLISHED 1817

The first bank in Australasia and the largest, the Bank of New South Wales offers a unique banking service to investors, traders and travellers. Over 860 branches are maintained throughout Australia, New Zealand and the Pacific Islands. At the main London Office, 29 Threadneedle Street, the Intelligence Department is fully equipped to provide information on economic and financial conditions in these countries. The branch at 47, Berkeley Square, W.1 advises travellers and makes arrangements for them.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

The profit for the year ended September 30, 1937, after deducting all expenses and charges, and after providing for bad and doubtful debts and legal reserves in South America, amounts to £462,075. To this sum has to be added £168,925 brought forward from last year, making a total of £631,000. From this unappropriated balance the directors recommend the following

distribution:—To dividend of 5 per cent., payable December 15, 1937, subject to income tax, £202,00

THE BANK OF ROUMANIA, LIMITED

The report for the year 1937 states that the balance of the Bucarest profit and loss account, namely, £3,186, cannot be remitted and has therefore been passed to the provision for bad and doubtful debts in Roumania and the equivalent sum has been released from the sterling reserve for doubtful debts, contingencies, etc. After meeting all London office expenses, directors' fees, and payments on account of the Bucarest office, as well as depreciation of investments, there is a deficit of £8,278.

BANQUE COMMERCIALE DU CONGO

The report of the board of directors for the year 1936-37 announces a net profit of Frs. 2,400,233, out of which a dividend of 8 per cent., free of tax, has been paid. Frs. 250,000 have been allotted to the reserve, and Frs. 13,345 are carried forward.

Owing to a change in the presentation of the balance sheet, the figures for 1935-36 and 1936-37, below, are only approximately comparable with those of previous years.

BRITISH OVERSEAS BANK, LIMITED

The directors' report states that the profit, after allowing rebate of interest and providing for all bad and doubtful debts (other than provided for out of contingencies account), for the year ended October 31, 1937, amounts to £52,454; balance available from last account, £69,147, making a total of £121,601, which has been appropriated as follows: To contingencies

account, £50,000, leaving a balance to be carried forward to next year of £71,601. The directors do not recommend payment of a dividend on the "A" ordinary shares, as they consider it prudent to conserve the resources of the bank in view of the unsettled state of world affairs.

HAMBROS BANK, LIMITED

The directors' report for the year ending March 31, 1938, shows that after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £323,884. Deducting the directors' remuneration of £15,206, and adding the balance brought forward from last year of £99,001, there remains an available total of £407,678. After transferring £170,000 to contingency reserve account and allowing the sum of £60,000 for interim dividend on the £10 shares and £9,000 for interim dividend on the £1 "A" shares paid on October 28, 1937, the directors now recommend the payment of a further dividend of 10 per cent., less income tax, on the £10 shares, making a total of 18 per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £87,478 be carried forward.

THE HONGKONG AND SHANGHAI BANKING CORPORATION, LIMITED

The directors report that the net profits for the year ending December 31, 1937, together with \$3,340,790 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$18,773,007. They recommend writing off bank premises account the sum of \$1,000,000. After deducting \$1,000,000 the interim dividend of £2 10s. per share, paid on August 9th last, viz.: £400,000 at 1s. 2½d.—\$6,564,103, and remuneration to directors, there remains for appropriation \$11,127,542, out of which the directors recommend the payment of a final dividend of £3 per share, viz.: £480,000 which, at 1s. 2½d., the rate of the day, will absorb \$7,744,538. The balance \$3,383,004 to be carried to new profit and loss account.

THE IMPERIAL BANK OF IRAN

The profits for the year ended March 20, 1938, after making provision for income tax, N.D.C., Exchange, and bad and doubtful debts, amount to £65,974, to which has to be added £53,034 brought forward from last account, making a total of £119,008. The assets and liabilities of the branches in Iran have been converted at the rate of exchange of Rials 80½ per £ sterling, being the rate on March 20, 1938. The rate last year was also Rials 80½. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. This leaves a sum of £54,008 to be carried forward.

THE NATIONAL BANK OF EGYPT

The report for the year ending December 31, 1937, shows the following statement: Gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to £938,843. After deducting from this for directors' fees £17,797, and for current expenses £461,471, the remainder is divided between the statutory dividend of 4 per cent., amounting to £120,000, and an additional dividend of 11 per cent., amounting to £330,000. By adding the balance brought forward from last year, £229,870, there remains £239,445 to be carried forward.

MOODY'S — ECONOMIST SERVICES LTD.

King William Street House,
London, E.C.4.

**A SELF-BINDER
FOR
THE ECONOMIST**

Week by week you keep your copies of THE ECONOMIST and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)
Price 5/6 each, post free (Overseas 6/6)

SWISS BANK CORPORATION

After deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1937, amounts to S.Fcs. 8,275,272, which together with the amount carried forward from last year, viz.,

S.Fcs. 1,298,913, makes a total of S.Fcs. 9,574,185. The board propose to pay a dividend of 5 per cent. on the paid-up capital, which will absorb S.Fcs. 8,000,000, and to carry forward S.Fcs. 1,574,184.

Our Information Service

The Intelligence Branch of *The Economist* has been
enlarged to meet the growing demand for economic and
statistical information. The Department has been able to
secure the services of a number of experts, and is prepared
to supply information and reports on any branch of
industry and finance as well as on international relations
at a fee proportionate to the work involved.

A special feature of the Department is the preparation of
regular or occasional reports, on request, for business men and
industrialists anxious to keep abreast of all developments
which may affect their branch of activity.

Enquiries should be addressed to the
Intelligence Branch, THE ECONOMIST

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, OCTOBER 29, 1938

No. 22

The Trend of Business

DESPITE the serious international crisis in September, which brought Europe to the brink of war, business activity—as distinct from the flow of new orders to industry—in this country showed no decline in that month. Indeed, *The Economist* index of business activity, shown graphically on this page, rose from 102 (1935=100) in July to 102½ in August and 103½ in September. Among the component series of the index, those relating to employment, merchandise on railways, building activity, iron and steel, and cotton consumption, the volume of raw material imports and shipping movements showed a slight decline. These declines were offset by rises in the indices of coal and electricity consumption, commercial motors in use, postal receipts and bank clearings. The rise of one point in the complete index is due almost entirely to the advance in the index of the volume of exports of British manufactures, whose movements are somewhat erratic. The rise of our index in September, therefore, cannot be taken as conclusive evidence of an upward turn in the trade cycle.

The course of business activity in October cannot yet be appraised by reference to statistics. It is clear, however, that some of the forces at work are still pulling back business activity while others are pushing it on. In the circumstances, any business forecast depends, in a large measure, on the relative importance attached to the main tendencies shaping the course of activity.

The downward movement in industrial activity between September, 1937, and May, 1938, was considerably intensified by the desire of industry to work off the excessive stocks of raw materials, semi-finished and finished goods accumulated during the period of advancing prices last year. While there are no data of movements in the stocks of semi-finished and finished goods, there is some evidence that this de-stocking movement has now almost exhausted itself. In no branch of activity has de-stocking been more marked this year than in the iron and steel industry. In order to keep pace with the slump in the demand for steel, caused largely by de-stocking, domestic production and imports had to be drastically reduced. This movement is reflected in the fall in our index of apparent iron and steel consumption (domestic output adjusted for imports and exports) from 173½ (1935=100) in December, 1937, to 93 in June this year. The downward movement has since lost momentum, and between August and September the index fell only slightly, from 90 to 89½. The experience of many other industries has been similar, and many of them are now in a position where an improvement in the consumption of their products could no longer be met from stocks but would involve an increase in output. An expectation that prices are likely to rise rather than to fall further might, consequently, set in motion a widespread re-stocking movement.

The vigorous recovery in the United States, which has

lifted the Federal Reserve Board's index of industrial production by no less than 18½ per cent. between May and September, is already exercising a powerful influence on prices. Indeed, the prices of industrial raw materials are again rising, and the improvement in freight rates suggests that the fall in international trade has been arrested. If the trend of prices remains upwards—and this will depend, in no small measure, on the course of business in the United States—the flow of orders to British industries should increase during the remainder of this year.

During the second half of September business transactions were seriously held up by the risk of war, except in those industries which are engaged mainly on armament work and in the supply of materials for A.R.P. Thus, the value of building plans passed by 144 local authorities in September was

25.1 per cent. smaller than in the corresponding month last year. Again, the September index of turnover in textiles, calculated by the Wholesale Textile Association in collaboration with the Bank of England, was substantially below the figure for September, 1937. During the past few weeks, however, the volume of

business transactions has shown a definite increase in many industries, even in the depressed cotton trade. It should be emphasised, however, that the increase in buying has not yet become general. For example, the volume of transactions in iron and steel remains small, partly as a result of the expectation of a reduction in prices at the turn of the year.

But if there has been some increase in the flow of new orders to industry, there are a number of trades—in which the time-lag between the placing of orders and their completion is considerable—whose activity is bound to show some further reduction. These include such important trades as building, shipbuilding and engineering. But while the downward movement in activity is likely to be comparatively small in building and engineering, commercial shipbuilding is expected to suffer a severe slump next year as a result of the paucity of new orders. Even if expenditure on armaments is to be increased substantially, this is unlikely to be reflected in the activity of the industries concerned until early next year.

An early and sustained expansion of domestic business activity is, therefore, unlikely. Rather is business likely to mark time, with the bias probably in favour of a gradual improvement.

Abroad, the feverish activity in Germany stands in striking contrast to the persistent depression in France. Apart from Germany, the majority of European countries have suffered a setback, but the recession has not yet gone very far, especially in Scandinavia. The news from the principal primary producing countries is quite encouraging; while their activity is not as high as a year ago, the renewed upward movement of prices, though not yet general, is tending to check deterioration.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of October. In the remainder they relate to the month of September.

COAL

There was a seasonal increase in the demand for coal in September, reflected in an increase in the output from 17.0 million tons in August to 18.5 million tons in September. The decline in production compared with the corresponding month last year, however, was greater in September (-9½ per cent.) than in August (-6½ per cent.). Exports continued to run below last year's level; shipments last month amounted to 3,012,000 tons against 3,657,000 tons in September, 1937. Similarly the quantity of coal shipped for the use of steamers fell from 1,021,000 tons in September, 1937, to 870,000 tons in the past month. The seasonal improvement in demand continued in October, and the difference between this year's and last year's output, as revealed by the weekly figures, has tended to become slightly smaller. The recession in the industry since the beginning of this year, although comparatively slight, has led to an appreciable fall in prices. For example, the Board of Trade's index of wholesale prices for coal fell by 8 per cent. between September, 1937, and the past month. The Central Council has therefore decided to exercise the compulsory powers of price co-ordination delegated to it under the amended legislation of 1936 in order to stem the decline in prices.

IRON AND STEEL

There are indications that the efforts made by the iron and steel industry since the beginning of this year to adjust new supplies to the lower level of demand by the drastic curtailment of domestic production and imports are beginning to bear fruit. The output of pig iron fell from 443,000 tons in August to 429,800 tons in September, but the production of crude steel was stepped up from 658,900 tons to 754,700 tons. Between August and September, 1937, the output of pig iron rose by 1.8 per cent., against a fall of 3 per cent. this year. Moreover, the 14.5 per cent. increase in the production of crude steel in September was due mainly to seasonal influences, for during the corresponding period last year output rose by 17.8 per cent. Nevertheless, the figures suggest that the adjustment of new supplies to the fall in demand is nearing completion, for stocks of pig iron and semi-finished materials are understood to have been substantially reduced. Although the volume of new purchases remains comparatively small, the industry is now expecting a revival in demand which may permit an early increase in output without adding to stocks. A reduction in prices at the beginning of next year would probably help to stimulate demand.

GENERAL ENGINEERING

The engineering industry is in the midst of a gradual recession in activity, due to the downward trend of the volume of new commercial—as distinct from armament—orders. Unemployment showed a slight increase between August and September; compared with September, 1937, the proportion of insured persons unemployed in general engineering showed an increase of 4 per cent. Notwithstanding the slight setback, activity remains at a high level, though the downward trend is expected to continue for some months, despite the prospective increase in armament expenditure. This is due to the long time-lag between the formulation of new armament plans and their translation into orders for machinery. Exports and imports are also tending to decline. In September imports of machinery amounted to 9,080 tons, compared with 12,233 tons in the corresponding month a year ago. The volume of exports declined from 36,866 tons in September, 1937, to 34,700 tons in the past month, but their value rose from £4,253,000 to £4,472,000. The negotiations between the trade unions and the employers concerning the speeding-up of defence work have not yet been concluded. There is no doubt that the volume of armament work could be increased very substantially if some of the regulations concerning labour relations were relaxed.

ELECTRICAL EQUIPMENT

The recession has been less marked in the electrical equipment industry than in general engineering. There was no increase in unemployment in the electrical engineering section between August and September, and there was actually a slight decrease in the electric cable and apparatus section. That the industry is still operating near capacity is revealed by the fact that the proportion of insured persons unemployed last month was only 5.4 per cent. in electrical engineering and 6.5 per cent. in the electric cable and apparatus section. Exports of electrical machinery continue above last year's level; shipments rose from 1,536 tons (valued at £268,132) in September, 1937, to 17,531 tons (valued at £323,815) last month. Exports of electrical goods and apparatus, on the other hand, showed a slight decline during this period, from £1,098,155 to £1,030,708.

AUTOMOBILES

Compared with the corresponding month of 1937, the output of private cars in August fell by 10.2 per cent. and that of commercial vehicles by 5.8 per cent. These declines are considerably less than those of previous months, and it is also worth noting that the seasonal fall in production between July and August this year has been less marked than in 1937. While attendances at the Motor Show did not quite reach last year's total, the volume of

orders placed is reported to have been encouraging, and production at some of the motor works is to be speeded up. The export of private cars increased from 1,950 units in August to 2,922 units in September, which compares with 3,793 cars exported in September, 1937; exports of commercial vehicles were slightly larger in September than in either the preceding month or in the corresponding month of 1937.

BUILDING

Despite a slight recession in recent months, activity in the building and contracting trades remains at a high level. Compared with September, 1937, the proportion of insured persons unemployed last month showed an increase of only 3.0 per cent. in building and 3.1 per cent. in public works contracting. The returns of the value of building plans passed in September by 144 local authorities are disappointing, for they show a decline of no less than 25.1 per cent. from the figures for September, 1937. There was a fall in all categories of building, with the exception of shops and other business premises. The September returns, however, must be read in conjunction with the political crisis, as a result of which many projects may have been postponed. It is quite possible, therefore, that the October figures will make a better showing. In any case, there are no signs of an early and abrupt fall in constructional activity. Moreover, if re-armament is to be intensified, the constructional trades will be among the first to benefit from the need for additional aerodromes, barracks, depots and factories.

CHEMICALS

Although all sections of the chemical market were disturbed by the international crisis, in general a fair amount of business has been transacted during the past month. Demand for industrial chemicals has been quite active, and business in pharmaceutical and other fine chemicals is generally satisfactory. Reports from the wood-distillation industry indicate that trade has been quiet but steady. Stocks of most products are decreasing, although little improvement has been shown in the acetates market. There has been no sign of a revival in the coal tar products' market. Overseas trade in chemicals, drugs, dyes and colours showed a further decline in September, exports decreasing in value by £319,906 and imports by £64,895 compared with 1937. Of the decrease in exports, coal tar products accounted for more than £130,000.

POTTERY

Trade improved during the early half of September compared with the low level of August; the percentage unemployed among insured workpeople was 17.2 on September 13th, compared with 26.5 on August 15th, when employment in some districts was affected by local holidays. The September exports of earthenware, at 41,035 cwt., showed a slight increase over the August figures, but exports of sanitary ware continued to decline.

FOOTWEAR

Employment in all districts improved between August and September; the percentage unemployed fell from 13.5 on August 15th to 11.2 on September 13th, which compares with 9.1 in September, 1937. Short-time working was common in most districts, except at Norwich. Exports, while still below the level of those in September, 1937, were higher than in August and amounted to 32,926 dozen pairs. During the whole of the current year, imports of leather boots and shoes have been larger than in 1937; total imports for the first nine months of the current year were 231,668 dozen pairs, of which slightly more than half came from Czechoslovakia.

COTTON

During the European political crisis, shipping difficulties increased and the sharp advance in war insurance rates had a serious effect upon trade negotiations. During the last few weeks, however, demand for yarn and piece-goods has broadened; most spinners and manufacturers have booked more orders and a slight improvement has occurred in industrial activity. This is reflected in the increase in spinning production to 55 per cent. of capacity, compared with 50 per cent. a month ago and 92 per cent. a year ago. The latest employment statistics, which refer to September 12th, showed a total of 131,987 cotton operatives unemployed, against 123,752 a month ago and 57,333 at the same time last year. After an advancing tendency in raw cotton prices, there was a slight reaction later in the month. The third American Government crop estimate of 12,212,000 bales, against the previous estimate of 11,825,000 bales, was larger than expected, and the carry-over of American cotton at the end of this season will probably be 14,500,000 bales. On the other hand, the Egyptian cotton crop for this season is expected to be about 30 per cent. smaller than that of last year. The cloth demand for India has increased, and some leading shippers have placed orders on a freer scale than for some time. Increased activity has also been experienced for South America, the Continent, the Dominions and the home trade, and occasionally makers have secured fairly substantial government orders. This improvement, while welcome, is still small; exports of cloth so far this year are 29 per cent. smaller than in the same period of 1937, and exports of yarn have fallen by 27 per cent. in the same period. In the spinning section, the breakdown of the price agreement for medium American ring yarns led immediately to a severe cutting of prices, with keen competition for orders. Big quantities have been sold by a leading combine at over 2d.

lb. below the old list rates, but since the increase in orders prices have been advanced. There has been a price reduction of ½d. per lb. under the agreements for medium and fine American welfts. Increased business has been done in Egyptian yarns.

JUTE

Unemployment, though still high, continues to decline slowly; on September 13th 25.1 per cent. of insured persons were out of work, compared with 27.8 per cent. on August 15th. The export trade remains disappointing, but there has been a revival in home trade due mainly to defence demands. Spinners are very busy and are pressed to give delivery of yarns on order.

LINEN

Flax prices are rigidly maintained; Russian flax is held off the market and there are no sales from the Baltic Monopolies. Courtrai fibre is dearer. The quality of the new Irish crop is rather disappointing. Spinners generally are reserved and disinclined to sell ahead. There is more cloth inquiry from home and overseas markets, but pending the conclusion of the Anglo-American trade agreement, business with the U.S.A. is being confined to nearest requirements. Exports of cloth in September continued at the low level prevailing in August, but there was at least no further decline.

RAYON

The international situation has continued to retard progress in all branches of the rayon industry, but it is becoming increasingly obvious that stocks are low and there is every reason to believe that a forward movement is more than due. Production of yarn and staple fibre remains at the reduced level established in the spring. Prices show little change.

WOOL

Raw wool prices continue to be well maintained, particularly for merinos. More business has recently been done in crossbreds, whose prices have also tended to rise. A number of small orders have been booked in the yarn market and prices generally are steady. Greater confidence has also been shown in the past fortnight in the piece-goods trade, although the volume of new orders for spring delivery remains disappointing. The woollen section of the industry has benefited most from the slight improvement in trade; employment in the worsted section remains slack, and considerable short-time is being worked. The September trade returns show that exports

of cloth continued at a lower level than in 1937, but that the divergence from the figures of a year ago was less in September than in August, and less in August than in July.

AGRICULTURE

The yields of wheat and barley are estimated by the Ministry of Agriculture to exceed the average for the last ten years. Autumn cultivations are now well in hand in most districts, and the recent spell of dry weather has favoured operations. There is a good supply of autumn grass and milk yields are up to the average. Sheep prices remain low, but the seasonal decline in fat cattle prices is about average.

SHIPPING

Freight rates improved slightly between August and September, *The Economist* index (1913 = 100) rising from 95.7 to 97.2. The prospect of a general war disorganised the freight markets and the revision in the rates for war risk insurance also hampered business. Later, when the tension subsided, freights on most routes were quoted at about the rates prevailing early in September. The shipment of grain continues to be the centre of interest, but, with ample tonnage available, lower rates are not unlikely. Meanwhile, the volume of shipping tonnage laid up at ports of Great Britain and Ireland increased from 332,004 net tons on July 1st to 455,667 net tons on October 1st, compared with 99,496 net tons a year ago.

RETAIL TRADE

The average daily value of retail sales in September, as revealed by the returns published in this week's *Board of Trade Journal*, was 0.9 per cent. higher than in the corresponding month last year. That there was no widespread hoarding of food and perishable goods is shown by the fact that sales of these articles were only 4.5 per cent. higher than a year ago. Nor was there any disastrous decline in non-food sales, which were only 3.5 per cent. below the level of September, 1937. The value of total sales was higher than a year ago in all districts, with the exception of Central and West End London. Indeed, Central and West End London is the only district which witnessed a substantial increase in purchases of food, accompanied by a sharp drop in purchases of other commodities; here the value of sales of groceries and provisions last month showed an increase of no less than 27 per cent. compared with September, 1937, and sales of articles other than food fell by 13 per cent.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—The long spell of dry weather during September and early October has at last been broken and wheat prospects have improved correspondingly. Imports remain at a high level, while the value of exports continues to decline. The trade balance for the two months July and August was unfavourable to the extent of £3.1 millions, against £0.8 million in the corresponding months of last year. Retail trade and manufacturing show slightly more than the normal seasonal recession, according to a cable from the National Bank of Australasia, but general business activity remains at a prosperous level. The demand for cars has slackened, but the latest statistics of building permits reveal no recession in constructional activity. A large programme of defence and other public works is projected for the current year.

CANADA.—Business activity in Canada shows little material change. Grain prices, after a temporary spurt caused by the fear of a European war, continue to sag slowly, but Canadian hard grains have been least affected by the fall. With a fixed price of 80 cents per bushel throughout the season, farmers are selling freely, and it is likely that an unusually large proportion of this year's heavy crop will be exported before Christmas. Building permits and the value of contracts awarded showed a less than normal decline between July and August. There was an expansion in the output of newsprint and wood pulp, but the exports of planks and boards fell sharply in August compared with July. Mineral production showed a slight fall in August, except for nickel and lead.

SOUTH AFRICA.—A certain amount of short-time working is reported from clothing and shoe factories, but business activity generally is well maintained, particularly in the towns. There was a sharp increase between July and August in the value of building plans passed in Johannesburg; the building trades in Cape Town continue well employed. Wool prices showed a rising tendency during the recent sales, owing largely to improved German buying as the result of the renewed payments agreement. The market for hides and skins has been firm.

INDIA.—Imports in September, at 10,81 lakhs, were a little smaller than in August, while exports, amounting to 15,67 lakhs, were a little larger. Compared with September, 1937, however, imports fell by 285 lakhs and exports by 143 lakhs. The final forecast of the jute crop gave a total of 6.7 million bales, and it is expected that stocks will be heavily drawn upon before the end of the season. Wholesale prices at Calcutta remain stable.

EUROPE

FRANCE.—Business was seriously disorganised during the crisis, when a large number of men were called to the colours. But even before the crisis there were few signs of recovery in France. The volume of new investment has remained consistently at a very low level, partly owing to the rigidity of the new labour regulations, which have not yet been modified to any marked extent. Owing to the lack of statistical evidence, it is difficult to be precise. The latest month for which the official index of production is available is April. As far as can be judged from reports, however, production has tended downwards rather than upwards in August and September. The number of unemployed in receipt of benefit was 338,409 at the end of September, compared with 305,449 a year earlier. Wholesale prices have tended to rise during the past four weeks, and the price of industrial securities recovered slightly after the Munich Agreement.

GERMANY.—As a result of the continuous transference of resources from commercial to armament work, the volume of industrial production in Germany has continued to rise. The Institute of Business Research's index of industrial production (including Austria) has risen without interruption since the beginning of the year. In August the index stood at 130.5 (1928 = 100), compared with 128.7 in July and 126.9 in June. The weekly index of business activity registered a decline in September, due probably to the withdrawal of labour resources from industry for the purposes of mobilisation. There is practically no unemployment in Germany; the number registered in September was only 156,000, compared with 179,000 at the end of August and 469,000 at the end of September, 1937. Despite the fact that there is now full employment in Germany, the official index of prices has shown no increase in recent weeks. Moreover, the crisis was scarcely reflected in the prices of Government and industrial securities, the latter having shown a gradual upturn since the beginning of September.

SWEDEN.—Export business was seriously affected by the European crisis, but more normal conditions have now been established. Turnover on the wood pulp market remains small, but consumers' stocks are falling and a re-stocking movement may occur before long. The increase in timber prices early in September was followed by an expansion in inquiries, and the outlook in this market is more hopeful. The latest figures for foreign trade relate only to August; in that month imports amounted to 173 million krona, and exports to 150 million krona, compared with 171 and 187 million krona respectively in August, 1937. Business activity was well maintained in August, but the statistics for September will probably show the effect of the recent crisis.

FINLAND.—The export trades were badly hit by the slump in timber and paper prices, and output has been restricted in consequence; more favourable conditions may be expected now that the European political situation has eased. Industries working for the home market continue well occupied. Compared with last year, exports in 1938 have fallen considerably, but the returns relating to August show a slight improvement; the same applies to imports, whose value, compared with 1937, has fallen rather less than that of exports.

GREECE.—While the yield of winter sowings was on the whole very satisfactory, spring sowings were unfavourably affected by the unsettled weather that prevailed during the summer. The new crops of currants and tobacco are also lower than last year. Industrial and trade activity was brisk during September, though the international crisis checked further business expansion in the latter part of the month. Business on the Athens Stock Exchange was equally affected by the crisis, but with the conclusion of the Munich Agreement prices improved considerably on the last day of the month. The foreign exchange reserves of the Bank of Greece registered a slight increase in September.

UNITED STATES OF AMERICA

The rate of expansion of business activity tended to slow down in September, partly, no doubt, owing to the political crisis in Europe. Thus, the Federal Reserve Board's index of industrial production rose by 7.8 per cent. in July, 6 per cent. in August and only 2.2 per cent. in September. Nevertheless, recovery has been very rapid, for the index for September showed an increase of no less than 18.5 per cent. over that for May. Moreover, there are indications that recovery has again gained momentum in recent weeks; the weekly index of business activity calculated by *The New York Times* rose from 84.3 for the week ended October 1st to 87.6 for the week ended October 15th. As in previous recovery movements, the expansion has so far been most marked in the case of consumption goods, but there are also signs of revival in the capital goods industries. For example, the proportion of crude steel productive capacity employed has risen from 44 per cent. in the first week of September to 53.7 per cent. in the current week. Activity in the building industry is tending to expand, and there are now prospects of a substantial increase in the expenditure of the public utilities. One of the unfavourable factors is the downward trend of the prices of cereals, which is diminishing the income of the farming community. The prospects of recovery in the United States are discussed in detail in a leading article in this week's *Economist*.

LATIN AMERICA

ARGENTINA.—With the alleviation of the European political crisis, grain prices in Buenos Aires have relapsed. The outlook for the coming cereal crops continues excellent, although some losses may have been sustained by frosts at end-September. Despite the continued adverse trade balance, the foreign exchange and monetary markets continue steady under the scheme of managed economy. Retail trade is quiet, reflecting the reduced purchasing power of the public, but if the crops turn out well, both the import and retail markets should recover later in the year. Both the wool and hides markets show improvement.

BRAZIL.—The trade balance for the six months ended June was adverse, although a favourable balance emerged in that month alone. Statistics show that Brazil is increasing her deliveries of coffee to world markets, although these larger shipments are offset by low prices. Distribution of foreign exchange in payment of imports was suspended on September 23rd, but resumed on October 4th. The Bank of Brazil has suspended the purchase of German Askis marks against exports of coffee, cotton and cocoa.

CHILE.—Trade has been marking time pending the result of the Presidential election. The country should benefit by the removal of restrictions on copper output. Meanwhile, conditions in the exchange market for sterling and dollars continue stringent.

PERU.—Trade conditions remain dependent on the changes in the world market for cotton. The currency continues to depreciate slightly and the favourable balance of trade at end-July showed a large reduction on that twelve months earlier.

THE FAR EAST

The values of Japanese exports and imports in September were both lower than in August, but the favourable balance declined from 53 million yen to 36 million yen. For the nine months of the current year the excess of imports amounted to only 97 million yen, a fall of 87 per cent. compared with the corresponding period of 1937. Export business and the turnover on the Stock Exchange were adversely affected by the European crisis, but conditions improved after the Munich Agreement. Business in trades not connected with the supply of war materials continues to be hampered by the stringent control over raw material imports. China's imports in September showed a slight fall to 75.1 million dollars, while exports were little changed at 79.8 million dollars. The fall of Canton, the last of China's major ports, must necessarily have a drastic effect on China's foreign trade.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of November. In the remainder they relate to the month of October.

COAL

The past month has witnessed an appreciable improvement in the coal-mining industry. The quantity of coal raised increased from 18.5 million tons in September to 19.7 millions in October, and, whereas output in September was 9.3 per cent. below that of the corresponding month a year ago, production last month was only 3.3 per cent. smaller than in October, 1937. The improvement, however, was confined to the home market, for exports last month, at 3,392,892 tons, were nearly 13 per cent. smaller than in the corresponding month last year. The quantity of coal shipped for the use of steamers last month, at 892,275 tons, showed a reduction of 7 per cent. compared with October, 1937. The increase in the demand for coal reflects the improvement in industrial activity, especially in heavy industry. The Board of Trade index of coal prices (1930 = 100) rose from 118.5 in September to 120.1 in October, against 130.1 in October, 1937.

IRON AND STEEL

A month ago we indicated that the surplus stocks of iron and steel accumulated last year had been practically liquidated and that current consumption could no longer be met from stocks to any great extent. Consequently, the stage had been reached where production had to be increased again in order to meet current consumption, and, in fact, the output of pig iron and steel showed an appreciable increase between September and October. The output of pig iron rose from 429,800 tons in September to 469,400 tons in October, and the output of crude steel rose from 754,100 tons to 854,000 tons during this period. Apart from the reduction in stocks, the expansion of domestic production was made possible by the maintenance of imports at a very low level. Total imports of iron and steel declined from 61,800 tons in September to 52,400 tons last month, compared with 220,500 tons in October, 1937. Exports, on the other hand, rose from 138,000 tons in September to 159,100 tons in October, compared with 260,900 tons in the corresponding month last year. The reduction in imports was thus considerably more marked than the fall in exports.

GENERAL ENGINEERING

The engineering industry has benefited from the improvement in general business activity, for the downward trend in employment was arrested during the past month. Although the total volume of new orders secured by the industry has not yet shown much expansion, there has been an increase in inquiry. As was to be expected, the slight improvement in the industry in due mainly to the placing of armament orders. Among individual branches of the industry, there has been an improvement in the lifting, printing and textile machinery sections. On the other hand, the agricultural machinery section has suffered a slight setback. Exports, though running below last year's level in volume, have so far been fairly well maintained; in October shipments were 37,096 tons (valued at £4,838,978), compared with 40,606 tons (valued at £4,649,913) in October, 1937, and 32,565 tons (valued at £3,589,557) in October, 1936. No further progress has been made with the discussions on the relaxation of trade union regulations. For the moment, the unions' demand for higher wages, to be discussed at a conference with the employers on December 6th, appears to be the main issue.

ELECTRICAL EQUIPMENT

The electrical equipment industry has experienced a slight improvement during the past month, reflected in a small reduction in the proportion of insured persons unemployed. The proportion unemployed last month was only 2.2 per cent. higher than a year ago in electrical engineering and 2.3 per cent. higher in the electric cable, apparatus and lamp section. Exports of electrical machinery continue well above last year's level; they rose from 1,388 tons (valued at £245,182) in October, 1937, to 1,625 tons (valued at £337,717) last month. The increase was most marked in the case of British India. Exports of electrical goods and apparatus, on the other hand, declined slightly, from £1,207,125 in October, 1937, to £1,155,388 in the past month. The prospects of the industry remain encouraging.

AUTOMOBILES

New registrations of private cars in September amounted to 17,067, a fall of 16 per cent. from the corresponding month of 1937; there was a fall of 21.6 per cent. in the new registrations of goods vehicles. The September production of private cars and taxis amounted to 22,859, compared with 25,846 in September, 1937, and that of commercial vehicles fell from 9,290 to 7,326. Exports

of new private cars amounted in October to 3,067, very slightly more than in September, but 1,281 fewer than in October, 1937. Exports of commercial vehicles and of second-hand cars of all types increased considerably compared with September, but were rather smaller than in October of last year.

BUILDING

Building activity showed a slight seasonal decline during the past month, but if allowance is made for seasonal variations constructional activity is still at a very high level. Although the number of insured persons aged 16 to 64 increased by 14,800 in building and by 33,900 in public works contracting between July, 1937, and July, 1938, the proportion unemployed last month was actually 0.7 per cent. smaller than a year ago in public works contracting and only 3.8 per cent. higher in building. Nor, in view of the prospects of increased defence expenditure, are there any indications of an early slump in the constructional trades. The September returns of the value of building plans passed by 146 local authorities showed a sharp drop compared with those of the corresponding month in 1937. This decline, however, was mainly due to the international crisis, for the value of plans passed in October by 141 local authorities was almost as high as a year ago.

CHEMICALS

A steady business has been transacted in most sections of the chemical industry during the past month, but most orders are for comparatively small quantities to cover immediate requirements. In the industrial chemicals market, interest has been shown in acetic and oxalic acids, acetone, ammonium chloride and formaldehyde. Salicylates have been in good demand among the pharmaceutical chemicals; demand for most other products is about average for the time of year. There has been improved business in creosote oil, but little interest has been shown in other coal-tar products. For the first time since January, overseas trade in chemicals, drugs, dyes and colours showed an advance in October as compared with the same month of 1937; exports increased in value by £249,671 and imports by £525,580.

POTTERY

There was little change in business during the last month; unemployment remained at about 17 per cent. of the insured persons, and a considerable amount of short time is being worked in all districts, particularly in North Staffordshire. Exports of both sanitary and earthenware improved between September and October, when they amounted to 35,638 cwt. and 44,575 cwt. respectively; compared with October, 1937, however, exports of sanitary ware were lower by 3,667 cwt., and those of earthenware by 12,486 cwt.

FOOTWEAR

Business continues to improve slowly; more inquiries are reported from nearly all districts and deliveries are increasing. The rise in leather prices is causing some anxiety, particularly as it has not so far proved easy to obtain increased prices for the finished articles. Exports improved from 32,926 dozen pairs in September to 33,579 dozen pairs in October, which compares with 37,956 dozen pairs in October, 1937; imports both of leather and of rubber shoes continue at higher levels than ruled during last year.

COTTON

During the latter half of October the increased activity in the Lancashire cotton industry was maintained, but since the beginning of November demand has fallen off somewhat. The pause in operations has been partly due to the more unsettled political situation, especially on the Continent. In certain quarters there has been a slight improvement in industrial activity, and in both spinning and weaving sections production is now estimated at 58 per cent. of full capacity, as compared with 55 per cent. a month ago. A welcome improvement has shown itself in the unemployment returns, the number now being 99,780 against 131,417 a month ago. Owing to the relatively high prices for American cotton, trading has been difficult and spinners have turned to an increasing extent to other qualities, especially South American and Indian varieties. Another of the yarn price agreements has been in danger of breaking down, but an effort is now being made to renew the agreement until the end of March. Cloth sales for India have been smaller than in October, but there are now indications of another revival in demand. Steady buying has taken place for South America and the Dominions, chiefly South Africa. Home trade reports have been

rather healthier and, owing to improved clearances in the retail and wholesale establishments, replacement buying has been on a freer scale. Some substantial contracts have been secured in heavy and fine cloths for the Army, Navy and Air Forces. Exports of cloth so far this year are 29 per cent. less than in the corresponding period of 1937.

JUTE

Spinners and manufacturers continue busy, and unemployment declined further between September and October. There is, however, a dearth of orders for future delivery, and unless more business materialises in the next few weeks activity may decline. Exports of both yarn and manufactures improved a little between September and October; exports of sacks amounted to 93,000 cwt., compared with 92,100 cwt. in September and 81,000 cwt. in October of last year.

LINEN

The flax position is unchanged, with prices tending still higher. Some bulk sales of Baltic fibre are recorded, with Germany taking the major portion on a barter basis. A considerable business has been done in Irish spun yarns for Continental account, but otherwise demand is confined to near requirements. There is also more inquiry for cloth, but potential buyers are slow to concede an advance in price against the higher costs with which producers are faced. Exports of piece-goods, however, increased from 3.9 million square yards in September to 4.8 million square yards in October, largely due to improved trade with the Empire.

RAYON

Demand in most sections of the rayon industry has been better, but buying is spasmodic owing to lack of confidence and contracts are not for large amounts. Production remains at a reduced level, but is being fully cleared. Overseas demand, apart from the colonial markets, is very poor; exports of rayon tissues fell from 6.1 million square yards in October, 1937, to 4.9 million square yards in October, 1938. The hose trade is fair.

WOOL

The demand for raw wool remains good and prices firm. There has been more buying on the international markets by American importers, and it is reported that comparatively little of the American home clip remains unsold. Quotations for yarns have been raised, against an increase in orders; the hosiery trade in particular is much busier than it has been during the past few months. The home demand for cloth is improving, but exports declined further between September and October. Exports of tops, however, which have been slowly improving during the autumn, rose from 3.3 million lbs. in September to 4.9 million lbs. in October, which was more than double the exports in October, 1937; the improvement was due to increased exports to Canada, the Scandinavian countries and Holland. Exports of yarns also increased, though to a smaller extent, again largely owing to improved buying from Scandinavia and Germany.

AGRICULTURE

The lifting of the potato crop is nearly finished and yields are generally high. The recent spell of warm weather has reduced the demand, but the raising of the riddle regulations has steadied the market. Good progress has been made with autumn cultivations, except in Scotland, and the corn crops are exceptionally well forward. The absence of any hard frost has prolonged the autumn grazing, with a considerable saving on feed bills. There have been only two outbreaks of foot-and-mouth disease in recent weeks, in contrast to the widespread attacks of last autumn.

SHIPPING

The trend in freight rates has again been downward during the current month, thus continuing the decline recorded in October. The Economist index of freight rates fell from 97.28 (1913=100) in September to 95.1 in October. The demand for grain cargoes continues disappointing, though there has been a slight revival of interest in chartering for the Australian crop. Freights in Eastern markets are definitely weaker, and elsewhere the outlook is not promising.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Drought continues in Victoria, where the wheat crop has become a total failure. Elsewhere, prospects have improved and a total crop of about 130 million bushels is expected. Employment is well maintained and there has been no change in business trends, according to the National Bank of Australasia; the seasonal increase in activity is about up to normal. The value of imports fell by £1.8 millions between August and September, while that of exports rose by £1.3 millions; consequently, there was an export surplus of £1.2 millions in September.

CANADA.—Business has shown little change in recent weeks. Employment and industrial production in September were higher than in August, and latest reports indicate that the improvement was maintained in the early weeks of October. Wholesale prices have remained stable for some weeks, in spite of fluctuations in international wheat prices. The newsprint industry has increased its output recently, but the output of steel and pig iron declined during September. The value of exports jumped from \$86.5 millions in August to \$108.5 millions in September, which was \$13 millions more than in September, 1937. The value of imports, on the other hand, declined between August and September, when they were considerably lower than in the corresponding month of 1937.

SOUTH AFRICA.—The European crisis in September led to a general lack of confidence, which impeded the usual flow of orders, but during October, business has again reverted to its normal level. Building activity has been well maintained in the principal towns, and the value of building plans passed indicates a continuation of full employment. There has been a better demand in recent weeks for hides, and prices of all varieties have improved; wool prices were affected by the European developments, but have since recovered and are firm, with a tendency to rise.

EUROPE

FRANCE.—Such meagre statistical evidence as is available for September and October suggests that there has been a slight improvement in business activity. In September, output in the mining, iron and steel, engineering and motor-car industries showed a definite increase, though the improvement must be attributed largely to seasonal factors. Although the number of unemployed in receipt of benefit increased in October, this movement may have been due to demobilisation following the Munich Agreement. Wholesale prices have shown no further increase during the past four weeks, but the prices of industrial securities have tended to rise. The business outlook, however, remains obscure, for it is intimately linked up with the fate of the Reynaud plan, whose acceptance by Parliament is not yet assured.

GERMANY.—Economic activity in Germany continues at a very high level, and there are no indications of any relaxation of war preparations. The index of industrial production calculated by the German Institute for Business Research (1928=100) rose from 129.4 in August to 132.0 in September. Indeed, the country's resources of men and machinery continue to be fully employed and unemployment is negligible. Activity appears to have shown a further expansion during the past month, for the Institute's weekly index of business activity (1936=100) rose from 108.2 during the week ended October 1st to 112.3 during the week ended November 5th. There has been little change in the indices of wholesale prices or industrial securities in recent weeks.

HOLLAND.—The signs of recovery in America have induced a feeling of greater optimism on the Amsterdam Stock Exchange, and the situation in Holland shows some improvement as well. The number of unemployed has declined during the summer to about 117,700 in September, compared with about 124,000 in September of 1937; the fall has been due largely to the improvement in the building trades. Activity in the shipbuilding yards has again declined, but the metal and textile trades have increased their output in recent weeks.

ESTONIA.—Unemployment in September and October remained at a higher level than in 1937, largely owing to the reduced activity in the export trades. The home market, however, remains brisk; crops have given good yields and prices of butter and other dairy products have remained at satisfactory levels. Exports of agricultural produce are still at a high level, though exports of timber have been much reduced.

SWEDEN.—There has been little change in business conditions since the early days of October. Timber sales, mainly to Britain, have been slightly larger than during the summer and prices have hardened; the demand for pulp is limited at unchanged prices. Sales of paper have increased in America and the United Kingdom, but these have not yet affected Swedish exports. Production of

pig iron and steel increased somewhat in September compared with August.

NORWAY.—With the more favourable political situation, and the signs of industrial recovery in America, the tone of the Stock Exchange improved during October. The number of unemployed persons on the registers of the official unemployment exchanges showed the usual seasonal increase between September and October; the total in October, at 30,085 persons, was 1,000 more than in October, 1937. Freight rates declined from their "war" level in the early days of October, but a firmer tendency has again appeared; the tonnage of Norwegian ships laid up fell from 490,000 tons at the end of September to 384,000 tons at the end of October, of which the bulk is represented by tankers. Industrial production as a whole increased between August and September, and was higher than in September of last year, but industries working for the home market have improved their position more than the export trades.

DENMARK.—Unemployment increased sharply between September and October, when it was slightly higher than a year ago. Business activity as a whole, however, has been well maintained during the summer and autumn and shows little change. The weather has favoured autumn cultivation and grazing. The more settled state of international affairs and the influence of American industrial revival stimulated the Stock Exchange during October; the index of share prices reached the highest monthly level since September, 1937.

UNITED STATES OF AMERICA

Recovery has continued to make headway. According to preliminary estimates, the Federal Reserve Board's index of production for October is expected to reach 95 (1923-25=100), against 90 in September and 88 in August. Moreover, *The New York Times* weekly index of business activity rose from 87.6 for the week ended October 15th to 90.3 for the week ended November 12th. One of the most satisfactory features of the business revival is the expansion of building activity, especially of residential construction. On a daily basis, for example, the value of building contracts awarded during the first half of October was higher than in any year since 1930. The improvement in other sections of capital equipment has so far been comparatively modest, but hopes are entertained that the railways and utilities will soon initiate large-scale re-equipment and expansion programmes. The motor industry is also gaining ground fairly rapidly. It is hardly surprising, therefore, that the proportion of America's crude steel output capacity in employment has risen to over 60 per cent., compared with just over 50 per cent. a month ago. Meanwhile, most of the evidence points to a further improvement in business activity.

LATIN AMERICA

ARGENTINA.—In mid-November the Argentine Government established a guaranteed minimum price of 7 pesos per 100 kilos for wheat and 13 pesos for linseed, and, at the same time, raised the official selling rate of exchange from 16 to 17 pesos per £. As the official buying rate of exchange remains at 15 pesos, the Government doubles its exchange profits, and presumably these are to be used towards subsidising the guaranteed grain prices. The increased rate of exchange will, however, render imports dearer and will also be a further blow to the Argentine railways unless they are conceded a special remittance rate. Meanwhile, prospects for the coming Argentine crops continue very favourable, so far as quantity is concerned, and the general outlook is regarded with restrained optimism.

BRAZIL.—Business conditions continue quiet; although exports of coffee and cotton are much larger in volume, the fall in values, coupled with a high level of imports, resulted in an adverse balance at end-July of £913,823 (gold) against an active balance of £4,378,127 at the same date in 1937.

THE FAR EAST

More stringent measures by the Japanese Government have been responsible for the stability in the past two months of the level of wholesale prices in Tokio. Difficulties have arisen over the export-import linking system for textile piece-goods; the existence of a time limit within which exports have to be made has had the effect of reducing the prices obtainable by exporters. Consequently, although the volume of cotton exports has increased in recent months, its value has tended to decline. It is now proposed to extend the time limit by one month. The Department of Agriculture is proposing to set up a company to control the internal distribution of rice. The value of Japanese imports remains at the low level of about 200 yen per month, compared with 250 to 300 million yen in 1937; exports in September amounted to 240 million yen, compared with 289 million yen in September, 1937. According to the League of Nations, Chinese imports in October amounted to 78.9 million standard dollars, a rise of 42 million dollars compared with October, 1937; the value of exports also rose, from 48.7 to 76.1 million dollars.

U.S.A. 1936 IMPORTS from
U.K. Canada Malaya India

trade both ways with the United States; United States trade both ways with Canada; United States exports to the South African Union and Australia; and United States imports from Malaya and British India.

UNITED KINGDOM—UNITED STATES TRADE

United Kingdom exports to the United States amounted in both 1929 and 1936 to only 6 per cent. of United States imports. As the following table shows, the chief item by far, since Prohibition ended, is whisky; other important exports are raw wool, linen piece-goods, tin ingots, woollen tissues and machinery. Since 1929 exports of cotton piece-goods and yarns, leather and jute goods have fallen off markedly; and the total value of United Kingdom exports (excluding re-exports) to the United States fell off between 1929 and 1936 by 33 per cent.

TABLE 3.—UNITED KINGDOM EXPORTS TO U.S.A. OF DOMESTIC PRODUCTS

Description and Unit	Quantities (000's)			Value (£'000)			Percentage of total exports 1936

Total (all classes)	...	...	...	45,558	15,091	27,626	6.3

United Kingdom imports from the United States fell from over 16 per cent. of total imports in 1929 to 11 per

cent. in 1936, and were more than halved in value in the same period. Raw cotton, tobacco, machinery and petroleum are the chief items, but wheat, fourth by value in 1929, practically disappeared in 1936, owing to crop restriction in the United States and the United Kingdom's tariff and preference policy. Tobacco and machinery imports were well maintained over the period 1929 to 1936, but raw cotton fell off sharply in value and petroleum steeply in volume as well as in value. Table 4 shows details of the most important items.

TABLE 4.—IMPORTS FROM U.S.A. RETAINED IN THE U.K.

Description and Unit	Quantities (000's)			Value (£'000)			Percentage of total imports 1936

† Excluding tobacco. * Comparability with later years only approximate.

THE IMPORTANCE OF CANADA

The value of trade between the United States and the United Kingdom is greater than that between any other two countries, except the United States and Canada; Canadian trade is thus of prime importance to the United States. In 1929 trade with the United States accounted for nearly 70 per cent. of Canada's imports and 44 per cent. of her exports; in 1936 the American share was 58 per cent. and 40 per cent. respectively. In this period Canadian imports from the United States were halved in value, while Canadian exports to the United States fell on balance

TRADING WITH AMERICA

SINCE its establishment in London over forty years ago, the Guaranty Trust Company has aimed at the constant development of its services in order to render the greatest assistance possible to merchants and firms trading between this country and America.

The management at any of the London Offices will be glad to explain the Bank's facilities in detail.

much less. As the following table shows, the United States exports to Canada, coal and coke, petroleum, automobiles, iron and steel products and machinery, all of which fell off steeply between 1929 and 1936 owing mainly to depression but partly to the Ottawa Imperial preferences:

TABLE 5.—UNITED STATES DOMESTIC EXPORTS TO CANADA
(thousands of U.S. dollars)

	1929	1932	1936	Percentage of total U.S. exports 1936

United States imports from Canada (shown in Table 6) are dominated by newsprint purchases; and between 1929 and 1936 imports of newsprint, timber and copper fell heavily, though imports of wheat, nickel and (post-Prohibition) whisky rose considerably.

* General imports. † Retained imports.

Canada occupies a key position in British-American trade. In 1936 the United Kingdom and the United States were virtually equal as customers for Canadian exports; and the United Kingdom's share of Canadian imports rose from 15 per cent. in 1929 to nearly 20 per cent. in 1936, mainly coal, iron and steel and textiles. Together the United Kingdom and the United States dominate Canadian trade, and they compete in the Canadian market for iron and steel, cotton manufactures and coal, just as the United States and Canada compete in the United Kingdom market for timber, wheat, barley, bacon, hams, apples, lard and salmon. Between 1929 and 1936 retained United Kingdom imports from Canada rose in value from £43,684,000 to £71,191,000; imports of wheat from £14,117,000 to £22,326,000, of all food, drink and tobacco from £28,598,000 to £42,125,000, and of wood and timber from £2,382,000 to £6,198,000. Similarly the value of United Kingdom exports of coal to Canada rose in the same period from £935,000 to £1,669,000 (745,000 tons to 1,285,000 tons).

AUSTRALIA AND SOUTH AFRICA

Australia, like Canada, though in lesser degree, is a pivotal point in the general scheme of British-American trade relations. Australian products compete with American

in British markets for fruit, wheat and barley; and while, under Imperial preference, Australian exports have somewhat ousted United States exports in the United Kingdom, the United States share of Australian imports has fallen from 25 per cent. in 1929 to 17 per cent. in 1936, Australia taking 6 per cent. of American exports to British countries.

Australia's exports to the United States are wool, hides and skins, hit hard by the 1930 tariff.

In the case of United States exports to the Union of South Africa (which amount to 7 per cent. of American exports to British countries) motor cars again bulk largest as in Australia, with petroleum and machinery important:

TABLE 8.—U.S. EXPORTS* TO THE UNION OF SOUTH AFRICA

All exports.....	63,751	15,982	71,199

* Individual items domestic exports, but total includes re-exports.

In large part the gains measure the boom in gold-producing South Africa. South African exports are gold, diamonds, wool and sugar, and, since these do not compete in British markets with United States goods, South Africa does not enter so forcibly into the equation of British-American commercial arrangements as Australia.

AMERICAN IMPORTS FROM MALAYA AND INDIA

The same is true of Malaya, which exports rubber and tin, of British India, which exports tea, low-grade cotton, skins, jute, flax and wool, and indeed of the Colonies at large. These are complementary, in British markets, to the United States and not competitive. As much as 18 per cent. of United States imports from British countries comes from Malaya, mainly rubber and tin, as follows:—

TABLE 9.—UNITED STATES IMPORTS FROM BRITISH MALAYA
(thousands of dollars)

	1929*	1932*	1936†
Rubber.....	168,634	22,214	110,524
Tin.....	61,323	10,353	53,657
All imports.....	239,164	34,806	167,902

* General imports.

† Retained imports.

United States exports to British Malaya in return are practically negligible (\$9 millions in 1937 against imports amounting to \$235 millions). United States trade with British India is not quite so one-sided; of total imports valued at \$149,332,000 in 1929 jute and jute products accounted for \$80,063,000, and in 1936 for \$37,671,000 out of \$70,711,000 worth of retained imports; total exports from the United States, on the other hand, amounted to \$55,360,000 in 1929 and \$26,807,000 in 1936.

the progress of industrialisation. The growth of industry was accompanied by a decline in the relative importance of agriculture. Agricultural protection was jettisoned because imports of cheap foodstuffs meant low production costs for industry. Moreover, owing to its start over other countries, British industry did not need protection, for it

had become the world's workshop. But towards the end of the nineteenth century Britain's dominating position as an industrial country began to be challenged by the United States and Germany. In the Dominions the challenge was met by a system of preferential tariffs; but Britain herself clung to free trade until 1932, when the growth of economic nationalism abroad and the increase in the excess of imports over exports led the Government to give way to the

persistent demand for protection from both industry and agriculture by the imposition of a moderate tariff on (mainly) non-Empire products. Later in the same year the system of inter-Imperial preferences, known as the Ottawa Agreements, which involved a further increase in Britain's tariff, was introduced in order to foster the commercial intercourse between Empire countries. Britain is now a fully Protectionist country.

The changes wrought in the British tariff by the Import Duties Act of 1932, and by the Ottawa Agreements, is analysed in Table 1, on the basis of our imports in 1930.

TABLE 2.—IMPORTS FROM FOREIGN COUNTRIES IN 1930
(Thousand £)

Rate of New Duty	Food, Drink and Tobacco Class I.	Raw Materials and Articles mainly unmanu- factured Class II.	Articles wholly or mainly manufactured Class III.	Animals not for Food Class IV.	Total
10 per cent.	148,841	54,880	62,267	81	266,069
15 per cent.	...	...	15,775	...	15,775
20 per cent.	4,276	...	99,230	...	103,506
25 per cent.	1,077	...	4,157	...	5,234
30 per cent.	128	...	2,827	...	2,955
33 $\frac{1}{3}$ per cent.	...	...	15,764	...	15,764
Total ...	154,322	54,880	200,020	81	409,303

As will be seen, in 1930 only 14 $\frac{1}{2}$ per cent. of our imports were subject to taxation. The Import Duties Act of 1932 increased this proportion to 55 per cent. and the Ottawa Agreements to 58 $\frac{1}{2}$ per cent. Moreover, of the items remaining on the Free List, the greater part is derived from the Empire.

But while the tariff legislation of 1932 made the bulk of our imports subject to taxation, the average rate of duty was kept at a moderate level. Table 2 shows the incidence of the duties imposed by the Import Duties Act of 1932 on imports from foreign countries on the basis of our intake in 1930.

British and American Tariff Policy

THE Anglo-American Trade Agreement is a landmark in the commercial intercourse between the two countries; and since the mutual concessions are automatically extended to other countries (except to Germany by the United States) under the most-favoured-nation clause, it is of far-reaching significance to the world as a whole. A country's foreign trade policy is conditioned, in a large measure, by domestic considerations. The Agreement may therefore usefully be

considered against the background of the economic evolution and tariff policy of the two countries, for this will reveal its full significance and the motives which gave rise to its birth. This survey should be read in conjunction with the preceding article which analyses recent changes in the nature and size of the trade between the United States, the United Kingdom, and the rest of the Empire.

In the nineteenth century Britain led other countries in

As a result of the introduction of the Import Duties Act of 1932, the average rate of duty on imports of manufactured goods was raised to about 18½ per cent. on the basis of imports in 1930, compared with 37 per cent. in the United States (as estimated by the World Economic Conference of 1927).

The introduction of a moderately protective tariff and of the system of Empire preferences naturally caused a diversion of trade in favour of the Empire. Thus, the proportion of our imports derived from British countries rose from 29.4 per cent. in 1929 to 39.4 per cent. in 1937. Similarly, the proportion of our total exports going to the Empire increased from 44.4 per cent. to 48.4 per cent. during this period.

This diversion of our trade has naturally harmed the industries in foreign countries affected by the Ottawa preferences.

Effect of Ottawa on the United States.—The proportion of our imports derived from the United States fell from 16 per cent. in 1929 to 11 per cent. in 1937. By way of examples we show below how the Ottawa preferences have affected American exports to this country:—

SOFT LUMBER AND TIMBER:—

Douglas Fir: From 1928 to 1930 United States exports to the United Kingdom averaged 117 million board feet, valued at about \$2½ millions; in 1933-37 they were down to 36 million board feet, valued at about one million dollars. The effect of the duty was to cause a serious decrease in actual imports, and a serious diversion to Canada. Before Ottawa the United States supplied about 60-65 per cent. of total shipments to the United Kingdom. Canada now supplies 93 per cent. and the United States only 6.4 per cent.

Plywood faced with Douglas Fir: Before Ottawa, the Empire supplied a fraction of 1 per cent. of United Kingdom imports, but by 1937 Canadian exports had exceeded United States shipments.

Doors: The United States was the predominant supplier of the United Kingdom, providing more than 60 per cent. of the imports when Empire participation was virtually nil. Ottawa raised duties to 2s. 6d. or 20 per cent. United States participation in United Kingdom total door imports declined from 60 per cent. to one-fifth of 1 per cent., and Canadian imports increased from one-fifth of 1 per cent. to 80 per cent.

TYPEWRITERS.—The following table shows how Canada has gained at the expense of the United States in the trade in typewriters:—

	Tons			Value \$		
	1936	1937	1938	1936	1937	1938
Canada	25	185	117	28,802	189,979	113,662
U.S.A.	691	631	356	549,943	487,552	261,394

MACHINERY.—Ottawa affected a large number of small machinery items, e.g.:—

Files and rasps, serrated edge being longer than 6 inches: before 1932 United States supplied 75 per cent. and Canada nil of United Kingdom imports. Canada now supplies 80 per cent., valued at \$200,000.

Bolts, nuts, and screws: Canadian participation has shown a steady increase, while United States trade has fluctuated.

PATENT LEATHER.—Canadian share in Britain's imports of patent leather increased as follows: 1932, 47.4 per cent.; 1933, 49.4 per cent.; 1934, 68.5 per cent.; 1936, 76.2 per cent. There has been a concession in this trade from which the United States is expected to derive "substantial benefit."

MACHINE BELTING OF RUBBER AND CANVAS.—United States and Canada provide 95 per cent. of the United Kingdom imports. Since 1932, when a 15 per cent. duty was applied, the position of United States and Canada has been reversed. Before 1932 the United States had 65-70 per cent. and Canada 25 per cent. of the total imports into United Kingdom; in 1936 the United States had 45 per cent. and Canada 52 per cent.

OTHER COMMODITIES.—The relative decline in the proportion of our imports of certain other goods derived from the United States is shown below:—

	Quantities		Value	
	1929	1937	1929	1937
<i>Rice:—</i>	(Cwt)			
United States	396,756	63,301	413,075	55,114

American Tariff Policy

THE tariff history of the United States is, in one sense, a reflection of the conflict of interests between agriculture and industry. As the home market does not absorb the whole output of agriculture, farmers have always been against high duties on imports of industrial products. Industry, on the other hand, was anxious to keep out foreign manufacturers in order to be able to supply an expanding home market, but to import essential raw materials free of duty. Until the civil war the level of protection was comparatively low; but the victory of the industrial North was followed by a policy of high protection. The policy of high protection was continued after the world war by the Fordney-McCumber tariff of 1922 and by the Hawley-Smoot tariff of 1930, both enacted by the Republican Party, which is dominated by the industrial section of the country.

Just as the Ottawa Agreements gave rise to criticism in the United States, the Hawley-Smoot tariff of 1930 and the further increase of duties on a limited number of commodities in 1932, have damaged certain industries in this country and in the Empire. The proportion of total British exports going to the United States fell from 6.24 per cent. in 1929 to 4.39 per cent. in 1931, and the average *ad valorem* equivalent rate on dutiable goods imported by the United States from the United Kingdom rose from 40.1 per cent. in 1929 to 53.2 per cent. in 1931. The schedules which most closely affected British goods were the following:—

SCHEDULE 1: Chemicals, oils and paints.

SCHEDULE 3: Metals and manufactures.

SCHEDULE 7: Agricultural products (Canada suffered heavily).

SCHEDULE 9: Cotton manufactures: general increases heavily affecting the United Kingdom included: cotton yarns and warps; cotton cloth, not bleached; cotton cloth, bleached; cotton cloth, coloured, dyed, etc.; blankets; tracing cloth; oilcloth, etc.

SCHEDULE 10: Flax, hemp, jute and manufactures.

SCHEDULE 11: Wool and manufactures.

Effects of the Hawley-Smoot changes on Canada were severe, particularly under the Agricultural Schedules. No less than four-fifths of goods originating from the United Kingdom are dutiable in the United States. Moreover, the average rate of duty on United Kingdom goods is very high. Below are some examples relating to the position in 1935:—

Duty of less than 30 per cent.: Leather, boots and shoes, tinplate, iron and steel pipes.

Between 30 and 45 per cent.: The bulk of typically English goods.

85 per cent.: Heavy worsteds.

91 per cent.: Heavy woollens.

95 per cent.: Combing wool.

98 per cent.: Earthenware and crockery.

The advent of President Roosevelt in 1933, at the head of a Democratic Government, marked a turning-point in America's tariff policy. The Trade Agreements Act of 1934 authorises the President to negotiate trade agreements and to alter tariffs by not more than 50 per cent. Nineteen bilateral agreements have already been concluded, and, in order to stimulate world trade, the concessions made in these agreements have been passed on to other countries, with the exception of Germany, which is held to discriminate against American goods and is therefore excluded from most-favoured-nation benefits. The Anglo-American agreement is the culmination of the more liberal foreign trade policy pursued by the American Government since the advent of President Roosevelt. In some respects the Agreement is a reflection of the traditional policy of the Democratic Party, which relies for adherents largely on the agricultural South. Mr Wallace's efforts to reduce the dependence of American agriculture on exports have not been very successful. A reduction in the duties on industrial products, therefore, was expected to lead to bigger exports of cotton, wheat and other agricultural products. But President Roosevelt's policy was not influenced by sectional interests alone. His policy is a reflection of his desire to free the channels of international trade for the benefit of the world as a whole.

The Agreement Summarised

THE Anglo-American Trade Agreement signed in Washington on November 17, 1938 (Cmd. 5882, price 1s. 6d.), consists of 25 Articles, 4 Schedules, and Exchanges of Notes on 8 supplementary matters. Articles 23, 24 and 25 provide that the Agreement shall enter definitively into force 30 days after the exchange of the King's ratification and the President's Proclamation. The Agreement remains in force until December 31, 1941, and may be terminated then or thereafter on six months' notice from either side. Tariff concessions by the United States, the United Kingdom and Newfoundland, for which the Agreement provides, will come into operation on January 1, 1939, and concessions granted by the Colonies as soon as practicable thereafter. Canada and the United States have reached a separate trade agreement, of which full particulars are not yet available.

THE 25 ARTICLES

The text of the 25 Articles comprising the Agreement governs, in the main, matters connected with the tariff concessions set out in the four Schedules. Article 22 provides that existing rights under agreements already in force between the two countries are not affected. In other words, the Commercial Convention of 1815 remains in force. The new Agreement, however, restates in more modern form some of the provisions of this Convention. Article 18, for example, permits the termination of the Agreement if "a wide variation should occur in the rates of exchange between the currencies of the United Kingdom and the United States of America." In such an event, either party may propose negotiations for its modification, and failing agreement, the Trade Agreement may be terminated upon 30 days' notice. Similarly, Article 19 permits either party to withdraw or modify any concession if it appears that the

major benefit has accrued to a third party and has threatened serious injury to domestic producers of the article concerned. Finally, Articles 9, 10, 11, 12 and 13, which govern the four Schedules, include provisions to deal with dumping and with any action which may be necessary to counteract export subsidies in connection with goods enumerated in the schedules. The second Exchange of Notes provides for consultation between the two parties before anti-dumping duties are imposed.

Article 1 defines the territories to which the agreement applies. These include, on the one side, the United Kingdom, Newfoundland, British Colonies, Protectorates and Mandated Territories, and, on the other side, the Continental Territory of the United States of America and such possessions as are included in its customs territory on November 17, 1938. The provisions of the Agreement relating to most-favoured-nation treatment apply, however, to all territory under the sovereignty or authority of the U.S.A., other than the Panama Canal Zone. Article 2 provides, in comprehensive form, for most-favoured-nation treatment in respect of import and export duties, customs rules and formalities, while Article 4 deals with most-favoured-nation treatment in prohibitions and restrictions (subject to certain exceptions under Article 16). Under Article 6, most-favoured-nation treatment is to be accorded immediately and unconditionally. Article 3 grants national treatment in the internal taxation of goods, while Article 5 provides that any allocation of import quotas shall be based generally on each country's share of trade in past years. Articles 7 and 8 are of minor importance. The former exempts from the application of the terms of the Agreement concessions for frontier traffic or Customs Unions by either of the parties; while the latter, which is common form in United States agreements, provides that if

THE CHASE NATIONAL BANK

monopolies are established in either country the trade of the other country shall receive fair treatment. This has no application in fact to relations between the two parties. Articles 9 to 13 govern the four Schedules and are referred to above. Provision has been made for additional import duties equivalent to an internal tax upon any item of trade under Article 14, notwithstanding the fixing of maximum import duties in the schedules.

Prohibitions, restrictions or quantitative regulations upon goods specified in the schedules are forbidden under Article 15, subject to certain exceptions under Article 16. Exception is also made in the case of restrictions imposed in conjunction with internal regulation of any given product or imposed in conjunction with internal government measures which operate to increase the labour cost of production of similar domestic articles. Provision is made for consultation in the case of both exceptions. Article 16 contains exceptions covering prohibitions or restrictions imposed on the ground of public health, the protection of animals and plants, etc., trade in gold and silver, arms, ammunition, etc., or regulations arising from neutrality, public security or circumstances of war. Article 17 provides that no change shall be made in the general principles by which dutiable values are determined for customs purposes. Article 20 contains general provisions providing for consultation if either party takes any action which, although not technically in conflict with the provisions of the Agreement, appears to nullify or impair its objects. Article 21 (in conjunction with the 3rd Exchange of Notes) excepts from the scope of the Agreement preferences accorded within the British Empire and also preferences which the United States accords to her own territories and to Cuba.

CONCESSIONS BY THE U.K.

Concessions by the United Kingdom to the United States of America are embodied in Schedule I. These cover approximately two-thirds of the United States trade with the United Kingdom. The total imports into the United Kingdom from U.S.A. amounted to £93,200,000 in 1936, of which items included in Schedule I amounted to £60,800,000, or 65 per cent. Of this proportion, 11 per cent. will enjoy reductions of duty, 15 per cent. will be covered by undertakings not to increase existing duties, 22 per cent. by undertakings to maintain free entry and 17 per cent. by other concessions. Modifications have been limited, as far as possible, to classes of goods of which the United States is the principal foreign supplier; so that the major benefit of concessions may accrue to the U.S.A., leaving other classes of goods reserved for subsequent negotiation with countries primarily concerned. Under Article 19, if the major benefit from any class accrues to any third party, the particular concession may be withdrawn or modified after consultation. Modifications may be sub-divided into three classes.

(a) *Maintenance of Duties.*—This category includes certain primary materials and manufactured goods, including motor cars of 25 h.p. and upwards which will continue to be subject to a duty of 33½ per cent., agricultural tractors other than track-laying tractors, dairy, and other kinds of machinery, certain plywood, paraffin wax, celluloid, women's dresses of cotton not exceeding 4s. in value and certain types of corsets. For unmanufactured tobacco, the United Kingdom agrees not to increase the present preference of approximately 2s. a lb. on Empire tobacco.

(b) *Continued duty-free entry.*—Free entry is maintained for certain raw materials such as raw cotton, sulphur, resin, and fur skins. The United Kingdom agrees to maintain duty-free entry for hams and the quota is to be increased. The 10 per cent. duty on lard is abolished.

(c) *Reductions of duty.*—On the 1936 figures, reductions of duty cover about £10,200,000 of imports from the United States out of a total of £93,200,000. With the consent of Canada, Australia and India the United Kingdom agrees to abolish the present duty of 2s. a quarter on wheat. No concessions have been given on wheat-flour. Concessions on soft wood, accorded with the consent of the Government of Canada, are important. A substantial reduction of duty (together with a promise of free entry in certain contingencies) has been conceded on soft sawn woods of the more expensive grades and of the larger sizes,

of which the United States is the main source of supply. Reductions have been made in the Ottawa duties on apples and pears.

The Dominion Governments, which have important interests in various canned and dried fruits, have facilitated an agreement which is designed to preserve existing rates of duty on canned peaches, pears and apricots and on raisins, but to assist the United States by certain reductions on other varieties.

Reductions of duty on manufactured goods are as a rule from the level of 20 per cent. to 15 per cent. (although in some cases other rates apply). Such reductions have been conceded on various types of machinery, including accounting and other office machinery, dry-cleaning and laundering machinery, petrol pumps and certain kinds of printing machinery. Similar reductions have been made on other kinds of metal manufactures, including metal furniture, tools and certain bolts and nuts. Concessions have also been granted on electrical goods, including cooking and heating apparatus, refrigerators, vacuum cleaners, food mixers, air-conditioning apparatus, sound amplifiers, gramophones, etc. For typewriters, the reduction in duty from £4 10s. to £3 10s. per machine does not cover portable typewriters or second-hand machines. No reduction has been made in the present duty of 15 per cent. on wheel tractors but the duty on track-laying tractors is to be reduced from 33½ per cent. to 25 per cent. In the case of silk stockings, an undertaking has been given that the duty (at 43½ per cent.) shall not exceed 10d. per pair. This will provide some reduction of duty for the more expensive type of stockings for which the United States is the chief supplier. A reduction has also been conceded on women's handbags, and on women's boots and shoes of a value exceeding 10s. per pair.

NEWFOUNDLAND'S CONCESSIONS

Schedule II sets out the tariff concessions granted by Newfoundland. These include the maintenance of existing duties, other cases in which duties are reduced, and undertakings that certain imports from the United States will not be subject to duties exceeding those applicable to similar articles imported from the United Kingdom or Empire countries by more than a specified margin of preference. Reductions of duty cover dried fruits, lard, certain textiles, clothing and boots and shoes, together with certain manufactured goods such as cameras and wireless receivers. Free entry into Newfoundland is guaranteed for flour, certain fruits, cotton yarn and twist, and special machinery. Undertakings not to alter duties to give a margin of preference where none at present exists have been given for tobacco and cigarettes, certain types of machinery and other articles. Schedule IV provides for reductions of duty for certain exports from Newfoundland into the United States covering a large part of Newfoundland's present trade. These items include fish of various kinds, berries, and fluorspar. In the case of seal skins (not fur skins) free entry into the United States will be continued.

THE POSITION OF THE COLONIES

The British Colonies obtain the same general benefits, and assume the same general obligations under the Agreement, as the United Kingdom. Specific tariff concessions are also exchanged between the United States and Colonial Empire, while a number of United States concessions (set out in Schedule IV) are in respect of items of almost exclusive concern to the Colonies. Schedule III sets out in detail the concessions which the Colonies have undertaken in return. For the most part, the Colonies have undertaken that margins of preference (i.e. the differences between the general rate and the preferential rate of duty) shall be reduced, maintained or, in a few cases, abolished. Most Colonial Dependencies derive the bulk of their revenue from customs duties, and reductions in rates might impair their budgetary positions. Thus, undertakings regarding the size of preferential margins leave the Colonial Governments free to adjust actual rates of duty to provide the budgetary revenue which they require. In nearly every case, concessions have been given only in respect of commodities of which the United States is the principal foreign supplier.

Unmanufactured tobacco is affected by one of the most

notable concessions made by the Colonial Empire; practically throughout the West Indies the preferential margin on this commodity has been abolished. Concessions on motor cars, which in several cases involve the reduction of existing preferential duties from 20 per cent. to 15 per cent., affect approximately one-sixth of the United Kingdom's total export trade to the British Empire. Other articles on which concessions have been made include lubricating oil and grease, typewriters, electrical machinery, canned fruits, fish and air-conditioning machinery.

The total United States imports to British Colonies in 1936 amounted to £11,120,000. Concessions cover trade amounting to £4,467,600, of which £756,600 represents reductions in margins, £2,158,800 undertakings not to increase existing margins, and £1,552,200 undertakings to maintain existing equality of treatment.

Colonial Advantages in United States Trade.—Concessions granted by the United States to the Colonial Empire are covered by Schedule IV, and will be available to every Dependency which can make use of them. These include reductions of duty by 50 per cent. on graphite, cut flowers, fresh celery, lime juice and certain types of sponges and rather smaller reductions on molasses, fresh lime and canned pineapples. Existing duty-free entry into the United States has been guaranteed to a number of other articles, including rubber, bar tin, cocoa, cloves, copra, sisal and various essential oils, while the duty on rum has been conventionalised at its present level. Conventionalisations are, in fact, far more numerous than duty reductions, because the majority of colonial products have always been admitted into the United States duty-free. Thus, domestic exports from the Colonies to the United States covered by duty reductions amounted to about £290,000 in 1936, but exports in respect of which existing treatment is conventionalised amounted to as much as £35 millions.

CONCESSIONS BY THE U.S.A.

Tariff concessions accorded by the United States to the United Kingdom, Newfoundland and the Colonies,

as set out in Schedule IV of the Agreement, number 600 items. United States imports of British goods totalled about £40 millions in 1936, of which £23 millions are liable to duty and £17 millions enter duty-free. Of the dutiable classes, reductions will be secured on £11 millions, existing duties will be stabilised on £6 millions, while free entry is guaranteed on £9½ millions of the £17 millions concerned. Concessions thus cover trade valued at £27 millions out of £40 millions. The extent of duty reductions is shown below:—

Value of Imports from U.K.	Covered by reductions of:
£3.4 millions	40 per cent. or more
£3.6 millions	30 per cent. to 40 per cent.
£2.6 millions	20 per cent. to 30 per cent.
£1.4 millions	Under 20 per cent.

The principal reductions of duty are analysed in the following categories.

(a) *Cotton Manufactures.*—Concessions on cotton manufactures as a whole cover some £1¼ millions of United Kingdom trade, according to the 1936 figures, of which cotton piece-goods are the main item. On the average, existing *ad valorem* duties on the types of cotton cloth of primary interest to British exporters will be reduced by fractions of one-fifth to one-third. For "plain woven" cloths of yarn counts 31 to 50, the reduction will amount to 48 per cent. For unbleached cloth the minimum specific duties will be reduced by 27 per cent., without limitation in respect of minimum value per pound weight. In 1936, United States imports of such cloths were valued at £600,000. United Kingdom cotton yarns of counts exceeding 60 (of which trade in 1936 was valued at £225,000) will obtain duty reductions of up to 20 per cent. of present rates. Concessions have also been obtained for certain other cotton goods, including tracing cloth, machinery belting, clothing, etc.

(b) *Wool Manufactures.*—The concessions secured cover United Kingdom trade in woollen piece-goods, hosiery and clothing valued at £2 millions in 1936, and in wool waste and yarns of £1¼ millions. The United States duties on

THE NATIONAL CITY BANK OF NEW YORK

woollen goods are composed of a specific element to compensate for duties on raw wool, and an additional *ad valorem* element to protect United States manufacturers. Apart from a small reduction in specific duty on the lowest grade of woollen cloth, no reductions are made in compensatory specific duties, since raw wool did not come within the scope of the present negotiations. Reductions in *ad valorem* duties have been secured on the whole range of woollen piece-goods, from a small reduction in the lowest grades to a reduction from the present rate of 60 per cent. to 35 per cent. for the highest grade of cloth. Considerable reductions have been secured on wool hosiery, knit outerwear clothing, wool waste and yarns.

(c) *Linen Manufactures*.—Substantial reductions will be made in duties on linen manufactures, for which the United States is our largest export market, covering United Kingdom trade valued at £2½ millions in 1936. For plain woven fabrics weighing less than 4 oz. per square yard (of which United Kingdom imports to the United States totalled nearly £1 million in 1936) the present 35 per cent. *ad valorem* duty will be reduced to 20 per cent. On woven fabrics not elsewhere specified, the duty will be reduced from 30 per cent. to 20 per cent. Duties on certain table damask will be reduced from 45 per cent. to 25 per cent., and on linen napkins from 40 per cent. to 25 per cent. Reductions of similar extent will apply to flax yarns, interlining fabrics, towels, sheets, handkerchiefs and collars.

(d) *Other Textiles*.—The existing low duty on jute burlaps (United Kingdom trade in 1936 approximately £600,000) is conventionalised and a substantial reduction from 50 per cent. to 30 per cent. *ad valorem* is made on jute fabrics for padding or interlining. A small reduction has been secured for cotton lace window curtains and other articles made on the Nottingham lace curtain machine. The maximum reduction, from 90 per cent. to 45 per cent. has been made for bobbinet machine-made nets.

(e) *Earthenware, China and Glass*.—The duty on china clay or kaolin is to be reduced from \$2.50 to \$1.75 per ton. The maximum reduction from 25 per cent. to 12½ per cent. *ad valorem* is given on Rockingham earthenware, and on certain other classes of earthenware the duty will be reduced from 50 per cent. to 30 per cent. Substantial reductions have also been secured on plain and decorated bone china. Gauge glass tubes obtained a reduction from 60 per cent. to 35 per cent., and reduced duties have been secured for several other glass manufactures.

(f) *Metal Goods*.—This varied group covers a considerable volume of British imports into the United States. Substantial duty reductions have been secured on certain silver-plated ware, pens, cutlery, bicycles, internal-combustion engines and considerable range of machinery, of which textile machinery is perhaps the most important.

(g) *Foodstuffs*.—Substantial reductions have been obtained on herrings, and reductions have also been secured on jams and marmalades, biscuits, ryegrass seed and mustard.

(h) *Spirits and Other Beverages*.—In this group, the stabilisation of the duty on whisky (which was reduced by 50 per cent. under the United States-Canada Agreement of 1935) is of first importance. Imports of whisky from the United Kingdom are the largest single item of trade, amounting to more than £5 millions in 1936.

(i) *Miscellaneous Goods*.—Duty reductions have been obtained on a wide range of miscellaneous trades, most of which are small in themselves, but which cover in the aggregate a considerable volume of British trade. Leather is the most important item. Although existing United States duties on leather are relatively low, duty reductions have been secured on most classes of interest to United Kingdom exporters. Welted leather boots and shoes will obtain more favourable treatment, and concessions have been obtained for leather cases and bags and miscellaneous leather manufactures. The wide range of concessions for goods of actual or potential importance to United Kingdom trade with the United States is illustrated by the following items included in Schedule IV: Books and numerous kinds of paper; tobacco pipes; fishing tackle; lawn tennis,

golf and other balls; certain toys; dressed furs; various brushes and buttons; bell chains and carillons; and gramophone records.

EXCHANGES OF NOTES

Accompanying the Articles and Schedules are 8 Exchanges of Notes, governing supplementary matters. All are dated November 17, 1938. The first contains an undertaking on each side to give sympathetic consideration to any representations which the other may make regarding access to raw materials. The 2nd Exchange of Notes records a mutual understanding not to impose anti-dumping or countervailing duties without affording the other Government opportunity to make representations regarding the proposed duty. The 3rd Exchange of Notes governs British preferences to mandated territories, while the 4th relates to tariff treatment of United States goods in certain British colonies, protectorates and mandated territories. Under the 5th Exchange of Notes, the United Kingdom undertakes to consult the parties to the International Rubber Regulation Agreement regarding the possibility of permitting the exportation of rubber plants to countries which are not parties to rubber regulation. The United States Government in the 6th Exchange of Notes undertakes to call the attention of the United States exporters of apples (and other fruits) to the desirability of co-operating with the Empire Fruits Council to ensure the orderly supply of apples in the United Kingdom market. It is further understood under the 7th Exchange of Notes that if the United Kingdom decides to regulate imports of any type of beef or veal the United States Government will not claim freedom from quantitative regulation, despite the provisions of Article 4, although the British Government undertakes to consult with the United States regarding any proposed action. The 8th Exchange of Notes provides for consultation regarding valuation for Customs purposes, and is the subject of a separate article in the current issue of *The Economist*.

THE POSITION OF CANADA

The Governments of the Dominions and of India have consented to important modifications of certain rights under existing trade agreements with the United Kingdom in order to facilitate the Anglo-American Trade Agreement. Substantial modifications on apples and timber have been conceded by the Government of Canada, and the British Government in turn has modified certain rights to preferences in Canada under the United Kingdom-Canada Trade Agreement of 1937. The full text relating to these changes has not yet been published in London.

British preferences in the Canadian market are of two kinds, guaranteed and not guaranteed. On the basis of imports of British goods during the year ended March 31, 1937, modifications of guaranteed preferential rights may be summarised as follows:—

Guaranteed Preferences reduced by:		U.K. trade affected
2½ per cent. <i>ad valorem</i>	£	1,840,000
5 " " "		172,000
7½ " " "		34,000
10 " " "		38,000
		£2,084,000

The main items of trade affected include chemicals and drugs, tinplate, certain iron and steel manufactures and diesel engines. Modifications in the preference from 20 per cent. to 17½ per cent. for tinplate of a class made in Canada accounts for a trade of slightly over £1½ millions. This trade, however, might have been expected to diminish in any case as Canadian production increases. No concession has been made on other classes of tinplate, or on South Wales anthracite. Reduced preferences on iron and steel goods cover only a small proportion of our total iron and steel exports to Canada, while the reduction on the guaranteed preference on diesel engines from 25 per cent. to 20 per cent. still leaves a substantial margin. It is understood that the Canada-United States Agreement also provides for duty reductions on a wide range of United States goods, which in turn involve reductions of guaranteed preferences enjoyed by the British exporter.

The Schedules

The following tables have been drawn up to show the importance of the mutual concessions contained in Schedules I and IV of the Agreement. Schedules II and III, which cover the alterations made in the tariffs of Newfoundland and the Colonies respectively, have not been analysed; their purport is indicated in the preceding article.

Many of the items in the Schedules are unidentifiable in the Trade Returns, and have had perforce to be omitted. The following tables, however, include all the important items, and 47 per cent. of all the items in Schedule I (United Kingdom concessions) and about 40 per cent. of the items in Schedule IV (United States concessions). In some cases, however, the tariff concession relates to part only of a category, for which total figures alone can be given. These cases are marked with an asterisk.

SCHEDULE I. CONCESSIONS GRANTED BY THE UNITED KINGDOM

Note.—Where two alternative duties are given, the greater applies. The figures of trade all refer to 1936.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, DECEMBER 31, 1938.

No. 24

The Trend of Business

A New Year Survey

NOVEMBER was a disappointing month. After rising from 102 (1935 = 100) in August to 104 in September and October, our Index of Business Activity (which is adjusted for seasonal variations), dropped to 101½ in November. This is the lowest figure recorded since October, 1935, when the index stood at 101. The fall in the index cannot be ascribed to an abnormal movement in any one of its component series. No less than ten of the component series given on page 23 showed a decline between October and November. Four indices—those relating to *employment*, the *number of commercial motor vehicles in use*, *cotton consumption*, and *metropolitan, country and provincial bank clearings*—remained unchanged. The index of *postal receipts* alone showed a slight increase.

In recent Trade Supplements we have hesitated to interpret the autumn revival in business as a change in the long-term trend. Only a month ago we pointed out that it was then still difficult to say whether the improvement in the previous month was merely a temporary rebound or a more lasting upward movement. Nevertheless, the fall in the majority of the individual series that go to constitute the complete index between October and November is disappointing, for if it were repeated in December the revival of the summer and early autumn would begin to look like no more than a temporary interruption of the downward movement which began in the autumn of 1937.

Closer examination of the movements of the component series of our index between October and November shows that many of the more sensitive series registered a decline. For example, the fall has been very marked in the figure of the volume of the *imports of raw materials*, an index pointing to future rather than to current activity. Another forward-looking index—that relating to *building activity* based on building plans passed—also continued its downward movement. The indices relating to the *consumption of coal* and *electricity* and the volume of *merchandise carried by the railways* are among those showing a decline. The rise in the *steel consumption* index in October, again, was not fully maintained in November, and the figure for the volume of *domestic manufactures* continued to fall. The decline in employment last month was too small to affect our index, but it must be remembered that this figure relates to one day and is not an average of the month.

As we have repeatedly pointed out, the long-term trend of general business activity must depend on the course of private and public investment. The course of private investment has been downwards for more than a year, but this fall has been

cushioned, though not fully offset, by increased Government expenditure for defence purposes. Seen in retrospect, the autumn revival seems to have been a short-lived re-stocking movement, stimulated in part by the rise in commodity prices due to recovery in the United States. But when the rise in commodity prices was arrested, the volume of new business secured by industry again declined, for it was not supported by an increase in new commercial investment in the home market.

The latest reports from industrial centres, moreover, indicate that the volume of new business has been declining in many industries. New building contracts, for example, are still falling off, and it is feared that, as buildings cannot be insured against war risks, the decline in the demand for private houses may be accelerated. The shipbuilding industry,

too, has received practically no new commercial orders in recent weeks. On the other hand, the increase in armament expenditure, which involves a considerable expansion in the demand for some varieties of capital goods, may continue partially to offset the falling commercial demand.

Most of the consumption goods trades are also gradually reducing their activity. The spurt in the cotton industry has been short-lived and the decline in new orders is again forcing it to curtail its output. The volume of retail sales in this country is also now running well below the level of a year ago.

Abroad, the most satisfactory feature is the sustained expansion of business activity in the United States, reflected in the rise of the Federal Reserve Board's index of industrial production from 96 (1923-25 = 100) in October to 103 in November. Moreover, the index for December is expected to show a further increase. But despite the encouraging trend of business in America the rise in the prices of commodities on the world market has been arrested, partly as a result of the smaller purchases by this country. The purchasing power of the raw material producing countries is thus not increasing as was expected earlier this year. In France there are also tangible signs of improvement, though the success of M. Reynaud's measures to stimulate production is not yet assured. In Germany industrial activity is maintained at a high level, but as a result of the fall in exports difficulty is being experienced in securing the maintenance of the flow of raw materials. In most other industrial countries, business activity is marking time or gradually declining.

The record of the month of November is, therefore, on balance, not a very encouraging one. To base judgments on the figures of a single month, however, is to run the risk of confounding accidents with trends. Twelve months ago, in the

* Austria.

NOTE.—In the case of cotton yarn and cloth the classification by numbers in the 1930 Tariff Act does not quite correspond to that adopted in the new Agreement.

Printed in Great Britain by EYRE AND SPOTTISWOODE LIMITED, His Majesty's Printers, East Harding Street, London, E.C.4. Published by THE ECONOMIST NEWSPAPER, LTD., at 8 Boulevard St., Fleet St., E.C.4.—Saturday, Nov. 26, 1938. Entered as Second Class Mail Matter at the New York, N.Y., Post Office

issue of January 1, 1938, *The Economist* surveyed the economic outlook at length and ventured a few indications of the prospect for the coming year. The attempt can suitably be repeated here. This year, as last, it is not merely the calendar but also the state of the trade cycle that make a New Year survey appropriate. In December, 1937, the country was just beginning to realise that there had been a change in the steady upward trend of almost all trade indicators, which had then lasted for five years. Indeed, in *The Economist's* survey it was still necessary to enter a defence against the charge of alarmism, which was then being uttered, with misplaced self-confidence, by high and low. In December, 1938, we again stand at an interesting point. We have had six months of very rapid decline in trade, then six months during which the indices have, on the whole, made no consistent move upwards or downwards (the figure for May was only half a point above that for November). This stagnation can hardly last; but the question is still unresolved whether the next move will be for the better or for the worse.

The Rewards of Prophecy

Last year's survey reached five tentative conclusions. It will be a salutary check upon cocksureness to set them against the events of 1938:—

1. It was anticipated twelve months ago that there would be a fall, or at least no rise, in the consuming power of the people. This is not a matter which can be checked by any single index. It is discussed in some detail below. But for the moment it may be said that the trend of the figures of retail sales seems to indicate that there has been a perceptible fall in consuming power.

2. A decline in building was expected, with little expansion in other constructional industries. The best brief check on this prediction is to be found in the unemployment figures. Between November, 1937, and November, 1938, the volume of unemployment in the building trades rose from 145,621 to 181,651 and that in public works contracting from 110,323 to 120,525. Among the other constructional industries, unemployment has risen in metal manufacture and in engineering.

3. The outlook for the export trades was found to be encouraging, chiefly on account of the accumulations of funds in the hands of the raw material producing countries during 1937. It was thought that there might even be some increase in export trade. This prophecy went sadly awry, and all that can be said for it is that the volume of exports of British manufactures has not fallen as rapidly as the volume of our imports of raw materials. The former index was, on the average of October and November, 8.8 per cent. below the previous year, while the latter had fallen by as much as 32.4 per cent. This contrast, it may be noted, was different from that experienced between 1929 and 1930, when exports of manufactures fell by 21 per cent. and imports of raw materials by less than 11 per cent.

4. It was suggested a year ago that the movement of American recovery would be resumed at some time during 1938, and that "there will be an immediate favourable reaction on the commodity markets and on the general psychology of international business." The resumption of recovery duly manifested itself in the summer, and exercised a beneficial influence on the psychology of markets. But the expected favourable effect on commodity markets has hitherto been much smaller than was expected.

5. In summary, we predicted a year ago that 1938 would see a continued increase in British unemployment, but that an increase of 500,000 in the unemployment total was the outside limit of what could be expected. On the average of the last two months (October and November), the unemployment total has been 360,000 higher than in the same months of last year.

Of five predictions, then, four have been broadly fulfilled. The result serves as a modest encouragement to repeat the experiment.

Had the general level of business activity continued to decline at the rate of the first few months of 1938, last year's prophecies would have been proved to be far too optimistic. *The Economist* Index of Business Activity, which reached its

peak at 113½ (1935 = 100) in August and September, 1937, and was still at 112½ in November, plummeted to 102 in May, 1938. How unprecedented was this drop of 10 per cent. in six months can be gauged from the fact that the biggest six months' decline during the 1929-32 depression was only some 7 per cent. Indeed, the extreme range of that Great Depression, from the highest month to the lowest, was only 18 per cent., and these two extreme months were more than three years apart. Other indices confirm the severity of the drop between 1937 and 1938. The Board of Trade Index of Production, for example, was 10½ per cent. lower in the third quarter of 1938 than in the same quarter of 1937. The drop in this index between 1929 and 1930, however, was only 8½ per cent. and between 1930 and 1931 9 per cent.

The Peculiarities of 1938

There was every reason, then, last spring for serious alarm about the state of trade. To judge by the available indications, Great Britain was in the incipient stages of a depression at least as severe as the last. There have, however, been a number of peculiarities about the cycle that began a year ago.

In the first place, having proceeded so rapidly in the first six or eight months, the fall was arrested. *The Economist* Index of Business Activity, having fallen to 102 in May, averaged 103 in the succeeding five months. The November figure, it is true, is slightly lower than the May figure, but it is still a provisional result, and in any case, it is too early to tell, from one month's figure, whether a new decline is in prospect. The result is that, if we take November, 1929, and November, 1937, as the starting points of the trade declines, the speed of the decline in the first six months was almost twice as great this time as last. But if the comparison is taken over a whole year, the proportionate fall is almost exactly the same each time. And, of course, the longer the present pause continues, the more favourable will the comparison be to the present cycle.

A second peculiarity, already noted, is the fact that the volume of imports of raw materials has fallen off much more severely than the volume of exports of manufactures. This is against the precedent.

Thirdly, there has been a remarkable divergence between the whole Index of Business Activity and its most important constituent, the index of employment. The complete index normally has a variation of rather greater amplitude, as is only to be expected on theoretical grounds. Thus, between 1929 and 1930, the Index of Business Activity fell by 5.6 per cent. and the index of employment by 4.1 per cent. But this time there has been a considerable divergence. Thus, if November, 1938, be compared with November, 1937, the complete index has fallen by 9.8 per cent. and the employment index by only 1.3 per cent. Some part of the divergence may be due to shorter hours of work; but in general, whatever it is that has gone wrong with the economic mechanism in the last twelve months, it has clearly not affected proportionately the industries which provide the bulk of employment.

This divergence between employment and business activity as a whole is not to be explained by the statistical composition of the index. This can be shown by tabulating what has happened to the different component series during the past year. The following table shows the change that has taken place in each series from November, 1937, to November, 1938:—

	Points		Points
Consumption of Electricity	+4	Consumption of Coal	-7½
No. of Commercial Vehicles in Use	+2½	Shipping Movements	-8
Postal Receipts	+1½	Building Activity	-8
Employment	-1½	COMPLETE INDEX	-11
Metropolitan, Country and Provincial Clearings*	-3	Cotton Consumption	-25½
Exports of British Manufactures*	-6	Volume of Merchandise on Railways	-26
Town Clearings*	-7	Volume of Imports of Raw Materials	-54½
		Consumption of Iron and Steel	-68

* Corrected for price movements.

Most of the series, it will be noticed, have fallen less than the complete index. But those which have fallen more rapidly than the average are all important series which cannot be ignored. A hint of the nature of the decline can, however, be

rawn from the observation that three of the four (Merchandise on Railways is the exception) are of such a nature as to be heavily affected if stocks of materials were being built up or drawn upon. For example, it is certain that the ultimate consumption of iron and steel has not declined by 40 per cent. in twelve months, even though steel production plus imports minus exports (which is the basis of our index) has fallen by that startling proportion.

For a final distinction that can be drawn between this recession and the last, attention may be drawn to the diagram printed at the foot of this page. This brings up to date a calculation which has appeared several times previously in *The Economist*. It attempts to divide the total of unemployment into its three economic components: Normal Unemployment, which can be expected to exist at any stage of the trade cycle, and which is taken, for the purposes of the calculation at 6 per cent. of the insured workpeople; Cyclical Unemployment, or that portion, spread fairly equally over the whole country, which is the product of the ebb and flow of the trade cycle; and Special Unemployment, or that long-term idleness of specific industries and districts which, though intensified by depression and relieved by boom, is fundamentally due to more deep-seated causes, such as the decline of particular industries as the result of technical change, or the loss of export trade. As on previous occasions, it must be emphasised that the calculation is necessarily rough, but that it is believed to show a broadly true picture.

It will be noticed that there is a sharp contrast between the experience of 1929-30 and that of 1937-38. In the earlier case, much the larger part of the initial increase in unemployment was in the special category, with only a small increase in cyclical unemployment until well on into 1930. In 1937-38, on the other hand, though there was an increase in special unemployment in the very first months, over the twelve-month period since the change in methods of counting interrupted the continuity of the curves, the greater part of the increase has been in cyclical unemployment.

Too much emphasis must not be laid on an approximation of this sort. But it only confirms the impression to be gained from many of the other indications that have been mentioned above. The depression of 1929-30 seems to have been a case of an external crisis impinging on the British economy from without. In 1937-38, on the other hand, although there were obvious external influences, there were also seeds of decay at home. Any explanation of the recession of the last twelve months must, therefore, draw its reasons both from foreign and from domestic events.

Four Causes of Recession

It seems probable that four factors have been mainly responsible for the decline in British business activity during the past twelve months. Two of these may be described as domestic factors (though nothing in this island is entirely divorced from the influence of the outside world), and the other two as external factors.

Factor A is the ordinary force of the trade cycle. When a country has enjoyed a period, lasting five years, of uninterrupted recovery, in the course of which new records of production and consumption have been set, all past experience justifies the expectation of a decline. A very large part of the literature on the trade cycle is taken up with explanations of the reason for this pendulum phenomenon, and with identifying the various seeds of decay that every period of advance carries in itself. It need only be said here that both the duration and the extent of the British recovery of 1932-37 were exceptionally large and that a recession was due, on the evidence, at just about the exact moment that it arrived. It is only reasonable, therefore, to suppose that the cumulative causes of recession have been in operation for the past twelve months. It may also be added that this factor applies, if not exclusively at least most powerfully, to Great Britain among the great industrial nations. The American recovery had not reached maturity by the summer of 1937, while France had not, and has not now, experienced any significant degree of recovery at all.

Factor B is the other domestic circumstance that has contributed to the causation of the decline. Great Britain was very strongly assisted in the great depression of 1929-31 by the fact that the consuming power of the wage-earning classes suffered no diminution even in the worst years of the slump. The loss of consuming power by those thrown out of work was more than offset by the gain in real purchasing power to those who remained in work. The real income of the British wage-earners was, indeed, steadily increasing for at least a decade and a half prior to 1937. This phenomenon was due, in part, to the steady increase of the numbers of the insured population, but mainly to the large falls in the prices of imported foods and raw materials during the crisis. In 1937, however, this increase in consuming power appears to have come to an end. To judge by the indices of wage-rates, employment and the cost of living and by available data on unemployment expenditure, the real income of the working class would appear, it is true, to have been some 1½ per cent. higher in 1938 than in 1937. But it is almost certain that a fall in the amount of overtime worked and an increase in the amount of short-time will have cancelled out this improvement. In any case, this figure applies only to that proportion of the population that is insured against unemployment. When the total of salaries, professional incomes and profits is added in, it is certain that the real consuming power of the population has fallen in 1938.

This decline in consumption is clearly reflected in the figures of retail trade, which are consistently showing declines in comparison with last year. Its significance, moreover, is very great. A diagram which was printed in *The Economist* last week, and is reproduced overleaf, indicates that the volume of production for the home market has recently been falling for the first time in a decade and a half. It is true that the figures on which this diagram is based, like so many other

THE ANATOMY OF UNEMPLOYMENT, 1929-1938

OUTPUT FOR HOME AND FOREIGN
MARKETS, 1924-1938

For method of calculation, see *The Economist*, December 24, 1938, page 648.

economic indices, may be unduly influenced by changes in stocks. But the change is too great to be explained entirely in this way, and it is probable that we have been witnessing something to which the British economy has grown almost entirely unaccustomed—namely, a fall in the consuming power of the population.

If this is so, several other unusual phenomena of the past year fit into their place. Hitherto London has always been the most prosperous region of the country, the last and the least affected when recovery turns to recession. The London Passenger Transport Board have recently calculated an Index of Business Activity for London alone. When compared with *The Economist* index for the whole United Kingdom, the London index is shown as reaching its peak and beginning its decline as early as the autumn of 1936, a full year before the country as a whole. It is possible that this divergence is exaggerated. But at least it is true that London has been losing its lead on the rest of the country. In employment, it still shows a more favourable performance than most other regions. But when measures of mercantile and financial activity are added in, it might well be found that London is no longer the favoured city. This is what would be expected if the consumers' industries and commercial activity were more seriously affected by the current recession than by the depression of 1929-32.

External Influences

The two external influences that have been at work in the past year on the side of declining activity are in reality but two facets of the depression that has once more overtaken world trade. But for the purposes of analysis it is as well to draw a distinction. In the first place, then, (Factor C) there has been the ordinary effect of slackness in international trade on Britain's export industries. The falling-off in production for export has not been quite so severe in 1938 as it was in 1930. But it has been quite severe enough to plunge the cotton textile industry once again into deep depression, to administer a severe setback to the other textile industries, to spoil the prospects for the coal-mining industry (which a year ago was enjoying its closest approach to prosperity for many a long year) and to assist in the discomfiture of the iron and steel industry. As always, the root cause of this decline in exports has been the lessened prosperity of the primary producing countries and their diminished ability to buy. In point of fact, the primary producers have bought more from Great Britain

and other industrial nations than they could really afford. There has been a strong tendency, during 1938, for the balances of payments of the primary producers to move in the direction of disequilibrium. This is true, for example, of Australia, Argentina and New Zealand, all of whom have maintained their imports in better proportion than their exports.

The decline in the activity of the export trades is the normal, one might almost say the mechanical and automatic, effect on Great Britain of a change for the worse in the state of world trade, due, in this particular case, mainly to the surprisingly sudden and severe slump in the United States which made its appearance about sixteen months ago. But the American slump has also exerted a powerful psychological effect on British affairs, which, in the particular context of 1938, has been even more important. Business psychology in Great Britain very frequently takes its cue from America, and it is hard for London markets to feel boisterous when those of New York are depressed. This is not, of course, pure psychology, since in many of the commodity markets American buying is the dominant marginal factor. A sudden collapse of prices in America would, therefore, at any time, exert a strong influence on London. In the middle of 1937, however, the markets were in a particularly vulnerable position. The level of commodity prices had begun, late in 1936, to move upwards with startling rapidity. To the usual forces of boom-time buying in England, and of accelerating recovery in the United States, the announcement, in February, 1937, of the heavy scale of prospective borrowing for British re-armament appeared to add a new inflationary factor. Under these influences, unusually heavy stocks of all sorts of raw materials were piled up, in the expectation (among the moderate) that prices would go higher and the fear (among the more credulous) that there would be outright inflation in America. Buying for stock enhanced demand, for a time, and helped to create the very rise in prices that was feared. But in the spring of 1937 the economic climate changed. In Great Britain the rise in prices induced a reduction in the volume of retail sales. The figures of the value of sales did not, at first, record this, but the interesting indices of the volume of sales in department stores compiled by the Retail Distributors' Association (and illustrated in *The Economist* of April 30, 1938) have subsequently shown that the volume of sales began to decline quite early in 1937. The natural result was a decline in retailers' orders to their suppliers. A similar effect was produced, in America, by the exhaustion of the effect on retail markets of the spending of the gigantic sums issued, in the summer of 1936, as veterans' bonus. Thus the completion of buying for stocks coincided roughly with a reduction in consumers' purchases. Prices sagged and the markets being in an extremely weak position owing to the stocks accumulated, the sag became a decline and the decline a collapse. Within a very few months, what had been sellers' markets became once more buyers' markets, and the gradual exhaustion of the stocks accumulated at higher prices has, ever since, affected the profits of traders and manufacturers and reduced demand, so far as the markets are concerned, even below what is required for consumption. The volume of trading and, in some cases, of production, in other words, has been reduced below that of consumption—a circumstance (Factor D) that largely explains the divergent behaviour of the indices of general business activity and of employment.

Diagnosis and Prognosis

In broad general terms, what appears to have been happening in Great Britain during the past twelve months is that the slow inception of the downward phase of the trade cycle (due, in the main, to purely domestic British causes) has had superimposed on it something resembling the classical panic of the markets, the chief cause of which came from outside. This diagnosis is consistent with the very remarkable shape of the curve of activity in the last twelve months. The original sharp drop was due to the market disorganisation. But it ceased when the temporary technical disorganisation of the markets was overcome and commodity prices found the bottom of their precipitous fall. But the signs of renewed decline now, after six months' pause, are due, if they are confirmed, to the

slow downward march of the fundamental conjuncture, which has now, as it were, caught up with the excessive speed of the fall last winter.

This analysis and the reasoning that has led up to it may now be used to serve as signposts to the future. Diagnosis can proceed to prognosis.

The domestic causes of recession, previously labelled Factors A and B, are still in operation. If the downward leg of a normal trade cycle began in the third quarter of 1937, it can hardly be expected to have run its course after only fifteen months. Indeed, there is every sign, as pointed out on the first page of this survey, for believing that the trend of demand from ordinary peace-time British industry for capital equipment is still downward. Building activity is still moving slowly downwards, and as the construction stage of the defence programme reaches its end, together with many of the larger civil projects that were begun at the very end of the recovery period, the speed of the decline can be expected to increase rather than to slacken, unless there is a gigantic programme of A.R.P. construction. The ordinary commercial demand for the products of the metal-using industries is more difficult to disentangle from defence orders, but there is every sign that that also is slowly declining. The pace of the movement down the falling leg of the cycle has not, this time, been accelerated by the pressure of dear money. But the most reasonable assumption seems to be that this fundamental tendency towards lower activity will continue.

The other domestic factor is the trend of consumption. An increase in unemployment tends by itself to diminish consuming power; it can only be offset, as in 1929-32, by a lower cost of living or an increase in the total size of the working population. On this occasion we are unlikely to get either. A further significant fall in the cost of living could be produced only by a very considerable worsening of the world's agricultural crisis, which does not appear to be in prospect. In any case, even if world supply and demand get into much worse disequilibrium than at present, the abundance of "controls," domestic and foreign, will largely nullify the effect on prices. As for the size of the working population, the period of rapid increase is now nearing its end.

Except for the possible influence of re-armament, to be discussed shortly, the purely British factors in the situation seem, then, to call for further slow decline of activity and employment. The external factors, on the other hand, are more encouraging. The market panic seems to be over. In commodity after commodity, stocks appear to be returning to normal (though a firm judgment is rendered impossible by the lack of statistical data), and buying is returning to the market. This can clearly be seen in the case of the domestic steel industry, which, having suffered badly from the stocking-up of 1937 and the stocking-down of 1938, stands a chance of returning to normal in 1939.

The influence of the United States on international trade and world business psychology is, for the moment, favourable. To analyse the American situation at length would involve doubling the scope of this survey. A recent analysis in *The Economist*, however ("American Horoscope," October 29, 1938), came to a guardedly hopeful conclusion, and nothing has happened in the intervening two months to modify that conclusion. The current movement of recovery is gathering momentum, and seems likely to last at least for some months.

American recovery, however, is not having as strong an effect on international commodity prices as American collapse had in 1937. Commodity prices, in fact, have pursued a disappointing course in recent months. This suggests that the disequilibrium in the world markets goes rather deeper than its purely American aspect. If so, it would be rash to look for any sustained increase in British exports, especially as we shall soon be feeling the effect of the measures taken by a number of countries to restore the equilibrium of their balances of payments.

On balance, therefore, the effect of external factors does not seem likely to be very strongly favourable, unless the further progress of American recovery pushes commodity prices

upwards. For the next few months at least, any upward influence exerted by external factors will probably be too weak to offset the downward trend of the domestic factors.

The Influence of Re-armament

Re-armament, however, has hitherto been left out of account. How, finally, can that be expected to affect the picture?

The amounts spent on re-armament seem enormous when they are added to an already over-burdened Budget. But compared with the dimensions of the national economy they are still comparatively moderate. It is not easy to select a basis with which the cost of re-armament can be compared. If it is compared with the total of the national savings or expenditure on capital goods, its importance will be exaggerated, since by no means all of it is spent on capital goods. In spite of the obvious defects of the comparison, it is safer to set the figures alongside those for the national income as a whole and make mental allowance for the effect of the "multiplier." Furthermore, it is difficult to know how to assess the inflationary part of defence expenditure. We were spending on the defence forces at the rate of approximately £120 millions before the issue of the first re-armament programme. The national economy is presumably adjusted to this scale of expenditure, which can therefore be disregarded in any assessment of the disturbing effects of re-armament. If £120 millions be deducted from each year's figures, the expenditure on the three defence forces for re-armament was £142 millions in 1937-38 and was estimated at £240 millions in the current year. Any figure for 1939-40 is, at this stage, a guess. We have been told, however, that expenditure on the Air Force alone will increase by £80 millions. The total may be as much as £400 millions.

Substantial portions of this expenditure are raised, however, by taxation. That is to say that these sums are, in the main, merely diverted from other uses. It is only the borrowing that can be truly regarded as potentially inflationary—and not even all of that, if either the fact or the announcement of armament borrowing leads to a decline in the amount of capital raised for other purposes. As a rough basis of comparison, however, the amount of borrowing year by year can be compared with the national income to indicate the dimensions of the expansionary impetus it can be expected to give. The borrowing of 1937-38 was £65 millions. That of 1938-39 is estimated at £115 millions, and may actually be slightly lower. The borrowing of 1939-40 can be guessed at about £220-£230 millions. Compared with a national income of between £4,000 and £5,000 millions, only the last of these sums is large enough to exert more than a comparatively slight influence.

We conclude, then, that the stimulating effect of re-armament has hitherto been very small. This conclusion is fortified by the fact that in two of the industries most directly affected, steel and engineering, armament orders were not sufficient in the past year to prevent an increase in unemployment. The mounting total of borrowing in the course of 1939-40 may, however, somewhat change the picture. Anything over £200 millions is a very large sum of money for the Government to spend in one year out of borrowings. But even that is not necessarily dominant; it is quite conceivable that private spending out of savings might fall off by an equivalent amount, although that would indicate a very severe depression. But at some point in the course of 1939 re-armament spending will begin to play a significant rôle in British economics.

That point, however, promises to be well on in the year. For the early months of the year, the indications seem to point to a decline in activity and an increase in unemployment, the influence neither of revival in America nor of mounting defence borrowing being strong enough to offset the cumulative forces of the trade cycle. From the summer onwards, however, either factor may begin to exert a stronger influence, and it is fully possible that the two in combination may succeed in pushing the indices upwards. But any such result depends on the emergence of factors which can now be foreseen only as possibilities.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of December. In the remainder they relate to the month of November.

COAL

Activity in the coal-mining industry showed a seasonal expansion in the past month. The quantity of coal raised increased from 19,696,000 tons in October to 19,969,000 tons in November, but whereas output in October was only 3.3 per cent. smaller than in October, 1937, production in November showed a reduction of 5.8 per cent. from that of the corresponding month last year. Exports in November, however, were only 6.3 per cent. smaller than in November, 1937, compared with a fall of 13 per cent. between October, 1937, and October, 1938. In view of the improvement in demand, the Central Council of Coal Owners decided at the end of November to increase the inland quotas for all coal fields for the last quarter of 1938 by 10 per cent. The inland quota for this period was originally fixed at 88 per cent. of the allocation for October-December, 1937. The improvement in demand, however, does not appear to have been fully maintained in December, when the volume of new business showed a decline in a number of districts.

IRON AND STEEL

The event of the past month was the publication, on December 9th, of the price list of iron and steel materials for the first six months of 1939. The reduction in prices was not uniform; for example, it amounts to about 6.2 per cent. in the case of rails and 7.6 per cent. in ship-plates. The iron and steel production returns for November showed that the improvement noticeable in September and October has been maintained. The output of steel ingots and castings rose from 854,000 tons in October to 860,000 tons in November, compared with 1,178,300 tons in November, 1937. The production of pig iron declined slightly, from 469,400 tons in October to 461,500 tons in November, against 762,300 in the corresponding month last year. The decline was due to the fact that November contains one day less than October. The number of blast-furnaces in operation actually rose from 66 at the end of October to 79 at the end of November. A satisfactory feature is the sustained improvement in exports of iron and steel materials, from 135,100 tons in August to 181,200 tons in November. Exports last month were only 8.5 per cent. smaller than in November, 1937. Imports of iron and steel materials increased from 52,400 tons in October to 65,900 tons in November; compared with November, 1937, when imports amounted to 272,500 tons, the current intake, however, is still small.

GENERAL ENGINEERING

The Trade Union's demand for higher wages was refused by the employers at a conference held on December 6th; in the circumstances they are less disposed than ever to agree to the relaxation of regulations necessary for the purpose of speeding-up armament production. On the whole, the engineering industry has welcomed the reduction in iron and steel prices, though the cuts were not commensurate to hopes. The improvement in the activity of the industry noticeable between September and October has not been fully maintained, and during the past month it has been marking time. The proportion of insured persons unemployed actually showed a slight increase between October and November. More recently there has been some improvement in the volume of inquiry, and Government contracts are still increasing. Consequently most branches of the engineering industry are expected to remain fairly busy during the next few months. The volume of exports declined from 40,275 tons in November, 1937, to 37,688 tons in the past month. Despite the decline, however, exports were well above the level of two years ago. Imports also registered a decline during the same period, from 11,714 tons to 10,057 tons. The decline has been most marked in imports from Germany. Incidentally, machinery has now risen to the first place among export trades. As far as individual branches are concerned, the machine tool, textile, lifting and mining machinery sections remain very busy. Manufacturers of agricultural machinery report some decline in activity, which, however, is due to seasonal influences.

ELECTRICAL EQUIPMENT

Activity in the electrical equipment industry remains at a very high level. The proportion of insured persons unemployed in November in electrical engineering was 5.3 per cent., an increase of 0.1 per cent. on October and of 2.2 per cent. on the corresponding month last year. The proportion of unemployed persons in the electric cable, apparatus and lamp section remained unchanged at 6.7 per cent. last month, an increase of 0.9 per cent. on the figure for November, 1937. Exports remain above last year's level; the value of shipments of electric goods and apparatus was £1,258,668 in November, against £1,163,253 in the corresponding month last year. During the same period exports of electric machinery rose from 1,485 tons (valued at £271,213) to 1,681 tons (valued at £349,202).

AUTOMOBILES

Sales of new private cars increased from 17,067 in September to 20,033 in October; compared with the corresponding months of 1937, the fall of 16 per cent. in September was reduced to one of 4.8 per cent. in October. Sales of goods vehicles also showed an improvement in October over those for September, though they were still 14 per cent. lower than in October, 1937. Production in October of private cars and taxis totalled 24,867, and of commercial vehicles 8,328, compared with 26,977 and 9,627 respectively in October, 1937. Exports showed little change between October and November, while imports of motor vehicles increased from 677 to 857.

BUILDING

Despite the slight increase in unemployment last month activity in the constructional trades remains at a high level. The proportion of insured persons unemployed last month was only 3.2 per cent. higher than a year ago in buildings, and was actually 0.8 per cent. smaller in public works contracting. Thus, although constructional activity has passed its peak, the decline has hitherto been comparatively slight. The latest figures of the value of building plans passed, however, indicate that the downward trend in private building is likely to continue. In September the value of building plans passed by a representative sample of local authorities was 25.1 per cent. smaller than in the corresponding month of 1937. As the decline from the figures of a year ago was only 2.8 per cent. in October, the conclusion was widely drawn that the sharp fall in the previous month was due to the postponement of plans during the crisis. The improvement, however, has not been maintained, for in November the value of plans passed was 20.8 per cent. below last year's corresponding figure. Last month the decline in plans passed was most marked in the case of dwelling-houses, plans for factories and workshops actually showing an increase. Government expenditure will probably remain at a substantial level, but it is unlikely fully to compensate for the decline in private building in the coming year. The decline in private building is expected to be accentuated by the absence of facilities for insuring against war risks.

CHEMICALS

During the past month a moderate business has been transacted in most sections of the home chemical market. There has been a fair amount of contract business in industrial chemicals, but, in general, demand has been below the normal for the time of year. Trade in wood distillation products has shown some improvement, and there has been some interest in pharmaceutical and other fine chemicals. In the market for coal tar products more enquiries have been received for tar acids and cresote oil is in fair demand, but trade in most products is still very limited. The Board of Trade returns for November show that exports of chemicals, drugs, dyes and colours decreased in value by £62,690 compared with November, 1937, coal tar products being mainly responsible for this decrease. Imports were also lower in value in November than in the same month of last year, the difference being £120,247.

POTTERY

Business remains slack, particularly in North Staffordshire, where unemployment increased during November. In other districts also there was a decline in employment towards the end of that month, with an increase in short time. Exports showed little change between October and November and remain considerably below the level ruling in 1937. Comparing the first eleven months of 1938 with the corresponding period of 1937, exports of sanitaryware declined from 395,634 cwt. to 355,810 cwt. and exports of earthenware declined from 441,970 cwt. to 420,886 cwt.

FOOTWEAR

End-of-year stocktaking in the boot and shoe trade has somewhat slowed down business, except for sections working on Government contracts or for the Christmas slipper trade. Employment in Bristol and in the North remained good, but the Midlands report a scarcity of orders for the New Year, which is now affecting employment. Leather prices remain firm, and in most districts the outlook is regarded with confidence. Exports in November were fairly well maintained, while imports both of leather and rubber shoes continue at considerably higher levels than in 1937.

COTTON

The past month has been a very unsatisfactory period for spinners and manufacturers. Demand has been limited and production has tended to decline. Wider fluctuations have occurred in raw cotton prices, and while values of the American staples show very little change, there has been a rather sharp fall in rates for Egyptian descriptions. Many rumours have been circulated as to the future policy of the American Government relating to the control of cotton supplies. About 10,250,000 bales have now gone into the loan, and exports compared with last season have fallen by over 1,000,000 bales. The position is causing anxiety to the Government at Wash-

ington. In the meantime farmers, by ballot, have supported the control plan for next season, but there may be modifications. Demand in yarns has been flat. There is still a danger of the 42's American weft price agreement breaking down, but negotiations are taking place for a comprehensive price agreement covering all American counts. A further reduction has occurred in unemployment, the latest figure being 93,560, against 99,780 a month ago, but the total a year ago was only 57,473. Exports of yarn so far this year are 23 per cent. smaller than in the same period of 1937. Spinning production is now 53 per cent. of capacity, against 58 per cent. a month ago and 90 per cent. at the same time of last year. The business done in piece-goods for export markets has been quite unimportant and order lists of manufacturers have run down. Steady buying has taken place for the home trade, and the improved clearances in the retail and wholesale establishments have been maintained. Further contracts have been given out by the Government in heavy and fine cloths.

JUTE

The market for raw jute has had a steady undertone, and prices tended to rise early in December, due partly to large purchases by Indian mills. New business in Dundee has been quiet, but spinners and manufacturers continue very busy on current orders. Unemployment showed a further slight decline in November compared with the previous month. Exports of piece-goods again improved in November, when they amounted to nearly 10 million square yards, an increase of 1½ million square yards compared with November of 1937. Exports of jute yarn, however, continue to decline slowly, while exports of bags registered another small increase in November over the October figures.

LINEN

Raw material prices have not improved, and United Kingdom consumers are further handicapped by adverse exchange movements. Irish spinners are buying increasing quantities of Belgian flax as the quality of the home crop is rather disappointing. There is no Russian flax on the market. There is an improved demand for both yarns and cloth, but prices so far obtainable do not cover replacement costs, though an advance in price has been secured in some cases. Exports of linen piece-goods again declined in November, by 220,000 square yards to 4,551,000 square yards.

RAYON

There has again been a little improvement in demand from consumers of rayon yarn, but there is a general lack of confidence. Production continues at a lower level, but stocks have been somewhat reduced. The hose trade has shown some improvement, but overseas business in all sections is unsatisfactory; exports of rayon tissues increased from 4.9 million square yards in October to 5.2 million square yards in November, but compared with November, 1937, there was a decline of 2.2 million square yards.

WOOL

Prices of raw wool continue firm and shipments from exporting countries are maintained at a high level. The Bradford market for tops remains lifeless, and after the spurt in October exports of tops fell back in November to their level of September. There is a certain amount of new business in the yarn market, but there is no advance in prices. Business in piece-goods for the home trade is not unsatisfactory, and there has been a limited enquiry from Scandinavia and America in certain lines. In manufacturing centres, machinery is running at about 75 per cent. of capacity.

AGRICULTURE

The exceptionally mild weather in November and the first fortnight of December has prolonged the autumn grazing season and postponed the use of the limited supplies of winter keep. Autumn cultivations in the West of England and in Scotland have been held up by too much rain, but in the East early-sown crops look well. There has been a brisk demand for porkers at most markets and prices rose during the past few weeks. Prices for other fat stock have tended to improve with the approach of Christmas.

SHIPPING

The trend in shipping freights was again downwards in November. The Economist index, after showing a slight improvement between August and September has since declined steadily. Since the end of November, however, prospects have improved a little, largely owing to the grain trade. Shipments from Roumania have brought some life into the Black Sea market, and there has been rather more chartering business from the North Pacific. On the other hand, the imposition by the Indian Government of an import duty on wheat has brought a lull in the Australian chartering.

* For method of construction and earlier figures (1924-1936) see Supplement to *The Economist* of July 25, 1936. This Supplement is now out of print, but a record of the complete index was given in *The Economist* of November 5, 1938. † Revised. ‡ Provisional. § Annual indices represent averages of monthly figures.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Sentiment has been depressed by the prospect of a small wheat crop and wool clip, coupled by the low prices for all grains. The latest estimate of the wheat crop is 137 million bushels. Local industry and trade continue active, according to a cable from the National Bank of Australasia, and employment is satisfactory. The value of imports during the past three months was £5,000,000 lower than in the corresponding period of 1937.

CANADA.—Railway revenues have been improved by the marketing of the large wheat crop and it is hoped that their new powers to make special contracts with shippers at rates below the regular schedules will enable them to recapture some of their lost traffic. In spite of a good export demand, lumber prices tended to fall during November, with the exception of pine and cedar. Activity in the automobile industry continues to expand and has had a heartening effect on the steel trade. General business conditions show little change, though the approach of colder weather has improved the prospects for the retail trade, which has suffered from the exceptionally mild autumn.

INDIA.—Imports in October, valued at 12,97 lakhs, increased by 20 per cent. compared with those in September, while exports showed a small decline to 14,15 lakhs. For the seven months of the current year (April to October) the value of imports and exports was respectively 16.2 and 17.7 per cent. lower than in the corresponding period of 1936-37, and the visible balance of merchandise and treasure declined by 3.75 lakhs, or 14.6 per cent., to 21,91 lakhs. The cotton piece-goods market remains overstocked, and up country demand is disappointing. Consequently, production is being checked and prices both of piece-goods and yarns are weak.

SOUTH AFRICA.—Wool prices continue firm, in the face of good competition among European buyers; combing wools, however, were less in demand and prices tended to weaken. There has been a slackening in the hide market, but prices are not changed. Considerable damage was done to the stone fruit crop in Cape areas by strong winds in November and the yield is expected to be below the average. There was the usual seasonal increase in retail trade in November, and business conditions generally are unchanged.

EUROPE

FRANCE.—Signs of an improvement in France have become more numerous in recent weeks. The growth of confidence is reflected in the continued repatriation of capital and in the sharp rise in the prices of Government bonds and industrial securities. In view of the paucity of up-to-date production statistics, it is still difficult to measure the extent of the expansion in activity. The latest official index of industrial production refers to September (1928 = 100), when it stood at 78, against 72 in August and 80 in July. Of the component series of the index available for October, those relating to mining, iron and steel and engineering show an increase on the month. The number of persons in receipt of unemployment benefit rose from 361,724 at the end of October to 367,106 at the end of last month; at the end of November, 1937, the number was 332,850. Although the position still remains precarious, the prospects of recovery are now better than they have been for some considerable time.

GERMANY.—Industrial activity has been well maintained. The weekly index of business activity calculated by the German Institute for Business Research (1936 = 100) rose from 112.2 in the last week of October to 113.9 in the last week of November. A year ago the index stood at 116.3. The daily number of car-loadings was 156,000 in the last week of October, and 157,300 in the last week of November. During the same period the output of coal in the Ruhr rose from 414,200 tons per day to 427,100 tons per day. Prices for industrial securities have tended to decline, and the general index of the Institute for Business Research fell from 108.2 (1924-26 = 100) in the last week of October to 104.3 in the last week of November. The value of industrial debentures has also shown a slight decline. Wholesale prices, on the other hand, have shown little change in the past few weeks. Despite the inclusion of Austria in the returns for 1938, the value of exports fell from Rm. 543.7 millions in October, 1937, to Rm. 466.5 millions in the corresponding month this year. The fall in exports has made it difficult to maintain the flow of raw materials to German industry, and this development is at present causing some anxiety.

FINLAND.—The export trades continue depressed. The saw-mill and woodworking industries hold considerable stocks, and a sharp reduction is expected in the timber felling during the coming season. Industries working for the home market are beginning to feel the effects of the recession in the export trades; unemployment in October increased sharply and there were more unemployed than in October, 1937. The index of industrial production was also much lower in the third quarter of 1938 than a year ago.

SWEDEN.—The export trades continue depressed, but the recovery in the United States is a hopeful factor, though it has not yet led to an increase in Swedish exports to America. Industries working for the home market are active, largely owing to the building boom; the engineering and electrical industries are fully employed and the shipbuilding yards are also busy.

SWITZERLAND.—Foreign trade has been well maintained in recent months, in spite of the recession in other countries, nor do the latest figures for unemployment show any increase. The activity in the building industry shows the usual seasonal recession, but the value of building plans passed in the three months August to October of this year was considerably higher than in the corresponding months of 1937. The index of share prices has been rising steadily since the summer, with a brief set-back in September, and reached 144.1 (1929 = 100) in November.

UNITED STATES OF AMERICA

Business activity in the United States continued to expand rapidly in the past month. The sustained improvement is reflected in the Federal Reserve Board's index of industrial production (1923-25 = 100), which rose from 96 in October to 103 in November; in November, 1937, the index stood at 88. The current volume of activity is thus substantially higher than a year ago. The improvement, moreover, appears to have continued in the first half of December; *The New York Times* weekly index of business activity advanced from 90.3 for the week ended November 12th to 94.3 for the week ended December 10th. Recovery has been very marked in the motor, apparel, household equipment and other consumption goods industries. Among capital industries, building has made rapid headway in the past few months. According to the Dodge reports, building contracts awarded in October were 77 per cent. above those in the corresponding month last year. Moreover, the improvement has continued, and in the first three weeks of November contracts awarded showed an increase of 35 per cent. over those of the corresponding period in 1937. The expansion in building activity is expected to continue. The prospect of an early and substantial increase in railway expenditure on new equipment, however, is considered to be less promising, and there may possibly be some delay in the recovery in this branch of capital equipment. The sagging tendency of commodity prices in recent weeks indicates that industrialists are pursuing a cautious buying policy. On the whole, however, the outlook for business remains fairly promising, though industrial activity cannot be expected to expand indefinitely at the rate of recent months.

LATIN AMERICA

ARGENTINA.—The trade returns for October show a better tendency, a favourable balance having been registered for the first time for several months. The outlook is viewed with moderate optimism, as a bumper wheat harvest is expected, although the linseed crop is a good deal inferior to that of last year. Maize prospects are at present excellent, but ample rainfall in December and January is essential for a good harvest.

BRAZIL.—The adverse balance of trade which occurred in the early months of 1938 has now been almost eliminated, but the continued shortage of exchange still leads to delay in liquidating importers' obligations. Exports of coffee in November totalled 1.2 million bags, the lowest monthly total for a year; prices, both in local and foreign markets, have tended to fall. The 1938-39 crop is expected to fall considerably below the official forecast of 14,759,000 bags.

URUGUAY.—Both the quality and quantity of the 1938-39 wool clip are up to standard, and shipments so far this season are better than last year. There has been renewed weakness in the value of the peso in the free market, the telegraphic rate on London rising to 13.15 pesos per £.

THE FAR EAST

The prospect of the enforcement by the Japanese Government of Article 11 of the General Mobilisation Act, which enables the Government to restrict company dividends, had unfavourable effects on the markets. The Stock Exchange recovered later, when it was known that the present rates would be maintained. The textile trades continue to be hampered by shortage of raw materials, and production in the wool spinning industry has been cut down to ten per cent. of normal output. For the first eleven months of 1938, the excess of exports amounted to 47 million yen, compared with an import surplus in the corresponding months of 1937 of 646 million yen; this enormous shift in trade has been entirely due to the severe restriction of imports, since exports are running at a slightly lower level than in 1937. There was a further increase in wholesale prices in Tokyo in November.

UNITED KINGDOM

(Population, mid 1936, 47,098,000; Area 95,030 sq. miles; 244,000 sq. kms.)
