Air Raid Precautions.—Discussion of the Government's plans to safeguard the population against attack from the air has narrowed down to a single point of basic principle. There can be no doubt that the advent of Sir John Anderson to direct civil defence measures has immensely speeded-up preparations. Manufacture of the steel household air-raid shelters, which will be delivered late this month and early in March, free to householders with incomes of £250 a year or less (with allowances of £50 for each child of school age in excess of two) is in full swing. The training and organisation of air-raid wardens in London is to be placed in charge of the police force to ensure discipline and efficiency and to avoid the development of bodies with overlapping functions and responsibilities; and it is said that wardens, who have everywhere semi-police tasks, may be similarly joined to the regulars in other cities. In addition, a regional framework for civil defence has been devised. It is by no means enough, however, that the need for taut organisation and the speediest possible execution of short-term measures should have become clearly recognised. There is no section of opinion now—unless the Treasury be excluded—that does not demand the equally expeditious undertaking of long-term measures, such as the construction of deep shelters and evacuation camps, which will give an immeasurably greater degree of safety. This is the crucial issue at which the Government still boggle. It has been made very clear in recent weeks by the bold proposals of Finsbury Borough Council to provide bomb-proof shelters at a cost of less than £11 per head (less expensive and more efficient, by his own admission, than Professor Haldane's projected tunnels). It may be made even clearer by the newly-formed Air Defence League* which will be set up with the backing of people from every walk of public life and every political group to impress upon the people the urgency of the present A.R.P. position and to focus attention on the steps that ought to be taken. Already the Government has been pushed well beyond its first obstinate entrenchments by widespread pressure. Further forced retreats will be a victory for commonsense and public safety.

Arms Progress Approved.—At first glance the general approbation voiced in the preliminary report of the recently-formed Industrial Advisory Panel on Re-armament, which was communicated to the Commons by the Prime Minister a week ago, suggested to some sceptics that its members were over-anxious to find everything in the garden lovely. Closer examination of the letter in which

the report was contained, however, shows, first of all, that since the end of December the Panel have made a very careful investigation, in 15 meetings and from special memoranda, of the present position of supplies for anti-aircraft equipment, fire-fighting equipment, naval building, aircraft construction, synthetic oil output and the production of scientific instruments; and, secondly, that they are sincerely satisfied, in the light of their unquestionable knowledge and experience, that "a most difficult task of great complexity" is being rapidly accomplished with efficiency and foresight. Even so, the issues which led many of the Government's critics to call for a Ministry of Supply to co-ordinate defence contracts and arms output are not affected by the encouraging conclusions of the Panel. "The results obtained up to the present time (they say) could not have been achieved without the whole-hearted co-operation of industry operating, it must be remembered, on a peace-time basis." "The Service Departments, supported by the Treasury (they declare) are, as far as circumstances permit, accomplishing a most difficult task." No doubt notable work is being done within the limits set by present policy. But is that policy sufficient to ensure that Britain will achieve, in the shortest possible time, that defence equipment and striking power which alone can guarantee herself and her allies against diplomatic blackmail and aggression? Or are more drastic measures still needed?

War Damage.—Preparations for war have become a chief economic activity, and the certain risks of warfare are now a main item in business calculations. Uncertainty about the way in which the cost of war damage will be met has been a deterrent to building and even to the occupation of new premises. In the most general terms the Government is now pledged to produce some plan to meet war damage, so far as it may be financially possible, when the war ends; and, in addition, a scheme to compensate civilians injured in air raids has been announced. Last week the legal rights and liabilities of persons interested in buildings damaged in war were defined in the report of a committee lately set up by the Lord Chancellor. Since neither insurance companies nor the Government have found it feasible to promote a scheme for insurance against war risks, the committee propose that lessors or lessees should be relieved from any obligation, express or implied, to repair war damage to buildings; nor is it, in their view, reasonable that leases should remain in force or rent continue to be paid where premises have been rendered uninhabitable. Mortgagors, too, should be relieved of their obligation to make good war damage, and their failure to do so should not cause any advance of the date of payment of the principal due. These proposals are simple common sense, but they scarcely diminish the prevailing sense of uncertainty, and are certainly not calculated to reduce fears of hardship. Until the root question of who will pay

the cost of war damage is clearly answered, all other arrangements are merely interim adjustments. And the Government cannot avoid the issue simply by saying that the problem is too big.

Serbs and Croats.—"The measure of Prince Paul as a statesman will be taken by his handling of the Croat case," we wrote on January 28th, "He must soon decide whether it is to be suppression or appeasement." On February 6th, by removing from power the man who had come to symbolise in Croatian thought all who opposed their case, Prince Paul decided for appeasement. The method adopted was for five members of Dr Stoyadinovich's Government, two Slovenes, two Bosniak Moslems, and the Serbian M. Tsvetkovitch who is now Prime Minister, to resign because they considered, on the score of election pledges and of "other important reasons of State," that "the way must be prepared, and travelled as soon as possible, towards a solution of the Croat problem," and that the Government of Dr Stoyadinovich was not capable of doing that. The Croat problem, quite simply, is a demand for de-centralisation from Serbian Belgrade which in the course of time has become a demand for full-blown administrative autonomy. Last December's elections screwed the tension tighter than ever, for although 107 Croat candidates received majorities, only 48 slipped through the complicated electoral procedure and managed to get seats in the Skupshtina; and those 48, under orders from Zagreb, have decided not to take their seats at least until the electoral law has been reformed. The next move came about three weeks ago, when Dr Koroshetz, leading Slovene and veteran Minister of the Interior, resigned "for reasons of health" which were clearly not the true ones; and, at the same time, M. Tsvetkovitch, who wields considerable influence as leader of the Yugoslav labour organisation, was reported to be having conversations with Dr Matchek in Zagreb. Something was obviously in the wind; and the course of debates in the Skupshtina, with the little Serbian Opposition hotly protesting against the electoral procedure and the treatment of the Croats, showed which way the wind was blowing. For Yugoslavia, Prince Paul's gesture to the Croats may be as memorable as that famous Declaration of Corfu which proclaimed the unity of the Croats, Serbs and Slovenes in 1917: if he can persuade Dr Matchek, cautiously biding his time in Zagreb, that he is in earnest and willing to press on Serbian opinion the necessary sacrifice of administrative authority, he will deserve the congratulations of all who wish to see a prosperous Yugoslavia. The next few weeks will tell.

A New Little Entente?—The changes in Belgrade were clearly neither palatable nor expected in Berlin or Rome, and the question is inevitably being asked whether

they had any motive in foreign policy. In particular, are they part of a desire, with which Roumania would have obvious sympathy, to strengthen the northern and western defences of the Balkan Entente against encroachment into its area by Great Powers? There is plausibility in this explanation, and conceivably a core of truth. Yet Yugoslavia's foreign policy since the re-armament of Germany has been Prince Paul's as much as his Prime Minister's; and not only has that policy been fairly successful in steering the Yugoslav Government through the Scylla of sanctions and the Charybdis of what followed on their collapse, but there now exists no immediate alternative. By flirting with the Dictators, both Roumania and Yugoslavia may be able to avoid being taken headlong into their arms. In favourable circumstances they would obviously wish (much as Colonel Beck wished not long ago) to make the Balkan Entente and alliances such as that between Poland and Roumania into a barrier against German penetration. As far as commercial relations are concerned there is ample evidence—the British purchase of Roumanian wheat, the establishment in Zagreb last October of an Anglo-Yugoslav Chamber of Commerce, the known Yugoslav wish for a new commercial agreement with the United Kingdom and the report that the dinar would be written down against sterling—that the Balkan countries understand the advantage of trading with free-exchange nations. But does the evidence go beyond this? The Balkans cannot afford to antagonise Germany, and to a much lesser extent Italy, without Franco-British cash and confidence; and until we are assured that King Carol received in London more than fine words and a State reception, we remind ourselves that no more in the Balkans than anywhere else will you get something for nothing. A new Little Entente may not be quite impossible; but as far as diplomacy intervened against Dr Stoyadinovich, it seems that it was merely to remove a man who had become hateful to the Croats and embarrassingly beloved by Rome and Berlin. The external effects are not likely to be more than will result from the substitution of one shade of neutrality between the Entente and the Axis for another.

Coalition Clouds in Belgium.—For a small country Belgium has more than its share of politics; and it is a tribute to M. Spaak that, before being finally forced to resign, he was in office (though with re-shuffled Cabinets) for over twelve months of much discord. From the first the Spanish war brought M. Spaak within the play of varying loyalties, the Catholics pulling one way and the Socialists another; and from time to time he has kept himself in office and Belgium from a general election only by resolutely threatening to resign. The Socialists have known better than to force to that length a Prime Minister drawn from their own ranks and pledged to a long programme of social reform; while the Catholics, though liking neither M. Spaak nor his programme, have enough troubles within their own ranks, and can sufficiently gauge the explosive power of Flemish and Walloon federalism to hesitate from the risk of a general election. Popular admiration for King Leopold and relief at the decay of Rexism have also been steady factors. At the end of 1938 the dispute over sending an agent to Burgos was stopped short of political crisis only by the Prime Minister's able manœuvring: he clinched the compromise by accrediting the Burgos agent with diplomatic privileges but not titles, and at the same time salving Socialist consciences by attacking the Non-Intervention Committee in acutely "governessy" terms. By the middle of January the dust had begun to settle, but on Thursday of last week it was kicked up again in a most literal sense by old soldiers' associations demonstrating in the streets of Brussels against the appointment to the Flemish Academy of M. Maertens, odious to them for his participation in the German Council of Flanders during the occupation. M. Spaak was set upon by the demonstrators; and a motion of confidence was passed in the Chamber only by a snap vote of 88 to 86, with seven abstentions. Although the appointment of M. Maertens to the Cabinet was M. Spaak's only tactless step in many difficult months, he has been unable to retrieve

it, and the Liberals have forced him to resign. M. Spaak deserves recognition for his ability; but, as often happens with coalition Ministries, he is unlikely to get it. His successor will have no easier task.

Bulgaria and the Balkans.—The fact that a German trade mission has been visiting Sofia will remind British exporters that Germany's share of Bulgarian trade has much increased of late. According to a League of Nations' report, Germany and Italy between them in the first ten months of 1938 took 64 per cent. of Bulgarian exports, mostly in foodstuffs; and their share in Bulgarian imports has been accordingly high. As the discontented member of the Balkan galaxy, King Boris may be glad of this good card in an otherwise poor hand: but after the closing of Balkan ranks in 1934 against outside influence and treaty revision, he is being wisely cautious in not overplaying it. He prefers to keep his neighbours smiling. When M. Kiossevanoff pays an official return visit to Angora this month or next, he will ask for (and receive) a renewal of the Turco-Bulgarian treaty of neutrality and arbitration signed in 1929 and valid until next March. Relations with Yugoslavia, long poisoned by Macedonian terrorism, are now on an almost cordial plane; and from Athens General Metaxas recently spoke words of friendship to Bulgaria with whom "we are bound by the Salonika Agreement (of July 31, 1938), on which we base the best of hopes for the development of closer relations." Rumours have been current for months past that Bulgaria would join the Balkan Entente; and it is probably true that the rulers of Roumania, Yugoslavia, and Turkey, if not of Greece, would welcome a means of caulking what may turn out to be an uncomfortable chink in their armour against German political penetration. Obvious difficulties remain in the way of this. None of these countries, and least of all Greece, can forget that Bulgaria came badly out of the Treaty of Sèvres; nor do the Bulgarians, as witness last month's irredentist rioting in Sofia, forget this for themselves. The hills of Thrace are, or were until the Salonika Agreement, a closely-guarded military zone. Much has been done in the last twenty years to harmonise the Balkan quintet: a completion of that work demands a further and lengthy period of peace.

Italian Migration to Abyssinia.—The monthly total of Italian workmen emigrating to Italy's new East African Empire has now declined to such an extent that it only amounts to a few hundred. At the same time the number of workmen repatriated has recently been averaging about 4,000 a month. As can be seen from the table shown below, there has been a net repatriation to Italy since January, 1937, which by last October had come to within 10,000 of the net emigration in 1935 and 1936 and promised shortly to exceed it.

ITALIAN WORKMEN EMIGRATING TO EAST AFRICA				
	Up to end of January, 1937	Remainder of 1937	1938 up to end of October	Total up to end of October
Emigrants ...	168,111	23,938	6,629	198,678
Repatriated ...	59,997	81,364	47,157	188,518
Net emigration	+108,114*	-57,426	-40,528	+10,160

* About half in 1936.

The Italian Government has now decided to cease publishing the number of repatriations on the ground that these include a large number of soldiers who remained in the Empire as workmen after demobilisation. This is, of course, the explanation of what seemed like becoming a paradox. But the position is none the less remarkable. It means that the number of Italian workmen in Abyssinia has so decreased that last October it was only 10,000 more than those demobilised soldiers (they cannot be many) who still remain in Africa as workmen after some 150,000 or more of their fellows have returned home. Either the Italian Government is reducing its expenditure on road-building and other public works or the newly-acquired Empire is proving unattractive to Italian workmen,

whether they originally left their native land as soldiers or civilians. Or more probably both these hypotheses are correct.

Russia and Hungary.—Hungary has joined the Anti-Comintern Pact, and Russia has retorted by closing her legation at Budapest and asking the Hungarian Government to close theirs at Moscow. Apparently, Hungary, before she adhered to the Pact, was warned by Russia that this would be the consequence if she did take that step. On the Russian side a distinction is drawn between this closing of legations and the act of breaking off diplomatic relations. These, the Russians suggest, can still be carried on, if necessary, at the capital of some third country. Russia has not broken off relations with any of the three principal parties to the Pact: Germany, Japan and Italy. The differential treatment of Hungary by Russia is based on an alleged difference between Hungary's status and that of her partners. Hungary, the Russians say, has adhered to the Pact under compulsion, and has thereby proved that she is no longer a fully independent State or deserving of full diplomatic rights. This explanation of the grounds of Russia's action is not only intended to be wounding; the shaft is also likely to strike home, since, in the past, the Hungarians have always been keenly sensitive to even the shadow of foreign, and especially of German, domination. No doubt, too, the Russians wish to deter Hungary's South-East European neighbours from following her example. At this moment, as in the years 1915-16, the Balkan countries are sitting on the fence, still uncertain about the side on which they will eventually come down. If the last war constitutes any precedent, Hungary has now, for the second time within a single lifetime, chosen a side—the wrong side for her. To this, no doubt, a Hungarian might reply that he has not been making a choice, but has been yielding, willy-nilly, to German *force majeure*; and that the Western Powers cannot expect to see Hungary resist this pressure unless they give her some encouragement by themselves showing greater determination than in the recent past.

Defending the Dominions.—From all the British Dominions comes news of the accelerated defence preparations which their Governments, without exception, have seen to be necessary. The Speech from the Throne at the opening of the South African Parliament contained a grave warning that it was necessary to proceed as rapidly as possible with the national defence works. If their attitude towards one possible occasion of war were not already clear enough, the Union Government made it plainer than

WILLS & TRUSTS

In acting as an executor or trustee, the Westminster Bank aims at putting itself in the position of a private trustee. It is therefore its practice to employ the family solicitor, if there is one, or any other solicitor the client may name; by such means the Bank succeeds in combining domestic tradition with business efficiency. A book showing the advantages of corporate executorship and the terms of appointment may be had at any branch

Trustee Dept., 53 Threadneedle Street, E.C.2
Also in Piccadilly, Bristol, Liverpool, and Manchester

ever by recently buying, against the competition of the German Government, 700,000 hectares of farming country in South-West Africa. In Australia, attention has been focused on the Government's attempt to obviate compulsory military service—which has been urged upon them from many quarters to Right and Left—by making a success of the drive to secure a voluntary militia of 70,000 men. They claim to be within sight of this objective. They are also following the British voluntary model in laying plans for a national voluntary register. No doubt the success or failure of the present non-compulsory system in Great Britain will also determine the future of Australian defence preparations, though Australia, having once had universal military service without feeling undemocratic, does not suffer from the same prejudices as the Mother Country. The Australian Government has also launched a scheme to store, for her own and United Kingdom purposes large quantities of foodstuffs against a war emergency. Mr Hughes has made his fellow-citizens' flesh creep by declaring that a policy was being hatched abroad that might shake Australia to her foundations. "Whatever comes," he added, "we will meet it as a united Empire." In Canada, Mr Mackenzie King, with unusual boldness, endorsed on behalf of his Government Sir Wilfred Laurier's statement of 1910 that if England was at war Canada was at war, though the degree of her participation was for the Canadian Parliament to decide. This is reported to have greatly disturbed some of his French-Canadian followers. These constitutional worries seem a little beside the point. Does or does not public opinion in the Dominions recognise that in any future British war in which they would be invited to participate there would certainly be at stake every principle for which they stand and everything that enables them to-day to live in honourable safety? If we look at the scene as a whole, undoubtedly the answer is that it does.

* * *

Irish Outrages.—The curiously inefficient campaign of terrorism by members of the Irish Republican Army has continued. It is now revealed that on January 12th Lord Halifax received an ultimatum from certain I.R.A. leaders threatening the use of force if British troops were not withdrawn from the whole of Ireland within four days; and at the preliminary investigation in London of a number of arrested suspects details were given of an alleged plan for wholesale violence to most important public places or essential services. Two London underground stations have been damaged by bombs. Four shops in Coventry have been fired, and bombs, grenades and explosives have been discovered in houses, gardens and tramcars. A number of persons have been injured, but, for the most part, the bombs used have been scarcely less amateur in manufacture or more effective in use than those most Irish of all munitions, the home-made shells in "The Moon in the Yellow River." The outrages are inexcusable, whatever the wrongs of minorities under Ulster law, and they present a serious danger which has justified the close guard set on public buildings. Yet the whole episode has an odd air of unreality, like a faded flash-back to earlier decades. In Eire itself Mr de Valera, who has to be careful not to disassociate himself from anti-partition sentiments, has secured the introduction of two emergency Bills to curb I.R.A. activities. Public opinion there no less than here has been shocked by recent events, though Mr de Valera spoke the minds of many even of the most indignant and law-abiding Irish citizens when he said that, so long as Ulster was separated from Eire, this sort of thing was liable to happen. But though bombs have before now divided countries, they have never yet succeeded in promoting union.

* * *

Libel Law Reforms.—The Bill to amend the law of libel, which was drawn up by private members and the Empire Press Union and introduced in the Commons by Sir Stanley Reed last week, served several useful purposes, although it was eventually withdrawn. In the first place, it enabled a series of speakers to demonstrate once more the precise ways in which the existing law menaces reputa-

ble and responsible writers, publishers and printers. The practice of seeking to extort damages "in circumstances little better than disguised blackmail" has become a regular trade, because it is not necessary for the plaintiff in a libel action to prove either that the defamatory words complained of were intended to apply to him, or that he has actually suffered as a consequence of the defendant's statements. In the second place, the debate revealed that not a few Members were disinclined to support the Bill, not because they approved the present state of the law, but because they disapproved of certain undesirable—and irrelevant—newspaper activities and had a vague fear that the national Press was becoming too powerful. Finally, the Government accepted the case for some measure of amendment, and the Attorney-General announced their decision to set up a Select Committee to examine ways of reform. Last Friday's Bill might well serve as the basis of their proposals; just as certain frank speeches in the debate may serve as reminders to some very small sections of the Press that the price of that freedom of publication, which is essential to democracy and is incomplete under the present libel and official secrets restrictions, is a high sense of social responsibility.

* * *

No New Roads for London.—Hastening to his daily work across London Bridge on foot while streams of buses stand still polluting the atmosphere with carbon monoxide, or urging on his taxi in the inextricable scrum of theatre crowds, the Londoner cannot be quite content that between them the L.C.C. and the Ministry of Transport are doing absolutely nothing about the Bressey report for the reorganisation of London's highways. Last Tuesday the Council decided that it could do nothing unless more money was forthcoming from the Government. The Minister admits the high cost of property in London, and that the expenditure in the County alone will be between £80 and £120 millions. But to justify the limitation of his grant to 60 per cent. of the full net cost he refers to the high rateable value per head of population in London and to the fact that the ratio of highway expenditure to rateable value is lower in London than in other large cities. The Council, whose annual borrowings in the capital market are limited to £10,000,000 (and, in the present circumstances, doubts whether this can be maintained), is unwilling to pledge itself to spend £2,000,000 each year for thirty years on highway improvements alone. It is also somewhat naturally jealous that it has to supply the money for the Government to give 100 per cent. grants to highways, for example, in Scotland; for many years London has subscribed some 15 per cent. of the Road Fund and received 0.1 per cent. from it. As the Bressey roads are essentially in the nature of main through-ways, responsibility for which the Government has already taken over outside London, there is a strong case for a higher rate of grant, especially as heavy other commitments will in all probability fall on the Council. It should not be beyond the wit of the Government to draw up and finance a plan for London one-tenth as ambitious as the plans that are being carried out in New York and Berlin. But it would seem to be essentially a Government problem. After all, the Speaker himself decided this week that the L.C.C.'s proposals for the rating of site values, which are not wholly irrelevant to this topic, were a matter of public policy and could not be put to Parliament in a private Bill.

* * *

Supplementary Estimate.—A supplementary Estimate of £4,549,660 for the Civil Services has been issued this week. The word "civil" is something of a misnomer, since £3,059,110 of the total is required by the Colonial Office (almost all for Palestine), £300,010 for Indian defence and £611,200 for the Stationery Office, the bulk of which is presumably due to the cost of printing the A.R.P. and National Service handbooks. The other items are all small, the largest being £200,000 for Old Age Pensions, the number of beneficiaries having turned out to

be larger than was anticipated. The total of Supplementaries is now £15,976,370, or half as large again as the provision of £10 millions made in the Budget. To judge by the trend of expenditure, further Defence Supplementaries of at least £20 millions will be required before the end of March.

* * *

Census of Production Bill.—This Bill, which came before the House of Commons last week, is relatively small fry; its interest lies not in what it contains, but in what it might contain. Parliament has not always been over-generous in granting powers to collect information to public departments, and no doubt on this occasion the Government took heed at the fate of the Population (Statistics) Bill and decided to reduce their requests to a minimum. Under the Import Duties Act of 1932 the Board of Trade has power to obtain details of the costs and consumption of raw materials and fuel from trades enjoying protection under the Act. For other trades partial information was collected in 1935 by voluntary inquiry; the new Bill grants compulsory powers to collect these items of information from all trades. This is a minor alteration. The Board of Trade is still prohibited from investigating industry's wage bill. Since the war the Ministry of Labour have conducted several inquiries into earnings and hours of work, including one in October, 1938, and the answers to last year's questions will reveal not merely average earnings, as in past years, but the range of earnings from the poorest-paid wage-earner to the most highly remunerated. The response by employers to these inquiries has been extremely good, but it would be of considerable benefit if the Census of Production Bill were amended at the Committee stage to permit of compulsory inquiries into wages. We should then be able to have fully reliable statistics both of the earnings of wage-earners and of the labour costs of industry.

Overseas Correspondence

From Our Special Correspondents

Germany

Colonial Claims

BERLIN, February 6.—Herr Hitler's Reichstag speech threw considerable light on the economic and financial situation of the Third Reich. For those countries interested in international trade, the Chancellor's remarks about the colonial question and exports were of special significance. The cry of "A Nation Without Space" has lost much of its meaning during the Reich's recent expansion, and specifically economic motives, the demand for equal rights and the satisfaction of honour have come to the fore as the chief reasons for colonial claims. In a book entitled "Why Foreign Trade?" Dr Eicke, Director of the Reichsbank, argues that Germany could achieve an immediate yearly saving of upwards of Rm. 200 millions in foreign exchange if her former colonies were returned. Eventually, it is calculated, the Reich could draw from the colonies Rm. 500-600 millions in foodstuffs and raw materials, which would mean that 15 per cent. of what Germany must now import from foreign countries could be taken from the colonies.

One fact is being forgotten. The setting up of a colonial Government and the necessary investment would swallow up sums, which, on any economic and commercial principles, would be far in excess of their usefulness. For the prestige of the National Socialist regime, however, foreign political successes are necessary. The more considerations of over-population recede into the background, the more are honour and the demand for equal rights brought to the fore, and the more will the Third Reich state its colonial claims with unremitting energy. The extent of Germany's colonial demands has been given here before (*The Economist*, November 26th); they will be for at least the return of all her pre-war colonial

Peace in Swedish Industry.—An important aspect of Swedish democracy is its success in obtaining compromise between conflicting interests. By 1935 representatives of workmen and employers had signed 8,583 collective agreements, and a large body of social, industrial and labour laws had by then been built up. In labour relations an important agreement has now been reached between the National Federation of Trade Unions and the National Federation of Employers' Associations, after negotiations extending over 2½ years. These organisations recommend their members to adopt new rules for negotiation which aim at better supervision of working conditions, speedier adjustment of grievances and the prevention of long-drawn-out disputes. The agreement prohibits political and religious persecution, the penalisation of persons involved in settled labour conflicts, and attacks on family undertakings or "third parties." In disputes affecting public utilities, a special committee will consider whether the dispute endangers the public interest, and, if it does, try to prevent or suspend it while arranging a settlement. An important concession gives workers the right to at least one week's notice, both in case of dismissal or temporary reduction of staff, thus mitigating the rule, consistently enforced by the Employers' Federation for over thirty years, and for long a bugbear of the Unions, that the employer shall "freely employ and dismiss workers." But the keystone of the agreement is the establishment of a Labour Market Committee, consisting of three representatives of the Employers' Federation and three of the Trade Unions' Federation. Besides being a conciliation board in disputes concerning public utilities, dismissals and temporary staff reductions, it will act as an arbitration court for differences of opinion over the agreement. Individual employers' associations and workers' unions are free to adopt the agreement at will; and its enforcement will therefore be voluntary. But it should help appreciably towards the sure establishment of peace in industry.

possessions. The Cameroon Railway Company has increased its capital from Rm. 240,000 to Rm. 1,800,000 in order to expand its activities, and it may be expected that other colonial companies will do the same.

At the 1938 party rally, Herr Hitler declared that Germany could not be affected by a blockade. In his Reichstag speech, he declared that the German nation must either "export or die." Although this is clearly an exaggeration, the foreign trade situation in Germany is disquieting, and future supplies of foreign foodstuffs and raw materials are endangered. Foreign trade with the more important nations has lately moved as shown in the table overleaf.

The Need for Exports

Germany's imports rose by approximately 1 per cent. if the two years are compared. This is explained, first, by the heavy demand, which has hardly been influenced by the

plan for autarky, and, secondly, by the fact that Germany's own foreign exchange reserves, as well as the foreign exchange and gold reserves of Austria and the Sudeten territory, were entirely pledged in 1938 to the maintenance of imports.

Exports fell by only 9 per cent., which seems small in view of the fact that other countries, including England, suffered much larger declines in their exports. In the case of Germany, however, the decline was of far greater importance, because no foreign exchange is available but that which is acquired through exports. It is this that explains Herr Hitler's vehement demands for more exports, and his announcement of an export offensive.

Although the sharp tone of Herr Hitler's statement was partly based on tactical considerations—they were believed to be especially in reply to Mr Hudson's pronouncements—there should be no delusion about the consequences. The Fuehrer himself stated that the battle for exports might, on the German side, degenerate into a battle of desperation, and that the Government was prepared for anything. Measures have already been taken to make the Deutsche Golddiskontbank, a subsidiary of the Reichsbank, more than ever useful to the furtherance of exports. This may mean that dumping is to be intensified through further levies designed to aid exports.

Some success for the Reich is being anticipated as the outcome of the Anglo-German industrial discussions. There is satisfaction about the coal agreement already reached. Further discussions will probably be held in Cologne, and, since an understanding is desired by both sides, some sort of agreement may be expected. The significance of any agreement should not, however, be overestimated. Too rigid price arrangements might lead to trouble with countries which buy from England and Germany.

Germany intends to meet the English and American export drives by a far-reaching centralisation of the export activities of German undertakings, and by the organisation of more than 10,000 foreign representatives. At the same time Germany is planning to overcome the chief difficulty which stands in its way—the greater ability of its competitors to grant credits. The intention is to expand still further the bilateral and barter method trade system, by offering "to make long-term contracts for deliveries of foodstuffs and raw materials at above world market prices."

The German-Italian economic talks in Rome are almost at an end. The negotiations have dealt mainly with the price of Italian products. It is known that Italy has granted preferential prices to Austria and the Sudeten territory. German-Yugoslav economic conversations are taking place in Berlin, and Yugoslavia has asked for a lowering in the mark exchange for settlements.

France

Laggard Production

PARIS, February 9.—Fiscal receipts in December amounted to nearly 6,000 million francs, of which some 4,980 millions represented normal receipts. This was 1,000 millions more than in December, 1937. The increase was mainly due to the rise in prices and higher taxes, but partly also to the revival of business. For the whole of 1938, receipts were 47,500 million francs against 37,839 millions in 1937, an increase of 25 per cent.

Statistics seem to show that the rate of the increase in fiscal receipts is greater than the rate of the rise in prices. It is for this reason that it is concluded that business is reviving. Headway in production, however, is slow. Capital must first come back, and then it must be invested, which is what M. Reynaud envisaged. Three months after the publication

of his decrees, a survey by Professor Charles Rist suggests that the classical process of recovery envisaged by the Minister of Finance is in fact going on. Capital is returning, short-term interest rates are falling, and there is a revival in investment. Not that the rise in investment is very rapid; bank credits are still too expensive. And there is a continual contradiction between the liberal policy of M. Reynaud and the persistent foreign anxiety which tends to paralyse the markets. The Minister has taken the first steps, but circumstances outside of France impose a policy of "wait and see" upon industrialists and business men.

If the return of capital and the revival of investment seem to act too slowly, then a monetary or credit expansion might help recovery along. But it is not certain that such an increase of monetary media would not end in inflation and a steepening rise in prices. This fear is important, and there are still doubts in workers' and employers' minds about the revision, on the one hand, of the forty-hour week, and, on the other, of methods of production. Theories have still to be broken down, said the rapporteur of the Senate Finance Committee recently. Totalitarianism and exaggerated New Dealism have been condemned, but the thrifty and productive path has still not been discovered.

Recovery in Metal Trades

The following figures show an appreciable revival in French metallurgical production since last September.

	Pig Iron		Steel	
	1937	1938	1937	1938
First quarter	1,814	1,753	1,911	1,748
Second quarter	2,005	1,425	2,022	1,481
Third quarter	2,029	1,299	1,916	1,325
Fourth quarter	2,069	1,574	2,054	1,621
Total	7,917	6,051	7,903	6,175

Monthly average

The number of furnaces in use, after a fall from 105 in December, 1937, to 76 in September, 1938, recovered to 83 in October, 84 in November and 86 in December. Progress in the metal trades at the end of the year was principally due to higher exports: they were 91,000 tons in May, 189,000 tons in November and 204,000 tons in December, and were stimulated by the low level of French prices. In addition armament orders at home picked up because the position of the Treasury improved.

The lowering of the rate of interest will permit the *Groupement de l'Electricité*, an association of great French electrical companies for the mobilising of savings more easily, to issue a loan of 200 million francs in debentures of 1,000 francs, issued at 930 and giving a yield of 5.75 per cent. The debentures in the Association's previous loan of 500 millions last July were of a 6.50 per cent. type issued at 900.

Total investments of 10,000 million francs in five years will considerably increase the electrical capacity of the country. According to the annual report of the Budget for Public Works, France must still buy vast quantities of energy abroad, so that the increase in domestic capacity is welcome. New plants for the hydrogenation of coal, too, have been set up and France may rapidly cover a large part of the needs of its aviation for special petrol.

Fall in Foreign Trade

The import surplus increased in January to 1,158 million francs, against 922 millions in December, 1938:—

	(Millions of francs)		
	January, 1938	December, 1938	January, 1939
Imports:—			
Foodstuffs	962	1,133	1,109
Raw materials	2,367	2,426	2,290
Manufactured goods	556	655	579
Totals	3,885	4,214	3,978
Exports:—			
Foodstuffs	310	594	423
Raw materials	867	999	830
Manufactured goods	1,262	1,699	1,557
Totals	2,439	3,292	2,820
Deficit	1,446	922	1,158

The fall of volume was principally in imports and exports of raw materials: coal imports and iron ore exports fell. Imports and exports of manufactured goods also declined.

The Wheat Office has estimated the present stocks of wheat at 105,300,000 quintals, after a crop divided as follows:—

(Quintals)	
France	97,500,000
Algeria	2,800,000
Tunisia	1,800,000
Morocco	1,460,000
	103,560,000

Needs being estimated at 79,177,000 quintals, the surplus amounts to 26 million quintals, and it is unlikely that more than 12 millions extra can be absorbed. The recent frost caused great damage to the autumn sowings, but it is too early to make any forecast of the 1939 crop. For the time being, the Government is seeking to export the 1938 surplus.

Poland

Currency and Credit Expansion

WARSAW, February 8.—The directors of the Bank of Poland have approved a drastic revision of the Bank's statutes. The operations of the central institution are to be "adapted to the great political and economic changes now taking place," and, says an official statement, "the passive power of gold must give place to the creative power of work and confidence." The new economic policy, to which the functions of the bank of issue are now in process of adaptation, has not yet been clearly defined, but its essence is industrial expansion and the finding of work for idle hands. The primary aim of this industrial expansion, now closely controlled by the State, is acceleration of the defence programme, and the new policy is described as one of "bold conceptions."

Foremost among the changes in the Bank's statutes is one providing for the creation of a fiduciary issue of 800 million zlotys, which may be increased to 1,200 millions, "according to the condition of the money market" and on the approval of the Minister of Finance. At the end of January the note issue stood at 1,348 millions, with a "cover" (gold and foreign exchange) of 30.28 per cent. The legal minimum at present is 30 per cent., and this will now be raised to 40 per cent. for notes and sight liabilities over and above the fiduciary issue. The other changes are mainly in the direction of facilitating credit expansion, converting short-term debts into long-term loans, and the removal of "rigid standards" so that the functions of the Bank can be readily adapted to State policy.

Trade Improvement

The gold and foreign exchange reserve of the Bank was reported at the end of January to be 464.6 million zlotys. The note issue has risen in the last thirteen months from 1,060 to 1,348 millions, and the volume of token coinage from 438 to 460 millions. The need for increased currency has been partly due to the recovery from Czecho-Slovakia last October of the Teschen district and to trade improvement due to the steady development of the defence and public works programmes.

The improvement in trade and prices, however, has been nothing like sufficient yet to account for a 30 per cent. increase in the money supply, and it is probable that most of this increase has been due to individuals carrying more money in their pocket-books than they did a year ago. During the two crises of 1938—over Lithuania in March and Czecho-Slovakia in September—currency withdrawals from the banks were heavy, and were accompanied by difficulties. Now that controlled inflation has been decided on, the velocity of circulation will presumably increase, and this, with a further increase in the amount of currency of several hundred million zlotys, should produce a strong revival in trade for the next few months at least. The immediate response of the markets to the announcement of the new policy was a vigorous rise on the Bourse. The foreign exchange rates, which are now under close official control, were not affected by the announcement.

What is now happening is probably less the inauguration of a new policy than the adaptation of the Bank's statutes to measures which have already been taken, and to a policy which really began when the attempt to carry through a "classical deflation" was abandoned, under the growing pressure of political discontent, in 1935. In April, 1936, currency restrictions in a mild form were introduced, and

since then the trend has been all in the direction of tightening restrictions, currency expansion, and official control over imports, investment and industrial output. Autarky and a war-time economy, in other words, are following their inevitable course.

Budget Estimates

The Finance Bill for the fiscal year beginning April 1, 1939, now before Parliament, estimates revenue and expenditure at 2,523 million zlotys, compared with 2,475 millions for the present year. The 1937-38 Budget closed with expenditure of 2,402 million zlotys and revenue of 2,426 millions. In the years 1937-38 and 1938-39 provision was made to spend, outside the ordinary Budget, about 1,800 millions on public works connected with national defence. This was intended to be a three-year plan, but by the end of March the plan will have been completed in two years. M. Kwiatkowski, the Finance Minister, has announced his intention of spending 2,000 million zlotys on a new three-year plan to begin on April 1, 1939, with the Ministry of War "decisively influencing" the spending programme. Strong opposition developed in Parliament to the alleged inadequacy, in view of existing needs, of the Finance Minister's programme, and the means have now been provided for enlarging the three-year plan.

Denmark

Social Democratic Aims

COPENHAGEN, February 3.—The 23rd Congress of the Danish Social Democratic Party was held at the beginning of January with the Prime Minister, M. Stauning, in the chair. A manifesto, issued at the close of the Congress, emphasised the national and Nordic character of the Labour movement in the Scandinavian countries and, to no little extent, relegated the connection with the Second (Socialist) International to the background. Co-operation with the Third (Communist) International is not in any way desired.

The manifesto further went on to state that the work of the Danish Social Democratic Party will be to unite the whole population in the party and to pursue its principles of justice and humanism; neither sex, race nor religion should be any hindrance to joining the party in its work. More extensive use of domestic raw materials in industry would be encouraged; and the question of too extensive industrial rationalisation resulting in unemployment would be examined. Agriculture must learn, with proper State support, to stand on its own feet; and it is the intention to press on with the social services and old-age pensions. The present policy of not being forced into heavy re-armament will be continued, although some modernisation of the defence forces and their equipment will be done.

Shipbuilding Boom

In the preliminary figures of Danish industrial exports in 1938 it is interesting to note that ships of a total value of 74.3 million kroner were exported by Danish yards, which are now fully booked up with new orders until the end of 1940. Further, a rise from 6.3 to 12.6 million kroner in the item "small arms" can be ascribed to Chinese purchases of a special type of light machine-gun very well adapted to guerilla warfare.

The Life Insurance Board has published some interesting figures. In 1937 policyholders paid 114 million kroner in premiums. At the end of 1937 the total face value of policies in force was 2,509 million kroner, covering 1,487,000 policies. In other words, 40 per cent. of the Danish population

THE COMMERCIAL BANK OF SCOTLAND LIMITED

Incorporated by Royal Charter and Act of Parliament

PAID-UP CAPITAL . . . £2,250,000

RESERVE FUND . . . £3,150,000

ESTABLISHED 1810

had taken out a life insurance policy. But, taken as a whole, the average face value per policy is only small, about 1,687 kroner. If, however, the so-called "Folkeforsikring" (popular life insurance policies of small amounts) is left out of consideration the average amount per insurance policy will be about 3,348 kroner.

Trade with Germany

On November 11, 1938, a trade agreement for 1939 was signed in Berlin between the representatives of the German and Danish Governments, whereby exports to Germany will be maintained at the present level. Published figures of Danish/German trade are as follows:—

(June-September)	Exports to Germany (In Reichsmarks—000's omitted)		Imports from Germany (In Reichsmarks—000's omitted)	
	1937	1938	1937	1938
Food:				
Live animals	11,031	11,466	21	19
Animal products	23,581	24,041	19	35
Vegetable products	170	331	84	162
Stimulants	5	6	105	65
Industry and Handicrafts:				
Raw materials	2,788	2,414	5,111	7,060
Semi-manufactured goods	971	984	7,239	7,912
Finished goods	690	624	44,017	40,858
Returned goods	475	450	4	7
Total, 3rd quarter	39,711	40,316	56,600	56,116
Total, 2nd quarter	33,556	41,603	56,378	44,788
Total, 1st quarter	35,168	41,683	49,590	44,183
Total, January-September	108,435	123,602	162,568	145,087

The monthly average of the index of production was 108 in 1938, compared with 107 in 1937. The rise is due to the fact that the food producing industries and the shipbuilding industry expanded considerably during the year, while production declined in other industries.

Palestine

Population Movements

JERUSALEM, January 27.—The London Conference which it is hoped will yield a settlement of Palestine problems, may result in the stabilisation of the Jewish proportion of the population at a fixed figure. A knowledge of the number of Jews at present in the country, and its relation to the total population, should therefore be useful. For this reason publication of the latest official figures is especially welcome, not the less as a counter to the propagandist figures issued by one side or the other. The latest instance is a leaflet of the Jewish Agency which says that since the war the Jewish population has grown from 60,000 to 430,000, and the Arab population from 550,000 to 950,000.

The Jewish Agency totals are probably not far from the real ones. For Arabs, the Government totals for September 30th last are: Moslems, 895,144; Christians, 109,831; others (Bahais, Alawites, etc.), 11,787. These figures do not include settlers who entered the country by evading the frontier controls, though the number of these among Jews or Arabs is inconsiderable. On the other hand they do include the other and larger class of illegal immigrants, those who entered the country as temporary visitors and remained without permission.

The Fall in Immigration

The increase of both the Arab and the Jewish sections of the population has of late been at a lower rate than previously. On the one hand the rate of natural increase is growing, the number of births per month rising and the number of deaths falling, with the infantile mortality rate also con-

tinuing to fall. But the balance of immigration, which used to represent the greater part of the increase of population, is now second to the natural increase.

While in 1935 the addition to the population by immigration was 64,147, in 1936, the year of the outbreak of the rebellion and of the depression, it was only 31,671; in 1937 it had fallen to 12,475; and in the first ten months of 1938 there was a net reduction in the population of 4,305. Emigration was noticeable among both non-Jews and Jews, but more noticeable among the former, who lost 9,471 on balance. The Jewish population increased by immigration during the ten months of 1938 by only 5,166, although 10,002 Jewish immigrants entered the country during that period. Another 985 who had entered the country as visitors were also registered as immigrants during the ten months. Of the 10,987 registered Jewish immigrants 1,442 were so-called capitalists, owning £1,000 and upwards and 2,512 men and women for whom employment was supposed to have been available. The remaining 7,033 were old people and children dependent on residents or other immigrants for their support. Of the total population of Palestine on September 30th last, 63 per cent. was Moslem, 28.4 per cent. Jewish and 7.7 per cent. Christian.

Hongkong

Banking Business

HONGKONG, January 19.—The favourable comments of the home Press on the final dividend of the Hongkong and Shanghai Banking Corporation, maintained at the same figure as for some years past, are no doubt echoed by the shareholders. The low price of the shares on the London Stock Exchange suggested that a reduction was anticipated, but the further decline since the declaration is difficult to account for. Conditions in the Far East may appear on a superficial view to be discouraging, but apart from the fact that the Bank derives much of its income from territory outside China and Japan, there is no reason to suppose that the bank's dividend and the usual transfer of \$1 million to bank premises account has not been amply covered by the year's profits.

Although banking business during the past year has been carried on under extraordinary difficulties the unique position held by the Hongkong and Shanghai Bank in the Far East has presented many opportunities for profitable business and the chairman's speech at the annual meeting will probably reassure pessimistic shareholders. In any case the chairman's annual review is invariably comprehensive and it will be all the more appreciated if it throws light on a situation which is as obscure to many on the spot as it is to investors 10,000 miles away.

The Course of Trade

The value of the trade of Hongkong for the year 1938, apart from bullion, surpassed all previous recorded figures. The following comparative table shows the imports and exports for the past three years:—

	(In million dols.)		
	1936	1937	1938
Imports:—			
Merchandise	452.3	617.0	618.1
Treasure	72.7	385.5	9.6
Total	525.0	1,002.5	627.7
Exports:—			
Merchandise	350.8	467.3	511.9
Treasure	143.8	395.2	188.1
Total	494.6	862.5	700.0

Imports from China were up by 10 per cent. to \$232.2 millions, while exports increased by over 20 per cent. to \$230.7 millions. The last two months of the year, however, showed a sharp decline compared with the corresponding months of last year, and in consequence of the fall of Canton and Hankow, the trade with South China, in November and December, was lower than at any time since the boycott of 1925. It will be noted from the table that movements of treasure were much smaller than in the two previous years.

The past year was notable for the transfer of the headquarters of the tea trade to Hongkong. The leading Shanghai tea merchants have opened offices in Hongkong and the Chinese Government an official tea agency. Tea grown in various parts of China was transported to Hongkong for shipment to world markets, the total value of exports being \$16.1 millions. Soviet Russia's purchases amounted to 16,772,000 lbs., valued at over \$9 millions.

Although the Pearl River, like the Yangtze, is still closed

to non-Japanese cargo shipping, the Japanese authorities, being anxious to attract Chinese traders to Canton, have arranged a passenger steamer service with Macao. Foreigners are dependent on the gunboat service with Hongkong, supplemented by one weekly steamer which does the round trip but is not allowed to carry cargo or mails. The population of Canton is now estimated at 300,000 or 400,000, but includes very few who are not paupers. So far the Japanese have got no benefit from their occupation of Canton, for neither is the Customs functioning nor is there at present any taxable community. Hints from Japanese officials suggest that the river may be opened by March or April, but there is no information of the terms on which foreign shipping will be allowed to trade.

Australia

Defence Expenditure

MELBOURNE, January 3.—Since the Budget speeches, the outlook for two Governments has changed for the worse. The Commonwealth Government's estimates of defence expenditure during the next few years have been increased, the defence appropriation having been enlarged to £63 millions spread over three years—an average of £21 millions per annum, against an average of £6 millions for the last three years. To obtain the increase by extra taxation would impose a heavy burden on taxpayers, and the Government propose to raise part of the amount by borrowing. To begin with, a loan of £10 millions is proposed, partly for issue in London.

The Victoria State Budget estimates have had to be modified owing to the small wheat harvest, and a deficit of £825,000 is now looked for, owing mainly to a reduction in railway revenue. Because of this fall in receipts and the small amount of loan money available for railway expenditure, the Railway Department has been discharging men. The State Government has decided to appeal to the Loan Council for a larger allotment of loan money at the next meeting of the Council.

Banking Changes

The Commonwealth Government has introduced a Bill (which will not be proceeded with until Parliament meets again some months hence) to amend the Commonwealth Bank Act, principally for the purpose of establishing a Mortgage Bank Department. Institutions for lending on mortgage already exist in most of the States, in addition to private lenders, but the present proposal is intended to fill up gaps. Rural business will be administered by the Mortgage Bank itself, but to finance housing loans in the cities it is contemplated that approved societies should be formed.

The Australian wool clip is now expected to be smaller than was anticipated in June, when it was estimated at 2,970,000 bales. The President of the National Council of Wool Selling Brokers and the chairman of the Australian Woolgrowers' Council have now decided that this estimate was too high by 50,000 bales. Estimates of the wheat harvest have lately been rising, but the total will still be substantially below last season's crop.

An Inflationary Step?

The flotation of the Commonwealth Cash and Conversion Loan of £72 millions at 3½ per cent. has presented some special features. The total amount included £68 millions for conversion and £4 millions fresh money for defence. Actual subscriptions reached £62,700,000, to which were added £3,000,000 from the sinking fund and a Commonwealth Bank cash contribution of £6,000,000 (this amount relieving other underwriters, who were therefore not called upon). The subscriptions included £52,300,000 for conversion, or approximately 77 per cent. of the maturing loans.

The issue has been more favourably received than might have been anticipated, and there is force in the contention that a conversion issue earlier in the year (1938) would have been desirable. In announcing the subscription of £6,000,000 by the Commonwealth Bank, the chairman stated that, although the Bank had made substantial contributions to recent Commonwealth loans, it considered that, in view of existing economic conditions and future defence requirements, this subscription was in the public interest and therefore in accord with the Bank's function as a central bank.

This policy is, in some quarters, regarded as amounting to a policy of inflation to maintain business and industrial activity, since the reduced results from primary production and exports for 1938-39 mean a decline in the national income. The policy of borrowing by a Government from a central bank has objections which would become apparent if a spending Government came into power.

Letters to the Editor

The Two Ukraines

TO THE EDITOR OF THE ECONOMIST

SIR,—Your extremely interesting article of February 4th is timely. The early history of the Ukraine is of fundamental importance: the area round Kiev, lying as it did at the Southern end of the great trade route between Scandinavia and Byzantium, became the original Russian State, and for over 300 years was the religious, cultural and military centre of Russia. The historical tradition, therefore, of the great days of the Kiev period is firmly rooted in Russian national consciousness. Early in the thirteenth century the invasions of the Tatars progressively ravaged this area and caused retreat into the forests to the north-east—and thus the Moscow State was created.

The Kiev area, apparently, was at first largely depopulated and later reclaimed from Tatar (and Turkish) domination by the Lithuanian-Polish Kingdom, but was regarded for long as an area menaced by enemies—the name "Ukraine" being accurately translated as "the Border Land." It was thus inevitable that a new dialect should develop in such a mixed area. (This occurred in parts of Germany, too.) The centripetal force of Moscow, due mainly to cultural and religious reasons, exerted a strong pull on the Ukraine, as well as the Lithuanian-White Russian Kingdom, but the power of Poland in the sixteenth and seventeenth centuries was too great.

It is not correct to regard the eighteenth to nineteenth century as a period of domination of Ukrainian land by Russian nobility; many of the landowners were local families and there was—unlike Greater Russia—a large and sturdy class of peasant-farmers; in fact, the lot of the Little Russian peasant was, probably, distinctly better than the Greater Russian until the Land Reform.

With regard to Carpatho-Ukraine, it is important to appreciate that it has always called itself *Carpatho-Russia*, and the dialect is (for some reason) much nearer to Russian than, for instance, that of Galicia or even certain parts of Russian Ukraine. It has always looked to Russia for moral support.

Factors such as these make powerful historical links between the Border Lands and Greater Russia—and this is very well known to the Germans (who study this problem much more than we do). The Germans appreciate that as long as the Soviet Government is anti-national and anti-traditional, a movement for an "independent" Ukraine has a chance of success. But as soon as a national Russian tendency develops—under whatever regime—the Germans realise that backing a Ukrainian movement is not likely to succeed. They, therefore, frankly say that this is an internal Russian question.

Yours faithfully,
M. ZVEGINTZOV.

The Fenians Again

TO THE EDITOR OF THE ECONOMIST

Sir,—Your comment of January 21st, entitled "The Fenians Again," is, in my view, uncharitable, if not unfair, to

Northern Ireland. It is not a pleasant thing for Ulster people to be told that they are bolstered up with British money when their Budgets for many years have contributed, to Imperial needs, amounts which show some approximation to any assistance received from Great Britain. Moreover, such assistance has been in respect of the unemployed, in which all creeds benefit alike.

Your article, I think, should have mentioned that the 34 internees have the right of appeal against detention, but, as they refuse to recognise the Courts, they do not exercise this right. If the police may arrest for "loitering with intent" where a mere larceny is suspected, how much more may this be justified where the suspicion is that of a grave imperilment of the peace?

Northern Ireland has been in the grip of a campaign by terrorists using explosives and your comments do not suggest a better (or any) plan for dealing with it.

Yours faithfully,
ALBERT E. BURNS.
Bangor, Co. Down.

Books and Publications

Statistics for Business Men

WITHIN recent months the two most outstanding works on the use of statistics in business, both running to some seven hundred pages, have appeared in new editions. Professor F. C. Mills's "Statistical Methods" and the book at present under review* are complementary rather than competitive. The former is first and foremost a book for the actual or would-be professional statistician. The latter is addressed to the business executive,

who judges the value of statistics according to their usefulness in securing practical results,

and to the university student entering business. Professor Mills's book is confined to methods and is rigidly mathematical; Messrs Riggelman and Frisbee have devoted more than half their book to the application of statistical methods to specialised business fields, and have avoided direct reference to mathematics, wherever such reference is not absolutely necessary. Accordingly, the method of Messrs Riggelman and Frisbee in presenting a box of tools is less to explain the technique of their construction than to demonstrate their use. This they have done in two ways.

In the first half of their book they introduce each tool in turn and illustrate its working with typical problems and cases where its efficiency has been tried: holes that can be bored and shapes that can be cut. The second half is devoted to actual craftsmanship in solving practical problems, to the statistics of production and marketing, forecasting and budgeting, and the analysis of real estate, investment and banking. The chapter on production and labour is particularly noteworthy.

There is much in this second section which is not strictly statistical, but this is both intentional and right: knowledge of the wood is essential for the right choice of tools. What is more, there are times when one can do best with one's bare hands, and the authors do not forbear to emphasise the limi-

tations of statistical methods. They warn student and business man alike not to expect too much from statistics:—

Probably no check in statistical analysis is more important than that of determining the reasonableness of results in relation to other information.

When experts speak thus of their subject, the plain man may trust them. Their case is the stronger for declaring its weakness.

It is because Messrs Riggelman and Frisbee have made such a strong case for the greater use of statistics in business that a review in the present context cannot just end in merited applause. This book is wholly American. It contains no mention of English statistics and all its illustrations are from studies and investigations made in the United States. Yet it is the most practical book on business statistics which has as yet been published in this country. This may well mean that the English business man is less scientifically minded than the American; it also means that the case has never yet been put to him for his conversion.

The most recent English book on statistics, the third edition of Mr L. R. Connor's "Statistics in Theory and Practice," has an appendix on calculating machines and an excellent survey of published statistics and indices. These are the materials, but, alone, they can do little to meet the needs of English business and less to command its attention. Messrs Riggelman and Frisbee here present the best work on statistics available to business men in this country. They will forgive a note of regret in our congratulations.

Shorter Notice

"A Short History of the Steam Engine." By H. W. Dickinson. Cambridge University Press. 255 pages. 15s.

The biographer of Watt, Boulton and Trevethick, and the official collector of steam engines, has written a fascinating account of man's harnessing of heat and steam. He begins in the dark ages of technology and, by way of Von Guericke's air pump, Savery's fire engine, Newcomen's vacuum engine and Watt's condenser, reaches the reciprocating engine and the modern steam turbine. The book will delight equally engineers, historians and mechanically-minded laymen, and constitutes an important contribution to the record of industry and transport, as well as to the philosophy of our civilisation.

THE BUSINESS WORLD

Germany's Short-Term Foreign Debts

IT is common knowledge that the total German foreign indebtedness has been reduced from Rm. 26 milliards in 1930 to under Rm. 10 milliards at the present time, roughly Rm. 6 milliards of the reduction being due to depreciation of the creditor currencies and Rm. 10 milliards to actual repayments. The present total of rather under Rm. 10 milliards (say, \$4,000 millions, or £875 millions) is divided almost exactly half and half between long-term and short-term debts.

As no new long-term loans have been issued abroad during these years, the total long-term indebtedness outstanding has gradually decreased, not only from depreciation of creditor currencies and actual repayments, but also from the reclassification of the debts to "short term" as loans have matured and been repaid in Reichsmarks but not transferred into foreign currencies.

The movements of the short-term foreign indebtedness are more complex, but have been the subject of much unnecessary mystification. This is partly, but by no means wholly, due to the fact that the detailed bi-annual analyses of German foreign indebtedness available from 1932 to 1935 have not been published for the past three years. It may be surmised that the chief reason for this non-publication has been doubt as to the accuracy of the figures. The detailed statements made in the early years were firmly grounded on a comprehensive census of the debtors. The figures for later years, when no census was made, must have been based partly on the volume of known debts (whose continued existence was easily verifiable) and partly on estimates made by experts of changes in the remaining mass of debts caught by the exchange restrictions. These estimates naturally become less reliable the further they get from the base years, although confirmation of particular sections of the debt may have been obtained from time to time as the result of negotiations with separate countries on questions of transfer.

The essential elements of the last published analysis are given in Table I:—

TABLE I
GERMAN SHORT-TERM FOREIGN DEBT—END FEBRUARY, 1935

Debtors	Rm. millions	Creditors	Rm. millions	Creditor Countries	Rm. millions
Banks	1,958	Banks	3,810	Switzerland ..	1,269
Konversionskasse, clearings, etc.	1,026	Financial companies	647	U.S.A.	1,262
Industry, trade, etc.	2,879	Industry, trade, etc.	1,379	Holland	1,211
Miscellaneous	428	Miscellaneous	847	England	902
Public	392			France	383
				All others	1,656
Total	6,683	Total	6,683	Total	6,683

It should be noted that "short term" as defined in the German statistics means due in one year or less, and, as mentioned above, also includes debts due but not transferred.

Although the detailed analysis in the form given above has not been published since 1935, the total of the short-term foreign indebtedness has been published annually, while sufficient is known of a number of specific debts to draw up Table II at the foot of the next column.

In this table two classes of debt are specified, "old debts," which are taken to be those existing when the exchange restrictions were introduced in 1931, and "new debts," those which have accumulated since the transfer

moratorium of June, 1933. To some extent this division is formal rather than real in so far as the new indebtedness represents merely a reclassification of the old debt. The item "all other debts," obtained by eliminating the specific classes of "known debts," should be considered as falling within the "old" category.

As in the official statistics given in Table I, foreign currencies have been converted into Reichsmarks at the rate of the day. The depreciation of sterling and the dollar was not, however, taken into account until the end of 1933, while the devaluation of the gold bloc currencies appears in the figures for February, 1937.

Some detailed comment on the table is necessary.

The figure of *Standstill* debts given for 1932 includes all debts which came under the standstill definition, whether or not formal adherence was made to the Agreement. From 1933 onwards the figures represent total credit lines, whether utilised or not, which naturally tends rather to overstate the actual indebtedness. But this method has been adopted as it appears to conform to the practice observed in the official German statistics. The figure of Rm. 900 millions for February, 1938, is an estimate based on the published figures for September, 1937 and 1938, Rm. 1,010 millions and Rm. 839 millions, respectively. Some Rm. 50 millions Austrian debts and Rm. 10 millions Sudeten debts must now be added to the total under the head of standstill debts.

The *Municipal Standstill* applies to the short-term foreign debts of local bodies, and the figures relate in each case to March 15th. Official German figures relating to short-term foreign debts of the States, Hansa towns and municipalities relating to March 31st give rather higher figures than those included in the *Municipal Standstill*, e.g. Rm. 263 millions for March, 1932, declining to Rm. 51 millions in 1937. The figure for 1938 is an estimate.

The *Lee Higginson credit* was granted in October, 1930, to the German Government for one year (since periodically renewed) and amounted originally to \$125 millions, of which \$100 millions were from a group of American and British banks and \$25 millions from German banks. Quarterly amortisation took place regularly until the transfer moratorium of 1933. From that date amortisation made in Reichsmarks and untransferred has been placed to a special account at the Reichsbank. In May, 1934, the German banks left the syndicate, their tranche being reclassified as Reichsmarks.

TABLE II
ANALYSIS OF GERMAN FOREIGN SHORT-TERM INDEBTEDNESS

Rm. millions— at end of February	1932	1933	1934	1935	1936	1937	1938
Old debts:—							
Standstill	5,040	3,853	2,528	1,961	1,567	1,165	900
Municipal standstill	247	200	148	110	80	41	20
Lee Higginson credit	524	433	257	82	18	...	...
Central Bank credit	428	360	...	...	...	...	...
Totals	6,231	4,846	2,933	2,153	1,665	1,206	920
New debts:—							
Konversionskasse	...	...	135	271	453	532	619
Young and Dawes amortisation	...	...	7	33	70	98	126
Lee Higginson amortisation	...	...	44	93	157	175	175
Clearing debts	...	...	...	510	500	450	250
Totals	...	...	186	907	1,180	1,255	1,170
Total classified debts	6,231	4,846	3,119	3,060	2,845	2,461	2,090
All other debts	3,922	3,856	3,640	3,623	3,455	2,939	2,910
Total short-term debts	10,153	8,702	6,759	6,683	6,300	5,400	5,000

The figures given in the table are taken from the monthly debt statement of the German Government (although some \$70 millions remain outstanding—see below).

The central bank credit of \$100 millions was granted to the Reichsbank in June, 1931, in equal shares by the Bank of France, the Bank of England, the Federal Reserve Bank of New York and the Bank for International Settlements. This credit was repaid in full in April, 1933. In the table it has been assumed that the whole of the credit of \$100 millions was outstanding in February, 1932 (converted at Rm. 4.2 to the dollar).

The *Konversionskasse* (in full, die *Konversionskasse für Deutsche Auslandsschulden*) is a subsidiary of the Reichsbank formed in 1933 at the time of the transfer moratorium to receive from German debtors amounts of interest and amortisation, etc., payable in foreign currencies outside Germany which, under the moratorium, could not be transferred. Payment to the *Konversionskasse* operates as a discharge of the debtor from liability under German law, but there is no obligation for the debtor to make his payments to the Kasse. The indebtedness under this heading is therefore partly new, e.g. in so far as interest payments are concerned, and partly old, as long-term loans falling due are reclassified from the long-term category. The Kasse has published monthly returns since its inception from which the figures in the table are taken—all its obligations to foreigners have been considered as short term.

The untransferred amortisation of the *Young and Dawes loans* is placed to a special account at the Reichsbank. The amounts untransferred are, however, deducted from the amount of long-term debt outstanding published in the official monthly statement of the public debt—and, presumably, counted as short-term.

The untransferred amortisation of the *Lee Higginson credit* (mentioned above) is also placed to a special account at the Reichsbank. Regular quarterly amortisation of about Rm. 16 millions has been made in place of the dollar amount of \$3.8 millions. It appears that, after the depreciation of the dollar, amortisation was continued in Reichsmarks at the equivalent of the old dollar value, so that the special account at the Reichsbank seems at the present time to have accumulated to about Rm. 280 millions. As the dollar amount outstanding remains at \$70 millions, the untransferred amortisation (shown in the monthly statement of the government debt) has been limited in the above table to Rm. 175 millions (i.e. at the exchange rate of the day).

The figures given for clearing debts are estimates based

on the material published on this subject in *The Economist* of December 3rd last.

It will be seen from the table that the classified "old debts" have fallen to one-seventh of the amount outstanding in 1932, but that some "new debts" have accumulated in the meantime.

Perhaps the most surprising thing in the table is the relative stability of the item "all other debts" (arrived at by elimination of the classified debts), particularly when account is taken of the effect of the depreciation of sterling and the dollar (end of 1933) and of the gold *blocc* (giving a reduction of about 15 per cent. from 1936 to 1937). These debts, most of which have now remained at "short term" for the last seven years, are evidently the mass of debts, chiefly of industry and trade, etc., caught in the general foreign exchange restrictions. A very large proportion under this heading are debts owing to the neighbouring countries, Holland and Switzerland, which own industries operating over the border. There are some exceptions to this generalisation, however, as, for example, the debts of the public enterprises, of which the Reichsbahn and Reichspost are the most important. These debts were booked at Rm. 102 millions and Rm. 58 millions at the end of March, 1936 and 1937, respectively.

The whole of the information used in this article has been taken from official sources (particularly the *Deutsches Jahrbuch* for 1937). Although a few estimates have been necessary, official material is available to give a solid base to them, so that they are by no means unsubstantiated guesses. It may, in fact, be emphasised that, although the detailed analysis of the foreign debt has not been published since February, 1935, sufficient material is available in regular monthly or quarterly form in the official German statistics to enable a fairly clear picture to be established for later years.

Exaggerated guesses which have from time to time appeared in the Press and elsewhere regarding German foreign short-term indebtedness are altogether without foundation, and what mystification exists is as much to be attributed to the shyness of the creditors as to the obscurantism of the German authorities. Incidentally, it might be asked whether for any other country it is possible to draw up such a comprehensive statement of foreign short-term indebtedness as that given in the tables contained in the present article.

Cable Makers Shares

IT would be hard to find a group of industrial shares showing a more stable dividend record than those of the cable manufacturers. Not one of the three leading companies, British Insulated, Callender's and Henley's, reduced the rate of dividend during the depression years, while Enfield, a smaller concern, only dipped below its 25 per cent. standard once, in 1933. Yet it is an interesting commentary on the market's instinct for earnings yields as opposed to dividend yields, that this stability of dividend rate was very far from endowing the cable companies with a quasi-fixed interest quality during the depression years. If, for example, the mean between the high and low price for 1929 be equated to 100, the 1931 mean price for British Insulated would be 69, 1932 would be 73, and 1933 would be 85. For Callender's the fall to 1931 was not quite so steep (74), but the course of prices was similar. The contrast with such a share as Lyons ordinary does not need stressing. The lowest level to which the Lyons mean price fell was 92 per cent. of the 1929 mean (touched in 1931), while by 1932 the mean had risen to 104, and by 1933 to 120.

But while the market has shown a sound instinct in valuing cable makers' shares on their earnings rather than on their dividend, the general conception of what influences chiefly affect the profits of the cable makers appears to be somewhat wide of the mark. It is held in a general way that the cable makers' market is linked with the continued rise in consumption of electricity, and

more particularly with the expansion in the country's electricity distribution system. It happens that for each of these movements there is a fair statistical record available. The expansion of electrical consumption is given by the published figures of units generated by authorised undertakings—this, of course, excludes units generated by works of railway companies for their own consumption. Similarly, the expansion of the main distribution system can be measured by the yearly increase in the capital expenditure on mains and services, as returned in the annual report of the Electricity Commissioners. In the table at the foot of the next column these two series are shown in the form of index numbers based on 1924=100. Beside them is shown a similarly based index for the combined profits of six leading cable manufacturers. It will be seen that the course of profits bears virtually no relation to the course of electricity consumption. While both moved in the same direction from 1924 to 1929, there was a sharp divergence between the two from 1929 to 1932. Similarly the expenditure on mains and services, while moving in approximately the same direction as profits up to 1931, thereafter moved first upwards and then downwards in precisely the opposite direction to profits for every year from 1931 to 1934. While therefore it would manifestly be wrong to say that the course of electricity consumption and the expansion of the mains distribution system are without an influence on the cable makers' profits, it is clear that

neither the one nor the other provides any reliable clue to the probable direction of profits in any given year.

Nor is this surprising if the products and markets of the cable makers are examined in more detail. The 1935 Census of Production shows that just over a half of the total output (by value) is represented by paper insulated

Year	INDEX NUMBERS (1924 = 100)			
	Cable Makers' Profits	Electricity Generation	Expenditure on Mains and Services	Comm. Building Plans
1924	100	100	100	100
1925	138	109	128	*
1926	119	116	132	*
1927	120	135	139	119
1928	124	149	161	133
1929	137	169	164	141
1930	115	179	172	136
1931	100	187	161	110
1932	96	201	180	95
1933	90	223	178	104
1934	99	253	160	127
1935	128	288	172	175
1936	175	332	212	205
1937	188	376	*	211

* Not available.

and "other" cables; about one-third by rubber insulated cables; and about one-sixth by telephone and telegraph wires and cables (insulated). The paper insulated cables represent, on the whole, heavy transmission lines; the rubber insulated represent lighter leads and flexes used for the final distribution to individual machines in factories, and for lighting and domestic purposes; the telephone and telegraph cables require no further explanation.

Now, while a considerable mileage of paper insulated cables is, of course, employed in main point-to-point distribution, an even greater mileage is involved in branch lines and networks to and within industrial plants themselves. Though offering fewer bulk orders than the main distributors, the needs of manufacturers both within their own works, and for branch mains leading to their works, are thus in the end the chief market for the cable makers. Moreover, the system of rebates on large orders (which has recently been extended, but has long been in existence) no doubt leaves a larger profit margin on the smaller works' orders.

From this it would appear to follow that the profits of the cable makers are more closely bound up with the general inclination of industry to undertake capital extensions than with any other single influence. Interesting confirmation of this is provided by the last column of the table, which gives an index number of the course of non-dwelling house building plans approved, year by year. It will be seen that the correlation between this column and that of cable manufacturers' profits is much closer than with either of the other two indices. Only in 1933 did the indices move in opposite directions, and, although the commercial building index tended to climb above the profits index over the period, the general "slope" of its movement is fairly closely parallel to that of the profits index in both recession and recovery.

	CABLE MAKERS' PROFITS			
	1937	1937	Current	
	Earned	Div.	Price	Yield %
British Insulated	31.1	20	85/9	4.66
Callender's Cable	40.5	20	82/9	4.83
Enfield	33.2	25*	54/9	5.70**
W. T. Henley's	30.7	20	19/9	5.06
Johnson and Phillips	16.8	12½	34/-	7.36
London Electric Wire	19.6	7½	30/-	5.00

* And 60 per cent. capital bonus.

** Assuming that dividend is reduced proportionately to increase in capital. If dividend were maintained, the yield would be 9.14 per cent.

It would appear therefore that the financial results and dividend policy of the cable manufacturers are compounded of two different elements. On the one side there is the normal movement of a trade producing capital goods, which does not appear to be much more influenced by the general electrification movement than is industrial

building as a whole. On the other hand, the dividend policy reflects the stabilising influences aimed at by the manufacturers themselves through the machinery of the Cable Manufacturers Association. As is well known, this Association was designed to avoid excessive competition in a trade where competition might have become acute. In its working the Association has been so successful that the MacGowan Commission on Electricity Distribution was constrained to suggest that the cable makers might reasonably be expected to reduce their charges. Thus an efficient organisation of the trade has combined with a conservative financial policy to insulate the shareholder most effectively from the profit fluctuations which are inevitable in a capital goods trade.

At the moment the market is inclined to fix its attention on competition from non-Association makers, which has indeed become serious enough to be mentioned by the Chairman of a leading Association manufacturer, and which has led the C.M.A. to offer loyalty rebates to its customers. This competition is undoubtedly an influence making for lower profits. But it is probably no greater influence than was the disappearance of a large source of demand through the completion of the main "grid" by about 1932. In retrospect, the effect of that gap of profits was only slightly to postpone recovery after the upward movement in commercial building had begun. Though the cases are not strictly parallel, it is reasonable to suggest that in any future cycle, the competition of outside manufacturers will have no more lasting effect.

In the immediate prospect the moderate decline in commercial building plans must be combined with the evidence of some competitive reduction in prices to suggest lower profits. But allowance must also be made for the considerable industrial building on Government account which is still in progress, though not reflected in the building plans figures. Some stimulus (though probably small in sum) will also be provided by the duplication of vulnerable main transmission lines, which is now being undertaken, and by the special telephonic

What is your Capitalised Value to your family?

If you listed all your personal assets and converted them into cash what would be the total? Now assuming from a safe investment interest on this amount could be obtained at the rate of 3½ per annum tax free, what income would this produce?

This is the test which you should apply to your own resources, so that you will know exactly what the financial position of your wife and family would be in the event of your death—a contingency which it is unwise to ignore. Most men are disappointed and not a little perturbed after this self examination.

THE "SAFEGUARD" POLICY is specially designed to augment personal assets by providing an income (tax free and payable monthly) for your dependants in the event of death. If you survive the period of your family responsibilities the policy provides capital for your own retirement.

You are invited to make an enquiry for full details and for an illustration suited to your own circumstances. Rest assured you will incur no obligation by doing so.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

lines which are understood to be in hand for the air-raid warning system throughout the country.

On balance, therefore, the immediate outlook, while not for further expansion, equally does not seem to threaten any serious recession in profits. What happens in the longer prospect must depend on great events outside the scope of this article. It should not be assumed, however, that war would necessarily limit sales. While

Finance and Banking

The Currency and Bank Notes Bill.—The second reading debate on the Currency and Bank Notes Bill in the House of Commons on Monday contributed little to the statistical background against which the Bill must be judged, except for the Chancellor's statement that the assets of the Issue Department currency show a depreciation of £9 millions, which is to be the first charge on the profit resulting from revaluation. The Bill has been well received both by the House of Commons (which gave it a third reading on Thursday) and by the public. Few changes in its terms have been suggested, and the only one that seemed essential (and its lack is still a serious defect) was one to provide that the price at which the gold is valued week by week should be published. Both the debate and a further week's consideration of the Bill have served to emphasise the paradoxical fact that while a revolutionary change is being made in the accounting practices of the Bank and in the theory underlying the statutory regulation of the note issue, the practical importance of the change is almost non-existent. It is worth recalling what the Bill does not do: it does not in any way prejudice the question of ultimate stabilisation (though it is a fair inference that stabilisation still seems remote to the authorities); it neither imposes any new restrictions on the issue of notes nor removes any restrictions that are now in existence. The effect on the note issue, in fact, will be of the smallest. There will be a small change on the day of the first valuation, since the increase in the value at which the Issue Department's gold is entered on the return will not be exactly equal to the £100 millions by which the fiduciary issue is to be simultaneously reduced. Thereafter, there will be no change in the total note issue, except by a purchase or sale of gold by the Issue Department (as distinct from the weekly transfers) or by a change in the fiduciary issue. It is true that the authorities have very large powers to alter the note issue, since they can buy and sell gold between the Account and the Department without recourse to the market and can alter the fiduciary issue, at least temporarily, by order. But these powers are not conferred upon them by the present Bill. The first is implicit in the Finance Act of 1932, which set up the Exchange Equalisation Account, and the second was conferred by the Currency and Bank Notes Act of 1928. Between them, these powers create a very elastic system of note issue; but the present Bill neither adds to its elasticity nor subtracts from it.

The new Bill, however, is the first explicit recognition of the principle that it is the size of the note issue that determines the size of the reserve, not *vice versa*. This principle is explicit in the short run in the provision for week-by-week adjustment of the reserve, and it is implicit in the long run too, for there is no doubt that if the public were to demand more notes than the total that will be fixed when the Bill comes into force, gold would be sold to the Department or the fiduciary issue raised. The Bill is, therefore, a definite step in the evolution of thought on the subject of note issues. The old principle that the supply of paper legal tender was the causative factor in the whole monetary economy, which must be rigidly controlled so that the whole economy could be kept stable, has been abandoned. Fluctuations in the note

ordinary commercial development would be checked sharply, the turnover to war production would no doubt fill part of the gap. Possibly the worst influence at present in prospect would be a continuation of uncertainty leading to a sharp restriction of commercial enterprise, but not producing a complete war reorganisation of industry as a whole. But in that respect the cable manufacturers are in the same boat as other capital goods producers.

issue are now recognised to be consequences rather than causes of changes in the credit structure, and control, if it is to be applied, must be applied elsewhere. This is the true answer to those who profess alarm at the wide elasticity of the powers the authorities now possess. Indeed, there are further steps still to be taken to accommodate the statutory framework of our monetary arrangements to the reality of modern conditions. There is a strong argument to be made out for the removal of all numerical and statutory limits, since the only true safeguard is the wisdom of the controlling authorities. But if formal limits are still to be set, they should be applied to the total outside liabilities of the Bank, of which the note circulation is to-day, in its power of initiating changes in the total supply of money, the less important part. The total outside liabilities of the Bank of England on February 1st were £629,652,943. Against these, the Issue Department's gold was, at the price of 85s. an ounce, £126,414,257 or 20.1 per cent., or at the market price, about £221,000,000, or 35.3 per cent.*

As was stated in *The Economist* last week, the new Bill does not repeal the provision in the Act of 1928 by which gold stocks of more than £10,000 belonging to residents in the United Kingdom can be compulsorily bought at the price of 85s. per fine ounce. We added the presumption that, in spite of the failure to repeal the provision, it would now lapse. It now appears that the omission was deliberate, and that the provision is being retained as a weapon against hoarders of gold. The intention is praiseworthy. But in fact it is almost inconceivable that a Government should use its compulsive powers to buy, for 85s. an ounce, a commodity which the market, the Bank of England and the Government's own Exchange Equalisation Account all value at nearly double that price. We venture to predict with some confidence that the clause will never be used.

January Clearing Bank Averages.—The table given below for the ten English clearing banks shows some interesting movements compared both with the previous month and January, 1938. The decline in deposits of £23.2 millions on the month and nearly £100 millions on the year is not unexpected in view of the current transfers of tax money and the loss of foreign funds during the course of last year. The decline, together with the increase in cash up to 11.17 per cent., against 10.8 per cent. for both the previous month and for January, 1938. But this rise is rather misleading, as it is almost entirely due to a sharp increase in the cash holdings of the Midland Bank from £55.6 millions in December to £64.9 millions. Those of the other banks show only small changes and are mostly lower. Of more interest is the increase in discounts on the month, for since the New Year the Treasury bill tenders have been very low and the percentage secured by the market small. The probable explanation is that the rise

* The figures given in the last line of the table on page 249 of last week's *Economist*, though correctly given as the ratio of gold to total notes and deposits, were not correct (as was stated) for what is usually known as the "reserve ratio," which is the ratio of gold to money in circulation and deposits.

represents purchases of bills allotted at the last few tenders of 1938, when the market's allotment was larger. As the banks do not buy full-dated Treasuries, the effects of the present contraction in the tender issue will not be seen until the February averages are published. It is, however, significant that the total of bills discounted is considerably lower than in January, 1938, when they had risen by as

(In £ millions)

much as £31.1 millions from the previous December. The severe fall in call money, too, reflects the dearth of discountable paper, and the decline of £11.1 millions in investments suggests that the banks are being forced to reduce their holdings of gilt-edged as a result of the depletion of their second line of liquid assets.

Politics and the Belga.—The belga has survived the hazards of the gathering political crisis in Belgium with considerable success. The cross rate on New York which is the effective criterion has not reached the gold export point of 5.944 belgas to the dollar, although on Thursday afternoon it rose to only a point or two below it. Its steadiness has been due partly to continued covering of speculative bear positions opened up when the decline of sterling in terms of dollars seemed to render the continued adhesion of the belga to its rigid gold parity highly questionable. The latest crisis has not been of sufficient severity either to arrest this covering movement or to set in motion another appreciable flight from the currency. The difficulties of the Government have been due to another echo of the attempt made by Flemish extremists during the war to separate Flanders from the French speaking provinces of Belgium. The "traitors" in question were formally condemned after the war and after many years duly amnestied. But the election of certain among them to high positions in the local government of their localities has recently reawakened the fires of racial strife which tend on occasion to flare up in the political life of Belgium. A more difficult hurdle for the Belgian Government may be provided by the coming budget discussions. While the ordinary budget is expected to show a balance between revenue and expenditure the extraordinary budget promises to show a deficit of some 2,500 million Belgian francs. The Belgian capital market is not at present in sufficiently good fettle to absorb borrowing of this size and there may be further approaches to the international markets by Belgium during the coming year.

Bank Loans against Bonds.—There has been considerable discussion in discount market circles this week of a reduction of the clearing banks' rate for loans secured by Conversion 4½'s from 1 to ¾ per cent. If the project has been mooted at all in clearing bank circles—whence the initiative must obviously come—it has only been in the most tentative manner. The discussion of this question emerges from the fact that the stock in question has only 17 months to run—or more truly 14 months as a bond, since after the three months' notice of redemption has been given it ranks in any case as a bill. Most discount

houses already include it among their bills for balance-sheet purposes and there is a strong feeling that it should rank with Treasury One's in the claim for special consideration from the clearing banks and command a loan rate of ¾ per cent. As against this, the clearing banks can argue that the redemption of Conversion 4½'s in July, 1940, though probable, is not inevitable, that their rule has always been to count as a bond any security with more than six months to run and that the exception made in the case of Treasury One's was wholly due to their desire to make attractive to the discount market an issue which would obviously have proved wholly unattractive had the bonds in question been eligible for 1 per cent. money only. In any case a move by the clearing banks to reduce their rate on loans secured by Conversion 4½'s would, if it was to be really effective, involve the cutting of that rate to ½ per cent. At present the bulk of the holding of Conversion 4½'s in the hands of the discount market is financed with non-clearing bank money, which in normal circumstances can be readily obtained at ½ per cent. It is unlikely that the clearing banks will ape the market so completely in the treatment of Conversion 4½'s as to grant this security the facilities given to Treasury bills.

Irish Banks' Returns.—The returns for the banks operating in Eire for the December quarter, published by the Currency Commission, are as follows:—

(Thousand £s)					
	Dec. Quarter, 1937	Sept. Quarter, 1938	December Quarter, 1938

The decline in deposits during the year is largely a result of withdrawals of saving deposits for investment in the Financial Agreement Loan, and the increase shown in the last quarter of the year is a satisfactory feature of the returns. The increase in bills is mainly accounted for by the short-period borrowing of the Irish Government from the Bank of Ireland. The decline in investments reflects the increased demand for loans and advances as well as the withdrawal of deposits. The increase in new loans and advances is not fully shown in the published figures, as many old loans were liquidated as a result of the improvement in agricultural conditions. The decline in the net sterling assets would be alarming if it were not for two relevant considerations; first, the transfer of the Financial Agreement Loan, and, secondly, the improvement in the visible trade balance which took place during the year.

Long-Term Gold Contracts.—It is not generally known that during the last few years the London bullion market has developed facilities for forward gold operations for very long periods. While it is seldom possible to deal in forward exchanges for periods longer than twelve months, it is possible to deal in forward gold for periods up to two years, and even three years. Needless to say, it is not always easy to find a counterpart, and the rate is always a matter of negotiation. The buyers are usually firms who want to cover their risk arising from long contracts. The sellers are usually the well-established

gold mining companies. The latter seldom, if ever, deal directly with the buyers; banks or bullion brokers act as intermediaries. Occasionally the counterpart for the buying order is provided by time arbitrageurs who buy the spot gold and hold it until maturity. The embargo on undesirable forward gold operations affected this market only in so far as buyers have to produce documentary evidence that the gold is wanted for genuine commercial purposes. For shorter periods the embargo applies even to commercial transactions, unless they are concluded in a currency which has no forward market, in which case it is permissible to cover the exchange risk with the aid of forward gold transactions. In the absence of forward exchange facilities beyond twelve months, it is

permissible to cover commitments for longer periods by means of forward gold transactions, even if the deal is concluded in a currency which has a good forward market for shorter periods.

A Chile Relief Fund.—The Bank of London and South America has given practical expression to the human sympathy which naturally follows long-established business relations by undertaking to forward to Chile any contributions to the British Relief Fund opened in Santiago for the benefit of sufferers from last month's shocking earthquake disaster. Contributions may be sent to the Bank at its head office, 6, 7 and 8 Tokenhouse Yard, London, E.C.2.

MONEY MARKET NOTES

Foreign Exchanges

THE firmer undertone of sterling which was apparent last week was maintained until Wednesday. Before the week-end business was again very small, but on Monday and Tuesday there was more activity with interest chiefly centred in dollars, which were on offer all day. For this trend bear covering operations were mainly responsible; these were not confined to speculators in sterling but took place as well in the guilders, and in Swiss francs which have been very firm. Capital withdrawals from London appear to have subsided, so that the pound had the full benefit of the covering operations against the dollar which closed at 4.68½ on Monday and on Tuesday at 4.68½. During this upward movement the Control made intermittent purchases of dollars. On Wednesday sterling became rather easier again, and the rate fell to 4.68½-¾ in the early dealings; but on Thursday the upward trend was continued, and the dollar was quoted at 4.68½-¾ in the late dealings. Francs have been very steady. On Monday the spot rate rose to 177½, against 176½ on Saturday; but this movement was the result of the French Control's tactics in maintaining a closer link with the dollar rather than the pound and did not represent any lack of confidence in the franc. Similarly, on Wednesday, with the improvement in the dollar, the rate fell to 176½ but with the resumption of the upward trend in sterling rose to 177½ on Thursday afternoon. The belga is discussed in a Financial Note. The news of the resignation of the Belgian Government caused a weaker tendency on Thursday, and the rate fell to 27.78 against the pound and to just below its gold export point against the dollar.

The Bank Return

RATHER surprisingly the note circulation shows a further increase this week of just over £3 millions, whereas a year ago the extra notes withdrawn by the public for end of the month requirements had already started to return.

This week's increase means that the circulation is only just below the level of last year's in spite of the return of notes from hoards that has taken place since then. The Reserve shows a net fall of £2.9 millions, and the "proportion" is consequently lower at 33.7 per cent. Bankers' deposits have suffered both from the rise in the note circulation and from the transfer of tax moneys. Thus, while these are down by £4.4 millions,

public deposits show a rise of £3 millions. The decline in bankers' deposits

illustrates the calling-in of funds from the money market which was apparent during the week, but it is worth noting that they are £1 million higher than a year ago.

The Money Market

AT the Treasury Bill tender on February 3rd the market only secured a 13 per cent. allotment, and this has made them even more reluctant to supply the clearing banks with bills. The banks, in fact, are not pressing their demands, in view of the abnormal conditions, so that business is very small. On Tuesday, when the market had no new bills to take up, transactions were almost entirely confined to commercial paper, supplies of which, however, were also small. The market quotation for the three months' fine bank draft remained at ½, but competition is so great that a slightly lower rate has often been

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

accepted. It is learned that the £300,000 Blackpool Corporation Bills which were sold recently were placed at a rate of ½ per cent. Credit conditions have remained comfortable, although occasionally money has been rather more usable. Thus on Monday morning a certain amount of calling-in of funds by some of the English clearing banks and also some Scottish banks caused some demand for money, and bond money cost ½ and even ¾ per cent.,

but conditions became easy again in the afternoon. The transfers of tax money are the chief reason for this calling, which has been apparent on other occasions during the week and is reflected in this week's Bank Return, but it makes no more than a momentary stiffening in rates for bond money from outside lenders.

The Bullion Market

THE weaker trend of the dollar caused a small reduction in the price of gold at the fixing each day except Wednesday, when it was unchanged. Most of the supplies have again come from Continental resales on the maturing of forward contracts, but the turnover, except on Thursday, when it rose to £815,000, has been somewhat smaller. On Saturday, the offerings were in-

† At fixing. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

adequate to meet the hoarding and arbitrage demands, and, as the Exchange Account was unwilling to sell at the market price of 148s. 7d., buyers were rationed. The demand was maintained after the fixing, but the price was not raised and few sellers appeared, so that the subsequent turnover was very small. On Monday, the bulk of the offerings was again taken by arbitrageurs, but the following day the continued strength of sterling tended to restrict arbitrage demand, and the turnover fell to under £500,000. On Wednesday, however, the absence of any premium in the price and the appreciation of the dollar encouraged arbitrage; the offerings were again insufficient to meet the demand, and buyers were again rationed.

Silver has improved from the low levels to which it fell last week. The general feeling appeared to be that the decline had gone too far, and a little speculative and general buying was enough to cause the small rises that have taken place.

Investment

First 1938 Railway Dividends.—After twelve months of utter despondency the Home Railway market was galvanised into excited activity at the beginning of this week by the dividend announcement of the Southern Railway, the first of the four main lines to issue its 1938 preliminary figures. Not even the most optimistic had dared to hope for a full 5 per cent. dividend on the preferred stock. Estimates generally ranged from 3½ to 4 per cent. The company's statement, however, showed that not only was the full dividend being maintained, but as much as 4.52 per cent. was actually earned, leaving only £131,871 to be drawn from the preceding year's carry-forward, which is thereby reduced to £94,933. Two questions immediately arise—first, why were all the estimates much too conservative, and, second, why the over-distribution? The answer to the first is presumably that the ancillary business has been much better than was generally expected and that the cost experience in the second half-year was much more favourable than in the first. During the second half of 1938, for instance, the weekly traffic figures showed a gross fall of £54,000, whereas the gross figures given in the statement show a fall of only £29,371. Pooling adjustments would have only a slight effect on the comparison, since the 1937 bus strike does not enter into the second half-year comparisons, so that the variations in the figures must be almost entirely due to an improvement in the ancillary side of the business. But it is costs that show the most startling change. In the first half-year there was a net loss of £574,000, of which £456,000 was due to the rise in working expenses. Yet net revenue for the full year is only down by £610,220. Of this, £112,371 is due to the decline in receipts, which leaves £497,849 as the increase in working costs for the full year—a matter of no more than £41,849 in the second half-year, as compared with £456,000 in the first half. The figures are remarkable, especially when it is known that for six weeks of the second half-year wages were higher than in the previous year, resulting presumably in something like a rise of £55,000 in costs, and that the cost of the two main railway materials, coal and steel, remained unchanged throughout the year. As regards the over-distribution, it seems probable that the board was encouraged to choose the higher rather than the lower round-interest figure by the prospects of additional revenue in the current year from the proposed 5 per cent. increase in charges in the London area, which in a full year should bring to the Southern upwards of £100,000.

The L.M.S. dividend statement is chiefly remarkable for the saving in expenditure which has been achieved as a result of reduced traffic and further economies, especially in the second half-year. The L.M.S. management has something of a reputation for its adaptability to changing economic conditions, and in the past year this reputation has certainly proved justified. The rise in the cost of labour and materials in the full year, 1938, amounted to £1,400,000, of which £1,040,000 was in respect of the first half-year. The rise under this head in the final six months of the year was, therefore, only £360,000, and about half of this was attributable to the restoration of the wage cuts in mid-August, 1937. By careful control of traffic, however, the management has been able to save no less than £1,740,000 in the full year. Of this, £503,000 is attributable to the first half-year, but this still leaves the very substantial figure of £1,237,000 as the saving from this source in the second half-year. Thus, whereas there was a net increase in working expenditure of £537,000 in the first half-year, there was actually a net saving of £877,000 in the last six months. Despite a fall of £3,351,000 in gross receipts, net revenue at £11,345,000 is, therefore, only down by £3,011,000. This is sufficient to meet the full payments on the 4 per cent. first pre-

ference and the 5 per cent. redeemable preference which rank together, and leave £37,000 to add to the carry-forward. An interesting point about these figures is that they suggest an actual improvement in the ancillary earnings in the second half-year. The figure for gross receipts, which of course includes ancillaries, is £148,000 higher than the weekly traffic returns of the railway side of the business for the full year. But at the half-year the difference was actually greater at £179,000. The weekly returns are always subject to adjustments, but the general inference to be drawn is that ancillaries at least held their own during the second half-year.

Company Registrations in 1938.—The fall in new capital issues by new industrial concerns last year is confirmed by the statistics of new company registrations for 1938, published during January by Messrs Jordan & Sons. It is true that the total of 12,611 companies registered is only 111 short of the 1937 totals. But public companies accounted for only 197 of the total, against 416 registrations, and after excluding companies limited by guarantee, etc., the comparison is 96 for 1938 against 321 for 1937. The 197 companies, technically known as public, account for £8,743,000 of new nominal capital, of which Beecham Maclean Holdings and Regis Property Company (the only public companies registered with capitals of at least £1,000,000) account between them for £3,250,000. The growing practice of registering businesses with small nominal capitals which are later increased, makes it necessary to stress yet again that undue importance cannot be attached to initial-registered capitals. Thus Reckitt and Colman account for only £100 of the 1938 total, though the capital was subsequently raised to £6,000,000. As the following table shows, the number of private companies registered has been maintained, and the compilers of the figures point out that in spite of the crisis period, the second half-year was in some ways better than the first:—

Years	Public Companies		Private Companies		Totals	
	Number Registered	Capital	Number Registered	Capital	Number Registered	Capital
1934 ...	446	69,761,622	12,029	73,778,784	12,475	143,540,406
1935 ...	430	54,870,733	12,673	81,763,377	13,103	136,634,110
1936 ...	418	49,359,643	13,324	108,861,595	13,742	158,221,238
1937 ...	416	37,619,099	12,306	75,971,184	12,722	113,590,283
1938 ...	197*	8,742,976	12,414	60,997,075	12,611	69,740,051

* Includes 103 companies limited by guarantee and associations not for profit without share capital.

Details of the separate groups provide few new features. Registered capital in the land and buildings section is by

far the largest and accounts for 18 per cent. of the grand total, while the food and the builders' groups are numerically the largest. The small number of public companies, and the lack of important changes between individual groups, underline the poor vitality of new company enterprise in 1938.

Investment in South America.—For several years South American holdings have provided little but disappointment for the investor, and the figures of investment in Latin America at the end of 1938, compiled by the *South American Journal*, have the sad distinction of recording a lower amount and proportion of interest received than ever before. The actual nominal total of investments of £1,149 millions is little changed from 1937, and shows only the normal decrease due to annual redemption. A rise from £496 millions to £656 millions in the amount of investments upon which there is no return is due mainly to the Brazilian default. Though announced in November, 1937, it did not greatly affect the receipts of that year, since most of the payments for 1937 had already been made. For all groups and countries interest and dividends received in 1938 were reduced by £6,423,000 to £19,681,000, and represented 1.7 per cent. against 2.2 per cent. of the nominal amount outstanding. Government bonds and railway stocks each yielded 1.2 per cent. on outstanding capital of £327.4 millions and £493.9 millions respectively. The banking, shipping and miscellaneous groups gave a better return, and so raised the general average by $\frac{1}{2}$ per cent. Of the £1,127.5 millions which can be allocated to the separate countries, Argentina accounts for the largest proportion—39 per cent. of the total—with Brazil and Mexico following next with 23 per cent. and 16 per cent. respectively. As much as £547 millions nominal of the stocks of these three countries are giving no return. At present there are but few signs that 1939 will prove any better than recent years, though the Chilean and Peru Guano loan payments should slightly swell the total interest receipts.

A New Era for American Utilities?—Close upon the Supreme Court's refusal to grant an injunction against the Tennessee Valley Authority respecting the sale of power in competition with sixteen private utility companies, comes news of an agreement which arouses hopes of improved relations in the future between the Administration and the private utilities. The Commonwealth and Southern Corporation has announced the sale of the electrical properties belonging to its subsidiary, Tennessee Electric Power Company, to the T.V.A., for a sum of \$78.6 millions. Negotiations have been long and difficult, and the resulting purchase price proves to be half-way between the \$90 millions asked by Commonwealth and Southern and the \$67 millions reported to be the T.V.A.'s previous best offer. Originally, however, the T.V.A. had not been prepared to pay more than the net asset value of \$57 millions, and the importance of the agreement lies, not in one purchase price or another, but in recognition of the principle that private utilities should be acquired as going concerns, with some allowance for the value of the equity. For there will remain in this case some \$8 millions for the Tennessee Electric Power Company common stock (which is almost wholly owned by Commonwealth and Southern), after using \$72 millions of the purchase price to redeem bonds and preferred stock. Though formal conclusion of the agreement is still awaited, the news has been well received by Wall Street, and reports that the City of Memphis may renew its attempt to buy the Memphis Power and Light properties suggest that the implications of the Commonwealth and Southern deal have been instantly seized upon.

The Bondholders' Year.—The fact that 1938 produced few settlements of outstanding debt problems is made manifest by the annual report recently published by

the Council of Foreign Bondholders. In the Council's view, the outstanding event in 1938 was the Anglo-German Transfer Agreement, which in the event was extended to provide for a permanent settlement of Reich and certain other German indebtedness, although the negotiations originally concerned only the future treatment of those Austrian loans guaranteed by the British Government. In other directions there was little success to record on behalf of the British bondholder, though Bulgaria, Roumania and Jugoslavia arranged for the external debt service for one or more years, and an offer was made in respect of the Peru Guano Loan. Strenuous efforts by the Council and bondholders' associations abroad (with whom conferences upon general matters as well were again held) to obtain a resumption of the Brazilian debt service met with no success, nor did informal discussions with the Greek Government produce any improvement on its present unilateral offer of 40 per cent. In such a year of upheaval as 1938 bondholders might well have fared worse. But it seems that certain countries are only becoming confirmed in their attitude towards their external debt obligations, and that the problems with which the Council constantly wrestles are becoming more, and not less stubborn. And, as the report points out, satisfactory settlements have been made more difficult by the uncertainties of the international outlook.

Uruguay Debt Offer.—The permanent settlement of Uruguay's sterling debt (foreshadowed in the Council of Foreign Bondholders' annual report and recommended for acceptance by the Council) proposes no increase in the $3\frac{1}{2}$ per cent. interest that has been paid since 1933. But it establishes regular sinking funds, and offers a cash bonus on those loans which have been receiving less than their nominal rate of interest. The largest Uruguay sterling loan, £12,819,260 of consolidated debt $3\frac{1}{2}$ per cent. sterling bonds, will continue to receive $3\frac{1}{2}$ per cent. and a semi-annual cumulative sinking fund of $\frac{1}{4}$ per cent. (against an original 1 per cent. annually). Actual interest will remain at $3\frac{1}{2}$ per cent. on the 5 per cent. Sterling Loan, 1896, the 5 per cent. Gold Bonds, 1914, the 5 per cent. External Gold Bonds, 1919, and the 6 per cent. Montevideo Loan of 1889 (which becomes a Government obligation), but a 5 per cent. cash bonus, payable in five annual instalments, is offered in compensation for the reduced service of the past five years. The annual sinking funds are to be 1 per cent. (rising to $1\frac{1}{2}$ per cent. after five years) on the two gold bond issues and $1\frac{1}{2}$ per cent. semi-annually on the Montevideo Loan, but the Sterling Loan of 1896 is to be rapidly retired by a semi-annual 10 per cent. non-cumulative sinking fund. Offers are also being made in Paris in respect of the 5 per cent. Gold Loans of 1905 and 1909.

Breweries and the Weston Case.—The Government's decision, announced last Monday by the chairman of the Brewers' Society, not to carry the Weston case to the House of Lords, has removed a difficulty which threatened to impede the breweries' policy of improvements by making the cost prohibitive. The matter at issue was whether local justices could continue to authorise extensions (so as to come under existing licences, unless the identity of the premises was entirely altered), or whether alterations to premises outside existing limits required a new licence and thus a payment for monopoly value. The licensee of a Weston-super-Mare hotel owned by Ansells had applied for the approval of enlargements, but, basing their decision on a similar case in Southampton, the justices said they had no power to grant the application. Last October the Divisional Court upheld the justices, on the grounds that the relevant part of the Licensing Act of 1910 was not meant to cover additional facilities for drinking when alterations involved premises not yet licensed as well as properties already licensed. But on January 20th this decision was successfully appealed against, and as the case is not being taken to the House of Lords the legal position is the same as it was originally, with the question whether or

not extensions fall within the ambit of existing licences remaining in the discretion of local justices. Many improvement schemes have been held up until this Weston case was finally settled, and the news has been welcomed by the industry. For some years modernisation has played a large part in brewery finance, and the prices of brewery shares have responded well to the removal of a stumbling-block.

Industrial Profits in December and January.—January was the sixth successive month in which reported net profits were lower, in the aggregate, than those earned by the same companies a year earlier. As is shown in the following table of recorded profits for each month over the past two years, the rate of decline is variable, but on the average of the last six months it has been of the relatively moderate order of 6 per cent.:

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1937		£	%	1938		£	%
Jan.	110	13,222,882	15.92	Feb.	202	29,792,378	5.52

Nov.	206	23,579,407	20.25	Dec.	171	18,534,750	a4.35
Dec.	152	18,101,112	14.69	1939			
Jan.	107	13,832,382	19.90	Jan.	152	16,316,851	a9.58

* After debenture interest.

(a) Decrease.

While the number of reports tends to fall off in December and January, the results just published are fairly representative. In December, however, rubber companies were responsible for over a quarter of the decrease in profits, although they form only a small fraction of total profits. In January, on the other hand, the satisfactory Woolworth results moderate the rate of decline. About half the decrease of £1,730,000 is due to textile companies.

Company Notes

Thomas Tilling Position.—The satisfactory upward trend of Thomas Tilling's profits continued in 1938. By rising from £480,147 to £535,531 profits showed a rate of progress hardly less than in the previous year. But four capital bonuses in eight years have given due recognition to the fact that increasing holdings, rather than rising earning power, have been the cause of expanding profits. A year ago a 25 per cent. capital bonus was distributed (arising from a writing-up of the book value of the Tilling and B.A.T. holding—due in turn to that company's bonus issues), and while the 10 per cent. dividend is maintained for the fourth successive year on the larger capital, no further capital changes are proposed at present. In the following table we show the allocation of profits:—

	Years ended December 31	1936	1937	1938
Profit.....	£	428,752	480,147	535,531
Debt interest and fees ...	£	24,142	23,748	23,335
Preference dividend	£	16,500	16,500	16,500
Ordinary shares				
Earned	£	388,110	439,899	495,696
Paid	£	329,600	329,600	412,000
Earned %	%	12.3	14.5	12.8
Paid %	%	10	10*	10
To general reserve	£	50,000	100,845	100,000
Carry forward	£	184,946	194,400	178,096

* Also 25 per cent. capital bonus.

The £82,400 increase in the amount of dividend, however, is somewhat larger than the rise in available earnings, and in order to maintain the allocation to general reserve from revenue the carry-forward is reduced by £16,304. As a result of last year's capital bonus and the consequent adjustments between reserves, the balance sheet shows several large changes. Apart from the rise in ordinary capital from £3,296,000 to £4,120,000, the general reserve stands at £1,001,861, against £58,793, but the capital reserve no longer appears. On the assets side, investments stand at £6 millions, against £4.7 millions, the capitalisation of bonus shares being shown as a separate item of £1,164,362. An increase of £180,860 to £2,617,554 in investments in subsidiaries is due to the purchase of further shares in companies that are already subsidiaries. Belief in the continued growth of the undertaking is suggested by a yield of no more than £4 7s. per cent. on the £1 ordinary shares at 46s. 3d.

English Electric Progress.—The dynamic qualities of the English Electric Company's earning power in recent years did not diminish in 1938. According to a preliminary statement, net profits of £501,709, after a special provision of £50,000 for taxation, compare with £436,185 earned for dividend in 1937 (after writing down issue expenses by £10,000), and if we assume all other expenses to be the same as a year ago, total profits would be some £115,000 higher at £667,000 and earnings for the ordinary stock 38 per cent., against 31 per cent. Progress during the past five years, as compared with an earlier record both erratic and unsatisfactory, has indeed been remarkable. Until 1937 (a year after the company had drawn clear of preference arrears) there had been no ordinary dividend since 1925, and in 1930 a reorganisation scheme was necessary. The company's dividend policy has, however, been conservative; a year ago the amount distributed was no more than a third of available earnings, and this year, while the market had expected some rise in dividend, the 10 per cent. payment is repeated. The company is engaged in the heavy section of the industry, and has been helped by orders both from the Central Electricity Board and from the Southern Railway. At least part of the good results for 1938 must be attributed to orders received rather earlier. Thus at the beginning of last year it was announced that orders outstanding were for an amount equal to invoices for 1937. Shareholders were reminded that the same rapid rate of progress could not continue indefinitely. But the anticipated growth in business is sufficient to warrant additional capital expenditure, as is indicated by the offer to be made to ordinary stockholders of one new £1 share at par for £3 stock now held. This would bring in some £480,000 gross, and represents a substantial addition to the company's resources. At a current price of 33s. 6d., including rights worth about 2s. 9d., the £1 units yield £6 19s. 6d. per cent., assuming the maintenance of the 10 per cent. dividend.

Bolsover Colliery Results.—In 1937, colliery companies were able to report that they had benefited not only from higher demand, but also, as the result of the selling schemes, from satisfactory prices. Yet reports covering financial years ending in 1938 for the most part indicate a setback in profits, although the general level of coal prices was on the whole well maintained. Increased costs have been partly responsible, but it is clear from the Bolsover report that the main factor has been reduced

demand. The directors point out that while average prices at pit-head were higher and domestic requirements kept up, the home demand for industrial purposes was much reduced, and a certain amount of export trade was lost to competing districts or countries, since the Midland district's export prices were above the general level. The effect for the company is a reduction in total profits by about £100,000. However, 1937 was somewhat exceptional, and the comparison with earlier years is favourable. We show below the allocation of profits in the past three years:—

	Years ended December 31		
	1936	1937	1938
Total profit	£628,869	£788,763	£688,797
Taxation	135,000	200,000	185,000
Fees	6,315	6,315	31,925*
Debt service	33,000	33,000	33,000
Preference dividends	62,500	62,500	62,500
Ordinary shares—			
Earned	392,054	486,948	376,372
Paid	223,896	280,362	242,158
Earned %	19.3	24.3	19.4
Paid %	11	14	12½
To reserves	149,246	175,000	125,000
Carry forward	84,332	115,918	125,132

* Including £25,505 provision for depreciation of investments.

A sum of £25,505 has been used for writing down investments—in the balance sheet the book value of the government securities and other general investments corresponds exactly to market value—and if this amount were not treated as a charge, earnings for the ordinary shares would be 20.8 per cent. The distribution is reduced by decreasing the cash bonus from 4 to 2½ per cent., and on this occasion no allocation is made to development reserve. Two new items in the balance sheet of £95,217 and £84,889 are in respect of shares in, and amounts due from, subsidiary companies respectively. The setback in 1938 does not detract from the satisfactory profits record in the long term or from the company's good financial position. At a current price of 37s. 3d., the £1 shares yield £6 14s. 3d. per cent.

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT

FEBRUARY 21 FEBRUARY 23

THE market displayed an altogether better sentiment, that showed itself mainly by an alert response to good news and a willingness to interpret events favourably. In the political sphere, Mr Chamberlain's reassurance upon our relations with France and the absence of further disturbances from Rome; in the economic sphere, the Southern and L.M.S. dividends, "Square Deal" developments, the clearing up of the Weston case—all these things, which in the market's former state of mind would have passed unappreciated, brought a firmer tone to most equity stocks.

As the week went on, movements in gilt-edged stocks became divorced from those in other sections. Improved political sentiment and renewed investment support brought good rises early in the week, War Loan and old Consols gaining as much as ½ on Monday. Later profit-taking brought its due reaction, and the marked recovery in industrials seemed to be at the expense of gilt-edged, which came on offer in mid-

week. Home corporations were subdued on reports of resumption of borrowing. Among Dominion stocks, which mainly followed the funds, New Zealand issues were supported. Brazilian bonds were the feature of the foreign bond market, on suggestions of a trade pact which would call for a resumption of the debt service. Japanese stocks reacted after early strength. French Railway Bonds were a bright spot among Europeans.

Home rails were much helped by the Southern Railway dividend, which in turn aroused hopes—fulfilled later—of full preference dividend payments by L.M.S. Great Western ordinary was supported on hopes of a 3 per cent. dividend, but reacted. Profit-taking brought some all-round hesitation in mid-week. Argentine rails lost ground, apart from support for Cordoba.

Industrials went ahead, consolidated their position, and then showed a strong upward movement, accompanied in mid-week by some expansion of business. Most iron and steel issues made good gains, with preference shown first for Tube Investments and later for Babcock and Wilcox. Coal shares tended to harden, but gave way slightly in early dealings on Thursday.

Rand Mines Ore Reserves.—Variations of considerable extent are shown by recent ore reserves estimates of many Rand mining concerns. A decline in value is also common, but to the extent of about one-third of a dwt. it may be regarded as an adjustment to meet the higher price of gold. In the Central Mining Rand Mines group, the Durban Deep expansion programme is reflected in an increase of 475,400 tons, while East Rand Proprietary shows a rise almost as large. An expansion of 313,000 tons by Crown Mines, though not inconsiderable, is scarcely impressive when related to a total exceeding 20,000,000 tons. These three companies have a further large tonnage locked up in shaft and safety pillars, not immediately available for stoping. The "Johnnies" group returns show a further sharp decline for Government Areas, and moderate setbacks for New State Areas and Van Ryn Deep. The Randfontein reserves of 13,550,000 tons are 550,000 tons down. Useful gains are shown by Robinson Deep and Vogelstruisbult, in the Gold Fields group, while the Simmer and Jack reserves, at 2,956,000 tons, are 572,000 tons higher, although the total represents only two years' supply for the enlarged plant. In the Anglo-American group the most notable gain is an increase of 580,500 tons by East Daggafontein, with an increased value of 6.18 dwts., but the Springs figures show a reduction of nearly 654,000 tons, while the value is reduced from 5.67 dwts. to 5.31 dwts. Consistent advances are shown by the Union Corporation group. The East Geduld reserves are 1,400,000 tons higher, while Grootvlei Proprietary shows an expansion from 2,500,000 tons to 3,750,000 tons, and Van Dyk from 1,800,000 to 2,250,000 tons, the value in the latter case being maintained at 5.8 dwts. Marievale has published its first estimate—1,100,000 tons value 6.1 dwts. over 39 inches.

The Week's Company Profits.—Gas companies and investment trusts are well represented among this week's results, which are summarised in our usual table of profit and loss accounts on page 326. This table covers 44 companies (apart from those for which comparable figures are not available), whose net profits of £4,507,000 are 5 per cent. less than the £4,741,000 earned a year ago. Aggregate net profits of the 196 companies reporting in 1939 are £20,579,000 against £22,340,000, a fall of 8 per cent. The week's results are discussed in preceding Notes and on page 312 under the heading "Shorter Comments."

Callenders were a strong feature among electrical equipment issues, but English Electric reacted in spite of the good report. Except for some mid-week profit-taking, motors (especially Austin) went ahead. Aircraft issues were relatively quiet. Textiles remained sluggish, and were not much affected by the Cotton Enabling Bill. Jute Industries preference, however, rose on the sandbags order. Breweries shared in the general improvement, and were given an extra fillip by the final settlement of the Weston case. Tobacco shares hardened after an irregular beginning. Bovril deferred, in the provision and catering section, gave way on the reduced dividend. Though business was quiet on Tuesday, miscellaneous shares took part in the general improvement.

Turnover in the oil market remained small, but apart from a slight reaction on Tuesday, prices were firmer. There was some speculative support for Mexican Eagles on rumours of an offer by the Mexican Government. One of the brightest individual features of the market was Attock Oil.

Relative firmness in rubber shares early in the week was not maintained, as it is feared that at the Committee's

meeting next Tuesday, a larger April-June quota may be decided upon. Business in the tea market scarcely expanded, but prices remained firm.

The tendency in the mining market was satisfactory, but on the whole quiet and not interesting. Among gold shares more attention was paid to West Africans than to Kaffirs. The undertone in Kaffirs was, however, firm, and Cape support was in evidence. And on Thursday there was some revival of interest. Rhodesian copper issues, and base metals generally, remained steady, but produced few movements of interest.

New York

THE improved tendency which began at the end of last week was on the whole maintained, though not much net progress was made, and there was a small temporary setback on Tuesday. Utilities were the week's outstanding feature, and but for them, activity was on a low scale. The announcement of the T.V.A. and Commonwealth and Southern agreement, started a chase after utility stocks, accompanied by a sharp improvement in quotations which for a short time spread to industrials. Enthusiasm, however, was overdone, and Tuesday saw some reaction on

profit-taking. Prices partly recovered later, but the amount of buying remained moderate. Steels were somewhat neglected, until, with motors and rails, they led the advance in late dealings on Wednesday. The market was indifferent to the higher steel output (estimated by *Iron Age* for the current week at 54, against 53½ per cent.), and General Motors' response to the dividend announcement was delayed until mid-week.

PUBLIC OFFER

Butlin's, Ltd.—Issue at par of £150,000 5½ per cent. first mortgage debenture stock and 250,000 6 per cent. cumulative participating redeemable preference shares. Stock redeemable at 102½ in 1966 or by drawings from 1938; or on notice 1947–57 at 105, or at 102½ thereafter. Preference participate up to further 4 per cent. after 6 per cent. on ordinary. Net assets, £514,761. Net profits, after depreciation before debenture interest, years to October 2: 1937, £56,210; 1938, £95,483.

BY STOCK EXCHANGE INTRODUCTION

Park Gate Iron and Steel Company.—Particulars of issue of £400,000 4½ per cent. first mortgage debenture stock. Redeemable at par October, 1963, from 1949 at various dates and rates, or by drawings from 1940. Messrs Helbert, Wagg and Company take issue at 98½ less 1½.

ISSUE TO SHAREHOLDERS ONLY

English Electric Company.—Issue of 481,156 £1 ordinary shares at par to holders as at February 14th, in proportion of one £1 share for £3 ordinary stock held. New shares rank *pari passu* with the present ordinary stock for all dividends out of 1939 profits.

BONUS SHARES

Property and Reversionary Investment Corporation.—A capital bonus is recommended of one new ordinary share for five held, by capitalising £30,000 of the capital reserve of £98,234.

SHORTER COMMENTS

Company Results of the Week.—Public utilities form a good proportion of the week's results. Both WANDSWORTH AND DISTRICT GAS and SOUTH SUBURBAN GAS report net profits which are practically unchanged. A reduction in quantities of gas sold was offset by an increased price. The fall in POWER SECURITIES net profits is entirely due to higher taxation and other expenses; total profits are almost unchanged at £137,363. While most investment trusts continue to show lower earnings, RAILWAY SHARE TRUST AND AGENCY, and RAILWAY DEBENTURE AND GENERAL TRUST report slightly higher income. Both companies are to change their present names, which are no longer appropriate. CINZANO, LTD., revenue in 1937–38 was £147,547, against £122,757, but net profits in 1936–37 included a transfer of £19,000 from exchange reserve. The latest accounts give effect to the repayment of 2s. 6d. on each ordinary share and the cancellation of preference shares. General industrial and political conditions are responsible for the sharp fall in ENGLISH CHINA CLAYS net profits from £82,044 to £45,446. The maintenance of GREENLEES AND SONS ("EASIEPHIT" FOOTWEAR) net

profits and dividend are satisfactory. The accounts, however, cover 53, against 52, weeks. GEORGE OUTRAM AND COMPANY report higher publishing, but lower advertising revenue, and higher costs. The dividend is repeated, although net profits have declined. A sharp fall in profits, from £74,702 to £47,056, is recorded also by COOK, SON AND COMPANY (ST. PAULS), who are paying preference, but not ordinary, dividends.

MISCELLANEOUS

General Mortgage Bank of Palestine.—At the annual general meeting of the bank held at Tel-Aviv, Mr S. Hodfien pointed out that, while this was the third time he had had to speak of the disturbed state of the country, he could again say that the bank's business had not suffered. And the bank's unique record was maintained—that it had never sustained a loss.

London Passenger Transport Board.—Interim dividend of 1½ per cent. on the "C" stock, as before.

International Nickel Company of Canada.—Quarterly dividend 50 cents per share. In each quarter of 1938 50 cents per share was paid.

South Suburban Gas.—Report for 1938 shows receipts from sale of gas £1,023,423 (£1,006,812); total income £1,526,119 (£1,490,662). Costs of manufacture £678,653 (£697,757), distribution £446,904 (£414,614). Net profit after expenses and interest, £153,152 (£148,439). Brought in, £21,582 (£18,443); pref. div. £55,016 (£52,672). Ordinary dividend 6 per cent., as before. Carry-forward £27,091.

Wandsworth and District Gas.—Report for 1938 shows receipts from sale of gas £1,142,244 (£1,113,281); residuals £340,925 (£331,464); total inc. £1,695,448 (£1,659,078). Costs of manufacture £824,229 (£805,928), distribution £376,768 (£378,318). Net profit after expenses and interest, £194,495 (£194,116). Brought in £28,372 (£31,591); total dividend on consolidated stock 7 per cent. (same), and £27,423 (same) allocated to employee co-partners.

Electricity Commission.—The Commissioners are issuing four-weekly statements (every fourth Tuesday) concerning loan sanctions issued to public authorities for electricity purposes. The first such statement shows loans sanctioned in: Nine months to December 31, 1938, £17,527,628 (£12,371,117); four weeks to January 28, 1939, £1,958,168; period from April 1, 1938, to above date, £19,485,796 (£14,124,429).

Edmundsons Electricity Corporation.—Results of the group's operations in January, 1939, as compared with January, 1938, show an increase of 20 per cent. of units sold.

The Bank of Nova Scotia.—Net profit year 1938, \$1,980,770 (\$1,982,140). Dividends, 12 per cent. as before, absorbing \$1,440,000. To pensions, \$185,000 (\$180,000). Premises, \$250,000 (\$250,000). Carry-forward raised from \$915,456 to \$1,021,227. Total assets, \$309,305,815.

Borax Consolidated, Ltd.—Net profit year to September 30, 1938, £405,284, compared with £486,232. Deferred ordinary dividend, 7½ per cent. (against 7½ per cent. plus a bonus of 2½ per cent.).

Pearl Assurance Company, Ltd.—Final dividend 27½ per cent., plus cash bonus of 2½ per cent., both tax free making 55 per cent. tax free for 1938 as before.

American Industries Trust.—This Trust (started in June, 1938) has issued its first progress report, which includes the composition of the fund as at December 31, 1938. In the half-year, eleven holdings were sold (all at a profit) and four repurchased at lower prices; net realised profit was over 9d. a unit.

Northampton Electric Light and Power.—Preliminary statement for 1938 shows net profit of £124,511, an increase of £6,675. Ordinary dividend maintained at 10 per cent., plus a jubilee cash bonus of 1 per cent.

Commercial Gas Company.—Gross receipts, 1938, £792,680, a decrease of £9,954. Ordinary dividend reduced from 5 to 4½ per cent. Transfer of £4,669 from reserve, which now stands at £84,389.

Lancashire Electric Light and Power.—Trading profits, 1938, £552,708, against £506,278. Final ordinary dividend, 5, making 7½ per cent. for year (same).

Power Securities Corporation.—Net profit for 1938, £95,298, against £104,811. Preference dividend, £25,375 (£26,833). To general reserve, £30,000, against £50,000 to investment reserve. Ordinary dividend maintained at 7 per cent. Carry-forward reduced from £16,384 to £15,708.

Scottish American Investment Company, Ltd.—Net earnings, 1938, £144,736, a decrease of £34,146. Ordinary dividend, 7 against 7½ per cent. Market value of investments showed a depreciation of 11.03 per cent. (against 17.8 per cent.).

Sterling Trust, Ltd.—Income for 1938, £199,487 against £210,043. Debenture interest, £85,450 (£88,396). Net revenue, £97,458 (£104,133). Written off investments, £22,157 (£40,000). Preference dividend, £31,901. Ordinary dividend reduced from 7 to 6½ per cent. Carry-forward raised from £68,861 to £70,790.

Mercantile Investment and General Trust.—Final ordinary dividend, 8½ making 12 per cent. for year, as before. Net revenue, £233,476 (£245,398). To general reserve, £15,000 (£60,000). Carry forward £120,537 (£118,550).

United States Debenture Corporation.—Net revenue for year to January 31, 1939, £167,648 against £181,004. Ordinary dividend, 10 per cent., as before. To dividend reserve, £9,898 (£23,254). Carry-forward remains at £100,000. Average yield of funds was 5.1 against 5.6 per cent.

Dickins and Jones, Ltd.—Profits for year to January 31, 1939, £106,893, a decrease of £18,204. Final ordinary dividend 5 per cent., making 10 against 12½ per cent. For tax and N.D.C., £10,500 (£7,000). To leases, £7,930 (£12,500). For improvements, £5,000 (£10,000). Carry-forward reduced from £47,861 to £39,130.

Bovril, Ltd.—Final dividend of 3½ per cent., making 6 per cent. for 1938, on £1,000,000 deferred capital. For 1937, dividend was 6½ per cent. To reserve, £35,000 (£65,000). Carry-forward raised from £71,364 to £73,852.

I.C.I.—Cerebos Salt.—As the result of a new agreement between most of the leading salt manufacturers—including Imperial Chemical Industries—Cerebos, Ltd., has raised its prices to the retail trade by about 10 per cent. for certain kinds of salt.

Whitworth and Mitchell, Ltd.—Trading conditions during the half-year to December 31, 1938, have been extremely difficult, but have resulted in a profit. The half-year's dividend on the preference shares has been paid to that date, but no interim ordinary dividend can be paid on the ordinary shares.

Scottish and North Country Investment Fund.—Progress report on operations for the half-year ended February 3, 1939, shows distribution for half-year at rate of £4 7s. gross per cent. per annum on initial price (3.80d. net per unit for the half-year) compared with £4 12s. for previous year. The report shows changes in the composition of the fund. It also contains a statement from the auditors, which is the first auditors' report in the terms recently published by Municipal and General. They calculate the yield on units as £5 9s. per cent. gross, at 17s. per unit.

Industry and Trade

A Cotton Enabling Bill.—The Cotton Enabling Bill, sponsored by the Joint Committee of Cotton Trade Organisations, has passed a further milestone on the long road to the Statute Book. After the Board of Trade had been informed that the proposals had received the support of more than two-thirds of the producing interests concerned, Mr Oliver Stanley announced in the House of Commons on Thursday last week that the clauses of the Bill would be published this week and that an official ballot would then be taken to ascertain the views of the industry. The draft Bill, which has now been published, embodies the Committee's proposals. It defines the methods by which the reorganisation of the industry is to be carried out and provides the administrative machinery for this task. The ballot papers, on which each firm which appears to be within the industry is invited to record its vote for or against the draft Bill by February 25th, have already been sent out. The weight attached to each vote will be determined with reference to the return made by each firm to the Census of Production Office in connection with the Import Duties Act Enquiry of 1937. No ballot papers have been sent to merchants, and the Board of Trade has invited the Chambers of Commerce of Manchester, London and Glasgow to ascertain the views of their members interested in the Bill. The trade unions chiefly concerned have also been asked to express their views. The fate of the Bill will soon be known. An Enabling Act, however, will do no more than provide an opportunity for re-organisation; its efficacy in improving the position of the industry will depend entirely on the use which will be made of the opportunity it provides.

Monopoly in Cement.—In a Note on the cement industry on page 502 of *The Economist* of December 3, 1938, we commented on the intention of an outside concern to cut into the market by the erection of factories in Kent and Devonshire. The decision to risk the heavy capital expenditure necessary to secure a slice of the cake was prompted by the profitable level of prices. In contrast to those of most other materials, the price of cement was raised at the end of 1937, when business activity began to decline, largely on the ground of the rise in coal prices. Early last year the Associated-Alpha-Tunnel groups, controlling 80 per cent. of the industry's total capacity, entered into a close working agreement, "cemented" by an exchange of shares. It is now reported that the plan to erect two new factories, which had caused resentment among the big groups, has been abandoned. It would be interesting to know the reason for this change of plan. Is it because the interests sponsoring the scheme were given to understand that their venture might be unprofitable? In other words, have the leaders of the established industry threatened to drive the newcomers out of business by price-cutting? Such an explanation would not be at all surprising. Meanwhile, plans are said to be afoot to close the ranks of the industry by a revival of the quota scheme abandoned at the end of 1937. But, whereas the old scheme was based on cash payments for under-production and penalties for over-production, the scheme now apparently under discussion would involve the distribution of orders to each unit of the industry by a central organisation, the share of individual concerns to be based on the volume of orders secured in the preceding twelve months. The prospects of a fall in consumption, and the possibility of a new bout of price-cutting, recently forecast by Lord Wolmer, chairman of the Cement Makers' Federation, have obviously encouraged the industry to strengthen its position. Asked in the House of Commons whether he would recommend the removal of the import duty on foreign cement, all that the President of the Board of Trade would

say was that it was open to consumers to make representations to the Import Duties Advisory Committee.

Two Million Unemployed.—As usual, employment declined, and unemployment rose, sharply between December and January. The number of registered unemployed in Great Britain (inclusive of agriculture) rose above two millions for the first time since February, 1936. The increase between December and January was 208,000, compared with one of 163,000 a year ago. Simultaneously, the estimated number of insured persons aged 16 to 64 employed in Great Britain (exclusive of agriculture) declined by 168,000, compared with a fall of 125,000 a year ago, 19,000 in 1937 and 238,000 in 1936.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN

1939						
Jan. 16	2,039	93.0	1,594	...	11,284	110

The returns do not point to any significant deterioration in business activity, for the somewhat bigger increase in unemployment, and reduction in employment, than at the turn of 1937 can be attributed largely to the fact that the weather was unfavourable to outdoor work on the day of the count. Our index of employment, which is adjusted for seasonal variations, remained unchanged in January, but the unemployment index shows a further

rise, due in part to the increase in the working population. Compared with January, 1938, employment has been fairly well maintained, the figures for last month showing a decline of only 35,000. On the other hand, the number of registered unemployed showed an increase of 211,000 between January, 1938, and January, 1939. A geographical analysis of changes in unemployment between December and January shows increases in all the administrative divisions. The seasonal nature of the movements is revealed by the figures for individual industries. Thus, the number unemployed rose by 54,001 in building, 29,158 in distribution, 14,556 in agriculture, 9,416 in public works contracting and 3,514 in stone quarrying and mining. But there were also significant increases in metal goods manufacturing, engineering and in the woollen and worsted trades. Unemployment declined by 12,917 in coal-mining and 4,100 in iron and steel. It remains to be seen whether the next few months will show the usual seasonal reduction in unemployment.

Larger Imports of Eggs.—Imports of eggs in shell in 1938 reached the record level of 27.7 million great hundreds, thus exceeding by a million great hundreds the previous record established in 1930, before the imposition of import duties in 1932. The table below, which gives British imports in 1930 and the last three years, shows that the expansion in imports between 1937 and 1938 came almost entirely from foreign countries. A small decline in imports from Denmark (still the largest supplier of the British breakfast) was far more than counterbalanced by increased supplies from almost every other country. It is interesting to note that the countries of South-Eastern Europe, who have been most affected by the German trade drive, have largely increased in the last two years their shipments of eggs to this country. Egg prices were affected in 1938 by the dry spring and long mild autumn, which maintained production at unusually high levels for these periods both in England and in other European countries.

On the average of the year, however, egg prices were slightly higher than in 1937, in spite of the increase in imports, which far more than offset the small decline in home production. Suppliers, both at home and abroad, of eggs to the British market are therefore likely to have had a fairly profitable year in 1938, when falling prices of feeding stuffs coincided with increased consumption and a slight rise in prices.

The Tin Dilemma.—Judged by price movements, the international control of tin exports has achieved a fair measure of success in the past year, when the apparent world consumption of the metal showed an appreciable decline. While the world's estimated intake of tin fell from 17,000 tons in December, 1937, to 11,300 tons in December, 1938, the average price of the metal in London rose from £190.6 to £214.6 per ton. But this result was achieved by a drastic curtailment of the exports of the countries adhering to the control scheme. The quota was successively reduced from 110

per cent. of the agreed basic tonnages in the last quarter of 1937 to 45 per cent. in the second half of 1938 and in the first quarter of 1939. An even more drastic cut has been averted by the expedient of withholding from the market nearly one-quarter of the permissible exports since July, 1938, as a reserve for evening out future price fluctuations. As the total stocks of tin (visible supply and carry-over), which increased only from 25,711 tons at the end of December, 1937, to 29,494 tons at the end of the past year, include the supplies accumulated by the Buffer Pool, the stocks actually available to the market must now be appreciably lower than a year ago. So far, however, prices have obstinately refused to rise to £230 per ton, the figure at which the Pool originally intended (so it was reported) to augment market supplies from its reserves. Despite the recovery on the commodity markets during the past fortnight, tin could still be bought at £213 15s. per ton on Wednesday. But the Pool cannot continue to add to its reserves indefinitely. Unless, therefore, demand shows an early improvement, which is a possibility, the industry will have to choose between the two unpleasant alternatives of reducing the export quotas below 45 per cent. of the agreed standard tonnages for the second quarter of this year or allowing prices to fall.

Production of Small Fruit.—Since 1931, imports of small fruits into the United Kingdom have been restricted by high duties. Imports of strawberries, for instance, fell from 90,000 cwts. in 1931 to 6,000 cwts. in 1934, since when there was a slight recovery to 26,000 cwts. in 1937. Similarly, imports of currants declined from 103,000 cwts. in 1931 to 11,000 cwts. in 1937, and imports of preserved fruits and fruit pulp have also fallen below the 1931 level, except for a temporary peak in 1933. In spite of this decline in imports, the acreage under small fruits in England and Wales has fallen steadily for some years past, as is revealed in the table below:—

AREA UNDER SMALL FRUIT*

	1928	1930	1934	1938
Total (acres)	64,721	66,209	61,033	49,283
of which				
Strawberries	20,400	21,500	24,500	20,600
Raspberries	6,200	6,600	6,800	4,700
Black currants	13,500	13,400	9,500	10,036
Red and white currants	4,400	4,300	3,100	2,361
Gooseberries	18,700	18,500	13,200	9,331

* Including small fruit in orchards.

A large part of this decline must be ascribed to the increasing incidence of disease, which has particularly affected the cultivation of strawberries. Highly infectious viruses are now widespread in many of the fruit-growing districts, and until immune varieties of strawberries have been established, cultivation will continue to fall in the former fruit-growing districts, such as Hampshire and Kent. It is worth noticing that the area under small fruit in Scotland has slowly increased in recent years; a marked expansion in the area under raspberries has more than counterbalanced a fall in the acreage of strawberries and other fruits.

The London Metal Exchange.—After the unprecedented speculative activity in base metals in 1937, it was only to be expected that the turnover in 1938 of the London Metal Exchange would show a sharp decline. The following table, which covers the trading of both the official mid-day meetings and of the afternoon sessions, shows the official turnover figures in recent years for the four leading base metals:—

TURNOVER OF THE LONDON METAL EXCHANGE
(Long tons)

	Copper	Tin	Lead	Spelter
1935	597,300	68,100	259,200	127,300
1936	457,200	78,300	335,100	248,300
1937	711,400	101,900	482,000	594,700
1938	475,400	91,100	387,300	296,500

Compared with the two earlier years, however, it will be seen that the 1938 turnover of three of the metals registered respectable gains; dealings in copper were affected during ten months of 1938 by the restriction of output, which was in force for only six months in 1936. Taken as a whole, therefore, these figures indicate that the London Metal Exchange has maintained its position as the clearing-house for the international trade in base metals, although metal exchanges in other countries have declined in importance in recent years.

Bacon Supplies in 1938.—Imports of bacon into this country, regulated since 1933 by an import quota, were slightly smaller in 1938 than in 1937, but appreciably larger than in 1936. Home production in 1938 is not yet known, but as there has been a steady decline in the total number of pigs in Great Britain during the last three years, output will certainly have been smaller than in 1937. This reduction in total supplies caused a rise in bacon prices in 1938, as is shown by the following table from *Weekly Dairy Produce Notes*:—

	BACON PRICES ON LONDON PROVISION EXCHANGE			
	1932	1936	1937	1938
	s. per cwt.			
English No. 1 sizeable—				
March	93.3†	94.9	94.0	102.0
June	89.3†	93.0	87.0	98.3
September	83.0†	96.9	103.0	99.0
December	81.0†	93.0	98.3	98.0
Annual average	86.6†	93.3	95.6	99.0
Danish No. 1 sizeable—				
March	55.6	94.6	90.0	102.3
June	60.0	92.0	88.0	98.3
September	66.9	100.0	103.6	99.0

Total imports	11,391	6,570	6,926	6,868

† Prices of British Wiltshire green at Bristol.

* Output in 1930-31.

During the last three years bacon prices have been kept at a fairly stable level, through the regulation of supplies; nevertheless, the seasonal variations in prices, due partly to the uneven distribution of home production throughout

the year and partly to fluctuations in demand, have not been noticeably reduced. There seems, however, no reason why the fall in home production in 1938 should have been allowed to bring a further rise in prices when the volume of imports could easily have been expanded to meet the deficiency.

Recovery in Steel Production.—Last December the output of pig iron and steel suddenly fell to the lowest level since February, 1934, and August, 1933, respectively. In commenting on these figures we reached the conclusion that the decline in December was due largely to the fact that, in view of the price reductions at the turn of the year, consumers took delivery of no more materials than they actually needed in that month. The returns for January, given below, tend to confirm this inference, for January given below, tend to confirm this inference, for buted to seasonal influences.

PRODUCTION OF PIG IRON AND CRUDE STEEL
(In thousands of tons)

	Pig Iron		Steel Ingots and Castings		
	1937	1938	1937	1938	1939
January ...	650.7	761.1	500.5	998.9	1,081.4
February ...	603.7	693.3	—	995.9	1,057.6
March ...	680.3	714.6	—	1,109.5	1,115.8
April ...	680.7	661.0	—	1,080.4	938.6
May ...	696.3	633.9	—	1,047.3	957.0
June ...	699.3	541.5	—	1,106.4	776.1
July ...	729.3	507.8	—	1,059.2	683.2
August ...	714.0	443.0	—	987.7	658.9
September ...	726.6	429.8	—	1,163.0	754.7
October ...	769.6	469.4	—	1,133.6	854.8
November ...	762.3	461.5	—	1,178.3	860.0
December ...	783.8	445.8	—	1,103.8	655.7

While the output of both pig iron and crude steel showed a decline at the turn of the two preceding years, production registered an appreciable increase in the past month, which can scarcely be attributed to the orders for steel shelters.

Correction.—The figures for the stocks of butter in cold storage given on page 264 of last week's issue of *The Economist* should be amended to read 134,300 cwts. and 254,700 cwts. respectively.

INDUSTRIAL REPORTS

SOME of the reports from industrial centres are a little more cheerful this week mainly as a result of the fall in political tension. While the home demand for coal remains fairly active, there are also indications of an increase in export inquiries. Business on iron and steel markets, though still small, is a little more active. There has been quite a spurt in some of the textile trades. Business in cotton yarns and piece-goods has increased, and sales of the latter were in excess of current output. The jute trade is more active and profit-margins have widened, mainly as a result of the heavy demand for sandbags. The Wholesale Textile Association reports that business has opened well in February in all departments. The provisional terms of the agreement between the railways and the road haulage industry are discussed on page 290.

Coal

Sheffield.—Demand for most classes of industrial coal is moderate, and prices are steady. Pressure for household fuel has eased, but demand remains good. Business in gas coal is active, and good deliveries are being

made to electricity works. Stocks of coking smalls are accumulating. Blast-furnace coke shows some improvement, and contract renewals are being made at 21s. 8d. per ton on rail at ovens. Large selected patent oven coke and graded coke for central heating is steady at 27s. per ton at ovens.

Although export inquiries are rather more numerous, there is not much new shipment business.

Newcastle-on-Tyne.—There is a more cheerful tone in the coal market, as a result of the improvement in foreign inquiry. Screened steam coals continue in keen demand, collieries in both Northumberland and Durham being well booked ahead. Graded fuels and smalls are offered freely for any position. Durham gas and coking collieries are comfortably placed, but some of these collieries would be glad of more forward business. Patent oven coke remains a very quiet market.

Glasgow.—Supplies are readily taken up. The operation of the Anglo-German agreement is expected to make for better conditions. Inferior grades of domestic fuel are slightly more plenti-

ful, but in general the collieries have several weeks' arrears of deliveries to make good, and in Lanarkshire splint coal is still being taken up for household consumption. This area is little concerned with export business for the time being, orders in any case being difficult to negotiate, owing to price differences. Ayrshire is comfortably placed for business for all qualities, as are Fife and the Lothians, although odd parcels of round coal and of doubles and singles could be obtained.

Cardiff.—There has been no improvement on the Cardiff coal market. One or two important contract inquiries have been reported, including one for the supply of 200,000 tons for Dutch electricity works, but day-to-day transactions are negligible. Shipments at the South Wales docks improved slightly last week, but at 323,700 tons they were about 50,000 tons less than in the corresponding period last year, and for the first five weeks of the year the decrease amounts to 275,000 tons. The market in dry sized coals, including grains, is firm; other smalls, particularly coking and steam classes, are weak. Exporters are expressing dissatisfaction at the

continued decline of trade with France notwithstanding the assurances given under the agreement of December 10th last. Prices are nominally unchanged.

Iron and Steel

Sheffield.—The disparity between pig iron and scrap prices appears to be hindering sales of the former. Nevertheless, there is a slightly better inquiry for forge iron, and foundry iron is in fairly steady demand. There is very little forward buying, sales being to supplement deliveries under contracts not yet exhausted. There is little change in hematites, and apart from common bars there is not much doing in finished iron.

There is a fair market for basic and acid steel billets, and some improvement is noted in the call for wire rods and strip. Structural steel business continues unsatisfactory.

The iron and steel scrap market is making a rather better showing, but there are still heavy supplies of imported material to be disposed of, and until these are out of the way, sales of home-produced scrap will probably show no great expansion.

★

Middlesbrough.—The demand for Cleveland pig iron is only moderate; there is no inducement for consumers to place forward contracts and the present output is more than sufficient to meet requirements. Some foundries are using cast-iron scrap in place of pig iron. East Coast hematite makers are still heavily stocked, but deliveries are steady and stocks are not increasing.

The sheet departments of the steel works continue busy and it is expected that orders for light sections will shortly be placed by the Government in connection with the A.R.P. shelters. Steel for ordinary requirements is quiet, due to the lack of demand from the building trades and the shipbuilding yards.

Iron and steel scrap is in better demand, and deliveries against old contracts are improving. More blast-furnace coke is going into consumption; whilst foreign ore imports are steady, there is very little new business.

★

Glasgow.—Many branches of the industry are now busy on work for the Services and it is anticipated that, after the initial difficulties are overcome, many plants will be running to capacity. Commercial business is showing an improvement, both in the home and export markets. The demand for practically all classes of steel material is good but the steelmakers are unlikely to be able to keep plants working to capacity until there is a better demand for shipbuilding material. Fabricators are busy, and they have orders on books sufficient to ensure full-time working for months to come.

★

Cardiff.—Shipments of tinplates at Swansea are a little more active and last week they totalled 5,564 tons, compared with 2,280 tons the previous week. The bulk of these deliveries, however, came from stock, and with no appreciable change in the inland market

position production continues at the low rate of only just over 40 per cent. of capacity. There is a better demand for sheets and the supply for air raid shelters is increasing.

★

News from Abroad.—There are still no signs of a seasonal revival on international steel markets. On the contrary, trade has recently deteriorated in some respects, partly because buyers doubt the ability of the Cartel to maintain prices in view of the unsatisfactory demand. As on former occasions, however, the Comptoirs are of the opinion that a general price reduction will not result in a substantial and lasting increase of orders.

At a meeting of the managers of the Comptoirs on January 28th in Brussels, it was decided that the price reductions on the British market for merchant bars, sections and thick plates should be applicable in the Empire. The meeting also dealt with the Australian competition on some Far Eastern markets and decided to send a delegation to Australia. A conference of the Executive Committee of the Cartel, which was convened at Cologne, has been postponed because the question of the Czecho-Slovakian quota, which was on the agenda, is not yet ripe for a solution. It is reported that the gold-sterling conversion ratio is not likely to be altered until the pound has found its new level.

Considering the poor demand prices have remained relatively stable. A substantial South African inquiry for plates is being negotiated, and the price of thick plates for this market has been reduced from £9 7s. 6d. per ton to £9 5s. A Japanese inquiry for 50,000 tons of semi-products and plates has not yet been secured and it is reported that an Australian offer is being considered. Several substantial inquiries from South America have been received, and Holland has bought several thousand tons of ship-plates.

Textiles

Cotton (Manchester).—The market has been more cheerful, due largely to the improvement in the European political situation. Inquiry in yarn and piece-goods has broadened and more business has been done than for some little time back. The raw cotton market remains dominated by the uncertainty concerning the future agricultural policy of the United States Government, but there has been very little change in prices.

An increased business has been done in yarns. In the American section most of the buying has been in the coarser counts. Rather more orders have been secured in Egyptian qualities for home consumption. Freer buying has been reported in coarse Egyptian counts for Germany, and some mills that generally use American cotton have turned to this trade.

Sales of piece-goods have shown a distinct improvement, and quite a number of manufacturers have sold more than a week's production. The chief support has come from the home trade and leading wholesale establishments have replenished supplies to an encouraging extent. Very fair orders

have been placed by the Government in materials suitable for the defence forces. Buying for export has been irregular. Delivery instructions against old contracts have come in more freely.

★

Jute (Dundee).—After the placing of orders in Calcutta by the British Government for 200 million sandbags, the prices of raw jute, jute yarns and jute cloth all advanced strongly. The sandbags have to be delivered at the rate of 25 millions this month and in March, and at the rate of 50 millions in April, May and June. This order could not have been undertaken by Dundee manufacturers, who are already delivering almost as much as they can. They are all busier and prices for yarns and cloth have risen.

Since December 1st the price of raw jute has risen by £5 7s. 6d. per ton for the full group of Daisee-2/3, but until this week quotations for yarns and cloth have scarcely moved. Now, however with Daisee-2/3 selling at £23 7s. 6d. per ton for the full group, spinners in many cases are refusing to quote, while others indicate that they might accept 2s. 4d. for common 8-lb. cops and 2s. 5d. for 8-lb. spools. Manufacturers are now asking 2½d. for 10-oz. 40-in. hessians and 2¼d. for 8-oz., an advance of ¼d. per yard.

The market in Calcutta goods has been firm; 10-oz. 40-in. hessians have risen by 1s. 10d. and 8-oz. by 1s. 5d. during the past week. The sandbag order of the British Government should assist in reducing the huge stocks of hessians in Calcutta by June 30th, even if output is not curtailed. Calcutta is anticipating further orders for sandbags from France and America.

THE COMMODITY MARKETS

AFTER last week's recovery, the prices of the principal primary products have shown little change. For example, Moody's index of the prices of staple commodities in the United States (December 31, 1931 = 100) for Wednesday was 142.9, the same as a week earlier.

Wheat and raw sugar were slightly cheaper. In view of the meeting of the International Rubber Regulation Committee next Tuesday, the rubber market was a little nervous and prices tended to sag. Raw cotton was marked up a little, for the American Government is unlikely to depress prices by heavy liquidation of its holdings.

Copper, lead, spelter and tin were all a shade cheaper.

There is still no evidence of a restocking movement, and most consumers are content to purchase only for immediate requirements.

Metals

Copper.—After rising to £43 3s. 9d. per ton in the first half of the week, the standard cash price relapsed owing to poor demand and closed on Wednesday at £42 10s. per ton, a net loss of 6s. 3d. The trend of con-

COMPANY MEETING

GENERAL MORTGAGE BANK OF PALESTINE, LIMITED

INCREASE IN YEAR'S PROFITS

PROOF OF SOUND POLICY

The seventeenth annual general meeting of the General Mortgage Bank of Palestine, Limited, was held on February 5th last in the bank's offices at Tel-Aviv.

Mr S. Hoofien (the chairman) said that for the third time in succession he had to draw attention to the disturbed state of the country in which the bank's business was concentrated. There had been a recrudescence of unrest and violence; immigration had been severely restricted and initiative and enterprise had been more than ever discouraged. A conference had now been called, and at one time the British Government apparently hoped that it would succeed in reconciling conflicting aspirations on this occasion. It had, however, transpired that the Arab delegation to the conference was entirely dominated by the Mufti, whose policy had been condemned by the Royal Commission, by successive Secretaries of State and by the Government itself. The delegation was entering the conference with a programme that left no hope of any agreed solution, and the British Government would apparently have to impose its own solution. It was only to be hoped that it possessed one.

BUSINESS MAINTAINED DESPITE DISTURBANCES

As last year, the directors were able to state that the bank's business had not suffered; the bank's policy had been put to the severe test of three years of disorder and depression, and it had emerged success-

fully. Again, the bank's unique record of not having sustained any loss had been maintained during the year under review.

No interest which was not actually collected was credited to profit account. Arrears of interest amounted to less than one-half per cent. of the aggregate amount outstanding. It would have been an easy thing to reduce these arrears, but the bank saw no reason, so long as the bank's interests were entirely safeguarded, to use harsh means where default was genuinely due to adverse general circumstances, and the courts were following a similar policy.

As in the previous year, the major part of the loans granted had been used for the repayment of existing private mortgage loans, and the scope for building loans was still comparatively narrow.

The item "Mortgage loans" in the balance-sheet had gone up by £P.439,191, and it now stood at £P.3,043,421.

The share capital had again been increased through the issue of £P.25,000 ordinary shares, and it now stood at £P.475,000. Additional working capital had been provided through the issue of £P.500,000 5 per cent. twenty-year debentures.

DIVIDEND PAYMENTS

The directors were glad to be able to say that business results had again been most gratifying. A net profit of £P.49,310 (as against £P.43,746 in the previous year) was available after the usual ample provision for contingencies and for debenture interest had been made. During the year an amount of £P.2,500 had been transferred to reserve account out of premium on shares issued, and a further amount of £P.15,000 had been added out of the year's profits. The directors again recommended the payment of a final dividend of 4½ per cent. on the ordinary shares and one of 3½ per cent. on the preference shares, thus making total dividends of 7½ per cent. on the ordinary and 6½ per cent. on the preference shares for the year. A *pro rata* dividend was proposed on the ordinary shares issued in the course of the year.

The report and accounts were unanimously adopted.

sumption outside the United States continues to be satisfactory. In the U.S.A., however, sales to domestic consumers totalled only 14,500 short tons in January, compared with the very low level of 25,500 short tons in January, 1938. These sales are, of course, much smaller than the country's consumption, but during the whole of the past month consumers expected a reduction in the domestic price, which is still kept at its 1938 peak of 11.25 cents per lb. In the last few days, however, confidence in the ability of the American producers to hold this price has strengthened owing to the enforcement of restriction of production by the three major concerns.

★

Tin.—The price of tin closed £2 5s. down at £213 15s. per ton. Buying was very slack throughout the week, although tinplate operations both in Wales and the United States have improved slightly since the second half of January. The backwardation has now widened to £1 5s. per ton, and it is expected that it will widen further within the next few weeks. At any rate spot supplies are limited in spite of the recent increase in the visible supply. The prospects of the tin market are discussed in a Note on page 314.

★

Lead and Spelter.—The cash price of lead closed 3s. 9d. down at £14 5s. per ton, while that of spelter lost 5s. to close on Wednesday at £13 7s. 6d. per ton. Both markets suffered from the disappointing building trade returns and the continued high level of production. According to the "Metallgesellschaft," the world's lead smelter production outside the U.S.A. reached 1,145,702 metric tons in the first eleven months of 1938, against 1,139,371

metric tons in the same period of 1937, and the output of zinc smelter outside the U.S.A. advanced from 1,026,021 metric tons to 1,051,057 metric tons.

Grains

GROWERS in northern Argentina are reported to be selling their wheat freely to the Grain Board and storage space is rapidly filling up. The prospect of sales pressure from the Argentine and the lack of fresh buying on Indian account has brought a dull tone into the wheat market and prices are generally lower than a week ago. The Russian demand for the Far East has been shifted from Australian to American wheat, but there has been some interest in Australian grain on Chinese account. Estimates of the forthcoming Argentine maize crop continue to vary widely, and demand remains restricted; there was, however, a better trade in feeding barley, although the competition of cheap wheat and lower maize prices prevents any rise in prices.

Other Foods

Provisions.—Prices for English eggs continue to decline with the approach of the seasonal expansion in production. There was again a slow trade in fresh meat, with a tendency towards lower prices. Continental butters were dearer.

★

Colonial Produce.—Prices for home refined sugar were reduced by 1½d. per cwt. on Monday, but were later restored to their previous level, with an improved demand. The market in cocoa has been steady, with a slight improvement in Accra prices.

Miscellaneous Commodities

Fruit and Vegetables.—Larger supplies of green vegetables brought a reduction in prices, and inferior lots have been hard to sell. A good demand continues for the limited supplies of English apples.

★

Rubber.—Prices fluctuated within narrow limits during the past week, according to changes in political sentiment, but there has been only a small volume of business transacted, pending the meeting of the International Committee in a week's time. The price of standard ribbed sheet on the spot closed on Wednesday at 7½d. per lb.

★

Furs.—The favourable tendency which prevailed at the opening of the London winter fur sales last week has been well maintained. The demand continues good; some classes of skins, particularly Persian lambs, were entirely cleared, and most types showed higher clearances than at the recent sales. Prices of nearly all of the skins offered this week recorded a gain of 10 to 15 per cent. on the autumn sale in October.

This diagram has been drawn to show, by comparison with St. Paul's Cathedral, the approximate *bulk* of goods passing through the Port of London.

Finance

GOVERNMENT RETURNS

For the week ended February 4, 1939, total ordinary revenue was £46,786,000, against ordinary expenditure of £18,010,000. Thus, excluding sinking fund allocations and Defence expenditure from loans, the deficit accrued since April 1st last is £132,320,000, against a deficit of £65,804,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On February 3rd applications at £99 17s. 5d. per cent. for bills to be paid for on Monday, Wednesday, Thursday, Friday and Saturday of following week were accepted as to about 13 per cent. and applications at higher prices in full. Applications at £99 17s. 6d. for bills to be paid for on Tuesday were accepted in full. £20·0 millions of Treasury bills are being offered on February 10th.

OIL OUTPUTS

Anglo-Ecuadorian Oilfields, Ltd.—Output for January, 1939, 23,765 tons.

Attock Oil Company, Ltd.—Output for January, 1939, was 81,526 barrels. Increased output is due to the new producer reported on January 10th. Output has now been restricted to suit available storage and refinery capacity.

British Controlled Oilfields, Ltd.—Total output week ended February 4, 1939: 12,961 barrels. Total output, January,

1939: 51,576 barrels. Total shipments, January, 1939: 50,265 barrels.

Tampico Oil, Ltd.—The total output from the company's properties in Mexico during the month of January was 1,543 barrels, in respect of which the royalty due to Tampico Oil, Ltd., was 116 barrels.

Trinidad Petroleum Development.—Output week ended February 4, 1939: 56,224 barrels. Output for January, 1939: 243,393 barrels. Deliveries for January,

1939, including purchased oil: 245,400 barrels.

Venezuelan Oil Concessions, Ltd.—Total output for week ended February 4, 1939: 1,234,392 barrels.

Trinidad Leaseholds, Ltd.—The figures for January, 1939, are:—Crude oil production (own fields only), 439,551 barrels; crude oil purchases (including own share of oil from jointly-operated fields), 526,486 barrels.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in G.N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis. (h) Yield on 4½% basis. (i) Yield on 5% basis. (j) Yield worked on 5½% basis. (k) Yield worked on 6% basis. (l) Yield worked on 6½% basis. (m) Based on payment of 2½%. (n) To redemption at par, in year shown. (o) Yield worked at 5% of face value. (p) Yield on 2.0925% basis. (q) Yield based on 10% basis. (r) Yield worked on a 14% basis. (s) Yield based on 40% of coupon. (t) Free of Income Tax. (u) Yield based on 47% of coupon. (v) 1% paid free of income tax.

* Bid and offered prices are free of Commission and Stamp Duty. (a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield on 20% basis.
(e) Including bonus of 5% free of tax. (f) Annas per share. (g) 8 1/2% paid free of income tax. † Free of Income Tax. (h) Yield worked on 6% basis.

these prices are for fuel oil for inland consumption—
include the Government tax.

the defence programme has now fully hit its stride. The production of aircraft has been very rapidly increased in recent months, and though some of the very large figures of production that have appeared in the Press are greatly exaggerated, it would appear to be true that the British output is now second only to that of Germany, which is being very rapidly overhauled. It has been announced that London is to have its full complement of anti-aircraft guns next month, and the production of these essential weapons of defence is now both large and increasing. The tonnage building for the Navy, as is shown in the White Paper, is considerably larger than in the pre-war years when there was a large potentially hostile fleet across the North Sea. The expansion of plans for civil defence can best be shown by the fact that expenditure on A.R.P., which will be £9½ millions in the current year, is estimated at £42 millions next year, with a further £9 millions for assistance to public utility services and for providing water facilities for emergency fire-fighting services.

All these items of progress, and others mentioned in the White Paper, are matters for genuine satisfaction, from which the Government can justly derive credit. In any well-planned programme of re-armament there is bound to be an initial period during which little appears to be happening, succeeded by another phase in which plans and programmes mature. And if the Government have had to meet a barrage of criticism during the years when the seed was being sown, they are now benefiting from the appearance of the shoots. Possibly they are deriving more benefit than they deserve, for there are many aspects of defence that are still in an unsatisfactory condition. There are, for example, many deficiencies of material. The most serious of these is perhaps in the general equipment of the Army, which has had to take third place among the fighting forces. There is a shortage of the small naval vessels needed for anti-submarine and convoying work. And the state of protection for the civil population against air attack is obviously rudimentary in relation to the needs. Further, there are in many directions grave inadequacies of planning and organisation. The reason given by the Prime Minister against the creation of a Ministry of Supply was the anxiety to minimise interference with the normal course of industry. But in many respects this deliberate restriction of planning is having the opposite effect to that intended. For example, it is understood that the extension of the electric generating plant of the country which will be necessary in peace and doubly necessary in war has been held up because there is no supreme authority to assign it a place on the list of priorities. For some essential distributive trades, a nucleus of emergency organisation has been set up; but for the majority nothing effective has been done. And in the mobilisation of brain power, many of those who have special skill or special knowledge to offer tell the same story of the maddening nonchalance with which their offers are received.

Quite clearly, it is the duty of public opinion to maintain an unrelaxed pressure on the Government to ensure that no efforts are left unmade—and the need is no less because of the greatly increased quantities in which some weapons are now coming forward.

The dominant theme of the White Paper, however, is neither these problems of organisation nor the widening stream of material, but the financial cost. In the financial year 1937-38 the total expenditure of the three defence departments was £262 millions. This year it will be about £388 millions. Next year it is expected to be £523 millions. Including expenditure on civil defence, the total bill in 1939-40 is expected to come to £580 millions. That figure is £175 millions more than the total expenditure this year and £307 millions more than the amount provided this year out of revenue. Of the total amount of borrowing originally authorised by the Defence Loans Act, only about £203 millions will remain unused on April 1st

next. The increase in the limit by a further £400 millions, to be provided by a Bill to be introduced next week, is clearly justified, as is the inclusion of civil defence among the services that can be financed in this way.

The mere increase of the borrowing limit, however, by no means solves the Budgetary problem. The total estimated expenditure of the Exchequer in the current year (omitting the self-balancing items) is about £1,080 millions when the full amount to be borrowed is added in. Until the Civil Estimates appear in a few days' time, it is impossible to say whether there will be any change in the non-defence items next year. But unemployment is higher, and there is much talk of large additional sums for agriculture; the total is unlikely to be much lower. We know, from the White Paper, that defence expenditure will be £175 millions higher, and the total ordinary expenditure for next year can hardly be put at less than £1,260 millions.

The estimated revenue for the current year is £944.7 millions. Some of the sources of revenue—the death duties, stamps, Customs and Excise—do not look like providing the estimated yields. Income tax, on the other hand, has been coming in almost fast enough to reach the estimated figure by March 31st. The actual revenue can be put at about £940 millions. Next year, some items will produce less. Income tax will be levied on the profits of companies in their financial years ending in the period April, 1938-March, 1939. The size of these profits should be indicated by the reports that have been issued since, say, the beginning of last July, and these show an average drop of about 4 per cent., which is tending to increase month by month. The average volume of trade looks like being on a lower level in 1939 than in 1938, which would affect customs receipts, while the fall in security values will diminish the yield of the death duties. It would seem conservative to suppose that the yield of taxation, on the present rates, will hardly be more than £920 millions in 1939-40. The gap between revenue and expenditure will thus be something of the order of £340 millions, as compared with about £140 millions this year.

To borrow the whole of this vast sum would be a large, but by no means an impossible task. The highest total sum raised by public issue by all borrowers combined in any one of the last fifteen years was, it is true, only £369 millions in 1928. But a substantial part of next year's borrowing could and should be raised by an expansion of the floating debt, which is now too small to serve the needs of the money market. If the Chancellor decides to borrow the whole £340 millions, it can be done. But there are indications in the White Paper that the gap between revenue on the present basis and estimated expenditure is not to be covered by borrowing alone. The increase in the borrowing limit under the Defence Loans Act makes £603 millions available in the next three financial years, and it is unlikely that the limit would not have been fixed at an even higher figure if the borrowing of as much as £340 millions in the first year was contemplated.

If, as seems probable, the Chancellor decides to raise part of the money needed by additional taxation, his decision will be a wise one. To increase the revenue to £1,000 millions—that is, by £80 millions or so—might involve too great an effort. But if it were achieved, there would still be £260 millions to be borrowed, which is certainly enough to test the resources of the capital market and provide a very considerable expansionary stimulus to the credit structure of the country. There are psychological arguments too: it is as well that we should not allow ourselves to be unmindful of the colossal economic wastes involved in the piling up of things than can never be used except for destruction.

To raise a further £80 millions by taxes would require a very great effort, as is shown by the fact that a full additional 6d. on the standard rate of income tax would produce barely £30 millions. But if the need is realised, the effort will be made.

What Would America Do?

SUPPOSING that a war were to break out among the European Great Powers in the course of 1939, what would the United States do?

Among the many large and portentous questions that confront world diplomacy to-day, none is more eagerly canvassed than this. It is by no means easy to answer. On the one hand there is a mass of evidence which confuses by its very volume, in addition to the diversity of its testimony and the very varying degrees of its credit-worthiness. On the other hand there is the ever-present danger of allowing wishful thinking to cloud objective judgment. American foreign policy, like British, is always difficult to define. Both in England and in America (but in America more than in England), a distaste for the hypothetical combines with the necessity for waiting on public opinion to make foreign policy necessarily nebulous and imprecise. But an answer to the question must be attempted if the horoscope of the immediate future is to be accurately cast.

The decision that the United States would come to in the event of war would be determined by the state of public opinion—led, so far as he can, by the President—at that time, and whatever the state of opinion might then be, it is unlikely that it would be exactly the same as it is now. The present state of American public opinion is therefore relevant to the issue only in so far as it reveals a consistent trend and permits a guess about what it would be if war were to come in the near future. Within these limits, American opinion gives an answer whose main outlines are clear enough, even though the details may be obscure. The average American citizen is increasingly hostile to the pretensions of the German-Italian-Japanese triangle and increasingly conscious of the common interests that bind him to the European democracies. But it is necessary to be wary about exaggerating the lengths to which this tendency has already gone, even though its direction is unmistakable. It is salutary to remember that the Neutrality Act is still on the Statute Book and that the President, though his dislike for the notions it enshrines has not been concealed, has not felt strong enough to press openly for its repeal.

The Neutrality Act, however, if applied to a war in which Britain and France faced Germany and Italy, would by no means prevent the democracies from drawing on American material resources. The Act would prevent them from buying actual munitions of war, and it would limit their purchases of materials to what could be paid for in cash and shipped in vessels belonging to the purchaser nations. Although the war chests and merchant marines of Britain and France are not inexhaustible, they would permit of very large purchases indeed being made in the United States—apart altogether from such help as could be obtained through the intermediary of Canada, which in many respects is exempt from American restrictive legislation.

It may be taken for granted that, whatever happens to the Neutrality Act, it will not be made stricter. The very minimum on which Britain and France can rely is thus permission to buy as many raw materials and manufactures other than actual munitions as they can obtain on a "cash and carry" basis. But is American opinion likely to remain content with this relative aloofness? The President is clearly not content—whatever the truth may be about the precise words he used in his famous secret interview with the Congressional Military Affairs Committee. He believes that American interests would be served by strengthening as much as possible the armaments of the democracies. The isolationists, however, are in outraged opposition to any such doctrine, and they are by no means poorly repre-

sented in Congress. The cries and counter-cries fill the air in Washington, and the opinion of Congress has not yet emerged. It will depend, as always, on what can be ascertained of the opinion of the people.

That, too, is confused, and its confusion was increased by the Munich Agreement. In those articulate circles in America which follow foreign affairs closely, the Munich Agreement was distinctly unpopular. Judging by their clamour, many close observers of the American scene forecast that Munich would lead to a renewed wave of disgusted isolationism in America. This view, however, was badly mistaken. In American isolationism there has always been a duality of motive: it has been believed, first, that America did not *want* to concern herself with world affairs; and, secondly, that she did not *need* to take any part. With Munich, the second (and stronger) buttress of isolationism disappeared. It was no longer possible to believe that the two democracies of Western Europe could always act as a shield between America and the dictators. For the first time the possibility dawned on the American consciousness that the consequence of standing aloof might be standing alone. A shrewd and cynical Congressman in the early days of the last war remarked that England's best tactics to ensure American help would be to lose a few battles. The lost battle of Munich had exactly the predicted effect. Another factor which has produced a significant change in American opinion since September is the pogrom in Germany, which has excited in America a truly passionate revulsion and caused many Americans for the first time to entertain for the Nazis feelings of real hostility.

There is no possibility in a brief article to rehearse the evidence for any conclusion about American opinion as a whole, still less to establish its validity. But in default of disproof by events, it would seem possible to state certain propositions with some assurance that they are correct. First, there is a very large goodwill for Britain and France as the (perhaps imperfect, but residuary) representatives of democracy, a way of life in which the average American believes with emotion and conviction. In any war of self-defence in which they were engaged, Britain and France could probably count on half the American people as their avowed partisans from the start. Second, the more courageously Britain and France appear to be defending themselves, and the heavier the odds against them, the greater will be the degree of support they will derive from America. Third, if their opponents are Germany (especially), Italy and Japan, the sympathies of the American people would be powerfully reinforced by their antipathies (which are at present the stronger emotions). And fourth—a point on which even Mr Hoover, who is currently to be counted among the isolationists, has laid emphasis—if the war involved heavy and unprovoked air raids on the cities of England and France the American reaction would be strong and violent. All these four conditions are likely to be fulfilled if war comes in 1939. It would seem to be a safe conclusion that American opinion, at the outset of such a war, would be considerably more favourable to the Anglo-French cause than it is now.

To translate these abstractions into concrete terms is an even more hazardous business. We can do no more than make a guess, based on as much information and as little wishful thinking as is possible. It would seem to be highly probable—almost certain—that in the event of war the Neutrality Act would be repealed or amended in such a way as to permit Britain and France to buy actual munitions, not merely materials. Since the term "munitions" includes military aircraft, this difference would be

important. It is less certain, but still very probable, that the Johnson Act, which prohibits borrowing by nations in default on war debts, would be repealed and that the two democracies would be allowed to raise in the American market such loans as their own credit would support. Direct loans from the United States Government would certainly not be given while the United States itself still remained at peace, and the emotions left behind by the war debt controversy are still so strong that, even after an American declaration of war, it might be very difficult to persuade Congress to make any new advances. Economic assistance in large, but not unlimited measure, would thus be forthcoming. On the political side, any degree of assistance is hypothetical, but possibly more likely in the Pacific than in the Atlantic. American opinion would unquestionably be very greatly disturbed by Japanese attacks on the Dutch East Indies or on Australia and New Zealand. It is by no means impossible—some would say likely—that America would warn the Japanese fleet to keep within its home waters. Any such action, if it were taken, would be conceived as being in America's own interests—as, indeed, would all American actions; it would be a very profound mistake to suppose that anything would be done out of affection for any foreign nation. But it would nevertheless be of the greatest assistance to Great Britain and France to have their liabilities in the Far East thus relieved.

All these are measures that the United States could—and probably would—take short of engaging in war her-

self. There is a growing belief in America that armed intervention would in the end be unavoidable. One of the more reliable of the "straw polls," which are becoming such an important factor in American public life, took, on two occasions, a sample of public opinion on the likelihood of America's being involved in war. On the first occasion, in July, 1937, only 46½ per cent. of those who thought a war likely believed that America would be involved. Last autumn the figure had risen to nearly 76 per cent. These figures may not be precisely accurate, but they are symptomatic. More than fatalism, however, is required to make a people take the supreme decision of declaring war. Perhaps the best possible guess is that America would be drawn into a long war and that the period of her neutrality would be less than the thirty-two months between August, 1914, and April, 1917. But how long it would be nobody can tell.

It has been very widely predicted that the character of the next war will be a very sharp and violent initial attack, followed (if at all) by a long-drawn struggle. In the first shock, the United States neither can nor will give the democracies any decisive assistance. They must rely on themselves alone to withstand the first brutal blows. But in the second and longer phase, the help that can already be relied upon from the other side of the Atlantic would be large and, in the end, decisive. It might well be forthcoming in such large measure as to shorten the phase of attrition by many months.

Why London?

IT is a grim picture of England that current discussion would have us scan. The plight of two million unemployed, the distresses of the export trades and the woes of farming—we have become painfully familiar with the symptoms of economic dislocation, with a country spotted with poverty in one place and prosperity in another. Yet this is by no means the whole story. The Special Areas may indeed languish while London thrives in its own bloated congestion; but there are blessings to be counted as well as disabilities, and not the least among those blessings is crazy, sprawling London itself. It is easy, in generous indignation, to say that public policy should call a halt to London's growth, and transfer to Wales, Lancashire, Tyneside and Scotland the light trades that prosper in home markets. But it is far from easy to do. Nor would it be altogether wise to try.

The fact is that there are important items to the credit side of the national account in recent economic history. Britain is not in decline, despite the distressful (and quite true) stories we hear. Not a bit of it. Between 1929 and 1937, for instance, the national income rose by as much as one-fifth, and the rate of increase in output per worker employed was possibly greater than ever before. The number of insured persons in work is now over a million more than it was in 1929. Between June, 1929, and June, 1938, the number of insured persons aged 16-64 employed in distribution and services rose by over 18 per cent., compared with an increase of only about 11 per cent. in all occupations; and there has been a specially notable expansion in the distributive trades proper, road transport, miscellaneous consumers' services, gas, water and electricity supply, motor vehicles, cycles and aircraft, and miscellaneous electrical trades. Striking headway has in fact been made in the last decade, despite the Great Depression. That headway has been most noticeable in industries serving the home market and dependent upon the maintenance of domestic purchasing power; and it has been most influential in London, the world's greatest market.

London's growth in people and occupations is, in fact, an index of the progress of the nation. The metropolis is not the villain of the tragic piece that has laid waste the Special Areas. The staple export trades of Wales and the North have shown neither the efficiency nor the adaptability, even when they have been given State assistance of various sorts, to retain their foreign customers, while the growth of industries and service occupations in London, as well as in other great cities like Birmingham, represents a remarkable adaptability to a new economic dispensation—a dispensation brought about in part, admittedly, by the British Government's own fiscal policy. Between 1931 and 1936 Greater London's population increased annually at the rate of nine per thousand compared with four per thousand in all Great Britain. The average annual rate of increase in workers insured against unemployment in London between 1933 and 1937 was over twice the rate of increase in the rest of the country. Over 85 per cent. of the new factories (employing 25 or more workpeople) set up between 1932 and 1937 were in Greater London. London's recent expansion, like that of distribution, services and consumers' goods industries elsewhere, has been clear gain to the national income. And if the expansion of London had been prevented, can we be sure it would have happened elsewhere?

On economic grounds, therefore, the State cannot lightly be called upon to play King Canute and turn back the tide that has flooded over London leaving older industrial areas high and dry. Indeed, there are dangers that interferences by the State may hinder rather than help the process of national economic adjustment that is proceeding *proprio motu*—albeit often shortsightedly and haltingly. To experiment with new light industries in Special Areas by means of trading estates is wise. To encourage groups of industrialists and business men in hard-hit regions to break out by their own initiative into new trades complementary to their declining staples is sound common sense. To stimulate them into recreating the true commercial efficiency

(and therefore the profitability) of their older enterprises, if need be by ruthless methods, is genuine statesmanship. To encourage industries, when other things are equal, or even when they are only nearly equal, to settle in the Special Areas rather than in London, and to make sure that the social costs of their settling in one place rather than the other are fully taken into account, is obvious prudence. But to administer artificial respiration to inefficient industries and, at the same time, to put new and thriving industries in prosperous places under anaesthetics would be barren folly.

Whether we look at the Special Areas at one end of the scale, or at the agglomeration we call London at the other, it behoves us to remember that what we are regarding is a complex and painful process of adjustment to changing circumstances, and that whatever policy we propose to pursue should be calculated to ease that process and not to slow it down. That is not to say, however, that an unattainable attitude of *laissez-faire* is to be desired, or that there are no strong grounds for the most forthright action on behalf of distressed people and distressed places. Nor is it to claim that, say, the growth of London is an unmixed blessing to be tolerated at all costs. Far from it: the cogent case for taking action, on grounds of good health, decent living, efficient transport and strategic safety, to guide urban development away from the present wasteful chaos has often been stated and will not brook denial. The case for ameliorating the lot of the unemployed and bringing revival to distressed areas is even more obvious. What must, however, be borne in mind is that, apart from the efforts and expenditure needed simply to alleviate distress and no more, the economic test of policy should be whether its net consequences are likely to increase the sum total of the nation's income and capital resources.

It is around London that the battle of controversy most fiercely rages, and it is here that it is perhaps hardest to remain clear-headed, because of the obvious social disadvantages which spring from the monstrosity of a city that houses one-fifth of Britain's population on one-one-hundred-and-twenty-seventh of Britain's land and calls upon a quarter of a million transport workers to move two and a half million people daily. No economic calculus can efface the undesirable consequences of life and work under metropolitan conditions, or overlook the vast cost in economic terms of maintaining London as a going concern: the London Transport Board has spent or is committed to spend £43 millions on development and reconstruction, and it plans to spend some £50 millions more; Sir Charles Bressey's plans to make the highways in and around London adequate will cost between £160 and £200 millions; the high cost of land in London has made it necessary for working-class rehousing to receive abnormally heavy subsidies from public funds. These are only a few of the items which make many sensitive and intelligent critics call, with good reason, for the decentralisation of London.

But what is too often lost sight of is that the costs of maintaining London (such as those cited above) represent only one side, the debit side, of the balance sheet. On the credit side come the services for which these payments are rendered: that is, the contribution which London, articulated, ramified and organised as it is at present, makes to the national income. To take only one mode of measurement: the Census of Production of 1935 shows that out of a net output in factory and non-factory industries valued at £1,576 millions some £386 millions, or over 24 per cent., was attributable to London, where net output per person employed was £274 against £223 in the United Kingdom as a whole; and the cash value of London's commercial, financial, insurance and shipping functions are scarcely assessable. Even if decentralisation and restriction on London's growth can be proved quite inevitable (as

indeed may very well be the case) the truth has to be squarely faced that, unless the output of its successor satellites is greatly in excess of similar towns already in existence, a price will be paid, in the shape of reduced output, for the social amenities secured.

The rôle of devil's advocate is distasteful. It is only because the case for London has been too simply identified with reaction and vested interests, while the case against has been indiscriminately equated with progress and welfare, that it is needful and timely to state it in its true context of national economy. New pages of economic history are being written, and it is the merest common sense to look at the whole of the latest chapter before passing final judgment, whether it be upon the enormity of London or the distress of Lancashire. There are almost overwhelming social grounds for curbing the Great Wen, and equally strong economic arguments for caution in the application of such a policy. That is the position.

There are, admittedly, good economic arguments to support the reformers' thesis, too. London's growth has been haphazard and unco-ordinated, unnecessarily costly and contradictory. The short-term interests of individuals have not infrequently run counter to the long-term interests, economic no less than social, of the community. Public authorities have had to pay the price in social charges of short-sighted private enterprise. Vitally important assets have been improvidently thrown away. To take one instance only: what Dr Willatts of the Land Utilisation Survey has described as "uncontrolled urban development on the limited areas of highly fertile ground" within the 2,000 square miles of Middlesex and the London region has devastated the best market gardening land in Britain. If the present rate and character of urban growth persists, there will be no rural land left in Middlesex in ten years' time. *A priori* there is no more reason for autarkically requiring that Middlesex should have its own market gardens than for laying down that Britain should draw its food from home sources rather than, more cheaply, from abroad. In fact, however, there are unchallengeable reasons of nutrition and good health why London should have available near at hand precisely the fresh vegetables and fruit threatened by the outward sprawl of aerodromes, golf courses and housing estates. London's orchards declined between 1910 and 1935 from 5,345 acres to 1,706 acres. In 1885 one-seventh of all the market gardening in England and Wales was in Middlesex. To-day, when the arable acres of Middlesex and the London region have fallen from 38,000 to about 12,000 in half a century, only astonishingly intensive cultivation has preserved the market gardeners' foothold. London is a super-attractive market for agricultural products, but the pressure on the capital's available land for urban uses drives its supply areas further and further afield to less fertile but lighter and more easily worked soils. It is Dr Willatts' view that

Far too much of the best land has been and is being wasted, and good land is a most limited asset.

The State's responsibility to supervise changes like these is inescapable. In large part it is public policy that has caused them. Moreover, only the Government can speak for the broad interests of consumers and the community; and only the Government can represent vitally important non-economic social and strategic considerations, whose cash worth is indefinable but whose value to the community may be infinitely great. The reformers' case against London, based on such considerations as these, is cast iron. Their root-and-branch plans for reform are less firmly founded. It is small wonder that the Royal Commission on the Geographical Distribution of the Industrial Population cannot make up its mind what to do about it.

Topics of the Week

Pope Pius XI.—Achille Ratti, who reigned as Pope Pius XI from his election on February 22, 1922, till his death on February 10, 1939, has undoubtedly made a lasting mark on the world's history. What is more, he was also undoubtedly a great man. Like others of his stature, he finished one distinguished career and entered on a greater and more strenuous one at an age—sixty-one—at which lesser men are apt to ossify. Born a Milanese subject of the Habsburg Monarchy in 1857, he was old enough in 1870 to mark and remember the extinction of the Temporal Power of the Papacy by the Kingdom of Italy. He lived to see the Habsburg Monarchy disappear and to bring about, in 1929, the rehabilitation of the Temporal Power, on a miniature scale, by negotiation with an Italian Government that was now no longer Liberal but Fascist. Starting life as a scholar, Mgr. Ratti became Prefect of the Ambrosian Library in his own Milan at the age of fifty and Prefect of the Vatican Library at Rome at the age of fifty-seven, just after the outbreak of the Great War. Could he have expected, or desired, to go further? Pope Benedict XV divined his librarian's latent powers, for, before the War was over, he sent Mgr. Ratti, in April, 1918, on the morrow of the Peace of Brest-Litovsk, as Apostolic Visitor to Poland, the only large new Catholic State to emerge from the War. Thereupon the man of action burst through the scholar's shell. Within less than four years the former Vatican Librarian had become Pope, after having served, on his return from Poland, as Cardinal Archbishop of Milan.

Among the concrete acts of Pope Pius XI the outstanding achievement is the settlement of "the Roman question" with Signor Mussolini in 1929. In the Lateran Treaty of that year Italy recognised the sovereign independence of a diminutive Papal State in the Vatican City, while the Papacy recognised the Kingdom of Italy and waived its title to all but a minute fragment of the former Papal States. At the same time a Concordat between the Holy See and Italy was concluded. This Concordat brought immediate relief to millions of good Catholics who were at the same time loyal Italian citizens; but time has yet to show whether the Milanese Pontiff or the Romagnol dictator got the better of the bargain. The negotiations were interspersed and followed by aggressive encroachments of the Fascist State upon the social field of the Church's activities in Italy—and this touched the Pope to the quick, since "Catholic Action" was the apple of his eye. In 1920 it had been borne in upon the Nuncio at Warsaw that Communism was irreconcilable with Christianity. It took him longer to see—though he did see it, and proclaim it, before his death—that Communism and Fascism—cum-National-Socialism were two variants of the same form of idolatry: the worship of a human community in the place of God. Meanwhile, as Pope he had concluded not only the Treaty and Concordat of 1928 with a Fascist Italy, but also the Concordat of 1933 with a National-Socialist Germany. These bold diplomatic acts may prove to have been diplomatic errors. The greatest and most enduring deed of Pope Pius XI will probably turn out to have been his clear and uncompromising denunciation of the "totalitarian" paganism and racialism in all their manifestations.

National Service.—It will not be known until the recruitment figures are made public how successful the National Service campaign has been. It is almost certain that the success shown will be smaller than it might have been. Since the National Service Guide and the ill-starred schedule of reserved occupations were put out three weeks ago, official propaganda to urge on the laggards and stimulate those still in doubt has been disturbingly lacking. The mere existence of machinery in the National Service Committees and Ministry of Labour offices to provide informa-

tion and answer the many questions which fill most citizens' minds in no way ensures that it will be used—unless individuals are told time and again in all sorts of ways what to do. And there are still people eager to serve, especially in professional and technical occupations, who feel that, although they have rushed to register, their services are not really welcomed. The trouble is that Ministers, while wishing the voluntary mobilisation of man-power to succeed, are desperately afraid of "scare-mongering." The result is half-heartedness and a general impression that the need for recruits is not really very urgent. Only if everybody, Ministers and private citizens alike, can be convinced by ceaseless telling that the sole way to make hopes for the best come true is to prepare doggedly for the worst can Britain's example of voluntary service make its due contribution to the preservation of world peace.

Civil Defence Organisation.—It is perhaps inevitable that the shape of a vast and complicated scheme to organise civilian defences for 45 million people should not be easily discernible to anxious critics, eager for the fullest mobilisation of the people for public safety and able only to see the piecemeal parts of the Government's plans as, one by one, they come into operation. The section of last Wednesday's Defence White Paper which describes the organisation of civil defence does make it clear that a framework of co-ordination and direction has now been devised—in a remarkably short time, since central supervisory and controlling arrangements were singularly lacking as late as last October—to embody the executive responsibility of the Home Office, the Ministry of Health and Ministry of Labour, respectively, for police work, air raid precautions, first aid, ambulance and hospital services, evacuation (in conjunction with the Board of Education) and the mobilisation of man-power. Particularly important is the fact that, although local authorities have rightly been left to operate the services for which, as the peace-time allocation of ordinary administrative functions shows, they are uniquely fitted, an intermediary structure of regional supervision, linking central and local activities, has been constructed. In the Air Raid Precautions Department, for instance, in place of the original and inadequate provision of 18 regional inspectors, 38 regional officers are being provided. In the same line of development are the much discussed plan to appoint 12 regional commissioners, which is only controversial because of the ill-defined political powers which these personages are to be given in emergency; the appointment of Mr Harold Scott to co-ordinate London's A.R.P. services; the nomination of district food controllers—as far away in one case as Brussels; the misunderstood proposal to centralise the training and organisation of air-raid wardens in London under the Police Commissioner, and elsewhere under Chief Constables; and the latest scheme, part of a wider mobilisation of doctors for various kinds of war-time work, to appoint regional medical officers to supervise and co-ordinate medical services over a wider area than the county or county borough. Civil defence is compelling noteworthy experiments in the practice of government, not without morals for peace-time, and, while responsible Ministers have time and again given the impression of a wholly needless caution in introducing necessary experiments with due rapidity, they have in part at least the excuse that public opinion tends to be uncommonly suspicious of innovations—to no small extent, it must be said, because of the Government's own secrecy about their motives and intentions.

Camps for Peace and War.—Sir John Anderson's decision to provide fifty camps of timber hutments, to accommodate in all 17,500 persons at a capital cost of £1,000,000, is at once welcome and disappointing. It is welcome that the principle of dual purpose camps—the

proposal is that they should be leased by the public and non-profit-making corporations set up to erect and run them to local authorities, at a charge to cover maintenance and half their capital cost, for use as school camps in peace time—should have been approved. It is vastly disappointing that a notable chance to serve the nation's need for health and safety on a wide scale, and simultaneously, should have been so inadequately nibbled at. The proposed camps will accommodate less than 1 per cent. even of the children who would have to be evacuated in war from urban areas; and the proposal to extend them tenfold in emergency by improvised additions will hardly meet the need that would then arise for stout, weatherproof and semi-permanent residences. It is said that the seaside landladies are in revolt against the camps. Quite apart from the fact that no vested interests could be allowed either to impede the progress of public safety, or to block the provision of cheap holiday facilities for the millions of working-class families whose needs are not now met by lodging-house keepers, the landladies need have no fear. These camps are not to be holiday camps for adults; and even if they were, the scale is too small to bring any contribution to the problem of making paid holidays possible in practice. Nor will they provide an appreciable addendum to billeting in war-time. The plan is presumably experimental. There is time and opportunity yet to design the camps that might multiply public safety and at the same time, by their extent, design and ingenuity of siting, provide worth-while work for a moving army of able-bodied unemployed in enriching by their labours the contacts that have become tenuous between the mass of British citizens and their own countryside.

The Recognition of General Franco.—At its meeting on Tuesday the French Government decided in principle to recognise the Government of General Franco, and M. Léon Bérard remains at Burgos to represent France. The date for recognition is not yet fixed. Discounting the peculiarly disruptive influence of M. Bonnet, whose views have never been in doubt, the Cabinet seems to have argued on the one side that to refuse recognition would not only prolong a disastrous war, but that no good could come of it for France or the Republican Government, since the victory of General Franco was now simply a matter of time. On the other side it was contended that no recognition should be granted until it was clear that the Burgos Government really intended, and were able, to push the Italian and German troops out of Spain. It is also hoped, as in Great Britain, that the granting of recognition may lead to General Franco granting an amnesty; though on this point it may be added that those who think the French Government's action oversoon might remember that France has already taken into shelter over a quarter of a million refugees. From the French point of view the general position is, however, not uncheerful. The

recent bombing of Minorca by Italian aeroplanes and its presumed reaction on Spanish opinion, the cordial reception of M. Bérard, the visit of French Staff officers to the Spanish Pyrenees and their assurance that no fortifications were being built, the mortification evident in the Italian and German Press, and the incidental announcement of Britain's £580 millions defence expenditure, all point to a change in the balance of forces which, though scarcely perceptible as yet, is no longer out of the question. There are debts, too. At the very moment when confirmation was forthcoming of the presence of 60,000 troops in Libya, M. Bonnet has brought upon himself another wave of suspicion through the alleged action of two alleged agents, M. de Brinon and M. Baudouin, who are reported to have held private discussions with Herr von Ribbentrop and Count Ciano respectively, in order to find out behind the Ambassadors' backs just how much France is expected to give the Italians. M. Bonnet has denied the reports, but the suspicion remains, and the Socialists have decided to raise the matter in the Chamber. It is to be hoped that no skeletons will be uncovered. For the times are painful to thoughtful men; and in this struggle between the Axis and the Entente for what someone has felicitously called "the soul of General Franco," involving as it does a strain on the moral integrity of a large part of the French and British peoples, it will be calamitous if either Government loses the long view and barbers, for profound disillusion and a heavy loss of popular enthusiasm, the momentary benefits to be got from patting the *parvenu* on the back. In delaying its own action until a little more time has passed, the British Government would seem to be showing greater political wisdom than the French—to say nothing of the material issues involved.

Belgium Without a Government.—A week after M. Spaak's resignation there was still no Government in Belgium, two attempts at coalition having failed, the first by M. Henri Jaspar (who, as it happens, has since died) and the second by M. Pierlot. The Maertens affair has taken the lid off the Flemish nationalist pot, and Flemish cultural associations have signed a resolution asking for immediate cultural autonomy which would mean, in their terms, the splitting of the Ministry of Education into two halves, one Flemish and the other French. M. Maertens has the support of these associations, has published a vindication of himself, and shows no sign of withdrawing from his appointment to the Flemish Academy. There is widespread anxiety lest things get out of hand; and it is feared that a general election could only further irritate feelings which are already sore. M. Jaspar was willing to give the Flemings a measure of cultural autonomy (though nothing like as much as they wanted), but insisted that M. Maertens resign. He might have got his way had not the Socialists jibbed, apparently because the six "technicians" whom he wanted to include in a Cabinet of eleven would have had a majority

over the Parliamentary members. M. Pierlot, in his turn, stumbled over the Liberals, who caused M. Spaak's downfall in the first place and have not relented their opposition: but there was still hope at the week-end that M. Pierlot might succeed. The sooner a Government is formed, and the sooner that it shows ability to soothe the Flemings without exciting Walloons, ex-servicemen, or any of the political parties, the better it will be for Belgium. Fortunately for the country's unity, Flemish nationalism is a patchwork of groups and programmes not all of which are mutually compatible. The vigorous Vlaamsch Nationaal Verbond, with its slogan of *Alles voor Vlaanderen*, Vlaanderen voor Christus (the Rexists, it will be remembered, have also a religious bias), finds itself in conflict with the *Verbond van Dietschen Nationaal-solidaaristen* which dreams of the realm of Charles of Burgundy, uniting 17,000,000 people in the Flemish provinces of France, Belgium and the Netherlands, together with Walloons and Frisians, etc. The improbability of these programmes has made it easy for the Government to ignore their instigators; but to have these wild ideas bandied about, as they will be until a new Government has settled down in Brussels, will not help matters.

* * *

Hungary in the Toils.—The only way of avoiding a revolution, as everyone knows, is to do it yourself. In setting out to act upon this precept last November, when his technical majority in the Hungarian Parliament collapsed, M. Imrédy might have drawn encouragement from the excellent examples which flourish in our own day; and he might, too, have taken a lesson from the fate of Kurt von Schuschnigg. If he had, he might not have fallen so soon. He began, correctly enough, by making the revolutionary programme his own—in this case it was the Hungarian Nazi programme of land-reform and anti-Semitism—followed with the foundation of a "Hungarian Life Movement," innocuously cultural and yet promising one day to be a most useful totalitarian weapon, and proposed that Parliamentary business should be speeded up by amendments to procedure. It looked as if things were going his way. The Regent and the Army were sufficiently on his side. The negotiations with Czecho-Slovakia had done him credit. The Germans could scarcely object to a leaf being taken out of their own book; and several leading Hungarian Nazis were still under lock and key. But his land-reform proposals, though in fact very moderate, stimulated the landowners to the obvious tactic of representing M. Imrédy, before it was too late, as a budding dictator imbued with a most ungentlemanly form of anti-Semitism; and they have beaten him.

* * *

In the end they cannot avoid land reform, the forces working to that end being far too profound and widely spread to be dammed by a parliamentary manoeuvre, but for the moment the Conservatives hold the field. Count Teleki, who is a member of the Upper House, has succeeded M. Imrédy with much the same Cabinet, and his job will be to convince his fellow noblemen that land reform is both necessary and unavoidable. Not of those who can retrieve lost causes by a sudden descent to the market-place, M. Imrédy retires with a tolerant smile and a well-bred legpull: one of his great grandfathers, he solemnly admits, was a Jew, and so the sinner

of the fourth generation must withdraw. As in the case of the change of Government in Yugoslavia a fortnight ago, the reasons for M. Imrédy's fall are internal rather than external. Any Hungarian Government, indeed, must necessarily work under the ægis of Berlin. But M. Imrédy's successor may show several shades less alacrity in his adhesion to the Axis.

* * *

Poland and France.—The presence in Paris this week of General Wladyslaw Sikorski, a former Minister for War in the Polish Cabinet and a well-known author of military text-books, is but one of several indications that discreet efforts are now in progress to restore to the Franco-Polish alliance some of the warmth it lost during the October crisis. The ostensible reason for General Sikorski's journey to Paris is "scientific research" and "lecturing"; but the close personal relations he has always had with the military leaders of France—to the late Marshal Foch he was "*mon ami Sikorski*"—lend more than a casual importance to the visit, especially at this time. Although he has never been taken off the active list, General Sikorski, now in his fifty-eighth year, has been *persona non grata* with the leaders of Poland since the late Marshal Pilsudski seized power in May, 1926. There was at that time keen rivalry between Pilsudski and Sikorski, the latter having always been associated with the Right Opposition group known as the National Democrats and a staunch supporter of the democratic system. The fact that the General, who for years was unable to obtain a passport, has now been allowed to visit his friends in France, may indicate both a desire to use all available means to strengthen the ties between the two countries, and also a friendlier attitude on the part of the governing regime towards a political opponent with a distinguished military career whose services might prove as invaluable to the nation as they did in the Great War and in the Polish-Soviet struggle of 1920. It is hardly to be doubted that the cause of national unity in Poland, no less than the restoration of Franco-Polish relations to their former cordiality, would be greatly helped by a reconciliation between the followers of Pilsudski who now rule Poland and the man who was, at the time of the *coup d'état*, his bitterest opponent. At the same time there is a good omen for Polish-Soviet relations in the conclusion of a commercial agreement designed to increase mutual trade to a yearly value of over 150,000,000 zlotys, considerably higher, as will be seen, than of late:—

(Thousands of zlotys)

	1937	1938
	First eleven months	
Polish imports from U.S.S.R. ...	13,466	4,267
Polish exports to U.S.S.R.	9,449	1,358

The trade will mainly consist in Polish textiles and coal from the Teschen area, and a certain amount of general goods such as agricultural machinery, locomotives, and rolling stock; and in Russian hides and furs and, it is thought, certain industrial products of the Donetz region. The agreement allows for an equal exchange of goods.

* * *

Refugees.—The negotiations between Mr Rublee, then director of the London Committee of the Evian Conference for Refugees, and Reich officials, about the emigration of Germany's Jews, which seemed to break down on the dismissal of Dr Schacht from the Reichsbank, were not after all a failure. Dr Schacht's impudent plan to finance the expulsion of German Jews by means of an international loan, to be guaranteed by increases of German exports, has indeed been abandoned. In its place the Evian Committee has been presented this week with a scheme for ordered emigration spread over five years which, *faute de mieux*, represents an appreciable contribution to the solution of a problem which, although its

appearance is entirely due to the culpable and irresponsible action of a single Government, affects in greater or less degree every country in the world. The chaotic expulsion of panic-stricken people will cease. The exodus of 150,000 able-bodied men and women under 45 years of age, accompanied or, more frequently, followed by 250,000 young or aged dependants, will proceed by stages. The German Government, true to the ruthless principles which have consistently characterised Nazi anti-Jewish policy, will take no responsibility, financial or otherwise, for the emigrants after they have crossed the frontier. But they have graciously consented to levy yet another tax of 25 per cent. of what property is still left to the Jews and to devote it to assisting the unhappy outlaws to take themselves and certain of their possessions, tools and capital equipment, which they will now be magnanimously allowed to keep, to the border. The strict limitation of the fraction of the Jews' property they will be permitted to take away to 5 per cent. will be relaxed; and, most important of all, reasonable freedom from further persecution is guaranteed while the migration is proceeding, unless new "incidents" arise.

* * *

That this plan is the best that anyone could expect from Nazi Germany is an adequate measure of that country's place in world esteem. It is an advance from the pogrom period, and it is now left to more civilised countries to make the ordered exodus possible by furnishing means for ordered settlement. The pressing need is for urban rather than agricultural settlement, and Santo Domingo's offer to take 100,000 professional, business and working people, like the invitation of the Philippines to 1,000 doctors, technicians and artisans annually, is a great step forward. The United States is taking 30,000 refugees a year; Australia will select 15,000 over three years. The bogey is finance. The British Government's inability to contemplate extra charges on Imperial or Colonial funds still leaves the ultimate responsibility to private people. The keystone of the plan Mr Rublee brought home is the formation of a private international trust, with funds provided largely from Jewish sources, to organise the retreat and foot the bill for transport, equipment, maintenance and settlement. Some other countries may find it possible to be more generous than Britain, but the chances are that the world's Jews will continue to pay to the hilt for Germany's misdeeds. It is unlikely that private means can cope with even Germany's discards. It is certain that they will not be able to cater for the millions more that other European nations, imitative of Nazi ways, may seek to cast out.

* * *

Official Secrets.—The widespread contention that the special powers of interrogation conferred on the police by the Official Secrets Act of 1920 should be confined to the cases of espionage and similar serious offences against the State, for which they were originally intended, and that their restriction to these cases should not rest simply upon the verbal promises of Ministers of the Crown, has at last been accepted by the Government. The Home Secretary has drafted a Bill giving statutory effect to this most reasonable restriction of powers whose use, since in principle they are quite contrary to the traditional processes of English law, can only be justified on grounds of public safety. Ministerial pledges to restrain the powers of interrogation were unsatisfactory because in fact they were broken, and journalists, for instance, have on occasion been virtually forced to convict themselves, or third parties, in cases where no question whatsoever of military or public importance arose. The Home Secretary's Bill, which is already in the House of Lords, serves as a logical complement to the Government's earlier decision to proceed to the amendment of the more onerous aspects of the law of libel by means of a Select Committee. It is fitting, in a country of democratic ways, that Parliament and the Press should be ready and willing to exercise joint watch and ward over

the liberties whose justification is the soul of the State itself and whose foundation is vigilance. And it is encouraging, in these days, to find the executive authority actually reducing their legal powers even by the smallest and most justified fraction.

* * *

Road Improvement.—Only at first glance is the report of the Road Fund for 1937-38 at all impressive. In that year actual expenditure from the Fund was £19 millions, apportioned between reconstruction, improvements and maintenance works; and by the end of the year accumulated commitments for further ordinary and extraordinary schemes amounted to nearly £55 millions, a figure only once before exceeded. But what in fact is the relation of the Government's recent spending to the country's accepted needs? In 1935 Mr Hore-Belisha and Mr Chamberlain announced that £100 millions would be made available in five years for road works over and above the ordinary annual programme; and, since the time when this pledge played a not inconsiderable part in a subsequent election, approved development schemes valued at £89 millions have involved the Road Fund in promises to spend over £50 millions. Actually, on improvements over and above normal works, no more than £5,877,996 was spent in 1936-37 and only £6,632,315 in 1937-38, instead of the £20 millions needed annually to execute the five-year plan upon which the vital efficiency of the country's road transport, even more in war than in peace, depends. And on the long overdue modernisation of the trunk roads for which he is now responsible, the Minister of Transport spent in 1937-38 just £1,327,000. It is too late now to call for expenditure to make up the leeway which has culpably been allowed to accumulate, with annual defence expenditure nearing the £600 millions mark, but if and when an emergency does arise, in no department of defence organisation more than transport will the years that the locust hath eaten be more sorely regretted.

* * *

The Japanese in Hainan.—The Japanese have landed on the Island of Hainan ("Sea South" or "South Sea"), which is the southernmost piece of Chinese territory, and the whole island is now in their hands. Commanding, as it does, the maritime approaches both to French Indo-China and to Hongkong, this Chinese island's occupation by Japanese armed forces is a matter of grave concern to both the French and the British Governments. In itself the occupation might perhaps have no more than a strictly military objective, since the focus of Chinese resistance to Japanese aggression now lies in the south-western provinces, and the Japanese must be eager to close doors by which supplies might continue to reach Yunnan, Kweichow and Szechwan by sea. The occupation would, however, serve equally well for putting Japanese pressure upon the

two West European Powers—whether as a move on the part of the Japanese Navy to match the Army's conquests on the mainland by maritime exploits in the South Seas or as a step in a world-wide offensive in which all three members of the Rome-Berlin-Tokyo Triangle would be acting in concert. The French Government have been prompt to protest against Japanese action which, in their view, violates the spirit, if not the letter, of a Franco-Japanese agreement of 1907, but they have so far obtained no satisfaction from the Japanese side. The official Japanese formula is that the occupation has been dictated by military necessities and that its duration must be determined by the course of military events. This is a way of keeping an absolutely free hand without admitting that the move may have an anti-Western point. Meanwhile, it has been stated in the Japanese Press that Italy and Germany were informed in advance. The French and British Governments are consulting together about the line that they are to take. To a lesser, but still appreciable, extent the Japanese occupation of Hainan is also a matter of strategic concern to the United States in respect of the Philippines, and to the Netherlands in respect of the Dutch East Indies. It is not inconceivable that these successive turns of the screw in both Eastern Asia and Western Europe may eventually force some kind of united action upon the Western democracies on both sides of the Atlantic.

* * *

The Benes Spirit.—With an ungenerosity which is no longer astonishing, the German minority organisation in Czechoslovakia has seen fit to protest against the persistence in the country of "Benés elements"—or in other words against any possible manifestation of Czech national consciousness. Herr Kundt, who heads that organisation, is finding himself up against that dour and silent determination which the Austrians encountered and which, in the end, outlasted the Austrians. Industrial reports show that the Czechs had lost none of their old spirit. The effect of the Anglo-American Trade Treaty was to damage Sudeten textile exports to the great benefit of the Czech product, and in Brno, for instance, the textile industry is virtually without unemployment. The arms industry is persevering with its efforts to change over to civilian production: the home market for arms has disappeared and not yet been replaced by German demand, and foreign contracts are also reported as having dropped out, notably the large Chinese contract which was stopped presumably by German intervention. The machinery industry is making some measure of recovery, and the Bruenner Maschinen Fabrik, reported to have a German on the board, has recently secured a contract with Russia worth about fifty million crowns. The administrative system is settling down, though the details are not yet all filled in. Last Sunday's elections in Ruthenia produced an overwhelming majority for the Government list, but, in view of the fact that there were no other candidates, this is scarcely surprising. Communications with Czechoslovakia's third province are confined to a motor-bus ride of about one hundred miles over a bad road from Preshov in Slovakia, and unless the German Government cares to advance money for a motor road, this is likely to remain a permanent condition. The Czechs have more important business to attend to.

* * *

Mr Gandhi and the Indian States.—The setback to Mr Gandhi and the Right Wing of the Indian National Congress through the election of Mr Bose to the Congress presidency has been followed by a growingly virulent campaign, led by Mr Gandhi himself, for political reforms in the princely states. A causal sequence is suggested, in that this may be an attempt to restore the Mahatma's leadership and at the same time to consolidate the Congress anew on an issue that does not divide Left and Right. It has a further bearing on the position of Mr Bose, who vaunts the policy of refusing federation at any price; for an essential part of the price asked by the Right Wing

was such elective representation of the states in the Federal Legislature as would give the Congress the chance of power. Mr Gandhi now makes two specific demands: that the Viceroy should intervene on behalf of the Congress cause in Jaipur and Rajkot, two states in which political agitation has recently caused rioting, civil disobedience, and a ban on certain Congress leaders; and that provincial Ministries should concern themselves with the affairs of states within their areas, and should presumably resign if these affairs do not go satisfactorily for the Congress. The British Government's policy, plainly expressed last December, is that the Paramount Power will not interfere with any political reforms which the rulers may care to make, but will not be responsible for initiating them. One reaction to all this agitation is growing resentment, especially among Muslims, at the Congress's assumption that it alone is entitled to speak for the people of India. To the Muslim League, the dominance of the Congress spells the "Hindu raj" which it exists to combat. The communal riots of the past week in Cawnpore are therefore part of the same picture, to be summed up as a struggle for coming democratic power.

* * *

Trouble in Burma.—The recent outbreak of disorder in Rangoon is bound to arouse considerable anxiety; for it is barely four months since the rioting in Burma which began last July and caused no fewer than 220 deaths was at last suppressed. The official committee of inquiry into the riots has yet to produce its final report. Its interim findings confirmed the general view that the incident precipitating the disorder—the re-publication of an anti-Buddhist tract—was only the superficial occasion, and that the real causes lay deeper. The committee found them to reside in the unsatisfactory conditions of land tenure, the competition of Indian immigrants, the marriage of Burmese women to foreigners, particularly Indians, and the influence of the Press and political organisations. In an address to the Legislature last week, the Governor of Burma rebuked the Press for its licence in agitation and the Legislature for its inadequate sense of responsibility for remedying genuine grievances and upholding law and order. There is, indeed, some justification for a charge of weakness against the Burmese Ministry, fearful as it has been of overthrow by a Legislature that has yet to learn the lesson of political responsibility. Burmese tempers are hot, and anti-Indian feeling grows more bitter as political consciousness spreads; the nationalist agitation has hitherto been primarily anti-Indian and only secondarily anti-European. Whether foreign propaganda has played its part is not clear, but Burma, with its traditional anti-Chinese feeling added to the ferment of nationalism, might be fertile ground for influences from the Far East.

* * *

Supplementary Estimates for the Army.—The first of the Supplementary Defence Estimates mentioned in the Defence White Paper were published on Thursday. Formally, each of these Estimates—one for the Army and one for the Royal Ordnance Factories—imposes a charge of only £100 on the Budget, but this is because virtually all the additional expenditure is to be met out of Defence Loans. The gross additional total required for the Army is £8,025,000. Appropriations-in-aid other than Defence Loans (chiefly a contribution from the Colonial Office for expenditure in Palestine) provide £1,855,000, leaving £6,169,900 to come from borrowing. The additional expenditure is due to (i) the improvements in pay and conditions announced last March; (ii) the acceleration of the Defence programme; (iii) the emergency measures of last September, and (iv) Palestine. The Royal Ordnance Factories require £3,914,700 more, of which £2,983,900 will be borrowed, £930,700 will be found out of other votes and the odd £100 left to serve as the vehicle for Parliamentary approval.

Overseas Correspondence

From Our Special Correspondents

United States

Business and Building

NEW YORK, February 6.—The decline in production in December, compared with November, although perceptible, was slightly less than the usual seasonal fall.

BUSINESS INDICES (1923-25 = 100; adjusted for seasonal movements)			
	Dec., 1937	Nov., 1938	Dec.,* 1938
Industrial production (total)	84	103	104
Manufactures (total)	79	103	103
Durable	60	95	92
Non-durable	95	110	113
Minerals	115	102	108
Construction contracts (total) ...	61	96	98
Residential	30	56	57
All other	87	128	132
Factory employment (total)	95.1	90.0	91.4
Durable goods	91.9	81.4	83.3
Non-durable goods	98.1	98.2	99.3
Factory payrolls (total)	84.2	84.1	86.6
Durable goods	81.0	78.3	80.6
Non-durable goods	87.7	90.5	93.3
Freight-car loadings (total)	67	69	69
Miscellaneous	69	74	74
Department store sales	89	89	89
Department store stocks	72	67	66

* Preliminary.

The greatest change is in building. December, 1938, showed an increase over December, 1937, of 100 per cent. in residential building contracts and nearly 100 per cent. in non-residential building. As a result, the adjusted index of building contracts was 98 per cent. of the base period, which represented a recognised building boom. This figure, however, represents a large seasonal adjustment (the unadjusted index is 79); and marks, too, the rush to conclude contracts carrying a Federal subsidy before the end of the calendar year, as provided by legislation. The December index is, therefore, far from an index of current building activity—it is rather a forecast of building activity in the late spring or early summer.

The index of production in December, 1938, at 104, is identical with the figure for June, 1936. For that reason it is worth while to compare the indices for these two months to note changes in the distribution of business activity.

BUSINESS INDICES (1923-25 = 100; adjusted for seasonal movements)		
	June, 1936	Dec., 1938
Industrial production (total)	104	104
Manufactures	105	103
Minerals	100	108
Construction contracts (total)	52	98
Residential	36	57
Non-residential	65	132
Factory employment	97	91.4
Factory payrolls	84	86.6
Freight-car loadings	73	69
Department store sales	87	89

Building is playing a much larger part in the current cycle—contracts having approximately doubled. Changes in the relation of factory employment and payrolls to the index of manufactures is also marked. Fewer persons are employed at higher wages to produce approximately the same amount of goods.

The Balance of Trade

The merchandise trade figures for December, 1938, showed exports valued at \$269 millions, and a net export surplus of \$97 millions, which was more than balanced by net gold imports of \$241 millions and net silver imports of \$20 millions. The export surplus in merchandise trade for the

whole year amounted to \$1,334 millions, compared with \$265 millions in 1937 and \$33 millions in 1936. This active balance was the largest since 1921. The value of exports for

the year (\$3,095 millions) was about 10 per cent. below the 1937 figure (\$3,349 millions), but, 1937 apart, it was the largest for any year since 1930 (\$3,843 millions), and substantially larger than 1913 (\$2,484 millions). The value of imports in 1938 (\$1,961 millions) was almost 30 per cent. below the 1937 figure (\$3,084 millions); and, except for 1932, 1933, 1934, it was the smallest for any year since 1915 (\$1,779 millions). The international implications of the shift in our merchandise balance represent a world economic phenomenon of the first order.

VISIBLE BALANCE OF THE U.S. IN 1938
(\$'000,000)

	Mer- chandise Exports	Mer- chandise Imports	Mer- chandise Export Surplus	Net Gold and Silver Imports	Net Balance (+ = Export Surplus; - = Import Surplus)
January	289	171	118	30	+ 88
February	262	163	99	23	+ 76
March	275	173	102	67	+ 35
April	274	160	115	87	+ 28
May	257	148	109	71	+ 38
June	233	146	87	74	+ 13
July	228	141	87	82	+ 5
August	231	166	65	171	-106
September ...	246	168	79	544	-465
October	278	178	100	586	-486
November ...	252	176	76	202	-126
December ...	269	171	97	261	-164
	3,094	1,961	1,134	2,197	-1,064

The import surplus (merchandise + gold and silver) is smaller than in 1937, when merchandise trade showed an export surplus of \$265 millions against gold and silver imports of \$1,673 millions, making a net visible active balance of \$1,408 millions; in 1936 this balance was \$1,266 millions. The difference is partly, at least, to be found in the flow of capital funds.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office :—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000
Paid-up Capital - £2,000,000
Reserve Fund - £1,000,000
Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

Business Prospects

In the month of January the share average fell about 10 per cent. Should this be ascribed to a change in the business outlook, or to other factors? While the January business data are not completely available, such as are at hand show almost no change from December, or, for that matter, from November. Indeed, many persons were expecting something in the nature of a perceptible setback, and this did not appear. The main question, however, is of the prospects for the spring.

With the index of production in the vicinity of 100, our economy is not acutely depressed, but it is far from prosperous. Inability to advance to a higher level in the spring would be seriously disappointing. The business record of January is quite non-committal; and, on the whole, it appears that the cause of the decline in the share market should be sought elsewhere. The reason most commonly given is that it was a "sympathetic" decline associated with the same forces that depressed the British market at the same time.

If our recovery is to be extended to the prosperity level, the resumption of a flow of capital into enterprise is required. One school of thought holds definitely to the view that never again will American enterprise be capable of employing the savings of economy. The historically heavy demand for capital by enterprise is attributed (a) to the expansion of the frontier; (b) to subsequent industrialisation; and (c) to the former rapid growth of population—about four times its present rate of increase. This group holds that the future demand for capital will mostly come from the State, when new capital issues will be principally those of the Treasury, plus the refunding issues of the most substantial corporations (comparatively few in number) into which our economy has crystallised or is crystallising.

The opposing view is almost diametrically different. The population is still increasing, although slowly. For seven or eight years, the investment in American enterprise has not equalled its estimated depreciation, and consequently an enormous amount of capital would be required merely to restore it to the *per capita* level of the mid-twenties. Further, just as the physical investment per industrial worker is to-day much greater than it was a century or even a generation ago, so the possibility of further improving the tools at the disposal of the worker is infinite; and such investment would improve the quality and cheapen the cost of the product as well as reduce drudgery, etc.

Between these two extreme groups there is a third. This group maintains that the American enterprise is actually being deflated by the inaccessibility of capital. Some argue that the deterrent to investment in enterprise is the very extension of the demand of the State for capital. Others emphasise the apparent shrinkage of profit margins and affirm that the capital demand of industry will remain hypothetical as long as industry is unable to give evidence of a capacity to pay for the use of capital a more satisfactory average return than it has yielded over the past decade. We have a capital market which will subscribe apparently unlimited sums to a large and increasing public debt at unprecedentedly low yields; which will take very limited amounts of new corporate offerings, also at very low yields; but which is able or willing to entrust to enterprise only a fraction of the sums formerly available.

For this reason, great interest attaches to any steps pointing in the direction of giving the utility and railroad industries greater access to new capital. Developments con-

strued as favourable to the wider opening of the capital markets to these two industries would have a direct bearing on the general problem, and might be a dominant factor in determining development in the spring.

France

A Slow Convalescence

PARIS, February 16.—Gold movements and the course of prices are the two main criteria by which the situation in France is to be judged. Gold continues to return, slowly but steadily. Since the end of November the franc has been steady *vis à vis* the £, and the latest statements of the Minister of Finance suggest that the 20,000 million francs of gold lost between May and September, 1938, have now been recovered. This repatriation of capital eases the monetary market, and subscriptions to short-term bonds are plentiful, largely covering the needs of the Treasury. Technical measures have just been decided upon which appear to be preparations for an eventual funding operation. The credit of the State has changed appreciably for the better.

Prices, too, are not moving unfavourably. They are still rising, but the advance is bearable. If the natural effects of a hard winter and increased taxation are taken into account, recent price movements seem quite natural. Comparison with foreign prices is encouraging. But the situation is not quite so promising as might appear. It seems that any undue rise in prices is checked more by stationary purchasing power than by the increase in production, which has in fact been rather disappointing.

New efforts are being made by the Government to stimulate business. M. Reynaud, for instance, has announced that, since capital is returning and being reinvested in industry (bond issues in December showed a brisk recovery to 338 million francs, against practically *nil* in previous months), a reasonable expansion of credit might be envisaged by the Government and would soon occur. In addition, a new decree is designed to speed up the renovation of industrial machinery by authorising industrialists to deduct from their annual profits, for the assessment of taxes, the difference between the old and the new cost price of machinery. Such measures of fiscal relief, combined with the lowering of interest rates and a complete return of social peace, might yield significant results, if the international atmosphere were not still so cloudy.

Strenuous efforts are also being made to promote foreign trade. Negotiations are actively in progress with Central European countries, such as Roumania and Czechoslovakia. A new commercial agreement has already been made with Hungary and Yugoslavia. Negotiations with Germany, to exchange iron ore for coal and to sell France's surplus wheat, appear to be progressing favourably.

Production and Prices

The Statistique Générale has just published its monthly figures of production and prices:—

	Dec. 1937	Oct. 1938	Nov. 1938	Dec. 1938
PRODUCTION (1928 = 100)				
General Index	91	81*	86*	...
I. Mines	99	93	97	96
II. Chemical industries...	107	94	103	104
III. Paper	183	157	168	173
IV. Textiles	91	82	86	87
V. Leather	70	...	...	...
VI. Iron and steel	87	66	73	74
VII. { Engineering	92	72	78	81
Automobiles	87	99	103	106
VIII. Building	58	62	62	61
IX. Gas and electricity ...	130	124	125	...
X. Miscellaneous	115	104	110	...

* Preliminary index.

Output figures for the cotton industry are as follows:—

	Sept. 1938	Oct. 1938	Nov. 1938	Dec. 1938
Spinning (average per spindle in kilograms):—				
Production	1,846	1,917	2,040	2,189
Deliveries	1,968	1,917	2,092	2,254
Stocks	2,114	2,168	2,136	2,098
Unfulfilled orders	5,612	6,427	6,842	6,821

Weaving (average per loom in pieces of 100 metres):—

	4-53	4-53	4-69	5-19
Production	4-53	4-67	4-69	5-29
Deliveries	4-47	4-67	4-69	5-29
Stocks	8-72	8-34	8-46	8-41
Unfulfilled orders	15-30	16-17	17-64	17-93

The slight rise in prices is still perceptible:—

	Jan. 1938	Nov. 1938	Dec. 1938	Jan. 1939	Feb. 11th
WHOLESALE PRICES (1914 = 100)					
General Index	612	658	666	676	679
Domestic products	653	678	692	705	704
Imported products	537	623	620	624	635
Foodstuffs	620	637	648	656	654
Industrial products	605	678	682	693	701
Retail prices	693	739	754	761	...
Lighting and heating	100-0	123-4	127-6	102-0	...
(1914 = 100)					
Clothing (1930 = 100)	113-5	102-0	102-0	115-9	...

The number of bankruptcies in January was 381, against 468 in December and 455 in November.

Unemployment, Production and Prices

The greatest unemployment is in Paris and the Département de la Seine, which frequently account for one-half of the national total: they had 203,000 workless in February last out of a total of 421,000. The total number of persons unemployed last week was 419,654, out of which about 100,000 were women, against 415,987 in the previous week and 406,050 a year ago. This figure would be considerably reduced if old-age pensions were to pass into law, though the saving on unemployment relief would be largely swallowed up by the increase in the number of pensioners. The Pensions Bill which will probably come before the Chamber this week anticipates that the cost of pensions will be covered by savings secured by a reform of the social insurance system. Many experts fear, however, that the lessons of the expensive experience of the pensions which were given to veteran soldiers have been overlooked in drawing up the new scheme.

Germany

Campaign for Exports

BERLIN, February 13.—The authorities are using all means in their power to perfect measures to further German exports, especially since Herr Hitler, in his Reichstag speech, coined the battle cry of "export or die." Attempts have been made to solve the problem of labour shortage; workers have been transferred from industries, such as the textile trades, which are not fully employed. Industrial capacity and raw materials are being mainly reserved for export purposes, once the demands of the armament industries have been satisfied. Domestic needs have to undergo radical restrictions. The net effect of these measures is expected to be a considerable curtailment of delivery periods in export contracts.

The transport system, moreover, which is now heavily overburdened and to some extent disorganised, is to be rationalised and pressed into the service of exports. Actually, however, measures to remove the psychological barriers which hinder an increased buying of German goods abroad are lacking. Instead of a change in foreign policy, and a cessation of intensive Nazi propaganda in certain countries, an attempt is being made to intimidate creditor nations by declaring that, unless increased exports are forthcoming, Germany will not be able to keep her transfer promises. This argument should scarcely prove very successful, because, in fact, the Third Reich has financed a considerable share of her armaments at the cost of foreign creditors.

As part of the export drive, the Reichsbank, now a State organ, has effected certain financial relaxations. The strict foreign exchange laws, and the usually considerable waiting periods during clearing transactions with other countries have led to higher costs and greater risks, which in turn have increased expenses and hampered exports. Amendments in the Reichsbank's procedure have lessened these disadvantages, and insurance against exchange, manufacturing and war risks has been merged in the export credit system. The intensified activities of the Golddiskontbank in the financing of exports may take the form of higher levies to help exports—such as an international understanding. This would mean, in effect, increased dumping.

The recent establishment by Egypt of a quota system for imports of cotton goods met with much approval in Ger-

many. Germany can now export more cotton goods to Egypt and buy more raw cotton from Egypt—just when the need for raw textile materials is most acute. The Egyptian Chamber of Commerce for Germany advises German firms to export mainly printed crepe, lainette, cotton prints, etc. In any event, the German firms must expect competition from England, and to some extent also from Hungary and Italy; and Germany will also export poplin, shirts, pyjamas, woolen hangings, materials for decoration and furniture and artificial silk thread.

The Anglo-German industrial negotiations are to be resumed next month. It is understood that the negotiations between the Federation of British Industries and the Reichsgruppe Industrie will take only a few days, but that the subsequent discussions in detail between the separate representatives of the various industrial groups will present greater difficulties. The conditions for a commercial understanding with England have recently been impaired. There is considerable indignation about England's offers of credit to Nationalist Spain and Roumania. These credits are regarded as dangerous to Germany's trade relations, especially since the Reich cannot compete with them. For the same reasons there is noticeable ill-humour about the Cabinet changes in Yugoslavia, where Germany has now lost her chief supporter in M. Stojadinovich.

Trade Agreement with Italy

The German-Italian trade discussions in Rome have been concluded. In addition to a price agreement (see *The Economist* of February 11th) an arrangement about tourist traffic has been arrived at whereby Germany will facilitate tours to Italy. In 1939 German exports to Italy will be increased by about 25 per cent. Last year Germany brought from Italy goods to the value of Rm. 245.6 millions, and exported goods to the value of Rm. 301 millions. According to the new agreements German exports to Italy in 1939 should amount to about Rm. 375 millions. The increase in exports will consist mainly of machinery, scientific instruments, electro-technical and chemical products, coal, etc.

Total savings reached the sum of Rm. 23,945 millions at the end of 1938, against only Rm. 15,600 millions in 1932.

Capital paid up and Reserves Drs. 1,205,000,000

Compared with 1913, the last pre-war year, the present savings total is some Rm. 4,000 millions higher.

(In Rm. millions)				
	1935	1936	1937	1938
Savings banks	13,819.5	14,614.9	16,065.9	18,010.0
Co-operative societies	2,872.6	3,066.8	3,350.7	3,790.0
Credit banks	1,097.8	1,217.4	1,428.0	1,745.0
Building societies	316.3	344.0	362.1	375.0
Factory savings banks....	169.0	105.0	65.0	25.0
Total	18,275.2	19,348.1	21,271.7	23,945.0

From April to December, 1938, the Reich's receipts from taxes and duties totalled Rm. 13,021.5 millions, against Rm. 10,478.3 millions and Rm. 8,584.6 millions, respectively, during the same months of the two preceding years. The increase in tax receipts is due mainly to an increase in the rates of corporation tax, to the annexation of Austria and the Sudeten territory and to the intensification of methods of collection.

Railway Difficulties

The huge armament programme and the carrying out of the Four-Year Plan have in recent years led to a very large increase in the volume of goods transported. At the same time, because of the urgency of armaments, the Reich Railways have been able to obtain only a small quantity of replacement material. The shortage of rolling stock and rails was actually increased by the annexation of Austria and the Sudeten territory. At the present there is a shortage of about 70,000 goods wagons. In consequence, there are constant and considerable delays on the railways. To do away with this, to economise on rolling stock and to ensure the regular overhaul of locomotives and carriages, the Reich Railways have launched out on an economy campaign. Trains have been suspended on various lines, travelling by officials, soldiers and workers (Strength Through Joy excursions) has been greatly curtailed; and even international traffic has undergone a number of restrictions.

Switzerland

Increasing Defence Expenditure

BERNE, February 11.—After the War the defence expenditure of Switzerland remained nearly on the same level until 1934. The ordinary Budget contributed 90 to 94 million Swiss francs towards this; and in addition 20 millions were voted in 1930 for strengthening air defences. After Germany's political change in 1933 the Swiss people showed a growing interest in the problems of military defence, even the Socialist Party, which formerly was opposed to military credits, changing its attitude. After the Anschluss, with the changing balance of power in Central Europe, the Swiss Parliament decided to take further military defence measures, and the following figures show the effect of these on the Swiss Budget:—

DEFENCE EXPENDITURE (Million Swiss francs)		
	Ordinary	Extraordinary
1933	91	97
1936	97	235
1937	106	...
1938 (Budget)	124	100
1939 (Budget estimate)	132	196.5

The ordinary defence budget shows an increase of 45 per cent. over 1933. Extraordinary credits, unknown before 1930,

BRITISH MALAYA

MALAYA HOUSE, TRAFALGAR SQUARE, W.C.2

reach the amount of 648,500,000 Swiss francs (£31 millions) in the years 1933 to 1939; and a further credit of 350 million Swiss francs is provided for in a Government recommendation.

That means a total expenditure of about 1,730 million francs (or £84 millions) in the period 1933-39, a heavy burden for a population of only 4,000,000. To cover extraordinary expenditure, a tax on income and property is levied, provisionally for three years. A capital levy of 1 per cent. is also being discussed.

Rhine Navigation

Since the Rhine has been made navigable, the traffic on this river continues to grow. In 1937 the traffic of the Basle Rhine port amounted to 2.96 million tons; though in 1938 there was a slight decrease because of low water. About one-third of Swiss imports come in by way of the Rhine (especially coal, grain, petrol) and 30 per cent. of Swiss exports go through the port of Basle.

An agreement of 1929 between the Swiss and German Governments deemed it desirable to make the Rhine navigable from Basle up to Lake Constance, or a distance of about 90 miles. Now Germany is urging that this agreement be carried out, so as to open up new traffic lines between Switzerland and Southern Germany and Austria, and through Austria to Italy. But the interests of Switzerland are not now what they were in 1929. The Swiss Federal Railways, in which 3,200 million francs are invested, would lose an important part of their traffic were most of the goods traffic with Eastern Switzerland, Austria and beyond to go via a German port on Lake Constance. As the conditions have changed, it seems that the question ought to be discussed again.

Balance of Trade

Swiss imports in 1938 decreased by 11 per cent. compared with the previous year, whilst exports increased by 2 per cent. thus showing an improvement in the balance of trade. The balance recently has been:—

(Million Swiss francs)			
	Imports	Exports	Import surplus
1936	1,266	882	384
1937	1,807	1,286	521
1938	1,607	1,317	290

The import surplus in 1938 is lower than in any year since 1922. This is partly due to smaller and also cheaper purchases of raw materials, and is therefore of a temporary nature.

Although there are no official figures available on the balance of payments, it no doubt shows in 1938 an important surplus of receipts. The net receipts from foreign tourists may be estimated at 250 million Swiss francs, and the net returns from foreign investments at about the same amount. Further, there is a revenue of about 100 millions from transit traffic, banking and insurance activity, so that the 1938 trade deficit is more than made up by "invisible exports."

U.S.S.R.

Purges at an End?

MOSCOW, February 4.—Signs have multiplied in recent weeks that the Communist Party is now easing, if not ending, its long and costly crusade for political vigilance. It was in March, 1937, that Stalin told a *plenum* of the party's Central Committee that Bolsheviks had forgotten politics in their concentration on the economic problems of the first two Five-Year Plans. He called on them "to master Bolshevism," as he had earlier challenged them "to master technique." It was the signal for what is now called here "the great cleansing work," which has dominated every aspect of Soviet life for the past two years.

"Back to business" might well be the nation's new slogan. On December 8th, Lavrentia Beria, a professional Chekist, took over the Commissariat of Internal Affairs, which includes the nation's political police, from Nikolai Yezhov, who had organised and led "the great cleansing work." Public denunciations decreased in number, and there began a small but definite trickle back to their jobs in Moscow of men who had "disappeared" many months before. A "Short Course of Communist Party History," published with Stalin's

Australia

Lower Export Prices

SYDNEY, January 27.—The prices obtainable for Australia's main exports continue to be low. The export price index (1934-35 to 1935-36 = 100) dropped from 135 in the third quarter of 1937 to 107 at the beginning of 1938, and to 91 in December. In spite of this decline in prices, however, heavy shipments kept up export receipts which, for the first five months of the current financial year, totalled £47 millions sterling, showing a reduction of only £4 millions sterling compared with the same period in the previous financial year. During October and November, the value of imports fell appreciably compared with the same months of 1937, considerable falls occurring in motor car chassis and parts, motive power machinery, piece-goods, rubber, and timber. This decline in the value of imports amounted to approximately the same figure as the drop in export receipts, so that the position at the end of the first five months of the current season was almost the same as in November, 1937, with an export surplus of some £3 millions sterling.

OVERSEAS TRADE (Millions sterling)

Five months ended	Exports	Imports	Surplus of Exports
November—			
1936-7	44.8	39.5	5.3
1937-8	51.1	48.1	3.0
1938-9	47.2	44.4	2.8

The position of primary industries has been further worsened by drought conditions over a large area of the South-Eastern portion of the continent and the recent bush-fires. The drought, with the consequent reduction of railway freights, has adversely affected State Budgets. The Treasurer of the State of Victoria in November revised his Budget estimates from a surplus of £A12,000 for the year to a deficit of £A825,000. Commonwealth receipts from customs revenues have fallen, and the first six months of the financial year show combined deficits for the Commonwealth and the States of £A12.4 millions. Revenue is actually higher than in the same period of 1937-38, but expenditure has increased at a greater rate.

The combined figure is only £A4.6 millions greater than the deficit at the corresponding period of the previous year, when the final result was a net surplus of £A3.5 millions. As the Budget estimates envisaged a deficit of £A1.2 millions in the current financial year, Government accounts are conforming fairly closely to forecasts and the budgetary position appears to be quite sound. Australia's economy has undergone a long period of strain associated with eighteen months of low commodity prices on world markets and it would undoubtedly seem that deficit financing is good policy.

A major factor strengthening the Australian economic system in meeting the difficulties of a period of continued low export prices has been the rapid expansion of secondary industries. The Federal Treasurer recently stated that the import of overseas capital for investment in Australia, mainly for the purpose of establishing new factories or extending existing factories, has averaged something like £A10 millions a year during the past few years. The expansion of secondary industry has received great impetus from the introduction of the enlarged defence programme and the decision to make Australia as far as possible self-sufficient in the production of arms and munitions.

Commonwealth Loan Policy

The Commonwealth loan of £A72.6 millions, which closed on December 15th, is particularly interesting because of its effects on the banking position and the official support which was given to it. The rate of interest at £3 17s. 6d. per cent. was quite appreciably above the rate ruling for comparable loans at the time of the announcement of the terms of issue. When the loan closed, £A52.3 millions had been converted and cash contributions totalling £A13.4 millions had been received, of which the National Debt Sinking Fund had contributed £A3 millions. The balance of about £A6 millions was taken up by the Commonwealth Bank, which had underwritten the loan. The system of the central bank underwriting Government loans has a danger in that the bank can be forced to expand credit to the extent to which the public refrains from subscribing to the loan. This risk can be reduced if the central bank shares the underwriting with the trading banks, as has been the usual practice in Australia. In the present instance the Commonwealth Bank took up the whole portion which remained unsubscribed, thus expanding central bank credit to this extent. As the cash reserves of the trading banks had been falling steadily during the greater part of 1938 some expansion of central bank credit was necessary if restriction were to be avoided.

blessing in a first edition of 6,000,000 copies, has outlined the new orthodoxy. A call has been issued for a party congress in March, the first for more than five years, and its agenda includes consideration of the figures of the third Five-Year Plan, which, although it is in its second year, has never been published or officially approved.

Clearer than any of these signs has been the campaign to increase labour productivity and industrial efficiency which started at the end of December. More than anything else, this has shown that the attention of the Kremlin is now focussed on industrial problems for the first time in more than two years. The campaign is currently taking three forms: decentralisation of management; stimulation of labour discipline; and emphasis on the technical, as distinct from the political, aspects of Soviet economics.

Decentralisation of Control

A year ago, on January 19, 1938, the first session of the nation's new Supreme Soviet formally elected twenty-five men to the Council of People's Commissars. Of these men, only nine now hold the jobs they held a year ago. What will possibly prove a more important change is that four of the commissariats themselves have been liquidated and divided, so that there is now a total of thirty-five.

This decentralisation has so far affected chiefly industrial commissariats. Heavy industry has been divided into fuel, ferrous metals, light metals, chemicals, building materials and electric power commissariats. Textiles have been divorced from light industry. Meat and milk products and fish have become independent of the food industry commissariat, and the defence industry commissariat has been divided into aviation, armaments, shipbuilding and military supplies. Nearly all the new commissariats are headed by "post-purge" personnel. The five new divisions of heavy industry, for example, besides the fuel commissariat which is still headed by Lazar Kaganovich, are now managed by men whose average age is thirty-eight, none of whom was a member of the Communist Party before 1917, and each of whom held a minor post or was still studying three years ago.

Labour Discipline

Efforts to improve labour discipline have been aimed at cutting down the still appalling labour turnover and at securing maximum effectiveness from each working day and each machine. The first end has been served by revision of social insurance laws, penalising "floaters" in respect to pensions, holidays and other benefits. A system of "labour books" is being introduced to record each worker's job history, and although he will still be legally free to wander across the continent as the spirit moves him, there will be—for the first time since 1917—an important incentive to settle down at one job.

Idleness and lateness have long been serious problems in Soviet industry. According to a new decree, a worker more than twenty minutes late without legitimate excuse must now be summarily discharged. The best possible proof of the Soviet Union's allegedly acute labour shortage, incidentally, has been found in the extreme reluctance with which managers even now discharge a guilty worker.

Both decentralisation of control and improved labour discipline have tended to raise the status of technicians in Soviet plants. A wide range of other measures has had the same effect. They are usually referred to here under M. Kaganovich's slogan of "cultured production." If the word did not have a capitalist curse on it, he might better call his programme "rationalisation." The object is to eliminate some of the gigantic waste from bad organisation from which Russian industry suffers.

One of the consequences of this general policy has been a marked increase in the authority of engineers in Soviet industry, and of foremen in each factory. Significant adjustments have already been made in certain wage schedules to overcome the natural reluctance of many Stakhanovist workers, who are paid extra premiums for over-fulfilling their output norms, to become foremen and shop managers.

The success of the programme depends on the willingness of workers to accept a tighter discipline while living conditions are still hard, and on the ability of technically-trained personnel to take back a measure of the initiative and responsibility which in the past the party itself has periodically denied them. Public trials of "loafers" are being used on a wide scale to meet the first of these problems. The confidence with which the Bolsheviks approach the second problem is based on the fact that the technical intelligentsia, which at similar periods since 1917 has had to be conscripted into authority, is now for the first time overwhelmingly young and Soviet-trained.

Letters to the Editor

French Financial Policy

TO THE EDITOR OF THE ECONOMIST

SIR,—Abroad in Hongkong, I have been following with the closest interest the recent letters to you on the desirability of exchange restrictions for France, as advocated by Dr Balogh, and on the undesirability of these, as stated by MM. Istel and Mantoux. To an impartial observer it appears that the only plausible reason adduced by Dr Balogh, now that France's finances and labour questions are being handled in a manner to inspire confidence in capitalists, is that exchange restrictions would prevent exports of capital in future due to war scares. But if that is so, then this would surely apply to Great Britain also. And war scares do not seem to cause the British to export their capital in appreciable amounts.

Presumably the reason why war scares do *not* cause nationals to export their capital appreciably (apart from patriotism) is the practical difficulty of benefiting by such an act, owing to subsequent Government action if war does break out—as the Germans and Italians have already found out during peace-time. It was very striking how not only the British, but also the French, did not export any appreciable capital during the September scare. (The withdrawal of capital by foreigners is, of course, irrelevant to the argument.)

Surely the great cause of nationals exporting their capital is distrust of the methods of handling their country's finances; in this case they do stand to benefit by their act. As the French now have no more reason for such distrust than the British have, it would seem logical enough for France, with £500 millions of liquid capital exported, to ignore war scares and keep the exchange free, just as Great Britain is doing.

Yours very truly,
T. L. CLEAVE.

T.T.1939

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Bauer's comparison of M. Reynaud's economy decrees with the emergency Acts of the former German Chancellor, Dr Brüning, seems to overlook the main principles. The general situation in both countries is entirely different, and the fundamental ideas of Budget policy are wholly opposed. Dr Brüning had to balance his Budget at all costs. There was only one Budget. Nobody thought then to institute an extra-ordinary Budget as France has to-day—and not only France. The cut in expenditure in Dr Brüning's Budget was more than offset by the shrinking receipts, as economic deflation was then in full swing. At that time diminishing State expenditure meant only new momentum for deflation.

Now let us look at France! For many years her Budget has shown large deficits; as there was no chance to balance the yearly Budget, non-recurrent expenditure—or what was thought not to be recurrent—was charged to an extra-ordinary Budget. For the coming year the total of the extra-ordinary Budget is estimated at well over 20 billions of francs. It is hard to see how under these circumstances a reduction of a few billions in public works can be regarded as a deflationary move. Moreover, the growth of armament expenditure is far offsetting the reduction of public works.

It remains only to emphasise that Dr Brüning's policy was deflationary, not only in respect of Budget policy, but also in all other respects. M. Reynaud's policy, on the other hand, is entirely reflationary; the political conclusion which Mr Bauer draws seems, therefore, to be unfounded.

Believe me to be, sir,
Yours faithfully,

Zürich.

WERNER BÄR.

The Currency Bill

TO THE EDITOR OF THE ECONOMIST

SIR,—Some misconception appears to exist as regards the profit accruing to the State when the Currency and Bank Notes Bill becomes law. Ignoring minor adjustments, £126 millions of gold in the Issue Department of the Bank of England will be raised in value by some £95 millions, and £95 millions of securities will be displaced and transferred to the Exchange Equalisation Account.

There seems to be a profit of £95 millions, but this is illusory. It is true that the Account will have an additional £95 millions of securities, but then it is essentially a costless proceeding to supply the Account with Treasury Bills: until the Bills are used (exchanged for sterling, foreign exchange or gold) the interest arising is simply paid from the Government's right-hand pocket into its left—as is the interest on securities in the Issue Department. On the other hand the profit would not be illusory if £95 millions of gold instead of £95 millions of securities were released from the issue Department.

Reigate,
Surrey.

Yours faithfully,
P. E. BUDGEN.

POINT FROM LETTERS

Science and Economic Progress.—In the article "Science and Economic Progress," on February 11th, you say: "The supply of goods for consumption may be increased in the future if the community limits its consumption now." That is an erroneous economic doctrine. The supply of any sort of goods may be increased now without any reduction in the standard of living, now or in the future, provided that raw materials and workers are available. These are the only physical limits to production. Unfortunately, there is a psychological limit and that is "belief in an archaic monetary doctrine."—*Hugh Munro, Glasgow.*

[To maintain that the limitation on the supply of goods is not the state of scientific knowledge but the resources of raw materials and workers available was the chief point of our article. We do not follow how the abandonment of "belief in an archaic monetary doctrine" would create materials and labour that do not now exist in adequate proportions for a sweeping advance in technology together with a maintenance of the present level of consumption.—EDITOR.]

Books and Publications

The Aircraft Industry

THIS survey* of the economic problems of the world's aircraft industry (outside of Germany) was compiled under the editorship of the Director of the official German Institute for Business Research and sponsored by the Association of German Aircraft Constructors. It is the first review of its kind. Three main sections deal with the experience of the World War, the development of the aeronautical industry in the post-war period and the present mobilisation of the industry. The trade in aeronautical materials is analysed, and the organisation of the aviation industry in "young" industrial countries is discussed.

There are three main reasons why the organisation of the aircraft industry will be of immense importance in the next war. Very large numbers of aeroplanes will be needed. The manufacture of aeronautical materials is complicated and therefore very expensive. And, furthermore, continuous improvements in design prohibit the storage of large reserves in peace-time. The industry's capacity must therefore be very great. A permanent first line strength of 3,500 planes, for instance, requires an industry capable of producing 50,000 planes a year.

Dr Wagenführ draws three chief conclusions from the various countries' experiences during the Great War. The output of aeronautical materials increased enormously (Great Britain's production of fuselages in 1914 was practically negligible; in 1918 the monthly output amounted to 2,961 units). The preparatory work needed to make larger outputs possible took a very long time, which leads the author to suggest very carefully planned co-ordination now to avoid war-time deadlocks through lack of raw materials, like the bottleneck created in the United States caused by the lack of linen. Finally, the demand for labour increased to such an extent that large numbers of men had to be called back from the front, every fighting plane requiring on the average 93.5 industrial workers; and at least half the actual fighting strength in the air had to be replaced every month.

The principal problems are common to all countries. Almost every expert agrees that air forces will play a very important rôle in any future war. An air force has to be kept ready for war at a moment's notice, even in peace time. Besides expanding already existing aviation plants, the belligerents will have to employ firms outside the aeronautical industry itself; and the organisation of supply has to be planned in peace-time. Reasonably large reserves for the first line strength must be available; and, since the introduction of new types into service takes a long time, it is necessary to work continuously on the development of new types, in addition to keeping current production steady.

Civil aviation is a very valuable additional source of income to the aircraft industry; but it is not sufficient to keep it alive, and aeroplane makers must therefore mainly rely on Government orders. It is imperative that Governments should plan their construction programmes for a long time in advance; but these programmes must be flexible. Exports must be promoted to keep the industry occupied; but Governments must find means to protect themselves against the export of the most up-to-date types of machines.

These are common problems, but the solutions chosen differ from country to country. While every Government attempts to control the operations of the aircraft industry which is dependent upon its orders, there are many different ways of doing this. The United States Government, indeed, refuses to participate in the industry in any way beyond controlling prices. The British and French Governments have gone somewhat further; in one case, subsidised "shadow" factories have been erected; in the other, the industry has been nationalised. America tries to create a large productive capacity through private firms able to produce a single type from first design to serial production. The "shadow" factories in this country are organised at present only for the production of parts, though they will become independent

* "Die Flugzeugindustrie der Anderen." By Dr Rolf Wagenführ. Berlin 1939. Hanseatische Verlagsanstalt Hamburg.

production units in case of war. Production policy is determined to a large extent by the particular political, geographic and strategic position of each individual country.

Dr Wagenführ has announced that he will prepare a similar survey of the German aircraft industry. It is to be hoped that he will show the same impartiality that he has consistently maintained in this most valuable book.

Shorter Notice

"Axis Plans in the Mediterranean." London General Press. 33 pages, 6 diagrammatic maps. Price 6d.

Captain Liddell Hart writes a preface to this brief "analysis of German geopolitical ideas on Italy, France, Balearic Islands, Gibraltar, Catalonia and Spain," in which he repeats the argument he has made elsewhere that "a friendly Spain is desirable, a neutral Spain is vital." In a sketchy and somewhat hortatory form, the booklet describes Germany's Mediterranean aims according to the neo-Treitschian school of Professor Banse and others; and the maps are drawn from German sources to illustrate the strategic implications of an anti-British regime in Spain. The booklet may be recommended to all imperialists.

PUBLISHED BY ROUTLEDGE

THE BUSINESS WORLD

Our Twelve Best Customers

ON page 113 of *The Economist* of January 21, 1939, we examined the general trend and nature of our overseas trade in 1938. Recession at home and abroad was responsible for a decline of 10.4 per cent. and 9.6 per cent., respectively, in the value of our imports and exports. But as import prices fell, while export prices were better maintained, we obtained in the past year a bigger volume of imports per unit of exports in 1938 than in 1937. And if allowance is made for changes in prices, it will be found that the volume of our purchases abroad last year was only 5.3 per cent. smaller than in 1937, whereas the volume of our sales overseas showed a reduction of 11.3 per cent.

The analysis of the geographical distribution of our imports and exports, published in the official trade returns for January, reveals where we purchased our supplies, and where we sold our exports in the past year. In the tables at the foot of this page we have assembled the figures for our trade with the principal countries of the world in the three years 1929, 1933 and 1938, and

we have calculated the percentage change in the trade with each country between 1937 and 1938.

Our commerce with individual countries in 1938 was naturally affected by changes in the total value and composition of our overseas trade and in the economic position and foreign trade policy of other countries. It is scarcely surprising, therefore, that the percentage changes in the value of our trade with individual countries between 1937 and 1938 were far from uniform. A feature of the past year's trade was the relatively smaller decline in the value of our trade with the Empire than in that with the rest of the world and, consequently, the persistence of the long-term trend towards an increase in the proportion of our total trade done with British countries, set in motion by the tariff of 1932 and the Ottawa Agreements concluded at the end of that year. Last year no less than one-half of our total exports were consigned to, and two-fifths of our purchases were derived from, the Empire, compared with 44.5 per cent. and 29.5 per cent., respectively, in 1929.

	OUR TWELVE BEST CUSTOMERS		
	1929	1937	1938
South Africa	7	1	1
Australia	2	3	2
India and Burma	1	2	3
Canada	6	5	4
Germany	4	7	5
U.S.A.	3	4	6
Eire	5	6	7
Argentina	9	10	8
New Zealand	11	9	9
Denmark	21	11	10
France	8	8	11
Holland	10	12	12

The United States has remained our leading source of supply, but she was sixth on the list of our twelve best customers last year, after being fourth in 1937 and third in 1929. The relative decline in our exports to the United States last year is a reflection of the fall in the total imports of that country rather than of significant changes in her sources of supply. South Africa, on the other hand, has moved up from seventh to first place on the list of the twelve best customers, due largely to the prosperity of her gold-mining industry; but as a large proportion of her exports consists of gold (which is not included in the ordinary trade returns), she does not come within the group of our twelve most important sources of supply of merchandise. Canada has moved up from ninth to second place on the list of sources of supply since 1929, and in 1938 she held the fourth place among our customers, against sixth in 1929. In 1938, as in 1929, Australia was our second most important overseas market, but in the interval she has risen from seventh to third on the list of our most important sources of supply.

New Zealand has also moved up on both lists, but India and Burma which were much the most important market in 1929 were third on the list of customers in 1938, due in no small measure, to the decline in imports of cotton goods; on the other hand, India and Burma's position on the list of suppliers in 1938 remained fourth, as in 1929.

The next table shows the value of British exports to our twelve best customers per head of their population:—

	IMPORTS OF BRITISH GOODS BY OUR TWELVE BEST CUSTOMERS PER HEAD OF THEIR POPULATION		
	1929	1937	1938
	£ s. d.	£ s. d.	£ s. d.
South Africa	3 17 10	4 4 7	3 19 2
Australia	8 9 7	5 9 10	5 10 11
India and Burma	0 4 5	0 2 1	0 1 11
Canada	3 9 10	2 9 7	2 0 6
Germany	0 11 5	0 6 4	0 6 0
U.S.A.	0 7 6	0 4 10	0 3 2
Eire	12 5 8	7 6 9	6 17 8
Argentina	2 12 7	1 11 8	1 10 1
New Zealand	14 10 6	12 14 7	11 19 11
Denmark	3 0 3	4 9 7	4 3 0
France	0 15 4	0 10 2	0 7 3
Holland	2 16 1	1 14 11	1 10 3

So far as British countries are concerned, New Zealand's purchases from us per head of her population were much bigger than those of any other country, both in 1929 and in 1938. Last year New Zealand was followed by Eire, Australia, South Africa, the British West Indies and Malaya, in that order. Among foreign countries, Denmark headed the list in 1938 (in 1929 Norway held that position), followed by Norway, Sweden, Holland and Argentina.

The proportion of our total trade done with the twelve most important countries has shown remarkable stability. In 1938, we obtained 62.8 per cent. of our total imports from the twelve countries listed, compared with 61.0 per cent. in 1937 and 64.4 per cent. in 1929. Similarly, the proportion of our total exports consigned to the twelve best customers in 1938 was 59.4 per cent. in 1929, 60.2 per cent. in 1937, and 59.6 per cent. in 1938. Changes in our trade with the less important countries were far more striking, as the accompanying tables show. The few countries which purchased more from us last year than in 1937 include the U.S.S.R., Spain, Italy and her dependencies, Hungary, Greece, Turkey, Egypt, Iran and Australia. Sales to the other South-East European countries, the Baltic States and South America showed a decline, but owing to the many conflicting tendencies at work, these reductions cannot be attributed to any single cause, such, for example, as Germany's trade drive.

The Borders Case

BUILDING society questions rarely come before the Courts. But the crowded audience which heard Mr Justice Bennett's reserved judgment in *Bradford Third Equitable Benefit Building Society v. Borders* last Monday demonstrated the widespread interest and concern which this case has aroused. It has, indeed, provided plenty of popular interest. The defendant, for example, conducted her own defence. The property, of which the plaintiffs claimed possession, was proved to be of bad materials and workmanship. And the plaintiffs failed to prove that the deed produced in Court, by which the house was alleged to be mortgaged to the Society, was in fact executed by the defendant and her husband. On the latter ground, the Society's action failed. On the other hand, Mrs Borders failed to prove that the building society was responsible for misrepresentations regarding the quality of the house. Hence, her counterclaim for damages also failed.

Neither of these points, however, despite their importance, matches the challenge to present-day building society methods which was raised in the course of

their contracts. Further, shareholders and depositors—possibly realising the full importance of the *ultra vires* issue for the first time—would have required the fullest reassurances that the legal position had been rectified.

Subject to the possibility of appeal, and subject also to Mr Justice Bennett's judgment being found to cover the whole subject of collateral security, these alarming apprehensions are shown to be unfounded. But in order to appreciate the full importance to the building society movement of the legal point involved, we may briefly examine a typical method adopted for collateral business, known as the "builders' pool." It has the dual object of enabling a house purchaser to acquire property on a modest initial payment (which may be as low as 7½ per cent. or even 5 per cent. of its valuation), and also to cover the building society for the excess of its advance over the normal proportion of 75 per cent. or 80 per cent. of valuation. The builder usually makes a cash deposit with the society, equivalent to the excess advance (i.e. 15 per cent. to 20 per cent. of the valuation) on the first batch of houses built. On the basis of its initial experience with the builder and the new estate, the society may subsequently accept cash deposits in respect of only part of the excess advances, but it protects itself for the remainder by obtaining the builder's personal guarantee and also retains the right to draw upon the pool in the event of default. When an estate scheme is in full operation, this cash proportion may vary between one-quarter and one-third of the excess advances. Finally, as the loan on a given property is reduced and the excess advance is recovered, the due proportion of the builder's cash deposit is released.

The system has made an enormous contribution to the development of new building estates, and the progress of the building society movement in recent years, though it is impossible to estimate the amount of building society business which has resulted, since the statutory form of building society accounts does not distinguish normal advances from those supported by collateral. It is thought, however, that for some of the larger societies, pool business may count for as much as half of the total. In any case, a movement which controls £636 millions of mortgage assets could not be allowed to remain exposed either to evasion of mortgage contracts or to any prejudicial threat to the security of depositors' and shareholders' funds totalling £656 millions.

There may, however, on further consideration, be a case for an Act to put beyond all question the right of the societies to take collateral security. Moreover, since these fundamental matters of building society practice have been raised, the moment would seem to be opportune for reviewing some of the other aspects of the movement's policy. The main statutory powers of building societies are derived from the Act of 1874. In two-thirds of a century the societies, which were originally conceived as philanthropic savings organisations, on Victorian "self-help" lines, have become highly capitalised concerns, whose resources approach one-third of those of the "Big Five" banks, while the assets of one society alone exceed the capital of the largest British industrial company by £43 millions. Yet much of the parochialism of earlier days still exists within the movement. There are still as many as 977 building societies in existence, and the fall in numbers since Victorian days is due largely to the gradual disappearance of the terminating society. In other words, the building society movement has not experienced the modern tendency towards amalgamation which has built up our railways, banks and large industrial units. Mere numbers, coupled with wide variation in the size of the societies, have made the achievement of uniform practice and safeguards against extremes of competition quite impossible in recent years. Attempts were made between 1934 and 1936 to introduce voluntary co-operation in the movement, and the larger metropolitan societies were, in fact, able to reach agreement on the desirable limits of pool business—covering such points as normal and excess advances, rates of interest and maximum periods of repayment. But it proved impossible to extend agreement over the movement as a whole, and, as a result, an unfortunate cleavage occurred by which the movement was split into

two organisations, the Building Societies' Association and the National Federation of Building Societies.

It is readily understood that smaller local societies, retaining much of the philanthropic character envisaged by the Act of 1874, should be averse to the imposition of rules which, in their own experience, seem arbitrary and unnecessary. Competition, however, has probably been more acute among societies of a more substantial character, particularly those who have seen their neighbours achieve national status. The growth of many provincial societies, in fact, owes much to the rapid growth of housing estates in the London suburbs in the last decade, and their incursion into new territory has not always been well devised. In particular, the relations between the societies and builders have sometimes been ill-defined in the minds of house purchasers, with unfortunate results where building standards have subsequently been proved wanting.

Since attempts to secure a voluntary agreement covering the whole movement have failed, it seems to follow that the only alternative is legally defined regulation. A former Chief Registrar of Friendly Societies, indeed, has remarked that building society law has begun to creak when applied to modern practices. Without considering a root and branch revision of building society law, it might be appropriate, at any rate, to consider the effective regulation of pool business. The pool system survived the depression of 1932 satisfactorily, but, in the meantime, total mortgage assets and the movement's combined liabilities to its members have both increased by well over £200 millions. The actual experience of pool business is known only to the societies themselves, but while there is no reason to question the care with which it is usually supervised, the fact remains that building society creditors have every right to demand that the collateral provided by the builders' pool is at all times adequate and liquid. It is plainly undesirable that, under the stress of competition for declining business, societies should be tempted to compete on terms which might involve risk to members.

Nor is this the only point on which the need for increased liquidity may be stressed. Leading spokesmen for the movement have repeatedly criticised the type of building society balance sheet which shows mortgage advances equivalent to 95 per cent. of total assets. Advances may have an average term of seven years to run, and it is not sufficient from the shareholder's point of view that they were originally made on a conservative basis, say, of 75 per cent. of valuation, and that any excess advances are adequately covered by builders' deposits. The valuation itself contains a "going concern" element which may disappear in the event of a forced sale or of depreciating property values. Certainly, it cannot be converted into cash at short notice to meet withdrawals of shares or deposits. Liquidity, in other words, should be measured not by reference to a given margin of valuation, but by the accumulation of adequate liquid assets in building society balance sheets. As a criterion, 10 per cent. of liquid assets might be regarded as a minimum, and the margin could with advantage be set higher.

Finally, the societies have a remedy against immoderate practices in their own hands. Faced with a growing volume of "return" money arising from the mortgage advances made in recent years, and with a potential decline in the demand for new advances in future, there is a risk that mortgage rates may be unduly reduced under competition—already suggestions are being heard to this effect. On the other hand, the recent increases in share interest (usually from 3 per cent. to 3½ per cent., tax free) suggest that some societies are experiencing a withdrawal of funds. On these general matters of trading (as opposed to pool business in particular) it is surely reasonable to expect the societies to move in concert—as indeed Lord Stamp emphasised at the Abbey Road Building Society meeting last week. The need for a fully representative body, capable of speaking for the movement as a whole and guiding its policy, has become more emphatic in recent months. By repairing the unfortunate cleavage which occurred in 1936, the movement would demonstrate its willingness—and achieve the power—to act in the best interests of its creditors, its borrowers, and, not least, its member societies.

Balkan Exchanges

MUCH has been heard in recent months of the difficulties under which British trade with the countries of South-Eastern Europe is labouring and of the necessity for defending our position against the inroads of German trade methods. It is not often realised, however, to what an extent Germany gains an advantage, and Britain is put at a disadvantage, through the merely technical operation of the foreign exchanges.

When in 1931 the pound sterling left the gold standard and depreciated, nearly all the countries of Central and South-Eastern Europe preferred to impose exchange restrictions and maintain the existing gold parities of their currencies. The reasons for this action were to be found in the popular horror of inflation which remained in all these countries as a legacy from the post-war years, and this opinion has remained so strong that, in most of these countries, the fiction of the gold parity is still maintained. This policy had the result that the Balkan currencies were left high and dry, while the pound sterling and, with it, the world price level for basic commodities, fell away. To take Roumania as an example, the gold parity between the leu and the pound sterling had been fixed in 1929 at Lei 813½ to the pound. But as the pound depreciated, the official rate of exchange fell to Lei 490.

The Reichsmark, however, remained officially at its old gold parity and for years after 1931 the rate of exchange between Berlin and Bucharest remained at the pre-crisis figure of about Lei 39 = Rm. 1. Germany had always been a very powerful factor in Balkan countries, both as a buyer and a seller, and this fact, combined with the stability of the exchange rate, contributed to the great expansion in trade between Germany and the Balkan countries. Since a pound, earned by the sale of Roumanian produce in Great Britain, would bring in only 490 lei, while a Reichsmark continued to bring in the former amount in Roumanian currency—and since, further, the internal price-levels of Great Britain and Germany both remained substantially unchanged—it was only natural that Roumanian exports should be diverted from Britain to Germany. In a system of free exchanges, British exports should have been helped by the depreciation of the pound, while Germany's sales should have been reduced by the enhanced competitive power of British goods. But under exchange control, these results do not follow. Roumania and Germany having set up an exchange clearing system, Roumania was compelled to take German goods to the amount of her sales to Germany, in spite of the fact that the Reichsmark had become over-valued relatively to sterling. And since Roumanian exports to Great Britain were hindered by the poor price, in lei, that they could fetch, the Roumanian authorities restricted the issue of import permits for British goods and thus prevented the British exporter from gaining the advantage of the relative cheapness of his goods. This combination of circumstances clearly worked to Britain's disadvantage. The Roumanian price-level became attached to the German and detached from the world price-level. Instead of falling (which, though painful, would have been the only way of buttressing the artificially exalted value of the leu) the Roumanian price-level remained in 1935 at the same figure as in 1931.

The position of being progressively cut off from the world economy became, of course, more and more unpleasant for Roumania. Exports to free exchange countries were subsidised and the form of subsidy gradually took the form of an informal and unavowed depreciation of the leu. By a law of December 1, 1935, a premium of 38 per cent. was allowed to exporters, who were compelled to hand over their foreign exchange to the National Bank, and the same premium was charged to importers of British goods. The new rate of exchange was therefore about 680 lei = £1. But though the leu was thus *de facto* depreciated so far as British-Roumanian trade was concerned, the exchange rate between the leu and the Reichsmark remained unchanged.

The new pound-leu rate of exchange was confirmed in the Anglo-Roumanian Payments Agreement of May, 1936. But it was recognised in the agreement that even this rate did not provide an adequate return on Roumanian exports in view of the internal level of prices. It was therefore provided that the Roumanian exporters of certain specified kinds of commodities might retain the sterling they obtained, without passing it through the clearing, and freely dispose of it to importers of other specified goods. The exchange rate for this so-called "compensation sterling" is determined by the market in Bucharest and in the last two years has fluctuated between 700 and 1,100 lei to the £. Towards the end of 1938 the rate moved in the range of 900-1,000 lei. Provision is also made for "special compensation" trade, i.e., compensation trade in commodities not on the general list but for which a special permit is granted. The rate for this type of sterling has fluctuated between 850 and 1,000 lei according to the type of goods concerned. All German trade has continued to be done at the rate of 39 lei to the Reichsmark. The pound sterling has consequently been valued, according to the official rate, at about Rm. 17½ and, according to the rate for compensation sterling, at which an increasing part of Anglo-Roumanian trade has been done, at anything up to Rm. 28. Moreover, it is only the compensation rate which now applies, since it was agreed in September that British exports to Roumania should no longer be paid for through the clearing account. Of the proceeds of Roumanian exports (other than oil) only 40 per cent. is retained for financial payments and 60 per cent. is now, broadly speaking, negotiable by the Roumanian exporter for the purchase of goods from the United Kingdom. These exchange rates, though necessary to facilitate Roumanian exports to Great Britain, very seriously limit the competitive power of the British manufacturer in the Roumanian market.

Thus the British trader is at a disadvantage whether the pound is undervalued relatively to the Reichsmark (as in the earlier years after 1931) or overvalued, as at present. Germany, on the other hand, has been able to draw advantages from either circumstance. When her currency was overvalued relatively to sterling, she avoided the evil effects that should have been produced on her exports by compelling Roumania to buy as much as she sold. And now that the Reichsmark is cheap, relatively to sterling, she gets over the difficulties that such a position would normally create for her imports by bulk buying at prices above the world level. Indeed, while the British complaint is that the pound is valued too high, the Germans have recently been pressing for an increase in the Reichsmark quotation in order to improve their terms of trade, and it was reported in December that the rate had been raised by agreement to 41 lei to the Reichsmark. This still indicates a cross-rate of about Rm. 24 to the £.

The Roumanian case has been dealt with in detail as an example of the forces at work. But what is true of Roumania is true in greater or less degree of the other four countries of South-Eastern Europe. With Turkey a full Clearing Agreement is in existence. The pre-1931 rate of exchange was 1,025 piastres to the £, and the official rate of the clearing is 590 piastres. At this rate, very few Turkish exports to this country are naturally forthcoming and British exporters have to wait 27½ months for their money. There is a possibility of private compensation trade and the premium for this compensation sterling (i.e. the depreciation on the nominal value of the piastre) fluctuates between 15 per cent. and 90 per cent. and is at present quoted at about 85 per cent.; but at these rates the amount of compensation trade that is possible is very small. The credit agreement concluded with Turkey a few months ago may possibly improve the position of the clearing, but only after a considerable delay.

In the cases of Roumania and Turkey, the clearing or payments agreements secure that a fair proportion of the proceeds of exports to this market are spent on British

goods. With Greece, Bulgaria and Yugoslavia this is not so, but trade is subject to varying degrees of restriction at the non-British end. Thus Bulgaria has complete exchange control and the fiction of gold parity is still maintained. The pre-crisis rate of exchange was 673½ leva to the £ and the present official rate is 375-400 leva. But since almost no business can be transacted at this rate, compensation trade is allowed. The premium is officially limited to 35 per cent. (i.e. 540 leva), but this premium is in fact exceeded. Reichsmarks are still rated at the old rate of 33 leva = Rm. 1, which would give a cross-rate of about Rm. 16½ = £1.

Greece is the only one of the Balkan countries that has admitted a large depreciation of its currency. The pre-crisis rate was 375 drachmæ to the £ and the present official rate is 540-55 drachmæ. Sterling can, however,

only be obtained from the National Bank as supplies are available and a small premium is charged. The Reichsmark rate, which was 18½ drachmæ before the crisis, is now about 42½ drachmæ, which corresponds to a cross rate of about Rm. 12.75 to the £.

The rate of exchange with Yugoslavia before 1931 was 274½ dinars to the pound. The official rate to-day is 210 dinars; this reflects an "official" depreciation of sterling of only 23½ per cent., reflecting the fact that some depreciation of the dinar has been admitted. But even so the rate does not permit much business to be done and a so-called free market rate of 262 dinars applies to the bulk of trade with Great Britain. A third special rate has recently been established for sales of sterling obtained by the export of turkeys; but this should rather be regarded as a disguised subsidy to the turkey-breeders than as a rate of exchange.

Finance and Banking

Bills at Poverty Rates.—The abnormal dearth in Treasury bills foreshadowed in *The Economist* of December 24th last is now making itself felt with a vengeance. Since the beginning of the year the total of outstanding bills issued by tender has fallen by £92 millions. Over the corresponding week of 1938 the reduction amounted to £65 millions only. Even more drastic has been the fall in the amount of bills obtained this year by the discount market syndicate. Taking the syndicate's weekly quota as being £30 millions, and adjusting this figure to the weekly proportionate allotment at the lowest tender figure accepted by the Treasury (this is always the syndicate figure), the amount of Treasury bills at present outstanding and issued to the discount market syndicate has fallen by £55,800,000 since the beginning of the year. Last year the fall in "syndicate bills" over the corresponding period amounted to £44,400,000. These reductions—and specially that for the current year—when measured in terms of the normal flow of Treasury bills to the discount market are far more severe than the reductions in the total of tender bills outstanding. One of the results of this dearth of bills has been to accentuate competition to a point at which the profit on turning over or running Treasury bills has virtually vanished. Last Friday the syndicate raised its price for the Treasury bills from the previous figure of £99 17s. 5d. to the maximum figure of £99 17s. 6d. This meant that the bills obtained by the market were discounted at a rate barely one-sixty-fourth over ½ per cent. Of £1,000,000 of bills so obtained the profit on resale to a clearing bank at the minimum rate of ½ per cent. would be slightly under £30. Similarly, if £1,000,000 of these bills were run for three months with ½ per cent. money the profit for the whole operation would again be under £30. As last week's syndicate allotment was only 25 per cent. the whole discount market obtained about £7,500,000 of Treasury bills, on which the profit would work out at £225. This is indeed a lean period for the discount market—as such. The Defence estimates for next year, however, provide some ground for the hope that this dearth in bills may prove to be a temporary phenomenon.

* * *

New Zealand Exchange Position.—Some concern is being expressed in banking quarters at the apparent absence of any recovery in the overseas assets position of the Reserve Bank following the recent imposition of exchange control. The situation can best be judged by a glance at the accompanying figures showing the overseas assets of the reserve and trading banks from the seasonal peak of 1936 to the time at which exchange control was applied, and, after that time, the position of the Reserve Bank alone. The lesson of these figures needs no stressing. The first table amply illustrates the immediate need of drastic action to preserve what was left of the reserve of overseas assets. The second set of figures shows that as far

as the Reserve Bank figures are concerned (the trading bank figures are not available beyond the end of November) the control of exchanges has brought about no improvement in the position. The most obvious reason for this

NEW ZEALAND NET OVERSEAS ASSETS (in thousand N.Z. pounds)			
End of Month	Reserve Bank	Trading Banks	Total
April, 1936	23,738	21,461	45,199
April, 1937	20,309	16,284	36,593
April, 1938	18,327	10,290	28,617
November, 1938	4,808	3,073	7,881

RESERVE BANK			
	Gold	Sterling	
January, 1938	2,802	16,415	
June, 1938	2,802	16,609	
December, 1938	2,802	4,678	
January, 1939	2,801	4,113	
February 6, 1939	2,801	4,074	

lies in the fact that the control of imports did not become immediately effective, many transactions initiated before the restrictions were announced bringing their influence to bear on the Reserve Bank's figures during December and January. Another point to bear in mind is the fact that there has as yet been no settlement between the Reserve Bank and the trading banks in respect of sterling bought and sold by the trading banks against controlled exports and permitted imports. The problem of determining exactly what balance is due to or from the Reserve Bank in respect of such transactions is likely to prove extremely complicated, and its final solution is being postponed to a date as yet unspecified. This means that some of the sterling due to the Reserve Bank may have been piling up in the accounts in the trading banks. As far as may be judged from the experience of individual institutions however such accumulation is likely to have proved almost negligible.

* * *

A third factor in the exchange position was the repayment towards the end of January of the Dunedin 3 per cent. sterling loan which involved the outlay of £200,000 sterling. It would, however, be incorrect to assume that the whole or even a substantial part of this repayment was met out of the resources of the Reserve Bank. The experience of the trading banks suggests that the control scheme is working with reasonable efficiency, that it has effectively put a stop to the outflow of capital from New Zealand and that the machinery for the licensing of imports is beginning to function with far fewer creaks than had been expected. The reserve position of the Reserve Bank is approaching an extremely interesting point. The latest published return shows a reserve ratio of 25.04 per cent. According to the original Reserve Bank Act 25 per cent. was the minimum ratio, and any fall of the reserve below this figure entailed the payment of a

graduated tax and a compulsory increase of the official discount rate. Under the Act as amended in 1936 these "penalties" disappeared, but it still requires a special authorisation of the Government for the reserve to fall below the 25 per cent. figure.

* * *

The Forward Gold Position.—The embargo on forward gold operations is proving very effective if judged from the point of view of the liquidation of the position outstanding in London. Since the first week in January, when the embargo came into operation, resales of gold originating from maturing forward purchases have provided the principal element in the offerings of gold at the daily fixing. It is estimated in competent market circles that the outstanding gold position, which was around £40 millions when the embargo came into force, has now been reduced to some £15 millions. A further contraction in this total is expected to occur, though the figure is not likely to fall much below £10 millions, this being the volume of forward gold operations of a commercial character which, as the only available hedge against contracts invoiced in gold, do not fall under the embargo. Has the embargo justified itself? It has certainly reduced the speculative position against sterling. The forward position in gold was, however, not so much the symbol of a bearish view on sterling as a hedge against the risk of all currency depreciation. There is some evidence to suggest that part of these hedge operations has been transferred to Continental centres and especially to Amsterdam, and that Dutch banks, which have been considerable buyers of gold in the London market since the embargo came into force, are in fact providing facilities for forward operations—even though these may not have sterling as their counterpart. The result means a loss to the London market of the appreciable profits previously made on these operations. More

important, it means a diminution of the stock of gold in London to which the authorities could lay claim in a state of emergency. When the gold was held here for account of London banks and bullion dealers against forward sales of gold it was in fact part of the potential reserve of the authorities. That gold is being rapidly dispersed. Some of it is going to feed the stream of arbitrage gold flowing to New York. Some is being transferred to the ownership of Continental banks, which are providing forward gold facilities, and once in this ownership cannot be regarded as so readily at the disposal of the authorities as it previously was. The embargo on forward gold is achieving its immediate objective with conspicuous success. But when complete confidence in sterling has been restored there will be a good case for reconsidering it and for allowing forward operations in gold greater latitude than they at present enjoy.

* * *

Swiss Bank Corporation.—There is some evidence from the balance sheet of this bank as at December 31st last that the "hot money" which sought refuge in Switzerland in 1937 was partly withdrawn last year. Sight deposits are down from Frs. 946.5 millions to Frs. 868.7 millions, and the total of all deposits has declined by about Frs. 61 millions, which roughly corresponds to the reduction in the balance-sheet total. Cash, however, shows a rise from Frs. 377.5 to Frs. 463.1 millions, so that although balances with bankers are down by nearly Frs. 69 millions, a high degree of liquidity has been maintained. Advances show only a moderate decline, and the brunt of the reduction in deposits has fallen on securities, which are down from Frs. 124.1 millions to Frs. 88.4 millions. Interest payable on deposits shows a further fall from Frs. 12.1 millions to Frs. 10.5 millions,

At the General Meeting to be held on the 24th February, 1939, the Board of Directors will propose to pay a dividend of 5 per cent. (same as for 1937) and to carry forward Frs. 2,029,946.

and this decrease has enabled the bank to show a small increase in net earnings of nearly Frs. 500,000.

* * *

Bank of Nova Scotia.—The dependence of Canada's prosperity on conditions in the United States was emphasised by Mr J. A. McLeod, the president, in his speech at this bank's annual general meeting. But he also pointed out that Canadian business activity showed a remarkable resilience in the face of lower commodity prices and the big fall in exports to the United States, so that the depression in Canada was comparatively moderate. This he attributed to the natural lag between reduction in export receipts and recession in domestic business, which

postponed the full effects of American conditions until fairly late in the year. The improvement in the United States in the summer, therefore, came at an opportune moment for Canada, for it brought with it firmer commodity prices and checked the decline in export trade. The subsequent recovery has been less pronounced than in the United States, but Mr McLeod considers that, if the revival in that country continues, the outlook for Canada is quite favourable. The bank's accounts for 1938 show that, in spite of the depression, profits would have been £73,000 higher than in 1937 had it not been for an increase of £75,000 in taxes. The reason for the maintenance of profits is the increase of approximately \$11,000,000 in deposits, which at \$253,291,054 are at the highest year-end figure in the bank's history.

MONEY MARKET NOTES

Foreign Exchanges

BUSINESS during the past week has been very restricted, with interest chiefly centred in the belga and the guilders. Last Saturday the selling pressure to which the belga had been subjected since the announcement of the Belgian Government's resignation was outbalanced by covering operations by bears, who were reluctant to leave their speculative positions open over the week-end. But, as no solution to the political difficulties had been found by Monday, the selling pressure was renewed and continued until Wednesday afternoon. On Tuesday the rate touched 27.83, closing at 27.80½, but the next day it showed an appreciation of 1½ c. in favour of the belga, and the firmer tone was maintained on Thursday. Guilders were also easier during the early part of the week, but the selling pressure was too small to justify the big movements that took place in the rate. Swiss francs have continued to be firm. Sterling has been rather erratic. The announcement on Wednesday afternoon of the Government's intention to double their borrowing powers for defence was immediately followed by a relapse in the sterling-dollar rate, which had till then been steady at around 4.68½. Some official support was given, but the pressure proved to be light and the Control's operations were probably on a very small scale. The closing rate of 4.68½ showed a fall of ½ c. on the day. On Thursday the rate was maintained at around 4.68½ for the greater part of the day; but in the afternoon New York came in as a buyer of dollars on rather a large scale, and the Control was forced to give a considerable amount of support to sterling. Forward premiums, however, were virtually unchanged.

*

The Bank Return

SOME of the extra notes issued in the previous two weeks have now returned, but the contraction only amounts to £1.8 millions and the note circulation is thus still very nearly at the level of last year's. The chief feature of this week's Return is the increase in bankers' deposits. These have benefited not only from the reduction in the note circulation but also from a rise in Government securities of nearly £5 millions, while the fall in public deposits to their level of a fortnight ago suggests that the rapid inflow of revenue is not being allowed to cause any immobilisation of

credit. It is worth noting that bankers' deposits at £110.5 millions are now over £4 millions higher than at the same time last year and nearly £20

millions higher than in 1937. A small increase in the coin and bullion holdings, together with the return of notes, has brought the Reserve up to £54.2 millions, and the proportion has risen to 34.1 per cent.

*

The Money Market

IN a Financial Note the effect of the reduction in the supply of bills on the discount market's profits is discussed in detail. The drastic step taken at the Treasury Bill tender on February 10th, when the syndicate raised its bid to £99 17s. 6d. in order to obtain a larger quota, was successful in that a quota of 25 per cent., the highest since January 6th, was obtained; but the level of the bid involves forgoing almost all profit on either running the bills or selling them to the banks. The average rate at which the bills were allotted fell as a result of the syndicate's action to 10s. 1.41d. per cent., which is the lowest since last May. The fact that the market was taking up a larger quantity of bills this week has not, however, led to any expansion in business. A few March and April maturities have been sold to the

clearing banks at ½ per cent., but the market is very loth to part with its bills, and the clearing banks are consequently refraining from pressing their demands.

Competition for commercial paper remains very keen, and the competitive rate for the three months fine bank draft is slightly under ½ per cent.

Credit conditions have been very comfortable, although bond money has been rather more usable and borrowers have sometimes had to pay ½ per cent. for fresh advances for the night. As indicated by this week's Bank Return, the clearing banks have been well supplied with funds and no calling-in has been evident.

*

The Bullion Market

THE turnover at the fixing has been on the small side every day, and on Tuesday only amounted to £293,000, which, excluding Saturdays, is the smallest this year. There has been little evidence of any hoarding demand, and the bulk of the small quantities offered has been taken for arbitrage, in spite of the increase in the premium over the American shipping parity on Saturday and Wednesday. On the latter day, resales on the liquidation of forward contracts were very small, and the Exchange Account was called upon to supply the greater part of the demand; this it was only prepared to do at a price which caused the premium to rise to just under 1d.

Date	Gold			Silver, price per oz. standard

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.
† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

Last Saturday keen demand for cash silver from bears raised the price ½d. to 20½d., the forward price being only ½d. higher. On Monday the cash price again rose ½d., and as the forward price was ½d. lower, the premium for cash silver widened to ½d. For this movement the renewal of bear positions in forward silver was mainly responsible; but on Tuesday the premium attracted swap transactions, and the cash price declined ½d., while the forward rose ½d.

Investment

Gilt-Edged and Defence.—Investors have been prepared for an increase in the Government's defence borrowing powers for some three months. But though the doubling of the limit to £800 millions already seemed inevitable, the actual announcement this week could not be translated into a bull point for the gilt-edged market. The arguments in a leading article on page 329 show that heavy borrowing for defence will be inevitable in 1939-40. Whether it will be so heavy that increases in taxation will be avoided is, however, open to question, particularly since well over half of the remaining borrowing powers could easily be absorbed next year if the Chancellor took the so-called lenient view. It is hardly to be supposed that the investor will be freed from the financial effort which re-armament entails in two years' time; hence the presumption that higher taxation will be coupled with increased borrowing appears to be strong. The timing of the new defence financing, however, during the forthcoming year is of great market importance. If the borrowing should amount in total to, say, £300 millions, it is obvious that the money market should be given the opportunity (which it would welcome) of absorbing an appreciable part of the amount in the form of increased tender issues. As for the long-term market, it is equally obvious that the placing of anything like £100 millions—or even more—of new securities would require much more persuasion by the Treasury than it has been compelled to exercise since 1932. To suppose that, because the money is not immediately required, the authorities may hold their hand in raising the loan is at least contrary to precedent, for the original issue of £100 millions 2½ per cent. Defence Bonds was made in April, 1937, while the £80 millions 3 per cent. Defence Loan was raised in June last year. Thus the former quickly followed the passing of the Defence Loans Act, while the latter waited only for the conclusion of the Budget debates. Last year's loan was significantly priced to produce success, though in the process it acted as a depressing influence upon existing securities. The Treasury can no longer count upon the Departments to act as temporary holders of a new stock issued at a fine price. Nor can it wish to give away any unnecessary concessions to the investor. Some preparation of the market may, therefore, provide a signal when the Treasury is likely to act.

* * *

Sharepushing Bill Third Reading.—On Tuesday evening the House of Commons gave third reading to the Prevention of Fraud (Investments) Bill, after considering amendments on the report stage. The Bill has raised unusual drafting difficulties, since freedom for *bona fide* business sooner or later provides loopholes for the sharepusher. A new clause, which provides an amended version of Clause 1, appears at least to remove some of the individual difficulties in the case of persons who, from the point of view of sharepushing, were quite above suspicion. Thus the restrictions of the Act are not to apply to transactions by recognised Stock Exchange members or dealers, the Bank of England, statutory corporations, etc., industrial and provident societies, and approved trustees or managers of unit trusts. Dealings with such bodies do not come within the scope of the Bill, nor are transactions with the holder of a principal's licence to be taken into account in deciding any question of contravention of its clauses. Again, dealings between principals are now subject to special reservations. A further clause was approved under which the Board of Trade shall not grant permission to deal in securities unless the sum of £500 has been deposited. The adequacy of the sum was questioned in the debate, but, in the Government view, a larger figure might act as a deterrent to honest but small dealers. If the Board of Trade is satisfied that the applicant has been carrying on the business of dealing in securities since the beginning of 1939 and that a £500 deposit would constitute an undue hardship, it may exercise its discretion to waive the deposit. Further amendments giving the Registrar power

to wind up an industrial provident society (in order to save something promptly from a threatened collapse) and also to enable the Board of Trade to obtain particulars of "half-commission" agents were also made. On the whole, the individual grievances under the earlier drafts of the Bill have been reasonably met without reopening the door to the sharepusher. They have, however, entailed additional burdens for *bona fide* investment dealers and investment advisers, who will hope that the Board of Trade, in return, will concentrate upon prompt and effective prevention of palpable sharepushing frauds.

* * *

Great Western Disappointment.—The Great Western dividend came as a shock after the excellent Southern and L.M.S. statements earlier last week. For the first time since the "grouping," the company has failed to pay the 3 per cent. ordinary dividend necessary to maintain full trustee status for its prior charges. Throughout the depression, the company's reserves were freely drawn upon to provide this minimum, and in 1937, for the first time since 1930, it was exceeded by a distribution of 4 per cent. Despite the tenor of the interim statement, and of the course of traffics, some optimists still hoped for the minimum 3 per cent. Actually, the ½ per cent. dividend declared was less disappointing than the fact that only ½ per cent. had been earned. The full accounts show that the dividend was actually short-earned by £164,493, for £100,000 has been appropriated from contingency fund, while the carry-forward is reduced by £64,493. The directors' decision to suspend the over-distribution policy followed in the last depression is an admission that circumstances to-day no longer justify an equalisation policy, and that 3 per cent. cannot be regarded as the mean earning potentiality of the company over a normal trade cycle.

* * *

The full accounts show a fall in net railway receipts from £6,318,018 to £4,636,144, but the disappointing net revenue figures were also depressed by the fall in ancillary earnings. Net ancillary receipts, as the following analysis shows, actually fell by £132,984 to £14,100.

GREENWOOD

The course of net revenue for the past eleven years is charted below:—

G.W.R. NET REVENUE 1928-38

South Wales coal exports slumped badly in the second half of 1938, and net receipts from docks, harbours and wharves, which are almost entirely dependent upon the coal trade, fell by no less than £140,254, mainly in the second half-year. On the railway side, a heavy fall occurred both in the number of passengers and in the volume of goods carried, but these losses were partly offset by the increased charges introduced in the last quarter of 1937. Thus, the number of ordinary passengers carried fell by 7.71 per cent., but receipts were only 0.38 per cent. lower. Total gross receipts fell by £1,281,706. On the other hand, expenditure increased by £400,168. In the first half-year, however, costs rose by £522,000, so that the company evidently achieved considerable saving in the second half-year. The full year's increase for wages was only £250,000. Coal cost £70,000 extra, and "other material" increased by a similar amount. Thus 1938 goes on record as the year in which Great Western lost the cachet of full trustee status for its prior charges, but their retention in the Chancery List should be within the company's power.

L.M.S. Accounts.—The full L.M.S. accounts show how elasticity of control can offset reduced traffic. Interest in the 1938 accounts, in fact, centres largely on the expenditure items for this reason. On the railway side, there was a saving in costs of £241,902, and on ancillaries a saving of £98,147. The total saving of £340,000 is a remarkable achievement in view of the fact that increased rates of wages and prices of materials accounted for £1,400,000 in the full year. The biggest saving was in wages. The restoration of the wage cuts in August, 1937, together with adjustments in the "cost of living" scales would normally have cost the company some £900,000 more, compared with 1937. Instead, there was a saving of £20,000. This was not achieved mainly by reducing staff. The average number of employees, it is true, fell by 1,508, but this would not account for more than one quarter of the amount saved. It is clear, therefore, that the management has achieved substantial savings in the expensive items of overtime and extra duty arrangements. Moreover, an actuarial review of the superannuation fund has provided a saving of £218,940. The section chiefly affected by the rise in labour costs, locomotive

and traffic expenses, has avoided a potential increase in costs of £1,740,000, partly owing to reduced traffic. Instead, therefore, of a big increase in costs, the rise is limited to £62,845, and there was an actual reduction in wage costs of £74,000. Moreover, instead of a big increase in fuel expenses (apart from electric current which cost £22,895 extra), there was virtually no change in cost, since engine mileage fell by 3 per cent. and the company was thus able to conserve expenditure. Maintenance of permanent way and rolling stock (items which vary little with changes in the volume of traffic) actually cost the company £76,593 less.

These savings are impressive, and as a result, net revenue shows a fall of £3,010,756 at £11,345,520, an amount which is sufficient to meet the first and redeemable preference dividends in full, and leaves £37,326 to be added to the carry-forward, as the following table shows:—

	1936	1937	1938
Railway gross receipts.....	64,462,842	67,234,080	64,212,115

* £3,180,000 in respect of rates recoverable 1931-34 transferred direct to contingency fund.

Distributions during the past eleven years are shown in the following chart:—

L.M.S. DISTRIBUTIONS 1928-38

Ancillary earnings, it will be seen, proved rather disappointing, for the deficit of £53,109 showed a fall of £282,630 compared with the previous year. Only two items showed an improvement. These were canals and air services and the improvement was in each case small. Steamboat net earnings fell by £97,608, docks by £60,335, and hotels by £22,098, while the usual heavy deficit on the collection and delivery of parcels was increased by £109,280, to £571,261. On the other hand, miscellaneous net receipts rose by £51,937, to £542,285, partly through increased earnings on joint lines, which benefited from the adjustment of pooling settlements and from credits for rates and rate relief. Since the report refers to "further fructification of economies in working," L.M.S. stockholders should expect to reap immediate advantage from any improvement in traffics.

Southern Railway Results.—The Southern Railway accounts fortify the satisfactory results shown by last week's dividend statement. Net revenue was only £610,220 below the record 1937 figure, and represents 4.52 per cent. on the preferred stock, which is receiving the full 5 per cent. dividend. The reason for these surprisingly good results lies, of course, in the unpredictable buoyancy of ancillary earnings, which actually show a net improvement of £18,106. The full results for the past three years and distributions since 1928 are analysed in the following table and chart:—

	1936	1937	1938
Gross railway receipts	21,256,414	22,113,580	22,012,051

SOUTHERN RAILWAY DISTRIBUTIONS 1928-38

The rise in ancillary receipts occurred despite the fact that in the previous year the company benefited greatly from the extra coronation traffic. The compensating factor appears to have been the favourable rates of exchange on the Continent, as a result of which gross receipts from steamboats rose by £74,555, most of which was retained net, since in this type of business costs are not substantially affected by changes in the volume of traffic. This more than offset the fall of £42,655 in net dock receipts. This fall was mainly attributable to the smaller volume of traffic passing through Southampton, and the chief items in which receipts declined were dues for ships and receipts from the use of graving docks and crane services. Hotel earnings were naturally lower, but on the other hand, the collection and delivery of parcels earned more—the Southern is the only one of the four companies which makes a profit on this type of business. On the railway side, expenditure rose by £492,641, mainly due to locomotive and traffic expenses, the former being £217,323 higher, and the latter £165,060 higher. The increase in the cost of maintenance of the permanent way and of rolling stock was £107,009. Of the total increase in costs, some £275,000 appears to be attributable to the increase in the cost of labour resulting from the restoration of the wage cuts in August, 1937, but the bulk of the increase

occurred in the first half-year—actually the increase in the second six months was limited to £37,641. The reduction in steam engine mileage during the year was more than offset by the increase in electric train mileage—a fact which suggests that the company is taking full advantage of electrification by providing better services and affording greater inducements to travel.

Courtaulds' Lean Year.—The suggestion, made in *The Economist* of July 16th, last year, that the Courtaulds' dividend for the full year 1938 might be well under half the total for 1937 has proved true. The dividend has, in fact, been reduced from 10½ per cent. to 4 per cent. The interim dividend statement disclosed that the 1½ per cent. distribution had not been fully covered by earnings, but the preliminary profits figures for the full year show that actual earnings for 1938 amounted to less than ½ per cent. for the ordinary stock. Profits, after taxation, fell precipitately from £2,373,892 to £352,265, and the amount earned for the ordinary stock from £1,973,892 to £62,265. In these circumstances, the decision of the directors to draw on stocks and insurance reserves not required to make the 4 per cent. payment is significantly generous. They point out, in fact, that but for the need for heavy provision against raw materials (especially wood pulp) last year, substantially better profits would have been shown. The following table analyses the results of the past three years:—

	Years ended December 31	1936	1937	1938
Profit after tax		2,296,458	2,373,892	352,265

Paid		1,881,000	1,890,000	696,000
Earned %		10.3	11.0	0.4
Paid %		9½*	10½	4
Special credits.....		...	...	Cr. 621,938
Carry forward		212,749	296,641	284,844

* Of which 2½ per cent. interim tax free.

It is a sobering reflection that the net revenue from the company's holdings of gilt-edged and other investments (amounting to £15½ millions), on the basis of an over-all rate of 3½ per cent., would have provided some £387,000—an estimate which suggests that after making the special stock provisions, trading operations as a whole may have been conducted at a loss last year.

There are, however, several pointers which suggest that, while 1938 proved an abnormally disappointing year, the company has not suffered a permanent loss of earning power. Apart from the dividend decision itself (a pointer of importance from so conservative a board) the discussions between the Courtaulds and British Celanese boards have resulted in an "arrangement" which should lead to greater stability on a somewhat higher price level for viscose and acetate yarns than prevails at present. This, it would seem, may be an interim arrangement, for the statement indicates that it has been made pending the outcome of negotiations between the two companies. The recent reopening of the Leith mill, coupled with improvement in the American market are further pointers towards

recovery in the current year, which should bear none of the special cost burdens of 1938. A dividend yield of no more than £3 1s. 6d. per cent. on the ordinary stock, after its recovery this week to 26s. 9d., suggests that some degree of improvement during the current year is already discounted—Courtauld's ordinary stock has always stood high in relation to actual earnings. But that fact, of itself, does not rule out the possibility of further improvement, if the present symptoms of recovery have a chance to mature.

* * *

Imperial Tobacco Position.—The full accounts of Imperial Tobacco add little to the rather meagre information already supplied in the preliminary statement. Total profits amount to £10,685,053, against £10,750,609, and (as explained in *The Economist* of January 28th) this trifling decline can be more than accounted for by higher taxation requirements. Since 1934-35 total profits have varied by no more than 5 per cent. But since the depression tobacco consumption has been rising, and stability of profits appears to be due to the combined effects of increasing costs, the company's stock equalisation policy, and its practice of disclosing profits after unstated inner reserves. The balance sheet, in fact, though it might be more instructive, does provide signs of growth which has been barely reflected in the profit and loss accounts of recent years. Leaf and other stocks, which now account for almost half the total assets, rose from £35,841,542 to £40,286,140 last year. This is an increase of as much as 12½ per cent., but on the reasonable assumption that the company's pre-eminent position in the industry is being maintained, the need for larger physical stocks to meet expanding demand, coupled with the small rise in leaf prices in 1937-38, would account for a sizeable increase. Buildings and plant are some £568,000 higher at £5,747,000, and net interests in subsidiaries and associated companies have risen from £13,053,000 to £14,264,000. On the liabilities side creditors have increased by 2 per cent. to £18,614,000, but as this is an "omnibus" item, including contingencies, provisions against stock value and taxation, and trade creditors, it is impossible to interpret this small change. The shareholder must perforce await Lord Dulverton's survey of the company's trading position and prospects on February 21, but there is nothing in the report which suggests any major changes in earnings during the current year.

* * *

Yorkshire Electric Expansion.—By a steady expansion of operations, Yorkshire Electric have attained a fresh record in total income, which for 1938 exceeds that of the previous year by the satisfactory margin of 11 per cent., and amounts to £1,468,988 against £1,314,926. In 1937 the increase in receipts by no means kept pace with the higher output, but last year's satisfactory results have accompanied an increase in sales to consumers of no more than 5 per cent., while output for the grid was actually lower by nearly 10 million units. But although total output rose by only 2 per cent., generation and distribution expenses increased by about one-fifth, largely because of a rise in fuel costs from £264,330 to £335,140. Among general expenses, taxes and rates required £18,000 more, and the revenue account includes a new item for pensions.

NORANDA MINES, LIMITED DIVIDEND NOTICE

Notice is hereby given that an interim dividend of \$1.00 per share, payable in Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable March 15th, 1939, to shareholders of record at the close of business February 22nd, 1939.

By order of the Board. J. R. BRADFIELD,
Toronto, February 7th, 1939. Secretary.

The recent course of profits and expenses is summarised in the following table:—

	Years ended December 31		
	1936	1937	1938
Total receipts	1,162,237	1,314,926	1,468,988

(a) Rate earned before, and (b) rate earned after charging depreciation and reserve fund allocation.

* After £10,000 to staff fund.

As the undertaking has grown, the provision for depreciation and reserve has increased, and for 1938 it absorbs roughly two-thirds of the balance of net earnings. Progress has been made with extensions at the Ferrybridge power station, as a result of which capital expenditure during 1938 amounted to no less than £1,020,618, compared with £463,456 in 1937. The process of development, however, is to continue, and since existing borrowing powers are now exhausted future requirements are being met by an issue to shareholders of 824,600 £1 ordinary shares, in the proportion of one new for five preference or ordinary £1 units, now held, at 30s., against a current market price of 35s. 6d. Since borrowing powers are limited to one-half of issued capital, this share issue will also permit the placing of further debentures. The need for replenishing cash resources to meet new capital expenditure is underlined by the balance sheet, which shows an excess of current liabilities over liquid assets of £142,000. The company has a steady dividend and generous depreciation record, and the £1 units yield £4 10s. 9d. per cent.

* * *

Ismay Industries Reorganisation.—The position of Ismay Industries provides yet another example of rapid growth and extreme diversification of business which have been followed by financial Nemesis. During the latter part of 1938 the original board was largely replaced, and shareholders were informed that the company's affairs were to be investigated, and that investment losses were known to have been incurred. In December it was announced that certain interests were sold and a capital reorganisation was anticipated. This week the report for sixteen months to October 31, 1938, has been issued, which does not refer to the reorganisation. A subsequent circular, however, states that total losses are about £700,000, of which £600,000 will be met by writing down the 5s. ordinary shares to 1s. each and the balance found from reserve. Total profits for the 16 months were £39,429, against £68,144 for a full year, and, in addition to ordinary expenses and interest, a charge of £39,610 for investment losses is involved. There remains a net loss of £31,104, against a net profit of £52,384, and although a year's preference dividend of £15,257 has been paid from a special reserve, no distribution for the six months to December, 1938, is proposed. Since the issue of the previous balance sheet the Sterling Batteries, Britannia Electric Lamp Works, and Ismay Cables interests have been sold (the last named at a loss); but a holding of more than one million ordinary shares (out of a total of two million shares) is still retained in A. C. Cossor, Ltd. After these changes, however, the gross book value of interests in subsidiaries

and associated companies is increased from £1,010,042 to £1,570,387—the over-valuation of certain of these holdings is, of course, the immediate cause of the proposed reorganisation. A new item in the balance sheet is a bank loan of £152,317 (apparently now reduced to £100,000), though the directors' report points out that the various sales effected since June, 1937, reduced the debt to the bankers by about £500,000. The production side of the business continues to develop, but the need for the simplification which the new board is trying to attain is shown by the existence in July last of over seventy allied companies. The group's position, however, cannot be fully understood until the nature of the losses and full details of the coming scheme are available.

* * *

Lancashire Electric Report.—In 1937, the Lancashire Electric Power Company increased its sales by more than 20 per cent. Last year the increase was at the moderate rate of 14 per cent., but for a period of acute depression in the cotton industry this scale of expansion is nevertheless creditable. It is evident that the reduction in charges which became fully effective in 1937 has produced further benefits, although the average receipt per unit sold shows no change during the year at .574d. The profits of the Power company and of the Holding company are analysed in the following table:—

	Years ended December 31		
	1936	1937	1938

† Available for parent company after crediting interest and adjusting carry-forward.

‡ After £40,000 to reserve.

The trading profit of the Parliamentary company shows an increase from £501,797 to £550,403, the bulk of which, as in previous years, has been applied to strengthening the depreciation provision. Including the debenture redemption provision of the Holding company and the small addition carried forward of the Power company, the total sum set aside is not far short of £225,000, compared with approximately £190,000 in the previous year. Further extensions which the group has carried out at the Kearsley power station and to the operating company's mains, however, justify this more generous depreciation programme. It

would seem, in fact, that the 7½ per cent. ordinary dividend is now covered satisfactorily by "true" earnings. The £1 ordinary stock units stand at 30s. 7½d., to yield £5 1s. 3d. per cent.

* * *

The Week's Company Profits.—Net profits of companies reporting this week have reached the high total of £17,102,000, largely owing to the inclusion of the Imperial Tobacco results. Our usual analysis of profit and loss accounts on page 378 covers 58 companies (apart from those for which comparable figures are not available), among which utilities and miscellaneous industrials are well represented. The week's total is 1 per cent. lower than the £17,316,000 earned by the same companies in the previous year, while the aggregate net profits of 254 companies reporting in 1939 to date amount to £37,680,000, against £39,656,000, a decline of 5 per cent. We discuss the week's results in preceding Notes and on page 360 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Sir David Milne Watson, at the *Gas Light and Coke Company* meeting, disclosed that during the past year the company had been using coal purchased under contracts dating from 1935. The heavily increased cost to-day had therefore compelled the increase in the price of gas. The chairman of the *Hungarian Commercial Bank of Pest* discussed the re-discount policy of the bank last year, by which credits granted to public authorities and private undertakings had been maintained, despite the withdrawal of deposits. Mr Cyril W. Black, at the *Temperance Permanent Building Society* meeting, disclosed that the society's reserve and carry forward were equivalent to over 19 per cent. of the combined share and deposit capital. Baron d'Erlanger showed that the depreciation of the investments of *Sterling Trust*, after deducting free reserves, was less than 2 per cent. At the *Beira Railway* meeting, Baron d'Erlanger disclosed that net receipts for October and November amounted to £90,900, compared with an exceptional figure of £106,800 for the corresponding months of the previous year. General merchandise traffic had so far been well maintained. Mr Frank H. Jones stated that the increase of 0.4d. per therm announced by the *Wandsworth and District Gas Company* would involve a reduction of ½ per cent. in the statutory dividend and corresponding reduction in the co-partners bonus next year. The issue of £350,000 non-interest bearing notes was discussed by Mr Robert Sweeney at the *South Banket Areas* meeting. The first milling unit is anticipated to be in operation in about eighteen months. Mr George Balfour disclosed that *Power Securities* had over £1½ millions of unfilled contracts at the end of 1938. The Chairman of *General Investors and Trustees* pointed out that the net depreciation of investments, allowing for reserves, was barely 5 per cent. Mr Richard Guinness referred hopefully to the prospective maintenance of the *Railway Debenture and General Trust* dividend. At the *Railway Share Trust and Agency* meeting, Mr Guinness referred to the proposed change of name of the company to "Share and General Investment Trust." Mr H. Eric Miller disclosed that the standard production of the four estates owned by *Bah Lias Rubber* amounted to 7,009,104 lbs.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
FEBRUARY 21 FEBRUARY 23

DULLER and quieter conditions prevailed on the London Stock Exchange for the first part of this week and no section succeeded in producing real activity. Contrary to expectations, however, the publication of the defence

White Paper recording the extension of defence borrowing to £800 millions (discussed on pages 329 and 353) acted as a moderate stimulus to business on Thursday. Turnover was higher, and prices, where changed, showed improvement.

Gilt-edged opened easier following the White Paper on Thursday, but improved during the day. Falls were limited on balance to no more than ½. A less satisfactory response had been anticipated on Wednesday evening, and

Thursday's comparative steadiness provided a marked contrast to the indifference and apathy earlier in the week. Further improvement occurred in the New Zealand stocks of which the market supply was short.

In the *foreign bond* market, Japanese issues responded to the American sinking fund operation with some sharp mid-week rises. European issues became firmer, but further selling of Brazilian bonds marked disappointment on continued absence of any debt offer.

BY STOCK EXCHANGE INTRODUCTION

Westminster Press Provincial Newspapers.—Particulars of issue of £500,000 5 per cent. debenture stock. Redeemable by 1959 by drawings at par from 1940; or on notice from 1954. Controlled companies publish 40 newspapers. Acquired in March, 1938, Westminster Press, Ltd., whose combined profits are, for 52 weeks to end March: 1936, £91,573; 1937, £99,239; 1938, £101,320. Purchase

price was 500,000 5 per cent. £1 preference and 499,997 £1 ordinary shares; goodwill value, £441,931.

BONUS SHARES

United Automobile Services.—This company is proposing to distribute a bonus of one new £1 ordinary share for every seven ordinary held.

BY TENDER

Bilston Gas Light and Coke Company, Ltd.—Sale by tender up to 3,530 £5 "B" shares (to realise £30,000) at a minimum of £8, yielding at that price £5 12s. 6d. per cent. Net revenue year to September 30, 1938, £16,082, or £13,796 after interest.

ISSUES TO SHAREHOLDERS ONLY

Waddon Investment Ltd.—Issue to Town Investments shareholders and company's debenture holders of £40,000 5 per cent. debenture stock at par. Ranks with £160,000 already issued. Redeemable at par December, 1965, or from 1960 on notice. Estimated book value net assets, March, 1939 (available as security on £45,000 mortgage and £200,000 debenture stock), £465,000. Profits, period to March, 1938 (before interest), £22,785.

South Bank Areas.—Offer at par (to members of company and Gold Coast Bank Areas) of £350,000 non-interest bearing 5-year registered convertible notes. Unsecured. Redeemable February, 1944, at 125, or earlier on notice. Convertible before 1941 at 1,000 2s. shares per £100 notes, or thereafter until 1944 at 800 shares. Owns mining concessions over 7,061 acres. Present ore reserves, 622,300 tons of 5.65 dwts. over 42.4 ins. With 180,000 tons a year from first unit, working costs of 20s., gold at 140s., recovery of 5 dwts., working profit would be £135,000.

Yorkshire Electric Power Company.—Issue of 824,600 £1 ordinary at 30s., in proportion of one for every five held by existing ordinary and preference shareholders.

Richard Thomas and Company.—This company has issued a further £253,000 4½ per cent. redeemable prior lien mortgage debenture stock. This raises the amount outstanding to £2,786,410.

SHORTER COMMENTS

Company Results of the Week.—PETER WALKER (WARRINGTON) & ROBERT CAIN AND SONS repeat the 7½ per cent. dividend, although trading profits and dividend from the subsidiary are reduced by £16,000 and £10,000, respectively. Further evidence of a decline in profits in the boot and shoe trade is reflected in the J. SEARS AND COMPANY (TRUE FORM BOOT COMPANY) accounts, which show a drop in net earnings from £262,369 to £232,455. Trading profits of D. NAPIER AND SON are more than 75 per cent. higher at £103,006, and ordinary dividends are being resumed with a 5 per cent. payment. Most branches of the textile trades continue to show considerably reduced profits. FLEMING, REID AND COMPANY, after earning £130,419 against £155,099, are reducing their dividend from 17½ to 13½ per cent. MERCANTILE INVESTMENT AND GENERAL TRUST have experienced some drop in revenue, but it is satisfactory that the valuation of securities shows a small appreciation above book values. A sharp rise in total profits, from £56,568 to £151,963, is

recorded by BIRMINGHAM RAILWAY CARRIAGE AND WAGON. Heavy advertising expenses and a higher bonus to the trade have resulted in a drop in BOVRIL net profits from £295,058 to £267,223. BORAX CONSOLIDATED report that prices and home demand remained steady, but that shrinkage in foreign markets has reduced total profits by about £80,000 to £481,515. The satisfactory impression given by the ENGLISH ELECTRIC preliminary results is confirmed by the full report; trading profits of £667,603 compare with £552,185. A considerable rise in turnover has yielded WM. P. HARTLEY, LTD., a 22 per cent. increase in net profits to £77,688, although rising costs reduced profit margins. A small but satisfactory increase in net profits is shown by MATHER AND PLATT. Stability of profits is also shown by SOUTHALLS (BIRMINGHAM), LTD., but the tax free dividend is raised from 20 to 25 per cent., while in 1937 a 5 per cent. cash bonus was paid from profits on investments.

MISCELLANEOUS

Canadian Pacific Railway.—The railway is passing the dividend on its £28,203,477 4 per cent. non-cumulative preference stock. For the previous year 2 per cent. was paid. The board has announced that while earnings were sufficient to meet all expenses and charges, including depreciation and taxes, with a modest surplus, the directors have considered it inadvisable to declare a preference dividend in view of the serious decline in the net results for 1938 as compared with 1937.

London Power Company.—Output of the company's stations increased by 2.14 per cent. in 1938. Excluding the Central Electricity Board's portion, the demand has risen by 10.42 per cent. Gross revenue is £209,093 higher at £3,794,522. Generation and maintenance expenses at £1,810,341 compare with £1,669,619. Transmission expenses, £26,653; rents, rates, etc., £246,578; general expenses, £68,976; debenture interest, £834,558. To reserve fund, £10,000 (same). Fixed 6 per cent. dividend, £3,000 (same).

Phoenix Oil and Transport Company.—A scheme of arrangement in order generally to improve the company's position, has now been settled and will be brought before the High Court with a view to its being submitted later to shareholders.

Transvaal Gold Output.—January, 1939: Witwatersrand, 1,009,986 fine ounces; outside districts, 28,731 fine ounces; total, 1,038,717 fine ounces. Total output, December, 1938, 1,026,229 fine ounces. Number of natives employed, January, 1939: Gold mines, 316,822; coal mines, 16,460; total, 333,282.

Walker (Peter) and Cain (Robert) and Sons.—Total income, 1938, £534,420, against £560,394. Ordinary dividend, 7½ per cent., as before. To general reserve, £50,000 (£60,000); improvements, £25,000 (£30,000); staff fund, £10,000 (same). Carry-forward raised from £99,436 to £103,719.

Harrods, Ltd.—A preliminary statement shows net profit for year to January 31, 1939, £708,191, against £788,802. Preference dividend, £300,000 (£300,000). Ordinary dividend 16 per cent., absorbing £354,431 against 16 per cent., plus a bonus of 2½ per cent., absorbing £409,811. To special reserve, £20,000 (£40,000). Carry-forward reduced from £189,749 to £183,509.

Evans (D. H.) and Company.—Net profit for year to January 31, 1939, £143,800, a rise of £6,022. Dividend raised from 12 to 13 per cent. To N.D.C. reserve, £8,000 (£6,000). Carry-forward reduced from £36,681 to £30,301.

John Barker & Co. Ltd.—Profits for year to January 31, 1939, £347,941 against £344,817. Dividend, 15 per cent. as before. To buildings reserve, £100,000; plant, etc., £25,000. Carry forward £190,379, against £189,651.

Lewis's, Ltd.—Profit for year to February 1, 1939, £791,553, after debenture interest, comparing with £808,006.

(Continued on page 374)

Industry and Trade

Slump in the Cotton Trade.—The past year was a bad one for the cotton trade. According to provisional estimates of the Joint Committee of Cotton Trade Organisations, the output of cotton yarn was only 1,050 million lbs. compared with 1,350 million lbs. in 1937. Production of piece-goods reached the record low of 2,700 million square yards, a fall of a quarter on 1937, and equivalent to only 45 per cent. of the 1924 output. The number of insured workers continued to decline and the average rate of unemployment was 27 per cent., although by the end of the year employment had recovered from its summer depths to the level of February. By far the greater part of this decline was in the export trade. Declines of 50 to 75 per cent. were recorded in exports to some countries, including French and British West Africa, Switzerland, Holland and the Dutch East Indies, whilst the U.S.A., Ceylon, Malaya, New Zealand and Argentina imported from 20 to 40 per cent. fewer British cotton goods than in 1937. The home market, on the other hand, showed greater powers of resistance, the decline in commercial demand being to some extent balanced by an increased volume of Government orders. Rough estimates suggest that finished goods to the amount of £40 millions were produced for the home market or added to stocks last year, compared with £50 millions in 1937 and £40 millions in both 1934 and 1935. As a result, the proportion of output exported has continued to fall and is now probably under half, compared with two-thirds or more before the Great Depression.

* * *

Rubber Quota Unchanged.—The price of rubber has recently fallen below eightpence per lb., partly because the possibility of an increase in the rubber quota for the second quarter of this year prompted consumers to buy "from hand to mouth." Uncertainty has now been removed by the decision of the International Rubber Regulation Committee (announced last Tuesday) to leave the export quota unchanged for April-June at 50 per cent. of the agreed basic tonnages. The market quickly responded by raising the price of rubber (standard smoked sheet) from 7½ pence per lb. on Monday to 8½ pence per lb. on Wednesday. Apart from the fear of an increase in the quota, the market in rubber, like those in other raw materials, had been depressed by the slowing-down of recovery in the United States and by doubts concerning the optimistic forecasts of probable consumption across the Atlantic this year. Actually, the supply-demand position in the rubber market is quite strong, for the prompt action of the International Rubber Regulation Committee prevented the accumulation of stocks last year. As a result of the reduction in the export quota from 60 per cent. to 45 per cent. in the third and fourth quarters, world stocks of rubber fell from 556,039 tons at the end of July to 456,865 tons at the end of December, when they were equivalent to only 6.1 months' consumption at the rate of intake in the twelve preceding months. In consequence of the rapid reduction in stocks during the second half of last year and because of the prospect of a further expansion in consumption (especially in the United States) in the current year, the Committee decided in December to increase the quota for the first quarter of this year to 50 per cent. of the agreed basic tonnage. Even if consumption does not expand further in the spring, stocks will probably continue to decline with a 50 per cent. quota. A revival of confidence in the United States, therefore, might induce a sharp advance in prices, though, by fore-shadowing a substantial increase in the quantity to be released in the third quarter, the Regulation Committee could, and in that case should, prevent an unhealthy boom on the market.

Five Years of the Milk Marketing Board.—The Milk Marketing Board has much on which to congratulate itself in its review of the first five years of its existence. It began operations in October, 1933, when the market for liquid milk, supplied by the unco-ordinated efforts of about 145,000 farmers, was threatened with a rapid breakdown of such organisation as had been evolved owing to the falling prices for dairy produce and the steady increase in supplies. In the space of five years the Board has provided the industry with an orderly and unified control over marketing; it has found regular outlets for a considerably larger supply of milk; by advertisement and propaganda it has helped to raise the consumption of liquid milk by 10 per cent.; it has co-operated to establish the schemes for cheap milk in schools and in some distressed areas; it has encouraged the production of better and cleaner milk so that in 1938 nearly half of the total output was produced under an "Accredited" licence, and the average returns to the dairy farmer have been raised by more than 1d. per gallon since 1933-34. In its functions as the representative of the producers, charged with the furtherance of their common interests, the success of the Board is undoubted, and its existence in some form or other has come to be regarded as essential to the dairy industry. The criticism which the public has against the Board—the unwisdom of giving to a producers' monopoly the complete control over not only the wholesale but also the retail prices of an essential foodstuff—should be more properly directed against the framers of the original scheme, who neglected to set up the independent central committee recommended by two reorganisation commissions. But it must be admitted that the opposition led

RENT your new factory
BUILT TO YOUR REQUIREMENTS
with coal, iron and steel on the spot

CAPITAL ASSISTANCE

WEST CUMBERLAND offers you the following exceptional advantages if you select it as a location for your new factory: plentiful labour, skilled and unskilled, male, female and juvenile. Foundries working the purest hæmatite in the Empire, producing pig iron and steel of all grades, and forgings. Manganese deposits in the area. Coal of all grades for engineering. Abundant lime. Water—soft water—in plenty: waterside factory sites. Good ports—good transport facilities. Magnificent country—mild climate—sporting amenities.

ADD TO THESE the unique facilities now offered by the Government. Your factory planned and built for you to your requirements, and rent only (on a non-profit basis) charged. Substantial assistance with capital. Contributions towards Rent, Rates, Income Tax and N.D.C.

by the Milk Marketing Board to the establishment of such a body proposed by the now defunct Milk Bill is not likely to increase the public's confidence in the ability of the Board to look beyond the narrow interests of the producers it represents.

* * *

Overseas Trade in January.—There was little change between December and January in the monthly totals of the value of overseas trade; the value of imports increased by £1.4 millions and the value of British exports declined by £1.7 millions. Owing to the sharp

U.K. IMPORTS AND EXPORTS

(£000)

	1937	1938	1939	Change between 1938 and 1939
<i>January</i>				
Total Imports	75,713	84,880	75,570	-9,310

fall in values between December, 1937, and January, 1938, the figures for January, 1939, show a smaller proportionate decline than those for December, 1938, when compared with the corresponding months a year ago.

* * *

Overseas Trade by Commodities.—The improved prospects in the wool and jute trades in the last few weeks resulted in an increase in January in the imports of their raw materials. Imports of some non-ferrous metals were also larger than either a year or month ago, but the volume of imports of most of the commodities

Locomotives and parts	1,831	1,924	1,097
Motor vehicles and chassis	8,871	8,275	6,516

listed in the first table were smaller in January than in the corresponding month of last year. Exports of textile products, both piece-goods and yarns, increased between December and January, but, compared with a year ago, exports of wool tops, worsted and cotton yarns, linen piece-goods, leather and iron and steel scrap were the only items in the second table to show an increase in January.

* * *

Wholesale Prices again Lower.—The general trend of the wholesale prices of commodities sensitive to changes in market psychology remained downwards during the past fortnight. Consumers have shown no anxiety to increase their stocks of materials, pending signs of the resumption of the upward trend of business activity in the United States. *The Economist's* indices of the prices of primary products in this country and in the United States showed a decline during the past fortnight, and the fall in the prices of basic raw materials is reflected in the more comprehensive *Economist* and Irving-Fisher indices for Britain and the United States respectively. On the other hand, the index for Germany remained unchanged, and the official figure for France registered a slight rise.

* These figures relate to February 11th. † Monthly average.

Details of the constituent series of *The Economist's* complete index for this country are given below:—

(1927=100)	Sept. 18, 1931	Feb. 16, 1938	Feb. 1, 1939	Feb. 15, 1939
Cereals and meat...	64.5	89.4	69.1	68.3
Other foods	62.2	59.6	58.2	59.5
Textiles	43.7	57.7	53.0	52.7
Minerals	67.4	94.7	91.1	90.4
Miscellaneous	65.8	78.5	74.6	74.4
Complete index	60.4	75.5	68.7	68.5
1913 = 100	83.1	104.0	94.5	94.3
1924 = 100	52.2	65.2	59.4	59.2

With the exception of that relating to other foods, the group indices for February 15th are all lower than a fortnight ago. Among important commodities, wheat sugar and non-ferrous metals were cheaper, while rubber and jute were slightly dearer.

Strong Demand for Cobalt.—One small result of the recent intensification of armament production in nearly every country has been the remarkable expansion in the demand for cobalt. This metal is used largely as an alloy in steel cutting and shaping tools, and the demand for it in the metal trades has now far outstripped its use in the ceramic and glass industries, which provided for centuries the bulk of the demand. The price of cobalt rose sharply after 1934; during 1938 it remained unchanged at 8s. per lb., but was raised in the middle of last month to 8s. 6d. per lb., nearly double the level prevailing at the beginning of 1934. This rise has occurred in spite of a very large increase in production, which is now probably twice as large as it was five years ago. Output in Northern Rhodesia

(where the cobalt mining rights are owned by the British South Africa Company) increased from 1.9 million lb. in 1937 to 3.2 million lb. in 1938, and the output of both the Union Miniere du Haut Katanga, operating in the Belgian Congo, and of the mines in French Morocco is known to have largely expanded in the last few years. Canadian production, mined by the Deloro Smelting and Refining Company, increased from 507,064 lb. in 1937 to 549,982 lb. in 1938. The companies in these four territories—Belgian Congo, Northern Rhodesia, French Morocco and Canada—are co-operating in an International Cobalt Association, whose efforts to keep supplies and demand in equilibrium have so far been nullified by the rapidly increasing demand for cobalt.

INDUSTRIAL REPORTS

THE demand for house coal has declined with the rise in the thermometer, but on the whole the offtake remained satisfactory. But not all districts are equally busy, and the report from our Cardiff correspondent is anything but cheerful. The output of coal showed a slight increase during the week ended February 4th, but at 4,935,000 tons, was 187,000 tons below production in the corresponding week last year. The latest reports from iron and steel centres point to a gradual improvement, but the volume of forward purchases is not yet heavy. Activity in the tinplate trade has shown a welcome expansion. The majority of textile trades have experienced an expansion in demand. Even in the cotton industry the flow of new business has increased.

Coal

Sheffield.—While demand generally is fair, the milder weather has caused some decline in household purchases. Steam raising coal moves moderately, but many collieries have a surplus of smaller grades. Demand for gas coal is rather smaller, and deliveries to electricity works are lower. Consumption of blast-furnace coke shows some expansion, but the demand is easily met. Business in coke for domestic uses is fairly good.

Export business continues unsatisfactory, but there are prospects of improvement next month when the scheme for the co-ordination of district prices comes into operation. This has been sought by Midland collieries, which have been adversely affected by the disparity between Midland prices and those quoted by Scottish and north-eastern collieries.

*

Newcastle-on-Tyne.—The North-East coal market is steady for prompt shipment, and buyers are now becoming more interested in forward business. German orders for both steam and coking coal have been booked at prices slightly below current quotations. The Northumberland steam coal market remains firm, large coals being very scarce with smalls and sized steams moving more readily in the home market. Durham grades are fairly steady, unscreened gas coal being firm, but in the coking and bunker sections there still remain some weak spots. There is no inquiry for patent oven coke, the only deliveries that are taking place being against old contracts.

*

Glasgow.—Despite the coming of milder weather there has as yet been

little easing in the Scottish coal position. Output, which is substantial, is still being readily taken up in most grades of fuel, for while demand for current consumption in the home market tends to taper off somewhat, there remain heavy deliveries to make good the recent depletion of stocks. This especially affects house coal, only the inferior qualities of which are at all freely offered. In addition there has this week been a welcome expansion in export business, mainly on Scandinavian account and affecting chiefly the smaller sizes of nuts. This has now, however, slowed down a little owing to some divergence in views on prices.

*

Cardiff.—Coal shipments at the South Wales docks continue inactive; in the week ended February 11th they totalled only 252,300 tons, compared with 323,700 tons in the previous week and 378,420 tons in the corresponding week last year. Current demand is far below the authorised export and inland trade quotas, and there has been considerable part-time working in the coal-field.

Some further contracts for forward deliveries have been placed, but advices have been received of active Belgian competition in the Portuguese and other markets. Exporters are also complaining of continued delays on the part of French authorities in carrying out the terms of the agreement of December 10th, both as regards the placing of contracts for supplies to the railways and public utility undertakings and the arrears under the coal-pitwood barter agreement. Stocks of all classes of large and ordinary small coals are very heavy, but there is a scarcity of dry steam washed and sized grades. Prices are unchanged.

Iron and Steel

Sheffield.—No great change has occurred in the iron and steel market this week. Business in forge and foundry pig iron continues limited, and relates mostly to small lots for early delivery. Forward business is unimportant. The full make is not going into consumption, with the result that furnaces are adding to stock.

Trade in basic steel billets shows some improvement, and small steel bars are more freely inquired for. This applies also to strip and bright drawn steel.

More steel furnaces are now operating in this area, and the call for high-class steel is considerably better.

Middlesbrough.—The tone of the iron and steel market is firm. Cleveland foundry pig iron is in better supply, but stocks at makers' yards are light. On the other hand, consumers' requirements are only moderate, and they are not prepared to buy ahead. Scrap continues to be used at some foundries in place of pig iron. Imports of foreign iron have ceased. The heavy stocks of East Coast hematite pig iron are not diminishing, but the demand from local and Midland consumers is almost equivalent to the current production.

The sheet departments of the steelworks are active and light sections are in better demand. It is expected that the demand for structural steel will show a seasonal increase. Orders for shipbuilding steel are scarce. Steelworks are taking better deliveries of heavy steel scrap, and more cast-iron scrap is going into consumption. Foreign ore imports during the current month are equal to those of January, but are mostly coming forward under old contracts. New business is negligible.

*

Glasgow.—During the past two weeks there has been a definite improvement, although it is not yet such that all available plant can be operated profitably. While the improvement is to a large extent due to Government work, it is not wholly accounted for by it, other buyers having placed considerably more business than during the earlier part of the year. Steelmakers, re-rollers of sections and sheetmakers are all busy and will be so for some months on orders already booked. Clyde shipbuilders are hopeful that a good share of the Admiralty work yet to be allocated will come to them. It is announced this week that Messrs Wm. Denny and Brothers, Ltd., of Dumbarton, have received an order for two destroyers from the Turkish Government.

*

Cardiff.—There has been a decided improvement during the past week in the flow of business in the tinplate trade, and operations have been resumed at a number of mills. The spurt has not yet been reflected in the statistics of production, which for the week ended February 4th gave an output under the pooling scheme of 42.85 per cent. of capacity, compared with 57.51 per cent. in the corresponding period last year. Shipments last week were not quite as good as in the previous week, but stocks in warehouse and in vans totalled only 3,570 tons. The sheet and

other re-rolling sections of the industry are also more active.

★

News from Abroad.—A faint beginning of the spring revival has recently been perceptible on international steel markets. The tone on the markets is fairly optimistic, for uncovered requirements are considered to be quite substantial.

In Europe, Scandinavia and Holland have been in the market for medium tonnages, and inquiries from South America and the Far East have slightly increased. Prices have recently tended to rise and concessions on official quotations have diminished or vanished in several cases. On the other hand, competition from outsiders has increased and has caused some Comptoirs to take counter-measures on several markets. As regards American competition, it is remarkable that, whereas formerly the low offers came from producers who are not members of the understanding between the Continental Cartel and the American group, for some time producers who have signed the agreement have been undercutting official prices more or less openly. The recent reduction of the price of thick plates for the Swedish market from £5 12s. 6d. to £5 (gold) per ton is a reflection of these developments. Competition from Australian and Swedish producers has recently been noticeable in a few cases.

Meetings of several Comptoirs recently took place in Cologne. The Thin Sheet Cartel discussed questions of outside competition and price infringements by members. Thin sheet prices for South Africa and some neighbouring countries have been reduced by about 2s. 6d. per ton. A statutory meeting of the newly formed Cartel for cold rolled hoops fixed definite prices for individual markets. The quotas have been distributed as follows: Germany, 53 per cent.; Belgium, 25 per cent.; France, 12 per cent., and Luxemburg, 10 per cent.

Textiles

Cotton (Manchester).—The better tone on the market has been maintained. Spinners and manufacturers have not been short of inquiry, and some fair contracts have been arranged, but in certain quarters trade has not expanded as much as expected. Many customers are not prepared to be committed to deliveries very far ahead.

Narrow fluctuations have again taken place in raw cotton prices. Operators are still harassed by the uncertainty concerning crop control in the United States. Preparations for next season are said to be well ahead and the area under cultivation will probably be between 25 million and 27 million acres.

Inquiry in the yarn market has continued on a larger scale. A feature of interest has been the decision of the Lancashire Cotton Corporation to advance prices for medium American ring yarns by 4d. per lb. It is understood that this action has been justified by the better order book compared with a few weeks ago.

The turnover in cloth has continued rather more encouraging, but practically all the sales have been in small lots. Rather more bids have been met with for India with irregular buying, chiefly in bleaching and printing styles. Some official announcement with regard to

the new India trade agreement is expected very shortly. Home trade purchases have continued better, and the turnover consisted of a wide range of goods.

★

Wool (Bradford).—There are signs of improvement. During the past fortnight a fair amount of new business has been placed, particularly at the raw and semi-manufactured end of the trade. Whether the fairly big purchases of tops were prompted by the conviction that prices had touched the bottom or by increased needs remains to be seen. Users have certainly covered forward requirements, and it now remains to be seen to what extent the purchases of wool and tops are taken up and passed into consumption. Some topmakers report having sold considerable weights, but adequate delivery particulars are not forthcoming. There are still orders for tops on the books of Bradford topmakers to-day which were placed fully two years ago, and there is little prospect of those contracts being liquidated.

Overseas markets have made progress during the past fortnight, and prices have turned against the buyer. There is much activity in Australia, and merinos are generally 5 per cent. dearer, while crossbreds are firmly held.

During the past fortnight the War Office has placed further orders with Yorkshire manufacturers, and some firms are busy supplying all classes of woven fabrics required on land and sea. The spring trade is opening out slowly, the dress trade undoubtedly being affected by steadily increasing imports of foreign-made goods.

THE COMMODITY MARKETS

CONSUMERS showed no inclination last week to cover their requirements farther ahead; consequently the general trend of the prices of primary products remained downwards. On the other hand, there were indications of a slight improvement in the United States, for Moody's index of the prices of staple commodities (December 31, 1931=100) rose from 142.9 to 143.5 during the week ended last Wednesday. A resumption of the upward trend of business activity across the Atlantic would be quickly reflected on the commodity markets in this country.

The feature of the past week was the rise in rubber prices after the announcement of the decision of the International Rubber Regulation Committee to leave the quota unchanged in the second quarter. The rubber position is discussed in a Note on page 316. Among non-ferrous metals, copper, lead and tin declined, but spelter remained unchanged in price. Raw cotton and wheat were also slightly cheaper, but raw sugar is scarcely changed on the week.

Metals

Copper.—The price of standard cash closed on Wednesday £1 down at £41 10s. per ton, the lowest level of the current year. Consumers' buying was at a very low ebb throughout the week, due chiefly to the uncertain political

outlook and a decline in European consumption. In addition the London market was depressed by the lack of demand in the United States, where consumption is restricted by the high domestic price of 11.25 cents per lb. According to the American Copper Institute, U.S.A. consumption reached 51,059 short tons in January, a rise of over 12,000 tons on the month and one of over 26,000 tons on the year. On the other hand, the extra United States consumption fell to 99,530 short tons, against nearly 115,000 short tons both in December and January of last year. This decline seems to be chiefly due to a temporary lull in armament purchases, so that it would be premature to draw serious conclusions from this movement. Production of copper has declined both in the United States and the rest of the world in the first month of the year as a result of the enforced restriction. Nevertheless, supplies still remained in excess of consumption, so that world stocks have risen further to 480,060 short tons at the end of January against 457,170 short tons one month ago and 505,970 short tons one year ago. If the recent trend of the market continues the copper quotas may be cut before long.

★

Tin.—The price of tin also declined by £1 to £212 15s. per ton. Although tinplate operations as well as the motor car output both here and in the United States have increased, the demand for tin shows a disappointingly low level. If the situation does not improve materially within the next three weeks an increase in the free market quota for the second quarter of this year can hardly be expected. The inability of the pool to sell has brought the tin price into a vulnerable situation in spite of the extremely strong statistical position of the product.

★

Lead and Spelter.—The price of lead closed only 1s. 3d. down at £14 3s. 9d. per ton, while spelter closed unchanged at £13 7s. 6d. per ton. Demand for these metals was also small, but sellers showed great reserve, as they expect not only a decline in production, but also an increase in demand for Air Raid Precaution purposes before long. In addition the favourable weather in this country will probably stimulate building within the next few weeks and the building industry is the largest purchaser of lead and spelter.

Grains

In spite of a considerable volume of buying on the wheat market, some of it believed to be on Government account, prices have tended to fall; the knowledge of large supplies in every exporting country has a depressing influence on world prices. Maize and barley prices have also declined in the past week, with a poor demand; the pressure of Plate supplies of barley and of the competition from cheap wheat continues to affect these markets.

Other Foods

Provisions.—The meat trade at Smithfield continues dull and demand is mainly for chilled and frozen meat. Egg prices continue their seasonal decline, but prices for butter and bacon remain unchanged.

(Continued on page 369)

COMPANY MEETINGS GAS LIGHT AND COKE COMPANY

REMARKABLE OUTPUT RECORD

SIR DAVID MILNE-WATSON'S ADDRESS

The two hundred and thirty-second ordinary general meeting of the Gas Light and Coke Company was held, on the 10th instant, at Gas Industry House, Grosvenor Place, London.

Sir David Milne-Watson, Bt., LL.D., D.L., the Governor, presided.

The Secretary (Mr Brian Wood), having read the notice convening the meeting,

The Governor commenced by expressing regret at the loss the company had sustained by the death of Mr Fooks, adding that his place had been taken by Mr C. W. L. P. Reed. He also referred with regret to the death of Mr Galbraith, the late Secretary.

Continuing, he said: Ladies and gentlemen, we will now take the accounts. On the capital account you will see that we have spent altogether £960,000, £17,000 of which was on land, £96,000 on buildings and machinery, £172,000 on mains and service pipes, £352,000 on meters, and £323,000 on appliances. Against these we have written off £838,000, making a net increase in capital of £122,000. During the year it has not been necessary for the company to issue any further stock.

RESULT OF YEAR'S WORKING

The result of the working of the year is as follows: The balance transferred from the revenue account to the net revenue account is £2,066,000, as against £2,050,000 for the previous year. This balance, after allowing for interest and dividends distributed in respect of the June half-year, leaves a sum of £802,000. This enables the directors to recommend the usual dividend on the 3½ per cent. redeemable preference stock, 1970, the 4 per cent. consolidated preference stock, and the 3½ per cent. maximum stock, and a dividend (unchanged) at the rate of £5 12s. per cent. per annum on the ordinary stock. The payment of these dividends, together with the necessary contribution of £20,000 to the redemption fund, will absorb £748,000, leaving £54,000 to be carried forward to the credit of the current year's accounts, as against £102,000 carried forward last year.

At the end of the year the directors found it necessary, with great regret, to announce a forthcoming increase in the price of gas. During the past year the company has been using coal purchased under contracts dated 1935. Since then the price of coal has risen substantially. Our former contracts have run out and our company has from now on to bear a very heavily increased cost. It is impossible to adopt the policy of allowing the coal industry virtually to impose what price increases it thinks fit, and then to complain when the costs of other things directly dependent upon coal rise too. The public has to pay in terms of the price of gas, of electricity, and of a vast range of industrial products in whose manufacture coal is an important factor.

You can imagine that it may be a temptation to put off the evil day by reducing some essential expenditure such as our provision for the proper maintenance and renewal of plant. But a company which takes that easy way out jeopardises its own future and paves the way for a slow decline that is certain, though it may not be outwardly visible. I am convinced that the directors' decision is the right one in the interest of continued efficiency in our operations and of the extension and ultimate cheapening of the vital service which we provide for the community.

Before leaving this question of the price of gas, let me put the whole matter in perspective once more by reminding you that our increase means an addition to the gas bill of the average London working-class household of 1½d. a week and of three-farthings a week to the Old Age Pensioner or anyone in similar circumstances. We have postponed the increase to the last possible moment, and during the recent cold spells the consumers have been getting gas at the old price, although we are paying more for the coal.

EFFECT OF WEATHER CONDITIONS

The year that has just closed was from our point of view a most extraordinary one. In March, and again in November, temperatures were quite abnormally high. I am satisfied from a study of the figures that in these temperature conditions a drop in sales of only a little over 1 per cent. shows that our business as a whole continues to expand.

In support of my view I may point to the remarkable output figures which were achieved during the blizzard just before Christmas, although the temperature and the conditions were by no means a record even in comparatively recent years. The figures of gas out-

put broke all records, on five consecutive days we beat our previous record day, and on Wednesday, December 21st, we reached the remarkable peak of 265,000,000 cubic feet, 17,000,000 cubic feet above our previous record, and by far the largest amount of gas ever supplied in a single day by any undertaking in the world.

The number of cookers, hotplates and gas rings in the district increased by over 42,000; fires, radiators, etc., by 23,000; water heaters by over 45,000; wash coppers by 16,000; and refrigerators by 11,000.

The technical development of gas central heating has proceeded rapidly in recent years, and with the coming of special tariffs, enabling gas to compete with other fuels, a considerable number of houses are now centrally heated by gas.

We put in new installations for Odhams Press, the *Daily Sketch* and *Daily Mirror*, which, added to those I have told you about in previous years, means that almost the whole of the great newspapers in London are now on our list. In addition, our successes cover such diverse buildings as 10 and 11 Downing Street, Sadler's Wells Theatre, Wembley Stadium, the Stock Exchange, the latest block of flats in Park Lane (Fountain House), the Office of Works building in Kingsway (Victory House), and last, and perhaps most notable of all, the new buildings erected by the Institution of Heating and Ventilating Engineers. This last is a tribute indeed. We need not look for any better evidence of the intrinsic merits of gas for central heating and central hot-water supplies, nor of the great field for development which awaits us, than the fact that a body of specialist experts in the heating of buildings and houses should have selected gas central heating for its own corporate use.

KENSAL HOUSE SCHEME

As you know, Kensal House is in one aspect a demonstration of what we consider to be the ideal fuel service for working-class dwellings. It was opened in the beginning of 1937 and during 1938 we have seen the idea begin to extend.

The London County Council have decided to conduct an important experiment on a large scale, based upon the Kensal House scheme, and, in addition, some 10 or 12 large private building estates have adopted the Kensal House system practically in its entirety, and estates built by the borough councils of Chelsea, Paddington, Stoke Newington, Islington and Westminster have adopted some of its most important features.

The smoke abatement campaign has achieved during the twelve months since I spoke to you a success which surpasses our expectations. We have had support from authoritative quarters in all parts of the country and are particularly gratified that the campaign earned the blessing of the Minister of Health himself, Mr Walter Elliot, and the leader of the London County Council, Mr Herbert Morrison, who expressed in the most direct terms the Council's resolve to do whatever it could, both as a great local authority and as one of the largest landlords in the country, to clean our skies and our homes.

A little later the First Commissioner of Works, Sir Philip Sassoon, reported in the House of Commons that Whitehall was no longer to be "Blackhall" and that every fireplace in the Government offices, as well as many of those in the House of Commons itself, were to be smokeless this winter. Smoke abatement is also one of the reasons why the Kensal House idea has been winning so ready an acceptance.

THE IMPORTANCE OF COKE

The past ten years has seen a very great improvement in the quality and standardisation of coke sold and also in the range and efficiency of coke-burning appliances. This progress is the direct result of technical research and marketing organisation carried out under the auspices of the London and Counties Coke Association.

As a result the production of coke for sale in the South has increased during this period by nearly 1,000,000 tons, representing some 2,000,000 tons of additional coal carbonised.

Perhaps it may not be out of place if I take this opportunity of offering to the great public authority under whose supervision we operate, the London County Council, our warmest congratulations on the jubilee which it will soon celebrate. The list of matters in which we and they have common interests and concern would probably surprise you by its length, and over this whole field of day-to-day discussion and co-operation there operates a spirit of practical good will, though neither party slackens its zeal for the proper performance of its own function.

In conclusion, the thanks of the directors are due to all grades in the company's service for their devotion to duty during the past year. The report and accounts were adopted.

An extraordinary general meeting was then held to consider a resolution approving the London Gas Undertakings (Regulations) Bill now before Parliament. The Governor, after briefly explaining the Bill, moved the resolution, which was seconded and carried unanimously.

TEMPERANCE PERMANENT BUILDING SOCIETY

A YEAR OF STEADY PROGRESS

The eighty-fifth annual meeting of the members of the Temperance Permanent Building Society was held, on the 15th instant, at the Memorial Hall, London.

Mr Cyril W. Black, F.S.I., F.A.I., the chairman, first explained the circumstances which had led to his occupying the chair. His predecessor in office, Mr William Bingham, J.P., had occupied the responsible position of chairman of the society since 1927 with conspicuous ability, but recently had asked his colleagues to relieve him of the office. It was impossible for him, the speaker, adequately to express their gratitude to Mr Bingham for his conspicuous service to the society; during his association with it, its position had been largely strengthened, and its activities and prestige greatly extended. They were all thankful that Mr Bingham was willing to continue as a director. During the year the society had sustained another great loss in the passing of Mr George Ernest Clarke, a director since 1900. Due to the retirement of Mr E. R. Musk, a joint manager and secretary, Mr A. W. Betts, F.C.I.S., had become general manager and secretary.

Continuing, the Chairman said: The year has been one of steady progress and we have continued to prefer the ways of safety and security and have withstood the temptation to plunge into the struggle for astronomical figures. The advances for the year amounted to £945,581, which, while not a record, closely approximates to the figures for the preceding year and under the circumstances I think it may be regarded as satisfactory. More than usual care had been applied to the scrutiny of applications for mortgages and where there had been an undue element of risk in business offered they had unhesitatingly rejected it. The total mortgage asset rose during the year by £303,324 and now stands at £6,023,909. Our borrowers have continued to meet their obligations in an exemplary manner and such losses as we have sustained have been of an almost negligible character.

The past year has seen a new beginning in the issue of shares, which has resulted in a net addition to our share capital of £50,933; our share capital now standing at £2,766,416. Our deposits have expanded by £160,693 and now stand at £2,424,473.

After making provision for the interest and dividends due to the depositors and shareholders and for all known liabilities, there remains a balance available of £71,817, including the balance brought forward from the previous year. This sum has been dealt with as follows:—

Allocation to staff pension fund	£600
Addition to reserve fund	£40,000
Addition to contingency fund	£5,000
leaving a balance to be carried forward of	£26,217.

A STRONG POSITION

Our various reserves and carry-forward amount now to £991,217, or over 19 per cent. of the combined share and deposit capital. These reserve funds place us in the foremost position of all large building societies in this respect. We, therefore, feel confident of our ability to meet and to overcome any unexpected difficulties or demands which might confront us in the future.

Unlike many other building societies, once an advance is made, we retain no power to call it in or increase the rate of interest so long as the borrower faithfully performs his obligations—a feature of our mortgage service which should commend itself to prospective borrowers. On the investment side of our business, we are in a position to make profitable use of increased funds, and our deposits and shares offer a channel of investment which is unequalled by most other investments, and surpassed by none. Depositors are entitled to interest at the rate of 2½ per cent. per annum with income tax paid by the society, showing a return to a depositor liable for income tax at the standard rate equivalent to nearly 3½ per cent.

We are also now prepared to receive investments in fully paid or subscribing shares, bearing interest at the rate of 3½ per cent. per annum, income-tax free to the recipient, which is equivalent to a return of 4½ per cent., where income-tax at the standard rate has to be borne. For security, liquidity, and attractive rate of interest, these investments may be recommended with the utmost confidence.

It requires great boldness to-day to make any forecast for the future, but we can see no reason why 1939 should not be another year of prosperity in our society, so we face the future with confidence and restrained optimism.

The report and accounts were unanimously adopted.

POWER SECURITIES CORPORATION, LIMITED

CONTINUED PROGRESS

The Sixteenth Annual General Meeting of Power Securities Corporation, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London. Mr George Balfour, J.P., M.P. (the chairman of the corporation) presiding.

The chairman, in the course of his speech, said: I trust you all feel that the accounts we present are satisfactory and are evidence of continuing stability and progress.

We have, year after year, looked forward to what I might term more sane commercial conditions at home and abroad, but so far these better conditions have not materialised. I think, however, we can say that there is now evidence of the foundations being laid upon which we can patiently build up the old structures of confidence in international trade and commerce. Not the least important step in this direction is the close personal contacts established between our Continental friends and rivals alike. While we are faced with many and extremely difficult problems there is and has been for some time a general feeling amongst thoughtful people that we are now not daily, weekly, or monthly on the verge of war.

MAINTENANCE OF BRITISH TRADE

We are all deeply interested in securing and maintaining a sufficient volume of British trade to employ our people. In this connection I noticed a few days ago that the Home Secretary said:—

“The time has surely come when British character and British trade and enterprise must show their mettle.”

I do not think there is any question about the quality of British character, enterprise, or mettle, but these qualities are so handicapped by restrictions that flexible use of these gifts and characteristics is disappearing and being replaced by the regulated mechanism of a trade robot—a mechanical device which can never have the advantage of the flexible intuition of British character and enterprise. Dominions and Colonies call for unfettered British enterprise and capital to develop their territories and their population. When our trading and financial institutions are free to meet the needs of the people instead of the requirements of Departments our unemployment problems will be well on the way to solution.

You will not be surprised to hear that during the year we only dealt with a small range and volume of purely financial business, and that our energies were, therefore, mainly devoted to engineering construction and management.

IMPORTANT WORK IN IRAQ

This time last year we had an extremely difficult season's work ahead of us on the important contract for the barrage across the Tigris at Kut in Iraq. The grave difficulties caused by abnormal floods in November, 1936, which caused a season's delay, have, I am glad to say, been successfully overcome and the work completed. It is a fine piece of work of which the Government, the engineers, and we, as constructors, can be proud. We have now only to attend to settling up accounts this year, and this will no doubt be accomplished in the same spirit of good will and understanding which characterised our relations since this difficult work was embarked upon.

We are now engaged upon other work in Iraq, consisting of a small regulator in the Diwaniyah area on one of the branches of the Euphrates and also carrying out works for the State Railways consisting of tunnelling, grading and minor bridge building in the Mosul district.

We have completed and still have on hand a considerable volume of work in many parts of this country, including a fair amount in hand in the London area, in addition to miscellaneous work in progress in several parts of the world, including Kenya, Uganda, Tanganyika and Palestine.

We carried out last year a very considerable amount of work and completed a very full year's construction programme. It is satisfactory to know that we had still over one and three-quarter million pounds of new work or works current at the end of our financial year.

The balance of profit carried to the balance sheet, £95,298, shows a net decrease on last year of £9,500, and, after transferring £30,000 to general reserve, the directors recommend a dividend of 7 per cent., less tax, on the ordinary shares.

Regarding the outlook for the current year, I see no reason why we should not maintain, if not improve, our record of the past. I think we are entitled to look forward to conditions no worse than the last few years, and probably much better.

The report was unanimously adopted.

HUNGARIAN COMMERCIAL BANK OF PEST

REVIEW OF A DIFFICULT YEAR

The ninety-seventh ordinary general meeting of the shareholders of the Hungarian Commercial Bank of Pest was held on the 7th instant, Mr John Teleszky, D.L.L., former Minister of Finance, Privy Councillor, chairman of the bank, presiding.

According to the accounts submitted the balance sheet for the year 1938 shows a net profit of 4,416,748.73 pengő (excluding the balance brought forward from the previous year) as against 4,630,061.82 pengő in 1937.

The total of capital and reserves of the bank has changed in so far as for such part of the investment contribution (capital levy) as has already been definitely assessed on the bank according to Act XX of 1938, an amount of 10,580,487 pengő has been transferred from the reserve fund in favour of a new “Investment Contribution Transitory Account.” The first instalment on this contribution, paid on October 1, 1938, has been written off to the debit of this transitory account.

In consequence of the continued tension in the international political situation and its effects on domestic economic conditions, savings deposits decreased during the past year from 160,571,326.81 pengő to 126,360,892.54 pengő. Since on the other hand, current account deposits rose from 135,208,490.19 pengő to 141,765,899.95 pengő, the aggregate amount of deposits on December 31, 1938, was 268,126,792.49 pengő, as against 295,779,817 pengő on the same date of 1937, a decrease of about 9.4 per cent.

On the assets side, the item of bills discounted is particularly noteworthy at 101,709,391.46 pengő as against 148,159,776.08 pengő in the previous year. This change, however, does not mean a real decrease in the volume of bills actually discounted, but is due to the fact that the bank, which had practically not availed itself in recent years of any rediscount facilities, except for a short period during the first months of the economic crisis in 1931, departed from this policy during last year. In so doing the bank was actuated by the desire to maintain in unchanged volume the credits granted to public authorities and private undertakings in spite of the withdrawal of deposits, thus helping to avoid a reduction in the national production and turnover, as well as by an endeavour to meet increased credit requirements in connection with the investment contribution and the issue of the first tranche of the National Investment Loan. The value of bills rediscounted with the National Bank of Hungary has been deducted from the item “bills discounted.”

The higher amount of the item “Debtors”—144,130,591.41 pengő as against 134,179,602.16 pengő of the previous year—is also due to increased credit requirements.

The valuation of securities has been made in accordance with the traditional conservative principles. The item “Government and other Securities” rose from 22,734,999.53 pengő to 28,260,647.40 pengő; this increase is accounted for by the fact that the bank bought bonds of the first tranche of the National Investment Loan of a face value of 6,905,900 pengő.

The contingent liabilities of the bank increased from 29,304,801.76 pengő to 55,278,440.38 pengő, this being in connection with the State investments made under the five years' programme.

The grand total of the bank's turnover was 14 per cent. in excess of last year's figure.

The report and accounts were unanimously adopted, and the proposal of the board of directors to allocate out of the aggregate profit of 6,535,801.73 pengő—including the profit of 2,119,053 pengő brought forward from 1937—2,000,000 pengő—for the payment of a dividend of 4 pengő per share, was also approved. The recommendation to add 1,000,000 pengő to the ordinary reserve fund and 116,400 pengő to the reserve fund for depreciation of the bank's real estates, was also approved.

The remaining profit of 1,052,304.80 pengő is to be carried forward to 1939.

Count Maurice de Esterházy, Aladar Heinrich de Omorovicza, Eugen de Nelky, Emile Stein, D.L., and Count Dominic de Széchenyi were elected as new members of the board of directors.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

BEIRA RAILWAY COMPANY, LIMITED

ANOTHER GOOD YEAR

The thirty-eighth ordinary general meeting of the Beira Railway Company, Limited, was held, on the 14th instant, in London.

Baron Emile B. d'Erlanger (the chairman), in the course of his speech, said: The net receipts of the line amounted to £553,408, and, adding £6,363 for miscellaneous receipts and £7,989 balance of interest account, there is a total of £567,782 for disposal. You will see that we have had a very good year, and in the circumstances your directors have considered that it would be sound policy to make a special provision of £50,000 out of profits for the rebuilding of some of our properties.

We propose that a dividend of 2s. per share, less tax at 3s. 9d. in the pound, be paid; that £60,000 be transferred to reserve account; and that £40,000 be transferred to dividend equalisation account; and that the balance of £39,657 be carried forward. The reserve fund will then stand at £360,000, and the dividend equalisation fund at £60,000.

You will have seen in the report that reductions in rates and fares were brought into force on January 1, 1939. In view of our very satisfactory financial position, we felt we were able to fall into line with the Rhodesia Railways, Limited, and surrender the surcharge of 5 per cent. to 10 per cent., according to the categories of the goods, imposed during the economic crisis of 1932. This surrender of revenue is estimated to cost the company £39,000 for the nine months in the current financial year during which the new rates will be in force, or £53,000 in a full year.

The net receipts for October and November were £90,900, as compared with £106,800 in the previous year, when, as I told you last year, they were exceptionally high, and £71,000 in the corresponding months two years ago. These net receipts are after taking into account the reduced rates under the copper agreements, but not the general reduction in rates, which does not take effect until January 1, 1939. The copper mines are working to 100 per cent. I do not anticipate any substantial drop in copper traffic. Our most remunerative traffic—import of general merchandise—has, so far, been well maintained, and if nothing untoward happens in world affairs I think we may look forward to a very fair year.

The report and accounts were unanimously adopted.

GENERAL INVESTORS AND TRUSTEES LIMITED

SATISFACTORY RESULT IN DIFFICULT YEAR

The thirty-second ordinary general meeting of this company was held, on the 16th instant, at Winchester House, London.

Mr Gerald T. Moody (the chairman) said that the period under review had been one of prolonged conditions disturbing to industry and finance, so that the outcome of their year's operations must be regarded with some measure of satisfaction. After providing for all expenses and the payment of the dividend on the preference stock, the balance of revenue allowed them to recommend a final dividend on the ordinary stock of 6 per cent., making 10 per cent. for the year, and to increase the amount carried forward from £6,882 to £7,562. The reduction in revenue was largely due to increased taxation and further control of foreign exchanges.

On the credit side of the balance sheet a substantial cash balance was shown, and that with their British Government securities gave them a sum of £120,000 available at short notice. They might be criticised for their policy in having retained that large sum in a form which yielded only a small return, but during the whole of the last twelve months the trend had been towards lower prices, and investments to-day could be made on very favourable terms.

The general collapse in prices was reflected in the valuation of assets shown by every investment and finance company in recently issued reports, and they had not escaped the débâcle. Their investments, which stood in the balance sheet at £1,978,282, showed a depreciation of £397,088, or approximately 20 per cent. Of that depreciation, £317,562 was covered by the reserve accounts and carry-forward, so that the net depreciation of their capital was barely 5 per cent.

With regard to the current year, stockholders would not expect him to make a forecast. Their troubles, as with private investors, lay in world conditions, which exhibited many unfavourable features. Since their investments were widely spread, they must not unreasonably hope to receive some additional income from favourable developments in respect of securities now in default, of which they held a large number. Failing serious internal trouble, therefore, his own view was that twelve months hence the report should not be unworthy of the company's record extending over thirty-two years.

The report was unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED

THE COMPANY'S NEW NAME

The fiftieth ordinary general meeting of this company was held, on the 16th instant, at Winchester House, London.

Mr Richard S. Guinness, the chairman, said that the revenue for the year ended January 15th last had amounted to £138,254, an increase of £2,379, and after deducting outgoings the balance represented just over 9½ per cent. on the ordinary stock against just over 9½ per cent. last year. The dividend was maintained at 6½ per cent.

The year stood out as one of almost continuous anxiety and difficulty, with at one time the prospect of a major catastrophe. To be able to record an improvement in revenue and the maintenance of dividends under such conditions was a matter of satisfaction to the board. While it was impossible to foretell how lack of confidence might affect industry and enterprise, the board were hopeful that the dividend of 6½ per cent. would be maintained.

The capital aspect of their company was also satisfactory. The annual valuation of their investments reflected the almost universal fall experienced during the year in all values with a depreciation of £265,924, equivalent to a fall of 11.12 per cent. for the year. Since they had a surplus of £133,809 over the book cost last year, the depreciation on book cost amounted to £132,115. Against this there had been a reserve built up of £233,000, so that the depreciation was absorbed and they were left with a surplus of £100,885. Adding the proposed carry-forward of £49,533, there was an indicated cover for the £600,000 of ordinary stock of £750,418.

Their company, in its 50 years' life, had satisfactorily weathered the ever-changing conditions which it had been called upon to endure. For the first four years an average dividend of 4½ per cent. was paid, and after the reorganisation of the capital and for the succeeding 46 years, the annual dividend had been approximately 5½ per cent. on the average.

It was proposed to change the name of the company to "Share and General Investment Trust, Limited," and it was the board's intention to take the necessary steps to change the present method of quotation of the ordinary stock in the Stock Exchange official list from the present basis per £100 stock to units of £1.

The report was unanimously adopted and the proposed change of title was approved.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED

SATISFACTORY REVENUE POSITION

The sixty-sixth ordinary general meeting of this company was held, on the 16th instant, at Winchester House, London.

Mr Richard Guinness, chairman of the company, said that despite the effect upon interest and dividend receipts occasioned by the almost continuous tension prevailing during the year, the revenue at £147,091 showed an improvement of £1,414, and after deducting outgoings the balance represented 7.41 per cent. on the ordinary stock against 7.19 per cent. last year. The available balance allowed the board to transfer to reserve £5,000 as in the past three years, to recommend the maintenance of the dividend on the ordinary stock at 5½ per cent. and to increase the carry-forward by £4,414 to £42,125. Of their income 74 per cent. was derived from bond interest, debenture interest and preference dividends, and of the balance of 26 per cent. or £38,113 derived from ordinary dividends, £28,141 arose from holdings in the United Kingdom. The net result of investment changes had been to somewhat increase holdings in the United Kingdom, in Australia, Africa, India, Canada and the United States, and to reduce holdings elsewhere—mainly on the Continent of Europe.

As to the prospects of the coming year, it was hoped that foreign politics would give some respite, and afford Parliament the opportunity to devote more attention in the coming year to urgent home affairs—such as fostering the country's export trade, and protection of the shipping interests which should help to reduce unemployment, and closer control of local expenditure, so that if one could not hope for a reduction in taxation, they could at least anticipate some relief from ever-growing local rates. Should something constructive be done in those directions it might be anticipated that the Trust's revenue from home securities would not diminish. If so they could better sustain the shrinkage they might continue to suffer in income from foreign investments. Given reasonable prosperity at home they should be able to maintain the dividend seeing that over 60 per cent. of their revenue was derived from investments in the United Kingdom.

The report was unanimously adopted and the proposed change of name to "Debenture and Capital Investment Trust" approved.

WANDSWORTH AND DISTRICT GAS COMPANY

LARGER NUMBER OF CONSUMERS

The annual ordinary general meeting of the Wandsworth and District Gas Company was held, on the 14th instant, at Wandsworth.

Mr Frank H. Jones (chairman and managing director) said that the revenue account must be considered satisfactory. The receipts from coke were satisfactory, but expensive plants had been provided for the cleaning, cutting and grading of coke, and the present price in part reflected the return on this capital expenditure and the by no means inconsiderable expense which had been incurred in the development of the domestic market. It was a matter of regret that the directors had to report that a further increase in the price of gas to the extent of 0.4d. per therm would have to be made as from the meter readings after April 1st next. That increase was caused by circumstances entirely without the control of the directors, and had been found necessary after every effort to economise. The increase also involved a reduction of half per cent. in the statutory dividends to the proprietors and the co-partners' bonus would be reduced by 25 per cent. next year.

The sale of gas showed a slight decrease in the amount sold to consumers, namely, 0.34 per cent. Since the beginning of the current year, with colder conditions, a considerable increase in the amount of gas sold was recorded, and to emphasise that point, in the intensely cold but short period which took place prior to last Christmas, the company sold more gas than ever before in the history of the undertaking and, in fact, on three consecutive days reached a new record of 20 per cent. over the previous best.

During the year the number of consumers had increased by 6,141, which now brought their total number to approximately 210,000, and in spite of the fact that there was a considerable trade depression during the latter part of last year, the sales of apparatus to their consumers had been maintained at a high level.

The report was adopted, and at a subsequent extraordinary general meeting the terms of the London Gas Undertakings (Regulations) Bill now before Parliament were approved.

SOUTH BANKET AREAS, LIMITED

INCREASE OF CAPITAL

An extraordinary general meeting of South Banket Areas, Limited, was held, on the 10th instant, in London, to consider a resolution increasing the capital from £500,000 to £900,000.

Mr Robert Sweeny (the chairman) said that last October he had informed shareholders that in the opinion of their engineers the progressive development of their mines justified the installation of a reduction plant and ancillary equipment. Subject to the passing of the resolution, an issue of £350,000 of non-interest-bearing five-year registered convertible notes had been arranged. They would be redeemable at 25 per cent. premium not later than February 23, 1944, and would be issued in multiples of £1.

ORE RESERVES

In their three not yet inter-connected mine workings they had developed or partially developed comparatively near to the reef outcrops, payable ore reserves of 622,000 tons with gold contents at present price of approximately £1,250,000, or 5.65 dwts. per ton.

They felt justified in contemplating the production would steadily increase after the first milling unit was in operation, which it was anticipated would be in about eighteen months. Their consulting engineer, Mr Robinson, estimated that when milling 180,000 tons with the first unit the working profit with gold at 140s. and 5 dwts. recovery should be £135,000 per annum. He believed that their property would prove to be one of the most productive of the Banket field.

Indeed, as they proceeded with their developments he thought their large mining property would prove a long-lived and highly profitable investment for the capital they subscribed. It was for that reason in particular that it was proposed to reserve the offer of the contemplated convertible note issue of £350,000 to shareholders of that company and their associated company, Gold Coast Banket Areas, Limited.

Mr C. E. Jobling, M.Inst.M.M. (Technical Director), said that he was satisfied that the proposed increase of capital should put the company into a position to pay substantial dividends for many years to come.

Resolution carried unanimously.

THE STERLING TRUST, LIMITED

10½ PER CENT. EARNED ON ORDINARY STOCK

The twenty-second ordinary general meeting of The Sterling Trust, Limited, was held, on the 14th instant, in London.

Baron Emile B. d'Erlanger (the chairman) said: It is extremely disappointing for me to have to report this year a still further depreciation in the value of your investments, without being able to foresee when the curve will reach its lowest level and begin to rise again, as it undoubtedly will, and sharply so if the fears of war can be set at rest.

The depreciation at December 31, 1938, amounted to a fraction under 14½ per cent. on the balance-sheet figure as compared with a fraction under 5 per cent. at the end of 1937, a falling off of some 9½ points: after deducting the amount of the reserve account and the balance carried forward, the depreciation amounted to under 2 per cent., as stated in the directors' report.

In this connection it is interesting to allude to—I do not say "compare," as it is not strictly comparable—the depreciation shown in the value of 365 representative Stock Exchange securities selected by the "Bankers' Magazine." These securities, which were valued on December 15, 1938, at some 6½ thousand million pounds, showed a depreciation of 7.3 per cent. on the valuation a year earlier. It must be borne in mind, however, that, of the valuation in December, 1938, some 56 per cent. was represented by ten securities which had shown a depreciation of only 3.6 per cent., namely, "British and Indian Funds," a class of security of which an investment trust company such as yours has a very small holding in comparison with its other securities.

I will now deal with geographical distribution. I will give you both percentages, firstly, on book value and, secondly, on valuation:

Great Britain	47½ per cent. and 59½ per cent.
British Empire	6½ per cent. and 9½ per cent.
Europe	18 per cent. and 11½ per cent.
Asia	3½ per cent. and 3 per cent.
Africa	½ per cent. and ½ per cent.
U.S.A. and Central	

America	9 per cent. and 8½ per cent.
and South America	14½ per cent. and 7½ per cent.

The classification of investments held shows the following percentages based on the valuation at December 31st last:—

British Government Securities	4½ per cent.
Debentures, bonds, etc.	34 per cent.
Preference stocks	26 per cent.
Ordinary and deferred stocks	35½ per cent.

Turning now to the revenue account, the income of the company, after deducting tax, has fallen by £10,555, to £199,442. Of this fall, about one-half was accounted for by the fact that tax was deducted during 1938 at higher rates than in the previous year.

After expenses and interest on the debentures the net income was £97,458. To this must be added the sum of £68,861 brought forward from 1937, making a total of £166,319. The interim dividends, less tax, on the preference and ordinary stocks paid last August absorbed £28,711, leaving £137,608.

INDUSTRIAL REPORTS—continued

Colonial Produce.—The futures market for raw sugar was a little weaker but prices for refined remained unchanged. With a decline in demand, the price of Accra cocoa again fell during the past week, although prices for Grenada improved a little.

Milk.—The following table is compiled from statistics issued by the Milk Marketing Board:—

	Jan., 1938	Nov., 1938	Dec., 1938	Jan., 1939
Prices (per gall.)	d.	d.	d.	d.
Liquid	18-0	17-5	17-5	17-5
Av. manufacturing	7-724	7-111	7-327	7-199
Av. pool	15-25	15-07	15-43	15-22
Contract sales (mill. galls.)				
Liquid	51-8	51-0	52-9	53-1
Manufacturing	14-9	15-2	13-2	14-1
Total contract	66-7	66-2	66-1	67-2
Used by farmhouse cheesemakers	0-6	1-0	0-5	0-5

Fruit and Vegetables.—Supplies of green vegetables remain short at the London markets and are not likely to

increase in the immediate future. Large supplies of Jaffa and of Spanish oranges are now available, but the quantity of English apples on sale is now very limited.

Miscellaneous Commodities

Oils and Oilseeds.—Linseed has been in much better demand during the past week and prices have been more firmly held, although there has not been any appreciable rise. The market for linseed oil has also improved and prices have risen by 10s. to 12s. 6d. per ton on the week. The demand for other oils remains disappointing.

Rubber.—The Committee's decision to leave the export quotas unchanged for a further three months is discussed on page 361. During the week the rubber market was steady, though there was little business transacted; the news of the Committee's decision resulted in an improved turnover and the

The directors have appropriated £22,157 in writing down investments and propose to pay the half-year's dividend of 2½ per cent., less tax, on the preference stock, which calls for £15,950 and a final dividend of 4½ per cent., less tax, on the ordinary stock (making a total ordinary dividend of 6½ per cent.), which calls for £28,711, and to carry forward the sum of £70,790.

In view of the series of conversions that have taken place during recent years and additions during 1938 to the already long list of defaults, I think that you will agree that our ability to show earnings on the ordinary stock for the year of 10½ per cent., as compared with 10½ per cent. in 1937, is satisfactory.

The report and accounts were unanimously adopted.

BAH LIAS RUBBER ESTATES, LIMITED

STRONG FINANCIAL POSITION

The twenty-eighth ordinary general meeting of The Bah Lias Rubber Estates, Limited, was held, on February 17th, at 19 Fenchurch Street, London.

Mr H. Eric Miller (the chairman) said that the report and accounts set out the working results of the Bah Lias Company to October 31st last. As from November 1, 1938, the company had been enlarged by amalgamating with it the estates and other assets of Bila (Sumatra) Rubber Lands, Limited, and The Wampoe Tobacco and Rubber Estates, Limited. The legal formalities in connection with the transfer of the properties of those two companies to their own were in hand, but it might be a month or six weeks before completion, when they would proceed with the allotment of Bah Lias shares to the members of the Bila and Wampoe companies.

The lower permissible exports and the drop of just over 1d. per lb. in the sale price average explained the decline in the net profit which, at £40,196, was very near the estimate on which the amalgamation scheme was framed. After allowing for the appropriations set out in the report, including the dividend of 8 per cent. which was paid in December in accordance with the terms of the amalgamation, they carried forward £43,481, rather more than the amount brought in.

Their own two estates, Bah Lias and Soengei Brohol, were maintained in good order throughout the year. In accordance with the terms on which the International Rubber Regulation Agreement was renewed, they would be allowed to plant with rubber during 1939 and 1940 some 408 acres. Having made a good start with the preliminaries, it was anticipated that the whole area would be well planted with up-to-date material by the end of 1939.

For 1938 the standard production of the four estates now owned by the company aggregated 7,009,104 lbs. The decision taken by the International Rubber Regulation Committee on Tuesday had come as quite a relief to the market and had had a steadying effect.

The company's estates were in good order; their financial position was a strong one and they were well equipped by the amalgamation to derive further benefit from that much desired improvement in world conditions.

The report and accounts were unanimously adopted.

price of standard sheet on the spot closed on Wednesday at 8d. per lb., a gain of ½d. per lb. on the week.

★

Furs.—The London winter fur sales have closed on a firm note. The demand from England, France, Germany, the United States and Poland continued to be large, so that about two-thirds of the offerings were sold. In the closing week of the sale the prices of nutrias were unchanged compared with October, while American opossum showed a decline of 10 per cent. on October. All other prices were 10 per cent. higher. In the free market the undertone has remained firm, although, of course, turnovers have declined, as most buyers have covered their requirements for the time being at the sales. The next London silver fox sales will take place on March 20th and May 15th. The general sales of spring furs will begin with the Hudson's Bay Company's sale on April 24th, preceded as usual by a short sale of Australian furs, which is due to begin on April 20th.

The operation of the Renters' quota for the period to March 31, 1938, is illustrated in the upper panel. If British shorts produced were less than the quota (so much per cent. of the total of shorts) this deficiency was added to the quota for longs. In the lower panel the operation of the Exhibitors' quota is shown. In the case of the former the figures are for the twelve months ended March 31st of the years indicated; in the case of the latter, for the twelve months ended September 30th. We are indebted to Mr S. Rowson for most of the statistics charted.

Finance

GOVERNMENT RETURNS

For the week ended February 11, 1939, total ordinary revenue was £44,671,000, against ordinary expenditure of £7,955,000. Thus, excluding sinking fund allocations and Defence expenditure from loans, the deficit accrued since April 1st last is £95,604,000, against a deficit of £41,653,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On February 10th applications at 99 17s. 6d. per cent. for bills to be paid for on Monday, Wednesday, Thursday, Friday and Saturday of following week were accepted as to about 25 per cent. and applications at higher prices in full. Applications at 99 17s. 7d. for bills to be paid for on Tuesday were accepted in full. £20.0 millions of Treasury bills are being offered on February 17th.

SHORTER COMMENTS

(Continued from p. 360)

H. Yager (London) Scheme.—It is proposed to reduce capital by £331,880 by cancelling 1,303,509 ordinary and 31,907 preference shares surrendered by Mr Harry Yager and Mr Solomon Yager, and by writing down preference shares from £1 to 9s. and ordinary shares from 1s. to 1½d. All shares would become one class of 1s. ordinary shares, and preference dividend arrears cancelled.

Manchester Ship Canal.—Net revenue for 1938, after interest, fixed charges and reserves, amounted to £144,834, compared with £271,923 for 1937. Distribution is 3½ per cent. on Corporation preference stock, 2 per cent. on the perpetual 5 per cent. preference (shares against 4 per cent.), and 1 per cent. on ordinary, compared with 2 per cent.

Watford and St. Albans Gas.—Gas sold during 1938 amounted to 1,792 million cubic feet, an increase of 1.67 per cent. Gross revenue for 1938 is £554,094, and net revenue £94,748, against £92,330 after £2,000 to special purposes fund. Dividend, 6½ per cent. for year, against 7 per cent. Dividend is reduced under sliding scale on account of increase in price of gas.

English Electric Company, Ltd.—This company's preliminary statement was discussed in *The Economist* of February 11, 1939, on page 309. In the full report, the balance sheet shows stock and work in progress at £1,668,841, compared with £1,957,320. Debtors and repayments are up from £2,267,916 to £2,749,452. Bank overdraft is reduced from £638,182 to £494,238.

Rawlplug Company, Ltd.—Net profit for 1938, £57,997 against £64,311. To reserve £5,000 (£10,000). Carry forward raised from £21,997 to £22,245. Ordinary dividend, 40 per cent. as before. It is stated that turnover has again increased.

Burma Corporation.—Gross revenue for the December quarter, 1938, amounted to £578,857, compared with £556,470 for previous three months. Expenditure was a trifle higher at £355,800, but surplus increased from £202,095 to £223,057. Taxation is estimated at £68,047 and depreciation takes £13,687.

Bovril, Ltd.—Net profits for 1938 show a reduction of £30,726, to £251,238. Deferred dividend is reduced from 6½ per cent. to 6 per cent., and transfer to reserve from £65,000 to £35,000; carry-forward, £73,852 against £71,364.

Bradford Dyers' Association, Ltd.—Preliminary figures for 1938 show a trading loss of £240,449, after £143,891 depreciation, against a profit for 1937 of £29,018, after £150,097 depreciation. Debenture interest increases loss to £298,599 (net loss for 1937, £29,132).

£29,132). Reserve of £150,000 transferred to profit and loss account. Carry-forward, Dr. £137,227, against Cr. £11,372.

Borax Consolidated, Ltd.—Total income year to September 30, 1938, £481,515 (£561,925). To depreciation reserve, £70,000 as before. Deferred share dividend 7½ per cent., absorbing £97,500, against 7½ per cent. plus 2½ per cent. bonus absorbing £130,000. Carry-forward raised from £237,068 to £241,528.

Freeman, Hardy and Willis.—Trading profit, 1938, £225,648 (against £254,564). To this is added £11,287 reserve for tax no longer required. Interest absorbs £10,000 and fees £3,664. Year's dividend on deferred ordinary is reduced from 4½ to 35 per cent., tax free. Carry-forward, £102,727, against £102,581.

Waygood-Otis, Ltd.—Increase in profits for 1938 of £10,516 to £136,776, after again placing £10,000 to pensions. Ordinary dividend is again maintained at 25 per cent., and previous year's special bonus of 20 per cent. repeated. Carry-forward, £10,555, against £13,279.

Birmingham Railway Carriage.—For 1938, profits were £146,781, an increase of £95,395. Ordinary dividend unchanged at 5 per cent., but with addition of 2½ per cent. bonus. Reserve receives £50,000; £15,000 written off buildings, plant, etc. (no allocations last year). Carry-forward raised from £27,106 to £50,563.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest securities allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the last dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

General Franco Recognised

THE recognition of General Franco's Administration as the legitimate Government of Spain was decided upon by the British Government over the week-end and by the French Government on Monday afternoon. Since the conquest of Catalonia and the appearance of a division of counsels in the Republican Government it has been evident that General Franco would obtain this recognition from the two West European Powers in the near future. The practical question, latterly, whether the French Government were wise or unwisely, and were likely to succeed or to fail, in their attempts to make recognition conditional. The terms which the French had in mind were laudable in themselves; they wanted some assurance of an amnesty for the Spanish Nationalists' Republican opponents, and of General Franco's intention to repatriate the foreign troops in his forces as soon as the war was over. The French, however, had nothing to bargain with; and the Spanish Nationalists, on their side, were not in a mood for bargaining when they saw themselves on the verge of what might prove to be a completely victorious termination to a desperate and devastating war. As a result, the British and French recognition of General Franco's Government has been given this week unconditionally—for no pledge to us is involved in General Franco's public statements, mentioned by Mr Chamberlain in the House of Commons on Monday, that he was determined to secure the traditional independence of Spain and

that he would prosecute only those, on the Republican side, against whom criminal charges had been laid.

The present situation is the inevitable cumulative consequence of British and French policy towards Spain ever since the outbreak of war there in July, 1936; and all persistent critics of that policy must feel incensed and alarmed at the pass to which it has now brought us. The device of a so-called "non-intervention" arrangement, which had nothing but the name in common with the meaning of the term, may have averted the danger (small or great) of the war in Spain spreading over the rest of Europe and the world. But this good has been bought at the price of the two evils of weighting the scales unfairly, and in the end decisively, against a Republican Government which was the legitimate Government of Spain, and at the same time exposing our own two countries to a mortal danger.

At this moment the German and Italian Press are boasting that our worst fears are about to be realised; that General Franco—or at least the preponderant element in the Nationalist ranks, whatever it may prove to be—is going to carry Spain into the Italo-German camp; and that the result will be to incline the balance of power still further in favour of the Axis—and this to a degree that will far more than counteract the effects of French, British and American re-armament. If these Italo-German boasts came true, the Western Powers would, in fact, find their Southern flank turned and the scales weighted against them,

not only in the Mediterranean and on the Pyrenees, but also in Africa and even to some extent in the Atlantic. We have given General Franco unconditional recognition, without being able to secure any material guarantee that he will not lend Spain to this formidable Italo-German manoeuvre to our detriment; and, until the future course of Spanish Nationalist policy becomes clear, our own position will continue to be very awkward and anxious.

Equally, however, we have no evidence that the Spanish Nationalists do mean to become a cat's paw for the Rome-Berlin Axis. Against the boasts of the Italian and German Press we must set their undisguised nervousness and irritation at the *pourparlers* between the Spanish Nationalists and the two Western Powers. This temper suggests that the Central Powers, too, are without any guarantee.

On the face of it, the interest of Nationalist Spain, from now onwards, would seem to be to practise, in fact if not in juridical form, that neutrality which General Franco himself proclaimed during the September crisis. If they have now virtually won a complete military victory which cannot be reversed—and this is the opinion of President Azaña, as advised by his chief of staff—then the presence of German and Italian troops in Spain has ceased to be a military necessity for the Spanish Nationalists, and has become instead a political, as well as a financial, liability. And we can hardly imagine that any Government of Spain, whatever its political complexion, would be so dominated by ideological, as opposed to patriotic, enthusiasm that, on the morrow of a long and exhausting civil war from which it had just emerged victorious, it would throw itself into a general war, in which Spain would again be in the thick of the fight with its Government a pawn and not a player.

So long as foreign armed forces remain in Spain, however, Spanish hands may be forced. At this moment General Franco must be uncomfortably conscious of the fate of Turkey, who, before the end of 1914, was forced into the last general war—with consequences disastrous to herself—as her reward for having given asylum to two German warships. The bombardment of Russian Black Sea

ports by the *Goeben* and the *Breslau*, operating from Turkish naval bases, might be emulated by German aeroplanes bombarding Bordeaux and Toulouse from aerodromes on Spanish soil. Such considerations suggest that an early and complete evacuation of all foreign troops is an important Spanish, as well as Franco-British, interest.

As for Tuesday's debate in the House of Commons on a Labour motion of censure, it added little to our knowledge of facts and made not a hair's breadth of difference to Mr Chamberlain's policy in Spain. The question of days, hours and minutes, in last week's Cabinet and Parliamentary proceedings, on which the debate was raised, is not the question of substance. The Anglo-French recognition of General Franco this week is a consequence of his military success in a war that has been going on for more than two and a half years; General Franco's success, in its turn, is a consequence of "non-intervention," and the only way of averting General Franco's victory by means of Italo-German intervention would have been to turn the British and French Governments out of office six months, twelve months or eighteen months ago.

The paradox of the present political situation in this country is that it is not Mr Chamberlain, but Mr Attlee, who is at this moment exerting himself to prevent the formation of an Opposition that might have a chance of turning the present Government out. So long as this situation remains unchanged the Labour Party's fulminations against Mr Chamberlain will remain unconvincing. In Spain they used to practise a "rotativism" by which two nominally contending political parties took office and resigned it, turn and turn about, on an agreed time-table. Mr Attlee's tacit understanding with Mr Chamberlain is still more quaint. He will see to it that Mr Chamberlain and his friends shall be His Majesty's eternal Government so long as Mr Attlee and his friends can be sure of being His Majesty's eternal Opposition. Periodical douches of vituperation from the Labour front bench must be a cheap price for Mr Chamberlain to pay for this application of the principle of collective security to party politics.

The Future of the Commonwealth

MUNICH, the days that immediately preceded it and the events that have come after, have plainly affected vitally both the position of the British Commonwealth nations in the world and their relations with each other. It was therefore to be regretted in many ways that the Sydney Conference, summoned by the various institutes of international affairs in the Commonwealth to discuss questions of economics, foreign policy and defence, should have met just when it did, in the first fortnight in September last. Before it met, Sir John Simon had made his Lanark speech, implicitly threatening British intervention if Czecho-Slovakia should be attacked and France should rally to her defence; when it ended, the Anglo-French plan had not yet been divulged. The agenda of the Conference was planned and its discussions launched upon one false premise, and it wound up its debates upon another. The first assumption was that, in the existing state of international affairs, a practical start could be made towards constructing a new and peaceful world order without urgent risk of world war. The second was that, even if world war should result within a few weeks or even days, the peace-loving and democratic States were at last prepared to stand together in defiance of aggression.

In spite of the falsity of some of its underlying assumptions, the Proceedings* of the Conference are nevertheless

a document of considerable importance for the student of British Commonwealth relations. For they depict the problems, the outlook and the aspirations of the Commonwealth and its member States at a critical moment in its history, a moment of transition from a world of fairly peaceable and ordered progress, at least in the Commonwealth itself, to a world in which world war is "just around the corner."

That the new phase in world affairs is likely to be one of increased difficulty in Commonwealth relations is plain from these pages themselves. As the Conference Recorder notes, the view was generally held and never challenged "that the Commonwealth cannot find an adequate inspiration for its own life from within itself alone." Seeking such an inspiration, and thus seeking the common principle necessary to unify the policies of its autonomous members, the Conference found its discussions turning much upon the phrase "a world order." One delegate accused the Conference of letting that phrase become a mere intellectual and emotional soporific. It is certainly true that the members of the Sydney Conference were not united upon the meaning of a "world order" as an objective of current policy, some wanting a collective-security league and some an "appeasement" league, some wanting to combine anti-Fascism or anti-dictatorship with their approach to a world order, others refusing thus to line up in an armed balance of power. The Conference, with its valuable preparatory papers, made clear that this difference of opinion among individuals has had its counterpart in differences between

the national policies of the member nations of the Commonwealth. Thus the New Zealand Government's policy of full automatic collective security was seen to be quite incompatible with the "no-commitments" policy of the Canadian Government; and non-intervention in Spain, said to be the only policy not disastrous for Australia, was described as "unintelligible" to most Canadians. But the Sydney Conference showed these differences to be overlaid by a half-blind grasping after an ideal international objective, capable not only of inspiring national policies but also of uniting them in a Commonwealth purpose.

It will not be so easy to establish the common objective in the post-Munich world. And the Sydney Conference gave warning that, in such a world, the old issue of Dominion neutrality is likely to cause a good deal of trouble. It appears that Canada raised this matter most keenly. Neither Australians nor New Zealanders hanker after a theoretical right of neutrality which they feel they would have no power to exercise. Probably most Irishmen and South Africans believe their countries to possess the right already in practice, since their Governments have often asserted, without contradiction from Westminster, that, if Britain were to be involved in war, Ireland or South Africa alone would decide whether and to what extent they would participate. Canadian official policy is already close to this position, but there is an intellectual school, well represented at Sydney, which demands the formal declaration of a right of Dominion neutrality, as an essential requisite of Dominion independence in foreign policy. There is also, of course, a powerful Canadian opposition to any such move. Therefore, in order to preserve at least an appearance of national unity, the overseas Dominions have avoided formal and irrevocable declarations, addressed to the foreign world, on the right of neutrality.

A leading member of the United Kingdom delegation, opening a discussion on the future of the Commonwealth, described the formal right of neutrality (which in his view involved secession and the treatment of each other as foreign countries by the members of the Commonwealth) as

the only alternative to a unitary or federal empire. But many delegates refused to accept this dilemma. They advanced a "new orthodoxy" about British Commonwealth relations, which would admit into the Commonwealth circle a potentially neutral or even a republican country. If there is no present basis for "closer union," asked one Australian, cannot a "lesser unity" be organised and made effective? A merely "consultative Commonwealth" was described as capable at least "of co-operation for mutual security, even if based on difference; of the mitigation of nationalism in the organisation of mutual trade; of the pooling of administrative and technical experience; of training citizens in a wider loyalty; of the renunciation of war among its members." Even within such a Commonwealth there will be different degrees of strength in the basis of co-operation, particularly for mutual defence, and therefore differences in the degree and the character of co-operation itself. "In defence, where realistic views must always be taken, the nations of the Commonwealth already practise greatly varying degrees and kinds of peacetime co-operation, and this was likely to continue and be intensified."

It is not only from the Dominions' end that the degree of willingness to co-operate may vary in the future. A Labour member of the United Kingdom delegation struck a warning note when he suggested that the working people of his country might not be prepared for ever to undertake to fight wars for the Dominions at the other ends of the earth, when the Dominions themselves gave no firm reciprocal assurance to the United Kingdom. The same delegate declared to his Dominion colleagues that, once the British people felt that a reasonable national security had been re-established, they would again "fight hard towards a world order. And in that," he added, "we shall be glad to go back feeling that you are with us in the job." The British Commonwealth of the next few years may be a Commonwealth beset with difficulties bred of isolationism and lack of a tangible yet inspiring common purpose in international affairs; but at least it will be a Commonwealth that gets down to brass tacks.

Property in Britain

IT used to be said that economics was the science of wealth. Nowadays economists are more inclined to call it the study of scarcity. Be that as it may, there is still no more important branch of economic inquiry than the measurement of the wealth of nations. The ability of a country to satisfy the wants and needs of its people is strictly limited by the size of its national income; the real test of a nation's economic progress is the rate at which output per head of the population is rising; and the true criterion of a democratic society is the degree to which it is free from onerous and wasteful inequalities in the distribution of incomes and property.

British tradition in this field of investigation is especially strong. The researches of Sir Robert Giffen, Sir Bernard Mallet, Professor Bowley, Lord Stamp and Mr. Colin Clark into Britain's national income and capital ~~are~~ very well known, and no recent contributions to this statistical stock-taking have been more significant than the work of Mr H. Campion. Mr Campion's special corner of the field is the measurement of property. Initially, he set out to measure the value and distribution of British property since the war, and an admirable little book* has recently been published containing the final results of his work. Everybody interested in the structure of our society should read it.

His first goal is to compute the value of property in private hands. This embraces all property, such as furniture, household goods, houses, Government securities,

stocks and shares, etc., which is individually owned and "capable of absolute individual disposal." Its value can be estimated on the basis of known mortality rates (with allowances for exempt estates and so on) from the yearly returns of property made on the death of individual owners for the purposes of estate duty. In 1932-34 the value of property in private hands, measured in this way, was, roughly, £20,000 millions.

This method of measurement, however, is incomplete. It tells us that by far the greater part of British property, probably not less than three-quarters or more than four-fifths, is subject to absolute rights of individual ownership; and this information is most important. But it does not bring in all kinds of private property. It ignores the existence of property held corporately. Clubs, livery companies, co-operative, friendly and provident societies, and mutual assurance companies are cases in point.

Mr Campion accordingly sets out to calculate the value of all private property, whether it is held individually or corporately. Following Giffen, he takes the Inland Revenue returns of the income derived from all sorts of property. He capitalises each item of income at an appropriate number of years' purchase; he values the income of trading concerns on the basis of Stock Exchange yields; and he adds on an allowance for the value of furniture, motor cars, household goods and stock in trade. This time his results run as shown in the first table overleaf.

The share of land, houses and buildings in total private property, by this ready reckoning, has fallen from 31 per cent. in 1911-13 to 22.7 per cent. in 1932-34. The share

Capital of industry, transport, commerce and finance	3,590-6,030	8,470-9,000	7,360-8,290
Furniture and movable property	425-675	750-1,190	550-900

* Both the tables in this article are Mr. Campion's own.

of British and foreign Government securities among private assets has risen from 10 per cent. to 28.7 per cent. The over-all total in 1932-34 is, say, £22,670 millions.

So far Mr. Campion's careful calculations, though possibly the most precise obtainable, are nevertheless highly approximate. When he comes to his next category, that of public property, this is even more the case. Public property consists of property held by the State, local authorities and general charities. Part can be valued by the Giffen method: income arising from houses in public hands, and from municipal trading undertakings is assessed for tax, and can be capitalised on the basis of the Inland Revenue returns. For the rest it is not so easy. Public libraries, schools and hospitals, for instance, are never assessed for tax or duty. The land and buildings of State departments, such as the Post Office, the dockyards and the Royal Mint, are only formally valued for balance-sheet purposes. Any remotely satisfactory basis for the valuation of battleships, guns, tanks and roads is very difficult to find. Nevertheless, Mr. Campion perseveres, and, excluding for the moment armaments and roads, he presents the following figures:—

ESTIMATED VALUE OF PUBLIC PROPERTY
(£ millions)

	1911-13	1926-28	1932-34
Total.....	975-1,225	1,950-2,590	2,455-3,325
Land and buildings	185-235	430-630	490-750
Government securities	220-290	550-610	725-855
Other property	570-700	970-1,350	1,240-1,720

These estimates are rough and ready, but they suffice to indicate the gains made by public ownership in a mere quarter century. The most marked features are the rise in the funds held by Government departments, mainly on account of social security schemes, and "the acquisition of land and erection of houses by local authorities."

This, then, is the picture Mr. Campion paints with his excellently devised statistics. While *total* private property has risen in value from £11,990 millions in 1911-13 to £22,300 millions in 1926-28 and £22,670 millions in 1932-34, public property (excluding armaments and roads) has advanced from £1,100 millions to £2,890 millions. As they stand, however, these figures cannot thus be used to measure the relative growth of private and collective ownership. When we put them side by side there is a serious duplication. As Mr. Campion points out, State and local debts are classed as private property, and the assets against which they should be set off as public property.

First of all we must deduct from total private property the market values of British Government securities and local loans, and from public property the Government securities held by Government departments and the Government securities and local loans held by charities. That done, we find that, expressed as a proportion of total private property, public property rose from 6.8 per cent. in 1911-13 to 8-12 per cent. in 1932-34.

Even this is still not a satisfactory statement of the position. It underestimates the statistical importance of public property in the last twenty-five years for two reasons: it omits altogether the great value of roads and armaments; and it puts the property of public corporations—like the British Broadcasting Corporation, the Central Electricity Board and the London Passenger Transport Board—on what may very well be the wrong side of the ledger, the private side. It is true that none of these is publicly owned like the Post Office. The capital of two, the L.P.T.B. and the C.E.B., is privately subscribed. But all three represent property subject to close State control and quasi-public ownership. If the value of roads and armaments is, very tentatively, put at between £500-£1,000 millions (here this quite arbitrary estimate of Mr. Campion's is surely far too small), and if the capital of the B.B.C., the L.P.T.B. and the C.E.B. is taken to be about £150 millions and regarded as public instead of private, the present percentage relation which public property bears to private is raised from 10 to 14 per cent., from one-tenth to one-seventh. This is almost certainly a truer picture.

Nor does the social significance of public property end with its merely statistical importance. The growth of public property reflects increased social services. The *benefits* of property have been more greatly extended than the rights of property. Death duties, which bring in £70-£80 millions a year, tend to spread the advantages of ownership over the community. Income and sur-tax, which take two-fifths of the total of all incomes over £2,000 a year, restrain the heaping-up of fortunes.

The setting-in of a tide towards greater equality of wealth can be seen in other ways as well. In 1936 at least one-fifth of all householders owned or were buying the houses they lived in. Not less than one-third of the adult population (over 25 years of age) had property worth more than £100. The ownership of savings bank deposits and Government securities was more widespread than ever.

Yet even when all these tendencies towards equality are added together, the chief characteristic of the society we live in is its tremendous inequalities. Five per cent. of the adults aged 25 or over own 75-80 per cent. of Britain's property; one per cent. own 55 per cent. One-half of one per cent. of the population receive one-sixth of the national income from all sources. Ninety per cent. of the population have to be content with one-half of the national income.

Few economists would dissent from Mr. Campion's comment on this state of affairs. "The inequality of the distribution of private property is perhaps the most important factor producing inequality of incomes." Income from property amounts to about one-quarter of the total income arising within this country, just as it did in 1911. Thirty per cent. of the persons receiving more than £10,000 a year in 1922-23 drew the *whole* of their income from property. In 1929, 50-60 per cent. of all incomes over £2,000 was derived from property. Property is at once the badge and springboard of riches.

And this despite a generation of rising taxation and death duties steepening to 50 per cent. True, inequality has undoubtedly been lessened: in 1911-13 five per cent. of persons over 25 owned 85 per cent., not 75-80 as now, and one per cent. owned 70 per cent., not 55. But the degree of inequality which persists in possessions and income is still undemocratic and wasteful.

This is no place to point the way to change this state of affairs. Mr. Campion himself is content to show the vastly interesting facts here displayed. But at least it is possible to say this. In the future, as in the past, it will be the tax-gatherer who will be most capable of helping the social service administrator to bring the community nearer to greater equality. It will be to death duties that his closest attention will probably be paid, for there he will cut at the root of inequality, the inheritance of great possessions.

The Estimates

WITH the publication this week of the Estimates for all the Supply Services, the greater part of the expenditure side of the forthcoming Budget can be filled in. The totals of the Estimates are shown in the following table:—

	(£'000 omitted)			
	Before deduction of sums to be borrowed	Comparison with last year	After deduction of sums to be borrowed	Comparison with last year
Navy	149,399	+ 25,692	69,399	- 24,308
Army	148,155	+ 41,655	81,923	- 3,434
Royal Ordnance Factories.....	16,932	+ 16,248	1,164	+ 480
Air Force	208,561	+ 82,160	66,561	+ 6,940
A.R.P. and Essential Commodity Reserves	57,000*	+ 39,217	8,691	- 11,082
Total Defence.....	580,047	+ 204,972	227,738	- 45,294
Other Supply Services†	446,261	+ 8,427	446,261	+ 8,427
Total.....	1,026,308	+ 213,399	673,999	- 36,867

* Figure given in Defence White Paper. † Excluding self-balancing expenditure.

The actual estimated expenditure for defence is £204,972,000 higher than in the current year. But after the deduction of increased borrowings the amount to be charged to revenue is £45,294,000 lower. The total amount of borrowing apparently envisaged is £352,309,000, though this

may be affected by the fact that the only figure yet published for total expenditure on civil defence is the round sum of £57 millions mentioned in the White Paper, which may not be precise. Of the total borrowing, £142 millions is allocated to the Air Force, £82 millions to the Army and Ordnance Factories, £80 millions to the Navy and the balance of approximately £48 millions to civil defence.

Some details of the Estimates follow:—

Most of the items of the *Civil Estimates* show a slight increase. The increase of £11,259,000 in the total of this category (excluding the two civil defence items) is not, however, an accurate reflection of the burden on the revenue, since nearly £3 millions of the increase is accounted for by the Post Office, whose expenditure is, of course, met out of its own revenues. Moreover, some of the items show declines. The biggest is a fall of £4.8 millions in the estimated cost of Labour and Unemployment. This is due partly to an estimate of lower unemployment (the estimate for the Unemployment Assistance Board is £415,000 less) but mainly to a reduction of £3½ millions in the payment to the Special Areas Fund. The Foreign and Imperial category shows a rise of over £3 millions, due in the main to increased payments for Indian defence. A rise of £1½ millions in Education, at one end of the age-scale, is matched by an increase of nearly £4 millions in Old Age and other Pensions (though War Pensions are £1 million lower). Agriculture shows another rise of £1½ millions, even before

the cost of any schemes that Sir Reginald Dorman-Smith may produce. An extra £2 millions is allowed for roads.

The Navy Estimates show increases in almost every item. The charge for the Fleet Air Arm, which was £5,718,000 last year, now disappears and the cost of this service is presumably spread among the other votes. The biggest increases, however, are naturally in the votes for Shipbuilding, Naval Armaments, etc. Vote 8 (which covers Shipbuilding) is up by £18,637,000. This is due to the fact that a new large programme of construction is to be started in 1939, while the last three programmes are still in course, and there will necessarily be a further increase next year for the same reason. The 1939 programme of construction is compared with previous years in the following table:—

	1937	1938	1939
Capital ships ...	3	2	2
Aircraft carriers ...	2	1	1
Cruisers ...	7	7	4
Destroyers ...	16	—	16
Submarines ...	7	3	4
Escort vessels ...	3	—	22

The Army Estimates tell the same story of general expansion. The establishment of the Army is raised from 170,000 to 185,700, but this is mainly due to the return of a number of units from India. The actual strength on March 31st is expected to be about 17,000 below establishment, as compared with a deficiency of 25,000 a year ago, and the figure is expected to be further reduced in the coming year. It has, in fact, been an excellent year for recruiting, the totals being as follows:—

	1937	1938
Regular Army ...	26,094	38,827
Supplementary Reserve	6,672	13,647
Territorial Army ...	45,320	77,142

The September crisis appears to have had a peculiar effect. Recruiting for the Reserve and the Territorials jumped up, but for the Regular Army the last quarter was the worst of the year. Study of the tables also suggests that the increased intake into the Regular Army has been accompanied by a fall in the average educational standard of recruits. Actually, fewer recruits of the highest standard were accepted in 1938 than in 1937, and more than twice as many of the lowest. Both the figures of the Estimates and the statements in the accompanying Memorandum indicate that mechanisation is proceeding rapidly, though not perhaps as rapidly as might have been hoped.

The Air Estimates are, perhaps necessarily, the least in-

formative of the three. For almost half the total sum (£93,640,000 out of £208,561,000) the only information given is that it is for "Aircraft and Balloons." But an idea of the rapid expansion of the service can be gained from the fact that the total expenditure will be two-thirds larger in 1939 than in 1938 and that the increase between the two years is five times as large as the total expenditure in 1933.

From the figures now published, the total expenditure can be estimated. A note is appended to the Civil Estimates stating that provision for Supplementary Estimates will have to be made in the Budget, as has been done in each of the last few years. No sum is mentioned, but a tentative figure of £10 millions, the same as last year, may be allowed. The Consolidated Fund Services may be put at the same figure as last year. The service of the National Debt is the most important of these items. The gross debt is higher than twelve months ago, but the full allocation is not being spent this year and service charges on the defence borrowing are included in the Defence Estimates. It is possible that the provision for the debt charge, which was increased by £6 millions last year, might be reduced again, but the balance of probability is against it. On these assumptions, the gross and net totals of expenditure will be as follows:—

	(£ million)	Gross	Net
Defence (including civil defence)		580.0	227.7
Civil and Revenue Departments (excluding self-balancing expenditure)		456.3	456.3
Consolidated Fund Services		242.1	242.1
		1,278.4	926.1

The sum that the Chancellor of the Exchequer will have to find from revenue will therefore be £926 millions. In *The Economist* of February 18th it was estimated that the revenue of the existing taxes in 1939-40 "could hardly be more than £920 millions." The interest of the Budget will be confined to the comparatively narrow issue of whether the Chancellor has contrived to bring revenue and expenditure exactly together (by reducing the debt charge or the provision for Supplementaries or by putting generous estimates on the prospective yield of taxes) or whether minor changes in taxation will be necessary. Of the two possibilities, the former seems much the more likely.

Topics of the Week

Pius XII.—His Eminence Cardinal Eugenio Pacelli, until Thursday Secretary of State to the Holy See, has been elected Pope by a Conclave of the whole College of Cardinals. He has taken the name of Pius XII. The Roman Church, at a most crucial time in its history, thus comes under the leadership of a man who is comparatively young (he is 63 this year), of great intellectual power and personal charm, intimately versed in diplomatic and administrative procedure, behind him a distinguished executive career. It would be rash to label Pius XII as a political Pope: but it is clear that the late Pope's closest coadjutor, the man who, above all, negotiated the Concordat with Germany which is now the cause of so much pain and strife, will scarcely depart from the clear stand which Pius XI, in his last years, took towards the doctrines of racial persecution and totalitarianism. In Italy Cardinal Pacelli's election will be regarded with mixed feelings: yet he is a Roman by birth. The Nazis, too, will not be best pleased, and Herr Hitler, at least, may have cause to regret that he does not possess the right of veto which the Emperor Francis Joseph saw fit to apply to Cardinal Rampolla in 1904. The new Pope was born in 1876 and became a priest in 1899. Until 1913, when he took up administrative work, he held various teaching posts. In the years that followed he was increasingly active in the sphere of Vatican diplomacy, serving as Nuncio in several

important places, and eventually became Papal Secretary of State in 1930. Since then he has progressively increased his reputation as a man of high-mindedness and determination. Those who wished for a strong man in St. Peter's seat seem to have had their wish rewarded.

Civilian Defence.—Air-raid precautions are at last in full swing. No Minister since A.R.P. became a duty of Government has been able to face the Commons with so clear a conscience as did Sir John Anderson on Wednesday. He spoke longer than most Chancellors do on Budget Day and the time he took was indicative of the considerable progress he had to report, a progress thrown into relief by the abysmal failure of his predecessors. Already the steel shelters, which are now generally accepted to afford substantial protection against blast, splinters and debris in bomb attacks, are being distributed to the poorer householders. Lord Portal has consented to act as chairman of the public corporation which is to set up fifty small trial camps to supplement billeting in private houses in case of wartime evacuation. The survey of accommodation in proposed billeting areas is now completed. Plans for co-ordinating inland transport in time of war, and for the diversion of seaborne traffic to Western ports, are receiving the closest attention; and considerable headway in the

preparation of a detailed programme for food storage and the allocation of tonnage for food imports is being made by the Food Defence Plans Department and the Board of Trade. Reserves of electrical equipment have been ordered. New types of organisation are being evolved to cater for wartime needs, including not only the proposed Regional Commissioners (whose names, for some odd reason, are to be kept strictly secret) and the regional articulation of A.R.P. supervision, but also such special modes of voluntary organisation as the collection of the scattered road transport industry into a single framework. Protection, dispersion, distribution and organisation have been strikingly advanced in Sir John's short four months of office.

Outstanding Tasks.—It was Sir John himself who said he was not yet satisfied with the progress made in civil defence, despite his belief that it would be possible to finish in 1939 all that was originally contemplated for completion in 1941. There is no case at all for complacency and every reason for the fullest public pressure to bring A.R.P. and allied plans to the highest possible pitch of efficiency. One abiding mark of Government policy is still evident. Ever since civilian defence became a prime obligation the Cabinet has been strangely reluctant to concede the need for measures which, though strongly urged from all sides, were not included in their own programme. In every case, after a period of intransigence and hesitation, they have partially given way; but never—at least in the field of civil protection—have they prevented public pressure by taking the initiative themselves. Trenches followed laggardly on the heels of gas-masks. Evacuation was only slowly admitted to be needed. Splinter- and blast-proof shelters and basement strengthening came belatedly. And the Government are now boggling uneasily at the demand for deep bomb-proof shelters, at least in specially crowded and vulnerable areas, and for a more ambitious project of evacuation camps. Sir John's arguments against deep shelters, which turned this time on the danger of concussion and "massacre" rather than on the possibility of panic, have not convinced even himself. It may be that no shelter can be truly bomb-proof. It is almost certain that Sir John and his experts—and the Treasury—will give way on this point, and meet the nation-wide call for deep refuges and for communal shelters where houses are indefensible. In the field of recruitment, too, there is still a good deal to be done. Failure is a relative term, and the enrolment of a quarter of a million recruits as a result of the National Service campaign is not negligible. But it is still inadequate to set behind the first line of civil defenders a strong force of reserves; and there are important areas, like Lancashire in general and Manchester in particular, where serious shortages of personnel persist. The gravest deficiency is of training accommodation and equipment. It is probably because of this lack that the recruitment campaign has not been pressed forward with greater zest by the authorities. Sir John Anderson has laid the foundations of adequate civil defence with speed and decision, but his fame will ultimately rest upon the strength and style of the superstructure he adds.

Crisis in the Palestine Talks.—As this week drew on, the talks at St. James's Palace were faced with a clear alternative between a Round Table Conference and utter deadlock, with probability weighing more and more heavily on the second. The sharpening of issues came rapidly over the week-end. Last week's meeting of delegates from the Jewish Agency with those from three Arab States had seemed hopeful, and was welcomed as a means of prolonging talks which threatened to remain sterile of result. By that time it was clear that once the British Government were seized of both points of view (and both were stated, during the first three weeks, in great detail), there was nothing left but to negotiate. Since neither side would move from its position, Mr MacDonald was obliged to set them going, and, once on the move, the situation changed at breakneck speed. On Monday both delegations were presented with tenta-

tive British proposals which, in general, suggested an independent Palestine allied to Britain on an analogy with Iraq, Arabs and Jews sharing administration during the transition period through a local legislature which, later, would attain full responsibility. The Jews took this as a threat of "permanent minority status"; report of the proposals went abroad, and even while their delegates in London were protesting and booking passages home, there were terrorist outbreaks at Haifa and Jerusalem which caused the deaths of twenty-eight Arabs. Later in the week Dr Weizmann had an interview with Mr Chamberlain, the result of which is not yet available. Meanwhile the Palestine Arabs had, in their turn, offered a number of objections to the British proposals; but these, it may be suspected, were inspired by tactical considerations. If, indeed, the proposals as we know them are a true outline of the imposed solution which the Government is understood to have in mind against a breakdown in the talks, then it is the Jews who have just reason to protest. Short of an official statement, not yet forthcoming, speculation is dangerous. It is repeatedly emphasised that the proposals are tentative and "still fluid." But in any solution, if the Government are to avoid the charge of dishonouring the Balfour Declaration even at its minimum meaning, there are a number of qualifications or guarantees which they must declare and enforce, if necessary, with their own arms. It is precisely the extent of those guarantees within the present proposals which is not known. Yet, if the Government's initiative in promoting negotiation does not kill the Conferences, it may actually revive them. The chances will not have escaped Mr MacDonald's attention.

Poland, Germany and Italy.—The smooth enamel surface that has been plastered over the face of Polish-German relations, by the art and effort of Herr Hitler and Colonel Beck, was nastily cracked last week-end. The trouble began on February 24th in "the Free City" of Danzig, when the Nazi students in the local polytechnic set upon their Polish fellow-students and sought to herd them into the "ghetto seats" in the lecture-rooms that are nowadays marked off for the Jews. The news of this trivial but provocative piece of Nazi aggression at Danzig had immediate and most violent repercussions in Poland. Not only in Warsaw but in the other principal Polish cities—Cracow, Vilna, Lwów—the Polish students came out into the streets. In the capital they stoned the German Embassy and serenaded their own Foreign Office with shouts of "Down with Hitler" and "Long live France." At Vilna they are reported to have shouted "Down with Beck" as well. Notwithstanding this last slogan, it seems unlikely that, in a semi-police state, such as Poland is to-day, demonstrations of this scale and vigour could have been carried on for hours on end without at least the passive acquiescence of at least some branches of the Administration.

EQUITY & LAW LIFE ASSURANCE SOCIETY

Established 1844 Funds exceed £29,000,000

The demonstrations recurred on Monday, and on the same day the Polish Government told the Danzig Senate that Poland is prepared to take "such action as may be deemed necessary" for the protection of Polish citizens at Danzig if the Danzig authorities fail to restore order. This threat is interpreted as portending reprisals against university students belonging to the German minority in Poland.

* * *

At Warsaw, additional piquancy was given to the disturbances on Sunday by their coincidence with the arrival of Count Ciano on an official visit. Roving bands of anti-German student demonstrators were one of the first sights that met the Italian Foreign Minister's eyes; and the demonstrators seized their opportunity to chip the Rome-Berlin Axis by interspersing cheers for Italy among their hisses for Germany. The tenor of Count Ciano's conversations with Polish statesmen has not been officially divulged, but he seems to have had two objectives which cannot be easy to reconcile. On the one hand, he would have liked an assurance of Polish neutrality (*pace* the Franco-Polish Treaty of Alliance) in the event of Italy attacking France. At the same time he would have liked Poland and Italy to "get together" for the furtherance of their common interests in the Danube Basin—which means, in plain terms, the construction of an Italo-Hungaro-Polish barrier for checking Germany's *Drang nach Osten*. This latter object, no doubt, is one for which Warsaw might be inclined to co-operate with Rome; but Colonel Beck seems to have hinted to Count Ciano that this policy could not well be combined with an Italian attack on France in which Italy would be bound to beg for German support—on German terms which would assuredly include a free hand for Germany in the East. There has also been a hint of colonies for Poland in the eventual re-distribution of Africa; but Colonel Beck may well have asked whether Italy could fulfil that promise any better than her undertaking to secure a common frontier between Poland and Hungary in Ruthenia. The general upshot of the conversations appears to have been negative. Poland would promise nothing, not even neutrality. The fact is that Polish policy, in its periodic oscillations, appears to be entering a pro-French phase. And even if this were not so, the Poles are the last people in Europe to relish an invitation to play third fiddle.

* * *

Japan and Shanghai.—In Eastern Asia the focus of tension has shifted for the moment from the guerilla fighting in the open country to the confines of the International Settlement and the French Concession at Shanghai. This great Chinese city, of which the core is under foreign administration, is the heart of the Yangtse Basin. All important affairs in this vast region must be transacted in large part within the bounds of the two Shanghai settlements; and, in particular, whatever government is momentarily in control of the Yangtse Basin must be conducted from Shanghai to a large extent—at any rate, on the financial, economic and commercial side. Today the Japanese are in military occupation of the provincial cities and thoroughfares in Shanghai's immense hinterland, as well as of the greater part of the city itself; they are attempting to manage this occupied territory through the agency of a puppet Chinese Government which they have set up at Nanking; and this move on the part of the Japanese militarists is being countered on the Chinese side by a terrorism which is directed against Japan's Chinese puppets even more actively than against the Japanese themselves. Inside, as well as outside, the two settlements at Shanghai the Chinese terrorists have lately been striking down a number of the victims whom they have marked out for assassination; and though the International and the French municipal authorities have been making strenuous efforts to round up the criminals and to re-establish public security, they are confronted with an enormously difficult problem in a dense urban area containing a huge Chinese population that has latterly been swollen by the influx of unhappy and resentful

refugees from areas which the Japanese have devastated. The *bona fides* of the two municipal administrations are beyond doubt, for they have two powerful motives for wishing to put this terrorism down. In the first place, it is as an oasis of law and order in a wilderness of anarchy that the two foreign settlements at Shanghai have won their extraordinary position in China, and they are bound to make every effort to preserve an asset on which their unique prosperity depends. In the second place, they must be anxious to avoid giving the Japanese any excuse for further encroachments upon their jealously guarded autonomy. On February 22nd, Japanese demands for presentation to the Municipal Council of the International Settlement were telegraphed from Tokyo to the Japanese Consul-General at Shanghai. These Japanese terms, which have not been made public, are believed to have been rejected by the Council; and the next move has been the unofficial declaration, by the puppet Government at Nanking, of a "silent war"—whatever this ominous-sounding phrase may mean—against the two Shanghai settlements and against French and British shipping in the Yangtse into the bargain. At Tientsin, simultaneously, the Japanese have run live-wire fences round the French and British concessions in that North Chinese treaty port. In both places the situation is critical; but it is not yet certain that the Japanese mean to push their offensive to extremes.

* * *

Peace and War in American Politics.—The debate on foreign affairs still holds the stage of American politics. It is now abundantly clear that Mr Roosevelt's secretive tactics were a mistake and that his policy was endangered by the indignation aroused by his methods. But the public is now beginning to distinguish between the policy itself and the air of mystery surrounding it, and it is a very welcome sign that several Republican Congressmen are expressing views very similar to those held by the President. The isolationists in Congress are busy reviving all their previous projects—the Constitutional Amendment to make a referendum necessary before war can be declared, the Bill to prohibit all exports of materials to belligerents, and so forth. But their offensive begins to look more and more like a rearguard action. Underneath all the confusing talk, American sentiment is changing. With so many minds concentrated on the possibility of war abroad, the Administration is making what looks like a genuine attempt to secure peace at home. Within the last week or two, business men have listened to a positive chorus of benediction from the New Dealers. Mr Roosevelt himself has publicly buried the utility hatchet. Mr Morgenthau has promised that there will be no new objectionable taxes. The most remarkable statements, however, have been those of Mr Harry Hopkins, the new Secretary of Commerce, who has always been considered one of the more extreme—and has certainly been, to business men, one of the most distrusted—of the New Dealers. In a speech at Des Moines, he came close to an admission that the Administration had been wrong in mixing so much reform with its recovery and promised better behaviour for the future. The cynics have, of course, been quick to suspect that Mr Hopkins is more concerned with votes at next year's Presidential election than with the eternal verities. But even if the suspicions are correct (as they probably are) it is significant that this line of advocacy should be chosen as likely to prove popular. The United States has been done infinite harm by the bitter and futile bickering between the New Dealers and business—a quarrel in which blame rests about equally on both sides—and if a *rapprochement* is now possible it would be foolish to question its motives.

* * *

M. Spaak's Successor Falls.—M. Pierlot, who succeeded M. Spaak as Prime Minister of Belgium at an interval of nearly two weeks, stayed in office for five days, just long enough for his Minister of Finance to state a policy of deflation, whereon Socialist opposition forced the

Government to resign. M. Gutt's statement on the financial position was dry and to the point: the ordinary Budget for 1938, he pointed out, carried a deficit of 1,085 million francs, and that for 1939, despite increased taxation, a deficit of 353 millions. The Treasury was in possession of 500 millions, and when allowance had been made for the extraordinary Budget and for additional air defence estimates, another 2,500 millions must be found. M. Gutt recommended a policy of prudence, and announced that a programme of economies would at once be worked out that would absorb the 1939 deficit. During his speech he referred to a number of economies which he had in mind; and when the Chamber of Deputies heard him announce the reduction of civil servants' salaries the sitting had to be adjourned to avoid the Government's defeat. When the Chamber met again, on Tuesday of this week, M. Pierlot declared the Government's resignation; and the next day, with the Liberals still refusing to co-operate until Dr Maertens had resigned from the Flemish Academy, the King was left with only the Socialists from whom to choose a Prime Minister. M. Soudan, Socialist Minister of Foreign Affairs in the Pierlot Government, undertook the task after forty-eight hours of pondering on the chances, and, if successful, will inherit a host of political and financial problems. He will have to take decisions on the vexed issue of Flemish nationalism and accord a precise measure of cultural autonomy where his predecessors have only made vague offers; not much less controversial, he and his Minister of Finance will have to make some attempt at balancing the Budget without offending Socialist principles or, on the other hand, the determined section of Belgian opinion which favours orthodox deflation. And, later in the year, he will probably have to decide whether or not to devalue the belga. Faced with these sore problems, he will at least be fortified by the knowledge that many, who would have opposed him to the end, will now think twice before doing so lest they destroy Belgian democracy. He, that is, or his successor.

* * *

Hungary Strikes at Extremism.—On the same day as the Hungarian signature was affixed to the Anti-Comintern Pact the police in Budapest rounded up a large number of members of Right extremist organisations, and the activities of the latter are for the future proscribed. Although an immediate result of the martial law which was proclaimed recently, after the blowing-up of a Budapest synagogue, the roots of this sudden proscription clearly go deep into Hungarian politics. The semi-official view points to the coincidence in date to draw the conclusion that, if Hungary's foreign policy is no longer independent of Herr Hitler's, her domestic policy remains so. This chimes in very well with the opinion that M. Imrédy nourished dictatorial and pro-German ambitions; and that these, rather than his firmness in pushing through the land reform and the anti-Jewish laws, were the occasions of his fall. Even though the validity of this argument may well be suspected, there is no substantial reason why the Nazis in Germany should want to control Hungary's domestic affairs once her foreign policy becomes "realistic"; and although it is generally supposed that the Hungarian Nazis draw their finance and fancies from party sources in Germany, it is conceivable that Germany's rulers have seen the wisdom (helped by the astonishing stupidity of the Hungarian extremists) of allowing Hungary's rulers the dignity and prestige of being masters in their own house, even if they have to be servants outside it. The truth probably lies in the middle of a number of motives: that Count Teleki's Government, having inherited from M. Imrédy's a good deal of German approval, decided to deal with their waspish enemies on the extreme Right and hang the consequences of party displeasure in Germany. Perhaps they will leave the League, just to make up for it. The other two controversies raging in Hungarian political discussion are those of land reform and the anti-Jewish laws. Both programmes will be carried through much as M. Imrédy intended, only the anti-Jewish laws are now in process of amelioratory amendment. Count Teleki's next task is to persuade the landowners

of the Upper House (of which he, unlike M. Imrédy, is a member) that they must do more than merely debate the pros and cons of land reform. This will be far from easy; but given the comparative modesty of the measures proposed, the urgent demands of peasants who compare their feudal lot with that of their new countrymen lately in Slovakia, and Count Teleki's acknowledged tact and intelligence, it should be possible to do this without further political upheaval.

* * *

Trouble with the Marketing Boards.—The producer-retailers have never been very happy under the authority of the Milk Marketing Board. They were necessarily included in the Milk Marketing Scheme, but they have no direct representation on the Board, whose main function with regard to the producer-retailers has been to collect levies. These payments are regarded by the Board as the producer-retailers' thank-offering for the present security of the liquid milk market, but now that six years have elapsed since this security was first achieved, the producer-retailers have begun to take it for granted and to question the desirability of paying sums ranging from 1½d. to 2½d. on every gallon sold to a Board over whose actions they have no control, but which prescribes the keeping of complicated records. The National Federation of Milk Producer-Retailers, one of whose members was this week fined £5 by the Board for failing to fill up the required forms, has now decided to defy the Board and has advised its members to pay no levies, to fill up no forms and, if necessary, to sell milk at 1d. per quart below the prescribed price until the Milk Marketing Board revokes its fine and amends its ways. Meanwhile, a bacon curer has been fined £15 by the Bacon Marketing Board because, having been supplied by the Board with the wrong type of pig, he bought pigs in the open market to supplement the deficiency. The Northern Ireland Pigs Marketing Scheme is also in difficulties; the Board was suspended last week while financial irregularities are being investigated and a new Board has been appointed by the Government to hold the fort.

* * *

Shop Hours.—A private Bill to limit shop assistants' work to 48 hours was rejected by the Commons a week ago, but discussion of the measure gained significance from the report of the retail distributive trades' conference on wages, hours and conditions of labour which had been published a few days before, calling for statutory intervention. The chief difficulty of Parliamentary or Ministerial action was amply shown in Members' speeches: one-eighth of the country's two million shop assistants work a 40-hour week; a quarter have collective bargains and voluntary arrangements restricting their week to 48 hours; as many as five-eighths, in small shops and one-man businesses, work 60 hours or more. The spread is too great to be removed by the enactment of strictly uniform standards. Nevertheless, present conditions in many shops are far below the standards that are expected in trade and industry nowadays, and the debate revealed all political parties agreed upon the need to curtail the hours worked by some 1,250,000 of the less fortunate shop employees. The hours of assistants aged between 16 and 18 are already regulated, even in small shops, and there can be no doubt that the industry's own plan to draw up rules for retail trade, section by section, and to enforce those rules by Ministerial Order, is capable of effecting appreciable improvements without cutting too sharply at the economic basis of shopkeeping.

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)

Annual Income	£6,700,000
Assets	£31,000,000
All classes of Life, Fire, Accident, Motor and General Insurances transacted	

Chief Office: BROAD ST. CORNER, BIRMINGHAM, 1

Retail trade, as at present organised, is strikingly wasteful and inefficient. The widely varying and generally depressed conditions of work simply reflect its inefficiency.

* * *

Wages and Illness.—The files of the Law Reports include many more cases of importance to great numbers of people than actually win headlines in the Press. A judgment given in the Court of Appeal last Monday provides an interesting example. The plaintiff, employed as a salesman on a weekly engagement at £3 10s. a week, fell ill on December 4, 1937, and went to hospital. On his return to work on March 26, 1938, he was given one week's notice, and thereupon claimed arrears of wages for the sixteen weeks of his absence, during which time his contract had not been terminated. In the County Court the judge found for the employers on the ground that, during his illness, the plaintiff had drawn 18s. a week in National Health Insurance benefit. It was the judge's view that it would be inequitable to expect employers to pay both contributions to National Health Insurance and wages during illness; he cited the parallel case of employees in receipt of workmen's compensation, where it had been established that no liability to pay full wages existed. On Monday the County Court judgment was reversed. In the case at issue, it was held, the contract of service and the obligation to pay wages lasted until notice to terminate the contract had been given. The instance of workmen's compensation was judged not relevant. The Workmen's Compensation Acts were explicitly designed to compensate workmen in part for the loss of their wages through disablement. The National Health Insurance Acts, on the other hand, were designed to furnish sick workmen with *additional* medical and other benefits "in their nature irrespective of the amount of wages as determined by the workman's individual contract of service." The employer was sufficiently protected by his power to terminate the contract. The plaintiff won his claim for £56, and a common-sense distinction of first-rate importance to workpeople was thus established.

B.B.C. Finance.—By its new charter granted in 1937, the British Broadcasting Corporation was allotted 75 per cent. of net licence receipts, but provision was made for an increase if it could be shown that its income was insufficient for the adequate conduct of its services. During 1937 it became clear that, if the present standard of sound broadcasting was to be maintained, little would remain over for television or foreign language broadcasts. Parliament, therefore, granted the B.B.C. an additional 8 per cent. of the net receipts for these purposes for the fiscal year 1937-38, and later an additional 15 per cent. for the fiscal year 1938-39. The following table shows the effect of these changes on the distribution of licence revenue :—

	LICENCE REVENUE (£'000)		
	1936	1937	1938
Gross receipts	3,955	4,216	4,428
To Post Office*	396	379	399
Net receipts	3,559	3,837	4,029
B.B.C. share†	2,510	3,078	3,534
Treasury share	1,049	759	495

* 10 per cent. of gross receipts for cost of collection in 1936; 9 per cent. in 1937 and 1938.

† An agreed sum in 1936; in 1937 and 1938 75 per cent. of net receipts plus allocations of £203,000 in 1937 and £510,000 in 1938 for television and foreign language broadcasts. These figures include income tax.

After deducting investment income, the B.B.C. share of gross licence revenue has risen from 60 per cent. in 1936 to 75 per cent. in 1938. Today, of the 10s. which the listener pays over the Post Office counter, 10½d. is deducted to cover the cost of collection, 11d. is paid directly to the Treasury and a further 5½d. indirectly in income tax. This leaves the B.B.C. with 7s. 9d., of which 4s. 1d., or more than half, is spent on programmes. Expenditure from revenue rose again last year to £3,534,795, compared with £3,205,779 in 1937, and £2,579,597 in 1936. The increase last year was mainly

due to the rapid extension of television broadcasts—the average time per week devoted to these programmes rose by a third—and to the new Arabic, Latin American and continental services. The amounts of licence revenue available for the home and Empire services rose by approximately £365,000 between 1936 and 1937, and by £149,000 between 1937 and 1938. The reduction of the Treasury's toll on listeners' payments by half a million pounds since 1936 has saved the B.B.C. from the necessity of economising on ordinary sound broadcasts. But clearly, if the requirements of television and foreign broadcasts continue to expand, the B.B.C. may need the remaining half a million which the Treasury still receives.

* * *

The Indian Budget.—In more than one respect Sir James Grigg's last Budget offers a contrast with the British Budget for 1939-40 as we may confidently predict it. In the first place, the Indian Budget is balanced without borrowing. In the second place, it is balanced by means of an important increase of taxation. And in the third place, it is balanced only because the cost of defence services, so far from rising, is expected to fall below the revised estimate for 1938-39. This economy is rendered possible by an increased contribution from United Kingdom funds to help meet the improved rates of pay and conditions of service in the army, by the withdrawal of certain British units from India, and by other adjustments. The whole future of Indian military finance will turn on the report of the Chatfield Committee, which recently investigated India's defence problem. Sir James Grigg, who must have seen a draft of the report, expressed the hope that the British Government's decisions on it would make available to India further substantial sums in order to give her the modern defence forces required by recent developments in military science and dictated by the world situation. A further notable budgetary economy is the cut of Rs. 173 lakhs on the interest bill. Nevertheless, after recording a final deficit of Rs. 78 lakhs in 1937-38 and an estimated deficit of Rs. 265 lakhs in the current year, the Finance Member forecast a deficit of Rs. 50 lakhs in 1939-40 on the basis of existing taxation. After the doubling of the import duty on raw cotton, however, he estimated a small final surplus, with revenue at Rs. 8,270 lakhs and expenditure at Rs. 8,265 lakhs. The defence budget makes up over 54 per cent. of the expenditure. It is significant that the sharp increase of the import duty on the raw material of India's principal manufacturing industry, with the effect of protecting the primary producer, seems to have been well received in Indian political circles; for agrarianism is certainly waxing in India even if industrial protectionism is not waning.

* * *

Mr Bose and Mr Gandhi.—The dispute between Mr Gandhi and Mr Subhas Bose, the Left-Wing leader who was recently elected President of the Indian National Congress in defiance of the Mahatma and the old hierarchy of the party, is too much entangled with personal issues for it to be clearly analysed from a distance. Mr Bose's election, it appears, was a demonstration by the Congress rank and file less in favour of Left-Wing policies than against the domination of the "Old Guard," who are mostly of the Right Wing but who also include Pandit Jawaharlal Nehru, the chief hope of the Socialists in the Congress. Pandit Nehru and twelve of his colleagues of the former governing group have now resigned their membership of the Working Committee. Whether this move is anything more than a tactical attempt to place Mr Bose in a difficulty, and thus to subject him and his supporters once more to the influence of the circle about Mr Gandhi, can be seen only from future events. The Mahatma himself, turning his back on Congress domestic politics, has resumed his activity in connection with the Indian States. His latest move has been a journey to Rajkot, one of the chief centres of disturbance, to investigate conditions personally; as a preliminary to this, civil disobedience in the State was suspended. Meanwhile, the Viceroy has given some hint of a more positive development in the policy of the Paramount Power towards reform in the States.

No Signs of Recovery

NEW YORK, February 20.—The various weekly indices of business activity show that there was a small sag in January compared with December. This appears to have continued in early February. This falling off is usual at this time of year. Statistically it is partly attributable to the upward seasonal correction which is made for December (which on the record of recent years appears to be excessive); partly to a shrinkage in steel operations, which had been surprisingly high in December; and partly to a decline in motor production. In the early weeks of the motor year (roughly the fourth and last quarter of the calendar year) the stocking of dealers requires the industry to work virtually at capacity. Once the dealers are stocked, production schedules are adjusted more closely to actual consumer demand. The slackening in January gives no cause for alarm.

The continued sluggishness of commodity prices is rather more disconcerting. Prices of industrial primary materials rebounded smartly last mid-year, and since then have held up fairly well. Prices of agricultural primary materials, on the contrary, took little part in last summer's spurt, sagged throughout the autumn, and now stand at about the low levels of last spring. Except in building, no part of the price structure gives an appearance of robustness; nor, on the other hand, is it definitely weak. Like production, in fact, prices are, on the whole, non-committal, although the relative heaviness of commodity prices is rather disturbing to those who are inclined to believe that the underlying trend of production is upwards.

The share market was distinctly strong in December and weak in January, rallying uncertainly in February. The production index, the price index, and the share index, therefore, all look the same, in the sense that none discloses a pronounced current trend. The hesitant behaviour of the share market is in contrast to the vigorous strength of the gilt-edged bond market, which has now recovered the high levels of early 1937, and in some cases even surpassed them. In 1937 the bond market reached its peak in a period of strong commodity prices. This year it has recovered that high level in a period of heavy or static commodity prices. The reciprocal relationship often ascribed to bond yields and commodity prices is not very much in evidence.

The banking figures, again, are almost contradictory within themselves. At the end of January the demand deposits of the reporting member banks were \$16,152 millions—up \$1,569 millions, or almost 10 per cent., on the year and more than 10 per cent. above March 30, 1938. The production index for January will be about 20-25 per cent. above that for January, 1938. But the January debits to individual accounts last month (\$32,340 millions) were almost precisely equal to those of January, 1938 (\$32,084 millions).

DEBITS TO INDIVIDUAL ACCOUNTS (\$000,000)

March, 1938	32,109
April "	31,169
May "	28,841
June "	32,797
July "	30,506
August "	28,270
September "	29,525
October "	33,235
November "	29,406
December "	39,930

Indeed, these debits have shown no very distinct rise since last spring. In short, neither the rise in deposits nor the increase in production has yet found any distinct counterpart in the debit figures.

Action Against Recession

Four reasons were commonly accepted to account for the depression of 1937-38. The official explanation attributed it to the decline in Federal deficit spending. The banking com-

munity blamed the reduction of the excess reserves by increasing reserve requirements, and by the sterilisation of gold in the Inactive Fund. The business community blamed the undistributed profits tax, which became effective at the end of 1936. Economic publicists generally attributed it to overstocking. Every one of these causes has now been specifically remedied. Since March last the Federal Government has resumed deficit spending on a lavish scale. The excess reserves have been raised to new high levels by a reduction in required reserves, by the monetisation of the Inactive Fund and by subsequent enormous gold imports. The undistributed profits tax was virtually repealed last May. And, finally, the year-end reports showed a varying, but generally large, reduction in inventories compared with the end of 1937. If the several diagnoses of the causes for the collapse of 1937 and for the prostration of early 1938 are correct, the present period of hesitation will presently evolve into an extension of the recovery movement. For that reason, if the recovery movement should fail to develop, its absence would be more than disconcerting.

Conflicting Views

It will be noticed that the variety of the causes and the *ad hoc* remedies contain certain elements of conflict. For example, though the spending programme and the monetary programme are in complete harmony, the objection to the undistributed profits tax implies objection to the generally higher taxation involved in the spending programme. Again, the insistence on the reduction of stocks or inventories is to some degree in conflict with the credit expansion programme, since it implies a reduction in loans; and, while Washington was inclined to find in inflated inventories one cause of the collapse, Federal agencies, such as the Commodity Credit Corporation, continued to build up theirs. Finally, the banks, while they resented the reduction of excess reserves and applauded the restoration of the excess reserve position by the monetisation of inactive and incoming gold, are disquieted by the increase in debt resulting from the spending programme and by the low level of their own earnings, due to the low interest rates implied by excess reserves and the repayment of their customer inventory loans.

It is only fair to say that the four causes for the recession enumerated above are not a complete catalogue. For example, some people placed a great deal of emphasis on the high prices of primary commodities in the winter of 1936-37—a matter more or less corrected by subsequent declines. Others stressed the increase in labour costs resulting from high wages and short hours; others the burden of taxation, and so on. The four reasons actually enumerated won a sufficient following, either in official, financial or business circles, to secure recognition and the application of specific remedies. The many other explanations of the setback simply represent the opinions of minorities incapable of securing action.

France

From Munich to Burgos

PARIS, March 2.—A formal vote of the Chamber in favour of the Government permitted the Cabinet to decide to give *de jure* recognition to General Franco. This recognition is a logical sequence to Munich, and as it happens it comes just when fierce debates are taking place at Lille, at the General Congress of the Trade Unions, where the moderates are protesting energetically against the "colonisation" of their organisations by the Communists, chief sponsors in the past of "Arms for Spain." In spite of the appeals of the moderates, politics have deeply penetrated into the trade unions, which have lost a great many of their members since the disastrous fiasco of the general strike, inspired by the Communists. At Lille, moderates and extremists were nearly balanced.

Meanwhile, social peace and relative calm in foreign affairs have given a better tone to the markets, while the present pressure upon the Dutch and Belgian currencies is to some extent favourable to the franc. Repatriated capital is still being invested in short and middle term bonds, which continued their rise during January and February. Renten, however, have lost a great part of the recovery registered in November and December, 1938, as the following table shows:—

	Dec. 1st	Jan. 3rd	Feb. 1st	Feb. 28th
3 per cent.	80.60	87.35	83.05	84
4 per cent. 1918	81	89.10	83.25	86
4½ per cent. 1932 "A" ..	85	91.85	86.40	90.10
Treasury Bonds—				
4½ per cent. 1933	1,001	1,019	1,038	1,060
4½ per cent. 1934 ...	1,004	1,023	1,032	1,051
5 per cent. Dec. 1937 ..	995	1,008	1,014.50	1,037.50

The yield of medium-term bonds, which has sometimes been 9 per cent. in the past, fell to 7½ per cent. last November. It is now no higher than 4-4½ per cent., the first fundamental sign of improvement in French public credit. Short-term bonds are always largely subscribed, and the Government is now in a position to delay its funding issue until May, after the Presidential election.

Many years have passed since a French Government could have looked forward to so calm a spring. Private long-term credit, however, is still too dear. Twenty years debentures of a 5½ per cent. type are issued at 905 and represent a charge upon the companies (*agio* included) of about 7.3 per cent. This is better than the former 9-10 per cent., but it is still uninviting, and industrial companies are waiting for better conditions to effect conversions.

The Vicious Circle

"The world will be reformed (M. Flandin recently declared) not with doctrines, but with the plough and machines." Nevertheless employers are still not disposed to renew their plant, because of the continued uncertain international outlook. One way of stimulating production would be to increase foreign trade, and this explains the present active negotiations with Central Europe and the Balkans, at a time when French prices are still lower than world prices.

Briefly, the position is this. Industry argues that its charges are too heavy; that, before a company can distribute 100 francs to its shareholders, it must pay 200 francs to the State and 100 francs in social charges. The Government replies that larger investment of capital and larger turnover would lessen the relative weight of these burdens. But industry and the Stock Exchange reply in turn that war is still threatening, and that public funds consequently offer an easier and safer investment. That is the "vicious circle" of the recovery by liberal methods.

"Ten milliards less in taxes would have meant ten milliards more in false money," M. Reynaud has said, to underline the fact that it is inflation and not taxes that causes prices to rise. That is all very well; but, if taxes do not make prices rise, then there is no objection to some slight expansion of credit which would facilitate the lowering of the rate of interest in the money market. The Minister of Finance has promised this expansion many times. But so far no action has been taken. A number of experts are suggesting that present circumstances are reminiscent of the Laval period. Then, the purchasing power of the country was diminished by economies instead of by fresh taxes, and a compensatory expansion of credit was similarly refused by the authorities.

The following table shows recent movements in wholesale prices:—

	Feb. 4th	Feb. 11th	Feb. 18th	Feb. 25th
General index	678	679	675	676
Domestic products ...	706	704	698	700
Imported products ...	628	635	634	633
Foodstuffs	659	654	648	650
Industrial products ...	696	701	700	699

The consumption of coal in January was 5,676,000 tons, almost the same as in January as well as in December last year. Output amounted to 4,311,000 tons, for 20.5 working days, against 4,531,000 tons in December, 1938, for 23 working days, and 3,705,000 tons in January, 1938. Average daily production increased from 180,200 tons in January, 1938, to 185,800 in December and 186,400 in January, 1939. Total imports of foreign coal fell from 1,490,000 tons in December, 1938, to 1,437,000 tons in January, when they were 573,000 tons lower than in January, 1938. The value of coal imports was 311 million francs in January, against 328 millions in December and 419 millions in January, 1938, though the price of imported coal is now 7.15 francs higher than it was in January, 1938.

Germany

Anglo-German Talks

BERLIN, February 27.—Mr Ashton-Gwatkin, of the British Foreign Office, has left Berlin at the end of a busy week to report progress to Mr Chamberlain and to Lord Halifax. His visit grew in meaning and importance from the moment it was announced a week ago that Mr Stanley and Mr Hudson would attend a banquet in Berlin as guests of the *Reichsgruppe Industrie* on the occasion of the Anglo-German industrial discussions. The importance attached to Mr Gwatkin's visit is to be seen by the way in which he was received for lengthy conversations by Herr von Ribbentrop, the Foreign Minister, Field Marshal Goering, Herr Funk, Minister of Economics, and Dr Wohltat, of the Prussian State Ministry, who was actually recalled for this purpose from Bucharest.

One gets the impression, from the various remarks made about the visit, that it ended on a slight note of discord. It is true that the prospects for an Anglo-German trade agreement are still regarded optimistically; Germany feels that England is especially eager for an agreement because there is the possibility that a certain amount of domestic political tension will be the outcome of the operation of her huge new armament programme. The Germans, too, are interested in reaching an agreement, because a further arms race coupled with sharpened commercial competition would place the Reich in increasing financial and economic difficulties.

Nevertheless, the difficulties that must be overcome before an agreement can be reached are still very great. This was clearly shown during Mr Ashton-Gwatkin's visit. The British and German views about procedure differ considerably. The Germans believe that political and economic questions should be kept separate during the discussions. They want, first of all, to see an understanding on trade questions, and they consider that some measure of political understanding will then follow of its own accord. The British view (as seen by Berlin) is that political understanding should come first as a basis for economic co-operation. The difference can be explained by the two Governments' divergent political ideas. The British Government is interested in maintaining peace. The German Government's prime interest lies in assuring its position as a leading power on the Continent, in extending its commercial and political influence in the world, and in winning colonial equality.

Trade with the United Kingdom

The colonial question was probably only mentioned incidentally during the talks with Mr Ashton-Gwatkin. At any rate, it was not the main subject of discussion. Other political questions, however, were in the foreground. Mr Ashton-Gwatkin is believed to have been convinced that, while the Reich is not unwilling to come to an economic understanding with England, the German Government is in no way willing to make political concessions to achieve such an agreement. The recent trend of Anglo-German trade reveals Ger-

many's great dependence on British sources of raw material.

	(In Rm. million)	
	German exports to the United Kingdom	German imports from the United Kingdom
1913	1,438.0	876.0
1929	1,305.5	865.3
1933	405.6	238.4
1937	432.2	308.6
1938	350.9	282.7

Since 1933 exports to England have fallen by 13½ per cent., but imports from England have risen by 18 per cent. in the same period. The *Deutsche Volkswirt* records that, in the first nine months of 1938, Germany bought Rm. 36 millions' worth of coal; Rm. 1.22 millions of coke; Rm. 8.38 millions of fish; Rm. 6.2 millions of machinery; and Rm. 2.46 millions of "land and water vehicles." Apart from coal, England sold Rm. 32 millions' worth of other raw materials to Germany during these months. In addition, imports from the United Kingdom included Rm. 67 millions' worth of semi-finished goods, such as cotton thread (Rm. 24.5 millions), woollen yarn (Rm. 8.6 millions), copper (Rm. 8.65 millions) and oils and fats (Rm. 5.45 millions).

As a result of the gigantic armament programme of the last few years, and the important political events that have gone with it, Germany's financial difficulties have grown in recent months. It was this which led Dr Schacht and Dr von Schwerin-Krosigk to draw up a programme of increased taxation. Their plan was turned down by Herr Hitler, who feared that domestic political difficulties might arise from the consequences such taxation would undoubtedly have had on wages and prices. At the time the Government limited itself to curtailing State expenditure, especially on building projects. The saving on armaments, which was then contemplated, had to be given up because the foreign political situation had grown definitely worse for Germany.

Increased Taxes After All

Now, under the pressure of circumstances, and presumably against the will of the Party, the Reich leaders have after all had to decide in favour of at least partial tax increases. The new income tax law removes a number of exemptions and abatements. Except in the cases of the families of farmers, families with numerous children, and aged, war-wounded or otherwise physically disabled persons, the cost of keeping female house servants may no longer be deducted from returns of income. This deduction was introduced in 1933 to put an end to female unemployment. Church taxes, too, may no longer be deducted. For unmarried persons the rate of income tax is raised by 12½ per cent., but the amount taken in taxes must not exceed 55 per cent. of the person's income. The same increase applies to married couples who have failed to produce children after five years of married life, but in this case, taxes must not exceed 45 per cent. of income. Considerable allowances, ranging from Rm. 28 to Rm. 260 a year for the first child, are granted to families with many children. These regulations square with National Socialist theories of population.

Needless to say, Jews are placed in the highest tax category on principle—except where Jews have non-Jewish or half-Jewish children (or adopted children) in their care. In contrast to the tax programme of Dr Schacht, which would have brought in about Rm. 500 millions in additional revenue, the new programme will yield only about Rm. 200 millions during the first year, and about Rm. 300 millions during the next. With a total tax revenue of Rm. 17,000 millions in the current fiscal year, the additional receipts are insignificant.

The national income has increased considerably during recent years. Since the State claims for itself the greater part of production, consumption has increased much less.

	(In Rm. '000 millions)			
	1928	1932	1937	1938 (provisional)
National income	75.4	45.2	71.0	76.0
National Income (at 1928 prices)	75.4	56.8	86.0	91.8
Wages	42.0	25.7	38.8	41.5
Taxes (total)	14.1	10.3	18.4	22.0
Retail trade turnover	36.2	22.7	30.9	34.0
Investment	13.8	4.3	16.0	18.5

A chief feature is the rapid growth of taxes, that is, of the State's share of the national income. The Reich is forced to collect in taxes the money it pours into business. Investment, too, increased considerably, showing an increase of Rm. 5,000 millions over 1928. Receipts from retail trade have increased yearly since 1933, but they are still Rm. 2,000 millions below the 1928 receipts.

Czecho-Slovakia

Politics and Administration

PRAGUE, February 23.—After the election of the new President and the appointment of a new Government headed by M. Beran, reorganisation is going rapidly ahead. Reaction now prevails both in home and foreign policy against the former regime, which is charged with relying blindly on foreign pledges that in the event failed to materialise, while neglecting to adjust relations with its neighbours. Public opinion is now turning away from former Allies and reaching out towards Germany and other nearby nations, for the Czecho-Slovak people is realistic enough not to waste time in fruitless recrimination. Relations with Slovakia are being gradually improved. The first days of vehement reaction against Czechs and especially Czech officials, have passed; feelings have now calmed down, and there is a better understanding of the need for co-operation with Prague.

The reaction against party politics is reflected in the simplification of the political system by the creation of two parties in Bohemia and Moravia, and a third in Slovakia. Ruthenia also has a single-party system. The first provisional constitutions of Slovakia and Ruthenia are to be replaced by new constitutions, now in preparation. The agrarians favour a system of planned economy. Industries and trades, however, would prefer free enterprise with State intervention limited to a minimum. Administration has been complicated by the establishment of federation, but also simplified by amalgamation of the Ministries of Railways and Posts and those of Social Welfare and Hygiene. The information and propaganda services are thought to have failed, and a new central information office may be set up.

Refugees

The political changes have brought misery to thousands of emigrants and refugees. The Government has made a great effort to alleviate the suffering by means of a special institute for refugees, which tries to find employment for officials, farmers, workers, traders and artisans who have left the occupied territory. The important question is what to do with refugees who are not Czecho-Slovak subjects, their numbers having recently risen considerably, as it would hardly be fair to ask Czecho-Slovakia to grant a permanent home to foreign subjects within her straitened territory. A revision of the naturalisation of all foreign subjects who acquired Czecho-Slovak citizenship after November 1, 1918, has therefore been ordered by the Government. Emigrants who are neither Czecho-Slovak subjects nor Czechs, Slovaks or Ruthenians are obliged, when so ordered by the authorities, to leave the country within a given time. Those who are without means are looked after by the Central Refugee Institute, which is assisted by contributions from the British loan. There is no distinction of race, religion or nationality.

Good Employment

Since October there has been a good deal of discussion on the transfer of industries, especially in those branches which suffered heavy losses by cession of territory, and to prevent unbalanced development the Government has now taken control. Employment in industry is, on the whole, good. The output of coal is rising; and those branches of industry which suffered temporary losses by changed conditions in the Sudetenland are also picking up. The number of unemployed persons in January was 180,071 against 519,002 a year ago, while scheduled public works, especially roads, waterways, and railways, will provide further employment. An agreement has been concluded to enable Germany to hire labour. Social insurance is to be centralised as far as possible.

Wholesale and retail prices have risen slightly, the index of wholesale prices in January being 772 against 733 a year

The OCEAN

Accident & Guarantee Corporation, Limited
Head Office: 36-44 Moorgate, London, E.C.

FOR ALL CLASSES OF INSURANCE

ago. The money market has calmed down again. The Czecho-Slovak crown will now be marked "K" instead of "Kc." The statute of the National Bank has been altered and its administration enlarged. Traffic was heavily hit by the new frontiers, which cut off railway and road communications; the Czecho-Slovak railways were reduced in length from 13,560 to 8,802 km., or by 35 per cent., and increased communications are now needed, especially from Bohemia to the east.

Foreign Trade

Czecho-Slovakia is preserving her character as an industrial country, and therefore requires to export manufactured goods in order to pay for necessary raw materials, food-stuffs, etc. It is thus in her interest to continue trading with "unfettered" markets, especially in the Anglo-Saxon countries and Latin America.

Imports for the period of October-December (after the territorial changes) amounted to K. 1,499 millions, the exports to K. 1,722 millions. Important negotiations with Germany have taken place recently regarding, besides a general trade adjustment, the temporary regime between Czecho-Slovakia and the Sudetenland. Similar negotiations are in progress with Hungary and Poland. With other countries the adaptation of commercial treaties to new conditions is being discussed.

Assisted by the Parliamentary Economy Commission, the Government has drawn up a federal Budget amounting to about three milliard crowns, but provincial Budgets for each of the three federal units are not yet completed. The yield of taxes in 1938 was K. 10,936.8 millions, or 5.4 per cent. more than in 1937. The December receipts were down by 28 per cent. in comparison with the previous year, owing to loss of territory. Direct taxation has been substantially raised. The Government has ordered the sale of superfluous war material, and the Minister of Finance is empowered to issue a new *tranche* of the defence loan, up to two milliard crowns, for the liquidation of payments for war material.

Hungary

Change of Government

BUDAPEST, February 21.—In spite of the Government's adherence to the Axis Powers by joining the Anti-Comintern Pact, anti-German feeling is steadily growing. This revival of Hungarian nationalism, however, has so far failed to unite the country, which is split into sections on the vital issue of land reform. Faced with the opposition of the Conservatives to land reform and the extreme anti-Semitic agitation of the Hungarian Nazis, M. Imrédy tried to stabilise the position of the Government by sacrificing plans for serious land reforms and by placating the Fascists with a drastic new anti-Jewish Bill, pronouncing Jews (racially defined) as a separate *Volksgruppe* and depriving them of political rights. "Every time the Government is in a tight spot, it strikes a blow on the Jews to save its own popularity," M. Eckhardt has declared. The Bill is now being modified.

A New Government

But M. Imrédy was forced to resign, and Count Teleki, the new Prime Minister, has found the country politically and economically desolated. The proposals of the second Anti-Jewish Bill have had a paralysing effect upon commerce and industry. The question of land reform still separates landowners (who have always had the greatest influence on Hungarian political life) from the Government. Deposits in the savings banks in Budapest fell between February (before the Anschluss) and the end of the year from 665 million

pengős to 543 million pengős. The index of share values on the Budapest Exchange fell from 140.1 in January, 1938, to 102.7 on December 31, 1938. The output of the textile industry declined by 15 per cent. over the year, in spite of the one million people (or 10 per cent. of Hungary's population) added by the incorporation of former Czecho-Slovak territories. The number of persons unemployed has risen slightly. Count Teleki, who is an eminent geographer and a very experienced politician, has a difficult task before him.

Gold Revaluation

The Hungarian National Bank officially quotes foreign currencies at their gold parities, but makes a 50 per cent. surcharge when buying and selling them. The bank's assets in gold and foreign exchange and its foreign liabilities have now been revalued by 50 per cent. (by fixing the value of gold at 5,700 pengős per kilogramme), though the nominal quotation at gold parities will continue. At the same time the formal increase in gold cover has been "sterilised," so that it cannot be used for an increase in the note circulation. A profit of 69 millions accrued from the revaluation of the gold stock which will largely counterbalance the loss resulting from the revaluation of its gold liabilities.

Henceforward subjects of foreign countries will be permitted to transfer about one-third of the dividends on Hungarian shares owned by them. The debt settlement of 1937 did not refer to the transfer of dividends and it is hoped that the present gesture will be regarded as an indication of Hungary's willingness to pay her foreign creditors. The present measure was rendered possible by the strengthening of the gold reserves of the bank, which showed some increase even during the difficulties of last year.

Smaller Foreign Trade

There was a surplus of exports in 1938, but the volume of trade fell off. Exports were valued at 522.6 million pengős, against 588 millions in 1937, while imports fell from 483.6 millions to 418.5 millions. The value of imports of industrial raw materials decreased from 198 millions to 109 millions, and of semi-finished goods from 150 millions to 120 millions. These figures point to a considerable decline in internal industrial production.

Trade with Great Britain remained practically unchanged. Exports to Britain fell in value from 42 million pengős to 41 millions, while imports were unchanged at 25 million pengős. There was a general decline in exports to countries with free exchange; while sales to Germany amounted to 46 per cent. of total exports.

The present high level of agricultural prices—in particular the price of wheat at 20 pengős per quintal—is bolstered by German purchases and can only be maintained, without undue sacrifice, if Germany continues to be able to supply Hungary's requirements of industrial imports. There are already some signs of difficulty in this direction; to take one example—Germany is no longer willing to supply textile machinery. In order to counterbalance the present dependence upon Germany for imports, attempts are being made to increase industrial exports to other countries; and a plan is now under discussion for a wide scheme of export credit insurance.

Bulgaria

Good Neighbour Policy

SOFIA, February 18.—Interest in foreign policy is keen. There has been animated discussion in Parliament, especially about the peaceful revision of treaties and the protection of Bulgarian minorities abroad. In a written statement, the Prime Minister affirmed Bulgaria's desire for sincere and loyal co-operation with her neighbours, and the establishment of the friendly relations that will make possible a peaceful settlement of all litigious questions. He emphasised the importance of the Pact of Friendship with Yugoslavia.

It is expected that the Pact of Friendship with Turkey will be renewed for another five years, and the Prime Minister is to visit Ankara. With Greece a regular commercial treaty is to be concluded; and there is an earnest wish for the improvement of better relations with Roumania, to safeguard Bulgarian interests.

Heavy State Outlay

The 1939 Budget has been definitely voted and came into force as from the beginning of February. The ordinary Budget provides 7,626 million leva of receipts and a like

amount for expenditure, against 7,200 million leva originally estimated for 1938. The higher figure for 1939 is warranted by increased ordinary receipts during 1938, when they amounted to 7,685 million leva. The budget of the State railways has also been approved, totalling 1,901 million leva for receipts and expenditure, against estimated receipts of 1,859 millions in 1938 and actual receipts of 2,163 million leva.

The only notable increases in the new Budget are for the Air Force and the War Ministry, which will together take 200 million leva extra, and the Ministries of Agriculture and Public Works, which will absorb an additional 170 million leva. New internal loans and credits are unavoidable—such as 75 million leva for posts and telegraphs, and 128 millions for the Ministry of Agriculture, the latter credit being concluded with the Post Office Savings Bank and the Agricultural and Co-operative Bank.

If it is recalled that last year Parliament voted 4,500 million leva of extraordinary credits for the War Ministry and another 1,000 million leva for the State railways and the construction of new roads, it will be seen that the programme entered into is quite extensive and that the burden on the public debt is substantial. In order to ease the position and in view of the conditions now prevailing on the money market, the Government have passed a law to reduce the rate of interest, on pre-war and post-war internal loans, from 6 and 6½ per cent. to 5 per cent. per annum.

Exchange Shortage

The present economic position is considered to be fairly satisfactory owing to the maintenance of higher prices for export products for Germany, such as pigs, poultry, eggs, etc. The general index of wholesale prices is unchanged.

The lack of free foreign exchange, however, is causing serious difficulties to merchants, and some 80 per cent. of Bulgarian export trade is directed to countries with clearing systems. As a result, the premium on free foreign exchange for private transactions has passed the legal maximum of 35 per cent. and is at present about 50 per cent.

The 1938 wheat harvest was the only crop which yielded satisfactory results. The surplus of wheat for export cannot, in fact, be exported owing to very low prices abroad. The Cereal Board has fixed the domestic price of wheat at 3.40 leva per kilo, a price three times higher than the world price. Naturally, the export of wheat at a loss for the Treasury raises serious difficulties.

Estonia

Agriculture in 1938

TALLIN, February 21.—It is estimated that the net economic production of the country for 1938 was 318 million Kr., in which trade receipts difficult to calculate are not included. Distributed over different fields of production, this total splits up into: agriculture 174, industry 103, transport 14, and real estate 27 million Kr. As is shown, agriculture takes first place; and although in recent years the process of industrialisation has been notably pushed forward, the predominantly agricultural character of Estonia remains scarcely changed. Over 65 per cent. of the population is engaged in agriculture; comparatively, agricultural technique has advanced little, and attention is accordingly being directed towards this. Between 1929 and 1938 the area of arable land rose from 807,100 to 889,200 hectares, connected with which is the attempt to make Estonia independent of bread cereal imports.

In 1938 the harvests were as follows, corresponding figures for 1937 being in brackets: Rye 184,000 (211,500) tons, wheat 83,100 (75,900) tons, barley 97,400 (80,900) tons, oats 169,700 (139,100) tons, muslin 109,100 (90,300) tons, potatoes 945,600 (985,600) tons, flax 7,500 (10,300) tons, and linseed 8,400 (11,700) tons. Although in some cases the weight of crops fell, the quality was on the whole better than in 1937. Prices for seed-crops and dairy produce moved independently of world markets, and the Government guaranteed fixed prices to producers. Thus, with Government subventions, prices for rye and wheat in 1938 were made up to Kr. 160 per ton and Kr. 230 per ton respectively; and these were a good deal higher than prices on world markets. Export prices for butter and eggs also improved owing to price conditions in the importing countries. The price level for flax fluctuated freely, and the export price for flax (on the Risten basis) was Kr. 135 per ton on January 4, 1938, and Kr. 107 on January 5, 1937.

Livestock increased on the previous year, the number of horned cattle from 639,000 to 660,900 and of pigs from 379,000 to 385,000. Owing to the improvement in butter and meat production, the value of all agricultural production rose from 184 million Kr. in 1936-37 to 192 million Kr. in 1937-38. For 1938-39 production is estimated at a value of 200 million Kr. A great part of the production is exported: in the first eleven months of 1938 agricultural exports were valued at 44 million Kr. against 37 million Kr. in the same period of 1937. Particularly encouraging in 1938 was the export of live pigs, from 23,600 to 66,300, to Germany and Russia. Butter exports rose from 12,465 tons to 13,985 tons, almost exclusively to Great Britain and Germany. In Estonia's total exports the share taken by agricultural produce rose over 1937 from 38 per cent. to 46 per cent.

An increasingly important problem is that presented by a shortage of land workers. With increasing industrialisation there is a corresponding drift to the towns, and hence a perceptible shortage of land workers and a rise in wages. This problem is being temporarily solved by the import of Polish seasonal labour, but the Government is anxious to find other means of solution. There is, to begin with, an official programme for rural dwelling houses: this is accompanied by energetic propaganda for the substitute of man power by mechanical power, and cheap credit is available for the purchase of agricultural machinery. The import of agricultural machines, in the first eleven months of 1938, increased in value over the same period in 1937 from Kr. 3,726,000 to Kr. 4,352,000; and it should also be remembered that Estonian industry itself is busy on the production of these machines.

Industrial conditions are satisfactory, although a slight recession over 1937 is noticeable. On November 1, 1938, there were 48,773 workers engaged in heavy industry against 51,076 on November 1, 1937. This recession is due to weakened market conditions abroad for timber, cellulose and textiles, but also in part due to labour rationalisation. The position in the money market was normal in the closing months of 1938. In the course of November deposits in the banks rose from 117.3 to 120.3 million Kr., and loans rose from 126.6 to 129.2 million Kr. The foreign exchange position was unchanged, and may be regarded as quite satisfactory. Gold and exchange holdings of the Eesti Bank were, on December 23, 1938, 50.3 million Kr. against 50.4 million Kr. on November 23rd, while the note circulation rose in the same period from 53.0 to 53.8 million Kr.

New Boom Ahead

Another Challenging Forecast

Major L. L. B. Angas

Internationally known Investment Consultant. Author of "Investment for Appreciation," "The Problems of the Foreign Exchanges," etc., etc.

In this challenging new pamphlet, Major Angas explains how Hitler is indirectly inaugurating industrial revival in England, which will be preceded by a Stock Exchange boom. Suggestions are made as to how to ride the coming boom.

Letters to the Editor

Nazi Economics

TO THE EDITOR OF THE ECONOMIST

SIR,—In his letter (*The Economist*, January 28, page 380) Mr Balogh points out that the present tension in Germany, and the fact that Germany has used her foreign successes for increased military power instead of raising the standard of living, are "not the necessary effect of totalitarian economics. It is the direct consequence of deliberate policy." In an article in the *Economic Journal* in September, 1938, Mr Balogh emphasised, too, that the difficulties are due to the aims "which are by no means identical with the system."

The Nazis govern by oppression, because only thus can they lower the general standard of life, move employed and unemployed in all possible directions and dictate wages and prices, without succumbing to the resistance of all those concerned. They cannot satisfy consumers' desires. Under a peace economy, Mr Balogh agreed in his article, Germany would face the same difficulties as other countries. Unable to solve the problems by a peace-economy or to silence existing discontent by a satisfying home policy, foreign policy remains the only field where striking successes can be achieved.

The soothing effect of these is, however, of short duration, and new foreign successes have to be prepared. A Fascist offensive usually coincides with a peak of discontent. Only foreign successes can compensate the population for their sacrifices, and only still higher sacrifices can guarantee the next foreign success. This method of lowering the standard of living and increasing military power for the next coup has proved successful so far. Foreign successes are achieved by a superiority over foreign countries. In order to keep this superiority, the requirements of normal economic development must be pushed aside.

On October 9th, after the occupation of the Sudetenland, Herr Hitler said: "I am convinced that it is cheaper to

arm one's self before the event than to be defeated unarmed when the day comes," and on January 30, 1939: "We must have unproductive expenses for armaments. The economic system rises and falls with foreign political security."

German Fascism is based on an inseparable unity of foreign, home and economic policy. Their interdependence, the interconnection between failure or success in each of these spheres, excludes any deliberate policy to a large extent, and restricts the liberty of action of the Government mainly to timing the explosion. To sympathise with certain "means" of Fascism as worthy of imitation, while decrying the rest of Fascist home and foreign policy, will lead to a misconception of the character and essence of Fascist totalitarianism.

Yours faithfully,

D. M. MOORE.

Oxford.

Profits Indices

TO THE EDITOR OF THE ECONOMIST

SIR,—The object of a profits index is (1) to indicate the trend of company profits, particularly at the turn of the trade cycle; (2) to enable long-term comparisons to be made.

The method of construction of your quarterly index, which brings in profits reported a year earlier as if they were still current, allows a considerable time-lag to develop, with the result that, at the present time for instance, your index understates the fall in earnings, and comparison with the period 1929-32 is not possible. The basic fault of the index is that it combines the profits of four sets of companies, earned at different times, as if they were all current at the same time. Each company's annual profit is incorporated four times into the quarterly figures, although annual profits may be rising at the rate of some 15 per cent. per annum (1932-37). As soon as profits begin to decline, the effect of the time-lag becomes serious, since you assume that the three sets of companies which have not yet reported are still earning at the old rate. Two faults therefore occur: (1) You do not show accurately the turn of the cycle; (2) your index, by lagging behind in the cyclical downswing, vitiates comparison between this and the foregoing period.

An annual index can be constructed from the total profits of all companies reporting within each year (*vide* Bank of England Statistical Summary, using your own profits data). A quarterly index should interpolate into this, but, actually, a comparison between your quarterly and annual indices only shows consistent results close on either side of the base 1935—that is, in the middle of a definite trend. Prior to 1932 and in 1937 the indices deviate. In mid-1937 (year of earnings) your quarterly index shows 131.7 and your annual index 127.2; and this divergence will naturally become more marked as profits continue to decline. From 1929-33 the two indices have a mean deviation of some 10 per cent., and in mid-1931 the deviation is 16 per cent.

The only way to construct a quarterly index is, I suggest, by determining the changes taking place in company earnings during each year, in order to find the proportion of profits earned in each quarter. This can be done graphically, and the resultant index is consistent with your annual index, except at the cyclical turns where it gives greater detail. Against your latest index number of 130.3 the index mentioned, which allows for the decline in the first and second quarter companies to date, gives 124.

Yours faithfully,

G. O. HOSKINS.

Brighton.

[Mr Hoskins' criticism of our new quarterly profits index is, in essence, a criticism of the raw material on which all profits calculations must be based. Some time-lag element is unavoidable in any profits index, unless, as Mr Hoskins appears to suggest in his final paragraph, the trend shown in each separate quarter of any given twelve-months period is extrapolated. The result of that process, however, is not to give an index of reported profits up to date, but an index of assumed profits. No annual index would escape Mr Hoskins' censure that four sets of company profits, earned at different times, are combined as if they were all current at the same time. Annual indices based on twelve different twelve-monthly periods would also fail to show the precise point at which the profits cycle changes. Until companies provide quarterly, or even monthly, profits, and issue their reports on the same day each year, we fear that the perfect profits index will be impossible to devise.—EDITOR.]

Shorter Notices

"Report on Economic and Commercial Conditions in Finland." By Eric R. Lingeman. Department of Overseas Trade. August 1938. 90 pages. Price 1s. 6d.

Finland, with a population of under four million, belongs to that happy band of vigorous smaller nations, which are both efficiently and democratically governed. Like Sweden and New Zealand, Finland has recently experienced both exceptional prosperity and a Socialist or partly Socialist Government. Encouraged by boom conditions in their export industries and rising national incomes these countries have embarked on important additions to their social services. Can these additions be maintained, now that boom has given place to recession? That is the crucial question. None of these countries can isolate themselves from the economic ups and downs of the outside world. One-third of Finland's production is exported, and over 80 per cent. of her exports consists of timber and forest products. But the Finnish Government has pursued a sound financial policy during the boom, repatriating the greater part of her foreign debt and accumulating a Budget equalisation fund to mitigate the difficulties arising from dwindling revenue in depression. Finland's enlightened social and economic policy is worthy of study, and H.M. Commercial Secretary in Helsingfors is to be congratulated on this informative survey.

"Price Control in Fascist Italy." By Henry S. Miller. Columbia University Press and P. S. King and Son. 146 pages. Price 8s.

This book is an interesting survey of the legal and administrative mechanism of price control in Italy, but it is not much more. This is not the fault of the author, who has done his best to make a lot of bricks with very little straw. His chapter on "The Statistics of Italian Prices" is extremely clear, and will be useful to anyone who wishes to examine the existing material. But many of the indices of prices have a slender basis. Nowadays in the smallest shop in the smallest Italian town you will find the list of maximum prices hung up on the wall. But if the law is at all generally infringed, official statistics must seriously under-estimate recent price rises. Mr Miller reaches the conclusion that the index of hourly wages in industry is seriously erroneous. This has been officially admitted, and the index is no longer computed. The index of wages paid in commerce, based on sickness insurance statistics, seems to be rather more reliable, but in the case of agriculture the author concludes that "there is no way of telling whether real agricultural incomes have been maintained or not." In the circumstances his final conclusion that "wages in commerce and industry have kept up fairly well with the cost of living and that in agriculture we can only guess that the same is true . . ." must be treated with reserve. All we do know is that, if real incomes have been maintained they have certainly not been vastly increased.

"New Boom Ahead in England." By Major L. L. B. Angas. St. Clements Press. 28 pages. Price 5s.

Major Angas is a confirmed believer in the force of monetary inflation to produce higher equity prices and to revive industrial activity. His estimate of the effects of defence borrowing is a "10 per cent. inflation." And he estimates that Herr Hitler will establish economic hegemony over Middle Europe without recourse to war. The market discounts this technique of bullying. But it has not, in Major Angas's view, discounted the coming inflation.

BRITISH RAILWAYS

In the following three articles, *The Economist* presents a survey of the past year's achievements of the four group railway companies, and of their prospects for the future. The first article discusses the investment prospects of home railway stocks, in the light of last year's operating economies, and of the signs that the traffic trend may improve this year. Operating problems and their relation to the "Square Deal" campaign are discussed in the second article, and the survey concludes with an examination of the net return and capital requirements of each department of railway and ancillary operation. The articles are accompanied by comprehensive statistical tables on page 450.

I. Recovery in Home Rails?

By an apparent paradox, the market has reacted to the worst railway results since 1933 by beginning to discount the possibilities of recovery. After a year in which the stockholder lost nearly £9 millions in dividends—for net revenues slumped in 1938 from £37,901,000 to £28,985,000—the improvement over the past fortnight in such marginal stocks as L.M.S. first preference (from 48½ to 53½), Southern preferred (from 62½ to 65½) and L. and N.E. second guaranteed (from 50 to 58½) is spectacular. Recovery has been assisted by the tempered optimism of the railway chairmen and by the first symptoms of improvement in the traffic trend.

Yet railway stockholders would do themselves a disservice if they were to measure the prospects for the current year merely by reference to the devastating loss of traffic in a depression year. Economic activity as a whole remained roughly stationary during the latter two-thirds of last year, but the major fall in railway receipts continued throughout this period. Taking the railway and ancillary gross receipts for all four lines, the fall of 4.2 per cent. in the past year compares favourably with the fall of 6.8 per cent. in *The Economist's* index of Business Activity. But taking a longer perspective, between 1929 and 1938 gross receipts have fallen by no less than 12.1 per cent., compared with an improvement of 6 per cent. in Business Activity. The investor may look forward to the possibility that, in a few weeks' time, traffic losses will be arrested, but merely to "break even" with 1938 will not make 1939 a good year. Fortunately, there is some evidence, though not as yet very substantial, that a positive improvement in trade and traffic may be seen during this year. Lord Stamp, at last week's L.M.S. meeting, discerned on balance a little more optimism, while Lord Home stressed the probability that industrial stocks must soon be replenished. The studied caution of these statements, however, compared with the preceding year's optimism, tells its own story. Railway managements are anticipating some recovery in business, but not of "normal" dimensions—if that term retains any relevance for railways to-day. And for the eight weeks to date the accumulated losses for 1939 already amount to £1,488,000.

In recent issues of *The Economist* the financial results of the four group lines have been reviewed in detail. In Table I, on page 450, the revenues, expenditures and appropriations of the companies are set out for 1929, 1937 and 1938, as a basis for discussion of the current year's prospects. So far as revenue is concerned, it is scarcely profitable to attempt to guess the magnitude of any recovery in traffic which may be obtained this year. The comparison of 1938 with 1937 was improved, for nine months of the year, by the 5 per cent. increase in charges introduced in October, 1937. But except for passenger receipts on the L.M.S. and Southern, increased charges merely acted as an insufficient counter-weight for falling passenger and goods traffic. The companies alone are in a position to say whether the expected retention of the basic increase in charges (originally estimated at 3½ per cent. for passengers, 3 per cent. for merchandise and 4 per cent. for coal) has in fact been realised. But, on the face

of the figures, the greatest relative gain has been in passenger receipts. On the goods side, the volume of traffic was severely curtailed, and seepage to the roads more acute.

An analysis of last year's operating costs, however, can be put on a firmer basis. The companies (in particular L.M.S. and L. and N.E.) are to be commended for providing much information on costs in addition to that which already appears in the reports. In the following table an attempt has been made to collate the information which is available. The table sets out the movement in gross railway and ancillary receipts and expenditure during the first and second halves of 1938 from the reports, and analyses the extent to which the estimated gross increase in costs due to higher wages and prices has been offset by savings due to reduced traffic and operating economies:—

RAILWAYS AND ANCILLARIES—1938 COMPARED WITH 1937
(£'000)

	Gross Receipts	Expenditure (net)	Net Receipts	Gross effect of Increased Wages and Prices	Savings due to Reduced Traffic and Economies	Net Savings (—) or Increase in Expenditure (+)
L.M.S.:						
1st half...	959	537	1,496	1,040	503	537
2nd half...	2,444	877	1,567	360	1,237	877
Full year	3,403	340	3,063	1,400g	1,740	340

S.R. (e):						
1st half...	83	456	539	456f	—	456
2nd half...	18	37	55	24g	—	24g
Full year	101	493	594	480h	—	480

(a) Including net miscellaneous receipts and charges. (b) Includes salaries and wages £698,000, fuel and materials £783,000, increased maintenance £285,000. (c) Of which wages £473,000, fuel and materials £403,000, increased maintenance £175,000. (d) Net revenue from all sources fell £818,000. (e) Excludes ancillaries. (f) Of which increased wages £220,000 and £236,000 increased prices and maintenance. (g) Of which £900,000 estimated for wages and £500,000 for materials. (h) Attributable to increases in total expenditure of £464,000.

Except on the Southern, the second half of the year experienced the major fall in gross receipts. Naturally enough, it was also the period in which the companies reaped the larger "savings"—so far as they are known. And the improvement on the costs side in the second half of the year (in comparison with 1937) was helped by the fact that the rates of wages were higher in 1938 than in 1937 for the whole of the first half but for only six weeks of the second half. Moreover, the rate of increase in materials prices became much less acute after the middle of the year. It would, of course, be wrong to suppose that the whole of the "savings" of £1,740,000 for the L.M.S. and £1,035,000 for L. and N.E. represents a permanent gain for the companies. But in the former case it exceeded the gross effect of increased wage and materials costs by

£340,000 (a result which testifies to the remarkable efficiency of budgetary control at Euston), while the L. and N.E. was able to effect a substantial net reduction in expenditure during the second half of the year. Unfortunately, the companies, in their cost analysis, stop short at a highly interesting point for the stockholder, since they do not dissect the savings that are due merely to reduced working last year, and those economies which may be expected to be permanent, irrespective of the volume of traffic. In terms of the fall in gross receipts, however, the L.M.S. "savings" represented 51 per cent. and the L. and N.E. "savings" 38 per cent., while Great Western, with a "saving" exceeding £500,000 in the second half of 1938 offset 40 per cent. of its fall in gross receipts for the period.

Some additional light on reduced working and permanent economies, however, is provided by the L.M.S. Last year the charge for locomotive coal showed a net decrease of £83 at £4,885,862. Lord Stamp's estimate at last week's meeting showed that increased prices per ton accounted for £201,750, but of this sum, £153,104 was saved through reduced mileage, while £48,729 was saved by lower consumption per mile. The reduced mileage saving can be regarded as the reduced running charge, and the lower consumption saving as the permanent economy. Again, taking locomotive and traffic expenses together, the L.M.S. shows an increase of only £63,000. But in 1937, salaries and wages under these headings totalled £23,230,000, and for 7½ months of 1938 the rates were 1½ per cent. higher than in 1937. The actual decrease of £74,000 in wages on these accounts last year represents a real saving of the order of £300,000 when allowance is made for the restoration of cuts—a fact which clearly points to more effective use of the staff and avoidance of overtime charges.

Such results do not appear to have been equalled, so far as the data are available, by any of the other lines, but they are favourable pointers of general significance for the current year. It is true, of course, that the National Railway Staff Tribunal is now considering claims for increased wages and betterment lodged by the Unions, but few stockholders are unnerved at the thought of the prospective decision. As for prices of materials, 1937 projected its legacy of heavy increases into 1938, but on balance little further increase is to be expected during the current year. To take only one example, the price of steel rails, of which the railways used 214,493 tons last year, has been reduced from £10 2s. 6d. to £9 10s.—though the resultant saving will not be wholly attributable to revenue expenditure. Making the relatively severe assumptions that no improvement in gross receipts will be reaped during the first half of this year, that reduced prices will offset any residuum of wage increases carried into 1939 (in other words assuming that there is no additional burden of wages and prices over last year's), the continuance into 1939 of the economies effected in the second half of 1938 should produce savings of the order of £1½ millions for the L.M.S., over £1 million for the L. and N.E. and over £500,000 for the Great Western to be obtained during the first half of this year. On the basis of total expenditure, the Southern made a small saving of £16,000 last year, and may have the opportunity to improve on this performance during the current half-year.

Two reservations are necessary before these results are translated into potential earnings. The first is that they are to some extent non-recurring—they can hardly be matched by a comparable volume of additional savings during the current year. The second is that an improvement in gross receipts would reduce the estimated saving, though it would, at the same time, improve net receipts. Stockholders would be wise, therefore, to regard these figures, at least in part, as the benefit of misfortune. It is to an increase in gross receipts, rather than the temporary "saving" in costs, that the stockholder must look for real recovery.

It is salutary, therefore, that the recent improvement in home rail stocks has been concentrated on issues above rather than below the margin, whose earnings, or cover, should show the greatest relative improvement. Merely as a guide to orders of magnitude, the following table relates the economies in prospect to the marginal stocks of the three lines for which figures are available:—

Amounts in £'000's					
	Marginal stocks	Required for full divs.*	Potential saving	Equivalent earnings	Current price
L.M.S.	4% pref., 1923	1,569	1,250	3.2	32
L. & N.E. ...	{ 4% 1st pref. } { 5% 2nd pref. }	2,129	1,000	{ 1.9 } { 2.3 }	28½ 47½
G.W.	Ord.	500	1.3	27½	4.7
Southern ...	Pref. ord.	132	?	65½	7.6

* Compared with 1938. † Flat yield, without allowance for redemption at par, 1955. ‡ On full dividend, short earned in 1938 by £131,871.

If our basis of estimation—admittedly crude, owing to the imponderables in the railway situation—has any foundation in reality, it is impossible to avoid the conclusion that the marginal stocks of L. and N.E. and Great Western have been carried relatively higher than L.M.S. 1923 preference. A similar yield range (but different incidence) is evident among the senior debenture stocks. Great Western and Southern 4 per cent. debentures, quoted slightly below par, are, in effect, a gilt-edged risk, and their movements depend largely upon the course of interest rates. On the other hand, L.M.S. 4 per cent. stock, at 91, and L. and N.E. 3 per cent., at 65½, recognise the industrial risk to a greater extent, with yields of 4.4 and 4.6 per cent. respectively. These two stocks may provide a cushion to rising interest rates, assuming that railway revenues recover. Between the senior securities and the marginal stocks lie the guaranteed and preference issues whose prices are already responding vigorously (in a market short of stock) to the prospect of improved earnings. This middle range includes stocks like L. and N.E. second guaranteed and L.M.S. first preference, which were only just within the margin last year. There is, in fact, a stock to suit every taste in the home rail market—if, indeed, it is recovery. At the moment there is every prospect of an interim improvement in the position of the home railways. But whether that improvement will endure depends first on the recovery possibilities of industry at large, and secondly on the long-term fruits of a Square Deal which appears to have lost its original shape.

2. The "Square Deal" Background

WHEN railwaymen discuss their operating problems they handle such multi-dimensional quantities as "average net ton-miles per freight train mile," which elude the layman's mind. When they seek to enlist public support for a solution of those problems they are wise enough to rely upon the simpler concept of the "Square Deal." Yet behind the "Square Deal" campaign lies the unavailing attempt of the railways, during more than a decade, to get on equal terms with the road carriers, public and private. And the consequences of that lack of success—which have involved

a continuous seepage of highly remunerative traffic to the roads, and a lower effective return from the heavy traffic which the road haulier would not, or could not, handle—can only properly be examined with the assistance of some of the complicated measuring-rods which the railwayman employs.

Table II on page 450 summarises the general operating experience of the railways in 1929, 1937 and 1938. Unfortunately, the full details of last year's working will not be available until the Ministry of Transport returns are

published later this year, and in the absence of cumulative figures for the first ten months of 1938 some operating statistics for last year (bracketed in the table) refer only to the four weeks ended October 29th. The table falls into three sections—volume of traffic and receipts for passengers and goods and indices of efficiency for freight train and locomotive working.

If all branches of railway operating had been conducted with the relative success which has attended passenger operations during the past decade, railway stockholders would sleep more easily. Even last year, only the Great Western showed a really substantial reduction in the number of passengers carried, compared with 1929, and this reduction was partially offset by a significant rise in the average fare from 1s. 3.92d. in 1929 to 1s. 5.32d. in 1938. On the two "northern" lines the average fare, fortified by the 5 per cent. increase in 1937, has been almost maintained over the period. Only the Southern shows striking changes on the passenger side. The intensive development of traffic has increased the number of passengers from 208.8 millions in 1929 to 236.5 millions in 1938 (though the latter figure showed a 3½ per cent. fall compared with 1937), but the average fare has declined from 1s. 1.45d. to 11.54d. The increased proportion of short-distance traffic, coupled with the fact that, in the London Transport area, the companies have yet to obtain authority for a basic 5 per cent. increase in fares, largely explain the reduction in average fares received by the Southern.

But the "Square Deal" campaign is concerned with "fair play" for goods traffic. During the past decade the volume of goods traffic handled has fallen by 18.8 per cent., and even at the cyclical peak of 1937 the tonnage was 9.1 per cent. below that of 1929. But the incidence of the fall has been relatively heavier for the lighter (and more remunerative) traffic between the two cyclical peaks, as the following table shows:—

GOODS TRAFFIC 1929-38

	1929	1937	1938	Fall 1929-37	Fall 1929-38
Merchandise (ex. Classes 1-6)	Mn. tons	Mn. tons	Mn. tons	%	%
Minerals, merchandise (Classes 1-6)	78.2	70.4	62.9	10.0	19.5
Coal, coke, etc.	79.4	72.9	59.1	8.2	25.5
All Classes	242.2	220.2	202.3	9.1	16.4
	399.9	363.6	324.4	9.1	18.8

Compared with an over-all fall of 9.1 per cent. in freight tonnage, the lighter merchandise classifications showed a fall of exactly 10 per cent. between 1929 and 1937, and by the end of 1938 this rate of fall had been almost doubled. It is precisely this loss of profitable traffic to the roads which has caused the railways such grave concern. Taking last year's L.M.S. figures as an example, lighter merchandise produced an average receipt of 13s. 3.15d. per ton, compared with 4s. 3.51d. per ton for merchandise classes 1-6, and 3s. 7.87d. per ton for coal and coke. These, however, are only crude measures. Taking the receipts per unit of work—in other words, per ton-mile—the biggest fall is concentrated, for every company, on the lighter traffics; the average receipt per ton-mile for mineral traffic shows a much smaller reduction, while the coal figures are remarkably stable. In short, the reduced volume of heavy traffics offered to the railways is attributable more to general economic conditions than to the enticements of road competition. These are the traffics which, according to the strict canon of railway charges, are charged on the basis of what the traffic will bear, rather than a close calculation of cost of service. But this theory equally assumes that the high-rate traffic should continue to provide the necessary support to railway revenues, so that industry's raw materials may be carried at minimum cost. And that side of the equation has broken down, owing partly to the loss of traffic to the roads, and partly to the reduction in the average receipt per ton-mile of light merchandise from 2.269d. to 1.948d. between 1929 and 1937 (compared with falls from 1.105d. to 0.966d. for minerals, etc., and a minor change from 1.044d. to 1.037d. for coal and coke), which has been necessary to retain even a reduced volume of traffic. At the same time, the average length of

haul for light merchandise has shown a significant increase from 91.15 miles to 103.21 miles. Had this increase been accompanied by a higher volume of traffic, or by maintained receipts per ton-mile, it would have been welcome. But unfortunately it only serves to illustrate the continued loss of short-distance traffic to the roads, and the increasing radius of road haulage services.

The railways have two principal means of offsetting these trends. They can improve the loading of freight trains and wagons; and they can improve the amount of work obtained from their locomotives. How far have they succeeded? The last two sections of Table II provide an answer for each of the main lines. Except on the L.M.S., there was no improvement in the freight train load between 1929 and 1937, and the L. & N.E. showed an appreciable reduction. A similar disappointment is recorded in the average wagon load figures for all classes of freight. Dissection of the figures into different classes, it is true, shows that improved loadings have been achieved for minerals traffic (from 9.07 tons to 9.64 tons) and for coal and coke (from 9.42 tons to 9.75 tons) between 1929 and 1937. But the wagon load for light merchandise actually fell from 2.94 tons to 2.88 tons. Smaller individual consignments account for part of the lighter load. But in order to compete more effectively with the roads in speedy delivery, the railways have extended their booked freight train services, and speed is not compatible with an optimum loading factor. Nor has the solution been found by increasing the number of loaded wagons per train; in 1937 the average of 23.20 wagons per train was almost identical with the figure for 1929.

As between an attempt to reduce effective freight train costs and the desire to increase, or at least to retain, light merchandise traffic, the railways have chosen the latter alternative. To have chosen the former might have made lower charges possible; but the railways have obviously estimated that the traffic gained by lower charges would be less than the traffic lost by increased time in handling. This hard choice does not mean that the railways have stood still in the matter of operating efficiency. The reduction of shunting and "other" miles per 100 freight train miles in recent years indicates the improvements which have been made in the marshalling yards, with their consequent savings and improved deliveries. Another index—wagon miles per total engine hour—relates, in effect, the volume of traffic handled to the costs of moving it. And this measure shows an improvement for all four companies, particularly impressive in the case of the L. & N.E. Finally, steam locomotive efficiency has made enormous strides. The L.M.S. to-day has 22 per cent. fewer locomotives compared with 1929, but it obtains 24 per cent. more mileage per day from each engine in use. The other companies have not matched the locomotive policy of the L.M.S., partly because their operating problems and traffics are markedly different. It is possible, however, that had the L. & N.E. been able to provide more generously for renewals during the past decade, it might have compared more closely with the justly famous "locomotive policy" of the L.M.S.

Will the "Square Deal," in the much modified form which now seems possible, significantly modify the operating experience of the past ten years? Freedom to fix "reasonable" rates should, on balance, improve the receipts from minerals and coal traffic, where the threat of road competition has always been small, but the traditional calculus of railway charges largest. But the precise effect upon light merchandise would depend upon the form of transport cartel which emerged from the present discussions—and particularly whether it was given statutory force. If effective co-ordination of rates on rail and road can be secured, it may be that in future traffic will tend to be divided between road and rail by considerations of door-to-door transit time, the railways diminishing their efforts to compete in speed of delivery, the roads reducing their rate-competition for the variety of traffic in which speed is not so essential. If the railways were not under the same necessity, as in recent years, of competing against the roads both in rates and in speed of service, some improvement in loading and operating costs might well result. That possibility, however, lies well in the future.

3. The Railways' Capital Problem

As the interest of the railway investor is primarily in the earnings cover for his securities, it is inevitable that comment on the annual results should tend to concentrate on the revenue accounts and to pass over the capital accounts as being only of formal interest. A year ago, however, we devoted two articles to an analysis of the capital problem which is already developing for the railways, and which may ultimately become pressing unless the present trend is changed. The present article carries the study a step further.

In Table III on page 450, the capital expenditure of each of the four group railways is analysed under its main heads for the years 1929, 1937 and 1938. The years 1929 and 1937 were each peak years in their cycles, while 1938 represents the situation in a depression year. The net revenue obtained from each branch is compared with the capital investment required and expressed finally as a percentage return on the capital invested. The net revenues on which this percentage is calculated are struck after maintenance and renewals, but before deduction of miscellaneous charges and, of course, before debenture interest.

From the rates of return on capital shown in the table, it is clear that, apart from the docks business, which is a consistently bad earner, the main railway investment is, on the whole, the least profitable of all. The L. and N.E. has, indeed, suffered a severe diminution in the earnings from its steamboats, which in 1929 were reasonably profitable; and the Southern Railway does not earn much on its hotel investment. But, taking the railways as a whole, the return on steamboats, hotels and land not used for railway purposes is fair or even good, and the same would be true of the younger investment in road transport shares, which is irrelevant to our present enquiry. But on the main railway investment itself, the return is not only at a much lower rate, but shows a much greater relative fall between the peaks of 1929 and 1937.

Yet, if attention is now transferred to the trend of capital investment the contrast with the trend of earnings is forcibly exposed. With a few isolated exceptions, such as the Southern Railway's investment in docks and steamers, the trend of capital investment in ancillary services has been downwards, despite the generally satisfactory rates of return. But the railway undertakings themselves have been absorbing more and more capital, a movement which is common to each of the individual groups, and which, for the four railways together, has raised the capital investment by no less than £35.7 millions since 1929. On this investment the net revenue fell between the 1929 peak and the 1937 peak from £40.3 millions to £34.4 millions, representing a return of 3½ per cent. in 1937 against 4½ per cent. in 1929. In the depression of 1938 the rate of return fell to 2½ per cent. Nor is there any sign that the investment of capital in railway assets is at an end. In the 1938 accounts the estimated further capital expenditure on projects actually in hand totals no less than £20,178,000 for the four companies, with a further £5,072,000 for projects not yet begun or in abeyance. Admittedly a large part (though very far from the whole) of the total is for the L. and N.E.'s suburban electrification under the London Passenger Transport (Agreement) Act of 1935. But that the railways are still absorbing large sums of capital, and will continue to do so, cannot be doubted.

If the new capital projects are taken individually, they can, no doubt, be shown to be very profitable. Railway chairmen from time to time give figures showing a very satisfactory rate of earnings on new investment. This insistence that new investment must be profitable is highly desirable. It may even suggest that in the long run new equipment might restore the earning power of the railways. But the immediate fact is that these satisfactory innovations have only served to check the fall in earnings. If they are ever to go to the length of raising them, a very large new investment will be required. And, as the directors are manifestly right to persevere in the modernisation

of the systems and to invest in new assets which promise a good return, it is evident that, even in the relatively short run, the improvement in railway equipment must call for a continuous stream of new capital—at least under the present statutory method of railway accounting.

The dilemma resulting from this demand for new investment at a time when the manifest trend of earnings precludes the raising of capital except in senior securities is illustrated by the overdrawn condition of the capital accounts. The following table shows the amount by which capital expended exceeded capital raised at the end of 1929 and at the end of 1938, respectively, for each of the group companies:—

	(£ millions)			
	L.M.S.	L.N.E.R.	G.W.R.	S.R.
1929	20.2	15.3	6.9	5.0
1938	29.5	23.5	16.7	12.8

A debit at capital account is not necessarily a bad thing in itself, since it may only indicate the progressive reinvestment of reserves in the concern. But no railway year since 1929 has yielded any appreciable reserves, and on balance reserves have unquestionably been depleted. Hence, the growing debits to capital account reflect only the necessity for spending more capital at a time when fresh capital cannot be raised on the market. Since the close of 1938 the Southern Railway has, indeed, raised £7½ millions nominal by a successful issue; and it would not be beyond the capacity of other railways to raise some fresh capital. But the main point is clear that, while by overburdening prior charges still further, the companies could obtain a moderate amount of further capital, there is no hope at all of healthily increasing their capitalisation so long as the present level and trend of earnings continues.

The companies have, in fact, already had to resort to special measures to meet their requirements. Of these, the device of the Railway Finance Corporation is the most obvious. But, in addition, capital has been withdrawn from non-railway investments, particularly from land; gilt-edged holdings have been reduced and surplus liquid capital in the superannuation funds has been invested, at interest, in the undertaking. The extent of this latter movement is shown in the following table, which gives the excess, or deficit, of general interest receipts over amounts paid in interest on superannuation funds, in 1929 and 1938 respectively, and the net deterioration over the period:—

	(£'000's)			
	L.M.S.	L.N.E.R.	G.W.R.	S.R.
Recd. in genl. interest less interest paid on superann. funds —				
1929	+ 74.5	-180.4	+568.0	+149.5
1938	-1,062.5	-740.6	-256.8	-70.7
Net deterioration—1929-1938	1,137.0	560.2	824.8	260.2

It should not, of course, be inferred that the security of the superannuation funds is in any way threatened—they are still protected by ample liquid cover. But it is clear that since 1929 a hidden prior charge has been created in each company, which in the case of the L.M.S. now amounts to the formidable sum of £1,137,000 a year.

In railway circles, it is heresy to suggest that the railways are overcapitalised. And in one sense they are not; for by no fair standard could the capital be called "watered." Moreover chairmen are accustomed to remind their stockholders that the railway assets could not now be replaced for the capital expenditure at which they stand. That is doubtless true. But the vital point is that on the earnings as they stand at present (even in a "good" year) the existing capital could not possibly be raised on the market. Manifestly a part of the present capital is not represented by earning assets. For a time the railways will be able to meet their requirements for capital by various special measures and by the creation of what may be called hidden prior charges. But sooner or later the problem may become acute.

TABLE I. FINANCIAL RESULTS
(Amounts in £000's)

	L.M.S.			L. & N.E.			Great Western			Southern

(a) Including net receipts from joint lines and net miscellaneous receipts. (b) Before crediting £100,000 from contingency fund. (c) No payment on 4 per cent. preference stock, 1933. (d) Full payments on 4 per cent. first preference and 5 per cent. redeemable preference stocks, and

price of tin well over £200 per ton by rationing supplies. Between the middle of 1935 and the beginning of 1938 the policy of the Committee was more moderate; but since then it has again pursued a policy of raising prices. By the formation, on July 1, 1938—when the price was £188.1—of a "buffer pool" (i.e. a pool of tin to which the participants contribute but which is under the influence of the Committee), with the avowed aim of raising the price to, and keeping it within, the range of £200 and £230 per ton, the industry's policy was officially changed from one of supply regulation to price fixing. As the buffer pool agreement is to remain in force during the remainder of the third agreement, which expires at the end of 1941, the defence of a high price level is apparently to remain the basis of official policy.

The maintenance of prices at a level at which they are above the average costs of production of efficient concerns has led to significant changes in the industry's structure. On the mining side, this policy has stimulated the development of tin deposits in "outside" countries. The present "outsiders," who supplied 13,967 tons in 1931, had raised their output to about 28,000 tons last year. China and Burma, the two biggest "outsiders," have doubled their production, while other countries, such as Argentina and Peru, have entered the list of producers since the inception of control. Production has also been stimulated in the Belgian Congo and French Indo-China, which joined the scheme at a later stage, and only at the price of being allotted quotas which bear no relationship to their proportion of world production in 1931.

Moreover, the proportion of the world's tin ore output smelted within the British Empire (the Straits Settlements, England and Australia) declined from 85 per cent. in 1929 to less than 66 per cent. in 1937. As a result of the growth of production in the Belgian Congo, Belgium has become an important smelting centre, and since 1934 the whole of the ore output of the Dutch East Indies has been smelted within the Dutch Empire. This tendency is likely to continue, for there are plans on foot to erect smelters in Bolivia, and in Siam (by Japanese interests). A proposal was made to set up a refinery in the United States to be fed by Bolivian and Chinese ore; but since, as part of the Anglo-American Trade Agreement, tin remains on the free list of the United States, the project is unlikely to be carried out in the near future.

Apart from the changes in the geographical distribution of mining and smelting, tin control has altered the channels through which the consumer obtains his supplies. The

turnover of the London Metal Exchange during the official morning dealings fell from 152,800 tons in 1931 to 66,700 tons in 1938. The difficulty of dealers in obtaining adequate supplies at all times through the operation of restriction and pools naturally impaired the services that the Exchange can render to the consumers of tin. At times the official tin pool has even supplied consumers in the United States directly in order to forestall criticism of a shortage of supplies in that country; this has had the effect of reducing the influence of the London Metal Exchange on tin prices.

So far as consumption is concerned, the high-price policy has encouraged the development of substitutes, though there is as yet no immediate danger that the position of tin will be seriously challenged by other materials. Moreover, the stringency of supplies has made it frequently impossible for consumers to obtain the grade of tin to which they have been accustomed, to the detriment mainly of Straits tin, whose popularity has declined considerably since 1933.

On the whole, the regulation of tin supplies would appear to have been to the doubtful advantage of the British Empire, whose proportion of the world's mining and smelting production has declined owing to the stimulus given by the high-price policy to the development of tin deposits in other countries. Nor has the international control of tin supplies had much more success in its aim of evening out fluctuations in production and prices. These have been as marked as ever, especially in the past three years.

When the third control agreement was reached in 1936, it was greeted with sincere good wishes for its success from many quarters, including those who had been the severest critics of the first scheme. Excessive fluctuations in the price of tin benefit nobody, and if a method could be found of ensuring an even flow of the metal from the producer to the consumer at a price fair to both, no doctrinaire attachment to "the free market" should in these days be allowed to stand in its way. For the reasons that have been given, tin should be one of the easiest commodities to provide with a control scheme of this sort. But two years' experience of the third scheme seems to suggest both that there are very great inherent difficulties in the way of such an undertaking and also that a control committee representative of producers—whether of the actual companies or of the Governments of producing countries—finds it difficult to resist the temptation to raise prices. Convincing proof of the benefits, to the general interest, of such control schemes has yet to be adduced.

Finance and Banking

The Currency Act in Force.—The new Currency and Bank Notes Bill, 1939, duly received the Royal Assent on Tuesday, and this week's Bank return shows the changes which it has entailed. It concerns the Issue Department of the Bank of England, and the relevant section of the past two week's returns are summarised below:—

	ISSUE DEPARTMENT	
	Feb. 22, 1939 £	March 1, 1939 £
Notes Issued—		
In Circulation	472,734,976	478,448,520
In Banking Dept.	53,679,381	47,965,955
Total	526,414,357	526,414,475
Fiduciary Issue	400,000,000	300,000,000
Gold	126,414,357	226,414,475

"*Parturiunt montes . . .*," a cynic might say, for the net result is to increase the note issue by £118. Actually this microscopic change shows that, as had been

anticipated, the authorities have decided to leave the note issue at its present level. The fiduciary issue has been reduced to £300 millions, and any outstanding depreciation of the securities in the Issue Department, which according to the Chancellor amounted in early February to £9 millions, will already have been made good by the Exchange Equalisation Account under the terms of the new Act. We are glad to see that the weekly return gives the basis on which the Issue Department's gold is valued. This week it is 148s. 5d. per fine ounce, or the same as Wednesday's London market price. Actually the writing-up of £126.4 millions of gold from 84s. 11½d. to 148s. 5d. per ounce would have given the Issue Department only £220.9 millions. To maintain the note issue at its former level, and in consequence to prevent a sudden contraction in the Reserve, the Bank of England bought on Wednesday £5,567,000 of gold from the Exchange Equalisation Account. This gold, of course, had to be paid for, as it is not an off-set against a fluctuation in the value of the Bank's gold. And so the change has come into effect with the usual smoothness of the British monetary system.

More Treasury Bills?—There are at last signs that the extreme dearth of Treasury bills is coming to an end. Last week tender allotments were raised from £20 to £30 millions, making the week's contraction in the tender issue only £5 millions instead of £15 millions. The syndicate promptly heralded this increase by dropping the price from £99 17s. 6d. to £99 17s. 5d. per cent., and succeeded in raising its allotment from 15 to 30 per cent. This week, the offer is £40 millions, and if all the bills are allotted, there will be an increase of £5 millions in the tender issue, this being the first increase since November 18th. Assuming that the current week's tender issue of £346 millions represents the nadir, the decrease since November 18th is £176 millions, while the decrease since March 5th, 1938, was also £176 millions; for the tender issue stood at £522 millions on both dates. The influx of revenue always begins to slacken during the closing month of the financial year, but the chief cause of this check to the contraction in the supply of Treasury bills lies in the steady issue of funds from the Exchequer under the Defence Loans Act. Between November 26th, when it first began, and February 25th, the total issue for defence borrowing amounts to £63.3 millions, and it has lately equalled between £5 and £8 millions a week. The issue of this money naturally mitigates the reduction in the floating debt, and as the revenue deficit is now only £46.9 millions, while there is another £70 millions of defence borrowing due, according to the Chancellor's estimate, to come by March 31st, it looks as if for the rest of the financial year issues under the Defence Loans Act will more than outweigh the excess of revenue over expenditure. If so, a net increase in the floating debt and also in the supply of Treasury bills may be expected.

Bank of England Recognises General Franco.—Simultaneously with its recognition by H.M. Government on Monday, General Franco's Government was also recognised by the Bank of England. The recognition assumed the shape of altering the quotation of the peseta for the purposes of the Anglo-Spanish clearing. Until Monday the rate of 117 was quoted, which was the official rate for Republican pesetas. From the time of the announcement of the recognition, the rate was altered to 42.45, which is the official rate for Nationalist pesetas. Needless to say, the rate is of little significance, since the Anglo-Spanish clearing ceased to operate towards the end of 1936. Nevertheless, belated payments for goods imported from Spain before the suspension of the clearing continue to come in, judging by the fact that since the suspension the amount of sterling accumulated by the Clearing Office increased by several hundreds of thousands of pounds, and now stands at about £1,750,000. From the point of view of the importers who have to make such belated payments, the change in the rate is anything but welcome, especially as it is most unlikely that the Nationalist Government will maintain the peseta around 42. Indeed, the rate of 52, which was formerly in force for "family" transfers from London to Spain, has now come to be regarded as being practically the official rate for all transfers to Spain. As for transfers from Spain, permits are only granted on the basis of the rate of 70. The "black" rate is 95 to 100, while Nationalist notes are dealt in around 115–117. There is much talk about the possibility of fixing the peseta rate at 100; this at any rate is the advice given to General Franco by Spanish banking and business interests by whom any effort to maintain the peseta around its present official level would be considered a fatal mistake. On the other hand, pressure is brought to bear upon the Nationalist Government from Berlin and Rome to maintain the peseta at its over-valued level, in accordance with true Fascist-Nazi traditions. The decision regarding the peseta will be one of the indications showing whether General Franco has been able to emancipate himself from Italo-German tutelage.

Rationing Gold.—For rather more than a week past it has been the regular experience of buyers of gold at the daily fixing to find themselves rationed, their requirements—at the price fixed—being only partially satisfied by the authorities. The offers of gold from resales arising from maturing forward contracts have been dwindling steadily while the fresh hoarding demand for gold has been of very small dimensions. Consequently the true interplay of demand and supply has been determined by arbitrageurs on the one hand and the Exchange Equalisation Account on the other. Under such conditions those in charge of the Exchange Account have apparently decided that their end is better served by rationing the market than by adjusting demand to the dimensions they desire by varying the price. Day by day sterling exchange appears to be still in need of moderate support by way of sales of dollars arising out of gold arbitrage business with New York. The Exchange Equalisation Account having decided each day what measure of support it has to give to sterling via sales of gold in the open market, has found that the most effective means of assuring that this amount is in fact sold is to make it available at the figure at which arbitrage buyers are attracted and if the total arbitrage demand is for more than this amount, to ration the buyers. The advantage of this procedure is that it exactly adjusts the arbitrage sales of dollars to the proportions desired by the authorities. As an instance of the continuously developing technique of the Exchange Equalisation Account this new procedure of gold rationing is therefore of exceptional interest.

Hongkong and Shanghai Banking Corporation.—In view of the difficult situation in the Far East, it is not surprising that Mr Pearce had to use very guarded language in his speech at the annual meeting of the bank held in Hongkong last Saturday. Exchange bankers, he said, had had to cope with a difficult and tense situation during the first nine months of last year. The black market at Shanghai had eventually become the normal open exchange market, but by the end of the year the flight from the currency had ceased and there had been a fair amount of repatriation. Partly through good fortune, but more through skilful management, China's financial situation had been kept well in hand, and no public default had yet taken place. The accounts of the bank for December 31, 1938, reveal an expansion of \$10.3 millions in the excess note issue and one of \$23.8 millions in current accounts, but fixed deposits are reduced by \$11.9 millions. The liquidity of the bank is very well maintained, for cash is \$42.2 millions higher and investments \$29.8 millions higher. The difficulties of commerce under present conditions are illustrated by the decreases of \$13.3 millions in discounts and advances and \$45.7 millions in bills receivable, though these movements, of course, may be partly fortuitous. Nevertheless, net profits have been maintained at \$15.3 millions, or at practically the same level as in 1937, and the 1937 dividend of £5 10s. per share is repeated.

The Royal Bank of Canada.—In his address to the shareholders of the Royal Bank, Mr Morris W. Wilson, the chairman, gave an encouraging account of Canadian business prospects. Canada had largely escaped the 1938 setback experienced in the United States, and the chief problems today were the low prices of many commodities, and the fact that this year's world wheat crop

A REASONABLE PRECAUTION

is for every responsible citizen to protect his dependants by securing Life Assurance now. Obtain advice on a suitable Policy from the

is the largest on record. In spite of attempts by various Governments to mitigate the situation, Mr Wilson declared that satisfactory returns from wheat production cannot be expected so long as supplies exceed world requirements. Mr Wilson welcomed the Anglo-American and Canadian-American Trade Agreements. In spite of scepticism felt by individual interests there was no doubt in his view that they would bring about an important expansion in the trade of both Canada and the United States, Mr S. G. Dobson, the general manager, discussed questions of more purely banking interests. He rebutted the criticism that the banks invested too large a portion of their funds in Government bonds and too little in assisting business enterprises. The bank's securities

yielded a return of only 2 per cent., and this by itself was proof that the banks would prefer, if possible, to increase their commercial loans, which were more remunerative. The real difficulty was that the bank could not compel unwilling borrowers to use its surplus funds, nor could a prudent banker take unwarranted risks. Mr Dobson also emphasised that the total volume of available credit was determined not by the chartered banks, but by the Bank of Canada. These remarks made it clear that Canada is experiencing the same banking conditions as have existed in Great Britain during recent years, but apparently Mr Dobson felt the need of bringing this home to the Canadian public. If so, he should certainly have succeeded in his object.

MONEY MARKET NOTES

Foreign Exchanges

MOST of the activity in the foreign exchange market has centred on belgas and guilders. Belgas have remained under the shadow of the prolonged Ministerial crisis, the spot rate, after slumping to gold export point in relation to the dollar, has remained at this level during the greater part of the week, and has only been prevented from depreciating beyond it by some intervention on the part of the Belgian control. The forward belga has depreciated under the influence of speculative attacks, and at one time on Tuesday the three months' quotation was at 70 centimes discount. Some bear covering and purchases of forward belgas by Belgian banks, attracted by the generous yield on the swap, have caused the three months' discount to narrow to 40 centimes. The guilder has moved within fairly wide limits, and after depreciating to 8.85 at the beginning of the week has recovered to 8.82½. The Dutch control appears to be leaving the rate very much to its own devices. The dollar, after moving against sterling to 4.69½ at the beginning of the week, has been rallying, and on Thursday was hovering around 4.68½. The movement of capital out of belgas and guilders was instrumental in helping sterling against dollars during the first part of the week, as part of the conversion of the Continental currencies into sterling was effected indirectly through the dollar. The recovery of the rupee has made further headway, and during the week the Reserve Bank was again able to purchase sterling by tender, the figure being raised from 1s. 5½d. to 1s. 5¾d. Last week's tenders were the first at which the Reserve Bank had been able to obtain sterling since last April, when the collapse from the pegged rate of 1s. 6½d. may be said to have begun.

The Bank Return

THE changes in the Bank return due to the passage of the Currency and Bank Notes Act, 1939, are dealt with in a Finance Note on page 452. As these changes leave the total of notes outstanding unchanged (apart from a reduction of £118, as against the total of £526,414,475), they have no direct effect on the figures in the Banking department. The latter, however, show some important movements, notably a

reduction of £11,179,000 in discounts and advances, of which about £10,000,000 is accounted for by the repayment of the Bank's Czech credits. In order to neutralise this movement and an increase (wholly seasonal) of £5,713,000 in the active note circulation Government securities have been increased by no less than £20,105,000. Part of the increase in Government securities must also be attributed to

Ways and Means borrowing in connection with the March dividend payments. The various changes, together with a movement of funds from public deposits—amounting to £4,704,000—accounts for the rise of £7,226,000 in bankers' deposits. The transfer from public to bankers' accounts is due to the payments of dividend monies on March 1, the day on which the return was made up.

The Money Market

SUPPLIES of credit remain abundant. The tendency towards greater scarcity of bond money apparent last week has completely disappeared, and such accommodation has been readily available from outside lenders at ¾ to ¾ per cent. Bill money is in superabundant supply, the dearth of bills and the generous volume of bank cash combining to create conditions of plethora in this market. At last Friday's Treasury bill tender the syndicate reduced its price from £99 17s. 6d. to £99 17s. 5d. owing to the change in the scale, the new bills being of 92 days' currency. Thus the average rate of discount worked out at 10s. 1.33d., as compared with 10s. 0.64d. per cent. the previous week. The syndicate obtained 30 per cent. of its application, as against 15 per cent. the previous week, mainly as the result of the increase in the amount of bills offered and allotted from £20 millions to £30 millions. The most important part of the Treasury bill announcement made

last Friday was the news that the bills to be issued this week would be raised to £40 millions. This compares with

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

next week's maturities of £35 millions. The market is expected to take the opportunity of the larger amounts of bills offered to increase its percentage allotments rather than to work up the average rate of discount. This is almost certain to be the case as the tenders held this month, since they will be for the popular June maturities. The banks have continued their quest for bills, and during the latter part of this week report a slightly greater readiness to sell by the market. There is again evidence of a shortage of remitted bills, and some of the Far Eastern banks which normally sell appreciable quantities of bills for forward delivery are finding some difficulty in complying with their contracts. Where they cannot do so from bills remitted to them, they are forced to obtain bills in the open market—of course, making a loss on the transaction.

The Bullion Market

THE gold market continues moderately active. As reselling from maturing for-

* Above or below American shipping parity. This week's calculations are based on a temporary parity, in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.

The New York price of silver remained at 48 cents per ounce .999 fine during the week.

ward contracts is rapidly dwindling, the Exchange Account has had to

supply the arbitrage demand, which, however, has been rationed day by day (see above Note). Towards the end of the week arbitrageurs were being outbid at the fixing by hoarders of gold, whose interest in the market is reviving. This renewed hoarding demand is in part connected with recent currency weakness in Belgium and Holland, and on Wednesday it caused the premium over the dollar shipping parity included in the sterling price of gold to

rise to 1½d. The continuation of arbitrage business with New York is evident in the fact that during the seven days to noon on Thursday of this week £5,911,000 of gold left this country for this destination. Part of these shipments may, however, represent the export of Belgian gold arranged by official quarters and representing the counterpart of official supporting operations for the belga.

The spot position in silver has been

made somewhat easier by selling for near delivery on American account. The cash price thus declined to 20½d. on Monday, and the margin between cash and forward narrowed to ½d. Subsequently there was a recovery to 20½d. in the cash price, while the discount on forward has widened again to ½d. The market remains extremely quiet. There has been a little demand from Indian bazaars which has been wholly concentrated on the forward market.

INSURANCE NOTES

The National Mutual Life Assurance Society.—This Society is one of the very few offices which adopts the "bonus reserve" method of valuing liabilities; it is unique in taking its Stock Exchange securities at market prices. The published results as at December 31 last are of special interest, as they marked the close of another valuation biennium. Formerly, it was the practice of the Society to retain all unallocated surplus in the life assurance fund, but in recent years part of this surplus has been transferred from the life assurance fund to specific reserve funds. In the following table for the sake of clarity these special reserves have been incorporated in the carry-forward. The basis used in valuing liabilities at the close of 1936 was very stringent; on this occasion the rate of interest assumed for assurances has been increased from 3½ per cent. to 3¾ per cent. and for annuities from 3 per cent. to 3½ per cent. The new basis is still strong and more stringent than that employed in 1934 or earlier valuations. The amount of the reduction in the actuarial reserves brought out by the change in the basis is not given, but is stated to be within the sum transferred in the 1938 revenue account to reserve fund (£345,266). As the cost of the bonus is "well within the trading profits earned in the valuation period" the reduction is taken at the arbitrary figure of £300,000 in the following table:—

	1935-36	1937-38
Trading profits	321,470	330,643(say)
Investment profit	513,646	—886,500
Brought forward	1,028,947	1,222,600
	1,864,063	666,743
Bonuses to policyholders	330,334	286,659
Staff profit-sharing scheme	3,500	2,500
Strengthening valuation basis	293,900	—300,000(say)
Staff pension reserve	13,729	—
Carry-forward	1,222,600	677,584
	1,864,063	666,743

The same normal rates of bonus as have been distributed in each of the preceding six years have again been declared: 42s. 6d. per cent. per annum for whole life full profit policies, 37s. 6d. per cent. per annum for endowment assurance with full profit policies and 15s. per cent. per annum for low premium participating policies; these rates are calculated on the sum assured and existing bonuses. In view of the present obscure financial outlook it has been decided not to repeat the additional "prosperity" bonuses given on the last two occasions. The total rates in 1934 and 1936 were, we believe, on a scale unequalled by any other office, and the normal rates now declared must be regarded as very satisfactory. New life

assurances in 1938 reached a new high level for the Society of £1,082,000, compared with £1,038,000 in 1937. The net rate of interest on the insurance funds at £4 3s. 6d. per cent. was 1s. 5d. per cent. in excess of the corresponding rate in 1937. The depreciation in securities in 1938 of £245,266 is equal to 3.2 per cent. of the mean assets of the year. Last year we drew attention to the apparent change in investment policy, and this trend continued in 1938. Loans increased from £875,000 to £1,048,000, but British Government securities, after an increase in 1937 from £1,019,000 to £1,088,000, fell sharply to £766,000. Foreign government securities appear at the insignificant total of £13,000, compared with £77,000 a year ago. Debenture stocks showed an increase of £20,000 to £1,808,000, but preference stocks further declined from £1,473,000 to £1,136,000. Ordinary stocks now stand at £1,066,000, representing 14.1 per cent. of the assets at the close of the year, compared with 14.3 per cent. and 20.0 per cent. in the previous two years. The position of the Society, even after the heavy depreciation of the last two years, which has no doubt been shared by the majority of offices, remains strong; it will be seen that there are free reserves aggregating £678,000, which is equivalent to rather more than 10 per cent. of the actuarial reserves including the cost of the bonuses now declared.

The Scottish Widows' Fund.—The 1938 report is of special interest as giving the results of the quinquennial valuation of liabilities as at December 31st last. Five years ago the O^m and O^m(5) tables were used for assurances, but on this occasion a change has been made to the A¹⁹²⁴⁻²⁹ table using "select" net premiums. For annuities the a^(m) and a^(f) tables have again been employed. Interest has been taken at 2½ per cent., except that for both existing bonuses and in arriving at the cost of the bonuses now declared 2½ per cent. has been used. It is stated somewhat cryptically that the total reserves "are not less than those which would have been held had no change been made in the basis of valuation." In the table which follows it has been assumed that the two bases bring out identical reserves. £500,000 has been set aside out of realised profits on investments as a general reserve fund. Apart from this reserve aggregate book values are stated to be considerably smaller than lowest market prices less accrued interest on December 31st last. The same high rate of bonus as on

each of the two preceding quinquenniums is declared, namely 42s. per cent. per annum calculated on the sum assured and existing bonuses; on this occasion, however, interim bonus is fixed, subject to review from time to time, at 38s. per cent. calculated on the sum assured and bonuses. Bonus declarations of this famous Society are always awaited with special interest and the reduction in the interim rate of

	1929-33	1934-38
Trading surplus	3,791,388	4,067,497
Capital profits	—	500,000
Brought forward	81,247	162,936
	3,872,635	4,730,433
Allocations:—		
To bonuses to policyholders	3,709,699	4,063,479
" general reserve	—	500,000
" carried forward to next valuation	162,936	166,954
	3,872,635	4,730,433

bonus is generally regarded as a pointer in the direction of some reduction in future bonus rates from the high level of the past fifteen years. New sums assured were £5,241,000 against the previous record of £5,048,000 attained in 1937. The net rate of interest on the assurance and annuity funds fell by 3s. 4d. per cent. to £4 1s. 6d. per cent. Total assets increased from £34,894,000 to £35,808,000. Loans showed further large expansion from £4,981,000 to £5,576,000, but British Government securities decreased by £97,000 to £7,292,000. Colonial and foreign government securities also declined from £2,279,000 to £1,951,000. Debentures increased by £179,000 to £7,628,000, while preference and ordinary shares increased by £359,000 and £97,000 to £5,947,000 and £4,476,000 respectively.

Pearl Assurance Company.—In the ordinary branch new sums assured fell from £8,664,000 to £8,231,000 and total premiums from £5,301,000 to £5,257,000. Death claims declined by £44,000 to £775,000 and the net rate of interest was 3s. 11d. per cent. smaller at £4 1s. 9d. per cent. The expense ratio in this branch fell further from the very moderate figure of 11.1 per cent. of the premium income to 10.9 per cent. In the industrial branch new sums assured amounted to £20,491,000, compared with £21,059,000 in 1937, but, more important, premiums increased from £8,779,000 to £9,116,000; the net rate of interest fell by 3s. 5d. per cent. to £4 7s. 7d. per cent. A year ago we mentioned that the expense ratio, which had been falling steadily for years, had reached a new low level at 29.4 per cent.

(Continued at foot of next page)

Investment

Markets Make Progress.—The investor, surveying the market's progress during February and its success this week in breaking through the post-Munich "high," may be pardoned for feeling that real recovery is not far round the corner. A month of comparative freedom from political alarms has succeeded Herr Hitler's unostentatious speech at the end of January. There are signs, small but possibly significant, that the tempo of business is

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935 = 100)

British: *Financial News* Index of 30 Ordinary Shares.
American: *Standard Statistics* Index of 50 Common Stocks.

improving. But, above all, the market has welcomed the Government's decision to borrow £350 millions for defence in the coming year—with its consequent implication that no significant changes either in direct or indirect taxation are in prospect this year. In terms of prices, the market in equity stocks has made the most of this news. The technical position favoured a smart recovery, and it has occurred.

But, so far, the volume and character of business does not suggest that the recovery has attracted a wide public following. Good support has been forthcoming from semi-professional investors in close touch with London brokers. But the attention of the smaller provincial investor—whose business, in sum, can take the London market from prosperity into boom—has yet to be secured. Few brokers, of course, would describe to-day's condition as prosperous, though it is satisfactory compared with the past few months. The volume of inquiry has increased, and yield differentials are once again under examination, but there is, as yet, no widespread disposition to discount the expansionary implications of defence borrowing, nor to anticipate a striking economic improvement in the near future. Again, the fact that stock has usually been in short supply has tended to give greater emphasis to the rise in prices. All these reservations call for the consideration of the investor, and no one would pretend that the markets have recovered full health. But they are at least making a satisfactory convalescence. London, in fact, has established a lead over Wall Street, which still remains dubious about the prospects of industrial recovery this year and seems uneasy when leaders in the Administration, having expressed themselves vigorously on world affairs, turn to woo "Big Business" at home.

Sharepushing Bill in the Lords.—Even the protagonists of the Prevention of Fraud (Investments) Bill would not pretend that it is a masterpiece of lucid drafting, and as it emerged from its third reading in the House of Commons anomalies remained in plenty. Lord Wardington, in the debate on the second reading in the House of Lords this week, performed a valuable service by exposing the wide powers of administrative rule which would be given under Clause 14 (3) in its present form. These would enable the Board of Trade, in effect, to "write in" new

are those effected prior to January 1, 1932. These various rates repeat the declarations of 1937. Total premium income in the other branches was slightly smaller, and the results are summarised below:—

Department	Premium Income	Underwriting Profit
Fire	1,062,869	40,820
Employers' liability	32,948	6,270
Accident	85,643	30,090
General	243,076	7,293
Motor	237,360	25,071
	1,661,896	22,238

Total assets increased from £102,486,000 to £107,141,000. Total loans increased from £6,272,000 to £6,393,000, a fall of £292,000 in policy loans being more than offset by an increase in loans on public rates. British Government securities are nearly £500,000 smaller at £33,637,000 and British municipal securities increased from £5,701,000 to £5,847,000. Foreign and Colonial government securities were some 10 per cent. higher at £13,803,000. Debenture, preference and ordinary stocks all showed considerable expansion, aggregating £3,130,000 to £36,650,000. The increase in the last few years in ordinary stock holdings is noteworthy. These holdings amounted to 5.7 per cent. of assets totalling £85 millions at the end of 1934 and the corresponding figures for the succeeding years are 7.7 per cent., 9.8 per cent., 12.2 per cent. and 12.6 per cent., respectively. Common

contingency fund is increased by £100,000 to £400,000 and the investment reserve funds amount, as in 1937, to £6,250,000, apart from the allocation of £100,000 shown above from the industrial branch out of last year's surplus. The rate of dividend is 5½ per cent. free of tax, together with a bonus of 2½ per cent. free of tax (same).

The Scottish Temperance and General Assurance Company, Ltd.

—New sums assured last year amounted to £1,575,000 against £1,604,000, but annuity consideration moneys rose from an insignificant £5,000 to £102,000. Death claims were slightly reduced at £244,000, while cash surrenders of policies and bonuses in the first year of the new valuation quinquennium amounted to £99,000, compared with £44,000 in 1937. The net rate of interest fell from £4 1s. 5d. per cent. to £3 19s. 6d. per cent. and total assets increased from £8,544,000 to £8,825,000. Loans fell by £17,000 to £1,955,000, British Government securities increased from £592,000 to £611,000 and Indian, Colonial and foreign government securities amount to £397,000 against £376,000. Debenture, preference and ordinary stocks increased from £1,723,000, £1,658,000 and £687,000 to £1,759,000, £1,761,000 and £725,000, respectively.

(Continued from page 455)

of the premium income; last year there was a further substantial reduction to 28.3 per cent. The results brought out in the usual annual valuation of the two life branches are given below, together with the corresponding figures for 1937. The bases of valuation were substantially the same in each year.

	1937	1938
Ordinary Branch		
Surplus earned during year ...	£1,171,009	£1,191,195
Brought forward from previous year	253,130	280,292
	1,424,139	1,471,487
To policyholders' bonus	885,406	914,254
shareholders' account	215,000	218,250
staff pension fund	43,441	43,991
carry-forward to next year	280,292	294,992
	1,424,139	1,471,487
Industrial Branch		
Surplus earned during year ...	£1,610,387	£1,759,195
Brought forward from previous year	661,349	690,221
	2,271,736	2,449,416
To policyholders' bonus	785,640	812,212
shareholders' account	650,000	650,000
investment reserve fund	145,875	169,112
staff pension fund	690,221	718,092
carry-forward to next year	2,271,736	2,449,416

The rate of bonus declared in the ordinary branch is 2 per cent. of the sum assured; in the industrial branch the rates are 16s. and 12s. for each weekly premium of 1s. in the whole life and endowment assurance classes, respectively, and the policies participating

provisions or strike out existing provisions in unit trust deeds and would thus impose new responsibilities on unit trust managers and trustees by the widest administrative prescription. Indeed, they raised the possibility that the entire basis of contract between managers and trustees might be upset. The startling wideness of this clause (which appears to have escaped the general notice of the unit trust movement for some time) is in contrast to the simple, if not naive, basis on which unit trusts were originally excluded from the scope of the Bill. As first drafted, it provided merely for exemption of "approved" trustees and managers, taking as the basis of approval the standards suggested by the Anderson Committee, which carefully avoided any suggestion that trustees were responsible in any way for the investment policies pursued by the managers. But if this form of exemption was too loose, it is certain that control under the revised version might have become an impossible millstone on the necks of unit trust managers and trustees. In reply, the Lord Chancellor (who confessed that the clause must "give a pain to any good lawyer") promised an amendment. Whether this will have any bearing on the debated question of the trustee's responsibilities *vis-à-vis* the unit holder remains to be seen.

Foreign Bonds Recover.—After a series of falls lasting six months, foreign bond prices in February showed a welcome recovery. The index of 106 bond prices computed by Municipal and General Securities (January-June, 1934=100) rose from the revised figure of 58.3 for January to 60.1. European issues, which had been most severely depressed in the previous month, made an excellent recovery of 6 points to 75.1. Details of the index in recent months are given below:—

AVERAGE JANUARY-JUNE, 1934=100

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Under-allocated Bonds	De-allocated Bonds	
				States	Provinces	Total

N.B.—Figures in brackets denote number of bonds included.
† Revised figures, to allow for repayment of Belgian 3 per cent. Sterling Loan, 1914.

In general, February's revival must be attributed to improved market sentiment rather than special causes. The European index, however, was assisted by the increased offer on the Roumanian Monopolies Institute 7 per cent. sterling bonds. Japanese bonds rose substantially, but Chinese only slightly. A further deterioration occurred in Egyptian bonds. This week the Council of Foreign Bondholders have re-emphasised their inability to recommend for acceptance the Greek Government's present offer of 40 per cent., but they state that bondholders should feel free to encash their coupons at this rate if they so desire. An appreciable number of bondholders have already adopted this course, with the result that their bonds are bad delivery, and dealers have recently petitioned the Stock Exchange Committee for the restoration of bonds with partly-paid coupons to the lists. Hence the Council's statement may have the consequence that the Committee may reach a decision to re-open dealings in such bonds.

Idle Capital Market.—New issue activity was again subnormal in February; only four public offers were made. Particulars of new capital raised in recent months, on our "old" and "new" basis, follow in the next column.

(000's omitted) excluding conversions

The bulk of the new financing was in fixed interest securities. The John Summers debenture issue involved £2,000,000 nominal, and the Essex issue, later in the month, £1,000,000. The "new basis" total of £9,765,000 (covering Stock Exchange introductions and issues accorded permission to deal) includes £3,530,000 in respect of the Ashanti Goldfields bonus.

Gallaher Progress.—The profits of Gallaher, Ltd., seem to be immune from the effects of the trade cycle, for they have shown a continuous rise since the company became public in 1928. The rate of progress has naturally varied, and the company's scale has been expanded by successive ordinary share issues for cash. But these points do not detract from the company's satisfactory record of expansion which for the past three years is shown below:—

	YEARS ENDED DECEMBER 31ST		
	1936	1937	1938
Profit	£567,282	£659,089	£738,580
Taxation	130,000	185,000	230,000
Expenses and fees	38,171	43,230	47,469
Preference dividend	49,562	48,750	47,125
Ordinary Shares—			
Earned	349,549	382,109	413,986
Paid	223,930	266,805	283,702
Earned %	39.0	39.4	40.1
Paid %	25	27½	27½
Contingencies	50,000	50,000	30,000
Reserve account	75,000	55,387	92,867
Carry forward	171,219	181,136	188,552

Profits last year showed a further rise from £659,089 to the record level of £738,580. Increased taxation, however, absorbs over half the 12 per cent. rise in total profits, and since the ordinary capital was increased by £29,360 £1 shares a year ago, the rate earned for ordinary shares is only slightly higher at 40.1 per cent. The contingencies reserve (which is not shown separately in the balance sheet) receives a lower allocation, but an increased provision for reserve (together with £132,133 from share premiums) raises the fund to £675,000. Stock, at £2,492,556 against £2,052,817, accounts for over half the balance sheet total, and are the main asset item to show expansion following the 1938 share issue, though premises are roughly £25,000 higher at £486,087, and a new holding of £94,688 Government securities now appears. This, however, is partly offset on the liabilities side by a rise in the bank overdraft from £16,786 to £82,388. The undertaking has not reached maturity, to judge from the offer to ordinary shareholders of new ordinary shares in the ratio of one for

five. The price of 30s., however, is in significant contrast with the 40s. obtained for the 1938 issue. With rights worth about 18s. 4d., the ordinary shares yield £4 10s. 6d. at a current price of 7½, and represent a satisfactory holding.

* * *

London Brick Profits Maintained.—For the past four years London Brick has produced profits and achieved outputs which have wholly confounded the pessimists. Diligent search would be needed to find another equity which has stood so long in the 8 per cent. yield category, with so little apparent justification from reported profits and dividends. Another output record was attained last year, despite reduced building operations in the closing months, and trading profits are in consequence slightly higher at £566,575. Including investment income, total profits show a negligible decline last year from £589,654 to £587,130. Depreciation is maintained at £150,000, and ordinary earnings are only slightly reduced at £402,000. The following table and chart illustrate the remarkable steadiness of profits in recent years:—

	YEARS ENDED DECEMBER 31		
	1936	1937	1938
Total profit after tax	£591,569	£589,654	£587,130
Depreciation	150,000	150,000	150,000

LONDON BRICK PROFITS, 1928-38

The company's predominant position in the industry, and its success in extending its effective selling area into markets previously regarded as the preserve of smaller local companies, have clearly offset the direct effects of a general fall in building activity. The balance sheet makes satisfactory if unexciting reading. Net additions to plant during 1938 amounted to £83,065, and a rise in cash and Government securities from £201,733 to £463,212 is partly

accounted for by a drop of about £110,000 in other investments. The £1 stock units at a current price of 51s. 9d. yield £7 14s. 9d. per cent. At a time when investors are beginning to consider the disparities between equity and fixed-interest yields, this return is apparently attractive. But will the company continue to be successful in future in obtaining a larger slice from a still smaller cake?

* * *

Metropolitan Electric.—Metropolitan Electric profits arise from the London Area, which is subject to the London Electricity Act of 1925, and the Western Area, which is relatively unrestricted. The company also owns subsidiary companies, which provide its most important source of revenue. The results of the company for the past three years are given below:—

	LONDON AREA		
	Years to December 31		
	1936	1937	1938
Gross revenue	553,867	577,709	562,880

* Calculated on distributable earnings.

In the London area, the company substantially reduced prices last year, for revenue from sale of current is down by £15,100, but the cost of current increased by £10,807. On balance, the net revenue available for the ordinary capital shows a decline of £42,752 to £53,979, which is actually less than the statutory dividend of £68,143; but the reduction in prices entitles the company to distribute a sum of £23,906—as against £19,106 in 1937—in excess of the standard dividend, which has been transferred to the No. 2 reserve fund, at the expense of the carry-forward. As a result, the balance carried forward at the end of 1938 is now just below the maximum of £71,518 fixed under the 1925 Act. The Western Area shows a very satisfactory increase in gross revenue of £144,956. Costs, however, have risen more than proportionately, and net revenue, before depreciation, is only £12,294 higher at £298,143. The charge for depreciation is reduced by £16,077 (which still leaves it in excess of the amount calculated on our standard basis), and on balance there is an increase in distributable profits for the Western undertaking of £23,304. Income from investments, at £239,988, represents a return of over 10 per cent. gross on the book value of subsidiaries, which amounts to £3,132,650, although certain other interests amount to about £350,000. Taking the combined results, the 12 per cent. dividend, and the transfer of £23,906 to the No. 2 reserve fund, reduces the amount carried forward by £30,374. At 50s. 6d. the shares yield 4½ per cent. In view of the small margin of earnings in recent years, the limited earnings scope of the London

undertaking and the purchase rights of local authorities in respect of an important part of the Western Area undertaking, this is probably not unduly generous.

* * *

Midland Counties Electric.—The sharp increase in net earnings from £374,183 to £413,690 last year almost equalled that of 1937, and the advance in ordinary earnings was even more marked, for percentage earnings rose to 11.7 per cent. against 9.8 per cent. in 1937. Actual earnings might well be higher than this, in view of the generous provision made for depreciation by the operating companies. The company's subsidiary undertakings include various traction properties, whose profits are not separately shown, but even allowing for the higher rate of depreciation necessary on these properties, the total depreciation provision still appears high. Profits have probably benefited to a fuller extent from the preference share issue in 1937. Profits for the past three years are analysed below:—

	1936	1937	1938
Trading profit of subsidiaries	£664,703	£767,352	£812,827
Depreciation reserves	306,955	377,116	383,200
Revenue paid to parent company	353,660	390,236	429,627

Parent company—			
	1936	1937	1938
Net earnings	337,480	374,183	413,690
Debt interest, etc.	34,197	41,793	40,744
Preference divs.	91,500	111,919	117,813

Ordinary stock—			
	1936	1937	1938
Earned	211,783	220,471	255,133
Paid	183,000	180,000	174,000
Earned (%)	9·2	9·8	11·7
Paid (%)	8	8	8

To reserve	25,000	37,125	80,964
Carried forward	11,647	14,993	15,162

Although the growth in trading profits during the past three years is impressive, stockholders would be interested to know what proportion of the company's total investments are now represented by traction properties and to what extent these have contributed to, or hindered, the growth of earnings in recent years. At present, the accounts provide a minimum of information regarding the sources of these satisfactory profits. The issue of £1,750,000 of 3½ per cent. debenture stock and redemption of the outstanding £1,000,000 4 per cent. debenture stock last year has markedly improved the liquid position; at the end of 1938, net current assets totalled approximately £609,000, which compares with a deficiency at the end of 1937 of around £85,000. At 37s. 6d. the ordinary shares offer the relatively low yield of £4 8s. per cent., but this is probably justified by the margin of surplus earnings.

* * *

Northampton Electric.—In 1938, Northampton Electric increased its sales to consumers by 10.3 per cent. and its revenue from the sale of current by 8 per cent. Bulk sales, on which the average price is lower, increased more rapidly than general consumption, and thus account for the slight fall in the average price received, although prices charged for general supply still appear to be relatively high. Gross revenue increased by only £6,427, for the gain due to general sales and bulk supply of £30,911 was largely offset by a reduction in sales to the C.E.B. In 1937, the company sold just over 55 million units to the Board, for £41,196 (equivalent to 0.32d. per unit). Last year, net sales amounted to only 13 million units and revenue to £15,391 (equivalent to 0.28d. per unit). This sharp reduction in exports to the Board is somewhat surprising, since the chairman stated last year that the increasing demands for export to the C.E.B. required the installation of another 30,000 k.w. unit, expected to be in operation in the autumn of 1940. It has, however, provided a reduction in generating costs of some £8,200, which, coupled with a small increase in gross revenue of £6,427, covers the increase in the depreciation charge of £15,814, but does not cover the higher tax provision. The 1937 figures given below,

however, are shown before charging £16,000 for special depreciation. The charge for 1938 exceeds the standard scale by some £20,000, equivalent to over 2 per cent. on the ordinary capital. Results for the past three years are shown below:—

	1936	1937	1938
Units sold (excluding sales to C.E.B.)			
in millions	75·6	85·5	94·3
Increase (%)	14½	13	10
Revenue	£358,807	£393,348	£424,259
Net profit, after tax	205,145	252,811	256,299
Depreciation	70,727	93,724	109,538
Debt interest, etc.	19,831	22,386	22,250
Preference divs.	2,625	2,625	2,625

Ordinary shares:—			
	1936	1937	1938
Earned	111,962	134,076	121,885
Paid	87,000	87,000	95,700
Earned (%)	13·7	17·2	15·2
Paid (%)	10	10	11

Additional depreciation	10,500	16,000	...
General reserve	15,000	20,000	20,000
Carried forward	18,445*	26,656†	32,843

* After crediting £3,953 income tax. † After £2,865 for other provisions.

Capital expenditure during the year amounted to £123,310, which was more than covered by the depreciation and reserve provisions. At 46s. 6d. xd. the shares yield 4½ per cent. on the basis of a dividend of 10 per cent., increased last year by a special jubilee bonus of 1 per cent. But the company is approaching the time when an important part of its undertaking is liable to purchase by the local authority, on the basis of capital expenditure. Even if this right of purchase is not exercised, the company's scope for maintaining profits on their present scale may be affected.

The Week's Company Profits.—The profits of the fifty companies reporting this week (excluding five for which comparable figures are not available) show a welcome measure of stability, for they total £6,397,000, only 1 per cent. less than the sum of £6,473,000 earned by the same companies a year earlier. Profits of the 364 companies reporting in 1939 to date show a decline of 5½ per cent. at £47,981,000, compared with £50,797,000. The week's results are discussed in preceding Notes on page 463 under the heading "Shorter Comments." The usual analysis table appears on page 486.

* * *

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 469. Lord Stamp's remarks upon the improved operating efficiency of the *London, Midland and Scottish Railway* are referred to in an article on page 446. At the *Clerical, Medical and General Life Assurance* meeting, Sir Francis Smith discussed the society's policy of short-dated investment, which involved some sacrifice of yield but gave increased stability of capital values. Last year the depreciation on the Stock Exchange securities was only 2½ per cent. of book values. The Duke of Atholl, addressing the *Scottish Life Assurance* meeting, expressed satisfaction that for the fourth successive year new policies had been issued for over £2,000,000 of sums assured. At the *Manchester Ship Canal* meeting, Sir Frederick J. West referred to the reduction in annual interest charges. In 1938 bonds of £287,670

had been repaid without recourse to further borrowing. Lord Bocket reported to shareholders of *Peter Walker (Warrington) and Robert Cain* that the bottling factory extensions had been completed, and the company could now cope with the increasing sales in that branch. Mr A. W. Robertson Durham explained to *British Assets Trust* shareholders that the rise in the proportion of securities held in the United States, and the reduction in the case of British securities, were due to changes in value and not to further investment in America. At an extraordinary meeting of *Tarran Industries* to sanction the increase in capital and the new note issue, Mr Robert G. Tarran said that in the past year the company had refused contracts because of the shortage of working capital. The interests of *Anglo-French Exploration* were surveyed at the annual meeting by Mr F. A. Robinson, who expressed satisfaction with the company's ability to pay 10 per cent. for the sixth year in succession. Mr Robert Annan informed *Konongo Gold Mines* shareholders that the rate of treatment had been raised to 10,000 tons a month, which, given a normal grade, should raise output to over 4,200 ozs. a month, against 3,800 ozs. for January, at small additional cost. At the *San Francisco Mines of Mexico* meeting, the Earl of Denbigh discussed the effect of the heavy fall in metal prices, and described the results of the year's active development work. At the *National Mutual Life Assurance* meeting, the Hon. Francis N. Curzon pointed out that their net earned rate of interest of £3 18s. 1d. per cent. showed some increase in spite of the higher income tax.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
MARCH 7 MARCH 9

THE moderate profit-taking which the market was called upon to absorb on Thursday was the natural sequel to a week of useful price improvements. Until the turn of the week, interest tended to broaden, particularly in the equity markets, and home rail stocks again showed substantial improvement. The actual volume of trade is, perhaps, less impressive than the improvement in prices, but the market's ability to consolidate its steady recovery is not the least satisfactory feature of the week.

The gilt-edged market has not experienced any significant increase in business this week, but for the first three days, at least, prices made a cheerful showing, in which undated stocks scored the most impressive advances. In mid-week, however, emphasis tended to change towards the

redeemable issues, while War Loan and Old Consols closed unaltered. Losses of ½ were general on Thursday. In active dealings, the Essex scrip reached ¾ premium. Substantial rises were recorded in all New Zealand stocks.

In the foreign bond market, Japanese issues fell at first, but recovered later on the reduced tension in Shanghai. Brazilian issues again fluctuated on hopes of an offer to resume service. Spanish 4 per cent. bonds staged a sharp advance on the recognition of General Franco, but lost their gain. Continued selling of Egyptian stocks was reported.

Until the traffics were published, home rail stocks gave an impressive performance. The gains tended to be concentrated on the stocks which are at present just within the earnings margin, and the junior prior charges ranking above them. Even the rather disappointing traffics did not bring out any appreciable volume of selling and, after a temporary check, net rises in the prior charges were recorded on

Wednesday. Argentine rail stocks became steady after a poor opening.

Despite some irregularity in mid-week, the trend of industrial shares remained upward, and Thursday's moderate profit-taking was well absorbed. Iron and steel shares rose by small stages, and advanced satisfactorily on balance, though they provided no excitements. Staveley lost 1s. 9d. on the reduced interim dividend. Coal shares were firm, apart from a fall in Grassmoor on the lower profits, and a slight setback in Sheepbridge in mid-week. The engineering section followed the general trend, with Ransome and Marles among the favourites. Among electrical equipment issues, Johnson and Phillips were in especial favour. Motor shares continued in good demand. Leyland went ahead on news of the Government contract. Aircraft issues, on the other hand, were among the few sections of the market to lose ground, following the debate on profits limitation. Textiles generally, including rayon shares, were little changed. There was moderate support for brewery issues, and the tobacco leaders continued to make headway. Provision and catering issues tended to harden, and useful gains were recorded for the more important stores. Miscellaneous shares reflected the general tendency. London Brick strengthened on the report, and there was some enquiry for television issues.

Oil shares began the week brightly. Prices advanced, and there was evidence of increasing public support for the leaders. Profit-taking, however, brought a more hesitant tone in mid-week. Rubber shares continued their recent improvement. Moderate gains were general and fairly continuous, and more public interest was shown than for some while past.

The mining market was not indifferent to the improved sentiment in other sections, but movements were

relatively more sluggish, and at no time was business brisk. Kaffirs became more hesitant in mid-week, after good initial gains. Support was mostly local, though when Paris or the Cape entered the market it was usually to buy. West Africans were quieter than in the previous week, though prices remained satisfactory. Rhodesian copper issues were somewhat erratic but harder on balance. Base metal shares lacked interest, but were firmer for choice.

ACTUARIES' INVESTMENT INDEX

OVER the past month there has been a persistent tendency towards recovery, and the Actuaries' index of 160 industrial equity prices stood on Tuesday, February 28th, at 63.5, compared with 59.1 a month ago, but with 69.4 a year ago. The corresponding average yields are 5.70, 6.40 and 5.22 per cent. Gilt-edged securities, as shown by the 2½ per cent. Consols price index, also improved in February, but to a more moderate extent than equities, and unlike industrials had not recovered to the end-1938 level. Home corporations, on the other hand, weakened during February. A rise in the index for distributive preference stocks has been accompanied by a disproportionate fall in yield, owing to the reduced home rail distributions. We give below the usual monthly particulars of fixed interest securities, and also a selection of the separate equity price indices:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)

New York

THIS week on Wall Street was thoroughly lacking in interest. Prices were steady or a little firmer, but except on Tuesday, when rising quotations were accompanied by the best turnover since the end of January, the general mood of the market was dull, though in no sense weak. Monday was uninspiring, with prices closing below the best, but the net change in prices on Tuesday somewhat understated the actual improvement in sentiment, as profit-taking prevented any advance beyond the strong opening prices. Some of the midweek dullness was attributed to substantial investment selling from a single source, while the earlier cheerfulness was prompted in part by the Supreme Court's decision on "sit-down" strikes. Rails were perhaps the most satisfactory group, and they resisted even Wednesday's sagging tendency. Steel shares provided no features of interest. *Iron Age* estimates steel output for the current week at 55½ per cent. of capacity, against 54 per cent., but it is not considered any marked increase in new business is in progress.

Paris

MEASURED in terms of security prices, February was a relatively satisfactory month for the Bourse. Moderate gains were recorded early in the month, and although quotations failed to advance further, they remained steady. On the other hand, turnover shrank to a minimum, and the absence of public interest was all too plain. Political factors were again dominating and as sentiment alternated without providing any clear signs on balance, the market's attitude became increasingly reserved, though an improved tone became apparent in the closing days of the month.

Berlin

THE Berlin Bourse did not escape the dull conditions prevailing in other centres last month. Price changes on balance were irregular, but turnover remained consistently small, and the market lacked resilience. In the first week of the month, especially, realisations on Jewish account were a depressing factor on prices. Sales never reached a large scale, but there was a lack of buying support. A period of dull trading and reasonably steady prices then followed, until sentiment began to weaken again as the month closed, under the influence of the January trade returns and the increase in income tax.

The Theory of the Thing

Business and stock market forecasting depends primarily on a study of monetary factors. Money, and its "flow," governs spending and trade. To mention Supply-factors only (omitting the Demand-factors, which may also be important)—it was the 20% inflation of bank deposit money which caused the 1926-29 boom in America. It was a 28% deflation of bank money which caused the 1929 slump to reach the 1932 levels. It was a 40% reflation of bank deposits which caused the Roosevelt boom of 1936. And it was a 6% deflation of bank deposits which caused the 1937 slump. Finally, it is the recent 9% reflation of bank deposits, coupled with prospective further reflation, that has caused the recent revival.

Deflations of the Supply of Money

It is generally conceded that inflation and deflation of the total Supply of money influence prices, profits and employment. But changes in the Demand for money (either notes or bank deposits) can have a similar effect. A fluctuating demand for money is in fact an important cause of Trade fluctuation.

Deflations of Velocity—due to Fear

There are, however, two different sorts of Demand for money: (i) the Medium-of-exchange demand, which varies passively with the volume of trade without influencing it; and (ii) the Store-of-value demand, which fluctuates with confidence and fear, and actively influences Trade.

The point is that money, including bank money, is used or 'demanded' not only for the sake of doing business (i.e. to spend soon); but is also widely used or 'demanded' as an investment (i.e. to hold, and not spend soon). These differences in the time factor concerning the "holding" of money are subtle, but vitally important to Trade and The Stock Market. Bull markets can develop in money itself; and can bring about bear markets in securities and Trade.

For instance, whenever general nervousness creates a desire for Liquidity, the investment- or liquidity-demand for money (including idle bank deposits) rises rapidly. Such bank-money is then used as a store of value; it is spent with less rapidity than usual; its velocity of circulation through industry is checked; and the volume of actual spending (on commodities and services) is reduced. Thus, Trade, profits and employment suffer from this Deflation of Velocity, or, if you like, from the growing Store-of-value Demand for money—just as much as if the total Supply had itself been deflated. In both cases, the "flow" of money through industry (on to goods and services) is checked.

Pre-War Fallacies

Normally, this industrial disease (of a growing liquidity-demand for money) grows cumulatively during bad Trade, and makes matters worse. For, the greater the fear, the more the non-spending; and the more the non-spending, the greater grows fear.

Obviously no government can take away the liberty of an individual to hoard (i.e. not spend) his notes or bank deposits, if he so wishes; it is his own property—prerogative and often very sensible. But the fact is that if the majority of individuals act (maybe prudently) in this way, their collective action becomes socially harmful, and causes bad Trade. The government is then confronted with the problem of whether it should "mind its own business" and let Business decline naturally, or whether it should "interfere" and check the slump, by artificially adjusting the supply of money to the harmfully growing "natural" investment-demand.

In the post-War era, with all its scares, the Store-of-value or Liquidity-demand for money has fluctuated much more violently than in the pre-War era. And unless something "artificial" is done to counteract these "natural" psychological variations in the "total" demand for money, the cumulative fluctuations in business may be aggravated.

A Cumulative Industrial Disease

Every banker and business man agrees that Trade and prices (i.e. the value of money) are influenced by confidence, but many persons object to Money Management on the ground that 'money does not influence Trade.' They would not, however, hold these views if they understood that although in periods of declining Trade the Medium-of-exchange demand for money automatically declines, the Store-of-value demand normally increases (because of fear) even faster than the Medium-of-exchange demand declines—with the result that the "net" Demand for money as a whole positively grows (rather than decreases) during industrial depressions.

The classical economists failed to emphasize this important fact. They emphasized rather the view that money was merely a Medium-of-exchange (which had no influence on Trade itself), and that the total Demand for it fluctuated parallel with business, declining when Trade fell off, and rising when Trade expanded. And, from this entirely false premise, they often argued that in so far as bank deposits were used as money, it was by no means unhealthy for bank deposits to be automatically contracted (as a result of bank loans being called in or investments reduced) as Trade fell off, and expanded as Trade improved. In fact, they rather approved the idea.

Law of Supply and Demand Disobeyed

But this reasoning is incomplete. The more modern view is that since, and because, the aggregate demand for money increases during bad Trade (even though the Medium-of-exchange demand declines), the total Supply should be adjusted to the Demand, and scientifically increased during periods of depression and falling prices (rather than being automatically or "naturally" reduced). (And vice-versa during booms, so as to prevent wild price-inflation.)

Instead of this being done in practice, however, the reverse operation normally eventuates. Nature has inconsiderately arranged that, in the monetary sphere alone, the Law of Supply and Demand shall not be automatically and "naturally" obeyed, as it is in every other economic sphere, but rather should viciously work in the opposite direction—so that instead of a rise in the value or 'price' of money

BOOMS AND SLUMPS

The "Managed Money Digests" of Major L. L. B. Angas

A Unique Service on the American Market

Money Management—and Money Management alone—has been responsible for two recent abrupt changes in the major trend of the American Stock Market. A new super-power—the Government Money Managers—is astride that market, and their purposes and methods must be understood by investors wishing to operate with safety and profit.

Under Money Management, many of the older methods of cyclical forecasting are rendered partially obsolete. The well-tried Dow Theory, which pre-supposes wide cyclical swings, should become less reliable as a long-term market guide. Even the widely accepted principles of "cyclical" investment, promulgated in Major Angas's standard work "Investment for Appreciation," may require modification. For, insofar as money is properly managed, long-term Cyclical Fluctuations will be replaced by shorter (though perhaps sharp) Managed Money Cycles.

To assist investors in judging the medium-term and longer-term fluctuations in stocks and bonds under these new monetary conditions, Major L. L. B. Angas now writes a series of "Digests on the Outlook for Stocks and Bonds Under Managed Money."

In these Digests an attempt is made to aid investors in putting themselves in the place of the Money Managers so as to analyse:—(1) The ever changing economic conditions which are likely to induce early action on their part. (2) The probable action to be taken. (3) The likely results on the stock and bond markets.

The analyses, which vary in length from Spot messages to 30-page pamphlets, have attained a wide circulation in America. So incisive are their arguments, so often have they "called the turn," that they are now regarded as indispensable by many leading bankers and business executives.

No extravagant claims are made for these Digests, but to participate profitably yet cautiously in the American Market, their study is advised. They will also help investors to apply the investment principles which have been followed by Major Angas in his various market pamphlets, a complete list of which follows:

Forecasts of Falls			Subsequent
	Date	Decline	
Reparations, Trade, and Foreign Exchange (Forecasting the collapse in the German mark)	Feb. 1921	99%	
The Coming Collapse in Rubber	Jan. 1926	80%	
The Coming Collapse in Gold (Included alternative forecast of further boom if America re-valued).....	Nov. 1933	-----	
Slump Ahead in Bonds (U.S.A.)	Feb. 1937	10%	
Forecasts of Rises			Subsequent
	Date	Advance	
The Coming Rise in Gold Shares	Feb. 1931	150%	
The Coming (English) Boom	Sept. 1931	100%	
Stock Market Tactics (Forecasting the Bond Boom, etc., in England)	Jan. 1932	28%	
The Coming Rise in Wall Street	Apr. 1933	190%	
The Coming American Boom	July 1934	100%	
The (American) Boom Begins	Apr. 1935	65%	
The Coming Rescue-Inflation (and Scramble for Stocks)	Apr. 1938	45%	

(SEPT. 1937) FORECAST OF A PANIC—UNLESS

Part of a telegram sent to the Washington Money Managers on September 10, 1937 (five weeks before the panic of October 18). (Three further supporting messages were sent.)
"Monetary Management is now on test. Irresolute half measures are bound to fail. If you do not act at once you will have a panic and a new depression, which will rapidly gather unexpected cumulative downward momentum as a result of the public's experience and bitter lesson learned in 1929-30. Everyone will try to get out simultaneously."

SIGNIFICANT DIGESTS OF 1938

Date	Remarks
March 22	Published within 10 days of cyclical bottom.
July 24	Issued at the first intermediate "top."
September 23	Issued at subsequent bottom.
October 14	
December 14	A sharp rise followed.

Your opportunity to profit from the American Market should be greatly enhanced by a subscription to Major Angas's Digests. A minimum of 12 issues is published each year, as market conditions seem to warrant rather than on specific dates. (18 were issued in 1938.) Their cost is Five Pounds (or \$25) per annum. Six months: Three Pounds (or \$15).

Other Investment Services

Personal management of individual portfolios is also undertaken. In addition, Major Angas conducts a Telegraphic Service in which are made recommendations for purchase and sale of specific American stocks. The charge for this, exclusive of cable costs, is \$100 (or £20) per annum (six months: \$50 (£12)) which subscriptions include the Digest service.

L. L. B. Angas, Investment Consultant, 570 Lexington Ave., New York

(namely a fall in general prices) benignly evoking an additional supply of money (as it ought to), it actually evokes a malignant and cumulative reduction. This monetary anomaly operates as follows:

Another Cumulative Industrial Disease

When general Trade shows signs of falling off, and when commodity prices start to fall, the collateral behind bank loans tends to shrink in value and many private bankers feel bound to call in loans—for prudence's sake. Forced sales in consequence occur; general prices deteriorate further; and cumulative downfalls are therefore called in; prices, meanwhile the bank-money used by the public is itself deflated—instead of being inflated as it ought to be so as to meet the growing Store-of-value demand which invariably matures (through fear) during depressions. Supply is "naturally" deflated, when it ought to be inflated!

The Laws of Supply and Demand are thus not only not obeyed, but positively disobeyed, in the Monetary Sphere.

The economic disease matures because of a natural (and prudent) tendency among individual bankers. It is nobody's fault: it is just endemic, and unavoidable in the very Nature of our modern banking system.

Need for Monetary Management

The disease of a cumulative growing Liquidity-demand for money would be bad enough, even if it operated in isolation, but when it is reinforced and aggravated (as it is) by the additional disease of 'a cumulative contraction of the supply,' it is too much for the industrial system to stand.

And these two cumulative diseases operate, not only on the deflationary side, but also in the direction of cumulative inflation, whenever an upward trend in Trade has once been established, after depression.

In order to iron out the cyclical fluctuations in business and prices which result from these "natural" monetary forces and from prudent banking—a deliberate form of Money Management is now advocated so as 'artificially' to adjust total Supply to total Demand, in accordance with the Law of Supply and Demand.

This is the object of Managed Money.

N.B. England to-day is perhaps making the mistake of merely keeping the Supply stable, when the (liquidity) demand is growing rapidly, through fear.

Looked at as a whole, money management can be likened to the steering of an automobile along a bumpy country road with ditches on either side. If the car swings "naturally" too much towards the ditch of inflation on the right (or of deflation on the left) the chauffeur (or Managers) should 'artificially' swing the car the other way.

The job of the Managers is to "fiddle intelligently," or "monkey continuously" with the steering wheel (the People's money!), since by this method alone can a fairly straight course be followed (along the road to monetary stability and economic prosperity). Neither too much inflation, nor too much deflation!

This is what America now hopes to do. Her government no longer believes blindly in the "natural" safety of monetary cars without drivers.

Stock Market Prospects

Meanwhile, the American stock exchange will jump or fall, as the throttle or brakes are alternately applied. Investors must keep their eyes and ears on the brains and feet which control the money pedals. They are vital. (Hence these Digests)

See Chart on Digest 28.

Amsterdam

As in London, the Amsterdam Bourse showed a reasonably steady trend of prices in February, but it was accompanied by a poor turnover, which in one session was described as the lowest for years. International politics, Wall Street's behaviour and the course of the guilders were watched with interest, but on balance the month was featureless and dull. The market began quietly, became particularly weak on February 3rd, recovered, and then for the following three weeks displayed only minor fluctuations. A better tone, however, became apparent in the last few days, and there was a satisfactory general advance. Rubber and sugar shares were active.

Capital Issues

THE striking success of the Essex issue last week has been quickly followed by Barking, whose issue of £500,000 3½ per cent. stock 1954-59 was made on Friday. The amount is smaller than most trustee issues, and even after the Essex stock had reached ¾ premium, the terms of the Barking loan were regarded as no more than normally attractive. Issues of convertible notes are being made by Van Emden (Dutch Guiana) Gold Mines and Tarran Industries, the former at 7½ per cent. and redeemable at 110 in 1946 or convertible to three 5s. shares in £1 notes before that date, while the latter carry 5½ per cent. interest and may be converted up to March 31, 1941, at the rate of 1,000 2s. shares per £100 note, and thereafter on less favourable terms until final redemption in 1950. A statement for information only to be published by W. G. Allen and Sons (Tipton).

PUBLIC OFFERS

Barking Corporation.—Issue of £500,000 3½ per cent. redeemable stock at 97. A Trustee stock. Redeemable at par November, 1959, or from 1954 on notice. Latest estimated population, 80,000; rateable value, £722,334; rates, 14s. 2d.; debt, £2,780,656 (of which £1,598,427 reproductive).

Van Emden (Dutch Guiana) Gold Mines.—Issue at par of £200,000 7½ per cent. convertible secured notes. Secured by first floating charge. Convertible at holder's option before June, 1946, into three 5s. shares per £1 note. Redeemable July, 1946, at 110. Sinking fund of 25 per cent. of profits, plus 10 per cent. of notes, begins 1941. Incorporated 1912. Net assets, £252,756. Estimated annual profits (gold, 140s.) from July, 1940, £108,604 (after note interest, before sinking fund). Proved reserves, 1,500,000 tons; partly proved and prospective, 1,700,000 tons. Lists closed at 12.55 p.m., March 1st.

BY STOCK EXCHANGE INTRODUCTION

W. G. Allen and Sons (Tipton), Ltd.—Issued capital, 408,500 5s. ordinary shares. Manufacturers of products required for power plants. Profits, years to March 31st, after depreciation: 1937, £6,585; 1938, £11,394; half-year to September 30, 1938 (before depreciation), £12,308. Total assets, 1938, £213,768.

BONUS SHARES

William Stones, Ltd.—A capital bonus of 100 per cent. for ordinary shareholders is announced, by capitalising £150,000 general reserve.

ISSUES TO SHAREHOLDERS ONLY

James Booth and Company, Ltd.—It is proposed to offer to ordinary shareholders 250,000 £1 ordinary shares (ranking for dividend at end of 1939) at 30s., in the proportion of one for two held.

Gallagher, Ltd.—It is proposed to issue 284,592 £1 ordinary shares at 30s., to ordinary shareholders registered March 31st, in the proportion of one new share for five ordinary held.

Tarran Industries, Ltd.—Issue at par to shareholders of £175,000 5½ per cent. convertible registered redeemable notes. Proceeds to reduce indebtedness to bankers and for working capital. Redeemable at 102, 1940-50. Holders may convert at varying rates and dates.

CONVERSIONS AND REPAYMENTS

A. and S. Henry and Company.—This company proposes a return of capital of £260,000. The entire £100,000 preference stock will be repaid plus a bonus of 1s. per £1, absorbing £105,000 in all. Of the £1,600,000 ordinary stock, 2s. per £1 unit will be repaid, absorbing £160,000.

RESULTS OF ISSUES

Essex County 3½ per Cent. Stock.—Lists for the £1,000,000 stock at 97 were closed at 9.05 a.m. on February 23rd. The issue was subscribed twenty times. Applications for £500 or under were ruled out; £600-£1,900 received £100, and thereafter by scale to a maximum allotment of £1,000.

Metropolitan Water Board.—Tenders for £1,000,000 bills dated March 1, 1939, and payable September 1, 1939, were opened on February 23rd. Total applied for, £5,325,000; allotted, £1,000,000; tenders at £99 14s. 5d. receive an allotment of about 67 per cent. Average rate of accepted tenders, £0 11s. 0.90d. per cent. p.a.

UNIT TRUSTS

National Gold Shares Certificates.—Managers, National Fixed Investment Trust, Ltd. Cumulative trust, 10-year life. Initial portfolio, 18 gold-mining companies; 12 alternative investments. Service charge, 4½ per cent., plus ½ per cent. semi-annually. Administration fund will be created.

SHORTER COMMENTS

Company Results of the Week.—Recent brewery results appear to reflect some decline in general purchasing power. Thus TAYLOR WALKER net profits have fallen from £313,191 to £284,009, and CANNON BREWERY have reduced their dividend from 10 per cent. to 8 per cent. LAMPORT AND HOLT were severely affected by the poor cereal crop in South America last year and voyage profits for 1938 fell from £184,038 to £56,483. Depreciation provision is reduced from £100,000 to £40,000, and while the reduction in the dividend is only from 5 per cent. to 4 per cent., the share premium account balance of £13,860 has been transferred to revenue. London stores results make a varied showing. HARRODS' gross trading profit, excluding dividends and other receipts, is 7 per cent. lower at £2,353,923. D. H. EVANS, its subsidiary, however, shows better results, while the total profits of PETER ROBINSON have been satisfactorily maintained at £113,879. Total profits of A. W. GAMAGE were reduced by no more than 3 per cent. to £125,194, thanks to a satisfactory revival of business in December. A. AND S. HENRY AND COMPANY, the textile merchants, have experienced a sharp fall in net profits, from £70,409 to £11,992. Substantial liquid assets are held, for which useful employment in the business cannot (Continued on page 464)

Industry and Trade

Coal-mining Profits in 1938.—Despite a fall in production of about 12.9 million tons between 1937 and 1938, the trading results of the British coal-mining industry, as ascertained by joint audits for purposes of wage regulation, showed a slight increase in the aggregate credit balance. Data of costs and proceeds for some of the smaller districts are not yet available, but the results of the principal coalfields are shown below:—

CREDIT BALANCES OF PRINCIPAL DISTRICTS.		
	1937	1938
Scotland	£ 2,584,456	£ 2,388,897
Northumberland.....	662,201	829,273
Durham	813,876	1,330,012
South Wales	701,702	619,018
Yorkshire	2,844,614	2,507,371
Derby and Notts	2,592,298	2,229,299
Leicester, Cannock Chase, and Warwick	1,431,225	1,430,210
Lancashire, Cheshire and N. Staffs	1,443,631	1,697,940
Other districts.....	273,129	400,000*
	13,347,132	13,432,020

* Estimated.

After the first three months of the past year, market conditions rapidly deteriorated, but the districts were unequally affected by the decline in demand and prices; Wales suffered seriously from the French import restrictions and from the disappointing results of the Anglo-Italian Trade Agreement of March, 1938, during the second half of the year. The major cause of the increase in the credit balance was the increase in the pithead prices. By far the greater part of the coal was disposed of under contracts arranged under the active trade conditions of 1937. The declared average f.o.b. value of exported coals was 2s. 2d. per ton higher than in 1937 and the ascertained pithead proceeds 1s. 6d. per ton higher. Costs, however, partly because of higher wages and partly because of the increase in the incidence of standing charges owing to part-time working in most of the coalfields, increased from about 14s. 7½d. to 16s. 1d. per ton, and for this reason the average increase in the pithead proceeds per ton compared with 1937 was only about a penny.

Anglo-Polish Talks.—In order to facilitate the conclusion of an international coal export agreement, the British and Polish colliery owners are now endeavouring to adjust their differences along lines similar to those on which British and German coal owners reached an understanding on January 28th last, discussed on page 263 of *The Economist* of February 4th. The two main tasks which

confront them are the revision of the reciprocal undertakings of the Anglo-Polish Agreement of December 15, 1937, and the consideration of Poland's claim for an additional quota in respect of the surplus output of the Karwin collieries which were acquired by her under the Munich Agreement. Since 1934 exports from Poland to countries other than Czecho-Slovakia, Austria, Hungary and border deliveries to Germany have been nominally restricted to a percentage of Britain's exports to all destinations (Ireland excluded), and since December, 1937, to such a percentage or, alternatively, to an agreed percentage of the combined exports of Great Britain, Germany, Poland, Belgium and Holland. The co-operation between the two countries has unquestionably benefited them, but their methods of regulation have not appreciably modified the competition of German and other coals, and Poland has on many occasions acted unilaterally in defence of her own trade. The operation of the Anglo-Polish Agreement has also had to be varied from time to time to meet the exigencies of unforeseen political complications, as, for example, during the period when the sanctions of the League of Nations against Italy were in force. The effect of these departures from the terms of the Anglo-Polish Agreement has been that Polish exports have normally exceeded the prescribed percentage of British exports, and the parties have now to discover a formula which will meet their respective claims more equitably. Since the partition of Czecho-Slovakia, Germany has been aiming at the reservation, as far as possible, of the Sudeten territories for her own coal; she has also imposed limitations on the export of Ostrau-Karwin coal to Austria; and Polish authorities estimate that of the production of the Karwin mines now under Polish control at least from 4 to 4½ million tons will have to be marketed abroad. In December there were deliveries from these collieries to Italy, Holland, France and Sweden as well as to the neighbouring markets of Czecho-Slovakia, Hungary and Yugoslavia; and it is apparently the intention of Poland to dispose of an increasing proportion of Karwin coals in more distant markets. It is difficult to see how this particular problem can be solved except by agreement with all the countries coming within the scope of the contemplated international agreement. In view of the fact that the coal mined in the Ostrau-Karwin district is more suitable for coking and metallurgical purposes generally than for steam raising, the view is held in British coal circles that the claims of Poland should be met by a redistribution of Central and South European trade rather than by any reduction in British exports, which consist predominantly of steam and anthracite coals.

Fall in Value of Building Plans.—The value of building plans approved by 146 local authorities, which report to the Ministry of Labour, declined once again last year, this time by 12 per cent. compared with 1937. The decline was most marked (20 per cent.) in plans for factories and workshops, though of course the volume of such building is small compared with house building. The total figure of all plans passed was about the same as in 1934, that is well above all the years 1923-33. But since 1934 there have been important changes in geographical distribution. In 1934 Outer London accounted for 27 per cent. of plans passed and the North and West Midland area for 18½ per cent. In 1938 the rôles were reversed, 18 per cent. being reported from Outer London and 24½ per cent. from the North and West Midland area. In recent years the continuous decline in the number and value of dwelling houses, for which plans were passed, has led many observers to expect a serious diminution in the amount of actual building. In fact no such diminution has occurred. The numbers of dwelling houses, for which

VALUE OF BUILDING PLANS APPROVED BY 146 LOCAL AUTHORITIES IN GREAT BRITAIN

	Dwelling-houses (£'000)	Other (£'000)	Total (£'000)
1929	44,260	28,834	73,094
1930	46,764	27,841	74,605
1931	40,492	22,518	63,010
1932	46,888	19,366	66,254
1933	62,308	21,374	83,682
1934	69,586	25,977	95,563
1935	78,429	35,879	114,308
1936	75,062	41,970	117,032
1937	67,638	43,283	110,921
1938	60,004	37,596	97,600

plans were passed by reporting local authorities in England and Wales in 1937 and 1938, were respectively 16 and 23½ per cent. below the peak twelve-month period ended June, 1936. But the number of houses actually built in the year ended September last was only 1½ per cent. below the peak twelve-month period ended March, 1937. It has often been pointed out in *The Economist* that the 146 local authorities cover only about half the total building in Great Britain. The returns are, however, fairly representative of urban areas, though they exclude building within the County of London. Can the discrepancy between plans and activity be due to increased building in rural areas outside the jurisdiction of the reporting authorities? That is one possibility. There is another. It is generally believed that the interval of time between the date on which plans are passed and the date on which building is commenced averages nine months. It may, however, be the case that when the value of plans was increasing rapidly, the delay between approval and execution was getting longer, and that when the value of plans began to decline they were being executed more rapidly. Whatever may be the explanation, the statistics of building plans have proved most misleading and must be treated with great caution.

British Shipping.—The annual reports of the Chamber of Shipping of the United Kingdom and of the Liverpool Steamship Owners' Association, published this week, once more draw attention to the plight of the industry and to the proposals for assistance discussed on page 127 of *The Economist* of January 21st. According to the Chamber of Shipping report, tramp freight rates in 1938 were back at a level at which over one-half of the subsidy would have been payable had the British Shipping (Assistance) Acts remained in operation. Cargo liners have fared rather better owing to increases of 10-20 per cent. in Conference rates in the latter part of 1937. Despite the operation of the International Tanker Pool, tanker freight rates declined to a level which, for a representative vessel, failed to cover increased running expenses and full depreciation. Coasting tramp rates were as low as from 1932 to 1935 during the greater part of the year. Costs, moreover, had shown a marked rise in recent years. During the

past two years the cost of coal rose by 25-30 per cent. (for certain vessels by as much as 40 per cent.), and that of fuel oil and diesel oil by 35 per cent. and 20 per cent. respectively. Stores are 10 per cent. dearer than two years ago, insurance costs 30 per cent. and repairs 30-50 per cent. more, according to the type of vessel, while wages are 20 per cent. higher. The great increase in the cost of shipbuilding, moreover, was hampering all classes of British shipping. Most sections of the industry, therefore, have had great difficulties in making ends meet. The Liverpool Steamship Owners' Association's report covers similar ground. But its Policy Committee rightly pointed out (a) that no proposals could be of any permanent usefulness and effect which did not have as their primary object the restoration and maintenance of world trade, (b) that proposals for temporary Government action pending the restoration of trade must not be such as to prevent or impair the chances of trade expansion and that they must maintain justice of treatment as between the different elements of a competitive industry. An announcement of the Government's policy is now awaited with interest.

Fall in Cocoa Prices.—Nearly six months have passed since the Cocoa Inquiry Commission published its report and three months since the Gold Coast Government appointed a Committee to report on the Commission's proposals for co-operative marketing by the African growers. So far, however, no steps have been taken to support the cocoa market and the London price of Accra has fallen from 25s. per cwt. at the beginning of the season in October to its present level of 21s. per cwt. Supplies in the current season are more than ample; the 1938-39 main crop in the Gold Coast is now estimated at 260,000 tons, against a crop of 220,000 tons in 1937-38 and the prospects for the minor crop, to be harvested shortly, are also favourable. Supplies in the other West African countries will not be below the level of the previous season, and while the Brazilian crop may have suffered from unseasonable weather, a more liberal selling policy has recently been adopted in that country. Further, as the result of substantial purchases since the end of last year, stocks in traders' hands have substantially increased; hence, in the absence of an unexpected spurt in consumption, buyers have no inducement to enter the market for any substantial amounts. The immediate outlook cannot be considered favourable, and some form of international agreement among producing interests would be of great value.

Oats and Barley Subsidy.—Shortly before Mr Morrison was transferred from the Ministry of Agriculture to the Duchy of Lancaster he announced that, in view of

SHORTER COMMENTS

(Continued from page 463)

be found, and the preference capital (plus a 5 per cent. premium) and 10 per cent. of the ordinary capital is to be repaid. The net profits of I. AND R. MORLEY show a 24 per cent. reduction to £88,333, and the dividend is cut from 5 per cent. to 3 per cent. The WOOLCOMBERS' results are somewhat consoling after the recent gloomy record of textile profits, for profits, at £123,980, show a reduction of no more than 2 per cent. H.P. SAUCE, LTD. total profits have fallen by 3 per cent. to £202,211, but the 30 per cent. dividend is maintained.

MISCELLANEOUS

Prudential Assurance Company, Ltd.—Total assets have risen during 1938 by £15,723,319 to a record of £346,139,159, and total income from all sources by £1,586,838 to £56,222,018. The "A" shares dividend rose from 9½ to 9¾ per cent., tax free, and the "B" dividend was maintained at 50 per cent., tax free. Bonuses to life policy holders have been maintained at the same rates as in recent years.

Woolcombers, Ltd.—Net profit, 1938, £111,226 (£114,948); final dividend 11½ per cent., plus bonus 5 per cent., both tax free, making 21½ per cent., as before; carry forward, £77,196 (£66,720); balance sheet shows debtors, £127,860 (£96,788); stores and work in progress, £68,894 (£65,277); investments, £1,314,285 (£1,304,069); cash, £151,448 (£204,881).

Harrods, Ltd.—Total income fell from £2,712,962 to £2,548,912 in the year ended January 31, 1939. To depreciation, £111,803 (£110,076); net profits, £708,191, a fall of £80,611; ordinary dividend 16 per cent., against 18½ per cent., which included 2½ per cent. bonus. To special reserve, £20,000 (£40,000); staff funds, £40,000 (£20,000); carry forward, £183,509 (£6,240 less). Stock stands at £775,867, against £801,326; debtors down from £1,471,140 to £1,354,217; cash from £568,878 to £517,782.

Peter Robinson, Ltd.—Balance sheet at January 31, 1939, shows stocks of £102,152, against £99,687; cash up from £17,580 to £20,084, and debtors from £70,424 to

£76,046; creditors stand at £72,277, compared with £60,424; trading profits at £113,879 compare with £114,959 and net profit is £61,394, against £61,108; year's dividend maintained at 4 per cent. N.D.C. again requires £2,300, and staff fund £1,000; £22,975 goes forward, against £21,131.

Associated Portland Cement.—Final dividend, 12½ per cent., making 20 per cent. for year, on increased capital, against 22½ per cent. To reserve, £60,000. Carry-forward increased by £2,806 to £208,699.

British Portland Cement.—Final dividend, 15 per cent., making 22½ per cent. as before. To depreciation, £260,000 against £250,000. To general reserve, £110,000, against £80,000. Carry forward increased by £1,294 to £219,972.

Electrolux Corporation (of America).—Consolidated net profit for 1938 was \$2,040,922, against \$2,775,497. Net profit for the fourth quarter was \$527,782, against \$621,604 for the fourth quarter of 1937. These figures are shown after all charges, Federal Income Tax, and surtax on undistributed profits.

THE BANK AS EXECUTOR

This is one of the many services which

BARCLAYS BANK

LIMITED

tenders to its customers.

Full particulars may be obtained from any Branch or from

THE TRUSTEE DEPARTMENT

37 KING WILLIAM STREET, LONDON, E.C.4
27 REGENT STREET, LONDON, S.W. 1

the serious fall in barley prices, the rate of subsidy to the growers of barley and oats would be raised from 10s. to £1 per acre. Last week the new Minister of Agriculture, Sir Reginald Dorman Smith, told the House of Commons that the Government had now decided against the immediate raising of the subsidy. Instead, a new Bill would shortly be introduced which would embody the Government's long-term proposals for assisting cereal growers. The details of the new scheme have not yet been announced, but Sir Reginald stated that the new legislation would remove the restriction under which the receipt of deficiency payments for wheat now renders growers ineligible for the barley and oats subsidy; further, the legislation would be made retrospective to include the 1938 crop, and the original subsidy of 10s. per acre, now due to growers, would be counted as an advance payment of the further assistance contemplated. It is a matter of congratulation that the Government have decided to abandon the temporary increase in subsidy, since, if special payments are to be forthcoming whenever farmers produce an exceptionally good (or exceptionally poor) crop, the cost to the National Exchequer is likely to increase indefinitely. The details of their long-term proposals of assistance to cereal growers will be anxiously awaited.

* * *

Changes in the Retail Trade Index.—As was announced in the *Board of Trade Journal* of February 9th, the monthly index of retail sales, compiled by the Retail Distributors' Association in co-operation with the Bank of England, has now been revised. The main change has been a shift in the base year, from 1933 to 1937, for which latter year more comprehensive data are available. The effect on the index of this change in the base year is shown in the following table, which gives on each base the annual index for the years 1932 to 1938 and the monthly index for 1938:—

AVERAGE DAILY VALUE OF RETAIL SALES

	(1933=100)		1937=100

Two sub-groups have also been added, apparel and household goods, for which indices of sales are available back to 1936.

* * *

Retail Trade in January.—The monthly index of the value of daily sales in January, on the new base 1937, shows little change compared with January, 1938. Sales of food and perishables fell by 0.3 per cent., while sales of other merchandise increased by 0.5 per cent. As the retailers' year runs from February to January, the publication of the latest figures enables comparison to be made with those of the 1937-38 season. Sales in all districts of Great Britain increased by only 1.8 per cent. in 1938-39, the rise being most marked in the early months of the year. The value of sales in Central and West London fell by 7 per cent. compared with 1937-38; all other districts registered an increase, which varied from 1.5 per cent. in the North-West district to 4.2 per cent. in Scotland.

Reduction in Tea Quota.—The increase in stocks of tea in bonded warehouses in this country, from 227.5 million lbs. at the end of January, 1938, to 252.6 million lbs. at the end of last January, and the consequent fall in the average price realised at the London auctions, from 14.49d. per lb. during the first seven weeks of 1938 to 13.57d. per lb. during the corresponding period this year, prompted the International Tea Committee to recommend a reduction in the export quota at its meeting last Thursday. The quota for the year ended March 31, 1940, has been fixed at 90 per cent. of the standard exports, compared with 92½ per cent. in 1938-39, 87½ per cent. in 1937-38 and 82½ per cent. in 1936-37. The standard exports of India, Ceylon and the Dutch East Indies—the three countries adhering to the regulation scheme—are 383.2 million lbs., 251.6 million lbs. and 173.6 million lbs. respectively. In 1937 the aggregate exports of these countries were equivalent to 78 per cent. of world shipments. Some reduction in the quota was generally expected and, in view of the accumulation of stocks, was not unjustified.

* * *

Advance in Prices.—As the prices of staple commodities are very sensitive to changes in market psychology, it is not surprising that many of them were carried upwards by the revival of confidence, due to the relaxation in international political tension, and to the more optimistic view now taken of economic prospects in Britain and in the United States. The improvement is reflected in the rise in *The Economist's* price indices for primary products in this country and in the United States, as well as in the more comprehensive *Economist* and Irving Fisher indices. The latest official index for France, on the other hand, is a shade lower, while the figures for Germany and Italy show little change.

‡ This figure relates to February 18th.

Details of the constituent series of *The Economist's* complete index for this country are given below:—

	Sept. 18, 1931	Mar. 2, 1938	Feb. 15, 1939	Mar. 1, 1939
(1927=100)				
Cereals and meat....	64.5	88.7	68.3	68.5
Other foods.....	62.2	60.7	59.5	59.9
Textiles.....	43.7	57.3	52.7	53.5
Minerals.....	67.4	94.4	90.4	90.7
Miscellaneous.....	65.8	78.2	74.4	74.6
Complete index	60.4	75.6	68.5	68.9
1913 = 100.....	83.1	104.0	94.3	94.9
1924 = 100.....	52.2	65.2	59.2	59.6

The improvement in prices during the past fortnight has been fairly general, for the indices for all the constituent series registered an advance; while consumers are still pursuing a cautious buying policy, the present position of the markets suggests that a little more evidence of an improvement in business activity in Britain and America would be sufficient to set in motion a re-stocking movement.

INDUSTRIAL REPORTS

THE latest news from industrial centres is much more cheerful. The coal trade is active and the output of iron and steel appears to be expanding rapidly. Tinplate manufacturers have secured substantial orders. The volume of business secured by the textile trades has increased, a feature being the improvement in the cotton trade. The Manchester Chamber of Commerce ballot on the Cotton Industry Reorganisation Bill resulted in an overwhelming majority of merchants voting against the proposals. Of the merchants engaged in the home trade, 74 per cent. were against the proposals, while 82 per cent. of export merchants expressed opposition. On the other hand, 72 per cent. of the producing sections supported the plan. The ballot conducted by the Board of Trade on the Bill has been completed, and the results are expected to be announced within a few days.

The importance of the British Industries Fair to the industrial world has been well shown in the past fortnight by the record attendances at each of the three sections—at Olympia, Earl's Court and Castle Bromwich. The volume of both orders placed and of inquiries received has given satisfaction to the stall-holders and it is worthy of note that many inquiries have come from overseas buyers, both in Europe and other parts of the world.

Coal

Sheffield.—The demand for household coal has eased, but it is still not easy to secure full deliveries of some qualities. There is not much change in industrial steams, demand for which is relatively quiet. Small coal is plentiful, and is not fully taken up. Best locomotive hards are in good request. Demand for electricity and gas fuels is well maintained, and coke works are taking moderate deliveries of smalls. Although there is a steady market for coke for industrial purposes, central-heating qualities are in smaller demand. The export market continues dull. Bunker coal is in normal demand. Prices are unchanged.

*

Newcastle-on-Tyne.—With the exception of Northumberland steam smalls, the coal market in this area remains steady, large coals being particularly firm. The reduction in the price of Northumberland steam smalls has brought a little more inquiry for this grade, but the position remains weak and is causing considerable embarrassment to collieries which are having to carry large stocks. There has been some good buying of Durham coals in the past week; the Helsingfors Electricity Works have bought 30,000 tons of Durham smalls, whilst the Oslo Gas Works have bought 40,000 tons of coking coal, these contracts being placed at current prices. The coke market in both the inland and export sections remains quiet.

*

Glasgow.—With the coming of milder weather supplies have generally caught up with demand, and except in the case of best qualities of house-

hold fuel, there are now almost no arrears of deliveries to overtake. Colliery stocks, however, are light, so that the seasonal contraction in buying appears unlikely to have a marked effect. Producers in many cases are well booked for export business over the summer months, but orders for March shipment are below requirements. Foreign buyers expect the usual reduction of 1s. or more per ton, which producers are reluctant to concede owing to the negotiations now in progress in the international market, and also (on the question of inter-district competition) in the home field. Industrial demand maintains recent proportions, and the utility and railways undertakings are still substantial buyers.

*

Cardiff.—There was an improvement last week in the volume of shipments at the South Wales docks, but, at 352,500 tons, exports were still 38,000 tons less than in the corresponding week last year. For the month of February the provisional returns of clearances for foreign destinations give a total of 788,386 tons for 24 working days, compared with 978,642 tons in January (26 working days), and 1,003,245 tons in February, 1938 (24 working days). Current inquiries continue restricted, and part-time working is reported from many parts of the coalfield. Some of the washed steam coals, particularly the dry classes, are relatively scarce, but in other classes the supply is in excess of the demand. Prices are nominally unchanged.

The joint audit of the coalfield for the three months ended January shows a credit balance of only £14,761, against £41,559 in the preceding three months and £388,129 in the quarter ended January, 1938. The proceeds per ton, at 16s. 1.09d., averaged 4.33d. per ton less than a year ago, while costs of production increased by 1s. 1.59d. There is to be no change in the general wage rate for the next three months.

Iron and Steel

Sheffield.—Although business in iron is slow, the outlook is regarded more confidently. Consumers are still unwilling to place long contracts for forge and foundry iron, probably because prices are not fixed for a definite period. Transactions in hematite are better, and there is less hesitation to buy forward. There are some inquiries for finished iron, but the bar mills are not regularly occupied.

The steel section of the market is becoming much more active, with a more substantial demand for both basic and acid billets. Wire rods, strip and bars are in good request, while the call for structural steel is expanding.

The iron and steel scrap market has come to life, largely on rumours of an impending shortage. Consumption is increasing, especially of steelmaking scrap, and business is good in most sections.

*

Middlesbrough.—In addition to Government orders under the A.R.P. schemes, local steelworks are experienc-

ing a better commercial demand. Semi-finished steel continues in good request. Sheet mills are busy. Other departments have booked orders for rails for Denmark, whilst shipments of pipes to South Africa are being made regularly under contract.

An additional blast furnace is being put into operation shortly for the manufacture of basic pig iron at Messrs Dorman, Long and Company's Redcar Works. It is also announced that that company intends starting additional steel furnaces and rolling mills at their Cleveland works.

The pig iron market continues firm. Shipments of pig iron from the Tees in February amounted to 3,010 tons, against 1,421 tons in January. The imports of iron ore during February amounted to 96,355 tons, compared with 105,128 tons for the previous month. Blast-furnace coke is in good supply, the price being maintained at 24s. 2d. per ton on trucks at the ovens. Merchants have to meet a big demand for heavy steel scrap. Shipments of manufactured iron and steel from the Tees during February amounted to 34,273 tons, of which 20,456 tons went abroad.

*

Glasgow.—Steelmakers in the West of Scotland are maintaining a high level of production and the volume of new business placed is gratifying, including as it does almost every class of material. Various engineering firms and builders of steel structures in Glasgow and other districts have recently secured some very important contracts and much of the steel material required is being obtained from West of Scotland steel works. Sheet makers are now fully employed not only with air raid shelters, which provide employment for a large proportion of the plant, but on work for other purposes, and recent bookings both of black and galvanised sheets are considered satisfactory. While some branches of the tube trade are busy and have several months' work on hand, others are finding business quiet.

*

Cardiff.—The recent improvement in the condition of the tinplate trade has been maintained and more mills are being brought into commission. The usual Canadian order for about one million boxes per annum with Richard Thomas and Company has been renewed for the current year, and it is reported that a contract for this annual quantity has been arranged for a period of five years. New business has also been arranged on the Swansea Metal Exchange. Shipments of tinplates in the week ended February 23rd were about 50 per cent. greater than in the previous week, but they were still lower than those in the corresponding period last year. The manufacture of black and corrugated sheets is also more active than it has been for a considerable period, and this expansion in the market for finished products is reacting favourably on the heavier branches of the industry.

News from Abroad.—The uneasiness of consumers concerning the future price trend and the uncertain political outlook are still holding up a seasonal revival on international steel markets. Considering the flow of orders to consumers of heavy steel products and the low stocks in consumers' works, the reluctance in covering requirements is difficult to understand, but the view is widely held that a revival is due very soon. The position of steel producers is, however, mitigated by substantial Government orders for defence materials.

Competition of outsiders and the anxiety of a smaller member of the Cartel to secure orders were responsible for slight disturbances on some markets. As to the American offers, the Comptoirs have made preparations to adjust prices in order to maintain their position. The demand for plates and sheets is relatively better than that for other finished products, but price concessions are still in vogue. Purchases of hoops have fallen off and quotations have been slightly reduced on some markets. As to the conditions on the individual markets, Scandinavia has remained an active buyer and small orders have come forward from the Far East and South America. Some large inquiries from the Far East, especially Japan, are on the market.

As regards the revision of quotas in connection with the partition of Czecho-Slovakia, which was recently subject to negotiations of the Co-ordinating Committee, the existing provisional agreement on the Polish quota has been prolonged, the quota for March being reduced by 20 per cent., which is regarded as a disappointing solution by the Poles. The European Tube Cartel has been able to overcome the difficulties raised by the Czecho-Slovak territorial changes so that a prolongation of this Cartel is now assured. The Executive Committee of the Cartel will meet next week in Luxemburg.

Textiles

Cotton (Manchester).—Demand has continued more active. Spinners and manufacturers have more work on hand than a month ago, and delivery instructions against old contracts are better. Raw cotton prices have tended to rise. The trade improvement is reflected in the larger forwardings of cotton from Liverpool to spinners, the average weekly deliveries during the past month having been 49,231 bales, against 46,178 bales in January. No important developments have taken place with regard to the proposals in the United States for releasing supplies of cotton, and the opinion is gaining ground that no major change will be made until next year.

Demand for yarn has increased. More business has been done in American qualities, especially ring beams, and prices have stiffened. Freer operations have taken place in Egyptian counts for home consumption. Further buying has occurred in tyre yarns for Germany.

The improvement in the demand for piece-goods has been maintained, and some manufacturers have sold more than their output. Shippers to India are still waiting for the terms of the new trade agreement, and only miscellaneous sales have been arranged. Demand for Java has continued more

active. Printed and dyed goods have moved off fairly freely for South America. Heavy goods have been sold for South Africa and sheetings for Australia. Buyers for the home trade houses have placed numerous orders. Some manufacturers have re-started idle looms. Big contracts are pending in drills for the Chinese Government, the quantity wanted being about 20,000,000 yards.

Wool (Bradford).—Conditions in the wool textile industry have improved somewhat during the past fortnight. Wool has continued to keep remarkably firm overseas, which has helped to stimulate the home industry, and big quantities have been sold each week in all selling centres since Christmas.

There has been a slight increase in machinery activity. During the past two weeks there has been a considerable increase in delivery particulars for tops—a sign that spinners are busier. At the present time the hosiery section of the trade is more active than for the past two or three years, the cold weather of the current winter promoting big sales of underwear fabrics which have directly benefited the wool trade. The dress goods trade for the coming spring and summer does not develop as it should, due no doubt to the increase in the imports of Continental dress goods, which are subsidised by different Governments, particularly the Italian.

THE COMMODITY MARKETS

LIKE the Stock Exchanges, the commodity markets have been infected by the improvement in confidence, due to the expectation of economic revival in this country and in the United States. While there are still no signs of a rush to buy, many consumers now seem less disinclined to cover their requirements further ahead, and the prices of many sensitive commodities have tended to advance.

Among non-ferrous metals, copper, lead, spelter and tin were all marked up a little during the week ended last Wednesday. Rubber and raw cotton were also dearer. Wheat prices showed little change, despite the slack demand, but raw sugar prices tended upwards.

The improvement in prices in the United States is reflected in Moody's index for staple commodities (December 31, 1931 = 100) which rose from 143.8 on February 21st to 145.4 on March 1st.

Metals

Copper.—After falling back to £41 6s. 3d. per ton, the lowest level since last September, the price of standard cash copper rallied sharply and closed on Wednesday at £42 6s. 3d. per ton, a net gain of 12s. 6d. on the week. The reduction of the quotas as from March 1st, to which reference was made a week ago, had no effect on prices, but under the influence of the improvement in the stock markets the U.S.A. quotation for scrap copper was raised by ½ cent to 9 cents per lb. This rally is the first favourable sign on the

American copper market for three months, and thus deserves attention.

Tin.—The tin market was also favourably affected by the rise on Wall Street and its price closed on Wednesday £2 5s. up at £214 15s. per ton. This improvement is particularly satisfactory, as the February statistics, published on Wednesday, disappointed the market. According to Messrs A. Strauss and Company, Limited, the total visible supply increased last month by 881 tons to 33,652 tons; new supplies, at 9,165 tons, were 457 tons up on the month, but on the other hand world deliveries declined by 1,411 tons to 6,331 tons. The low level of deliveries and the rise in stocks has rendered the I.T.C.'s task in fixing the quotas for the second quarter of this year even more difficult than it was before. The meeting of the Committee has been postponed from March 15th to March 22nd this week, a fact which indicates that the Committee intends to make its decision as late as possible in order to get a clearer view of the market trend. In the United States the tinplate industry's activity has now risen to 52.5 per cent. of capacity against 45 per cent. a month ago and activity is also on the increase in South Wales.

Lead and Spelter.—The price of lead showed no change this week and closed at £14 5s. per ton, while the spelter price closed 2s. 6d. higher at £13 11s. 3d. per ton. The demand fluctuated considerably from day to day, but as sellers were rather reserved the fluctuations had no effect on prices. Home warehouse stocks of lead totalled 13,976 tons on February 28th against 12,856 tons on January 31st, and stocks of spelter in official warehouses in this country rose from 25,049 tons to 25,771 tons. Even at the higher level, however, stocks of both metals are still comparatively low. According to the *Metallgesellschaft*, the world's lead smelter output amounted to 1,617,498 metric tons in 1938, against 1,698,875 tons in 1937, and the zinc smelter output totalled 1,576,635 tons compared with 1,668,653 tons. In both cases the decline was solely due to the lower United States supplies, since production outside the United States reached record levels in 1938. As consumption of both lead and spelter outside the United States declined in 1938, stocks of the two metals must have increased considerably last year, since production was already in excess of consumption in 1937.

Grains

THE grain market has recently been passing through a very quiet period. European demand for wheat is slow, since millers are only buying to cover immediate needs; outside Europe, the only event has been the purchase of some Australian cargoes for Shanghai, and the sale of 200,000 tons of Argentine wheat to Spain reported on Wednesday. Although storage space in Argentina is believed to be filling up rapidly, sales have so far been on a small scale. The falling level of world shipments of maize has steadied the

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY

EFFECTS OF TRADE RECESSION

SERIOUS DECLINE IN TRAFFICS

RAILWAY CHARGES FOR MERCHANDISE

CLAIMS FOR COMPLETE EQUALITY WITH OTHER FORMS OF TRANSPORT

CO-ORDINATION IN THE PUBLIC INTEREST

LORD STAMP ON THE "SQUARE DEAL"

The sixteenth annual general meeting of the London Midland and Scottish Railway Company was held, on the 24th ultimo, at Friends House, Euston Road, London, N.W.1.

The Rt. Hon. Lord Stamp, G.C.B., G.B.E., chairman of the company, presided.

The Chairman: I will now ask the secretary to read the notice convening the meeting.

The Secretary (Mr Owen Glynn Roberts, C.B.E.) read the notice accordingly.

The Chairman: Ladies and gentlemen, I now lay on the table the report and accounts for the past year, and as they have been in your hands for some days I presume you will, as usual, take them as read.

THE LATE MR CHARLES BOOTH

The company have suffered a severe loss since our last meeting, for it is my sad duty to report the death by accident on December 9th last of our colleague, Mr Charles Booth, of Liverpool, whose family have been associated with Liverpool and Warrington for over 300 years. His great-uncle, Henry Booth, was the first secretary of the Liverpool and Manchester Railway, the inventor of the screw coupling, and shared with Stephenson the prize for the "Rocket." Mr Charles Booth himself, who was at one time chairman of the old Midland Railway, joined that company's board in 1898 and was an original director of this company. He was a man of broad sympathies and great kindness, and it was said of him, in his relationships with labour as chairman of the Employers' Association of the Port of Liverpool and a member of the Docks and Harbour Board, that he had taught all classes to trust to his sense of justice and to count on his sympathetic understanding. He had sound judgment and great business experience, and will be difficult to replace.

We shall also suffer a great loss by the retirement of our dear friend Sir Thomas Williams, whom nature seems to have endowed with perennial youth. He was first employed by the Monmouthshire Railway and by the Great Western, and then his services were acquired by the London and North Western Railway as part of the "working stock" of the Sirhowy Railways when they absorbed it in 1876. It was one of the best bargains they ever made. We have been more than fortunate in having had for so long the benefit of his great experience, his constant energy and his chairmanship of the Birmingham Canal. He is a standing refutation of the theorists who set a fixed age for retirement as the limit of directorial usefulness.

I ought to refer to a face we shall never see at these meetings again, for Mr Eric Charles McAdam died in August last. He was a stern critic of the administration, but the interest he took in all phases of the company's affairs and the sincerity of his convictions will always be a pleasant memory.

ADMINISTRATIVE CHANGES

We have strengthened our position in Scotland by the appointment to the Scottish Committee of Mr Murray Stephen, the chair-

man of Alexander Stephen and Sons, shipbuilders, of Linthouse, who is the sixth Stephen in direct succession as head of that firm.

During the year Mr C. R. Byrom retired from the position of chief operating manager, and we hope he may be spared many years to enjoy his well-earned rest. He has been succeeded by Mr T. W. Royle, an officer of vigour and great experience.

When we lent the services of Mr. E. J. H. Lemon to the Government for a time as Director-General of Aircraft Production, Mr Ashton Davies (our chief commercial manager) was appointed acting vice-president, and Mr T. E. Argile acting chief commercial manager. You will, I know, be sorry to hear that Mr Ashton Davies has been seriously ill, but he has made a good recovery and is resuming his important work next month.

Mr J. H. Follows, who retired from the position of vice-president in March, 1932, had continued up to date to serve the company faithfully as their representative on the boards of several companies in which we are interested. He was a man of outstanding personality, and the company is the poorer by his death.

RESULTS OF THE YEAR

RAILWAY TRAFFIC RECEIPTS

At our last meeting I pointed out that for the fourth successive year our railway traffic receipts had increased and that for the first eight weeks of 1938 we had improved on 1937 by £317,000, and the general prospect over our system was that trade would be just about the same level in 1938 as in 1937.

By the end of the seventeenth week, however, the increase had been wiped out, and for the remainder of the year there was a serious decline, resulting in a final decrease of railway traffic receipts amounting to £3,005,000—a decline which has continued so far in 1939 at the average rate of £78,000 per week.

The reasons for the decline are well known to you—a sharp recession in trade since March, which was accentuated by the international situation, and a further diversion of certain classes of merchandise traffic to other forms of transport, coupled with reductions of rates for vulnerable traffic retained. In addition, large stocks had been built up by various trading interests in 1937, and there was a consequent fall in traffic conveyed in 1938.

TRAFFIC REDUCTIONS

I gave you last year the decreases in the various classes of railway traffic receipts in 1937 as compared with 1929, and repeating these figures in relation to those for 1938 will best indicate where we have suffered.

	Reduction per cent. of 1929.	
	In 1937.	In 1938.
Passengers ...	6.4	5.6
Parcels, etc. ...	4.9	6.1
Merchandise (Class 7 and upwards) ...	14.4	21.6
Merchandise (Classes 1-6) ...	4.6	20.7
Coal ...	3.8	6.1
Livestock ...	28.8	36.2
Total railway traffic receipts ...	8.2	12.4

The figures in each case reflect the increase in charges which came into force on October 1, 1937, and but for this decline would have been even more marked.

A SATISFACTORY FEATURE

The one satisfactory feature is the further growth in the passenger receipts, which were considerably aided by the travel to the Glasgow Exhibition in 1938, but, on the other hand, in 1937 there was a substantial volume of special business in connection with the Coronation. While passenger numbers in 1938 declined by 5½ per cent. compared with 1937, there was a growth in long distance traffic, with an overall increase of £165,000. The Christmas holiday week illustrates this point. You will recollect that sudden frost and snowstorms greatly interfered with the arrangements of the public in that week. There was a severe reduction in the numbers of short-distance passengers who would normally have travelled to football matches which were cancelled or for various recreationary purposes. On the other hand, there was an abnormal number of passengers for that time of the year on the long-distance trains because of the difficulty of road conditions. There were natural difficulties in effecting the change in our working arrangements, with snow and ice impediments, but they were well overcome, and although we received some complaints of delays, there were even more thanks from passengers who appreciated the manner in which the weather conditions were defeated by the really excellent work of our staff as a whole, to whom I sent a special message of thanks.

MERCHANDISE RESULTS

The merchandise results are the most serious, and it is the cumulative effect of our losses here which has led us to make representations to the Government, to which I will return later. Although the major cause of the decline in 1938 in the merchandise receipts, in classes 1 to 6, is the condition of the heavy industries, there have been losses of certain traffics to road conveyance. The latter difficulty is more marked in classes 7 to 21, which in the upper ranges are less affected by trade conditions as a whole. Here we have seen distinct losses of both old and new types of traffic, some of them due to pressure on traders (to whom I have referred before) who recognise that the classified rate system required by Parliament imposes higher rates in terms of weight on the higher classified traffics and do not wish to disturb this balanced system. They have, however, now been instructed by certain ultimate consignees to obtain tenders for road conveyance on a weight basis, and although both they and the consignees know the ultimate result, they must follow their instructions. The result is a loss of present rail-borne traffic and a lowering of railway rates to retain similar future traffic to the railways with further damage to the Parliamentary scales of rates which are not based on weight considerations alone.

EXPENDITURE

The losses of traffic receipts are, for the reasons I have stated, almost entirely due to causes outside our control. When, however, we turn to the expenditure side of the accounts we get into a field where the amount controllable is substantial. We cannot control prices of materials and rates of wages, although we do our best to see that they are reasonable, and in certain cases we can resort to alternatives, where efficiency and safety are not affected.

ECONOMIES EFFECTED

I have told you on various occasions the many steps we have taken to effect economies and of the budget system we have in force to ration expenditure. When, in 1932, I explained the rearrangement of our budgeting plans, I pointed out that a good deal of time and experience must elapse before they would yield all their logical implications and give their most productive results. Clearly, the most difficult part is the forecasting of the probable receipts, or sales of transport, and last year our first forecasts were far from the mark because they were based upon the equally wrong forecasts by the different industries of their respective prospects. I told you a year ago broadly what they were, and was more amused than annoyed when last September, in the midst of the unprecedented difficulties then, two or three stockholders wrote me pointing out our error. Stockholders, moreover, often get confused between ordinary revenue expenditure and expenditure on capital works which they think ought to be curtailed but which really does not affect the year's results in any way.

REVENUE FORECASTS MODIFIED

We, in fact, modify our forecasts as circumstances change and naturally did so more than once during the year. These revenue forecasts influence our expenditure forecasts, which have been greatly developed and extended in recent years, and were of the utmost value last year. While certain controllable outlay must by its nature be settled well in advance and cannot quickly be altered without disturbance to our customers—train schedules are an illustration—other outlay can be modified. Week by week throughout the year the matter was closely watched, and we cut our coat according to our cloth, each department and each part of it working very closely to plan, with the results I have mentioned.

Maintenance expenditure was reduced by £77,000 and without curtailment of any essential work. Less renewal work was performed, but that does not affect the charges to the year's expenditure as the annual provisions are independent of the work done in any one year. These provisions as a whole were practically the same in 1938 as in 1937, reductions due to standardisation of stock being balanced by the effects of price changes and by a growth in the provision we make to equalise the charges for renewal of worn-out works or for writing off redundant works.

OPERATING EXPENDITURE

Operating expenditure increased by £63,000, which was more than accounted for by increased prices of coal and other materials, as retrenchments in numbers of staff more than offset the higher rates of wages. An interesting figure is the coal charge for locomotive running, which was £83 less than in 1937 out of a total of £4,886,000. There are three factors in this:—

Increased cost per ton of coal used	£201,750
Decreased cost due to less mileage	£153,104
Decreased cost due to less consumption per mile	£48,729
	201,833
Net decrease	£83

Even these three parts cover variations in types of coal, mileage and locomotives, and show the danger of considering total figures alone which have apparently the same meaning.

SUPERANNUATION FUND

Three years ago I referred to our superannuation fund, and told you that we had provided for an additional actuarial liability as from 1935, and that the whole position would be reviewed later. We have now completed our examination of this and all other like liabilities, and this has resulted in a decrease in the annual charge to general charges by £204,000 per annum, and the present figure will repeat itself annually until such time as new actuarial circumstances may require a revision.

The other railway expenditure calls for no special comment, and this brings me to the net railway receipts, which at £10,856,000 are £2,780,000 less than in 1937. The total reduction is, of course, most disappointing, but it compares very favourably with the loss of £3,022,000 in railway gross receipts when it is borne in mind that the expenditure is heavily swollen by the increase in prices and wages rates, which I shall refer to again later.

OTHER NET RECEIPTS

The other businesses and interest items show the same general results as those from railway working and show a reduction over all of £231,000.

The Joint Lines improvement of £136,000 is largely a non-recurring one, due to a special credit of £40,000 for corrections of payment for local rates which have followed the reductions on the main lines. The receipts have also been assisted by amendments of past pooling balances with the owning companies.

An increase in rents of £28,000 is very satisfactory having regard to the many sales of surplus property which we have effected in recent years and which, including £464,000 in 1938, have resulted in credits to capital account since 1923 of £4,250,000—an important liberation of our capital resources for employment in other directions.

RAILWAY CHARGES FOR MERCHANDISE TRAFFIC

I shall be surprised and disappointed if any of you are not fully aware of the proposals which we have made to the Government

through the Minister of Transport for a drastic revision of the law governing the fixation and quotation of charges for the conveyance of all classes of merchandise traffic and the statutory requirements attaching to them. It has become known as the claim for a "Square Deal" because we have asked for complete equality with our competitors, principally road hauliers and coastwise shipping, who are entirely free from the mass of statute and case law and governmental regulation imposed upon us.

In my maiden speech to you as chairman eleven years ago I dealt—not with maiden brevity—with our disabilities, and I have not failed to refer to them at each subsequent annual meeting. In February, 1928, I was most concerned with the undercharges made on our competitors for their use of the public roads and the need for powers to operate our own road transport. These powers we ultimately secured with satisfactory results, which disproved the fears of the opponents to our application and the pessimistic critics of the use of our powers, who suggested we were going to lose millions of money, indulge in wasteful competition, secure a monopoly, rook the public, etc.

CO-ORDINATION IN PUBLIC INTEREST

I see that then I put in the forefront first the public interest, including the interests of those such as the heavy industries who are more or less compelled to use the rail, and secondly justice to the railway shareholders. I then stated that transport by road and rail required co-ordination in the public interest, and that the most economic combination of these two means for each particular set of circumstances must be discovered and made available, and that with road powers the railways would be able to explore the possibilities of co-ordination by voluntary arrangement between the two parties. We have, in fact, very largely secured this on the passenger side, but on the goods side our success has been small because of the far greater number of operators who could not only "cry havoc" but, owing to their use of their freedom, played havoc with our commercial department working under a shackled rate system.

I further pointed out that we had no desire to force traffic on to the rails, but that every ton of traffic which *economically* ought to be on the rails and went on the roads was a loss to you and burdened the heavy industries unnecessarily.

I have inflicted upon you this glance at the past because it aids a true perspective now.

Since 1928 a system of regulating road haulage *licences* has been introduced which in some respects bears a slight resemblance to the obligation placed upon the promoters of a new railway line to show that their proposals are in the public interest, but, of course, unlike railway promotions in the past, the new licensee is not required to pay compensation for damage to other providers of transport.

TRANSPORT ADVISORY COUNCIL'S REPORT

But as regards co-ordination in charges nothing has been done. After several years' protests by the railway companies a Royal Commission was appointed in 1928 to report upon transport questions. In its final report in 1931 it found it impossible to make a positive proposal on co-ordination, but recommended the setting up of a Transport Advisory Council for the purpose, amongst other things, of advising the Minister of Transport on the co-ordination of transport. In 1933 this Council was authorised by Parliament and set up in 1934. It dealt with various other matters, and after prolonged discussions in July, 1937, reported to the Minister on road and rail transport, expressing the view that *all* forms of transport should, where practicable, be rate controlled and recommended that legislative steps should be taken at the earliest possible moment for machinery to secure uniformity of wages throughout the road transport industry, observing that no real co-ordination as between road and rail would be possible without it. The Council further recommended the internal creation of a rate structure by the road transport industry and the setting up of machinery for its enforcement, including a Road Rates Tribunal, and it was hoped that road and rail rates agreements would then be achieved on a voluntary basis. The Minister of Transport announced, as I informed you a year ago, that the Government accepted the broad principles of the report and proposed to introduce legislation accordingly. This was not introduced in the 1937-38 session or referred to in the King's speech opening the 1938-39 session.

ATTITUDE OF ROAD INTERESTS

Since July, 1937, road competition increased steadily in the manner I have earlier explained, and certain road interests developed a strong attack on the railways, completely misrepresenting their

position and suggesting that the adoption of the 1937 report would lead to a railway monopoly. The railways made no reply beyond representations to the Government upon the development of new diversions of traffic which were seriously impairing the railway structure required by Parliament, and making enquiries on the prospects of legislation on the report. No assurances were apparent after the legislative programme of the Government for 1938-39 was published, so the railways submitted new constructive proposals to the Government and asked for early action on them.

These proposals are briefly condensed in the report before you. The existing statutory regulation of the railway charges for conveyance of merchandise and the requirements attached thereto should be repealed and the railways thus placed on terms of equality with other forms of transport. Such equality would remove particular obstacles which have been cumulatively prejudicial to the efficiency of the railways in recent years, and would then assist Parliament to deal with transport charges generally by equal regulations, and it is hoped lead to a large measure of co-ordination of transport.

We were criticised from various quarters by statements that this was a somersault, a *volte-face* or something else equally picturesque that we wished to penalise the heavy trades, that we wished to favour the heavy trades at the expense of the small traders, that we were not entitled to equality on rates because passenger trains in London were overcrowded at the peak hours or because particular long distance trains had run late in a blizzard, that the heating apparatus did not always work, that the remedy was to close unspecified branch lines, that the remedy was to write off some of your capital (making the present unfair return of profits look prettier on paper), that the creation of one huge transport amalgamation was the remedy. In short, that we should not now have equality because justice to us might check interests who are now gaining daily by the injustice and by delay in putting it right.

AN INTOLERABLE SITUATION

Might I again hark back to what I have said to you before—thirteen years ago, six years ago.

I then explained the nature of the statutory regulation of these charges, the classification under which Parliament placed high charges on valuable goods and lower charges on the less valuable goods of the heavy trades, and the inroads of road hauliers on the former traffics. I added and I quote verbatim:—

"While we believe that reasonable regulation of conditions must be in the interests of all branches of the transport service if it is not to fall into chaos, which in the long run will inflict far more damage upon the user than any immediate advantages he may snatch from it, at the same time the existing situation is intolerable. The effect of an entirely free-lance and irresponsible competitor upon the system of rates classification is of immense importance to the public and the heavy trades, and the immediate gains of a section of the community will be dearly bought at the expense of the remainder if a solution is not found."

If the present proposals are a somersault the reason is to be found in the fact that a situation which I described as intolerable six years ago has grown worse to the knowledge of everyone, including the Government, and nothing has been done. That is why we urge Parliament, as the protectors of the interests of the public and not of a section of it, for a *Square Deal*—Now.

The proposals have been referred to the Transport Advisory Committee, of which I am a member, and I do not now propose to comment on their proceedings. I hope, however, that adequate and early action will be taken in Parliament, and if no proposals are made or proposals which your board consider inadequate, they will summon a special meeting of the stockholders of all classes, for this is a matter which affects the debenture stockholders also, in order to make the companies' position clear to you and to the public in general.

ARRANGEMENTS WITH ROAD HAULIERS

While I cannot at this stage give you the detailed position of the discussions, it is clear that we are being opposed by powerful interests, but I would refer to the arrangements entered into with the road haulage organisations, particulars of which have been published.

Contingent upon our proposals being adopted—and the road interests are prepared to support them—we shall co-operate actively with them for a new stage in transport history, the co-ordination of rates and services, and the spirit in which they have made this arrangement augurs well for a resolute joint attack upon this difficult problem.

"SQUARE DEAL" POINTS

Meanwhile we have already indicated ways in which you, as shareholders, can help us. When you discuss the railway companies' claim for a "Square Deal" with your friends be sure they understand the following points:—

The railways want to be free, like their competitors, to make charges by ordinary commercial methods.

They no longer possess a monopoly and old restrictions are no longer necessary.

They do not oppose regulation, provided it applies to all alike.

They have already undertaken that their charges shall be reasonable, and that the trader will have the right to appeal against any charge he thinks unreasonable—this is more than the trader has at present.

The small trader will have the same rights as the big one.

The railways desire true co-ordination of transport in the national interest. The "Square Deal" is a step towards co-ordination, which is impossible under present conditions.

The "Square Deal" does not restrict anyone else.

The need for action is urgent, not because of yesterday's traffics or to-morrow's, but because of the cumulative effect of many years' erosion.

THE PROSPECT

What can I now profitably say upon the prospects ahead with all the world guessing? The railway prospects depend upon economic prospects, and economic prospects are particularly dependent upon international political prospects, and these in turn are in the lap of several considerable gods.

Reports from the separate industries are varied and uncertain, and cannot be easily summarised, though there seems to be discernible on balance a little more optimism in the last two or three weeks. It would not be honest to put it any higher, and I can only say that your officers and staff who have responded so magnificently to every call made upon them in 1938 are ready to secure the best from all that may come in 1939.

The report and accounts were adopted.

On the question of the re-election of a director who was over 70 years of age a poll was demanded and the meeting adjourned for a fortnight.

TARRAN INDUSTRIES, LIMITED

NEW FINANCE SUCCESSFULLY ARRANGED

At an extraordinary general meeting of Tarran Industries, Limited, held, on the 1st instant, in London, Mr Robert G. Tarran, M.I.O.B., the chairman, said:—Arrangements have been made with the Federated Trust and Finance Corporation, Limited, to underwrite an issue of £175,000 5½ per cent. convertible registered redeemable notes. It has been decided, and we feel that you will be in full agreement, that this offer should be made to existing shareholders and not to the public, as the notes offer a good income return, redemption at a favourable premium, and the prospect of a substantial capital profit by virtue of the conversion rights.

£2,000,000 CONTRACTS

During the past year, owing to the shortage of working capital, a number of first-class contracts have had to be refused. There is ample new work available, and, having regard to the reputation and excellent organisation of your company, we shall, with the proposed new capital, be in a position to add considerably to our earning capacity. Even with our present capital we have contracts in progress and on hand totalling over £2,000,000.

You may have read in the Press that building activities are being curtailed, but I should like to emphasise that this applies principally to private and speculative building and does not apply to Government Departments, municipalities, and other public bodies, which do not publish a full programme of their intended operations. It is on these latter sources that we mainly rely for our business. I can readily visualise an expenditure of over £200,000,000 during the next five to ten years on public works and slum clearance, not including the huge trunk road development schemes which must go forward, in all of which we and our well-organised subsidiaries are excellently equipped to participate.

Your company has earned very satisfactory profits in the past, and with the proposed additional capital I look forward to the extension of our business, increasing profits, and the distribution of dividends.

Resolutions increasing the capital of the company and extending the borrowing powers of the directors were passed unanimously.

MANCHESTER SHIP CANAL COMPANY

RESULTS OF A DIFFICULT YEAR

The annual meeting of this company was held, on the 28th ultimo, at Milton Hall, Manchester, Sir Frederick J. West presiding.

The chairman, in the course of his speech, said:—In 1938 tonnage was less than the record figure of the previous year by nearly 650,000 tons, resulting in a reduction of receipts by over £100,000.

The fact that our receipts at the half-year showed a decrease of only £7,000 reflects the dislocation of trade consequent upon the European crisis.

Ship Canal tolls, ship dues and miscellaneous receipts showed a decrease of £101,914. Railway working, including Bridgewater railways, a decrease of £27,318 and the Bridgewater Canals a minor increase of £16, which accounts for a decrease of £129,216.

The decrease of £6,297 in the working of dock labour, less a difference of £1,683 in miscellaneous receipts and charges, brings the decrease to £133,830.

Expenditure in the working of the Ship Canal, including provisions, shows a decrease of £15,771. Income tax has to be £15,000 more, but there is a saving of £5,970 on loan interest.

After taking into account a small reduction of £251 in the amounts brought forward, these figures result in a net decrease of £127,340, which is the difference in the balance available for dividends and reserve, namely, £211,535, as against £338,875 in 1937.

It is proposed that there should be appropriated £35,000 to the reserve for contingencies and repairs and that out of the balance of £176,535 the following dividends, amounting to £154,658, should be paid:—3½ per cent. on the Manchester Ship Canal Corporation 3½ per cent. preference stock, 2 per cent. on the preference shares, 1 per cent. on the ordinary shares, carrying forward £21,877 to next year's accounts.

I come next to the decrease of £40,763 in the provisions. Abstracts (A) and (D) show amounts provided which total £60,320, as against £101,083 in 1937.

Referring to Abstract (A), in 1937 we added £14,000 to our fund for the renewal of dredging craft and plant. Although this fund is not nearly as strong as it should be (it stands now at £38,952—less than the cost of a modern dredger), we do not feel we can be as liberal as last year, and have added only £4,000 in 1938.

We have made no addition to the Dredging Craft Insurance Fund, as against £3,000 last year.

We have still to deal with the Knutsford Road swing bridge, and in 1937, you will remember, we provided £6,000, and have earmarked a similar amount in the 1938 accounts.

We have again, as last year, provided £5,000 towards the cost of the replacement of the railway swing bridge.

In Abstract (D) you will see that the provision made for craft renewals in 1938 is £40,685, as compared with £36,000.

We have again provided £36,000 for imminent craft renewals, and the balance of £4,685 has been taken to depreciation account.

On the receipts side, bonds amounting to £58,480 were repaid during the year. In the last few years we have repaid bonds amounting to £287,670 without recourse to further borrowing. This, as you will have seen, has resulted in a reduction in our annual interest charges.

The traffic through the port in the past twelve months reflects the trade of the country as a whole.

In seaborne traffic our imports have fallen by nearly 400,000 tons—from 5,099,797 to 4,704,530 tons—and our exports have fallen, more severely in proportion, by nearly 230,000 tons, from 1,728,768 to 1,499,250 tons—a drop in imports of nearly 8 per cent. and in exports of over 13 per cent.

The change in our industrial structure consequent upon the decline of the cotton industry from its once dominant position has made it increasingly important to foster minor industries in this area. This has been a policy to which your company has always subscribed and done its best to further.

Our Barton Dock Estate is a contribution to this policy. Last year I told you that a fine new cereal factory for Messrs Kellogg was being constructed there. I can now report it completed and in full production—I trust it may soon be followed by others.

Our sales of land this year exceed even those of last year. The principal sales have been in connection with the extension of oil installations at Stanlow and developments at the steel works at Irlam, enterprises with which our activities are closely associated.

As the conventional tests do not apply to-day I shall make no attempt to forecast our prospects in the current year. Improvement in productive enterprise and profitable exchange await increasing confidence, and we cannot blind ourselves to the fact that confidence, in its turn, awaits a radical change in international relations.

The report and accounts were adopted.

CLERICAL, MEDICAL & GENERAL LIFE ASSURANCE SOCIETY

GRATIFYING RESULTS

The annual meeting of the Clerical, Medical and General Life Assurance Society was held, on the 2nd instant, at 15 St. James's Square, London.

Sir Francis Smith (the chairman) said that the society in 1938 had issued 3,138 new policies for £2,665,301 net of reassurances, which compared with the 1937 figure of 3,142 policies assuring £2,852,848. The number of new policies issued was thus practically the same, a gratifying feature, whilst the fall in net new sums assured was only about 6½ per cent.

The whole of that reduction had occurred during the last quarter of the year, it being their experience that, after the September crisis, there was a widespread disinclination on the part of the public to enter into fresh financial commitments. In the circumstances he thought that the new business total was a creditable one, for the achievement of which they were much indebted to the continued goodwill of their agents, policy holders and other friends.

INTEREST AND INVESTMENTS

Another figure arising out of the transactions of the year to which he wished to draw attention was the average net rate of interest of £3 16s. 2d. per cent. earned upon the invested assets of the society. Although, with the investment and re-investment of growing funds, the net yield continued to show a falling tendency, the 1938 figure should, he thought, be regarded as not unsatisfactory, especially in view of the very high level of existing taxation, the fact that, as on previous occasions, a margin of their interest earnings had been applied to write down the book values of some of the assets—notably property investments—and, lastly, the short-dated character of the Society's investment policy.

The adoption of a short-dated policy naturally implied some sacrifice of yield but equally conferred the important advantage of increased stability of capital values. In that connection they would be interested to know that the shrinkage in capital value of the £4½ millions of Stock Exchange securities, during the depressing year of 1938, amounted to only 2½ per cent. of their book values, as compared with the typical shrinkage of 7 per cent. or more, disclosed by investment index results derived from groups which included longer-dated securities. Further, no individual security stood either above its cost price or above its middle market price, less accrued interest, on December 30, 1938. The resulting book values were materially lower in the aggregate than the market values, and the difference or appreciation, being excluded from the accounts, constituted a reserve margin held against possible future shrinkage of capital values. The net yield of £3 16s. 2d. per cent. afforded a very substantial margin over and above the society's net valuation interest basis of 2½ per cent.

UNRESTRICTED POLICIES

It had always been the practice of the society to issue its policies in as simple a form as possible in the knowledge, based upon long experience, that the absence of restrictive clauses or conditions added to the value and usefulness of the contract. With rare exceptions, accordingly, their existing policyholders were free to go where they wished and do what they would. It was, however, the duty of the directors to ensure, as far as possible, that the new policies to be issued, under the conditions of to-day, should be placed upon the books on the proper terms, and the question of the maintenance of that desirable practice of issuing world-wide and unconditional policies thereby arose. After careful consideration the directors had decided that the practice should be continued, subject to the reservation that the society was entitled to review the basis of issue of the very cheapest forms of policy—such as short-term assurances and their well-known "Supplementary Units"—where the life assurance risk assumed was at a maximum, in relation to the premium paid.

In the revised leaflets which came into force that day certain modifications had been introduced into the terms governing the issue of those two types of policy, which policies remained, however, unrestricted in form and, undoubtedly, good value for money. The directors felt it to be prudent and necessary, in present circumstances, to make those amendments which, they were satisfied, especially in the case of the "Units" policy, inflicted no trace of hardship upon intending policyholders. Indeed, they served, rather, to emphasise the outstanding attractions of that inexpensive and convenient method of obtaining life assurance protection, which protection, incidentally, never could have appeared more valuable than it had done recently and did to-day.

The report was unanimously adopted.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

FURTHER RECORD IN NEW BUSINESS

The one hundred and ninth annual general meeting of the National Mutual Life Assurance Society was held, on the 1st instant, at 39 King Street, London.

The Hon. Francis N. Curzon (the chairman) after paying a tribute to Mr J. M. Keynes, who had resigned the chairmanship and retired from the board owing to the state of his health, and expressing regret at the death of Mr Geoffrey Marks, whom he described as "in a very real sense our second founder," said that it was perhaps fitting in a society such as theirs, now in its one hundred and tenth year, that it was not often possible, in reviewing the events of a single year, to point to any notable feature of their business. Nevertheless, it was satisfactory to be able to record, especially in relation to such a year as that through which they had just passed, that the business had progressed satisfactorily.

Once again the volume of new assurances granted exceeded that of the preceding year and created another record. Not only so, but the ingredients of the total consisted preponderantly of what he might call "bread-and-butter" business—ordinary whole-life and endowment assurance policies. Those results had been achieved in spite of—or, perhaps, he should say, partly because of—a wholesale revision, mainly upward, of the premium rates last autumn, and were certainly a credit to their organisation.

On the other side of the account, the amount paid in claims somewhat exceeded the corresponding figure for 1937. Expenses and commissions were higher, but the ratio which they bore to premium income was less due to the large single premiums included in the latter. It was satisfactory to find that the earned net rate of interest, £3 18s. 1d. per cent., showed some increase in spite of the increase in income tax. That figure of £3 18s. 1d. per cent. they regarded as the more correct measure of the rate at which their funds had improved at interest, though the figure which was more comparable with that shown by other companies was £4 3s. 6d. per cent., which was calculated on the assurance funds alone.

CHANGES IN INVESTMENT

The classification of the assets in the balance sheet showed clearly the nature of the changes in investments which had taken place during the year. British Government securities had been substantially reduced and there had been an approximately corresponding increase in amounts deposited with building societies. That was in accordance with their desire in present circumstances to keep a larger than normal investment in the form of "shorts," and it had been achieved not only without loss of income, but even with a small improvement.

Holdings of preference shares had been considerably reduced; they had come to the conclusion that that class of investment, carrying none of the advantages of debentures or ordinary shares and most of their disadvantages, had figured rather too prominently of recent years in their portfolio, and that process of reduction had been carried further since the close of the year. Holdings of foreign government securities were now reduced to a negligible figure.

The year just ended coincided with the close of another biennial period. Speaking generally, the valuation had been made on the same basis as before. The cost of bonuses declared was well within the trading profits. The scale of bonuses—42s. 6d. per cent. compound for whole-life assurances and 37s. 6d. per cent. compound for endowment assurances—was in itself a high one, materially higher than the immediate pre-war distribution of 36s. per cent. compound in 1913. On the present occasion they had felt unable to continue the special additional bonuses which had been the feature of the two preceding distributions. These had never been represented to be as other than prosperity bonuses and the directors were confident that members would accept the present decision as being in their best interests. After two years of unprecedentedly violent depreciation in investment values, the Society entered upon another valuation period with actuarial reserves calculated on a stringent basis and with free resources equal to 13.5 per cent. of the Stock Exchange securities.

These were difficult times for them as investors, and no less so in their personal capacity as citizens. The growing evidence of the country's rapidly increasing strength was, in his judgment, the best guarantee not only that war would be averted, but that real peace would be gained, and the gradual spread of that belief would, he felt sure, enormously relieve the mind of the business man and dissipate exaggerated pessimism in financial circles. He was confident that Great Britain could and would play a decisive part in world affairs.

The report was unanimously adopted.

THE BRITISH ASSETS TRUST, LIMITED

SATISFACTORY RESULTS

MR A. W. ROBERTSON DURHAM'S ADDRESS

The forty-first ordinary general meeting of The British Assets Trust, Limited, was held in Edinburgh, on Wednesday, March 1st, Mr A. W. Robertson Durham, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—Before turning to the report and accounts for the past year, I regret to have to refer to the death of Mr James Ivory, which occurred on January 19th. Mr Ivory founded the company in 1898 and acted as manager since its inception. He was appointed a director in 1928 and during his long association with the company he always took the keenest interest in its affairs. His wide knowledge of investments and his wise counsel will be greatly missed. To fill the vacancy caused by his death the directors have appointed Mr Basil G. Ivory to a seat on the board.

YEAR'S RESULTS

You will see from the accounts that the gross income for the year amounted to £324,140, as against the figure of £344,531 for the previous year. These two figures, however, are not strictly comparable, as the figure for the past year includes all arrears of dividend and also some other dividends which might be considered to be of a non-recurring nature, amounting to a total of approximately £13,000 before deduction of income tax, whereas the figure for the previous year did not include any such extras. After deducting management and other expenses, income tax and N.D.C. as well as debenture interest and preference dividends, there remains £45,162 available for the ordinary stock, and we are again glad to be able to recommend a dividend for the year of 10 per cent. on this stock. This dividend will absorb £34,361, leaving a surplus for the year of £10,801, and you will see from the report that we have transferred £10,000 to the income reserve fund, raising this fund to £130,000, and increased the carry forward by the balance of £801.

On the payments side of the accounts the management expenses show practically no change, but interest on debenture stocks and terminable debentures, less tax, shows a decrease of approximately £8,000, due partly to the increased rate of income tax, but mainly owing to the reduction in the total amount of interest payable as a result of the average of our short-term indebtedness during the year having been substantially less than in the previous year. The higher rate of income tax as compared with the previous year more than made up for the reduced amount of income falling under assessment, and taxation shows an increase of about £1,200.

There is very little in the balance sheet, I think, that calls for much comment. The investments, after deduction of the capital reserve fund and contingent fund, amount to £7,033,834, an increase of £134,000 as compared with last year. As stated in the report, a valuation of these investments as at January 15, 1939, showed a depreciation of 10.32 per cent. on the balance sheet figure, and we have also given there a statement showing the distribution of the investments based on this valuation. This statement shows that the percentage of our funds invested in Great Britain had fallen during the year from 41 per cent. to 37 per cent., whereas that in the U.S.A. had risen from 34 per cent. to 40 per cent. This is due to the fact that the valuation of our British investments has fallen while our American investments have increased in value and not that we have remitted any additional funds to the U.S.A. during the period under review.

On the liabilities side of the balance sheet you will notice that the terminable debentures have been reduced by approximately £140,000, and loans have increased by £153,000, thereby showing a small net increase in our short-term indebtedness.

The past year, as you will know, was a very unsatisfactory one for all those engaged in the investment business, and I do not propose to give you a detailed review of the various crises and other disturbances which occurred throughout the year as you doubtless recollect them only too well. I think, however, that in all the circumstances it is satisfactory that our income, though showing a reduction as compared with the previous year, is still sufficient to enable us again to pay a dividend of 10 per cent. on the ordinary stock and in addition to transfer a further £10,000 to the income reserve fund, raising this fund to the substantial sum of £130,000.

CURRENT YEAR'S OUTLOOK

As regards the outlook for the current year, we have made our usual estimate of revenue, and, providing that nothing unforeseen happens, we hope that we shall be able to maintain the same dividend, but as so much at the present time depends on international politics it is extremely difficult to make any reliable forecast of future earnings.

The Chairman completed his remarks by moving the adoption of the report and accounts, and the payment of the dividend recommended therein.

The motion was seconded and adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

RECORD NUMBER OF NEW POLICIES

His Grace the Duke of Atholl, K.T., presided at the annual meeting held, on February 24th, in Edinburgh.

In moving the adoption of the report, he said that for the fourth consecutive year the company had issued new policies for over £2,000,000 of sums assured net, which satisfactory total had been spread over a larger number of policies than had ever been issued in one year before. There was an advance of about £100,000 in sums assured over the previous year. The net premium income for the year was £658,000, which included £34,000 of new single premiums. The renewal premium income was therefore £624,000, which was £18,000 over that of the previous year.

During the past year the company had earned an interest rate of £4 2s. 2d. per cent. after deduction of income tax. Claims by death were below those expected. The total outgo for claims, including endowment assurances matured by survivorship, was £554,000. Surrenders, including annuity surrenders, at £51,000 represented a normal figure. Commission and expenses had increased fractionally to 16.9 per cent. of the premium income. There had again been a substantial addition to the funds, the increase being £288,000, which brought the company very close to its ninth million. There had been no striking change in the balance-sheet items, and the amount of new mortgages and loans added to the investment portfolio was nearly equal to the sum added to the Stock Exchange securities.

FAVOURABLE NON-PROFIT RATES

Sir John Lorne MacLeod, chairman of the board of directors, in seconding, said that considering the forces which were influencing the future, life assurance, without profits, was still being offered in many quarters at premium rates which were on the low side. It was felt that some of the company's non-profit rates were out of line with present conditions, and steps were therefore being taken to adjust certain premiums for new entrants to slightly higher levels. In referring to the balance sheet, he said that in spite of the recession in capital values of securities which had occurred since 1936 the book values of investments were still considerably below current market values, so that the company had an undisclosed margin of security which was greatly to the benefit of policyholders.

The report was adopted and the recommendations therein contained approved. A final dividend of 2s. 9d. per share, less tax, was declared in respect of the past year, making with the interim dividend of 2s. 9d. per share, already paid, a total for the year of 5s. 6d. per share. An interim dividend of 2s. 9d. per share, less tax, payable on September 1, 1939, was also declared.

A vote of thanks to the branch officials, moved by Mr Wm. Lawson, was acknowledged by Mr J. L. Anderson, branch secretary, North Wales.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

KONONGO GOLD MINES, LIMITED

SATISFACTORY RESULTS IN DEPTH

The fifth ordinary general meeting of the Konongo Gold Mines, Limited, was held, on the 1st instant, at 20 Aldermanbury, London.

Mr Robert Annan, M.Inst.M.M. (the chairman), after dealing with the accounts, said: The ore treated during the year amounted to 92,018 tons, an increase of 25,777 tons over the previous year, the average rate of milling being 7,668 tons per month. As a result the output of gold at 39,970 oz. was increased in a slightly larger ratio than the tonnage milled. While the revenue from gold was higher by 1s. per ton there was a gratifying reduction of 2s. 3d. per ton in operating costs, of which 1s. 6d. represents the saving in mining and 8d. in treatment costs.

Development was continued at the same rate as in the previous year and has again given most satisfactory results. Fifty-three per cent. of the distance driven on reef was in payable ore and resulted in proving 200,496 tons of new ore during the year. As 92,018 tons were treated during the same period, the net gain is 108,478 tons and the total reserves at September 30th last amounted to 464,259 tons averaging 9.42 dwt. per ton. As this approaches four years' supply for the mill at a treatment rate of 10,000 tons per month, which we now hope to maintain, the position is very sound.

FURTHER PROGRESS IN CURRENT YEAR

Development on the Odumase Vein was particularly encouraging. The results of development since the end of the financial year have been equally encouraging.

In Akyenase Central, in the South Section and on the Odumase Vein, results at the deepest points yet opened on the respective veins are most satisfactory. Lateral development has also been in progress on the Odumase Vein, for which purpose the fourth level has been driven over 600 feet in each direction beyond the limits of the ore-shoot originally developed. It is gratifying to report that both ends recently encountered values. The south end has now been driven 35 feet in ore averaging 22 dwt. over 53 inches. In the north end results are inconclusive and, while it is far too early yet to estimate the importance of these discoveries, they are certainly very encouraging.

Since the end of the financial year the first section of the flotation plant was put into operation. The results have come up to our expectations and, in consequence, the entire plant will be changed over to flotation, when only the concentrate will require cyanide treatment, and work on this is now in progress. In the meantime the rate of treatment has been raised to 10,000 tons per month. Treating a normal grade of ore at 10,000 tons per month should raise our output to over 4,200 oz. per month as against 3,800 oz. for January at little additional cost except for taxation, thus giving promise of considerably enhanced profits in the near future.

You will appreciate that this policy of expansion cannot be carried out without a certain amount of capital expenditure and our programme has already taken us to the limit of our hoisting capacity and of our power supply. Expenditure in the past year was principally on the flotation plant and its accessories and the additional amount required to convert the entire plant to flotation is inconsiderable. To provide for power requirements a further diesel-electric generator set and a compressor have been ordered and will be delivered this year.

NEW VERTICAL SHAFT

We have decided to make a start on opening the mine in depth by sinking a new vertical shaft on the Odumase section to a depth of at least 2,000 feet. Owing to the dip of the veins this will serve both the Akyenase and Odumase veins in depth and will open up the southern section of the property, leaving the northern section for future consideration.

Assuming that we continue to treat 10,000 tons per month at the average grade of our ore reserves our profits should be sufficient to cover this expenditure and still maintain our present rate of dividend, but this leaves little margin for contingencies and obviously depends on our encountering no unforeseen setback. The other alternative is to issue to shareholders a block of our reserve shares at a price which, while attractive to them, would bring in sufficient to cover the major part of the expenditure, leaving most of the increased profit available for distribution. It is this latter of the increased profit available for distribution. It is this latter course that your directors have decided to adopt as soon as a favourable opportunity presents itself.

The report was unanimously adopted.

ANGLO-FRENCH EXPLORATION COMPANY, LIMITED

10 PER CENT. DIVIDEND MAINTAINED

The forty-ninth ordinary general meeting of the Anglo-French Exploration Company, Limited, was held, on the 1st instant, in London, Mr F. A. Robinson (the chairman) presiding.

The Chairman, in the course of his speech, said: Those of you who have studied the report and accounts will have seen that there is a general falling off in the figures. This can occasion no surprise in view of the political and other conditions which have prevailed throughout the year. The remarkable thing is that anyone can carry on business under such conditions, and, taking these into account, we have no reason to be dissatisfied with the figures we have laid before you.

We have maintained our dividend while many companies engaged in similar business have had to reduce theirs. That we have been able to do this is due to the conservative policy we have followed. During the last few years we have built up a reserve fund of £125,000, and we have done various other things which have strengthened the company. The consequence is that when we came to consider what dividend we should recommend we decided to give the shareholders as much as we could and to maintain the distribution of 10 per cent., which, as you know, is for the sixth time in succession—no bad record. Income tax is to be deducted at the rate of 4s. 2d. in the £1 instead of 5s. 6d., which is equal, I believe, to another $\frac{1}{2}$ per cent.

The valuation of the company's assets, less liabilities, shows a surplus of £305,457. The auditors state in their certificate that 99 per cent. of our holdings have quoted prices, which is a record. Shareholders will, I am sure, consider this very satisfactory.

GOLD MINING INDUSTRY IN 1938

The year 1938 was again one of progress and expansion. The ore crushed exceeded 54,000,000 tons. Gold recovered amounted to 12,156,629 fine ounces; working profit was £31,803,257, and the amount paid in dividends was £17,262,216. All these figures show advances upon the previous year.

In consequence of the rise in the price of gold the average grade of ore milled has been reduced from 6.47 dwt. in 1932 to 4.35 dwt. last year, and vast quantities of ore previously unpayable have now become payable. In 1937 the South African Government took nearly £14,000,000 in taxes and royalties; the figures for 1938 are not yet available, but I regret to say there is at present no indication of any reduction.

THE COMPANY'S INTERESTS

Apex (Trinidad) Oilfields, Limited, is one of our principal interests. The production of crude oil, for the company's year ended September 30th last, amounted to 562,942 tons, which was a record. The net profit was £315,554, and the dividends paid amounted to 40 per cent. Since the close of the company's financial year the production of oil to date has amounted to approximately 213,000 tons.

The net profit made by the Anglo-Burma Tin Company, Limited, for the year ended June 30, 1938, was £10,643. The output of tin concentrates was 477 tons. The dividend declared was 10 per cent. The output for the current year, i.e. from July 1, 1938, to the end of January, 1939, inclusive, was 328 tons, against 327 tons in the previous year. The new hydro-electric installation is practically complete and is about to be started up. When the plant gets into full operation we may expect to see a considerable increase in the returns.

We have again received satisfactory dividends from our other tin interests, which are mostly in the F.M.S. The developments at the Geevor are, I understand, excellent. As regards the tin trade generally, the buffer pool was re-established in June. The object of the buffer pool is to stabilise the price between £200 and £230 per ton, and it is understood that the pool will not sell below the latter figure. The production of tin in 1938 is estimated at 148,000 tons, which is a reduction of 60,000 tons on the year before. The heavy fall in consumption is due to a decline in the demand for tin plates and a reduction in the manufacture of motor cars. The visible stocks at the end of the year were reckoned at 29,494 tons, representing a consumption of about eleven weeks. The International Tin Committee have reduced the export quota from time to time, the present quota being 35 per cent.

As regards the future, it would be a bold man who would venture to prophesy. If the international political situation becomes more settled we shall, I believe, see a strong recovery.

The report and accounts were unanimously adopted.

Finance

GOVERNMENT RETURNS

For the week ended February 25, 1939, total ordinary revenue was £29,524,000, against ordinary expenditure of £9,128,000. Thus, excluding sinking fund allocations and Defence expenditure from loans, the deficit accrued since April 1st last is £46,945,000, against a deficit of £11,784,000 a year ago.

(Incorporated in the Colony of Hongkong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

ONE HUNDRED AND TWENTY-THIRD REPORT OF THE BOARD OF DIRECTORS
to the Ordinary Yearly General Meeting of Shareholders, held at the
Offices of The Hongkong and Shanghai Banking Corporation, 1 Queen's Road
Central, Hongkong, on Saturday, the 25th February, 1939, at 11.30 a.m.

GENTLEMEN:—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance Sheet for the year ending 31st December, 1938.

The net profits for the year, together with \$3,383,040.53, balance brought forward from the previous year, after paying all charges, deducting interest paid due, and making provision for bad and doubtful accounts and contingencies, amount to \$18,679,625.85.

The Directors recommend writing off Bank Premises Account the sum of \$1,000,000.

After deducting \$1,000,000, the Interim Dividend of £2 10s. 0d. per share, paid on 8th August last, viz.:—£400,000 at 1/2% = \$6,453,781.51, and remuneration to Directors, there remains for appropriation \$11,145,172.08, out of which the Directors recommend the payment of a final Dividend of $\frac{1}{3}$ per Share, viz., £480,000, which, at 1/2%, the rate of the day, will absorb \$7,744,537.82.

The Balance \$3,400,634.26 to be carried to New Profit and Loss Account.

The Accounts have been audited by Mr. JOHN FLEMING, C.A., and Mr. H. R. FORSYTH, C.A., who offer themselves for re-election.
T. E. PEARCE,
Hongkong, 8th February, 1939. *Chairman.*

JOHN FLEMING } Chartered Accountants.
H. R. FORSYTH }
Auditors.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(a) ~~Share~~ dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in £N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis
(h) Yield on 4½% basis. (i) Based on payment of 2½%. (j) Redemption at par, in year shown. (k) Yield worked on 2% basis. (l) Yield worked on 10% basis. (m) Yield worked on a 5½% basis. (n) Yield worked on a 14% basis. (o) Yield worked on 2.9225 basis.
(p) Yield based on 40% of coupon. † Free of Income Tax. (q) Yield based on 47% of coupon. (r) Yield on 2.9225 basis. (s) 1% paid free of income tax.

* Bid and offered prices are free of income tax. † Free of income tax. (i) Yield worked on 6% basis.
(m) Including bonus of 5% free of tax. (p) Annas per share. (q) 8½% paid free of income tax.
(r) Allowing for rate of exchange.

OIL OUTPUTS

British Controlled Oilfields, Ltd.—Total output, week ended February 11, 1939, 13,256 barrels. Total output week to February 18, 1939: 12,847 barrels.

Phoenix Oil and Transport Co., Ltd.—The output of crude oil of the Phoenix Group for January, 1939, was 45,787 tons.

Lobitos Oilfields, Ltd.—Output of Peruvian company for January, 1939, 28,060 tons.

Kern Oil Company, Ltd.—The total output of the company and its subsidiaries during January, 1939, was 221,530 barrels, or approximately 31,647 tons. As from January 10th the company's production in California has been further curtailed in accordance with the general voluntary restriction plan agreed to by the operators in that State.

Dacia Romano Petroleum Syndicate Ltd.—Gross output, January, 1939: Dacia 1,599 tons; Perimeter X, 2,505 tons; Starnapha, 527 tons.

Premier (Trinidad) Oilfields, Ltd.—Output six months to January 31st, 27,385 barrels, including January production of 7,017 barrels.

Trinidad Petroleum Development Co., Ltd.—Output for week ended February 11, 1939, 56,853 barrels. Output for week ended February 18, 1939: 54,140 barrels.

Venezuelan Oil Concessions, Ltd.—Total output, week ended February 18, 1939: 1,075,801 barrels.

industries making sales at home have arisen. With a wealth of figures, diagrams and examples, the present pattern of industrial development is clearly shown.

The trouble is that it is a disorderly and dangerous pattern. It is costly and wasteful, because social distress, the wastage of land, and the destruction of amenities are its consequences. Even from the viewpoint of the individual business man who makes profits under the present system, it is doubtful whether, with its chaotic consequences which throw heavy burdens upon rates and taxes, it is an outstandingly advantageous pattern. It is certainly not a "natural" pattern, as some adherents of *laissez-faire* doctrines still contend. The truth is, on the contrary, that the present state of affairs is largely due to official interferences; to tariffs and subsidies; to marketing schemes; to policies to protect particular industries; to the activities of local authorities armed with grants-in-aid; to road and housing development; and to the spread of public utilities.

There can be no question that the immediate problem is to co-ordinate and plan these State interferences, direct and indirect, so that their impact upon the nation's economy does social good in place of social harm. This in itself involves no new principle. It simply entails doing well and wisely what is now done piecemeal and inefficiently. But more than that is needed. It is clearly necessary to introduce fresh interferences by authority where public health, public wealth or public safety seems to require it. To say this is simply to ask for a much-needed extension of the State's present powers to abate proven nuisances.

It would be folly to call upon the Government to arrest the processes of economic change that are now well under way. It would be folly because these changes have already begotten great wealth, and the national income has lately been growing at least as rapidly as ever before. What is wanted is an earnest search for means to ease those processes. The State has already undertaken, in its social services, to cushion the consequences of economic dislocation and, in its fiscal policy, to protect basic industries from the wintriest blasts of competition and decline. What is needed now is that State policy in all these ways shall be single-minded and effective. At present the location of industry is blind. The right hand of the nation does not know what the left hand is doing.

Backed as it is by the most precise analysis yet made of the facts of industrial location, P.E.P.'s plan to end this state of indifference is worthy of the closest attention. It falls into two parts. In the first place it calls for methods of research and publicity by some central body which will open the eyes of industrialists, State departments and public corporations to the "locational" consequences of the policies they intend. In the second place it calls for the extension of the powers of financial inducement at present possessed by the Commissioners for the Special Areas, for their defined districts alone, to the whole country—at least *in posse*. Finally, a sanction is to be added: every proposal to establish or extend a factory will need to come before the Industrial Development Commission, proposed to carry out the tasks of research, publicity, advice and encouragement for licensing. The sanction of licensing will have two strictly limited purposes: to pass in continuous review the whole process of industrial extension, movement and transfer; and to provide a sort of State policeman to curb the activities of what P.E.P. has happily dubbed "economic pirates," whose readiness to sacrifice communal income to obtain a greater individual material income can no longer be tolerated. The big stick is to be kept firmly in the background; and the conclusion of the report that the first object of policy should be to ensure to existing industries a peaceful and prosperous existence will be widely and rightly welcomed. The measure of P.E.P.'s wisdom is the practicability of these proposals.

Not a few enthusiasts for national welfare will hold that P.E.P.'s investigators have been pusillanimous, and that the

temperate character of the policy they propose does not do justice to the disorderly evils their inquiry so starkly reveals. In so far as there are grounds for this disappointment, there is still time for the rumoured recalcitrant minority of the Royal Commission to fly the kite of root-and-branch reform more boldly. It certainly cannot be assumed that P.E.P.'s moderation will in fact be tenable: circumstances may yet compel a stronger line. Between 80 and 90 per cent. of licences, P.E.P. conjectures, will be mere formalities, but it remains to be seen whether the wholesale granting of letters of marque, supplemented by the high-pressure information service the Commission is to provide, can convert piracy into law-abidingness. P.E.P.'s plan has this virtue: it is immensely flexible, and, without any alteration in machinery, the big stick could be brought much more into the foreground.

It is not possible in the short space of a single article to pass upon all the practical details of P.E.P.'s plan. The proposed Commission would protect precious fertile land and indispensable amenities as jealously as the Office of Works preserves ancient monuments; it would try to forestall the advent of new Special Areas by encouraging the maximum regional diversification of industries, through trading estates and the creation of new institutions to furnish capital to new enterprise. The chief fruit of its labours would be the creation of a single national policy, informing private and public enterprise alike and correlating all departmental activities. That would indeed be a long stride forward.

But more even than a national policy is needed. All policies must be applied at a place, and the local machinery for planning is as important as the plan itself. However adequate present town planning powers may be in theory, they are ineffective in practice. P.E.P. proposes that a National Planning Commission should be set up, but the larger problem of the regional machinery of administration has had perforce to be left for report by yet another group of P.E.P.'s researchers. The present publication in consequence tells only half the story. It may be an exaggeration to say (the Ministry of Health avers that it is) that vested interests are too strong and the cost of compensation to landowners too great for the present local authorities to plan land-use effectively. It is certain that, for this purpose as for a host of other vital services, existing areas of local administration are too arbitrary and too small. The great "urban clusters" (a picturesque and euphonious term which P.E.P. proposes to substitute for the ugly "conurbation") of London, Birmingham, Merseyside and Tyneside cry out for regional organisation for defence against industrial, residential and traffic chaos, just as they call, with more success, for regional organisation against enemy attack in war-time.

One of the chief merits of P.E.P.'s inquiry is to establish the fact that the problem of industrial location is not an isolated segment of economic policy that can be chipped off for individual examination. Location can only be fundamentally altered after reforms as vast as a complete overhaul of central and local government, and a fundamental re-examination of the whole system of national and local taxation. The views of the Royal Commission about these aspects of their subject will be all-important. Like P.E.P. they must make the nation know that quick and decisive action is needed against evils that grow and sap our strength. Like P.E.P. again they must prove that such action can be taken without striking at the roots of our economy or drying up the springs of our national income. They must create a national attitude. But they must do more, if they are to seize their chance of pressing upon the Government the most important State document of our generation. They must cut across the tangle into which our systems of local finance and administration have fallen. They must call in the fiscal engineers to design a fresh machine to weave the nation's welfare.

Pharaoh's Plan

MR RUBLEE, the American who was appointed by the Evian Conference to the presidency of the Intergovernmental Committee set up to supervise the exodus of the Jews from Germany, has resigned his post. But he has not done so in failure. His mission was not a permanent one, but the temporary one of attempting to persuade the Nazis to undertake some small part of the responsibility for solving the appalling problem they have created. Mr Rublee was cast for the rôle of Moses, not that of Joshua. And he has succeeded in obtaining a few concessions from Pharaoh's hardness of heart.

The German Government's proposals, which have resulted from Mr Rublee's negotiations, first with Dr Schacht and subsequently with Dr Wohltat, if they are carried out, will mark a new stage in the refugee exodus. The outcome of the negotiations is not an agreement or contract between the Intergovernmental Committee and the German Government, which is as unwilling to accord the Committee official recognition, as it was to recognise the High Commissioner of the League of Nations. The proposals, therefore, have the form of a unilateral declaration, like the original Capitulations which the Ottoman Sultans in the sixteenth and seventeenth centuries granted to certain Christian States with regard to the treatment of the European Christians in their dominions. The German Government appears as the gracious donor, and the other countries and the Jews are the beneficiaries. No sanction or consideration is given for the observance of the proposals. It is expressly said that in case of "incidents" the arrangement may be withdrawn; and, of course, incidents may occur any day.

It is made clear, moreover, that the application of the new regime to German Jews depends on the early organisation by other Governments and by philanthropic bodies of a planned emigration, which will take out the whole of the young generation of German Jewry within a period of three to five years. The young generation of workers, which includes those between the ages of 18 and 45, is estimated to number about 160,000. The total Jewish population in Greater Germany, including Austria, is estimated at 500,000; but of these the majority are over 45. It is not clear whether the German Government envisages the liquidation in the period of five years of the whole community, including the older persons and the children, for whom the workers are to prepare homes in new countries. But it is held out that the older persons and the children will be permitted to remain in Germany for a time, while the workers are emigrating, and will not be harried. So far as they can find employment they may even be allowed to work, but with the stipulation that they will be separated from "Aryan" workers. The Jewish property still left in Germany will be used for their support, and, so far as it is inadequate, they will be entitled to public assistance.

One of the principal features of the proposals is in regard to the transfer of the emigrants' property. Until last year, Jews leaving Germany could take out in foreign exchange a small and steadily declining percentage of the property which remained to them when they had liquidated their affairs and had paid the emigration tax and other dues. The proportion fell rapidly to something under 10 per cent. But, since the middle of last year, even that concession has been withdrawn, and the emigrants have been unable to take out anything in foreign money or, more recently, any object of intrinsic value. The new proposals are that one-fourth part of the total value of the

remaining property of German Jews shall be pooled, with the consent of its owners, and used for the assistance of emigration. The fourth part is arrived at after the satisfaction of the penal fine imposed on the Jewish community last November, which amounted to a milliard of marks (£80 millions), and involved the impoverishment of a large part of the Jewish bourgeoisie. None of the fund thus created will be taken out in foreign exchange; it will be used for passages and transport, on the one hand, and for goods which may assist settlement, on the other. The goods will be partly personal effects and tools of trade which the emigrant will take with him—but not valuable objects—and partly capital goods, such as machinery, which will be useful in the new home. The Jewish property is to be liquidated by a Board of Trustees composed of three persons. For the purpose of assisting settlement in the countries of emigration, a corporation is to be established outside Germany.

What is contemplated is a modification of the Haavara system that has been applied by Palestine Jewish bodies in agreement with the German Government since 1934, with a view to assisting the settlement of Jews from Germany in Palestine. Under that system a Jew in Germany, wishing to settle in Palestine and possessing some property, has deposited in a German bank the value of £1,000, which is the qualification for a capitalist's certificate for Palestine. The sums deposited have been utilised by a trust for the purchase of German export goods for Palestine, and those goods have been marketed in Palestine by a publicly controlled corporation. The proceeds of sale are credited to the persons in Germany who made the deposit, subject to a deduction for the cost of the imported raw material in the goods, which goes to the German manufacturer. The rest has been available in foreign exchange to the depositors, and has enabled them to satisfy the requirements of the Palestine Government as to the capital which the immigrant "of independent means" must possess.

In the new proposals the goods exported from Germany are not to be sold, but are to be used by the emigrants for their settlement. Moreover, the funds for their purchase will be derived by a levy on German Jewish property. At the same time, the objection that was strongly felt to the original proposals put forward by Dr Schacht, involving the stimulation of German exports for trading purposes, is met by the provision that the goods taken from Germany by the emigrants will not be placed on the market, but used directly by them in their new homes.

The crux of the proposals is to find countries in which the larger ordered emigration may be settled. The German Government demands of the other Powers that they shall take an active part in solving the problem which it has created. The execution of the plan is dependent on some manifest proof of their co-operation. At the moment it is hard to see how it will be immediately forthcoming. Emigration is proceeding all the time from Germany and Austria to many countries. The largest section moves to the United States, where the annual quota accommodates about 28,000; another is distributed between various countries of South America; another small but ordered stream moves to Australia, and a less ordered and panic-stricken stream to Shanghai. But so far, apart from the proposals of the Dominican Republic, which held out the prospect of accepting 100,000 refugees, there has been no indication from the other countries of willingness to make a place for ordered settlement on any considerable scale. The British Government's offer of a territory in British Guiana for a large settlement, and of facilities for small groups to settle

in Northern Rhodesia and Kenya, are being investigated; but, with the best will in the world, scientific surveys must take some time, and the execution of colonisation plans in undeveloped countries requires longer time.

If there is to be a sincere effort of the German Government and the other Governments to attain a decent and ordered solution to the problem, time must be given. The pace of emigration must be slower at the beginning, while the examination of possibilities and the arrangements for the transfer of property are being carried through. It may grow steadily in the next years. Present indications in Germany are of an increased pressure to force out the Jews and the "non-aryans" by all manner of menaces, particu-

larly by the threat of incarceration or reincarceration in the concentration camps. That ruthless pressure during the past year led to a panic-stricken and unordered emigration from Austria, engendering refugee problems in all parts of the world. It was to check that hopeless exodus that the negotiations of Mr Rublee, on behalf of the Intergovernmental Committee, were particularly undertaken. It would be a dire calamity if the proposals of the Governments, including the German Government, were wrecked by a recrudescence of pressure before an honest opportunity had been given for carrying them out. What is needed is opposite action by the German and other Governments; relaxation by the one, acceleration by the others.

Negligence and Common Sense

(By an Insurance Correspondent)

A FEW weeks ago Lord Porter, a legal member of the House of Lords, delivered to the Insurance Institute of London an address on contributory negligence which has not yet been fully reported, but will, when it is published, be of great value to students both of accident insurance and of the law. Lord Porter, with his usual clarity, explained the principles of the law of negligence and the theoretical basis on which they rest, claiming for them that, while they are a mixture of philosophy, tradition, common law and statute, they include in their make-up a considerable proportion of common sense. Most barristers would probably agree with this inclusion of common sense in the recipe, but there are non-legal minds devoted to the practical application of the law in the settlement of claims who would not admit that common sense is given its proper place in this branch of law. After all, common sense in law only means giving the community a law that suits it, that holds the balance fairly between conflicting interests and is reasonably clear in its application. Taking that as a test, let us consider four recent cases, of which one has already been mentioned in *The Economist* and one has not yet become the subject of an action.

The first case is that of *Radcliffe v. Ribble Motor Services*, in which the House of Lords gave judgment last month. Radcliffe, the driver of a bus, stopped on the road, left the driving seat and (as he stood in the road) was killed by another bus belonging to the same owners. That the widow had a claim against the bus company was certain. But what was her claim? If it was for workmen's compensation it could not be more than £600. If for negligence, the sky was the limit, and the actual sum assessed as damages for negligence was £2,079—£1,479 more than workmen's compensation—a figure of the greatest importance to the poor widow.

Whether she received the £600 or the £2,079 turned solely on whether her husband and the driver of the other bus were at the moment of the smash legally in common employment. If they were in common employment she would get £600. If not she would get £2,079. The judge in the first court said they were not in common employment. The Court of Appeal said they were. The House of Lords said they were not, and restored the judgment of the first Court.

The arguments and the reasoning are far too subtle for a short analysis, but it is broadly true to say that the Lords held thus: if Radcliffe had been in the Ribble Motor Company's garage when he was run over and killed, the doctrine of common employment would have prevented his widow from recovering damages, because each of the men would then have been dependent on the skill with which the other drove his vehicle; but when they were

moving independently down a highway, neither was more interested in the skill of the other than in the skill of the hundred drivers whom he would naturally meet on the road. Killed by Jones in a garage, £600. Killed by Jones on a road, £2,079.

The second case is that of Miss Merle Oberon, the film star. She was being driven by her chauffeur when the car collided with another car, which, the Court held, was being negligently driven. Miss Oberon was so badly injured as to be unable to act for some time, and naturally she brought a suit against the driver of the other car. But, being well advised by her lawyers, she brought at the same time an action against her own chauffeur, in case it turned out that he was the negligent party. After hearing the evidence the Court held that her chauffeur was slightly negligent, but very much less so than the other driver, with whom the main fault lay. And on that finding the law declared that the whole of the damages must be paid—by whom? By Miss Oberon's chauffeur. Here again the reasoning is much too subtle to be dealt with shortly, but it turns on the doctrines of agency and contributory negligence, and it resulted in this situation: the slightly negligent chauffeur, if he was injured, had a claim, under the Workmen's Compensation Act, for 30s. a week against his mistress, and his mistress had a claim in common law against him for the whole of her damages; while the far more negligent driver of the other car got off scot-free. It would be interesting, in the light of this case, to know whether a housemaid who negligently leaves an electric iron on too long, and burns the house down, is liable for the results of the fire to the houseowner and by subrogation to his insurers; and also whether Miss Oberon's fellow actors who were thrown out of employment by Miss Oberon's injury had a claim against anybody.

The third case is that of the "Hurunui," a liner belonging to the New Zealand Shipping Company. The facts here are that a little drifter called the "Reclaim" was coming out of port with one or two other drifters when something went badly wrong with her navigation. What happened nobody will ever know, but as the result of her incredibly bad handling she collided so violently with the "Hurunui" that (it is said) she actually was sucked under the hull of the "Hurunui" and came up on the other side bottom upwards. All the crew of the "Reclaim" but one were drowned, and their dependants had to decide what action to take. If they had gone for the owners of the "Reclaim" they might, perhaps, have recovered for workmen's compensation, but on the doctrine of common employment it did not look as though they could possibly recover for negligence. What was to be done? That the "Reclaim's" bad navigation caused the collision was beyond doubt, but there was just a chance of the Court hold-

ing that the "Hurunui," too, did something wrong. They took the chance and won, because the judge held that, although the "Reclaim's" navigation was utterly wrong, and although in ordinary language the blame was entirely hers, it was, at the same time, possible that the collision could have been avoided, if the "Hurunui's" pilot had reversed his engines 60 seconds or so before he actually did reverse them. The collision was admittedly forced on to him, but, because of this last-minute possibility, the "Hurunui" had to indemnify all the dependants of the "Reclaim's" crew, while the owners of the so terribly negligent "Reclaim" escaped scot-free.

The last case is that of a man driving some near relations in his car. In an accident caused almost certainly by his bad driving all the relations are killed while he escapes. Their estates have an action for loss of expectation of life against him. They are sure to recover from his insurers. He will succeed now or later to their estates. The money paid to the third parties for his negligence will come to him.

There is nothing unusual or extraordinary in any of these four accidents. They are just the ordinary casualties that insurance companies and their lawyers have to handle every day of the week, but in three out of the four cases the law is obscure almost to the point of impenetrability,

and in not one of them can the results reached by the law be described as sensible or equitable or suitable to modern conditions. The patchwork of traditions and old principles and modern statutes which the lawyers have put together does not cover the facts of to-day, and the law of negligence is now in much the same plight that the commercial law was in half-way through the eighteenth century. Before Lord Mansfield went to the bench in 1756 the lawyers were clumsily adapting the principles of real property to commercial transactions, and making such a mess of it that merchants had all but given up coming to the Courts with their disputes. Lord Mansfield cut through all the traditional usages and declared that business must have the law it needs, a law which will lead to sensible results from ordinary transactions. So he established the commercial law of England and rehabilitated the Courts. Is it too much to ask for the same line to be taken now with the law of negligence? Is it not possible for the lawyers to produce a system in which the predominant element will be common sense instead of worn-out traditions, remembering that no man can safely sew a piece of new cloth on an old garment, and that when over-subtlety comes in at the door common sense flies out at the window?

The World's Navies

IMMEDIATELY after the issue of the British Navy Estimates for 1939 a number of comparisons were made in the Press between the leading fleets of the world. Most of these have been in tabular form, and have followed the simple and easy plan of adding together the numbers of existing ships and ships building and projected in each category.

Actually, this is a somewhat misleading method, since a definite proportion of the ships under construction for every country will be found to have been authorised for the replacement of obsolete tonnage. A sounder approach must take into consideration first of all the ships actually completed, leaving those under construction or projected to be counted separately.

Only seven Powers possess navies of first-class importance—the British Empire, the United States, Japan, France, Italy, Germany and Soviet Russia. To obtain an idea of the respective strength of each it is only necessary to compare the figures in each of the principal categories of fighting ships.

Capital ships (battleships and battle cruisers) remain the backbone of every fleet, nothing that has occurred since the end of the Great War having affected their status. Under the London Naval Treaty of 1936 and the Anglo-German and Anglo-Soviet Naval Agreements, capital ship displacement was originally restricted to 35,000 tons; but in view of reports that the only country which is not a party to one or other of these conventions—Japan—is building battleships bigger than this, the limit has since been raised to 45,000 tons.

In completed capital ships—battleships and battle cruisers—the comparison is as follows:—

Great Britain	- 15	U.S.A.	- 15	Japan	- 9
France	- 7	Italy	- 4	Germany	- 5
		U.S.S.R.	- 3		

Of the British total, only two units, the *Nelson* and *Rodney*, are of post-war design; but three of the older ships have undergone extensive modernisation, and three more are in process of reconstruction. No fewer than ten of the American ships have been similarly renovated, as have most of the Japanese. It is quite possible that the Japanese total should be 10 ships and not 9, since the demilitarised battleship *Hiei* is reported unofficially to have been

brought back into first-line condition. Two of the French battleships, the *Dunkerque* and *Strasbourg*, are new ships of 26,500 tons displacement, with a speed of over 30 knots. Of the remaining five, only three have been modernised at all, the other two being overdue for replacement. All four of the Italian ships have been taken in hand for complete reconstruction, and two are now in service again. Germany's total includes three so-called "pocket battleships" of 10,000 tons. These cannot fairly be compared with real battleships, being for practical purposes powerful armoured cruisers. But the remaining two are new 26,000-ton vessels, comparable with the French pair. Russia's three ships are of little value, being old and slow.

In aircraft carriers the comparison runs:—

Great Britain	- 7	U.S.A.	- 5	Japan	- 5
France	- 1	Italy	- Nil	Germany	- Nil
		U.S.S.R.	- Nil		

One of the British vessels, the *Argus*, is of small importance, having been converted into a tender for "Queen Bee" wireless controlled target aircraft. One of the Japanese ships is also of little value, being of small size and out-of-date type. The whole question of aircraft carrier design has not long emerged from the experimental stage, only three navies having had extensive experience with different types.

Cruisers are of greater importance to this country, with its world-wide commerce, than to any other. Figures compare thus:—

Great Britain	- 64	U.S.A.	- 35	Japan	- 39
France	- 22	Italy	- 21	Germany	- 6
		U.S.S.R.	- 5		

In the British total are 23 war-built cruisers which are over the age for replacement. Two of these have been converted into anti-aircraft ships, and six more are to be similarly utilised. The Japanese figure includes three ships of under 3,000 tons, comparable with a number of French ships of similar size which are rated as destroyers.

Under the somewhat confusing system of classification adopted in the London Naval Treaty, cruisers and destroyers, the functions of which sometimes overlap, were lumped together under the general heading of "light surface vessels." But every Navy continues to maintain the old distinction in its national rules for rating war-

ships. Taking this into consideration, destroyer totals to-day are:—

Great Britain - 174	U.S.A. - 206	Japan - 118
France - 58	Italy - 60	Germany - 22
	U.S.S.R. - 24	

It will be recalled that during the Great War the shortage of destroyers was acutely felt. In fact, right up to the Armistice there were never enough to meet requirements, though the total in service on the side of the Allies was equal to the combined strength in this category of all the above Powers to-day. Of the French total, 32 are vessels of between 2,300 and 2,900 tons. Over 30 of the British destroyers are being converted into escort vessels.

Excluding the small motor type, which is really of service only in narrow waters, the following are the totals of completed torpedo boats:—

Great Britain - Nil	U.S.A. - Nil	Japan - 12
France - 13	Italy - 60	Germany - 24
	U.S.S.R. - 15	

Average displacement of these vessels is in the neighbourhood of 600 tons. Most are fast craft of modern design.

In submarines comparative strengths are:—

Great Britain - 55	U.S.A. - 93	Japan - 60
France - 78	Italy - 102	Germany - 60
	U.S.S.R. - 139	

It should be noted that a dozen of the British submarines, and more than twice as many of the American, are of war design and construction, so must be reckoned as of limited value. This applies to only seven of the Italian vessels and a similar number of the Russians. All the French and Japanese craft are post-war; and the German U-boats were all built during the past four years, though 32 of them are small craft of 250 tons, with a limited radius of action. About 40 of the Soviet submarines are of equal dimensions.

So far for existing tonnage. It remains to deal with ships under construction. Battleships either building or authorised for laying down at an early date comprise:—

Great Britain - 9	U.S.A. - 6	Japan - 4
France - 4	Italy - 4	Germany - 4
	U.S.S.R. - 3?	

Five of the British total are ships of 35,000 tons, armed with 14-inch guns, due for completion during 1940-41. The other four, only two of which have so far been ordered, are to be of 40,000 tons, with 16-inch guns. All six of the American vessels are 35,000-tonners, to be armed with 16-inch guns, but only two of them have actually been begun. Authority is likely to be given shortly for the building of at least two more, of over 40,000 tons.

Nothing definite is known about the four Japanese, but it is believed that they will be ships of over 40,000 tons, armed with 16-inch guns, though not more than two are understood to have been laid down. Three of the four French ships have been started, and all four of the Italians. They are 35,000-ton ships, designed to mount 15-inch guns. This description also applies to the four German battleships, three of which are actually building, the fourth being due for commencement shortly. Nothing definite appears to have been settled about the Russian programme, and no keels have been laid, though it has been widely reported that these ships will be 35,000-tonners with 16-inch guns. Of the 34 capital ships listed above, the first to be completed should be two Italians, which are expected to be running their trials by the end of this year.

In aircraft carriers under construction or authorised, this country is well ahead of others, the figures being:—

Great Britain - 6	U.S.A. - 2	Japan - 2
France - 2	Italy - Nil	Germany - 2
	U.S.S.R. - 3	

All the British ships are understood to be of 23,000 tons, and orders have been placed for all but one of them. One of the Americans will be of 20,000 tons, the other of 14,700 tons. Both the Japanese are to be of 10,050 tons, and the two French of 18,000 tons. The two German air-

craft carriers will be of 19,250 tons. So far as is known, one Russian carrier will be of 9,000 tons and the other two of 12,000 tons.

In cruisers the position is as follows:—

Great Britain - 23	U.S.A. - 6	Japan - 5
France - 3	Italy - 12	Germany - 9
	U.S.S.R. - 5	

It should be noted that the number of British cruisers in hand is exactly the same as that overdue for replacement. Japanese and Russian figures are unofficial, no statistics being forthcoming from either country through Government channels. The twelve Italian cruisers are to be fast vessels of 3,362 tons; but five of the Germans will be 10,000-ton ships armed with 8-inch guns.

Destroyers in hand are distributed thus:—

Great Britain - 40	U.S.A. - 40	Japan - 10
France - 23	Italy - 7	Germany - 8
	U.S.S.R. - 6	

As before, the Japanese and Russian figures are unofficial. At least eight of the British destroyers, and most of the Japanese, are vessels of about 2,000 tons, and the Soviet ships are of 2,600 tons. None of those tabulated is less than 1,500 tons.

Submarine construction in the world compares as follows:—

Great Britain - 18	U.S.A. - 13	Japan - 8
France - 16	Italy - 20	Germany - 11
	U.S.S.R. - 25	

Nearly all these submarines are believed to be ocean-going craft of considerable size. In a sense, the construction of submarines may be regarded as provocative, since in the event of war the temptation to employ them ruthlessly against merchant vessels, irrespective of the protocol signed by all the Powers, might easily prove too strong to resist. Therefore every flotilla of submarines ordered is likely to cause an equal number of destroyers or patrol vessels to be put in hand by some other Power which considers itself threatened by a rival's programme of submarine construction.

To summarise these figures and present a complete picture of the relative strength of the world's navies is a task beyond the powers of mere numerical listing. Considerations of age (where existing ships are concerned), of date of completion (for ships under construction) of bases and strategical geography have all to be taken into account. But in general, it would seem that the British Navy is now the strongest in the world and is increasing its lead.

If war were to break out immediately, and if it involved (as we must assume it would involve) Britain and France on the one hand and Germany and Italy on the other, the superiority of the democracies in European waters would be very large. In reasonably modern and large capital ships they would have ten to four, and they would receive reinforcements within comparatively few months of six to four; and they would have a margin of seven older ships. In cruisers and destroyers the position is 318 to 112 (including three German "pocket battleships") completed and 89 to 36 building. In submarines, the Axis powers have a superiority, especially when age is taken into account, and, temporarily, in motor torpedo boats.

If Japan were to enter the war on the Axis side, without either Russia or the United States being involved, the numerical superiority of the democracies would be reduced, though it would still exist both in capital ships and in "light surface vessels." The size of the fleet that would have to be sent to the Far East, however, would depend on whether the attempt would be made to contest the mastery of the seas north of Singapore and on other such matters of high strategy. The probability is that Great Britain and France would still have a decisive naval superiority in Europe. In a few years' time, when the present British building programme is complete, that superiority will move out of the range of probability and become an established fact.

Topics of the Week

Britain's Land Forces.—Mr Hore-Belisha's remarkable exposition of the ways in which army development is being related to modern strategic needs, made in the Commons on Wednesday, left unanswered the question most people were asking. The Secretary for War stated that military conversations with France had not yet involved this country in any commitment to send an expeditionary force to the Continent in case of war. Yet, though he was still unable to measure the military liability we might have to incur overseas in war-time, Mr Hore-Belisha made it quite clear that the view that Britain's liabilities could or should be rigidly limited to home and Imperial needs was no longer held by the Government. "Prudent minds should be ready for any eventuality," he said; and he went on to show how the army was at present organised as an elastic and mobile striking force. The needs to be envisaged in war are three: Home defence, Imperial defence and expeditionary co-operation with our allies. Home defence, which had perforce to be left to the Navy in the last war, will in the next be carried out by seven Territorial divisions, an increase of two over the present anti-aircraft force. Imperial defence will be stiffened by the recruitment of local troops and based upon the concentration of strategic reserves in India and Palestine: here the yet unpublished report of the Chatfield Committee is the key document. After home and Imperial needs have been met, according to present calculations, six Regular and thirteen Territorial divisions will remain. These 19 divisions will be available as a Field Force for expeditionary use on the outbreak of war: 13 are infantry, three are motorised, and three are armoured.

Outstanding Needs.—On the whole, Mr Hore-Belisha's review of resources and strategic policy represented a notable step in the right direction. In case of need, we will be able to fulfil our inescapable obligation to assist our French allies on land, as well as at sea and in the air, at least in a small way; and a new nation-wide machinery for recruiting Territorials to the Field Force on the outbreak of hostilities has been devised. It cannot be too strongly urged, however, that this is only a beginning. Last year's strategic re-shuffling of Europe has made the necessity for large-scale military intervention on the Continent by British man-power inevitable in any future war; and, bearing in mind the quite reasonable possibility that home defence forces may in the event need to be strengthened by Regular units at present included in the potential Field Force, we cannot regard the earmarked nineteen divisions, say, 250,000 men, as a sufficient expeditionary force, even at the outset. At least ten divisions more, fully trained and fully equipped with modern armaments, would seem to represent the minimum margin of safety required. And, of the existing nineteen divisions, only the four Regular units will be fully armed in the immediate future: only they, for instance, are now fully issued with Bren guns. The Territorials are to have more money for buildings and training; they must be adequately supplied with modern armaments as well. The Government's mind may, indeed, be prepared for any eventuality. The army, as yet, is not.

Civil Defence.—The greatest contribution to public confidence made in recent months by the Ministers responsible for civil defence has been the abatement of departmental secrecy. Citizens can now discern a wide flung pattern of defence measures very different from the deficient patchwork so starkly shown up last September. It is now well-known, for instance, that plans for the regional co-ordination of local government over large areas have been completed, with regional officers to dovetail in the war-time administration of services with

committees of the existing authorities, who are not, of course, to be superseded. Last week, the Minister of Health issued a memorandum outlining the emergency organisation of hospital services through regional officers acting for the Ministry. This week, the Director of the Food (Defence Plans) Department of the Board of Trade explained a far-reaching scheme for the rationing of meat, bacon and ham, butter and margarine, cooking fats, sugar and other essential provisions and groceries in the event of war, through local Food Control Committees representing consumers and retailers. Schemes of this kind are signs that a national defence policy is now in being. Even so, there is no case yet for satisfaction. The Government's evacuation census has revealed voluntarily offered billeting accommodation for 1,110,000 adults and 2,250,000 children; but it has yet to be proved that more than the 50 small evacuation camps projected will not be needed to supplement house-billeting. The Government's widely-awaited decision on the provision of deep shelters has yet to come. Finally, there is still a shortage of the raw material of defence, personnel. In fact, according to Sir John Anderson, there is an all-round need for more volunteers, not confined to A.R.P. and allied services. In the active services themselves, the Regular Army, the Territorials and the Supplementary Army Reserve still need 20,000 more recruits each, and the Women's Territorials 13,000; the Navy needs skilled artificers; the Air Force wants 20,000 men. For civil defence the need is greater: the estimated deficiency of 250,000 men and women is too small; if specific local shortages in particular services are added up, 430,000 men and 125,000 women are still required. A new Central National Service Committee has been set up, and the tasks before it are great and urgent.

Currency War in China.—The latest phase of the "incident" in China is economic. For months past the Japanese have been trying to force on the population of the territories they occupy, especially in North China, the notes issued by their Army-born and Army-bolstered Federated Reserve Bank in Peiping. The currency in which these notes are issued is the yuan. The yuan has the same exchange value as the Japanese yen; in fact, for all practical purposes, it is the yen. The Chinese population has shown a stubborn preference for the dollars of the National Government and the yuan has been fighting a losing battle. The Japanese Army have now proclaimed new currency regulations, to come into force on March 10th, which impose a tight exchange control, in favour of the yuan. Exporters are to deposit their proceeds of sale in yuan, and

licences will be needed for importing. These licences will, of course, be granted most easily (some suspect exclusively) to those who have the good sense to import from Japan and Manchuria. An attempt is being made to force the foreign concession at Tientsin into this system. The opportunities for evasion and smuggling are legion and the institution of control is not calculated to enhance the attractiveness of the yuan. Whether by coincidence or by design, steps have been almost simultaneously taken to strengthen the Chinese dollar. The National Government have set up an Exchange Fund of the equivalent of £10 millions. Half of this sum is to be subscribed by two British banks, the Hongkong and Shanghai Banking Corporation and the Chartered Bank of India, Australia and China, and the banks are to be guaranteed against loss by the British Government. These funds will not, of course, be directly available for purchases of munitions, and Japan's interest in the stability of the dollar has been emphasised often enough for it to be possible to argue with some plausibility that the British move is not anti-Japanese. But it remains true that it will be welcome in China and unwelcome in Japan and that China's chances in the currency war are improved.

Meanwhile, the war goes on on its various fronts. The main Japanese attack is concentrated on the Han River, north of Hankow, which is reported to have been crossed on Tuesday of this week after intensive bombardment. In Shanghai the firmness of the Municipal Settlement has succeeded in securing continued Japanese recognition of the principle that the Settlement's own police should be left in control in the area under the Council's jurisdiction. The chief centre of foreign anxiety at the moment is Tientsin, where the Japanese have isolated the concessions with a line of live-wire fencing. They are evidently determined to ruin the trade of the treaty ports, even if they leave the foreigners physically unmolested.

The Hussein—McMahon Correspondence.—The correspondence, running from July 14, 1915, to March 10, 1916, between the Sherif Hussein of Mecca and the then British High Commissioner at Cairo, Sir Henry McMahon, has now been published as a White Paper (Misc. No. 3, Cmd. 5957, 1939). The exchange of letters was made in Arabic on both sides, and in the now published version the original English drafts of Sir H. McMahon's letters and the original English translations of the Sherif's letters have been revised in order to bring them into closer correspondence with the authoritative Arabic texts. The bearing of this correspondence on the present problem in Palestine turns upon Sir H. McMahon's letter of the October 24, 1915, in which he accepts, with certain specified exceptions, the geographical bounds within which the Sherif, in his letter of July 14, 1915, had asked Great Britain to acknowledge the independence of the Arab countries—as a condition of the Arabs taking up arms on Great Britain's side against the Turks. The Sherif's original demand included Mersina and Adana in Cilicia, and everything except Aden south of a line running eastward from these two places, along latitude 37 degrees, till it reached the Persian frontier. Sir H. McMahon excepted "the two districts of Mersina and Alexandretta and portions of Syria lying to the west of the districts of Damascus, Homs, Hama and Aleppo"—"without prejudice to existing British treaties with Arab chiefs" (e.g. the Gulf chiefs, the Sultan of Oman, and Ibn Saud). The British undertakings were made specific in respect of "regions lying within these frontiers wherein Great Britain is free to act without detriment to the interests of her ally France." The British official thesis hitherto has been that this formula excepted the whole of Palestine west of the Jordan, on the ground that the district of Damascus meant the Ottoman province (*vilayet*) of Damascus, which included the whole of what is now Transjordan, down to Akaba inclusive, and thus flanked the whole of Palestine. The Arabs have always contended that "district" was used in this formula in the unofficial sense of "neighbourhood" or "entourage," on the ground that the *vilayet* of Damascus included the districts

of Homs and Hama, and the *vilayet* of Aleppo the district of Alexandretta—all of which districts are separately enumerated by Sir H. McMahon. On this showing, the whole of Palestine would be included in the area in respect of which the Arab demand was accepted by Great Britain.

The wording is—perhaps deliberately—obscure. But if it was intended to exclude Palestine from the Arab kingdom, the least that can be said is that the drafting was culpably lax. The more obvious meaning of the words would be more in accordance with the Arab claim. This conclusion is supported by the date of the letter. For in October, 1915, there was no question of making any provision for the Jews in Palestine. Any such idea, in fact, was vetoed by the Czar and it was only eighteen months later, after the Russian Revolution, that the Balfour Declaration could be made. The internal evidence goes to show that the only non-Arab interest that the British Government were interested in, in 1915, to protect was that of France in Northern Syria. The bearing of these letters on the present Palestine problem, however, is another matter.

Mr Gandhi Breaks Fast.—On Tuesday last, when Mr Gandhi took a sip of orange juice, there ended an extraordinary example of the non-violent *Kraftprobe*. The Mahatma, without a single gun to back his diplomacy, presented his ultimatum and mobilised his forces of personal prestige and will-power. He was as successful as any Hitler. It is true that the terms on which he was persuaded to demobilise were not those that he had stipulated when he began his fast unto death. But this is likely to prove as deceptive as the seeming fact that the Munich Conference gave Herr Hitler less than he had demanded at Godesberg. Not only has the Thakor Saheb of Rajkot agreed to set up a committee (including Congress nominees) to consider reforms in the State in accordance with his original undertakings, and to accept the judgment of the Federal Chief Justice of India upon the interpretation of his pledges; much more important, Mr Gandhi's demonstration secured the direct intervention of the Viceroy, as agent of the Paramount Power. Although Lord Linlithgow has shown the utmost circumspection in avoiding entanglement in the merits of the Rajkot dispute itself, a momentous precedent has thus been set up. Mr Gandhi, furthermore, has accepted His Excellency's invitation to come to Delhi for a personal conversation, which will no doubt cover the whole field of reform in the States; this will be the first meeting between the two most powerful individual men in India. Thus one more step, and a very notable one, has been taken in the direction of a more positive and constructive British policy towards the advance of democracy in the Indian States, a policy that is manifestly required by the necessities of the times.

"Square Deal" in Sight.—After more than three months of protracted negotiations, the railways are at last within sight of a modified version of their "Square Deal" proposals. As a result of recent conversations between the railways and trading interests the Transport Advisory Council should be able in the near future to submit an agreed report to the Minister. Two weeks ago—as we pointed out—separate reports seemed inevitable, since a complete deadlock appeared to have been reached in the negotiations between the railways and the traders. The traders were insisting upon maximum rates, and a definition of the word "unreasonable" (as it was to be interpreted by the rates tribunal when considering complaints) as a condition of their support for the railways' Bill. For their part, the railways were unwilling to make further concessions. In the last few days, however, both sides have compromised, with the result that an agreed memorandum has been drafted for signature in the near future. The chief point in this memorandum is that the railways agree that, in determining whether a charge is reasonable or not, the tribunal shall have regard to a number of specified considerations. The traders, however, point out that the fears they originally expressed to the special committee of the T.A.C. have been aggravated by the Road-Rail Agreement,

and that whilst they are in favour of any step designed to bring about that co-ordination of all forms of transport, they had not envisaged what they describe as a "transport trust." Their fears centre upon a possible lack of flexibility of rates which they anticipate may result from the Road-Rail Agreement, on which they still desire safeguards. Hitherto, the railways could, if they chose, quote an exceptional rate up to 40 per cent. below the standard without applying to the rates tribunal, but under the Road-Rail Agreement they will be tied to a rate, until it can be varied through machinery that (the traders fear) may operate too slowly. If the agreement should work out in this way, the traders' reservation is reasonable. Agreement or compromise has now been reached with all interests represented on the T.A.C. with the exception of coal—and even here it is still believed that, despite the Mining Association's memorandum which sets out no less than sixteen safeguards for tied traffic as the condition of its support, a last-minute agreement may be reached. The committee of the T.A.C. is meeting each day next week, except on Monday, and the report is, therefore, expected to be in the Minister's hands very shortly.

Rail Wages and Mine Hours.—At a time when, one after another, industrial interests are approaching the Government, cap in hand, or *cap à pied*, according to the temperament of their trades, to demand assistance, it is scarcely to be supposed that industry's workpeople, who have many admitted grievances to unfold, will be backward in coming forward. Square deals, as the current jargon goes, are in the air; and, in the labour world, few men have a better case for amelioration of their lot than the lower-paid railwaymen and the coal-miners whose subterranean existence is constantly hazardous. Unhappily, economic decisions cannot go by deserts—which is, incidentally, as true of industries as of trade unions. The simple fact that at this moment the railway companies cannot afford to institute the minimum weekly wage of 50s. demanded by the men or the coal industry to lop off daily hours the half-hour that was added to the seven-hour day in 1926 has been underlined in the last few days. A week ago the Commons talked out a Bill to restore the seven-hour day in mining; and the Railway Staff National Tribunal have rejected, almost entirely, claims for more pay and improved conditions of work that would have added £6,869,000 at least to yearly working costs. It is true that the coal-mining industry has consistently shown credit balances since 1935, but it has only done so by means of controlled and higher prices, and further increases in the country's fuel bill would gravely hamper business recovery. It is true, too, that the railways had net revenues of £29 millions last year, but that was not enough to meet their obligations and reasonable capital needs; costs have risen and receipts and net revenue are still falling. Indeed, the wages award of 1937, which added some £3 millions to railway costs, was based upon an estimated trend of revenues that has been far from realised; and, so far from the railwaymen winning concessions, the companies may logically call for an abatement of labour charges. This, however, is not likely to happen. The Tribunal made it quite clear that a great part of railway wages was set too low for human needs and contemporary standards. Current balance sheets cannot have the last word on railway wages or miners' hours. Both industries have an obligation to the community not to fall behind in the standards of their workpeople; and a primary objective of the transport co-ordination that is in train and of the mining reorganisation that is still being resisted should be to meet the just demands of the men.

Official Secrets.—Enthusiasts for the maintenance of the maximum amount of civil liberty for individuals that is consonant with the safety of the State are still not satisfied with the Government's proposals to amend the Official Secrets Acts. The grounds on which the Acts have been exposed to a wide-flung fire of criticism are two. In the first place, Section 6 of the 1920 Act made it

an offence for witnesses, as well as suspects to refuse to answer inquiries made by the police in the course of investigations under the Acts. In the Government's new Bill, which has been in Committee in the Lords this week, this statutory offence, which in effect furnishes the police and the Executive with special powers, will be confined to cases of espionage. So far so good. The critics' second grievance goes further, and is not met by the Home Secretary's new measure. Briefly their case is this: the special powers given in the 1920 Act have been limited to official secrets obtained for the purpose of spying; but it is still possible for the definition of official secrets to be drawn sufficiently widely by the powers-that-be to include far more than information of proven military importance. Under Section 2 of the 1911 Act information which may not be wrongfully communicated includes

any sketch, plan, model, article, note, document or information which relates to or is used in a prohibited place (i.e. defence works, arsenals, factories, dockyards, camps, ships, telegraph or signal stations or offices belonging to His Majesty) . . . or which has been made or obtained in contravention of this Act . . . or which has been entrusted in confidence, etc.

The scope of this clause is indeed far-reaching. The new Act, while reserving special powers of interrogation for cases of espionage, will still permit the term official secrets to be employed to cover information which has not the remotest connection with spying. Journalists and editors, though they will no longer be subject to punishment for refusing to answer the police questions, will still stand in uncertain danger of prosecution for publishing facts that turn out to be "official secrets," and the case for careful consideration of what an official secret really is cannot be denied. Section 2 of the 1911 Act might well be drafted more closely. Nevertheless, the fact that official secrets must, by their very nature, be defined *ad hoc* is unfortunately inescapable, and not even the most complete procedure for the preservation of civil freedom can overcome the necessarily authoritarian implications of *raison d'état*, though they can, and should, be reduced to a minimum.

London's Budget.—On Tuesday last the London County Council voted its annual budget for 1939–40. That such huge sums as £36 millions on maintenance and £15½ millions on capital were passed without more criticism or comment is one further proof of public acquiescence, if not approval, in the huge development of this body during the past 50 years. In 1889, gross annual maintenance costs were £2½ millions, and ratepayers grumbled at 1s. 0½d. in the £; this year the county rate is to continue unchanged at 7s. 9½d. This does not mean that maintenance expenditure is not up; its secular upward march has not been stayed; estimated outlay is over £720,000 higher—equivalent to a rate of 3d. in the £. The raising of the rate to meet this has been obviated

primarily by the growth of London's rateable value, for, even unchanged, rates are anticipated to yield £24,113,000 in 1939-40 against £23,786,000 in the current year. Government grants are up £66,440 at £10,366,887, and the Council's balances at the bank may be drawn on to the extent of nearly £1½ millions. Of current revenue, however, £1,000,000 is being applied to capital expenditure. During the six years of its rule, the present council will thus have allocated £4,825,000 out of revenue (compared with £2,715,405 in the previous five years from 1929, when the policy was commenced), which is truly conservative finance (even if it was adopted from the former Socialist government of Vienna). As a result of it, total loan charges in 1939-40 will be £420,000 less. The total capital expenditure to be included in the annual Money Bill to Parliament—this exceptional way, in which London suffers central government control—is reduced from £16,475,115 to £15,768,440. The net debt of the Council has increased during the current year by £3,715,885 to £87,503,155, the whole of the increase being accounted for by the housing activities of the Council. As these are continuing at the maximum rate which the London building trade can stand, it is possible that the Council will shortly be raising further capital both in the form of a medium-term loan and also in the form of bills.

Ending the Spanish War.—The Spanish war, as far as the fighting goes, is at last becoming Spain's business only. This week's events, the fall of Dr Negrin and those loyal to him, the desertion of part of the Republican fleet, the Communist uprising in Madrid against Colonel Casado's military junta, and General Franco's preparations for the final assault if surrender does not come before it, have passed before the world with the more or less ungenerous comments of those who stand and wait. Outside the arena the spectators and the traders and the diplomats chaffer and dispute over which of them shall have the greatest share of the victor's favour; the British and French Ambassadors arrive next week in Burgos, the Italians trumpet loud and somewhat troubled defiance, and only the Germans, with their Hisma agency selecting the pick and their hands on the Biscayan mineral deposits, are comparatively quiet; but, inside Spain, a war between Spaniards is nearing the bitter end. How bitter that may be is reflected in the internecine fury which, even at Madrid's eleventh hour, is not dissolved in common alliance against an enemy whose mercy promises thereby to become even more strained than it is already. But Republican Spain is breaking up; the interest of outsiders is more and more in General Franco's Spain. The Italians, it is not forgotten, are still in Majorca and may insist that their troops in the Peninsula be given a place of honour in the assault of Madrid; how much liberty have they left General Franco to treat with Britain and France? How far can he go without calling up against himself the enmity of the Falange, well-organised and violently pro-Fascist? How far does he himself wish to go? There are no answers to these questions yet, though the assumption of belligerent rights in applying a blockade to the coast of Central Spain without a word of permission from Britain or France, is an interesting pointer. General Franco has made Prime Minister Señor Serrano Suñer, his brother-in-law, who will need all the astuteness with which he is popularly accredited to satisfy, with one hand, the demands of General Pétain and Sir Maurice Peterson and, with the other, the commands of their Italian and German counterparts.

The Polish-Roumanian Alliance.—When M. Gafencu, the Roumanian Foreign Minister, visited Colonel Beck at Warsaw this week he went almost directly from the meeting of the Balkan Entente. The discussions at Bucarest are known to have gone far beyond merely anti-Bulgarian business, and even to have considered inviting Bulgaria to join the Entente as a means, presumably, of cementing the Balkans against German diplomatic intervention. In talking over Polish foreign

policy since Munich, with its move towards the U.S.S.R. and the disappointed partnership with Hungary which failed to wrest Ruthenia from the Czecho-Slovak Republic, M. Gafencu and Colonel Beck will scarcely have failed to settle differences of opinion which arose at that time. It is possible—though not very probable—that M. Gafencu withdrew Roumania's objections to the Hungarian annexation of Ruthenia which lies next door to Roumania and her Hungarian minority, and that Colonel Beck, for his part, explained his latest moves. But the core of their discussions must have been in the plans which Germany has for Eastern Europe; and it is neither wishful thinking, nor a misunderstanding of the essential opportunism which must actuate Eastern European Governments, to say that the Polish-Roumanian alliance (like the Balkan Entente) has of late years changed in the spirit, if not in the letter, of its text. Primarily it is an anti-Soviet alliance dating from the days when Poland feared revenge for Pilsudski's victories and Roumania the making of claims on Bessarabia. But to-day both statesmen know that the chief danger comes not from the east but from the west. There remains only a difference of opinion on which is going to be the winning side: Colonel Beck is thought to back Herr Hitler, and King Carol, and being farther away he can afford a bolder policy, to favour the Franco-British interest. The trend in Roumania marked by the suppression of the Iron Guard, a trend away from Germany, has been reinforced this week by the appointment of M. Calinescu to succeed the Patriarch Miron Cristea, who has died, as Prime Minister. The new Prime Minister showed his ability as an administrator when, at the Ministry of the Interior, he was instrumental in dealing with the Iron Guard. All this does not mean to say that either country, if it can help it, will take part in a future war; they both want to be neutral but, at the same time, neither can afford to be in the victor's bad books. To the extent that his moves during and since Munich have done much to enhance Roumania's standing among the Eastern and Balkan States, King Carol seems to be the better diplomat: and if the British Government's interest still extends to his part of the world, it is largely because King Carol has welcomed that interest both by word and deed. British re-armament and an invitation to London may help Colonel Beck to emulate his ally.

* * *

Castles in Slovakia.—In their relations with the Czechs since Czecho-Slovakia became a federal republic, the Slovaks have been trying to have their cake and eat it at the same time. They have been calling for subsidies out of the (comparatively) abundant revenues of Bohemia and Moravia; but they have also been demanding their independence. The last few weeks have brought rumours of direct negotiation between Bratislava and Berlin; there was talk of a Zollverein, or at least of an intimate economic co-operation which would not include the Czechs, and certain elements in the Slovak Government are understood to have put forward demands for complete autonomy. At this point the Czechs have put their foot down; they have told the Slovaks that they will get no more money from Prague unless they sincerely accept the unity of the Federal Republic; and, for the moment, the Slovaks have capitulated to this ultimatum. The explanation is simple enough. With its valuable *potentiel* in food production and its geographical position on the south-western axis between Germany and the Balkans, Slovakia represents to Germany a prize that is worth the winning. Ever since Munich, German agents have been active in Slovakia (as in Ruthenia, too), and from the course of events there it is clear that the Slovaks in power are quite ready to do all that the Germans wish. This is the more so because M. Sidor, the power behind Mgr. Tiso's Government, has changed from his former view that Slovakia would be best served in its fight for independence (a fantastic dream) by a Polish alliance, and now favours full co-operation with Berlin. Since M. Sidor commands the Hlinka Guards, his political power in the province is unchallenged. The Germans, however, have no intention of being saddled with a tract of territory

which might become a battlefield and is, in any case, financially derelict; they much prefer that the Czechs should continue to pay the needed administrative expenses.

* * *

Once again, it is the Czechs who pay. They have no option; just as they have no option but to hand over to Germany 23 per cent. of their gold reserve. The poverty of the province can be gauged from the fact that in 1936 the Slovaks provided about one-seventh of all State taxes; with the loss of Kosice and the valuable riparian plain even this fraction must now be much reduced. The best agricultural land has passed into Hungarian hands; of what remains much is only primitively cultivated. Mineral deposits are sparsely developed; in 1936, for instance, Slovakia produced half a million tons of lignite and 700,000 quintals of crude mineral oil. Bratislava, indeed, is scarcely worth a trespass. Something similar has occurred at Chust, Ruthenia's village capital. A short time ago the Federal Government appointed General Prchala to the job of hamstringing the anti-Polish activities of "Sitch," the Ukrainian nationalist organisation. A Ruthenian minister, M. Revay, has now resigned. He is a leader of "Sitch," and regards all Czech influence as harmful to his cause; which, indeed, it is. With Ruthenia under their hand as a threat ready for Poland at an appropriate moment, the Germans are well enough content that the Czechs shall have the trouble and expense of keeping the peace.

The Belgian Cabinet Crisis Continues.—Last week's chronicle of the Belgian political crisis ended with M. Soudan's acceptance of the unenviable task of trying to form a Government in succession to M. Pierlot's short-lived administration. On Friday of last week M. Soudan, in his turn, gave up the attempt, when a new formula, suggested by him, for settling the "Maertens Affair," was rejected by the Liberals. Since then, M. Max, the Burgomaster of Brussels, has been invited by the King to take up the burden, and has declined, and M. Pierlot, to whom the King has since turned once again, has proved unwilling to make a second attempt. The latest news is that Parliament is to be dissolved. There is no bright prospect in a general election in which a conflict over financial issues will be complicated by the "Maertens Affair," in which the Flemish-Walloon conflict of nationalities will be envenomed by memories of Flemish "Activism" during the war. There must be few Flemings who are seriously prepared to contemplate accepting a German yoke in exchange for the very slight inconveniences and irritations of their present somewhat uneasy partnership with their French-speaking fellow-citizens. Equally, there must be few Walloons who are determined to ride the high horse today at the risk of jeopardising their country's independence. But whatever fundamental moderation there may be in the Belgian character seems to disappear when the political parties come face to face with each other. King Leopold, in a remarkable letter, has expressed his irritation with the politicians, and there will be many to agree with him. The mood of irritation may be salutary—or dangerous.

* * *

Guns v. Butter in Australia.—Australia has been passing through a Cabinet crisis which is of much more than local significance, not only because the personalities and political colour of the Canberra Government affect many countries besides Australia, but also because the crisis arose from the almost universal struggle between rearmament and social services. Last year the Australian Parliament passed a National Health Insurance Act, but delayed its entry into force until next September. The Country Party, which shares the Government coalition with the United Australia Party, only supported this Act with reluctance, believing that it imposed burdens on the farmers without giving them compensating benefits. They are now disposed to support its continuance only if the benefits are extended to small farmers and others working on their own account, as well as to the dependants of

injured persons. The original Act had been estimated to cost £1,900,000 in its first full year, and there are many who thought even this burden too high for an armament-swollen Budget. But the Country Party's amendments would cost several more millions. Last December the three-year programme of arms expenditure, announced in the previous March, was raised from £49 millions to £63 millions, and though part of this expenditure is to be met out of borrowings, in London or in Australia, part will fall on the revenue. It is clearly not a time when very heavy new social service commitments can be lightly entered into. On the other hand, the balance of the parties in Australia is as delicate as that of the public finances. The Government's margin at the last election was of the slenderest, and its history since has been chequered. One section of the United Australia Party, led by Mr Menzies, the Attorney-General, contends that to drop the Act now would be a breach of faith and political suicide. The differences have been temporarily bridged by the promise of further inquiry. But neither the political nor the financial problem has been solved.

* * *

Arms "Profiteering."—It is salutary that public opinion should insist that undue profits are not made by companies engaged in the armament industries, and the debate on the Defence Loan Bill at the beginning of last week served a useful purpose in ventilating this view. To define what "reasonable" profits are, however, is not so easy, and it is evident from the course of the debate that several members entertain misconceptions even regarding a proper definition of profits. One spokesman gave the authority of *The Economist* for a statement (as reported in Hansard) that "60 per cent. of the money subscribed for all kinds of armaments production went to profiteers." At another point, he attributed a statement to *The Economist* that only 38 per cent. of money subscribed to armaments companies was used for production and that 62 per cent. was "sheer profit." These figures appear to be based on an analysis of rearmament boom finance which appeared in *The Economist* of October 10, 1936, in the course of which it was stated that the vendors of twenty businesses examined received 62½ per cent. of the total purchase considerations in cash and took 37½ per cent. in shares. The 62½ per cent. cash payment, of course, does not represent "sheer profit." To determine whether formation profits were excessive it would be necessary to compare the value of assets acquired by the twenty new companies with the total purchase prices paid. Even this apparent profit would include a payment for the capitalisation of expected profits in the future. And it would throw no light whatever upon the reasonableness of current profit margins on arms production.

WILLS & TRUSTS

In acting as an executor or trustee, the Westminster Bank aims at putting itself in the position of a private trustee. It is therefore its practice to employ the family solicitor, if there is one, or any other solicitor the client may name; by such means the Bank succeeds in combining domestic tradition with business efficiency. A book showing the advantages of corporate executorship and the terms of appointment may be had at any branch

No Revival Yet

NEW YORK, March 2.—The Federal Reserve Board's index of production fell 3 points in January (when adjustments for seasonal movements had been made); and, unadjusted, it was 1 point up. This confirms the general impression that January showed no marked change in business. There was something of a sag round about the year end; and there are signs that this recession continued in February. However, such a mid-winter recession is not uncommon; and it is not necessarily significant of any trend. March and April are more "barometric" months than January and February.

BUSINESS INDICES (1923-25 = 100: Adjusted for Seasonal Movements)

	Jan., 1938	Dec., 1938	Jan., 1939*
Industrial Production, total ...	80	104	101
Manufactures	76	104	100
Durable	56	92	88
Non-durable	93	114	110
Mineral	108	109	110
Construction contracts, total	52	96	86
Residential	26	57	54
All other	73	128	112
Factory employment, total	90.0	91.6	91.5
Durable goods	83.7	83.2	83.4
Non-durable goods	96.0	99.5	99.2
Factory pay-rolls, total	75.0	86.6	83.2
Durable goods	67.1	80.4	76.6
Non-durable goods	84.0	93.5	90.6
Freight car-loadings, total	65	69	69
Miscellaneous	69	74	76
Department store sales	90	89	88
Department store stocks	71	66	67

* Preliminary.

The following table shows the important part played by seasonal adjustment in recent months.

	Manufactures Adjusted	Unadjusted	Factory Employment Adjusted	Unadjusted	Factory Pay-rolls Adjusted	Unadjusted
October, 1938 ...	96	97	87.5	89.5	83.9	84.1
November, 1938 ...	103	103	90.0	90.5	84.1	86.6
December, 1938 ...	104	98	91.6	91.2	86.6	83.2
January, 1939 ...	100	98	91.5	89.3	83.2	

In neither employment nor pay-rolls have the fluctuations been so sharp as in production. The general impression is of a January activity slightly below that of December and November. Broadly, for the past four months, the economy has been marking time.

In building, the seasonal fluctuations are more distinctly marked. The decline of non-residential building contracts is rather less than was anticipated. In residential building the figures have held up conspicuously well, and are approximately double those of a year ago. Any list of the specific recovery measures of 1938 might well include the amendments to the Federal Housing Act, passed in February, 1938. The index of residential building (unadjusted) dropped from 52 in May, 1937, to 22 in January, 1938. It then rose rapidly to 56 in September; the subsequent fall to 45 in January, 1939, was scarcely more than seasonal. This revival of residential building is largely, probably mostly, attributable to legislation.

The Employment Paradox

Perhaps the most conspicuous paradox is the contrast between the 30 per cent. rise in the index of manufactures (from January to January) and the mere 2 per cent. rise in factory employment. Even the rise in factory pay-rolls is only a little over 10 per cent. The obvious answer to these disparities is the "play" within the work-week—that in a "submerged" economy, the fluctuations will occur in the pay-roll figure rather than in the employment figure. A second suggestion is that the character of the recovery to date has brought relatively the greater expansion to industries using relatively little labour. Some, of course, refer to technological unemployment—a factor at least as old as the industrial revolution, only the term being new. None of these explanations is entirely satisfactory.

The following table sets these items together at times in the past when the index of manufactures has been in the vicinity of the present level. All the data are unadjusted, because the pay-roll index is published only in the unadjusted series.

	Manufactures	Employment	Factory pay-rolls
Average, year 1923	101	104	103
Average, year 1930	96	92	89
July, 1933	97	72	51
November, 1935	98	95	79
October, 1937	101	107	105
January, 1939	98	89.3	83.2

Not much statistical illumination can be obtained from these figures. The month of July, 1933, may be omitted as an economic freak; and the figures for October, 1937, similarly. The general import of the figures, however, is clear enough—a given index of manufacturing output seems now to be obtainable with a relatively smaller working force and a considerably smaller pay-roll than, say, fifteen years ago. This would seem to indicate two things pretty clearly—lower labour costs per unit of output and lower weekly wages per worker.

Yet neither of these conclusions is accepted by common opinion and belief. Certainly hourly wages per worker are far higher than they were ten or fifteen years ago; and high unit labour costs are frequently cited as the reason for the unsatisfactory earnings of enterprise. It is possible that the high hourly earnings do not compensate the worker for the shortening of the work-week. It is possible that unsatisfactory corporate earnings are attributable to other causes than labour costs. At all events, the data open a number of questions relevant to the basic problem of employment and unemployment—for it must be remembered that, since 1923, over 10 million, and possibly as many as 15 million, persons have come of working age, and at least half the number can be regarded as a net increment to the potential working population.

Unemployment and Confidence

Realisation of the complexity of the unemployment problem appears to be growing in the United States. For some years we were content to regard it as a cyclical phenomenon, to be met by relief expenditure financed by a "cyclical" deficit, supplemented by "spreading the work" through the shorter work-week, at first voluntarily, then compulsorily by law. But there have been increasing doubts about the

accuracy of the premises on which these conclusions rested, and an inclination to associate the phenomenon with the suspension of the flow of capital into enterprise which, except for unemployment itself, is perhaps the most conspicuous economic phenomenon of the period.

In his annual Message the President referred to the bringing together of unemployed capital and unemployed men as the first task of statesmanship. In recent weeks the same theme has been forcibly repeated by a number of authoritative spokesmen. It was the subject of an extensive pronouncement by the Executive Committee of the American Federation of Labour in mid-February. In the past week it was developed in a Press interview by Mr Morgenthau, Secretary of the Treasury; by Mr Eccles, the Chairman of the Board of Governors of the Reserve System; and by Mr Hopkins, the Secretary of Commerce. Mr Morgenthau said:—

The thing that bothers me is that the business men I see—a good many of them—seem to have a what's-the-use attitude about going ahead in their own business. I think this attitude is holding back a good many business men from expanding their businesses and taking normal business risks.

Mr Hopkins expressed the "what's-the-use" attitude in only slightly different terms:—

Among business men there exists a widespread lack of confidence. Lack of business confidence is and has been a hard stubborn fact, and may be as real a deterrent to restored business health as any we have to deal with. . . . If we could find a way to break the long jam of private investment in the field of utilities, railroads, and housing we will have gone a long way toward taking the essential steps to ultimate recovery.

France

M. Reynaud on Recovery

PARIS, March 9.—M. Reynaud in a survey of the French financial situation after four months in office, once again laid stress upon the progress made. The Equalisation Fund's gold increases daily; and the Minister of Finance has allowed for its gold stock an estimate of about 20,000 million francs. The operations of the Fund will henceforward be published every month, as in Great Britain and the United States, and with the delay which prudence recommends.

Business prospects are favourable and should improve still further, the Minister of Finance said, and it now appears that the chances of peace are much stronger than they were. The people must have confidence in the destiny of their country, he urged, and help the Government which is now planning large cuts in administrative expenditure.

Private experts, too, if not so categorical as the Minister of Finance, are generally optimistic about the immediate future of business. Encouraging progress in sales was recorded in February in the main branches of production. There was an increase of hours of work beyond 40 hours, and a simultaneous fall in partial unemployment. The number of persons wholly unemployed is still falling steadily; it was 414,756 on February 25th against 418,207 eight days before; it was still 2,370 more than in the same week last year, though the increase over last year's figures has been much reduced (in the two previous weeks it was 8,437 and 10,232).

Heavy industries are being helped by State orders, while the export trades are still being stimulated by relatively low domestic prices. Some slackening in the consumption goods, however, was seen in February, and seems to have been due partly to the fear of renewed international tension and partly to the rising cost of living.

Increased Confidence

The delay in the communication of the Italian colonial claims, and the rumour that they will in the event involve no territorial claim; the approach of peace in Spain; British and American re-armament; the Papal Conclave's choice; and rumours of an international conference, which seem to have been provoked by the British trade campaign in Europe, all these have favourably impressed the Stock Exchange, and in the last few days the trend has been upwards:—

	Nov. 5th	Dec. 24th	Jan. 28th	Mar. 4th
Stocks	206.0	246.0	219.0	236.0
Bonds	78.9	87.4	83.4	86.8
Rentes 4½ per cent. 1932	80.70	92.0	82.50	89.25

After two years of Parliamentary turmoil, the present session is proceeding with astonishing calm. There have been interminable discussions about agricultural problems and about old age pensions. Members have been unanimous about

the principle of these pensions, but innumerable difficulties have arisen as soon as the problem of financing them has come up.

In effect there is no Parliamentary Opposition to M. Daladier's Government, and this will continue at least until the Presidential Election, for which the name of the Prime Minister is increasingly put forward by his friends—and his enemies. The Socialists this week continued at their conference the endless controversy between the supporters and the critics of the Munich policy. At present it looks as if the calling of an international conference for the stabilisation of armaments and the revival of trade may offer an honourable issue to last September's acts. Many object, however, that France is badly prepared for such a step which might cost her fresh sacrifices in the cause of peace between Britain and Germany.

Stimulating Trade and Building

Meanwhile, Government and business circles are very much interested in the British campaign to develop foreign trade. An agreement has been just signed with Czechoslovakia; and others are to be negotiated with Roumania and with Germany; French foodstuffs could be exchanged against German metal products. The various Ministers concerned with foreign trade have decided to hold periodical meetings. And, in addition, the administration has urged private interests to make an effort to group themselves to develop their information services, to intensify their publicity, and to improve their methods in foreign markets. Foreign trade and the tourist industry could bring precious backing to the revival of French business, at a time when national purchasing power is exhausted by many years of monetary depreciation, increased prices and heavy taxation.

At the same time, help is already being officially given to the domestic market, and notably to building. The recovery plan of M. Reynaud entailed at the outset a curtailment of public works to facilitate the balancing of the Budget. Early in the spring the Minister of Finance will take compensatory steps to stimulate the building industry. The index of building activity (1928 = 100) is now 61, against a lowest of 51 in October, 1937. The annual average of floors built in Paris has fallen from 6,500 before the War to 400, as a consequence of two main factors: the increase in the cost of building and the prohibition by the State of normal increases of rent. M. Reynaud has decided to abolish the tax on the sale of property and the income tax on profits made on new buildings. These decrees will undoubtedly help recovery, but the present inactivity of the industry calls for more drastic remedies.

Germany

Trading Methods Defended

BERLIN, March 6.—The slight feeling of dissatisfaction in certain political circles in Berlin about the British Government's standpoint on trade questions led Dr Goebbels to attack Great Britain in his speech at the opening of the Spring Fair at Leipzig. It was easy (he said) for the Western democracies, who had sufficient food, raw materials, money and colonies, to criticise German economic methods. While Germans must use hard work and intelligence to gain the goods they lacked, democracies needed to make no such exertions.

The Propaganda Minister once more emphasised—just as Herr Hitler did in his recent Reichstag speech—that the economic situation of the German nation was more constrained than that of other nations, and that Germany was

almost in the position of being unable to procure the food-stuffs and other goods necessary to satisfy daily demand. The reason for this (as Dr Goebbels sees it) is that Germany receives too small a share of the world's goods. England should not criticise the German methods, he said. Instead, England should support German attempts to make up for their disadvantages by industry and enterprise, since if they were successful they would tend to diminish and gradually eliminate the European tensions which at present are steadily growing. Dr Goebbels's remarks no doubt constitute an answer to the frequent British criticisms of German methods of finance and foreign trade.

Passing to the colonial question, Dr Goebbels declared that a nation of 80 million people would not allow itself to be simply shut out. Since Germany had no colonies, she must export correspondingly more. Finally, Dr Goebbels repeated the warning sounded by Herr Hitler that the Third Reich was prepared to do anything to further exports and so to satisfy Germany's inescapable needs.

"Is it seriously believed that a nation of 80 millions will be satisfied so long as its economic basis is too narrow and insufficient to provide their daily bread?"

Dr Goebbels's speech had very little to do with the objects of the Leipzig Fair, and the impression in German and foreign circles here is that it was scarcely calculated to help forward the forthcoming Anglo-German industrial conversations.

Although the speeches by the British Ambassador in Berlin and by Mr Tark, the banker, on the occasion of the founding of a branch of the German-English Society in Cologne, were greeted in an extraordinarily friendly manner by the German Press, the newspapers are at the same time conducting a sharp attack on British trade policies. England is accused of extorting concessions from the Baltic States by the threat of closing the British market. Stress is laid on the fact that Germany will never permit an expansion of British exports at the expense of German business. Perhaps the sharp tone of both the Propaganda Minister and the inspired Press should be regarded, in part at least, as a tactical manoeuvre and an attempt to force England to make economic concessions, and maybe colonial ones as well.

Grain Surplus

Although Dr Goebbels once more reminded the German public of the difficulties of the present food situation, the Reich Food Department has just announced remarkably favourable figures for last year's crops. The grain crop in the Old Reich amounted to 26.36 million tons, which was $\frac{1}{2}$ million tons more than in the previous year. In addition, it is estimated that Austria produced 2 million tons and the Sudetenland 1.3 million tons, so that Greater Germany's grain crop, including maize, amounted to 29.7 million tons, or 4.2 million tons more than in the previous year. Including 3 million tons in stock, Germany's total grain holdings amount to 32.7 million tons, and demand in Greater Germany amounts to 28 million tons yearly. Thus, without taking imports into consideration, Germany should have about 5 million tons in stock at the time of the next crop; and, in addition, 2 million tons of grain were imported during the period between last year's harvest and the end of January.

The financial situation is becoming more tense. In the February report of the Reichsbank, its total responsibilities were Rm. 8,370 millions, against Rm. 6,136 millions in February, 1938; this included bills (mainly armament bills) amounting to Rm. 7,333 millions, against Rm. 5,637 millions in 1938. Inflationary signs are becoming more and more evident. Total monetary circulation has reached a point only slightly lower than the record figures of last September and December.

BANK OF MONTREAL

Newfoundland and the United States

New Ways of Financing

As a result of the money shortage, numerous authorities, particularly the military authorities, have begun to issue what are now called "acknowledgment certificates" (*Anerkennungsscheine*). These instruments replace the familiar forward Treasury bills. The novel procedure arises from the fact that the financial authorities now restrict the use of cash and Treasury bills within the limits of the various departmental budgets, so as to have a stricter control over the expenditure of the individual departments. The issuing of "acknowledgment certificates" is an evasion of this control, and is all the more dangerous since it may become customary under certain conditions. There is, furthermore, the danger that the banks may be swamped with these instruments, which have no definite currency and bear no interest. The authorities point out that the issuing of "acknowledgment certificates" was forbidden at once, and that "issuers" were made subject to arrest. The circulation of these "acknowledgment certificates" (unofficially estimated at about Rm. 1,000 millions) is said officially to be only trifling (about Rm. 50 millions). Since no accounts, and only incomplete reports about public debt, are published in the Third Reich, any reliable control over the above-mentioned procedure is impossible.

Supplementing the measures taken by the Reichsbank and Golddiskontbank to help the financing of exports, the German clearing house has remitted the tax of 1 per cent. per annum on payments to German exporters. And the Reichsbank has taken steps to eliminate exchange risks by offering to buy bills covering those risks. The repayment of these bills is made by the delivery to the Reichsbank of the export proceeds. Their currency is usually three months, but this may be prolonged; and the discount rates for these bills correspond with those of the country in whose currency the bill is drawn. In cases where bills covering exchange risks cannot be used, the Reichsbank arranges Golddiskontbank or standstill credits in favour of the exporter; and, taken together, these measures constitute a considerable easing of export financing.

Holland

The Guilder Depreciating

AMSTERDAM, February 27.—A pronounced ambiguity characterises the monetary situation in the Netherlands. Both sterling and dollars show a gradual but persistent advance, as does also the price of gold at Amsterdam. The causes of this movement are hard to define, especially as few details bearing on the monetary position are nowadays published in the Netherlands. Returns relating to the exportation and importation of gold no longer appear, and information of the Netherlands Bank's holdings of gold has lately been withheld, while our Equalisation Fund, contrary to the practice in England, no longer gives a periodical account of its operations.

One has to resort, therefore, more or less to mere guesswork in forming a judgment. In some quarters it is asserted that the further depreciation of the guilder is attributable to the withdrawal of French capital from the Netherlands. The accuracy of this assertion cannot reliably be checked, but it is a fact that transactions on the Amsterdam foreign exchange market have been of extremely small compass recently. Any withdrawal of French capital must have been of limited extent, and having regard to this, the Equalisation Fund would certainly have been capable of supporting the guilder.

On the whole, the opinion is thus gaining ground here that the Minister of Finance is, if anything, availing himself of the opportunity to bring about a depreciation of the guilder. Since sterling declined further in terms of dollars, the sterling rate in the Netherlands had gradually dropped to 8.5 at the beginning of January, 1939, and this was necessarily detrimental to the interests of Dutch shipping companies, plantation companies and, in short, to her entire exporting business with countries comprising the sterling bloc. During the past year supplies of capital exceeded normal investment requirements to such an extent that, despite some flight of capital, hoarding of gold, etc., capital lying idle again increased materially, although more slowly than in 1937. The capital that has become available on the Netherlands money market since the depreciation of the guilder in September, 1936, may be computed at between 1,000 and 1,200 million guilders. Most of these funds, for which no employment can be found, are lying idle at the Netherlands Bank. The influence which such a superabundance of capital

exerts on the course of interest rates can scarcely be exaggerated.

It goes without saying that our Government is desirous of restoring the competitive powers of Dutch exporting interests by a revision of the sterling rate to its former level. There is all the more reason for thinking that the authorities are not averse to a depreciation, now that the Government, introducing an amendment raising some import duties, has issued a statement that: "Ministers wished to reiterate emphatically that the Government regards a competitive level of production costs as being a matter of primary importance for our industries, and it is proposed to maintain this by all means within their power."

This amendment to the tariff legislation provides for higher import duties on goods produced by six groups, viz. the glass and earthenware industries, the textile and clothing trade, the paper industry, the wood and wood-working industry, the leather and leatherware industry, and the metallurgical industry. The increases in the import duties will amount respectively to:—

Ad valorem	
Present Duty	Proposed New Duty
3 per cent.	6 per cent.
6 "	10 "
8 "	12 "
10 "	15 "
12 "	18 or 20 per cent.

The Government's aim in proposing these increased duties is to encourage the sale of Dutch products in the home market, and thus increase employment. It is claimed that, in consequence of the export policies adopted by foreign governments and their methods of discriminatory price fixing, the prices which Netherlands producers can command in their own market have in many cases been depressed to a level making remunerative production absolutely impossible. With higher import duties, even assuming that imports remain on the same scale, the relation between production cost and selling prices for producers will considerably improve. The Government emphasises that the price increase involved will neither be exorbitant nor burdensome, and that there is no intention of adding to the present proposals in the near future. An increased revenue of 5 million guilders is anticipated.

That measures of this kind were badly needed is evident from the fact that on January 28, 1939, there were still 404,407 registered unemployed in the Netherlands. Expressed in percentages, this figure makes a satisfactory showing in comparison with preceding years, viz. 38.0 per cent. in 1936, 36.1 per cent. in 1937, and 27.7 per cent., compared with 31.0 per cent. in 1938. To provide employment, the Government have ordered two new cruisers from Rotterdam yards.

Decline in Trade

The value of both imports and exports showed a slight decline in January, 1939. The following table summarises our foreign trade, month by month, during recent years:—

	Imports			Exports			Percentage of imports covered by exports	
	1937	1938	1939	1937	1938	1939	1937	1938
January ...	106	119	112	73	82	79	68.9	69.0
February ...	105	118	...	79	82	...	75.2	69.4
March ...	125	120	...	94	90	...	75.4	75.1
April ...	142	115	...	101	81	...	71.2	70.1
May ...	128	110	...	90	83	...	70.4	75.8
June ...	140	119	...	95	81	...	67.8	68.0
July ...	146	120	...	102	78	...	69.7	65.0
August ...	122	115	...	98	90	...	80.3	77.5

October ...	149	127	...	106	98	...	71.5	77.0
November ...	130	119	...	98	92	...	75.1	77.6
December ...	127	117	...	98	82	...	77.4	70.3
Totals ...	1,550	1,415	...	1,148	1,039	...	74.1	73.4

Standstill in Activity

The last quarter of 1938 saw a comparative standstill in the trend of activity, though several indices did show some improvement. Activity in the building trade has increased, stimulated by low rates of interest, coupled with the difficulty of finding suitable objects for investment. The value of house property belonging to life insurance companies alone has increased by no less than 65 million guilders in the course of the past two and a-half years.

The improvement experienced by the metal trades is, of course, largely attributable to armament requirements. Ship-building indices, however, are falling; the industry is still

fairly busy, but insufficient orders are coming in to replace those now in hand or completed. But the position of Dutch shipping can scarcely be described as unsatisfactory; freight rates fell substantially in the course of last year, but many Dutch owners running on regular line routes are not directly dependent on the general course of the freight market, and other owners had their vessels out on time charter at satisfactory rates. The operating profits of the Holland-America Line advanced from 309,583 guilders in 1937 to 5,127,072 guilders in 1938.

Latvia

An Authoritarian Economy

RIGA, March 3.—The remarkable increase of State control in Latvian industry which we commented upon recently (Commercial History for 1938, *The Economist*, February 18th), noting that out of a total of 6,600 million lats invested in the Latvian economy, 2,000 millions might be attributed to the State, is strikingly brought home by the estimate that 35 per cent. of State receipts are produced by taxes on State and part-State enterprises. A large number of industrial undertakings are indirectly State-controlled, including electricity works, machinery works, spas, sugar refineries, an insurance institute, a wheat office, a ships' chandlery, a slate quarry, and various other businesses. In recent years, the State has been active in helping to start a number of enterprises, and in this way has monopolised the export trade in meat, dairy produce, and seed. The Latvian Kredītbank is a central organ of this activity; and connected with the bank are the Finance Ministry and the Post Office Savings Bank.

The co-operative movement has shown considerable development in recent years; and here, too, the State has made its influence felt. The A/G Turība, the most important of Latvia's importing firms, acts as central organisation of the co-operative movement. An important State enterprise has lately been formed for the purpose of controlling the hide and wool markets, which at one time were run by Jewish capital. In the sawn timber and timber export trades the State has also founded an enterprise designed to bring the whole organisation under one control. With all these State and part-State undertakings, there has arisen a very tight interlacing of capital. The President and the Minister of Finance have stated more than once that the State's activity in industry is partly for the purpose of market regulation throughout the country, and partly for the purpose of making good a lack of capital and thereby strengthening the Latvian element in industry.

Compulsory Organisation

From the organisational point of view, too, the State's intervention is welcomed, and there is no question of putting a drag on its development. A decree will shortly be published for the compulsory cartelisation of single industries into special groups, and leaders for these groups will be appointed by the Finance Minister. The reason adduced for this is that industry must be rationalised. All this preparation and activity has, not unnaturally, left private industry, including that financed by foreign capital, with a certain feeling of insecurity.

BARCLAYS BANK (CANADA)
MONTREAL & TORONTO

A factory will shortly be laid down for the manufacture of Ford motor cars under licence. The veneer wood industry is to be the subject of cartelisation in order to reduce the number of firms and to rationalise labour; and this control is to be extended to the sawn wood and building timber industries. Owing to a poor sugar beet harvest, the State sugar refinery has had a reduced turnover during the past year. Harvest figures were given in the Commercial History already referred to.

Latvia is, indeed, a fully authoritarian State in which no opposition may be permitted to its economic policy. In the name of national necessity the State has entered the business of production and thereby weakened the hold of private enterprise, not excluding foreign interests. There is in Latvia to-day no branch of industry in which a more or less privileged State enterprise is not working; and, although this development is not yet completed, it may already be said that the State is the biggest industrialist, the most extensive banker, and the leading salesman in the country. It is a process that is more and more being accelerated.

The most important job which the State undertook in 1938 was the construction of a power station in Keggum, and when it is ready this station will supply the whole country with current. The project was paid for out of State receipts, and in connection with this a large internal loan was floated.

Owing to diminished timber exports, foreign trade showed a less satisfactory picture in 1938 than in the previous year, but the balance of payments was nevertheless favourable, owing to the active part played by the Latvian merchant fleet, consisting of one hundred ships with a total British registered tonnage of 192,000 tons. In line with conditions abroad, the index of wholesale prices (1913 = 100) fell from 115 in 1937 to 112 in 1938, although the index of the cost of living rose at the same time from 86 to 90.

Canada

OTTAWA, February 17.—The Federal Parliament has made very little progress in the first five weeks of the new sitting. An abnormally long debate on the Address was followed by a full week's discussion of the Bren gun contract; and from this the King Ministry has derived a great deal of damaging publicity. Having accepted the motion of a member of the Co-operative Commonwealth Federation to refer the contract and all relevant documents to the standing committee on public accounts for further investigation, the Government voted down a Conservative amendment which proposed the contract's outright cancellation. Conservatives took the line that, since the committee would be packed with a Liberal majority, it was certain to produce a whitewashing report; and their speakers accused Mr Mackenzie, the Minister of National Defence, of being both incompetent and derelict in his duty. The speech he made in his own defence was said by the *Winnipeg Free Press*, a Liberal paper, not to answer the real charges brought against him, and his abuse of his critics to be discreditable, coming from a member of the Government.

New Wheat Policy

On February 16 the Federal Government announced an important change in its wheat marketing policy. The present plan of a fixed minimum price for wheat on the basis of 80 cents per bushel for No. 1 Northern, the highest grade at Fort William, has in practice resulted in farmers with no crops getting no benefit, and farmers with good crops securing a substantial bonus which they did not really need. This has meant political damage to the Government in the West, and the plan is to be abandoned.

Legislation will be introduced this session for a new plan which will take the form of an acreage bonus; no details are available, but the policy will be of a permanent nature to cope with emergencies arising from failure of crops or lack of markets. According to the Minister of Agriculture it will aim at encouraging home-building in the prairie provinces rather than at increasing wheat production. The Government has also committed itself to legislate on the three main recommendations of the Turgeon Commission on Grain Marketing. These were that the Government should stay out of the business of wheat marketing, leaving it to be conducted through the "futures" grain market; that the grain exchanges should be brought under adequate supervision; and that the formation of co-operative marketing associations or pools should be encouraged. Spokesmen of the Conservative and C.C.F. parties gave a sympathetic welcome to the proposals of the Minister of Agriculture, although they did not endorse all of them.

In the West, the farmers and the grain traders have for the

first time made common cause; and a committee, which was set up at the Prairie Markets' Conference held at Winnipeg in December, met last week at Saskatoon and formulated a programme of assistance to Western agriculture. This programme was submitted to the Federal Government on February 28th.

Monetary Discussions

The Government is seeking authority from Parliament to borrow money, up to 750 million dollars, for refunding operations as far as 1940. The legislation has produced some interesting discussions about Canada's monetary and financial policy. The Social Creditors and Mr Tucker, a prominent Western Liberal who is also a monetary reformer, protested against further borrowings from the public when Canada's gold reserves were sufficient to permit a large expansion of the currency. Mr H. H. Stevens, a former Minister of Trade and Commerce, alleged that the Canadian dollar was now firmly tied to the American, and argued that Canadian producers would benefit if, instead, it were deliberately tied to sterling. Mr Dunning, however, after denying the allegation that the Canadian dollar was tied to the American, would not accept Mr Stevens' suggestion, and declared that it was the policy of the Government to keep its currency completely independent and let the Canadian dollar rise and fall "with the tide of trade." There was some criticism of certain aspects of the country's financial situation, including the danger of incurring further obligations in the United States; and Mr Dunning, to meet these criticisms, intimated that the Governor of the Bank of Canada and some of his officials would place themselves at the disposal of the standing committee on banking and commerce, for the purpose of explaining the working of and the motives behind the financial policies now being pursued co-operatively by the Government and the Bank.

Business Marking Time

With February the winter has become much more severe, and heavy snowfalls have blocked highways and hampered trade in rural areas. Business is still affected by the uncertainties of the international situation, heavy commitments ahead being avoided by many people. Conditions remain relatively stable, however, and the business level for January, 1939, was higher than in January of last year, the Bureau's index of the physical volume of business for the month being 116.4, as compared with 111.8.

The general economic index of the Bureau of Statistics shows a decline:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Feb. 12, 1938	79.98	83.6	90.5	108.2
Jan. 28, 1939	74.1	73.2	93.7	107.3
Feb. 4, "	72.3	73.2	100.5	107.5
Feb. 11, "	71.9	73.0	92.3	107.1

Department store sales in dollars in January showed, as usual, a heavy decline of 59 per cent. from the December figure, but were only 3 per cent. below that for January, 1938. The mining industry remains active, and the production of gold in January was 438,699 fine ozs., compared with 359,549 ozs. in January, 1938; while exports of copper, nickel and zinc, at 354,407, 193,109 and 281,288 cwts. respectively, were only slightly below the figures for January, 1938. Newsprint production is still at the low level for January of 208,382 tons, compared with 209,753 tons in December and 222,500 tons in January, 1938.

Conditions for manufacturers remain variable. Heavy industries are still short of orders; the output of iron and steel in January was respectively 57,660 and 78,200 tons, compared with 74,862 and 107,753 tons in January, 1938.

Foreign Trade

The following are the foreign trade figures for January, with comparative data:—

	January, 1938	December, 1938	January, 1939
Imports	\$49,719,835	\$44,285,986	\$43,753,810
Exports	\$72,234,169	\$70,452,224	\$81,773,462

The increase in the January exports is largely due to the inclusion of about 10 million dollars for exports of gold bullion, of which practically none was exported in December.

The yield of Federal revenues for January was again discouraging, amounting only to 33½ million dollars, compared with 35½ millions in January, 1938. Expenditure for the month, at 49½ millions, was down by 2½ millions in the same comparison. For the first ten months of the fiscal year 1938-39, the revenue total is 428 million dollars, compared with 438 millions in the previous parallel period. Total expenditure, without including certain important items like the wheat subsidy, was 416 millions, compared with 413½ millions in January, 1938.

Letters to the Editor

Profits in the United States

TO THE EDITOR OF THE ECONOMIST

SIR,—I beg to reply to the interesting observations and query in the letter from Mr A. C. Dobbs (*The Economist*, January 21, 1939, page 125) on Anglo-American Treasury financing and the "absurdity" of paying 2½ per cent. on 25-year borrowings, when short-term funds can be secured at almost no cost. This divergence in yield seems to substantiate clearly the extent of the money market's present abnormality, rather than the charge of debt mismanagement. It is profound scepticism about the permanence of the negligible current interest rates, on the part of lenders as well as borrowers, that has motivated the great disparity between the rates on long- and short-term paper. The commercial banks and other lenders concerned with the preservation of capital values are deterred from switching into the much higher-yielding long-term issues by the expectation of changes in present money rates. How then can the Treasury sooner than the lenders be expected to gamble on the expectation that the current money market conditions, which are necessary to enable cost-less refinancing by notes, will continue indefinitely?

Although the composition of the United States Government debt has been improved materially during the last three years, even now almost 40 per cent. of our total direct obligations matures within five years—contrasted with only 18 per cent. in short term maturities in 1930. Assuredly, there is still a very long way to go in lengthening—not shortening—the debt's average maturity, and transferring it from the books of the banks into the hands of genuine investors. Does accomplishing this at a 2½ per cent. cost conceivably constitute "absurdity" or mismanagement?

Mr Dobbs contends that our enormous gold stock, instead of functioning to settle international transactions and protect the exchange, justifies further increases in our floating debt.

This overlooks the fact that the basic security backing Government debt is not gold, gobbled up from the rest of the world at an inflated price, but *taxation*.

Faithfully yours,

New York City.

A. WILFRED MAY.

Jugoslavia's Peasant Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—The interesting report on economic conditions in Jugoslavia in your Overseas Correspondence section on February 25th (page 394) was most timely. The population problem in its more Malthusian aspect, in Jugoslavia as well as in Central Europe as a whole, is of the greatest importance. You quite rightly point out that 80 per cent. of the peasants in Jugoslavia have less than 5 hectares of land, but this does not quite explain the problem. To-day Jugoslavia has 81.6 peasants to every square kilometre of productive land (including forests and pastures), while Denmark has 33.97 and Germany 47.63—the only two countries in Europe with higher figures being Italy (90.4) and Bulgaria (89.6). Excluding forest and pastures, the figure rises in Jugoslavia to 156.8 peasants to the square kilometre.

There are three possible solutions. First, more intensive and more efficient exploitation of the land (for which, in the opinion of experts, there is not very much scope), taking into wheat production both forests and pasture land; and a return to large estates by means of peasant co-operation could be contemplated, which would stop the further division of land holdings and increase efficiency. Secondly, the problem could be solved by emigration, which was developed on a large scale before the war. Thirdly, there is the way of industrialisation, diverting the surplus peasant population into industry. The policy of industrialisation is the most probable.

I am, Sir,

Yours sincerely,

UILLAN FISTER.

Cambridge.

New Boom Ahead

Another Challenging Forecast
by

Major L. L. B. Angas

Internationally known Investment Consultant. Author of "Investment for Appreciation," "The Problems of the Foreign Exchange," etc., etc.

In this challenging new pamphlet Major Angas explains how Hitler is indirectly inaugurating industrial revival in England, which will be preceded by a Stock Exchange boom. Suggestions are made as to how to ride the coming boom.

Books and Publications

Printing House Square

IN 1842, the year in which Peel's Budget introduced a new era in English public finance which did not end until 1932, and the year before *The Economist* was founded to strike at the last stronghold of the old Protectionism, the Corn Laws, John Thadeus Delane became editor of the fifty-odd year-old *Times*. Its circulation was then in the neighbourhood of 20,000. Six years later it was 30,000; and, in 1850, at 40,000 it was four times the circulations of *The Chronicle*, *The Herald* and *The Post*, *The Times*' chief rivals, put together.

The Times' first Empire, which could be measured by the numbers of its readership, did not last very long. By 1870 or so, only a few years before Delane's long reign ended, its circulation of some 60,000 was far outstripped by the 150,000 of *The Daily News* and the 200,000 of *The Daily Telegraph*, penny papers both. Faced by the spread of outstanding provincial journals in the late 'fifties and the rise of a cheap and vigorous Press in London, *The Times* had to carve out a new niche in a select and influential, though relatively small, corner of the newspaper world.

The measure of *The Times*' exclusiveness, then as now, was its price. At the outset of Delane's editorship it cost 5d., the same as its contemporaries. From 1861, when the paper tax was repealed, to 1913, it cost 3d., despite the advent of the penny Press. It gave more for the reader's money—at least during the great Delane period, which is the subject of the second volume of Printing House Square's own autobiography.* And it was struck a severe, and deliberate, blow by the Act of 1855, which introduced a new postal rate for newspapers based on weight. Not that *The Times* suffered at all fatally from the price of posting or the rise of rivals. The chief proprietor and the other owners of the paper in normal times, throughout the Delane era, drew in dividends something like £1,000 for every 1,000 of circulation. Many of the main innovations in printing technique and distribution arrangements were devised in Printing House Square. And the complaint that the country was "ruled by *The Times*" was chronic throughout the period.

The leading journals now are place hunters of the Court, and the once stern guardians of popular rights simmer in the enervating atmosphere of gilded saloons, declared Disraeli in 1858. It was widely believed that the "dangerous eminence" of *The Times* was due to its sycophantic connection with certain Ministers. This was never really true. Delane, veritable embodiment of John Bull himself, assiduous, unflagging, patient, blunt, peaceable and kind, was a pragmatist. He had no axes to grind, as his more literary and better educated leader-writers usually had. He wanted news, and he went to the horse's mouth to get it. Aberdeen, Sir Charles Wood, Clarendon, Russell and even

Danubian Destiny

A balanced and logical exposition of the complicated problems in Europe to-day resulting from the Munich Agreement. "An extraordinarily useful handbook. . . Mr Hutton is particularly to be thanked for his clear exposition of the Schacht wizardry which has hitherto enabled Germany to flout the rules of the economic game without a spectacular collapse."—ELIZABETH WISKEMANN (*New Statesman*). 8/6 net.

HARRAP

the once-hated Palmerston were, at one time or another, profitable friends; but only seldom did Delane's lack of original ideas lead him into subservience. He "dined out" because he was a newspaper man.

My whole life is bound up with the paper: I must work for it or not at all.

Delane's confession was quite genuine; and his loyalty to the paper was shared by Mowbray Morris, the manager (whose query to a ditchwater dull Correspondent: "Do the Viennese never commit murder or rape?" is classical) and John Walter III, the chief proprietor. Together they founded the tradition of *The Times*; and it was an independent tradition.

The first duty of a newspaper is to obtain the earliest and most correct intelligence of events . . . and to make them the common property of the nation.

To find out the true state of facts . . . and to call down the judgment of the world on what is base or false or tyrannical appear to me the first duties of those who write.

Those [newspapers] will obtain the largest measure of public support who have told the truth most constantly and most fearlessly.

There were only occasional lapses. The American Civil War was one: Delane and Walter had "no desire to see the Union preserved," and Morris hated the Yankees. Partially, they backed the South and, when the war went against them, *The Times* was "furious and scolded like a drab."

This was exceptional. True, their leader-writers had often hampered prejudices, especially Henry Reeve, Clerk of Appeals to the Privy Council, *Il Pomposo*, who wrote 2,482 articles in 15 years and 4 months and earned about £13,000. Reeve's attacks on the "licentious Court" of Napoleon III were most inconvenient; his fondness for "his beloved Austrians" obscured his judgment about the Eastern question; while his indictment of "degenerate . . . and paltry German princes" was "a dagger in the Queen's heart." Robert Lowe, too, brilliant journalist as well as successful politician, was a handful; and his anti-Reform bias, as one of the Adullamites, did not help *The Times* to be open-minded.

Indeed, *The Times*, in these high days, was very blind to many social and political questions. Paladin of the Victorian middle class, it only seldom found news in workpeople and workplaces; and, in any case, its daily verbatim reports of the Commons' debates, its multi-column leaders by brilliant donnish writers, and its unrivalled foreign correspondence left little room for new matter.

The Times was greatest in the Crimean War, when its most famous correspondent, W. H. Russell, won the war and saved the troops by his revelations. For the most part, after that, the telegraph, the cable and the despised agencies broke its monopoly of first-rate news. In the European wars of 1859, 1866 and 1870 *The Times* was decisively beaten by its rivals. In 1842 it was a newspaper. In 1877, when Delane went, it was an institution.

This autobiography is sometimes smug. It is by All Souls out of Printing House Square. But it is admirable. It is a remarkable achievement as an historical work alone; and no reader will be able to escape the fascination that is on every page.

THE BUSINESS WORLD

American Banking: 1933-1939

IT is six years this month since, in one of the most astonishing coincidences of economic history, the long run on the American banks culminated in final and total closure on the very day that a new President took office. March 4, 1933, was the beginning of decisively new phases both in the politics and in the finance of the United States.

The nature of the political New Deal has been explained, debated, praised, comminated, dissected and analysed until there are few minds in America or in Europe that have room for new opinions on it. But perhaps the most eloquent testimony to the change that has come over American banking lies in the fact that the stream of discussion of banking problems, which ran at the flood in 1933 and for two or three years afterwards, has dwindled to a trickle. The American public is showing a disposition to leave banking again to the bankers. The chief reason for this can be seen in the first table of the collection of relevant statistics printed at the foot of this page. Even in the prosperous 1920's, an average of two banks, with deposits of \$300,000 each, failed every working day. Since the bank "holiday" in 1933, bank suspensions have been radically reduced. Apart from 1934, when most of the suspensions were delayed effects of the "holiday," the number of suspensions has been reduced to one a week, and the highest total of deposits affected in any year was \$19,723,000 in 1937. In countries unaccustomed to banking failures, these figures would seem large enough in all conscience. But in the United States they make so favourable a comparison with past years that the problem can be regarded as almost solved—at least for the time being.

A bank suspension, moreover, no longer causes dead loss to the depositors. The banks holding by far the largest part of the country's total deposits are included in the Federal

Deposit Insurance Corporation, and most small depositors are paid their deposits in full in the event of a suspension. This system has undoubtedly been a powerful assistance in the re-creation of banking confidence. It is significant, however, that most of the casualties are among insured banks. It would appear that insurance does not prevent failures. Moreover, the great reduction in the number of failures among the small banks (all non-insured banks are small) would seem to show that it is something other than insurance that has eliminated failures. In the present, this reflects a fundamental soundness in American banking. For the future, however, it suggests the less comforting conclusion that deposit insurance has not yet been tested against really difficult conditions.

It is, in fact, not so much the unprecedented device of insurance as the unparalleled degree of liquidity that has so largely removed the curse of bank failures. A preliminary survey of this liquidity can be gained from Table II. The total deposits of all banks of all kinds in the United States (whose number, incidentally, is only half the peak figure of 1921) is now virtually as high as in 1929. Nevertheless, the total of bank debits in the principal cities in 1938 was only some two-fifths of the 1929 level. Even in prosperous 1937, the figure was less than 50 per cent. Clearly there is in the United States a superabundant supply of credit, but stagnation in its use.

The analysis can be carried further in Table III, which refers not to all banks in the United States nor even to all the member-banks of the Federal Reserve system, but to those city member-banks which make weekly reports of their condition. Their deposits, it will be seen, have very greatly expanded and (allowance being made for changes in the method of reckoning) stand well above the 1929

I.—BANK SUSPENSIONS

* Average for month.

figure, although the figure for *all* banks is no higher. This shift in the distribution of deposits is due partly to the higher mortality of rural banks (and is therefore probably compensated in part by the consistently higher volume of circulation of currency, which can be seen from Table IV) and partly to the fact that idle funds naturally congregate in the urban financial centres.

The most remarkable feature of Table III, however, is the fact that the great increase in deposits is unaccompanied by any increase in loans and advances or in the indirect provision of funds to industry by purchases of securities other than those of the Government. If January, 1939, be compared with March, 1933, the "adjusted" demand deposits of the reporting banks have increased by \$8,457 millions and time deposits by \$544 millions, a total increase of almost exactly \$9,000 millions. Borrowings from the Reserve Banks, on the other hand, have completely disappeared. The net increase in these three main liability items is a little less than \$8,400 millions. On the asset side, loans and "other" securities show a combined drop of \$568 millions. Holdings of Government securities have risen by \$5,202 millions and reserves kept with the Reserve Banks by \$6,136 millions. Thus, broadly speaking, of the funds they have received in increased deposits and capital items, the commercial banks of the country have left half standing idle in their reserve accounts and have used the other half in financing the deficit of the Federal Government. None of the increased supplies of money have gone to meet the needs of industry and trade.

For this result the banks of the country are not to be blamed. They are certainly not restricting the demand for credit by demanding excessive rates of interest. The average rate charged to customers in 27 southern and western cities is now no more than 4.1 per cent., and the figure is lower in the cities of the east and north. The explanation must be found deeper in the general *malaise* that afflicts the American economy. The great increase in the banks' holdings of Government securities has the incidental effect of making them very dependent upon the course of the bond market. Any period of weakness, especi-

ally near the end of the quarter, when balance sheets are in prospect, sends a shiver of apprehension through the banking fraternity.

Where has the great increase in the banks' deposits come from, if not from the expansion of normal demand for credit? Approximately half of it is the direct counterpart of the purchase of Government securities. The deficit, as it were, has been monetised. But this would not have been possible (at least at such low cost to the Government) unless the banks had been supplied with ample reserves. The other half of their increase in deposits has been due, as we have seen, to the receipt of funds which have been deposited with the Federal Reserve Banks and left idle there. Table IV shows where these funds have come from. The total of Reserve Bank credit stands almost exactly where it did in 1933. Money in circulation is \$300 millions higher. On these two items combined, member bank reserve balances would have declined rather than increased. But no less than \$10,358 millions has been added to the gold stock of the country. Some \$4,000 millions of this was due to the devaluation in 1934 and a large part of the increase was sterilised in the Treasury. Sterilisation of some imports has also been attempted. But the inflow of gold has been mainly responsible for an increase of over \$7,000 millions in member bank reserves. The "excess reserves" were reduced by increases of reserve requirements in 1936-37 and increased again by a partial reversal of this policy in 1938. They now stand at much the highest figure ever reached.

The general picture of American banking is, then, that the public has more funds on deposit with the member banks than it cares to use, and that the member banks are in the same position *vis-à-vis* the Reserve Banks. The credit-creation powers of the system are in abeyance. The American banks can be compared to a four-masted schooner carrying an enormous spread of canvas but with not a breath stirring. In the circumstances the man at the helm is powerless: there is no scope for credit control in America to-day. But if ever a wind blew up, the course of the ship, with unshortened sail, might be very exciting.

Control for Unit Trusts

THE Prevention of Fraud (Investments) Bill is not, in the legislative scheme of things, a measure of first-class importance. Its object, after all, is a relatively simple one—to prevent the rogue from victimising the investor, and particularly the small investor. That aim is free from political controversy. Moreover, the scope of the problem and proposals for its solution were authoritatively examined by the Bodkin Committee, whose report was published in July, 1937. Yet the Bill, which is now in its final stages in the House of Lords, is not a simple measure, and it would be futile to pretend that it is a popular measure.

The Bill has suffered, too, from another defect which was quite incidental to its main purpose, for it has attempted to telescope the prevention of share-pushing with the control of unit trusts. After digesting the Anderson Report on unit trusts for eighteen months, the Government announced in December, 1937, that legislation dealing with unit trusts was not immediately contemplated. Seven months later, in July last year, the draft Share-pushing Bill was issued, and it was introduced, with certain alterations, to Parliament last November. Its subsequent stages have been reported from time to time in *The Economist*. They had, however, one remarkable feature. Between the introduction of the Bill, and its passage to the House of Lords last month, the official attitude regarding unit trusts changed completely. In the first draft, unit trust managers and trustees were among the exempted *élite*, provided that the trustee was "approved"—a criterion which merely required it to be a corporation capable of acting as trustee, and having an issued capital of not less than £500,000 of which at least half had been paid up in cash. That, it

appeared, was the limit of regulation on which the Government felt disposed to insist, in a Sharepushing Bill.

Unit trust managers had reason to congratulate themselves on the lightness of this proposed statutory burden, but they lulled themselves into a false sense of security. Even on the first day of the Committee stage of the Bill, early last December, the President of the Board of Trade gave a pledge to amend the clause dealing with unit trusts in order "to incorporate, both in existing and future trust deeds, the sort of conditions which were laid down by the Anderson Committee." This amendment subsequently became clause 16 (3) in the Lords Bill. It provided that, by the fiat of the Board of Trade, trust deeds might be deemed to contain new provisions, and that any existing but inconsistent provisions would automatically be struck out. Thus, in a ten-line clause, powers of the widest delegated authority over unit trusts were sought. The simple—perhaps too simple—basis of exemption had been replaced by a degree of control which was not contemplated even by the Anderson Committee.

The unit trust movement was only just in time to insert its foot in a closing door. Lord Wardington, who as chairman of Lloyds Bank is well qualified to put the views of unit trust trustees, last week exposed the dangers of conceding such wide and unspecified powers to the Board of Trade, when the Bill was before the House of Lords for second reading. And he extracted from the Lord Chancellor an undertaking that the clause must be amended. This week, discussions have been held between the Department and representative trustees and managers, and there is ground for supposing that, as a result, the prescriptive powers of the Board to control unit trusts are to be limited

to five main matters comprising price and yield calculations; issue and execution of certificates; advertising; provision for future management; and replacement of managers in case of need.

On all five points, present-day unit trust practice is well ahead of July, 1936, when the Anderson Report was published, and they are among the principal matters which were raised in that report. There is ground for real satisfaction, first, that while the Board of Trade's power of intervention is not drawn so widely that existing trust deeds could be turned inside out, several matters on which reform is still desirable are included in the list. Thus the criticisms voiced in the Commons that unit trusts would obtain a privileged statutory position without undertaking any significant statutory obligations have been met, without exposing the trusts to administrative prescription on the widest scale. It will be hoped, for example, that no doubts will remain in future that unit trust prices are based on the effective dealing prices in the underlying securities. In the minority of cases where Official List offered prices are used in price calculations, the managers obtain an unconvenanted benefit which has the effect of inflating their profit (and hence the costs of the unit holder) or of enabling them to reduce their management charge to a sub-normal level.

Similarly, there is to-day no widespread suspicion that flexible unit trusts yields are inflated by methods which involve the depletion of the trusts' capital. Yet to remove even the few doubtful instances which have been the subject of comment in informed quarters in the last year or two would constitute a valuable corrective for the movement. Certain groups have, indeed, recognised the need for an independent check on prices and yields, by providing unit purchasers or holders with certified figures. But, to take one point only, the "proper computation of a yield on a flexible trust is a subtle process, particularly where the fund is growing rapidly, or its investments are frequently changed. Hence, properly administered regulations governing prices and yields would encourage the practice, which most responsible groups already follow, of dealing at a price, and holding out expectations of a return, which are unbiased by motives of extraneous profit or salesmanship.

The second matter in which the Board may take power to act is not likely to be contentious in practice. Although it concerns the mode of issue and execution of unit certificates, and thus appears to raise questions regarding the relative merits of appropriation and cash fund trusts, it is unlikely that this technical controversy will be a principal factor in the determination of the Board's powers. But considerable difficulty has, apparently, been experienced on the question of advertising. The Anderson Committee, it will be recalled, drew a distinction between publicity which was merely intended to incite interest, and that which could be held in law to constitute an invitation. The proposed prescriptive powers over advertising seem to hark back to this distinction. There is, first, power to secure the sufficiency and accuracy of statements regarding price or yield in any advertisement, circular or document, issued by or on behalf of the managers; and secondly, there are powers to determine the matters which shall appear in an "invitation." It has been argued that the drawing of such a distinction might be troublesome in practice, and ineffective in law, since the legal doctrine of *ejusdem generis* might confine the unspecified powers relating to "invitations" within the narrower limits specified for other documents. But, in the first place, the law of contract may well require a distinction; and secondly, a form of words has presumably been found that obviates the legal difficulty and confers on the Board wider powers of suspension over "invitations" than over other forms of advertisement.

These are the main questions which are likely to be governed under the new clause, for such questions as reserves for future management and the right of the trustees to replace an unsatisfactory manager are now common form in unit trust deeds. If they had been specifically defined when the now notorious clause 16 (3) was inserted in the Bill, it is doubtful whether any controversy would have occurred. There is no reason why all trusts, existing

and yet to be formed, should not be prepared to comply with official standards in these matters. The power of precept is great, and it has been the greater in the unit trust movement because reform, in many cases, could be turned to good business account. But the statutory recognition of the movement which was originally proposed ignored the fact that certain safeguards could not be provided by the managers themselves in a competitive world, while the trustees, contrary to widespread belief and frequent suggestion, simply act in a custodian capacity.

It is possible to argue, of course, that the trustees have interpreted their responsibilities too narrowly—that the public, rightly or wrongly, has assumed that undesirable practices would not escape the trustees' notice. And in some cases, the latter have exercised their powers of persuasion over matters which, under a strictly legal interpretation of the trust deed, would lie outside their scope. Trustees are not anxious to step beyond the present limits of control incorporated in trust deeds. Yet there are many features of unit trust business—advertising is a particular case in point—where the trustees could exert influence on the achievement of higher standards, without overstepping the strict legal limits of custodianship. And a watchful eye on investment policy, backed at least by veto powers, would also have advantages.

These matters, however, lie in the future. If the new clauses are agreed, the unit trust movement will have secured statutory recognition for a considerable period ahead in return for a relatively tolerable burden of statutory responsibility. The concept of the "approved trustee"—which, although useful, is of limited service in matters of unit trust supervision—will be replaced by the concept of the "approved trust deed." But the power of the Board of Trade to intervene in unit trust practice will at the same time be restricted to proper dimensions. In fact, on the five points outlined above, a sufficient degree of control could be exercised which would remove any vestige of reproach against the movement.

What is your
Capitalised Value
to your family?

IF you listed all your personal assets and converted them into cash what would be the total? Now assuming from a safe investment interest on this amount could be obtained at the rate of 3½% per annum tax free, what income would this produce?

This is the test which you should apply to your own resources, so that you will know exactly what the financial position of your wife and family would be in the event of your death—a contingency which it is unwise to ignore. Most men are disappointed and not a little perturbed after this self examination.

THE "SAFEGUARD" POLICY
is specially designed to augment personal assets by providing an income (tax free and payable monthly) for your dependants in the event of death. If you survive the period of your family responsibilities the policy provides capital for your own retirement.

You are invited to make an enquiry for full details and for an illustration suited to your own circumstances. Rest assured you will incur no obligation by doing so.

Finance and Banking

The Bank's New Accountancy.—This week's Bank Return illumines two technical points of the new accountancy introduced by the Currency and Bank Notes Act of 1939. The Issue Department's gold has been valued this week at 148s. 2d. an ounce. The price at Wednesday's fixing was 148s. 2½d., and the slight discrepancy may be taken as a demonstration of the freedom left to the Bank in certifying the price to be used. Last week's valuation was at 148s. 5d., and the depreciation of the gold held by the Issue Department was consequently £381,384. According to the Act, this sum could be made good by the transfer from the Exchange Equalisation Account either of gold or of cash, and this week (again, presumably, as a demonstration of the elasticity of the Act) the less obvious method of settling the difference in cash has been chosen. The Exchange Account, in effect, drew £381,384 of notes out of the Banking Department and presented them to the Issue Department for cancellation. Differences may be settled in future either in gold or in cash or by a combination of both methods.

The Supply of Bills.—After all the discussion raised by the abnormal contraction in the issue of Treasury bills it is reassuring to find that there is evidence of continued recovery in the supply of commercial bills of exchange. This evidence is to be found in the annual report of the Commissioners of Inland Revenue and more precisely in the tables showing receipts from stamp duties on inland-drawn and foreign-drawn bills of exchange and promissory notes. It is possible from these figures to calculate with a close degree of accuracy the outstanding volume of bills in the period to which they apply. The method was explained in an article which appeared in *The Economist* on March 26, 1938. The report of the Commissioners of Inland Revenue published this week brings the necessary data up to and including that for the financial year 1937-38:—

	Stamp Duty Receipts	Bills & Notes outstanding
1934-35:		
Inland-drawn bills and notes	238,895	119,447,500
Foreign-drawn " "	268,421	134,210,500
Total	507,316	253,658,000
1935-36:		
Inland-drawn bills and notes	242,534	121,267,000
Foreign-drawn " "	276,463	138,231,500
Total	518,997	259,498,500
1936-37:		
Inland-drawn bills and notes	265,386	132,693,000
Foreign-drawn " "	286,065	143,032,500
Total	551,451	275,725,500
1937-38:		
Inland-drawn bills and notes	298,478	149,239,000
Foreign-drawn " "	295,560	147,780,000
Total	594,038	297,019,000

It will be seen that the recovery in the average amount of bills outstanding in 1937-38 was particularly marked in the case of inland-drawn paper. This is a token of the moderate success which has continued to meet the efforts of those acceptance and discount houses which have led the campaign to popularise the bill of exchange in the finance of domestic business. As a considerable proportion of the bills drawn in this country finance foreign trade the appreciable recovery in this item may also refer to this type of paper.

The Belga and Guilder.—The absence of any government in Belgium continues to affect the exchange, and on Monday three months' belgas depreciated momentarily to Bel. 0.85 discount. The rate has since returned to Bel. 0.57 discount. Spot belgas remain at the export gold point against the dollar, and the sterling rate fluctuates in sympathy with the direct London-New York rate.

The market is inclined to take a pessimistic view of the financial outlook. There is a big Budget deficit, and M. Pierlot's resignation last week was partly due to opposition to his economic policy, which was regarded as deflationary. Rightly or wrongly, the market is beginning to think that the belga will eventually abandon gold for sterling, and a possible rate of belgas 35 to the pound (compared with the current rate of belgas 27.87) is already being canvassed. A devaluation of this kind would bring the belga into a better relation with the French franc from Belgium's point of view. On the other hand, the belga cannot be devalued without legislation, and with Parliament dissolved, no legislation is possible in the near future. Realisation of this fact has led to some covering of short positions, and on Wednesday one month's belgas were Bel. 0.17 discount. The guilder has been steady this week, with sterling quoted at Fl. 8.83½ and the dollar held at Fl. 1.88½. It has needed very little support this week from the Dutch authorities. The continued outflow to New York of capital owned by refugees remains the immediate cause of the recent depreciation of the guilder, but as in the case of the belga, it is considered in some quarters that a moderate depreciation would not be disadvantageous, and arguments to that effect have lately appeared in the Dutch press.

A Great Underwriter.—Mr Cuthbert Heath, who died on Wednesday last, was one of the great men of the City of London. His whole working life was devoted to insurance, for he became a Lloyd's underwriter while still a very young man and he remained a Lloyd's underwriter till his death. The debt which the Corporation of Lloyd's and the members and subscribers of Lloyd's owe to him is immeasurable, and outside Lloyd's there are thousands of workers throughout the world to whom he was scarcely a name who have to thank him for their success in business and even for their livelihood. He was the first man to see the potentialities of insurance in the modern world, and by his vision and enterprise he opened up one after another new fields of profitable and useful insurance. The first burglary policy ever written was written by him. He was one of the earliest pioneers of workmen's compensation. Fire policies against consequential loss were his invention, and so were policies against hurricanes, hail damage, and the bad debts of traders. There are, in fact, few departments of our modern life which have not been touched at this point or that by his inventive genius. He had in him every element of greatness—intellect, character, vision, courage, and a deep personal humility—and it was possible for him, as it is possible for few successful business men, to say at the end of his life that he never made an enemy or lost a friend.

February Clearing Bank Averages.—Conditions in the money market during recent weeks are well illustrated by the February averages of the ten English clearing banks. Thus, discounts are down on the month by £43.6 millions; and though this is only very slightly higher than the drop from January to February last year, it has brought the total down to the lowest figure since April, 1935. Call money shows a further decline, of £5.1 millions, owing to the same influences. There is nothing unusual in the rise in advances, as February commonly sees a demand for credit to make tax payments; but the fact that there has been a steady rise since last November suggests that industrial demand is probably responsible for some of the expansion. The increase, together with the fall in liquid assets, has compelled the banks to realise some of their investments

which are £8.1 millions below the amended figure for January and nearly £16 millions less than for February, 1938. The seasonal deflationary influences, however, are now probably at an end, for Treasury Bill payments are once more exceeding maturities and the period of heavy tax collection is over. The March figures ought to show some improvement, although the disappointing quota secured by the discount market at last Friday's Treasury

* Amended figure.

Bill tender and the very low level to which its bill holdings had fallen will probably mean that the banks' ratios will not return to normal in the immediate future.

Bank of Canada.—The annual report of the Governor of the Bank of Canada for the year 1938 shows that the monetary affairs of the Dominion have proceeded on an even keel. There was some evidence that a greater need for care was felt, for the Bank's holdings of "other securities" (consisting of obligations of the United Kingdom, any British Dominion, the United States or France), which amounted to \$12.2 millions a year ago, have since been liquidated, the result being an increase from \$14.9 to \$28.4 millions in the Bank's holdings of sterling and American dollars. The report alludes to the slight depreciation of the Canadian dollar against the American dollar, and also to its appreciation against sterling. Compared with 1937, there was a drop of 16 per cent. in exports and one of 15 per cent. in net tourist receipts, but as imports were also reduced by 16 per cent. the net active balance of payments was only reduced from \$218 to \$185 millions. Internally the report alludes to the increase from \$165.3 to \$175.3 millions in the Bank's note circulation, but this was partially offset by a reduction of \$7.7 millions in the note issues of the chartered banks. The Bank's gold stocks rose from \$179.8 to \$185.9 millions. Here the Bank of Canada has anticipated the Bank of England in valuing its gold at the current market price, and \$4.3 millions of this increase was due to the net appreciation of the Bank's gold stocks during the year. Investments in Canadian securities have risen from £173.9 to £185.5 millions, with a big turnover towards short-term securities, but this last movement simply reflects the fact that the Dominion Government 3 per cent. 1940 bonds became a short-term security during the year. Still the increase in investments shows that a liberal monetary policy has been followed, and so it is not surprising that the chartered banks' balances have risen from \$196.0 to \$200.6 millions.

Indian Insurance Act.—India is an important market for British insurance offices, but in recent years their experience has been most unsatisfactory, especially in the life branch. Indian life assurance companies have sprung up in mushroom fashion. Many of them have been in a dubious financial condition from the start, while their expenses, in a great number of cases, have been scandalously

high. All sound insurers—British offices no less than old-established Indian offices—desire reform in the Indian insurance business, and if last year's India Assurance Act has not been accorded an unqualified blessing by them, it is because its provisions have in some respects been unduly drastic. In a paper submitted to the Institute of Actuaries last week, Mr R. W. Sturgeon examined the provisions of the Act, which takes effect from a date to be fixed. Deposits are to be required from offices, non-Indian and Indian, transacting business in the country, though they are not unduly high—450,000 rupees when all classes of business are transacted, and less when the business is more restricted. The provision for the appointment of a Superintendent of Insurance, with wide powers of inspection and discretionary authority to apply to the Court for a winding-up order, has some justification, though it is certainly a departure from the British tradition of "freedom and publicity." The Act fixes maximum levels of agency commission, prohibits the rebating of commission and requires agents to be licensed. Such provisions are welcomed, though the concession to new companies to pay commissions on a higher scale during their first ten years seems doubtful wisdom, since excessive commissions have been the notorious cause of the present unsatisfactory position. In another important respect, however, the Act cannot be deemed other than retrograde. Under provisions which define the assets which insurance offices shall hold in their life funds, Indian and United Kingdom offices will be required to hold Indian Government rupee securities against 25 per cent. of their Indian liability and not less than an additional 30 per cent. in Indian Government rupee or sterling securities, Indian provincial or municipal securities, Indian Port Trusts, or securities issued or guaranteed by the United Kingdom Government. Offices in other countries—and this includes Dominion offices—must hold 33½ per cent. and 66½ per cent. respectively in these two categories. Such stereotyping of investments is of no advantage to policyholders.

Each year for the last twelve years the Standard has declared a

42½%

ANNUAL COMPOUND REVERSIONARY BONUS

In 1938 this yielded for the year to many of the older members over

80%

on the original sum assured

MONEY MARKET NOTES

Foreign Exchanges

STERLING has again been firm during the greater part of the week, partly owing to sales of dollars against shipments of gold from Belgium and partly owing to a general revival of confidence in the pound. The improvement in the Stock Exchange is also tending to induce funds to return to London, and the publication of the better employment figures was the probable cause of the distinctly firm tone on Tuesday. The dollar rate on that day rose to 4.69½, a net improvement of ¼c. on Monday. The rise would have been even more pronounced had not the Control bought dollars on a fairly substantial scale. On Wednesday, however, there was a slight relapse to 4.69, but on Thursday in a very quiet market the rate was steady at 4.69½-r. Francs have not moved with the dollar, but have tended to appreciate against sterling, although the spot rate shows very little change on balance. The discount on forward francs, however, has narrowed to ½ for one month and ¾ for three months. Belgas and guilders are discussed in a Financial Note. On Thursday the market in belgas was much quieter, and the discount on three months contracted to 57-60c.

Applications at the sterling tender at Bombay on Wednesday, amounting to £905,000, were accepted at 1s. 5½d., and the tap rate is expected to be raised to 1s. 6d. The formation of a £10 million fund to maintain the stability of the Chinese dollar is discussed on page 495. The announcement caused a slightly firmer tendency to be noticeable in the Chinese exchange, the Shanghai rate rising to 8½d.-8½d. on Thursday, but it is not expected that it will be allowed to appreciate to any extent.

The Bank Return

THE Issue Department is discussed in a Finance Note. In the Banking Department

	Mar. 9, Feb. 22, 1938	Mar. 1, 1939	Mar. 8, 1939	Mar. 1, 1939
Issue Dept.

Notes in circulation	479.3	472.7	478.4	479.2
Banking Dept.				
Reserve	48.0	54.7	48.9	47.9
Public Depts.	12.6	16.3	11.6	11.4
Bankers' Depts.	114.3	103.1	110.4	97.4
Other Depts.	36.1	35.1	36.5	35.8
Govt. Secs.	105.2	78.9	99.0	69.2
Discounts & Advances	6.5	17.5	6.3	3.4
Other Secs.	21.5	21.6	22.4	22.4
Proportion	29.4%	35.3%	30.8%	33.1%

ment the chief movement is a fall in bankers' deposits, which are down by

as much as £13 millions. For this the decline in Government securities of nearly £10 millions is mainly responsible, but discounts and advances are also down by nearly £3 millions. Public deposits are virtually unchanged. It is worth noting that bankers' deposits are well below the figure at the corresponding date of last year. Their fall probably explains why one or two institutions have been less keen to acquire bills during the week, although there has not been the slightest indication of any monetary stringency. The fall in deposit liabilities explains the rise in the Proportion, in spite of the fall of £1 million in the Reserve.

The Money Market

LAST Friday's Treasury bill tender proved very disappointing for the discount market. The increase in the amount of bills on offer to £40 millions had encouraged it to hope for a larger allotment, but in actual fact the syndicate only obtained 27 per cent. of requirements, against 30 per cent. a week earlier. Applications rose from £72.6 millions to £83.8 millions, and the average rate of allotment fell from 10s. 1.33d. per cent. to 10s. 0.48d. These two factors indicate very strong outside competition for bills, which probably represented the renewal of bills by one or more central banks of the sterling bloc, although in some

	Mar. 10, 1938	Mar. 2, 1939	Mar. 9, 1939
Bank Rate	2	2	2
London Deposit Rate	½	½	½

Treasury bills	½	½	½
Three months' bank bills	17½-9½	12-17½	12-17½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

quarters it was suggested that it may have been official tendering. In any case, the result has not enabled the market to replenish to any notable extent the banks' bill holdings, which, as shown by the February averages, have fallen to a very low level. Some April and May maturities have been sold, but the supply has been very short of the requirements. Glasgow Corporation has taken advantage of the prevailing conditions to place some bills at very favourable rates. Of the total of £650,000, £250,000 maturing on June 30 were placed at 10s. per cent.,

£200,000 maturing on August 10th at 10s. 7½d. per cent. and £200,000 maturing on September 11th at 10s. 7½d.

Credit conditions have remained very easy in spite of the fall in bankers' deposits shown in this week's Bank return, and advances against bonds have been readily obtainable at ½ per cent.

The Bullion Market

THE increase in hoarding interest in gold noted last week has again been evident, although on a very small scale. It was most marked, perhaps, on Monday, when nervousness over the Belgian political situation was very apparent, and the discount on the three months'

Date	Gold			Silver, price per oz. standard

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.
The New York price of silver remained at 43 cents per ounce - 999 fine during the week.

belga widened to 85c. The publication on that day of the National Bank of Belgium's return for the week to March 2nd also encouraged the slight tendency to hoarding; for it showed a fall of nearly £11.5 millions (at current rates) in gold and foreign exchange, and consequently encouraged those who think that a devaluation of the belga is a possibility. On Tuesday and Wednesday, however, there was more arbitrage demand. Arbitrageurs on the latter day were encouraged by the appreciation in the dollar and the small premium over the American shipping parity; the turnover rose to £670,000, offerings being mainly on private account, but buyers were not able to obtain their full requirements.

The silver market has been quiet, with very little change in prices. The spot price is still above the New York parity to an extent sufficient to encourage small sales from American operators; but this has been counter-balanced by some buying on Indian account, which has also been felt in the forward market.

INSURANCE NOTES

Prudential Assurance Company.—This company is the colossus among insurance offices and is, indeed, the largest corporation in the country. Hence its progress and prosperity are of national interest. During 1938, total assets increased by nearly £16 millions to £346 millions and total income by £1.6 millions to over £56 millions. More than one million policies are in force in the ordinary branch, while in the industrial branch the total number exceeds 28 millions. Moreover, the com-

pany has four associated approved societies with a membership of nearly four millions. Last year, new assurances in the ordinary branch declined from 99,000 policies assuring £32,500,000 to 94,000 policies for £31,800,000. Annuity consideration moneys amounted to £783,000, compared with £877,000 and the rate of interest was 3s. 11d. lower at £4 4s. 4d. per cent. In the industrial branch, 2,536,000 policies were issued for £69,720,000 against 2,445,000 policies for £66,192,000 in

1937, and premium income showed a satisfactory increase from £22,300,000 to £23,100,000. The net rate of interest earned in the industrial branch fell by 5s. 8d. per cent. to £4 5s. 1d. per cent. and the expense ratio was again smaller at 22.6 per cent. of premiums, against 22.7 per cent. in the previous year and 40.5 per cent. in 1920. If the bonus to the outside staff, which last year cost £739,000, is included as an expense and not an allocation from surplus, the expense ratio would be 25.8 per cent. The

results of the valuation at December 31st are compared with the 1937 results below:—

	1937	1938
Ordinary Branch—		
Surplus earned	3,045,602	3,137,315
Capital profits	30,248	738
Brought forward	596,428	639,297
	3,672,278	3,777,350
Policyholders' bonuses	2,729,683	2,809,489
Shareholders' bonuses	288,198	296,565
Contingency fund	15,100	15,600
Carried forward	639,297	655,696
	3,672,278	3,777,350
Industrial Branch—		
Surplus earned	5,995,584	6,096,862
Brought forward	588,864	642,533
	6,584,448	6,739,395
Policyholders' bonuses	4,044,192	4,131,392
Contingency fund	297,000	303,000
Shareholders' bonuses	894,094	901,352
Contingency fund	706,629	738,542
Carried forward	642,533	665,109
	6,584,448	6,739,395

The bonus rates in the ordinary branch are maintained at 46s. per cent. for whole life and 40s. per cent. for endowment, calculated in each case on the sum assured. The bonus in the industrial branch is also repeated at the very satisfactory rate of 32s. per cent. In the ordinary branch, as in the previous year, the bases of valuation are OM3 per cent. for assurances and a⁽¹⁾ and a^(m)3 per cent. for annuities. In the industrial branch, the English Life Table (No. 10) with interest at 2½ per cent., first adopted in 1937, has again been used this year.

Net premiums, after reassurances, in the branches other than life assurance, amounted last year to £2,692,000, being an increase of £53,000 over the previous year's total. The results of the last two years are summarised below:—

	1937	1938
Fire	90,397	83,739
Motor	982	14,467
Employers' liability	Dr. 62,891	Dr. 21,261
Miscellaneous	7,791	22,849
Sickness and accident	45,727	62,749
Marine	60,269	20,415
Sinking fund	23,201	15,703
Fees	19,324	22,211
Exchange	Dr. 20,318	Dr. 13,763
Securities realised	...	Dr. 10,188
Total	163,238	196,921
Net int. earnings	119,411	120,829
	282,649	317,750
Income tax	30,000	32,000
N.D.C.	15,000	18,000
	237,649	267,750
Cost of dividend	133,333	133,333

A sum of £75,000 against £100,000 has been transferred to the general branch investment reserve fund. Instead of holding departmental additional reserves (apart from reserves for unexpired risks and outstanding claims) the Prudential now maintains a central general branch additional reserve account, to which £33,800 was transferred last year against £47,600; and which now amounts to £1,177,000. The balance sheet shows the following subdivision of the company's assets into six groups:—

	(£ millions)	1937	1938
Assets:—			
Ordinary branch	122.9	127.5	127.5
Industrial branch	191.7	202.3	202.3
General branch	8.1	8.1	8.1
Common contingency fund	2.7	2.8	2.8
Special contingency fund	4.6	5.1	5.1
Share premium account	4	3	3
	330.4	346.1	346.1

The distribution of the combined life

assurance funds is shown below for 1937 and 1938:—

	1937	1938
Amount Per (£ mns.) cent.	Amount Per (£ mns.) cent.	
Mortgages, inc. loans on	43.2	46.9
Policyholders' bonuses	89.7	92.8
Indian, Col. & For. Gov. secs.	16.5	16.1
Brit. Munpl. & Cty. secs.	5.3	6.0
Col., For., Mun. & Prov. secs.	5.4	4.8
Debentures	52.8	55.6
Pref. and Guar. stks.	28.8	30.2
Ordinary stocks	38.1	41.2
Reversionary ints. & properties & other assets	34.8	36.3
	314.6	329.9

An increase of £349,000 to £11,221,000 in loans on property in the United Kingdom is more than offset by a reduction of £556,000 to £5,112,000 on mortgages outside the United Kingdom. Loans on Stock Exchange securities, which fell in 1937 from £16,224,000 to £9,282,000, recovered last year to £13,100,000. Policy loans showed some reduction at £4,866,000. Aggregate market values on December 31, 1938, of Stock Exchange securities in each branch exceeded book values. The "B" shares are entitled to 75 per cent. and the "A" shares to 25 per cent. of the divisible profits of the general branch, but the "B" shares do not participate in the surplus of the life business. The rate of dividend on the "A" shares (£1 each fully paid) shows an increase from 19s. 5½d. tax free to 19s. 8½d. tax free. In each year 6½d. was attributable to general branch profits. The rate of dividend on the "B" shares is 50 per cent. tax free for the third year.

Britannic Assurance Company.—The results of the annual valuation of Britannic Assurance are compared with the figures for 1937 below:—

	1937	1938
Ordinary Branch—		
Surplus earned	412,492	399,962
Brought forward	161,139	178,732
	573,631	578,694
Bonuses to policyholders	285,714	296,255
Shareholders' account	39,185	39,361
Investment reserve fund	40,000	50,000
Staff pension fund	5,000	10,000
Contingency fund	25,000	...
Carried forward	178,732	183,078
	573,631	578,694
Industrial Branch—		
Surplus earned during year	697,745	740,991
Brought forward	158,173	193,418
	855,918	934,409
Bonuses to policyholders	267,500	267,500
Shareholders' account	240,000	240,000
Investment reserve fund	60,000	100,000
Staff pension fund	95,000	115,000
Carried forward	193,418	211,909
	855,918	934,409

The basis of valuation was again A1924-29 in the ordinary branch and E.L. No. 8 (Males) table in the industrial branch; the rate of interest assumed was 2½ per cent. for participating policies in the ordinary branch and 3 per cent. for all other life contracts in the ordinary and the industrial branches. In the ordinary branch the rate of bonus remains at 38s. per cent. on the sum assured. In the industrial branch the same sum as in 1937 has been set aside for policyholders. The sums credited for the four years 1935-38, amounting to £950,000, will be held in reserve and applied later for the benefit of policyholders. The company's bonus scheme shows a balance on hand at December 31, 1938, estimated to provide bonus additions varying from 5 per cent. for policies ten years in force to 20 per cent. for

policies of twenty-five years or more, which become claims before March 31, 1940. New sums assured in the ordinary branch amounted last year to £3,423,000, compared with £3,594,000 in 1937, and in the industrial branch to £9,560,000, against £9,769,000. Reduced new business in 1938 was a general feature of industrial-cum-ordinary offices. The net rate of interest in the ordinary and industrial branches fell by 3s. 10d. per cent. to £4 2s. 10d. per cent. and £4 8s. 6d., respectively. Ordinary branch expenses fell from £181,000 to £179,000, and amounted to the moderate figure of 12.5 per cent. of the premium income against 13.1 per cent.; in the industrial branch the expense ratio fell from 31.4 per cent. to 30.2 per cent. Total assets increased from £30,103,000 to £32,272,000. Loans increased from £4,792,000 to £5,660,000, while British Government securities showed little change from the 1937 total of £6,559,000. Foreign and Colonial Government securities increased from £3,627,000 to £3,820,000, debentures from £2,864,000 to £2,928,000, preference shares from £2,585,000 to £2,695,000 and ordinary shares from £5,059,000 to £5,591,000. The dividend is repeated at 50 per cent. free of tax.

United Kingdom Provident.—The triennial valuation was made as at December 31st last, and the results are compared with those of the previous triennium below. The bases of the valuation are the same as before.

	1933-1935	1936-8
Surplus earned during triennium	1,705,805	1,651,502
Profit on securities	300,000	40,372
Brought forward from previous valuation	277,455	400,377
	2,283,260	2,092,251
Allocations—		
Bonuses to policyholders	1,582,883	1,720,201
Transfer to Investment contingency reserve	300,000	...
Carried forward to next valuation	400,377	372,050
	2,283,260	2,092,251

Bonuses are at the same high rates as for the last three valuations, namely, 45s. per cent. and 41s. per cent. for whole life policies in the temperance and general sections respectively, calculated on the sum assured and existing bonuses. For endowment assurances, the rate is 43s. per cent. in the temperance section where the original term is not less than twenty-five years and 41s. per cent. for all other policies, including those in the general section. On this occasion, however, the cost of bonus is somewhat in excess of the surplus earned in the period. Stock Exchange securities stand in the balance sheet at middle market prices on December 30, 1938; the aggregate values of other assets appear to exceed book values. Total assets amount to £26,516,000. Loans show a further increase over the year from £6,646,000 to £7,088,000. British Government securities rose by £449,000 to £3,397,000, while Colonial and foreign government securities, debentures and ordinary stocks were all higher at £2,231,000, £2,347,000 and £3,605,000, respectively. Preference shares, however, were reduced to £1,903,000. New sums assured set up a new record at £5,116,000 against £5,023,000 in 1937. The net rate of interest fell by 4s. 1d. per cent. to £4 1s. 6d. per cent.

a result, the English trading profits were approximately halved, compared with 1937, while the 30 per cent. reduction in wood pulp prices required a provision against stocks which absorbed most of the reduced profit. Abroad, the American Viscose Corporation's year was "wholly unremunerative" and no dividends were received. The directors detect no hopeful prospects of better trading in the American rayon trade during 1939, but at home, two en-

COURTAULDS' PROFITS—1928-38

couraging features are seen: lower wood pulp costs, and the new price arrangements. The Courtaulds board is habituated to caution, and the payment of a 4 per cent. dividend out of earnings of less than $\frac{1}{2}$ per cent. last year was in itself significant. Hence their present encouraging references to the trade prospect, with proper reservations regarding the international outlook, go far to explain the present low yield of £2 15s. 7d. per cent. on the ordinary stock.

Home and Colonial Group Progress.—Some recovery in the profits of the Home and Colonial group (controlled by Lever Bros. and Unilever) was already apparent in 1937-38, and the preliminary results for the year to January 7, 1939, show a further satisfactory improvement. Net profits of Home and Colonial have risen from £231,794 to £321,174, and ordinary dividends are resumed, after a lapse of three years, with a 3 per cent. payment. Maypole Dairy profits are £48,763 higher at £395,709, and the deferred ordinary dividend is increased from 7 per cent. to 9 per cent. Meadow Dairy earnings, however, are only $1\frac{1}{2}$ per cent. higher at £141,611, and this rise may be accounted for by the fact that the group's latest accounts cover 53 against 52 weeks—a difference which covers only a small part of the improvement shown by the other two companies. The policy of internal re-organisation undertaken by the group during the past few years is yielding its fruits, for unremunerative shops have been closed, and new premises opened in more promising districts. An important cause of difficulty two or three years ago was the lag between costs and selling prices. But in 1937-38 the necessary adjustments were apparently effected more simply. It may be that, contrary to traditional views regarding price trends and provision profits, slightly higher prices in 1938-39 assisted the companies to achieve

more satisfactory trading margins. Sir George Schuster's remarks a year ago suggested that a satisfactory expansion in margarine sales (particularly in the better qualities) had been stimulated to some extent by the rise in butter prices, and consumption was also very satisfactory last year. The group has some way to go before the former levels of prosperity are in sight, but shareholders will be well satisfied with the first stage of recovery effected in the past two years.

London Brick Prospects.—In his survey of the past achievements of London Brick, Sir Malcolm Stewart's speech this week gave every cause for satisfaction. Fixed assets have been written down to the extremely low basic valuation of £1 per thousand bricks of annual productive capacity, which is 1,750 million bricks. Last year, a satisfactory demand, until September at least, enabled the company to establish new production records. For the current year, however, Sir Malcolm's attitude was cautious, and his references to current business position were frank. Deliveries to date are "sensibly down" compared with those of a year ago. At the moment, the board foresees no factors likely to be strong or rapid enough to enable last year's sales to be reached. In 1938, stockholders were warned that interim dividends of 5 per cent. did not as a matter of course imply a year's total of 20 per cent., but this week Sir Malcolm was only able to offer the consoling suggestion that, if the interim payments should be reduced, it would not necessarily imply a reduction in total dividend. If, as we questioned last week, London Brick should not be so successful this year in obtaining a larger share of a smaller volume of business, stockholders will at least have been frankly prepared for the consequences by their chairman.

Scottish Power.—The 1938 report shows an increase in the trading profits of subsidiaries of £61,459, equivalent to 9.2 per cent., which is slightly higher than the 1937 increase of 8.9 per cent. The Grampian Hydro-Electric development is still not completely self-supporting, and credit is taken for £15,262 in respect of interest charged to capital. After providing for additional depreciation of £32,572, and an increase in preference dividends of £14,813, reflecting the issue of £1,000,000 4 per cent. preference stock in May, 1937, the net earnings available for the ordinary capital show a slight reduction as compared with 1937. A further issue of £500,000 4 per cent. preference was made in October last, but the dividend on this stock will only come into the accounts for the current year. The results since 1936 are set out below:—

	1936	1937	1938
Trading profits of undertakings	£ 615,827	£ 670,588	£ 732,047
Interest charged to capital.....	12,391	23,943	15,262
Total	628,218	694,531	747,309
Depreciation and reserves	188,328	201,329	233,901
Income tax	72,824	88,614	101,571
Available gross revenue.....	367,066	404,588	411,837
Parent company's expenses ...	23,532	24,716	30,263
Interest on loans.....	8,721	11,570	9,471
Preference dividends	100,650	111,575	126,388
Ordinary stock:—			
Earned	234,163	256,727	245,715
Paid	231,800	228,000	220,400
Earned %	8.1	9.0	8.9
Paid %	8	8	8
Carried forward	10,468	10,695*	11,209*

* After allocating £28,500 to general reserve in 1937 and £24,800 in 1938.

While it is impossible to make an estimate of standard depreciation, since a large but undisclosed proportion of total capital expenditure is represented by hydraulic works, the actual provision made by the operating subsidiaries for depreciation and reserves, seems hardly more than adequate. The company's enterprise in

providing electrical supplies over sparsely inhabited and economically unattractive areas in Scotland does appear, however, to have yielded a moderate, if not unduly generous return. Over the past decade the company has obtained some £7,150,000 (excluding the issue in October last) of additional capital, in the form of either preference or ordinary shares, on which it has earned and paid an average return of just under $5\frac{1}{2}$ per cent. The further stage in the Grampian hydro-electric undertaking completed last year, brings the company near the end of a ten-year programme. In this project, also, the company has displayed commendable enterprise, although in the absence of any detailed figures, it is impossible to estimate the degree of financial success which has resulted, or the extent to which it has been "carried" by the remaining part of the company's business. At 37s. x.d. the ordinary shares yield £4 6s. 6d. per cent.

North Metropolitan Electric.—A further satisfactory increase in consumers and in units sold was shown last year, the gain being most marked in the company's own distribution undertakings. The latter, which now account for over 45 per cent. of the total units sold, showed an increase in sales of 17.2 per cent. Industrial power sales, representing 16.5 per cent. of the total, were up by 8.1 per cent., and traction sales to London Transport by 3.7 per cent. Units sold to other authorised undertakings, amounting to 27 per cent. of the total, show only a small increase of just over 4 per cent., but this figure may need qualification since the Harrow Electric undertaking was vested in the North Metropolitan Company in October, 1937. The results of the past three years are analysed below:—

	1936	1937	1938
Total consumers	336,722	375,067	407,106
Units sold (millions)	597 $\frac{1}{2}$	691	760
Increase (%)	21	15	10
Net revenue	£ 855,443	£ 914,332	£ 983,141
Interest charges	80,374	80,628	78,592
Depreciation and reserve acct.	337,352	374,082	410,810
Reserve and redemption funds	31,762	47,387	47,387
Preference dividends	84,000	84,000	92,834
Ordinary shares:—			
Earned	321,955	328,235	353,518
Paid	278,151	278,151	319,148
Earned %	12.1	12.4	11.5
Paid %	10	10	10
Contingency fund, etc.	30,000	39,383	32,325
Carried forward	63,666	74,367	76,412

The accounts show only a moderate increase in net profit of just over $3\frac{1}{2}$ per cent., and even this may be affected by the changed status of the Harrow undertaking. Interest and dividend receipts show a large increase of £36,392, which presumably reflect the acquisition of the Hendon Electric Supply Company. If this item is shown after deduction of tax, the increase almost offsets the dividends payable on the £200,000 of 6 per cent. preference stock and £418,000 of ordinary stock of the North Metropolitan Company created for this acquisition. On balance, the percentage earnings on the increased ordinary capital show a slight fall. A rough calculation suggests that the total amounts appropriated to depreciation, reserves and redemption funds, are some £75,000 in excess of depreciation on our standard basis, which would represent additional earnings of approximately $3\frac{1}{2}$ per cent. on the ordinary capital. The report makes no reference to the Southgate undertaking, in respect of which the local authority gave notice some twelve months ago of its intention to purchase at 45s. 9d. x.d. the ordinary stock units yield £4 7s. 3d. per cent.

London Stores Outlook.—It is now possible to complete the picture presented by the London stores' results for 1938. They make a mixed showing, for while

the John Barker and D. H. Evans profits caused satisfaction, and Peter Robinson and A. W. Gamage maintained their position, Harrods experienced a moderate decline, and the setback in Selfridge and Whiteleys was distinctly severe. Treating John Barker's results as a special case, it is clear that the stores have, at best, only been able to maintain their earning position in a difficult year. The fullest analysis of the course of trading month by month was perhaps given by Mr Gordon Selfridge at the Selfridge and Company meeting. The year 1938 began with some decline, which became intensified at the time of the *Anschluss*. Then there followed a period of doubt, culminating in the September crisis which brought a heavy drop in the trading returns. Mild weather in October and November brought a smaller recovery than might have been expected, but in December there was a marked recovery, which surpassed the 1937 figures. In the experience of A. W. Gamage (whose trading profits in 1938-39 were £122,850 against £125,220) December was also a satisfactory month. While Sir Woodman Burbidge's survey of business in 1938 at the Harrods meeting followed similar broad outlines, the chairman spoke with some optimism of the future, and was able to cite practical proof of this confidence. Rebuilding schemes costing in the aggregate some £1,200,000 and financed entirely from the company's own resources, are in progress in Brompton Road, in Manchester and at Dickens and Jones, and political uncertainties have not deterred the company from proceeding with these plans. The Harrods report shows a decline of 6 per cent. to £2,548,912 in total profits, and from £488,802 to £408,191 in earnings for the ordinary stock, but the company's profit record suggests that the satisfaction which Sir Woodman expressed regarding long-term prospects is well justified.

Pennsylvania Railroad.—The results of the Pennsylvania Railroad in 1938 vividly illustrate the difficult conditions under which American railroads were forced to operate last year. Total operating revenues were \$95,549,267 down to \$360,384,241, but the reduction in expenses by \$80,914,050 did not cover the fall in gross revenue, and after provision for taxation, hire of equipment and including income from investments, gross income was reduced by \$17,001,076 to \$93,559,078. This sum covered debt and other prior charges with a surplus of \$11,046,100, and after appropriations to sinking and other funds of \$8,035,319 the resulting surplus for the common stock was reduced to \$3,010,781, against \$19,134,172 in 1937. Earnings were thus equivalent to 46 cents per share and failed to cover the dividend of 50 cents per share paid in December. Some signs of improvement are apparent in

the January traffic figures, which show an improvement in gross receipts from \$28,466,000 to \$32,897,000, while net operating income was up from \$2,242,000 to \$4,999,000. The common stock, at 23½, is close to last year's high of 24½ and discounts some recovery in net income this year.

Consolidated Mines Selection Setback.—The full report of Consolidated Mines Selection confirms the approximate halving of profits revealed by the preliminary statement. Poor dealing opportunities in the stock markets in 1938 are reflected in a drop from £156,057 to £49,825 in share dealing profits—which are less than investment income for the first time since the last depression. From the 16 per cent. reduction in dividends received, which amount to £68,629, it would appear that a higher return on such interests as Gold Coast Selection and Rand Leases has not offset the lower Anglo-American and Mawchi distributions. The balance available for the ordinary stock amounts to £73,065 against £148,873, and thus covers the 15 per cent. dividend with a margin of only 1.4 per cent. Dealing profits, however, are struck after writing down investments, which in the aggregate stand at less than market values. On a 15 per cent. dividend basis, the 10s. units yield £6 3s. per cent. at a current price of 24s. 4½d.

The Week's Company Profits.—Our usual analysis of profit and loss accounts, appearing on page 546, includes 66 companies this week whose net profits of £6,400,000 compare with £8,856,000 earned by the same companies a year ago. This sharp reduction of 28 per cent. is largely due to the inclusion of the Courtaulds' results. Aggregate net profits of 430 companies reporting in 1939 to date amount to £54,382,000, and show a fall of 9 per cent. compared with earnings of £59,653,000 for the previous year. The week's results are discussed in preceding Notes and on page 522 under the heading "Shorter Comments."

Company Meetings of the Week.—At the *Refuge Assurance* meeting, Mr J. Wilcock Holgate pointed out that of the total new ordinary branch sums assured nearly 32 per cent. was for assurances of £500 and over. The company's tables had been revised, and, generally speaking, the effect was to reduce the whole life and to increase the endowment assurance rates of premium. A tendency towards the improved yields for which he had pleaded was discussed by Sir Ernest J. P. Benn at the *United Kingdom Provident Institution* meeting. Mr J. A. Jefferson, in his address to *Britannic Assurance* shareholders, expressed satisfaction with the reduction in the industrial branch expense ratio from 31.38 per cent. to 30.15 per cent. of premium income. The stringency of the company's valuation basis was stressed by Mr George William Blackwood at the *Standard Life* meeting. In the valuation of actuarial liabilities, the interest rate assumed was only 2½ per cent. Members of the *Scottish Widows' Society* were informed by Sir Ian Bolton that the surplus on the valuation exceeded £3,700,000, and he drew attention to the growth of business in three successive quinquenniums. Sir Ronald W. Matthews' survey of the *London and North-Eastern Railway* concluded with references to encouraging features in the trade outlook. Mr George Balfour informed shareholders at the *Midland Counties Electric* meeting that during the year they had connected 16,568 new consumers, bringing the total to about double the number at the end of 1934. At the *Scottish Power* meeting, Mr Balfour reported that the hydro-electric plants had produced an output largely in excess of their calculations. Sir P. Malcolm Stewart's review of *London Brick* prospects is discussed on page 516. The chairman's comments at the *Selfridge and Harrods* meetings are referred to on page 517. At the *Scottish Equitable Life* meeting, the chairman drew attention to the margin between the rate of 2½ per cent. used for valuation purposes and net interest earnings of £3 18s. per cent.

THE PRUDENTIAL ASSURANCE CO. LTD.

Points from the Speech of
SIR EDGAR HORNE, Bart.

Chairman of the Company, at the 90th ANNUAL GENERAL MEETING held at Holborn Bars, London, E.C.1, 9th March, 1939

ASSETS AND INCOME. The assets of the Company are now £346,139,159, of which over 82 per cent. are invested in the United Kingdom. The income during 1938 was £56,222,018.

ORDINARY BRANCH. The net new sums assured were £31,762,732. The reversionary bonuses declared on participating policies in force at 31st December, 1938, are maintained at £2.6.0 per cent. for Whole Life Assurances and £2.0.0 per cent. for Endowment Assurances.

INDUSTRIAL BRANCH. The premiums received were £23,115,486. The reversionary bonus is £1.12.0 per cent. for Great Britain and Northern Ireland. The same rate as for the year 1937.

Since the initiation of the profit sharing scheme in the Industrial Branch, the total amount allotted for bonuses to policyholders is over £55,529,319.

A further reduction in the Industrial Branch expense ratio. For 1938 the ratio was 22.61 per cent. of the premiums received.

GENERAL BRANCH. The premiums received were £2,691,605 of which £994,593 was in respect of Fire business.

APPROVED SOCIETIES. Membership exceeds four millions and the amount expended more than £4,500,000 on the payment of benefits.

SETTLING DAYS

TICKET ACCOUNT
MARCH 21 MARCH 23

THE basis of recovery in the London markets this week has been significantly broadened. From the first, it was apparent that the smaller investor was taking a larger hand, and by Thursday the flow of small country orders was responsible for the bulk of a very satisfactory volume of trade. Whether it is significant that the volume of London buying has tended slightly to diminish has yet to be seen. The fact remains that ordinary shares, as measured by the *Financial News* index, have advanced steadily from 85.9 at the end of last week to 88.0 on Thursday and support for fixed interest sections of the market has been very well maintained.

Gilt-edged opened with rather slow business on Monday, but picked up in sympathy with the rest of the "House" as the week advanced, the prospects of a balanced budget assisting the rise in mid-week. Demand was well spread over undated and unredeemable stocks, and although the volume of business towards the end of the week was not so great, prices remained very firm. Home corporation stocks responded to the success of the Barking issue, and on Thursday the Essex scrip rose as high as 3 premium. Profit-taking after the recent rise affected New Zealand issues, but otherwise the Dominion list was firm.

In the *foreign market*, Chinese bonds responded sharply to the news of the £10 millions stabilisation loan, the 4½ per cents. of 1898 closing as much as 3½ higher at 78½ on Wednesday. On the other hand, Japanese bonds remained dull. Brazilian issues opened firm on the reaction to the United States credits, but failed to maintain their improvement. Central European issues, and Czech bonds in particular, reflected the improvement in the international situation.

*

Anticipation of a rising traffic trend brought renewed support for *home rails* and the traffic (particularly the "plus" for Southern) were regarded as encouraging. Southern preferred claimed much attention, and the marginal preference issues also advanced, with rises of a point or more on successive days, which were the more vigorous since the market remained short of stock. Argentine rails were uninteresting until mid-week, when the group enjoyed a belated share in the general recovery.

The *industrial share market* had another satisfactory week; it responded well to good trade news, and a moderate amount of profit-taking in mid-week did not damp its relatively bright mood. Iron and steel shares went ahead, with Neepsend Steel and James Booth prominent in the earlier part of the week, and Swan, Hunter and Hadfields later on the dividends and profits. The improvement in the Cammell Laird results, however, had been over-discounted, and the shares eased slightly on the announcement. Coal shares were firm, and more active than in recent weeks. Among engineering issues, Westinghouse Brake were favoured, and the group as a whole made moderate gains. Electrical equipment shares,

which were among the brightest features in the earlier part of the week, became more irregular later. Substantial gains were recorded in practically all motor shares, until profit-taking brought a more hesitant tone. Aircraft issues were firm at first, but gains were generally small. Textiles were in much better demand than of late, and Bradford Dyers were firm on the price agreement. Rayon issues, however, were relatively subdued. Brewery shares made a more irregular showing than other sections, while tobacco shares reacted slightly after a firm start. In the stores section, quotations followed the general trend. Provision and catering issues also gained, assisted by the satisfactory Home and Colonial results, with which International Tea rose in sympathy. Miscellaneous shares went ahead on Monday, reacted slightly, and then made fresh gains. London Brick weakened after the meeting (discussed on page 516). The shipping group was much firmer than in recent weeks, on hopes of a subsidy and of improved freights.

*

Continuous though moderate gains were general among *oil shares*, though it was only on Wednesday that the volume of orders reached good proportions. Rubber shares again enjoyed advancing prices, broadening public interest and a better turnover, though the pace tended to slacken. Tea shares improved, under the stimulus of the reduced export quota and the general trend of the market.

The *mining market* did not remain indifferent to the improved tendency elsewhere, though its response remained less brisk. Kaffirs made small gains, without much expansion of turnover except on Monday. Local buying helped the developing issues, and the Cape lent an occasional hand. Interest was again shown in West Africans, where Kwahu and Ariston were prominent. Rhodesian copper issues tended to harden, but were checked occasionally by profit-taking. There was renewed support for tin shares.

ACTUARIES' INVESTMENT INDEX

A considerable rise is again shown by the Actuaries' index of 160 industrial equity prices, which on Tuesday, March 7, stood at 65.3 (this year's "high") compared with 63.5 a week ago and 60.3 a month ago. The average yields are 5.50, 5.70 and 6.25 per cent. respectively. A selection of the separate indices follows.

New York

THE week began in disappointing fashion, showing not so much falling prices (which were only fractionally down) as a subdued undertone. This more sober mood was attributed to several factors: the declaration by Senator Bankhead that there was nothing new in the Administration's policy towards business; the fall in the Federal Reserve Board's industrial production index; a rise in unemployment, and the general lack of real signs of an upswing in business this spring. The next session saw the same uninteresting mood, though prices were a shade higher for choice. A sharp revival came in mid-week, however, when the Dow industrial index rose over two points, and turnover once more topped the million mark. Mr Hopkins' speech was well received, and the market inclined to think better of the "appeasement" policy, while the strength shown by London helped. Steel shares remained somewhat in the background, for the market is disappointed that prices are not being raised. Output for the current week is estimated by *Iron Age* at 55 per cent., the same as the revised figure for last week.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

THE PENNSYLVANIA RAILROAD

SUMMARY
OF ANNUAL REPORT
FOR 1938

THE 92nd Annual Report of the Pennsylvania Railroad Company covering operations for 1938 will be presented to the stockholders at the annual meeting on April 11, 1939. Total operating revenues were less than 1937 by \$95,549,267 or 21.0%. Operating expenses decreased \$80,914,050 or 23.9% (due to falling off in business and decreased outlays for maintenance of roadway, track and equipment). Net income was \$11,046,100, as compared with \$27,278,638 in 1937. Surplus was \$3,010,781 equal to 0.46% (23 cents per share) upon the outstanding Capital Stock (par \$50) as compared with 2.9% (\$1.45 per share) in 1937.

OPERATING RESULTS

	1938	Comparison with 1937 Increase or Decrease
TOTAL OPERATING REVENUES were.....	\$360,384,241	D \$95,549,267
TOTAL OPERATING EXPENSES were.....	257,047,243	D 80,914,050
LEAVING NET REVENUE FROM RAILWAY OPERATIONS of	103,336,998	D 14,635,217
TAXES amounted to.....	37,225,328	D 2,107,422
HIRE OF EQUIPMENT AND JOINT FACILITY RENTS were	8,778,772	I 3,140,234
LEAVING NET RAILWAY OPERATING INCOME of	57,332,898	D 15,668,029
INCOME FROM INVESTMENTS AND OTHER SOURCES was..	36,226,180	D 1,333,047
MAKING GROSS INCOME of.....	93,559,078	D 17,001,076
RENTAL FOR LEASED LINES, INTEREST ON THE COMPANY'S DEBT AND OTHER CHARGES amounted to...	82,512,978	D 768,538
LEAVING NET INCOME of.....	11,046,100	D 16,232,538
APPROPRIATIONS TO SINKING AND OTHER FUNDS, etc....	8,035,319	D 109,147
SURPLUS (Equal to 0.46% on Capital Stock).....	3,010,781	D 16,123,391

A dividend of 1% (\$0.50 per share) was paid December 20, 1938, and charged to Profit and Loss.

The cooperation extended by the security holders, the public and the employees in getting people to travel and ship via The Pennsylvania Railroad is appreciated.

M. W. CLEMENT, President

PRIVATE PLACING

Aeronautical and General Instruments.—This company has issued to Electrical and General Industrial Trusts for cash 120,000 5s. ordinary shares. This raises issued capital to authorised total of £150,000.

ISSUE ABROAD

Argentine Government Internal Loans.—The issue of the 4 per cent. ten-year loan was increased to the full authorised amount of 50,000,000 pesos and was fully covered. The 4 1/2 per cent. 25-year loan was also increased to the full amount (100,000,000 pesos). Subscriptions exceed 50,000,000 pesos; the balance is expected to be covered shortly.

BONUS SHARES

Limmer and Trinidad Lake Asphalt Company.—It is proposed to capitalise £411,334 of reserve, and to distribute 399,334 ordinary shares as bonus to preference and ordinary stockholders, in the proportion of one new share for £1 stock held. It is also proposed to convert existing 7 1/2 per cent. preference into ordinary stock. As compensation, preference stockholders will receive remaining 12,000 shares, in proportion of one £1 share for £10 stock.

SHORTER COMMENTS

Company Results of the Week.—Net profits of MEUX'S BREWERY show a significant reduction from £169,810 to £142,752, and the dividend is 2 per cent. lower at 9 per cent. Electricity companies continue to show a satisfactory growth in profits. Thus CLYDE VALLEY ELECTRICAL POWER report revenue from sales of current of £1,334,905 against £1,175,608. Colliery companies reporting this week make a good showing. BAIRDS AND DALMELLINGTON net earnings are maintained at £304,410, a slight reduction in output being due to lower exports. Trading profits of SETTLE SPEAKMAN AND COMPANY are a little higher, but most of the improvement in profits is due to larger income from dividends. WIGAN COAL CORPORATION resume dividends with a 2 1/2 per cent. payment. Trading profits of BRITISH HOME STORES fell by £15,000 to £156,465, and expenses were higher owing to internal re-organisation, so that the dividend is cut from 3 1/2 to 1 1/2 per cent. The SWAN AND EDGAR dividend of 7 per cent. is maintained, although profits have fallen from £124,570 to £103,101. Nearly all investment trusts continue to record lower net revenue. LONDON BORDER AND SECOND SCOTTISH AMERICAN, however, are maintaining their dividends. JAMES BOOTH AND COMPANY profits are £44,500 higher at £145,411, and extensions to building and plant will require further capital. Considerable tool work for the re-armament programme is reported by BRIGGS MOTOR BODIES, whose net profits are up from £103,505 to £116,231. Some slackening of demand in the later months of 1938 did not prevent BRITISH PORTLAND CEMENT from making total profits of £944,271 against £916,447. BROWN BROTHERS are repeating the 12 1/2 per cent. dividend despite a 9 per cent. fall in net profits.

HOFFMAN MANUFACTURING are increasing the distribution from 15 per cent. to 17 1/2 per cent. tax free, and report earnings of £221,141 against £205,928. **HOOVER, LTD.**, sales reached a new record but cost more to achieve, and net profits are therefore £20,000 lower at £218,515. A decline in **ILLUSTRATED NEWSPAPER** profits from £128,438 to £119,237 appears moderate in relation to the recent experience of publishers. The trading loss for 1938 of **PHILCO RADIO AND TELEVISION** is about the same at £115,590, but special losses require a further provision of £21,780, while £115,961 has been written off assets.

MISCELLANEOUS

Midland Electric Corporation for Power Distribution.—Net profit for 1938, £160,174, against £146,033. Tax £28,419 (£23,284). Interest £19,625 (£19,500). To reserve £40,000 (£25,000). Carry forward raised from £49,048 to £50,202. Ordinary dividend 9 per cent. for year, as before.

Clyde Valley Electrical Power Company.—Net profit for 1938, £574,798 against £518,469. Ordinary dividend remains at 8 per cent., but absorbs £205,512 against £168,000. To contingency fund, £250,000 (same). To superannuation, £25,320. To issue expenses, £14,921. Carry-forward raised from £140,268 to £161,314.

Hadfields, Ltd.—Net profits for 1938 £278,405, an increase of £9,365. Final ordinary dividend 15, making 22 1/2 per cent. for year, as before.

Cammell Laird and Company.—Net earnings for 1938 £353,907. Tax and N.D.C. take £100,000, leaving £253,907, against £223,707 after depreciation. Final ordinary dividend 6, making 10 per cent. for year, against 8 1/2 per cent. General reserve £100,000 (same). Carry forward raised from £35,108 to £60,328.

Lancashire Steel Corporation.—Income for 1938 is £51,995 higher at £856,760. To central depreciation, £175,000 (same); tax and N.D.C., £273,518 (£235,169). Net profits, £407,042, or £13,646 more. Ordinary dividend again 7 per cent. To general reserve, £100,000 (same); stock reserve, £20,000 (nil); superannuation, £25,000 (same). Carry forward, £82,109 (£78,071). Consolidated balance sheet shows surplus current assets of £1,252,978; stock, £656,757 (£654,904); cash, £1,365,178 (£980,724).

Foreign Government Bond Trust.—Distribution for half-year to March 3, 1939, on coupon 10 is 5 20d. per bond-unit, tax free, or £5 19s. 9d. gross per cent. on initial price of £1. The tax free rate is the same as in previous two half-years. The progress report describes developments in the past six months affecting foreign bondholders generally, and sets out the percentage composition of the portfolio.

Trust of Bank Shares.—Progress Report No. 6 announces distribution due March 15th of 3.2643d. per unit net, making for year 6.5953d., or a gross yield of over 4 1/2 per cent. on current price of 17s. 6d.xd. The policy of investing more in home and less in Dominion and Colonial banks, etc., has continued. Percentage invested in Home group has risen from 49.52 to 51.73. The report sets out the distribution of the fund and the rate of dividend received on each.

Central Provinces Manganese Ore.—Trading profit for 1938, £421,596, compared with £599,609. To reserve, £60,000 (£230,000). Carry-forward raised from £102,991 to £103,840.

Wigan Coal Corporation.—Gross profit 1938, £200,196, an increase of £68,205. To depreciation, £51,416 (£107,085). To tax and N.D.C., £66,567 (nil). To staff superannuation, £10,000 (same). To general reserve, £20,000 (nil). Carry-forward reduced from £16,946 to £16,374. A first dividend of 2 1/2 per cent. is paid on "A" and "B" ordinary shares.

Industry and Trade

Sharp Decline in Unemployment.—The employment and unemployment returns for February confirm the evidence of an improvement in business activity, revealed by recent reports from industrial centres. The number of registered unemployed in Great Britain (inclusive of agriculture) fell to 1,897,000 on February 13th, a reduction of 142,000 from the figure for January. During the corresponding period last year the number of registered unemployed showed a decline of only 18,000. Simultaneously, the estimated number of insured persons (aged 16 to 64) employed in Great Britain (exclusive of agriculture) rose by 135,000 to 11,419,000, compared with an increase of 19,000 between January and February, 1938. Although unemployment usually shows a decline, and employment an increase, between January and February, last month's movements cannot be ascribed solely to seasonal influences. Thus, *The Economist's* index of unemployment, adjusted for seasonal variations, fell sharply last month to the lowest level recorded since October, 1938, while our index of employment, which had remained unchanged since July, 1938, rose by a full

Result of Cotton Ballot.—The results of the Government's ballot of the producing sections of the cotton industry on the draft Enabling Bill were published last Tuesday. The proportion of votes cast in favour of the Bill, measured by the number of firms, and by employment and output, is shown below:—

	PROPORTION OF VOTES CAST IN FAVOUR OF BILL		
	Measured by		
	No. of Firms	Employment	Output
	%	%	%
Spinning and doubling.....	66	73	72
Weaving.....	63	68	66
Finishing.....	64	79	77
Packing and making-up ...	52	72	75
Total	65	72	70

The Government had also invited the Chambers of Commerce of Manchester, London and Glasgow, as well as the trade unions chiefly concerned, to express their views. In a ballot of the members of the Manchester Chamber of Commerce, 730 votes were cast for, and 849 against, the Enabling Bill. Of the thirteen firms in the district of the Glasgow Chamber of Commerce interested in the merchandising of textiles, eight are reported to be in favour, and five opposed to, the Bill, while the Cotton Exporters' section of the London Chamber of Commerce is opposed to the Bill as drafted and desires

your new factory

BUILT TO YOUR REQUIREMENTS

with coal, iron and steel on the spot

CAPITAL ASSISTANCE

WEST CUMBERLAND offers you the following exceptional advantages if you select it as a location for your new factory: plentiful labour, skilled and unskilled, male, female and juvenile. Foundries working the purest hæmatite in the Empire, producing pig iron and steel of all grades, and forgings. Manganese deposits in the area. Coal of all grades for engineering. Abundant lime. Water—soft water—in plenty: waterside factory sites. Good ports—good transport facilities. Magnificent country—mild climate—sporting amenities.

ADD TO THESE the unique facilities now offered by the Government. Your factory planned and built for you to your requirements, and rent only (on a non-profit basis) charged. Substantial assistance with capital. Contributions towards Rent, Rates, Income Tax and N.D.C.

point in February. Moreover, although the number of registered unemployed last month was still 86,000 higher than in February, 1938, 87,000 more insured persons were estimated to be at work than a year ago. Geographically, the reduction in unemployment between January and February was widespread, Wales being the only administrative division to register an increase, due largely to the deterioration of the coal trade in that district. So far as individual trades are concerned, the fall in unemployment last month was most marked in building, public works contracting, agriculture and horticulture, and stone quarrying (in which employment in January was adversely affected by bad weather), and in the iron and steel and metal goods, engineering, textile, clothing, footwear and pottery trades. Compared with February, 1938, the unemployment figures for last month show substantial falls in the cotton, woollen and worsted, hosiery, motor vehicles, cycles and aircraft trades. So far as it is possible to judge from the industrial progress reports which have come to hand this month, the improvement in business activity has continued.

a number of modifications. On the other hand, the Bill has the support of the National Union of Dyers, Bleachers and Textile Workers, and of the Joint Branch of Inside Warehouse Workers. On the whole, the results of the voting have confirmed expectations, and the Government's decision is now awaited with interest.

* * *

Another Cotton Price Agreement.—Meanwhile, a further step has been taken towards price control in the cotton industry; this time by firms engaged in the dyeing of fabrics. Approximately one hundred concerns, including the Bradford Dyers' Association, are affected, and this means that agreement is assured. Dyeing charges will be stabilised at about 12½ per cent. above the present rates. The members of the agreement will be subject to stiff penalties for any evasions. The committee responsible for the scheme will issue the new rates to the trade at an early date, and in the words of the chairman of the committee they will "put an end to the wholesale demoralisation in the dyeing section from which we have been suffering for some time."

* * *

The Bunkering Trade.—The persistence with which Poland has fostered its bunkering trade has complicated the negotiations of an international coal export agreement. The supply of coal for the use of ships engaged in foreign trade is excluded from the scope of the Anglo-Polish agreement, and in view of the contraction in the volume of the world cargo coal export trade, and of the severe restrictions that are now imposed on imports by France, Belgium, Holland, Germany and even Italy, Polish exporters have been diverting an increasing proportion of their exports to the bunkering trade. The quantity supplied by them to foreign-going vessels last year was nearly three times as great as that in 1936. In the exercise of their rights under the agreement of December, 1937, the British coalowners have made representations against the methods adopted by Poland in the sale of coal for bunkering purposes, but apparently they have not been very effective. It is now understood that although it remains the main object of the contemplated international agreement to regulate coal exported as cargo, the control of the distribution of bunkers is also likely to be brought within its scope. The outstanding feature of the bunkering statistics for recent years has been the decline in Britain's share of the total volume, and the increase in Polish and Dutch shipments:—

BUNKER COAL SHIPMENTS

	1932-36	1937	1938	1932-36	1937	1938
	(Thousands of metric tons)					
United Kingdom ...	13,335	11,890	10,637	75.3	Per cent.	61.1
Holland	2,129	3,158	3,056	12.0		17.5
Poland	462	1,194	1,846	2.6		10.6
Belgium	290	191	271	1.6		1.6
Germany	186	389	344	1.1		2.0
United States	1,302	1,661	1,256	7.4		7.2
	17,704	18,483	17,430	100.0	100.0	100.0

While the decline in the coal-burning shipping tonnage and the increase in fuel efficiency has been responsible for the long-term downward trend in world bunker shipments, the decline in Britain's share has been due, in no small measure, to the relatively lower average prices of bunker

coals and dock charges at Continental ports. Besides the coal shipped directly for the use of steamers, shown above, the world bunkering trade also includes the coal cargoes exported to foreign coaling depots for the fueling of vessels on the great trade routes of the world. The bunkering trade thus constitutes the chief outlet for the steam coals of this country. Although some of the influences making for the decline in the total volume of the bunkering trade and for the diversion of demand from British to Continental ports are beyond the control of British coalowners, the coal industry, as the report of the Faulkner Committee pointed out, will have "to decide whether, having regard to all considerations, its price policy for bunker coal should be such that its trade is not only maintained but increased."

* * *

Improvement in Shipping Freight Rates.—Between December, 1938, and January, 1939, *The Economist's* index of tramp shipping freight rates remained unchanged, an indication that the downward trend had been arrested, at least temporarily. The figures for February, given below, show a slight, but welcome, improvement:—

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Feb., 1938	Nov., 1938	Dec., 1938	Jan., 1939	Feb., 1939
European waters	110.0	117.6	108.0	109.1	107.4	105.2
North America	113.1	109.3	111.0	110.3	111.6	110.7
South America	123.4	122.4	116.0	113.2	110.4	117.1
India	106.3	130.3	108.1	106.4	108.6	108.2
Far East and Pacific	117.4	120.4	101.3	97.0	97.8	98.7
Australia	127.9	113.4	112.2	111.3	111.3	110.0
Total	116.3	118.9	109.4	107.9	107.9	108.3
1913 = 100	100.0	102.1	94.1	92.8	92.8	93.1

But as the next table shows, the improvement last month was by no means uniform, for freight rates on a number of routes registered a further decline:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	98.6	+ 1.5	South America:—		
Bay—outwards	110.0	— 12.4	Outwards	80.2	+ 13.3
Bay—homewards	125.9	— 3.3	Homewards	154.0	+ 0.1
Mediterranean:—			India—outwards	91.2	— 1.4
Outwards	74.0	— 2.0	India—homewards	125.2	+ 0.7
Homewards	124.0	— 1.8	Far East, etc.	98.7	+ 0.9
North America	110.7	— 0.9	Australia	110.0	— 1.3

While business on the shipping freight markets remained quiet early this month, the outlook is now less discouraging, for economic revival in Britain and in the United States, accompanied by an upward movement of commodity prices, is likely to be reflected in higher freight rates later this year.

* * *

Further Rise in Steel Production.—Instead of the usual seasonal decline between January and February the output of pig iron and crude steel last month showed an increase. The output of pig iron rose by 3.1 per cent., compared with a fall of 8.9 per cent. between January and February, 1938, while the production of crude steel showed an increase of no less than 19.6 per cent., against a reduction of 2.2 per cent. a year ago. Compared with the figures for February, 1938, the output of pig iron and crude steel last month still showed decreases of 25.6 per cent. and 8.2 per cent. respectively. The relatively much bigger increase in the output of steel than in the production of pig iron is due to the longer time taken to step up the output of the latter. Owing to the delay in increasing the output of pig iron, the steel furnaces were compelled to use a bigger proportion of scrap; as a result the surplus stocks of scrap were rapidly absorbed, and it is now probable that substantial purchases will soon have again to be made abroad.

To some extent the marked expansion in the output of steel last month is probably still a reflection of the severe curtailment in December, when production must have been well below consumption. But there are reasons to believe that

PRODUCTION OF PIG IRON AND CRUDE STEEL
(In thousands of tons)

	Pig Iron		Steel Ingots and Castings

December ...	783.8	445.8	...	1,103.8	655.7

consumption has, in fact, tended to expand, partly, no doubt, as a result of the cut in prices on January 1st, for the bulk of the orders placed in recent weeks is reported to have been for early delivery. Moreover, the improvement in consumption appears to have been fairly widespread and cannot be ascribed solely to increased defence expenditure.

INDUSTRIAL REPORTS

THIS week's postbag from industrial centres indicates that activity is still tending to expand in important industries. The coal trade in Wales remains depressed, but in most other districts output is running only slightly below the level of a year ago. Turnover in iron and steel is increasing, but there is as yet little evidence of speculative forward purchases. While the spurt of new orders for tinplates has not been maintained, output has shown a marked increase and is now as high as a year ago. The volume of business in cotton goods has shown a further increase, sales of American yarns this week being equivalent to more than three weeks' output at the current rate.

Coal

Sheffield.—There is a steady demand for most classes of industrial fuel, and delays in the delivery of household coal, due to the epidemic of influenza in colliery districts, are now being overcome. Electricity and gas undertakings continue to take good deliveries. No great inroads have so far been made into stocks of blastfurnace coke, but consumption is increasing.

There is no appreciable improvement in the export market, but some inquiries are about which it is hoped will result in early business.

*

Newcastle-on-Tyne.—The coal market remains fairly steady, but the difficulty in finding outlets for smalls hampers the output of large coal. Demand for Durham gas and coking coal is good, the feature this week being additional inquiry from Germany for the better qualities of coking coal. Prime grades of bunkers are firm but ordinary grades are freely offered. Business in patent oven coke is quiet in the export section, but there is a slightly better tendency in the home market.

Glasgow.—The market position is somewhat irregular, but on the whole the outlook is not unsatisfactory. In the inland branch demand has seasonably quietened, but industrial requirements tend to expand, and the railways and public utility undertakings provide good outlets. Best grades of house coal are still none too plentiful. Coastwise shipments have been on an increasing scale, but competition has reduced the share of Scottish fuel on the London market. Pearl nuts, however, the grade most affected, are still fully absorbed. While export bookings for the summer months are good, orders for March are still inadequate, in spite of some price concessions.

*

Cardiff.—The position on the Cardiff coal market shows no sign of improvement. The French National Railways are reported to have renewed contracts for the supply of 220,000 tons over the next four months, but there has been little business with other countries. Deliveries of industrial coal for inland consumption have increased slightly with the expansion of activity in the iron and steel industry, but the export market is exceptionally quiet. The diminished output of best large steams is steadily absorbed, and the dry sized grades continue scarce and firm, but stocks of all other classes are heavy. Coke has not yet responded to the improved condition of the pig iron market, and there has been a further contraction in the market for patent fuel. Prices generally are well above the minimum schedule figures, but they show no change on the week.

It is understood that no agreement was reached in Paris last week between the representatives of the British and Polish coalowners concerning the quota bases for the contemplated international coal export agreement, but that the talks are to be resumed before the end of the month, when representatives of Germany will also attend. Ship-

The Food Council on Meat Prices.—The fall in sheep prices in the first half of 1938 brought many complaints from sheep farmers, particularly as the retail price of English mutton was very little affected by the collapse in the fat sheep markets. The Food Council, in a report to the Board of Trade on meat prices, points out that in times of rising meat prices, such as occurred in 1937, the butchers' margin is diminished, since retail prices do not rise as quickly as fat stock prices; conversely, in times of falling prices the butchers must be allowed to obtain some compensation by delaying the adjustment in selling prices, particularly as the glut of home-grown sheep and lambs has seriously reduced the value of butchers' offals. Further, the regulation of the imports of meat, combined with the strong demand for the cheaper (and more uniform) imported beef and mutton, has diminished the butchers' margins on this class of meat, with the consequence that the profits of the trade have been derived mainly from the margins on home-grown meat. In this connection it is obvious that the regulation (which can be taken to mean the temporary reduction) of imports of mutton and lamb will tend to worsen the competitive position of the British product rather than to improve it. The only remedy for the periodic gluts in home-produced meat, as the Food Council points out, is regulation of the supply of fat stock to the local markets.

Iron and Steel

Sheffield.—Business in the iron and steel market, mainly for early delivery, continues to expand.

There is an active demand for basic steel billets, and acid billets also show improvement. Business in wire rods is good, and there are better inquiries for structural steel. Consumers of forge and foundry iron appear still to be fairly well supplied, and new purchases are confined to small parcels. There is a distinct improvement in hematites, but finished iron business is disappointing.

The market in iron and steel scrap has sprung into activity, and heavy buying is taking place, probably as a result of the fear of a shortage. Heavy basic steel is in sharp demand at the control price, and good business is being placed for heavy cast iron for the foundries at up to 75s. per ton. In view of the pressure for supplies it is reported that there may be a resumption of scrap imports.

*

Middlesbrough.—The tone of the iron and steel market has improved as a result of Government orders. Extra plant was started up this week, and, as commercial orders for steel are now being placed more freely, the prospect is better.

The demand for semi-manufactured steel is overtaking the supply, with the result that a parcel of 1,000 tons of steel billets has been imported during the past week from the Continent.

Steel scrap is distinctly scarce and if the present demand continues it is almost certain that imports of this material will recommence. The trade in foundry pig iron has not yet responded and the demand here is quiet. East Coast hematite pig iron, however, is in

Apply to above address for particulars of Sites for Works

rather better request. Blast-furnace coke is freely obtainable at 24s. 2d. per ton f.o.t. at the ovens, whilst imports of iron ore under old contracts are fairly well maintained.

★

Glasgow. — Heavy steelmaking plants in the West of Scotland are now working at 75-80 per cent. of capacity and there seems every prospect of a fairly long spell of steady employment. While bar re-rollers are not so comfortably placed, the recent slight improvement is maintained and a fair amount of business is being done. Sheet re-rollers and sheet galvanisers are exceedingly busy and most plants are working near capacity. Work on the A.R.P. shelters is proceeding smoothly. Demands from motor car manufacturers and other consumers is providing much work for the sheet makers.

★

Cardiff. — The recent spurt in the volume of new business in the tinplate trade has not been maintained, and orders during the last fortnight have averaged only about 250,000 boxes per week. But the industry is more active than it has been for many months, and in the week ended February 25th output was approximately the same as in the corresponding period last year. The export trade is disappointing, and the whole position with regard to quotas and prices is to be reviewed at a meeting of the International Cartel to be held in London towards the end of this month.

The other re-rolling branches of the industry, particularly those engaged in the manufacture of heavy black and corrugated sheets, are busy in the execution of A.R.P. and other re-armament work, and the current production of crude steel has increased to such an extent as to lead to a shortage in the current supply of scrap.

★

News from Abroad. — Although some markets have recently shown a slightly better tone, the general position on the international steel markets has remained unsatisfactory. Consumers are covering only their urgent requirements and are not greatly impressed by the prospects of a substantial increase of the steel producers' activity due to defence orders.

Inquiries mainly for prompt delivery are coming forward on a better scale. In Scandinavia, a seasonal revival seems now to be on its way, Holland is in the market for fairly large quantities, and South America has bought medium tonnages. A consignment of 9,000 tons of merchant bars to Chile from Nationalist Spain has aroused much interest, but it is unlikely that Spain will in future be able to export substantial quantities, her own requirements for reconstruction work being considerable. The demand from British India and the Near East is disappointing and Japanese purchases are hampered by the scarcity of foreign exchange. Great Britain is negotiating for the purchase of large quantities of semis on the Continent, but is still greatly behind her quota under the Cartel agreement. The position in thin sheets and wire rods has perceptibly improved. With regard to wire rods a price agreement has been reached for South America between the Cartel and the American exporters.

Textiles

Cotton (Manchester). — The volume of business this week was bigger than for some time. In certain districts machinery has been restarted and order lists generally are longer than a month ago. Stocks at the mills are distinctly smaller than at the beginning of the year. There has been a further upward movement in raw cotton prices, values now being on a higher level than for fifteen months back. During the last three weeks deliveries of raw cotton to spinners in Lancashire have been 159,284 bales against 131,279 bales in the previous three weeks.

Sales of American yarns have been larger than production and most producers have advanced prices. The turnover of some spinners has been equal to three to four weeks' output. Egyptian spinners have had another good week.

Cloth inquiry has continued much more active and sales have been encouraging. Inquiry for India has improved, but buying has not been on a free scale. Fancies have moved off fairly well for Java and Singapore. Increased activity for Egypt is expected when the new quota terms are available. Steady buying has taken place in a variety of cloths for South America, with a little more activity for the Dominions. Further Government contracts have been placed and substantial buying has been reported in home trade fabrics.

★

Jute (Dundee). — Dundee spinners and manufacturers are very thankful that they have sandbags to make, not only for the Government but also for private firms, as, were it not for these, the trade would be in a very unfortunate position. Buyers of all other goods are holding off in the hope that prices will come back a little. There has been a general advance in prices as the result of the sandbag orders, not only those placed in Dundee but also the 200 million bags purchased from Calcutta. Dundee is now delivering four million bags per week to the Government and additional quantities to private firms, which keeps employment in the works on a satisfactory level. The number of wholly unemployed in the jute trade on February 13th was 4,559, with 182 working three days or less per week, a total of 4,741 receiving benefit, which is the lowest number since 1929.

It is interesting to note that prices for raw jute are higher than they have been at any time since 1930. Prices have recently shown signs of weakness, falling from £26 per ton to £24 17s. 6d. for the full group of Daisce-2/3, while Tossa-2/3 has dropped from £26 15s. per ton to £25 7s. 6d., March/April.

Imports of raw jute into Calcutta during February were fairly heavy at one million bales, making the total for the first eight months of the season 7,825,000 bales, compared with 7,800,000 bales last season. During the last four months of last season, the quantity imported was just over two million bales, and if the same quantity comes forward this season, the fears of a shortage will be proved to have been unfounded. The world's requirements this season are estimated at 10 million bales.

THE COMMODITY MARKETS

In spite of the improvement in business confidence, reflected on the London and New York Stock Exchanges, price movements on the commodity markets were erratic during the week ended last Wednesday. Moody's index of the prices of staple commodities in the United States, for example, fell slightly, from 145.4 (December 31, 1931 = 100) on March 1st to 144.5 on March 8th.

The prices of the principal non-ferrous metals and of linseed oil were all marked up a little, while raw cotton was also slightly dearer as a result of the improvement in consumption here and in America. Rubber prices, on the other hand, are scarcely changed on the week, and wheat showed a decline. Jute also fell in price on the growing evidence that the size of the Indian crop had been underestimated, but raw wool prices showed little change.

Metals

Copper. — The price of standard copper gained another £1 and closed on Wednesday at £43 6s. 3d. per ton, the highest price for two months. Sellers show substantial reserve and if the strength of the stock markets and the better trade activity in the United States continue, the price of copper has a considerable chance of recovering to £45 per ton. As a result of the better London prices, both the United States scrap price and the New York export price have also improved.

★

Tin. — Demand improved this week and the London price of tin gained 15s. to close on Wednesday at £215 10s. per ton. Although many consumers are still inclined to await the outcome of the I.T.C. meeting on March 22nd, before entering into new commitments, the better trade reports from the United States have had a favourable effect on the market. The activity of the United States tinplate mills has now reached 53 per cent. of capacity, against 45 per cent. a month ago and 40 per cent. at the beginning of this year.

★

Lead and Spelter. — The price of lead gained 7s. 6d. to close on Wednesday at £14 12s. 6d. per ton, while spelter rose by 5s. to £13 16s. 3d. per ton. Demand in these two markets is supported somewhat by the early start of the building season, although the consumption of the building trade is disappointing. The rally this week was due rather to the better general sentiment than to an improvement in the intrinsic position of the two markets.

★

Tungsten. — After having been stable at 54s. per unit for some weeks, the price for Chinese wolfram has risen to 56s. 6d. in the last few days. Exports from China declined from 16,518 metric tons in 1937 to 12,358 tons in 1938. Even at the latter level, however, they were still above normal. The Chinese National Government has granted the monopoly for tungsten

COMPANY MEETINGS

REFUGE ASSURANCE COMPANY, LIMITED

RECORD ALLOCATION OF PROFITS TO INDUSTRIAL BRANCH POLICYHOLDERS

LOWER EXPENSE RATIOS

ADDITIONS TO INVESTMENTS RESERVE FUNDS

INCOME EXCEEDS £13,400,000 — ASSETS £71,165,000

The seventy-fifth annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 6th instant, at the chief office of the company, Oxford Street, Manchester, Mr J. Wilcock Holgate (chairman of the company) presiding.

The Secretary (Mr J. W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—

Gentlemen,—You may remember that when I addressed you twelve months ago I remarked how fortunate it was that the industrial recovery of the country, then happily recorded, had been gradual and well-balanced, and I stated that although there was then noticeable a tendency towards a slowing down in the upward trend of trade and industry, the general prosperity of the country was well maintained. I remarked also, however, that the industrial position was largely conditioned by political needs and considerations, and in the months which followed our last annual meeting experience generally underlined the truth of this observation.

Taking as our criterion our new business returns, the progress of the company in 1938 was normal until the intensification of the political uncertainty in March last. The resultant falling away was much more than recovered by the end of May, when our figures were considerably in advance of those for the corresponding period in the preceding year; but subsequently the events which led up to the situation in September last exerted a depressing effect on our new business, as indeed on life assurance business generally, and, in the circumstances, I think we may congratulate ourselves upon being able to record such success in overcoming what was perhaps a natural reluctance on the part of the public to undertake financial commitments, the results of which would not emerge until some date in the then apparently uncertain future. In such circumstances the accounts as a whole afford evidence, I venture to suggest, not only of the value placed upon the protection it is our province to provide, but also upon the high opinion in which this company is held by the assuring public.

On previous occasions, I have ventured to express some views as regards the future. I am not prepared to do so to-day. In the field of politics and international relationships, fundamental factors in the development of industry, this does not appear to be a time when the past can be regarded as affording a reliable index of the future: and I would only add my profound conviction that the crying need in trade and industry to-day, not only in this country but throughout the world, is the disappearance of the prevailing atmosphere of uncertainty and recurrent crises.

Granted the return of conditions as we have known them in the past, or even the continuance of the present world status, life assurance has immense potentialities, and will continue to expand. It is upon the bases of technical ability, industry, integrity and individual effort that life assurance has been built up; and it is upon such principles that its true development depends.

COMBINED RESULTS

Turning now to the details of our results, our total premium income for the year amounted to £10,686,081, showing as compared with the previous year an increase of £204,508. The net interest income was £2,677,756, showing an increase of £20,434 over the corresponding figure for the preceding year. The amount paid in claims by death or maturity during the year was £7,212,153, including £4,281,404 by way of maturities alone, the total figure representing the payment of over £24,000 each working day: and the total sum paid under this head since the inception of the company is now £116,915,051. The aggregate surplus shown by the valuation of the two branches of the company was £2,670,314, and the total assets now stand at £71,165,182, having increased by £2,455,572 during the year.

In both branches the rate of mortality experienced was more

favourable than that anticipated under the mortality tables employed in the valuation.

ACCIDENTAL DEATHS

In the industrial branch our experience as regards deaths arising through accident, or other violent cause, was more favourable last year than in 1937, yet the total paid under this head amounted to over £51,000. The number of policies dealt with in this connection was 3,755, averaging over twelve a working day, and the average weekly payment in respect of these cases was nearly £1,000.

Transacting, as this company does, so large a business amongst the working men and women of this country, it is a normal feature of our accounts to include payments in respect of claims arising as a result of any industrial disasters which may occur. In this connection I might mention that when the Markham Colliery disaster occurred last May, claims amounting to nearly £500 were paid by this company. On this, as on similar occasions, immediate steps were taken by our officials to ensure the coming into the homes with the minimum of delay of the money which is so sorely needed at such times.

ORDINARY BRANCH

In the ordinary branch the number of new policies issued by way of periodical premiums was 49,722, at annual premiums amounting to £434,654, the sums assured thereunder amounting to £7,710,575. In addition there were issued during the year 1,022 single premium contracts, the premiums applicable thereto amounting to £164,002.

It is again interesting to observe that of the total of £7,894,877 new ordinary branch sums assured issued last year, nearly 32 per cent., or over £2,500,000, represents individual assurances of £500 and over.

The ordinary branch premium income for the year was £4,691,372, showing an increase of £63,536 over that of the previous year. The net interest amounted to £1,497,627, showing a net yield of £3 19s. 5d. on the assurance fund. The expense ratio was appreciably lower than that of the previous year, being 14.03 per cent. as against 14.46 per cent. in respect of 1937, and the life assurance fund now amounts to £38,688,365, showing an increase of £464,324 during the year, in addition to which there is an investments reserve fund of £2,000,000.

ORDINARY BRANCH VALUATION

The annual valuation was again made on a 3 per cent. basis, and the resulting surplus, including £710,010 brought forward, was £1,775,774, showing an increase of £19,797 over that of the preceding year. It is proposed to declare a reversionary bonus at the rate of £1 16s. per cent. on with-profit policies, absorbing £955,352, to allocate £106,150 to the shareholders and to carry forward unappropriated the sum of £464,272, after transferring £250,000 to the investments reserve fund.

NEW ORDINARY BRANCH PROSPECTUS

In the early part of the year the whole of the company's tables of rates in the ordinary branch were revised in order to give effect to modern experience as regards rates of mortality, interest and expense.

Speaking very generally, the effect was to reduce our whole life rates of premium, and to increase those applicable to endowment assurances. At the same time we introduced several new types of policy, under which we have already written a gratifying amount of new business. One of these schemes, in addition to securing life assurance cover, enables provision to be made for a definite pension at a stated age and should appeal especially to persons whose pensions depend on their individual efforts, or who wish to supplement the allowances they will receive from other sources. Another scheme enables the parent to assure his own life, with the option

of transferring the contract to his child at the age of 21 or 25 for a greatly increased sum assured, at a low rate of premium. We hope by means of these two schemes to meet two desires commonly to be met with in life to-day—the one, to secure a pension of a definite amount in old age, and the other to give a practical lesson to children in the art of thrift.

INDUSTRIAL BRANCH

In the industrial branch our premium income amounted to £5,994,708, showing an increase of £140,972 over that of the previous year. The net interest income was £1,180,129, representing a net yield of £4 9s. 5d. on the life assurance fund, which increased during the year by £1,649,240, in addition to which there is an investments reserve fund amounting to £2,000,000. The expense ratio was again reduced, being 32.83 per cent., as against 33.59 per cent. in respect of 1937.

The average duration of the premium-paying contracts on our books shows a further increase, and is now twelve years and three months.

A significant feature of our operations in this branch is the amount paid to policyholders on account of survival of endowment terms. The total maturity benefit so paid was larger than ever before in the history of the company, and amounted to over £764,000. It is, of course, natural to expect a continued growth in payments of this character, having regard to the increasing proportion of industrial assurances under the endowment or endowment assurance plan which has been a feature of our new business figures for a number of years. The following figures show clearly the development of this tendency:—

Percentage to total new business premiums of premiums in respect of policies under the following types of assurance.

Year.	Type of Assurance.	
	Policies for the whole of life only.	Policies containing endowment benefits.
1914	93.3	6.7
1920	75.9	24.1
1928	66.3	33.7
1933	62.1	37.9
1938	53.9	46.1

The point has been made before that in the industrial branch the history of the ordinary branch is being repeated. Until the beginning of this century, ordinary branch business was principally conducted under the whole life plan, and it is only within comparatively recent years that endowment assurances have come to form so enormous a proportion of the whole. It is interesting to observe how to-day in the industrial branch endowment assurances are becoming increasingly popular, whilst ordinary branch experience is again reflected in the development of systems of allocation of surplus to industrial branch policyholders. As between the two branches of life assurance one main difference will always persist, i.e. collection of premiums at the homes of the people; but this is fundamental to industrial assurance, and is, as I have remarked before, as much a part of the benefit of the policy as the payment of the sum assured.

I would venture to go further and suggest that the two branches are not, as is commonly supposed, mutually exclusive, but rather complementary. Not only is it the case that many people begin by taking out industrial branch policies, and progress therefrom, as their circumstances improve, to the ordinary branch: but also the industrial branch, in its statutory extension of the principle of insurable interest to cover funeral expenses of certain relatives, fills a need in other besides working class homes which cannot be met in the ordinary branch. It may well happen also that the financial arrangements of a home are such as find a place for policies payable by weekly and monthly premiums equally with others payable by yearly premiums.

INDUSTRIAL BRANCH VALUATION

As indicated in the report, the valuation basis has again been strengthened and is more stringent than any previously employed by the company in this branch. The rate of interest assumed is 2½ per cent. for all contracts.

The resulting surplus is £894,539, which includes £121,441 brought forward from the preceding year. After the transfer of £250,000 to the investments reserve fund it is proposed to set aside £454,350 for allocation among the policyholders in this branch and from the remainder to allocate to the shareholders the sum of £51,350, the amount carried forward being £138,839.

ALLOCATION OF PROFITS TO POLICYHOLDERS IN THE INDUSTRIAL BRANCH

You will have observed that for a number of years my remarks on occasions such as the present have contained an observation to the effect that the basis of valuation in the industrial branch had been materially strengthened; and I observe to-day—with great pleasure, let me add—that the allocation of profits to policyholders I am now able to announce is a record. These observations are directly connected with one another. During recent years the growing approximation of industrial branch practice to that prevailing in the ordinary branch has been recognised, and our resources have been largely employed in building up a profit-earning position. The results before you to-day afford some indication of the success which is attending our efforts.

INVESTMENTS

From an investment point of view the period covered by the accounts has presented many difficulties consequent on the international political situation and its inevitable economic repercussions generally throughout the world. The difficulties are too well recognised for it to be necessary for me to enlarge on them, and I need only say that your directors continue to give unceasing attention to the investment policy in relation to the general situation.

Turning to the balance sheets the assets, now amounting to £71,165,182, have, as already indicated, increased during the year by £2,455,572.

Of the amounts standing against the various classifications, the principal change, has been an addition of £856,420 to British Government securities and securities guaranteed by the British Government, now amounting to £25,951,568, or 36.46 per cent. of the company's total assets, whilst £761,983 has been added to loans on parochial and other public rates and £616,527 to railway and other debentures and debenture stocks. Unimportant reductions have occurred under various classifications, including mortgages on property within the United Kingdom and Indian and Colonial Government securities.

The general geographical distribution of our investments is approximately as follows:—

	1937	1938
	per cent.	per cent.
Great Britain... ..	82.84	83.69
Indian and Colonial	12.49	11.93
Foreign	4.67	4.38

I need hardly say that the company has not been immune from the consequences of the depreciation in market values which has occurred in almost every class of investment during the past year. However, I am pleased to be able to state that, in the aggregate, the market value of our Stock Exchange securities at the end of the year considerably exceeded the amount at which they appear in the balance sheets, leaving intact the investments reserve funds which, as a precautionary measure in view of the generally obscure outlook, have been increased during the year by £500,000 and now amount to £4,000,000.

The net interest received during the year amounted to £2,677,756 compared with £2,657,322 in the preceding year, showing an increase of £20,434 and producing a net yield on the combined assurance funds of £4 3s. 7d. against £4 6s. 4d. in 1937.

NATIONAL HEALTH INSURANCE

Turning now to another branch of the company's activities I have to report that on behalf of the National Health Insurance of a membership of 708,000. During the year payments of benefit were made amounting to £654,043, including £78,596 in respect of maternity benefits. In addition, the further considerable sum of £64,225 was received by "Refuge" members by way of non-cash benefits. The number of new members of the Society obtained during the year by "Refuge" representatives was 76,111.

During 1937 58,508 cases of claims for compensation were handled by the Society on behalf of its insured members. This is a figure which is growing from year to year at a remarkably high rate; and affords evidence of the value of the service rendered by the Society in assisting its members to pursue their title to compensation or damages—assistance which is rendered free of all cost to the members.

STAFF SUPERANNUATION FUND

For many years, as you are aware, it has been the practice of the company to pay pensions to members of the staff who retire from the service after attaining the appropriate pension age. Last year a further step was taken, and a staff superannuation fund, under trustees, was set up, the pension funds formerly appearing in the balance sheets, amounting to £210,000, being transferred to the

trustees. Contributions were also made to the trustees of the sums shown in the ordinary and industrial branch revenue accounts for 1938, viz.:—£12,949 14s. 8d. and £56,438 11s. 3d. respectively; and all pensions granted in 1939 and thereafter will become a charge upon the staff superannuation fund.

NATIONAL SERVICE

Mention of the staff reminds me that this company has agreed to provide facilities whereby our agents should be invited to enrol as enumerators for the 1941 census, with a proviso that should a national emergency arise each enrolled man's services would be available for the purpose of compiling a National Register; and I may add that the company is willing to encourage its staff to take any practicable part in the various schemes of National Service now available. As regards chief office a comprehensive system of Air Raid Precautions has been devised, whereby definite places of shelter have been allotted to the separate departmental staffs, and a complete organisation has been built up for the provision of first aid, and for dealing with fires, etc. The system has been tested by individual departments, and by the office as a whole, and has been found to work most successfully.

TRIBUTE TO STAFF

In conclusion, I wish to express my appreciation of the efficient service which continues to be rendered by the company's staff, both indoor and outdoor. The year with which I am now dealing resembled its immediate predecessors in producing its problems and difficulties, but the staff, as is their custom, has faced them with a good courage, with the result that further progress has been made. I am also glad to say that the relations of the company with the Field Staff Association and the Chief Office Staff Council continue on a cordial footing.

CONCLUSION

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

Messrs William Eber Thornton and James Proctor Green were reappointed directors.

Messrs Walton Watts and Company were reappointed auditors.

The meeting closed with a vote of thanks to the chairman.

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED

YEAR OF STEADY PROGRESS

The fifty-second ordinary general meeting of this company was held, on the 7th instant, in London.

Mr George Balfour, M.P., the chairman, who presided, said he was sure the accounts presented would be accepted by the shareholders as satisfactory.

The London and Home Counties Joint Electricity Authority had sought powers to take over the rights of purchase of certain areas within the company's supply area. As a result, however, of a lengthy public inquiry, at which the application was opposed by local authorities and companies, the Commissioners had decided not to proceed.

Their company had spared no effort in the areas for which it was responsible to make the supply available for all classes of consumers at the lowest economical rates, and he thought that was appreciated by the weekly wage-earning classes. The total reduction to consumers over the last five or six years had amounted to about £750,000.

One of their great anxieties which might in the near future seriously affect charges to the consumer was the increasing burden of local rates. He had seen it stated that 43 per cent. of the rates upon which the loan of the Barking Council was secured was paid to a large extent by two ratepayers, the Gas Light and Coke Company and the County of London Electric Supply Company, who, presumably, had not the slightest control of expenditure.

As to the progress made during the year, they had connected 14,670 new consumers, making a total of 201,535, and in the poorer districts, 1,340 of the new consumers had been assisted to procure their wiring on terms of deferred payments. The total units sold had amounted to 483,000,000, of which 352,000,000 had been sold direct to consumers, and the remainder in bulk to other authorised undertakers. Excluding the latter, more than one-third of the units were sold for industrial purposes at an average of .99d. per unit, and the remainder sold for general domestic purposes at an average of 1.85d.

From the balance now available of £401,452, the directors recommended a further dividend of 7 per cent. on the ordinary stock with a bonus of 2 per cent., making 12 per cent. for the year.

The report and accounts were unanimously adopted.

LONDON AND NORTH EASTERN RAILWAY COMPANY, LIMITED

COMPANY'S MOST DIFFICULT YEAR

The 16th ordinary general meeting of the London and North Eastern Railway Company was held, on the 3rd instant, in London.

Sir Ronald W. Matthews (chairman of the company), after referring to the loss the company had sustained in the resignation from the board of Mr William Whitelaw and also of their chief general manager, Sir Ralph Wedgwood, said that it was a matter of deep regret to him that on his first appearance in the chair he should have to report the results of the worst and most difficult year in the history of the company with the exception of 1926, the year of the General Strike. Total receipts from passenger train traffic were £17,357,000, a decrease of £268,000, or 1½ per cent. below 1937, but better than the 1936 figure by £387,000, or 2½ per cent. Freight traffics had been disappointing. The fall in receipts had been heaviest in respect of minerals and heavy merchandise, a decrease of £822,000, representing no less than 16½ per cent. of the previous year's revenue. The quantity of freight traffic carried amounted to 121 million tons, a decrease of 15 million tons, or 11 per cent.

THE "SQUARE DEAL" CAMPAIGN

The statement of the company's accounts and the facts and figures he had given would have brought home the urgent necessity for immediate action to end the conditions under which British railways were now struggling. The margin of financial and economic stability was all but exhausted, and another year like the last would seriously threaten their whole commercial existence. The consequences of a continuation of the decline in receipts which had gone on since the early part of last year and which reflected the cumulative effects of conditions which had existed for years, could not fully be foreseen, but it was evident that they would be disastrous not only to the stockholder and the trader, but to the general public as well.

The railways were not merely an indispensable factor in the organisation of the nation's commerce and industry. They were also consumers of British products on a very large scale. Curtailment of railway services or a drastic reduction of rolling stock would mean a blow to national efficiency at a moment when that efficiency must be maintained by every possible effort. It would also mean a serious blow to British industry and in particular to the heavy industries upon which the progress of the country so largely depended. What then, was to be done? The railway companies had outlined the remedy: it must be applied without delay. The Square Deal was simply the recognition of 20th century conditions. There were only too many branches of their national life which were stunted by the dead hand of legislation. It was that dead hand which the railways wished to throw off, so that they could overcome 20th century difficulties by 20th century methods.

The railways had been entirely frank about their difficulties. They had made it clear that on their part they had no wish whatsoever to be forced into a position where their continued efficient existence would depend on subsidies. Nor did they desire to achieve their salvation either by being given preferential treatment or at the expense of any section of the trading community.

AN ATTEMPT AT EQUALITY

The Square Deal was an honest and fair attempt to achieve equality for all and it offered safeguards to the trading community which went beyond those at present existing. The longer the present position in British railways continued, the more precarious did their services become and the more danger was there of a serious collapse in the whole railway transport system of the country; while the sooner the railways' claims were granted, the better hope was there of a recovery in the fortunes of the stockholders, of improvement in the nation's transport facilities and of an increase in the efficiency and competitive power of British industry.

With regard to future prospects, leaving out of consideration any benefits they might secure as a result of their appeal for a square deal, they were faced still with the uncertainties of a highly charged political atmosphere in Europe and the clearing of the international sky must be a condition precedent to a general improvement in world trade. But assuming, and he thought they could assume it, that there was to-day a more clearly defined inclination towards peace, he thought they could find some grounds for encouragement.

The report and accounts were unanimously adopted.

At a subsequent extraordinary general meeting a resolution was unanimously adopted approving a Bill introduced into Parliament to establish a superannuation fund.

LONDON BRICK COMPANY, LIMITED

PRODUCTION RECORDS BEATEN

LARGER TRADING PROFIT

BOARD'S POLICY OF NATIONAL DISTRIBUTION

OUTLOOK FOR CURRENT YEAR

SIR P. MALCOLM STEWART'S REVIEW

The annual general meeting of London Brick Company, Limited, was held, on the 7th instant, at the Connaught Rooms, Queen Street, London, W.C.

Sir P. Malcolm Stewart, Bt., O.B.E., LL.D., D.L., J.P., the chairman of the company, presided.

Mr A. Guthrie Stewart, one of the secretaries, having read the notice convening the meeting, and Mr F. H. Parrott, F.C.A., representing the auditors (Messrs Derbyshire and Company) having read the report of his firm,

The Chairman said:—Ladies and gentlemen,—I presume it is your wish to take the report and accounts as read. (Agreed.)

If you will refer to the debit side of the balance sheet, you will notice that sundry creditors and accrued charges at £269,134 show an increase of £34,718 on last year's figure, due mainly to extra provision for N.D.C.

The reserve for taxation and contingencies at £325,000 and the general reserve at £400,000 remain at the same figures as shown in the balance sheet for the previous year.

FIXED ASSETS

On turning to the credit side of the balance sheet, you will observe that the fixed assets now stand at £2,100,000. I wish particularly to draw your attention to this figure of £2,100,000; it shows a reduction of £60,000 on that of the previous year and brings us back to the very low revaluation of 1936 for the aggregate of our fixed assets. Freehold land was then valued at £200,000; o-day stands at £214,277, with additions in respect of purchases since made, which bring the total freehold land held up to 10,000 acres, of which over 8,400 are clay reserves. Our 500 cottages, village hall, swimming baths, club premises, sports pavilion, and canteens were also lowly valued in 1936 at £150,000. These, with additions since made, stand to-day at £157,255. Works buildings, kilns, plant, etc., which were valued at £1,750,000 in 1936, are now reduced by £21,532 to £1,728,468.

You will doubtless recollect that when we wrote down our works, etc., assets to £1,750,000, this represented a basic valuation of only £1 per thousand of annual productive capacity of 1,750 million bricks. I should explain that all our calculations affecting bricks are made per thousand, and these somewhat astronomical figures are more easily grasped if it once becomes clear to you that one million thousand bricks represent the same quantity as one thousand millions.

ADVANTAGES OF CONSERVATIVE FINANCE

There may in all probability be some stockholders who do not fully realise the advantages that are now being reaped, and will further be realised in the future, in consequence of the heavy writing down of our works and other assets effected in 1936. I will explain. Were we to make no additions and write off £150,000 depreciation, we should be writing off 150 millions of productive capacity, since every £1 thus provided writes off the plant required to produce 1,000 bricks. Why was this drastic writing down desirable? Because I never lose sight of the fact that at any given time the book value of our fixed assets should, if possible, be related to their earning capacity. If a proportion of our plant remained idle owing to a falling off in the demand, it would, while closed, have no earning capacity, since it could not be used for any other purpose than that of making bricks.

It will be readily appreciated that the effectiveness of present and future depreciation is much enhanced because of the exceptionally low figures to which our fixed assets have already been written down. Thus from past prosperity have we provided for possible future adversity, a policy designed to give increased stability and security which can but prove advantageous to all interested in our undertaking in whatever capacity.

I have dealt with this question at some length because I am anxious you should clearly understand the reasons for a policy con-

sistently pursued and which we hope to continue. To abandon it would be to ignore experience.

Turning once again to the balance sheet, you will notice stocks in trade are less by £20,079 owing to the reduction in general stores and fuel.

Sundry debtors are down by £33,655 because of the falling off of trade in December.

Liquid investments at £462,695 and cash and British Government securities at £463,212, together totalling £925,907, show an increase of £150,052 on the previous year. The liquid investments and the British Government securities are valued at market prices as at December 31st last.

PROFIT AND LOSS ACCOUNT

Turning to the profit and loss account, you will see that the profit from trading amounts to £566,575, an increase over that of the previous year of £3,098.

Interest and income from investments at £20,337 are lower by £5,503. The total revenue of the company at £587,130 is down by £2,524. The sum of £150,000 has again been set aside for depreciation and utilised in writing down the works assets. After providing for the dividend on the 8 per cent. preference stock, the profits earned enable the directors to recommend a final dividend on the ordinary stock of 5 per cent., less tax, making 20 per cent. for the year. The sum of £2,000 remains to be added to the carry-forward, which will then stand at £82,000.

PRODUCTION AND COSTS

Dealing with the production side of the business, you will be interested to learn that we manufactured a considerably greater quantity of bricks than in any previous year. Our record production of 1938 was achieved despite the fact that we had to close some works and slow down late in the year in order to prevent an undue stacking of bricks. We not only generally benefited from the improvements and extensions previously effected, but in particular reaped the advantage of the reorganisation of the Coronation Works, near Bedford. While the layout of these works was good in some respects, there was much that needed doing to bring them up to our standard of efficiency. The plant originally installed for excavating the clay was scrapped and vital alterations were made to the kilns, resulting in marked economies being effected.

When following the crisis in September it became apparent that there was a definite falling off in the good demand so far enjoyed, we felt it desirable to curtail our programme of works extension. This decision has been justified, but I am glad to say we are now proceeding with the replacement of certain obsolete kilns to secure further economy. Meanwhile we are holding our hand with regard to adding to our productive capacity which has been so rapidly expanded during recent years.

You will not be surprised to learn that our costs of production increased during the year, the higher prices of fuel and all materials for maintenance being mainly responsible for this. Indeed, during the past few years there has been a marked upward tendency in manufacturing costs apart from the charge for additional social services. To combat this we are making a determined effort to economise through procuring increased efficiency, and have already effected a certain degree of reorganisation.

ACHIEVEMENT OF NATIONAL DISTRIBUTION

With regard to the sales side of the business it must be realised that the past year was influenced by two major factors operating in opposed directions on our turnover. We reaped the advantage of the fine weather experienced in the spring of last year, but were hit by the critical events of September. The year was entered with the full knowledge that we must further pursue our established policy of national distribution which has benefited not only the company but the building industry by making available in any part of the country materials of a standard quality at a fair price. This we have suc-

ceeded in doing on an economic basis, and last year there was no county in England and Wales in which Phorpres bricks were not sold. Our consistent policy of selling at what is for us a fair economic price has helped to stimulate building and brought its own reward.

AN ESTABLISHED PRODUCT

This expansion of our trade has naturally met with some opposition, particularly from those with strong local ties and influence, but once our product is established it is appreciated, not only by the architect and the builder for its technical qualities, but also by the bricklayer, who benefits from the ease of handling due to its uniformity and light weight.

We have no wish to depress prices already sufficiently low, but some manufacturers who complain of our activities are apt to overlook local undercutting against which we have to compete if we are to get a fair share of the trade.

Owing to the scattered production, the vast variety in the nature of bricks manufactured, the multiplicity of producers of clay products, and the wide difference in the efficiency of the producing units, it would probably prove impossible to procure stabilisation of prices on a national basis. Meanwhile, it is not to be expected that we should sit down, adopt a passive policy, close works, and throw our employees on to the dole.

FAVOURABLE WEATHER CONDITIONS FOR BUILDING OPERATIONS

As stated, the outstanding factor favourably affecting the sales position in the past year was the abnormally fine weather early experienced. This had the effect of diminishing the lost time frequently to be faced in building operations and of hastening the date of completion of work undertaken. The good weather also proved advantageous to the contractor and building operatives. It provided a welcome offset to some of their often considerable losses incurred through wet weather. Most of us enjoyed the marvellous spring of the past year unless engaged in gardening or farming, which suffered from the drought. However, it became difficult to determine what proportion of the good demand was normal and how much was due to acceleration of building operations. Thus favoured, our deliveries broke all records for the early months of the year, and they held out well until the crisis of September last, following which a shrinkage of demand was quickly experienced and has since continued.

When the crisis passed overwhelming gratitude surged forth to the Prime Minister for deliverance from war, then so imminent. Many of our citizens who had been satisfied that in the preaching of the doctrine of peace could security for their homes be found, woke up with a rude shock to the hard fact that the preaching of peace not backed by the practice of re-armament by the State brought peril instead of security.

Once peace was brought within reach and the emotions were relaxed, many of those previously indifferent turned their thoughts with anxiety to the progress of re-armament and to the problem of meeting the cost. The delicate circumstances doubtless called for a degree of studied silence. Such general statements as were made but whetted the appetite of those anxious for greater assurance. This was not common curiosity, but a natural desire to banish uncertainty and to be able better to plan for the future.

EFFECT OF UNCERTAINTY

It was this feeling of uncertainty, however inevitable, that brought in its train some sense of lack of confidence, not in the Government but in the future. It considerably spread through all classes of society; the worker wondered whether his standard of living would be reduced, the small house-owner contemplating a modest extension said, "I will go on with my present arrangements." The fairly prosperous man who had long had an eye on that desirable house with a larger garden said, "I must stay where I am," and those still better endowed with this world's possessions felt they must retrench and, doubtless, deserving charities suffered.

It has lately become increasingly clear that the Government appreciate the situation. The recent statement by the Chancellor of the Exchequer all but broke with tradition, so as to permit a peep behind the scenes at the financial drama rightly rehearsed in an atmosphere of rigid reticence. The thrill quickly gave to the public and to the Press a sense of quasi-assurance and increased confidence in the future tending to diminish fear which induces industrial inactivity.

PROSPECTS FOR CURRENT YEAR

You are probably asking yourselves, what do I think of our prospects for the current year? I am going to tell you quite frankly that whereas last year we increased our production and deliveries, a repetition of this is not yet assured. You must not think I fear we are in for a bad year, because this is not the case. However, after

discounting the relatively poor results that have been achieved so far, that is treating them as due to abnormal causes, it is difficult to-day to foresee such favourable conditions operating with adequate power and speed as would create a demand sufficient to absorb the quantity of bricks marketed last year. It may come, but it is not yet in sight.

Last year I thought it essential to warn stockholders that they must not necessarily regard the payment of a total dividend of 20 per cent. as assured if we saw our way to declare interim dividends of 5 per cent. The unusually good profits earned in the early part of that year secured the payment of 5 per cent. interim dividends for the first two periods. We were hopefully uncertain of the further outlook.

Fortunately we have been able to make good and to recommend to you a final dividend of 5 per cent., making 20 per cent. for the year. However, I must tell you clearly that so far the trading conditions experienced in the current period are very different from those operating in the corresponding period of last year. I will be precise; our deliveries to date are sensibly down compared with last year, when we regularly achieved records. We have made a poor start, but I am glad to inform you trade has recently been steadily picking up, and I am confident not only of further improvement but that we shall make a fair showing. Nevertheless, it is doubtful whether the demand will prove equal to that enjoyed last year.

COMPANY'S STRONG POSITION

Consequently, I am going to reverse the advice tendered to you. This year I say, if the early dividends should be reduced do not necessarily take it for granted that the final dividend will be at the same reduced rate. It may be higher, it may be lower, but it will be at that rate which we can prudently recommend after giving consideration to the trading results for the full year. Above all, remember that your company is in a sound position, strong to meet any setback. Nevertheless, we shall not depart from the cautious financial policy consistently pursued over so many years, the conservation of which is vital to the best interests of the stockholders.

Finally, I would remind you that there is no permanency of prosperity in any industry. We have undoubtedly enjoyed a long run of favourable conditions, which, through enterprise and hard work, we have endeavoured to make the most of, and if we were this year to encounter some setback we should take it with equanimity and with, I trust, a sense of gratitude for the abundant prosperity of past years.

Before closing, may I express our regret at the absence of our works managing director, Mr G. H. C. Ratcliffe, whose health has not been too good for some little time. He has, at my suggestion, taken a trip to South Africa, and I am sure you will join with us in wishing him a speedy recovery.

I would again express the thanks of the board, and I am sure of the stockholders, to the staff and the whole of our employees for their support and co-operation so willingly given during the past year, which have so largely contributed to our success.

The chairman concluded by moving the adoption of the report and accounts.

Mr A. T. Worboys (deputy chairman) seconded the motion, and it was carried unanimously.

The retiring directors, Mr Thomas Fortescue Crawshaw Frost and Mr Ronald Compton Stewart, were re-elected; the auditors, Messrs Derbyshire and Company, were re-appointed; and the meeting closed with a cordial vote of thanks to the chairman, directors and staff.

BRITANNIC ASSURANCE COMPANY, LIMITED

BRITANNIC PROGRESS IN 1938

£563,755 ALLOCATED FOR BONUSES TO POLICYHOLDERS

FURTHER REDUCTION IN EXPENSES

CLAIMS PAID NOW OVER £50,000,000

The seventy-third annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held, on the 3rd instant, at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A., Chairman and General Manager, presiding.

Mr Jefferson, in moving the adoption of the report, said:—

The directors are pleased to report that the year 1938, despite the uncertainty of the international situation, was one of all-round solid progress for the company. The funds increased during the year by the record sum of £2,158,000 to a total of £31,790,000. The total premium income, excluding that of the general branch, amounted to £5,462,000—an increase of £149,000 over that for the previous year.

The total income from all sources was £6,889,000, which represented an increase of £210,000 for the year. The claims paid amounted to £2,461,000, bringing the total to date up to the impressive figure of £50 million pounds.

GENERAL INFLUENCES

There is nothing more disturbing to trade than lack of confidence, and although the past year was dominated by uncertainties, this country showed a remarkable resistance to the downward trend of world trade.

I am not unmindful that the re-armament programme has helped to replace some of the falling off in trade in other directions, but as the risk of war diminishes and re-armament work slows down, the factors which bring this about should at the same time bring about a revival of confidence and therefore a revival of trade, particularly of international trade, which is of such importance to this country. If we are to secure our full share of this world revival we must do everything possible now to maintain our export trade, and that the importance of this is fully realised is evidenced by the recent statements of policy made by the Government.

The Anglo-American trade agreement which was negotiated last year has laid a solid foundation upon which to build for the future.

In the dark days of the September crisis this country was united in a manner rarely witnessed before in its approval of the courageous and unprecedented action of our Prime Minister by which, almost at the twelfth hour, the horrors of war were averted and a way opened up for negotiations by personal contact between the leaders of nations. Such unprecedented action cannot I am sure fail to bear further fruit in days to come.

ORDINARY BRANCH

The funds increased by £688,000 to £11,873,000. The premium income of £1,426,573 showed an increase of £39,000. The sums assured under new policies issued totalled £3,422,000 and the annual premium income thereunder was £152,000.

The yield on the funds after deducting income tax was £4 2s. 6d. per cent.

The expense ratio at 12.55 per cent. showed a further reduction of .53 per cent.—a fall largely accounted for by the reduction in new business.

The annual valuation of liabilities was made by the actuary, Mr K. J. Britt, on the same stringent bases as last year, and showed satisfactory results, the surplus disclosed in the Britannic fund being £566,821. Out of this total the directors have allocated £50,000 to the ordinary branch investment reserve fund, increasing it to £590,000. They have again declared a reversionary bonus of 38s. per £100 sum assured under immediate profit policies, this being the same rate as that declared in each of the previous six years.

INDUSTRIAL BRANCH

The funds increased by the record amount of £1,223,000 to £16,538,000. The premium income now exceeds £4 millions a year, the increase in 1938 being £110,000.

The net rate of interest earned on the funds was £4 7s. 3d. per cent.

The amount paid in death claims during the year, including £58,216 paid in respect of bonuses, was £1,203,000. This was lower than the amount paid during 1937 by £70,000. The rates of mortality experienced were the lowest in the history of the company.

Under the heading maturing endowment policies £484,500 was paid, inclusive of £39,655 paid in bonuses.

As a result of more efficient organisation and without any lowering of our high standard of service to policyholders there has been a further substantial reduction in the expense ratio, from 31.38 per cent. to 30.15 per cent. of the premium income.

The annual valuation of both Britannic and British Legal industrial policies has been made on the same bases as a year ago. The total surplus was £934,409, which is again a record and which is an increase of £78,491 over the figure of a year ago. The amounts allocated to profit and loss account and to policyholders remain unchanged at £240,000 and £267,500, respectively. £250,000 of the sum allocated this year will be added to the sums set aside in respect of the three previous valuations, making a total of £950,000 still in hand, and this sum is to be held in reserve for the benefit of Britannic policyholders and applied in such manner as may be determined later by the directors.

Increased allocations have been made both to the investment reserve fund and to the staff pension fund. The former allocation has been increased from £60,000 to £100,000, and that to staff pension fund from £95,000 to £115,000. I will deal with these items more fully later.

After the various allocations have been made there remains a balance of surplus in the Britannic and British Legal funds of £211,909 to be carried forward to 1939.

GENERAL BRANCH

Our general branch has passed the £200,000 mark in premium income. Although we do not transact any business outside the United Kingdom, the actual premiums at £208,730 show an increase of £17,576 over 1937. Not only has the volume of business increased, but the sound quality to which I have referred in the past has been maintained.

BALANCE SHEET

On the liabilities side there is only one feature to which I need now refer, and that relates to the investment reserve funds, which at £1,750,000 show an increase of £150,000 in the year. These funds now represent 7.5 per cent. of the book value of our Stock Exchange investments, which is slightly higher than the percentage a year ago.

Despite the heavy fall in the market values of Stock Exchange securities which has been so marked a feature of the past two years, I am glad to be able again to inform you that the value of our assets is still considerably in excess of the value at which they appear in the balance sheet now before you. This means that the margin of appreciation which we possessed two years ago was very substantial, but we were under no delusion about its true character. I felt that it could not last, and that the artificially low level to which interest rates had fallen would sooner or later give place to higher rates, a process which would involve a readjustment in capital values. That process has been operating, and I still hold the view that the underlying trend of fixed interest rates is upward. The financial world has been passing through times of unusual difficulty, and this fact has influenced us against following that long-term investment policy which in more normal times is a prominent feature of this company's finance. I am satisfied that the policy pursued has been a wise one and that, with a return to more normal conditions, we shall be able to derive substantial advantages therefrom.

Meantime I need make no apology for the conservative action of the directors in building up the investment reserve funds even when growing appreciation was the order of the day, and still less need I do so in times like the present.

This company has always favoured ordinary stocks, and by careful selection over a wide range we have not only enjoyed the resulting higher yield obtainable from such securities, but have maintained a margin of appreciation which, even to-day, is very substantial.

Cash on deposit and in hand has increased by £328,000 to £1,295,000 in accordance with our desire to keep a liquid position during such uncertain times. Signs are not lacking that we may soon be able to invest this money at more favourable rates of interest.

The directors have this year transferred the increased sum of £125,000 to the trustees of the staff pension fund.

The directors again offer their sincere thanks to the inside and outside staffs for their loyal and efficient services throughout the past year.

Mr J. Murray Laing, deputy general manager, in seconding the resolution, stressed the remarkably strong position which the company occupied financially.

The report and accounts were unanimously adopted, and Mr J. Murray Laing, the retiring director, was unanimously re-elected.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

RECORD OF STEADY PROGRESS

INCREASED PREMIUM INCOME

The one hundred and twenty-fifth stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held in the Society's head office, Edinburgh, on the 7th instant, Sir Ian Bolton, Bt., C.A. (chairman of the Ordinary Court of Directors), presiding.

In moving the adoption of the report and accounts, the Chairman said: The report, which is before you, deals not only with the society's affairs during the year 1938, but also with the results over the five years, 1934-1938. While the new business has increased each year during the quinquennium, and a comparison might be made one year with another, a more satisfactory measure is given by the figures in five-year periods. In this way fluctuations from year to year are evened out, and the trend is more clearly shown. The total new business in the five years, 1934-1938, after deducting amounts reassured, was £24 millions, as compared with £18 millions in the preceding quinquennium and £13 millions in the five years, 1924-1928. This is a gratifying record of steady and substantial progress, and is a striking testimony to the important service the society renders to the community.

The increase in new business has had its effect on the revenue account in the form of a further addition of £127,000 to the premium income, which in 1938 amounted to £2,220,000. This is about £360,000 more than the figure of five years ago—another gratifying measure of progress.

INTEREST RATES

Expenses and commission together are little more than in the previous year, and represent only 13.45 per cent. of the premium income, as against 14 per cent. in 1937—a reduction which bears witness to the economy of management which has long been one of the society's marked characteristics.

The low interest rates are largely responsible for a fall of 2s. 2d. in the gross rate of interest earned on the total assurance and annuity funds, from £5 4s. 6d. per cent. to £5 2s. 4d. per cent. The corresponding net rate of interest, after deduction of income-tax, is 3s. 4d. lower at £4 1s. 6d. the fall having been accentuated by the increase in income-tax. In present conditions, these reductions are moderate, and it is highly gratifying to be able to report a rate of interest which is only 2s. 10d. per cent. gross and 3s. 9d. per cent. less than in 1933.

THE NEW MORTALITY TABLES

At the annual meeting five years ago, the chairman referred to the joint publication by the Institute of Actuaries and the Faculty of Actuaries of a new mortality table based on a modern experience of assured lives. During the quinquennium monetary tables, based on this experience, were made available, and the new tables, known as the "A 1924-29 Tables," have been used on this occasion in the valuation of the society's obligations under assurance contracts. The rate of interest used was again 2½ per cent. net for the valuation of the sums assured and future net premiums, but, in valuing both of the existing reversionary bonuses and those to be declared as a result of the investigation, the reduced rate of interest of 2½ per cent. was employed, thus making a more stringent reserve. The total reserves held on this occasion are not only as large as they would have been had the old basis again been used but are at least equal to the reserves which would have been brought out by an ordinary net premium valuation on the new tables with 2½ per cent. interest throughout.

The surplus shown by the valuation is over £3,700,000 and, once again, the directors have declared a bonus at the high rate of £2 2s. per cent. calculated on the sum assured and existing ordinary bonuses—the actual rate, if reckoned on the sum assured alone, ranges from £2 2s. per cent. for recently effected policies to over £6 per cent. in the oldest case. This is an achievement in keeping with the society's long-standing reputation for high and consistent bonuses, and it is gratifying that at our one hundred and twenty-fifth annual meeting we have been able to mark the "century-and-a-quarter" with another impressive addition to our "unique bonus record."

BONUS RATES

The question of the rate of intermediate bonus to be allowed in respect of current claims and surrenders is one to which the directors gave careful consideration, and they decided that the time had come to make some reduction. Rates of interest remain at a low level, and we cannot look for any reduction in the burden of taxation so long as there is no improvement in international relations and nations continue to spend vast sums on armaments and defence. On the contrary, we may have to face further increases in income-tax. In these circumstances the directors did not feel that they could declare a rate of intermediate bonus with any confidence that it would be maintained throughout a whole quinquennium, and they therefore decided to fix the rate at 38s. per cent. compound for the present, and to review the position from time to time in the light of changing conditions.

The results of the quinquennial investigation, showing, as they do, a position of great strength, will, I am sure, be received with satisfaction by the members, and we can look forward to the future with every confidence in the continued vitality and prosperity of our society.

The directors' report and the accounts as audited were adopted unanimously.

THE STANDARD LIFE ASSURANCE COMPANY

BONUS OF 42s. PER CENT. ANNUAL AND COMPOUND DECLARED FOR THE TWELFTH SUCCESSIVE YEAR

RECORD NEW BUSINESS

FUNDS NOW EXCEED £30,000,000

The one hundred and thirteenth annual general meeting was held, on Tuesday, March 7, 1939. Mr George William Blackwood, chairman of the company, was in the chair.

The Secretary having read the auditors' report, the Chairman said:—Gentlemen,—May I take it to be your wish that the directors' report which is in your hands be held as read?

Before reviewing the results of the past year I should like to refer in a few words to the loss which the company has sustained since our last annual meeting by the death of two members of the board. Mr R. O. Pitman followed his brother the late Mr A. R. C. Pitman as a director of the company, and had served the Standard in that capacity for fourteen years. For the three and a half years prior to his death he had been vice-chairman of the company. Mr James Ivory was our senior director, having joined the board in 1906. For the long period of over thirty-two years his expert knowledge of financial matters has been of the greatest assistance to the company. Both will be greatly missed by their co-directors.

As will be seen from the report, Mr Stewart Macnaghten, who had held the position of manager for nineteen years, retired last July. His services to the company were invaluable, and I think I may say that the wonderful position in which we find ourselves to-day is due very largely to his efforts. As he joined the board on retirement, we still have the benefit of his great knowledge and experience. The directors appointed Mr A. E. King as successor to Mr Macnaghten. I very much regret that the state of Mr King's health prevents his being present with us to-day, but you will all join with me in wishing him a speedy and complete recovery.

SATISFACTORY NEW BUSINESS FIGURES

The year 1938 was a critical one, and the dominating effect of international politics was not conducive to that steady expansion of trade and industry which normally provides the best background for our business. Notwithstanding this, I am glad to be able to report that our new business again constituted a record. The amount of new ordinary life business written during the year was £4,649,000, and group life assurances amounted to £1,817,000, making the total life assurances £6,466,000. This figure exceeds the total for the

previous year by £1,336,000, and this is the first occasion on which the new business has passed the six million pounds mark. Our steady progress is most satisfactory, and you will appreciate the successful efforts of all who were responsible for it.

During the year the directors decided to discontinue the transaction of new business in India as from November 15, 1938. This step was taken with much reluctance, but the directors carefully considered all the circumstances and came to the conclusion that the best interests of the members would be served by the adoption of this course.

HIGH INTEREST EARNINGS AND FAVOURABLE MORTALITY EXPERIENCE

From the revenue account of the life assurance and annuity fund you will see that the premium income shows a very satisfactory increase, and has now reached the total of over £2,346,000. The interest revenue also shows an increase and amounts to over £1,252,000. As the rate of interest obtainable on new investments suitable for life assurance funds still remains low and as the standard rate of income tax during the year was increased from 5s. to 5s. 6d. in the £, you will appreciate that the problem of finding suitable investments for the company's surplus funds is a difficult one. In these circumstances I think you will agree that the rate of interest earned on the life assurance and annuity fund during the year, viz., £4 14s. 2d. per cent., after deduction of income tax, is highly satisfactory. The surplus income from the guarantee fund which is transferred to the credit of the life assurance and annuity fund amounts to over £39,700.

On the expenditure side of the revenue account there is little on which to comment. Claims by death show a decrease, which is highly satisfactory, particularly in view of our expanding business, and I am pleased to be able to say that our mortality experience has been favourable. A second contribution of £100,000 has been made during the year to the staff pension fund. The life assurance and annuity fund, now standing at over £27,900,000 shows an increase during the year of £1,400,000.

STRENGTH OF VALUATION BASIS

As regards the balance sheet, the general fall in security values to which I referred a year ago was continued in 1938, but I am glad to be able to say that the margin between the market and balance sheet values of our assets is of very considerable amount. For the valuation of the actuarial liabilities the same stringent bases were used as were employed last year, involving the assumption that the rate of interest earned by the company in the future on all its funds would be only 2½ per cent. After setting aside reserves for the liabilities calculated on this stringent basis and after transferring the sum of £100,000 to the staff pension fund, the directors were able to declare for the twelfth successive year an annual compound reversionary bonus of £2 2s. per cent., with appropriate bonuses under the cash bonus plan and other schemes.

FACILITIES FOR PROVIDING PENSIONS

The original and still the most important purpose of a life office is to enable a man to protect his dependants at his death, and the company's policies will be found to fulfil this purpose in the most advantageous manner. On the other hand, there are many other uses to which policies may be put, and one of the chief of these is the provision of pensions. The attention of the public has recently been drawn to this question by the Government's new voluntary pension scheme, and I would remind members of the facilities which the Standard offers both to private individuals to provide for their own retirement and to employers of labour to inaugurate satisfactory pension schemes for their employees. We specialise in pension business on behalf of industrial firms, and our experience in handling this type of business enables us to put forward a suitable plan for each particular case and to administer the scheme with the minimum of trouble to the employer. For the private individual who has to make his own pension provision we have introduced a new "Pension Policy," of which full particulars can be had on application to any of the company's branches.

This company is a mutual one, controlled by its members for their own benefit. I would therefore remind members that they are acting in their own interests if they assist in extending the influence of the company and in bringing the company's name and policies before any of their friends who may be thinking of taking out life assurance policies. In doing so they can be perfectly satisfied that their recommendation is one which neither they nor their friends will regret.

I now move the formal adoption of the report, revenue accounts and balance sheet submitted.

Mr G. Innes Stewart, C.A., seconded the motion, and the report was adopted unanimously.

HARRODS LIMITED

SATISFACTORY RESULTS IN A DIFFICULT YEAR

SIR WOODMAN BURBIDGE'S ADDRESS

The forty-ninth annual general meeting of Harrods Limited, was held, on the 6th instant, on the company's premises, Brompton Road, London.

Sir Woodman Burbidge, Bt., C.B.E., the chairman, in the course of his speech, said:—The net profit for the year amounts to £738,190, a decrease of £79,611. In view of the adverse conditions, I venture to think you will agree with me when I say that these results may be considered as not unsatisfactory.

Looking into some of the past records relating to the growth and development of this business during the last 20 years, some very interesting results are revealed. During these 20 years ended January 31, 1939, this company has earned net profit amounting to £13,300,000, an average over the 20 years of £665,000 a year. Moreover, before arriving at these profits, a sum of one and a-half million pounds had been written off in respect of depreciations. During this same period there has been distributed in preference dividends £5,588,732 and to the ordinary stockholders £6,650,771, and it is very interesting to note that the average rate per year of the ordinary dividend is 16 per cent. This, I think you will agree, is a very good record.

REBUILDING SCHEMES

Whatever success we have achieved in the past, it is my firm conviction that we have ample scope for further development. We do not fear competition from whatever quarter it comes, as it is still true that there is only one Harrods. I am a firm believer that it is impossible to stand still, and I cannot see any bounds to our possibilities. As evidence of our confidence in the future, I need only instance the rebuilding schemes we have in hand at the present time in Brompton Road, Manchester, and at Dickins and Jones. These will cost £1,200,000, and will be financed entirely out of our own resources.

Gross profit on trading amounts to £2,353,922, a decrease of £181,374. It is proposed to pay a final dividend of 11 per cent. actual, making 16 per cent. for the year, on the ordinary stock.

The trading results of our Manchester branch have not equalled those of last year. It must be admitted that business in this area, particularly as affecting the cotton industry, has experienced difficult times.

You will no doubt have seen the Press reports of the fire at our Manchester branch, and, although of a serious nature, doing considerable damage, it is very fortunate that it did not affect in any degree the main store immediately opposite. The loss is fully covered by insurance. The remains of the damaged buildings are being pulled down, and we shall in due course proceed with the erection of the whole of the new store, which we expect will be completed by August next year.

The trading for the year of Dickins and Jones, Limited, has resulted in a net profit of £106,893, a decrease on the previous year of £18,204. I regard this as only a temporary setback, due entirely to the difficult trading conditions prevailing throughout the year. It should be remembered that during the previous six years the net profit earned had increased by 47 per cent. The rebuilding of the remaining portion of the old block, now in course of erection, will have three floors completed and opened to the public next month, and the remainder next September.

I am pleased to report that D. H. Evans and Company, Limited, has done extremely well for the past year, as both the sales turnover and net profit earned show a satisfactory increase. The net profit for the year is £143,800, an increase of £6,000. I consider this business will continue to develop and prosper, and that Harrods has in its holding of the ordinary capital of this subsidiary company an asset which will be of increasing value.

OUTLOOK FOR 1939

After paying a tribute to the work of the staff, he went on to say: The company is in a very strong and sound financial position. We have in Harrods an organisation which has been built up and constantly modernised over a long period of years, and which I venture to claim is second to none in the retail distributive trade of the world.

I feel, therefore, the future progress of this business is full of promise. I trust our hopes for a speedy and permanent settlement of all international difficulties may be realised, and that we may enter upon a long period of peace. In this event, I am hopeful that I shall be able to put better results before you next year.

The report and accounts were unanimously adopted.

UNITED KINGDOM PROVIDENT INSTITUTION

1938 NEW RECORDS

MAXIMUM BONUS MAINTAINED

SIR ERNEST BENN ON THE NEWSPAPER MENACE

The ninety-eighth annual general meeting of the members of the United Kingdom Temperance and General Provident Institution was held on Wednesday, March 8, 1939, in the Incorporated Accountants' Hall, Victoria Embankment, London, W.C.

The Chairman (Sir Ernest J. P. Benn, Bt.) said:—My Lords, Ladies and Gentlemen,—In moving the adoption of the ninety-eighth report and accounts, and attempting a review, as is our custom, of the past year, I have a task which is perhaps more difficult, certainly more interesting, than ever before in my experience. From the general market I have to report a certain amount of depression, a considerable element of anxiety, a lack of confidence, and a failure to progress, out of which it would be easy to produce a superficial tale of woe.

But, in my judgment, any such tale would be far removed from the real truth, however much it might accord with that deeply cherished grumbling instinct which is one of the qualities of our race.

THE NEWSPAPER MENACE

Commerce and industry have always suffered the handicap of politics, but in these modern times a serious new barrier to peace and prosperity has arisen in the shape of an enormous expansion in the machinery for the distribution of news. Hour by hour the rotary press and the wireless have to be fed with more and more news. There remains, however, among all this advance and improvement, the age-old difficulty that good news is no news and bad news is good news. Thus in the realm of foreign affairs we only hear of the bad in other nations, and they, in their turn, are only informed of the bad which, strange as it may seem to us, is also to be found or invented here.

The business of news gathering and news distribution, on paper and on the air, must now be ranked with the greatest of our industries. In this country alone it employs more than a hundred millions of capital; there is a daily newspaper circulation of thirty million copies, and there are nearly nine million wireless licences.

To remember that the whole of this impressive structure is absolutely governed by the very human preference for bad news is to realise one of the difficulties of a peacemaking Prime Minister and the jeopardy in which quiet and confidence always stand.

The difference or difficulty about which men can disagree, argue or even fight is as old as history, but only in recent times has it become the essential raw material of a great and powerful industry. I fear that to preach goodwill to the news trade, the bad news trade as it must be called, is something like advocating teetotalism to brewers. But a more general understanding of this difficulty is one of the most urgent of present-day needs.

In the absence of cheer, or comfort, or encouragement from the news services, we are only saved from disaster by the good faith and sound common-sense of ordinary people, who still find, if not "sermons in stones," at least some "good in everything."

THE STOCK EXCHANGE IN 1938

Roughly three-fifths of your property is in Stock Exchange securities, and the shrinkage in values during 1938 was a matter of some concern to us. For some years past I have pleaded, in your name, for a better interest yield upon our money, and in each of the last four years I have noted with satisfaction a tendency in that direction. 1938 has given us all we hoped for, and has brought Stock Exchange prices into line with the five per cent. mentality of which I spoke last year. You must remember that, like all serious investors, we buy for income, and seeing that we have never taken credit for inflated capital values, we are able to remain undisturbed when the inflation disappears. Our economic department has functioned so effectively that the round million of appreciation which we put into a published reserve remained intact even at the low Stock Exchange levels of December 31st.

I fail to share the feelings of the pessimists, and I think that the story of the Stock Exchange in 1938 gives further proof of our strength and staying power as a nation. We have lost foreign funds chiefly because of returning confidence in France and America. I can find no cause for pessimism in that. I suspect that the withdrawal of foreign money was accelerated by official attempts to stop it, and I regret that, notwithstanding all the lessons of the post-war period, we still persist in the attempt to control and manage that which, more than anything else, derives its "sweetness and perfume"

from "Liberty alone." The withdrawal of "funk" money because of the absence of reason for "funk" should be a matter for congratulation, and should be quickly followed by the deposit of new money arising out of the prosperity of the foreigner.

The bureaucratic grip upon our activities still tends to tighten. If Chambers of Commerce, farmers, shipowners and others continue to demand Government assistance in fields where government is out of place, that grip must get tighter still. There are those who hold that confidence and management can go together. To my mind the two things are wholly incompatible, and I believe that the rapid development of the new science of management, as exemplified in the Exchange Equalisation Fund and recent legislation, is in part responsible for the continued weakness of confidence.

The ordinary man, rightly, shrinks from a market where the largest and most powerful operator is a newcomer, full of theories, but devoid of experience, whose avowed object is not to secure income, or to make profit, but simply to defeat the law of supply and demand.

From the mass of dialectical generalities about the practice of control and management, two, and only two, small but significant facts have emerged. The first is that the Issue Department has ceased to be a source of profit to the Treasury, and has made a loss of £9,000,000; secondly, £86,000,000 has been placed to a reserve in the equalisation account, indicating that in the opinion of the managers, losses are not to be ruled out even in the Holy of Holies of the new economics. The situation was admirably summed up by an American correspondent who wrote: "We don't know where we're going, but we're getting there all right."

ANOTHER FIVE MILLIONS

Coming to the details of our own business, which, of course, hang upon these wider considerations, I am happy to report that the total of the new policies written during 1938 exceeded for the second time the sum of £5,000,000, and improved a little upon the record figure established by us in 1937.

OUR FUND

We can claim another record for the year just passed in that for the first time in our history the normal annual addition to our life assurance fund had reached the seven figure mark. We add to the fund the handsome sum of £1,030,020.

CLAIMS

The institution paid out in 1938 £1,510,143 in claims arising by death, by maturity, and by surrender. This figure is three times the average of the previous 97 years, and provides striking evidence of growth, but it is even more interesting as evidence of the value of life assurance as a method of investment. If each of the claims paid during 1938 is considered as part of an estate, whether large or small, it is safe to assume that the life assurance item was, in most cases, the only one that realised the full value attached to it.

EXPENSES OF MANAGEMENT

The directors are happy to report that notwithstanding the continued growth of the new business undertaken, the ratio of management expenses to premium income has been reduced by .2 per cent.

THE BONUS

I have left until the last the important question of the valuation and distribution of bonus.

You will see from the printed report that the actuary puts the present value of the liabilities under all contracts at £23,193,583.

We can pride ourselves upon being able to maintain our reserves for both old and new contracts upon the same stringent basis as before. We then come to the life assurance annuity and capital redemption fund which is shown as £25,198,836, without taking into account in any way the £1,000,000 reserve fund. There is thus a surplus of assets over liabilities of £2,005,251, of which £400,377 was brought forward from the previous valuation.

It requires the sum of £1,633,201 to allot bonuses at the same record high rates as declared ever since 1927, and there remains the sum of £372,050 to be carried forward undivided.

Throughout the triennium, the inroads into the funds made by the death claims have been light, and this has been a powerful factor in the production of the surplus available for distribution to members.

The institution has a fine history of large bonuses, and the declaration of a steady rate for the past twelve years, during which period the prices of gilt-edged stocks have jumped up and down like the shoddiest of industrial shares, is proof of the stability which you secure when your money is invested in this institution.

The report and accounts were unanimously adopted.

MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED

YEAR OF STEADY PROGRESS

MR GEORGE BALFOUR'S REVIEW

The twenty-sixth ordinary general meeting of Midland Counties Electric Supply Company, Limited, was held, on the 3rd instant, at Winchester House, Old Broad Street, London, Mr George Balfour, J.P., M.P. (the chairman), presiding.

The Chairman, in the course of his speech, said that the accounts continued to indicate steady progress. As the company had still to provide for increasing load, demanding further additions to plant and transmission system, it appeared that they could look forward with confidence to the results of the current year.

SOUND POSITION OF TRANSPORT PROPERTIES

It was very satisfactory to record that after a long struggle the board had placed the transport properties, which represented only 9½ per cent. of the company's share and loan capital, in a thoroughly sound position, and the board felt the time had now come to consider the question of separating the transport business and presenting a separate account, as to which they would probably have something to report during the year.

The traction properties operated services over 541 route miles with a fleet of 289 modern vehicles.

Last year they had carried 52,625,000 passengers, compared with 49,825,000 in the previous year. After providing £41,687 for depreciation of rolling-stock, as against £23,700 in the preceding year, the trading profits of the Traction properties amounted to £99,920, of which £54,858 had been appropriated for depreciation and reserve against assets other than rolling-stock and £45,062 brought over into the company's accounts.

Dealing with the general position, he would emphasise that theirs was a holding company in the full sense of the term, and their very large territory could not have been developed as rapidly or the consolidation of services brought about if their company had not knit all the properties together through the one central control.

As to the work they had done and the new business secured last year, they had afforded supplies in 29 parishes hitherto unserved, their supply now being available in four boroughs, 30 urban districts, and 663 rural parishes, while street lighting services were now provided in three boroughs, 18 urban districts, and 147 parishes and rural districts.

NEW CONSUMERS

They had connected 16,568 new consumers during the year, bringing the total number up to 150,670, approximately double the number at the end of 1934. The generating stations owned and operated by their company's subsidiaries had produced 562,041,000 units and in addition had purchased 17,819,000 units. A decrease in the number of units sold to a few high-load factor industrial consumers at the lowest power rates had been more than overtaken by supplies afforded to domestic consumers and miscellaneous power-users, a fact which was reflected in the slightly increased average price obtained over the whole area, which for the past year had been 0.872d. per unit, compared with 0.840d. in the preceding year.

The units sold direct to domestic consumers and small traders for power, lighting, heating, and cooking had been 64 million units, and it was interesting that 67 per cent. of the supply to that class of consumer was supplied under two-part tariff and the balance through slot meters and metered flat-rate charge. The average price of all domestic load under two-part tariff, which was available to all classes of consumers, was 1.83d., and of all domestic supply, including supplies under flat-rate charge slot meters, and two-part tariff, was 2.61d. per unit.

PROFITS AND DIVIDEND

The trading profits of the subsidiary companies had amounted after payment of income tax to £812,827. They now had, with £14,933 brought forward, an available balance in their company of £428,683. After various appropriations the board recommended a final dividend of 5½ per cent. on the ordinary stock, making 8 per cent. for the year, carrying forward £15,162.

Last year he had informed shareholders that a pension fund for the employees of the electricity supply undertakings had been established and operating from February 1, 1938. At the end of the year 1,018 members of the staff and employees were subscribers to the fund. The company's contribution for the year had amounted to £6,155 and a like amount had been contributed by staff and employees benefiting under the scheme.

The report and accounts were unanimously adopted.

SCOTTISH POWER COMPANY, LIMITED

FURTHER EXPANSION

The twenty-ninth annual ordinary general meeting of this Company was held, on the 9th instant, in Edinburgh.

Mr George Balfour, M.P. (the chairman), after referring to the loss they had sustained by the death of Sir Tom Callender and mentioning that Sir Robert Brooke, Bt., had been elected a director to fill the vacancy, said that the accounts would, he was sure, be accepted by stockholders as satisfactory. The progress made during the year was substantial and fulfilled their expectations.

The rapid development of electricity supply from Brora in the North to Northumberland in the South with only one small gap intervening could not have been accomplished without the machinery of the company as a holding company capable of quick action in acquiring, consolidating and developing electricity supply services immediately the opportunity occurred. The company owned the whole of the share and loan capital of all their subsidiary companies except a few thousand pounds in one company, and therefore at these meetings he had been in the habit of speaking of the affairs of all their subsidiary companies as though they were one consolidated property and not detached undertakings.

SATISFACTORY WORKING

All the hydro-electric plants had operated satisfactorily throughout the year and had produced an output largely in excess of their calculations and requirements, with the result that they were in a happy position of being able to supply from surplus water over 40 million units to the Central Board in excess of their contract, although they had only received for that surplus supply the very small sum of £13,500.

Last year in the catchment areas feeding the reservoirs from which they drew their water power, they had had an average rainfall of 91 inches, or 45 per cent. over the mean average rainfall for a period of years. Nature seemed to work in a peculiar and disturbing way. The supply from the watershed of Loch Garry became available at the end of 1937 just in time to avoid water shortage. That was immediately followed by excessive rainfall which, if they could only have foreseen, would have enabled them to postpone construction work for one year. Their task, however, was to see that their water resources and their reservoir capacity were sufficient to deal with periods of drought even though they had to run water to waste or sell "spill water" units for a small sum.

They had continued their policy of consolidation, and during the year had purchased the small unauthorised undertakings at Brora in Sutherlandshire and Coldingham in Berwickshire, replacing the existing direct current systems in those districts with a modern alternating current system and had continued the change-over to alternating current in other larger districts. Their business-getting and publicity department was specially active during the year attending to existing consumers and encouraging new business. Apart from the establishment of heavy industries, it was time small industries were established in the Highlands. They were ready to consider applications from responsible parties who were able and willing to put up small works for miscellaneous manufactures with a view to providing assistance in tiding over their preliminary difficulties during the first year or two.

ADDITIONS TO SYSTEM

They had added 367 miles to their transmission and distribution systems during the year, 192 miles being high tension and 175 miles low tension, making a total of 3,697 miles of mains in service, compared with 3,330 miles in the previous year. During the year they had connected 10,637 consumers, bringing the total up to 80,643. During the last five years they had nearly doubled the number of consumers. They had inaugurated supplies in four burghs and 40 villages and now served 101 burghs (of which only 10 had more than 10,000 population) and 287 villages. Public lighting was inaugurated in five burghs and 13 county districts, and they now supplied public lighting in 70 burghs and 138 county districts.

In addition to the spill water units, they had sold over 278 million units, of which over 106 million units were under their contract with the Central Board and nearly 172 million units for their general power, domestic and business purposes, an increase of 7.7 million units due to small power and domestic load.

The trading profits of their subsidiary companies, together with miscellaneous receipts of the Scottish Power Company and interest charged to capital during construction, amounted to £747,309, an increase of £52,778. The directors recommended a final dividend of 5½ per cent. on the ordinary stock, making 8 per cent., less income tax, for the year.

The report was adopted unanimously.

SELFRIDGE AND COMPANY, LIMITED

ADVERSE TRADE CONDITIONS

The thirty-first annual ordinary general meeting of Selfridge and Company, Limited, was held, on the 3rd instant, in London.

Mr H. Gordon Selfridge (chairman and managing director), who presided, said that the year 1938 had proved to be an unhappy period for nearly every business in the world. They had all been confronted with a continuous succession of international disturbances, and the commercial, industrial and financial world had been thrown seriously out of line.

The retail trade, and particularly as it applied to London, might generally be regarded as a fairly accurate index to industrial conditions and the general state of trade. Taking the four years to January, 1930, which was a good time, their net trading profit averaged £484,000, but when the slump started, in 1930-31, the average fell for the next four years to £382,000. The recovery which commenced in 1934-35 went on until well into the first half of 1937 and levelled up the average of the three years ended January, 1937, to £424,000. The present decline in industrial production commenced in 1937, with the result that last year's figures and the amount of profit now disclosed showed reductions from previous years. The present figure of £370,644, however, was still £29,000 above the low year of 1932-33, and even the average for the last two years was well above that for the four-year period to January, 1934.

The year 1938 began at once, as compared with 1937, to show reduced figures. In March, during which month Austria was taken over by the Nazi army, the loss in returns grew heavier. The following months were periods of doubt and question, and then came the September crisis, when their losses in returns reached high-water mark. With the easing in the public's nervous condition following Mr Chamberlain's return from Germany, they thought they could anticipate a return of reasonable or more or less normal conditions. But the exceptionally mild weather during October and November affected sales, and it was not until the middle of December that their returns increased instead of decreased. January also helped a little, but the year's total was so much off that their reductions in expense were not equal to the loss in gross profit.

As to the accounts, the available total was £432,410. Debenture interest and sinking fund took £59,723, and the amount reserved for income tax and national defence contribution absorbed £25,000 more at £105,000. The amount paid under guarantee to William Whiteley, Limited, was £12,400 higher at £50,741 and £50,000 was again written off premises. The full year's dividend on the 6 per cent., tax free, preference stock required £78,000, and after charging the dividend on the preferred ordinary stock paid to September 30th, the balance remaining was £22,279. It was their practice to carry forward a sum sufficient to cover the liability to William Whiteley, Limited, to the date of the accounts, and for that purpose £75,000 had been transferred from general reserve to leave a balance of £97,279, which sum would be considerably in excess of the actual liability. The total liability incurred and paid to January 31, 1938,

was £585,181. There were only three more years to run under that liability.

Given normal conditions there were grounds for anticipating some improvement in the current year, and although that was not yet apparent in the figures, there were indications of reviving confidence and better trade.

The report and accounts were unanimously adopted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

GOOD RESULT IN A DIFFICULT YEAR

The annual general meeting of the Scottish Equitable Life Assurance Society was held at Edinburgh, on the 9th instant.

The chair was occupied by the president of the society, the Right Hon. the Earl of Stair, K.T. He called upon the chairman of the board of directors to present the annual report and balance sheet, and in the course of his remarks Sir Harry Hope, Bt., said:—

We have now completed the first year of a new quinquennium. It has been a year of exceptional difficulty. The steady increase in the total life assurance business of the country which had continued for some years received its first setback, Stock Exchange securities fell in value and generally the problems of life assurance management have become increasingly exacting. In such times it is well to look first to our reserves. We have a very strong actuarial valuation, and while in common with similar institutions we suffered depreciation in investments during the year our "hidden reserve" or buffer to meet such eventualities has proved considerably more than ample.

NET RATE OF INTEREST

The net rate of interest earned on our total funds is £3 18s. per cent., of £4 1s. per cent. after making allowance for the reserve fund and carry-forward. As the rate of interest assumed in our actuarial valuation was 2½ per cent. the rate earned gives a satisfactory margin.

FAVOURABLE MORTALITY EXPERIENCE

The claims experience is much better than the mortality tables would have led us to expect. The postponement of claims as a result of a favourable mortality experience means that not only will the society continue for a longer period to collect the premiums, but it will also receive the interest of which earlier payment of the sums involved would have deprived it.

NEW BUSINESS

Net new business was £1,836,395, which is rather less than last year's figure. The gross returns, however, were a few thousands in excess of the previous year, and we look forward to increasing new business.

The report was adopted.

THE COMMODITY MARKETS—continued.

exports from China to the British-controlled Pekin Syndicate. Whether this company will be able to export tungsten from China depends on the attitude of the Japanese authorities. The market does not expect a shortage of supplies and the demand, although larger than in the preceding two months, is not too active.

and barley prices have also slightly improved, with a rather better demand for feeding purposes.

Miscellaneous Commodities

Oils and Oilseeds.—Although the volume of business remains small, the undertone of the market has improved and prices are tending higher. Prices of both Plate and Indian linseed have advanced, and linseed oil is about 15s. per ton dearer. Trade in oilcakes is still below normal.

★

Rubber.—After a period of dull trading at the end of last week, the market improved and the fall in prices was entirely recovered by Wednesday, when the price of standard sheet on the spot closed at 8½d. per lb. The British motor factories are reported to have had an exceptionally busy month in February.

Furs.—The following table gives the prices (in shillings and pence per skin) of leading furs at the Hudson's Bay Company's recent sales:—

The World's Navies

Source: *Fleets of the British Commonwealth of Nations and Foreign Countries, 1939*. Cmd. 5936. Price 2s. The official return does not include figures for the Soviet Navy. The categories are those of the London Naval Treaty, but the heading "Capital Ships," shown above, excludes coast defence vessels. "Cruisers" refers to light surface vessels, sub-categories A and B (mainly heavy and medium cruisers). "Destroyers" refers to sub-category C (including light cruisers). Any slight discrepancies between the figures charted and those given in the leading article on page 493 are due to differences of classification.

Finance

GOVERNMENT RETURNS

For the week ended March 4, 1939, total ordinary revenue was £34,191,000, against ordinary expenditure of £21,570,000. Thus, excluding sinking fund allocations, Defence expenditure from loans, and £720,000 interest paid and received to date in respect of Defence loan issues, the deficit accrued since April 1st last is £34,324,000, against a deficit of £2,305,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On March 3rd applications at £99 17s. 5d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday, and Friday of following week were accepted as to about 27 per cent. and applications at higher prices in full. Applications at £99 17s. 6d. for bills to be paid for on Saturday were accepted in full. £40.0 millions of Treasury bills are being offered on March 10th.

(a) Paid on increased capital.
\$ Free of income tax.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

The Agony of the Czechs

ONCE again Herr Hitler has demonstrated to an outraged world that he can break his promises more flagrantly and more quickly than any of his predecessors even in the sordid history of Prussian diplomacy. Quite literally overnight an independent State has vanished from the map. What seemed impossible on Tuesday afternoon was an accomplished fact by Wednesday evening. Before the world—before even the Czech people—was aware of what was happening, Bohemia and Moravia were completely overrun and Adolf Hitler himself was sleeping in the Hradcany Castle that towers over Prague. Never has a large State pounced with more brutality on a small one. It is recorded that when the German troops entering Prague met with the jeers, the hisses and the tears of the helpless Czechs, their faces reddened. The ordinary German citizen may well blush for the deeds of his Nazi overlords.

The story of the last few days, in outline, is very quickly told. In its swiftness and the technique employed it bears a very striking resemblance to the invasion of Austria almost exactly a year previously. For some time past the Slovak autonomists, enlisted in the so-called Hlinka Guard and abetted from Vienna, have been getting more and more turbulent, especially in the expression of anti-Semitism. The Slovak Government of Mgr Tiso has winked at these disorders. Last week, the Central Czech-Slovak Government in Prague got wind of Mgr Tiso's intention to declare Slovak independence. This, of course, was

treason against the Republic, and President Hacha was well within his rights and duties in dismissing Mgr Tiso and appointing in his place M. Sidor, a Slovak autonomist and an adherent of the late Father Hlinka, but one who, according to report, realised that Slovakia's best interests would be served within the framework of a partnership with the Czechs.

Germany, however, was as little pleased by any consideration of the Slovaks' real interests as by Herr Schuschnigg's resolve, last year, to consult the opinion of the Austrian people. So, as in Austria a year ago, German policy was forced out into the open. Mgr Tiso was summoned from the monastery to which the legal Government of his country had confined him, to audience with the Fuehrer in Berlin. President Hacha was "recommended" by Berlin to summon the Slovak Parliament, which on Tuesday morning duly proclaimed the independence of Slovakia and, in the same breath, stultified it by placing the country under German patronage.

But Slovakia was only the pawn taken in the opening gambit. It became apparent in the course of Tuesday that Germany aimed at nothing less than the total occupation of all the Czech lands. There were provocative movements among the German Bohemians; "incidents" occurred; and the German Press rediscovered the "Hussite orgies"; of last September. President Hacha went to Berlin to plead with the inexorable Fuehrer, to offer a Customs union, a currency union, a military alliance—anything to avoid the

ultimate humiliation of a military occupation. All was in vain. He was offered the brutal alternative of surrendering his country to Herr Hitler's discretion in return for a vague promise of cultural autonomy (with the Gestapo in the background!) or of having Prague destroyed. He surrendered and invited the Germans in. They had not waited for the invitation; and the Reichswehr was in Prague before breakfast. The army is in control; military governors have been set up; and the secret police are beginning their hideous reckoning with the victims on their black list. All this has happened with incredible speed. As late as Tuesday night the German Foreign Office was, it is reported, declaring to the representatives of the other Powers that no drastic measures were in contemplation. This, in itself, given Herr von Ribbentrop's reputation, should have been a signal that the exact opposite was intended. But even the most hardened believer in von Ribbentrop's habitual mendacity could scarcely have believed that that paragon of German honour would be sleeping in Prague next night.

SALUTE TO BRAVERY

Thus died the Czecho-Slovak Republic. An attempt is being made by some people in England whose sense of decency is entirely overlaid by the fat of smugness to hold that Czecho-Slovakia collapsed from within, that it was a ramshackle State which did not deserve to live. That is untrue. Even under the immense pressure of last autumn there was never any violent discontent in Czecho-Slovakia that was not incited, supported and fostered from without. The Czechs have made mistakes in their twenty years and four months of freedom. But the marvel is that a people with their history and their lack of national opportunities should have shown the energy, the industry, the humanity, the moderation, the liberal democracy, the manly decency—above all, the unexampled fortitude and silent courage—they have shown. Let us salute them. In spirit, every man and woman of them has died at Thermopylae a hundred times over. They will not be forgotten. They will rise again. In the undeclared war that is raging throughout the world, the restoration of Czech independence becomes a primary war aim. Until it has been achieved, the Czechs will lie heavy on the conscience of the world.

It is hardly necessary to say that the German action is a crime, without pretext or redeeming feature, against all that has ever been regarded as international law or morality. It is a flagrant breach of undertakings solemnly and publicly repeated by Herr Hitler less than six months ago. It is in contemptuous disregard of the Munich Agreement. It goes far beyond any mandate that the Fuehrer has ever asked for from the German people. Even Dr Goebbels' coating of hypocritical justification is so nauseatingly thin as to reveal, rather than to conceal, the fact that vice no longer finds it necessary to pay any tribute to virtue. The actions of March 14 and 15, 1939, should give the lie once and for all to those well-meaning, truth-fearing folk who have always proclaimed that there is a limit to Herr Hitler's ambitions, that Germany is anxious to settle down in amity with her fellow-nations, that, when appeased with a few more concessions, the Fuehrer will be found to be an angel of peace. We now know that Nazi Germany is a robber State. There is nothing it will not take if it can. It will be restrained not by any signatures or scruples but only by force as naked and brutal as its own.

And what a painfully revealing light the events of this week shed on British foreign policy! The whole post-Munich episode, from the extraordinary proclamation of "peace in our time" down to the busy fostering by Ministers, only a week ago, of optimistic forecasts of an agreement for arms limitation before long, seems almost unbelievably naïve, amateurish and ill-informed. The Munich Agreement is now revealed in its true colours. So far from being a settlement, it was merely a manoeuvre, by

which Britain and France were persuaded not merely to assent to, but actually to assist in, the first step of a campaign that has now ended in the utter destruction of the State our leaders claimed to have "saved." All the brave talk that we had rescued the Czecho-Slovak State from "unlimited invasion and possible destruction" (the words are Sir John Simon's) is now seen to be just so much nonsense, and Great Britain is reduced to the necessity of extricating itself, with more than a little legal sophistry, from a guarantee given less than six months ago. It is difficult to resist the conclusion that the policy of the present Government towards Nazi Germany has been wrong from the start. Over and over again, we have acted on the assumption that if they were given a little rope the Nazis would hang themselves—or alternatively that they would sober down. In fact, they have used each concession, each forbearance, as a stepping-stone to new aggressions. For this reason, if for no other, it is now essential to avoid even the appearance of uncompensated concessions, which will infallibly be interpreted as weakness. This applies to the Anglo-German commercial negotiations fully as much as to diplomatic moves. The visit of Mr Stanley and Mr Hudson to Berlin has been "postponed"; it should have been cancelled. And we must realise that the preliminary agreement that the F.B.I. negotiators are reported to have brought home from Duesseldorf is as worthless as all other German undertakings.

The German move has shattered at a single blow the structure of confidence that has been precariously built up in the last few weeks. Once again the apprehensive question in every mouth is, What next? Germany is greatly strengthened by the seizure of Bohemia. The last return of the National Bank of Czecho-Slovakia showed gold holdings of about £17½ millions and foreign exchange holdings of a further £8 millions. To these must, of course, be added the foreign assets of other institutions and persons. Some of the gold will automatically fall into German hands, as will at least some of the foreign exchange holdings—all of them unless the authorities in London, New York and elsewhere take the obviously justifiable step of impounding them. Most of the British Government credit is still untransferred, and is being retained. But whatever the exact figure may be, it is clear that Germany's desperately depleted coffers will receive substantial support. In the military sphere, the Reich takes possession of equipment for an army of 40 divisions, of a large and efficient air force, and of a very productive armament industry. Many of the economic strains that have been so apparent in Germany since Munich are relieved, and in twenty-four hours Germany more than offsets a year of British re-armament.

THE NEXT STEP

For what are these arms to be used—since it can be taken for granted that they will be used for something? The most obvious answer is that they will be used for the drive to the East. But there are one or two facts which do not entirely square with that intention. Why bother to absorb Bohemia when, for Eastern purposes, it can be more effectively used under a cover of independence? Why alarm the destined victims? Why disappoint Italy once more? Why allow Hungary and Poland to join hands across the only road to the East? Why give Britain and France—and America—the time they need? There are answers to these questions, and they may be satisfactory. But it would be blindness to dismiss the possibility that the absorption of Bohemia and Moravia is not a step to the East but a securing of the rear before a joint Italo-German offensive against the West. The two danger-spots to be watched in the next few weeks are Roumania and Spain. If trouble is made for King Carol, the omens will point eastwards. But if there is an attempt to turn

General Franco's Spanish nationalist government into an Italo-German Fascist regime, the danger will be on our own doorstep. We shall not have to wait very long before we know which it is to be.

In the meantime what can we do? We can, of course, arm, with redoubled speed and with an abandonment of the pretence that the situation is not yet serious enough for war-time measures. But arms alone may be useless without policy. In the House of Commons on Wednesday Mr Eden made an impressive appeal for national unity and agreement on a policy

to examine . . . the new military and strategic position that confronts us in Europe, to consult all those nations who are like-minded with us, wherever they might be, whoever they might be, and of whatever colour, to discuss with those nations what our policy is to be and where we will make our stand and having determined that to make with them at once the military plans to give effect to our decisions.

The Cartelisation of England

THE result of the ballot taken by the Government among the members of the cotton industry on the draft of the proposed Enabling Bill for the industry was recorded in *The Economist* last week. The majorities in favour of the Bill were by no means overwhelming; they testify to the stubborn independence of the Lancashire mind, even after two decades of greater or less depression and almost as many years of discussion. But they are deemed adequate and the Bill is to be introduced into Parliament shortly.

The structure envisaged in the Bill is complicated and specified in a wealth of detail. In broadest outline, it provides machinery by which each of the sections of the industry can evolve schemes either for the removal of redundant plant or for the fixation of minimum prices (but for no other purpose). When approved, these schemes are to have compulsory force. The process of approval, however, is threefold. First, a scheme must be approved at a poll of the section concerned. Secondly, the scheme must be approved by the whole Cotton Industry Board. And finally, the scheme has to be approved by the Board of Trade and not disapproved by Parliament.

The cotton textile industry has had a lamentable post-war history. For this reason, and because cotton is our greatest export trade, the whole country will hope that the remedy on which a majority of the industry has at length agreed will bring it back some prosperity. There are, however, several very important questions of principle in connection with this Bill, and with the similar schemes in force or in contemplation for other industries, which should not go without discussion. An entirely novel form of industrial organisation is creeping upon us unawares. We are witnessing the gradual cartelisation of England.

Until the last decade or so it was the accepted doctrine among virtually all business men and perhaps more than half of the public that the State would intervene in the affairs of specific industries as little as possible. Complete *laissez faire* went by the board decades ago, but until recently the tendency has been, at least among business men, to regard State intervention in industry as perhaps necessary, but if so a necessary evil. As a purely abstract proposition that would still doubtless be maintained. But in practice the attitude has changed. The change dates from the Great Depression and from its economic consequence in Great Britain, the protective tariff. Since 1932 the State has no longer appeared to industry solely in the guise of monitor or policeman; it has had favours to dispense. What is more, in addition to the concealed subsidy of a Customs duty, the State has

Mr Eden is unquestionably right in thinking that it is only on the basis of such a policy that national unity can be achieved. But he is apparently wrong in hoping that the present Government can be recruited for it. Sir John Simon, later in the same day's debate, deliberately and emphatically rejected it. It would lead, he said, to "an extensive, general, undefined commitment, with the result to a large extent that our foreign policy would depend not on this country, this Parliament, and the electors, but on a lot of foreign Governments." The position, then, seems to be this: the Government realise that in time of war they would need allies, with all that alliances imply in commitments and in sharing the responsibility for decisions. But they will not do, to save the peace, what they would certainly do to win the war.

This peculiar attitude amounts to an invitation to the aggressors to destroy us in detail. We dare not assume that the invitation will not be accepted.

begun to hand out specific subsidies in hard cash, from which agriculture has benefited most handsomely, but by no means exclusively. And finally, in addition to tariff protection and cash subsidies, the State has in several cases lent its aid to the creation of legally enforceable determinations of minimum price and maximum output. The result has naturally been to revolutionise the attitude of industry to the State: the policeman has turned Father Christmas.

With this change has gone a similar alteration in the public attitude towards purely private and non-legal monopolies and combinations. We have never in this country followed the American worship of competition to the length of enacting anti-trust legislation. But there has always been a doctrine of the common law against combinations in restraint of trade, reinforced by a general belief that such combinations tend to be anti-social in their effects. The belief has changed and the common law doctrine is in disuse. What is more, the Government, in recent years, far from reprobating the cohesive organisation of industries, has encouraged it. Both steel and coal had almost to be forced to combine. The particular machinery set up under the Import Duties Act makes it virtually obligatory for every industry to have an effective trade organisation. And at this moment industry in general is being exhorted to form tight combinations for export. The price that is not fixed is becoming a rarity, and the businessman's theme-song has changed from Free Private Enterprise to the Self-Government of Industry.

The shift has come gradually and subconsciously. At no point has it been asked whether this new concept of economic organisation is one which the community should welcome. There is one uncompromising school which has no doubt of the answer. "People of the same trade," wrote Adam Smith, "seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices." Professor Smith's recommendation that, in consequence, the members of a trade should not even be encouraged to provide collectively for their poor, their sick, their widows and orphans, would hardly find favour to-day. But it is undeniably true that combinations to fix prices or output do have a strong bias towards the restraint of trade. And it is also undeniably true that, in general, and subject to exceptions, the restraint of trade means the restraint of the community's wealth. To prove this proposition it is not necessary to adduce instances of monopoly exaction. Most price-fixing industries can be acquitted of earning excessive profits. But all of them have a bias in favour of the easy life of high profits on low turnover and against the

strenuous competitive life of low profits on high turnover. Mr Henry Ford, M. Bata, Sir Montague Burton, and Sir Henry Price—none of these would have flourished if the prices of cars, shoes and suits had been fixed.

There is, then, at least a *prima facie* presumption that "combinations in restraint of trade" are contrary to the public interest. To attempt to suppress such combinations as arise by private effort, without special assistance from the State, is to become involved in all the difficulties and complications of "trust-busting" legislation such as continue to plague the United States. The precedent is not encouraging. But when the restraint of trade arises with the assistance and at the urging of the State, the matter is different. The history of the majority of the monopolies created by the State in the past decade is not encouraging. The effects of the cartelisation of the coal industry are discussed elsewhere in this issue of *The Economist*. The edicts of the steel cartel have been very widely criticised. And the price policy of the Milk Marketing Board (to take only the most prominent of the agricultural examples) is a byword. For all the acts of these various bodies admirable justification, usually relating to costs of production, can be pleaded. But the fact remains that, to judge by what we have seen of it to date, the self-government of industry leads to the indefinite postponement of true rationalisation and a strong bias in favour of high prices for the essential raw materials of national industry and national health.

The draft Cotton Industry Bill is chiefly remarkable for the very great care that has been taken to avoid these evils. It will be harder for an anti-social proposal to pass through all the stages of approval than for a camel to pass through the eye of a needle. Those who have drafted the Bill deserve the highest credit for the precautions they have taken. But there is some danger lest, in taking these precautions to see that the Bill does the community no harm, they have not in effect whittled away all its power to do the industry good. What sort of a scheme is it likely to be that will be agreeable to two-thirds of a section of the

industry and will not injure the worker, the exporter, any other section of the industry, any other industry, the consumer or the general interest? It is hardly likely to be a very far-reaching or positive scheme. If in the future the organisation of industries is to be left fundamentally to the industrialists, but there is to be a similar array of elaborate safeguards for the public interest, the net result is likely to be the same as that of political constitutions on the identical theory of checks and balances: a multitude of people empowered to say "No" and no one with the power to say "Yes." The industry will have the initiative, but not the power. The community will have the power without the initiative. And the result is likely to be stagnation.

The argument might seem to be leading to a Socialist conclusion. A Socialist organisation with some dynamic power would, indeed, be preferable to "self-governing" ossification. But the choice is not limited to these two. There are other weapons in the armoury of economic organisation. There is the method adopted in the Great War (and perhaps, in its fullest form, only suited to war conditions) of appointing controllers for those industries that require State intervention, the controller being, in most cases, a business man, but drawn from an industry other than that which he controls. This idea is already embryonically present in the independent chairman of the Steel Federation and the three independent members of the proposed Cotton Industry Board. Or there is the method of the semi-public, semi-private merger exemplified by the London Passenger Transport Board, in which the managers are given the widest powers, but with other objectives to set alongside the profit motive. The examination of these alternatives is too vast a topic for a single article. But the subject deserves open discussion. We must not allow ourselves to slip unwarily into a false solution merely through seeking to find something that is neither the outmoded *laissez faire* nor the distrusted nationalisation. Economic organisation is too vital a matter to be fobbed off with a *pis aller*.

The L.C.C.'s Jubilee

THIS week, the greatest of London's governments, the London County Council, celebrates its golden jubilee. Half a century ago, on the first day of spring, 1889, ten days before the date fixed by Parliament, Lord Rosebery and the 120 members and aldermen of the first Council hurriedly took over the duties of the former Metropolitan Board of Works, which was about to spend its last days in voting higher salaries and pensions to its employees and approving contracts for capital expenditure running into millions of pounds. From this premature birth, the Council has gone from strength to strength. From "the cavernous and tavernous" Spring Gardens the centre of London's government has moved to the ever-growing County Hall, where next Tuesday H.M. the Queen will open an exhibition of fifty years of municipal progress in the presence of representatives of all London's other governing bodies congregated to do courtesy, if not homage, to the Council.

Fifty years is but a short span in the life of a great city. Yet, from the spring of 1889 through the summer of Progressive rule and the long winter of Municipal Reform to the revival of the past five years, the London County Council has been assisting at the birth of a new metropolis. It is true that, in the County area itself, these years have been, for the most part, years of consolidation, rather than reform. Greater London's population has risen from 5 to 10 millions, but the County's population has actually fallen. Even so, the County now knows new principles and methods of administration. The School Board, the Metropolitan Asylums Board and the boards of guardians have gone. Under central control the founda-

tions have been laid for model municipal school and hospital services. The Council has been transformed from a rather grim quasi-legal and quasi-legislative body, concerned primarily with preventing individuals from unduly harming each other (by controlling weights and measures, places of public entertainment, and nuisances), into an active and versatile provider for young, aged and infirm alike. A symbol of this change is the Council's appointment this year of a woman Chairman—Mrs E. M. Lowe. In 1889 it was ruled out of order even for women members to be elected (and only in 1907 was the sex bar removed).

Just as medicine has become increasingly preventive since Victorian days, so has government. Municipal activities have spread to public parks, to swimming baths, to playing fields, to green belts, to literary institutes and to evening classes. Cottages and flats have been furnished where formerly there were slums; loans have been given to house-purchasers; and, all in all, in London as in other cities, citizens have been provided in recent decades with some at least of the means of living fuller and healthier lives by their local councillors. And these civic outgoings have saved far more in the cost of curing ills than has been spent on the policy of prevention.

In very many ways, the present Council deserves congratulations. During the past five years, a real effort has been made to interest the Londoner in his government. The desire to build a better city has been rekindled. A great housing campaign has set an example for the abatement of slums and the solution of overcrowding—however much percipient critics may cavil at the high cost

and unsuitability of flat-dwellings. London's Green Belt scheme and the decision to town-plan the arbitrarily defined County itself show that a pious start has been made, under admittedly impossible conditions of administrative clash and confusion in Greater London as a whole, to control at least the centre of the amorphous and sprawling mass of London and its suburbs. But the limitations of London government, of the County's area and of the Council's powers were never more evident than in these years of struggle to achieve real progress.

Two years ago, in its Coronation-time London Supplement, *The Economist* dwelt at length on "the anomaly of London government," on "the chaos of areas, chaos of franchises, chaos of authorities and chaos of rates" to be found there. In the early years which followed 1889, reforming zeal vented itself in frequent efforts to rationalise the multitude of London's governing authorities. Each and all were straightway killed by the jealous opposition of Parliament and the City Corporation. The host of authorities that to-day stretch out from the County's boundaries to the fringes of monstrous Greater London itself still stand in the way. The sceptic may well wonder whether London in these fifty years has not progressed in spite of rather than because of its governments.

Their various representatives who will gather in friendly fashion next week at County Hall fight each other with vigour over any and every Parliamentary committee table. They should look back not fifty years but eighty-four to *The Times* of March 20th, 1855:—

We may really say that there is no such place as London at all, the huge city passing under that title being rent into an infinity of divisions, districts and areas. . . . Within the metropolitan limits, the local administration is carried on by no fewer than 300 different bodies, deriving power from 250 different local acts, independent of general acts.

Can London's governors put their hands on their hearts and claim that very great progress has been made since the time of the Crimean War?

Dr Robson, whose reputation as an expert on administrative subjects needs no elaboration, has made a thorough study of this very problem. Appositely a notable book from his pen has just appeared,* pointing out that every year increases the need and redoubles the difficulties of reform. Dr Robson has taken the bull by the horns: he suggests the creation of a Greater London Regional Authority to rule over an area 20 times that of the present county and to be responsible for all but minor and strictly local services. He is only too well aware of the obstacles in the way. It is with some bitterness that he says that

the tacit assumption of unalterable boundaries is making peaceful change almost as difficult in Surrey and Kent as it is between sovereign states. Municipal vested interests are defended with a passion every whit as strong as those which defend private property.

Possibly Dr Robson's bold scheme is too ambitious; maybe it rates too highly the ability of local government officers to organise and administer so large an area effectively. But London cannot continue to live and work with innumerable unco-ordinated authorities and *ad hoc* boards: one plans London's transport and another sanctions houses in an area to which a third finds it economically impossible to take water; the provision of the essential services of living and travelling does not march as one; and the consequence is congestion, ill-health and weary days.

How is reform to be brought about? One thing is sure: it cannot be done by party politics. As Mr Sidney Webb said in 1899, "London's municipal interests are far too important to be made the shuttlecock of imperial parties." And to-day reform is written in the pattern of inescapable facts. Nothing is more easy than to pigeon-hole plans of re-

form. What Dr Robson's shrewd analysis has just done for London, was done for the Tyneside by a Royal Commission in 1937, which reported wholeheartedly in favour of the institution of a Tyneside Regional Council and the abolition or diminution of the smaller authorities. Nothing has been done there either. But civil defence everywhere is inevitably being given a regional structure, and every expert review of town-planning problems has called for regionalism. The areas and financial resources of local authorities are wholly inadequate for efficient government.

Possibly the greatest achievement of the London County Council in recent years has been the interest which it has aroused in government among Londoners. The Londoner's local patriotism tends to be lost in a maze of authorities; it is divided between County Hall, the Guildhall and the various lavish town halls springing up in every metropolitan borough; and Londoners have always seemed to want only the minimum of government. Real government only came into being in London when the need for paved streets and clean drainage became imperative, just as the police were reluctantly created to deal with attacks on property. It was hard to be enthusiastic about drains—even though the laying of drains on the Thames foreshore and the necessity of covering them gave London the beauty of the Victoria Embankment.

The fact that London's administration in the past was never reformed until too late was, admittedly, by no means entirely due to the Londoner's apathy. Working against efficient London government, more often than not, there has been Parliament, jealous of its powers and privileges: there have been vested interests, too. Thus it was that past reforms were born in catastrophe, and always belatedly. In 1854, London was swept by cholera. So urgent was the need for drains that the Government turned aside from the Crimean War to accept the private Bill of "Big Ben" Hall to set up the Metropolitan Board of Works. This was the first step forward. But, despite Royal Commissions, Select Committees and Bills, no further reform was undertaken until the corruption of the Metropolitan Board of Works led to an official inquiry that exposed such dishonesty that an elected council for London was hastily and at the last moment spatchcocked on to a Bill relating to country county councils. Thus the L.C.C. itself was the child, not of considered judgment, but of dire emergency.

London has never been given a considered charter; it has never had a thought-out constitution. Its chief area of administration remains to-day practically the same as (in fact, it is slightly smaller than) that hastily improvised in 1855. It is likely that, in the future as in the past, reform will only come in the face of some catastrophe. And that compelling catastrophe may be near. Reform may come as a result perhaps of an aerial bombardment, discovering the fire hoses of one small area unfitted to the hydrants of another, or the good shelters of one district invaded by the scared inhabitants of another in which all defence duties have been neglected. Or the needs of transport and traffic may provide the final imperative. If there is one thing more grave and amazing than that London should need the grandiose and costly Bressey scheme to free its roadways from intolerable chaos and danger, it is that London can apparently take no step to put the scheme into operation.

The celebrations at County Hall may well arouse such a civic pride amongst the great mass of Londoners that they will no longer be satisfied with the present chaos and confusion. They have in the London County Council a body that has conscientiously tried to perform its duties. It is only balked in their better performance by an obsolete area and an outmoded system. In this Jubilee year, it is for Londoners to celebrate, not merely by pomp and circumstance, but by assuming a wholehearted interest in the affairs of the greatest city in the world and by pressing hard for a reform in government as thoroughgoing as that to which New York has lately been subjected.

* The Government and Misgovernment of London. By W. A. Robson. Allen and Unwin. 15s

Political Economy in Australia

THE fissure in the Australian Cabinet over the fate of the National Insurance Act, to which reference was made in *The Economist* last week, has not after all been patched up. Faced, on the one hand, with demands by the Country Party for more favourable (and more expensive) treatment for the rural population and, on the other hand, with the uncomfortable fact that the Budget would not stand any further burden, the Federal Cabinet has compromised by dropping the pensions provisions of the Act and extending the health insurance provisions in accordance with the Country Party's views. Mr Menzies, the Attorney-General, who has deeply committed himself to the support of the existing Act, has resigned. His personality, and the issue that provokes his resignation, virtually ensure that a major political storm will follow.

Fundamentally, the issue is merely the Australian version of the world-wide dilemma of guns *versus* butter. Last year the Commonwealth Budget produced a surplus of £3,500,000, and the States also achieved much better financial results than had been expected, balancing their Budgets in the aggregate even after meeting sinking funds. Federal surpluses, enabling taxes to be remitted, and contrasting with much more difficult fiscal conditions in the States, have been a regular feature of Australian government finance during the recovery period. The current year, however, has seen a significant change. While the States as a group were able to make satisfactory Budget forecasts, the Commonwealth was obliged to impose extra taxes in order to meet the combination of rising expenditure for armaments and other services, with a prospective decline in customs and excise, the main source of federal revenue.

The chairman of the Bank of New South Wales has remarked recently that "higher taxes are far from being the ideal method of raising money when business activity shows signs of slackening." But the Commonwealth Government cannot contemplate a policy of unlimited borrowing, and it has already had certain difficulties in the capital market. In December, 1938, the first block of Australia's huge internal conversion loan, floated at 4 per cent. in 1931 to replace bonds bearing a higher rate of interest, fell due for repayment. This block of £67,600,000 had been largely taken up in 1931 by small holders, who might well fail to be attracted by the offer of a 3½ per cent. re-conversion loan running for 14 to 16 years. The difficulties were increased by the addition of £4,000,000 for defence to the sum to be borrowed. It was therefore gratifying that the whole of the loan should have been subscribed, including £10,400,000 of new money. This result, however, was achieved only through a special subscription of £6,000,000 by the Commonwealth Bank, which (in its chairman's words) was acting in the light of the existing economic position in accordance with its policy as a central bank. This phrase was generally interpreted as meaning that the Bank was anxious to avoid deflationary credit conditions in Australia. The success of the December conversion was not repeated when a further loan of £8,500,000 at 3½ per cent. was raised in February, no less than £3,700,000 being left with the underwriters.

The use of Government loan finance as a means of reflation has become orthodox policy in Australia since 1931, and there are some signs that the latest effort of the kind has had its effect. Bank clearings, after falling off for some months, were 7 per cent. higher in December than they had been in the same month of 1937, and deposits also showed a sharp rise. For some months the Australian economy had seemed to be poised uncertainly between recovery and a continuation of the contraction that marked the middle of the year. While retail sales had spurted to

a high rate in November, motor-car registrations were still substantially lower than they had been twelve months before. The November figure of unemployment among trade unionists was 8.9 per cent., against 8.2 per cent. in November, 1937, but in employment, as in retail trade and in factory turnover, the trend was, and still is, hard to discern. On the whole, the last months of the year were encouraging, notably in the capital goods industries.

In a country like Australia, internal spending power must depend to a large extent on the proceeds of exports. The index of export prices (1927 = 100), which had been 91.8 in 1936-37 (the Australian statistical and fiscal year ends on June 30th) and 82.3 in 1937-38, fell to 65.4 in December, but recovered a little in January. The monthly value of exports has been regularly below the corresponding figure for 1937-38. Drought and bush fires have added to the difficulties of primary producers, though good rains have now fallen both in the pastoral and in the wheat-growing areas. On the basis of export prices at the beginning of the year, it has been estimated that, even if the whole of the abnormal carry-overs of wool and wheat are sold in the current season, exports in 1938-39, including newly-mined gold, are likely to total only £135 millions, £19 millions less than in 1937-38. On the basis of the current flow of imports, it has likewise been estimated that imports will total £125 millions, a decline of £14.6 millions. The realisation of this forecast would give a credit balance of only £10 millions, which would be quite inadequate to meet the cost of Australia's interest payments, since the interest on Government and local authority debt alone amounts to about £27½ millions per annum.

In the past couple of years Australia's balance of payments has been supported by capital importations, including a good deal of capital which left New Zealand before exchange control was imposed, in anticipation of such a measure or of socialistic interference with industry. While there is likely to be a further net credit on this account in 1938-39, some depletion of the banking system's London funds is certainly to be looked for. These funds are still large enough to withstand a substantial drain. In the last resort, if the external accounts were to remain seriously unbalanced, the Australian pound might be further depreciated, as an alternative to the stringent internal deflation that would otherwise be necessary; for of all economic specifics deflation is the most unfashionable as well as the most unpopular in Australia, and the attempt to administer it in large doses might swiftly bring about a reversal of political forces. But the Australian currency is still well defended, and the stability of the exchange is not in question at present. On the other hand, the economic outlook is not so unequivocally favourable that heavy social service commitments can be lightly undertaken. The balance is delicate, and can only be preserved with care.

The stability of the Lyons Ministry is no more firmly established. At the General Election in October, 1937, it won a majority of no more than 16 in a House of 74. This is a small margin for a Coalition Government. Moreover, the Cabinet crisis over health insurance was but a symptom of a lack of solidarity which has been apparent for some time. Disagreement over the issue of compulsory military service has been barely disguised, though this in itself is unlikely to provoke a split in the Government. The reconstruction of last November, brought about by public dissatisfaction with the conduct of re-armament, possibly provoked more dissension than it cured. Mr Lyons' personal character and his popularity with the mass of Australian electors have hitherto sealed the cracks.

It will be highly dangerous for the Coalition Ministry if they reopen; for its strength in relation to Labour has shown some signs of wilting. Labour can hardly be prevented from gaining control of the Commonwealth Senate at the next triennial election, since few of its own senators will be among those obliged to seek re-election; and a relatively small turnover of popular votes would give it a majority in the Lower House also. Labour, however, like the Government coalition, is a house divided against itself. The "industrial" wing, which opposes Mr Lang in New South Wales and often differs from Mr Curtin, the Federal leader, seems to be growing stronger. Labour, too, shares with the Opposition in Great Britain the tactical disadvantage of being unable to oppose the principle of

re-armament, though it criticises the details of the Government's policy.

The political future, therefore, is very nicely balanced. Which way it will swing is likely to depend largely on the course of economic events in the next couple of years. Prosperity might reinforce the shaken prestige of the Lyons-Page Government, but if prices fall and the unemployed increase it may well repeat the fate of the Bruce-Page Government, which was thrown from power at the end of 1929. Mr Curtin would then assume the rôle of Mr Scullin, and Australia would have another Labour Government—but with this difference, that Mr Curtin, unlike Mr Scullin, would not have the handicap of a hostile Senate.

Topics of the Week

Power to Strike.—It was a grim but fitting backcloth that Herr Hitler unfolded for this week's discussions in Parliament on Britain's defence policy when he stole an army and an air force. In both Houses the major theme was this country's power to attack in the event of war. On Tuesday Mr Hore-Belisha's critics returned to their charge that the necessity for a large and fully-equipped expeditionary force to operate on the Continent of Europe in the defence of France, the Low Countries or Scandinavia had not yet been sufficiently realised. Mr Churchill's view that the Government's decision to envisage the use of a Field Force of 19 divisions, with the Territorial units armed similarly to the Regulars, should have been taken much sooner, in view of the altered strategical balance of Europe, evident as long as a year ago, was widely supported. His contention that 19 divisions were not enough and represented only "the first instalment of a bill which was the penalty for our disregard of events in Europe" was soon driven home by the sound of marching Nazi columns. On all sides, the urgent need for the speeding-up of production to furnish the material, arms and equipment still needed for even a small Field Force was underlined; and Lord Chatfield's restatement in the Lords on Wednesday of the Government's thesis that the machinery of a Ministry of Supply should be held in reserve for actual wartime conditions was correspondingly lacking in force. The feeling that, in effect, the war has already begun was never far from the speeches of members and peers. For the most part, however, Lord Chatfield's *début* as Minister for the Co-ordination of Defence was impressive. It was generally expected that his province would be strategy and not supply; and his chief purpose on Wednesday was to reassure the Lords that the plans at present being worked out in detail for the prosecution of a war in no way neglected striking-power for defensive strength. Wars may be lost by inadequate defences, but they can only be won by attack; and it was Lord Chatfield's assurance that Britain's guns would be as strong as her armour. Some doubts were expressed by peers about the Government's recent decision to increase the ratio of fighters to offensive bombers in the air programme, but Lord Chatfield emphasised the speed, range and carrying-power of our latest bombers. His general thesis was the traditional one of naval warfare: the object is to destroy the enemies' fleets wherever they are. The whole co-ordinated design for military and economic warfare, he claimed, envisaged the maximum power to attack. At the end, he left the Lords and the public impressed encouragingly by the fact that, within the limits that the Government have set upon themselves, remarkable progress is being made in defence and arms—and made in the right direction.

Air Raid Precautions.—Next year the taxpayer will foot a bill of only £5,190,707 for A.R.P. and allied services, which is over £4 millions less than in the current financial year. The total bill, however, including borrow-

ings, will be £42,205,907, or well over four times the cost this year, and it is wholly gratifying to be able to record, week by week, progress which suggests that this sum will be well spent. Most—though not quite all—of the major decisions have now been taken under the new and vigorous Anderson regime, and it is largely matters of detailed attention that make up current news. In the last few days, following the successful survey of accommodation and willingness in scheduled billeting areas, the Minister of Health has been in consultation with representatives of local authorities and hospitals in Devon; a provisional scheme for the grouping of London's hospitals for emergency work in the event of war has been made public; the detailed instructions to the London County Council to provide for the evacuation of 1,300,000 persons, chiefly children, are now known; the distribution of backyard steel shelters has gone steadily on; and it is announced that the Government's forthcoming A.R.P. Bill will define the duties of landlords in relation to protection against air attack, a much-needed step. Yet, despite the measures taken and the emergence of a centralised and regionally articulated scheme of organisation, there is much ground still to be covered. It is not yet known whether the Government are going to meet the widespread demand for deep bombproof shelters. It is obvious that the provisional list of billeting and evacuation areas, like the schedule of reserved occupations, is in need of drastic revision. And, most important of all, there is still a shortage of both personnel and material for civil defence. The Government and the population, equally, have leeway to make up in the discharge of their duties.

Air Progress and Profits.—A week ago, in the lull of official optimism about the course of foreign affairs which preceded the storm in Danubia that is still raging, Sir Kingsley Wood introduced estimates for the Air Force in 1939-40, totalling nearly £206 millions, or twice the expenditure in 1933 on all the fighting services together. Doubts about the Government's air programme have been threefold: the organisation of production has in the past been rightly suspect; the speed of output has in consequence been too slow; and there has lately been a vague but widely held view that manufacturers' profits were not sufficiently under control. On all these counts the Air Minister's speech was to a point very reassuring. In the field of organisation the complex pattern of co-operative manufacture has now taken shape; aircraft firms have been formed into groups to concentrate on the production of single types, a *sine qua non* for speedy output; and eleven shadow factories are already in operation. Production has correspondingly leaped ahead: the rate of output is already 150 per cent. above that of last May; and the end of this year, when important organisations not yet at work will have come into production, may see the fourfold increase over that figure officially expected for May, 1940. The ineluctable goal of parity with Germany has not been reached. Now that the Third Reich has absorbed the Czech air-arm its

achievement is still longer delayed. But the lesson that quality is not enough in aircraft manufacture has been learned: it is being allied with quantity; and parity is no longer out of sight. It is because the programme is at last fully under way, after prolonged delays, difficulties and deadlocks, that the third ground of grievance, profits, is now to be tackled. The increased scale of operations, the ever wider-flung network of sub-contracting and the considerable contributions now made from public funds for capital expenditure have outmoded the existing agreement covering aircraft contracts. The industry itself has approached Sir William McLintock, author of the ruling agreement, to revise its terms. The news of this step, though welcome, will not wholly allay doubts. Even in the last few weeks Sir Kingsley himself and other Ministers have contended that undue profits were not being made by aircraft makers, and if the proposed review of the position is to do no more than make the administrative and technical alterations in detail demanded by new modes of organisation and contracting, it will do nothing to abate suspicion. It may, indeed, be that profiteering is wholly absent, though that is scarcely likely; but the Government, if they are not to seem negligently to leave loopholes for those who would batten on national emergency for their own gain, must make very evident to the public their intention of inquiring most searchingly into every item of the aircraft industry's account with the State. The suspicion of profiteering is as morally and politically damaging to the nation's unity as profiteering itself.

Bonus to Brazil.—The way of transgressors is proverbially hard, but, in these latter days, this aphorism does not apply to debtors. The United States Government, naturally eager to combat the advance of Germany in the markets of Brazil, which is pre-eminently an American sphere of economic influence, as well as an incorrigible defaulter on its foreign debts, has stolen a march on Brazil's other creditors, and notably on Britain. Last week it was announced, after discussions in Washington, that Brazil proposed to free her exchange market for trade transactions; that the Brazilian Government intended to facilitate an "equitable return" on American investments in Brazil; and that payments on account of interest and amortisation on Brazil's dollar debt would be resumed on July 1st. As a *quid pro quo* for these helpful gestures Brazil will receive various credits from the United States amounting in all to \$120,000,000, or £24,000,000. Two objects are served by this bargain: Brazil will buy more American goods; and the rise in German sales to Brazil which in 1937 exceeded Brazil's imports from the United States will be stemmed. In 1937, while 23 per cent of Brazil's purchases came from the United States (against 23.9 per cent. from Germany—whose exports passed and then doubled Britain's in two years—and 12 per cent. from the United Kingdom), the United States took as much as 36 per cent. of her exports (against 17.1 per cent. to Germany and 9.1 per cent. to the United Kingdom). There was a heavy export surplus in favour of Brazil. The new agreement will presumably end this state of affairs, as well as benefiting American bondholders. It is to the traders and investors of the United Kingdom that it will do no good.

The Creditors' Front?—There are good grounds in equity for the argument that the method of unilateral concession is no more the way to deal with international debts than it is to deal with military aggression. But it is hardly possible for this argument to be put forward with conviction by the British Government, which has twice taken similar unilateral action at the expense of the United States, once by last year's trade and debt settlement with Germany and again by the series of currency and trade agreements with Argentina. True, the British share of Brazil's trade is greater than the United States' share of trade with Argentina. But the lesson of the latest step by the United States to combat German

economic aggression within the Monroe ambit is not protest by this country but action. At least the American Government has shown that action against German competition on the spot is more likely to achieve results than the British method of discussions in Berlin; and there can be no doubt that there should be room for more British goods in Brazil. A quarter of Brazil's imports represents machinery and vehicles, and over a tenth is iron and steel goods. It is price rather than the manoeuvres of other countries that compels the United Kingdom to leave the bulk of these markets (except that for textile machinery) to the United States, Germany and Belgium. And, moreover, so long as we purchase only a tenth of Brazil's exports, against not far short of a fifth by Germany and over a third by the United States, we cannot expect to make equal headway with these countries in sales. To give credits to defaulters is distasteful, but it has been done before, and by us. If we wish to counter America's move and catch up Germany, it is to Rio rather than to Washington or Berlin that we should turn.

Health and Government.—This week's distressing report of the committee set up two years ago to examine the anti-tuberculosis service in Wales and Monmouthshire is not an indictment of Wales or the Welsh people. It is a terrible indictment of present methods and areas of local government. Tuberculosis is not inherited but acquired; and a vital factor in its prevention is good standards of housing, sanitation, nutrition and education. Social services cost money. The estimated produce of a penny rate over all Wales in 1937 was £44,096; of this the counties of Glamorgan and Monmouthshire, together with four county boroughs, accounted for £29,115, leaving only £14,981 from eleven other counties. A penny rate in Colwyn Bay yielded as much as £804; in fifteen non-county boroughs it brought in less than £100; in one it realised only £12. It was in these poverty-stricken places, rural and urban, that the committee found indescribable conditions of overcrowding; primitive Celtic type cottages; six to ten persons sleeping in a single small room; damp, decrepit, leaky and ramshackle dwellings; and insufficient and polluted water. Indifference and obstructionism march with poor finances. Year after year the reports of medical officers of health are ignored. Seventy-five of the 95 medical officers in boroughs and urban districts, and 51 out of 59 in rural districts, are part-time officials, despite the prescriptions of the 1929 Act, and again and again they dare not criticise the state of properties for fear of losing their only wealthy patients. It is a damning story, which loses little by comparison with the dreadful conditions revealed a hundred years ago by inquiries into the state of early industrial towns; and it differs only in degree from conditions in not a few other poor districts to-day. It is one which calls for a new Edwin Chadwick to translate a startled public conscience into remedial action. "Throughout the inquiry we were conscious of a great disparity between local authorities in the standard of performance of public health duties." The committee found that, in Wales as elsewhere, the powers given to counties under the 1933 Act to review local government areas and to secure amalgamations for administrative and financial strength, had been almost wholly blocked by local jealousies, and the committee's report furnishes only a few of the compelling reasons why this fatal parochialism must be stopped forthwith.

Britain and Russia.—The forthcoming visit to Moscow of Mr R. S. Hudson, Secretary to the Department of Overseas Trade, has been given a fateful significance by the German Fuehrer. The relentless advance of unbridled and cynical aggression in Danubia in the last few days has made clearer than ever the need for the fullest co-operation between Britain, France and Russia. At a single stroke the Third Reich has acquired a new army and a new air force, and it is only in the Russian army, which has been doubled in size in five years, and the vast Soviet

air force that an adequate counterpoise can be found. The fatal weakness of the Western democracies' policy in the face of Herr Hitler's successive *coups* has been the reluctance of their leaders, on class and ideological grounds, to consult and co-operate with the Soviet Union. Indeed, it is not surprising that M. Stalin, in his address last week to the Eighteenth Congress of the All-Union Bolshevik Party, should have denounced the peace-loving States of Europe for doing little to reinforce peace by their actions. The Soviet leader went so far as to accuse France and Britain of being content to let the Nazi fury spend itself on the soil and peoples of Eastern Europe, and ultimately of Russia, in order to buy a sordid security for themselves. The charge may have been over-pitched. It had a propaganda dress. But the facts of the past twelve months offer no evidence to deny that the Western democracies' policy, *faute de mieux*, has been to encourage the *Drang nach Osten*. The possible consequences of such short-sighted seeking for a breathing space are incalculable. It is not simply that Germany's troops have carried the swastika to Prague and beyond. There is the grave chance that the essential Eastern ally, Russia, may be lost. Russo-German co-operation is traditional; it was the corner-stone of Bismarck's policy; and it was to extirpate the desire in the army and the bureaucracy of Soviet Russia itself to return to that tradition that M. Stalin, firm advocate of a common front with the democracies in foreign policy, was lately constrained to conduct wholesale purges.

For the moment, Russia is not yet lost to the West. "We must rely only on ourselves" is as far as the disillusionments of 1938 and 1939 have carried the Soviet leaders; and last week M. Stalin notably restated his determination to strengthen all ties of friendship and business with all countries concerned in safeguarding peace. Mr Hudson is officially visiting Moscow to talk about trade only, and in the purely commercial field the possibility of extending Anglo-Russian exchanges mainly depends upon the Soviet's readiness to abandon the interpretation of trade relations that has recently alienated British business opinion. But in the field of politics, which cannot be far out of sight in the Moscow talks, the onus is upon Britain. Russia is reasonably and avowedly unwilling to stand alone to pull the chestnuts out of the fire that Herr Hitler has set ablaze. Mr Eden's appeal on Wednesday for the British Government "to consult with all nations like-minded to us wherever and whoever they might be" was coldly rejected by Sir John Simon because it might involve Britain in Continental commitments. But, *in posse*, those commitments already exist, created by Herr Hitler himself and made imperative by our own need for eventual security, and the words of M. Maisky, spoken also on Wednesday, cannot be ignored:—

In the last resort the fate of peace or war in our time depends upon the kind of relations which exist between London and Moscow.

The Fighting in Madrid.—The Communist rising in Madrid against the military junta which ousted Dr Negrin and his followers was put down, and internal peace restored, after seven days of street and loophole skirmishing into which must have gone the surcharged bitterness of men who have fought for over two years only to see their worst fears realised. During the first day or so the rising seems to have spread and drawn to its support several thousand men, and it was only after troops had been withdrawn from Madrid's defences that they could be summarily dealt with. With their suppression last week-end disappears the main ideological objection to an early peace; and there is now no body of impassioned opinion to obstruct the clarity of thought with which the National Defence Council, as General Miaja and Colonel Casado term the body they have jointly created, is pursuing its work for the war's "liquidation." Demobilisation is already reported to be in progress. Those who will suffer certain penalty at General Franco's hands now see the full helplessness of their condition; they cannot continue fighting and they cannot escape. Meanwhile General Franco turns a deaf ear to the National Defence Council's broad hints. He wants complete surrender, is troubled by no thoughts of appeasement, and continues to prepare for an assault on Madrid. Although he is known to favour Fabian tactics, which in this case, indeed, may help to demoralise still further those who remain to defend Madrid, it is very understandable that General Franco should be marking time while the Germans are annexing Bohemia and Moravia. "One thing at a time" is a guide for both dictators and for propagandists, for it links a measure of prudence to the maximum of effect. And the fall of Madrid would present a simple means of taking anxious French and British minds off the fate of Central Europe.

Franco's Blockade.—It was announced at Burgos on March 8th that General Franco had declared a complete blockade of the coast of Republican Spain, and that, within Spanish territorial waters off this coast (which were to be reckoned, for this purpose, at the three-mile limit), submarines under General Franco's orders would sink any ship at sight, whatever flag she was flying. This announcement has raised two distinct questions, both of which are vital. First, has General Franco the right to declare a blockade at all? Second, assuming, for the sake of the argument, that he has, are his intentions permissible in international law? To both these questions the answer is in the negative. First, the recognition of the Burgos Government by the French, British and certain other Governments does not carry with it any authorisation to exercise belligerent rights. If belligerent rights automatically followed from recognition, then the Republican Government, which enjoyed world-wide recognition at the time when General Franco rebelled, would have enjoyed belligerent rights throughout. As it is, neither party has been

granted belligerent rights so far. On the second point, sinking at sight by submarines is unlawful for any Government in any waters. Hence Lord Halifax's commendably strong and clear declaration of the British Government's attitude in the House of Lords on the 9th. He declared, first, that, if action of any kind were taken outside territorial waters, the British Government would resist it as they had done in the past. They would also regard as a very serious matter the sinking of a British merchantship even within territorial waters, especially if due warnings were not given, and adequate steps were not taken for the safety of the crew. Lord Halifax added that British warships had already been instructed to give all necessary protection to British vessels which might be the object of such attack, and to retaliate, even inside territorial waters, against any submarine taking such indefensible action. No cases of submarine attack have yet been reported. But two British merchantmen on the high seas were on the 11th ordered by a Spanish warship to proceed to Palma, Majorca. One refused, the other was rescued. The British statement, and the British action, have not been popular at Burgos. But no British Government could have taken any other line.

British Plan for Palestine.—A Cabinet meeting last Wednesday discussed and approved the "British plan" for Palestine which Mr MacDonald and the Colonial Office have been working on for some months past. The plan was next shown to both Arab and Jewish delegations, and, though it has not been formally rejected, there is very little hope of acceptance. If deadlock results, then the Government will override the rejections and will publish the plan next week as a White Paper for passage through Parliament. While reserving judgment on such a controversial matter, the British public may breathe a sigh of relief that the Government has realised that need for a quick decision, even of an imposed solution, which every expert on Palestine from resident officials to Royal Commissions knows to be necessary. If we must impose our will on Palestine, then let us do it resolutely and without loss of time. Once the die is cast, nothing is to be gained by delay. Of the plan itself little can be said; for little is known. Reliable reports describe it as providing for an independent Palestine linked by treaty with Great Britain ("independent" here has a domestic significance), after a transition period of joint administration under British tutelage. The bone of contention, already uncovered, is on the length and limitation of the transition period. To the Jews it is of obviously vital importance, the more so because during that time their immigration is to be restricted to 10,000 or to 15,000 (presumably with a strict watch on land sales); while to the Arabs the length of the transition period will represent a measure of their success. The Jews want the period to last as long as is needed to obtain Arab-Jewish collaboration; but with due sympathy for the urgency of their case this seems impracticable. The Arabs want the period to be limited beforehand; the British Government, it seems, agrees with this principle, and is thinking of five years. In any case, the transition period must be used by the British in Palestine for strenuous efforts to obtain that agreement and mutual respect between Arabs and Jews without which they cannot decently leave the country. Nobody wants to crab the Arab case; but, at the same time, nobody should imagine that our responsibility towards Jews who have gone to Palestine in the confidence of entering what would soon become their National Home, can be shuffled off on the shoulders of an imposed solution.

Reform in the Indian States.—The interchange of speeches between the Viceroy and the Jam Sahib of Nawanagar in the Chamber of Princes at Delhi reads like the twentieth century talking to the eighteenth, even though it is the conservatism of to-day talking to a moderate Toryism of the day before yesterday. Lord Linlithgow reiterated the policy already expressed by himself and the Secretary of State that it lay with the ruler of each State to decide, without pressure from the Paramount

Power, what constitution was best suited to the needs of his people. But the Viceroy urged very forcibly that all rulers should adapt their administrations to the hearing and remedying of any genuine grievances of their people. An effective machinery whereby all such complaints could readily reach the ears of the Durbar was a necessity in present conditions. The Viceroy attacked absenteeism and excessive appropriations to the ruler's privy purse, and he exhorted the more enlightened and powerful rulers to press the requisite reforms on their weaker and backward brethren, who should, if necessary, amalgamate together for the purpose. The Jam Sahib was plainly suspicious of the Viceroy's utterance. While he declared that the Princes were always ready to consider administrative improvements, he differentiated between these and constitutional changes, especially when the demand for the latter came from outside bodies. He indicated that the Princes, who have before them the final drafts of their instruments of accession, were now concerned less with the details of their membership of the federation than with its general effect on their finances, and still more on their constitutional position and the ability of the Paramount Power to defend it. By their hesitations the Princes could hamstring federation in its present form; but what they fear even more is a federation of British India alone. This and the march of time are the real instruments whereby their reactionary tendencies can be overcome.

Imperial Defence in the Pacific.—At the request of the New Zealand Government, a conference is to be held in that Dominion in the near future to consider Pacific questions of common concern to Australia, New Zealand and the United Kingdom, particularly questions of defence. The chief civil representative of the United Kingdom will be Sir Harry Battenberg, who has just taken up his position as First High Commissioner for the United Kingdom in New Zealand. Although defence problems come before every Imperial Conference and are frequently discussed informally between the different Governments of the Commonwealth, we have to go back to the Imperial Defence Conference of 1909 for a comparable formal and specialised meeting to discuss defence co-operation within the British Commonwealth. One of the products of that Conference was the Royal Australian Navy. Since then, the nature of the problem has changed. In the first place, the Dominions have consolidated their national independence, and their peoples are now more reluctant than ever to hand over to any other country the peace-time command of any of their defence forces. Secondly, the Japanese alliance, which gave Australia and New Zealand a much higher degree of local security than their own armaments could furnish, has been abandoned. And, thirdly, air power has been added to sea power as a sphere in which the Pacific Dominions can not only do much to protect themselves locally but can also contribute to the wider system of protection on which they depend. Moreover, experience in the war and since has shown the great defensive importance of their industrial capacity as a means of supplying themselves and others with munitions and aircraft. The importance of the coming conference will be political as well as technical.

* * *

Shipping in the East.—It is a cold and depressing light that is being shed upon British shipping from all kinds of sources. The tale of decline in face of intensified competition and subsidised rivalry is not new, and it has been told of nearly every one of the Seven Seas. But the need for redress has grown with increased realisation of the requisites of national defence in war-time, and it is to Eastern waters in particular and the consistent successes of the Japanese mercantile marine that attention has most recently been called. Last week the Imperial Shipping Committee issued a report showing how, by reason of the depreciation of the yen, the relatively low standards of their seamen, the aid given them by State subsidies and the high degree of organisation in their industry, Japanese shippers are able to sweep the Indian and Pacific Oceans. Their costs are from 10 to 15 per cent. lower than their

British rivals, whose share of the carrying trade within the Orient has fallen from one-third to one-fifth. Britain is not the only sufferer, and, indeed, of the long-distance trade to and from the Orient by Suez or round the Cape, the British 50 per cent. share has to date been held. Inside the Orient, the United States, too, has lost; the American share of total carrying trade there has fallen from one-third to as low as one-eighth. It is not subsidies alone that are to blame, for the Americans as well as the Japanese have their State aids, and the Government of the Netherlands Indies, no better placed in many ways than New Zealand, India, Australia and the United Kingdom, has successfully bargained for a fifty-fifty division of the trade between the Netherlands Indies and Japan.

* * *

It is an unfortunate fact, as the Imperial Committee emphasise, that the countries of the British Empire have no common policy, no unity of purpose and no organisation in shipping matters, and, since a quarter of the gross receipts of the British shipping industry, or nearly £33 millions, is drawn from Oriental trades (half of it from trades wholly confined to the Far East), the United Kingdom would be well repaid to remedy these defects. Far Eastern seas are Japan's home waters, and it is only natural that Japanese shipping should have expanded *pari passu* with Japanese trade and industry, which have grown astoundingly. Britain's Oriental trade has fallen away, but Britain is still the world's greatest buyer, and it should not be beyond the wit of the Imperial Government to drive a bargain with Japan for a fair share of the trade with Empire countries. Subsidies come in another category. The need for a stock of vessels against the requirements of war-time provisioning is a powerful argument for subsidies to build and replace ships. The Chamber of Shipping and the Liverpool shipowners have called for a Liner Defence Fund of £5 millions a year for five years. But a *sine qua non* of all subsidies must be efficiency in open competition: building costs are comparatively too high in British yards and running costs too high on British ships; and British steel and coal prices are not blameless. Subsidies, allocated impartially by an independent body, are admittedly now needed, if only to serve as a bargaining instrument in the hands of the Government, which must assume responsibility for negotiation with foreign rivals; but there are houses to be set in order first.

* * *

Jubilee on the Waterside.—It is not only London's county councillors who have a jubilee to celebrate this year. London dockers, and indeed the dockside workers of Merseyside and other ports, also have reason to commemorate the events of fifty years ago. It was in 1889 that the famous strike of the two-year-old Dockers' Union on Thames-side opened a new era in the trade union organisation of unskilled workers; and it was in 1889, too, that the Merseyside dockers' union was formed, to spread soon to Scotland and Ireland. To-day there are 163,000 insured dock workers. They constitute one of the main pillars of the Transport and General Workers' Union, which merged 38 unions into a single federated organisation seventeen years ago and has 650,000 members to-day. This year the dockers hope to celebrate Ben Tillett's successful struggle for the "dockers' tanner" fifty years ago by finally securing the end of the intermittent labour engagements which are still the curse of the waterside. A good deal has already been done to end casual dock labour. During the war a system of registration was begun, and in many ports to-day, notably in Bristol and in the area of the Port of London Authority, employers have a large nucleus of permanently engaged workers in receipt of weekly wages which, for men over 21 years of age, average out at over £3 10s. But a majority of British dockers are still engaged casually by the day or the hour; and, if this week's meeting between Ministry of Labour officials and representatives of the Port Employers' Council succeeds in its object of drawing up a scheme for complete decasualisation that will win the approval of the T.G.W.U., the dock workers' jubilee will be well and worthily marked. The

chief obstacle is the state of trade; as many as a quarter of the insured dockers are out of work; and it is the common experience of all ports that it has been declining foreign trade that has done most to arrest the progress of decasualisation in the past.

* * *

Unemployment Insurance and Agriculture.—This year the Unemployment Insurance Statutory Committee have not recommended any reduction in employers' and workers' contributions or any increase in the benefits given under the general scheme. This year the Unemployment Fund's surplus is £3 millions compared with £21 millions a year ago, and is to be devoted to the redemption of debt. The increase of unemployment last year caused a rise of £18½ millions in expenditure on benefit, and only the long-term upward trend in the numbers of the insured population, together with the extension of insurance to nearly a quarter of a million persons in institutional and outdoor domestic employments prevented a serious fall in total contributions. As it is, however, existing reserves are still adequate to provide for an average rate of unemployment over the trade cycle one-fifth greater than in 1938. The situation is otherwise with the new agricultural scheme. Here, ever since its inception there has been an excess of revenue over expenditure and, even assuming a relatively worse experience over the trade cycle than under the general scheme, the Committee have found themselves in the possession of a surplus of £285,000. This they recommend to be spent on increasing benefits and reducing contributions. The benefit for an unemployed agricultural worker with a wife and three children will now be increased by 3s. to 33s. a week. This compares with an average wage of just under 39s., while an industrial worker with a wife and three children who may earn 55s. 6d. (the average earnings of all insured applicants last year) gets 36s. when unemployed. The agricultural worker who loses his job suffers a smaller reduction in income than his industrial confrère. But, as the report explains, this arises essentially from the relatively low wages paid in agriculture, and no doubt the committee, in making their recommendations, have not been unimpressed by the plea of the Agricultural Departments that the rates of benefit should be increased with the express object of increasing the attractiveness of agricultural work and so checking the drift from the land. New figures, published in the report, show, not merely that agricultural employment is falling, but also that the numbers of farm workers under the age of 21 are declining even more rapidly than the average. It has been a common European experience that the greater security of urban life has been among the most important factors in drawing the landless agricultural worker to the towns. Measures to expand social services in the countryside and so to redress the balance of security are, therefore, wholly to be welcomed.

Recovery by Spending?

NEW YORK, March 9.—The chief basis for hopefulness about business prospects is not any evidence of recovery but the existence of the spending programme. The theory that the slump of 1937 was caused by the curtailment of deficit spending has been persuasively expounded to a by no means unreceptive public, and many vest their forecasts of recovery in the spring on the cumulative deficit. Nevertheless, just as there are those who rate the deficit as a positive blessing, there are others who regard it as a positive curse. The latter, who are at present an uninfluential minority, call attention to the fact that there has been no market for corporate issues of new capital since deficit financing began late in 1930; that for eight years the State has monopolised the national savings; and that, as long as private enterprise is deprived of access to new capital, it cannot "go ahead," and our economy must become ever more dependent upon subventions. Meanwhile the country is committed to the spending programme.

The following table, taken from the Federal Reserve Bulletin, gives the fiscal position quarter by quarter during the past two calendar years.

EXCESS OF EXPENDITURE (\$000,000)		
	1937	1938
First quarter	-370	-153
Second quarter	-984	-718
Third quarter	-244	-686
Fourth quarter	-310	-890

The excess of expenditure, however, is not identical with what is called technically the "productive deficit," as it includes transfers to a variety of Treasury trust accounts. The following shows actual net cash outgoings:—

EXCESS OF CASH EXPENDITURE (\$000,000)		
	1937	1938
First quarter	-95	+135
Second quarter	-253	-617
Third quarter	+163	-420
Fourth quarter	+13	-703

Note.—Plus means cash income.

This table shows three phases: first, the cash deficit towards the end of the first spending period; second, the period when the Budget was brought into an approximate cash balance; and, third, the launching of the current spending programme.

Debt and the Deficit

The financing of the spending programme cannot be described briefly without slurring important details. For example, the period in which the Budget was nearly brought into balance included the period of increasing public debt for carrying the Inactive Gold Fund; the early period of the current spending programme was also financed indirectly by the monetisation of the inactive gold. Then, too, the activities of various Government agencies—the Social Security Reserve, the Federal reserve banks, etc. (to say nothing of the ebb and flow of the Treasury General Fund)—complicate any description.

Even a statement of the total debt is complicated. For example: on December 31, 1938, the total gross debt was \$39,427 millions, the total interest bearing debt was \$38,899 millions, the total "publicly offered" public debt was \$35,327 millions, and the total described by the Treasury as "market issues available for trading" was \$29,461 millions. In addition, there are the "fully guaranteed obligations of the Federal agencies," amounting to approximately \$5,000 millions.

So far as the financing of the spending programme is concerned, the most representative figures are of the movement of the "issues available for trading" (although the Treasury appears to have developed a market for about \$500 millions a year of United States savings (baby) bonds, which are not negotiable, and not part of the "market").

MARKET ISSUES AVAILABLE FOR TRADING
(\$000,000)

1937		1938	
End of—		End of—	
Dec., 1936 ...	28,154	Mar., 1938 ...	28,609 -197
Mar., 1937 ...	27,977 -177	June, " ...	27,883 -726
June, " ...	28,764 +787	Sept., " ...	28,793 +910
Sept., " ...	28,773 +9	Dec., " ...	29,461 +668
Dec., " ...	28,806 +33		

In the fiscal year ended June, 1938, the public debt in the "market" declined by almost \$900 millions—despite the fact that the excess of expenditure over revenue was \$1,364 millions, and in spite of an increase in the gross debt amounting to \$740 millions. On the other hand, the demands made on the market in the first two quarters of the current fiscal year have rather exceeded the excess of cash expenditure; and the cash in the Treasury's general fund has risen to the unusual, if not unprecedented, figure of \$3,083 millions—which might be subtracted from the various figures of the public debt given above, in order to obtain a net debt.

The important point to remark, however, is that in the fiscal year ended June, 1938, the Treasury not only made no net demands on the market for new capital, but actually redeemed from the market almost \$1,000 millions and that, in the first half of the current fiscal year (June-December, 1938), it has asked for over \$1,500 millions of new capital from the market.

Changing Types of Loan

During the period of the two calendar years, when the public debt in the market was in the aggregate rising about \$1,300 millions, the composition of that debt was undergoing a decided change. The table below, taken from the Federal Reserve Bulletin, is not strictly comparable with the last one, as the "public debt publicly offered" exceeds the issues "available for trading" by the amounts held by the Federal Reserve Banks, etc. It will, however, show in general the changes in the structure of the public debt in the market.

ELEMENTS OF THE PUBLIC DEBT "PUBLICLY OFFERED"
(\$000,000)

	Bonds*	Notes	Bills
End of 1936	19,531	10,289	2,203
" March, 1937	20,015	9,783	2,203
" June "	20,015	10,617	2,303
" Sept. "	20,015	10,575	2,403
" Dec. "	20,555	10,547	1,952
" March, 1938	21,006	10,076	1,803
" June "	21,925	9,147	1,154
" Sept. "	22,791	9,067	1,302
" Dec. "	24,084	8,496	1,306

" " 1936	17,247	11,381	2,354

* Ex. U.S. Savings Bonds.

From the beginning of the period of deficit financing (June, 1930) until the end of the fiscal year 1936, the principal medium of financing was the three-five year note. Since June, 1936, there has been a continuous tendency to shift from short-term to long-term loans. In the months covered by the table, maturing notes were replaced by bonds; and a great part of the Treasury bills were redeemed by the monetisation of the Inactive Gold Fund. This policy, inaugurated as the Treasury was approaching a balanced Budget (after the bonus payments of mid-1936), has been continued in the financing of the spending programme, which may be dated either from March, 1938, or June, 1938.

The steady reduction of the short-term Treasury paper in the market coincided with a period when, as a consequence of the stock market collapse of 1937, the volume of brokers' loans (relatively not large in 1937) had been cut in half—when there was little commercial paper afloat. The result has been to give short Treasuries a "scarcity value."

In the period June, 1937, to June, 1938, when the Treasury was reducing total market debt, but increasing long-term debt and redeeming short, while all rates fell, the

yields on bills and notes declined much the most rapidly. Between June, 1938, and December, 1938, the market absorbed over \$2,000 millions of long Treasuries without any disturbance of the rate; and, in the same period, it reduced the notes in the market, without producing a decline in the note yield.

In financing the current spending programme, the banks have taken a large part, though complete details will not be available until the Call Report for the year-end is published.

REPORTING MEMBER BANKS AND THE DEFICIT
(\$000,000)

	U.S. Securities		Fully Guaranteed Securities	
	New York City	Outside	New York City	Outside
June 29, 1938	2,885	4,885	678	810
Dec. 23, 1938	2,826	5,440	860	872
	-59	+555	+182	+62

In this period the "market issues available for trading" increased about \$1,600 millions; of these the reporting member banks took about \$500 millions; and we might infer that all banks took approximately half of the total offering.

France

M. Daladier's Choice

PARIS, March 16.—The elections for the Presidency have been fixed for April 5th. The name of the Prime Minister is often put forward for the office, as a man who has worked for peace and internal recovery. But some observers say the party man cannot aim at the Presidency, which is above parties. Moreover, recovery is not completed and the foreign danger is not over. And the fact that most of these informal votes for M. Daladier as President come from the Left is very strange and significant. It would seem the best course for the captain to remain at the helm until the next elections for the Chamber. To change offices now would be dangerous, and M. Lebrun has shown remarkable adroitness during seven years of the greatest internal and external difficulties.

For two years the economic situation was disturbed by the Treasury's difficulties and by the rise in prices which led repeatedly to falls in the franc. Now the franc is backed by the internal efforts of the Government and aided externally by the heaviness of the belga and the florin. Capital is coming back, but it is not coming back into investment. It is staying in the money market and being used to buy Treasury bonds.

Prices tend to show greater stability. The index of wholesale prices was 677 at the end of February, against 676 in January. This stability is principally due to the partially seasonal decline in food prices. Retail prices in February fell from 761 to 755. Between October and January, in recent years, the rise in prices has been: in 1936-37 12.04 per cent., in 1937-38 5.33 per cent., and in 1938-39 only 3.85 per cent. This seems to confirm M. Reynaud's view that it is inflation rather than taxation that leads to increases in prices. This may be modified in the near future by the higher wages and consequent increased purchasing power which will automatically follow an increase in the cost of living, which has so far amounted to 5 per cent. since last August.

Better Foreign Trade

The latest rise in French prices is partially counterbalanced by a rise in foreign prices, so that the competitive advantage is held. However, the results of foreign trade in February, though much better than a year ago, were still far from satisfactory.

(Fr. millions omitted)

	February, 1938	January, 1939	February, 1939
Imports:—			
Foodstuffs	1,126	1,108	1,217
Raw materials	2,543	2,289	2,596
Manufactured goods	617	578	705
Totals	4,287	3,977	4,518
Exports:—			
Foodstuffs	288	423	403
Raw materials	843	829	1,012
Manufactured goods	1,177	1,567	1,620
Totals	2,309	2,819	3,035
Import surplus	1,977	1,157	1,483

The volume and value of total foreign trade and the value of exports of manufactured goods are both on the up-grade. But the import surplus, if lower than in February, 1938—the worst during last year—is higher than in January, which was in turn higher than in December. If trade with the Colonies is excluded, the import surplus in February was only 1,111 millions, against 905 millions in January and 1,435 millions in February, 1938.

Economic activity in Algeria alone was much more satisfactory. The total value of foreign trade increased from 5,500 million francs in 1935 to 6,703 millions in 1936, 8,685 millions in 1937, and about 10,000 millions in 1938. In 1938, imports were valued at 4,660 millions, an increase of 580 millions over 1937, and exports at 5,600 millions, an increase of 1,260 millions. The surplus of exports was 980 million francs. Exports to France rose from 3,500 million francs to 4,660 millions, which was 84 per cent. of the total.

Algeria has now come into the first rank in French trade. It is the best buyer of French products (3,780 million francs) after Belgium (4,180 millions), and it comes before Great Britain (3,351 millions). It is the best seller to France (4,846 millions) after the United States (5,235 millions), and it comes far before Great Britain (3,227 millions).

Recovery in Production

The *Statistique Générale de la France* has again published its index of production after a twelve months' gap. The course of this index was: July, 81; August, 71; September, 80; October, 81; November, 85; December, 86; January 1939, 87. Its average in 1938 was 82, against 88 in 1937 and 85 in 1936. It shows a steady improvement which has brought present production back to the level of January, 1938.

	Jan., 1938	Nov., 1938	Dec., 1938	Jan., 1939
PRODUCTION (1928 = 100)				
General Index	87	85*	86*	87*
I. Mines	89	97	96	94
II. Chemical industries ..	105	103	103	104
III. Paper	166	168	173	164
IV. Textiles	83	86	87	92
V. Leather	69	...	...	...
VI. Iron and steel	83	73	74	75
VII. { Engineering	89	78	81	83

Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

Germany

(This letter was written before the annexation of Czechoslovakia by the German armies had taken place.—Editor.)

The Reich's Trade Demands

BERLIN, March 13.—German pressure to get England to make trade concessions in the joint industrial conversations is growing stronger. Should Great Britain begin a trade war, it is said, she would meet with an opponent prepared for anything. The *Deutsche Allgemeine Zeitung* writes:—

It would be false for the foreign nations to be pleased about Germany's economic difficulties. Rather the manner in which this situation is regarded abroad will show which are the spirits of peace and which the ones who desire the ruin of Europe. Those who argue that it is good that the disturbing Germans have food difficulties and wish to let them stew in their own trouble until they become politically unimportant and ready to sell their rights as a great Power and Kultur nation for a mess of lentils—those who argue thus come in the category of war agitators and destroyers of European order.

Foreign trade is no longer regarded as a commercial question by the Third Reich, but rather as a political one. According to this view, the German Reich has the right to export and import, and intends to win this right by force should the other nations be unwilling to recognise it or make concessions.

German circles are following with particular care the prospective negotiations between Great Britain and the Eastern European States. The trend of trade between the Old Reich itself and the Eastern European States has been as follows:—

(In Rm. millions)					
	1934	1935	1936	1937	1938

Trade with Russia and Poland

German-Russian trade relations are of great importance, since Germany must still depend for many years on raw material imports from abroad. Against a decline in imports from Russia last year there was an increase from Rm. 282 millions to Rm. 404.6 millions in the value of imports from the United States. This is especially inconvenient for Germany since the United States must be paid in negotiable foreign exchange, while Russia can be paid in goods.

The decisive factors for the decline in Russo-German trade were: political differences; domestic events in Russia; a change in the orientation of Russian trade policy; the elimination of Russian foreign debts; and the end of the compulsion upon Russia to export; increased English and American competition; and the inability of German manufacturers to make deliveries.

German-Polish trade relations have been revised, following last year's territorial changes. Exchange quotas have been altered; and Germany will import more flax for the Sudeten textile industry, as well as more wood, more pigs, etc. German exports to Poland have, as a matter of fact, declined, so that the quotas had to be scaled down. The credit of 120 million zlotys given by Germany to Poland, however, which is to be used up in the next four years, will lead to an increase in German sales. Repayment by Poland, which is to be in goods, stretches over a period of nine years, although Poland has already delivered 30 million zlotys' worth of rye and timber.

The South American Market

Germany's position on the South American market is being injured by the British-American trade agreement, by the trade activities of the United States Government, and by political friction. German trade with South and Central American States shows the following trend:—

(In Rm. millions)						
All South America	Imports			Exports		
	1934	1935	1936	1937	1938	1939
1934.....	440.6	558.6	536.5	265.5	390.8	390.8

Nicaragua.....	2.6	4.9	3.6	3.5	1.9	1.3
Paraguay.....	2.7	4.5	2.7	1.9	3.2	2.2
Panama.....	0.4	0.4	0.4	7.3	3.8	2.1
Haiti.....	1.0	1.5	0.8	1.0	1.2	0.7

Since, although trade between Germany and South America is run on an equal exchange basis, Germany continually draws more than she delivers, difficulties arise. This was shown by the recent troubles with Brazil, which led to a coffee shortage in Germany. The German market is only of interest to the South American States when the remaining markets, which pay in negotiable currency, are falling-off or inaccessible. Germany, on the other hand, tries to guarantee the continued stability of her trade with South America by long-term contracts.

Poland

Colonial Aspirations

WARSAW, March 11.—Outstanding importance is attached here to the visit, from March 18 to 22, of the British economic mission headed by Mr. R. S. Hudson, Secretary of the Department of Overseas Trade, and to that of Colonel Beck, Polish Foreign Minister, to London early in April. Newspaper comment suggests that, both in the political and economic spheres, these visits will put the official seal on the efforts already in progress to strengthen the ties between Great Britain and the countries of Eastern Europe. Export credits on a substantial scale for Poland are now being discussed, somewhat prematurely, in the Press.

An indication of what is in the official mind was the resolution on "colonies and raw materials" adopted by the National Unity Camp—which has a substantial majority in the Sejm and Senate—after the recent visit to Poland of Count Ciano, the Italian Foreign Minister, and at about the time the visit of Mr. Hudson was announced. The "colonial claims" now enunciated "can be fully satisfied only by obtaining regions over which Poland will exercise sovereignty"; but, the resolution goes on, "this does not exclude the possibility of securing direct access to other colonies." Polish participation in the possession of colonies, it is held, "will contribute to international co-operation and to the general stabilisation of peace." The point, moreover, is emphasised that Poland is not seeking colonies for Jewish emigration. Other territories "must be found" for the Jews, and the resolution concludes with the illuminating paragraph that

in view of the problems awaiting us in the overseas colonies, the development of scientific research is immediately necessary, as well as the systematic training of young people for colonial service.

While there is a widespread belief that events are now moving towards a redistribution of colonial wealth, the expectation is not yet seriously entertained that Poland will be given sovereignty over foreign lands. It is unfortunate that the wide publicity given to such resolutions as the

above encourages a public opinion not well versed in world affairs to hope that a re-making of the map is imminent, and that, in the event, Poland will not only be a direct beneficiary but will be able to unload a large part of her Jewish population (numbering 3,500,000 or more) on the overseas possessions of other countries.

Closer Ties with Britain

Exaggerated hopes in the colonial field need not obliterate the genuine desire, both in official and trade circles, for improving political and economic relations with Great Britain. That the Anglo-Polish Trade Agreement, which came into force in 1935, and the extensive export credit guarantees granted to Poland in the years preceding 1935, have not fulfilled the highest expectations is clear from the following tables:—

IMPORTS INTO POLAND				
Year	From United Kingdom	From Germany and Austria	From United States	Total
(In millions of zlotys)				
1935.....	116.7	165.0	123.1	860.6
1936.....	141.6	187.8	119.3	1,003.4
1937.....	149.2	240.0	149.1	1,254.3
1938.....	147.8	299.6	158.4	1,300.0

EXPORTS FROM POLAND				
Year	To United Kingdom	To Germany and Austria	To United States	Total
(In millions of zlotys)				
1935.....	181.4	199.3	43.3	925.0
1936.....	221.6	204.1	67.3	1,026.2
1937.....	219.2	231.7	100.9	1,195.5
1938.....	215.5	282.2	62.9	1,184.7

Side by side with a strong sentiment for closer ties with Great Britain there is a corresponding reluctance—especially on the part of the Jews who are an important factor in Polish foreign trade—to strengthen Germany's economic hold on the Polish market any further. There need be no hesitation in saying that the strong position which Germany has built up in recent years has been due to the failure of British exporters—and, indeed, of the British Government—to realise that foreign trade methods have undergone a profound change since the advent of National Socialism in Germany.

What Poland buys from Germany she could, for the most part, obtain at better prices from Britain, and buyers here would prefer to trade with Britain. But British industries must be co-operatively organised for export, and suitable arrangements must be made to take Polish exports. The two, indeed, are complementary—Poland importing "capital" goods and exporting agricultural produce. It should not, therefore, be beyond the wit of British exporters and Government Departments to bring about a considerable increase in trade with a country still in the early stage of industrial development, and one which could vastly increase its output of agricultural products by the application of modern methods of cultivation. Poland's "colonial problem," in reality, is a domestic and not an African affair; and its solution should be sought, not in a "colonial understanding" with Germany and Italy, but in a more enlightened and co-operative spirit on the part of Paris and London.

A point that will no doubt be impressed on Mr. Hudson during his talks in Warsaw is that new export credit guarantees must be for a longer term than hitherto. The credits granted prior to 1935 are now maturing, and the strain on the Treasury for the next three or four years will be heavy. The view is now held here that export credit guarantees for industrial development projects should run for not less than ten years. This is Poland's side of the picture.

Sweden

The Core of Unemployment

STOCKHOLM, March 10.—During the last three years, in spite of a boom which has affected practically all branches of business activity, there has been a constant residuum of unemployed workers and employees whom neither trade nor industry has been able to absorb. To investigate the reasons

for this, the Government appointed a special committee which has now published a report. Out of a total of 27,000 unemployed persons, the cases of 24,200 were subjected to individual investigation. Of these, 3,600 were employed in agriculture and forestry, 9,600 in industry, 9,400 in shipping, fisheries, etc., and 1,700 were office employees. Some 9.3 per cent. were aged between 14 and 20, 48 per cent. between 21 and 40, and 42.7 per cent. between 41 and 74. Workers aged between 40 and 45 were predominant, and the bulk of these were workers in the timber industry and office employees. Unemployment was mainly confined to great cities and certain special areas.

Only about one-quarter were persons whose working capacity had been for one reason or another diminished, and it would be a mistake to regard this residuum as unfit for work. In actual fact, there has been a steady movement of individuals into and out of the pool of unemployed, and only a small minority represents real "unemployables." In order to ease the problem of the unemployed residuum, it is proposed to lighten the tax burden in places where there is little or no possibility of establishing new industrial enterprises. The committee also emphasises the importance of settling the question of pensions for aged workers, and advocates more attention to technical education, since unemployment is especially high among unskilled labour.

Employment has been fairly satisfactory, apart from the pool of workless, and the number of registered unemployed in January amounted to 27,500, compared with 21,700 a year before. The building industry shows no signs of slackening off, and as a result demand for low-grade steel and cement has been on the increase. One rather dark feature in the otherwise bright picture is the poor export outlook for the timber, pulp and paper industries.

Anglo-Swedish Trade

Foreign trade figures in January were better than in January, 1938, and exports as well as imports recorded improvement. Figures have now become available for Sweden's foreign trade with the United Kingdom in 1938, and they assume a special interest in view of the forthcoming visit to Stockholm of Mr. Hudson. Swedish exports to the United Kingdom in 1938 were valued at Kr. 447 millions, compared with Kr. 479 millions in 1937. But only Kr. 425 millions represented goods consumed in the United Kingdom, the remaining Kr. 22 millions being re-exported. Pulp and paper exports to the United Kingdom fell from Kr. 142 millions in 1937 to Kr. 136 millions in 1938; iron and steel exports from Kr. 47 millions to Kr. 43 millions; and timber exports from Kr. 135 millions to Kr. 102 millions.

Imports from the United Kingdom in 1938 were valued at Kr. 376 millions, compared with Kr. 403 millions in 1937. Of this total goods produced in the United Kingdom accounted for only Kr. 250 millions, the rest being re-exports. Coal imports were Kr. 75 millions, against Kr. 85 millions in 1937; textile imports from the United Kingdom fell from Kr. 79 millions in 1937 to Kr. 65 millions; but machinery rose from Kr. 24 millions to Kr. 26 millions. There was also a slight rise in imports of British cars. The negotiations which Mr. Hudson is going to conduct will be of a preliminary character and no final decisions about the modification of the Swedish-British trade treaty will be taken.

China

War at Deadlock

SHANGHAI, February 25.—One returns from a trip of several weeks through the occupied and unoccupied parts of China with the impression that the Sino-Japanese war has entered a phase of deadlock that may last for a considerable length of time—unless it is broken by the interjection of some outside factor. This deadlock may be summed up in two propositions. The first is that the Chinese, unaided, cannot drive the Japanese out of the main cities, ports and lines of rail and river transportation which they have occupied. There has, I think, been no instance in the war when the Chinese have been able to capture a town that was held by a moderately large Japanese garrison. Any serious large-scale Chinese counter-offensive seems outside the range of reasonable probability, if only because of China's inferiority in aeroplanes and in artillery.

The second proposition is that Japan has little prospect, in the predictable future, of pacifying the regions which have been nominally occupied, much less of subduing the whole of China. At the moment of writing, Chinese Nationalist gunmen have succeeded in picking off Mr Chen Lo, Foreign Minister in the shadowy "Reformed Government" which the Japanese set up at Nanking. He was the fifty-first victim of political assassination in Shanghai since the beginning of the war. And the great majority of these killings were unmistakably carried out by Chinese Nationalists, although Japanese hired gangsters accounted for a few.

One periodically hears the sound of gun-fire, and even of artillery, in the near vicinity of Shanghai and Peking. In this extraordinary war there are no clearly defined fronts with elaborate fortifications and trench systems. But all China, almost up to the doors of the headquarters of the Japanese forces of occupation, is a "front." The Japanese are in occupation of ten Chinese provincial capitals; but they can point to no region under their occupation (with the possible exception of thinly populated Inner Mongolia) where considerable guerrilla forces are not operating more or less effectively against them.

The war, therefore, since the termination of the campaigns which ended in the capture of Canton and Hankow, has tended to turn into a struggle of endurance and attrition. Each side professes to believe that time is on its side. The Japanese hope to disorganise administration, daily life and economic activity in the Nationalist areas by maintaining their grip on the key centres of the country, on the railway lines and the Yangtse River and on the chief ports. The Chinese contend that Japan will be the first to break down; that Japanese expenditure on the war is exceeding China's in the proportion of about five to one; that guerrilla warfare makes the Japanese occupation economically unprofitable; and that the persistent and successful campaign of assassination against Chinese who assume office under the Japanese will give a sort of scarecrow character to the regimes set up in occupied territory.

China's Strength

It seems unlikely that either China or Japan can expect an early ending of the war on its own terms. If China were a highly organised industrial country like Germany or Belgium or Czecho-Slovakia, its fate would have been already sealed. Resistance on any serious scale would have become impossible after the occupation by the enemy of the six largest cities and the most important economic arteries.

But one of China's weaknesses, its very primitive state of economic development, under present conditions becomes a source of strength. The enormous majority of the Chinese people are accustomed to live on local resources for food, clothing and shelter. Thus the loss of key points, while serious enough, is not catastrophic. One finds a rise in prices in the towns of the interior, largely due to the influx of refugees; but there is no acute food shortage; in some places rice is even cheaper than it was before the war began. China is an easy country to defeat, but an extremely difficult country to knock out.

At the same time, it seems doubtful whether China's present tactics of resistance (a combination of elastic defence where the Japanese advance, of guerrilla warfare behind the Japanese lines, of systematic extermination of traitors and of economic boycott of the zones under Japanese occupation) can yield visible results in a short period of time. The military effectiveness of the guerrillas, numerous as they are, is severely limited by inexperience, by lack of explosives, and most of all, perhaps, by the typically Chinese passivity of temperament. And, while the war is certainly very costly for

the Japanese economy as a whole, it is profitable for the Japanese army, which sets up various lucrative monopolies in the occupied regions, and for the army's camp followers. There have been as yet no strikes or riots or other symptoms of mass discontent in Japan.

So the present deadlock may go on indefinitely, unless it is broken by some outside factor. Europe casts long shadows over China. One of the shrewdest analyses of the international situation from the Chinese viewpoint which I have heard was that of Mr T. V. Soong, well-known financier and President of the Bank of China, who said to me:

What is worst for China is the present state of constant alarm and tension in Europe, because this prevents China's natural friends from exerting their normal weight in the Orient. A general war might seem to help Japan at first; but, in the end, the democratic countries would win and China would share in their victory. China would also benefit from real appeasement in Europe. It is the constant threat of war, with its paralysing effect on the Far Eastern policies of Great Britain and France, that is most harmful for China.

Argentina

Poor Trade Prospects

BUENOS AIRES, March 4.—The foreign trade returns for 1938 (compared with the corresponding figures for 1937) were as follows:—

	Exports	Imports (In pesos)	
1937	2,310,997,802	1,557,684,380	Exp. surp. 753,313,422
1938	1,400,294,121	1,460,887,797	Imp. surp. 60,593,676

The value of exports in December was the highest for any month since January, 1938, being 128,497,845 pesos, against 114,397,536 pesos in November and 145,255,887 pesos in December, 1937. Owing, however, to a rush to anticipate the new import restrictions, which came into force in the New Year, there was also a sharp increase in imports in December; these, too, were the highest since January, 1938, being valued at 134,897,489 pesos, compared with only 116,573,469 pesos in November.

The small exports in 1938 were almost entirely due to reduced shipments of cereals and linseed through drought and frost. In 1938 Argentina only exported 2,021,632 tons of wheat, compared with 3,992,577 tons in 1937. The fall in maize shipments was still more pronounced; they only amounted to 2,645,376 tons, against 9,218,715 tons in 1937.

Prospects for 1939 are only moderately good at the best. A bumper wheat harvest is partly offset by low wheat prices due to a world surplus. This season's maize crop is expected to be disappointing, though probably better than last year. The bulk of the maize crop suffered irreparable damage through drought and heat in December and the first four days of January. Private estimates place this season's exportable surplus of maize at around 4 million tons, which is far inferior to the exports of recent years.

Exports in January were disappointing, amounting to only 891,532 tons, valued at 128,622,136 pesos; this was the lowest volume of exports for January in any of the last ten years, while the value was the lowest recorded in January since 1933. Wheat shipments were slightly higher than last year, and maize shipments were very much higher, but owing to the fall in price these two cereals were responsible for a diminution of over 13 million pesos in the total value. Exports of linseed, oats and barley were considerably lower than last year both in volume and value.

Britain's Share Grows

Imports in January, owing to drastic restrictions, showed a big fall compared with last year. They were valued at 117,033,648 pesos, against 145,801,423 pesos in January, 1938. On the other hand, they were higher than in January of any other year since 1931. The January export surplus shows a great improvement; this year it was 11,588,488 pesos; last year it was only 192,545 pesos. The item among imports which shows by far the biggest reduction is textiles, which fell by 33.7 per cent. in value compared with January, 1938; and here Italian and Japanese manufacturers are the chief sufferers. Machinery and vehicles, which are so largely an American line, were down by 25 per cent.

This year Great Britain supplied 19.2 per cent. of total Argentine imports in January, against 18.2 per cent. last year, and the United States' share receded from 19.4 per cent. to 17.9 per cent. It is likely that this trend will be more marked when the February returns are published.

Letters to the Editor

The Location of Industry

TO THE EDITOR OF THE ECONOMIST

SIR,—I read with interest the article in the last number of *The Economist* headed "The Location of Industry," which gave a résumé of the conclusions reached by the Political and Economic Planning Group on this subject.

I note that among the main proposals put forward by this Group are:—

(1) The extension to the whole country of the powers of financial inducement to new industries at present possessed by the Commissioners for the Special Areas and confined to those Areas.

(2) The establishment of a National Planning Commission to put on a wider basis existing town planning powers and aim at the orderly arrangement of the whole country, keeping in view the interests of industry, agriculture and amenity.

The point to which I desire to draw the attention of your readers is that suggestions almost precisely of this type have already been made by the Scottish Economic Committee in its report entitled "Scotland's Industrial Future," which was issued in February of this year. In Chapter III of that report recommendations were made in the following sense:—

(a) It was suggested that a new form of planning authority should be established with a scope extended to Scotland as a whole, with the primary duty of formulating national plans for the future layout and development of the country. It was added that such a body should, in the committee's opinion, be established by statute, and that its functions should no doubt be essentially of an advisory character, though it was thought that its powers and their limitations could only satisfactorily be determined after the Royal Commission on the Geographical Distribution of the Industrial Population had issued its report.

(b) The Economic Committee also suggested that a branch of the proposed planning authority should be created to deal so far as practicable with the question of the location of industry. The committee proposed that this branch of the planning authority should combine within itself the functions of the Commissioners for the Special Areas concerned with the establishment of new industries and the powers of the Special Areas Reconstruction Association to make financial advances in the case of new or struggling industries which have reasonable prospects, but which are unable to obtain accommodation through the normal financial channels.

The foregoing observations constitute an extremely brief summary of the Scottish Economic Committee's proposals, but it is sufficient to show that they are, broadly speaking, in line with the conclusions independently reached by the Political and Economic Planning Group.

Yours faithfully,

WILLIAM GOODCHILD,
Secretary General,

Scottish Economic Committee.

Glasgow.

Trading Methods

TO THE EDITOR OF THE ECONOMIST

SIR,—The question is being asked whether the bold "export or die" policies of the totalitarian countries should be met by the same methods on the part of this country. I should like to stress the following points.

First, the shrinkage of foreign trade in general and the falling away of exports in particular totalitarian countries unmistakably suggests that their commercial systems are not advantageous. Second, trade between countries with a similar economic structure, such as that between highly industrialised countries, is quite different from trade between countries, on the one hand, that are industrialised and countries, on the other, that are producers of raw materials and foodstuffs. It is in this latter kind of trade that the totalitarian countries are especially interested, for their complicated machinery of State control makes it difficult and unremunerative for them to compete in the markets of industrialised countries against manufactures produced there.

Third, business men will continue to prefer free trade to a State-controlled and inconvenient system of barter which

hampers enterprise and considerably cuts down profits. In addition, the consumer under the system of barter probably never gets, either in kind or in quality, what he wants, but has to be satisfied with what the totalitarian Governments are willing to supply.

Finally, credit being the backbone of all export trade, to-day just as much as in the past, this country should not hesitate to make use of its priceless advantages. The fact that it belongs to the so-called Haves is a great asset. It is true that bankers and financiers are at present worried about the political outlook and therefore reluctant to finance even the soundest export business. Nevertheless, the Scandinavian, the Baltic, the South-Eastern European, the Middle Eastern, the Asiatic and the South American countries are to-day by no means less reliable as customers than they were before the war.

We should, therefore, contemplate adjusting our present trade system to the demands of the day without changing its principles. Neither bilateral discussions between chambers of commerce nor negotiations between trade associations can do very much to get rid of the psychological and political obstacles to economic recovery.

What is wanted is this: British trade associations should try to build up, with the help of the Government, organisations manned by young, active and independent business men, with an intimate knowledge of the economy and public life of the various countries in which markets are sought. The personnel might even be trained in a special institute linked up with Oxford's Nuffield College. Their task would be to study the individual requirements of prospective customers, to make decisions on the spot and to establish social contacts. The risks of foreign trade would thereby be diminished and exporters would be better able to comply with special demands. Only in this way can the volume of this country's trade be appreciably enlarged.

Yours faithfully,

London, N.W.6.

Books and Publications

India Insistent

INDIA, on the highroad to responsible government, is being dissected and analysed as never before. "Economic Problems of Modern India"* is a valuable survey by various experts of the changing sub-continent to-day. The volume deals in turn with the land and its population; agriculture, livestock, co-operation and marketing; and transport, tariffs and trade.

Agriculture is India's economic mainstay and land revenue the sheet anchor of Indian finance. The lot of 25 million agricultural labourers and 61 million small tenants or cultivating owners is not enviable. Land has been passing into the hands of non-cultivating owners during the last few decades, and the Indian landlord has become a rent receiver rather than a wealth producer. Landlordism, by and large, has become both "effete and irresponsible," strong words these from Professor Mukerjee who is always scrupulously moderate both in his language and opinions.

This is not, however, an unrelieved tale of poverty. India possesses in her animal husbandry enormous potential wealth, probably greater than the value of any single industry of any other country in the world. Its annual value is conservatively estimated at Rs. 1,300 crores (£975 millions).

The outstanding issues for India's future are ones of policy, and perhaps the most important essay in this volume is that dealing with protection. Protective duties, through higher prices, effect a transfer of wealth from consumers to producers and, in India especially, aggravate the existing inequality of wealth. Yet Professor Dey of Dacca contends that the system of "discriminating" protection administered in India probably represents the best tariff-making practice; and the chapter on the Ottawa Agreement calls for special praise because it raises the subject from the plane of party and political prejudice and examines it simply as a commercial transaction, which in fact it is.

Only the fact that its figures generally stop short at 1935 seriously detracts from the value of this sane and admirable survey.

It is not economists and business men alone who must study India's economy. Gone are the days when the servants of John Company could despise "competition wallahs." For some time past candidates for the Indian Civil Service have been selected by front-door open competition and back-door "nomination by selection." Selected, they are compelled to attend lectures on the broad principles of Indian social economy and policy; and it is these lectures that have been revised and expanded to make a sumptuous and informative volume,† furnished with a glossary of vernacular words, a select bibliography, apt illustrations and an exhaustive index.

The sub-title of this book—an introduction to some social and economic problems of the Indian people—sums up its scope. It supplements Dr Mukerjee's survey by its account of public health, education, industrial labour and rural India. Addressed initially to the young bureaucrat, it includes such choice aphorisms: "Do nothing, by injudicious word or deed, to weaken the 'revenue-paying conscience' of the ryot," and "Don't drive a desperate poverty-stricken peasant to retort, 'You officers on high salaries have a mania for calling other people prosperous'."

The District Officer is, after all, a collector of revenue and the more prosperous the people committed to his charge, the more benefit accrues to the Sirkar. More education, better health service, improved agriculture and the expansion of co-operation are held out as ways to solve the problems of India. But the root trouble is finance. The "immoral" opium revenue has gone. Receipts from excise

duties on drink, second only in size to revenue from land, are doomed to extinction by the advent of prohibition. And the task of finding money for nation-building services, now left to Indian administrators at the helm of provincial affairs, is a hard one.

It is industry that foreshadows a new India. Abundance of raw materials, great resources of power and labour, a vast potential home market for manufactures and pressure of population on the land have accelerated the growth of industry. And students of Indian labour are under a great debt to the I.L.O. for its lucid and topical monograph on "Industrial Labour in India."‡ Mr Harold Butler is able to record that

Conditions prevailing in large-scale industries in India do not compare unfavourably with those in many European countries, and the regulation of working conditions in large factories is perhaps more advanced than in any other Asiatic country.

It is true that the agitation started by Lancashire late last century about conditions in Bombay mills and the tradition of State intervention, which is indispensable in a country like India, have done much to raise up the industrial worker. But, as Dr Rao's full and incisive review of India's new proletariat§ amply shows, the time is none the less ripe for an Indian Shaftesbury.

A keen interest in social questions is now becoming manifest and swelling in India. There is pressure for the introduction of Labour Conventions in British India modified to suit Indian conditions, and for measures to induce Indian States to take equal steps. All who are interested in some five million Indian industrial workers in plantations, factories, mines and transport—their work, wages and welfare—will find this I.L.O. publication with its wealth of statistics indispensable.

Shorter Notices

"Denmark's Day of Doom." By Joachim Joesten. Gollancz. 288 pages. 7s. 6d.

The Third Reich controls Danish foreign policy, dictates special treatment for the German minority in Denmark, holds the country's economy in a stranglehold (drawn the tighter by British tariffs on butter, eggs and bacon): and the day foreseen will come, and that soon, when war in Europe will oblige the Danes to open their frontier to *Panzerdivisionen*, their command of the Baltic approaches to the German navy, and their landing-grounds to the German air force. Such is the theme of this book; plausible, much documented, and highly tendentious. M. Joesten, who would not appear to be Scandinavian by birth, asserts that the Danes have built in South Jutland no land fortifications worth the name; that practically no air-raid precautions exist for the protection of Copenhagen; and that, so long as British trade policy makes Denmark reliant on German markets, the Foreign Office of Herr Peter Munch will not be slow in accepting terms from the Wilhelmstrasse. From being a product of swift-moving circumstance, their pro-Germanism, he says, has become deliberate, so that only by a British push in the other direction can the balance be restored before it is too late. This is a popularly-written book; and should be read with care. Yet the task of saving Denmark from the German dragon (assuming that the Danes would like to be saved, or need to be saved) is unlikely to appeal to Saint George, that knight-errant's favourite weapon being nowadays the umbrella rather than the walking-stick.

"The Right of Property." By Fr. Vinding Kruse. Translated from the Danish. Oxford University Press. 489 pages. 20s.

This is a *magnum opus* which only the really erudite lawyer, philosopher or sociologist could fully appreciate. Yet it maps a territory which the economist, too, must be familiar with; for the law of property is the immutable frame of his studies. Professor Kruse, introducing his remarkable study of the theory and practice of property rights, calls for wider horizons and the sweeping away of "the tightening boundaries between the sciences." In all humility economists would do well to survey this vast field with the holder of the Chair of Law at Copenhagen.

THE BUSINESS WORLD

Coal Mining and Coal Prices

LIKE many other raw material producing industries, coal-mining has suffered seriously from excess capacity since the Great War. In the latter part of the nineteenth century and, indeed, up to the War, the world's demand for coal increased at the rate of about 4 per cent. per annum, and, except during periods of recession, there was no serious disequilibrium between the capacity to produce and to consume coal. Since then, however, the annual rate of growth has slowed down considerably, averaging only 0.7 per cent. between 1913 and 1929 and about twice that rate between 1920 and 1929. In a painstaking survey* of economic and social conditions in the world's coal-mining industry prepared by the International Labour Office, the conclusion was reached that "the lagging of the total consumption of coal behind the other indices of industrial activity since 1913 must be attributed, above all, to fuel economies." (The extent of the progress in the efficiency of coal consumption in this country was discussed on page 396 of *The Economist* of February 25th.) But while the pace of the growth of consumption slackened after the war, the world's capacity to produce coal continued to increase fairly rapidly, partly because of the development of new mines, the more extensive exploitation of lignite resources and the utilisation of the smaller sizes of coal formerly treated as waste, but chiefly as a result of the increased productivity of labour due to the progress of mechanisation in many countries. Indeed, the problem of surplus capacity is in a sense an offspring of scientific progress, reflected in the more economical utilisation of coal, on the one hand, and in the improvement in the methods of extraction, on the other. But the effects of the activities of scientific man have been aggravated by some of the efforts of political man, embodied in such things as territorial changes, reparation payments in kind, large-scale strikes, economic nationalism and a number of other factors. According to estimates made by the Economic Committee of the League of Nations in 1929, the potential production exceeded current demand in 1927-28 by 25 per cent. in Germany, 25-33 per cent. in Britain and about 50 per cent. in Poland.

The consequent intensification of competition both within and between national frontiers increased the pressure on prices which, in turn, tended to depress the standard of living of the coal-miners and the profits of the coal-owners, and led to a demand for national and international regulation of supplies and prices instead of free competition. National control schemes are already in operation in the leading producing countries. Until recently all attempts to regulate the international coal trade had proved fruitless, but the conclusion, at the end of last January, of an agreement between Britain and Germany holds out hope of the formation of a European export cartel.

In the circumstances, there is much to be said for the substitution of an efficient national and international control of supplies and prices for free competition, with its consequences of poor standards of living and low profit margins; but there is always the danger inherent in price control schemes that the creation of a seller's market may lead to a relaxation in the drive for increased efficiency, for past experience has shown that the efforts of industrialists to reduce costs increase with falling, and diminish with increasing, profit margins. In this country, in par-

ticular, whose economy is based on an abundant supply of cheap coal, an undue and permanent rise in prices might well have evil consequences for the whole community.

It has long been held by enlightened observers in this country that Government action to improve the conditions of the coal-miners as well as the earnings of the coal-owners, was desirable, but only on condition that the consequent increase in costs would be offset, as much and as speedily as possible, by a sustained drive to increase the efficiency of the industry by the introduction of modern methods and by the concentration of production on the most efficient units.

The whole drift of post-war legislation has been towards securing both of these desirable ends. The intention of the Mining Industry Act, 1926, was to increase the industry's efficiency by facilitating its reorganisation. The Coal Mines Act, 1930, combined a scheme for securing compulsory amalgamations with a legal framework for the control of the production, supply and sale of coal. The Coal Act, 1938, went a good deal further for, apart from continuing the provisions for the control of production and prices, it set up the Coal Commission, which is to have the dual function of holding the nationalised royalty rights and of attempting to breathe some effective life into the still-born provisions of the 1926 and 1930 Acts for reorganisation and amalgamation. The Commission does not, however, take possession of the minerals until 1942, and its amalgamation powers are subject to a moratorium until 1940.

The main trends in the British coal industry since 1929 are indicated in the table overleaf. The course of the demand for coal has been downwards since 1929, for even in 1937 output failed to recover to the pre-depression level. The decline, however, was due entirely to falling exports, for home consumption in 1936, 1937 and 1938 exceeded the level of 1929. In the past year the industry suffered a slight setback, most marked in the export trade. The quantity available for consumption in Great Britain was only 3 per cent. smaller than in 1937, but as the coal equivalent of exports fell by nearly 12 per cent., the output of the mines had to be reduced by 5 per cent. Despite the slow progress towards concentration of production, the efficiency of the industry has been appreciably increased since 1929 by the introduction of modern methods of production and other improvements. The proportion of the total output cut by machines, for example, rose from 28 per cent. in 1929 to 57 per cent. in 1937, while the output per man-shift increased from 21.69 cwt. to 23.35 cwt. But technical progress was not confined to Britain, and appears to have been even more rapid in other countries. According to the report of the I.L.O., the output per man-shift rose between 1929 and 1936 by 8½ per cent. in the United Kingdom, 20.5 per cent. in France, 29.4 per cent. in Germany (Prussia), 30.3 per cent. in Czecho-Slovakia 34.1 per cent. in Holland (State Mines), 37.8 per cent. in Belgium and 45.5 per cent. in Poland. An international comparison of the output per man-shift in 1935 is given below:—

OUTPUT PER MAN-SHIFT IN PRINCIPAL COUNTRIES, 1935
(Output in Belgium = 100)

Belgium	100	Germany (Ruhr)	22½
France.....	112	Holland	23:
Great Britain	153	Poland (Eastern Upper Silesia)	26:
Czecho-Slovakia (Bituminous)	172	U.S.A. (Bituminous)	52:

* "The World's Coal-mining Industry." 2 vols. International Labour Office. P. S. King and Son, Ltd. Price 8s. each.

* "Economic Problems of Modern India." Edited by Professor Mukerjee. Macmillan. 443 pages. Price 10s. 6d.

‡ "Industrial Labour in India." I.L.O., Geneva. 335 pages. Price 7s. 6d.

§ "The Industrial Worker in India." By B. Shiva Rao. Allen and Unwin. 263 pages. 10s. 6d.

It will be seen that, compared with other countries, the output per manshift in Great Britain is still relatively low, but as the extent of mechanisation depends largely on the geological structure of the coal seams, these figures do not necessarily prove that the industry in Britain has been less progressive than those in other countries.

Less satisfactory is the fact that the increase in the output per manshift has tended to decline again, from 23.54 cwt. in 1936 to 23.35 cwt. in 1937 and 23 cwt. in 1938. The decline in 1937 must be ascribed to the increase in demand in that year which probably necessitated the operation of less efficient units. Again, in 1938 there appears to have been a delay in the industry's adjustment to the fall in demand, for the average number of wage earners on colliery books was higher than in 1937 despite the reduction in output by 5.1 per cent.

Costs of production per ton showed little change between 1929 and 1936, but as a result of the increase in proceeds, due partly to the operation of production control, the profits per ton more than doubled. In 1937 costs, proceeds, and profits rose further, but mainly as a result of the rapid economic expansion at home and abroad in that year. The recession in 1938 would normally have brought with it a reduction in proceeds and profits; in fact, costs, proceeds and profits per ton rose by about 9 per cent. last year. The increase in proceeds in face of the fall in demand must be ascribed mainly to the operation of the selling schemes introduced on August 1, 1936.

Despite the downward trend in production between 1929 and 1938, the financial position of the industry has been considerably strengthened during this period. Thus, the average cash earnings per manshift showed an increase of no less than 35 per cent. during this period, and the average cash earnings per annum rose by 23 per cent. to £145, exclusive of the value of allowances in kind, estimated at £5 per annum. Earnings in the coal-mining industry thus no longer compare so unfavourably with those in other industries, especially when it is remembered that the average covers all employees, above and below ground, men and boys alike. But the improvement in the standard of living of the coal-miners, partly at the expense of a reduction in the number employed, has been accompanied by an equally marked increase in the profitability of the industry, the margin between proceeds and costs having risen from 4½d. in 1929 to 1s. 4d. per ton in 1938.

So far, the improvement in the financial position of the industry has been attained mainly at the expense of the consumer, for the proceeds per ton last year were 24.5 per cent. higher than in 1929. While it is true that the efficiency of the industry has been increased, this has not yet gone very far in offsetting the increase in wages and profits per ton, and the costs of those industries which, like gas and electricity undertakings and the cement and iron and steel trades, are large consumers of coal, have risen appreciably. No effort should, therefore, be spared by the coal-mining industry to reduce its costs by further improvements in production and distribution methods (the latter are now being examined by the Monckton Committee) and by the concentration of production. In many countries

concentration appears to have gone much further than in Britain. Thus, in the Ruhr district of Germany, the number of undertakings has been reduced from 120 in 1893 to 33 at present, and their average output has risen from half-a-million tons to over three million tons. In Belgium, the number of active colliery concerns declined from 164 in 1880 to 122 in 1913 and 86 in 1936, while the output per unit rose from 52,000 tons to 85,000 tons and 160,000 tons respectively. Again, in the United States, the number of bituminous mines of commercial size fell from 9,331 in 1923 to 6,315 in 1935, and the proportion of output from mines raising 100,000 tons or more per annum rose from 70.4 per cent. to 80.7 per cent. In this country, the number of mines in active operation fell from 3,289 in 1913 to 2,539 in 1928, but the average annual output during this period rose only from 87,000 tons to 90,000 tons. Since 1928 progress has been somewhat more rapid, but while the number of mines had been reduced to 2,080 in 1936, their average annual output was then still only 110,000 tons. Fortunately, there is evidence that the coal-

owners are now less oblivious to their responsibilities to the public. Moreover, the selling schemes have already tended to stimulate amalgamations, a process which should be hastened when the Coal Commission assumes the administration of the coal estate in the summer of 1942.

The troubles of the coal-mining industry have been such a constant thread in the political and industrial life of the country, and the conditions of the miners have excited such widespread sympathy, that there will be no regrets in any quarter over the industry's improved financial position. The mineowners, as a body, have not in the past succeeded in earning much sympathy from the general public; but it must be obvious to all save fanatics that a reasonable rate of profit is an essential condition of the health of the industry. But the improvements of the past decade could not have been secured without the assistance of the community. The community has a right to insist that the next task before the industry shall be a relentless pursuit of efficiency and a determined effort, without lowering the more satisfactory standards now attained, to reduce the cost of coal, which is still the basic ingredient of industry.

The community has a right to insist that the next task before the industry shall be a relentless pursuit of efficiency and a determined effort, without lowering the more satisfactory standards now attained, to reduce the cost of coal, which is still the basic ingredient of industry.

THE ECONOMIST BY AIR

To meet the growing demand from overseas readers for *The Economist* by air, special subscription rates have been introduced applicable to those countries to which Letter Mail is now normally transmitted by air. These are as follows:

	12 months	6 months
Europe	£ s. d. 4 17 6	£ s. d. 2 8 9
Empire Air Routes	6 10 0	3 5 0

These rates include all supplements, but the latter will be sent by the surface routes and not by Letter Mail.

Unexpired subscriptions may be transferred to the new category on application to

THE PUBLISHER, THE ECONOMIST,
8 BOUVERIE STREET, LONDON, E.C.4

THE NEW VAUXHALL FOURTEEN IS

BIGGER

with longer wheelbase, wider track, and much more roomy coachwork,

LIVELIER

the new 6-cylinder engine gives more and smoother power,

SAFER

all-steel integral construction and hydraulic brakes,

EASIER TO DRIVE

all silent, all synchromesh gears, adjustable steering wheel, etc. etc.,

SMOOTHER

latest Vauxhall torsion bar, Independent Springing, trouble free, steady on corners,

MORE LUXURIOUS

arm rests to all seats and many new luxury features,

AND ECONOMICAL

30 miles per gallon at an average speed of 30 m.p.h.

DE LUXE SALOON

£230

This is the first advertisement

for the Vauxhall "Fourteen" since we announced this new car last October—and even this is rather in the nature of an apology. For only by trebling our manufacturing schedules are we at last catching up with a demand that has overwhelmed us since the Motor Show.

Such is the reputation of the Vauxhall Fourteen that many motorists placed orders before even seeing the car. While this confidence in the name Vauxhall is very gratifying, we would prefer

The New you first to have a thorough trial on the road, which you can do now at any Vauxhall dealer.

VAUXHALL

I4 Six

Before you decide on your next car, see and try the new Fourteen at your local Vauxhall dealers'. Write for literature to Vauxhall Motors Ltd., Luton, Beds.

NOTICE the clean rear lines and the big luggage boot. The spare wheel is housed in a separate compartment.

International Nickel Prospects

THE annual report of International Nickel is no ordinary set of company accounts. Stockholders will look in vain for any statement of the position of International Nickel Company of Canada, as such, for the directors, unencumbered by the provisions of the British Companies Act, pursue logic to its limit and publish only the consolidated profits, assets and liabilities of the company and its wholly owned subsidiaries. In its detail the fifteen-page directors' report is admirable. And the description of the numerous products of International Nickel and their uses, which completes the report, is an essay in modern metallurgical practice.

International Nickel stockholders, however, are habituated to such a generous volume of information. But not since 1932 has it been accompanied, as it is for 1938, by a reduction in net profits. The value of net sales (a new heading in the profit and loss account) fell by 20.3 per cent. to \$107,194,723, while operating profits were reduced by roundly \$20 millions to \$50,298,299. The outcome of the year, in terms of net profits, is a reduction of 35½ per cent., from \$50,299,624 to \$32,399,470. These results show a significant check to the expanding profits of the last few years, and illustrate, if proof were needed, the close dependence of International Nickel profits on cyclical trade movements. Last year the normal secular growth of consumption of nickel products was wholly interrupted by a fall of 21 per cent. compared with 1937, but it is still important to realise that even the reduced volume of 1938 was 31 per cent. higher than that of 1929, while the company's operating income was some two-thirds higher than the 1929 level.

These points are evident from a study of the table of comparative results of the undertaking for the past three years and of the chart showing the distributable profits for the past eleven years, which appear below. An analysis of the company's sales by volume, however, shows an interesting distinction between nickel and copper. Total sales of nickel, in all forms, fell last year from 207,700,943 lbs. to 164,378,245 lbs., and International Nickel failed to maintain its proportion of world consumption of nickel, which is estimated to have fallen last year from 240 million lbs. to 204 million lbs. On the other hand, sales of copper prove to have been remarkably stable last year, and actually showed a slight decrease from 291.9 million lbs. to 292.1 million lbs., although average prices were markedly reduced. The nickel figures, at least, should serve to check the still common assumption that International Nickel is primarily interested in armaments demand. The steel industry, which according to the company's estimates is responsible for as much as 60 per cent. of world nickel consumption, suffered a severe setback last year, particularly in the United States, and it was fortunate that the demand for copper outside the United States was sufficiently well maintained partly to offset the reduced

American demand. On the necessarily rough basis of average New York prices, which fell from 13.1 cents per lb. in 1937 to 9.8 cents per lb. in 1938, the decline in copper revenue may have been of the order of \$9.6 millions. The fact that the company's sales of copper were maintained largely through an increase in extra-U.S.A. sales has an interesting bearing on the working of the copper restriction scheme last year.

Before turning to consider the prospective demand for these main products during the current year, International Nickel stockholders will find much ground for satisfaction in the present position of the plants. Throughout the report, considerable emphasis is placed on research and productive economies. It will be recalled, for example, that the 1937 report referred to the "great economies" in mining costs which are anticipated from open-pit development at the Frood mine. This project is now well advanced and shipments of ore started, as scheduled, in January. To take another example, improvements at the Port Colborne nickel refinery gave a 3½ per cent. increase of furnace production and a 10 per cent. decrease in fuel consumption. Such examples could be multiplied for almost every section of the plants, both in Canada and in this country. For the forward-looking holder of International Nickel (and on the current yield basis of 3.69 per cent., holders of the stock are presumably looking ahead) the commencement of operations at the Finnish mine in the autumn of 1940 is of importance. These various improvements can be summed up by a comparison of capital expenditures during the last few years. Since 1934, the total has amounted to \$35½ millions, compared with net book property values, at the end of last year, of \$158.4 millions. Last year's allocation of \$10½ millions was the highest since 1936, which included very substantial expenditure on the Copper Cliff smelter. And in the current year the capital programme entails an expenditure of \$10.6 millions, of which \$4.3 millions is attributable to Finland.

The conclusion to be drawn from this recital is clear. The strategy of International Nickel is not conceived in terms of a single year's profits. It is rather intended to provide the most efficient plants for the satisfaction of a secular expansion in demand for nickel products. How far is that expansion likely to re-assert itself during the current year? The estimate of the president of the company, Mr Robert C. Stanley, is that business should parallel closely that of last year, assuming that the probability of war is remote—a reservation to which this week's political events give additional point. And it may be that a further element of caution is introduced by the apparent failure, so far, of the American steel industry to get into its stride. There is a suggestion, moreover, that the automobile industry is tending to use less highly alloyed steels in private cars, and this might act as an offset to the natural expan-

sion in nickel consumption which is to be anticipated in such outlets as stainless steel, foundry production and alloy metals. And the comparatively severe degree of restriction which has been re-introduced by the copper industry suggests the possibility of some reduction in copper shipments this year, unless demand revives.

Judging by the specific factors which determine the company's earnings—industrial trends in North America and overseas markets, the world price of copper, and the exchange value of the pound sterling—there is some reason for endorsing the President's caution. American recovery has recently wavered, and world trade conditions are still in the thrall of politics. The price of copper is firmer, but the restriction screw has necessarily been tightened. And a firmer dollar would not imply higher dollar income, unless sterling prices were raised, and that is hardly in the company's tradition. The uncertainties of the moment, at least, do not suggest that Mr Stanley's estimate is likely to prove unduly cautious, though it is important to emphasise that nickel consumption was greater in the second half of 1938 than in the first half. Moreover, the movement of quarterly earnings (which are not subject to any real degree of seasonal variation) may be significant. In the second quarter of 1938 consolidated earnings amounted to \$10.8 millions, but in successive quarters the total has improved to \$11.7 millions, and, for the December quarter, to \$13.1 millions. Such movements do not suggest that any massive recovery was in progress during the second part of the year, but they are in the right direction. And if the level of earnings in the current year were to equal the December quarter's average, an improvement in operating earnings of the order of \$2 millions would be achieved.

In the last analysis, however, it is not the nicely calculated less or more which influences the price of International Nickel. As a market leader, it is influenced by broad market movements, and in recovery and depression alike, the stock invariably capitalises current earnings generously. A stock which is a combination of a mining, industrial and commodity share should not, in theory, be selling on the basis of 26 times current earnings. But in this case theory has never really been applicable. Whether this is an appropriate time to buy on long-term prospects is another matter. The crude lesson of history gives the investor little assistance here, for last year the price fluctuated between 60½ and 38½, and even in the year of peak earnings—1937—the range was as wide as 35½-75½. So long as the balance of argument remains in favour of American recovery (and hence of improvement in Wall Street) any appreciable setback in the price of the stock would appear to be unlikely. But Wall Street has shown this week that European politics are still a prime factor in its calculations, and "Big Business" shows little disposition to accept its domestic brand of appeasement with much greater assurance. In International Nickel, in short, the investor meets that most awkward of securities—a stock whose long-term earning prospects are sound (though subject to cyclical influences) but which is perennially overvalued. Hence the ideal buying time involves taking a view of market conditions which may have no precise relation to the immediate profits outlook. But at least it may be said that the latter is not immediately expansive, and that the former are not making the expected headway. In such conditions, they serve their own ends who only stand and wait.

Finance and Banking

Czech Currency Outlook.—It seems safe to take it for granted that the conquered provinces of Bohemia and Moravia will soon be *gleichgeschaltet* from a monetary point of view, and that the crown notes in circulation will be exchanged for reichsmark notes. Some doubt exists whether Slovakia, which may retain for a while a show of autonomy, will be allowed to retain the crown as her currency, but considering that ever since Munich, Berlin had insisted upon monetary union with Czecho-Slovakia, it is more than probable that the crown will disappear altogether. In such circumstances it is not surprising that the market has adopted a strongly pessimistic view about the prospects. For the moment, the exchange rate has been fixed at 10 to 1, which over-values the crown, but it is not certain that the Czech districts will continue to be given as favourable treatment as the Sudetenland received after its conquest. Then the German authorities aimed at calling in the largest possible amount of crown notes, partly in order to use them in payment for raw materials purchased in Czecho-Slovakia, partly in order to sell some in Western European markets in return for free exchanges, and, last but by no means least, in order to be able to claim a large share of the Czechoslovak National Bank's gold reserve. Now none of these inducements exist. Crown notes have depreciated considerably in the market. While on Tuesday they were quoted at about 470 (against the official rate of 137½ for transfers), on Wednesday the quotation advanced to about 650 and closed around 600. There was some recovery on Thursday, on the assumption that the rate may not be fixed at quite such a disastrous level. Simultaneously with the slump in crown notes there was a noteworthy recovery in reichsmark notes, owing to the anticipated improvement in the German exchange position as a result of the acquisition of Czech gold assets, and also because of the temporary possibilities of smuggling notes into the conquered provinces before the new order is established.

circles. The point at issue is a simple one. Almost every European country other than the United Kingdom, makes its parcel post facilities available for the dispatch of bullion. In the case of France, those facilities are available subject to each parcel being of a maximum weight of 20 kilos. As a bar of gold weighs about 12½ kilos, the arbitrating of gold to New York via a French port can be effected by this means provided the gold is sent in boxes containing one bar each—as against the more usual four bars to a box. The charge made by the French Post Office for carrying freight across the Atlantic is considerably smaller than the “Atlantic conference” rate of 5s. 6d. per cent. charged on bullion shipments. As against this, however, must be set the higher cost of insuring gold dispatched by parcel post. This is due to the fact that the parcel post gold is not carried in the ship’s strong room—as is the gold which pays the normal freight rate—and also to the belief, quite erroneously held, that when it arrives in New York the parcel post gold does not receive the “military honours” and police guard which usually awaits incoming bullion in the United States. Hence the insurance market for parcel post gold has always been restricted. About two years ago this market disappeared altogether on a recommendation of the Committee of Lloyds that for insuring such gold across the Atlantic a premium of not less than 5s. per cent. should be charged. This premium of course placed such arbitrage out of court for the time being.

* * *

More recently underwriters have been tempted back into the market for quite limited amounts—about £500,000 a week—at rates which give parcel post gold arbitrage with New York an advantage of about 1d. per ounce over the gold arbitrage following the more normal channel. For the amount in question therefore there has in fact been a dual shipping parity and the ability of arbitrageurs to bid for gold at prices including a premium of ½d. or 1d. over the normal shipping parity to New York has in part been due to this fact. The problem has suddenly emerged into the field of open discussion owing to the ventilation of complaints by members of the bullion market who have been elbowed out of this business by the ability of other houses to book ahead the whole of the insurance facilities available for parcel post gold. The complaints have a distinct flavour of sour grapes about them, and are in no way helped by the spurious argument that the utilisation of parcel post facilities has intensified the drain on the Exchange Account’s gold resources.

* * *

North China Currency.—The currency regulations for North China came into decidedly uncertain force at the beginning of this week. At the last moment their immediate application was appreciably restricted, the forcible

conversion of old dollars to the new yuan currency being limited to a number of cities in which the machinery for conversion existed. Hitherto the conversion movement has proceeded in very half-hearted manner, and even in Tientsin the old Nationalist notes (exchange value 8d.) command a small premium over the new yuan notes (nominal exchange value 1s. 2d.). So far the regulations compelling the foreign banks in North China to sell their export bills to the agents of the new Reserve Bank in exchange for yuan currency at 1s. 2d. have been a dead letter. Official protests against this enactment have been made to Japan by Great Britain, the United States and France, but these, according to advices from Tokyo, are being rejected on the ground that “Japan has nothing to do with the Peiping Government.” The immediate burden of complaints against these regulations is that the compulsory sales of export bills at the exchange rate of 1s. 2d. applies retrospectively to deals entered into by the exporters on the basis of an exchange rate of around 8d., and that since the old and new Northern China currencies are convertible at par a substantial loss must accrue on such transactions. Moreover, it is felt that the sudden jump from the 8d. to the 1s. 2d. exchange rate must cause a serious dislocation of trade, especially as the new currency must for a long time fight against a strenuous boycott by the population. In answer to the exporters’ complaints the local authorities in Northern China have granted one month’s grace for the compulsory sale of export bills where these arise from contracts entered into before March 10th.

* * *

Commonwealth Bank of Australia.—Australia’s economic problems are discussed in a leading article on page 554, in which it is suggested that the balance of trade in 1938-39 will necessitate some depletion of London funds. The export surplus in 1937-38 was already the smallest since 1929-30, when there was an import surplus of £31 millions sterling, which presumably explains the drop to £22.6 millions in “money at short call in London” disclosed in the balance sheet at December 31st last of the Commonwealth Bank. The figure compares with £27.1 millions at the end of June and £30.5 millions at the end of December, 1937. The other notable change is a rise in Commonwealth Government securities from £30.7 millions in June to £36.2 millions; in the directors’ report it is explained that the bank subscribed £6 millions to the £72 millions Commonwealth Conversion and Defence Loan last November. The report adopts a very cautious attitude with regard to current economic conditions. Internal activity is regarded as being still comparatively high (the bank’s note circulation at the end of the year was only £1 million below the end-1937 figure); but the financial position of the different Governments is said to show some weakening, and the warning is expressed that defence expenditure may place some strain upon the community’s savings and available resources.

MONEY MARKET NOTES

Foreign Exchanges

THE firmer tendency in sterling apparent in recent weeks has been reversed by the events in Czechoslovakia. Over the week-end the sterling-dollar rate was very steady and closed on Monday at 4.69½, compared with 4.69½ on Saturday, but on Tuesday uneasiness over the political situation began to spread to the foreign exchange market and Control support was necessary to prevent the rate from falling below 4.68½. Selling, however, has not been widespread, even on Wednesday when at one time the rate fell

to 4.68½, and it has been the almost complete absence of demand for sterling, other than official buying, which has caused the comparatively wide fluctuations. On Thursday, the volume of business was again very small, but, except for a brief rally in the early afternoon, the pound was on offer all day, and Control support was necessary to hold the rate at 4.68½. Simultaneously, with the decline in the spot rate, the premium on forward dollars has widened, and on Thursday afternoon that for three months was quoted at 1½%. Francs were rather erratic on Wednesday and depreciated at one time to 176½, but rallied later and closed

with a net appreciation of ½ against sterling at 176½. On Thursday afternoon they were quoted at 176½-¾. More significant has been the renewed offering of forward francs, the discount for three months widening from ½ on Tuesday to ¾ on Wednesday and to 1½-1 at one time on Thursday. A similar tendency has been noticeable in belgas. The spot rate has moved with the dollar, falling to 27.83½ on Thursday, but the three months’ forward discount was then quoted at about 63c., compared with 55½c. on the previous day. Swiss francs were offered on Thursday, and the rate rose from 20.60½ to 20.65½.

The Money Market

CONDITIONS in the money market have remained very much unchanged, and no disturbance as a result of the international situation has been noticeable. The flight of capital to New York, indicated by the fall in the sterling-dollar exchange rate, must be of very small dimensions, for credit conditions remain very comfortable. Bond money was in rather keener demand on Thursday and was available at ½ per cent.

	Mar. 17, 1938	Mar. 9 1939	Mar. 16, 1939

Clearing Banks	1½-1*	1½-1*	1½-1*
Others	5½	5½	5½-34
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	17½-9½	17½-17½	17½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

In the discount market slightly more business has been done, as market houses have now more bills to offer to the banks. Nevertheless, they were again disappointed at the result of last Friday's Treasury Bill tender. Their quota rose from 27 to 34 per cent., but one of 40 per cent. had been hoped for in view of the maintenance of the amount on offer at £40 millions. The amount to be offered for tender this Friday, however, is £10 millions in excess of the corresponding maturities, so that the prospect for the market is more encouraging. As the bills will mature towards the end of June they will, however, be very popular and little improvement in the rate is expected. The rate for the three months' fine bank draft is still quoted at ½ per cent.

Refuge Assurance.—New sums assured showed there was a considerable reduction from £8,685,000 to £7,895,000 in the Ordinary Branch last year; in the Industrial Branch, new sums assured amounted to £15,861,000 against £16,001,000. The rate of interest earned fell by 3s. 1d. per cent. and 2s. 7d. per cent. to £3 19s. 5d. per cent. and £4 9s. 5d. per cent. in the Ordinary and Industrial Branches respectively. In the Industrial Branch, the expense ratio fell further from 33.6 per cent. to 32.8 per cent. of the premium income. The development of endowment business since pre-war days has no doubt contributed to the great reduction in expense ratios. In 1914, 93.3 per cent. of the Refuge's new business was in whole life plans against 6.7 per cent. for endowment assurances; by 1928 the corresponding figures were 66.3 per cent. and 33.7 per cent., while last year the ratio of the two classes was 53.9 to 46.1. The basis of the annual valuation was unaltered in the Ordinary Branch, namely O^m 3 per cent. for assurances and a⁽¹⁾ and a^(m) 3 per cent. for annuities. In the Industrial Branch the reserves were again strengthened, at an unstated cost; English Life Table No. 10 replaces the No. 8 table, and on this occasion 2½ per cent. was used not only for premium paying policies as in 1937, but also for free policies. The progressive strengthening of reserves over a number of years is resulting in increased surpluses and bonus distributions. Last year, as the following table shows, the surplus

The Bank Return

THIS week the gold in the Issue Department has been valued at 148s. 5d. an ounce, which is again ½d. below the market price on the day of the Return. As the total gold holding of the Department is unchanged on the week, it follows that the difference arising from the higher valuation must have been counteracted by a transfer of gold to the Account. The note circulation

	Mar. 16, 1938	Mar. 1, 1939	Mar. 8, 1939	Mar. 15, 1939
Issue Dept.	£ mill.	£ mill.	£ mill.	£ mill.

shows a fall of £2 millions, and this, together with a rise of £8.3 millions in Government securities, has partially offset the big drop in bankers' deposits last week. They are now back to about their February average, but are £12.5 millions below the corresponding figure last year.

*

The Bullion Market

THE price at the fixing showed very little change until Wednesday. The steadiness of the sterling-dollar exchange rate, and the firm undertone of the pound discouraged any big arbitrage demand, and such as did exist was met from Continental resales. On Monday these were insufficient to supply the market demand, and as the

Exchange Account, in view of the firmness of the pound, was disinclined to encourage the rising tendency by selling gold for arbitrage, buyers had to be rationed and only obtained about 75 per cent. of their requirements. With the weaker tone in sterling, however, the Exchange Account has been anxious to offset it by allowing arbitrageurs full play; and about half of the turnover of £460,000 on Wednesday came from official sources. There has been no evidence of any revival of gold hoarding, except perhaps for a little on Thursday, when in a very small market hoarding

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

and arbitrage demand raised the premium to 1½d. The silver market has been quiet and very steady. Supplies of cash silver over here are still very scarce, so that a little buying from India, coupled with some bear covering, has been enough to cause the small rise in prices that has taken place. America has been inclined to offer silver for near delivery, but when the tone of the dollar became firmer sales from this source were checked.

INSURANCE NOTES

earned was more than double that in 1937 and three and a-half times that in 1936. In the Ordinary Branch, the surplus differed little from recent years, but a substantial allocation was made to the Investment Reserve Fund at the expense of the balance carried forward. The results of the past two valuations are set out below.

	1937 £	1938 £
Ordinary Branch		
Surplus earned	1,059,946	1,065,764
Brought forward	696,032	710,011
	1,755,978	1,775,775
Policyholders' bonuses	941,370	955,352
Shareholders' account	104,597	106,150
Investment reserve fund	710,011	250,000
Carried forward	1,755,978	1,775,775
Industrial Branch		
Surplus earned	352,741	773,099
Brought forward	120,297	121,441
	473,038	894,540
Policyholders' bonuses	256,194	454,350
Shareholders' account	45,403	51,350
Investment reserve fund	50,000	250,000
Carried forward	121,441	138,840
	473,038	894,540

The bonus in the Ordinary Branch is again at the moderate rate of 36s. per cent. on the sum assured, but the allocation to policyholders in the Industrial Branch has been largely increased. Total assets, at £71,165,000, show an increase of nearly £2½ millions over the year. Investment Reserve Funds now total £4,000,000, and the market value of stock exchange securities at the end of the year "consider-

ably exceeded" book values. British Government securities amount to nearly £26 millions, representing 36.5 per cent. of total assets; during the year £762,000 has been added to loans on public rates and £617,000 to Debenture stocks. Ordinary stock holdings show little change at £512,000, and represent only 0.7 per cent. of the assets.

*

National Provident Institution.—Total new business in 1938 shows a small decline, at £2,047,000, compared with £2,126,000 in 1937 and £1,882,000 in 1936. Death claims in 1938 at £387,000 show an increase of £95,000 over the previous year, but the mortality experience appears to be favourable, since claims intimated over the last five years represent only 83 per cent. of the amount expected according to the A¹⁹²⁴⁻²⁹ table. Total assets increased from £12,909,000 to £13,219,000. Loans of all kinds amounted to £3,608,000 against £3,257,000; loans on public rates amounted to £739,000, compared with £496,000, while policy loans fell from £771,000 to £687,000. A new item of £150,000 for "deposit with building society" confirms the impression that a good deal of money has recently been invested by the life offices in building securities. British Government securities declined from £1,746,000 to £1,590,000, but there were no other marked changes in securities.

Investment

A Blow to Confidence.—Until this week, political quiet and accumulating evidence of industrial recovery provided a favourable background for the Stock Exchange. Such hopes have again been shattered by political aggression. The annexation of Czecho-Slovakia, indeed, has occurred with such incredible suddenness that even on Wednesday, when the facts were staring from the headlines, the market was not violently shaken—until shortly before the close of business, when heavy selling from Wall Street and the announcement that British Ministers had put off their trade discussions with Berlin, led to a sharp fall in gilt-edged and industrial security prices. For the moment, the market seems disposed to act only on the

short view that even tigers must attend their digestion. Hence, there has been no selling of a panic nature, and although the market was in a state of incipient retreat on Thursday, it succeeded in a better show of resistance than the brute facts might have suggested. The accompanying table shows the course of leading gilt-edged securities, German and Czech bonds and industrial shares since the Munich Agreement. Herr Hitler's more or less pacific speech at the end of January flattered the market into thinking that appeasement could be capitalised. This week's consequences may not affect the ultimate economic effects of expansionary re-armament finance—indeed, they may enhance them. But the Stock Exchange can no longer make any confident bid for political appeasement.

The "House" and Inequitable Taxation.—The Committee for General Purposes and the Trustees and Managers announced this week an important scheme, the principal object of which is to lighten the inequitable existing basis of taxation which falls upon Stock Exchange firms, especially jobbers. Although the scheme is not restricted to jobbers, the prime difficulty arises from the fact that the profits of jobbers generally have to take into account the changes in the value of the "book" and this, again, must be based on the quotations, whether nominal or not, ruling at the end of the accounting period. But the profit figure thus arrived at does not in any sense represent the jobber's net cash increment over the year. Moreover, in normal cases, the jobber's book is normally made by the public and, except in particularly active stocks, he cannot cash in at his own selected moment. Even if he could find a buyer, disposal would be tantamount to getting rid of his stock-in-trade on the basis of which he has to make prices. In a rising market, therefore, paper profits arrived at in this way bear no relation to cash earnings. And it is a fact that in very many cases, tax and surtax on the former more than absorb the whole of the latter, leading to the paradoxical result that the diffi-

culty of meeting taxation obligations assumes quite unmanageable proportions in good years. If there is a normal subsequent recession, a serious situation may well arise, which is not due to any lack of conservatism or heavy drawings. For some two years, methods of meeting this situation have been under consideration and the Stock Exchange authorities have concluded that the only method for obtaining relief is to allow firms to register as private companies with unlimited liability. To this end, the trustees and managers propose alterations of the deed of settlement so as to extend the definition of the word "members" to include corporate bodies. When the deed has been altered it will be necessary to reconcile the rules, and the necessary changes will be carried through immediately the proprietors have performed the lengthy voting processes which at present have to be followed when an alteration in the deed is proposed. Firms will then be at liberty to turn themselves into private unlimited liability companies, the directors and shareholders of which will be liable for taxation only on the amount actually received by way of management, remuneration and/or directors' fees and/or dividends. It is understood that the scheme has the tacit approval of the Inland Revenue and that, provided it can be shown that there is a reasonable distribution of profits, amounts placed to reserve will not attract surtax. It should be added that the scheme is purely permissive and that firms which decide to avail themselves of the new right are likely, in nearly all cases, to adopt a nominal capitalisation. The attendant publicity, however, may for a time have some influence on firms which are undecided to make the change, for unlimited companies are required to make substantially the same return to Bush House as limited companies.

The trustees and managers are taking advantage of the opportunity to propose further alterations to the deed of settlement, which are considered necessary in the light of present-day conditions. Resolution No. 2, therefore, covers two objects. The first proposes to enlarge the purposes of the undertaking to enable the Trustees and Managers to acquire property outside the City in anticipation of the need for alternative accommodation during a state of war or other emergency. Under the second head, it is proposed to relax the stringent voting requirements at present involved for the validation of special resolutions for increasing capital or altering the terms of the deed. The serious difficulty in amassing the proportion of votes needed at the stipulated confirmatory meeting was illustrated last year, on the re-financing proposals, though the latter enjoyed virtually unanimous support from all sections of the "House."

Unit Trust Control.—The Prevention of Fraud (Investments) Bill was considered at Committee stage in the House of Lords on Tuesday. Amendments on the general sharepushing clauses of the Bill are mainly of a drafting nature, but clause 16 relating to unit trusts has, in substance, been re-drafted on the lines suggested in *The Economist* last week. The main points in the new clause arise under sub-section 3, which in turn is supported by a Schedule of six paragraphs. The new sub-section provides that the terms of any unit trust deed created before the commencement of the Act may be varied or supplemented by a further deed containing such provisions as may be certified by the Board of Trade, within the scope of the matters specified in the Schedule. With the addition of a paragraph requiring the publication of accounts relating to the trust, the requirements of the Schedule are substantially those which were discussed in last week's article. It is clear that sub-section 3 of clause 16 will act retrospectively on all trusts which desire to become authorised unit trust schemes, and the permissive

"may" in the clause merely enables them to amend the existing terms of their deeds, in cases where this is necessary, without being obliged to make an application to the Court. Secondly, the powers of the Board of Trade to regulate the affairs of unit trusts will be restricted to the six points of the Schedule.

It may be contended that to incorporate a measure of control over the movement, within the framework of the Sharepushing Bill, is not the most satisfactory way of legislating for unit trusts, as we pointed out last week. Much will depend, clearly, upon the requirements which the Board of Trade may certify as being necessary. For example, their powers relating to prices and yields might undoubtedly raise fundamental questions regarding the relative merits of appropriation and cash fund trusts, and this should depend on something more than a mere departmental decision. Some sympathy will undoubtedly be found for an amendment by Lord Buckmaster to require the publication of accounts relating, not merely to the trust, but also to the managers, for if the contentions of the advocates of the cash fund method (that the managers of appropriation trusts are in a position, as principals, to obtain extraneous profits) are valid, the extent of such profits would immediately be apparent if their accounts were published. If, on the other hand, the new clause 16 is regarded as a provisional piece of legislation, pending an opportunity to legislate comprehensively for the movement, it must at least be regarded as an ingenious and probably a workable compromise. It is to be hoped, however, that the Government having decided at the last minute to indulge in a measure of statutory control, will not weaken the clause as it now stands, since it offers scope for improving the security of the unit holder and cannot conceivably operate harshly on either trustees or managers. Reports that certain groups have offered units, in one case through a third party, and in another to existing holders, at a discount, come distinctly inappositely in a week in which questions of unit trust management have been under discussion in the House of Lords.

Electricity Reports

North-Eastern Electric.—Recession had no apparent effect on the fortunes of North-Eastern Electric last year. The report shows a further substantial advance in operating profit and in ordinary earnings. Increased armament work, particularly naval shipbuilding, has presumably offset any falling-off in general industrial activity. Moreover, the company has doubtless benefited from the intensive campaign to develop its domestic supply. Its load is now more diversified, and less vulnerable to trade setback than in the 1931 depression. The results for the past three years are analysed below:—

	1936	1937	1938
Profit	1,244,590	1,410,801	1,509,880
Interest payable	250,806	247,818	244,132
Depreciation and sinking funds	466,770	592,959	646,748
Preference dividends	185,482	185,482	185,482
Ordinary stock:—			
Earned	341,532	384,542	433,518
Paid	333,194	333,194	333,194
Earned %	7.2	8.3	9.9
Paid %	7	7	7
To general reserve	...	...	100,000
Carried forward	166,373	217,721	218,044

The 7 per cent. dividend is now covered by a comfortable margin, and since the depreciation and sinking fund charges would now appear to compare with our standard scale, it may be regarded as a true margin. At 31s. xd. the £1 shares give a yield of £4 10s. per cent. In assessing the prospects of the company, however, it must be remembered that the bulk of its distribution orders are approaching the time when the purchase rights of the local authorities will become operative. In fact, less than

half the existing orders have more than ten years to run. While it is unlikely that the Electricity Commissioners will permit these rights to be exercised, and such a development would be regrettable in view of the outstanding enterprise and efficiency which the company has shown, an extension of its franchise in respect of these various orders might be made subject to restrictions regarding the permissible rate of earnings in the future.

County of London Electric.—This undertaking—the largest electric supply company in the country—again showed a substantial increase in sales of current and revenue last year. Revenue, in fact, increased by 11 per cent., while sales of units rose by 10.4 per cent.—a result which is somewhat surprising, since a large part of the undertaking is subject to the London Electricity No. 1 Act of 1925, under which distributable earnings can only be increased by reduced charges. Net revenue, which includes interest and dividends from subsidiary companies, shows a gain of no less than £345,652, equivalent to 14.5 per cent. The greater part of this gain is available for the ordinary capital, on which earnings, after tax, are some £217,023 higher at £1,037,502. The nominal earnings are equivalent to 20.6 per cent., but this is not necessarily distributable in its entirety, since part of the "surplus" earnings of the London undertaking is presumably included. A comparison of the results for the past three years is given below:—

	1936	1937	1938
Units sold to consumers (mn.)	1,035	1,200	1,325
Increase %	16.7	15.9	10.4
Units sold to C.E.B. (mn.)	831	715	682
Revenue from sales of energy	4,002,900	4,357,847	4,836,632
Trading profit	1,860,290	2,050,869	2,365,522
Net revenue (inc. divs.)	2,120,081	2,378,110	2,723,762
Debt interest, etc.	324,677*	371,841	388,980
Depreciation & sinking funds	699,385	791,796	849,365
Taxation	50,000	100,000	125,000
Preference dividends	282,915	293,994	322,915

Ordinary stock:—			
Earned	763,104	820,479	1,037,502
Paid	599,246	612,371	612,371
Earned %	14.2	15.3	20.6
Paid %	10½	10½	10½
General and No. 2 reserves	150,000	150,000	255,000†
Carried forward	425,289*	483,397	653,527

* Excluding special allocation of £18,241, covered by £42,259 profit on investments realised, balance of £24,018 being added to carry forward. † Including £70,000 for staff superannuation and £35,000 to contingency fund.

It is to be regretted that the company, unlike the Metropolitan Electric, does not segregate the results of the undertaking which is subject to the 1925 Act from the rest of its business. This omission makes the analysis of the accounts difficult, and in view of the ostensibly high rate of earnings shown on the ordinary capital, segregation might be advantageous to the company. Depreciation and sinking fund charges made by the company are also difficult to relate to our standard basis, but it would appear that the actual provisions are, if anything, more than adequate. In December last the company made an issue of 1,250,000 ordinary shares of £1 at 43s. 6d. per share, which will rank for dividend in the current year. On the indicated earnings, the company should not have the slightest difficulty in maintaining last year's distribution of 10½ per cent. on the increased capital. At 44s. 6d. xd. the £1 shares yield £4 14s. 6d. per cent.

Clyde Valley Electrical Power.—This company, which serves a similar economic area as the North-Eastern Electric, shows even more satisfactory results. Net profits last year increased by approximately 10 per cent., as against 7 per cent. in the case of the latter. After again providing £250,000 for the contingency fund—or, strictly speaking, depreciation—earnings available for the ordinary capital show a substantial increase from £210,468 to £266,798. The results for the past three years are analysed below:—

	1936	1937	1938
Revenue from sale of energy	1,023,627	1,175,608	1,334,905
Net profit	439,290	536,327	589,623
To contingency fund	200,000	250,000	250,000
Interest	10,509	17,859	14,825
Preference dividends	58,000	58,000	58,000
Ordinary shares:—			
<i>Earned</i>	170,781	210,468	266,798
<i>Paid</i>	168,000	168,000	205,512
<i>Earned %</i>	8.2	10.7	11.3
<i>Paid %</i>	8	8	8
Carried forward	97,800	140,268	161,314*

* After providing £25,320 for special contributions to super-annuation and writing off £14,921 new issue expenses.

In April last year, the company increased its ordinary capital by 50 per cent. through the issue of one new share for every two held at 20s. On the capital ranking for dividend, the earnings for the year are equivalent to 11.3 per cent., and would cover a dividend of 8 per cent. on the increased capital for a full year with a slight margin to spare. Moreover, the contingency charge of £250,000 is in excess of depreciation calculated on our standard basis by an amount equivalent to approximately 2½ per cent. on the capital now outstanding. Hence, there can be little doubt regarding the company's ability to maintain dividend payments at the rate of 8 per cent.

* * *

A comparison of the company's position with that of the North-Eastern Electric produces some interesting results and explains the company's ability to issue shares on generous bonus terms last year:—

	Clyde Valley Electrical Power £	North-East'n Electric Supply £
Capital expenditure, December 31, 1938	5,910,010	17,523,791
Depreciation, sinking fund and other reserves	2,549,097	3,225,908
Net capital expenditure	3,360,913	14,297,883
Available to meet capital charges, 1938	589,623	1,509,880
<i>Do. as % of net capital expenditure</i>	17.5	10.5
Depreciation charges, etc.	250,000	646,748
<i>Do. as % of net capital expenditure</i>	7.45	4.53
Available for equity capital	266,798	433,518
Equity capital outstanding	3,150,000	4,759,919

At the end of 1938, the Clyde Valley's total depreciation fund and reserves amounted to no less than 42 per cent. of its outstanding capital expenditure, largely as a result of profits ploughed back into the business in the past. In effect, therefore, the balance sheet value of the assets is much lower than their real value. At 36s. 6d. the shares yield £4 8s. on the assumption that the 8 per cent. dividend is maintained.

* * *

London Associated Electricity.—Reviewing the 1937 results of London Associated Electricity, we pointed out that the company was faced by a difficult problem if it

wished to earn additional profits in respect of "shareholders' proportion of consumers' benefit," since there was little margin for any reduction in prices if earnings were to be maintained at a level sufficient to cover the statutory dividend of 7 per cent. and the existing level of sliding-scale profits. The question then posed—whether the directors would make a substantial reduction in prices and face a temporary reduction in earnings in order to encourage an expansion of demand and thus eventually to increase the level of sliding-scale profits—is answered by the 1938 report, which shows that they have, in fact, done so. The figures for the past three years are given below:—

Operating Company	1936	1937	1938
Units sold (millions)	386	419	433
<i>Increase (%)</i>	10.3	8.5	3.2
Revenue from supply	2,612,648	2,736,691	2,615,687

Income tax	...	12,919	25,219
Co-partnership bonus	...	40,953	38,667
<i>Balance available for dividends</i>	559,955	512,806	299,527
Dividends paid "A"	519,184	460,055	446,879
No. 2 reserve fund	5,713	75,000	...
Holding Company			
Net earnings	501,055	445,988	446,841
Preference dividends	120,420	120,420	120,420
Ordinary dividends (7%)	325,556	326,093	326,145
To stockholders' reserves	55,000	...	...

Sales of units increased by 3.2 per cent., but total revenue fell by £107,327, or 3.6 per cent. Cost of current purchased rose by £50,067, and after providing for the normal increase in the sinking funds, the net balance available for dividends is some £213,279 lower at £299,527. The ordinary dividend paid by the operating company is reduced from 7½ per cent. to 7 per cent., but in order to pay this it has been necessary to draw on the carry-forward to the extent of £114,980 after taking credit for profit on investments of £32,373. No appropriation is made to No. 2 reserve fund, against £75,000 in 1937, although the amount which the company was entitled to appropriate, had earnings been available, was undoubtedly much greater than in 1937—possibly of the order of £110,000. The amount carried forward is now only £137,991, and the company could hardly afford to maintain its 1938 level of earnings longer than another year without running the risk of being unable to pay even its statutory dividend. The holding company dividend on its ordinary shares is maintained unchanged at 7 per cent. Superficially, the initial results of the new policy are disappointing, particularly if judged by the small increase in the number of units sold. It is hardly possible, however, to assess the policy on one year's results. An unexpected increase in the cost of current at the same time as a voluntary reduction in sales revenue may have caused a more acute drop in net earnings than was envisaged by the company. The evident necessity to increase sales of current partly explains the company's desire to impose "minimum charges" on certain categories of consumers, to encourage greatly increased consumption, though its effects are perhaps open to debate. At 28s. 9d. the £1 shares yield £4 17s. 6d. per cent.

* * *

South London Electric.—The 1938 report of the company, which is controlled by County of London Electric, shows a surprisingly large gain in the number of consumers supplied of 5,713 to 44,233. The gain in units sold, at 7.3 per cent., is more than double that of the London Associated Electricity, and revenue from the sale of current has increased almost proportionately. The results for the past three years are shown on the opposite page.

	1936	1937	1938
Units sold ('000)	55,810	63,930	68,596
<i>Increase %</i>	21.1	14.5	7.3
£	£	£	£
Sale of current, etc.	356,571	401,787	426,382
Cost of purchased current	163,618	184,192	207,759
Net revenue	121,205	138,260	130,764
Sinking funds, etc.	46,723	53,826	62,324
<i>Earned for ordinary capital</i>	56,682	65,839	44,768
Ordinary dividend	37,346	37,346	37,346
<i>Earned %</i>	11.8	14.1	8.9
<i>Paid %</i>	7	7	7
To No. 2 reserve	14,743	19,386	22,444
Carried forward	17,932	27,039	17,017*

* Includes £5,000 from investment reserve not required.

The balance available for dividends shows a sharp fall, largely owing to increased cost of current. While the statutory dividend of 7 per cent. is still covered, the "shareholders' proportion of consumers' benefit" carried to the No. 2 reserve fund, which is equivalent to an additional 4½ per cent. on the ordinary capital, is only earned to the extent of under 2 per cent. Here, again, an unexpected increase in the cost of current has probably unbalanced the careful calculations of the management regarding the amount of surplus dividends which could be earned. On the regular dividend of 7 per cent. the £1 shares at 29s. 6d. yield £4 15s. per cent.

Company Notes

Outlook for Courtaulds.—Stockholders will find several points of encouragement in Mr Samuel Courtauld's speech at this week's meeting. His explanation of dividend policy, confirming the suggestion made in these columns, shows that last year's generous declaration implies "a reasonable probability" that earnings will cover the same rate for the current year. On the trading outlook, the speech falls into two sharply divided parts. In the home trade, a moderate increase in the volume of business is possible. And in conjunction with lower wood-pulp costs and stabilised prices, at a higher level, the implication of higher profits from this branch is clear. So far, the price arrangement is of a friendly and informal nature, and a long-period basis of agreement is still under discussion with British Celanese. But in the United States, neither the course of rayon sales nor the level of prices provided Mr Courtauld with justification for forecasting "any substantial change for the better" this year. Even if this judgment were to prove unduly reserved, a marked improvement in the position of American Viscose in the second half of this year would not, judging from past practice, swell Courtaulds' profits until 1940. On these grounds the chairman's cautious estimates seem entirely reasonable. But looking further ahead, stockholders may well feel satisfied with the progress of new products and technical improvement. "Nylon" has been in this week's headlines, and undoubtedly the agreement between Courtaulds and Imperial Chemical Industries to form a joint company to manufacture this new yarn (recently patented by du Pont de Nemours) shows that the company is abreast of every technical development. In terms of immediate profits, of course, the new material will not be a dominant factor, for the initial plant will be small, and it will not, at first at least, enjoy so wide a market as the new du Pont plant, which is to cost, in all, over \$10 millions, and will not be completed before next year. Meanwhile, however, there are potential economies to be won at home. The new Preston factory at which operations are commencing on a small scale, is expected to show very important savings. And the two staple fibre plants at Greenfield (the first is now working to full capacity and the second to 70 per cent.) would produce better financial results if cotton and wool prices were at less acutely competitive levels. These are points of substance for the long-term investor, even if the immediate profits outlook is limited to a natural rebound from the bitter experience of 1938.

Canadian Pacific Reverse.—For a month past preference stockholders of Canadian Pacific have awaited the results of a year which proved barren of dividend. The announcement of the passing of the preference dividend was accompanied by a statement that a "modest surplus" was actually available, after providing for expenses and depreciation. This proves to be equivalent to 0.92 per cent. on the preference capital. Gross railway earnings fell last year from \$145,085,558 to \$142,258,981, and working expenses were in fact slightly higher, at \$121,506,515 against \$121,342,311. Hence net railway earnings were reduced from \$23,742,247 to \$20,752,466. So much, however, was already known. This week's statement, therefore, is chiefly interesting for the light it throws on other income and expenses, whose movements are analysed in the table below:—

	(In \$'000's)		
	1936	1937	1938
Railway:			
Gross earnings	138,563	145,085	142,259
Working expenses	115,252	121,343	121,507
Net earnings	23,311	23,742	20,752
Other income:			
Dividends, etc.	5,188	8,204	6,360
Steamships	Dr. 14*	2,459*	591*
Hotels, etc.	1,457	967†	413†
Total income	29,942	35,372	28,116
Rentals and interest	23,913	24,042	24,768
Interest on "Soo" bonds, etc.	...	1,868	2,086
Available for dividends	6,029	9,462	1,262
Pref. div.	1,372(1%)	2,745(2%)	Nil
"Soo" interest deficiency	3,660	3,849	...
Loss on lines abandoned, etc.	3,341	2,822	1,498
Carried forward	137,160	137,206	136,970

* After depreciation: 1936, \$3,567,151; 1937, \$3,894,469; 1938, \$3,781,990. † After depreciation: 1937, \$1,257,598; 1938, \$1,246,687.

Other income, after providing for depreciation, has fallen markedly from \$11,629,711 to \$7,363,673. Dividend receipts show the expected setback, due mainly to the fall of \$1,682,500 in Consolidated Mining and Smelting dividends. But steamship earnings have slumped from \$2,458,832 to \$591,071, after providing a slightly reduced sum for depreciation last year, and there is a further sharp fall in hotel and communications income to \$412,865. The combined loss of revenue under these heads accounts for the bulk of the fall in total income from \$35,371,958 to \$28,116,139. No reduction in the interest obligations for Minneapolis, St. Paul and Sault Ste. Marie first mortgage bonds became effective last year—Canadian Pacific's liability actually expired on July 1st last. Hence a charge of \$2,085,818 is made in respect of interest guarantees, although no provision is required from surplus to reduce the investment in the "Soo" line in respect of advances. Sir Edward Beatty has argued that provisions for loss on lines abandoned (reduced last year from \$2,495,362 to \$1,402,349) should exert no influence on dividend policy. Yet it is difficult entirely to dissociate the passing of the preference dividend from this factor. To date, the company shows a loss of \$794,000 in gross receipts, but on the other hand considerable savings will arise from the lapse of the main "Soo" guarantees, which will in future apparently leave a maximum annual charge of \$1,273,830. This reduction, however, scarcely compensates for the lack of encouraging features in last year's operating results.

* * *

Lever Produce Companies.—Before the end of the 1936-37 financial period, it was already apparent that produce and merchandising companies in West Africa were facing a difficult time. The cocoa hold-up, low prices, and the exceptionally high stocks held by trading concerns presented a formidable combination of difficulty, which in the case of United Africa Co. has overlapped two financial years, with somewhat paradoxical results. Normal prosperity in the earlier part of 1936-37 more than offset the effects of low prices and the hold-up, and trading profits rose from £1,752,744 to £2,127,412. Last April, producers

began to release the cocoa crop, but, since prices have continued to be very low, the increase in trading has been accompanied by a halving of profits to £1,066,130, while the dividend is reduced from 11 per cent. to 6½ per cent. Roughly half the fall in total profits was due to merchandise and produce business in West Africa, and profits from the ancillary businesses actually rose from £670,990 to £767,672. The consequences for African and Eastern Trade Corporation, thanks to the 6½ per cent. payment only barely covered by earnings, have been tempered, although total profits are reduced to £105,905 against £184,129. The available surplus, however, is sufficient to pay only 8 per cent. on the 12 per cent. non-cumulative preferred ordinary shares, and the ordinary stock receives nothing, against 11 per cent. The decline in United Africa profits falls more heavily on the controlling company, Niger Co., whose net profits have dropped to £186,565, against £982,640. The general reserve is re-instated with an allocation of £300,000 (the reserve was used up a year ago by the £2,875,000 bonus issue), but this transfer involves a reduction in the carry-forward. Results such as these are in contrast with the satisfactory trading in 1938 of the Home and Colonial retail trading group. This week the preliminary statements of three of the four companies have been followed by the full reports, and by the Lipton results, which show a rise in total profits from £158,253 to £197,113. A feature of the Maypole Dairy balance sheet is the rise in cash holdings, since January, 1937, from £141,000 to £583,000.

Crown Mines.—There are no surprises in the report of the Rand's largest gold producer. Tonnage milled during the year, at 4,237,000 tons, showed a decline of 21,000 tons, but the yield was slightly increased at 1,026,666 fine ounces, due to an increase of .041 dwt. in the yield per ton. Notwithstanding this and a rise in the revenue per ton by 8d. to 34s. 6d., the working profit came out at only 14s. 7d., a decline of 2d., due to a rise in working costs of 10d. per ton. Some £43,020 less was required for taxation; but the net profit was £23,562 lower at £1,858,258. This covers the dividend maintained at 19s., with a small margin and, after providing £59,169 for capital expenditure, leaves an unappropriated balance of £62,779, representing a decline of £12,759. One penny of the increased costs is due to the expenditure of 1s. 54d. per ton on development as against 1s. 44d. in the preceding year. The development footage accomplished, however, was slightly lower at 144,995 feet. Development results showed no marked change and were generally satisfactory. A minor feature of interest is the increase in the ore mined from the Main Reef which in 1938 formed 5.9 per cent. of the total as against 5.5 per cent. The tonnage is drawn principally from two reefs, the Main Reef Leader and the South Reef. Thirty years ago, as much as 25 per cent. was obtained from the Main Reef. This fell to only 1 per cent. in 1931, but it has since been gradually rising. The reduction in the pay limit has led to a revival of interest in this reef and more active exploration is being undertaken. Last year the chairman stated

that in the vicinity of the No. 4 shaft down to the fixed level some encouraging values had been encountered, and that work in this direction might eventually result in a not inconsiderable tonnage becoming available for inclusion in the ore reserves. The present report shows that the No. 2 shaft has been re-equipped with headgear and winding plant and is being re-timbered for use in opening up and mining the Main Reef in the upper levels of the Eastern section of the mine. Ore reserves at December 31, 1938, show an increase of 501,200 tons, but a decline of 0.1 dwt. in value. Available ore reserves, excluding shaft and safety pillars, at 20,051,400 tons, are five years ahead of the mill. The 10s. shares at 15½ yield 6 per cent., and this moderate return, not seasoned by the prospect of any expansion programme, reflects the reliable technical position and long prospective life of the mine.

The Week's Company Profits.—This week our usual analysis of profit and loss accounts, appearing on page 595, comprises 65 companies, excluding banks and businesses for which comparable figures are not available. Net profits of these companies are £10,981,000 (a high figure due largely to the inclusion of electricity companies, and several Unilever companies) against £12,415,000, a decline of 11½ per cent. Aggregate net profits of the 495 companies reporting to date in 1939 are £65,363,000, or 9½ per cent. lower than the £72,068,000 earned a year ago. The week's results are discussed in preceding Notes and on page 580 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue reports of company meetings begin on page 585. At the *North Metropolitan Electric Power Supply Company* meeting Sir James Devonshire pointed out that the combined total capital expenditure of the company and its two subsidiaries was £14,630,887 and further extension of the Brimsdown "B" generating station had been begun. Mr C. B. Colston, in his address to *Hoover* members, stressed the attention the company paid to research. Since 1921 over £1,000,000 had been spent on this purpose. The different branches of the company's work were reviewed by Mr Colin F. Campbell at the *Telegraph Construction and Maintenance Company* meeting. Despite a reduced demand for miscellaneous cables, that branch had maintained its financial results owing to improved organisation. At the *London and Lomond Investment Trust* meeting the Hon. W. B. L. Barrington pointed out that the reduced income was due in part to the policy of seeking greater stability as a protection against depression in the future. Addressing *Consolidated Mines Selection* members, Mr S. S. Taylor discussed the promising nature of their Grootvlei Proprietary interest, which was expected to pay a first dividend this year. At the *Illustrated Newspapers* meeting Lord Southwood pointed out that the satisfactory results for 1938 had been in part due to the exceptionally good profits of *Illustrated London News* and *Sketch*, Ltd., in 1937, when the special Coronation issues proved extremely profitable.

London

SETTLING DAYS

TICKET	ACCOUNT
MARCH 21	MARCH 23

THE first political shadows which fell on the market on Monday and Tuesday this week gave no hint of the storm which was to follow. It is true that the immediate consequence has not produced an extreme wave of selling, but a relatively considerable marking down of prices has occurred. The *Financial News* index of ordinary shares which stood at 88.0 at the end of last week,

had fallen by Thursday's close to 84.9—a sharp movement, but in no way suggestive of panic. If it is conceded that the market was in any case ripe for a technical reaction, after a rise of nearly 20 per cent. in the previous five weeks, the week's falls are far less extreme than their provocation.

In the *gilt-edged market*, nervousness was marked on Monday by falls ranging from ½ to ¾, but after initial losses, ranging from ½ on Tuesday, the irredeemable stocks closed unchanged. For the greater part of Wednesday, relatively steady conditions prevailed, until shortly before the close, when a bout of professional selling depressed the undated stocks to the extent of half a point. After further marking down at

the opening on Thursday, *gilt-edged* became steadier, War Loan closing unchanged at 97½. Home corporation stocks remained relatively firm, and earlier in the week, at least, some demand was reported for New Zealand stocks.

In the *foreign bond market*, Czech bonds were marked down in sharp steps and subjected to a fair amount of selling. The 8's started the week at 69, had fallen to 47 by Wednesday, and on Thursday slumped further to 39½. German loans also weakened but to a relatively moderate extent, the Young Loan reaching 29½. In mid-week Roumanian bonds fell back in sympathy. Brazilian issues were unsettled. They relapsed from the previous week's

firmness, recovered and then weakened again.

Home rails began in uninspiring fashion, but returned to favour on traffic hopes. In mid-week, the predominance of politics and slight disappointment with the traffics brought some reaction. The preference stocks did best in the rally and were the worst sufferers in Wednesday's setback. Early brightness in Argentine rails on news that combined services were now permissible was soon extinguished by the market's other preoccupations. Brazilian rails reacted after some speculative support.

The effect on *industrials* of European developments has been to wipe out a proportion of the advances recorded over the past month. But although on the whole prices have sagged persistently owing to precautionary marking-down and lack of buyers, there has been no real selling pressure, and business has been quiet. There is a greater tendency to await developments than to take alarmist views.

Iron and steel shares were not unaffected by the general weak tendency, but were relatively resistant, and net losses were nearly always small. Neepsend Steel made a delayed response to the increased interim. Coal shares also were a firm but neglected market. The engineering section was easier for choice, though Hawthorn Leslie improved on the dividend announcement. Electrical equipment issues were dull. Motors made a mixed showing, for they lost ground on Monday in spite of the registration figures, then became steadier, while in mid-week there was renewed uncertainty. Aircraft issues weakened further on prospects of profit limitation. Early in the week textiles reacted from their previous strength, but picked up considerably later on. In the rayon group, Courtaulds advanced on news of the "Nylon" developments, but gave way after the meeting. Breweries were irregular, and movements mostly downwards. Tobacco shares also lost ground, but movements were small. Stores and provision and catering issues followed the general trend. Miscellaneous issues were irregular and prices sagged on the whole. After the reduced dividend, Pinchin Johnson ended lower on balance after some fluctuation. Dunlop Rubber rose on dividend hopes, but reacted on profit-taking.

Leaders in the *oil market* showed resistance at times, but the tone was somewhat heavy. There was considerable business in Mexican Eagles on hopes of settlement of the Mexican dispute, but in mid-week quotations were more irregular in the absence of specific news.

The broadening of interest apparent in recent weeks in the *rubber market* was checked. Selling was only scattered, though lack of buyers led to a small but general marking down. Apart from an unexpected show of interest on Tuesday, tea shares were neglected and mostly lower.

The *mining market* succumbed to general influences. Prices sagged, the amount of business was small, and the tone altogether hesitant. In Kaffirs, the developing mines proved the most sensitive. The volume of selling never became large, but most prices gave way. West African issues were quiet in common with other sections. No interest

was shown in Rhodesian coppers, which tended to slip back, and other base metals were similarly weaker.

New York

WALL STREET's reaction to European news came rather late, but it was corresponding violent when news of the

cancellation of the Anglo-German trade talks brought full realisation of what was happening. The tendency on Monday was dull and slightly weak, the market only devoting half its attention to the Czech situation, and preferring to await the President's Relief Message to Congress before deciding which way to jump. In the event the Message did not really clarify the Administration's intentions concerning appeasement, nor did the remarks on relief cause surprise, while Czech news restrained speculators. But in spite of the lack of really fresh developments, the market recovered some of Monday's small losses, largely on rumours of a plan to reduce margin requirements on stock commitments. On Wednesday, however, prices broke sharply in a wave of indiscriminate selling. In the afternoon, the retreat became much more orderly and further losses were not severe, but the Dow industrial index was almost 3½ points down on the day. Specific business news was neglected, owing to preoccupation with politics. Rails, however, were weak on Monday on failure of the New Jersey railroads to obtain a review of the New Jersey tax case. Steel mill activity for the current week is estimated by the American Iron and Steel Institute at 55.7 per cent. of capacity against 55.1 per cent. a week ago.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

1939 (New Basis)	16,210,369	1,400,046	12,547,721
1938 (New Basis)	18,461,099	3,432,846	16,926,323
1939 (Old Basis)	13,037,635	712,697	5,083,219
1938 (Old Basis)	14,084,122	2,135,722	8,171,349

NOTE.—"Old Basis" includes only public issues and issues to shareholders only. "New Basis" includes all new capital in which permission to deal has been granted.

BY STOCK EXCHANGE

INTRODUCTION

Full-Fashioned Hosiery Company.—Particulars of issue of £100,000 5 per cent. first mortgage debenture stock, redeemable at par by July, 1950, by drawings from 1940. Messrs. Robert Benson and Company take the issue at par.

Lewis's Investment Trust.—Particulars of issue of 500,000 5 per cent. cumulative second £1 preference shares. Lewis's Bank, Ltd., take half the issue, and Messrs. Cazenove Akroyds and Greenwood and Company the remainder, at par less 3d. in each case.

PRIVATE PLACING

Sheffield and District Gas Company.—Placing of £500,000 4 per cent. debenture stock 1959-64, of which £485,000 is required for repaying mortgages due July, 1939.

FORTHCOMING ISSUES

Squires Gate Blackpool Holiday Camp.—Lists will open and close on March 21st for an issue of 100,000 6 per cent. redeemable cumulative £1 preference shares at par and 168,320 5s. ordinary shares at 6s. 3d. Profits: 1936, £7,024; 1937, £14,036; 1938, £12,915. After extensions, etc., expected profits £31,400.

S. Guiterman and Company.—Lists will open and close on March 22nd for an offer for sale of 55,000 6½ per cent. cumulative participating redeemable £1 preference shares at par, and 299,930 2s. ordinary shares at 2s. 3d. Distributors of machine tools, motor parts, etc. The offer will contain a 30-year table of profits; profit for 1938 was £26,223.

SHORTER COMMENTS

Company Results of the Week.—Among financial trusts, LAW LAND COMPANY repeat the 9 per cent. dividend, despite a small decline in profits. In the engineering group, DAVIS & TIMMINS net profits have fallen from £42,922 to £33,950, and the dividend is reduced. London stores reports continue to show reduced profits. The trading profits of FREDERICK GORRINGE amount to £33,860 against £38,538, while MAPPIN AND WEBB, who maintain the dividend, have also experienced a slight reduction in earnings. A reduction in BRITISH OIL AND CAKE MILLS net profit is entirely due to higher taxation, for total profits are slightly larger at £775,288. Assets of subsidiaries are now included in the parent company's balance sheet, which reaches a total of over £9,500,000. Last year, BRITISH THOMSON - HOUSTON COMPANY received a rather lower volume of orders than in 1937, but actual output reached a new high record, and net profits are slightly higher at £580,987 against £573,168. INVERESK PAPER resume dividends with a 6 per cent. distribution, though net profits are a trifle lower owing to increased taxation. Consolidated total profits, however, amount to £745,005 against £814,555, for higher costs and reduced demand for paper were only in part offset

by economies arising from capital expenditure. PEEK FREAN, whose accounts are again presented in the improved form adopted a year ago, report a sharp recovery in total profits, from £72,192 to £115,808, a figure which surpasses the 1936 level. The report of UPSONS, LTD., provides another example where a slight reduction in net profits is entirely due to higher taxation. Total profits are some £7,000 higher at £183,567, after allowing for the fact that part of the 1937 earnings was of a capital nature. The reduction in PINCHIN JOHNSON AND COMPANY net profits from £293,593 to £199,882 is of some magnitude. Sales were well maintained in 1938 until the end of May, and recovered in November, but in the intervening period business fell off decidedly.

BANKS

Imperial Bank of India.—Net profit for half year to December 31, 1938, is Rs. 39,35,096, against Rs. 36,90,102 for same half year in 1937. Dividend 12 per cent. per annum, tax free, as before, absorbing Rs. 33,75,000. To reserve, Rs. 2,50,000 (nil). To pensions, Rs. 70,000 (Rs. 38,600). To premises, Rs. 2,50,000 (same). Carry forward, Rs. 30,40,043 (Rs. 30,41,605).

The Yokohama Specie Bank, Ltd.—The accounts for the half year ended December 31, 1938, show net profit Yen 16,683,793, including Yen 10,422,028 brought forward from the preceding half-year. The amount was distributed as follows: To reserve fund, Yen 1,250,000; dividend at 10 per cent. per annum, Yen 5,000,000; balance carried forward Yen 10,433,793. Total reserve fund, Yen 138,400,000.

Anglo-Portuguese Colonial and Overseas Bank.—Net profit for year to January 31, 1939, £227 (£16,076); forward, £65,808 (£65,581). Balance sheet shows deposits, £1,669,517 (£1,261,680); acceptances, £786,374 (£803,801); cash, £814,438 (£590,214); balances with banks abroad, £104,595 (£50,716); bills discounted, £1,028,467 (£874,025); investments, £469,796 (£540,497); advances, £500,983 (£304,322).

MISCELLANEOUS

Meadow Dairy.—Full report shows trading profits of £159,065 for 53 weeks, against £156,346 for 52 weeks. Net profits, £141,611 (£139,341); tax, £14,000 (£12,000); N.D.C., £4,500. To staff fund, £10,000 (same); ordinary dividend, 5 per cent. (same). Carry forward, £50,808 (£39,022).

Lipton, Ltd.—Full report shows total profits of £197,114 for 53 weeks (£158,253 for 52 weeks). Net profits, £79,248 (£38,403); tax, £5,000 (£12,000); N.D.C., £2,000 (£500). Dividend of 6 per cent. absorbs £67,500; in 1937, £25,903 balance of profits was distributed. Carry forward, £4,748.

Maypole Dairy.—Full report shows trading profits for 53 weeks of £420,840, against £373,362 for 52 weeks. Net profit, £395,709 (£346,946); tax, £35,000 (£25,000); N.D.C., £15,600 (£10,650). Deferred ordinary dividend 2 per cent. higher at 9 per cent.; provident fund receives £20,000 (£15,000); to reserve, £10,000 (same). Carry forward, £302,579, against £289,220.

Home and Colonial Stores.—Full report shows that trading profits have risen from £267,028 (for 52 weeks) to £349,285 (for 53 weeks). Dividends received, £34,252 against £28,791; total profits, £384,053 against £296,494. Net profits are £89,381 higher at £321,174, before tax. Tax, £34,000 (£24,000); N.D.C., £5,600 (£3,000); staff fund, £20,000 (same). Ordinary dividend 3 per cent. Carry forward, £188,931 to £208,914.

Thos. Firth and John Brown, Ltd.—Net profit for 1938, £515,056, against £537,681. Final ordinary dividend, 11½ per cent., free of tax, making 17½ per cent., free of tax, for 1938 (the same).

Industry and Trade

A Scottish Iron and Steel Merger.—The proposed fusion of the interests of William Baird and Company, Limited, and the Scottish Iron and Steel Company, Limited, announced last Saturday, is a further step in the consolidation of the iron and steel industry in Scotland. Messrs William Baird and Company were not previously associated with the steel industry, their activities being confined to the mining of iron ore in Sierra Leone and Spain, of coal in Scotland, and to the manufacture of pig iron at the Gartsherrie Works, Coatbridge. The Scottish Iron and Steel Company, Limited, was originally formed in 1912 by the fusion of thirteen firms engaged in the manufacture of wrought iron in the Motherwell and Coatbridge districts of Scotland. Wrought iron is still manufactured in the puddling furnaces of the company at its Waverley, Rochsolloch, Woodside and Coats works in Coatbridge, but the decline in the demand for iron in recent years turned the activities of the firm increasingly to steel-making. By this fusion of interests Messrs Baird have assured a steady outlet for at least a portion of their pig-iron production, backed by extensive raw material resources. They have always enjoyed a large share of the important trade in foundry pig iron used by the makers of domestic cooking and heating appliances in the Falkirk district and by the makers of cast-iron pipes, rhones and gutters in the Possilpark and Maryhill districts of Glasgow. Some years ago Messrs Baird offered coke-oven gas to the Glasgow Corporation at a price with which the municipal undertakings could not compete, but the proposal was turned down by the Socialist majority in the city council. The problem of finding an outlet for the surplus coke-oven gas may now be solved by its conveyance by pipe-line from Gartsherrie to the Northburn steelworks, the distance between the two plants being just over a mile. It is even possible that molten pig-iron may be conveyed by rail to the steelworks. The assurance of adequate supplies of pig iron, both for puddling and for steel smelting, is of considerable importance to the Scottish Iron and Steel Company at a time when there is again a possibility of a raw material shortage. Scrap supplies have been declining, and the anxiety of the steelmakers to prevent another shortage is revealed by the fact that a delegation has been sent to the United States for the purpose of buying scrap. It may be noted, in passing, that in the light of the present position the selling of both scrap and pig iron at a loss to Germany last autumn revealed a singular lack of prevision.

It will be interesting to see whether and how far the new combine will be able to expand its steel-making activities. The Colville group, firmly entrenched in Scotland, is associated with the shipbuilding and engineering firms of Harland and Wolff, John Brown and Company, The Fairfield Shipbuilding and Engineering Company, Lithgows, Babcock and Wilcox, and others, but there are still "independent" yards such as those of the Scotts Shipbuilding and Engineering Company at Greenock, and of the Caledon and Burntisland Shipbuilding companies on the East Coast of Scotland. In the constructional steel industry, Redpath, Brown and Company are associated with Dorman Long and Sir William Arrol and Company with the Colville group, but there are still "unattached" firms like A. & J. Main and Company, the Glasgow Steel Roofing Company, and William Bain and Company of Coatbridge, all of whom are important consumers. The new combine appears to be to the mutual advantage of its two constituent members and since the fusion is expected to lead to a reduction in costs, its prospects appear not unpromising, especially as it is possessed of substantial liquid capital resources.

Fall in Merchant Shipbuilding.—The Government is expected shortly to disclose its policy concerning the shipping and shipbuilding industries. Meanwhile, the position of the shipbuilding industry continues to deteriorate. The following table, based on the *Shipping World's* estimate, shows the tonnage of ocean-going merchant vessels under construction at the end of last February and a year ago:—

MERCHANT VESSELS UNDER CONSTRUCTION (In thousands of gross tons)

District	Liners		Cargo Vessels		Tankers	
	Feb., 1938	Feb., 1939	Feb., 1938	Feb., 1939	Feb., 1938	Feb., 1939
Clyde	239	173	54	...	127	78
Scottish outports	31	26	40	...	...	7
North-east Coast	125	51	178	54	155	70
Rest of England	78	34	...	...	16	8
Belfast	114	84	...	...	8	...
Total	588	369	272	59	306	163
Of which launched	106	203	52	22	3	68
Of which on stocks or order	482	166	220	37	303	96

The total number of ocean-going merchant vessels under construction at the end of last month was only 61, against 150 a year ago, and their tonnage has fallen from 1,165,936 gross to 591,364 gross. Moreover, a substantial proportion of the vessels still under construction have already been launched. In the absence of an early increase in new orders, the volume of merchant work on hand will soon be insignificant.

Cotton Spinners' Price Scheme.—The committee of the American cotton spinners in the Lancashire cotton industry have recently had under consideration the details of a price scheme for all yarns made from American cotton. The scheme will affect some 200 mills, controlling 20 million spindles. The stage has now been reached when draft proposals have been drawn up, and after slight modifications at a meeting this week the scheme is now ready for circulation to the trade. The prospects of what would be the most comprehensive agreement yet concluded have heightened with the improvement in Lancashire trade, which has already led to an advance in American yarn prices. This week the Lancashire Cotton Corporation raised its prices for certain qualities by another ¼d. per lb., the second increase within a fortnight. If the scheme obtains sufficient support, the new rates will be brought into force immediately. The wider implications of the growth of cartelisation in British industry are discussed in an article on page 551.

Polish Coal Exports.—At the recent meeting in Paris of representatives of the British and Polish coal owners no alterations were made in the existing Anglo-Polish agreement, but its future application and its adaptation to the prospective European coal agreement were

OTARD'S EST. 1795
V.S.O.P.
LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

discussed. In view of the imminent resumption of the talks the following details of the trend of Polish coal exports during the last four years may be of interest:—

POLISH COAL EXPORTS

	1935	1936	1937	1938
Total exports (thous. metr. tons)	8,906	8,362	11,003	11,669
Value (thous. zloty)	131,136	129,865	185,048	217,416
Value (zloty per ton)	14.72	15.53	16.82	18.63
Exports (thous. tons) to:—				
Czecho-Slovakia	212	30	48	476
Germany	7	6	1	782
Hungary	3	11	16	43
Exports to above countries as a percentage of the total	2.5	0.6	0.6	11.2
Bunker exports (thous. tons)	567	645	1,146	1,786

During the last few months of 1938 Polish coal exports rose sharply; they were 3.4 million tons during the last quarter of 1938, against 2.9 million tons in the previous quarter. This increase, due to the acquisition by Poland of the former Czech Karwin mines, found its way almost entirely back to Czecho-Slovakia, although exports to Hungary also rose substantially. Since exports to these countries are not included in the quota scheme under the Anglo-Polish agreement, no major disturbances of the pact are to be expected for the time being. The latest developments in Czecho-Slovakia, however, will raise new problems with regard to the sale of the additional Polish coal output.

* * *

Overseas Trade in February.—The value of British imports declined sharply between January and February, by £10 millions, but about half of this fall can be ascribed to the shorter working month. There was also a fall in the volume of imports of many industrial raw materials, reflected in the drop in *The Economist* index of raw material imports (1935 = 100) from 94½ in January to 92 in February. The value of British exports was 1.3 per cent. higher in February than in the corresponding month a year ago, but this rise was entirely due

U.K. IMPORTS AND EXPORTS
(£000)

	1937	1938	1939	Change between 1938 and 1939
February				
Total Imports	71,712	75,794	65,516	-10,278
British Exports	38,572	37,559	38,052	+ 493
Re-exports	6,928	5,528	4,772	- 756
Total Exports	45,500	43,086	42,825	- 261
Excess of Imports over Exports	26,212	32,708	22,691	-10,017
Transshipments under bond	3,092	2,461	2,349	- 112
Two Months ended February				
Total Imports	147,331	160,633	140,905	-19,728
British Exports	77,656	78,744	77,530	- 1,214
Re-exports	12,030	10,323	9,366	- 957
Total Exports	89,685	89,066	86,895	- 2,171
Excess of Imports over Exports	57,646	71,567	54,010	-17,557
Transshipments under bond	6,041	5,319	5,161	- 158

to the export last month of three warships, valued at £1.8 millions; if this item is excluded, the value of British exports fell by 2.4 per cent., compared with February, 1938. Compared with the previous month of January, the value of British exports showed a slight decline, but when allowance is made for the shorter month,

The Economist index of the exports of British manufactures (1935 = 100) rose from 100 in January to 105½ in February; about half of this rise must be ascribed to the greater tonnage of warships exported.

* * *

Overseas Trade in Commodities.—The revival in the iron and steel trade is reflected in the rise in imports of iron and steel scrap, and imports of wool also showed a slight increase between January and February, but imports of most of the other commodities included in the first table given here were smaller in February than in

RETAINED IMPORTS—MONTH OF FEBRUARY

Item and Measure	1937	1938	1939

Motor vehicles and chassis	478	823	758
	8,365	9,161	6,907

January, or than in February, 1938. Similarly, the improvement in these two trades in recent months has been accompanied by an increase in the exports of iron and steel manufactures, of machinery and of woollen tops and yarns, but exports of the other commodities given in the table of exports were generally lower in February than in the previous month.

* * *

America's Oil Reserves.—The oil reserves of the United States seem to be as inexhaustible as the widow's cruse in the Old Testament story. On January 1, 1938, the country's proved reserves were estimated by the American Petroleum Institute at 15,507 million barrels—a barrel being about one-seventh of a ton. In the past year 1,213 million barrels were taken from the ground, yet the latest estimate of the A.P.I., relating to the beginning of the present year, puts proved reserves at 17,348 million barrels. Proved reserves, therefore, rose last year by no less than 1,841 million barrels, although production was only slightly below the 1937 record. This apparent inconsistency is explained by the fact that the A.P.I. figures refer only to reserves which have actually been proved by drilling operations and which are recoverable on a commercial basis by existing methods of production. Low estimates of reserves are assigned to pools which have been insufficiently tested, while no allowance at all is made for potential discoveries in geological structures known to be favourable for the accumulation of oil. With every extension of exploration work and every improvement in methods of production, reserves are therefore increased. Of last year's gross increase of 3,054 million barrels in

proved reserves no less than 2,244 million barrels were accounted for by upward revisions in estimates relating to fields already known a year earlier; the remaining 810 millions were attributable to new discoveries made during 1938.

* * *

In view of the persistence of rumours of an impending exhaustion of the world's mineral oil resources, it may be of interest to note that American reserves were estimated in 1914 at a mere 6,000 million barrels. This figure was alleged to cover oil in all known and possible oil-bearing structures, by whatever method extracted. As recently as 1925, moreover, the first A.P.I. estimate put *proved* reserves as low as 5,000 million barrels. Some 18,000 million barrels of crude oil have been produced since the first of these estimates was made and over 13,000 millions since the second—yet proved reserves are now higher than ever. In the light of this experience, anxiety regarding future mineral oil supplies is clearly unjustified. It is impossible in the present state of knowledge even to guess at the amount of oil actually remaining in the sub-soil of the United States. And there are enormous reservoirs in various parts of the world—in the Near East and Russia, for example—which are likely to remain untouched for years to come.

* * *

Sugar Prospects.—The London price of raw sugar rose by nearly 25 per cent. to about 6s. 4d. per ton in the last two months of 1938, when it became apparent that the very poor European beet crops would lead to a substantial increase in the purchases of importing countries. During the current year prices have moved within narrow limits, and the present quotation at 6s. 3d. per ton is slightly lower than the figures for the end of 1938. The stagnation of the market is partly due to seasonal influences, since the supplies of Empire sugar to the United Kingdom are at a maximum in the early months of the year; the market is also affected by the uncertain prospects for the third quota year, which begins on September 1, 1939. Under the international agreement the quotas for the next season stand at 3,695,000 metric tons. According to F. O. Licht's preliminary estimate, however, free market requirements in 1939-40 will not be higher than 3,183,000 metric tons, of which anything between 100,000 and 150,000 tons may be supplied by non-agreement countries. There is thus a wide gap between the quotas and requirements. Unfortunately, the International Sugar Council's right to reduce the quota by 5 per cent. terminates at the end of this season, and in future cuts in the quotas may only be decided by unanimous votes. Consequently an equilibrium between supplies and requirements can only be achieved by large voluntary surrenders of quotas. There are, however, prospects of an increase in production in a number of countries next season; Germany, one of the largest potential exporters of beet sugar, has just ordered the resumption of sugar exports after an interruption of years in which the country actually imported small quantities of the product. Last week, both the chairman and the secretary of the International Sugar Council visited Prague and Budapest

in order to discuss questions connected with the political changes which occurred in Central Europe last September. Whatever arrangements may have been made during that visit have again been disturbed by the events of the last week. For the season ended in August, 1938, Czecho-Slovakia was allotted an export quota of 323,000 metric tons and did in fact export 320,000 tons, mainly to Italy, Hamburg and Switzerland; it is presumed that her export quota will now be amalgamated with that of Germany.

* * *

Further Rise in British Prices.—The upward trend in the prices of sensitive commodities in this country, which began in the latter part of February, continued during the past fortnight. The improvement is reflected in the slight rise in *The Economist's* price index for primary products as well as in our more comprehensive complete index. The figures for the United States, on the other hand, indicate a lull in the upward movement across the Atlantic. In France wholesale prices have tended to advance, but the latest official German index remains unchanged:—

† Monthly average.

Details of the constituent series of *The Economist's* Complete index for this country are given below:—

	(1927=100)	Sept. 18, 1931	Mar. 16, 1931	Mar. 1, 1939	Mar. 15, 1939
Cereals and meat...	64.5	86.5	68.5	68.4	68.4
Other foods	62.2	60.2	59.9	59.6	59.6
Textiles	43.7	56.5	53.5	53.8	53.8
Minerals	67.4	95.4	90.7	91.5	91.5
Miscellaneous	65.8	77.6	74.6	74.7	74.7
Complete index	60.4	74.8	68.9	69.1	69.1
1913 = 100	83.1	103.0	94.9	95.2	95.2
1924 = 100	52.2	64.7	59.6	59.8	59.8

There was a decline, during the past fortnight, in the group indices for cereals and meat and other foods, but a rise in the figures for textiles, minerals and miscellaneous commodities. On the whole, the improvement has not yet gone very far, for many consumers persist in covering only urgent requirements.

INDUSTRIAL REPORTS

WITH a few exceptions, the latest reports from industrial centres remain cheerful. The coal trade is fairly active, except in South Wales, where production is about twelve per cent. below last year's level as a result of the decline in exports. The demand for steel, assisted by defence orders, remains on the up-grade. In South Wales, the iron and steel industry is working almost at capacity, and the rate of operations in the tinplate trade rose from 52.3 per cent. of capacity (as determined by the pooling scheme) during the week ended February 25th to 56.1 per cent. during

the week ended March 4th. The improvement in the cotton industry has been well maintained, demand having been stimulated by the rise in prices. Activity in the wool textile trade has also tended to expand, partly as a result of Government orders, which have also played a part in the revival of the cotton industry.

Coal

Sheffield.—There has been little change on the coal market. A steady call exists for industrial coal. Small

of all grades are plentiful, and most collieries have stocks in hand. Public utility concerns are taking good deliveries under contract, but new business is limited. Business in household fuels is more active. Some improvement is noted in the demand for blast furnace coke, but domestic sorts are less readily taken up. A reduction in the prices of coking smalls is expected shortly.

While there are numerous export inquiries, competition is severe, making new business difficult to secure. Demand for prompt shipment is chiefly

TELEGRAPH CONSTRUCTION AND MAINTENANCE COMPANY, LIMITED

ORDERS INCREASED BY 10 PER CENT.

The seventy-fifth ordinary general meeting of the Telegraph Construction and Maintenance Company, Limited, was held, on the 14th instant, in London.

Mr Colin F. Campbell (the chairman) said that the balance of trading account amounted to £68,402, against £67,806 a year ago, thus showing an increase of £596. The actual net profit, after bringing everything into account, was £62,922, so that after transferring £25,000 to reserve for contingencies, the balance remaining was £37,922. The board recommended a final dividend of 5 per cent., making a total return for the year of 10 per cent., the same as for the previous year, leaving £32,439 to be carried forward to next year's account. There was every reason to be satisfied with the results of the year 1938. The total value of the orders executed was about 10 per cent. in excess of 1937, due to large orders for submarine cable.

POWER AND OTHER CABLES

In the power cable branch, although there was a reduction in the turnover, the extension of the building had enabled them to do the work without having recourse to more than a very limited amount of overtime, with the result that the net earnings of the shop showed no diminution. Their metal branch had maintained its output, and that business was becoming well established. As it had started some years ago from very small beginnings and the accommodation provided was neither suitable nor sufficient, the board had decided to erect a new building for that branch of the work. That building had just been completed, the plant installed and the change-over had been effected without interfering with production.

The development of radio relay cables was still retarded by the failure of the Government to come to any decision, and the extension of licences was anxiously awaited by all those connected with the industry. Although there had been a falling off in the demand for their miscellaneous cables, the financial results were equal to 1937 owing to improved organisation in manufacture and that side of their business was again on the upgrade. Their high-frequency cables continued to be in great demand and were very widely used, especially for television purposes. The gutta percha sundries, which included various kinds of articles, such as tissue, treated metal foil, tubes, sheet and bottles, showed an increase of 50 per cent. over 1937.

IMPORTANT ORDERS

The submarine branch, which was owned jointly with Messrs Siemens Brothers, had been working to full capacity during the year. The most important cables manufactured were a second telephone cable between Wales and Ireland, a telephone cable from Dartmouth to Jersey and an important telegraph cable for the French Government. All those were laid most successfully by Messrs Siemens' cable ship "Faraday." The French cable was laid in September, just before the crisis, in almost record time, and a special letter was received from the French Government thanking the Submarine Cable Company and their whole staff for the excellent way in which the whole contract had been carried out. In addition, they had had to manufacture a large amount of cable for Cable and Wireless, Limited.

With the steadily increasing demand for submarine cable, they had had to keep a careful watch on the supply of gutta percha. Manufacture had been restarted on the Selborne Estate in Malaya, which was the property of the company. For a number of years that estate had been kept going with a "care and maintenance" staff, but he was glad to say that they were now getting again into full production, as they had to meet not only the demands of the Submarine Cable Company, but of other companies and administrations which required that product.

Their Submarine Cable Research Committee had continued to do good work and had been engaged in studying new forms of dielectric and improved methods for loading cable. It must be realised, however, that research was a slow business, and in connection with submarine cable, where long tests had to be carried out, practical results could not be obtained quickly.

With regard to the future, he thought he could fairly repeat what he had said a year ago, that they could look forward with confidence to the prospects of the company during the present year, which was especially satisfactory in view of the fact that the company celebrated its seventy-fifth anniversary next month.

The report was unanimously adopted.

HOOVER LIMITED

RECORD SALES

The ordinary general meeting of Hoover Limited was held, on the 15th instant, at the registered office of the company, Perivale Greenford, Mr C. B. Colston (chairman and joint managing director) presiding.

The Chairman, in the course of his speech, said:—The profit on trading on the year is £338,515, compared with £419,807 last year, but in 1938 we increased our depreciation from £43,250 in 1937 to £63,912, and if you agree to the final distribution which the directors recommend there will be a carry-forward of £20,018 which is only £616 less than last year.

In the directors' report we commented on the fact that 1938 was a record year for sales, and perhaps some further explanation should be given to you as to why profits are down in spite of the fact that sales were a record.

Quite early in 1938 it became evident to the directors that it was going to be a difficult year, and we determined that we would do everything possible to keep sales up even if it entailed extra cost, and so we deliberately increased our selling organisation, all of whom, as you already know, are paid a salary. In spite of the difficult conditions at the beginning of the year, our sales responded to this stimulus, but you will understand that a substantial increase in our overhead of this kind must necessarily require a continued increase in sales in order to maintain the same profit. Had sales for the year increased in proportion to the increased effort which was made, I have no doubt that we would have been able to talk to you to-day of a substantial increase in profits, and exactly how much we should blame the international crisis in the autumn for our decrease in profit is very difficult to assess. It is, however, a very substantial figure, as you will realise when I tell you that our decrease in profit for the month of September, 1938, alone compared with September, 1937, was no less than £37,500. I should add here that September is normally a very good trading month.

HIGH REPUTATION OF COMPANY'S CLEANERS

In the prospectus for our preference issue, which was made on March 18, 1937, we referred to the fact that the board had under consideration the manufacture of household appliances other than electric cleaners, and that certain preliminary development work had already been undertaken with that object in view. I have no news whatever to give you in this regard, except to say that one of the main reasons that we have not undertaken the manufacture of another article is because we have been unsuccessful, to date, in finding any other appliance which stands so pre-eminent in its field as our cleaner does in its field to-day, and so the board feel that until they do find such a product they are unwise to risk the splendid reputation which has so far been built up for Hoover Cleaners. I should tell you, however, that development work along this line is still being continued.

It may stagger you to know that since 1921 a sum slightly in excess of £1,000,000 has been spent in research work, and that we are continuing to spend a very large sum every year in perfecting and refining our present products. I hope you will realise that in this we have a definite assurance for the future of this company.

The science of vacuum cleaning has now reached such a stage that it is very improbable for any further development to come except as the result of such intensive development work, and we believe that there is no company in the world carrying out research work towards the improvement of the science of vacuum cleaners even comparable to that which we are doing.

With regard to our manufacturing facilities, the factory is run at an exceedingly high state of efficiency. Our output is now of such large dimensions that it has paid us to manufacture many of the highly specialised components, referred to in our prospectus, which used to be purchased elsewhere.

Competition in this industry is keen, but we do not fear it. It keeps us alert, and our research department will ensure that our product maintains its outstanding leadership within the industry.

THE FUTURE

Now with regard to the future, because of the uncertainty of present conditions, it would need a bold man to make any definite promises, but with our splendid research department I have no hesitation whatsoever in predicting that this company will continue to hold its dominating position in the cleaner industry.

In view of the conditions that existed last year, your directors feel by no means displeased with the result.

The report and accounts were unanimously adopted.

ILLUSTRATED NEWSPAPERS, LIMITED

SATISFACTORY RESULT DESPITE DIFFICULTIES

The thirteenth annual general meeting of Illustrated Newspapers, Limited, was held, on the 16th instant, at the Connaught Rooms, London.

The Lord Southwood (the chairman), in the course of his speech, said: The net trading profit amounts to the sum of £192,499, as against £196,169 last year, a decrease of only £3,669. The available balance is £175,626. Up to November 30, 1938, there had already been paid out of these profits a full year's dividend on the preference shares to April 30, 1938, but which was not paid until January 1, 1939. Your directors, however, deemed it wise to provide for this in these accounts. These three half-years' dividends, less tax, amount to £108,900, leaving a balance of £66,726. Out of this sum your directors recommend that a further £25,000 be transferred to preference dividend reserve, making with the amount previously transferred a total of £75,000, approximately equivalent to one full year's dividend, less tax.

BOARD'S SOUND DIVIDEND POLICY

This, in the opinion of the board, is a wise measure to adopt providing as it does to a considerable extent for a continuity of payment of the preference dividend, and thereby strengthening the position of the ordinary shares. The directors are of opinion that, in view of the general conditions of trade ruling, not only in this country but throughout the world generally, and consequently the necessity of conserving the company's cash resources, it would be unwise to recommend a dividend on the ordinary shares.

"ILLUSTRATED LONDON NEWS AND SKETCH"

We are fortunate at this time in being able to present to you accounts disclosing such satisfactory results considering the extremely difficult conditions we have experienced during the past year. I cannot, however, do other than make it perfectly clear that these results have been helped very considerably by the fact that in these accounts we have benefited by the exceptionally good results shown by the Illustrated London News and Sketch, Limited, for the year 1937. It was, as you know, a year in which events of great national importance occurred. I refer particularly to the Coronation, in connection with which event our special issues proved extremely profitable.

Apart from the absence of great national events, the past year has been one of considerable anxiety in view of the unsatisfactory state of trade due to international conditions. We, in common with most other concerns, have naturally suffered therefrom. As customary, and in view of the fact that we hold about 94½ per cent. of that company's share capital, you will have received a report and accounts of The Illustrated London News and Sketch, Limited, for 1938, for which you will see that the profits of that company were £48,218, as compared with £96,164 in 1937. The net amount we shall receive in dividends after tax is £24,098, as against £58,240. This sum, however, added to the amount we propose to carry forward in our company's accounts, will be approximately sufficient to pay the full year's preference dividend for the current year without drawing upon the £75,000 preference dividend reserve created or any profits which may accrue during the current year. The directors consider this to be a very sound position.

POPULARITY OF COMPANY'S PUBLICATIONS

I am glad to be able to report that all our publications maintain their popularity both with readers and advertisers—this in spite of the ever-increasing competition which we constantly have to face. We have maintained our excellent standard of production of which, you will agree, we may justly be proud. I would like here to emphasise what I stated last year, namely, that too much stress cannot be put upon the value of all our papers to advertisers. That they reach the intellectual and influential people all over the world is undoubted. Our papers, I think I may say, are unique and deservedly popular, and this is evidenced by the fact that they can be found in every part of the globe.

Our monthly magazine *Britannia and Eve* has made great strides, and, as one of the trade papers recently said, it is "top of its class." We have in this publication a valuable and profitable investment. I am not bold enough in these difficult times to make any definite forecast for the future, but, given a period of peace, which is the hope of everyone, I am optimistic enough to say we shall go steadily forward with improved results.

The report and accounts were unanimously adopted.

LONDON & LOMOND INVESTMENT TRUST, LIMITED

DIVIDEND INCREASED TO 6½ PER CENT.

The eighth ordinary general meeting of London & Lomond Investment Trust, Limited, was held, on the 16th instant, in London.

The Hon. W. B. L. Barrington (the chairman of the company) presided.

The notice convening the meeting having been taken as read, Mr Ian Wright, of Messrs Grahams, Rintoul, Hay, Bell and Company (the secretaries), read the auditors' report.

The Chairman, in moving the adoption of the report and accounts, referred to the death of Mr C. R. V. Coutts and the appointment to the Board of Mr P. H. McCormack, and said:—

After meeting expenses of management, interest and income tax, the net revenue was £34,862, a decrease of £9,217. £10,000 has again been carried to general reserve, which now stands at £50,000. The directors recommend payment of a final dividend of 4½ per cent. on the ordinary stock, making 6½ per cent. for the year as against 6 per cent. for the previous year.

I wish to explain that the diminution in the income has arisen only in part by reason of actual reductions in dividends received from investments. It is also due to the policy pursued by your board with the object of achieving a greater degree of stability of income as a protection against future periods of depression. During the past two years holdings in companies, the profits of which tend to fluctuate with the trade cycle, were reduced and the proceeds re-invested in securities the income from which is less liable to variations. This policy involved the acceptance of a lower income return than might otherwise have been obtained.

DOWNWARD TREND OF VALUES

During the year under review, despite periodical rallies, the main trend of security values continued downwards, and in consequence, at the end of our year, there was an unrealised depreciation of £36,756 on the balance sheet value of our investments. This depreciation compared with an unrealised appreciation of £93,960 a year earlier, but it was covered four and a half times over by our reserves, so that in spite of the fall in markets the indicated net asset value of our ordinary stock was still over 150 per cent. on January 31st last. You will be interested to learn that as a result of the improvement in prices since January 31st a valuation made as at March 13th, which, of course, was before yesterday's developments in Central Europe, showed that the depreciation of £36,756 had been recovered and that, in addition, there was an unrealised appreciation of over £30,000.

With regard to the outlook for the present year, our estimates based on income receivable at current rates on investments now held lead us to hope that our revenue should be maintained at last year's level.

The report and accounts were unanimously adopted.

The retiring directors, Messrs R. E. F. de Trafford and P. H. McCormack, were re-elected, and the auditors, Messrs Moores, Carson and Watson, chartered accountants, were re-appointed.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED

DIVIDEND 15 PER CENT.

The forty-third ordinary general meeting of The Consolidated Mines Selection Company, Limited, was held, on the 14th instant, in London.

Mr S. S. Taylor, C.M.G., D.S.O., who presided in the absence through ill-health of the chairman of the company, Mr Walter McDermott, said that the net profit carried to the appropriation account was £110,083, as against £229,694. Shareholders would of course appreciate that market conditions throughout 1938 had rendered profitable share dealing most difficult. It was proposed that a dividend of 15 per cent., less income tax, should be paid.

With regard to the principal concerns in which the company was interested, in spite of the unfavourable markets the Anglo-American Corporation of South Africa, Limited, declared a dividend in September last of 3s. per share. With its widespread activities in the fields of gold, copper, and diamonds, as to which last signs of improvement were already apparent, most satisfactory sales having taken place since the beginning of the year, the Anglo-American Corporation was very favourably placed to take advantage of any market recovery. The South African Land and Exploration Com-

pany commenced production at the end of June 1938, paid a first dividend in December last, and undoubtedly had a most promising future, while Grootvlei Proprietary Mines, Limited, in which they had a very substantial interest, also reached the production stage in 1938 and was expected to pay a first dividend this year.

Apart from the indirect interest in copper through the Anglo-American Corporation, they had a direct interest through Rhodesian Anglo-American, Limited, which held 54 per cent. of the ordinary shares in Rhokana Corporation, Limited, and paid a dividend total-

ling 1s. 6d. per share in 1938. Even though the prices of copper since the commencement of Rhokana's financial year in July last had been possibly lower, yet as from that date Rhokana had had the advantage of a substantial increase in its quota. Operations connected with the opening up of the rich N'changa Consolidated Copper Mines, Limited, were proceeding without hitch.

The Mawchi Mines, Limited, was now handsomely repaying their faith in the undertaking.

The report was unanimously adopted.

INDUSTRIAL REPORTS—continued

of the spring and summer trade in both woollens and worsteds has led trade circles to expect firm prices during the next few months.

THE COMMODITY MARKETS

In contrast to the fall in the prices of securities on the world's stock exchanges, due to the unexpected dismembering of Czechoslovakia, commodity prices held up fairly well until Wednesday.

Wheat prices, which invariably advanced during recent political crises, are scarcely changed on the week. Similarly, raw sugar prices showed little variation. Rubber tended to decline in price owing to the cautious buying policy of consumers, while linseed oil has scarcely moved. With the exception of spelter, the principal non-ferrous metals all rose in price until Wednesday, but relapsed on Thursday. Raw cotton was again marked up in price and jute was also dearer. The opening prices realised at the second series of the London wool auctions, which began this week, showed a slight improvement over the figures for the previous sales.

In the United States, the general trend of the prices of staple commodities was slightly downwards, Moody's index having fallen from 144.5 (December 31, 1931 = 100) to 143.8 during the week ended last Wednesday.

Metals

Copper.—The market was steady early this week, but on Thursday the price of standard cash fell sharply to £42 12s. 6d. per ton, as the market took an unfavourable view of recent events. Several branches of copper manufacturing trades have increased their activity in the past fortnight, and consumption seems to be on the up-grade. According to the Copper Institute the extra-U.S.A. consumption of copper totalled 101,531 short tons in February, against 99,530 short tons in January; in the United States consumption fell in the same period by nearly 3,000 tons to 48,067 short tons, due mainly to the shorter month. Output decreased both in and outside the United States in February and the reduction seems to have made further headway since the beginning of March, so that an equilibrium between production and consumption may be obtained this month. In February production was still in excess of consumption, so that world stocks showed an advance of slightly over 13,000 short tons to 493,114 short tons.

Tin.—After considerable strength early in the week, due to the further improvement in the American and Welsh tinplate industries, the price of tin fell by £1 to close on Thursday at £215 15s., the same level as a week ago. The market is very narrow at present as most buyers are inclined to await the outcome of next week's tin meeting.

Lead and Spelter.—While the price of spelter closed unchanged at £13 16s. 3d. per ton, that of lead gained 6s. 3d. to close on Wednesday at £14 18s. 9d. per ton, the highest level of the current year. Thursday's trading, influenced by the political events in Central Europe, brought only small declines in the prices of both metals. The forward price for lead has now exceeded the £15 limit for the first time since the early days of January. The strength of the market was due both to an improvement in the demand from the building trade and to the decline of offerings. Although so far no statement has been made about the lead cartel, it is expected that the lead scheme will be strengthened considerably before the end of this month.

Grains

EUROPEAN demand has been dull, and wheat prices have tended to fall, in spite of a moderate trade in Australian wheat to the Far East. In the last two days there has been some rise in the quotations for near positions, due to the recent political developments. The official estimate of the Australian wheat crop has now been raised from 145 to 151 million bushels, compared with an outturn of 188 million bushels last season. Little business has been transacted in maize or barley, and prices of these grains are also somewhat lower on the week.

Other Foods

Provisions.—The bacon market remains very firm, with prices for English and Danish (No. 1 sizeable) up to 100s. per cwt. There was a brisk demand for Colonial butters early in the week, but the price of Danish fell by some 3s. per cwt. Egg prices continue to fall.

Colonial Produce.—The sugar market has been dull, and prices for refined were reduced by 1½d. per cwt. on Wednesday. With only a limited demand, cocoa prices have again fallen, but at the tea and coffee auctions, a fair interest was shown.

Fruit and Vegetables.—Supplies of kitchen vegetables remain short and prices are well maintained. New

potatoes are now on the market from the Canary Islands, but the trade in English maincrop has improved and prices to growers have hardened.

Milk.—The following table is compiled from statistics issued by the Milk Marketing Board:—

	Feb., 1938	Dec., 1938	Jan., 1939	Feb., 1939
Prices (per gall.)	d.	d.	d.	d.
Liquid	18.0	17.5	17.5	17.5
Av. manufacturing	7.586	7.327	7.199	7.245
Av. pool	15.12	15.43	15.22	15.01
Contract sales (mill. galls.)				
Liquid	48.1	52.9	53.1	49.4
Manufacturing	14.5	13.2	14.1	14.4
Total contract	62.6	66.1	67.2	63.8
Used by farmhouse cheesemakers	0.6	0.5	0.5	0.5

Miscellaneous Commodities

Oils and Oilseeds.—A firmer tone in the markets in the early part of the week gave way to renewed weakness, with the political developments of the last few days. Linseed and linseed oil have been in fair request, but the original advance in prices has not been maintained. Demand for oilcakes is below normal for the time of year.

Rubber.—The good figures for American consumption in February and the decline in stocks did not prevent a marking down of prices in sympathy with the political uncertainties of the week. The market has been steady, however, though the volume of business has been very small. The price of standard sheet on the spot closed on Wednesday at 8½d. per lb., a fall of ¼d. per lb. on the week.

Furs.—During the past week, the Soviet Fur Trust held its 16th Leningrad Fur Auction. Although these sales were only begun in March, 1931, they now hold a very important place in the international fur trade. Supplies included all well-known Russian furs and were fairly large, but demand was so keen that 95 per cent. of the offerings were sold, the United States, Great Britain and France being the chief buyers. Prices were generally strong and rose by 5 to 15 per cent. compared with both the contract prices and the prices of the fifteenth sale, held in July, 1938. The tendency on the free London fur market has continued to be firm in the last few days, but the political events in Central Europe have led to a reduction in demand so that reactions in prices are possible.

The County of London

Comparison of the income and expenditure of the L.C.C. during the last half-century is affected by the transfer of certain services into and out of the control of the Council. Thus, Education was administered by the School Boards prior to 1904-05, and public assistance by the Boards of Guardians prior to 1930-31. The tramways ceased to be administered by the Council after the establishment of the London Passenger Transport Board, and this change largely accounts for the decline in "other income" between 1930-31 and 1937-38. Grants from the income side means grants from the Government and on the expenditure side grants to other local authorities.

Finance

GOVERNMENT RETURNS

For the week ended March 11, 1939, total ordinary revenue was £25,375,000, against ordinary expenditure of £14,855,000. Thus, excluding sinking fund allocations, Defence expenditure from loans, and £720,000 interest paid and received to date in respect of Defence loan issues, the deficit accrued since April 1st last is £23,805,000, against a surplus of £10,156,000 a year ago.

* Revenue required to meet expenditure.
† Excluding Post Office and Broadcasting and £12,900,000 under Defence Loans Act.

† After adding Navy and Air Supplementary Estimates, Consol. Fund increase under Eire Act, revised and increased Civil Estimates (additional to marginal provision). Net increase, £3,968,000.

¶ Now transferred as charge against revenue.

¶ After adding issues from Defence Loans.

After reducing Exchequer balances by £279,635 to £2,658,892, the other operations for the week (as shown below), but excluding issues from Defence Loans and issues to Sinking Funds) reduced the gross National Debt by £2,044,000 to about £8,276 millions.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On March 10th applications at £99 17s. 5d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday, and Friday of following week were accepted at about 34 per cent. and applications at higher prices in full. Applications at £99 17s. 6d. for bills to be paid for on Saturday and accepted in full. £40.0 millions of Treasury bills are being offered on March 17th.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where a stock is redeemable at the discretion of the issuer the date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

SHORTER COMMENTS

(Continued from page 593)

British Aluminium Company.—Final dividend of 8½ per cent., making 12½ per cent. for 1938 on capital of £3,000,000. For 1937 12½ per cent. was paid on £2,000,000, £1 15s. 10d. per cent. on £1,000,000 issued during 1938. Net profits increased by £119,488 to £607,670. To depreciation, £50,000 (same). To reserve, £100,000 (same). Carry forward raised by £42,670 to £144,094.

Automatic Telephone and Electric.—Final dividend 7 per cent., making 10 per cent. plus a 2½ per cent. cash bonus. Previous year's dividend 10 per cent. "A" deferred shares and "B" deferred stock also receive 10 per cent. plus cash bonus of 2½ per cent., against 10 per cent. a year ago. Net profits have risen from £148,624 to £202,074 for 1938.

William Beardmore and Company.—Dividend 3½ per cent., less tax, on ordinary stock for period ended December 31st, or

about 7½ per cent. per annum, less tax. Net profit for 1938 of £296,365, comparing approximately with £145,619 in 1937. To preference stock dividend reserve, £160,000; £95,000 carried forward. Last dividend on old ordinary was 6 per cent., tax free, in 1919.

Mappin and Webb, Ltd.—Net profit for 1938, £73,554, against £69,214. To general reserve, £25,000, as before. Tax and N.D.C., £20,000 (same); written off plant, etc., £6,879 (£6,905). Carry forward reduced from £43,436 to £40,804.

England Awakes

WITHIN a week the whole aspect of world politics has been changed. Herr Hitler's previous strokes have had the effect of uniting all Germans for the first time in one State. His unprovoked murder of Czech liberty—the first action that took him beyond the limits of the German *Volks*—bids fair to unite the world.

The first reaction of the British public to the news of the invasion of Czecho-Slovakia was indignation. But the indignation seemed on the first day or two to be no greater than on previous occasions. The statements made by the Prime Minister, the Foreign Secretary and the Chancellor of the Exchequer on Wednesday of last week seemed to take special pains to avoid the moral, or even the wider political, aspects of the matter, and to concern themselves mainly with establishing the legal basis for British non-intervention. If allowance is made for his usual exaggeration and his constitutional inability to appreciate a moral issue, Dr Goebbels appeared to be correct in saying that "the reaction in the Western democracies to the dissolution of the former Czecho-Slovakia is practically nil."

But these first appearances were deceptive. It was apparent from the Press and from other sources that the current of indignation ran far deeper, that it was not confined to the declared opponents of the policy of appeasement and that it was reinforced by a growing instinct of alarm for the safety of Britain. The true significance of the murder of Czecho-Slovakia was not that it revealed Hitler as an aggressor and oath-breaker (he has been both

for many years) but that it proved once and for all his unwillingness to forswear the ambition of world domination. The moral, after all, was not lost on the British people, and their reaction was given trenchant expression by the Prime Minister at Birmingham on Friday evening. Overnight the official policy of Great Britain was turned round. Collective resistance took the place of retreat. The British Government has made proposals to France, Russia and others Powers for a joint agreement looking towards collective resistance to any further German aggression. And Lord Halifax, speaking in the House of Lords on Monday, so far from claiming continuity for the Government's policy, went out of his way to emphasise the change that had taken place and adopted for it the oft-reviled name of "collective security."

The public reaction to this rapid change of front by the Government has been truly remarkable. Greater unanimity has been achieved than at any time since the war. Even those organs of the Press that have been most pertinacious in the pursuit of "splendid isolation," most consistent in their condemnation of all attempts to organise international peace, have blessed the new direction of policy. Even those quarters to whom for years the word "Red" has been an epithet of abuse have clamoured for an alliance with Russia. The Soviet Ambassador must, indeed, be amazed at the company in which he suddenly finds himself.

The alacrity and completeness of the changes of opinion that have occurred are such that they are scarcely to be

credited. Those who, like *The Economist*, never having expected anything better, either of the Nazis or of the appeasement policy, have no cause for surprise at the infamy of the one or the failure of the other, may perhaps be forgiven if they ask themselves whether what they hear and see can possibly be true. Yet it has a certain ring of sincerity, and the explanation can be found in the frequency with which those who have shared the Government's awakening speak of their experience as one of release. We now know, what previously we could only guess, that most of those who during the months since Munich have supported the policy of trying to find a basis for accommodation with the dictators, have done so for reasons other than intellectual conviction of the correctness of that policy. They have not, after all, ignored its hideous dangers for Britain. They have not, after all, overlooked the inherent improbability of any moderation being found among the Nazis. Most of the supporters of appeasement, in fact, have been desperately unhappy. They have rejoiced at the permission to speak their minds.

If this psychological analysis is correct, it carries its own dangers with it. There is some risk lest in the reaction from a pacifism without conviction we should run too far towards bellicosity. The change that has come over British national policy is that we now abandon the pretence that Germany is no more likely to aggress than any other power. We recognise the Nazis as the world's most probable aggressors. But we should not forget that the object of all policy must still be defence and, subject only to liberty and independence, the preservation of peace. It is common sense to be clear in our minds that any agreements concluded with Germany are likely only to be snares for the unwary. Entirely irrespective of the merits or demerits of the agreement concluded between British and German industrialists at Düsseldorf last week (which are discussed in a Note on page 607) it is obviously right to say that no further talks can now be undertaken. It is prudent to prevent Germany from reaping the economic benefits of her crime, by blocking Czech balances in London. But it would be as wrong and as foolish in the economic sphere as in the political to take the initiative in making an attack on Germany. We shall do well to remember that "encirclement" is the nightmare not merely of the Nazis but of all Germans. If our new policy is accompanied by economic acts whose purpose is not so much to defend ourselves as to hurt the Germans, we run the risk of doing what none of Hitler's triumphs has succeeded in doing—uniting the German people in his support. If a fight there must be between the Powers, let the Nazis begin it.

A new chapter in British foreign policy is opening. But we do not yet know its detailed contents. The proposal that has been made by Great Britain to France, Russia and Poland is, it appears, that these Powers should take a "common attitude" of resistance to further acts of aggression by Germany and that when such an act occurs the signatories should consult about their common action. This, it will be seen, is no mere Kellogg Pact. It definitely envisages military co-operation to resist attack. It jumps, in principle, the hurdle that has obstructed British foreign policy ever since the war and contemplates British commitments in Eastern Europe. But it still enshrines a reluctance to say clearly and definitely what those commitments should be. It admits that there are some cases in which Britain would intervene in Eastern Europe, but it does not say in terms what those cases are.

This weakness, if it is persisted in, will be fatal to the whole project. For one thing, the support of the countries of Eastern Europe will not be enlisted unless they have precise assurances of support from Britain and France. If Poland, for example, is to come off her traditional fence, she runs a very severe and immediate risk against which she naturally requires full and formidable guarantees. And secondly, obscurity of commitment was the

bane of our intervention in the Czech imbroglio. An obscure commitment opens the way to humiliation for us and to triumph for Hitler. Are we to repeat on the grand scale the story of our "guarantee" of the Czech frontiers?

What, then, should our precise engagements be? We can be quite sure that we shall not get something for nothing. Every engagement will have to be strictly reciprocal. Recognising the imminent danger of world war, we must scan the list of European countries and determine which we should wish to have as our allies. And to those countries we must offer support fully as valuable and sacrificial as we hope to get from them. No other basis is possible. The East will not fight for the West—the smaller Eastern countries will not even fight for themselves—unless the West will fight for the East.

This is, admittedly, a very bitter pill to swallow. It involves undertaking to defend, say, Poland. And that means that if Germany attacks Poland we must make an attack on Germany. To such a desperate state have world affairs descended. But if we refuse this risk we are indeed blind. For it is perfectly obvious now that the German programme involves, at some stage, a reckoning with the Western powers. Do we wish to face that reckoning with allies, who can force Germany to fight on two fronts, or without? There can only be one answer, and we must shoulder the very heavy obligations of that answer in order to draw its benefits.

The line which we are to defend must be drawn with care. The time has passed when we had the strength to secure the whole world. The familiar tactics of brutal ultimatum have, for example, been followed at Memel; but there is no case for resistance to Germany there this week, just as there was no case for armed resistance to the invasion of Bohemia last week. Similarly, Hungary, by her geographical position and her adhesion to the Axis, is placed outside the pale. On the other hand, the line must not be drawn too far to the rear. There is reported to be a section of opinion in the Cabinet that would draw it only in the Near East, and let all Eastern Europe go. That solution would be desirable only if Great Britain herself were secure and it were merely a question of protecting extraneous "interests." But since Great Britain herself is menaced, it is essential to secure support in Eastern Europe; and for that purpose it is necessary to support Eastern Europe.

The sheet-anchor of any such defensive coalition must necessarily be Russia. The doubts felt in Western Europe about the efficiency of post-purge Russia may or may not be justified. But whatever the exact degree of her strength, Russia cannot by any stretch of language be called a weakness to her allies. Turkey is another essential pivot of the combination, Roumania a third. Greece is necessary for the safety of the Eastern Mediterranean. Poland, though her past mistakes in policy are now coming home to roost, is still a desirable member of any collective attempt to put limits to German aggression.

Whether other nations should be included in the alliance is no longer a question of policy but of strategy. The only political point—but it is vital—is that, wherever the line is drawn, it must be drawn with precision, and our united stand taken on it with all our forces. The doctrine of limited commitments must go once and for all. We can clearly see now where that doctrine has led us. The attempt to limit Britain's commitments has not prevented us from having those commitments forced upon us in the end; it has merely meant that we have delayed in assuming them until their weight is well-nigh crushing.

Mr Chamberlain compared his position some months ago to that of William Pitt. If now he will adopt Pitt's policy; if he will not hang back out of commitments but will take the lead in rousing a continent for collective self-defence, we can still save Europe by our example and England by our exertions.

Business Not as Usual

ONE of the most striking passages in Mr Chamberlain's very striking speech at Birmingham last Friday declared the necessity for reviewing, in the light of the new situation, the whole of the domestic, as well as the foreign, policy of the country. "Every aspect of our national life," he said, "must be looked at again" from the angle of national safety; "nothing must be excluded" from the survey. Reviews of defence policy have been promised in the past; after Munich, for example, Sir John Simon promised a review that was to be "vigorous, complete, remorseless and urgent." But there is reason for hoping that the expectations will not be so completely disappointed on this occasion as in the past. The mere completeness of the change in the Government's foreign policy is itself a guarantee that in other directions the main object of investigation will no longer be to find reasons for avoiding change.

The full consequences of this re-orientation will not be apparent for a long time to come. Some conclusions, however, can be drawn at once. For many months the question of foreign policy has divided the Government from the Opposition. If now, as may become apparent, the Government have been converted to the Opposition view, there is no immediate issue of moment dividing the parties. When the Government have carried their diplomatic negotiations to the successful conclusion which will at once create a defensive coalition in Europe and establish their own *bona fides* as advocates of collective security, the way will be clear for that National Government which has for so long seemed unattainable. Mr Chamberlain himself, indeed, in those circumstances might be the ideal leader of opinion, and if he could form a Government embracing not merely the two Opposition parties but also personalities such as Mr Churchill, Mr Eden and Mr Lloyd George and representatives both of the trade unions and of the Dominions, no more eloquent testimony could be given of the unity and will to resistance of all the British peoples.

A second task which has to be faced at once will be virtually impossible to solve without such a National Government, but almost automatically solved with it. This is the problem of compulsion—the word is used advisedly instead of the more familiar conscription, since it is a distortion of reality to pretend that the needs of the nation begin and end with the drafting of young men for the fighting forces. It is true that, if full confidence is to be felt on the Continent, and especially in France, in Britain's new determination, the armed forces of the Crown will have to be very rapidly increased in size. But conscription in this narrow sense is not the only pressing problem calling for the use of compulsion; nor is there any possibility of securing it in this liberty-loving land if the lives of young men alone are to be conscripted. Conscription is essentially a whole-hog matter, and those who lay emphasis solely on its military aspects are defeating their own ends. If we are to have conscription (and of the need for it few are now unconvinced) it must be levied on the old as well as the young, on property as well as on persons, on wealth as well as on life. In the present temper of the people a truly National Government would be granted the power to call on the people and the property of the country for sacrifices. Anything less sweeping will only stir up dissension and disunity.

A third aspect of the review of our national life concerns its economic activities. Hitherto the declared policy of the Government has been to draw up the defence programme in such a way as to occasion the smallest possible interference with peace-time activities. "Business As

Usual" has been the motto. The policy has been criticised, in *The Economist* and in many other places, on the grounds that the effort of co-ordination by some such device as a Ministry of Supply, though it might have a more impressive façade of intervention, would in fact result in less dislocation. The elements of the problem, however, are now changing. Massive interference is no longer to be avoided. At the time of the publication of the figure of defence borrowing during the coming financial year the opinion was expressed here that expenditure of this magnitude might be accommodated in the economic mechanism without imposing any drastic limitations on the supply of goods for other purposes, but "it will be a tight squeeze." That was a conservative estimate, and it is at least as probable that the financing of £350 millions of expenditure by borrowing will give rise to some phenomena of inflation. Inflation is not only dangerous in itself; it is at once a symptom of deficiencies in the economic mechanism and a most inefficient and inequitable method of eliminating them.

If this is the conclusion on the defence programme as it now stands, how much more true will it be of the defence programme as it is soon to be expanded? If we are to avoid inflation—and the avoidance of it should be a primary aim of policy—we must begin now to achieve by direct control that redistribution of resources that comes about haphazard by inflation. If it is necessary to secure for armament production the equipment and personnel of, say, a motor factory, it is infinitely better to do it by direct order than by waiting until competition for plant and workers drives up the prices of cars and reduces the demand for them. The one great lesson that can be drawn from German economic experience in the past three years is that well-organised control can secure the maximum utilisation of a country's resources for the piling up of armaments without resort to inflation. We shall be blind if we ignore this lesson or allow the superficial attractiveness of business as usual to conceal the fact that from now on business cannot be as usual.

The events of the past week reinforce a hundredfold the arguments for a Ministry of Supply, charged with the duty of co-ordinating industrial effort and equipped with all the powers of compulsory priority that are necessary to ensure its effectiveness. The conscription of industrial capacity is the essential counterpart of the conscription of man-power. Both are distasteful in the extreme. Both are necessary. Both, it is to be hoped, will figure in the Government's review of national policy.

THE ECONOMIST BY AIR

To meet the growing demand from overseas readers for *The Economist* by air, special subscription rates have been introduced applicable to those countries to which Letter Mail is now normally transmitted by air. These are as follows:

	12 months			6 months		
	£	s.	d.	£	s.	d.
Europe	4	17	6	2	8	9
Empire Air Routes	6	10	0	3	5	0

These rates include all supplements, but the latter will be sent by the surface routes and not by Letter Mail.

Unexpired subscriptions may be transferred to the new category on application to

THE PUBLISHER, THE ECONOMIST,
8 BOUVERIE STREET, LONDON, E.C.4

The Cost of Education

BY next year, according to the present estimates, the Government's expenditure on the fighting services will have risen fivefold in five years. More than a tenth of the national income will be used for defence and arms. Yet, despite re-armament, expenditure on civil needs, on education, health, labour, insurance, roads and the like, has not fallen. In fact, during the same half-decade it has risen by something like one-fifth.

Even by the strictest canons of national defence needs, money spent on civil and social services is not money wasted. These are the country's human and personal defences. Of no branch of State effort are these considerations more true than of education. It so happens that, just when a wholesale review of national life has been made imperative, two annual publications appraising the scale and development of British education have made their appearance. The Board of Education's Memorandum on the Education Estimates*, prepared to explain the ways in which public funds are spent, is always a revealing document; while the Institute of Education's Year Book† provides, not only a summary review of education in Britain compared with education overseas, but also an informed account of outstanding problems and current researches.

Education cannot be measured by statistics. Its fruits of knowledge, aptitude and character cannot be weighed or counted. But the rise in expenditure tells its own story. In 1913-14 the expenditure of local education authorities on elementary and higher education, including the grants-in-aid they received from the national Exchequer, was (in round figures) £30 millions; in 1939-40 it will be over £96 millions. The net estimates of the Board of Education in 1913-14 amounted to £14,660,311; for 1939-40 they are £52,242,026.‡ The number of children in schools has not risen threefold; the number in secondary schools has, it is true, increased from nearly 188,000 in 1913 to about 490,000 last year; but the number of elementary school children has actually fallen by nearly a million from the 1913 figure of 5,381,000.

It is the annual cost per child that has increased. In elementary schools it has risen since 1913 from £4 15s. to £16 17s., and in secondary schools from £12 10s. to about £30. The reasons for the growth are clear. The cost of teachers' salaries in elementary schools has risen from just over £3 per child in 1913 to sixpence short of £10 next year. Salaries take close on 60 per cent. of expenditure, and for elementary teachers in full-time employment average £258 a year. The success of schooling depends upon the quality of the teachers, and this increase in remuneration has been wholly advantageous. But it has not stood alone. In 1913 no money was spent on maintenance allowances, on the conveyance of children over long distances safely to school, on reorganisation and development, or on teachers' superannuation. Next year these charges will total nearly £6 millions. Similarly, expenditure in 1913 on special services, such as medical inspection, was only £898,000, while next year, now that the special services provided include meals, numerous special schools for defective and disabled children, physical training, play centres and nursery schools, it will be £6½ millions, or nearly 9 per cent. of the total cost of elementary schools; it will be £1½ millions

more than only four years ago. This, the most important sector of the educational front to-day, represents the fight for good health and good nutrition.

Nevertheless, it is not the size of expenditure alone that tells the story; its distribution is equally significant. Out of the local education authorities' total expenditure next year, £46½ millions, or very nearly half, will be contributed from taxes through grants-in-aid. Grants for elementary education, allocated according to a complicated formula based upon the authorities' approved expenditure, the number of children in their schools and the wealth or poverty of the respective areas (in terms of rateable value), will amount to £35½ millions; for higher education, which includes teachers' training and technical instruction as well as secondary schools, they will be £11 millions, or 50 per cent. of the total charge.

In the allocation of grants an effort is made to distribute financial assistance most generously to the areas that most need it, by reason of their poverty and/or the calls made upon them. It is here that the importance of distribution becomes most evident; and it is on this point that, by good fortune, the Institute's Year Book for 1939 has new and remarkably significant figures and information to be studied. Dr N. Hans, who has had access to the files and records of the Board of Education, contributes an exhaustive analysis of local and regional variations in educational finance and facilities which is without doubt the Year Book's chief feature.

From Dr Hans's tables it is immediately clear that enormous headway has been made in the direction of spreading the burden equitably between districts. The extreme anomalies of a generation ago have been widely mitigated. The "ability" of authorities to raise money, the "necessity" of spending money and the varying "effort" made by different authorities to reach a high standard of educational achievement have all been taken into account in successive attempts up to 1932 to devise a satisfactory system of apportioning grants to local authorities.

Even so, this probably remains the least satisfactory aspect of British education. It is reasonable, in view of their different economic positions, that Durham and the Holland division of Lincoln among counties should receive over 60 per cent. of their expenditure on elementary education from grants, against an average for all counties of 52 per cent. and 36-37 per cent. in London and Surrey; that among county boroughs, where the average percentage is 51, St. Helens should draw 64 per cent. from grants and Bournemouth only 18; and that, among boroughs and urban districts, where the average is 49 per cent., Jarrow should get 77 per cent. and Hove only 8½. But serious differences persist. To maintain approximately the same expenditure per elementary school child, West Bromwich levies a rate of 46d. in the £ and Bournemouth one of 12.8d. The expenditure per child in Hartlepool and Salisbury is roughly the same; their education rates are 49.6d. and 19.6d. respectively.

Local variations of this kind weigh heavily upon the progress of policy. In recent years, for instance, the watchword in elementary education has been reorganisation: that is, the local authorities have been exhorted to make "provision for the advanced instruction of children over the age of 11 by giving opportunities for suitable classification and organisation." The movement has taken the form of setting up senior schools and senior departments for children not proceeding at 11+ to secondary schools. To-day, about two-thirds of all the school children in England aged over 11 are in reorganised schools. Nearly half the county boroughs, two-thirds of the boroughs and

urban districts and over a quarter of the urban county areas have virtually completed their reorganisation. But there is quite another picture in rural areas. Ten small rural authorities had done no reorganisation less than two years ago; seventeen had less than a tenth of their children over 11 in senior schools; sixteen others have less than a third; and only four large ones have over a third. In all, probably less than a third of rural school children are in reorganised schools and departments.

The failure of some authorities to keep pace in the campaign to provide new types of schools, like the failure to replace about a third of the schools black-listed some years ago as unfit for use, to relieve overcrowding or to cater for the educational needs of growing areas, is not, of course, entirely due to inadequate local income per head. It may be due to the difficult lie of the land in the countryside or the scattered and scanty nature of the population, to local jealousies or historical factors. But it is disquieting evidence of the unfortunate regional differences in British administration which State policy, administrative and financial, is still unable to remove.

If we turn from elementary to secondary and technical education the same variations are visible. Surrey spends nearly twice as much per possible pupil on higher education as Durham, but Surrey's higher-education rate is only a third of Durham's. St. Helens spends the same per possible pupil as Bournemouth, but its rate is six times as big. And these differences are thrown into relief because the percentage rate of grants for higher education is very much more uniform than in the case of elementary education.

Here, too, the undesirable differences between one area and another go beyond purely financial discrepancies. For secondary education Dr Hans has worked out in each area the percentage relation between the number of elementary school children admitted to grant-aided secondary schools in 1937 and the number of children aged 10-11 in elementary schools in 1936. For all England the percentage was 12.8; in Staffordshire it was 7.6; in Durham it was 9.5; in London it was 11.4; and in a group of agricultural counties it ranged between 14 and 18. Among cities it was 26 per cent. in Bradford and 20 per cent. in Plymouth and Sheffield; in Salford, Sunderland and West Ham it was about 7 per cent.; and in Hull, Liverpool and Nottingham between 9 and 10. Many factors go to explain these variations in the proportion of elementary pupils passing to secondary schools besides the ability and readiness of authorities to furnish facilities. The extent of juvenile employment in industrial districts

and its absence in country areas are clearly relevant. So, too, are the different rates at which the populations of these different places have been recently rising. But, at bottom, it remains clear that, neither in the financing of local education nor in the demarcation of administrative areas, has public policy yet devised methods whereby the cost of providing equal educational opportunities for all children, wherever they may live, can be fairly and efficiently apportioned.

To examine the special field of technical instruction—a sector of higher education which is of immense importance in these days of mechanics, engineering, industrial adjustment and re-armament—is but to underline the same moral. There are a million students in technical colleges, evening institutes, technical schools, art schools and commercial schools; and only 40,000 are full-time day students. These are only a small part of the boys and girls that might, in their own and the nation's interests, profit by technical training. In 1935-36 the number of students in these institutions aged 13-18 was only 16 per cent. of the population aged 8-13 in the census year five years before; and even this low ratio of actual to possible students marked a remarkable and disturbing variation from district to district. In London, the ratio was as high as a quarter; in Durham it was barely a tenth, and in Staffordshire just over a seventh. Nor were deficiencies in any sense confined to rural or scattered districts; Buckinghamshire, Wiltshire and Oxfordshire were well above the average; and 121 urban centres with more than 50,000 inhabitants had no junior technical schools at all.

In the technical field the cure for the present lack of co-ordinated policy and for these considerable local variations has been officially adjudged to be concerted action by joint authorities over wider areas. Regional councils for technical education are already at work in Yorkshire, the West Midlands and the Manchester district, as well as on Merseyside.

The picture drawn by the Board's Memorandum is impressive. But there are many things awry—things which specially need a policy to redress them when we are constrained by circumstances to strive to get the last ounce of value, in terms of the nation's resources of personnel, out of our educational effort. Present methods of local administration and finance are more than a little responsible for the chief evil, which is the wide disparity between regions in every branch of education. It would be timely to remember that democracy implies equality of opportunity between places as well as between persons. Indeed, the one is bound up with the other.

Workmen's Compensation

ONE outstanding problem has lain without satisfactory solution on the hearthstone of the industrial system since the days of Watt's steam engine. This is the problem of providing for the wage-earning victims of industrial accident and disease. The prior remedy is admittedly to prevent casualties of all kinds in places of work, and notable progress has been made in this direction by a long series of Factory Acts. Only in the summer of last year this generation's great consolidated Factory Act passed partially into operation; and only this week the House of Commons has been debating proposals to lessen the toll of life and limb and health in coal mines.

But, if anything, deaths and accidents in industrial employment have lately shown a tendency to grow in number; and it was the findings of a Royal Commission set up to recommend means of stemming the growing dangers of mining that the Commons had before them on Monday. Redress is so important because protection is incomplete. That is another Royal Commission is

even now at work examining the present scale and character of the compensation accorded to injured and sick workmen or, in fatal cases, to their dependants. So long as yearly deaths in shipping, factories, docks, mines, quarries, building and railways exceed 2,000 and non-fatal injuries hover between 400,000 and half a million every year, workmen's compensation will remain an item of pre-eminent social importance in British industrial law.

The present law of workmen's compensation has been evolved haltingly in the course of a century, and there are few people to-day who would claim that, as it stands, it provides a full and sufficient statement of the material obligations owed by industry, and indeed by the community at large, to the victims of a mechanical age. The statutory right of a workman to claim a measure of compensation for injuries received in his employment, and of his dependants to claim compensation in the event of his death, is now firmly established. It is the measure or amount of compensation accorded and the means whereby

* "Memorandum on The Board of Education Estimates, 1939." H.M. Stationery Office. 6d.

† "The Year Book of Education." Edited by Harley V. Usill and an Editorial Board. Evans Bros., Ltd., Russell Square, W.C.1.

‡ The post-war introduction of a new method of superannuation payments and the revision of the system of grants-in-aid to local authorities render these comparisons only approximate.

claims are made and recognised that is in dispute; it is because there are still grave occupational diseases not scheduled for special treatment that critics complain.

To this accumulated tangle of legislative measures made *ad hoc* in the past Sir Arnold Wilson and Dr Hermann Levy have turned their attention in their campaign for needed social reforms that has already starkly exposed the more obvious abuses of industrial assurance. This first volume* is largely designed to clear the ground: to tell the story of workmen's compensation to date and to pose the problems which the Royal Commission and their own second volume will seek to solve.

The story covers three clearly defined periods. The first is that long period of over a hundred years during which the ordinary wage contract was presumed to cover all the risks and dangers of work with new-fangled machines and processes. This was a time when victims of industrial accident commonly found themselves left to the mercy of God and good neighbours, either because of their inability to sue employers under the Common Law or because justice in the hands of unsympathetic judges was too heavily weighted in favour of factory and mine-owners. The second is the short period after employers' liability was conceded by Parliament in 1880; then compensation was still in most cases denied, because of the ignorance of workers, the cost of taking a case to court, and the unscrupulous evasion by employers of their responsibilities under the Act. Lastly, there come the years after the passing of the first Workmen's Compensation Act in 1897. This is the period of our own lifetime, during which commissions of inquiry and a concatenation of amending Acts have stumbled reluctantly, and so far unsuccessfully, towards that adequate protection which humanity and justice should afford those stricken on the industrial field.

This is not a story that can simply be told as an exposition of a phase of industrial history hitherto only sketchily treated. Nor do Sir Arnold Wilson and Dr Levy treat it so. Their objective account is admirable, but it involves, inevitably and characteristically, strong criticism of Governments, of employers and of insurance companies. Throughout, cogent arguments are being ranged for the remaking of the whole *corpus* of existing compensation legislation. It is contended that, from beginning to end of what may be termed the compensation period which began forty-odd years ago, this problem has defied solution because Governments, backed by employers and insurance companies, have steadfastly refused to examine fully and impartially the evidence in favour of complete State control repeatedly brought to light by committees of enquiry and in Parliamentary debates. The nationalisation of insurance has many more angles than the compensation one, and it is a thorny question too much beloved of doctrinaires. But it is hard to see why the State's interest in compensation should not be as direct as in unemployment insurance; and it is hard, too, to disagree with the authors when they deprecate strongly the reluctance of Governments to compel all employers to insure against industrial accident, even though facts and figures showed abundantly that this omission was leaving thousands of workers completely unprotected. Nor is their insistence upon the need for strong central control of workmen's compensation heterodox or novel. It was the Holman Gregory Committee which recommended, twenty years ago, that a Commissioner should be appointed to supervise and control the working of the Acts.

In general, Sir Arnold Wilson and Dr Levy echo the views of a majority of critics and all trade unionists when they condemn the mistaken application of so-called *laissez faire* doctrines which has repeatedly operated to defeat any suggestion for an all-in scheme of State Assurance on lines similar to those successfully run in other countries.

* "Workmen's Compensation." Volume One. By Sir A. Wilson and Dr H. Levy. Oxford University Press. 328 pages. 10s.

The critics have not yet proved their case, though in view of present discontents it is *prima facie* persuasive and worthy of closer attention than it has so far been given.

So far the critics, in this book as in other books and many speeches, have scarcely done their case full justice. There is a lack of statistical documentation to point the main heads of the argument, which is not remedied, for instance, by the incomplete and unco-ordinated figures of fatalities given in the preface to this volume. One would have thought that a great deal of information of this kind could have been secured from trade union sources. It is almost certain that complete figures at least for the mining industry are available. In view of the evident desire to impress readers with the urgent need for reform this lack of data is unfortunate; and, above all, the authors, like all the legion of would-be-reformers, might have provided more information about the State schemes operated in Germany and the Dominions which are so often commended. Most people are wisely sceptical about importing ready-made solutions for social ills.

In addition, the reader will miss in the later chapters reference to one important defect of the existing law. Time was when men injured but so far recovered as to be able to do light work could depend upon being offered a suitable job at mine or factory. In these days very few are looked after in this way, though their compensation is still curtailed. There are hundreds of light-rate compensation men to-day eking out a miserable existence with the aid of poor relief. This is particularly true among men suffering from nystagmus in the mining areas. Indeed, many of these are left stranded, even after they have completely recovered, because employers refuse to engage or re-engage a man who is likely to contract the disease again after only a few months at his old work.

This is only one among many defects of the current law. In sum, do they call for the root-and-branch changes the critics demand? It is not easy to say. It was *The Economist* which said, sixteen years ago,

logically insurance should be made compulsory and be under strict State supervision; we who have learned that strict logic makes a sorry mess of human affairs leave insurance voluntary but, by an agreement with the insurance offices, make it so attractive that employers have little excuse for not carrying out their liabilities.

It is only if those liabilities are not fulfilled that there is any case for drastically amending the law. The case for change put by the authors of this book and like-minded people rest upon evidence of liabilities insufficiently met. The reduction of compensation in cases of partially incapacitated workers certified as fit for light work that they cannot get is only one case in point. The fact that a man deprived for ever of work, and having a wife and three children, may receive less than 30s. a week in compensation is another and more serious one. In cases of death a widow can get no more than a lump sum of £600 as compensation; and, commonly, much less is awarded.

These are the concrete grounds for reform, in addition to the dissatisfaction that persists about the prevailing system of medical inspection. It matters little whether the State achieves the rectification of these ills or whether the employers do it in conjunction with the insurance companies. The point is that it must be done. No conflict about the merits and demerits of State and private enterprise should be permitted to stand in the way. Two things at any rate seem certain. First, even if the present basis of legislation is preserved after the Royal Commission have said their say, the law will require some officer, such as the commissioner proposed in 1919, to be Parliament's "remembrancer" to secure its uniform administration. Secondly, and more generally, the question of compensation must always, if it is ever to be satisfactorily answered, be considered first and last from the standpoint of those to whose lot it falls to bear the heat and risk of the nation's work in dangerous places. No other view is germane.

Topics of the Week

An Obnoxious Agreement.—It is a very great pity that the bursting of the international crisis has affected the fate of the agreement concluded at Duesseldorf last week by representatives of the Federation of British Industries and its German counterpart, the *Reichsgruppe Industrie*. For compelling reasons of a general nature the Government have been prompt to declare that the agreement must be regarded as stillborn. Mr Stanley on Wednesday and the Prime Minister on Thursday shared the regret that political considerations have killed the agreement. The reasons, however, are different; for the F.B.I. regard the suspension as a mere postponement, and Mr Stanley described it as "a valuable piece of work which might have served as a basis on which the individual industries of the manufacturing countries of the world could have solved a great many of their difficulties," while *The Economist's* regret at the irruption of the crisis arises solely from the fact that the obnoxious character of the agreement as an instrument of purely commercial policy is thereby obscured. It may be as well to recall the circumstances in which the F.B.I. delegation went to Germany. It had been officially recognised that German methods of trading—subsidies, exchange manipulation, trade control by the Government for political ends—were harmful and wrong. The strongest warnings had been given by Mr Stanley and Mr Hudson that if the Germans did not desist from their objectionable practices Britain would "fight them with their own weapons" and "beat them at their own game." But since commercial peace will always be preferable to commercial war, Germany was to be offered a peaceful opportunity to mend her commercial ways. That was certainly the assumption on which the idea of negotiating was widely approved.

Of condemnation of German methods, even by the gentlest and most indirect implication, the agreement is entirely innocent. Indeed, by including as one of the approved objects of trade the provision of "a volume of foreign currency sufficient for [Germany's] economic needs" it concedes the whole basis of Dr Schacht's policy. A number of changes in policies hitherto pursued are approved in the agreement. But without exception they are all changes not in German but in British policies: the creation of international agreements to put an end to our familiar friend "destructive competition"; a policy of securing complete co-operation not merely in export trade but "throughout the industrial structure" of the two countries (i.e. complete domestic cartelisation); and, so far from abandoning the subsidisation of German exports, a project for joint Anglo-German subsidies. Instead of securing from the Germans an abandonment of their unfair methods, the British negotiators seem to have swallowed them, lock, stock and barrel. The lengths to which this collaboration is apparently to go is indicated by the most amazing paragraph of the whole document, which deserves quotation in full:—

The two organisations realise that in certain cases the advantages of agreements between the industries of countries or of a group of countries may be nullified by competition from the industries in some other country that refuses to become a party to the agreement. In such circumstances it may be necessary for the organisations to obtain the help of their Governments, and the two organisations agree to collaborate in seeking that help.

The United States is one country that would be most unlikely to "become a party to the agreement." The clause consequently means that in given circumstances the F.B.I. contemplates seeking British Government subsidies to help German trade against American. Is there something in the atmosphere of Duesseldorf that causes sensible men to lose their wits?

The agreement contains a number of the conventional sentiments about the necessity of increasing international trade, of not penalising the consumer and of leaving the agreement open to any country's adhesion. But its substance is this: Provided Germany does not encroach on British trade preserves or reduce the profit margin of British exporting industries, Great Britain will not concern herself with what Germany does to other people's trade or by what means. This policy may just conceivably be in the very short-term interests of the firms represented in the F.B.I. It is certainly not in the interests, either at short term or at long, of the British community as a whole. We repeat our regret that the international crisis has come to confuse the issue. That issue is, in a word, that the agreement proposes to compound a commercial felony.

* * *

France and Great Britain.—The measure of Herr Hitler's miscalculation—if he sincerely believes in the decadence of the West—has already been given by the reactions in France and in Great Britain, and not least by the further proofs of the solidarity of will and feeling between the two West European democratic Great Powers. In the Chamber in Paris on the 18th, the Prime Minister called for the conferment on the Government of extensive special powers, for the reinforcement of the national defences, to last till November 30th. After a debate in which M. Daladier refused all compromise, he was duly voted plenary powers, for the period in question—in the Chamber by 321 votes to 264 and in the Senate by 286 votes to 17. In virtue of these votes, the Government promulgated, on Tuesday, a series of decrees covering most of the field of public life, and falling under the three main heads of security, production and economies. The new measures for active, as well as passive, national defence, notable though they are, are not so significant as those providing for the mobilisation of the nation's economic energies. There has never been any doubt about the excellence of the French armed forces—notwithstanding certain gaps which the authorities have latterly been making good. The economic home front has been, all along, the danger point. Had the country the facilities, and had the workers the will, to raise the national production for war purposes to the necessary level, and then keep it there? The key-measure in this connection is the decree providing for a 60-hour week throughout the national defence industries. By nature the French are one of the hardest-working nations in the world; and when political inhibitions on hard work are overridden by patriotism, there is likely to be a formidable release of national energy.

SKANDINAVISKA BANKEN

It was a happy coincidence that the day which saw the publication of these decrees also saw the arrival of the President of the Republic and Madame Lebrun in London to return the visit paid to France by the King and Queen last July. For once, Herr Hitler has timed one of his *coups* unfortunately for himself. His seizure of Czecho-Slovakia has made it clear to all citizens of the Western democracies—even including Cabinet Ministers—that nothing short of complete solidarity can avail to overcome the world danger to our common “conceptions of honour, of justice, of human dignity, of respect for treaties and for one’s pledged word, and our common attachment to the liberty of thought, speech and writing, and, in fact, to liberty of life.” These words were spoken by the President himself in his reply to the King’s speech at the State banquet at Buckingham Palace on Tuesday night. The welcome which the President had by then already received from the British public showed that they had instinctively anticipated the points that he was to formulate. It is now for British and French statesmanship to see to it that this “union now” between Great Britain and France becomes a nucleus for a rally of all Governments, peoples and men and women of good will throughout the world in defence of the imperilled foundations of our civilisation.

* * *

American Opinion.—Herr Hitler’s seizure of Czecho-Slovakia has evoked strong reactions at Washington and throughout the United States. The penalisation of German imports, which happens, not inopportunely, to have coincided in date with Herr Hitler’s *coup*, was of course a reply, not to this, but to Germany’s unfair methods of trading. Since then, on the 17th, the “temporary extinguishment” of Czecho-Slovakia has been made the subject of a public statement by the Assistant Secretary of State. Mr Sumner Welles condemned Herr Hitler’s crime in plain terms, and declared that “acts of wanton lawlessness and arbitrary force” were “threatening world peace and the very structure of modern civilisation.” On the 18th a notification of Germany’s annexation of Bohemia and Moravia was handed to Mr Welles by the German *chargé d’affaires* in Washington. The American reply, which was delivered on the 20th, stated that the Government of the United States does not recognise that any legal basis exists for the *de facto* administration of Bohemia and Moravia by the German authorities. A copy of Mr Welles’ statement of the 17th was annexed. The Czech Minister in Washington is refusing to surrender his Legation and Consulate to the Germans, and Dr Benes is forming a Czech provisional Government in America. We may venture to speculate that to-day this Czech provisional Government abroad may be as near to becoming the *de facto*, as well as *de jure*, Government of its home country as its predecessor was in March, 1918.

* * *

At Washington, meanwhile, the revision of the existing neutrality legislation has become an urgent matter of practical politics. That substantial revision, in a sense unfavourable to the Axis, will take place in the near future seems highly probable. But the important thing, behind all political moves, is the movement of American public feeling and opinion. Shall the United States stand aside if Germany makes a bid for the domination of Europe? Or shall there be an alignment with the West European democracies in order to fight the winning battle further afield than the last ditch? This issue, which has been before the American people for many months past, has now become acute. The decision is the American people’s own affair; but, as far as they are influenced by external events, we may guess that the most potent factor here will be the attitude of the British Government during these coming days and weeks. Feebleness and irresolution in London now might alienate America once for all. We trust that our Government realise this and have taken it to heart.

* * *

Victim of the Week.—On Wednesday of this week, after the Lithuanian Foreign Minister had received from

Herr von Ribbentrop an ultimatum backed by threat of immediate invasion, the Memelland passed under German sovereignty, and a sixteen-year-old incident in Baltic history for which the Allied Powers must bear the final responsibility and the unquestionable odium was thus concluded. Few will now contest the injustice of Memel’s separation from East Prussia, carried out as it was by force against the wish of the population or even of the Conference of Ambassadors at the time. When so much is admitted, there remains, as one more example of Nazi methods, the brutal dishonesty with which Memel is brought back into the Reich and the question of why Herr Hitler should have chosen this particular moment for his action. With Germany’s overwhelming force next door, the Lithuanians would, of course, have continued to observe most scrupulously the terms of the Memel Statute, and they proved this only recently by revising the high-handed methods they used when Germany was a Republic; Herr Hitler assured Mr Chamberlain that he was satisfied with the Memel Statute and had no wish to make a change—and there is, too, the relatively academic point that his assurance carried the force of a solemn promise. If he has lost little morally, it is because he has little left to lose. Economically he has gained nothing, for Memel’s importance cannot be enhanced by *Anschluss*, but may, if the Lithuanians retain their liberty to improve the roadstead of Libaja, even be diminished. Politically he has given the Polish Government and people, faced now with German arms creeping round their northern and southern frontiers, one more push towards the Western Powers, and to those Powers new proof that the Nazi word is valueless when reckoned against self-interest. He has removed the last doubt in our minds, not that resistance must be prepared, but that it must be prepared with the most urgent speed. There remains only the strategic reason. Were the Lithuanians really preparing for union with Poland? Was Poland ready to take her stand on Kovno? The Germans seem to have thought so. For with Memel in their hands it is only a matter of time before Lithuania asks for German “protection”; and for a nation standing to arms the butter of Lithuania will come far more gratefully than the guns of Bohemia and Moravia.

* * *

Victim of Next Week?—When the German divisions moved eastwards out of Prague in the middle of last week, stopping only to leave garrisons behind them, it looked as if they were bound for the Roumanian frontier. Hungary then continued the mobilisation she had carried out for the occupation of Ruthenia, and suspicions were deepened. With the British Cabinet’s emergency meeting on Saturday evening to consider a report handed to the Foreign Office by M. Tilea, Roumanian Minister in London, to the effect that King Carol was facing an “economic ultimatum” (origin of the label unknown) which would reduce Roumania to vassalage wherein she would close down her own industries and concentrate on producing food and oil for the Reich, it seemed certain that Roumania was next on the Nazi list. There followed the speedy diplomatic moves which we discuss elsewhere. Over the week-end, however, the situation became clearer. King Carol, it appeared, had adroitly turned to his own advantage a turn of events which might otherwise have left him without means of resisting Germany’s trade envoys. Like all other East European States, Roumania cannot afford to antagonise Germany without possessing a well-defined alternative policy. Last week she lacked that alternative. Herr Wohlthat and his colleagues were busy pressing on their Roumanian opposite numbers what Herr Funk had failed to induce Belgrade to accept—namely, complete priority for German economic needs with all that this would entail. There existed no sign, spasmodic gestures by France and Britain apart, that Roumania might hope for help elsewhere. Failing that help, she must have put her signature to Herr Wohlthat’s documents. Then, by what may or may not have been a lucky coincidence, the Germans invaded Bohemia, took charge of Slovakia, and everything was changed. Without finally breaking off negotiations (for that might be exceeding the safety line), the Roumanians rejected the “ultimatum” and warned the

British Government. The danger to Roumania was for the moment averted, though a trade agreement conferring large benefits on Germany was, after all, signed at Bucharest on Thursday. Far better reason for anxiety now exists in Warsaw. The achievement of a common frontier with Hungary is a poor return for a German encirclement that is now on three sides of Poland, and in this gloomy perspective it is being seen by the Polish public. On the 19th President Moscicki saw fit to broadcast to the nation an address in which he said that “we shall not surrender our destiny to alien protection”; and on that same day, as if to push home the British Government’s invitation to sign a multilateral declaration, Mr Hudson arrived in Warsaw. The Poles have always declared that they will fight rather than submit to political disintegration; they may now ask themselves whether they have not reached the point of proving that determination by joining the Powers which are now uniting against German aggression.

* * *

Italy’s Turn?—Two weeks ago it was a common question whether Signor Mussolini could formulate his precise claims on France without the effect of an anticlimax. In the calm atmosphere which prophets in Whitehall were reckoning a new period of grace there seemed no place for *sacro egoismo* of the Fascist brand. The troops in Libya, it was felt, might provide the means of screwing up that tension which normally precedes demands on the democracies. In the event, the senior partner has obliged; and one big question left to be answered is what effect the German *coup* is having on the junior partner. Perhaps unfortunately for him, Signor Mussolini has several obvious opportunities of answering this question. On Tuesday, while his Ambassador in Berlin was returning to report, the Duce conferred with the Grand Fascist Council and later issued a “full reaffirmation of agreement with the policy of the Rome-Berlin Axis.” He could do no less; but it will not be so easy to let pass the occasion of his speech on Sunday without more pregnant phrases. On responsible Italian opinion the German advance south-eastwards will have the double-edged effect which all German successes are wont to have in Rome. Those who argue that Italy can sustain a joint war against the Western Powers, that it is worth her while to do so, and indeed that only by doing so can she reap the lost fruits of 1919, will doubtless be pleased by the news, though their pleasure will be mitigated by the probability that the Western Powers at last mean business. Those others who regard German competition as more of a danger to Italian commercial and political influence in the Balkans than an assistance to African conquest, and who are unwilling to take the Rome-Berlin Axis beyond its original scope of “nuisance value,” will see in last week’s events another confirmation of the fears that troubled them when the Reichswehr set its standards on the Brenner. To-day there can be no further hope of detaching Britain from France, and Italy’s task must seem in Rome immeasurably harder. In his speech to the new Chamber of Fascios and Corporations on Thursday, King Victor gave a key to the Italian viewpoint when he said that, “regarding France, my Government, in an official note of December 17th last, formulated the questions which divide the two countries at this moment.” The note referred to was that which denounced the 1935 agreement and invited negotiation; and, taken in context with the rest of this rather peaceable speech, this statement might be taken to mean that no new formulation of demands need after all be expected.

* * *

The Gestapo in Czecho-Slovakia.—During the war of 1914-18 many countries, from Belgium to the Ukraine, experienced the terror and oppression of a German occupation. But that was child’s play compared with what the Czechs are undergoing now. The Germany who broke her word over Belgium in 1914 was merely the exponent of Prussianism, whereas it is Nazidom that has its grip on Czecho-Slovakia to-day. While the occupied territory is being fleeced as systematically in 1939 as it was in 1918,

its inhabitants to-day are being made the victims of the refined acts of tyranny that have been worked out in the Third Reich under Herr Himmler’s auspices. Within a few hours of the German military occupation the Gestapo were busily at work arresting, and relegating to concentration camps, all individuals obnoxious to the conqueror. The list includes all Czech patriots, as well as all Liberals, Marxists and Jews; and the figures of the victims are believed to run into thousands. In Czecho-Slovakia, as in Austria, the anti-Hitler plebiscite is being recorded in the form of suicides. Events have already proved—what could be assumed *a priori*—that the so-called protectorate is no more than a verbal façade for oppression pure and simple. No doubt it is only a matter of time for the “independence” of Slovakia to produce the same fruits as the German “protectorate” over her two sister Slav provinces. To parody a famous Austrian *mot* about the aftermath of 1848, the Slovaks to-day are manifestly going to receive as their reward what the Czechs have received as their punishment. In all this, the Germans are showing that characteristic national combination of stupidity with brutality which was the ultimate cause of their defeat in the war of 1914-18. The Czechs are a stalwart people who have been inured to oppression by a centuries-old experience. They will not be broken by Herr Himmler’s “third-degree” methods; they will be steeled by them into a yet more indomitable passive resistance. And meanwhile all but three of the sixty or seventy nations of the earth, as they see the crime that is being committed in the heart of Europe, will be taught, beyond possibility of mistake, that they have more to lose by submission to Herr Hitler’s tyranny than by the most desperate resistance.

* * *

Infra-Aryan Status.—The legal framework of Nazi “protection” is worth recording by way of example. The text of Herr Hitler’s proclamation contains thirteen articles precisely delimiting the status of the annexed Provinces. Under the protection of the Great German Reich they are to form the “Protectorate of Bohemia and Moravia,” the German inhabitants of which become German citizens (and thus subject to the Nuremberg laws), whilst the other inhabitants become nationals of the Protectorate. Although the Protectorate is autonomous and administers itself, its prerogatives are “in accordance with the political, military and economic importance of the Reich.” To make it doubly certain that nothing will be done in the Protectorate to damage German interests, the Fuehrer is to appoint a “Reich Protector”; and this step has already been taken with the appointment of Baron von Neurath. As “delegate” of the Reich it will be his task to see “that the lines of policy laid down by the Fuehrer and Reich Chancellor are observed,” to approve the Protectorate’s Government, to inform himself of all events in the Protectorate and to stop anything he thinks ought not to be done (with power to veto judicial decisions as well as legislative and administrative acts). military establishments, control by the Reich of communications, posts and telegraphs, the inclusion of the Protectorate within the Reich Customs Union, and the ratio of the crown to the mark. Article 12 contains the typical statement that "the law now in force in Bohemia and Moravia remains valid except in so far as it contradicts the spirit of the protection undertaken by the German Reich."

* * *

The Dominions and the Crisis.—The response of the Dominions to events in Europe, though varied according to their different situations, has greatly encouraged those who believe that Commonwealth solidarity is a vital contribution to genuine collective security. In a stirring broadcast address, Mr W. M. Hughes (who has succeeded Mr Menzies as Attorney-General in Australia, while remaining Minister for External Affairs) declared that there could be no peace or security or progress in the world until the aggressor nations were confronted by resolute peoples barring their path with drawn swords. That must be the policy of the democracies, not in some remote future, but now. Significantly, he added that the Japanese occupation of Hainan Island should remind Australia that the advantage of her geographical position was rapidly disappearing. South Africa's geographical concern in German ambitions for world mastery was rudely brought home to citizens of the Union by the revelation that, in protesting against her refusal to allow certain German immigrants to land in South-West Africa, the German Government had darkly declared that it would not be responsible for the consequences of continued exclusion. It is understood that the Union Government, which has asked for particulars of the complaints, regards these immigrants as political agitators. South Africa has reason for suspecting the German doctrine of "divide and conquer"; for, even while the Union Government were taking special police measures against possible German disturbances, the chief Nationalist newspaper was demanding a policy of strict neutrality as between Great Britain and Germany, if they should clash. The majority of Union citizens, however, are reported to be firmly behind British policy as expressed by Mr Chamberlain and Lord Halifax. South African divisions contrast with a remarkable demonstration of solidarity in Canada, where the leaders of all three major political parties have denounced German aggression and pledged Canada to action if need be. Mr Mackenzie King, who is not given to unequivocal utterance on such issues, declared in the House of Commons that, while Canada's participation in war was a matter for Parliament to decide, any attack on Great Britain should instantly be regarded as an act of war against Canada.

* * *

The Opposition.—It is in crucial days like these that the flexibility of Parliamentary government is most seriously tested—and most sorely needed. This is the time when a Government unmistakably representing the views and desires of the majority of public opinion and possessing the trust and confidence of the people is most urgently required. It is accordingly unfortunate that the traditional working of the party system, designed as it is to throw up such a Government in time of need, should at the present time be gravely clogged. On the one hand, Mr Chamberlain's administration has taken on since his advent to the Premiership the character of a rigid autocracy; the virtual rule of a small Inner Cabinet has deprived Ministers and Parliament of the free exchange of ideas that should be their privilege, and most even of the independent and ablest members of the Government parties themselves have been robbed of any influence upon policy. But it is not only that we now suffer most of the disadvantages of having a War Cabinet without enjoying its advantages. The Opposition, too, are seriously to blame for the halting operation of Parliamentary democracy. The Labour Party, even more than the National group, is autocratic; Mr Eden and Mr

Churchill are still members of their party; Sir Stafford Cripps has been driven out. It is a sad reflection on the present state of party politics that the National Executive of the Labour Party should have found it needful to spend a great part of these days of crisis in working out new measures of menace and intimidation to prevent their supporters from backing Sir Stafford Cripps (as they are doing in growing numbers) in his campaign to secure reconsideration by Socialists of his plan for a common front between all progressive parties. The Executive have this week threatened to take steps to put a stop to the activities of the Left Book Club; and they have informed Mr Aneurin Bevan, Mr George Strauss, Sir Charles Trevelyan and other M.P.s and Labour candidates associated with Sir Stafford's campaign that they, too, will be cast out if they do not desist. In these conditions, it is glaringly true that there is not the vestige of a sign of any alternative Government to Mr Chamberlain's, despite the fact that the Prime Minister has been compelled to abandon a foreign policy on which he seemed to have staked his political reputation. This situation is the very negation of Parliamentary and representative politics.

* * *

Labour and National Service.—Politically the Labour Party is inept. Socially and industrially organised Labour probably holds the key to the successful achievement of national confidence and security. This week the National Council of Labour, representing the trade unions as well as the Labour Party, stated their standpoint in the present crisis. In declaring support for a forthright and specific return to the policy of collective security, the Council simply registered their agreement with the majority opinion in probably all political groups, Right and Left alike. They showed, too, that one obstacle inherent in doctrinaire Socialism had been successfully overcome, when they re-affirmed their opposition to any alliance for Imperialist ends only to declare that a definite pact to resist aggression by force did not come in this category. On the issue of national service their views were less pliant. So far, neither industrial nor political Labour is willing to contemplate compulsory service of any kind. Yet, even here, there are signs that wisdom may prevail over dogma should the need arise. The memorandum of the National Council called upon members of Labour organisations to safeguard the voluntary principle by throwing every effort into making voluntary national service work successfully. The point is that there are two strands in Labour's aversion to compulsion; on the one hand, the trade unions are fearful for their standards, rules and regulations; on the other, Labour politicians are traditionally opposed to conscription as an instrument of Imperialist militarism. At the moment, these fears are reinforced by distrust of the Prime Minister, upon whom they are not ready to rely for the needed reversal of his policy of appeasement. Given a Government they could trust, carrying out effectively a foreign policy they could support, Labour politicians and trade unionists would, it can scarcely be doubted, be prepared to modify their dogmas in the service of their country. Given a policy at home that would impose compulsion and restraint upon business men and employers equally as much as upon working people, Labour would be ready to play its decisive rôle in unlimited re-armament. As it is, Sir Stafford Cripps is right: the Labour Party is powerless. Only if a more enlightened policy of co-operation with other progressive groups and individuals could be pursued would Labour be in a position, first, to speak for a large proportion, if not a majority, of the electorate, and, secondly, to join hands for the commonweal with a freer and more flexible Conservatism.

* * *

Strength at Sea.—Sea power is still Britain's greatest asset in war and diplomacy. The outcome of the next European conflict, like the outcome of the last, will turn in the end upon this country's ability to maintain command of the seas and to keep open our own supply routes while choking those of the enemy. Few speakers in the

Commons' debates on the Navy Estimates last week and this were disposed to doubt that Britain's sea-power was greater now than in 1914. There is no hostile navy or combination of navies in European waters capable of offering the challenge flung down by the Imperial German fleet twenty-five years ago; and our rate of naval building is now greater than it was in the years of Anglo-German rivalry before 1914. According to the present programme, the naval tonnage completed annually in 1940 and 1941 will be almost a third greater than the annual output in the three years before the last war. In the year 1938-39 forty-three warships were completed; in 1939-40 the number will be 60, and there will be over 200 vessels, including nine battleships, six aircraft carriers, 25 cruisers, 43 destroyers, and 19 submarines, under construction.

* * *

It is true that some members were not sure that our naval strength was sufficiently great to resist simultaneous attacks in European and Far Eastern waters; but, for the most part, critics did not fear the consequences of any direct naval challenge, but rather the sapping effects of submarine and aircraft raiding. They called for more light escort vessels to protect merchant ships and an increase in the two flotillas of destroyers included in the Estimates, and, from all parts of the House they suggested that the enlargement and reconditioning of ports on the West coast inaccessible to air attack was imperative. The Government's reply was reassuring. The combination of a protected convoy system with anti-submarine devices which are now much more effective than those which broke the U-boat campaign in 1918 would be adequate to repel the only kind of threat we were likely to have to face; 1,000 merchant ships had already been stiffened to withstand bomb, shell and torpedo attack, and 9,000 merchant officers had already been trained in convoy and protection methods. The rumour that the Anglo-German Naval Treaty of 1935 might be repudiated by the offended Fuehrer did not alter the view that Germany is in no position to offer any large-scale naval menace in the measurable future; and the only doubt left in the minds of Parliament and the public was whether, in spite of the notable progress made in anti-submarine and anti-aircraft precautions, it would not still be advisable to concentrate even more on smaller vessels to counter the raider than on giant warships to engage a Grand Fleet that does not exist.

London's Fares.—On Monday the application of the main line railway companies and London Transport for power to increase fares in the London Transport area was opened before the Railway Rates Tribunal. The Board is required by statute to provide the standard dividend of 5½ per cent. on the "C" stock, but its revenues have so far proved insufficient and a threat of an application for receivership hangs over its head. For their part, the main line railway companies were granted a 5 per cent. increase in passenger charges outside the London Transport area in October, 1937, and they seek a similar increase for London suburban passenger services, subject to certain fractional rules. London Transport applies to the Tribunal only in respect of certain jointly-owned or operated railways and all parties have many fares which may be increased without application, since they are below the maximum charging powers. London Transport proposes to increase certain fares on the bus, tram, trolleybus and coach services, on which, however, the standard of 1d. per mile for ordinary fares will be maintained. In financial terms, the estimated additional receipts of the London Transport pool from the joint proposals amount to £1,179,000, of which only £220,000 needs the sanction of the Railway Rates Tribunal. Of this sum the estimated proceeds (after pooling) are £732,000 for the Board, £60,000 for the L.M.S., £71,000 for the L. & N.E., £16,000 for the Great Western, and £300,000 for the Southern. The amount required to cover a full 5½ per cent. payment on the Board's "C" stock, on the basis of last year's actual earnings, is approximately £617,600.

The basis on which the Board will adjust its railway fares can be summarised thus. For fares under 4d., increases will only be made in conjunction with adjustments in larger fares or to eliminate ½d. fares. No single fare under 9d. will be increased by more than 1d. Certain fare anomalies will be eliminated and charges on alternative routes will be brought into closer correspondence. Out of a total number of 8,719 fares, some 3,709 (or 42.45 per cent.) will be increased, 146 reduced and 4,864 (55.79 per cent.) left unaltered. Certain long 1d. road fares will also be adjusted to bring the charge closer to the standard basis of 1d. a mile. The application is being opposed by the London County Council, and various local authorities, together with the Progressive Rambling Club and the London District Committee of the Communist Party of Great Britain.

* * *

Government Camps.—The text of the Minister of Health's Bill to promote the construction, maintenance and management of camps of a permanent character is now available. The measure is important because it represents the recognition by the authorities of the need for dual purpose camps to serve simultaneously the requirements of peace and war, a need voiced in many quarters ever since the evacuation of large numbers of urban residents in the event of hostile air attack became a real possibility. It is important, too, because in the two non-profit making companies projected to provide the camps, with grants or loans from the Exchequer not exceeding £1,200,000 in all, the Government have devised a type of agency fitted to carry out socially useful tasks of much wider scope than this one. It is, indeed, the small scale of these proposals that is most open to question: fifty camps to house 17,500 children in all will make no appreciable contribution either to the supply of rural camps that urban schools urgently need or to the solution of the billeting problem in time of war. Clause 4 of the Bill empowers the Unemployment Assistance Board to make arrangements for the engagement of unemployed persons in the construction of camps; but here again the amount of alleviation that will be afforded for a grievous social problem will be exceedingly slight. It is only by assuming that these camps are viewed by the Government as experimental, to be widely extended later, that one can escape the feeling that a very great chance has been lost to embark upon the sort of bold and large-scale scheme which democracies are nowadays accused of being incompetent to undertake.

* * *

Government in Central Africa.—That the Royal Commission on the Rhodesias and Nyasaland should have decided against the immediate amalgamation of the three territories is not surprising; for it would have been a rash Commission indeed that would have recommended the establishment of a single self-governing Colony—self-

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

governing because Southern Rhodesia would have consented to nothing less—in an area of 500,000 square miles, inhabited by over 4,000,000 natives and only 68,000 Europeans. But, practical considerations apart, the divergence between the native policies in Southern Rhodesia and the two Protectorates is the fundamental cause of the Commission's decision. It emphasises that it is too early to state whether the Southern Rhodesian policy of "Parallel Development," which implies the exclusion of native competition in European areas, works to the advantage or detriment of the native. But it is clearly irreconcilable with the principle of trusteeship that directs native policy in the non-self-governing territories of Africa; and it is significant that those natives of Northern Rhodesia and Nyasaland whose opinion was taken showed a striking unanimity against amalgamation with Southern Rhodesia. Yet, if in theory the natives of the two Protectorates enjoy more liberal treatment than those of their southern neighbour, in many other respects their condition is sadly inferior. In recent years the Government of Southern Rhodesia has addressed itself energetically to the provision of social services for the natives and to encouraging improved methods of agriculture among them; but in Northern Rhodesia native education is still very backward, agriculture is still primitive and wasteful, and the standard of health is still very low. The comparative poverty of both Northern Rhodesia and Nyasaland has retarded native development; and it is to effect a substantial financial saving, as well as to abolish boundary anomalies, that the Commission recommends the immediate amalgamation of the two territories under one Administration. Whether this is put into effect or not, the Commission also urges close co-operation between all three territories by means of an Inter-territorial Council to co-ordinate certain public services and survey the economic needs of the whole area. Native labour, for instance, is a problem common to all, which can only be solved by collaboration. The drift from the land to work in the mines and towns, and the consequent breakdown of tribal life, have raised evils that are crying out for redress. While they exist they are the responsibility of the Imperial Government no less than of the local Administrations; and the Colonial Office should see that "indirect rule" is used, not as a cover for shelving them, but as a means of realising the distinctive aim of British Colonial policy,

which is the promotion of better Africans rather than pseudo-Europeans.

* * *

Mexican Oil.—Nearly a fortnight's discussion does not appear to have brought Mr Donald Richberg, representing British and American petroleum companies, and the Mexican Government much nearer agreement on the teased questions of compensation and collaboration. Although negotiations have not been broken off, the companies have refused to accept the Mexican Government's proposal for joint investment and representation. It may not be a very apt comparison given their reputed hard-headedness, but it is clear that if the petrol interests did fall in with this plan they would relive all the unhappiness of the proverbial fly. The Mexican Government needs capital, and is happy that the capital should be British and American: having got the capital, it has no intention of disgorging any proprietary rights. Expropriation is a whole-hog measure or it is nothing. This point of view comes out again in the Government's proposals for compensation, so far as they are known. It appears that the companies cannot expect to receive compensation on a basis of their total estimated losses—generally supposed to be about \$400 millions—for the Government subtracts from this the whole of what appertains to that "national heritage," the subsoil; and compensation will be calculated on a far lower figure. Meanwhile, the Mexican Government is trying to get rid of the oil. In this they are meeting with a good deal of success, chiefly through the activities of Mr William R. Davis and of German and Italian agents. For months past details of barter transactions have been leaking through, for machinery with Germany, for oil tankers with Italy, even for military aeroplanes. American opinion was startled the other day by the news that the Japanese had begun drilling on properties next door to expropriated Mexican Eagle wells; there was even reported a grandiose project to be worked out under the same unwelcome auspices for running a pipeline from Eastern Mexico to the Pacific. These barter deals may be legitimate trading from the strictly Mexican point of view; from the companies', since compensation is to be paid out of the proceeds of oil sales, they are a shady means of getting payment deferred.

Treasury Wants No New Money

NEW YORK, March 13.—Increasing interest is being shown in the flow of investment capital into enterprise. Except for the three summer months, 1938 was not a year of large corporate issues, especially those classifiable as new capital. The first five months of the year were days of business prostration and discouragement; in June, July, and August there was a spurt in the issue market; but in the final four months, this again lapsed into quietude, though, in this period, the demands of the Treasury were enormous. The Treasury bonded debt rose as follows:—

	Bonds Outstanding \$
End Aug., 1938	23,658,000,000
End Jan., 1939	26,007,000,000
Increase	2,349,000,000

A substantial part of the increase was absorbed by Government agencies, but the net increase in the total "market

issues" was about \$1,356 millions and the decline in the maturing short issues of \$651 millions brought the total absorption of Treasury long term issues to about \$2,000 millions in the four months. The banks, if one may judge from the reporting member banks, replaced the maturing shorts with longs, and took about half the net increase in addition, leaving upwards of \$700 millions to be taken by the market.

This borrowing by the Treasury was in excess of its current needs, and the "working balance" in the General Fund rose from \$1,663 millions in August to \$2,288 millions in January—say \$600 millions. As a consequence, the Treasury has announced that on March 15th it will ask for no fresh money; but will confine its operations to the conversion of the \$1,400 millions-odd of notes maturing in June. In short, the Treasury, after making enormous demands on the market in the last four months of 1938, is now in a position to make no demands on the market for approximately half a year.

There is no more mooted question in American economic thinking than that regarding the formation and flow of capital; one group holds that American enterprise no longer affords an outlet for new capital and that the State must continue to be virtually the sole demander of new capital, in the indefinite future as in the recent past; the other argues that the demands by enterprise for capital are enormous, but that

they have been ineffective, because the State has monopolised the supplies of savings. It seems pretty clear that in the final months of 1938, the Treasury did, in fact, pretty nearly absorb current capital accumulation. And it is just as clear now that, in the current four months, the Treasury, by asking for no new money, is giving enterprise the field, though it was not until the end of February that the market was apprised of the Treasury's decision.

Capital Market Transformation

The capital issue market itself is undergoing a process of remarkable change. It is now clearly divisible into three parts. First, there is the regular issue market, in which the security is underwritten and sold by the underwriters to the market, subject to the regulation of the Securities and Exchange Commission. Such issues are then commonly, if not invariably, listed on a recognised exchange. This procedure is standard for large issues—say \$10 millions or over. A second category is the direct or private sale to a single lender or small group of lenders, commonly insurance companies. These issues are not underwritten, are not intended for listing or trading, and escape the costs of the more formal offerings. They are of medium size (say under \$10 millions and above \$1 million). Beyond these is a new form of time loans from banks; this is not, properly speaking, a new "issue," but as such loans may be made for five or ten years, they serve a purpose that formerly would have been met by a formal issue. These may be fairly large, if the borrower is a large corporation, or fairly small, in the case of smaller enterprises; and the terms vary.

Statistics have not yet caught up with these developments. The publicly offered issues are, of course, tabulated. The tabulation of privately offered issues is still informal. The long-term loans of the banks are tabulated with the privately sold issues only if they are of considerable magnitude; otherwise they are apparently lost in the general item of bank loans. The private issue and the long-term loan are relative innovations; yet they are functionally part of the capital market. The private issue goes back four or five years, and apparently has been increasing in relative importance, although somewhat sporadically. The long-time bank loan is apparently an outgrowth of the private issue market, but is more recent, for the originator of the private issue market was the insurance companies.

Private Transactions Loom Large

But so important have the private transactions become (even apart from the time loans of the banks) that they cannot be omitted from consideration. In recent weeks, they seem to have exceeded, not only in number, but also in amount, the formal public offerings. If one takes into account only the public offerings of January and February, the sum hardly exceeds (if it equals) \$100 millions—which would indicate a lethargic issue market; but if one doubles that figure to include these private transactions, the figure compares pretty well with any similar period in recent years.

A considerable part of both markets, however, represents refinancing, and consequently does not afford any answer to the main questions about the demand for and supply of new capital for enterprise. The fact that this revival has coincided with the absence of the Treasury from the market is not conclusive, either; for the period has been one in which other factors have been influential. Nevertheless, it is possible to arrive at two conclusions from these facts that have a bearing on the general outlook: (1) that for a period of some months the Treasury will not be in the market for new funds, although it will be shifting a substantial short maturity into long-time bonds; and (2) that, while formal capital issues have been few and small so far in 1939, the combined formal and private issues run to substantial figures.

Naturally, this innovation has precipitated a controversy. The investment, banking and underwriting houses feel that it is a kind of poaching on their preserves; the S.E.C. is concerned about the use of the private transaction as a vehicle to evade their controls. On the other hand, the innovation appears to have justified itself especially for issues which are too small to command a public listed market and which are in this way more economically placed directly with those institutions that might have been their eventual purchasers and repositories anyway.

For those unconcerned with these controversies and concerned rather with following the flow of capital into enterprise, it is primarily important to note that the familiar statistical series of capital issues no longer tells the whole story. Currently, this flow is much larger than the traditional data would indicate.

France

Making the Country Strong

PARIS, March 23.—The Government intended to wait until the visit of M. Lebrun to London and the Presidential election to take new measures. But Herr Hitler decided otherwise. For the third time in a year M. Daladier sought and obtained full powers (this time until the end of November)—to take whatever measures he may deem necessary "to consolidate and increase the strength of France." It is necessary to go back to the war-time "dictatorship" of M. Clemenceau to find the executive vested with such broad and elastic powers.

The decrees of April, 1938 (after the *Anschluss*), mainly stated principles. The decrees of November, 1938 (after Munich), dealt much more practically with the problems of internal recovery. But the third batch to come will represent the first real effort to achieve reorganisation, retrenchment in public expenditure and increased production since the war.

Symbolical of the Government's determination to assert its authority is the proposed administrative reform of the City of Marseilles. Only those who know the long-standing disorders of this municipality and the powerful demagogic interests entangled in this little "Tammany" can understand the real and moral significance of this step.

Economy in public expenditure is to be enforced. Fifteen of the sixty-five "offices"—which require a special budget of 3,500 million francs per year—are to disappear and be reintegrated in the general Budget. This is one of the first decisions of the "Axe Committee," and it is a reform which has been called for for many years. It has hitherto been blocked by electoral interests and, eight days ago, the forecast that it would be done would have made all French people laugh.

Fortright steps towards more efficient organisation are to be taken. The central direction of military production will be instituted and propaganda will probably be dealt with similarly. The object of these changes is to co-ordinate the activities of all the various Government departments to the best advantage.

The prime need is increased output. New credits and the power to increase hours of work up to 60 hours a week are given to employers who will give priority to war orders. Unemployed persons who refuse to work in armament works will lose any claim to the "dole" for a year.

Other measures deal mainly with the military security in France and North Africa. They are directed in two chief directions: defence against air raids; and the defence of Tunisia. At the same time, the military department which will have to supervise armament production is to be strengthened.

Public Confidence

The effect in the country of this manifestation of authority and resistance to the German danger was considerable. During the crisis, the franc stayed stable; there was not the slightest sign of any panic in the markets as there was last March or last September. Not a newspaper posed the old problem of "liberty or exchange control." After a bad Monday on the Stock Exchange—mainly caused by the heaviness of foreign markets—on Tuesday there was a vigorous recovery.

This change in the attitude of French capital is of the greatest importance, coming as it does after a long period of paralysis which seemed to have proved that the automatic flight of capital in the face of foreign danger would effectively prevent any plan for recovery by liberal methods from succeeding. All is changed now. It may be that, after this successful test, the staunch will of the Government and the

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

West End Branch: 198 Piccadilly, W.1

confidence of the country will lead to fresh investment of capital in business and industry, and so to real recovery.

The recent trend of production and public finance made it clear that fresh efforts were possible and necessary. The fact that the January revenue receipts were 4,827 million francs compared with 3,946 millions in January, 1938, for example, showed that the internal recovery could and should be speeded up. These figures show, in fact, that the new taxes are not checking economic revival; and, as a whole, they confirm the forecasts of the Minister of Finance. This is notably so in the case of the turnover tax, which is showing a surplus over estimate; the deficit on the customs duties is due to the decline in imports brought about by the fall of the franc since a year ago and the increase in the rate of duty. Despite some encouraging signs, however, at the present rate, the Budget deficit seems likely to reach 3,000 million francs.

Stable Prices

Meanwhile, prices are still steady.

Wholesale Prices	Feb. 11th	Feb. 18th	Feb. 25th	Mar. 4th	Mar. 11th	Mar. 18th
General Index	679	675	676	678	678	679
Domestic products ...	704	698	700	703	703	706
Imported products ...	635	634	633	632	633	631
Foodstuffs	654	648	650	651	649	651
Raw materials	701	700	699	702	705	703

Unemployment again fell last week. The number of persons out of work was 407,180, a fall of 4,083 compared with the preceding week, and a decline of 52 compared with the same week of 1938. Firms (with 100 or more workers) working less than 40 hours a week are 11.07 per cent. of all firms, against 16.43 per cent. a year ago; while those working more than 40 hours are 23.41 per cent. against 3.58 per cent. a year ago.

Germany

Unpromising End to Talks

BERLIN, March 20.—The Anglo-German conversations between the Federation of British Industries and the *Reichsgruppe Industrie*, which were begun in Cologne and continued in Duesseldorf, took place entirely under the influence of political events. They were unfavourably affected by the countermanding of the intended visit of Mr Stanley and Mr Hudson to Berlin. The visit was described as inopportune by the British Government, and the prospective banquet was cancelled. The conversations—about which considerable optimism had been displayed in Berlin—then ended on a sour note, despite the decision to meet again in England in June.

It is not astonishing, under these circumstances, that the negotiations led only to platonic professions between the two groups. The chief results were the realisation that understanding is mutually desired; the agreement that both countries need a strong and gainful export trade to raise their standard of living and assure sufficient foreign exchange; the conclusion that "unhealthy" competition must be done away with; and the decision that an agreement about prices and other foreign trade matters might constitute the first step towards a well regulated system of world trade—particularly if other countries could be pressed to share in it. These views and the formation of a standing committee cannot hide the deep feeling of dissatisfaction that is now evident. The recall of the British Ambassador to report made the atmosphere worse, especially since he is not expected to come back, and

it will now be extraordinarily difficult to reach any concrete agreements about prices, competition, and mutual markets.

Mounting State Debts

Although tax receipts have been steadily and consistently increasing, last year's political events have led to a further increase in indebtedness. While the entire debt of the Reich amounted to only Rm. 11,690 millions in March, 1933, and Rm. 17,570 millions in September, 1937, it had risen to Rm. 25,680 millions by September last year. During the first four and a half years of National Socialism indebtedness increased by Rm. 6,000 millions. In the following year it rose by Rm. 8,000 millions.

The consolidated debt rose from Rm. 15,180 millions at the end of 1937 to Rm. 19,140 millions at the end of September, 1938, and Rm. 22,230 millions at the end of the year. At the same time, the floating debt rose considerably. In March, 1933, it was only Rm. 1,500 millions; in March, 1938, it was Rm. 2,300 millions; by September it was Rm. 4,750 millions; at the end of 1938 it was Rm. 5,270 millions; and at the end of last month (February) it was Rm. 5,910 millions.

In February alone Reich Treasury bonds bearing no interest (forward Treasury certificates) were issued to the amount of Rm. 690 millions and this is an indication that the financial preparations for military action against Czechoslovakia were then already under way. In addition, new armament bills have been issued; an insight into their amount can be gained by noting that the bill holdings of the *Allgemeine Deutsche Credit-Anstalt* rose in the first two months of the year by the same sum (Rm. 23 millions) as the amount they fell last year. And, at the same time it should be mentioned that the currency circulation increased from Rm. 7,219 millions to Rm. 10,061 millions in a single year between February, 1938, and February this year.

Germany's foreign trade is falling and the gold and foreign exchange holdings received after the annexation of Austria and the Sudetenland have been used up. Thus the Minister of Economics finds himself forced to resort to a further intensification of foreign exchange regulations. All those coming under the foreign exchange laws (*Deviseninländer*) and all emigrants must register with the Reichsbank and sell any foreign securities still left to them before April 15th. Russian securities, Hungarian pre-war mortgage deeds and municipal bonds, as well as other Austro-Hungarian securities, need not be registered.

The attitude of the German population is clearly given in the *Deutsche Allgemeine Zeitung*, which writes that the number of voluntary deliveries of foreign securities still held here has been steadily falling in recent months. Since foreign holdings have already been sucked up in the most drastic way during the last few years, only small amounts will be mobilised by the new decree. It is, however, significant of Germany's acute lack of foreign exchange that the last reserves must now be drawn upon in order to buy the necessary foreign raw materials for the maintenance of armaments.

Output Problems

On the ground that "mining capacity must be considerably increased to render the German nation capable of defending itself and in order to carry out the Four-Year Plan," General Goering has issued a "decree for the increase of capacity and wages in mining." The working time of the miner underground is lengthened by 45 minutes a day. Shifts will not normally exceed 8 hours and 45 minutes, except in special cases. For overtime payments the rate of wage is increased by a quarter. Piece workers receive an additional increase for achieving more than the average output; and the working time of workers on the surface is increased "according to needs."

The new decree is doubtless tied up with increased output of armaments made necessary by the international situation, as well as being due to the recent fall in production per man and per shift. In 1938 daily output in the Ruhr territory sank from 419,000 to 417,000 tons, though output of brown coal in all Germany (including Austria) was raised from 188 millions tons to 198 millions and of other coal from 185 millions to 186 millions. It may be mentioned that coke production rose from 40.9 million tons in 1937 to 43.5 millions last year, crude oil production from 450,000 tons to 550,000 tons, iron ore output from 10.4 million tons to 13.5 millions, manganese ore output from 200,000 tons to 300,000 tons, pig iron production from 16.3 million tons to 18.6 millions, and crude steel production from 20.3 million tons to 23.3 millions.

Reports from mining companies all emphasise that less efficient workers have now to be employed, that their plant is now completely worn out, that their capacity is declining

and that their costs are rising. In addition, the workers are showing signs of tiredness, the result of longer hours and poor nourishment. And, though rumours of sabotage acts cannot in any way be confirmed, the numerous treason trials that take place (economic sabotage is counted as treason) suggest that the stories have some basis in probability.

Trade Still Falling

The unfavourable trend of trade continued throughout February. Greater Germany's imports were valued at Rm. 471.5 millions, against Rm. 472.2 millions in January; and exports fell from Rm. 441.3 millions to Rm. 411 millions, a decrease of 6.8 per cent. In January the import surplus was Rm. 31 millions. In February it was Rm. 60.5 millions. In two months Greater Germany's import surplus has mounted up to Rm. 91.5 millions, whereas in 1938 the import surplus for the Old Reich alone in the same two months was only Rm. 55 millions.

In the Old Reich this year, imports in February were Rm. 425.7 millions, against Rm. 409.8 millions in January and Rm. 453.2 millions in February, 1938; and exports amounted to Rm. 388.3 millions, against Rm. 418.4 millions in January and Rm. 436.2 millions in February last year. Thus, while there was a small export surplus of Rm. 8.6 millions in January, in February there was an import surplus of Rm. 37.7 millions, making an import surplus for the two months of Rm. 28.7 millions, which is less than last year. Imports from Great Britain in January and February have declined by Rm. 2.8 millions compared with 1938, and exports to Great Britain by Rm. 3.5 millions. Similarly, sales to the United States have fallen by Rm. 5.9 millions.

Lithuania

(Written before the German annexation of Memelland.—Editor.)

New Trade Agreements

KOVNO, March 15.—During the last twenty years, the period during which they have established their independence, Lithuania and Poland have engaged in neither political nor cultural relations. Whether it was a question of railway traffic or of postal services, passengers and goods and letters have had to go via a third country. In 1937 Poland took steps to end this state of affairs. Diplomatic relations were set up, treaties and conventions were signed, until, to-day, the two States are in process of becoming good neighbours. In the industrial field agreements were signed regarding shipping, timber-floating, and railway traffic, thereby laying a good foundation, and finally, on January 25th last, a long-awaited trade treaty came into force. This treaty is designed to cover all outstanding commercial questions of a routine kind; and it will deal with mutual trade difficulties, if and when they arise.

During the last twenty years there have existed, of course, commercial relations with Poland: but the traffic passed via Danzig. Between the years 1925 and 1937 Lithuania obtained in this way goods from Poland to the value of about 105 million lits and sold goods to the value of about 4 million lits only. The cause of this difference lay in the fact that, as a typical agricultural country, Lithuania found in Poland little market for its products, whilst Poland bought only such things as sugar, coal and different industrial goods which Lithuania was not in a position to supply. The new trade treaty is founded on the most-favoured-nation principle. In the official text of the treaty are included the usual definitions with reference to trade representatives of other countries, to certificates of origin, and so forth. The Polish Government reserves the right to include Danzig within the agreement. Attached to the agreement is a tariff and quota protocol, but this has not been made public. For both countries deliveries to the value of about 7 million lits are provided for, and arrangements will be made to keep the balance. Preparation of the schedules encountered great difficulties. Lithuania will supply Poland mainly with cellulose, linseed, skins and leather, bricks, fish, etc., and will import from Poland steel, zinc, coal, textiles, chemicals, etc. For all of these goods quotas are at present in force. Special importance is attached in the agreement to communications across the Memel district to the port of Memel, and the goods traffic will doubtless take this route. The agreement is already working: Lithuania has already taken a cargo of Polish coal and the Memel timber mills have purchased 65,000 cubic metres of Polish timber.

More Trade with Russia

At the beginning of February Lithuania followed this improvement of trade relations by a trade agreement with Russia. Before trade can improve it will be necessary to rearrange quotas and prices. The present value of Russo-Lithuanian trade is estimated at about 10 million lits on either side. In the case of Lithuania two co-operative concerns under the State control carry on most of the trade; Lithuanian private firms may purchase in Russia only tobacco and hides. Deliveries to Russia consist mostly in pigs, cattle for breeding, clover-seed and other agricultural products, whilst imports from Russia are made up from agricultural machinery, motor cars, oil products, salt, sugar, ironware, glass, etc. In regard to the import from Russia of artificial manure no agreement over prices was reached. It appears that, on the whole, the prices of Russian exports will be higher, and, in return, the Lithuanians have increased the prices of their meat exports. The Russian concern "Exportless" has set down such narrow conditions for deliveries of wood to the Memel wood syndicate, that it is improbable that the syndicate will purchase any Russian timber this year. But when it is considered that Lithuania's total imports in 1938 were valued at 224 million lits and her total exports at 233 millions, it is apparent that Poland's and Russia's share are of very limited importance.

The Lithuanian Treasury's receipts in 1938 were about 371 million lits against 347 millions as was estimated. The increased revenues were from excise duties, monopolies, posts and railway traffics, and will be spent chiefly on agricultural works. The Budget for 1939 envisages expenditure of 368 millions, and an internal loan of 20 millions is provided for. Nearly a third of total expenditure will be spent on national defence. The gold holdings of the Bank of Lithuania amounted on February 1st up to 63.55 million lits and the exchange holdings to 7.71 millions. The note circulation stands at 142.6 millions.

There is a good deal of activity at the moment in the direction of industrial legislation. Of the more important decrees, there is one dealing with price increases, and another with import regulations. Customs regulations are also to be revised. After the passing of these decrees a number of new departments to deal specially with foreign trade, industry, customs, etc., are to be formed.

India

Banking Trends

CALCUTTA, March 15.—The report of the Reserve Bank of India for the year ended December 31, 1938, draws attention to a number of factors with which the public are not well acquainted but which have a direct bearing on India's financial structure. Reference is made, for instance, to the distribution of the Reserve Bank's shares which have tended to concentrate in fewer hands, and mainly in those of shareholders on the Bombay register. A Reserve Bank vote has long been recognised as of greater value than an ordinary electoral vote, and it is a fair inference that Bombay is by this means acquiring additional political power. The original intention, when the bank was formed in 1935, was to make the shareholding as diffuse as possible. Clearly that intention is being defeated—and not, one may say, entirely by accident.

Last year was important from many points of view. It saw the new provincial administrations firmly in the saddle, and they began to make their arrangements for ways and means requirements direct with the Reserve Bank from April 1st. The first province to borrow in the form of Treasury bills was the Central Provinces and Berar, one of the smallest of all the provinces. During the year the

provincial governments took from the market in the form of three, six and nine months' Treasury bills a sum of Rs. 4,75,00,000 at an average rate per cent. per annum ranging from a minimum of Re. 1/3/11 in the case of Madras to a maximum of Re. 1/15/6 in the case of Assam. Of the major provincial governments, neither Bengal, Bombay nor the Punjab availed themselves of Treasury bill borrowings. A wide range of Treasury bills bearing varying rates of interest is obviously not a desirable feature in a well co-ordinated money market, and the ultimate policy of the Reserve Bank will presumably be to assist provincial governments to shape their financial policy to a long-term pattern.

The sole reference in the report to the Bank's purchases of gold for the Bank of England is a brief statement to the effect that, during the year, the Reserve Bank undertook the purchase of gold in India on behalf of its correspondents abroad. The gold so purchased was not exported but was earmarked by the bank. The amount of gold held by the Reserve Bank for purchasers abroad at the end of the year was approximately 9,20,000 tolas valued at Rs. 3,39,78,000.

The report outlines the course of the rupee exchange during 1938. On the whole it remained steady, varying between 1s 5½d. and 1s 5¼d. The report adds that the total amount of sterling purchased by the Bank was insufficient to meet the Government's sterling requirements, which amounted to £36,010,000, during the year, and the Reserve Bank had to transfer sterling securities amounting to £15,605,000 from its issue to its banking department, contracting its cash balances correspondingly. In December, forward exchange rates weakened, the fall being further aggravated by speculation, and the Government of India made an announcement (further endorsed by the Viceroy in a speech at Bombay) restating its decision to maintain the exchange at the present statutory rate.

Shortage of Rediscountable Assets

Despite the general recession in the first half of the year, the demand for money continued reasonably active and, on the whole, the scheduled banks were working on a lower cash ratio than in 1937. Towards the end of the year there was a definite increase in the credit requirements of trade and industry and the ratio of total cash and balances with the Reserve Bank to total liabilities fell to 8.05 per cent., as compared with 11.6 per cent. at the end of the previous year. The steady development of the scheduled banks maintained during the last three years was unfortunately marred by a local banking crisis in South India at the end of June, following upon the closure of the Travancore National and Quilon Bank.

The banking crisis in South India, the report says, revealed that one of the difficulties in the way of making advances to scheduled banks was the absence of a sufficient quantity of rediscountable assets. In order that the banks may build up a stronger portfolio of more eligible paper, an increase in the amount of bills traded in by them is obviously necessary. The greatest obstacle to such an increase, at present money rates, is the incidence of the high stamp duty on usance bills, and in December the Central Board of the Reserve Bank repeated its request to the Government that the present rates of duty should be reduced.

The election of Mr Subash Bose for another term as Congress president can be regarded as an interesting and possibly important "straw vote" on the Federation issue. Mr Subash Bose's desire for a second year of office is compounded of personal vanity and a burning desire to keep Congress out of the Federal plan, as it now stands. The fact that the presidency had to be decided by ballot is an indication of the deep differences of opinion that exist on this and other subjects within the Congress higher command. When it comes to making a final and formal decision, the last word will almost certainly lie with Mr Gandhi.

Japan

War-Time Needs

TOKIO, February 17. — The demands upon Japanese economic and financial resources during the current year are prodigious. In addition to army supplies, the development of Manchukuo and the rehabilitation and exploitation of the occupied territories of China must be financed. Resources for these purposes will be provided either by increased domestic production and imports or by enforced saving through enforced under-consumption.

The past year witnessed a marked expansion of war industries. Though reliable statistics are not available—for strategic reasons—iron and steel production in 1938 quadrupled, and the output of some chemicals doubled or trebled compared with the preceding year. The large section of industry which depends upon raw material imports, however, had to adjust activities to the supply available.

Industry, as a whole, has also suffered from a shortage of labour, and a scramble for labour has now become rather acute. With labour as well as raw material difficulties, a further rapid increase in industrial production can hardly be expected. No great expansion of imports to make up for domestic deficiencies can be expected, since the trend of imports depends upon the course of export receipts. Although there was an appreciable improvement in export trade in the closing months of last year, due to a campaign to promote overseas trade, close study shows that the recovery was not so marked as to bring in large import funds.

The Standard of Living

Thus there remains only the one resource still to be raided—consumers' goods and services. The alleged deterioration in the general standard of living is so far scarcely the case. It is true the indices of retail prices and the cost of living rose by some 16 per cent. in the course of last year, while the index of wages advanced by less than 10 per cent. But the index of wages is quite misleading, since it is based on crude average earnings which would necessarily be reduced by the ever-increasing entry of untrained newcomers into industry. The actual income of skilled workers is still far ahead of the increased cost of living. Department store sales are rising, and their year-end sales reached a record total. The cash income of the farming community is also on the upgrade. Consumers' purchasing power, in short, is certainly not lower than it was a year ago.

This is not to say that consumption has not already suffered in some ways from the war effort. Because of regulations on imports and consumption, difficulties are being experienced in procuring certain commodities entering into daily consumption and domestic use (to take just two examples of shortages: copper bath-tub boilers and foreign-made safety-razor blades); and there is a marked deterioration in the quality of textile goods, particularly cotton.

Nevertheless, a wide range of articles of consumption is still undeteriorated in quality and easily obtainable. Despite the rationing of petrol, bus routes even in the far-off countryside are being generally maintained, though on a reduced scale of operations. Supplies of foodstuffs are adequate and prices are controlled. There is, therefore, room for the imposition of further sacrifices on the people in respect of their standard of living, and such sacrifices would be accepted without much complaint.

Cutting Consumption

In these circumstances the Government is pursuing with increased vigour the policy of reducing to a minimum the amount of resources applied to the satisfaction of consumers' needs. In January, for instance, rayon consumption at home and exports to Manchukuo and China were together limited by decree to a total of 114,000 bales, compared with 150,000 bales in December last; and the authorised output of staple fibre in January was also reduced by 25 per cent. Further, it has been decided to reduce imports of wood pulp, timber and crude rubber for the January-March quarter of this year to 90 per cent. of those of the preceding quarter.

The creation of a new institution to finance war-time industries has in the end been dropped. Eventually the Government gave sanction to the Industrial Bank of Japan to increase its capital from 50 million yen to 200 million yen; and the bank has also been empowered to supplement its resources by the issue of its own notes to an amount of 500 million yen. The leading joint-stock banks and trust companies are being required to subscribe the greater part of the new capital; but, on the other hand, they are not going to be called upon to depart from their traditional banking sphere in order to carry out industrial financing.

Letters to the Editor

Hungarian Economics

TO THE EDITOR OF THE ECONOMIST

SIR,—It seems that your Budapest correspondent definitely overstated his case when he said, in your issue of March 4th, page 442, that Count Teleki, the new Prime Minister, when assuming power found the country "economically desolated." No doubt the repeated political crises of last year affected economically every country in Europe, but the setback was no more marked in Hungary than anywhere else.

Your correspondent substantiated his assertion by pointing out that deposits in the saving banks in Budapest fell between February and the end of the year from 665 to 543 million pengős. It would have been more correct to say that, between the Anschluss and Munich deposits fell as low as 506 millions, but began after Munich gradually to mount again, reaching at the end of the year 567 million pengős.

The index of share values was undoubtedly lower in December, 1938, than in January of the same year. This tendency, however, was not exclusive to Hungary.

Against your correspondent's statement that internal industrial production declined, it may be pointed out that the consumption of industrial coal rose from 3.32 million tons in 1937 to 3.39 millions in 1938. The index of industrial production was stable in 1938, while that of the textile industry rose from 186 to 188. The aggregate of wages in 1938 rose to 865.7 million pengős from 785.8 millions in 1937.

Political uncertainty has not improved external trade in any country, and Hungary, admittedly on a small turnover, maintained in 1938 her foreign trade balance of about 100 million pengős of 1937. The recovery of territories from Czecho-Slovakia imposed heavy demands on the economic forces of the nation.

The proportion of Germany's participation in Hungary's exports was correctly stated to be 46 per cent., including, of course, the 18 per cent. which used to go to Austria. Owing to the fact that the so-called free exchange countries are

prepared to purchase our agricultural produce at a very low price only, Hungary is forced to export increasing quantities to Germany, and only the prices paid by Germany make our agricultural production profitable. No difficulties have so far been experienced as to the counter-balancing industrial imports from Germany.

I am, Sir,

Your obedient servant,

L. SIMA,

Press Attaché.

Hungarian Legation,
London, S.W.1.

Gold by Parcel Post

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of March 18th under the heading of "Finance and Banking" you refer to the practice of dispatching gold to New York by parcel post.

The article states that some time ago the Committee of Lloyd's recommended the application of a rate of 5s. per cent. This recommendation was made not by the Committee of Lloyd's but by a Committee of Specie Underwriters appointed by the Lloyd's and Company Markets.

Your correspondent suggests that certain of the hazards which underwriters fear are non-existent. I have before me a report on the situation issued by a competent and unbiased authority in New York as recently as February 21st last. This leaves no doubt as to the risks which underwriters are running, and this to some extent is borne out by the fact that two thefts have already been reported. It seems unfortunate that the accepted methods of carrying valuable shipments of bullion should be scrapped in favour of a method of carriage which does not differentiate between bullion and bulls' eyes.

Yours faithfully,
UNDERWRITER.

London.

Control of International Trade

HEINRICH HEUSER, Ph.D.

In this book the author has inquired closely into the motives which have led states to introduce quotas and exchange restrictions, and investigated the technical problems which their operation involves. He concludes with an illuminating discussion of the effects of planning in an otherwise free economy. He has pursued his researches personally in Denmark, Germany, Italy, Austria and Switzerland to gather his material. The work is divided into three parts: (a) Causes of the regulation of foreign trade; (b) Methods of Foreign control; (c) Results of the regulation of foreign trade. 12s. 6d. net

Books and Publications

Books of Words

To be all things to all men is a bonhomous quality not easily achieved by dictionaries. Dictionary makers are usually moralists. In the past, they have almost always had an end in view: to make a list of words suitable for the *salon* or the best prose; to show the philological development of a language; or to trace the growth of meanings in the annals of literature.

The first dictionary-maker to base his work on the idea that words and their meaning are first and foremost working tools was an American, the well-known Webster, over a hundred years ago. Since then, happily for the ordinary man, dictionaries have tended to become more and more the record of current usages and contemporary meanings that he wants, and less and less the museum pieces gleefully compiled by *litterateurs* and etymologists. Most countries nowadays have standard dictionaries of their own language that most people in most walks of life can profitably use.

It is in the rendering into one tongue of the meanings of words belonging to another that this democratisation of dictionaries has been most laggardly. It has taken a very long time for the *Entente Cordiale* to produce a bi-lingual counterpart of the native Oxford and Larousse. Five years ago the publication by Messrs Harrap of the first volume (French-English) of Mr Mansion's Dictionary suggested that the Channel was at last to be successfully and intelligently spanned. The appearance of the second volume (English-French)* reinforces this view.

No Englishman who wants to translate English into

* "Harrap's Standard French and English Dictionary," part II. English-French. Edited by J. E. Mansion. 1,500 Pages. 63s.

French can now complain, as most of us have done from time to time, that no dictionary exists to which he can turn whatever the subject of his discourse. Scholarly though it is, this dictionary is the workaday volume we want. It includes the words and phrases most English people require, except perhaps some of the low-life colloquialisms they ought not to need; and, more than that, Mr Mansion has made a remarkable attempt to include nearly all the particular words and phrases particular people—tradesmen, business men, politicians, engineers, doctors, scientists, motorists and so on—may need for their particular purposes.

This is an impossible task. To combine in the compass of 1,500 pages a general dictionary and every technical dictionary ever written cannot be done. But it is doubtful whether it can actually be done much more successfully than Mr Mansion has done it. The economist or business man can have this dictionary on his shelf and not more than twice, or at the most thrice, in ten times will it fail to give him the French equivalent of the special verbal counters of his profession. "Managed currency," he will find; "blocked currency" he will not; "conurbation" he will wryly greet; "subsidised industry" and "interest" in all its meanings are there; "full employment" and "forced saving" will be looked for in vain. Other pundits are equally well served. This dictionary is very nearly all things to all men.

Thomson's well-known *Dictionary of Banking*† is not so warm-hearted. Coldly, it sets out to be no more and no less than an encyclopædic and rapidly usable card index to all aspects of British banking law and practice. The ninth edition succeeds as admirably as the preceding eight did. It is a necessary part of a banker's office equipment; and here, be it noted, "blocked currency" has been included.

Shorter Notice

"The Hire Purchase Act, 1938." Issued by the United Dominions Trust, Ltd.

"The Hire Purchase Act, 1938, and the Retailer." By Richard B. Hurton. Issued by the Bankers' Commercial Security, Ltd.

Before the passing of the Hire Purchase Bill a large proportion of the hire purchase business had fallen into such disrepute that it was manifestly in the interest of the respectable hire purchase firms to support any measure that would eliminate the numerous abuses of which they themselves were innocent and which were spoiling their business. They have very little to complain of in the legislation as it was finally passed, and here are two of the biggest hire-purchase finance firms welcoming the Act and expounding it to the public in free pamphlets. Both of these pamphlets publish the full text of the Act and explain some of the less obvious details. The Bankers' Commercial Security pamphlet gives a rather fuller exposition, and the style of Mr Hurton (who is chairman of the Hire Purchase Trade Association) is admirably lucid. The United Dominions Trust pamphlet, on the other hand, reproduces the hire-purchase proposal and agreement forms which they have evolved to conform with the provisions of the new Act, and these should be useful to traders. The aim of both is to make the Act work smoothly, and if they can impart to retail traders some of their own almost unqualified benevolence towards it, they should certainly succeed.

THE BUSINESS WORLD

The Discount Market's Future

THE London discount market has not in the last few years led a very exciting life. The standstill system (which, in any case, affects the accepting houses more directly than the discount brokers) is now in its eighth year and 2 per cent. Bank rate in its seventh, and beneath the shelter of these two arrangements the discount market has been pursuing the remarkably even tenor of its way. The smooth surface has, however, been considerably disturbed in the past fortnight by a request that has been addressed to some of the smaller houses by the Bank of England suggesting that these houses should take steps, by amalgamation or otherwise, to increase their capital, and that the scope of their operations in short-dated bonds should be considerably reduced.

The controversy that has thus been uncovered is not a new one, and this is not the first time that the authorities have given expression to the view that the discount market should be "rationalised." But it is believed to be the first time that their views have been given any precision or that the request of the Bank for action has been put in an urgent form. It is no secret that the firms in question have a feeling of grievance.

The discount houses have traditionally performed two specialised functions in the London money market. The first is the ability to size up the quality and soundness of a bill from the names of its drawers and endorsers—what, in the language of the market, is known as "smelling a bill." But nowadays, when the chief fare of the market is Treasury bills, when another large volume of bills is subject to standstills and when the numbers of accepters have been considerably reduced, the need for this function is much less. The "fine nose for a bill" is less necessary when all bills smell alike. Secondly, the discount market is the buffer between the clearing banks and the Bank of England. They borrow the spare cash of the clearing banks and, when there is no spare cash, it is they who are thrust "into the Bank" and obtain from "the lender of last resort" the extra supplies of cash that are required. This buffer system has great advantages; it is largely responsible for the fact that the British banking system is more amenable to central control than, say, the American. But it is not an absolutely essential part of the mechanism. There is no inherent impossibility in the joint-stock banks being directly in touch with each other for the placing of day-to-day money or with the Bank of England when borrowing from the Bank is necessary. Whereas before the war the discount market was indispensable, there has, of recent years, been an element of sufferance in the attitude towards it of the clearing banks, on whose goodwill it is completely dependent.

There can be no question that the capital and personnel of the discount market are larger than can be employed in the discount business properly so-called, and there has been a noticeable tendency for some years for the discount houses to extend their operations in short-term and medium-term gilt-edged bonds. Clearly, a bond with a term even as short as two years can fluctuate in value over a considerably wider range than a three-months' bill, and the business is *pro tanto* more risky for firms using borrowed money. There are indications that this is one of the developments which the authorities view with some anxiety.

The steps that have been taken in the last few weeks, however, do not relate solely to trading in bonds. The Bank of England has taken the view that those firms whose own resources are less than £300,000 are too small for the present-day market. They have been recommended, either by amalgamation or otherwise, to increase their resources to a minimum of £500,000 and to limit the return on their capital until they have built up reserves of a further substantial figure. Further, it has been suggested that these firms should not hold bonds of between two and five years' currency to the extent of more than twice their own capital (a very much lower ratio than has been customary). It has been indicated, according to reports, that it may, in due course, be necessary to deny the firms who do not comply with these stipulations their present privilege of borrowing from the Bank at the minimum rate of half of one per cent. above Bank rate. Firms who fell into this disfavour would never be sure at what rate they could borrow, and higher than the customary margins would be required of them.

Objection has been taken to the use of the word "ultimatum" to describe this intimation. Perhaps it is too drastic. But even if the nature of the Bank's "requests" were not fully understood in the City, the sanctions that have been mentioned would, in the circumstances, be compulsive. Six firms are understood to be involved and their total resources are in the neighbourhood of £1,250,000. These six firms at present have rather fewer than a score of partners, but amalgamation would undoubtedly involve the withdrawal of many of them, together with their shares. Moreover, it would be a task of great difficulty to attract fresh capital into the market, especially as the firms are recommended to limit the return, and the ability of an amalgamated firm to borrow from the banks would almost certainly be less than the combined credit of the constituent firms. For all these reasons it would appear that the most probable method of giving effect to the Bank's wishes would be an amalgamation of all six firms. This, of course, could not avoid being a painful process both for the present principals and their employees.

That some measure of rationalisation is required in the discount market is undoubted—indeed, some instalments, both by way of merger and of liquidation, have already taken place. And, as in all forms of business, there are disadvantages in smallness. There is, it is true, no reason why a small firm should not be as soundly managed as a large one; soundness depends partly upon the quality of the bills bought and partly upon the ratio of liabilities to capital,

**FOR ALL
INSURANCE
NEEDS**

Head Offices:

LIVERPOOL North John St. LONDON Lombard St.

and on either count a small house can be as good as a big one, even if its balance-sheet figures are not as impressive in their magnitude. But it is probable that the effort required to cover overhead costs—including the remuneration of the principals—is greater the smaller the firm. If so, the temptation to increase income by trading in bonds or by shading the quality of the bill portfolio would be larger for the small firms. This is the theoretical case. It is only fair to add that, in practice, large size has not provided immunity from costly mistakes, nor have the smaller houses, as a class, fallen into difficulties. In so far as smallness is a disadvantage, it has been successfully overcome for many decades. Moreover, so long as the market remains a market, there is an advantage in maintaining the number of independent participants, which would be virtually halved if these six firms were amalgamated into one.

In spite of all these arguments, however, the need for rationalisation once being accepted, it is probably inevitable that the process should begin with the smaller firms. It is probably true also that, given the painful nature of the process of shrinking, very little would be done without stimulus from above. It is certainly true that the views of the authorities, in general terms, have been before the market for a long time. But when all this is said and done, it is still questionable whether the statement of more or less precise requirements, backed up with the hint of severe penalties, is the most suitable method of procedure. There

is no reason to believe that positive proposals for re-organisation made by the authorities would not have been treated with the respect they deserve.

The second aspect of the Bank's proposals, the suggested limitation of bond trading, rests on very solid foundation. The further the market gets away from the 90-day bill, the further it is departing both from its true function and from the sort of business to which its peculiar financial structure is best suited. Since the Bank of England has, in the last resort, to assure the solvency of the market, it is fully entitled to express its views on what are the limits of legitimate business. But what is sauce for the small goose is surely sauce for the large gander, and the small houses chiefly affected are naturally disposed to ask why they should be subject to what looks *prima facie* like discriminatory treatment.

The answer may well be that the Bank has in mind a general clarification of the whole subject of bond trading by discount houses, large and small. There would be much to be said for such a step. Although the specific limitation that has been mentioned—to twice the trader's own resources—might be considered unduly restrictive, the money market as a whole would welcome a clarification of a practice that has been the subject of much discussion and some criticism. And the additional, very useful—almost essential—purpose would be served of demonstrating that there is no prejudice in the City of London against the small man.

Armaments Profits Examined

BY the irony of events the European crisis of the past ten days has coincided with a spate of reports from armaments producing companies. A fortnight ago the possibility of an arms agreement was still a remote dream. To-day such hopes are nowhere entertained. It is too early to guess the outcome of the latest shock, either politically or economically. But certainly it means greater business for armaments companies.

The Stock Exchange, however, is not treating their shares as a class apart, and it is probably wise. One general conclusion stands out from the 1938 reports. Turnover is running at a high level; but disclosed profits and dividends show no comparable expansion. There is, indeed, something anomalous in the disclosure of an actual fall in total profits by Vickers, Limited, for 1938. Nor is this the only instance in which profits have apparently been brought under control before disclosure. Vickers-Armstrongs,

English Steel, Hadfields, and Thos. Firth and John Brown all show their total profits after unstated provisions for depreciation or contingencies. Is it without significance that three of the four companies have also maintained their equity dividends? The commonly cited "pressure of public opinion" is not the only explanation of this diffidence. Groups like Vickers and Hadfields, recalling the over-expansion of capacity in the post-war years, are evidently not disposed to risk a repetition of its financial consequences. Hence, their reserve policy (summarised in the accompanying table) has become progressively conservative during the past three years. Actually, the reserve position is much stronger than the disclosed figures would suggest for companies which make undisclosed allocations to contingencies.

To appreciate the consequences of this conservatism for the investor, a detailed analysis of the Vickers' group

An Outstanding TWELVE

THAT SAVES IN FIRST COST
ALONE ENOUGH TO PAY
TAX AND PART INSURANCE

EXPERTS are agreed that the Vauxhall 12-four has the best all-round specification. Yet it costs from £16 to nearly £60 less than any ordinary "Twelve." So that even against the cheapest competitive model, you save enough, on first cost alone, to make a big hole in a full year's tax and insurance. In addition, a petrol consumption of 35 m.p.g. with normal driving means that you go on saving.

STANDARD SALOON

£189

DE LUXE SALOON £198

The Vauxhall 12-four has smart, modern lines; is roomy and comfortable. It is a top gear car, always having power in reserve, which means easier driving, safer driving, and less strain. It has the special Vauxhall system of independent suspension. If you are used to ordinary springing, please try a Vauxhall 12-four. Your Dealer will gladly arrange, without obligation, a trial run in a car fitted with a special test tank so that you can check petrol consumption at the same time.

VAUXHALL

MECHANICAL FEATURES INCLUDE: All-steel chassis-less construction: trouble-free independent springing: controlled synchromesh: hydraulic brakes: "controlled flame" combustion chambers: overhead valves: six-phase carburation: fully counter-weighted crankshaft: compensated voltage control.

EQUIPMENT INCLUDES: Safety glass all round: self-cancelling direction indicators: twin mechanical windscreen wipers: rear side arm rests: rear blind: body conformity front seats (adjustable): luggage boot at rear: leather upholstery. On de Luxe Saloons (£198) no-draught ventilation, sliding roof, central disappearing arm rest to rear seat, etc.

There are other Vauxhalls of 10 h.p., 14 h.p. and 25 h.p. at prices from £163 to £630. Available on convenient terms. A postcard to Vauxhall Motors, Luton, Beds. (Luton 2600) will bring unusual and interesting literature.

DEPENDABILITY — PERFORMANCE — COMFORT — ECONOMY

results is instructive. English Steel Corporation shows an increase of 9½ per cent. in total profits, after unstated provision for contingencies, to £1,445,796, of which no less than £523,918 has been ploughed back for depreciation or free reserves. Of this profit, some £66,029 (gross) goes into the Vickers accounts direct for debenture interest. The share capital, however, is divided between Vickers-Armstrongs and Cammell Laird, and the total dividends paid (£339,340 net) may be divided between the two companies as to £238,100 and £101,200 respectively. The next stage is to trace the income and distributions of Vickers-Armstrongs. Unfortunately, this process is complicated by the absorption within the latter company of the group's aviation business from October last year. This fact implies that the increase in profits (after provision for contingencies) from £1,965,550 to £2,754,679 is not a strictly comparable movement. But from such internal evidence as an increase in the tax charge from £648,010 to £1,074,884 it is evident that this main operating subsidiary of the group substantially increased its profits last year. The result, for Vickers, is that dividend receipts from Vickers-Armstrongs have increased from £863,171 to £1,096,192, after tax, while disclosed reserves (which consist almost entirely of depreciation) have increased from £454,369 to £583,603.

At this point, Vickers' profits (analysed in the accompanying chart) begin to take shape, but here also complications arise. Under the reorganisation plan of 1934 Metropolitan-Cammell Carriage and Wagon undertook to make distributions from available profits at the end of 1937 and 1939. Vickers and Cammell Laird, who jointly own the equity of Metropolitan-Cammell, each received £75,000 in tax-free ordinary dividends from this source in 1937. It is known that Vickers received a dividend from Metropolitan-Cammell last year (the 1934 scheme having been varied), but its amount has not been disclosed, and it would follow that one year's debenture interest has also been received on Vickers' holding of £789,312 6 per

VICKERS' PROFITS 1928-38

cent. debenture stock of Metropolitan-Cammell (equivalent to £34,350 net). Taking the income from all the items specified in the balance sheet (assuming a rate of 6 per cent. on the English Steel Corporation loan of £300,000), it is possible to identify £1,191,442 net out of Vickers' profits (after tax) of £1,472,211. The balance of £280,769 arises from income from subsidiaries and on Metropolitan-Cammell shares, together with interest on gilt-edged stocks, which rose from £2,002,991 to £2,920,000 last year.

Granted the adequacy of the disclosed reserve appropriations, there was comparatively limited scope last year for increasing Vickers' profits spectacularly by a fuller division of the subsidiaries' profits. That conclusion is certainly true of Vickers-Armstrongs, though less true, perhaps, of English Steel, whose allocation to free reserves was as much as £202,694. Divided between Vickers (via Vickers-Armstrongs) and Cammell Laird, this surplus

would have provided an addition to Vickers' profits of £131,000 net—equivalent to an extra 2.9 per cent. for the ordinary stock. Moreover, English Steel has now built up the preferred ordinary dividend equalisation fund to well over twice the annual dividend. Hence the necessity to provide 10 per cent. of net profits for this fund, which absorbed £121,224 last year, has now ceased. The same presumption that directorial policy has intervened between earnings and the shareholder is reflected in the Hadfields figures. The full report, published this week, records that the tonnage output of the company last year reached the highest level since 1918. Yet disclosed profits, after providing for depreciation and income tax, show a very modest rise from £308,418 to £316,176. It is probably significant that the creditor item "provisions for income tax, etc." shows a much steeper rise from £375,846 to £536,429, which suggests a much sharper advance in assessed profits.

The distribution of Thos. Firth and John Brown provides no windfall for ordinary shareholders of John Brown, which holds 75 per cent. of the £1,100,000 "A" capital and all the £450,000 "B" shares. On both classes the company has maintained the distribution of 17½ per cent. tax free. Although profits have increased from £867,723 to £973,940 (the latter figure is struck after an unstated amount to contingencies) depreciation and free reserves absorb £28,000 more, and taxation £80,000 more. In all these instances, which refer to general armaments and projectile companies, it is evident that a measure of strict, though voluntary, control of disclosed profits and dividends is already in operation. In such circumstances, it may matter little by how much armaments expenditure increases during the next year or two. There is already a breath of profits control in the air, which may well be sufficient to stiffen the directorial control of disclosed earnings and dividends, even in the absence of official measures.

There remain, finally, two naval shipbuilding reports, which reveal less apparent rigidity in earnings and dividends last year. Total profits of Cammell Laird increased from £306,100 to £437,233, though equity earnings, after a new tax provision absorbing £100,000, were only moderately higher at 19.7 per cent. Last year's profits were assisted by an increase in tonnage launched from 57,644 to 68,456. Some bearing on the current year's potential business is provided by an analysis of the Navy Estimates, which show that the value of orders for hulls and machinery will increase this year from £3,212,290 to £3,472,223. But both for this company and Swan Hunter, mercantile shipbuilding is an important item. At the beginning of last year, about four-fifths of the latter's workpeople were engaged on mercantile work. Hence the virtual stabilisation of its naval business during the current year at £2,350,351, compared with £2,317,972, will leave little margin to offset the prospective fall in profits from mercantile building.

From this review, it cannot be said that armament shares, as a class, emerge with special attractions which are denied to more general equities. It is the armaments "fringe," rather than the companies directly concerned, which may be readier to make the fruits of defence expenditure available to their shareholders. Armaments companies have, it is true, the virtual assurance of a high level of turnover. Yet even those which appear most closely connected with re-armament have valuable commercial business to preserve. The Firth-Brown report refers to "an appreciable increase in overseas trade" last year. And Hadfields' record tonnage since 1918 was accompanied by a record turnover of "ordinary commercial products." Part of the latter may well be required to serve the defence programme at some stage, but the general distinction is a real one. Meanwhile, the chairman of Clarke Chapman has discussed a further cautionary element in assessing armament shares. If profits on Government work exceed 10 per cent., he declared, a rebate is demanded, and he expressed dissatisfaction with the rate of 8 per cent. provided on the company's output last year. The yield on Hadfields may be generous, in comparison with Swan, Hunter, but it cannot be said that armament shares are obviously undervalued, nor that naval shipbuilding shares are excessively discounting the fall in mercantile building this year.

Finance and Banking

Czech Assets in London.—The German annexation of Czecho-Slovakia was at once followed by the seizure of the Czech gold reserves in Prague, and it is highly probable that the Czech National Bank will be absorbed by the Reichsbank. This at once raised the question of the status of Czech assets held in London. It is true that London is traditionally a free money market, but such freedom does not carry with it the condonation of an act of bare-faced robbery; still less does it oblige London bankers to facilitate the completion of that robbery. In these circumstances, the Government has been swift to act. On March 15th the Prime Minister announced that the undrawn portion of the Czech credit, then amounting to £6½ millions, was to remain blocked at the Bank of England pending a clarification of the situation. Czech gold reserves in London were similarly immobilised. On Friday a general instruction was issued by the Treasury to London bankers requesting them not to make payments against Czech balances without first consulting the Bank of England and the Treasury. On Monday this was followed up by a more detailed statement (analysed below), circulated by the Bank of England at the request of the Treasury. Finally, as compliance with the terms of this statement might expose the banks to legal proceedings, a bill described as the Czecho-Slovakia (Restrictions on Banking Accounts, etc.) Bill was introduced on Wednesday, and is being passed rapidly through all its stages. The object of the Bill is to indemnify the banks against any proceedings arising out of their compliance with the authorities' request. In moving the second reading of the Bill, Sir John Simon laid special emphasis on the needs of the refugees. The sum of £4,000,000 already given for that purpose would remain available, so far as it had not been used already; and the Chancellor hinted at the possibility of new legislation. City opinion welcomes these moves, for it is recognised that once Czech funds or securities are withdrawn from London it will be impossible to keep them out of German hands. There is a precedent for this drastic action, for during the war Tsarist Government balances were blocked in London and have never been surrendered to the Bolshevik regime. In some quarters there is a disposition to say that this immobilisation of Czech assets can only be a temporary measure, and that a final decision will sooner or later have to be taken. Everything depends here on the general outcome, which cannot be predicted as yet, and in any event the total amount involved is relatively small. Still, as regards the principle, public opinion will be unanimous in saying that for the moment the only possible course of action is to hold these assets on trust for their rightful owners, and this is the object of the Government's emergency measures.

The Bank of England's circular is drawn in very wide terms. It relates to all gold balances and securities held in London banks on behalf of residents in Czecho-Slovakia, the latter terms also including the Czech Government, the Czech National Bank and companies incorporated in Czecho-Slovakia. Before any of these assets are surrendered, application is to be made in all cases of uncertainty to the Bank of England. The circular adds that the Bank's permission may be assumed in certain cases. Thus, bills accepted by a British house on behalf of a Czech client prior to March 15th may on maturity be debited to the account of that client. Any cheques drawn or instructions for payment issued before March 15th may be acted upon. Debts or obligations due to British subjects or persons in the United Kingdom (other than a resident in Czecho-Slovakia) may be met, and assets belonging to British subjects resident in Czecho-Slovakia may be freely disposed of. In the case of debts due to a person abroad (other than a British subject), and also in the case of assets belonging to nationals of other countries resident in Czecho-Slovakia, reference should be made to the Bank of England,

but permission will be given in suitable cases. The circular does not refer to remittances to Czecho-Slovakia, and our information is that remittances are still being made. Nor does it necessarily suspend all trade between Great Britain and Czecho-Slovakia, for payments due for British exports automatically rank as debts due to a British subject. We are also glad to learn that, as Government spokesmen promised during the debate, Czech refugees now in London have been able to obtain permission to draw on their balances with a minimum of delay. The circular in fact carries out the intention of the Government, and is drawn widely with that end in view. Such an embargo cannot be made absolutely watertight without similar co-operation in other financial centres. This is a matter for arrangement with other Governments, but at least everything possible in London is being done to fulfil our position of trust towards the rightful owners of these assets.

Foreign Funds and the Czech Embargo.—The swift measures taken by the Government to prevent the withdrawal of Czech assets from London produced a rather unexpected result. It gave rise to quite unwarrantable fears on the part of other foreign holders of funds in London that in given circumstances their assets, too, may become blocked. As a result, there was a fair amount of liquidation of gold and sterling balances this week on the part of nationals of Belgium, Holland and other countries which are exposed to German invasion. The heavy gold disbanding was largely the outcome of these fears. In reality, foreign holders of assets in London should derive reassurance from the British measures, since they indicate the Government's determination not to allow Germany to lay

hands on the London assets of nationals of conquered countries in the way she laid hands on a large proportion of Austrian private assets abroad. Unfortunately, at the beginning it was not made sufficiently clear by the Government that this was one of the underlying objects of the embargo; indeed, the discrimination in the Bill in favour of those who left Czecho-Slovakia before March 15th gave rise to the impression that those who leave the country after the conquest may experience difficulty in recovering their London funds. If this impression were correct, it would be easily understandable that nationals of countries exposed to German invasion would become concerned about the possibility of their London assets being seized exactly at the time when they would need them the most. Owners of refugee funds, being of a nervous disposition, were inclined to give the British measure such unfavourable interpretation. Consequently, many of them transferred their assets to New York, since until Wednesday there was no indication that the United States would follow the British example. On Wednesday, however, it was reported that the American banks received requests similar to that addressed to the British banks last week concerning Czech assets, prior to the adoption of legislation. This, together with the reassuring tenor of the debate in the House on the second reading of the Bill, made owners of refugee funds realise that it makes no difference whether they keep their funds in London or New York. Accordingly, withdrawals abated considerably.

* * *

Gold Activity.—Judged by the increase in turnover of business, it is the bullion market which has received the greatest stimulus from the recent events in Europe. The stimulus has been of the surprising but now customary character: when the risk of war crystallises, gold, to which hoarders turn in all troubles other than this extremity, is sold and the proceeds converted into currency—preferably dollars. This week the re-selling of gold from Continental hoarders has assumed such proportions that the gold arbitrage channels between this country and the United States have become congested. Every liner leaving for New York is carrying more than its normal quota of gold, as may be seen from the abnormal rates quoted for reinsuring gold covered under the usual open covers. During the week to Thursday last the gold exported to the United States amounted to £14,701,408, while the liners leaving during the week-end will have carried further substantial consignments. It is not merely the big hoarder who has been reselling. There has also been evidence of reselling of gold coins, the premium on which has disappeared completely. The motive behind these sales is the fear that in the event of war gold might become at best a frozen, and at worst a sequestered, asset. The demand for dollars arising out of the conversion of the proceeds of these gold sales into dollars has been approximately neutralised by the sales of dollars by arbitrage houses, which this week have taken the bulk of the gold offered in the market. The authorities have evidently encouraged this offsetting process as far as possible by keeping out of the bullion market and by allowing the gold price to be fixed at a figure making arbitrage with New York profitable. Apart from small purchases by the Exchange Account on Monday, the arbitrageur has had the buying side of the market to himself. It is not surprising, therefore, that on one day the price fixed should have been at a slight discount on the shipping parity.

* * *

Exchanges and the Crisis.—The German annexation of Czecho-Slovakia has inevitably given rise to fresh feelings of nervousness in all countries bordering upon Germany, and this has expressed itself into a fresh outflow of funds to New York. London, as usual, has provided the main channel, and so it is not surprising that the British Control has had to give some support to sterling. Still, the New York rate was held successfully at \$4.68 and above, and the absence of speculation proves the efficiency of the measures adopted last January. The foreign exchange market also believes that on balance the control has lost very little gold. Such a belief is reasonable, for there was little foreign hot money remaining in London, and so

long as London acts as a channel between the Continent and New York, it should in theory gain as much gold as it loses. On the other hand this week's Bank return reveals an increase of £18 millions in public deposits, most of which has arisen from gold sales by the Exchange Equalisation Account. There are various obvious symptoms of the Continental *malaise*. Dollar notes have been bid in London to $\frac{1}{2}$ per cent. premium, and there has also been a noticeable tendency for some efflux of funds from Switzerland, part of which at least represent refugee money, but these withdrawals have not been sufficient to inspire alarm or to cause any tightness of money. It is significant of the Swiss franc's strength that the forward rate remains at a premium. The Swiss National Bank feels only bound to keep the exchange rate steady within fairly wide limits, these corresponding to between Frs. 19.50 and Frs. 21.90 to the pound. At the worst the spot rate only rose from Frs. 20.58 to Frs. 20.85, and in all probability the National Bank was able to render support by drawing upon its *devisen* rather than its gold. It is doubtful if the British Control gained any Swiss gold. Belgium is in a different position, for the anxiety of the past fortnight supervened upon an already weak exchange position, due to Belgium's political troubles and still more to her uncertain economic outlook. Here the recent recovery in French industry has made the over-valuation of the belga a far more serious matter than it was ten months ago, while since that time there has also been the depreciation of the pound and the guilder. It is doubtful if, under present conditions, the Treasury can see its way clear beyond the end of April and before long the devaluation of the belga may have to be faced. It is not, therefore, surprising that forward belgas remain at a wide discount, while the spot rate needs continual support. One estimate is that the National Bank has lost nearly \$100 millions of gold during the past month and is still losing it at the rate of \$1.5 to \$2.0 millions a day. Most of this gold has gone to New York, but some has been sold in the London market. Thus, on balance, the British Control has been able to replenish some, though not all, of its gold losses.

* * *

Indian Banking Results.—Of the four banks operating in India and other Eastern countries whose accounts and balance sheets have been published recently, the Mercantile Bank of India makes the most satisfactory showing so far as profits are concerned. In what must have been a difficult year for all of them, it is able to show a slight increase in net profits from £183,497 to £192,443 and to maintain its dividend for the year at 12 per cent. At the annual general meeting of the Eastern Bank the chairman referred to the decline in advances and bills receivable, which are together down by over £1,000,000. This is presumably the chief cause of the small fall in net profits from £127,173 to £111,601; but the directors have felt justified in maintaining the final dividend at last year's figure, making the total for the year unchanged at 7s. per share. The National Bank of India with its big East African connection must have suffered from the stagnation of trade in those territories last year caused by the heavy over-stocking in 1937. In the circumstances, it is not surprising that net profits have fallen from £465,862 to £444,063, or that it has been deemed prudent to reduce both the interim and final dividends from 9 to 8 per cent. The balance sheet shows that deposits have fallen by over £2½ millions to £27,856,726; on the other hand, discounts and advances show a small increase at £10,118,561. The Chartered Bank of India, Australia and China shows, as is only to be expected, the biggest decline in profits; for, of the four banks, it is the only one with an extensive connection in the Far East, and its business there must have been adversely affected by the war. Net profits are, in fact, down by £155,756 to £335,309, and the dividend has been reduced from 14 to 10 per cent. The balance sheet shows, however, a very liquid position, for cash, though lower on the year, is still at the high figure of £6,014,530, while the total of current and fixed deposits is down from £49,741,351 to £46,191,968.

MONEY MARKET NOTES

Foreign Exchanges

THE foreign exchange market has withstood the shocks administered by Herr Hitler comparatively well. Selling has not been nearly so widespread as last September, and rates have consequently not been subject to big fluctuations. The weakest currency has, perhaps, been the Swiss franc, which is discussed in a Finance Note. On Thursday, after a weak opening, it rallied and the rate in the late afternoon was quoted at 20.81, compared with 20.83½-4 earlier in the day. The sterling-dollar rate has been firmly controlled, but pressure has not been entirely in one direction. The weakest day for the pound was on Monday, when the Control was in the market all day as a seller of dollars at 4.68½ and the forward premiums widened at one time to 1½c. for one month and 3½c. for three months, but in the late afternoon pressure on the spot rate abated and the forward premiums came back to ¾c. and 2½c. respectively. On Tuesday bear covering caused the pound to rally and the Control purchased dollars at 4.68½ to check the rise, although a weaker tendency again set in at the close. On Wednesday the trend in the spot rate was against the pound, but a better sign was the smaller demand for forward dollars. The next day, the pound opened on the weak side and was firmly held by the Control at 4.68½; later, however, the rate steadied at 4.68½ and less intervention was needed. Canadian dollars were firmer on Thursday and appreciated to 4.70½ in the afternoon. Francs have shown little change. The tendency of forward discounts to widen, noted last week, has been reversed, and after being ¼ franc for one month and ½ franc for three months on Monday, they have since come back to ¼ franc and ½ franc respectively. Free German marks have been offered and have been quoted at up to 11.72, but on Thursday afternoon they recovered to 11.69.

The Bank Return

THE Issue Department shows virtually no change on the week. The gold hold-

Clerical, Medical and General Life.—New sums assured amounted to £2,733,000 against a record figure of £3,239,000 in 1937. Death claims were £40,000 smaller at £400,000 and surrender values at £153,000 showed a reduction of £17,000. The net rate of interest in the life assurance fund was £3 16s. 6d. per cent. against £3 19s. 6d. per cent. in the previous year. Assets

ing has been valued at the same price as last week—148s. 5d.—which, incidentally, was the market price at the fixing on Wednesday. The note circulation is only slightly higher, so that political events have not induced either the public to hold cash or the banks to add to their till money. In the Banking Department, however, some measure of the Exchange Account's support of sterling is provided by the switch-over from bankers' to public deposits. The latter are up by as much as £18.1 millions, and though some of the rise may be the result of revenue transfers, by far the greater part probably represents the Account's purchases of sterling in the past week. Some attempt has been made to offset the deflationary effect of this movement by an increase in Government securities, but these are only £1.9 millions higher, and the net fall in bankers' deposits is £14.3 millions.

*

The Money Market

PRIOR to the week-end there was little sign that Central European developments were having any effect on conditions in the discount market. It is true

	Mar. 24, 1938	Mar. 16, 1939	Mar. 23, 1939
Bank Rate	2	2	2
London Deposit Rate	2	2	2
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½-9	1½-3½	1½-1*
Discount Rates:			
Treasury bills	1½	1½	1½-9½
Three months' bank bills	1½-9½	1½-9	5½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

that the fall in total applications at the Treasury Bill tender from £81.3 millions to £73.8 millions is probably explained by the reluctance of outside quarters to enter into new commitments; but the market syndicate was anxious to obtain a larger quota rather than raise the rate, which was only slightly higher at 10s. 132d. per cent. The six months' Manchester Corporation bills, too, were placed at the low rate of 11s. 4d. per cent., applications for the £500,000 of bills on offer totalling over £1,000,000. On Monday, however, a firmer tendency in bill rates became noticeable. The clearing banks were reluctant to buy more than a limited amount of April and May maturities, while June bills, where they were taken at all, were only bought at ½ per cent. On Wednesday there was a wider demand from the banks, and rates were maintained at the usual ½ per cent. for short-dated maturities and ½ per cent. for June bills, one bank

attempting unsuccessfully to raise the latter to ¾ per cent. Rates for commercial paper have naturally tended to rise in sympathy. The three months' fine bank draft is generally quoted at ¾ per cent., compared with ½ per cent. a week ago, while the six months' draft, which is only taken reluctantly, is quoted at ¾ per cent. Credit conditions have remained fairly comfortable. The smaller outlet for bills has increased the demand for credit from the market to enable it to take up its larger quota of Treasury Bills; but in spite of the fall in bankers' deposits disclosed in this week's Bank Return, the clearing banks have been fairly willing lenders at ½ per cent. against bills, and the only real sign of stringency has been some shortage of bond money which has sometimes only been available at ¾ per cent.

*

The Bullion Market

THE bullion market has been completely dominated by the unhoarding of gold by Continental hoarders, which is discussed in a Finance Note. The result has been that on Tuesday and Wednesday the turnover at the fixing rose to the highest figures for some months; but these, particularly on Wednesday, were completely overshadowed by unofficial dealings, and on that day the turnover for the whole day was estimated to be in the neighbourhood of £3,500,000. On Thursday, however, both official and unofficial dealings appreciably diminished. The Exchange Account has been in the market both as a seller and buyer of gold, supplying about half of the demand last Friday and buying a substantial proportion of Tuesday's large offerings. On Wednesday, however, it was unwilling to buy gold in view of the weakness of the pound.

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.
The New York price of silver remained at 43 cents per ounce -999 fine during the week.

The silver market has been quiet, and prices both for cash and forward have tended to fall, although there was a rally in the cash price on Thursday.

INSURANCE NOTES

increased from £15,654,000 to £16,282,000, and no Stock Exchange security stands above its cost price or above its middle market price on December 30, 1938, less accrued interest. Mortgages and loans increased from £6,311,000 to £7,087,000; mortgages in the United Kingdom amounted to £4,558,000 against £3,873,000 but no mortgages remain outside the United

Kingdom; these amounted at the end of 1937 to £393,000, and were arranged by a subsidiary of the Society in Canada, which was disposed of in 1938. There was a further advance in loans on medical practices under a distinctive scheme of the Society from £686,000 to £743,000. British Government securities showed little change in the year at £653,000 and debentures were also

practically unchanged at £2,040,000. Preference shares, however, increased from £100,000 to £363,000. The share holdings in the General Reversionary and Investment Company and in the Clerical, Medical and General Investment Trust remain at £850,000 and £750,000, respectively. Since the close of the year the latter company has been wound up, for the Society's internal organisation has developed to a degree which has made the continued existence of the Trust of no particular advantage. During the year depreciation of Stock Exchange securities amounted to about 2½ per cent. of book values, and this low rate arises partly from the short-dated investment policy which has been followed. The chairman mentions that, after careful consideration, the directors have decided to continue the issue of unrestricted policies, even under to-day's uncertain conditions. In the case of the cheapest types of policy, namely, temporary assurances and the Society's well-known "supplementary units," where the life assurance risk is at a maximum in relation to premiums paid, an adjustment has been made by an increase in the rate of premium, leaving the contracts unrestricted in form. This departure will doubtless be received with great interest by other offices.

★

Maritime Insurance Company.—The premium income of this company, whose share capital is held by the Scottish Union and National, increased last year from £387,000 to £405,000. Claims accounted for 78 per cent. of the premium income, a result which corresponds closely with the experience of the previous year, but is somewhat less favourable than in earlier years. In 1937 a special cash bonus of 100 per cent., less tax, was paid on the share capital at a net cost of £375,000, and this payment explains the reduction last year in the assets from £1,925,000 to £1,594,000. The position of the company remains strong. The underwriting fund amounts to 106 per cent. of the 1938 premium income, while general reserve totals £300,000 and the profit and loss balance, subject to deduction of the final dividend of 3 per cent., amounts to £290,000. The total dividend for the year, as before, is 6 per cent. Investments total £1,465,000 and in the aggregate are valued below middle market prices on December 31st last.

★

Marine and General Mutual Life.—This mutual Society, which was founded in 1852 and has always had a close association with the shipping industry, has recently given special attention to the expansion of its new business. Last year, new sums assured amounted to the record figure of £564,000 compared with the previous record of £525,000 in 1937. The net rate of interest fell by 4s. 8d. per cent. to £4 1s. 2d. per cent. and death claims increased by £16,000 to £154,000. A depreciation of 6 per cent. occurred last year in security holdings, which account for 86 per cent. of the assets, but there is apparently still an ample excess of market values over book values.

★

Scottish Equitable Life.—New sums assured last year amounted to £1,836,000, compared with £1,923,000 in 1937. The rate of interest fell by

4s. 5d. per cent. to £3 18s. 0d. per cent. Death claims were reduced by £69,000 to £368,000. Total assets increased from £11,746,000 to £11,987,000 and the reserve account remains unchanged at £250,000. There was no special change in the classification of the assets. Loans increased slightly from £3,187,000 to £3,210,000; while British Government securities fell from £1,404,000 to £1,291,000, and debenture, preference and ordinary stocks together increased from £5,312,000 to £5,659,000.

★

Standard Life Assurance.—The accounts of this company for the year to November 15, 1938, reveal the customary position of great strength. Assurance liabilities were again valued by the A1924-29 table, using select net premiums, while for annuities the British Officers' Select Annuity Table O1a1, plus an additional reserve to allow for the exceptional longevity of annuitants, was again adopted. The rate of interest employed in valuing the assurance and annuity liabilities is 2½ per cent. The results of the last two years are given below:—

	1937	1938
Surplus earned	488,432	523,119
Surplus income from guarantee fund	39,406	39,733
Brought forward	31,365	31,034
	559,203	593,886
Policyholders' bonuses	428,169	462,755
Pension fund	100,000	100,000
Investment reserve	31,034	31,131
Carried forward	559,203	593,886

The very high bonus rate of 42s. per cent. per annum, calculated on the sum assured and bonuses, is declared for the twelfth successive year, and is much more than covered by current earnings. New sums assured amounted to £4,650,000, compared with £4,341,000 in 1937, and last year was the sixth to produce record new business. The company is one of a small group of offices which specialise in group assurance and annuity business. Last year total new group assurances were more than doubled, at £1,817,000, against £789,000. In 1937, 1,922 deferred annuity policies were issued for £373,000 per annum (doubtless in connection with group pension contracts). Last year saw an expansion to 2,512 policies for £766,000 per annum. The net rate of interest earned in 1938 was £4 14s. 2d. per cent., against £4 15s. per cent. The guarantee fund remains at £1,700,000, consisting of £850,000 general reserve and £850,000 perpetual stock. The amount transferred last year from this fund to the life assurance fund was £39,733, equivalent to about 3s. 6d. of the 42s. per cent. bonus. Total assets increased from £29,605,000 to £31,091,000. Loans of all kinds increased from £3,370,000 to £3,768,000; loans on public rates amount to £766,000 against £113,000, while policy loans fell from £1,056,000 to £992,000. There was some reduction in British Government securities and also in foreign and colonial government securities. On the other hand, debenture, preference and ordinary stocks showed big increases.

★

London Life Association.—The results of the annual valuation of the liabilities of the London Life, including its associated companies, the Clergy Mutual and the Metropolitan Life (which operate as closed funds), are

shown below for 1937 and 1938:—

	1937	1938
Ordinary trading profits	540,251	535,885
Brought forward	156,771	113,241
	697,022	649,126
Policyholders' bonuses	456,104	382,639
Staff pension fund	15,000	15,000
Written off premises	...	100,000
Strengthening actuarial reserves	77,677	...
Reserve	50,000	50,000
Carried forward	113,241	151,487
	697,022	649,126

The bases used in the valuation, as in 1937, assume an interest at 3½ per cent., and the Eastern Counties Rural Districts Table is adopted. For London Life the future annual increase in rate of reduction of premium is taken at £2 per cent., and the future annual rate of bonus at 30s. per cent. compound. For Clergy Mutual, the bonus rate assured is £2 per cent. of sums assured (increased for whole life assurance by 2s. for each year of age over 65), and for Metropolitan, the increase in rate of abatement assured is 4½ per cent. The reversionary rate of bonus declared by London Life is again 35s. per cent., calculated on the sum assured and bonuses. In the reduction of premium class, the increased rate of reduction for the year beginning July 1, 1939, is 2 per cent. This follows three successive declarations of 3 per cent., but it was pointed out in these years that declarations of less than 3 per cent. must be expected in some years. The reversionary bonus declared for the Clergy Mutual is at the rate of 3 per cent., calculated on the sum assured, increasing in the case of whole life assurances by 3s. per cent. for each additional year of age over 65, compared with 4 per cent. and 4s. per cent. in recent years. The increase in the rate of abatement for the Metropolitan is 6 per cent., against 5 per cent. in 1937. New sums assured in 1938 were practically unchanged at £2,701,000, of which 57 per cent. related to non-participating contracts. The Association pays no commission, and the expense ratio thus represents the extremely low figure of 5½ per cent. of premium income. The net rate of interest earned by the total funds fell by 1s. per cent. to £3 15s. per cent., and the net rate calculated on the valuation liabilities fell by 1s. 2d. per cent. to £4 0s. 9d. per cent. It will be seen that there is an effective margin over valuation requirements of 10s. 9d. per cent. New deferred and reversionary annuities, which in 1936 totalled 2,075 contracts representing annuity payments of £216,000 per annum, and in 1937 1,622 contracts for £186,000 per annum, fell last year to 1,355 contracts for £164,000 per annum. These figures suggest a considerable falling off in staff pension business. At the close of 1937, on the basis of market prices then ruling, there was a free margin in excess of valuation liabilities of about £2,550,000; the corresponding figure at the close of last year was about £1,700,000. Depreciation during 1938 appears, therefore, to have represented about £850,000, equivalent to 2.7 per cent. of the assets or 4.7 per cent. of the Stock Exchange securities. Total assets increased from £30,289,000 to £30,953,000. Loans increased from £8,791,000 to £9,203,000, and there was a small reduction in British Government securities which was more than balanced by an increase in Colonial and Foreign Government securities.

Investment

An Unsettled Week.—The Stock Exchange has made a more realistic response to political events this week, although the continued absence of anything resembling crisis mentality is the outstanding feature of dealings. Jobbers have been ultra-cautious both on the "bull" and the "bear" tack. Consequently, when prices have moved, their response, both up and down, has been more pronounced than last week. On Monday, for example, when a significant volume of selling was reported, jobbers refused to take any appreciable amount of stock on their books, and quotations were lowered and widened. This preliminary slide, however, was followed by a partial recovery in which something between one-third and one-half of the day's losses were regained. The net result was a fall of a point in gilt-edged and a fall of 2.6 points in *The Financial News* share index. By contrast, the "House's" display of renewed confidence on Tuesday was indeed remarkable. Acting partly on the theory of improved investment morale and on hopes that the Berlin-Rome axis might develop symptoms of strain, the market proceeded to gain strength throughout the day, with none of the intermittent hesitation which underlying political conditions might have involved. Once again the refusal of jobbers to become "bears" when they previously refused to become "bulls" provided part of the explanation. In mid-week the market's attitude was once again sharply reversed; Tuesday's gains were lost, and in some instances more than lost. Wavering confidence was augmented by fears of technical weakness, which was confirmed by a small failure on Thursday. The weakness was even more pronounced in Wall Street, where the Dow industrial average closed nearly four points lower at 135.91. The significant feature in these see-saw movements (save, perhaps, for Monday's initial slide) is the relatively small amount of selling. It is true that buying support for the time being has virtually disappeared, but there is no pressure of selling on the part of the general investor. The latter, like the public at large, appears to be watching and waiting for the clarification of the Government's policy.

★ ★ ★

I.C.I. and Dunlop Rubber.—The preliminary statements of Imperial Chemical Industries and Dunlop Rubber have enjoyed a profoundly different market reception. On the former, a disappointed "Street" market on Wednesday marked the ordinary stock down sharply to 28s. 9d., compared with 30s. 3d. at Tuesday's close. The latter, issued at the end of last week, was followed by a recovery in the ordinary stock from 27s. 1½d. to 28s. Some reduction was generally anticipated in the Imperial Chemical dividend, despite the maintenance of the interim payment at 3 per cent., and the 8 per cent. total was not, in itself, a matter for great surprise. But the market seems to have been impressed by the fall in net earnings for dividends from £7,510,707 to £7,061,291, though the fall of 6 per cent. is in close keeping with the 6.6 per cent. decline in *The Economist* Index of Business Activity. It would, however, be premature to reach any firm conclusion on the past year's trading until the central obsolescence and depreciation provision is known. But the year 1937 was one of "exceptional activity and profit"—to quote the chairman's words last year. And even if the group has maintained its general trading position, the setback in the demand for fertilisers, building materials, and general metal products may well have involved a fall in profits of this order. In consequence of the dividend decision, the reserve provision is reduced from £1,500,000 to £1,125,000. The Dunlop announcement came as a complete surprise to a "bearish" market. At the beginning of October last year the directors referred to "a material reduction" in trading profits, and the ordinary shares were sharply marked down in consequence. Apparently, however, a rapid improvement occurred in the second half of the year, and particularly in the last quarter, with the result that net profits show the

comparatively small fall of £90,124 at £1,500,893. The dividend and bonus, together maintained at 9 per cent., are covered by earnings of 13.7 per cent., compared with 10.8 per cent. for 1937. Thus, a year which promised adverse results has made an excellent recovery and, incidentally, has suggested that half-yearly statements have their limitations as well as their advantages.

★ ★ ★

Associated Portland Cement.—The preliminary profits announcement of Associated Portland Cement, with its reference to a reserve provision of £60,000, suggested that the reduction in the dividend from 22½ per cent. to 20 per cent. was in the nature of a precautionary measure. The full report, in fact, goes some way to confirm this, for it shows an increase in trading profits from £1,054,591 to £1,070,381, and in interest and dividend income from £540,237 to £580,828. Of the latter, some £81,300 was provided by the Alpha Cement dividend, which was divided between the Associated and Tunnel companies, according to the new control, in the proportion of 74 to 26. This acquisition is also reflected in an increase in the ordinary capital to £4,000,000 against £3,500,000, in a consequent expansion of subsidiary interests from £2,384,552 to £2,754,650, and in a reduction in the rate of earnings for the increased equity from 22.9 per cent. to 22.2 per cent.—the latter despite the increase in equity earnings from £796,728 to £862,806. The profits of recent years are analysed in the following table and chart:—

	Years ended December 31, 1936	1937	1938
Trading profit.....	1,149,494	1,054,591	1,070,381

† Including £10,000 for investments. * On a capital of £4,000,000 (against £3,500,000).

ASSOCIATED PORTLAND CEMENT PROFITS
1928-38

Aggregate deliveries of the group last year were fully maintained, although some reduction in demand occurred in the later months of the year. But the figures do not suggest

that the industry was in the acutely depressed state which was officially suggested at the end of last year. At the meeting of British Portland Cement last week Sir Malcolm Stewart referred to a movement to secure greater co-operation in the industry, and he will take the opportunity at next week's meeting of the parent company to enlarge on this theme. Stockholders will probably appreciate Lord Wolmer's assurance this week, in another connection, that no rise in cement prices is in contemplation. Demand for general construction purposes is likely to show some fall this year, and while a check to incipient price-cutting may be a legitimate objective of co-operation, turnover would hardly be encouraged by any positive increase in prices. At 68s. 9d., the £1 ordinary stock units yield £5 16s. 3d. per cent.

* * *

British Insulated Cables.—The 1938 results of British Insulated Cables must be considered satisfactory, although, after a period of expanding earnings, some decline in profits is reported. The balance is struck "after contingent reserves adjustment," which renders close comparison between 1937 and 1938 profits difficult. On the basis of disclosed total profits, however, the percentage decline is no higher than 1½ per cent. for 1938, and the 20 per cent. dividend is covered by a scarcely less generous margin than in 1937. The course of profits over the past three years is shown below:—

	Years ended December 31st		
	1936	1937	1938
Profit after contingencies	765,695	821,358	807,874
Fees, etc.	19,161	19,726	19,406
Depreciation	143,682	143,019	156,402
Debt interest	35,000	35,000	35,000
Preference dividend	57,500	57,500	57,500
Ordinary stock—			
Earned	510,352	566,113	539,566
Paid	333,333	400,000	400,000
Earned %	33.9	31.1	29.6
Paid %	20*	20	20
To reserve	100,000	100,000	100,000
Carry forward	380,879	446,992	486,558

* And 20 per cent. capital bonus, absorbing £333,334 from reserve.

The increased depreciation provision, coupled with lower total profits, results in a reduction of £26,547 in earnings for the ordinary stock to £539,566. The generous earnings cover in recent years absolves the stockholder from making an unduly close estimate of the outlook for the current year. Competition from non-members of the Cable Manufacturers' Association may have some effect on profit margins, and it must be left to the equipment of factories and extensions for the arms programme to make up the leeway in demand resulting from a potential decline in private construction. A leading article in *The Economist* of February 11th on cable shares emphasised the point that requirements for subsidiary mains and for consumers' installations now form the chief market for cables. Hence the manufacturers are not dependent merely on the growth of the country's electricity distribution system, although the smaller cable market is the more competitive field. British Insulated £1 ordinary stock units yield £4 19s. per cent. at the current price of 81s.

* * *

British Aluminium Progress.—Since 1933 British Aluminium has enjoyed rapid and uninterrupted progress, and last year an increase in total profits of as much as 17 per cent., from £773,432 to £909,851, was recorded. The reduction in the price of aluminium, which was not favourably received by the Stock Exchange last year, appears to have produced rapid fruits in increased sales. The company's expansion programme of recent years is now in sight of full earning power. In particular, the Lochaber extensions did not come into full operation until the last quarter of 1938, though they have been partially productive for about a year. Higher output and sales, and consequent savings in large overheads, must, therefore, have

played a large part in last year's satisfactory results. Allocations of profits during the past three years are shown below:—

	Years ended December 31st		
	1936	1937	1938
Total profit	597,181	773,432	909,851
Taxation	34,000	70,000	50,000
Directors' fees	24,250	25,250	27,181
Depreciation	50,000	50,000	50,000
Debt service	140,000	140,000	175,000
Preference dividend	90,000	90,000	90,000
Ordinary stock—			
Earned	258,931	398,182	517,670
Paid	200,000	267,916	375,000
Earned %	13.9	20.6†	19.1
Paid %	10	12½*	12½

Reserve account	50,000	100,000	100,000
Carry forward	71,158	101,424	144,094

† On dividends paid, or 14.7 per cent. on capital of £3,000,000.
* On old capital; dividend on 1,000,000 new shares, £1 15s. 10d. per cent.

The increase in total profit is not wholly available for ordinary stockholders, for the reduced tax provision does not fully offset the new debt sinking fund requirements. This year the full 12½ per cent. dividend is payable on the new shares, and, reckoned in terms of the present capital, earnings have increased from 14.7 per cent. to 19.1 per cent. No change is made in the reserve allocation of £100,000, but a substantial addition is made to the carry-forward. Capital expenditure during 1938 amounted to £619,700, while accounts with subsidiaries increased by £611,000 to £4,803,000. Shares in subsidiaries are unchanged, a fact which suggests that the £500,000 private company formed to build (in conjunction with other interests) a factory in South Wales is presumably contained among the other fixed assets, for the new works at Newport are now almost complete. Despite last year's expansion, there still remained at December 31st over £1¼ millions of cash, while net liquid assets totalled £1,434,000. At the current price of 53s. 6d., the £1 units yield £4 13s. 6d. per cent.

* * *

Associated Electrical Industries.—The trading profit of Associated Electrical Industries for 1938 reached a new high level of £1,399,499, compared with £1,290,008 for 1937. In their report, the directors describe last year's output as the highest in the history of the company and new orders received were second in volume only to those of the record year, 1937. Owing to a fairly sharp rise in taxation requirements, from £380,759 to £505,257, the amount earned for dividends is reduced from £691,493 to £664,308, and the ordinary dividend, maintained for the third year at 10 per cent., is covered by a virtually unchanged margin of 6.5 per cent., compared with 6.6 per cent. for 1937. The directors state that unexecuted orders on hand at the end of 1938 were slightly less than a year earlier, while the consolidated balance sheet showed a reduction in stock and work in progress from £6,151,298 to £5,825,167. These two points suggest that some reduction in trading profits is to be expected during the current year. On the other hand, the group has undertaken important munitions contracts, and can presumably count upon the continuance of a satisfactory volume of defence work. The joint interest which the company has acquired, together with John Brown, in Westland Aircraft, will not, of course, produce immediate fruits, since large-scale extensions are being made to the aircraft works. At the current price of 39s. 10½d. the ordinary stock yields a comparatively low return of £5 5s. 6d.

* * *

Insurance Share Index.—The trifling decline in insurance share prices in the July-September quarter of 1938 developed in the closing months of the year into a more substantial fall. *The Economist* index of insurance share values (based on an investment in 1913 of £1,000

in the ordinary shares of 24 companies) fell from 4,549 at the end of 1937 to 4,307 on September 30, 1938, and to 4,198 on December 30th. The 1938 average, at 4,226, is nearly 12 per cent. below the level of 1937, but a certain recovery has occurred this year. Details of the index, which takes account of bonus share issues by assuming that rights are sold and re-invested in an additional holding of original shares, are given below:—

Company	Average 1937	Average 1938	Dec. 31, 1937	March 31, 1938	June 30, 1938	Sept. 30, 1938	Dec. 30, 1938
Alliance	2,341	2,102	2,268	2,058	2,142	2,100	2,100

Yorkshire	3,762	3,511	3,556	3,401	3,504	3,504	3,504
Average	4,795	4,226	4,549	4,109	4,312	4,307	4,198

The decline in average insurance share values in the last quarter of 1938 was of a fairly general character. Of the 24 shares in the table, 12 showed declines and seven were unchanged, but modest rises were shown by the remaining five.

Electricity Reports

Midland Electric.—Despite the small increase in units sold of 3.2 per cent., Midland Electric succeeded in increasing its revenue from the sale of current by 6.3 per cent., and a part of this gain in gross revenue is carried through to augment ordinary earnings, which are slightly higher at 15.7 per cent., as against 14.6 per cent. in 1937. The accounts, analysed below, do not show the cost of current as a separate item:—

	1936	1937	1938
Consumers connected	43,552	51,102	58,476
Increase %	20.3	17.3	14.4
Units sold (millions)	142	161	166
Increase %	19.5	13.5	3.2
Revenue from sales of energy	500,328	565,168	600,788
Operating profit*	165,746	192,408	207,033
Sinking funds	29,701	36,464	42,757
Debt interest	11,769	19,500	19,625
Income tax	12,663	23,284	28,419
Preference dividends	10,638	10,463	10,076

Ordinary shares:—			
Earned	100,975	102,697	106,156
Paid	64,050	63,000	60,900
Earned %	14.2	14.6	15.7
Paid %	9	9	9

To special purposes and contingency fund	8,906	9,911	4,102
Reserve account	20,000	25,000	40,000
Carried forward	44,262	49,048	50,202

* Including investment income.

The appropriation to "special purposes and contingency fund" apparently represents the proportion of profits which are not divisible under the sliding scale provisions of the new franchise, which extended the company's tenure until 1973. If this item is deducted, ordinary earnings are reduced to 15.1 per cent. The sinking fund charges which are required under the new franchise are comparable to depreciation on our standard scale. It

would appear that, in order to increase divisible profits by 1 per cent. on the ordinary capital, i.e. by £6,750 net, it would be necessary to reduce the revenue from sale of current, for the same number of units sold as in 1938, by approximately £20,000. At the same time, expenses would have to be cut by £26,750 if this additional dividend was to be earned. On this basis, the scope for increasing the divisible profits of the company does not appear particularly great. Probably a more important source of increasing the divisible earnings on the existing ordinary capital is the right which the company has to invest "free reserves," i.e. undistributed divisible earnings, in the undertaking, on which it is entitled to earn a return of 6 per cent. This may probably explain why the company has not increased its dividend despite the substantial margin of divisible earnings available. At 38s. 9d. the shares yield £4 13s. per cent.

* * *

Electrical Distribution of Yorkshire.—The steady increase in sales was maintained last year. The gain in net revenue, however, was less pronounced, owing to the increased cost of coal and higher rates. After providing for interest on the £500,000 of debt stock issued in May and depreciation at the same rate as in 1937, net ordinary earnings are unchanged, if allowance is made for the increased rate of tax. Profits for the past three years are given below.

	1936	1937	1938
Units sold (millions)	48.6	54.8	60.7
Increase %	13.7	12.7	10.7

Net revenue (after tax)	232,863	252,206	266,050
Interest and bank charges	9,606	730	14,305
Depreciation & reserve account	70,000	100,000	100,000
Preference dividends	32,025	48,239	52,200

Ordinary stock:—			
Earned	121,232	103,237	99,545
Paid	102,938	101,250	97,875
Earned %	10.6	9.2	9.2
Paid %	9	9	9
Carried forward	51,181*	58,168	59,838

* After charging £4,351 issue expenses.

The transfer to "depreciation reserve fund" of £100,000 is now approximately equal to depreciation calculated on our standard scale. At 40s. 4d. the £1 ordinary stock yields £4 10s. per cent., which is not particularly generous in view of the narrow margin of undistributed earnings over the 9 per cent. dividend. The company undoubtedly has an attractive area, which presents scope for further development. But while net revenue has increased since 1930 by 150 per cent.—from £106,548 to £266,050—net ordinary earnings have remained practically unchanged.

* * *

Mersey Power.—Owing to unsettled industrial conditions, the fall in power sales last year almost entirely

offset the gain in lighting and domestic consumption. On balance, net units sold were only 1,000,000 higher than in 1937. In these circumstances, a 5½ per cent. increase in aggregate revenue from current is not unsatisfactory. However a substantial increase in generating costs more than absorbed this increase, and the net profit available to meet capital charges was reduced from £163,119 to £150,959. By reducing the depreciation charge from £75,000 to £53,925 ordinary earnings were almost unchanged compared with 1937. This illustrates one of the reasons why electric supply shares are commonly regarded as depression proof. Since heavy capital expenditure is involved, depreciation is high in proportion to equity earnings for most undertakings, and it is possible to offset fluctuations in the latter by appropriate changes in the amounts of depreciation charged in any particular year. Mersey Power profits for the past three years are analysed below:—

	1936	1937	1938
Revenue from sale of current	269,929	305,188	321,210
Net profit	140,440	163,119	150,959

Paid %	7½	8	8
Carried forward	4,510	8,204	1,738*

* After writing off £9,540 debenture discount.

The reduced depreciation charge of £53,925 only slightly exceeds our standard scale. The bulk of the ordinary shares, quoted at 32s. to yield ½ per cent., are now held by the Mid-Cheshire Electricity Company. Although the results for 1938 are not representative, the yield is not excessive, since the company is not a "power company" in the strict sense, but operates under distribution orders which are purchasable by the local authorities within the next 25 years, on terms which include no provision for goodwill.

* * *

Bournemouth and Poole Electricity.—The rate of growth in units sold by this associate of County of London Electric slackened somewhat last year, although the actual gain of 13.5 per cent. is still quite impressive compared with most other electricity undertakings. Further reductions in rates for both urban and rural consumers prevented the increase in revenue, amounting to £28,245, from offsetting the higher cost of current, and net revenue shows a drop of £8,923. Available ordinary earnings are slightly reduced at 17.2 per cent., against 18.2 per cent. The results are analysed below:—

	1936	1937	1938
No. of units sold (millions)	47.1	58.7	66.6
Increase %	29.1	24.9	13.5
Revenue from sale of energy	425,983	466,916	495,161
Cost of current	126,507	151,290	191,967

Written off sundry items	21,235	10,000	...
Carried forward	13,554	16,537	14,848*

* After charging £8,865 in respect of Jubilee Bonus to staff.

The depreciation charge plus the sinking fund appropriation for the company's generating station, which is now closed down, is now only slightly in excess of depreciation calculated on our standard scale. The margin of

undistributed earnings is therefore small. Some important sections of the company's undertaking will become subject in the next few years to purchase by the local authority, and some restriction on the profit earning capacity of the company is therefore to be anticipated. At 65s. 6d., the ordinary shares of £1 yield £4 11s. 6d. per cent.

* * *

South Metropolitan Electric.—Last year revealed a slackening of the rapid growth in units sold which has been a feature of recent years. Despite the fact that the company operates largely under the London Electricity Act of 1925, revenue from sale of current again shows a substantial increase of £115,613, equivalent to 16 per cent. This gain, however, is largely absorbed by increased expenses, particularly for cost of current, and net revenue is only £30,747 higher. After providing for the normal increase in sinking fund charges, ordinary earnings show only a slight gain compared with 1937. The divergent trend of units sold and revenue received is reflected in a sharp reduction in shareholders' proportion of consumers' benefit and the appropriation to general and No. 2 reserve account is cut from £17,500 to £10,000. It would almost appear that the company foresaw the rise in costs which occurred last year, and, unlike the majority of the London companies, raised its prices. Results for the past three years are given below:—

	1936	1937	1938
Units sold	139.7	167.2	179.8
Increase %	23.3	19.7	7.5
Sale of current, etc.	612,905	725,479	841,092
Cost of current	287,420	352,381	410,021
Net revenue	200,558	240,052	270,799
Sinking funds, etc.	75,202	90,118	108,431
Earned for ordinary	59,714	90,559	93,672
Ordinary dividend	60,799	69,750	69,750
Paid %	9	9	9
To general and No. 2 reserve	5,393	17,500	10,000
Carried forward	40,207	43,516	47,438*

* After providing £10,000 for staff superannuation.

Like the County of London Electric, by which it is controlled, the company bears all the marks of an enterprising and efficiently managed undertaking. It also shares with its parent the less happy distinction of presenting accounts which fail to distinguish between that part of its business subject to the 1925 Act and the rest of the undertaking.

Mining Reports

East Geduld.—Last year East Geduld first reached the adult stage. Ore milled increased from 1,496,800 tons in 1937 to 1,751,800 tons, which represents virtually the full capacity of the plant as increased by the 1937 extension. The latter completed the main capital expansion programme, and appropriations from profits for capital purposes have ceased to be a feature of the accounts. It is, therefore, interesting to note that the available profit, which increased by £186,067 to £1,158,870, showed a generous surplus over the amount required for the dividends, totalling 11s. 6d., paid during the year. The December dividend was raised to 6s., a sum which, on an annual basis, would represent a distribution of £1,080,000. There should, in fact, be scope for a further increase on this rate, for there is reason to expect that profits may show some further rise this year. The results of the company for the past three years are summarised below:—

	Working Profit	Dividends Amount	Per cent.	Carry forward	Ore Reserves Quantity Tons	Value Dwt.
1936	1,609,387	855,000	47½	90,997	9,000,000	6.3
1937	1,782,959	877,500	48½	108,061	10,100,000	6.2
1938	2,185,713	1,035,000	57½	220,132	11,500,000	6.0

Working costs at 16s. 2d. per ton milled show the further appreciable decrease of 11d. on the previous year, and for the first two months of 1939 the exceptionally low figure of 15s. 7d. per ton has been attained. The recalculation of the ore reserves at the year-end disclosed a quantity of 11,500,000 tons, valued at 6.0 dwts. over an estimated width of 58 inches. This represents an increase of 1,400,000 tons over the previous year, but a decrease in value of 0.2 dwt. The average yield per ton milled was 5.77 dwts., which, on an extraction of 94.62 per cent., is in close accord with the average value of the reserves. On the basis of a distribution of 12s., the yield on the £1 shares at 10½ would be £5 15s. 6d. per cent. The earnings surplus discussed above does not, of course, take into account the increase in the price of gold, which averaged 142s. 5d. per oz. last year. Nor is allowance made for the promise of a return on the Grootvlei holding, in which East Geduld now holds 134,400 shares, i.e. approximately one Grootvlei for each thirteen East Geduld. The mining position is excellent, and the shares fully deserve their status as a leader among the investment Kafirs.

* * *

Geduld Proprietary.—This famous mine is facing its declining years with dignity and success. The steady easing in the average value of the ore reserves continued in 1938 with a drop of 0.1 dwt. at 4.9 dwts., and for the first time the actual tonnage is lower at 9,050,000, a decline of only 50,000 tons, but possibly significant. Development footage was again somewhat lower at 37,247, but payability was maintained at 41 per cent., and it is clear that no sharp deterioration in the position is to be anticipated. Actually the net profit of £1,126,942 constituted a record, though the actual gold yield was virtually unchanged at 326,527 ounces. Tonnage milled, at 1,328,500, showed an increase of 27,500 tons. Mining profits were virtually unchanged, the £54,868 increase in profits being due largely to the increase in the dividend from East Geduld. The prospect of further improvement in dividends, from this source, together with the expectation of distributions on Grootvlei and the effect of a higher price now ruling for gold, indicates the possibility of the attainment of a new record profit. The shares at 8½ offer a yield of 9 per cent., and in some respects they represent the best investment opportunity among the declining Kafirs.

* * *

Grootvlei.—Grootvlei reached the production stage last September and steady progress towards normal output is being made. The plant capacity is being increased from 60,000 tons to 80,000 tons per month, and it is anticipated that this extension will be completed in the second quarter of the current year. During the period September to December last, ore crushed amounted to 230,500 tons and yielded the nominal working profit of £8,841, an average yield of 3.3 dwt., valued at 24s. 3d. per ton. The low average grade of the ore sent to the mill reflected the high proportion of ore crushed from development faces and the surface dump of development rock. No serious troubles have been encountered in any section of the plant. Ore reserves are estimated at December 31st at 3,750,000 tons, having an assay value of 5.5 dwt. over an average estimated stopping width of 55.5 inches. Excluding shafts, development last year amounted to 39,669 feet. There is no doubt that Grootvlei will develop into a sound dividend payer, but there is sometimes a tendency to put the property on a par with East Geduld, which is hardly justified. The general indications are that the eastern sections of the property compare less favourably with the western portion, where development continues to be excellent. Development on Palmietkuil, the eastern neighbour, tends to confirm this discrepancy, and the No. 3 shaft, situated in the south-east, encountered the reef but showed unpayable values. A connection between the latter and the western portion of the mine is expected to be made about the middle of this year, and this should lead to a rapid increase in the reserve tonnage. The commencement of dividends this year will be awaited with interest.

Marievale.—Marievale is in the changeover stage from a development proposition to a mine. Last December, it will be recalled, the directors announced that the consulting engineer recommended the installation of a reduction plant having an initial nominal capacity of 500,000 tons per annum designed to permit of economic expansion. It is stated that the plant will be completed by the end of the current year, earlier than was anticipated when the capital issue was made to provide the necessary funds. The issued capital now stands at the full authorised amount, namely, £2,250,000 in 4,500,000 shares of 10s. each. A further £150,000 may be required to meet the full financial requirement for the producing stage. As preferent subscription rights have been fully utilised, the shareholders now have the full equity. The large extent of the property, 6,146 claims, is sufficient to allow a considerable margin should the eastern portion prove to be poor. The footage on the reef and sampled during the year was 17,780, of which 10,080 feet were payable, averaging 14.2 dwt. over 23 inches, a really excellent achievement. Ore reserves as at December 31st last were calculated to amount to 1,120,000 tons, having an average assay value of 6.1 dwt. over a stopping width of 39 inches. Since the commencement of operations the footage sampled has totalled 37,405, of which 15,208 feet have proved to be payable, averaging 14.7 dwt. over 20 inches. Thus, Marievale has been proved, so far as is possible short of reaching the actual production stage.

* * *

Van Dyk.—Van Dyk is now getting into its stride, and the results shown last year fully justify the confidence of those who expect the mine to take its place among established concerns on the East Rand. Milling operations commenced at the beginning of last May and by the end of the year 508,000 tons had been milled, resulting in a working profit of £170,444. The usual factors of gold absorption and treatment of low-grade development rock during opening up of the stopes were reflected in the low yield. Though steady progress has been made, normal production had not been reached by the end of the year. The reduction plant is now in course of extension from 60,000 tons to 80,000 tons per month and in February the record throughput of 77,000 tons was attained. Ore reserves at December 31st disclosed an increase of 450,000 tons to 2,250,000 tons, of an average assay value of 5.8 dwt. over an estimated stopping width of 40 inches. The original programme of vertical shaft sinking has been completed and an important area will be opened up by driving between the No. 2 and 3 shafts which offers the probability of a rapid increase in the reserves. The property is a large one, having a total mining area of 5,777 claims. Adequate funds are in hand from last year's issue to complete the expansion programme to 80,000 tons per month, but there seems no reason why, over a period, a decision should not be taken further to increase the scale of operations. The issued capital is now £2,750,000 in 10s. shares and the market capitalisation at the present price of 23s. 9d. must be considered moderate in relation to dividend expectations during the next two years. It is evidently the policy of the directors, however, not to draw unduly upon the revenue account for capital expenditure. The maiden December dividend of 3d. per share absorbed £68,750, leaving an unappropriated balance at December 31st of £95,857.

* * *

Rietfontein 11.—There is no improvement in the prospects of Rietfontein No. 11. During 1938 development accomplished totalled 16,308 feet, of which 8,830 feet were sampled, but no payable disclosures were made. The report states that during the latter part of the year

operations were confined to the area north of the shaft where prospects are described as "slightly more encouraging." In this section it is always conceivable that small payable shoots, originating in the south-eastern portion of Grootvlei, may be encountered. But it cannot be said that there is any reasonable expectation of making Rietfontein 11 into a payable mine. The necessity for preserving cash resources has led to the suspension of all development south of the shaft and this is no more than common prudence, since no indications to warrant expenditure in this direction have been revealed. During the year the balance of 9s. per share unpaid on 419,637 partly-paid shares was called up making available £188,836 13s. for working capital. The balance sheet shows that deposits and cash amount to £53,148. It would be difficult to justify the expenditure of this balance. Results on Palmietkuil to the north, Grootvlei to the north-west, and East Daggafontein to the west, should eventually reveal any potentialities that may exist on Rietfontein 11. The possibility that one of the adjoining mines may think it worth while to take in the property, or portions of it, provides some hope for shareholders, but the company has a large capitalisation of 2,200,000 10s. shares.

* * *

Durban Deep.—The Durban Roodepoort Deep report leaves an impression of a further accession of strength. In every respect 1938 was a record year, and there is reason to expect that in tonnage, yield and profit new records will be attained in 1939. In general, the expansion programme initiated after the New Steyn acquisition is moving steadily towards fulfilment. The tonnage milled during the year at 1,374,000 showed an advance of 165,000 tons compared with 1937, and the rate is gradually being increased. The two plants are now nearly attaining their limit of between 140,000 and 150,000 tons a month, and further extensions should bring the capacity up to 175,000 tons a month, or 2,100,000 tons per annum, by the end of this year. Ore reserves are again up, by 429,700 tons, the value being maintained at 4.7 dwt., while the stoping width is slightly higher by half an inch. Development work reached a new high level of 71,057 feet, an increase of 7,677 feet, and the percentage of payability, at 65 per cent., also shows a further improvement of 3 per cent. During the year expenditure on shaft sinking, equipment, etc., amounted to £449,200, and since expenditure is expected to be on a similar scale this year, it is clear that the working capital of £265,859 at December 31, 1938, will need to be supplemented. The two dividends of 1s. 3d. for 1938 were earned with a surplus of £61,633. The February profit, however, was nearly £19,000 higher than the corresponding figure for February, 1938, and there is every reason to hope that the capital requirements will be covered without a further capital issue. Dividend maturity is likely to arrive in 1940-41. This factor justifies the low yield of £5 5s. per cent. offered by the 10s. shares at the present price of 2½.

* * *

Modderfontein "B" Gold Position.—Only the rise in the average gold price in 1938 enabled Modder "B" to avoid a moderate drop in profits. Since 1934 reserves have been increased relatively slowly, and at the end of 1938 were re-estimated at 3,805,000 tons, or 46,000 tons less, and with 0.1 dwt. lower value at 3.9 dwts. Tonnage mined last year fell from 1,212,000 to 1,181,000 tons—the first time in recent years that a smaller tonnage has been recorded. The drop in milling was very small, from 1,084,000 to 1,082,000 tons, but the value was lower by 0.04 dwt. at 3.36 dwt. Costs, however, were unchanged at 13s. 11d. a ton, and as working profit was 1d. a ton higher at 10s. 1d., total mining profit was £1,344 higher at £544,280. A reduction in the usual transfer from capital account from £41,561 to £32,252 was partly offset by a lower taxation provision, so that the balance is only £4,237 lower at £350,791. This total, however, only just covers the 50 per cent. distribution, and the relatively short remaining life of the mine is reflected in a current yield of 17½ per cent. on the 5s. shares at 14s. 6d.

City Deep.—Satisfactory results for 1938 arose largely from the higher value of ore milled during that period. The tonnage crushed was 16,000 tons lower at 1,277,000 tons, but owing to an increase in yield of 0.112 dwt. to 3.977 dwt. (the highest yield since 1933), and a rise of 2s. in the average gold price, total revenue rose by 1s. 2d. a ton to £1,811,659 in all. The rise in working costs was limited to 8d. a ton, and as a result the company increased its working profit by £31,266 to £271,924. After allowing for other revenue and expenses (including an increase of £15,221 to £15,755 in tax provision), the balance available for dividend is £239,460 against £222,942, and the increased distribution of 11½ per cent. is covered by earnings of 14.8 per cent. This dividend, however, is payable on a slightly larger capital, for during 1938 20,000 £1 reserve shares were taken up under option at 30s. by Central Mining and Rand Mines. Capital expenditure absorbed £164,264, and was more than covered by sales of freehold land and by the share issue. Available ore reserves increased by 288,200 tons, with no change in value. At a current price of 36s. 3d., City Deep £1 shares yield £6 4s. per cent.

The Week's Company Profits.—This week our usual analysis of profit and loss accounts, appearing on page 655, comprises no fewer than 107 companies, excluding banks and companies for which comparable figures are not available. The heavy industries are particularly well represented in the week's total of £19,336,000, which is only 2½ per cent. less than the £19,815,000 earned by the same companies a year ago. The aggregate net profits of 602 companies reporting this year to date are £84,699,000 against £91,883,000, a fall of 8 per cent. The week's results are discussed on earlier pages and on page 634 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—In this issue reports of company meetings begin on page 641. Mr T. E. Pearce's address at the *Hongkong and Shanghai Banking Corporation* meeting on February 25th was discussed in *The Economist* of March 4th on page 453. At the *Eastern Bank* meeting Sir James Leigh-Wood referred to the possibility that the Government of India might follow the course of the Bank of England and write up its gold reserve. Addressing *Scottish Provident Institution* members, Mr George M. Brown explained that the reserves had been strengthened, as in valuing liabilities an interest rate of 2½ per cent., against 3 per cent. previously, had been assumed. At the *County of London Electric* meeting Sir Bernard E. Greenwell informed shareholders that during last year reductions had been made to consumers throughout the suburban and rural areas, and that over 82 per cent. of consumers on quarterly supply had adopted the two-part tariff. Members of the *North-Eastern Electric* were informed by Mr R. P. Sloan at the annual meeting that during each of the years 1935 to 1938 reductions in charges to lighting and domestic customers had averaged some £50,000 a year. The chairman of *Law Land Company* discussed the effects of the rebuilding of Waterloo Bridge on certain of the company's properties. Mr F. Le Neve Foster informed shareholders at the *Davis and Timmins* meeting that the board's policy of widening their range of stock screws and reducing costs and prices by adopting better production methods was amply justifying itself. At the *Telephone and General Trust* meeting Sir Alexander Roger expressed the opinion that industry had benefited immensely from the revolutionary change over the past few years in the principles and methods by which monetary conditions were controlled. Mr John E. James reported to members at the *Lancashire Steel Corporation* meeting that the past few weeks had shown signs of an improved demand, due to commercial as well as to arms requirements. At the *Banco di Roma* meeting, the chairman reported that in 1938 two new branches had been added to the 14 branches in Italian East Africa.

SETTLING DAYS
TICKET ACCOUNT
APRIL 11 APRIL 13

THE market's weak opening on Monday suggested that political fears might take more serious toll of prices than at any time since the September crisis, but it gave an exaggerated impression of the true response of the general investor. After a sharp initial break, an appreciable rally enabled the market to regain up to half of its early falls. Subsequently, sentiment has swung from one pole to the other on successive days. Tuesday revealed a consistent—actually too consistent—rally, and in mid-week the market was again facing a gloomier interpretation of the political facts. This feeling, in turn, was reversed on Thursday when the small extent of reported technical weakness (which was a factor in Wednesday's decline) was revealed. The only conclusion regarding this week's movements is that jobbers have retained an open mind regarding the swings of the political weathercock, and have kept their books at the lowest possible level.

In the *gilt-edged market* dealing margins were at first widened to as much as a point, and by noon on Monday quotations were anything up to two points lower. Despite the afternoon rally, however, undated stocks showed losses of up to 1½. Certain of the short-dated issues were reported to be affected by the official desire to limit gilt-edged holdings of certain discount houses. Monday's losses were largely regained on the following day, when War Loan closed ½ higher and a significant rally also occurred in the short-dated group. These movements, however, were almost exactly reversed in mid-week, and Thursday's improved tendency only assisted the undated stocks to the extent of ½. Corporation and dominion stocks followed these fluctuations.

Among *foreign bonds*, the European list was at first very depressed. Czech 8 per cents. fell at one time on Monday to 36, but closed as high as 43 on the blocking of Czech assets in London. A substantial recovery from the lowest also occurred in German loans, and prices were relatively well maintained later in the week. The Central European group was naturally a nervous market. Further selling of Japanese bonds was reported, though in mid-week the market received better support.

Home rail stocks were exposed to the full shock of weak markets, following their recent speculative advances, and despite the afternoon rally, the marginal stocks on Monday showed heavy losses at the close. Southern preferred received some support on Tuesday and the preference stocks generally more than regained their opening falls, only to give way again in mid-week, when L.M.S. 4 per cent. preference lost 3 points and L. and N.E. first preference two points.

Although the *industrial market* made a good stand on Tuesday, on the whole it was sorely affected by European events. A severe precautionary marking down of prices as the week started was followed by a partial recovery, but a fresh setback occurred in mid-week. A rather firmer tendency on Thursday

was almost entirely due to technical causes. Iron and steel shares followed the general movement. Wm. Beardmore and Vickers responded to the issue of the full reports, but as the Hadfields' accounts came out when the market was particularly gloomy, the shares lost ground. The engineering section was rather more resistant than other groups to the mid-week reaction. Craven Brothers went ahead on the satisfactory report, and Hawthorn Leslie strengthened. Electrical equipment issues followed the general trend, and Callenders Cable were affected by Monday's weakness. On Tuesday, motor shares more than recovered their earlier losses, but fell back again later. Aircraft shares were considerably firmer than other sections, though there were a number of small changes. Response by textile shares to news of the Indian trade pact was delayed, and was scarcely enough to offset the general weakness. Courtaulds and other rayon shares drifted with the rest of the market. Losses among brewery shares were heavy on Monday, and subsequent rallies did not save them from falls on the week. Tobacco issues followed the same tendency, but some interest was shown in Gallaher. Store, provision and catering issues also swam with the current. In the miscellaneous section, the leaders were sensitive to the general tone of the market, and I.C.I. reacted on the dividend reduction.

In the *oil share market*, a precautionary marking-down of prices at the outset and a widening of quotations had the desired effect of discouraging sellers, and on Tuesday bargain-hunting helped to lift prices. A dull tone returned in mid-week, and though Paris was a seller of the leaders, there was no heavy pressure. Mexican Eagle were depressed by the statement that no agreement was in sight. Rubber shares followed the same trend as elsewhere, with changes in quotations quite out of proportion to the actual volume of buying or selling. Tea shares were subdued and mostly lower.

Mining shares were heavily marked down on Monday, recovered, and then staged a fresh fall in mid-week. But it was chiefly quotations which changed, for the actual volume of business remained small throughout. The Kaffir market was nervous, but while prices fluctuated in common with other sections, the volume of actual dealing was very small. Both Paris and the Cape occasionally entered the market, but the trend was no more consistent than it was on local account. Rhodesian coppers and base metal shares generally rallied in late dealings on Monday, but shared in the mid-week reaction.

ACTUARIES' INVESTMENT INDEX

A fall of 4 points in a single week is shown by the Actuaries' index of 160 industrial equity prices, which on Tuesday, March 21, 1939, stood at 62.0, compared with 66.0 a week ago and 62.2 a month ago. The corresponding average yields are 5.80, 5.48 and 5.77 per cent. A selection of the component indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Price 1939 High

New York

AFTER an undecided opening, Wall Street staged a general moderate advance on Tuesday, which carried the Dow Jones industrial index up by more than 2 points, only to lose ground heavily in mid-week. On Wednesday, the industrial average fell by 3.90 to the accompaniment of turnover of 1,440,000 shares. The German occupation of Memel added to the market's general political pre-occupations and caused a heavy wave of selling in the last hour. During the brief intervals when the market was feeling more confident, the main feature was an increased demand for armament and aircraft shares. But even on Tuesday there was no substantial public buying and turnover amounted to no more than 690,000 shares. The virtual stability in steel output—*Iron Age* estimates steel mill activity this week at 55½ per cent. of capacity against 56 per cent. a week ago—was not an encouraging pointer for the steel group. In the bond market, foreign issues were weak and rail bonds showed heavy losses, while Treasury issues failed to maintain Tuesday's improvement.

Capital Issues

Two public issues and one new unit trust have braved this week's heavy political weather. The prospectus of *S. Guiterman and Company* is remarkable for the inclusion of a profits record extending over thirty years, the average of which is closely comparable with the average over the past five years. The cover and yield estimates, as befits a dual issue of this size, are necessarily generous. The *Squires Gate Blackpool*

Holiday Camp issue will doubtless appeal chiefly to Lancashire investors. The shares will be dealt in on the Manchester Stock Exchange. *Lombard Industrial Trust* is the first trust to be formed under the auspices of a new group, Lombard Unit Investments. The trust has an initial portfolio of 32 industrial shares; the trust is operated on cash fund lines; and the directors are assisted by a panel of investment consultants.

PUBLIC OFFER

Squires Gate Blackpool Holiday Camp.—Issue of 100,000 6 per cent. redeemable cumulative £1 preference shares at par and 168,320 5s. ordinary shares at 6s. 3d. Proceeds to repay mortgage, etc., and for extensions needing about £50,000. Net assets, £68,202 (after mortgage and overdraft). Profits, before depreciation and bank and other loan interest, years to October 31: 1936, £7,024; 1937, £14,036; 1938, £12,915.

BY OFFER FOR SALE

S. Guiterman and Company.—Offer for sale of 55,000 6½ per cent. cumulative participating redeemable £1 preference shares at par, and 299,930 2s. ordinary shares at 2s. 3d. After 6½ per cent. on ordinary, preference and ordinary rank *pari passu* for further 3½ per cent. Preference redeemable at 22s. 6d. after 1943, on notice. Merchandising business in tools, etc. Profits, after depreciation, before directors' remuneration: 1936, £23,360; 1937, £35,597; 1938, £26,223. Total assets, £170,096. Whitehead Industrial Trust take issue, pay expenses, and retain 42.97 per cent. tax free ordinary dividend; net cost is par for preference and 2s. 0.4d. for ordinary.

ISSUE TO SHAREHOLDERS ONLY

H. M. Hobson (Aircraft and Motor) Components.—Issue to shareholders of 97,131 5s. shares at 10s., in proportion of two new for fifteen held on March 17th. New shares receive no interim for year to September 30, 1939, but otherwise are *pari passu* with existing shares.

CONVERSIONS AND REPAYMENTS

Parker's Burslem Brewery.—Issue of £200,000 4 per cent. mortgage debenture stock at 99½. Of this, £69,521 is required to redeem £66,211 4½ per cent. debenture stock at 105 and £69,679 to redeem £67,650 5½ per cent. "C" debenture stock at 103. Holders may convert into £100 new stock for £100 held, and will receive difference between redemption and issue prices in cash.

Ceylon Government.—£1,015,000 3½ per cent. inscribed stock, 1954-59, is being offered by way of conversion to holders of existing 4 per cent. stock, 1939-59, which will be repaid on April 15, 1939.

UNIT TRUST

Lombard Industrial Trust.—Managers, Lombard Unit Investments, Ltd. Cumulative; 20-year life. Portfolio, 32 British companies (in eleven industries); similar securities may be substituted, under terms of trust deed. Limits: 7½ per cent. of fund in any one company, and 15 per cent. in any one industry. Initial charge, 5½ per cent.; half-yearly fee of ½ per cent.

SHORTER COMMENTS

Company Results of the Week.—The moderate recession which has been evident in recent brewery results has affected **COURAGE AND COMPANY**, whose net profits have declined to £349,550 against £397,106; and the dividend is reduced from 20 per cent. to 18 per cent. For the first trading year, reported profits of **EARLS COURT, LTD.**, compare unfavourably with prospectus estimates at £9,036. The exhibition building was unlet for 230 days, and after charging debenture service, the debit forward is £121,383. **BALDWIN'S, LTD.**, total profits are £658,053 against £808,547, but the 10 per cent. dividend is maintained. **GUEST KEEN BALDWIN'S IRON AND STEEL** total earnings are approximately £15,000 lower at £768,493, while **WILLIAM BEARDMORE** net profits are more than doubled at £296,365. An increase in **PROJECTILE AND ENGINEERING COMPANY** trading profits from £166,481 to £176,438 is offset by higher taxation. **MILLOW AND ASKAM HEMATITE** report that the trading position deteriorated after the first quarter of 1938, and though the order book remained excellent, customers could not take delivery; stocks rose and a furnace had to be damped down. The 10 per cent. dividend, however, is maintained. The **JOHN LEWIS AND COMPANY** report, which is no less informative than usual, shows that trading profits of the group were virtually maintained at £313,301, while total profits are higher, although the dividend is reduced. Changes in money-turnover, and in the number of transactions, are set out in the report. **BRITISH ROPES** trading profit is approximately £6,000 lower at £385,224, and the distribution is maintained at 25 per cent. Both the recent profits and the immediate prospects of **CRAVEN BROTHERS (MANCHESTER)** are satisfactory. Net profits for 1938 are £100,653 against £76,173, and the volume of work in hand is enough to employ the works at capacity for over two years. The **JOHN DICKINSON AND COMPANY** report offers no comment on the lower profits and the reduction in dividend from 14 per cent. to 12½ per cent. **LANCASHIRE DYNAMO AND CRYPTO** record a satisfactory rise in total profits from £145,334 to £155,806. Results of soap companies controlled by **Lever Bros.** and **Unilever** show that total profits of **JOSEPH CROSSFIELD AND SONS** and **WILLIAM GOSSAGE AND SONS** have fallen moderately from £797,068

(Continued on page 649)

Industry and Trade

New Anglo-Indian Trade Agreement.—Dissatisfied with the operation of the Ottawa Agreement of August 20, 1932, the Indian Legislative Assembly passed a resolution in March, 1933, which left the Government of India no option but to give notice of its intention to terminate the Agreement. This happened in May, 1933, but it was then agreed that, pending the conclusion of a new agreement, the Ottawa provisions should remain in force, subject to three months' notice. After protracted discussions, a new Agreement was at last signed on March 20th, only eleven days before the Ottawa Agreement was due to expire; the Agreement will come formally into operation on a date yet to be agreed between the two Governments, and it will remain in force until March 31, 1942, when it will become subject to termination at six months' notice. So far as the United Kingdom is concerned, the changes are few in number. Broadly, Indian goods now entering this country duty-free will continue to enjoy that privilege, and, with a few exceptions, revisions and alterations, those subject to preferential treatment will continue to enjoy such treatment. As our jute trade correspondent points out in his report on page 640, the absence of provisions for a duty on Indian jute goods has caused keen disappointment in Dundee. On her part India has substantially re-written the Ottawa Agreement. She has cancelled the preferential treatment of many goods, including the following:—

Rubber tyres and tubes and other manufactures of rubber; hardware, ironmongery and tools; woollen yarn, woollen fabrics and mixtures, woollen hosiery, and woollen knitted apparel; paper (of kinds to which a preference was accorded at Ottawa) and stationery; iron and steel pipes and tubes; and ale and beer.

But many products—the most important of them are listed below—will continue to enjoy preferential treatment in India, a new preference of 7½ per cent. on motor cycles and motor scooters having been added:—

Motor cars and other motor vehicles; various chemicals, drugs, and medicines; electrical instruments, apparatus and appliances; iron and steel hoops and strips, and barbed or stranded wire and wire rope; paints, colours, and painters' materials; sewing and knitting machines and parts; copper, wrought, and manufactures of silver; and instruments, apparatus and appliances, other than electrical, not otherwise specified (excluding scientific and surgical).

While India's intake of goods which will continue to enjoy preferential treatment rose from £4,800,000 during the year ended March, 1934, to £6,700,000 in 1937-38, her purchases of goods on which the preferences were cancelled increased only from £6,900,000 to £7,500,000 during this period. In compensation for the abrogation of preferential treatment on a large number of items, India has made important concessions to the Lancashire cotton trade.

Lancashire's Gain.—The Lancashire cotton trade is the chief beneficiary under the new Anglo-Indian Trade Agreement. In the first year of the Agreement India's import duty on cotton piece-goods is to be reduced from 20 per cent. to 15 per cent. (in the case of printed goods from 25 per cent. to 17½ per cent.), and the alternative specific duty on grey goods is to be lowered proportionately. In subsequent years the duty on cotton piece-goods will vary with total exports to India and with the volume of Britain's purchases of Indian raw cotton. The standard quantities of Indian raw cotton to be imported by this country are: 500,000 bales (weighing 392 lbs. net each) in 1939, 550,000 bales in 1940 and 600,000 bales in subsequent years. (Retained imports averaged 537,000 bales in 1936 and 1937, against 375,000 bales in 1935.) Pro-

vided Britain takes these standard quantities of Indian raw cotton, her exports of cotton piece-goods may rise to 500 million linear yards per annum without incurring any increase in the basic rates of duty. If British exports rise above the maximum of 500 million yards, India may raise the duties in the subsequent year sufficiently to reduce them to that level. If, on the other hand, exports fall to below 350 million linear yards in any year, the duties will be reduced in the following year by 2½ per cent. below the basic rates. The basic duties will be restored in the year after exports have again fallen, or risen, to 425 million linear yards. Provision is made for an increase, or decrease, in India's import duties on piece-goods if Britain's purchases of raw cotton fall below, or exceed, by given quantities, the standard imports. Between the years ended March, 1929, and March, 1938, India's imports from Britain fell from 1,400 million linear yards to 279 million yards; these figures measure the extent of Lancashire's loss in the past ten years as well as the value of the new concessions, which have been applauded in Lancashire as much as they are likely to be deplored in Japan.

Increase in Building Permits.—The constructional industry obstinately refuses to comply with the frequent forecasts of an imminent slump in the industry. For example, the number of dwelling-houses built in England and Wales during the six months ended last September, at 158,942, was still 2.1 per cent. greater than the figure for the corresponding period in 1937. Nor is there any evidence of anything like a slump in other forms of building and public works contracting. Thus, the proportion of insured persons unemployed last month was only 2.8 per cent. higher than a year ago in building, while in the case of public works contracting the ratio of unemployed to the number of insured persons was actually 1.5 per cent. smaller than in February, 1938. To some extent the forecasts of a slump probably rested on the returns of the value of building plans passed by 146 local authorities. But these returns are not comprehensive and do not include direct Government contracts. Nevertheless, it is significant that, for the first time since last August,

Agencies in: New York, Bradford, Manchester

he value of plans passed last month showed an increase over the figure for the corresponding month a year earlier. The increase between February, 1938, and the past month was 7.1 per cent., compared with a fall of 29.4 per cent., 28.4 per cent. and 14.7 per cent. respectively in the three preceding months. There was an increase in the figures for both dwelling-houses and factories and workshops, and while the February returns do not necessarily portend a recovery in building activity, they are one more indication of the revival of business confidence last month.

Wartime Regulation of Foods.—At the meeting last week of the Council of the National Farmers' Union, Sir Henry French outlined the plans of the Food Defence Department for the regulation of home-grown foods. The scheme envisaged is apparently that which was in force at the end of the Great War, with various modifications. Farm products would be taken over at fixed prices by the Ministry of Food, operating probably through the present personnel of auctioneers and merchants, who would become official agents of the Ministry. As a corollary, of course, the prices of feeding stuffs and other farm requirements will also have to be controlled and supplies may have to be rationed, in order to ensure the continuous production of the most essential foods. After the long delays associated with the organisation of A.R.P., the knowledge that the principles of the control of one part of Britain's food supply are already drawn up is very welcome.

Czecho-Slovakian Steel Industry.—By her annexation of Czecho-Slovakia Germany has obtained a considerable increase in the capacity of her steel industry. The following table shows the output of the two countries of crude steel and of pig iron and ferro-alloys for 1937 and 1938:—

	(000 tons)			
	Pig Iron and Ferro-Alloys		Crude Steel	
	1937	1938	1937	1938
Germany	15,709	18,226	19,538	22,875
Czecho-Slovakia	1,649	1,215	2,282	1,733

The Czecho-Slovakian industry is, however, largely dependent on foreign ores, bought mainly from Sweden, as the domestic ores have a very low iron content. About one-fifth of the output of the steel industry has been exported, the principal customers being Holland, Switzerland, China, Sweden and Italy, in order of importance; the export trade consisted mainly of iron and steel bars, tubes and fittings, plates, wire products and rails. The Czecho-Slovakian producers were members of eight international cartels, and it is presumed that their export quotas will be amalgamated with those of Germany.

Wheat Prospects.—The revised estimates of the wheat production in 1938 have raised still further the estimates of the size of this record crop. According to the International Institute of Agriculture, production last season amounted to more than 4,250 million bushels, distributed as follows:—

	1936-7	1937-8	1938-9
Total*	3,336	(million bushels) 3,614	4,291
of which—			
Europe	1,352	1,429	1,726
U.S.A.	627	876	931
Canada	219	182	350
Argentina.....	249	185	316
Australia	150	188	151

* Excluding Russia, Spain and China.

The export surplus in the current season is estimated at 896 million bushels and import requirements at 568 million bushels. The probable carry-over at August 1, 1939, has been put by the Food Research Institute at 1,135 million bushels, nearly double the 601 million bushels which were carried over into the current season; the excess

of stocks at August 1st over the amount required to supply importers until the next harvest is thus equal to about a year's import requirements. It is not surprising, therefore, that prices not only of wheat but also of other grains remain at a low level. Unfortunately, the protectionist policies of European countries prevent the low price of wheat from restricting the acreage grown; the area sown to winter wheat in 1939 in the countries for which statistics are available shows a further small increase compared with 1938, although it is reported that a considerable area will have to be resown, as a result of the December frosts. The area sown to winter wheat in the United States has been reduced by some 7 per cent. compared with a year ago, and, according to the United States Bureau of Agriculture, intended sowings of spring wheat, though well up to the average of earlier years, indicate a similar reduction in acreage. With a normal yield, therefore, supplies in the 1939-40 season will still be in excess of requirements, while the pressure of the new Argentine crop, which is now being stored by the Grain Board at ports and sidings, indicates that, in the absence of war, wheat prices are likely to remain at a low level for the remainder of this season.

Disappointing Lead Statement.—For several weeks the lead market has been buoyed up by hopes that the international lead agreement was undergoing reconstruction in order to strengthen the operations of the existing gentlemen's agreement. These hopes were disappointed on Monday last, when the Lead Producers' Association (which was formed in September, 1938, to adjust production to requirements on the extra-U.S.A. market), held a meeting in London to discuss the situation. The *communiqué* issued after this meeting stated that the first six months of the association had been reviewed; it added that since the introduction of the scheme stocks had been reduced by 10,000 tons. There is, unfortunately, no possibility of checking this figure. Statistics of stocks outside the United States are not published, and official statistics of production and consumption in the last months of 1938 are still incomplete. According to the British Metal Corporation's estimate, lead production outside the United States totalled 1,275,000 long tons in the whole of 1938, against 1,240,000 tons in 1937. For the same territories consumption, which had been 40,000 tons below production in 1937, was 45,000 tons lower in 1938, and the latest statistics indicate that the high level of extra-U.S. production was also maintained in January, in spite of the declining demand from the building industry, the chief consumer.

Reduction in Tin Quota.—At its meeting last Wednesday, the International Tin Committee decided to reduce export quotas in the second quarter of the current year by 5 per cent. of the basic tonnages to 40 per cent. As the 10 per cent. allotment to the Buffer Pool comes to an end, this decision involves, in theory, an increase in the export quota to the free market of 5 per cent. of the basic tonnages, or of some 2,350 tons, in the next three months. In fact, however, the size of the supplies in the immediate future is still uncertain, as the Committee announced that arrangements had been made for the liquidation of the 7,000 tons by which the allotted exports had been exceeded in recent months. The Committee did not state in what period the adjustment was to occur, but if the whole of the excess were to be deducted from the exports of the coming quarter (which is not likely), supplies in this period would equal an export quota of less than 30 per cent. of the standard tonnages. It is probable, however, that supplies to the free market in the next three months will not exceed those of the current quarter, so that, taken in conjunction with the improvement last month in the activity of both the American and Welsh tinplate industries, a considerable reduction in stocks may be expected during this period. Whether this prospect will lead to an advance in prices which would enable the Buffer Pool to sell some of its holdings will largely depend on political developments in Europe.

INDUSTRIAL REPORTS

HERR HITLER'S move in Czechoslovakia has dealt a severe blow to business confidence and there has been some evidence of a decline in new orders in certain industries. On the whole, however, business activity is well maintained. The coal trade is active in all districts, with the exception of South Wales, which has suffered severely from the decline in exports. Activity in the iron and steel industry also remains on the up-grade and the output of tinplates has shown an increase. Business in textiles has been less brisk as a result of the political developments. The new Anglo-Indian Trade Agreement, discussed on page 635, has been favourably received by the Lancashire cotton industry, but the absence of an import duty on Indian jute goods has given rise to dissatisfaction in the Dundee jute trade. The trend of general business activity, as well as the position in individual industries, is discussed in the *Trade Supplement* accompanying this week's *Economist*.

Coal

Sheffield.—Although there is a steady demand for industrial fuels, stocks are still heavy, there being a large surplus of smalls. The requirements of utility concerns have eased, and new business is slow. The colder weather has helped demand for household coal, and there is delay in delivery of best qualities. The call for blastfurnace coke is not heavy and the demand is easily satisfied. Central heating coke is a moderate market.

Although there are a fair number of inquiries, export business remains unsatisfactory. Recent quotations from this area have met with a poor response, keen competition coming from North-East Coast and Scottish collieries, and a subsidy provided by a levy on outputs is advocated to counter the disadvantages of collieries situated far from the seaboard. The Riga electricity works are inviting tenders for 60,000 tons of coal for April-October shipment.

★

Newcastle-on-Tyne.—The feature of the coal market in this area to-day is the demand from Germany for prime grades of Durham coking coal. In the past few weeks substantial quantities of this class of coal have been bought for delivery to the Northern German ports and this week there is more inquiry for delivery over the next 12 to 15 months. With this trade and also additional trade to Italy the prime Durham coking section is now very firm, with most collieries fully booked for this year. The position of the Northumberland steam coal section remains the same, large coal being firm owing to the inability of collieries to dispose of smalls and singles.

★

Glasgow.—With the advance of the season household demand tends to contract, and supplies of inferior and medium qualities of house coal are now in excess of requirements. Stocks, however, are not burdensome, and there has been some increase in industrial and public utility demand. The latter affects small as well as large coal; but apart

from pearls, washed nuts are now more freely offered. This reflects a rather curious position in the export branch, in which current demand is inactive, while summer bookings are on quite a good scale. Scandinavian markets have given substantial orders for forward shipment, the latest being a share in the Swedish State Railway contract, the whole of which, incidentally, has come to the United Kingdom. March is a "tween-seasons" month, with reductions in prices frequently decided upon for ensuing months. As there has been little shading of prices on the present occasion the quietude is probably due to abstention or diversion elsewhere of the marginal buyers.

★

Cardiff.—Conditions on the Cardiff coal market are practically unchanged. The recent increase in domestic requirements, due mainly to the revival in the iron and steel industry, led to an application for an increased inland supply quota for the March quarter, and a certain increase has been given to the district by arbitration between the local Executive Board and the Central Council. In the export trade a small contract has been secured for the supply of steam coals to Portuguese shipowners, and there are inquiries in the market for supplies to the Palestine Railways and the Oran Electricity works, but the current rate of shipment at the South Wales docks continues appreciably below the weekly average for 1938. For the first eleven weeks of the year the decrease in foreign and coastwise shipments amounts to 700,000 tons. Prices are generally unaltered.

Iron and Steel

Sheffield.—International developments have shaken the confidence of the iron and steel market, and there has been an easier tendency this week. Demand for forge and foundry iron, which was showing some signs of recovery, has become quiet, and there is less activity in hematites. Business in finished iron has also declined.

Basic steel billets continue in good request, and wire rods and steel bars are fairly active features. The market regards the present setback as merely temporary, and expects that it will be succeeded by a sharp revival.

Business in iron and steel scrap has kept up well, and the limited supplies of some classes of material have resulted in the placing of good contracts.

★

Middlesbrough.—The international situation has not tended to improve the position of the pig iron trade so far as export business is concerned; it has, however, tended to accelerate the production of steel and additional furnaces have been restarted this week, so that it is likely the March output figures will show a further improvement.

Good orders have been placed for steel, mostly in connection with Government requirements, and some of the plant is running at capacity. Merchant shipbuilding requirements are poor, but the announcement that additional naval vessels are to be built on the Tyne will produce orders for more steel.

Delivery instructions for hematite pig iron are given more freely both locally and in the Sheffield area, and if this continues the stocks in makers' yards will be reduced. The position of Cleveland pig iron shows no improvement, foundries only requiring moderate quantities, and in some cases continue to use cast-iron scrap in place of pig iron.

The pressure for heavy steel scrap continues, and supplies are not too plentiful. Users of Durham blastfurnace coke have their requirements fully covered. New business in foreign ore is not mentioned, whilst imports continue at approximately the same rate as last month.

★

Glasgow.—The situation remains very satisfactory and output is maintained at high levels in many branches. In the heavy steel trade production is greater than it has been for a couple of years, and it is also some time since re-rollers of bars and sections have had so much work on hand. Sheet makers are exceedingly busy and tube makers are fairly active, although in some departments business is quiet. Generally business shows some expansion and a considerable tonnage of work has been placed, including a fair amount for structural engineers. The four vessels which the Admiralty have decided to place with Clyde shipbuilders will provide employment for many men at the shipyards and engine shops of Messrs John Brown and Company and Messrs Yarrow and Company.

★

Cardiff.—The recent improvement in the tinplate trade as well as in the heavier branches of the iron and steel industry is well maintained. In February the local steel output, at 207,100 tons, was the largest of any district in the United Kingdom, and it is certain that this output will be substantially exceeded in the current month. The current supply of scrap is adequate for immediate consumption, but stocks are being rapidly depleted and imported material is expected next month. The output of tinplates has increased to 59.2 per cent. of the estimated capacity under the pooling scheme. Prices are unaltered, but changes were expected from the meeting of the International Cartel held in London on Thursday.

★

News from Abroad.—As far as can be seen the new political tension has had no material effect on the international iron and steel markets, which have suffered from the political uneasiness for many months. The reluctance of consumers to buy beyond their immediate requirements has not yet given way to the widely expected spring revival and people ask themselves whether the further delay in this revival will not mean a postponement until after the summer recess. Such a development might further weaken the already unstable price structure, although it is true that consumers cannot wait indefinitely with the covering of their requirements, which are quite substantial.

The granting of rebates on official prices has seldom been as widespread as at present, concessions ranging from

Textiles

5s. to 15s. (gold) per ton according to the product. Polish competition has increased, particularly on the South American and Near-Eastern markets, but it is expected that this competition will cease as soon as a satisfactory arrangement has been made with the Poles on their new quota. With regard to the American competition it is noteworthy that outsiders have recently increased their export prices, whereas producers who are members of the agreement with the European Cartel have made reductions.

Belgian producers report an increased flow of British orders for semi-products and a further increase of these pur-

chases is expected. The other European markets are quiet, whereas some substantial orders have been placed by Argentina.

The transfer of the Czechoslovak quotas to the German Cartels will further complicate the task of the International Cartel to comply with the various applications for quota adjustments. Whether the Czech steel works will now proceed with their plan to increase their capacity, as they intended to do after the cession of the Sudeten area, remains to be seen. Export prices for tinplates are subject to an examination by the International Tinplate Cartel.

Cotton (Manchester).—The demand for yarn and piece-goods has fallen off, as a result of political tension. The turn of events has been most unfortunate for Lancashire, in view of the distinct improvement in business during the past month. For the time being confidence has been severely shaken. The difficulties of trading have been increased by the fall in raw cotton prices on reports that the United States Government may release loan cotton; but so far no official announcement has been made.

UNION CORPORATION, LIMITED

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS

In submitting to the Shareholders the Accounts of the Corporation for the year ended December 31st, 1938, the Directors state:—

The Accounts are drawn up in Union of South Africa currency, English currency being ken at par.

The net profit for the year is £811,535 6s. 3d. plus £128,805 13s. 5d. brought forward, making a total of £940,340 19s. 8d. A final dividend of five shillings and sixpence per share was declared, making, with the interim dividend of two shillings and sixpence, a total of eight shillings, or £816,000 for the year. £124,340 19s. 8d. remains to be carried forward.

Exploration expenses incurred during the year amounting to £51,246 6s. 0d. have been

charged directly to Exploration Reserve Account, leaving a balance of £203,837 8s. 4d. to be carried forward on that account.

Holdings of Shares, Debentures and other securities have been taken into the Accounts at cost or under, but in no case above the market price of December 31st last, or, where no market price exists, above the Directors' valuation. At present market prices, these holdings show a very substantial surplus over the amount at which they stand in the Balance Sheet. The Directors, as on other occasions, have thought it expedient to provide for contingencies by reducing the book cost of certain holdings both below cost and below market price.

The operating results of EAST GEDULD MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
37	1,498,000	£3,063,598 (40/11)	141s.	£1,230,639 (17/1)	£1,782,959 (23/10)	£877,500 (9/9)
38	1,751,800	3,598,978 (41/1)	142s.	1,413,265 (16/2)	2,185,713 (24/11)	1,035,000 (11/6)

The ore reserve at December 31st last amounted to 11,500,000 tons assaying 6.0 dwt. per ton over a stoping width of 58 inches.

The operating results of GEDULD PROPRIETARY MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
37	1,301,000	£2,294,285 (35/3)	141s.	£939,887 (14/5)	£1,354,378 (20/10)	£1,095,643 (15/0)
38	1,323,500	2,323,907 (35/0)	142s.	967,930 (14/7)	1,355,917 (20/5)	1,095,643 (15/0)

The ore reserves at December 31st last amounted to 9,050,000 tons assaying 4.9 dwt. per ton over a stoping width of 57 inches.

from other sources amounting to £404,285, which figure includes dividends on its large shareholding in East Geduld Mines.

The operating results of THE MODDERFONTEIN DEEP LEVELS (in Liquidation) have been as follows:—

	Tons milled	Gold output (and per ton)	Price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
37	590,800	£377,552 (19/7)	141s.	£470,332 (15/11)	£107,220 (3/8)	£150,000 (1/6)†
38	595,300	581,790 (19/7)	142s.	483,001 (16/3)	98,789 (3/4)	100,000 (1/0)†

† Liquidation dividends.

The ore reserves at December 31st last amounted to 1,100,000 tons assaying 3.3 dwt. per ton over a stoping width of 68 inches.

The GROOTVLEI PROPRIETARY MINES reduction plant commenced operations on September 1st, and during the four months to the end of the year 230,500 tons of ore were milled for a working profit of £8,841. There was considerable absorption of gold in the plant. Work has been started on the first extension, which will increase the nominal capacity of the plant to 80,000 tons per month.

The total footage sampled during the year was 22,450 feet, of which 13,125 feet or 58 per cent., was payable. The ore reserves at December 31st amounted to 3,750,000 tons, assaying 6.5 dwt. over an estimated stoping width of 53 inches.

On MARIEVALE CONSOLIDATED MINES No. 1 Incline was sunk 4,241 feet to a total depth of 4,263 feet, and has almost reached the fourteenth level horizon. No. 2A Incline was stopped at a depth of 1,144 feet and No. 2B Incline was extended therefrom to a depth of 1,064 feet, where it has reached the tenth level horizon.

The total footage sampled for the year was 17,780 feet, of which 10,080 feet, or 57 per cent., was payable. The ore reserves at December 31st last amounted to 1,100,000 tons, assaying 6.1 dwt. over an estimated stoping width of 39 inches.

Orders were placed late in the year for a reduction plant with an initial nominal capacity of 500,000 tons per annum. The necessary funds were raised by the issue of 1,195,894 shares. That issue was disposed of by offering to shareholders the preferential right to subscribe for 339,167 shares at par and 250,000 shares at 15s. and your Corporation, who were 17,500 shares was subscribed firm at 15s. per share by your Corporation, who were responsible for underwriting the whole of the issue. It is anticipated that the proceeds of this issue may be insufficient by about £150,000 to meet the full requirements to the reducing stage. The plant is expected to be brought into commission about the end of 1939.

The reduction plant on VAN DYK CONSOLIDATED MINES came into operation in April last. During the following eight months to the end of the year 508,000 tons of ore were milled for a working profit of £170,444. Progress is being made with the extension of the plant to a nominal capacity of 80,000 tons per month. A maiden dividend of 3d. per share was declared in December last.

The total footage sampled during the year was 27,475 feet, of which 13,275 feet, or 48 per cent., was payable. The ore reserves at December 31st amounted to 2,250,000 tons, assaying 5.8 dwt. per ton over an estimated stoping width of 40 inches.

As a result of the prospecting work done in the ORANGE FREE STATE, SOUTH WESTERN TRANSVAAL and WESTERN TRANSVAAL the major portion of the areas which were held under option has been abandoned. Certain areas have been retained for further investigation.

The Corporation has acquired further options South of the Sand River and has initiated a prospecting programme with a view to locating gold-bearing horizons.

The ground immediately North of the Sand River is being prospected by Western Holdings, Limited, with whom the Corporation is collaborating. In the event of any companies being formed to exploit this area the Corporation has the right to acquire a substantial interest in such companies.

SAN FRANCISCO MINES OF MEXICO suffered during its financial year to September 30th, 1938, from the severe fall in lead, zinc and silver prices and from the burdens of increasing taxation and demands for higher wages. The mill treated a total of 577,690 tons for an operating profit of £80,015. After deducting the usual charges, and appropriating £44,890 to write off development account, there remained a net loss of £42,939.

SELECTION TRUST paid a dividend of 1s. and a bonus of 6d. per share for the fifteen-month period ended 31st March, 1938. The Company's major interests continue to be centred in the American Metal Company, Consolidated African Selection Trust and Trepsa.

The earnings of Roan Antelope Copper Mines and Rhodesia Selection Trust in Northern Rhodesia, and Trepsa Mines in Yugoslavia, have been satisfactory in face of the ruling low base metal prices.

The Corporation has acquired some Chrome deposits in the Lydenburg and Rustenburg districts of the Transvaal.

BAY HALL TRUST. The net profit for 1938 was £73,333. A dividend of 6 per cent. was declared, absorbing £60,352 on an issued capital of £1,005,875. The carry-forward was increased by £12,980 to £50,815. The Trust's investments as at December 31st last showed, at their current market prices, an appreciation of £150,211.

"SOUTH AFRICAN PULP & PAPER INDUSTRIES. Dr. Ing. Umberto Romilio supervised personally the completion of and starting up of those sections of the plant which had been erected to his designs under his patents. By the end of the year the erection of the major portion of the plant was complete, and some of the units had satisfactorily undergone initial tests.

Holders of Share Warrants to Bearer can obtain copies of the full Report and Accounts on application at the London Office, Princes House, 95 Gresham Street, E.C.2.

The yarn market has been distinctly quieter, there being a smaller turnover in American and Egyptian counts. There is every probability that the price agreement for medium American wefts will be renewed at the end of this month.

Fewer orders have been secured by cloth manufacturers. An event of importance has been the publication of the terms of the new trade agreement with India. The reduction in the duties is very welcome, and some leading merchants believe that the new conditions will result in an appreciable increase in business. Some manufacturers have sold fairly well for South America, the Dominions and home trade. Numerous buyers, however, have been more cautious.

★

Jute (Dundee).—Keen disappointment is felt in the Dundee jute trade, reports our correspondent, because the Government has completely ignored all the representations that have been made in recent years to obtain some measure of protection against the ever-increasing imports of Indian manufactured goods into this country. The new agreement still permits Indian jute goods to come upon this market free of duty. The trade in Dundee feels that it has received a raw deal, and the Association of Jute Spinners and Manufacturers has sent a telegram to a number of prominent Members of Parliament asking that something should be done before the agreement is ratified by Parliament.

The Dundee trade remains busy on the making of sand bags for the Government and private firms, but if this work were to cease, the industry would be in a very depressed condition, as there is very little business being done in other goods. By their ability to produce cheaply, Calcutta manufacturers can sell jute goods in the United Kingdom at something like ½d. per yard cheaper than Dundee manufacturers, who must pay wages determined by the Jute Trade Board. The Dundee Jute and Flax Workers' Union has just forwarded a request to the employers for an increase in wages of 15 per cent.

Raw jute has fluctuated, with Daisee-2/3 now quoted at £24 17s. 6d. per ton for the full group and £21 15s. for fours, while Tossa-2/3 is named at £25 5s. and fours at £24, April/March. Yarns are a quiet market at 2s. 6d. for common 8-lb. cops and 2s. 7d. for 8-lb. spools, while 10-oz. 40-in. hessians are nominal at 3½d. and 8-oz. at 2½d.

THE COMMODITY MARKETS

THE international crisis has checked the incipient re-stocking movement, and the general price trend, consequently, was downwards during the week ended last Wednesday. The extent of the decline, however, was comparatively small.

Among non-ferrous metals, copper, tin and spelter were all marked down, but lead prices remained virtually unchanged. The International Tin Committee's quota decision for the second quarter of this year is discussed on page 636. Rubber prices showed a decline and raw cotton was marked down sharply on rumours that the United

States Government may release some of its holdings. As usual during political crises, the markets in wheat and raw sugar were comparatively firm. The immediate outlook on the commodity markets depends largely on political developments.

The downward trend of prices was not confined to this country. Thus, Moody's index of prices of staple commodities in the United States (December 31, 1931=100) fell from 143.8 to 142.2 during the week ended last Wednesday.

Metals

Copper.—Sentiment on the copper market was considerably depressed owing to the political difficulties and the price of standard cash lost 11s. 3d. to close on Wednesday at £42 18s. 9d. per ton. The market was encouraged by the low level of United States exports, which declined from a monthly average of more than 11,000 tons in the last two quarters of 1938 to 3,300 tons in January and to 2,900 tons in February. As the situation on the U.S. domestic market has improved since the beginning of this month it is quite conceivable that exports will remain at a low level in the immediate future.

★

Tin.—The price of tin lost £2 to close on Wednesday at £214 5s. per ton. The uncertain political outlook and the meeting of the International Committee on Wednesday (whose result is discussed on page 636) combined to restrict the current demand.

★

Lead and Spelter.—The demand for both metals was less active than usual at this time of the year; the price of lead fell 1s. 3d. on the week to close on Wednesday at £14 17s. 6d. per ton, while spelter was 2s. 6d. lower at £13 13s. 9d. per ton. The meeting of the Lead Producers' Association, held in London this week, is discussed in a special industrial note on page 636.

Grains

EUROPEAN demand continues at low levels, although some more Australian cargoes of wheat and flour have been sold to China. The political developments of the past week were responsible for a temporary rise in wheat prices in near positions, but other deliveries are weak. Shipments from Argentina are still very small, though some improvement may be expected from the 5s. per ton reduction in the minimum freights made by the Tramp Administrative Committee. Maize prices have tended to fall, in the absence of demand, which is discouraged both by the premium on maize for near delivery and by the competition of cheap wheat. The trade in feeding barley is also dull.

Other Foods

Provisions.—The Board of Trade has arranged for the import of an additional 30,000 cwt. of bacon before Easter to meet the present deficiencies in supplies; prices of Danish and English on

the London Provision Exchange have remained at about 100s. per cwt. during the greater part of the current year. There was a fall in butter prices during the week, but conversely, egg prices, which normally reach a seasonal minimum in March or April, showed a slight recovery.

★

Colonial Produce.—The announcement last week that the American supply quota of sugar for the current year was to be reduced by 77,000 short tons strengthened the tone of the New York sugar market and has been reflected in an improvement in prices in London; refined sugars of all types were marked up by 1½d. per cwt. on Monday last. Little business has been transacted in cocoa and coffee, but tea prices received a further stimulus at the auctions early in the week.

★

Fruit and Vegetables.—Supplies of good quality old potatoes are short and prices have risen, while the larger imports of new potatoes are sold at lower quotations. Good kitchen vegetables are still in request in London, as consignments are limited.

Miscellaneous Commodities

Oils and Oilseeds.—After a period of stagnation due to the uncertain political outlook, a better tone has developed on these markets. The decline in freights from Argentina has been more than offset by a firmer tone in the Argentine market for linseed, although the demand from English crushers is largely concentrated on Indian supplies. The price of linseed oil has recovered the loss of last week, but there was a further fall in prices of Egyptian cotton seed, which is now quoted at £5 16s. 3d. ex Hull for March loading.

★

Rubber.—The market has been entirely overshadowed by political developments, which have reduced the volume of business to a very low level. Compared with a week ago, the price of standard sheet on the spot closed on Wednesday ½d. lower at 7½d. per lb., but lower levels were reached at the end of last week, from which some recovery was made later.

★

Furs.—During last week a series of silver fox sales took place in London. The supply reached the respectable total of 150,000 skins, but owing to the political crisis in Central Europe, the attendance was much smaller than was expected. Comparatively few foreign merchants were present, and the domestic demand was also much reduced. Only about 30 per cent. of the offerings found buyers, and prices, which have been firm for some months past, relapsed by 10 to 15 per cent. compared with the previous sale in January. On the free London fur market, business has been brought to a standstill by the unsatisfactory outlook.

COMPANY MEETINGS

THE HONGKONG AND SHANGHAI BANKING CORPORATION

[Incorporated in the Colony of Hongkong. The Liability of Members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.]

GRATIFYING RESULTS IN SPITE OF LAST YEAR'S DIFFICULTIES

THE FAR EASTERN CONFLICT: ABNORMAL TRADE AND CURRENCY SITUATION

JAPANESE ASSURANCES AND TREND OF DEVELOPMENTS IN NORTH AND CENTRAL CHINA

THE MARITIME CUSTOMS ADMINISTRATION

CONSIDERABLE INCREASE IN EXPORTS FROM SOUTH CHINA PORTS

MR T. E. PEARCE'S ADDRESS

The ordinary yearly general meeting of the shareholders of The Hongkong and Shanghai Banking Corporation was held, in Hongkong, on February 25 last.

Mr T. E. Pearce presided.

The Chief Manager read the notice convening the meeting. The Chairman said:—Ladies and gentlemen,—The report and statement of accounts having been in your hands for the required period, I will, with your permission, take them as read.

After making full provision for all known losses and contingencies, the net profits for the year amount to \$15,296,621.32, to which must be added \$3,383,004.53 brought forward from last year.

After deducting the interim dividend of £400,000 paid at 1/2.7/8 and directors' remuneration there remains available for distribution \$12,145,172.08, which it is proposed to allocate as follows:—

To pay a final dividend of £3 per share (subject to deduction of income tax)	\$7,744,537.82
Transfer to bank premises account	1,000,000.00
Carry forward to new account	3,400,634.26
	\$12,145,172.08

The figures of our balance sheet have again been converted at 1/2.7/8, the same as last year.

BALANCE SHEET FIGURES

There is very little to say about the balance sheet, which in total shows an expansion of about \$20,000,000 on each side. Excess note issue has increased by about \$10,000,000 and is met on the other side by about a similar increase in our holding of Hongkong Government Certificates of Indebtedness. Among our liabilities, Government Certificates have increased around \$24,000,000 while fixed current accounts have increased around \$11,000,000, while among our assets cash deposits have decreased \$42,000,000, investments \$30,000,000, while loans has increased \$13,000,000 and bills receivable \$46,000,000.

For a good many years it has been the custom for your chairman to review at some length in his speech to shareholders the political, currency, and trade conditions in the Far East. This year the political situation is so delicate and the currency and trade situation so abnormal that while making some references to each of these headings I trust you will not be disappointed if I confine my remarks in the main to generalities and leave untouched, or pass but lightly over, matters about which you hoped for stronger words or more detailed observations. I am sure you realise how foolish it would be for one in my position to attempt to enlarge on subjects which at the moment are both controversial and of great political delicacy.

We are, of course, not in the inner confidences of any Government, and it is obvious that the more I say the more easy it will be for misinterpretations to arise.

CHANGEABLE ECONOMIC OUTLOOK

Our balance sheet and statement of account show that in spite of all difficulties we have managed to hold our own, and the measured optimism of last year's chairman has proved to be justified. But all of us who have a solid stake in business and trade out here are aware how precarious and changeable the financial and economic outlook must inevitably be so long as the two great neighbouring Eastern countries remain antagonistic. The present conflict has also led to an unsatisfactory situation in regard to the maintenance of the "Open Door" and British rights and interests in China.

There are some who blame our Home Government for not taking a stronger line of action both here as well as in Europe. I do not, however, propose to criticise British policy. In times of international crisis freedom of speech and freedom of the Press have their drawbacks and much harm has, in my opinion, been done in recent times by careless criticisms, rumours, and the publication of unauthenticated news items. I believe that recently there has been more controversy at home than is wise and desirable about questions of foreign relations. At any rate, it is abundantly clear that His Majesty's Government are steadily strengthening the nation, while at the same time they are freeing their hands and thus becoming more prepared to face future events without embarrassing entanglements. Moreover, the Powers most interested in the Far East have made their stand clear: that the position of their nationals is governed by the strict observance of international obligations such as the Washington Treaties and other international agreements, the alteration of which by unilateral action will not be considered.

JAPANESE ASSURANCES TO THE POWERS

From the Japanese side there have also been very explicit assurances that Japan will respect to the fullest extent the rights and interests of the Powers in the occupied areas while leaving "the door wide open." Mr Hirota used these last words on January 22, 1938, and similar statements have been repeated by important Japanese officials on numerous occasions. It is, however, impossible to reconcile such assurances with the trend of developments in North and Central China. Our important stake in the economic structure of the Far East naturally makes us very anxious that treaties, agreements, and properly authenticated statements should mean what they say and be carried out with good faith.

CURRENCY SITUATION

In regard to the currency situation in China, you all know how matters stand—that, as in many other countries, the currency has more than one exchange value, the official rate and the open market rate, which varies in different parts of China owing to restrictions on the movements of bank notes. Until March the exchange was maintained satisfactorily in Shanghai, but when the Federal Reserve Bank was formed in North China and threatened to undermine the national currency a system of exchange rationing was introduced.

This resulted in operators obtaining their exchange requirements where they could, and a "black market" started, which eventually became the normal open market for Shanghai, as distinct from the closely rationed official market. As allotments at the official rate became more limited the open market rate fell away gradually. Thus the dollar was at about 10½d in the middle of May. A month later it was down to 8d., and eventually the lowest point of 7½d. was reached early in August. Support was then forthcoming, and soon after the tide turned and the rate recovered to around 8½d. Since then the rate has kept reasonably steady and there have been, comparatively speaking, only slight fluctuations caused by military or political developments or local rumours. At the end of the year not only had flight from the currency ceased but there has been a fair amount of repatriation of funds.

"EXTERNAL INFLUENCES"

You can read between the lines how difficult and tense a time exchange bankers had throughout the first nine months of the year. Even now there is an ever-present fear of what I may call "external influences." The Tientsin and North China exchange market has particularly suffered from these "external influences," and the outlook there remains under this cloud.

War-time conditions govern the finances of the Chinese Government, but the latter have been assisted by good crops in the Western provinces, and by the fact that remittances of money from Chinese residents abroad have been remarkably well maintained. Perhaps I can sum up the currency and financial situation in China by saying that, partly through good fortune but more through skilful management, it has been kept well in hand.

THE CUSTOMS LOANS

We have watched with anxiety the developments taking place in regard to the Chinese Maritime Customs Administration. Although the so-called Anglo-Japanese Customs agreement of last May has not yet been endorsed by the Chinese Government, we are satisfied that it did in fact serve a valuable purpose in aiding the Administration to pass safely through a period dangerous to its integrity. Weighty reasons have restrained the Chinese Government from putting the agreement into effect, but we are sorry that this has not been done. Apart from other things, it has meant that no foreign loan quotas have been remitted from the ports under Japanese control. Moreover, we had hopes that some similar *modus operandi* might have been applied to other difficult questions of international concern.

In spite of this, the payments due on Customs loans were maintained without delay or hesitation throughout 1938. But early in January the Chinese Government eventually were driven to the decision that, since 80 per cent. of the Customs revenue was out of their hands, they could no longer bear the whole burden of finding the equivalent of some £400,000 each month to meet these loan requirements. However, no public default has yet taken place, and it may still be avoided. The future of the Customs loans is bound up with the outcome of the present conflict, but we feel sure that the Chinese Government will do all they can to set matters right, as we believe that the maintenance of their credit through these loans is a matter about which they take considerable pride.

INSPECTOR-GENERAL'S SERVICE

Meantime it is pleasant to be able to record that, in spite of adverse circumstances the Customs service has been able to weather the storms of the past year without any breakdown in its centralised administration under one nominal authority in the person of the Inspector-General, whom we must congratulate on just having concluded 10 years of outstanding service in his arduous post. Notwithstanding the varying conditions of war that have existed at

one port after another, Sir Frederick Maze and his international staff of Chinese, Japanese, British, and some 20 other nationalities, have throughout shown tactful judgment under unusually difficult conditions. More than ever is it of importance that the international nature of the Customs service should be continued and that its impartiality *vis-à-vis* foreign merchants of different nationalities should be unimpaired.

I mentioned just now that at one time we had hopes of the application of some *modus operandi* such as the Customs Agreement to other difficult questions of international concern. I was thinking of the Salt Administration and the railways. When the Salt Gabelle was organised, at the time of the flotation of the Reorganisation Loan, there were great hopes that this new Administration would act like the Customs Administration and, with the help of the foreign personnel, insulate the Salt Revenues, and the loans secured thereon, from local disturbances and even more serious eventualities. To a certain extent the Salt Administration in past years succeeded in doing so, but the Chinese Government have from time to time effected changes as a result of which the foreign element has been unable to exert those neutral influences which we would have wished. The Salt Revenues of China remain of great importance and are a potential security which may be of considerable value in the eventual rehabilitation of the country, if confidence still exists in the administration.

THE RAILWAYS

As regards the railways, the situation naturally deteriorated as the war was prolonged. The Peking-Moukden Railway is now alone of all the Chinese railways running fairly normally. There is no point in speculating about the future of the other railways in which British bondholders are interested. They have all suffered severe damage, and it is clear that so long as warfare continues—and there is no sign of an end—the railways will, generally speaking, be liable to constant attacks.

The Chinese succeeded in removing a very considerable amount of rolling stock and destroyed large sections of the track and many bridges before they retired westwards. As a consequence, the Japanese have had to bring much rolling stock over from Japan and undertake a great deal of reconstruction work at heavy cost. There has been a lot of talk about the Burma Road and the Burma Railway. The completion of the former is undoubtedly a magnificent feat, though its practical importance should not be over-emphasised. The railway is still in the preliminary stages, and what its future will be it is too early to foretell.

EXPORT FIGURES

The Customs Returns of Trade for 1938 are not easily comparable with those of previous years, but the export figures do indicate how successful the Chinese Government were in gradually diverting exports from the Yangtze to South China ports. Thus exports from Shanghai dropped greatly, while the majority of the South China ports showed considerably increased exports. The comparison would be more striking were it not for the closure of Canton and some of the other Southern ports after the middle of October.

The Tientsin figures are a considerable improvement over the previous year, mainly because of the great increase of trade with Japan. Canton and Hankow, in spite of air raids and various restrictions, enjoyed a phantom prosperity for some nine months of 1938, but the immediate outlook is gloomy for the handful of foreigners sticking it out in those places under unpleasant conditions. The reopening of the Pearl and Yangtze Rivers to foreign shipping are naturally matters of very great importance to Canton and Hankow, but Hongkong and Shanghai are also vitally affected, and merchants of all nationalities are watching the situation with concern.

DISORGANISATION OF TRADE

The general disorganisation and dislocation of trade and industry in China during the past year necessitated constant adjustment to keep in line with the changing situation. May 1, for instance, remind you that during the year the Japanese occupied the ports of Tsingtao, Chefoo, Wei-hai-wei, Amoy, and Canton. They advanced up the Yangtze beyond Hankow to Yochow, and for varying periods Wenchow, Foochow, Ningpo, Swatow, and other Southern ports were closed for one reason or another. As a matter of fact I

MANCHUKUO

believe that I am correct in saying that Shanghai, Tientsin, and Chinwangtao were the only treaty ports on the China coast which were not subject either to closure or naval operations at one time or another. That shows you what merchants and shippers had to put up with.

Yet this is by no means the whole story, because even when ports were open to shipping all kinds of restrictions were frequently imposed. Moreover, in the hinterland, multitudinous forms of irregular taxation became prevalent, while the dangers and difficulties of transportation increased charges enormously. Yet the movement of both import and export cargo went on. This was largely due to the amazing resilience and tenacity of the Chinese farmers and traders, which enabled them, sometimes with Government help but often without, to find ways and means of moving goods in spite of the adverse conditions with which they were confronted.

In fact, the volume of some important exports has been maintained at a level well up to average years. Significantly enough there has been a great increase in the export of raw cotton to Japan, from 234,000 quintals in 1937 to 964,000 quintals last year. In West China development proceeds apace, and the efforts being made to improve agricultural methods and to promote the production of goods of importance to the export trade will surely prove their value in the course of time.

CONDITIONS AT SHANGHAI

Shanghai has perforce had to resign itself to the new conditions, which have outwardly changed very little during the year. In spite of its main artery, the Yangtze River, being severed, the past few months have shown a distinct improvement, both in imports and exports, over the low level of the earlier months of last year. Up there in Shanghai you have, crowded into the limits of what are regarded as the safety areas, a population which is equal to, if not greater than, the population which previous to the hostilities lived in three separate administrative districts of the International, the French, and the Chinese Municipalities.

Moreover, considerable industrial activity has developed in the western district controlled by the Shanghai Municipal Council. New cotton mills, silk filatures, paper mills, and also numerous plants of the type employing only a handful of workers have sprung up, and this feature continues. These developments have caused difficult problems for the Municipal Council as well as for the utility companies. In the Japanese-controlled areas north of the Soochow creek little change is to be recorded. A few more factories have opened and a few thousands of Chinese have returned, but by and large those areas remain much the same as a year ago, and no serious attempt at reconstruction of the devastation has yet been set in hand.

Unfortunately, barely perceptible progress has been made in the negotiations affecting Shanghai and its relations with the Japanese military and naval forces, and I can only underline what your chairman said last year when he emphasised the importance of the Powers supporting the present Municipal Administration, pending a final settlement of the Shanghai problem in all its aspects.

EFFECT OF THE WAR IN JAPAN

Any visitor passing from China to Japan will be struck at seeing what little outward effect the war has had on the latter country. But the effects of the war are, of course, telling on her month by month, and the external value of the yen is now little or no higher than the Chinese dollar. Japan is, however, a well-disciplined country, with a highly organised system of Government, and it would be a mistake to under-estimate her lasting powers under conditions as they exist at present. Whether these conditions change or not mainly depends on external political developments.

China's loosely knit organisation contrasts vividly with Japan's, but the threads of its organisation are stronger than they seem; they have an elastic quality which gives but does not easily break. Too much stress ought not to be laid on any indices relating to the economic condition of either of these countries. Under modern conditions even Europe has no right to cast stones at Asia because of abnormality in regard to statistics relating to budgets, national debts, currency reserves, and so forth, and in any case these are realms in which the most august authorities often make miscalculations.

Manchukuo year by year becomes more closely knit with Japan, so I will not linger except to draw attention to the new barter agreement concluded with Germany during the year, which is expected to divert more trade from other countries. Yet it is interesting that the final trade returns show that Manchukuo took goods from the United States of a greater value than ever before; materials for war industries being presumably the explanation.

In Hongkong we have seen fluctuating conditions throughout the year very dependent, as always, on the *entrepot* trade with China. The fall of Canton and the closure of other southern ports has, of course, had an adverse effect on the business community, but it has caused no panic and we are prepared to wait and see what this coming year will bring forth. Fortunately the currency and finances of the Colony are sound, so we are in a position to face the future with confidence.

PHILIPPINE ISLANDS

The trade and finances of the Philippine Islands showed some recession in 1938, but there is plenty of optimism about the coming year. The gold output and base metal production both grow steadily, and are an increasingly important factor in the economic outlook. Supporters of the movement to bring independence to the Islands earlier than 1946 seem to have veered round in their views, as a result of the conflict in China, and the report of the Joint Preparatory Committee on Philippine affairs has helped to put a seal on this agitation.

In Malaya the setback which started in the last quarter of 1937 continued into 1938. The trade figures are far from satisfactory, while banks have been overloaded with cash. Malaya, of course, depends for prosperity largely on the rubber and tin industries, and in both cases 1938 saw decreases in production as well as reduced average prices. Stocks are now gradually falling, but the future depends, as always, on demand from America.

Trade in India has been dull, and exports of merchandise have fallen somewhat alarmingly. A notable change took place in the exchange market when last April the Reserve Bank of India dropped its buying rate. The effect was to cause exchange to weaken and attacks on the market by speculators were only checked in December after the issue of a strongly worded *communiqué* by the Government stating their determination to maintain the existing exchange value of the rupee.

NEED FOR MEDIATION

Before I end I have one more word to say about the situation in the Far East. For many years relations between these great neighbouring countries of China and Japan have been unsatisfactory, and unfortunately there are at the moment few indications of any clearing of the air. In fact, things are drifting dangerously, and the gap will grow more and more difficult to bridge unless mediation is attempted soon. For merchants of all nationalities the desirability of an early cessation of hostilities is manifest, but for millions of desperate people it is of vital importance—a matter of life and death.

This is not the occasion to dilate upon the desolation existing over hundreds of square miles of territory; upon the wretched conditions of millions who first by military operations and then by succeeding waves of brigandage have been pillaged and despoiled and are likely to suffer repeatedly in similar fashion until peace is once again restored. I only urge that these conditions should be kept in mind by those who are charged with the direction of national policies and that no opportunity be missed to mediate with a view both to relieving the appalling distress as well as to obtaining a situation in which China and Japan can develop naturally and pacifically to the benefit of the whole world.

WORK OF EXECUTIVE AND STAFF

Ladies and gentlemen, I cannot conclude without referring to the excellent work of the members of the staff of the bank, and particularly of the managers and agents stationed at ports in the Far East who have had to deal with problems such as bankers elsewhere rarely, if ever, have to face. They have served us well, and I am sure you will agree that our special thanks are due to them this year.

I now beg to propose the adoption of the report and accounts, as presented, and after they have been seconded I shall be pleased to answer to the best of my ability any question that may be asked.

MR A. W. HUGHES'S SPEECH

In rising to second the report, Mr A. W. Hughes said:—Mr Chairman, ladies and gentlemen—It gives me great pleasure to second the proposal that the report and accounts as presented to this meeting be adopted.

While our chairman's opening remark to the effect that there is little to say about the balance sheet may be true in that the figures now before us follow fairly closely those of last year, I feel I am but expressing the views of shareholders in saying that the net profit shown in the 1938 general profit and loss account is very gratifying to us. This is all the more so because of our knowledge of the difficulties under which the bank's work has been conducted during the past year.

Strength shows itself only when tested by adversity, and there are few present to-day who are unaware that the past twelve months have produced most of the adverse factors that an institution such as ours can expect to encounter. If confirmation of this is required, one has but to reflect upon the fact that during 1938 the world was in a continual state of political and social unrest, and that no less than nine months out of the twelve were marked by international crises, each one of major importance and having a marked effect upon the financial markets of the world.

BOARD CONGRATULATED

That the bank's strength was demonstrated during this period is evident from the statement now before us, and I would be lacking in a sense of appreciation if, on behalf of all shareholders, I did not tender to the board of directors, the chief manager, and staff our thanks for and congratulations upon the fine result they have achieved. It gives me great pleasure to do so.

In the difficult circumstances in which the world at present finds itself it is understandable that you, Sir, have deviated from custom and refrained from lengthy comment upon such delicate subjects as politics, trade and currency conditions in the Far East. Naturally we are interested in all of these subjects, and because of the leading part the bank plays in the economics of the Far East we listen each year with eager attention to its chairman's reviews and anticipations. Undoubtedly upon this occasion your reticence is wise, and I propose to follow your example, making but a short comment upon one aspect of the China situation. All I would say is that the deepest sympathy of every person having the smallest claim to human feelings must go out to the unfortunate and innocent victims of the present strife.

On occasions such as this the bank has joined with others in providing succour for sections of the community who through disaster are in dire need. I feel sure the directors' policy in this respect has the full support of its shareholders.

Mr Chairman, I now formally second the adoption of accounts as presented at this meeting.

The Chairman: There being no questions, as proposed by myself and seconded by Mr A. W. Hughes the motion now before the meeting is the adoption of the report and statement of accounts as presented.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

EASTERN BANK, LIMITED

SATISFACTORY RESULTS

The twenty-ninth annual general meeting of the Eastern Bank, Limited, was held, on the 22nd instant, in London, Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (the chairman), presiding.

The Chairman, in the course of his speech, said: The net profit is lower by £15,500 at £111,600, from which we propose to pass £40,000 to contingency account and to recommend a final dividend of 4s. a share, less income tax, after crediting Dominion tax relief. With these appropriations the dividend for the year will have been the same as for 1937 and the carry-forward will be slightly increased at £82,800, as against £81,200 brought into the account. I hope you will regard the final result as satisfactory.

POSITION IN INDIA AND IRAQ

The Budget recently presented by the Finance Minister in India is reassuring and shows an estimate for a small surplus in 1939-40 without substantial increase in taxation, with the exception of the tariff on raw cotton designed to promote the domestic cultivation of the long staple type which is now imported in large quantities. A further satisfactory feature is the agreement reached by the great majority of the jute mills in regard to uniform hours of working in order to prevent over-production, with consequent unprofitable selling prices; this agreement runs for five years and should be beneficial to those concerned in this important industry.

I will not weary you with many figures except to refer to the continued drop in the values of exports of piece goods from Great Britain to India, which for 1938 were £4,571,000, as against £5,709,000 in the previous year. In 1929 the figures were over £26 millions, so you can easily appraise the effect upon the Manchester and allied trades. I sincerely hope the Trade Agreement concluded on Monday last between Great Britain and India, in which both parties made concessions, will go some way to restore the export trade in cotton goods.

Indian trade statistics show an all-round reduction, as imports of merchandise are £8,000,000 down and exports are lower by £31 millions. The favourable trade balance is £22 millions, as compared with £42 millions last year—both these figures include treasure and the actual favourable balance covering merchandise is only £11,300,000.

Bearing these facts in mind, you will appreciate the difficulties of banks trading in the East, although with the return of more stable conditions throughout the world, I am confident of a marked and favourable change in the affairs of the great country of India.

The recent revaluation of gold held by the Bank of England may encourage the Government of India to adopt a similar course, which would result in a writing-up of gold values from £33 millions to £58 millions, and the resulting adjustment would form a strong exchange reserve should that be required, but it is premature to speculate on this matter, as special legislation would be necessary before the Reserve Bank could take action.

You will recollect that Iraq has had a balanced Budget for several years and that for 1939-40 is now before Parliament. While showing a small estimated deficit of £60,000, there should be little difficulty in adjustment, as there is a substantial rise in income, not only from oil but also from Customs and Excise, which now provide half the total revenue estimated at £5,700,000, of which, unfortunately, no less than £1,600,000 is required for Defence.

THE CONTINENTAL SITUATION

Referring to the Continental situation, the Chairman said: One development especially repugnant to me is that of barter, which is surely putting back the clock to the Middle Ages. Our modern system of exchange through the instrument of bills and credit had been brought to a pitch of perfection with advantage and economy alike to producer, merchant, bankers and the discount market, but this fine piece of constructive work is being impaired with corresponding reduction in volume of international bills of exchange.

I am not, however, unduly discouraged, as with the revival of confidence—the real currency of the world—I believe there will be a return to the more simple ways which have served mankind so well for generations. There are now definite signs of basic recovery in the United States as well as in France, though it would be idle to deny the gravity of the international situation.

The report and accounts were unanimously adopted.

THE SCOTTISH PROVIDENT INSTITUTION MUTUAL LIFE ASSURANCE

ANOTHER YEAR OF STEADY PROGRESS

THE QUINQUENNIAL REPORT

MR GEORGE BROWN'S ADDRESS

The 101st annual general meeting of The Scottish Provident Institution was held in Edinburgh on Tuesday, March 21, 1939, Mr George M. Brown in the chair.

The Chairman, in moving the adoption of the report, said:—The statement of business for the year calls for only brief comment. It is a record of the steady progress with which members have long been familiar.

Proposals for new assurances amounted to £3,875,239, which is the largest yearly total we have ever dealt with. The amount of new business actually completed was £3,478,628 gross, or £3,158,519 net after deducting reassurances. During the quinquennium the amount of life assurance completed was in round figures £15,800,000, as against £14,600,000 for the previous five years.

The new premiums (deducting the premiums on sums reassured) amounted to £119,624, a total slightly less than was reported last year.

Our claims at £1,289,632 again show a decrease, their incidence being favourable.

The total funds now stand at £25,396,055, showing an increase during the year of £330,196.

The rate of interest realised, £4 9s. 6d. per cent. gross, is 9d. less than we reported last year, while the net rate of £3 13s. 2d. per cent. is, owing to the increase in taxation, 2s. 5d. less. These yields are calculated on the total funds, including the reserve fund.

QUINQUENNIAL REPORT

So much for the results of the year 1938. Let us now pass to the main features of the quinquennial report.

As regards the assets, these were, as usual, scrutinised in detail by a committee of the directors.

To look back over the past twenty years is to realise how much more unstable economic conditions have been than they were in pre-war days. Fluctuating foreign exchanges have seriously affected trade, while international relationships have been embittered by jealousy and mistrust, bringing in their train war and the menace of a European conflagration. Under such conditions our large hidden reserves have stood us in good stead, and it is satisfactory to be able to state that, notwithstanding the depreciation in values during the past year, the market value of our Stock Exchange securities exceeds the value at which they stand in the balance sheet, while the investment reserve fund of £600,000 remains intact.

In valuing our liabilities the mortality table employed is that most recently published. This shows rates of mortality more favourable than those of the OM Table used at previous investigations. On the other hand, an interest rate of 2½ per cent. has been assumed, as against the 3 per cent. previously. The net result is a strengthening of the reserves.

On these bases the total surplus is £2,094,996. Out of this, intermediate bonuses amounting to £143,439 were paid during the quinquennium, leaving a balance of £1,951,557. Of this, £1,289,613 arises on the common fund for whole life assurances; £661,889 on the special endowment assurance fund; and the small sum of £55 on the capital redemption fund.

DISTRIBUTION OF THE SURPLUS

In regard to the distribution of the surplus, I would explain that the common fund now consists of two series of policies. It will be remembered that in 1928 we reduced our rates for whole life assurance so as to adhere as closely as possible to the fundamental principle of the Institution—viz. to charge the policyholder the largest possible with safety and thus to give the policyholder the largest possible assurance cover for his outlay while reserving for him the right to ultimate participation in any surplus that might arise from the low premiums. In the early days when the Institution was founded its premium rates were in many cases actually lower than the non-profit rates charged by its rivals. As time went on, more favourable

mortality experience and higher interest rates enabled offices to reduce their non-profit rates; so our old rates got, as it were, somewhat out of focus. Ten years ago, therefore, we reduced the rates, as I have said, explaining, when we did so, that policyholders under the new rates could not expect to receive bonuses as large as those yielded by the older rates. That is the reason why policies under the common fund are divided into two series.

Dealing first with the older series, you will see that policies now sharing for the first time have been allotted reversionary additions at the rate of £1 8s. per cent. on the sum assured for each complete year of their duration up to December 31, 1938, excluding the war years 1914-18, in respect of which no divisible surplus arose.

Policies sharing for the second time have been allotted £1 10s. per cent. for each year of the quinquennium; those participating for the third time, £1 12s. per cent.; those participating for the fourth time, £1 14s. per cent.; and older participants, £1 16s. per cent.

At last investigation (in 1933) the rate allotted to first participants was 30s. per cent.; so you will see that the conditions which have obtained during the past five years have, in the opinion of your directors, made it advisable to reduce the rate to first participants by 2s. per cent. As regards previous participants, we have on this occasion graduated the rates up to a maximum of 36s. per cent.

The new series comprises the policies of those who entered under the rates of premium now current. The number of participants is, of course, relatively small as yet. We have decided now to allot bonuses at the same rate, 15s. per cent., as we allotted in 1933 to the very few participants then. I would, however, emphasise what my predecessor five years ago pointed out as regards this rate, viz. that it should not be taken as necessarily applicable to the great body of normal policies which will in due course rank for participation.

The sum required to provide these bonuses under both series is, as you will see, £854,985, leaving a balance of £434,628. Of this, £343,608 falls to be reserved for policies not yet entitled to participate, and the balance of £91,020 is reserved against contingencies.

WITH-PROFIT ENDOWMENT ASSURANCES

We now come to the with-profit endowment assurances. These form a special fund, the surplus on which is divisible entirely amongst the policyholders in this class. Again, for the reasons which I have stated, the rate of bonus has been fixed at 35s. per cent. as against the 38s. previously declared. In this class bonuses are allotted on what is known as the compound system—that is to say, the declared rate is calculated on the sum originally assured and existing bonuses. Thus no policy will receive a bonus smaller in amount than it received at the last division. The rate of intermediate additions is subject to annual revision, and meantime it will be the same as that now declared—35s. per cent. The small surplus of £55 arising on the capital redemption fund has been carried forward.

Having now given a brief summary of the main features of our report, I should like to refer to one or two points in the revenue account and balance sheet.

In the revenue account you will see that the claims by death were £875,000, a smaller sum than we have reported for years, while the claims paid on the maturity of endowment assurances have, as one would expect, increased—to £393,000.

In the balance sheet the assets side will naturally interest you most. Over 93 per cent. of our funds is invested within the British Empire.

The largest item on the assets side in the balance sheet is, as you will see, British Government securities aggregating over £8,400,000. This sum is represented almost entirely by securities with definite dates for redemption. Its proportion of our marketable securities is 38 per cent. This, of course, has the effect of keeping down the interest yield, but on the other hand it affords a measure of security which will, I think, be favourably regarded by our members. To counterbalance this we have a holding of £3,900,000 in ordinary

stocks and shares which have been carefully selected and yield a satisfactory return.

HOUSE PURCHASE SCHEME

Our house purchase scheme which we adopted a few years ago is making steady progress, and we have gradually extended the limits of our operations. Under the scheme we make advances on selected house property in the occupation of the borrower. Repayment of the loan is provided for by an endowment assurance policy. This plan has advantages over other methods of borrowing. At the end of the agreed period, twenty years or less, the borrower is in full possession of his property free from mortgage, while should he die earlier the property passes unburdened to his dependants. The premium payments for the endowment assurance qualify for income-tax relief, which appreciably reduces the cost of redemption. Premium and interest are payable by a banker's order, a procedure which is found to be of great convenience to the borrower. Our members are, of course, aware of the advantage the Institution has all along afforded to the young married man by its distinctive system of life assurance to which I have already referred, and we are glad to find now that the facilities afforded by our house purchase scheme are being taken advantage of to an increasing extent by those who desire to have a home of their own.

In the past quinquennium the Scottish Provident completed its hundredth year. In 1839, just about this time a little group gathered for the first annual meeting. The annual premiums were reported with satisfaction at £1,530, and the funds were stated to be sufficient to pay nine or ten claims. That was the beginning of a bold adventure. The position of the Institution to-day is sufficient evidence of its success, and I should like to emphasise that the distinctive system of the office is essentially the same as it was a hundred years ago and that we are still following the traditions of the founders.

The motion for the adoption of the report was seconded by Mr E. M. Wedderburn, LL.D., Deputy Keeper of His Majesty's Signet, and carried unanimously.

The directorate was thereafter constituted and Mr Francis More, C.A., was reappointed auditor.

BANCO DI ROMA

IMPRESSIVE FIGURES

The general meeting of the Banco di Roma was held, on the 21st inst, with Gr. Uff. Antonio Pesenti, Member of the National Council, in the chair. The managing director, Gr. Uff. Veroli, read the report, which, after summarising the principal international events of a political and economic nature of 1938, illustrates the further progress made by the Italian economic policy of self-sufficiency. After a detailed description of the gigantic work done by Italian labour and capital in the lands of the Empire, the activities of the bank in Italy, in foreign countries, in the Colonies and in the Empire are reviewed, and the various items in the balance sheet are examined.

A new branch has been opened at Padua, which will be followed by others at Bergamo, Udine and Verona. To the fourteen branches in Italian East Africa, two new branches have been added at Giggiga and Dire Dawa, which were opened in 1938.

The business of the bank during the past year is reflected in really impressive figures. For instance, deposits on current and savings accounts increase from Lire 1,261,327,288.72 (1937) to Lire 1,482,446,002.87, an increase of Lire 221,118,714.15; balances due to correspondents increase from Lire 2,796,285,837.12 (1937) to Lire 2,944,527,597.46, an increase of Lire 148,241,760.34; cash and funds with the Central Bank and with other banks in Italy and abroad increase from Lire 597,638,702.17 (1937) to Lire 666,481,214.56, an increase of Lire 68,842,512.39; portfolio, Treasury bills and sight funds increase from Lire 1,876,532,546.99 (1937) to Lire 2,107,963,292.47, an increase of Lire 231,430,745.48; balances due by correspondents from Lire 1,177,172,674.76 (1937) to Lire 1,198,546,247.72, an increase of Lire 21,373,572.96; secured advances increase from Lire 499,266,759.22 (1937) to Lire 564,095,793.01, an increase of Lire 64,829,033.79; finally, the general total of the balance sheet increases from Lire 8,470,715,545.33 (1937) to Lire 9,828,005,411.59, an increase of Lire 1,357,289,866.26.

The accounts are drawn up on an extremely conservative basis, and show a net profit of Lire 11,760,396.95 (against a profit of Lire 10,891,790.35 in 1937), and this permits of the payment of a dividend at the rate of 4 per cent.—the same as last year—and an allocation of Lire 1,176,039.69 to the ordinary reserve fund, which is thus increased to Lire 46,523,391.70, and a balance of Lire 2,290,347.34 is carried forward.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED

A YEAR OF GREAT PROGRESS

The forty-fifth ordinary general meeting of the County of London Electric Supply Company, Limited, was held, on the 21st instant, at River Plate House, London.

Sir Bernard E. Greenwell, Bt. (the chairman), in the course of his speech, said: In spite of the unusual circumstances of the year 1938 which operated against the prosperity of so many industrial concerns, we, in contrast, have before us figures of greatly increased growth of business, increased profits and reduced prices to our consumers. The increased output for the year was over 92 million units as compared with the previous year, and, although the Central Electricity Board took 33 million units less than in 1937, we have sold 125 million more units to our own consumers, or an increase of 10½ per cent.

The gross revenue—£5,273,792—shows an increase of some £511,000, while the increase in revenue from sale of current is over 10½ per cent. To net revenue we carry £2,723,000, an increase as compared with 1937 of over £345,000, and it is proposed to pay the usual dividend of 10½ per cent. During the year the company made reductions to consumers throughout the suburban and rural areas of the company, and now over 82 per cent. of our consumers on quarterly supply have adopted the two-part tariffs.

ENGINEERING ASPECTS

The Barking Station gave excellent and continuous service during the year, the plant being properly maintained, and there were no breakdowns calling for abnormal expenditure on repairs and maintenance. The installed capacity of the station now totals 462,500 kilowatts, and when the fourth 75,000 kw. turbo-generator is installed this year the total will be 537,500 kilowatts. The abnormal generated demand of some 451,000 kilowatts experienced during the cold spell before Christmas was handled satisfactorily.

Extensive construction works have been carried out during the year at Barking, and two of the four boiler units in course of erection were brought into service. The fourth 75,000 kw. turbo-generator and two further boiler units will be available for service before next winter. The extension of the distribution system during the year to meet the demand of new consumers, has involved the provision of 109 miles of high-tension lines, 410 miles of low-tension mains and the establishment of another 145 transforming stations.

Last December, with a view to providing funds to meet the large capital expenditures which your company and its subsidiaries required for further development, the board thought it should not put off the issue of more capital as, at that time—that is, the early part of December last—the future looked so uncertain. We applied, as we have to do under our 1925 Act, to the Electricity Commissioners for their approval as to the price and terms of issue and, as you know, we issued 1½ million ordinary shares at 43s. 6d. per share.

You will appreciate how much weather conditions vary the demand for our industry, in the same way as it does the gas industry, and, when coupled with the increased cost of coal, the result is that the majority of gas companies and a number of electricity undertakings have had to raise their prices to consumers; but our diversity stands us in good stead and not only have we a record of increased sales and revenue, but we have no need to increase the prices to our consumers.

SUPERANNUATION AND PENSION SCHEME

I want to deal briefly with the superannuation scheme which we have put into force in this and all our associated companies. We have always had a superannuation scheme for our electrical and technical staff, but we were convinced of the need for giving every employee not only fair wages and conditions, as we do, but also the security for old age, and we have introduced a contributory pension scheme, with which is incorporated a life assurance benefit, and it embraces every permanent employee.

I told you last year of our achievement in obtaining uniformity of charges throughout our respective urban, suburban and rural areas, and that uniformity, which involved reductions, will assist us in further development. We are maintaining our percentage of increased consumers and revenue on larger figures each year, and that, I think, is itself proof to our shareholders that the business is being run on a progressive basis. Our associated companies are conducted in the same way, and, in the aggregate their increase in output for the last year was 9 per cent. in units, and they attracted 13.6 per cent. more consumers.

The report and accounts were adopted.

NORTH-EASTERN ELECTRIC SUPPLY COMPANY, LIMITED

A GRATIFYING PROFIT

FURTHER REDUCTION IN CHARGES

MR R. P. SLOAN'S STATEMENT

The annual general meeting of the North-Eastern Electric Supply Company, Limited, was held, on the 22nd instant, at the Royal Station Hotel, Newcastle-upon-Tyne.

Mr. R. P. Sloan, the chairman of the company, who presided, in moving the adoption of the report and accounts, said: In the directors' report and statement of accounts, we have shown the number of units supplied by the company during the past year instead of giving the horse-power connected. We have thought it opportune to make this alteration in view of the fact that during the course of the past year we were able, for the first time, to commence our full trading with the Central Electricity Board under the terms of the Electricity (Supply) Act of 1926. Owing to the special conditions which prevailed while we were carrying out the change of frequency throughout our area—the work in connection with which, as you know, has occupied many years—it was not possible to reach this trading stage at an earlier date. To our own customers—that is excluding the Central Electricity Board—we sold 73,800,000 more units in 1938 than in 1937. We propose, in our future reports, to continue the practice of giving the units supplied.

As a matter of interest I may say that, had the present report stated the figure of new connections, it would have shown that the additional horse-power added during the past year exceeded that added during the year 1937 by over 9,000.

The profit for the year totalled £1,509,879 which exceeds that for the previous year by £99,078.

It is gratifying that the profit, the units supplied and the horse-power connected, during our fiftieth year, each establish a record in the history of the company. In view of the satisfactory trading results obtained last year, we are again making a reduction in our charges for electricity supply to certain classes of our customers.

After providing for allocations from profit, the balance remaining—together with the sum brought forward from the previous year—is £736,720, and after providing for the payment of dividend on the 7 per cent. and 5 per cent. preference stocks—the directors recommend a dividend at the rate of 7 per cent. for the year (less income tax) on the ordinary stock, and that the balance of £218,044 be carried forward.

FACILITIES AT OFFICES AND SHOWROOMS

You may have noted that, for the last twelve years, we have shown the sum of £20,000 against cost of office and showroom furniture, fixtures, &c. It may have surprised some of you that this figure has not been reduced from time to time during this long period. If a fair estimate of the present-day value of the items represented by this sum were to appear in our accounts, the figure shown would be very substantially increased.

We find that full advantage is taken of the facilities afforded to our customers at our showrooms of seeing and having explained to them the latest electric fittings, appliances, etc., for household purposes. In certain districts where, so far, we have not felt justified in establishing permanent showrooms, similar facilities are provided through the medium of travelling showrooms. These travelling showrooms are capable of accommodating some 50 persons, who are thus enabled to witness demonstrations and attend lectures given by members of our housecraft staff.

INCREASED NUMBER OF CUSTOMERS

Coming now to more general matters, I am pleased to be able to tell you that during the course of last year we secured 21,766 new customers, which is substantially in excess of the previous year's figure. This number—which is mainly represented by domestic customers—does not constitute a record, but is the second highest number we have reached in any year during the course of our history. Bearing in mind that our area of supply is—comparatively speaking—already highly electrified, I think you will agree that this increase and the increases during the immediately preceding years reflect credit on all concerned in obtaining this class of business.

In view of the progress we have made in the development of household supplies, I am glad to say that, in spite of continued increases in the cost of coal, we are making, as from the beginning of next quarter, further reductions in the charges to a large number of our lighting and domestic customers. These reductions will chiefly benefit the small householders who take their supplies through pre-payment meters. We are particularly glad to be able to make these concessions at a time when, on account of the increase in the cost of fuel, many public utility undertakings throughout the country have had to increase their tariffs. The reductions in charges to lighting and domestic customers which we have made during each of the years 1935 to 1938 have averaged some £50,000 per annum.

As regards our supplies to collieries, shipyards, engineering works and iron and steel works, the year 1938 proved to be satisfactory. The same may also be said in respect of our business with the lighter industries.

I stated, at the last general meeting, that a further 50,000 kilowatt turbo-alternator was being installed at Dunston "B" power station, together with additional boilers, etc. This turbo-alternator is now in commercial operation and the boilers will be ready in the near future. Work is also in hand to provide for the reconstruction of an existing turbo-alternator at our Dunston "A" power station, which—when completed—will enable the machine to give an output of 15,000 kilowatts to assist in meeting anticipated increased demands next winter.

While there has been and still is less activity in certain sections of the industries we serve, this has been more than offset by increased development elsewhere, as is evidenced by the figures I have put before you to-day.

THE NEW BATTLESHIP

The announcement that the battleship recently launched by His Majesty at Walker Naval Yard is to be followed by the construction of another and still larger vessel was very gratifying news. We welcome this on account of the benefit it will be to the district by giving employment to many thousands of workers, and also because electricity will play an important part in carrying out the work.

With the international situation such as it is, any forecast of the future is, of course, extremely difficult, but—as we have not yet felt the full benefit of the large amount of new business we have obtained in recent times, and as our sales of electricity since the commencement of the current year show a satisfactory increase—I regard the outlook for the present year, so far as we are concerned, with confidence.

DEVELOPMENT IN RURAL AREAS

When addressing you last time, I mentioned that we had carried out considerable extensions in the outlying rural areas, and I would like to add that, in 1938, we made appreciable further progress in that direction. It is perhaps as well that I should emphasise this because some statements have recently appeared in the Press inferring that the development of electrification in country districts has been neglected. There are many people who do not realise that commercially it is a much simpler problem to afford electricity supplies to some hundreds of customers along a route-mile of cable—as in cities—than to supply perhaps two or three customers only on a route-mile of cable in some country district. In spite of this great difference, however, we are, I consider, doing all we can—and with considerable success—to afford supplies of electricity in the more rural parts of our area. During the course of the twelve months under review, the number of new distribution centres we established in rural areas amounted to no less than 57, and we have in hand still further extensions into the sparsely populated localities. The number of farm premises, where supplies are now being taken from us, exceeds 1,000.

The report and accounts were adopted on the motion of Mr R. P. Sloan, seconded by Sir Cuthbert Headlam. The dividend resolution was passed and Mr H. W. F. Bolckow and Mr G. Stirling Newall were re-elected directors.

LANCASHIRE STEEL CORPORATION, LIMITED

INCREASED EARNINGS

The ninth ordinary general meeting of the Lancashire Steel Corporation, Limited, was held, on the 17th instant, at 34 Leadenhall Street, London.

Mr John E. James (chairman and managing director) said that earnings from operations for the year under review amounted to £855,560, an increase of £51,995. In view of the recession of trade experienced in the industry during at least the latter portion of 1938, he thought that the profit for the year would be regarded as satisfactory. After deducting certain reserves, including £175,000 for depreciation of plant and £100,000 for general reserve, the available net profit was £340,113. Provision was made for the preference dividends, and the board recommended a dividend of 7 per cent. on the "A" and "B" ordinary shares.

He commented on the consolidated statement of the Corporation and its subsidiaries, and pointed out that the depreciation and the general reserves of the group now amounted to £1,020,000 and £315,000 respectively. The surplus of liquid assets over current liabilities amounted to £1,252,978.

It was with pleasure that he informed them that their profits increased for the first time a dividend from their holding in the Wigan Coal Corporation, Limited.

Following the non-payment of an interim dividend by the Corporation during the past year, the board had given careful consideration to their future policy in that respect. Some branches of the steel industry were of a seasonal character, while the industry in general was liable to considerable fluctuations within comparatively short periods of time. In certain financial years, therefore, the distribution of interim ordinary dividends might prove to be misleading, and it seemed to the board to be in the best interests of all classes to discontinue the payment of such dividends, and they proposed to follow that policy.

A DIFFICULT YEAR

The past year in the steel industry had been one of considerable difficulty. Shareholders would remember that a year ago he had indicated that a distinct if slight recession of trade had been experienced in the latter part of 1937. That recession had become more pronounced during 1938, and at the close of that year production of steel had fallen considerably in comparison with the production obtained during its opening months.

The past few weeks, however, had shown signs of an improvement in demand. The requirements of the present emergency programme were responsible to a certain extent for that improvement, but its volume had been increased by demand of a commercial character, doubtless stimulated by the substantial reductions in prices which were made by the industry as from January 1, 1939. He would like to remind them, however, that no commensurate reduction had been made in the prices the industry was paying for its raw materials.

CURRENT OUTLOOK

The prospects of industrial recovery during the present year were, as all knew, closely associated with the international political situation, and until more stable conditions prevailed in Europe it seemed unlikely that the exchange of goods between nations would increase to any substantial extent.

The events of the past few days in Central Europe could not but have an unfortunate effect on the revival of international trade for which they had all hoped. This country's export trade, however, was of great importance to its people, and, despite the unpromising outlook, he felt strongly that every effort should be made to encourage it, whether the effort were that of individual concerns seeking outlets for their products or of industries endeavouring in a concerted fashion to meet the competition of other countries in world markets.

He was glad to observe that the Government was alive to the necessity for assisting these efforts in any manner which might be appropriate. It was also gratifying to note in that connection that the prolonged negotiations between the United States of America and our own Government in relation to a trade agreement were concluded in November last. The creation of freer trade relations between those two great countries might well, if circumstances were propitious, be the precursor of similar relations with other countries, and of a revival of international trade to the benefit of all.

He (the chairman) had been asked to become vice-chairman of Richard Thomas and Company, Limited, and had agreed, with the approval of the board, to accept that office.

The report was adopted.

LAW LAND COMPANY, LIMITED

SATISFACTORY RESULTS IN DIFFICULT YEAR

DIVIDEND MAINTAINED

The fifty-sixth annual general meeting of the Law Land Company, Limited, was held, on the 22nd instant, in London.

Mr M. E. F. Crealock (the chairman) said that the revenue for the past year was again higher than that of the previous year, in spite of the fact that no income had been received from the building in Kingsway sold during 1937. The satisfactory lettings in Brettenham House and Carrington House had not only made up for that shortage, but had resulted in an increase in the total rental received of approximately £2,400.

In spite of crises, lack of confidence in the future and higher taxation, their lettings had, on the whole, given them good grounds for satisfaction. Carrington House was proving itself to be a sound investment, and a valuable addition to their properties, and, with the widening and reconstruction of Curzon Street would improve still further. Brettenham House was fully let, with the exception of some of the shops, but the rents at which lettings had been completed were considerably below those anticipated.

By reason of the delays and disturbances connected with the rebuilding of Waterloo Bridge, they had suffered a serious loss of revenue from Brettenham House and Duchy House, and that must inevitably continue for some time. They were claiming compensation and, although no settlement had yet been reached, he was hoping to report favourably on that subject at their next meeting. Not one penny of the sum which they anticipated receiving had been included in the present accounts.

WATERLOO BRIDGE

He desired to say most emphatically that when that site was acquired they had had no knowledge of the intention to do more than recondition the old bridge. In arriving at the purchase price they had calculated that the rents which they could expect to receive would give a fair return on their outlay. Only in the case of their earlier lettings had they been able to obtain rents in accordance with the schedule on which they had based the price which they agreed to pay for the property. Since the announcement of the decision entirely to rebuild the bridge lettings had been delayed and rents obtained had been below those for which they had budgeted. It had been impossible to let parts of Duchy House and much of the shop space.

Although they looked for a gradually increasing income as the work neared completion, it would be quite untrue to say that the result of rebuilding the bridge would be an increase in the original value of the site. The work had undoubtedly temporarily depreciated it, and they could only hope that when order was restored the building would regain in value what it had lost by reason of the uncertainties, delays and disturbances.

NORFOLK ESTATE

They had acquired the existing leasehold interest in premises on the Norfolk Estate adjoining one of their buildings, consisting of certain shops in the Strand, and hoped to obtain a long lease of the entire block at the north-east corner of Arundel Street. Although it would probably be some time before they embarked on a rebuilding scheme, plans were in course of preparation for a large office building, and they hoped to retain the existing tenants of the shops. The proposed building was part of a contemplated programme extending over something like twenty years. In spite of the erection of blocks of offices in the West End, it was obvious that the company's particular district was remaining the chief business centre and must continue to hold that position.

As to the future, he had no fear regarding the maintenance of their revenue, but, with higher wages and costs, he doubted whether it would be wise to continue to divide their profits to quite as great an extent as in the past during the coming years. Their reserves were ample and the security of their invested capital was beyond question, but they must make provision for keeping their properties in first-class order and condition.

They had again added to their reserve for depreciation of flat properties; they had added nearly £11,000 to their leasehold redemption account. Properties had increased by £34,000, whereas mortgages and loans had increased by only £26,500. Debtors and cash were higher by approximately £7,500 and creditors were up by some £6,000, so that they would see that their strength had been well maintained.

In conclusion the chairman expressed the sincere thanks of himself and his fellow directors to the staff for their excellent work of the past year.

The report and accounts were unanimously adopted.

TELEPHONE AND GENERAL TRUST, LIMITED

CONTINUED PROGRESS

The 13th ordinary general meeting of Telephone and General Trust, Limited, was held, on the 22nd instant, at the Incorporated Accountants' Hall, Victoria Embankment, London.

Sir Alexander Roger (chairman and managing director), who presided, said that the profit for the year amounted to £112,534—an increase of £4,897—mainly owing to improved receipts from their telephone interests, together with the first beneficial effects of their issues of debenture stock. It was now proposed to pay a final dividend of 5 per cent. on the ordinary stock, making 8 per cent., and a dividend of 8 per cent. on the "A" ordinary stock.

Having dealt with the salient figures in the accounts and outlined the progress made in the principal interests of the company, the chairman referred to a question which, he said, was usually left to economists for discussion, but which was of immense importance to industry. When he recalled the complex disturbances, economic, financial, and, above all, political, through which they had passed in 1938, he was struck by the immense benefit that the trade and industry of the country had derived from the revolutionary change, over the past few years, in the principles and methods by which monetary conditions were directed and controlled.

In 1931, when there was a great outflow of funds and a heavy drain on the gold reserve, true to the principle and practice of the past—the principle that the gold parity of the currency must be defended at all costs—the Bank rate was raised to 6 per cent. and credit was restricted, with the result that industry and trade not only had to pay more for accommodation, but found credit more difficult to get. Business in many directions was gravely impaired, and not until several months after we had left the Gold Standard did monetary management afford relief from the stringency which had proved both futile and damaging.

PROGRESS IN PRINCIPLE AND PRACTICE

Since that time the progress made, both in principle and practice, had been remarkable. He would remind shareholders of what it meant to them. Last year was a year of alarms, arising from causes, both political and financial, which again originated beyond our own borders. Enormous amounts of funds were removed from London, and a gold outflow far surpassing in size anything recorded in previous financial history had taken place. But what had happened to our domestic monetary conditions? The answer was, quite literally, nothing. Bank rate remained at 2 per cent., and he doubted whether a single business man paid a penny more in interest on his credit from his bank, or found credit supplied to him any less readily in spite of the vast movements taking place in the money market.

The change thus indicated meant simply this: that it had been found possible, notwithstanding the undiminished sensitiveness of the London money market to external influences, to secure our domestic

SHORTER COMMENTS

(Continued from page 634)

and £294,695 to £765,834 and £284,621 respectively, while JOHN KNIGHT total earnings have declined rather significantly, from £239,088 to £191,836. The GODFREY PHILLIPS distribution is again 11½ per cent., though net profits are a little lower. Total profits of PROVINCIAL CINEMATOGRAPH THEATRES have risen by £9,648 to £516,350. RADIATION, LTD., in 1938 felt the full force of higher costs, which had been only partly operative in 1937. This factor and the general decline in trade involves a reduction in the dividend from 15 to 12½ per cent. WILLIAM HOLLINS AND COMPANY, whose board has been reconstituted, made trading profits in 1938 of £1,725, against £28,980. A draft of £30,000 upon general reserve has been made to meet interest, tax, fees and other expenses.

MISCELLANEOUS

John Dickinson and Company, Ltd.—Net profit for 1938, £287,014 (£369,290). Dividend and bonus reduced from 14 to 12½ per cent. To debenture redemption £8,570 (£8,028). To reserve £50,000 (£100,000). To contingency reserve £30,000 (£35,000). Carry forward reduced from £76,970 to £74,163.

Vauxhall Motors, Ltd.—Trading profit for 1938, £1,624,942 (£1,911,159). Income tax and N.D.C. £262,475 (£357,569). General depreciation £279,421 (£222,410). Maintenance charges £268,758 (£318,258). Written off special tools, etc., £228,150 (£100,775). Net profit £448,942 (£716,407). Ordinary dividend 20 per cent., against 30 per cent. plus a 50 per cent. scrip bonus. Carry forward raised from £796,251 to £996,175. A.R.P. expenses £18,244. A £100,000 A.R.P. scheme is to be carried out.

British Ropes, Ltd.—Gross profit for 1938, £385,224 (£391,189). Tax and N.D.C. £40,000 (£33,000). To depreciation, etc., £58,273 (£52,534). Net profit £238,057—a fall of £5,712—but 1937 figure was after £13,000 for staff superannuation. Ordinary dividend maintained at 25 per cent. To reserve £25,000 (£25,000). Carry forward raised from £89,509 to £111,310.

John Lewis and Company.—Trading profits for 1938, £313,300, a fall of £23,671. Tax absorbs £103,069 against £71,175. Net profits reduced from £182,718 to £167,348. Ordinary dividend reduced from 12 to 8 per cent. Carry forward raised from £6,093 to £22,711.

John Baker and Bessemer.—Profit for 1938, after depreciation and tax, £49,087 (£46,407). Provision for tax and N.D.C., £15,340 (£13,350); dividend of 10 per cent.,

industry and trade against the damaging effects which inevitably followed, under the old regime from wholly extraneous factors.

Now that the Gold Standard had been replaced by monetary management wise in conception and skilful in execution, they could go forward and make their plans in the confidence that to their many troubles and anxieties they need no longer add the risk of disturbance to our internal credit arrangements because of some violent upheaval in the world's money markets.

The report and accounts were unanimously adopted and a hearty vote of thanks to the chairman, directors, secretary and staff closed the meeting.

DAVIS AND TIMMINS, LIMITED

DIVIDEND OF 25 PER CENT.

The fortieth annual general meeting of Davis and Timmins, Limited, was held, on the 22nd instant, at Holborn Restaurant, London.

Mr F. Le Neve Foster (the chairman), who presided, said that at the meeting last year, when presenting record results, he had sounded a note of warning and had reported a falling off of orders in the first two months of the year compared with the corresponding period of the previous year. He had referred to the causes to which he believed the so-called recession in trade was attributable and had expressed the view that recovery was retarded by the general feeling of apprehension and uncertainty which even then prevailed. Unfortunately, as the year went on those tendencies had become emphasised and culminated in the crisis of September. As a result, in almost all sections of general trade there had been a substantial slowing up of business. It had been a year of anxiety in the home and difficulty in business.

Sales of stock screws continued remarkably firm, and the policy which they were still developing of widening the range and, by the adoption of more efficient production methods, reducing the cost and prices, was amply justifying itself. A particularly satisfactory feature had been the development of the lines of steel rolled threaded screws, and, in spite of severe competition, he was able to report a substantial increase of sales. They were widening the field of their activities in those lines, and he had little doubt that sales would be further increased during the coming year. In view of the increased activity in the aircraft industry, they were extending their interest in that market.

The net profit for the year was £37,035, as against £51,261 for the previous year. The proposed distribution, making up the dividend on the ordinary shares to a total of 25 per cent. for the year, was well within the amount of the net profit figure shown in the accounts, which was equivalent, after provision for the preference dividend, to approximately 36 per cent.

From trade indications the business prospects of the company for the current year looked more favourable than they had done when he last addressed the shareholders.

The report and accounts were unanimously adopted.

less tax, on ordinary shares (7½ per cent.); forward £31,061 (£26,240).

Sir William Arrol and Company.—Trading profit in 1938 rose from £138,376 to £161,994. To staff scheme £10,000. Ordinary dividend maintained at 15 per cent., but bonus is doubled at 10 per cent. After £50,000, against £51,750, to general reserve, balance forward is £29,121, against £26,584.

Baldwins, Ltd.—The report for 1938 shows a fall in profits from £808,547 to £658,054. Depreciation £100,000 (same, but in previous year £40,000 special depreciation in addition). Tax and N.D.C., £185,000 (£225,000). Net profits £306,146—a decline of £59,327. Ordinary dividend repeated at 10 per cent. Reserve receives £50,000, against £52,763; £43,541 forward, compared with £42,474.

Scottish Iron and Steel.—Profits for 1938 £129,606 (£221,336). Tax and N.D.C. £46,045 (£61,433). Depreciation £15,000 (£20,000). To reserve £15,000, compared with £100,000. Ordinary dividend maintained at 10 per cent.

Radiation, Ltd.—Profits for 1938, £277,831 (£327,682). Ordinary dividend maintained at 12½ per cent. but last year's 2½ per cent. bonus is not repeated. General reserve again receives £20,000; £137,167 forward, against £131,688.

OVERSEAS BANK RETURNS

NOTE.—A return of the Bank of Spain appeared in The Economist of May 28, 1938. The latest returns of the Bank of Portugal appeared in our issue of February 4th; Iran, of February 25th; Argentina and Egypt, of March 4th; Denmark, Australia, Bulgaria, Canada, Finland, Japan, Java, Jugoslavia, Norway, and Germany, of March 18th.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in G.N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis. (h) Yield on 4½% basis. (i) Based on payment of 2½%. (j) To redemption. (k) Redemption, year shown. (l) Yield worked on 5% basis. (m) Yield on 5½% basis. (n) Yield worked on 10% basis. (o) Yield worked on a 5½% basis. (p) Yield worked on 10% basis. (q) Yield based on 10% coupon. (r) Free of Income Tax. (s) Yield based on 4½% coupon. (t) Yield based on 4½% coupon. (u) Yield based on 4½% coupon. (v) Yield based on 4½% coupon. (w) Yield based on 4½% coupon. (x) Yield based on 4½% coupon. (y) Yield based on 4½% coupon. (z) Yield based on 4½% coupon.

(m) Including bonus of 5% free of tax. (p) Allowance for exchange. (e) Allowing for rate of exchange.

THE WEEK'S COMPANY RESULTS—continued.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JANUARY 28, 1939.

The Trend of Business

The Economist Index of Business Activity, which is adjusted for seasonal variations, has shown a further decline, from 101½ (1935 = 100) in November to 100½ in December, the lowest figure since October, 1935.

The downward movement last month, however, was less uniform than in November. Two of the constituent series of the Index of Business Activity given on page 3 remained unchanged, while a decline of six of them was balanced by a rise in the remaining six indices.

The indices which remained unchanged are those relating to employment and railway merchandise traffic (which is provisional). For various reasons, such as the spreading of work, the index of employment is not a very sensitive reflection of short-term changes in general business activity; it has remained unchanged since July last year, and the figure for

last month was actually slightly higher than that for December, 1937, when the weather was unfavourable to outdoor work.

The indices showing a rise between November and December include those relating to electricity consumption, commercial motor vehicles in use, postal receipts, cotton consumption, shipping movements and town bank clearings. The sharp rise in the consumption of electricity during December was probably due to nothing more than the cold spell in that month. Nor are the slight upward movements of the five remaining indices of decisive significance.

On the other hand, the indices showing a decline in the past month include all the more sensitive—and in some cases forward-looking—series. The drop in the coal consumption index in a month when the domestic intake must have been heavy looks ominous at first sight, but it was probably due, in a large measure, to the reduction in iron and steel production, which, in turn, was largely fortuitous. The index of building activity, based on the value of building plans passed, foreshadows a further shrinkage in constructional work.

The index of iron and steel available for domestic consumption, based on domestic output and adjusted for imports and exports, fell heavily, from 99 in November to 82 in December, the lowest level recorded since November, 1933. The sharp decline in iron and steel production in December is widely attributed to the reduction in prices, which prompted consumers to delay purchases until January. The provisional index of the volume of raw material imports fell to the lowest point since January, 1935. While the uncertain trend of raw material prices has prompted consumers to refrain from purchasing anything but urgent requirements, the low level of purchases can no longer be explained by the existence of surplus stocks. The decline in the intake of raw materials, therefore, creates a strong presumption that the trend of the consumption of those materials remains downwards. The index of the volume of manufactured exports registered a

further decline in December. Lastly, the figure for metropolitan, country and provincial bank clearings, a much more accurate indicator of changes in general business activity than the index of town clearings, also showed a decline.

Such evidence as has come to hand since the beginning of January is somewhat conflicting. So far as the capital equipment industries are concerned, the decline in building activity, if anything, is gaining momentum. The present A.R.P. programme, moreover, cannot be expected fully to offset the curtailment of private building. Again, there have been very few new orders for merchant vessels; the activity of the shipbuilding industry, therefore, is bound to decline further during the next few months, despite the big volume of naval work on hand, especially as considerable time will elapse before any Government assistance can become effective.

The engineering industry, on the other hand, remains very active, and the volume of new orders, both for civil and military purposes, has shown a slight improvement. The electrical equipment industry, in particular, will receive a substantial volume of orders for the increase in the capacity of the electricity supply industry. Activity in the iron and steel industry, moreover, may be sustained by Government orders for steel shelters and other A.R.P. and military equipment.

Reports from the consumers' goods trades are encouraging as far as domestic business is concerned. There has been a noticeable improvement in sales of motor cars. Moreover, a report from the Wholesale Textile Association indicates that orders for February, March and April are well up to expectations; but export business has remained disappointing.

The impression left by the evidence of trade conditions is that while the trend of activity remains downwards in certain major branches of activity, including building, business is marking time or showing a slight improvement in other industries. Although the general outlook still seems to point to a slow decline in activity and a slow increase in unemployment, there are no indications, at the moment, that the rapid decline in general business activity in the early months of 1938 will be repeated this year.

In the United States business activity showed a further, though modest, expansion in December, but, as was only to be expected after the vigorous recovery in the second half of last year, the upward movement has now tended to slow down, at least temporarily. In France there are indications of a gradual improvement. Production is maintained at a record level in Germany, despite the decline in exports, but the latter tendency is increasing the difficulty of keeping the machines fed with raw materials. Elsewhere in Europe, as in the principal raw material-producing countries, activity is either marking time or slowly declining.

* Weeks ended March 9th and March 16th.

† These prices are for fuel oil for inland consumption—other than for use in Diesel-engined road vehicles—and do not include the Government tax.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of January. In the remainder they relate to the month of December.

COAL

The past month witnessed a decline in the activity of the coal-mining industry. The quantity of saleable coal raised declined from 20.0 million tons in November to 19.2 million tons in December, compared with 21.1 million tons in December, 1937. The deterioration in the industry is revealed by the fact that, whereas output last October was only 3.3 per cent. smaller than in October, 1937, production in November was 5 per cent. smaller and in December 9 per cent. smaller than in the corresponding months in 1937. Exports and shipment for the use of steamers in November and December were 6 per cent. and 11 per cent. smaller than in the same months of 1937. Home consumption also showed a decline in December, which, in view of the cold spell in that month, is surprising. The reason for the decline must be sought in a fall in industrial consumption, which, in turn, was probably due in a large measure to the curtailment of activity in the iron and steel industry last month. While the demand for house coal has been fairly well maintained this month, the volume of forward business, especially for export, has been somewhat disappointing. The total quantity of saleable coal raised in 1938 was 228.2 million tons, against 241.2 million tons in 1937. During the same period exports declined from 40.3 million tons to 35.9 million tons, and shipments for the use of steamers from 11.7 million tons to 10.5 million tons.

IRON AND STEEL

The output of iron and steel was sharply curtailed between November and December. The output of pig iron declined from 461,500 tons in November to 445,800 tons in December; during the same period in 1937 production rose from 762,300 tons to 783,800 tons. The output of crude steel declined by almost one-quarter, from 860,000 tons in November to 655,700 tons in December. Between November and December, 1937, output fell by only 6.3 per cent., from 1,178,300 tons to 1,103,800 tons. It is doubtful whether consumption showed a proportionate decline; and it is widely believed—and probably with justification—that the reduction in prices at the turn of the year prompted consumers to take delivery of no more materials than they actually needed before the lower rates came into force. If this is the full explanation of the severe curtailment in output, the returns for January should show a more than seasonal increase. The market's response to the cut in prices appears, as yet, to have been somewhat disappointing, but an improvement in business is confidently expected by the industry. Last week the industry obtained the first order for household air-raid shelters. The initial order, understood to be one-fifth of the total quantity to be ordered, is for 400,000 shelters; their construction will require 100,000 tons of sheets and 18,000-20,000 tons of channels, with a considerable tonnage of nuts and bolts. This order will give a welcome fillip to certain sections of the iron and steel industry. The total output of steel ingots and castings declined from 12.89 million tons in 1937 to 10.38 millions in 1938, a reduction of 20 per cent. Imports of iron and steel declined by 34 per cent. to 1,341,000 tons and exports fell by 25.5 per cent. to 1,918,000 tons.

GENERAL ENGINEERING

The slight improvement in new orders noticeable a month ago is reflected in a decrease in the proportion of insured persons unemployed between November and December. Thus, the employment position showed an improvement in general, electrical and constructional engineering, but there was a slight increase in the number of insured persons unemployed in marine engineering. The slight improvement in the volume of the new orders secured by the industry has been maintained this month, and the fact that it was not confined to Government contracts is encouraging. As far as individual sections of the industry are concerned, there has been a slight increase in business in the electrical and mining machinery sections. The demand for lifting and excavating machinery, boiler-house equipment and machine tools remains good, and a seasonal improvement in the agricultural machinery section is expected next month. Since the refusal of the trade unions' demands for higher wages on December 6th there have been no further negotiations. The engineering industry is among the few branches of activity which were able to increase their exports in 1938. Thus, shipments rose from 438,052 tons in 1937 to 459,990 tons in 1938. The increase in the value of exports was even more marked, from £49.7 millions to £57.9 millions. The expansion of exports was partly due to the increase in shipments to Russia, from 4,873 tons in 1937 to 20,315 tons in 1938. Imports, on the other hand, showed a decline both in volume and value; they amounted to 124,278 tons (valued at £21.8 millions) in 1938, against 147,203 tons (valued at £24.2 millions) in 1937. In December, however, the volume of exports was smaller than a year earlier, but their value showed a further increase. The outlook for the industry remains encouraging, and orders on hand will ensure a high level of activity in the coming months.

ELECTRICAL EQUIPMENT

Activity in the electrical equipment industry remains at a very high level. The proportion of insured persons unemployed declined from 5.3 per cent. to 4.9 per cent. between November and December in electrical engineering, and rose slightly, from 6.7 per cent. to 6.8 per cent. in electric cable, apparatus and lamp manufacture. Moreover, the indications point to the maintenance of a high level of activity in the electric equipment industry. For example, the capital expenditure on plant extensions in the electricity supply industry authorised in 1938 is estimated at £14.5 millions, which exceeds the figures for all previous years. Export trade has been very well maintained in the past year. Thus, shipments of electric equipment increased from £12.5 millions in 1937 to £13.4 millions in 1938, and those of electrical machinery rose from £3.0 millions to £4.3 millions.

AUTOMOBILES

New registrations of cars in November, 1938, were 12 per cent. bigger than in November, 1937, the first increase recorded for some months over the corresponding figures for 1937. The expansion was concentrated on registrations of private cars, and it appears that after a period of stagnation, the demand for new cars has increased. Production of private cars and taxis, reflecting the improved demand, increased from 24,867 units in October to 28,226 units in November, an increase of 1,200 compared with November, 1937. Production of commercial vehicles also showed an expansion compared with a year ago, though the increase was smaller than that of private cars. Imports and exports of all kinds of motor vehicles declined in 1938 compared with 1937; imports of private cars and taxis fell from 18,034 units to 10,242 and exports from 78,079 units to 68,267.

BUILDING

Activity in the constructional trades showed a further, though largely seasonal, decline between November and December. On the whole, however, the downward trend of constructional activity has remained comparatively slight, though there are indications that the pace of the decline is gaining momentum. The returns of the value of building plans passed by a representative sample of local authorities in recent months have been consistently below the level of the corresponding months in 1937, and although these returns do not include direct Government contracts, they foreshadow a further shrinkage in total activity during the next few months. The returns of the value of plans passed in December, for example, show a reduction of 30.6 per cent. compared with the corresponding month in 1937. The decline was very marked in the case of dwelling-houses, which is being attributed partly to the decreasing attractiveness of property as an outlet for private savings, due to the absence of facilities for insuring against air raids.

CHEMICALS

In most sections of the home chemical market, trade in December was less active than during the previous month. There was a fair amount of forward business in industrial chemicals, and prices were maintained. Reports from the wood distillation industry indicate that there has been little change since last month, a moderate volume of trade being transacted in most products. There has been a steady demand for pharmaceutical and other fine chemicals. The demand for coal tar products was dull throughout the month. Overseas trade in chemicals, drugs, dyes and colours showed a further decline in December, the value of exports decreasing by £205,341 and that of imports by £265,747 compared with December, 1937. As compared with the twelve months of 1937, the value of exports of the chemical group in 1938 fell by £2,604,414 and the value of imports by £642,907 to £22,048,681 and £13,214,627 respectively.

POTTERY

The completion of Christmas orders has brought a reduction in output in many sections of the industry. Employment in North Staffordshire in particular showed a marked decline in December, though activity was better maintained in Bristol and Derby. Exports of earthenware also declined between November and December, though exports of sanitary ware showed a small increase. For the calendar year 1938, exports of earthenware amounted to 501,000 cwt. valued at £2,000,200, compared with exports of 532,700 cwt. valued at £1,980,900 in 1937; exports of sanitary ware declined from 467,500 cwt. to 424,500 cwt.

FOOTWEAR

After the usual seasonal slackness in December and early January, there has been a considerable revival in orders, and spring business is developing well. Leather prices remain firm. The trade returns for 1938 show that exports of leather boots and shoes amounted to 374,511 dozen pairs, which compares with 394,440 dozen pairs in 1937; imports of leather footwear increased from 231,277 dozen pairs in 1937 to 270,261 dozen pairs in 1938, due to increased supplies from Czechoslovakia and the United States. Imports of rubber foot wear increased from 916,500 dozen pairs to 1,057,100 dozen pairs.

COTTON

There has been very little change in conditions in the Lancashire cotton industry during the past month, in which business was to some extent interrupted by the holidays at Christmas and the New Year. This slack state of affairs has been partly due to the political situation, and merchants remain in a cautious mood. Changes in raw cotton prices have been unimportant. Home users and exporters of yarn have purchased from hand to mouth, and margins for counts and qualities that are not covered by price agreements have been narrowed. Spinning production remains unchanged at 53 per cent. of capacity compared with 88 per cent. a year ago. Demand for cloth for foreign outlets has been limited. Not more than a retail business has been done for India, but some manufacturers have done rather better for South America and the Dominions. Some home trade buyers have been more disposed to make replacements, and further Government contracts have been arranged in fine and heavy materials. Exports of piece goods in 1938 amounted to 1,386 million sq. yards valued at £31,967,400, compared with 1,921 million square yards valued at £44,768,700 in 1937. Exports of cotton yarns fell by 23 per cent. compared with 1937.

JUTE

The price of raw jute has advanced sharply during the past few weeks, and has induced a greater volume of enquiries both for cloth and yarns. Unemployment continued to decline in December in the Dundee jute industry, and a further increase in activity is expected, unless a relapse in jute prices should occur. Exports of jute yarn and of manufactures increased noticeably between November and December, but the recovery in the last quarter of the year was not sufficient to offset the decline in exports in the earlier months. Exports of sacks and bags declined from 963,400 cwt. in 1937 to 943,600 cwt. in 1938, and exports of other manufactures declined even more, from 136,900 cwt. to 84,100 cwt.

LINEN

The suspension by the Soviet Government of all further exports of flax from the 1938 crop has left the market very short of supplies. Consequently, prices have risen sharply, but the uncertain political outlook has restricted the sale of cloth, and there is little business passing. Exports of linen piece goods fell from 83 million square yards, valued at £5.1 millions in 1937, to 52 million square yards, valued at £3.5 millions, in 1938; the greater part of the fall was due to the very sharp contraction in exports to the United States.

RAYON

Trade has been disappointing during this month, and has not developed as was expected. Production continues at a reduced level and the stock position is good. The hose trade continues in the shadow of threatened labour disturbances. Staple fibre demand is somewhat unsatisfactory. Overseas business is very poor. The recession in the rayon trade is reflected in the 1938 trade returns; exports of piece goods declined from 77.9 million square yards in 1937 to 60.7 million square yards in 1938.

WOOL

Raw wool prices have been well maintained at the primary markets, and the rather uncertain tone at the opening of the London sales improved later. New business in yarns has improved recently, and there are prospects of very considerable Government contracts, which will help the woollen trade. There is rather more inquiry in the cloth market, but new business remains limited.

AGRICULTURE

The cold spell in December has prevented much progress from being made with winter cultivations, but these were generally well advanced. Hill sheep suffered from the cold and supplies of winter fodder have been needed, both for lambing flocks and for dairy herds. Lambing has begun on some lowland farms, but will not become general for some weeks.

SHIPPING

Freight rates continued to decline during September; The Economist index declined from 94.1 (1913=100) in November to 92.8 in December. The fall was general on all routes, with the exception of the Mediterranean. Interest in the shipping and ship-building industries is centred on the proposals for Government assistance published last week by the Chamber of Shipping.

RETAIL TRADE

After the fall in retail trade in November, the statistics published by the "Board of Trade Journal" show that the daily value of retail sales in December, 1938, in the reporting shops, increased by 1.9 per cent. compared with December, 1937. The increase was general in all districts with the usual exception of Central and West London, where a sharp fall of 7.6 per cent. occurred. The fall in the value of stocks, noted in each month since June, also continued in December, though it was appreciably smaller in recent months.

* For method of construction and earlier figures (1924-1933) see Supplement to The Economist of July 25, 1936. This Supplement is now out of print, but a record of the complete index was given in The Economist of November 5, 1938. † Revised. ‡ Provisional. † Annual indices represent averages of monthly figures.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Trade showed the usual seasonal expansion at Christmas, and industrial activity has been well maintained. The poor wheat harvest (especially in Victoria), combined with the low world prices, does not provide a favourable outlook for trade in future; a reduction in the wool clip is also expected, and production of butter has been affected by the long drought. The preliminary figures for the last six months of 1938 showed a reduction of £4.6 millions in the value of exports and of £5.8 millions in the value of imports, compared with the same months of 1937; the export surplus increased by £1.2 millions to £6.6 millions.

CANADA.—Business conditions remained unchanged, and activity is at about the same level as a year ago. Primary sales of wheat have been large, and visible stocks amounted at mid-December to 171 million bushels, compared with 60 million bushels a year ago. The guaranteed price for wheat has helped to maintain incomes in the western districts, and retail trade showed a fairly normal increase in December. The sales of cars continue satisfactory, and the activity in the motor industry has helped the steel trades. Some anxiety is felt over the reduction in the tariff under the new American-Canadian trade agreement, as it is felt that American competition may be intensified. The decline in the value of the pound has also hindered exporters to the British market.

INDIA.—The rise in the price of raw jute does not seem to have encouraged the placing of more business, and as stocks of piece goods are big, the outlook is not favourable in the jute trade. The market in cotton piece goods showed a slight improvement after Christmas, and there is consequently a more hopeful feeling in the yarn market, but the level of activity is still low. Rain is still needed in many districts, and the wheat harvest has been badly affected by the drought. The value of both imports and exports was a little lower in November than in November, 1937.

SOUTH AFRICA.—The volume of Christmas trade was satisfactory, and general business activity is well maintained. Building contractors are still busy, though the value of building plans passed in Johannesburg in 1938 was considerably smaller than in 1937. Widespread rains in December benefited all areas; prices of wool and hides and skins continue stable. Exports of citrus fruit during the first 11 months of 1938 amounted to 202,282 tons, compared with 237,410 tons in the corresponding months of 1937.

EUROPE

FRANCE.—On the whole, business activity is showing a gradual expansion. Statistics of the latest movements in industry and trade are not yet available; the most recent official index of industrial production rates to November (1928 = 100), when it stood at 86, against 80 in October and 92 in November, 1937. Between October and November the expansion in activity was fairly general, embracing mining, chemicals, iron and steel, engineering and the motor industry. The index of building activity, on the other hand, remained 38 per cent. below the 1928 level, as it did in the four preceding months. The cotton textile industry has shown some improvement. Unemployment showed a seasonal increase during the four weeks ended January 7th, the number of persons in receipt of benefit rising from 371,920 to 416,604. The trend of wholesale prices was upwards during the four weeks ended January 14th, but the prices of industrial securities, after rising steeply during the latter part of last year, have again tended to decline, probably owing to the deterioration in the international political outlook.

GERMANY.—Industrial activity has been maintained at a high level. Thus the monthly index of production calculated by the German Institute for Business Research (1928 = 100) rose from 133.5 in October to 135.8 in November. The more up-to-date weekly index of business activity (1936 = 100) rose from 113.8 during the last week of November to 116.7 in the first week of January. But the high level of industrial production masks the severe strains and stresses now noticeable in the German economy. The drive for increasing the country's military strength has resulted in a heavy transference of resources from peace-time to military purposes. It is estimated, for example, that something like 50 per cent. of the new orders secured by industry are now placed by Government agencies. Moreover, since the country's resources are already fully employed, it is becoming increasingly difficult to expand activity in any one direction without reducing it in another. Again, the decline in exports relatively to imports is increasing the difficulty of keeping the machines fed with raw materials. The commodity price indices calculated by the Institute for Business Research, however, have remained practically unchanged in recent weeks.

SWEDEN.—There has been little change in the economic situation. Activity in industries which supply the building trade continues to increase, but the export trades remain depressed. The volume of new business in the wood pulp trade is small, and the contracts arranged for 1939 have involved unsatisfactory prices. Timber sales were considerably smaller in the latter half of 1938 than in the corresponding period of 1937; prices for redwoods have been falling in recent weeks, but the market for whitewoods is firm.

BELGIUM.—The iron and steel trades increased their output in the latter months of 1938, and there was also an improvement in

the textile trades, due to a better domestic demand; the export trade has been affected by the fall in the value of the pound and, since the suspension of Russian flax exports, by the shortage of raw material in the linen industry. Unemployment increased slowly in the third quarter of 1938, and was in October at about the same level as a year previously.

DENMARK.—The mild weather in the early part of December favoured winter cultivations, which were well advanced before operations were stopped by the cold weather during Christmas. Industrial production continued to increase during the autumn, particularly in the trades dependent on building. Compared with the first eleven months of 1937, the value of imports in the corresponding period of 1938 fell by 30 million kroner to 1,509 million kroner, while the value of exports fell by only 8 million kroner to 1,419 million kroner. The decline in imports was largely due to the reduced prices for imported cereals. The shipping freight market improved in December, due principally to grain charterings from Roumania and the United States; during the last three months most of the shipping laid up during the summer was brought back into commission.

UNITED STATES OF AMERICA

Industrial activity continued to expand in December, when the Federal Reserve Board's index (1923-25 = 100) stood at 104, compared with 103 in November and 96 in October. The less comprehensive *New York Times* weekly index of business activity declined from 94.3 for the week ended December 10th to 90.7 for the week ended January 14th. Expansion has thus slowed down in December and has given way to a slight setback early in January, but, in view of the vigorous recovery of the preceding months, a temporary lull in the upward movement was to be expected. There are no indications, however, of a major contraction in business activity during the next few months. There has been no undue accumulation of stocks of semi-manufactured or manufactured goods; nor has there been any marked rise in prices. Most observers believe that the slight recession in January is no more than a temporary interruption of the upward trend. The outlook for the building industry, for example, is quite encouraging. Building contracts awarded in November were higher than in any corresponding month since 1929, and they showed an increase of 52 per cent. over the figures for November, 1937. The improvement was maintained in December, the Dodge returns for the first three weeks of that month showing an increase of 61 per cent. over those for the corresponding period in 1937. Enquiries for machine tools are active and prospects for increased railway equipment purchases have also tended to improve.

LATIN AMERICA

ARGENTINE.—Very good average crops of wheat, linseed and oats are expected, and exports will be considerably higher than last year. On the other hand, maize has been damaged by drought, although late rains have improved prospects somewhat. Optimism arising from prospects of a good wheat crop is tempered by the fact that prices are about 50 per cent. lower than a year ago, so that in view also of the damage to maize, the general trade outlook cannot be regarded as very encouraging. Exports will probably be on the low side for some months to come, with a consequent reflection in the volume of imports. Nevertheless the new regulations requiring permits for all imports is expected to be beneficial to Great Britain.

BRAZIL.—Exchange cover for imports is still provided with some three months' delay, but the trade returns for January-September register an export surplus, owing to the improvement shown in August and September. Total coffee exports from Santos in the year 1938 were the largest ever recorded for a calendar year, although external prices continue low. Exports of cotton were also larger in 1938 than in 1937, but the recorded value showed a reduction owing to the fall in prices on international markets.

COLOMBIA.—The trade agreement between Colombia and the United Kingdom has been extended indefinitely, but after September 30, 1939, either country may give three months' notice of cancellation. With the improvement in the coffee position, exchange permits covering general imports into Colombia continue up to date. The coffee markets in the Central American Republics are generally quiet, awaiting overseas buying interest.

THE FAR EAST

The Tokio stock exchange had more than one fit of depression in November, due largely to the enforcement of those provisions of the National Mobilisation Act which limit dividends and provide for compulsory bank loans to war industries. The so-called link system, whereby the volume of raw cotton imports has been made dependent on the amount of cotton piece goods exported, has not been a great success; exports of cotton piece goods in October fell by 17 per cent. in volume and by 36 per cent. in value compared with exports in the corresponding month of 1937. The market in raw silk improved at the end of the year, owing to the increase in shipments to the United States, and stocks of rayon are also slowly falling, helped by severe restriction of production. It is noteworthy that there has been a continuous expansion in the note circulation in recent months; the amount of Bank of Japan notes in circulation increased from 1,638 million yen in October, 1937, to 1,948 million yen in October, 1938.

Our Information Service

The Intelligence Branch of *The Economist* has been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

A special feature of the Department is the preparation of regular or occasional reports, on request, for business men and industrialists anxious to keep abreast of all developments which may affect their branch of activity.

Enquiries should be addressed to the

Intelligence Branch, *THE ECONOMIST*
8 Bouverie Street, London, E.C.4

From Peace to War Economy

FOR those who measure economic progress in terms of a rising standard of living, who wish to see human ingenuity applied to the improvement of the lot of the poor, the past year has been full of disappointments, and the best that can be said for it is that the worst fears have not come true.

Instead of the application of the fruits of science to the improvement of human well-being, the past year has witnessed a further transference of economic resources from peace-time to military uses. Indeed, country after country has been caught in the maelstrom of a mad and hectic armaments race, the end of which is not yet in sight. Peace-time standards of commerce and trade have been thrown overboard and military efficiency has taken the place of material well-being as the criterion of progress.

A year ago the title of this introduction was "A Check to Recovery." Commercial activity in most parts of the world was then declining after a long period of recovery in most countries of the world. The rising tide of unemployment of men and machinery was indeed checked by the middle of last year, before the world was again engulfed in a serious slump. In the United States recovery made rapid headway from the spring to the end of the year, and, by slowing down the fall in the prices of primary products, the growing demand for these materials across the Atlantic prevented a further serious impoverishment of the raw material producing countries.

But while recovery in the United States probably did

much to prevent the world from sinking into the depth of depression, the growth of expenditure on armaments was a no less potent factor in maintaining activity. If the guns produced in 1938 are prevented from going off, the armaments race will have taught the world one important lesson which economists have long preached in vain—the fact that government expenditure can influence the course of the trade cycle.

The recession in progress at the beginning of 1937 has thus been checked in most countries in the course of the year. In the United States public spending on a large scale made the wheels of commerce turn faster; in the United Kingdom and many other European countries deterioration was also checked by increased public spending, but on guns instead of on butter. By the end of the year Germany could boast the complete elimination of unemployment, but how many of those in employment were engaged in ministering to human wants? In France there were at least signs of improvement towards the end of the year, but so far the increase in production has been concentrated mainly on the armament industries.

In view of the piling up of armaments, it is difficult to view the future with any confidence. The only encouraging feature is the fact that the balance of forces is gradually becoming less unequal as a result of the awakening of the democracies, Britain, France and the United States. But it would be hazardous to predict what the year 1939 has in store for the world.

United Kingdom

INDUSTRY AND TRADE

THE year 1938 opened with Britain and the world in the midst of recession, which brought *The Economist* index of British Business Activity down from 113½ (1935 = 100) in September, 1937, to 102 in May, 1938. The downward movement in activity was even more rapid than in 1929-30, partly because of the accumulation of heavy stocks of semi-finished and finished goods in 1937, which forced many industries to curtail their output below the level of current consumption. The recession was short and sharp, for in the early summer there were signs that its force had been broken, before it had developed into a serious slump, and when the general level of business activity still exceeded that of the pre-depression year of 1929. There was a slight but fairly widespread improvement in the autumn, but towards the end of the year the direction of the business curve was again slightly downwards, and by December *The Economist* index of Business Activity had fallen to 100½. At the end of the year the general outlook seemed to point to a further but slow decline in business activity rather than to another rapid fall such as occurred in the early months of 1938. The main trends in British business activity since 1929 are indicated in the table below:—

Indices of production— (1924 = 100)	1929	1932	1937	1938
London and Cambridge Economic Service	110.6	84.9	124.0	109.5
Board of Trade (1930 = 100)	108.5	90.5	132.8	†

* Provisional. † For the first nine months of 1938 the figure was 123.4, as compared with 131.6 in the corresponding period of 1937. ‡ Third quarter of 1938. (a) Year ended September 30th.

Industrial relations were not marred by any serious conflicts last year, and the number of working days lost through disputes was smaller than in any year since 1934. Despite the decline in business activity, employment showed remarkable stability, and the estimated number of insured persons aged sixteen to sixty-four in employment in Great Britain in December was actually slightly higher than a year earlier, when the weather on the day of the count was unfavourable to outdoor work. Weekly wage rates, as measured by the Ministry of Labour's index, continued to rise until the second quarter of 1938, when the upward trend came to a halt.

So far as individual branches of activity are concerned, the past year witnessed a sharp setback in the textile and other mainly exporting industries; the volume of domestic exports was 11 per cent. lower last year than in 1937. There was also some decline in house building and in other industries supplying the home market, and the iron and steel industry experienced a severe slump, the aftermath of the hectic activity in 1937 when supplies appreciably exceeded consumption. But the decline in exports and in commercial investment at home was accompanied by a further substantial increase in defence expenditure.

Agriculture

THE contrasts of weather in 1938 provided exceptionally severe conditions for the home farmer. A long spring drought kept the pastures bare until June, and reduced the total yield of hay by more than a third compared with 1937. Corn crops did well, however, and yields per acre of barley and wheat were the highest since the present records were begun in 1885. The mild weather which accompanied the drought gave promise of a good fruit year, but April brought sharp night frosts. Exceptionally heavy rainfall in the autumn severely reduced the sugar content of the sugar beet crop; but the mild weather which lasted until Christmas somewhat compensated the livestock farmer for the shortage of hay.

The acreage under all arable crops, with the exception of turnips and swedes, was larger in 1938 than in 1937; the increase was most marked in the cases of barley and potatoes. There was again a slight fall of less than 1 per cent. in the number of dairy cows, while the number of other cattle continue to rise slowly, in spite of lower prices in the beef trade. There was another sharp increase of 10 per cent. in the number of ewes kept for breeding, and marketings of sheep and lambs at representative British markets were 11 per cent. larger in 1938 than in 1937; as a consequence, prices of British lamb and mutton fell continuously from the end of 1937 and sheep breeders and feeders had a very poor year. The June returns also revealed a decline of 2 per cent. in the number of pigs, and of 1 per cent. in the number of poultry. The most serious feature of these returns was the decline compared with the previous year of 6 per cent. in the number of agricultural workers in Great Britain. In the last ten years the number of agricultural workers in Great Britain has fallen by 195,600, or by 22 per cent.

The general fall in wholesale prices since the autumn of 1937 was reflected in a somewhat smaller fall in British agricultural prices. Prices of potatoes, barley and sheep declined sharply, and those of other cereals fell also to the advantage of the livestock farmers; growers of wheat were protected by the operations of the wheat quota. Wholesale milk prices were raised by 4d. per gallon in July, and this increase was consolidated in the contracts negotiated for 1938-39.

The long-promised Milk Bill was published in the autumn of 1938, providing for the setting up of an independent Milk Commission, pasteurisation at the option of local authorities, and for not more than ten experiments in the rationalisation of milk rounds. Mild though these proposals were, the Bill was shortly withdrawn for further consideration in deference to pressure from farming interests. After a lapse of two years the revised system of bacon contracts came into force in December, 1938; the new Act provided the pig feeder with a price based only on the cost of feeding stuffs, irrespective of the fluctuations in the price of bacon. In spite of this inducement, the Pigs Marketing Board obtained contracts for only 1.4 million pigs for 1939. The slump in barley and sheep prices led the Government to double the barley and oats subsidy and to place under the control of the Empire Beef Council the imports of lamb and mutton from January, 1939. At the close of 1938 it was announced that the Government was undertaking a review of the whole of their agricultural policy.

Overseas Trade

THE fall in business activity in the latter months of 1937 and the early months of 1938, both in the United Kingdom and in the United States, was bound to cause a decline in British overseas trade from the high levels of

1937. In view of the large stocks of raw materials accumulated in the boom of 1937 and of the subsequent fall in prices of many raw materials, the fall of 10 per cent. between 1937 and 1938 in the value of British imports and exports is smaller than might have been expected. As the table below shows the greater absolute fall in imports brought a reduction in the import surplus:—

Year	Imports	British Exports	Re-exports	Total Exports	Import Surplus
1929	1,220.8	729.3	109.7	839.0	381.8
1930	1,044.8	570.6	87.0	657.5	387.3
1931	661.3	390.6	63.9	454.5	404.8
1932	701.7	365.0	51.0	416.0	285.7
1933	675.0	367.9	49.1	417.0	258.0
1934	731.4	395.9	51.2	447.1	284.3
1935	756.0	425.8	55.3	481.1	275.9
1936	847.8	440.6	60.8	501.4	346.4
1937	1,027.8	521.4	75.1	596.5	431.3
1938	920.4	470.9	61.6	532.5	387.9
Per cent. change, 1937-38	-10.4	-9.7	-18.0	-10.7	-10.3

In fact, the decline in business activity and in the value of British overseas trade was checked in the summer of 1938, and for the latter half of the year the value of both imports and exports was comparatively stable, except for a resumption of the downward movement in December.

The next table gives the value of British imports and exports by the three main classes:—

	(£000,000)							
	1929		1932		1937		1938	
	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports	British Ex- ports
Food, drink and tobacco	509.5	55.7	357.7	31.5	417.8	38.8	419.1	35.9
Raw materials and ar- ticles mainly unmanu- factured	285.3	78.9	141.0	43.6	278.4	64.6	217.3	56.9
Articles wholly or mainly manufactured	305.5	573.8	346.0	276.4	250.5	404.7	215.5	365.4

The value of imported food has altered little in the last two years; the value of imported raw materials declined by £60 millions, due very largely to the depression in the textile trades and to the curtailment of iron and steel imports. The fall in exports, though fairly general, was concentrated on textiles, iron and steel and non-ferrous metals, as is shown in the table below:—

Item and Measure	1929	1932	1937	1938
Coal, Iron and Steel Products				
Coal	60,267	42,750	40,338	35,861
Iron and steel scrap	424	407	234	186
Pig iron and ferro-alloys	545	128	167	101
Railway materials	610	106	208	158
Total iron & steel manufactures	4,380	1,979	2,574	1,918
Textile machinery	127	63	73	71
Total machinery	562	302	438	460
Locomotives and parts	40,316	3,154	7,550	8,376
Motor vehicles and chassis	26,527	29,194	105,658	89,668
Textile Goods				
Cotton yarns	166,638	141,663	159,028	122,933
Cotton piece-goods	3,672	2,198	1,921	1,366
Wool tops	32,737	42,754	40,180	32,458
Woolen and worsted yarns	46,696	38,025	32,323	27,793
Woolen tissues	108	54	80	59
Worsted tissues	47	28	43	32
Linen piece-goods	72	66	83	52
Leather boots and shoes	1,006	640	394	375
Paper and cardboard	5,047	3,870	4,390	3,529

The volume of coal exports declined, although the value was maintained, and exports of machinery increased, due partly to the long time-lag between the placing of orders in 1937 and their execution in 1938. The Board of Trade estimates of the average volume and value of British trade reveal that the average price of imports declined steadily from the third quarter of 1937 throughout 1938, while the average price of British exports

Industrial Profits

THE end of 1938 has seen the beginning of a decline in industrial profits, which reached their peak about the middle of 1938—nearly a year after the peak in business activity. This was to be expected, as there is a time-lag averaging 10-11 months between the middle of the year in which profits are earned and the date on which they are reported. The course of reported profits is shown by the *Economist* index, which is given below. The construction of this index was explained in *The Economist* of January 14, 1939.

COMPANY REPORTS PUBLISHED IN CALENDAR YEARS 1928-38

Reports Published in Calendar Year	No. of Companies	Total Profits*		Chain Index (1928 = 100)
		Current Year's Reports	Same Companies, Preceding Year	
		£ Mn.	£ Mn.	
1928	1,709	179.6	167.6	100.0
1929	1,770	194.7	194.8	100.0
1930	1,932	197.5	198.8	99.4
1931	2,009	160.1	206.6	77.1
1932	1,998	143.3	175.0	63.7
1933	1,945	141.4	140.8	63.4
1934	1,975	168.8	144.8	73.9
1935	2,116	203.2	175.3	85.7
1936	2,186	239.1	212.2	96.5
1937	2,279	281.4	240.3	113.2
1938	2,389	302.7	284.4	120.7

* After debenture interest.

The profits of companies reported during the whole of 1938 were something like 20 per cent. above the level of 1928, compared with 13 per cent. in 1937. As compared with 1937, profits in 1938 were about 7 per cent. higher, but the rise was recorded mainly by companies reporting in the first half of the year. In the second half, beginning in August, there were net declines in reported profits as compared with the preceding year, though these declines were the result of averaging widely divergent movements, such as increases in coal, steel and shipping earnings, and declines in financial, land, investment, oil, tea, rubber and textile earnings. The following table gives the quarterly changes from 1928 to date, together with the number of companies on which the figures are based.

	1st Quarter		2nd Quarter		3rd Quarter		4th Quarter	
	No. of Cos.	Profits: Change on prev. year %	No. of Cos.	Profits: Change on prev. year %	No. of Cos.	Profits: Change on prev. year %	No. of Cos.	Profits: Change on prev. year %
1928	504	+15.2	558	+1.3	237	+9.7	412	+3.1
1929	454	+1.5	639	-0.7	257	-3.0	410	+1.4
1930	516	+1.9	578	+8.6	329	-6.4	506	-18.1
1931	596	-10.6	619	-19.4	320	-35.5	474	-53.9
1932	543	-14.3	675	-21.8	303	-28.6	472	-2.9
1933	562	-8.9	612	+3.3	307	-35.5	464	+30.3
1934	547	-5.3	642	+19.2	318	-27.7	468	+32.9

1937	628	+11.9	765	+19.9	357	+19.2	549	+20.2
1938	646	+10.5	805	+12.9	374	-1.4	564	-4.4

* After debenture interest.

Our next table analyses the distribution of profits and the rate of return on capital for companies reporting in the fourth quarter, including many large concerns which make up their accounts on September 30th. These figures disclose a continued rise in the proportion of profits put to reserve, which is now well over a third.

The margin between profits earned and profits distributed is much greater to-day than it was in 1929. If it were part of directors' policy, this margin so far as it consists

DIVISION OF PROFITS (FOURTH QUARTER COMPANIES)

Reports issued during Fourth Quarter	Proportion of Profits (after deb. interest)			Rate of Payment on each Class of Capital			
	Paid in Pref. Div. %	Paid in Ord. Div. %	Put to Reserve or Carried Forward %	Debt-holders %	Preference %	Earned for Ordinary %	Paid on Ordinary %
1929 ...	16.0	66.0	18.0	5.29	4.7	13.5	10.6
1930 ...	21.9	60.2	17.9	5.19	4.5	10.3	8.4
1931 ...	43.1	76.9	Dr. 20.0	5.18	3.8	2.9	3.9
1932 ...	32.4	75.4	Dr. 7.8	5.16	3.6	4.4	4.9
1933 ...	23.4	64.3	12.3	5.04	3.2	6.2	5.2
1934 ...	19.6	59.9	20.5	4.95	3.7	9.9	6.8
1935 ...	19.0	55.2	25.8	4.84	4.5	11.6	7.9

1937 ...	15.7	51.6	32.7	4.59	5.4	18.2	11.2
1938 ...	13.9	48.8	37.3	4.47	5.0	18.7	10.6

of reserves in liquid form) could be used to cushion any decline in dividends. In the past few months, however, dividend reductions corresponding with the decline in earnings have been the rule.

Commodity Prices

UNDER the influence of the recession in British and world economic activity the trend of commodity prices remained downwards during the past year. The downward movement was arrested in the early summer, mainly under the impact of recovery in the United States, but, after a brief recovery, prices continued to fall.

As usual in recession the fall was most marked in the case of raw materials and least in finished goods. This tendency is strikingly revealed by the Board of Trade indices of average import and export prices. Thus, while the average price of our imports of raw materials fell by 10 per cent. between the fourth quarter of 1937 and 1938, that of exports of domestic manufactures fell by only 1.5 per cent. The comparative stability of the prices of finished goods, however, is not revealed by our own price index, which is based chiefly on raw materials and semi-manufactured goods.

The movement of the component series of *The Economist* index is shown below, on the basis of 1927:—

(1927 = 100)

Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average 1929	96.9	85.8	92.2	95.6	90.5	92.4
" 1930	81.0	77.2	64.4	83.6	81.6	77.6
" 1931	68.7	65.3	50.0	73.1	68.4	64.9
" 1932	68.2	62.5	49.2	72.9	61.9	62.6
" 1933	64.4	58.7	50.9	77.2	65.6	63.1

" Nov. "	65.9	57.6	53.2	94.9	75.3	68.6
" Dec. "	70.1	57.5	52.6	94.4	74.9	69.2

The Complete index fell by 10.4 per cent. between December, 1937, and the corresponding month last year. But the movements of the component series during that period were far from uniform. There was a sharp fall in the figure for cereals and meat, accompanied by a lesser

reduction in other foods, textiles and miscellaneous commodities, and a slight rise in the index for minerals.

Apart from the stability of the prices of finished goods compared with those of raw materials, the feature of the past year was the extent of the change in price relationships between individual raw materials and semi-manufactured goods. The prices of home-produced materials fell much less than those of many imported products. Iron and steel prices, for example, were maintained at boom levels throughout the year, in face of a sharp decline in demand.

The next table shows the movement of the constituent series of our complete index on the basis of the pre-war year 1913:—

(1913 = 100)

Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average, 1930	113.4	122.9	99.1	101.6	101.5	106.8
" 1931	96.1	104.1	77.0	88.9	85.3	89.3
" 1932	95.4	99.6	75.7	88.6	77.1	86.1
" 1933	90.1	93.5	77.6	93.9	81.7	86.8
" 1934	96.7	94.0	83.2	93.6	85.7	90.3
" 1935	97.8	96.5	87.8	97.1	93.1	94.3
" 1936	107.5	97.3	95.2	102.9	97.4	100.1
" 1937	126.8	107.3	104.6	126.0	104.5	113.6
" 1938	111.7	93.5	83.2	113.2	94.4	98.9
End June 1934	95.7	93.4	81.5	93.6	86.1	89.7
" Dec. "	97.9	95.8	84.0	92.2	86.4	90.9
" June 1935	95.8	94.2	85.4	95.7	93.4	92.9
" Dec. "	100.6	98.3	95.0	100.1	97.3	98.2
" June 1936	98.2	93.8	91.4	98.2	96.9	95.9
" Dec. "	120.9	104.5	103.9	116.0	101.1	109.1
" June 1937	127.6	107.6	108.9	129.5	107.1	116.0
" Dec. "	126.9	100.4	91.9	113.6	99.2	106.2
" June, 1938	121.0	91.8	79.3	110.9	93.6	98.9
" Dec. "	98.1	91.5	81.1	114.8	93.2	95.2

The figures show that prices of raw materials and semi-finished products, on the average, again fell below the pre-war level of 1913 in the past year. With the exception of the figure for minerals, which includes the home-produced materials coal and iron and steel, the constituent series were all lower last December than in 1913, while all the series were appreciably lower than in 1929.

In addition to the Complete index, which is based on raw materials and on semi-manufactured goods, *The Economist* also publishes indices of raw materials alone, both for this country and for the United States. These figures are shown in the next table.

(September 18, 1931 = 100)

	Sterling Prices (Primary Products)		Dollar Prices	
December 30 1931	117.1		94.4	
December 28 1932	109.3		76.9	
December 27 1933	113.9		119.8	
January 2 1934	123.7		154.5	
March 27 1934	123.3		147.6	
June 19 1934	125.6		144.2	
September 25 1934	131.3		148.6	
January 1 1935	131.2		143.3	
March 25 1935	133.9		144.3	
June 24 1935	133.2		147.0	
September 30 1935	144.5		159.6	
December 30 1935	163.9		187.3	
March 31 1937	181.9		199.7	
June 30 1937	165.9		176.8	
September 22 1937	164.0		166.3	
December 29 1937	147.4		135.3	
March 30 1938	137.0		129.3	
June 22 1938	133.2		124.8	
September 28 1938	134.8		127.0	
December 22 1938	132.4		126.5	

The prices of many raw materials are very sensitive to changes in market psychology. Both indices clearly reveal

the effect of the improvement in "business sentiment" in the summer and the recurrence of pessimism in the autumn, due largely to the deterioration in international political relations.

The last table shows the annual movement of the constituent series of the complete *Economist* index since 1931 on the basis of 1924:—

YEARLY AVERAGE (1924 = 100)

	1931	1932	1933	1934	1935	1936	1937	1938
Cereals and meat	60.1	59.7	56.3	60.4	61.2	67.3	79.4	69.9
Other foods	61.2	58.6	55.0	55.3	56.8	57.3	63.2	55.1
Textiles	36.6	35.9	37.2	39.5	41.7	45.2	49.7	39.5
Minerals	61.2	61.0	64.7	64.3	66.8	70.9	86.9	77.9
Miscellaneous	64.8	58.6	62.1	65.2	70.8	74.0	79.5	71.8

Complete index 56.1 54.0 54.5 56.7 59.2 62.9 71.3 62.1

The Complete index for 1938 was the lowest since 1935.

MONEY AND BANKING

The Money Market

THE Money Market last year varied between a continuance of the quiet conditions, with low rates, which characterised it in 1937, and short periods of stringency with rising rates as a result of external influences and the vagaries of the calendar. Last year in this survey we wrote that "Interest, indeed, attached less to the efficacy of the machinery for maintaining cheap money than in the method of its operation." In 1938 the machinery's efficacy was severely tested, and the question of its ability to stand the strain is the outstanding consideration. It may be said at once that, having regard to the unusually grave political situation, and the big withdrawals of funds from London, the success achieved was remarkable.

The year opened with low discount rates and comfortable credit conditions which persisted throughout the first quarter. The news of the *Anschluss*, which had wide repercussions in the foreign exchange and stock markets, failed to ruffle the calm of Lombard Street, and even outside quarters were sufficiently supplied with funds for bond money to be available at $\frac{1}{8}$ per cent. That the calm was partly due to official intervention, for the Bank Return for March 16th showed an increase in Government securities and a rise of over £4½ millions in bankers' deposits, is possible, but the low rate for bond money from outside banks suggests that the flight of capital to New York was not of the extent indicated by the sharp fall in the sterling-dollar rate during the critical days. The first crisis of the year, therefore, did not provide a true measure of the adequacy of official tactics.

A better test came in May when a week-end of international tension supervened on a period of temporary stringency resulting from the return of capital to France after the publication of M. Daladier's decrees. The latter factor had already caused a momentary rise in bond money to $\frac{1}{4}$ -1 per cent., and the clearing banks had had to call in money to replenish their cash reserves, when the Central European situation suddenly took a turn for the worse. The fact that the crisis coincided with the week-end was in itself enough to prevent any serious dislocation, for by the time the markets reopened on the Monday the tension had relaxed. But the tactics of the authorities in offsetting the effect of the withdrawal of French funds by special purchases of bills probably explains why the political situation failed to cause even a slight intensification of the existing conditions.

The half-year passed without any untoward incident. The discount market had arranged that its payments for the bills allotted at the previous tender should be made on July 1st. This obviated any monetary discomfort on June 30th; but as July 1st was also a date when a call of £38 millions was made on the issue of the second instalment of the National Defence Loan, totalling £80 millions and offered at 98, some credit stringency was expected. In actual fact dividend disbursements of £11 millions reduced the sum to be found to £27 millions, which presented no difficulty as the banks were by then

eager purchasers of bills to make up for their very small purchases in June.

The severest test to which the machinery for maintaining cheap money was put came, naturally, in the September crisis. The strong desire for liquidity resulted in a sharp contraction in the usual demand for bills, and the average rate at which the Treasury bills were allotted at the weekly tenders rose from 10s. 5.87d. per cent. on September 2nd to 18s. 10.75d. on the 16th, 19s. 7.07d. on the 23rd, and £1 5s. 1.4d. on September 30th. At the same time the rate for the three months' bank draft rose from just over $\frac{1}{2}$ per cent. in the early days of September to $\frac{3}{4}$ per cent. in the middle of the month and 1½ per cent. on September 29th, while many market houses preferred to obtain their bond money from the clearing banks at the fixed charge of 1 per cent. rather than rely upon the rapidly dwindling supplies of outside money. In addition to the reluctance to take bills, the rise in the note circulation was another factor curtailing the supplies of credit. The Bank of England Return for September 28th showed an increase of as much as £21.7 millions on the week, for, besides the natural desire of the public for extra cash, in preparation of an emergency the banks had strengthened their currency reserves all over the country. This liquidity preference, whether shown in reluctance to undertake new commitments or in the desire for cash, taken in conjunction with the exodus of money to the United States, provided the authorities with a difficult problem; but that they were able to prevent any serious disturbance, by special purchases of bills and the rapid re-investment of the proceeds of the Exchange Account's gold sales, is shown by the reduction of only £1 million in bankers' deposits at the Bank of England in the week to September 28th. Moreover, once tension was eased, discount rates soon fell to their previous levels.

Shortly after this the clearing banks decided not to accept bills of local authorities as security for money market loans unless they were rediscountable at the Bank of England. Several municipalities had taken advantage of the low rates for bills to raise money in that way, as it was considerably cheaper than an overdraft; and during the crisis, when outside money was scarce, they were offered as security to the clearing banks, who questioned their legality and, still more, the expediency of encouraging local authorities to run up floating debts. But their ruling was arbitrary, for it excluded paper, such as Northern Ireland Treasury bills, which as security was above suspicion; and in December the Bank of England announced that, under certain conditions, it would extend its discounting facilities, hitherto limited to Glasgow, Liverpool, L.C.C. and Metropolitan Water Board bills, to those local authorities and other public bodies which had power to raise money by bills under Act of Parliament.

The final period of stringency was experienced at the very end of the year. In strong contrast to the previous year, when December 31st came without any borrowing by the market at the Bank of England, the market at the end of 1938 was forced to borrow sums estimated at as much as £45 millions. The chief reason for this unusually large borrowing was the incidence of December 31st. As it fell on a Saturday it meant that the market had to take up all the bills allotted on December 23rd before the year closed. Their corresponding maturities, moreover, were small as a result of their absence from tendering, and the official purchases of December bills, at the time of the crisis: The banks, too, were even less keen buyers of bills than usual, for the withdrawal of foreign funds, both in repatriations to France and in purchases of dollars, was making them more than usually anxious about the picture their cash position would make in their balance sheets. Finally, the authorities appeared to consider that an obviously temporary period of stringency did not merit the same neutralising action that had been taken on the previous occasions, for throughout the difficult week there was no evidence of any special purchases of bills. However, the practice, initiated in 1937, of offsetting the Christmas expansion in the note circulation by increasing the fiduciary issue, was repeated, an increase of £30 millions being announced on December 6th.

In brief, the history of the money market last year may

be summed up as follows: the most important influence was the withdrawal of foreign funds, which was the chief cause of the decline in deposits of the ten English clearing banks of £77 millions during the year; these withdrawals were covered by gold sales by the Exchange Account, which took over tap Treasury bills with the sterling proceeds, the consequent transfer from bankers' deposits to public deposits being only temporary (the more permanent effect—the reduction in tender bills—was only beginning to be felt when the year closed); finally, the fact that the fall in bankers' deposits did not involve a contraction in cash or calling-in of advances is evidence that, taking the year as a whole, supplies of money and credit were as plentiful as ever, and evidence, too, of the efficiency of the machinery for maintaining them. The current year will show how it will cope with the problem arising from the contraction in the tender issue of Treasury bills, which over the whole of last year amounted to £134 millions, and the ensuing fall in the ratio to deposits of the banks' discounts and call money which constitute their second line of liquid assets.

Bank Clearings

THAT the 1938 returns of London and Provincial bank clearings should show a fall not only on the previous year but also on 1936 is not surprising in view of the trade recession and the political uncertainty.

	1936	1937	1938
	(£ millions)		
Town clearings	35,039	36,719	33,862
Metropolitan clearings.....	2,040	2,162	2,075
Country clearings	3,538	3,805	3,673
Total, London clearings ...	40,617	42,686	39,610
Provincial clearings	1,394	1,472	1,258

Analysed quarterly, however, the London clearings, if they are any use at all as a barometer of business activity, showed some improvement as the year progressed. Thus, town clearings, which, as is well known, are mainly governed by Stock Exchange dealings, showed a fall of 10.8 per cent. in the first quarter, compared with the first quarter of 1937, and of 12.3 per cent. in the second quarter, were only 3.1 per cent. lower in the third quarter, while in the last quarter they were actually 4.2 per cent. higher than in the final quarter of 1937, when, of course, the trade recession was well under way. Somewhat surprisingly, metropolitan and country clearings were slightly higher in the first quarter, but in the last quarter were down by 3.4 per cent. and 4.5 per cent. respectively, so that the total London clearings showed a fall of 4.1 per cent. compared with the fourth quarter of 1937. In provincial clearings over the whole year, the biggest decline was shown by Liverpool with a fall of 24.3 per cent. compared with 1937, followed by a decline of 20.7 per cent. for Bradford, 15.9 per cent. for Manchester and 10.5 per cent. for Birmingham.

The Foreign Exchanges

FOR the first two or three months of last year conditions in the foreign exchange market were much the same as those obtaining in 1937, but later a complete reversal became apparent and London not only ceded to New York pride of place for refugee capital but even became suspect in view of the continued deterioration of sterling. At the same time, the return of confidence in the franc, which was accelerated after the appointment of M. Paul Reynaud as Finance Minister on November 1st, induced the repatriation of French funds so that the pound was pulled downwards from two directions. The result was that fluctuations in the sterling-dollar rate were wider than for some years, and the pound on December 31st was quoted at \$4.64½, compared with \$4.99½ on January 1st.

After an initial period of firmness in January and February, when there were rumours of a further devaluation of the dollar, the rate was fairly steady at an average of about \$5 to the pound throughout the first quarter, save for a

brief scurry at the time of the *Anschluss*, when it fell to \$4.94½. In the second quarter, which included the May crisis and the beginning of the repatriation of French funds, the rate was more often below \$5 than above, and by the end of the half-year was around the \$4.95 level. The next three months were a period of rapid depreciation. The opinion had been expressed that \$4.86 would mark the bottom of the pound's fall and that the authorities, helped by the psychological effect of "mint par," would be prepared to keep it at that level. This proved unjustified, for in the last days of August, a month before the international crisis was to wreak such havoc in the exchanges, the dollar was at one time quoted as low as \$4.84½. The trend of sentiment was thus clearly against the pound, and the rush of selling in the last week of September, which brought it down to \$4.60, was a momentary intensification for political reasons of a gradual readjustment to a value which was more in harmony with the United Kingdom's overseas trade position than that with which the year opened. The crisis carried it too far, and the relaxation of tension was promptly reflected in a recovery in the rate to around \$4.80 in the early days of October; but in November and December the tendency was downward in spite of covering operations in the latter month by speculators who had sold forward in the critical days of September. That the authorities were concerned at the continued pressure was shown by the unofficial request to the clearing banks in December to abstain from taking advantage of the premium of about 2½ cents for the three months forward dollar to make profitable "swap" transactions. At about the same time they were also requested to discourage the raising of credit against gold. It was the weakness of the pound, too, which led to the full reimposition of the embargo on issues of capital for transfer abroad, which was announced on December 20.

The extent to which the Exchange Account was forced to intervene in support of sterling is illustrated by the return of its gold holdings on September 30th, as shown in the following table:—

BRITISH MONETARY GOLD STOCKS, 1938

Quantity (million fine ounces):	Mar. 31	Sept. 30	Intervening Change
Bank of England	76.8	76.8	...
Exchange Account.....	42.5	21.7	— 20.8
Total	119.3	98.5	— 20.8
Value (£ millions: at 140s. per fine ounce):			
Bank of England	537.6	537.6	...
Exchange Account.....	297.8	151.8	— 146.0
Total	835.4	689.4	— 146.0

This shows that the Account lost £146 millions of gold during the six months from April to September, and further heavy losses must have been suffered in the last quarter of the year.

The other source of pressure on sterling, the repatriation of French funds, was also mainly confined to the second half of the year. After 1938 opened the franc was subject to a new crisis which forced the spot rate up to 155½ francs, while forward discounts were as wide as 2½ francs for one month and 6½ francs for three months. Speculation against the franc continued, and in early May M. Daladier's Government decided on a further devaluation, declaring that the sterling rate would never be higher than 179 f. In this object they were fairly successful, for the spot rate only rose above the limit agreed upon during the time of international crisis; but the forward outright rate for three months was on several occasions over 180 francs to the pound.

The May devaluation caused a certain amount of funds to return to France, but confidence in the state of French finances was still lacking, while the international situation checked the incipient repatriation movement. It was not until after the appointment of M. Paul Reynaud as Finance Minister, and the ensuing efforts to restore Budget equilibrium and increase production, that capital was persuaded to return on a large scale. The small improvement in the franc exchange since November is no measure of the extent to which funds have been repatriated; for the French Control has consistently prevented any big app

freely selling francs to meet the demand. A better indication is provided by the forward rate, which for one month was quoted at about par at the end of the year, and for three months was on the same date at a discount of only ½ franc, compared with 6 francs two months earlier.

Chief interest in the foreign exchange market last year was naturally centred in the weakness of sterling and the recovery of the franc, but movements in other currencies were not without importance. On the Continent, the decline in the pound was noted with some anxiety by countries which had pegged their currencies to sterling. Thus, the franc at the end of the year was maintaining a closer link to the dollar than the pound; the guilder left the sterling *bloc* during the crisis; and the Swiss franc was not allowed to follow the pound downward but showed a net appreciation of 4 to 5 per cent. during the year. The Scandinavian currencies, on the other hand, remained full members of the sterling *bloc*. The belga was at times subject to speculative attacks, but was successfully defended.

Outside Europe the free peso depreciated by nearly 17 per cent. against sterling, owing to the severe deterioration of Argentina's trade balance. In the Far East the Japanese yen was maintained at 1s. 2d., but the Shanghai dollar broke badly in the summer, falling to 7½d. in June, and at the end of the year was nominally quoted at about 8½d. Both countries intensified their exchange control measures during 1938. The introduction of a new currency into the Chinese territory occupied by the Japanese, with the object of obtaining the Chinese Government's monetary reserves, was an added pressure on the Shanghai dollar, which was already feeling the strain caused by the war and the consequent decline in foreign trade.

Gold Output and Movements

THE following table shows world gold production during each of the past two years, as estimated by the Union Corporation. No final figures for 1938 are available yet, but the figures given for South Africa, Canada and Australia are substantially accurate. The Russian returns for both years are uncertain, as no official figures are given.

	Thousand fine ounces	
	1937	1938
South Africa	11,735	12,160
U.S.S.R.	6,000	5,000
Canada	4,091	4,680
U.S.A.	4,089	4,250
Australia	1,380	1,570
Other countries	8,205	9,040
	35,500	36,700

Gold movements last year were complicated by various factors arising from the international situation. For the first few months, however, before the decline in sterling gathered up speed, dealings in the London bullion market were mostly governed by demand from hoarders, this tendency being stimulated at times by rumours of a further devaluation of the dollar. At one time in February the demand raised the premium over the American shipping parity to a point which was high enough to encourage arbitrage shipments from the United States. The distrust of the dollar, and, therefore, the strength of sterling, hid the fact that the pound was, on commercial standards, overvalued; and in May the unofficial embargo on loans against gold was raised, only to be reimposed, so far as spot gold was concerned, in December, and on forward gold shortly after the year closed. Towards the end of the year, too, the decline in sterling led to a record price of gold, amounting to 150s. a fine ounce at the fixing on November 26.

The effects of the crisis were threefold. In the first place, hoarders, contrary to their usual practice, switched over from gold to dollars, fearing that their gold holdings might be mobilised in the event of war; secondly, shipments both from South Africa to the United Kingdom and by arbitrageurs to the United States were suspended as a result of the confusion over war risk insurance; and thirdly, the authorities adopted the policy of keeping part of the country's gold stocks overseas.

The next table should be studied in the light of these considerations. The decline in imports from South Africa is counterbalanced by the earmarking of Transvaal gold since September by the Exchange Account at the South African Reserve Bank; and part at least of the exports to Canada may represent official shipments. The increased exports to the United States are clearly complementary to the disclosed losses of the Exchange Account resulting from its defence of sterling.

GOLD BULLION IMPORTS AND EXPORTS

	(£ millions)					
	1937			1938		
	Imports from	Exports to	Net Exports (+) or Imports (—)	Imports from	Exports to	Net Exports (+) or Imports (—)
India	13.3	...	— 13.3	26.0	...	— 26.0
South Africa	79.9	...	— 79.9	52.5	...	— 52.5
Australia	4.3	...	— 4.3	5.6	...	— 5.6
Canada	0.5	...	— 0.5	...	3.4	+ 3.4
Germany	10.0	0.8	— 9.2	6.9	...	— 6.9
Holland	1.5	5.1	+ 3.6	7.2	4.4	— 2.8
France	115.9	3.6	— 112.3	17.5	0.6	— 16.9
Belgium	2.4	7.3	+ 4.9	73.7	3.4	— 70.3
Switzerland	1.5	4.8	+ 3.3	2.6	19.1	+ 16.5
Russia	40.4	...	— 40.4	23.3	...	— 23.3
United States	1.0	168.8	+ 167.8	...	...	+ 216.9

The net results of gold movements so far as Great Britain is concerned, together with the imports and exports of gold coin, are shown in the following table:—

BRITISH GOLD IMPORTS AND EXPORTS

	Bullion		Specie			
			Foreign Coin		British Coin	
	1937	1938	1937	1938	1937	1938
Imports	£ millions 290.2	210.1	£ millions 2.8	12.8	£ millions 2.2	16.7
Exports	210.7	272.5	2.4	16.0	2.4	13.8
Import surplus ...	79.5	...	0.4	...	...	2.9
Export surplus ...	...	62.4	...	3.2	0.2	...

The practice of earmarking renders the above tables inconclusive. For, in addition to the earmarking at the South African Reserve Bank, already referred to, a large part of the imports from Belgium is believed to be earmarked on Belgian account, while it is known that the Exchange Account has made large gold sales, against the repatriation of French funds, which, according to the table giving movements by countries, have not yet been shipped. These two factors must outweigh the earmarking for Great Britain's account at the South African Reserve Bank, so that this country's net gold losses last year cannot be measured by the figure of £62.4 millions given in the returns.

The final table is taken from the Federal Reserve Bulletin's monthly compilation of the gold holdings of central banks. It does not include holdings of Exchange Funds which are only revealed at infrequent intervals. The British Exchange Account held gold to the value of \$1,489 millions on March 31st and \$759 millions at the end of September. The latest return for Italian gold holdings is for December, 1937, and the figure for that month is consequently repeated for subsequent months.

GOLD HOLDINGS OF CENTRAL BANKS AND GOVERNMENTS (\$ millions)

	1938 (End of Month)	January	March	June	September	November
England	2,689	2,689	2,689	2,689	2,689	2,689

China	16	16	16	17	18	18
Japan	261	261	261	164	164*	164*

* October.

As so much gold is now held by Exchange Funds, the above table gives only a very incomplete picture of the

effects of last year's gold movements on central bank gold reserves. But it shows clearly that the United States made substantial additions to its gold holdings as a result of the crisis in September and the sharp decline in sterling in the last months of the year.

INVESTMENT

New Capital Issues

AN exceptionally low degree of activity characterised the capital market in 1938. The total of £153 millions of new money subscribed (calculated on our "old basis"—that is, offers by prospectus, offers for sale and issues to shareholders only) was the lowest of any recent year except 1931 and 1934. In the first of the accompanying tables, we analyse the amounts raised by different types of borrowers. Perhaps the chief feature of the year was the relative scarcity of subscriptions to new industrial companies, and even then the great majority of public industrial issues, mostly by existing companies, were for debentures and preference shares. The industrial equity made but rare appearances during the year—which showed, incidentally, a rising trend of interest rates. The level of non-gilt-edged borrowing, however, remained above that for the depression years 1931-33.

TOTAL BORROWING BY OFFERS TO PUBLIC AND TO SHAREHOLDERS ONLY
(Million £)

Calendar Years	British				Empire	Foreign	Total Issues	Index 1928 = 100
	Government	Home Corporations*	Others	Total Home				
1930	65.6	41.7	63.3	170.6	61.4	35.8	267.8	73
1931	10.7	8.0	35.8	54.5	38.5	9.1	102.1	28
1932	102.7	28.8	31.6	163.1	25.5	0.3	188.9	51
1933	150.8	24.5	34.9	210.2	29.2	5.4	244.8	66
1934	44.1	36.1	57.5	137.7	29.9	1.5	169.1	46
1935	88.0	51.1	81.6	220.7	15.2	0.2	236.1	64
1936	60.2	79.5	90.6	230.3	24.7	0.7	255.7	69
1937	95.8	49.7	84.7	224.2	21.1	6.3	251.6	68
1938	75.9	24.9	52.2	153.0	24.3	2.3	180.1	49

* Including county and public board loans.

The main event of the year in the capital market was the issue at 98 of £80 millions British Government 3 per cent. National Defence Loan, 1954-58. A yield of £3 2s. 8d. per cent. was offered (against £2 11s. for the 1937 loan of £100 millions), and the loan succeeded much better than the first issue of Defence bonds in 1937.

Our second table, which includes placings by means of Stock Exchange introduction and the granting of permission to deal shows more clearly still how much new issue activity fell off as compared with 1937, which in turn was less active than in 1936. Stock Exchange introductions, which had been assuming an increasingly important rôle in the capital market, became less numerous as industrial enterprise declined.

TOTAL BORROWING, INCLUDING STOCK EXCHANGE "PERMISSION TO DEAL"
(Million £)

Calendar Years	British				Empire	Foreign	Total Issues
	Government	Home Corporations*	Others	Total Home			
1936	60.2	82.1	306.1	448.4	33.8	11.7	493.9
1937	143.1	45.3	199.1	387.5	63.4	7.1	458.0
1938	75.9	27.7	110.1	213.7	53.7	5.7	273.1

* Including county and public board loans.

Interest rates have been rising, and neither rates nor maturities have provided outstanding opportunities for conversion. During 1938 (as in 1937) the British Government effected no conversions, and the totals dealt with

CONVERSION ISSUES (MILLION £)						
	1932	1934	1935	1936	1937	1938
British Govt.	2,478.9	105.0	204.0	37.2	Nil	Nil
Other	31.8	136.9	108.2	109.7	58.5	23.6
Total	2,510.7	241.9	312.2	146.9	58.5	23.6

by other borrowers were lower even than in 1932, as we show in our third table. The largest conversion issues were, in January £10 millions 3½ per cent. stock by Canada, and in May £7 millions 3½ per cent. stock by Australia. In December, the issue of Australia 4 per cent. stock was for a relatively small amount, but significantly involved a higher yield than the stock replaced.

The Stock Exchange

ON balance security prices fell less severely in 1938 than in 1937. But it was an equally depressing and far more anxious year, with shrinking turnover and a downward drift in quotations punctuated only by political crises and the recoveries following them. The economic factor was uppermost for only a short while, with eyes turned towards America for signs of revival. But most of the time European politics were the prime consideration, owing to which scarcely any attention was paid to steadier business conditions at home since the summer, and an improved outlook in the United States of America, which in that country—but not in this—found reflection in brighter stock markets during the second half-year.

After running on a fairly even keel for two months, the market's first recession came in February on Mr Eden's resignation. A fresh and sharper plunge followed in March on the Austrian crisis. Pre-Anschluss prices had virtually been regained, when events in Czecho-Slovakia in May began a slower but just as severe decline. In June and July there was again some recovery. Then uneasiness over German military manoeuvres caused a general sagging, culminating in the crisis at the end of September. Quotations slumped all round, and finally jobbers in the gilt-edged market arranged minimum prices among themselves. After Munich, prices rebounded sharply. At the time much was made of the fact that pre-crisis price levels were exceeded, and in the following weeks further gains were made. But after mid-November an insidious deterioration set in, which slowly brought the end-of-year prices so near to the crisis level that in January, 1939, quotations did not have to fall far for that level to be broken through. In the following table we show the course of prices indicated by the Actuaries' investment index (December 31, 1938).

End of	Fixed Interest Securities			Ordinary Shares		
	2½% Consols.	Miscell. Indus. Debts.	Miscell. Indus. Pref.	Home Rails	Iron and Steel	Miscell.

June, "	131.5	120.4	112.8	50.4	54.3	60.5
July, "	134.5	120.9	114.5	39.3	51.7	61.0
August, "	131.9	121.0	114.5	38.2	48.9	58.9
September, "	119.1	118.7	111.6	34.2	45.4	53.7
October, "	127.8	119.7	112.4	37.6	55.6	59.0
November, "	126.6	119.7	111.4	33.7	53.8	59.1
December, "	125.3	119.6	110.5	35.0	54.1	58.3

The gilt-edged market alone began the year well; March, however, brought a sharp fall, and though recovery followed, the position at the early part of the year was never quite caught up. Conditions at the September crisis were unprecedented; prices were quoted very wide, and War Loan at one time was dealt in as low as 90. Among Dominions stocks, the only point of interest was the weakness of New Zealand issues which began with news of the

social security scheme. Fluctuations in Austrian and Czecho-Slovakian loans, and also in Japanese and Chinese bonds, were necessarily considerable.

No group of stocks suffered more severely in 1938 than home rails. Values were virtually halved, and after a year of unsatisfactory traffics a surprise campaign for a "Square Deal" began in November. By failure to pay 5½ per cent. on the "C" stock for the third time, the L.P.T.B. became liable to be put under a receivership. But in January, 1939, application was made for an increase of fares, and until this is settled "C" stockholders are delaying action.

The weakness of industrials is indicated by the *Financial News* price index, which started at 95.7, reached a high of 97.2 soon after, a low of 73.7 on September 28, but ended the year no better than 80.4. Iron and steel shares (in which group the main event of the year was the re-financing of Richard Thomas in July) declined like other sections in spite of re-armament. Textiles were particularly weak, and breweries ended the year even lower than in September, the implications of certain legal decisions and the possibility of fresh taxation causing persistent declines. Oil shares followed their own course and declined only by about 8 per cent. on the year. A low point was reached in March on the Mexican Government's expropriations. The rubber market was stagnant, and while mining shares generally did not fall so much as industrials, and gains were by no means uncommon, the year showed declines or irregularity. The following chart shows the course of industrial share prices in this country and the United States of America:—

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935 = 100)

British: *Financial News* Index of 30 Ordinary Shares.
American: *Standard Statistics* Index of 50 Common Stocks.

Outside the actual stock markets the question of non-member share dealers was to the fore. The Sharepushing Bill was presented in July, requiring the licensing of dealers who are not members of the Stock Exchange or of recognised associations of dealers. The Association of Stock and Share dealers was registered, and the Stock Exchange formulated new rules for dealings between members and non-members.

LABOUR CONDITIONS

IN 1937 the average number of insured persons (aged 16-64) in work was 11,497,000, a new high record. In 1938 the persistence of recession brought the average down to 11,405,000, a small fall in the circumstances. Unemployment rose from a monthly average of 1,413,000 in 1937 to 1,791,000 in 1938; at the end of the year the two million mark was in sight; and the average percentage of insured persons (aged 16-64) out of work in 1938 was 12.66 compared with 10.75 in 1937. The first table shows monthly figures of employment and unemployment.

The rise in unemployment was most marked in the North-Western and Midlands Divisions and smallest in the South-Western, Northern and Scottish Divisions, though unemployment remained strikingly highest in Wales (24.7 per cent.), the Northern Division (18.3 per

EMPLOYMENT IN 1937 AND 1938

	Insured Employed (a)		Insured Unemployed (b)		Insured Unemployed (c)	
	1937	1938	1937	1938	1937	1938

November	11,580	11,428	1,432	1,828	10.7	12.7
December	11,444	11,452	1,584	1,831	11.8	12.7
Average ...	11,497	11,405	1,413	1,791	10.75	12.66

(a) Estimate of number of insured persons aged 16-64 in employment in Great Britain (excluding Agriculture) with allowance of 3½ per cent. absence for sickness, etc.

(b) Insured persons aged 16-64 unemployed in Great Britain.

(c) Percentage unemployed among insured workers aged 16-64 in Great Britain. * Revised procedure for counting unemployed introduced.

cent.), the North-Western (17.8 per cent.) and Scotland (16.3 per cent.). In London and the South-Eastern and South-Western Divisions the unemployment percentages ranged about 8 per cent. compared with between 6 and 7 per cent. in 1937.

In the cotton industry the average percentage rate of unemployment rose from 11.5 in 1937 to 26 in 1938. Unemployment in coal-mining rose only slightly over the year, but in pig-iron manufacture the rate rose from 10 per cent. to 16 per cent., in iron and steel manufacture from 11 per cent. to 21 per cent., and in the tinplate industry from 13 per cent. to nearly 40 per cent. In most branches of engineering the increases in the rate of unemployment over the year were small. In shipbuilding and repairing the rate fell from 24 per cent. to 21 per cent.

Average weekly full-time rates of wages, in industry and agriculture, continued to rise, the increase over 1937 being between 1 and 1½ per cent. After May, however, when the delayed impetus of the activity of 1937 slackened, wage decreases more than counterbalanced wage increases, and there was probably an appreciable rise in short-time working, which suggests that actual earnings in 1938 were distinctly lower than in 1937. The next table gives details of wages, cost of living and trade disputes:—

WAGES, PRICES AND TRADE DISPUTES, 1937 AND 1938

	Wages (a)		Cost of Living (b)		Trade Disputes (c)	
	1937	1938	1937	1938	1937	1938
January	98½	102½	151	159	000's 306	000's 103
February	99½	103	151	157	84	133
March	99½	103	151	156	220	113
April	100	103½	151	154	480	151
May	100	103½	152	156	814	185
June	100	103½	152	155	111	175

August	100½	103½	155	156	228	90
September	101½	103½	155	156	228	90
October	101½	103½	158	155	285	90
November	102½	103½	160	156	152	90
December	102½	103½	160	156	45	29
Average ...	100½	103	154	156	350	110

(a) Index (1924 = 100) compiled by Prof. Bowley, eliminating seasonal fluctuation.
(b) Ministry of Labour Index for 1st of month (July 1, 1914 = 100).
(c) Number of working days lost.

The cost of living index at the end of 1938 was four points below the December, 1937, figure, mainly due to falls in food prices. Real wage rates were higher in 1938 than for several years, though total earnings were falling off. Industrial relations were peaceful, the number of trade disputes being only 866, affecting a quarter of a million workpeople, compared with 1,129, affecting 610,200 in 1937. There were no major disputes. All in all, apart from the spreading shadow of unemployment, 1938 was a remarkably good year in the labour world: conciliation machinery worked well, holidays with pay were widely conceded and officially approved by the Amulree Committee; and twelve months of bad trade were weathered with no serious attacks on wage levels.

Overseas Countries

British Empire

Canada

THE economic record for 1938 was not wholly satisfactory. There was no serious slump, but hopes of making fresh headway towards real prosperity were not fulfilled. The Bureau of Statistics index for the physical volume of business (1926=100) was 112.7 for the year, a decline of roughly 9 per cent. from the 1937 figure. The most serious adverse factor was the continuance of grave international disturbances and tensions and the further development of economic nationalism in various countries. These conditions operated to diminish Canada's export sales.

Canadian industry also suffered from the serious recession in the United States during the earlier part of the year. Curtailed exports caused a lowering of purchasing power. Crops were reasonably good and there was a substantial increase in the grain yields of the prairie provinces, but, as it was accompanied by a sharp drop in the price of grain and other farm products, rural purchasing power in the second half of the year was rather lower than twelve months before.

Industry.—The mining industry continued to be the most reliable buttress of the national economy, and the output of established mines was well maintained. The estimated value of mineral production in 1938 was \$440,634,000, compared with \$457,359,092 in 1937, the 4 per cent. decline being largely due to lower base metal prices. The newsprint and lumber industries had a difficult year. There was an improvement in the fishing industry; but conditions in manufacturing were variable. The production of iron and steel declined sharply and most textile mills operated at well below capacity. Equipment and machinery firms, however, were reasonably busy and farm implement firms had more orders than in any recent years.

Agriculture.—The wheat crop was the largest for any year since 1932, amounting to 350,010,000 bushels compared with 180,210,000 bushels in 1937. The yield of the other principal field crops (with the 1937 figure in brackets) was as follows: oats, 371,382,000 bushels (268,442,000); barley, 102,242,000 bushels (83,124,000); rye, 10,988,000 bushels (5,771,000); mixed grains, 39,161,000 bushels (36,169,000). The total value of field crops is estimated at \$528,860,000 compared with \$556,220,000 in 1937, and total agricultural income at \$1,026 millions compared with \$1,054 millions.

Foreign Trade and Prices.—Foreign trade experienced a sharp decline. In the first eleven months of 1938 exports were valued at \$886,273,000, a fall of 15.3 per cent. compared with the corresponding months of 1937, and imports at \$633,165,368, a fall of 16.2 per cent. The new trade treaty with the United States is expected to stimulate exports. The trend of commodity prices was almost continuously downward, and in December the index of wholesale prices of the Bureau of Statistics (1926=100) was 73.3, compared with 82.7 in December, 1937, a decline of more than 11 per cent. The most serious fall was in vegetable products. The cost of living index showed no similar decline, being 83.5 in December compared with 84.0 for January.

Finance.—The Federal revenues have fallen off slightly, the yield for the first three quarters of the current fiscal year, that is, up to December 31, being \$394,821,748 compared with \$402,283,545 in the parallel period of 1937. Expenditure in the same period totalled \$366,901,152 compared with \$361,874,524. The Budget position was therefore worse by about 2½ million dollars with a quarter of the year yet to run. The debt embarrassments of the Western Provinces are still acute.

Employment was fairly well maintained. In the first eleven months of 1938 the number of wage earners in employment averaged 2,303,000, with about 400,000 unemployed on the average.

Australia

ECONOMIC activity in Australia continued at a high level despite adverse developments abroad. The large volume of exports in the year 1936-37 resulted in considerably higher imports in 1937-38 and a corresponding stimulus to business

activity of all kinds. Customs revenue was buoyant and direct taxation showed a marked increase in yield. Unemployment fell, the percentage of trade union members unemployed falling from 9.9 in March, 1937, to 8.0 in March, 1938, and then rising slightly to 8.6 in the June quarter. During the later part of the year a sharp fall in the prices of Australia's primary products had an adverse effect on the export trade.

Wool, Wheat and Gold.—The wool clip totalled 1,010 million lbs. in the 1937-38 season, compared with 975 million lbs. in 1936-37. The value of wool per lb. in 1937-38 averaged 1s. 1.7d. for greasy, and 1s. 10.0d. for scoured, compared with 1s. 5.4d. and 2s. 0.0d., respectively, in 1936-37. The area under wheat for the 1937-38 season was 13,680,500 acres, compared with 12,342,000 acres in 1936-37, and the yield was estimated at 187,795,000 bushels, against 150,468,000 bushels. The average export price of wheat fell from 5s. 2.7d. per bushel in 1936-37 to 4s. 5.1d. per bushel in 1937-38. Gold mining continued to expand, the value of the output rising from £10½ millions in 1936-37 to £12½ millions in the following year.

Overseas Trade.—Overseas trade showed a substantial advance. Imports in 1937-38 amounted (in sterling) to £111,427,000, an increase of £20,943,000 compared with 1936-37. The principal increases recorded were: an increase of £2,277,000 in textile material imports; a rise of £1,797,000 in the value of imported mineral oils; an increase of £3,711,000 in machinery imports; a rise of £2,141,000 in iron and steel plate and sheet; one of £2,563,000 in motor-car chassis and parts; and an advance of £1 million in timber purchases. Exports were valued at £111,943,000 sterling in 1937-38, a decrease during the year of £5,403,000. The merchandise figures show an export surplus of £515,905 in 1937-38, compared with £26,755,000 in 1936-37, while the export surplus in trade in bullion and specie amounted to £11,332,231 sterling, compared with £9,483,000 in the previous year.

Exports	1936-37		1937-38		Per cent. exported to Great Britain 1937-38
	Volume	Value (a)	Volume	Value (a)	
	lbs. millions	£'000's	lbs. millions	£'000's	%
Wool, greasy	759	55,155	722	41,282	40.9
Wool, scoured	72	7,347	82	7,348	50.5
Wheat	4,306	18,670	5,671	20,910	29.6
Flour	1,129	5,580	1,263	6,045	29.3
Butter	174	8,801	197	10,148	93.3
Frozen mutton & lamb	208	5,233	201	5,340	97.8
Frozen beef	233	8,036	283	4,342	93.0

(a) Recorded values in Australian currency.

Finance.—The accounts for both the Commonwealth and States for the year ended June 30, 1938, are set out in the following table:—

State	Revenue	Expenditure	Gross Public Debt
		(Values in £'000's)	
New South Wales	60,090	59,076	354,168
Victoria	27,617	27,587	177,228
Queensland	17,340	17,588	125,782
South Australia	12,460	12,336	107,450
West Australia	10,819	10,830	93,712
Tasmania	3,640	3,633	25,841
Six States	131,966	131,930	884,180
Commonwealth	89,458	85,964	390,845
Total	211,489	207,959	1,275,025

The Budget speech was delivered on September 21, 1938. It was announced that additional taxation is proposed to produce £3,210,000 during the current year. The principal changes are an increase of 15 per cent. in the rate of income tax for individuals and companies, a rise in the sales tax from 4 per cent. to 5 per cent.; and an increase in the land tax of 11.1 per cent. These increases in taxation are rendered necessary by the expenditure under the National Insurance Scheme, the reduced value of exports, and the higher expenditure for defence purposes.

The loans raised by the Commonwealth during the past

year, partly for conversion and partly for public works, were as follows:—

London:—	Amount	Price
Nov., 1937. 3½% 1951-54	11,409,965	97
May, 1938. 3½% 1952-56	7,000,000	99
Australia:—		
Nov., 1937. 3½% 1951	8,194,760	99½
May, 1938. 3½% 1952-54	10,418,130	99½
For States (over the counter)	1,312,340	Various

New Zealand

DURING 1938 New Zealand passed the peak of a period of expansion and entered on a recession, which is as yet more noticeable in external than in internal trade. For the twelve months ended January, 1938, export receipts reached the highest level ever recorded, £NZ67.17 millions. By October, the twelve months' total had fallen to £NZ58.79 millions. Imports rose to a peak of £NZ58.18 millions for the twelve months ended April, 1938, but by October the twelve months' total had fallen to £NZ55.43 millions. Stimulated by the high export income of last year and continued heavy expenditure on public works, internal trade was maintained at a high level. But costs were high, much labour was attracted from farming to public works, and farm production is tending to decline. There was considerable export of capital; the excess of exports is now insufficient to meet normal payments for interest, etc., overseas; the trade balance was adverse in the second half of the year, and sterling funds fell off heavily. In consequence, the Government imposed a system of exchange control (involving the licensing of both exports and imports) from December 5th, the financial outlook is causing concern, and further contraction of trade appears inevitable.

External Trade.—Overseas trade returns, for recent years ended October, are as follows:—

Year ended Oct. 31	£ millions		In Sterling	
	Exports	Imports	Exports	Imports
1929	55.88	48.93	55.88	48.93
1933	39.74	25.61	32.43	20.97
1934	49.02	30.16	39.21	24.13
1935	44.15	35.58	35.44	28.56
1936	56.41	42.02	45.31	33.75
1937	66.33	54.98	53.28	44.16
1938	58.79	55.43	47.22	44.52

The decline in exports in 1938 was mainly due to the heavy fall in wool prices in the 1937-38 season, which was only partly offset by higher prices for dairy produce. The first four months of the 1938-39 season showed a fall in exports of £NZ3 millions compared with the same months of the previous season, and prices for wool, dairy produce and meat are all somewhat lower than they were then. In view of the present adverse balance of payments, the shortage of sterling funds, the prospective further decline in exports, and the licensing of external trade transactions, a sharp contraction of imports appears certain. Most overseas trade is with the British Empire. For the first ten months of 1938, Great Britain took 84.7 per cent. of New Zealand exports (some for re-export), and supplied 48.6 per cent. of the imports, while Empire countries took 90.3 per cent. of the exports and supplied 74 per cent. of the imports. Ministerial statements indicate that the new official control will be used to promote closer trade with Britain.

Internal Trade.—Internal trade remained at a high level throughout the year. Building increased, but a large part consisted of public buildings and dwellings erected under the State housing scheme. Heavy public expenditure on these and other public works, and the high wages paid, stimulated retail trade. The note circulation, which was about £NZ6½ millions in 1928 and 1929, and averaged £NZ9 millions in 1937, reached £NZ10½ millions in October, 1938. Though there are many men on relief works, etc., unemployment, according to official reports, has almost disappeared, and farmers, who cannot compete with the rates paid on public works, complain of scarcity of labour.

Banking and Finance.—Trading bank deposits in mid-November were £NZ62.41 millions in 1938, against £NZ64.27 millions in 1937, while advances were £NZ58.38

AUSTRALIA

THE GOOD CUSTOMER

YOUR ATTENTION is directed to the following table. It gives in round figures the value in sterling of Australia's imports of British goods in each of the last seven years.

1931-32	... £17,000,000
1932-33	... £24,000,000
1933-34	... £25,000,000
1934-35	... £31,000,000
1935-36	... £34,000,000
1936-37	... £38,000,000

1937-38 ... £47,000,000

These figures emphasise the value of Australia as a customer for British manufactured goods, and her contribution to the revival of the export trade of Great Britain since the depression.

This favourable result, it should be noted, has been achieved during a period of industrial expansion in Australia. It shows that the progressive development of Australia's secondary industries will provide more, not fewer, openings for British trade, as it will increase the opportunities for the investment of British capital.

Australia's capacity to buy British manufactures, however, is governed mainly by her ability to sell her primary products in the British market. Moreover, a large proportion of the proceeds of what Australia sells to Great Britain is returned every year in interest to British investors. For Australia, besides being a good customer for British goods, is also one of the most profitable fields for British capital investment.

BUY AUSTRALIAN PRODUCTS and HELP BRITISH TRADE

Issued by The High Commissioner for Australia, Australia House, London, W.C.2

millions in 1938, against £NZ53.38 millions a year earlier. From November to November, too, the Reserve Bank's returns showed an increase of £NZ7.3 millions in advances to the Government, both trading bank and Government deposits fell, and sterling exchange dwindled from £NZ16.67 millions in 1937 to £NZ5.66 millions in 1938. Net overseas funds held by the Reserve Bank and the trading banks combined fell from £NZ28.02 millions at the end of October, 1937, to £NZ11.85 millions at the same date in 1938.

The Budget of 1938 showed a surplus of £NZ810,000, revenue amounting to £NZ36.06 millions and expenditure to £NZ35.25 millions. For 1938-39, revenue is estimated at £NZ35.85 millions, and expenditure at £NZ35.79 millions. For the first half of the financial year 1938-39, revenue was slightly less and expenditure somewhat greater than in the preceding year. The Government anticipates that the Budget will be balanced, but customs revenue is likely to fall in the last quarter of the financial year ending March 31st, and it may be difficult to effect a corresponding reduction in expenditure. In addition, money is scarce: the Reserve Bank's discount rate was raised from 2 to 4 per cent. on November 11th; and, though the Government proposes an internal loan to finance its public works programme, it is not yet clear how or where the money is to be found.

India

IN India, as elsewhere, there was a perceptible pause in trade activity in 1938, though the industrial development of the country continued throughout the year.

Public Finance.—Revised estimates for 1937-38 anticipated taking Rs. 109 lakhs* out of the Revenue Reserve Fund to balance the Budget. For 1938-39 it was expected that the remaining sum of Rs. 75 lakhs left in the Revenue Reserve Fund would be required to balance the Budget and leave a small surplus of Rs. 9 lakhs. There was no increase in taxation in the 1938-39 Budget.

REVENUE (In crores and lakhs of rupees, thousands omitted)*				
	Accounts, 1936-37	Revised Estimate, 1937-38	Budget Estimate, 1938-39	
Customs	51,44,67	43,93,00	43,81,00	
Central excise duties		7,74,00	7,76,00	
Corporation tax		1,50,00	1,55,00	
Taxes on income other than Corporation tax	15,33,51	12,12,40	12,42,34	
Salt	8,81,36	8,35,00	8,35,00	
Opium	47,66	46,23	44,92	
Total (with other items)	1,21,00,19	1,22,57,04	1,22,27,72	
EXPENDITURE (In crores and lakhs of rupees, thousands omitted)				
	Accounts, 1936-37	Revised Estimate, 1937-38	Budget Estimate, 1938-39	
Debt services	12,55,88	14,84,08	14,62,32	
Civil administration	11,27,33	10,63,37	11,31,18	
Currency and mint	37,71	39,05	37,43	
Civil works and miscel- laneous public improve- ments	2,52,10	2,58,64	3,12,36	
Miscellaneous	3,95,08	3,85,80	3,63,45	
Defence services	50,67,26	52,53,61	50,77,69	
Total (with other items)	1,21,00,19	1,22,57,04	1,22,27,72	

* Indian numerical notation differs from European. Large numbers are punctuated as crores and lakhs. A *lakh* is one hundred thousand (written out as 1,00,000). A *crore* is one hundred lakhs, that is ten millions (written out as 1,00,00,000). Thus, 43,93,00,000 should be read as 43 crores 93 lakhs, or, in European notation, 439,300,000. In the above table (and others in the article) the final three noughts are omitted.

Foreign Trade.—The total value of India's exports to all countries, including Burma, in 1937-38 was Rs. 181 crores (one crore = 10 million rupees) or Rs. 4 crores less than in 1936-37, but Rs. 31 crores more than in 1935-36. Imports rose by Rs. 32 crores compared with 1936-37 and by Rs. 24 crores when compared with 1935-36. The biggest drop in exports was in cotton, due to the Sino-Japanese conflict and the plethora of American cotton. The export position was affected by the fall in the price of ground nuts. Among imports there were larger purchases of long staple cotton and machinery.

CHIEF EXPORTS (In crores and lakhs of rupees, thousands omitted)		
	1937-38	Percentage of Total Exports of Merchandise
Cotton, raw and waste	29,77,26	16.46
Cotton manufactures	9,29,30	5.14
Jute, raw	14,71,90	8.14
Jute manufactures	29,07,76	16.07
Tea	24,38,69	13.48
Seeds	14,18,65	7.84
Grain, pulse and flour	9,48,89	5.24
Metals and ores	6,12,60	3.39
Leather	7,25,42	4.01
Hides and skins, raw	5,04,10	2.79
Total value of all exports ...	180,92,42	100.00

CHIEF IMPORTS (In crores and lakhs of rupees, thousands omitted)		
	1937-38	Percentage of Total Imports of Merchandise
Cotton and cotton goods	27,68,24	15.92
Oils	18,69,96	10.76
Machinery and millwork	17,15,36	9.87
Metals and ores	13,39,31	7.71
Vehicles	8,92,30	5.13
Instruments, apparatus and appliances	6,13,36	3.53
Artificial silk	4,87,49	2.80
Dyeing and tanning substances ...	3,94,06	2.27
Wool, raw and manufactured	4,14,87	2.38
Paper and pasteboard	4,14,71	2.38
Chemicals	3,32,82	1.92
Total of all imports	173,78,76	100.00

The export surplus in 1937-38 amounted to Rs. 15,88 lakhs, compared with Rs. 51,19 lakhs in the preceding year and Rs. 5,11 in 1935-36. Including transactions in treasure the total visible balance in favour of India was the lowest for the three years, being Rs. 30,24 lakhs against Rs. 64,90 lakhs in 1936-37 and Rs. 40,52 lakhs in 1935-36, the decline representing the falling off in gold exports.

South Africa

THE year was marked by many new records of achievement and prosperity in South Africa. The country was again one of the most prosperous in the world. Primarily, this is due to the continued expansion of the gold mining industry of the Transvaal. The following are figures relating to Transvaal gold:—

	1937	1938
Tons milled	51,129,650	54,274,850
Yield in gold (fine oz.)	11,740,891	12,156,629
Revenue	£80,177,687	£84,019,909
Do. (per ton milled)	31s. 4d.	31s. 0d.
Expenditure	£48,477,927	£52,216,652
Do. (per ton milled) ...	18s. 11d.	19s. 3d.
Est. working profit	£31,699,760	£31,803,257
Do. (per ton milled)	12s. 5d.	11s. 9d.
Dividends declared	£17,070,714	£17,262,216

The 1937 output of gold was based on an average monthly valuation of £7 0s. 3½d. per fine ounce. That for 1938 has been valued at a monthly average of £7 2s. 0½d., ranging from £6 19s. in January to the peak figure of £7 8s. 6d. per fine ounce in December.

Foreign Trade.—Despite the record figures of gold production, the Union's gold exports declined from £86 millions in 1937 to £50 millions in 1938, owing to the holding of gold in the Union "earmarked" on account of overseas purchasers. This largely accounts for the decline of £42 millions in South African exports. Union imports were valued at £95,867,000, a decline of nearly £8,000,000, largely due to smaller purchases of luxury articles. Customs revenue fell by only £816,000. Exports were valued at £83,234,000, compared with £125,161,000 in 1937. Export items which show major decreases are wool, which fell from £12,643,000 in 1937 to £9,036,000 last year, diamonds which declined from £3,247,000 to £2,382,000, and maize which fell from £3,194,000 to £949,061.

Finance.—In the first three quarters of the Union's financial year Government revenue receipts were £29,300,000,

just under £90,000 below the receipts for the corresponding period of 1937. Over the nine months period customs and excise revenue dropped by nearly £1,000,000 compared with the previous year, but inland revenue increased by about £750,000 and postal revenue by about £100,000.

Maize crop estimates point to a record. One authority estimates the current year's crop at over 30 million bags. A huge surplus will be available for export. Of last year's maize harvest of 19 million bags, 3,500,000 bags were available for export.

Companies.—In 1938, 1,513 new companies were registered with a total nominal capital of £5,675,379, which is rather lower than in 1937. Increases in capital of existing companies totalled £10,346,696. No mining companies of major importance were registered last year, the largest individual capitalisation being £250,000, whereas in 1937 there were five new companies registered with nominal capitalisation of seven figures, six representing an aggregate of £13 millions and one with a nominal capital of £4,000,000.

Eire

THE most important event in Eire in 1938 was the agreement arrived at in April with Great Britain terminating the so-called economic war between the two countries. The agreement provided for the removal of penal duties on both sides; for the revision by the Prices Commission of Irish protective duties on British goods; and for the payment by Eire of the sum of £10,000,000 in settlement of all outstanding claims. The agreement has been of great benefit to Eire. The agricultural export trade has shown signs of revival; the progressive deterioration of the balance of payments has been stayed; and the Exchequer has been relieved of the necessity of raising large sums for export bounties. So far, the Prices Commission has done very little towards revising the protective duties, but several applications have been listed for hearing. The £10,000,000 was raised successfully at 3½ per cent.

Agriculture.—The agreement has undoubtedly brightened the economic outlook in Eire, but it would be idle to pretend that 1938 was a prosperous year. The area under tillage continued to fall, in spite of the encouragement given to beet and wheat, and the rural population further declined. Although the price of agricultural products rose, farmers experienced many difficulties caused by rising costs, and there was a persistent demand for further relief from rates and other fixed charges. The Government has set up a Commission to investigate agricultural conditions. The problem is to increase the volume of output and to reduce costs of production, and there is room for considerable technical improvement in the industry. The utilisation of grass lands, increasing the fertility of the soil and the extension of winter dairying are matters that require particular attention. There is a growing realisation that the only chance that a small country has of enjoying a high standard of living is by the exploitation of its comparative advantages to the utmost degree, and of thus maintaining a large volume of external trade.

Industry.—Such a policy requires caution in the development of secondary industries, and the programme of industrial self-sufficiency is encountering an increasing volume of criticism. Even Mr Lemass, who is chiefly responsible for the industrial "drive," is not as happy as he was a few years ago, and his speeches have been showing signs of doubt about the success of some of his schemes. Many of the new industries are incurring losses, and some of the older industries, for example, the woollen trade and the breweries, are reducing their scale of operations. The building industry has encountered considerable labour trouble, and, indeed, Irish trade unionism has not been very helpful to industrial progress. The railways experienced a terrible year, and were on the verge of bankruptcy when the Government appointed a tribunal to investigate the whole question of transport.

Banking and Trade.—The report of the Banking Commission, which was appointed in 1934, was published in August. The report recommends the retention of the existing link with sterling; the abolition of the note issue rights of the commercial banks; and the conversion of the Currency Commission into a central bank. The Banking Commission undertook the task of surveying the whole economic and financial condition of Eire, and its report has attracted considerable notice and has aroused much controversy. Attention is drawn to two trends which, if allowed to continue unchecked, may become dangerous: the balance of payments has been becoming increasingly passive, and the public debt is growing rapidly. The necessity of correcting these *disequilibria* is emphasised.

The recent improvement in the balance of trade (disclosed in the following table) is the result partly of the settlement of the "economic war," but to a greater extent of the fact that the terms of trade moved in favour of Eire during 1938.

Year	Imports	Exports	Import Surplus
1937	44,108,332	22,856,353	21,251,969
1938	41,404,903	24,241,839	17,163,064

Economic Policy.—In spite of the improvement that has taken place, the import surplus on visible account is still too large to be covered by the credit invisible balance, and the country has been drawing on accumulated reserves, as is shown by the continuous decline in the banks' sterling assets. This tendency is viewed with disapproval by the Banking Commission on the ground, among others, that many of the invisible exports are of a wasting or precarious character. The only invisible export that can be expected to increase is the income derived from tourists, and the Government has extended additional assistance to the development of tourist traffic. The necessity of increasing the volume of visible exports is obvious, and, as the only possible exports are agricultural products, the problem resolves itself into that already referred to in connection with the condition of farming, namely, the increase of the output from the soil and the reduction of agricultural costs.

The deadweight debt, the growth of which the Banking Commission regards with disapproval, is the result of the policies of housing and land settlement. The latter can be terminated if necessary, but the former must be continued. Here again, as in agriculture, many of the problems are technical and there is an urgent case for an inquiry into methods of reducing the cost of building. Meanwhile, public expenditure continues to grow. Social services are being extended, and additional sums will have to be found for defence. The Government has been borrowing by ways and means advances and by Exchequer bills, but the capacity of such accommodation is strictly limited, and it is possible that further long-term borrowing will be necessary soon. If production and exports could be increased, such additions to the public debt would cause no apprehension, but there is reason to believe that recent investment has been financed by the liquidation of old securities, rather than from the proceeds of new savings.

If the year 1938 has not been one of progress in Eire it has not been one of retrogression. The settlement of the "economic war" has given the country a breathing space to take stock of the situation and to mend its course in so far as it has strayed from the path of rectitude. The report of the Banking Commission, in spite of much hostile criticism, has helped to educate public opinion, and there are signs that the politicians are beginning to learn some of the elementary economic principles which cannot be ignored with impunity. As it was put by a well-known Dublin humorous paper, "The situation has the Government well in hand."

Palestine

THE main feature of the year was the continuance of the Arab revolt and a consequent condition akin to civil war. The British Government sent out a technical Commission in the spring to investigate the possibilities of partition in accordance with the recommendations of the Royal Commission of 1937. The Commission reported in November against the project. The Government then announced a determined effort to bring Arabs and Jews together for a round-table Conference. The preparations for the Conference were made, but the terrorist campaign continued. The disorder and insecurity inevitably injured economic life and checked enterprise.

Population and Trade.—There was an increase in the population during the first ten months of the year from 1,401,000 to 1,420,000. Jewish immigration was greater than in the previous year, and is estimated at about 12,000 for the year. The main Jewish immigration came from Germany and Austria, the total from those countries being about 5,500.

Both imports and exports during the ten months showed a substantial decline. The value of imports was £10½ millions, against £13½ millions in the previous year. The value of exports was £3,790,000, against £4,430,000. The English share of the imports was substantially increased, rising in value from £2,100,000 to £2,500,000. The value of exports to England fell from £2,350,000 to £1,780,000. The value of the exports to other European countries rose by £150,000. That was mainly due to the increase of the orange crop in

the season 1937-38 and the finding of fresh markets in Europe. The figures of shipping in the ports of Palestine show a drop from 790,000 tons of cargo discharged during the ten months of 1937 to 600,000 in 1938; but the figures of cargo loaded show little change. The new port of Tel-Aviv grew notably at the expense of Jaffa. The effect of the public insecurity was shown significantly in the figures of railway traffic. Railway revenue fell by over one-third in the case of goods traffic and by nearly one-half in the case of passenger traffic.

Government Finance.—During the first eight months of the current fiscal year beginning April, 1938, revenue declined by half a million pounds compared with the corresponding period of 1937. Customs showed a decrease of more than half that sum. The decrease in expenditure was only about £125,000, and there was a deficit of over half a million pounds. The surplus balance of the Government, which on April 1st amounted to £2,400,000, was reduced on November 30th to £1,890,000.

Banking and Enterprise.—In spite of the local unrest, the shock of the autumn world disturbance was well resisted in Palestine. There was a decline in deposits with the banks and credit co-operative societies of 7 per cent. during the month of September; but a large part found its way back to the banks before the end of the year. The falling off of private enterprise is marked, on the one hand, by the fall in new capital issues from nearly £1,000,000 to £500,000 during the first ten months compared with the same period of 1937; and, on the other, by the fall in new building in the four principal towns to a monthly average of about 30,000 square metres, against 48,000 square metres in 1937.

British Guiana

ON most counts the 1938 trade results point to an increasingly sound economic position.

Trade and Revenue.—At the end of November, British Guiana's export surplus for the year stood at \$2,246,217; exports for the eleven months were valued at \$11,941,478, and imports at \$9,695,261. At the end of November in the previous year, the value of exports was \$11,835,109, and of imports \$10,469,130, making an export surplus of \$1,365,979. The figures are encouraging despite the reduction in customs revenue. The import fall was expected; there had been a great deal of overstocking by Georgetown merchants in 1937 when European war clouds caused a mild panic. Last September's international crisis also appears to have caused an increase in imports, but not to the same extent.

It is probable that the revenue position will improve; it has already been possible to make an upward revision of the year's estimated revenue. Customs will yield \$125,000 more and income tax \$50,000 more than at first seemed likely. But unemployment, the demand for better conditions in certain branches of Government service, the need for increased police owing to labour troubles, and abnormal weather conditions have led to increased expenditure. At the end of November there was still the prospect of an \$850,000 deficit when the accounts for 1938 are finally audited.

Analysis of the trade figures provides abundant evidence to justify the Governor's statement to the Legislative Council last October, that "the economic organisation of the Colony has become inadequate to support a vigorous and healthy life for all its people, and that a widening of the basis of production is urgently called for."

Exports and Industry.—In the eleven months, bauxite exports, stimulated by armament manufacture, increased by \$338,603, but total export trade increased by only \$106,369. There was a general downward tendency. Shipments of rice, livestock, coconuts, copra, and rum declined. Rice, second only to sugar as an agricultural staple, awaits the report of Mr H. Parker, manager of the Government Rice Mill at Perak, in the Federated Malay States, who is to outline a scheme to replace the many small and mostly inefficient mills with a few central units. Thorough-going organisation of this industry would mean the conquest of the considerable West Indian market. Sugar exports, though limited by international agreement, increased by \$87,496, the f.o.b. price improving slightly, but since the Colony's industrial reorganisation must be based on the expansion of production in export industries, hopes obviously cannot be confined to the chief staple industry. Balata, a once prosperous forest industry, shows a \$50,000 improvement in exports, but there has been a decline in exports of timber, gold and diamonds. The outlook in these industries is far better than the statistical position suggests; there is, indeed, a feeling of real optimism that

1939 will see not only the complete dominance of local timber in the considerable home market—nearly all of British Guiana's buildings are wooden—but also a concerted attempt to expand exports. The feeling is based on the fact that the huge timber-seasoning ground which the Government are erecting with the aid of the Colonial Development Fund will be completed early this year. In spite of the somewhat unsettled outlook in the industries whose products affect the small man, the year closed, as in all West Indian countries, in an air of great expectancy; in British Guiana this feeling is due, not only to the great hopes placed in the Royal Commission, but also to the general belief that the Jewish colonisation scheme will materialise.

Western Europe France

Two years after the elections of 1936, foreign threats and financial difficulties led to a hasty change in French policy. After the 1936 Popular Front Government with Socialist direction and the 1937 Popular Front Government with Radical Socialist direction, a Radical Socialist Government not resting on the Popular Front came into power in April, 1938. Just a month after the Anschluss, the Senate rejected M. Blum's plans for economic control, and M. Daladier became Prime Minister. The real effort towards economic recovery only began after the Munich Agreement of September 30th and the subsequent withdrawal of the Socialist-Communist bloc into opposition. Then followed a period (which has not ended) marked by the advent of the liberal M. Reynaud as Minister of Finance, the new decrees of November 13th and the fiasco of the general strike on November 30th. The 40-hour week has practically been abandoned. Capital is being repatriated. Public funds are booming. But, only three months after Munich, the Italian claims on French Mediterranean territory and M. Daladier's visit to Corsica and Tunisia were signs of a new situation of diplomatic strain.

Monetary Policy.—After further falls from 147.30 to the £ on January 3rd to 154.90 on January 27th and 165.65 on March 15th, the franc experienced heavy pressure in April. M. Daladier then declared that the level of 179 francs to the £ would not be passed. Thereafter the franc was kept in step with the £, and together they fell against the dollar, the franc to 38 at the end of the year compared with 29.48 at the end of 1937. The gold stock of the Bank of France remained practically unchanged. But the recovery plan of M. Reynaud included a revaluation of the stock on the basis of 27.5 milligrammes to the franc, instead of 43. The proceeds of the revaluation, amounting to 31,000 million francs, were applied to the repayment of the advances to the State, which were reduced from 52,000 million francs to 20,600 millions.

Finance.—The deficit on the 1937 Budget was 5,821 million francs. The 1938 Budget will show an excess of expenditure over revenue of 9,500 millions. Taxes were raised or increased in April and November, and the 1939 Budget seems to be balanced at 66,340 million francs, against 54,739 millions in 1938. Nine-tenths of an extraordinary Budget amounting to nearly 28,000 million francs is devoted to rearmament. Public debt reached a new high level in 1938:—

Debt	Francs (000,000 omitted)	
	December, 1937	August 31, 1938
Funded	50,038	50,034
Redeemable	201,545	206,932
Short-term	39,216	38,974
Floating	85,297	101,687
Agricultural credit	2,034	1,992
Posts, telegraphs and telephones	10,137	9,886
	388,267	409,505

Foreign debt totals 16,000 million francs; railway debt is 102,000 millions; colonial and public undertakings debts are 40,000 millions; and it is estimated that the entire public debt by the end of 1938 reached nearly 580,000 million francs.

Banking and the Money Market.—The effort to balance the Budget and restrain from public borrowing, the revision of the forty-hour week, and first signs of economic recovery caused a repatriation of capital and considerable disharding, with the result that interest rates fell sharply.

The rediscount rate of the Bank of France was changed only three times, against six in 1937 and 11 in 1936, and was never higher than 2½ per cent. or 3 per cent. At the year-end it was 2 per cent. The commercial bill rate fell from 3.13 per cent. in December, 1937, to 2.36 per cent. twelve months later. Deposits in the large banks, however, were practically unchanged:—

	Francs (000,000,000 omitted)		
	Nov. 30, 1937	May 31, 1938	Nov. 30, 1938
Crédit Lyonnais	11.3	12.9	11.7
Société Générale	9.1	10.4	9.1
Comptoir d'Escompte	7.6	8.6	7.9
Crédit Ind. et Commercial	2.0	2.3	2.0
	30.1	34.3	30.9

From November, 1937, to November, 1938, the note circulation of the Bank of France rose from 97,000 million francs to 110,000 millions.

The rise in public funds and debentures which followed the November decrees caused an appreciable fall in long-term money rates. The average yield of debentures fell from 6.16 per cent. in December, 1937, to 4.58 per cent. at the year-end; and the yield of the 3 per cent. Rentes came down from 4.31 to 3.42 per cent. Private issues, however, were the lowest for many years.

Production and Prices.—The wheat crop was very large, amounting to 94 million quintals, against 67 millions in 1937, 69 millions in 1936 and an average of 83 millions in 1930-35. The basic price of wheat was fixed by the Administration at 204 francs per quintal, against 180 francs in 1937. Monetary depreciation, increased taxation and social charges caused a further rise in prices, which appeared to slacken during the summer:—

(1914 = 100)	End of		
	1937	July, 1938	End of 1938
Wholesale prices:			
General index	601	652	666
Domestic products	650	673	692
Imported products	515	613	620
Foodstuffs	615	638	648
Retail prices	676	690	754
Cost of living	630*		689*

* Third quarter

Coal output increased from 45,334,000 tons in 1937 to 47,560,000 tons in 1938, while consumption fell from 76,160,000 tons to 68,170,000 tons, and imports of foreign coal from 30,875,000 tons to 22,725,000 tons. Pig iron production was 5,999,000 tons, against 7,916,000 tons in 1937; steel production 6,178,000 tons, against 7,920,000 tons in 1937.

Foreign Trade.—The year's imports were valued at 45,900 million francs, against 42,300 millions in 1937, and exports at 30,500 millions, against 23,900 millions. The import surplus fell from 18,381 million francs to 15,396 millions, or (excluding trade with the colonies) from 14,879 millions to 11,323 millions. The volume of imports fell from 57,400,000 tons to 47,155,000 tons, and the volume of exports from 30,369,000 tons to 26,981,000 tons.

Germany

THE year 1938 in Germany was a year of important political events, of which the most important were the annexations of Austria and the Sudeten German territory. Industry and trade were considerably affected. Industry, which had already reached the limit of its capacity at the turn of the year 1937-38—especially as far as the armament and building industries were concerned—was forced into a state of over-employment. At the same time there was a quickening of the armament tempo and the construction of immense fortifications. In many trades, but mainly in armaments, mining and construction, the lack of skilled labour grew. At the end of 1938 there were 456,000 unemployed in the Old Reich, compared with a million at the end of 1937, while the number in employment totalled 19.2 millions. Including Austria and the Sudeten territory, 824,000 unemployed were registered at the end of the year.

The preponderance of State contracts led to further noticeable tensions in production, in provision for civil domestic needs and in price formation, with the result that the State had to exercise an even stronger control and supervision over all branches of private industry. Commissioners (*generalbevollmächtigte*) were appointed for five industrial groups; they were given far-reaching powers to press forward rationalisation, and to bring the needs of the State, private industry and the export trades into line. Price control has been intensified, because prices tended to rise on account of shortages of goods.

Official control of raw materials continued unchanged, and the provision of raw materials for industry actually improved, because Germany was able to increase the volume of her raw material imports owing to a fall in world prices. Total imports remained at about the same value as in 1937, although exports declined; this was possible because all the Reich's reserves of foreign exchange, including those of Austria and the Sudeten territory, were employed for the purpose.

The Government's financial policy led to various crises. The financing of schemes by special bills was begun and was later replaced by the use of Treasury delivery certificates. The marked increase in indebtedness led, towards the end of the year, to acute cash difficulties, which ended in the dismissal of Dr Schacht. Industry was in need of capital, and as long as the State's control of capital continued, industrial investments could be made only from industry's own reserves. Those reserves (especially security holdings) were accordingly liquidated, which led to the slump in the Bourse in the summer, a slump later intensified by anti-Semitic measures.

Credit and Capital.—The Reichsbank's discount rate remained unchanged at 4 per cent., the private discount rate at an average of 2.88, and daily money at 2.9. The capital market was kept mainly at the disposal of Reich loans. In 1938, capital issues amounted to about Rm. 9,000 millions, of which Rm. 1,000 millions went to industry and the remaining Rm. 8,000 millions to Reich loans. Since 1935, the Reich has issued loans amounting to Rm. 15,600 millions, of which Rm. 14,000 millions were still outstanding at the end of October, 1938. The pressure upon private industry was shown by the fact that, although compelled to rely almost entirely on itself for finance, industrial investment amounted to Rm. 18-19,000 millions, against Rm. 16,000 millions in the preceding year.

The national income rose from Rm. 70,970 millions to about Rm. 76,000 millions; income from labour alone rose from Rm. 38,800 millions to Rm. 41,500 millions. Retail trade turnover rose in value from Rm. 30,900 millions to Rm. 33,500 millions. The Government's great need of money can be judged from the fact that taxes, duties and other levies absorbed in all 35.5 per cent. of the national income against 33.5 per cent. in 1937. Deposits at savings institutions rose from Rm. 15,535 millions to Rm. 17,421 millions.

Public Finance.—Again the Reich published no Budget. It is known that expenditure far exceeded receipts. Reich receipts from taxes and duties at the end of the financial year March, 1937-38, amounted to Rm. 13,964 millions, against Rm. 11,492 millions in the preceding year. From April to December, 1938, the Government collected Rm. 13,022 millions, compared with Rm. 10,478 millions in the corresponding months of 1937. The complete financial year (1938-39) should yield about Rm. 17,000 millions. The total receipts of the Reich, the provincial authorities and the local authorities, which amounted to Rm. 18,400 millions in 1937-38, should rise to Rm. 22,000 millions in 1938-39. This increase is mainly due to a rise in the rate of corporation taxes, more stringent methods of collection and a number of increased import duties. Taxes on real estate purchases and on beer were also increased.

The Reich's debts also rose considerably:—

	Foreign Debts	Long- and medium-term domestic debts (In million Rm.)	Short-term domestic debts	Total
March, 1933	3,003	2,751	1,514	11,690
March, 1936	1,678	6,029	2,899	14,372
March, 1937	1,442	8,611	2,383	16,558
March, 1938	1,333	11,954	2,345	19,098
October, 1938	1,276	16,191	4,890	25,678

The change over from financing by means of bills to financing by the use of delivery certificates has led to a considerably increased short-term debt; and it must be remembered that there are still about Rm. 10-12,000 millions of unconsolidated special bills outstanding. The real short-term debt can therefore be estimated at a total of between Rm. 14,000 millions and Rm. 16,000 millions.

Prices.—Although the ban on price increases was maintained, although the Price Commissar undertook to lower certain prices in certain domains, and although world prices remained well below the record levels of 1937, the German price indices rose a little. The reason for this increase was the Government's over-riding claim on production and materials for its own uses; private demands were starved and a shortage of goods resulted. The wholesale price index (1913 = 100) rose to 106.4 at the end of December, from 105.5 in the preceding December. The increase affected all groups, with the exception of textiles and metals, whose indices fell from 78.1 to 77.9 and 53.3 to 51.4, respectively.

The largest increases were in the indices for vegetable foods, cattle produce, fodder and building materials. The index of the cost of living (1913-14 = 100) also rose to 125.6 from 125.1, compared with 124.5 in December, 1937, and December, 1936. The cost of foodstuffs fell slightly, but the cost of clothing increased considerably. The various indices cited do not take into account the deterioration in the quality of goods, which is equivalent to an appreciable indirect rise in prices.

Agriculture and Industry.—Although the shortage of labour is particularly marked in agriculture—the deficiency in man power is estimated at from 700,000 to 800,000 persons—agricultural production has increased. The crop of bread cereals reached 13,970,000 tons, against 11,490,000 tons in the previous year, and 14,490,000 tons in 1936. The wheat crop rose from 4,580,000 tons to 5,550,000 tons and the rye crop from 6,920,000 tons to 8,460,000 tons. The crop of fodder cereals increased from 10,830,000 tons to 11,890,000 tons. The potato crop, however, and the sugar beet crop fell. Grain imports rose from 2,060,000 tons to 4,060,000 tons in volume, and from Rm. 226 millions to Rm. 402 millions in value. Stocks of grain amounted to 13½ million tons at the end of September, an increase of about 3.7 million tons over the preceding year. The value of agricultural production amounted, during the season ended July, 1938, to Rm. 12,700 millions, compared with Rm. 11,900 millions at the end of the previous season. The proceeds of agricultural sales rose from Rm. 8,910 millions to Rm. 9,634 millions, but working expenditure rose simultaneously from Rm. 6,369 millions to Rm. 6,884 millions.

The volume of industrial production showed a further increase. The gross value of production rose during the year from Rm. 77,000 millions to about Rm. 85-90,000 millions, against Rm. 85,000 millions in 1929. The value of machinery production rose from Rm. 4,000 millions to Rm. 4,500 millions—although exports remained unchanged at Rm. 800 millions. Production has been mainly of investment goods. The production of pig iron rose from 15,960,000 tons to 18,600,000 tons, and that of crude steel from 19,850,000 tons to 23,300,000 tons, but Austria is included in this year's figures. The output of rolling mills (*walzwerke*) increased from 14,120,000 tons to 16,370,000 tons. Yet shortage continued and the system of rationing in favour of armaments and exports had to be retained. Domestic iron ore production (inclusive of Austria) rose from 7,360,000 tons to 10,170,000 tons, and imports increased, during the first three quarters of the year, from 14,890,000 tons to 16,760,000 tons. Coal output rose from 184,500,000 tons to about 186,200,000 tons, but coal exports fell considerably. The production of domestic textile raw materials (including cellulose wool and artificial silk) again greatly increased from 199,400 tons to 260,500 tons.

Foreign Trade.—The foreign trade policy of the Reich remained unchanged. The shrinking of world markets and lower prices combined with a heavy domestic demand, caused a recession in the value of exports from Rs. 5,788 millions to Rm. 5,257 millions (for the Old Reich alone). For Greater Germany exports were valued at Rm. 5,619 millions. Since the domestic demand for foreign raw materials and foodstuffs actually increased, imports remained almost unchanged at a value of Rm. 5,449 millions (for the Old Reich), against Rm. 5,375 millions in 1937. Imports into Greater Germany amounted to Rm. 6,052 millions. In 1937 an export surplus of Rm. 443 millions was recorded. In 1938 there was an import surplus of Rm. 192 millions for the Old Reich, and of Rm. 432 millions for Greater Germany.

Italy

Agriculture and Industry.—The agricultural year was reasonably satisfactory, yields being generally higher than in recent years. The wheat crop was 8,100,000 tons, against an annual average of 7,323,000 tons during the three years 1935-37. Similar comparisons for other crops run as follows:

(Tons)	Annual Average 1935-37	Actual Yield 1938
Rye	141,000	113,000
Barley	210,000	248,000
Oats	539,000	629,000
Spring maize.....	2,981,000	2,936,000
Rice.....	753,000	686,000 (est.)
Hemp.....	87,000	109,000
Flax	2,500	3,600
Grapes	6,185,000	5,971,000

Prices were from 10 to 20 per cent. higher. The following are the indices of industrial production published by the Corporation Department (1928 = 100):—

	1935	1936	1937	1938	1938
				11 mos.	Nov.
Textiles.....	76.8	70.1	83.7	82.3	94.6
Iron and steel	112.2	106.0	114.1	111.3	115.1
Engineering.....	101.9	120.0	131.8	134.1	138.7
Paper	139.7	123.2	150.0	142.8	147.6
Building.....	162.3	91.9	95.9	89.7	98.4
Electricity, gas	135.8	140.5	154.6	156.9	152.6
Minerals, etc.	98.9	110.3	127.8	135.0	137.8
Chemicals	99.6	107.4	133.2	129.4	136.8
General index	102.4	95.5	108.7	106.9	115.8

The general index progressed from 105.5 in January to a maximum of 114.7 in March, falling to a minimum of 88.8 in August, rising again to 108.4 in September and to 115.9 in October.

Foreign Trade.—Trade with the colonies is now separately stated.

	(In million lire)			Imports (—) Exports (+)		Surplus in Trade with Foreign Countries	
	Imports from Colonies	Exports to Colonies	Imports from Foreign Countries	Exports to Foreign Countries	Imports (—) Exports (+)	Surplus in Trade with Foreign Countries	Imports (—) Exports (+)
1929	22,313	14,999	—	—	—	—	—
1933	78	7,354	212	5,579	+ 134	—	1,575
1934	93	7,582	259	4,965	+ 166	—	2,617
1935	117	7,673	750	4,488	+ 633	—	3,185
1936	157	5,882	1,718	3,824	+ 1,561	—	2,058
1937	350	13,592	2,580	7,853	+ 2,230	—	5,739
1938	206	10,918	2,419	7,960	+ 2,213	—	2,958
1937*	207	8,027	1,524	4,638	+ 1,317	—	3,389
1938*	154	...	1,429	4,701	+ 1,307	—	1,747

* Converted into lire at the legal rate before the realignment of October 6, 1936.

The adverse balance of trade was drastically reduced, almost exclusively by reducing imports. Reductions were possible partly through good wheat and corn harvests, partly because stocks, depleted during the African campaign, were replenished in 1937; and, finally, through better terms of trade with foreign countries. Foreign trade is now at a lower level than in 1933. The direction of trade has also changed:

	(In million lire)					
	Imports			Exports		
	1933	1937	1938	1933	1937	1938
United Kingdom.....	727	561	703	689	639	580
France	413	491	248	459	438	322
Switzerland	271	412	373	483	507	489
Germany	1,143	2,589	2,981	729	1,503	1,983
Austria.....	175	631	...	131	289	...
Austria	1,115	1,539	1,316	529	783	774
Argentina	248	1,054	271	381	402	404

Germany is the only country which appears to be increasing her trade with Italy.

Traffic.—Internal traffic is growing. The State Railways have fared as follows (from July 1st to June 30th):—

	Tons Carried '000 omitted		Traffic Revenue Million lire		
			Passengers	Goods	Total
1933-4	40,214	1,126	1,593	2,719	2,719
1934-5	42,796	1,101	1,514	2,615	2,615
1935-6	47,089	1,188	1,968	3,156	3,156
1936-7	51,481	1,284	2,262	3,546	3,546
1937-8	57,394	1,437	2,566	4,003	4,003

Prices.—Cost of Living and Wages.—Changes in the level of wholesale prices and in the cost of living (1928 = 100) have been as follows:—

	1929	1935	1937	1938
Wholesale—				(Dec.)
General index	95.4	68.2	89.1	96.4
Raw materials	95.3	65.6	89.5	91.7
Semi-finished goods	97.5	74.9	101.3	111.7

Cost of Living	101.1	77.5	91.7	99.12*

* Yearly average.

Prices now appear to have come back to about the 1929 level. Devaluation was only one among many influences

high helped to reverse the trend of prices. Export prices, which suffered most during the crisis, are also slower to cover ground, in comparison with 1929. The cost of living almost back to the 1929 level; in December, 1938, the index number was 99.97. The wages index has gone from 4.3 in 1935 to 100.5 in 1937; but there are no later data. 1 October, 1938, the number of persons in employment was 3 per cent. higher than the 1934 figure.

Money Market and Stock Exchange.—The year showed featureless money market. The official rate was unchanged at 4.50 per cent.; private rates for commercial paper between 5.50; and monthly settlements were carried over at 5.75 per cent. On the Stock Exchange, share-values, which had closed in 1937 at 48.8 (1924 = 100) after a bottom at the end of 1935 of 35.3, rose to 50 at the end of February, 1938, and then hovered around 48, closing finally at 46.47. Saving and current account deposits increased from 74,627 million lire at the end of 1936 to 79,575 at the end of 1937 and to 82,408 millions at the end of September, 1938. The number and capitalisation of Italian joint stock companies hanged from 20,018 companies at the end of 1937 to 0,660 at the end of November, 1938, and their capital progressed from 47,695 to 52,807 million lire. The increase was mostly in paper transactions from reserve to capital account. Failures are fast diminishing:—

	Ordinary Failures Number Liabilities (Thousand lire)		Small Failures Number Liabilities (Thousand lire)	
1933	9,954	1,380	11,359	118
1934	8,211	1,051	10,258	106
1935	6,864	739	10,578	109
1936	5,287	501	8,554	82
1937	3,209	251	6,153	56
1938	2,846	236	5,171	46

Public Finance.—No figures were published regarding the accounts after the Budget speech of May 18, 1938. The total deficit (ordinary and extraordinary expenditure included) was 2,030 million lire for the fiscal year ending June 30, 1935; 12,685 millions for 1935-36; 16,230 millions for 1936-37. For 1937-38 the deficit was preliminarily estimated at 12,173 millions, but owing to a high yield from the new tax on joint-stock companies, the Minister of Finance hoped that the deficit would be kept under the 12,000 millions level. For the current fiscal year a surplus of 37 millions, and for the year 1939-40 a deficit of 4,755 millions, were originally estimated; but these figures are largely a guess, since they do not include unforeseen extraordinary expenditure. Following the two 5 and 10 per cent. extraordinary taxes on land and real estate capital and on joint-stock companies, a third extraordinary tax of 7½ per cent. was applied to the capital of private companies and concerns.

Belgium

The year 1938 was politically and economically not very favourable. The year began with the Janson Cabinet in power, and this gave place to the Spaak Cabinet in May. The great difference between these two Ministries of National Union was at the Ministry of Finance. In the Janson Cabinet, M. Soudan succeeded M. de Man as Minister of Finance; but after M. Spaak became Prime Minister, the office was given to M. Max Léo Gerard, an upholder of the most strict and orthodox financial methods, who was in turn followed in December, 1938, by M. A. E. Janssen, another stickler for orthodoxy.

Finance and Industry.—To meet the deficit occasioned by the economic depression, the Government proposed several tax increases; but, as these were only enforced during the second half of 1938, the Budget year will close with a deficit estimated at between 500 and 800 million francs. Even so, fiscal receipts were not unsatisfactory, showing in 1938 a total of 9,670 million francs, compared with 9,680 millions in 1937 and 9,068 millions in 1936. The Treasury has called for only one loan during the year: for 1,000 million francs at 5 per cent.

Industry has been seriously affected by the world depression. The textile industry suffered heavily. The metal trades, after experiencing rough weather during the first six months, picked up again at the end of the year, but output is still much lower than it was in 1937. Coal mining has had a difficult time owing to heavy expenses, and especially because of the reduction of the working week from 48 to 45 hours. The Belgian coalfield now yields appreciable profits only in the best mines. A Government proposal to help the coal industry by a tax of 10 francs on every ton of

coal imported met with well-founded opposition from all other industries.

	Production	Coal	Steel
		Metric Tons	
1936.....	27,875,000	3,105,000	
1937.....	29,680,000	3,775,000	
1938.....	29,575,000	2,213,000	

During 1938, coal stocks increased by 1½ million tons. The metal industries at the end of the year were producing at a rate equivalent to 2,700,000 tons annually.

Foreign Trade.—Belgium's foreign trade inevitably fell away in 1938, but the decline was no more severe than the average fall in other countries. In the closing months of the year signs of recovery were noticeable—more so than in most other countries. Indeed, in the last quarter, Belgian trade showed an export surplus—which is very unusual for Belgium, where important invisible exports normally cover a surplus of imports.

	Foreign Trade	Imports	Exports
		Millions of Francs	
1936.....	21,700	19,750	
1937.....	27,650	25,500	
1938.....	23,185	21,730	

Exports to Germany have suffered from the foreign exchange policy of the Reich; and sales to France were hit by the devaluation of the franc.

Money and Finance.—The Belgian franc remained fairly stable, except in May, when the French devaluation apparently threatened the Belgian exchange. Otherwise the Belga has remained near the gold import point, and there have been important gold imports. In the May panic, it is true, 4,000 millions of gold were exported in a few weeks; but by the end of the year this gold was back again in the National Bank. The official gold reserve of the National Bank amounted, at the end of the year, to more than 17,000 million francs; and to this must be added the Treasury's reserve and the excess gold reserves of the National Bank. The country's total gold reserves amounted to 22,500 million francs in all. Discounts and advances made by the National Bank went up during the May panic, when the volume of stocks and securities increased sharply from 1,000 million francs to 2,500 millions, falling again rapidly afterwards. During the international crisis of September, although the National Bank continued to receive gold, it had at the same time to increase the amount of its credits to allow private banks to meet their depositors' demands. By the end of the year these exceptional credits had been refunded.

Prices on the Brussels Stock Exchange have, on the whole, depreciated abnormally, the chief factor in this decline being the international situation. Financial operations in 1938 were not of great magnitude. Share issues were relatively unimportant. But dividends paid were considerable, amounting, for the complete year, to 4,200 million francs, against 3,800 millions in 1937. It is feared, however, that the year 1939 will be much less favourable in this respect.

Savings.—National savings were again high. Hoarding was widespread. The Savings Bank (*Caisse d'Epargne*) closed the year with the same volume of deposits as a year ago (approximately 12,500 million francs), and the banks show an appreciable reduction in current accounts.

Spain

THROUGHOUT the course of another year the Spanish Civil War has continued unabated, and, although important developments have occurred in the last few months, culminating in the fall of Catalonia, the position has not yet reached a point where a certain cessation of the tragic and impoverishing conflict can be definitely forecast. In existing circumstances, it is still quite impossible to foresee how the country will emerge economically from the struggle, or to appreciate how far-reaching the results may be upon general business conditions there. The Insurgent forces under General Franco now occupy more than two-thirds of Spain, having, in the spring offensive, carried their lines on the Northern front through to the Mediterranean, and cut off Catalonia from the remainder of the Government territories radiating southwards and eastwards from Madrid to the sea.

Foreign Trade.—The overseas commerce of Republican Spain is at a serious disadvantage by reason of the vulnerability of its ports (now located only on the Mediterranean) and the ships that serve them to attacks by the Insurgent navy and aircraft. The disposition of the Insurgent zone, on

the other hand, gives ample shipping facilities, as this territory includes the whole of the coastline on the Atlantic as well as several important ports on the Mediterranean seaboard. Figures published by the British Board of Trade show that United Kingdom trade with Spain as a whole has contracted very considerably since the outbreak of the war, and, although it is not possible to say with any exactitude to what extent the smaller trade with the United Kingdom can be ascribed to diversion of commerce to other countries, or to an actual fall in the total volume, it is believed that shipments from Insurgent Spain to both Italy and Germany are now at a higher level than in 1935. Exports from Government territory to France are likewise understood to be well maintained, as well as French shipments to Spain.

Imports from the whole of Spain (excluding the Canary Islands) into the United Kingdom were officially reported to have fallen in value from £11,119,000 in the year 1935 to £8,628,000 in 1937, and to £4,296,000 in the first nine months of 1938. Similarly, British exports and re-exports to Spain totalled £5,758,000 in 1935, only £3,411,000 in 1937 and £3,275,000 in January-September, 1938. Although British export trade to Spain, taken as a whole, was smaller in 1938 than in previous years, coal exports showed a sharp expansion, shipments in the first nine months being valued at £981,150, against £597,842 and £564,234 in the same periods of 1937 and 1936, respectively. Similarly, shipments of coke and manufactured fuel advanced in value to £110,931 from £84,935 in January-September, 1937, and £47,584 in the same months of 1936. Shipments of iron and steel and iron and steel manufactures fell to £150,953 from £282,795 in 1937, but compared with £88,978 in 1936. Other important exports from the United Kingdom included tin, machinery, chemicals and codfish.

Among British imports from Spain, outstanding increases have occurred in iron pyrites—from £159,869 in the first nine months of 1936 to £320,119 in the same months of 1938—and in non-ferrous metals which advanced from £180,340 to £327,340. Arrivals of iron ore and scrap from Spain, on the other hand, have shown a declining tendency. Imports of potatoes from Spain have shown a sharp reduction, but potatoes and tomatoes imported from the Canary Islands are higher in value than in 1935, although bananas are slightly lower in aggregate worth. Exports of Spanish wine to the United Kingdom have been maintained, but oranges and lemons are both on a smaller scale.

Finance.—The effects of the war upon Spain's finances cannot yet, of course, be gauged, but undoubtedly the wastage of national resources must have been, and must still be, enormous. Insurgent territory comprises areas rich in minerals, olives, wines, etc., and exports of these products have no doubt been fostered as the principal means of paying for the supplies necessary to prosecute war. The Madrid Government, on the other hand, was in possession of the country's official bullion reserves, but it is not known to what extent these have been drawn upon. Exchange rates might be expected to reflect the strained economic position, and, although the Government official rate is now about Ptas. 110 to the £ sterling against 36½ at the outbreak of hostilities in July, 1936, the rate controlled by the Burgos authorities is only Ptas. 42.45. The comparative measure of depreciation is evidenced by the periodically-fixed surcharge which is applied where Customs duties—expressed in gold—are paid in paper pesetas: in July, 1936, this surcharge was about 138 per cent., and in early 1938 was 266 per cent. in Barcelona (to which city the seat of Government had then been transferred) and 177 in Burgos. At the close of 1938 the Government surcharge had risen to 637 per cent. and the Insurgent to 196 per cent.

Portugal

PORTUGAL'S present financial and economic outlook is dull but sound. Expansion of the corporative idea, with the State as guide and protector rather than dictator, is based on the cumulative experience of the past ten years. Living costs have been kept stable; social services and indirect benefits to labour are growing in scope and importance.

Trade.—Trade in 1938 showed a slight drop when compared with the 1937 figures. Taking a conto (1,000 escudos) as the equivalent of £10, the comparison, in round numbers, reads as follows:—

(1st eleven months)			
Imports	Exports	Imports	Exports
1937	1938	1937	1938
£20,031,000	£18,865,000	£10,189,000	£10,993,000

The changes in Portugal's trade with principal countries were as follows:—

	Imports from Percentage of Total Imports		Exports to Percentage of Total Exports	
	1937	1938	1937	1938
United Kingdom.....	19.07	17.78	21.38	21.09
Germany.....	14.82	15.61	10.93	13.51
United States.....	10.85	11.23	8.11	5.19
Belgium-Luxemburg.....	9.01	6.56	4.79	4.75
Brazil.....	2.85	2.14	4.14	5.79

Increased shipments of resin and turpentine account almost entirely for the rise in Germany's share of Portugal's exports.

Banking and Savings.—The latest banking returns reflect the trade recession. Comparing 1938 with 1937, one notes a small drop in cash in hand and deposits with other banks, a slight contraction in both sight and time deposits, and a small increase in discounts and advances. The better-off middle classes, whom it would be misleading to call *rentiers*, inasmuch as they are almost all still active in business or the professions, have been very hard hit by Brazil's default. Local estimates put at some sixty millions sterling the amount of Portuguese savings invested in Brazil and now receiving little or no return. Hence personal retrenchment has been widespread, with the natural and direct effect on consumption. The year 1938, inauspicious commercially everywhere, has hit Portugal, but she is still better placed for taking immediate advantage of even a slight improvement in world trade than are many larger countries—especially if the end of the troubles in Spain are in sight. This would mean brisk business, to say nothing of a resumption of tourist traffic hither, a source of direct income which before 1936 brought to Portugal and her Atlantic islands, Madeira and the Azores, close on £1,000,000 per annum.

Finance.—Dr Salazar's cardinal principle, living within one's income and keeping something in hand, will, judged by the Budget figures available to November 30, 1938, show a surplus of receipts over expenditure of 422,420 contos, this figure including the carry-forward from 1937 of some 215,325 contos. The estimates for 1939 perforce show a sharp increase in extra-ordinary expenditure—the allocation to the Ministry of War is doubled at 400,000 contos and there is an increase of 56,163 contos for public works and communications—but, as the following table shows, there will still be an estimated net surplus if all goes well.

1938 (contos)		1939 (contos)	
Ordinary Revenue	Extra-ordinary Revenue	Ordinary Revenue	Extra-ordinary Revenue
1,994,600	477,900	2,029,200	786,000
Ordinary Expenditure	Extra-ordinary Expenditure	Ordinary Expenditure	Extra-ordinary Expenditure
1,988,200	481,000	2,019,800	793,400

It will not be easy to work to these estimates if general trade conditions take a turn for the worse. The changed position in Spain, however, and widespread signs of greater interest in Portugal's possibilities, warrant the belief that 1939 will see the Government close its books with a balance in hand.

Holland

ECONOMIC events followed a rather erratic course in 1938. The recession which set in at the end of 1937 continued throughout the spring, but the falling-off in business was arrested later in the year by the recovery in the United States. Political disturbances abroad also left their mark, and on the Amsterdam Stock Exchange and in the foreign exchange and new issue markets calm and stability was considerably upset. Generally speaking, however, the various indices of economic activity show that there is no prospect of any serious setback such as that of 1937.

Shipping.—The end of 1937 marked the end of a prosperous period in the history of Dutch shipping. The decline in world trade during 1938 did not, however, seriously influence Dutch shipping, although the year's results were, of course, well below the 1937 level. Despite the fact that the merchant fleet was increased by 130,000 tons in 1938, hardly a single ship was laid up. The index of ocean freights to and from Dutch ports fell in November to 66.9 compared with 103.7 in the exceptionally satisfactory month of November, 1937.

Money and Finance.—The market for new issues provided no reason in 1938 for rejoicing; the total of loan

issues for new investment was scarcely higher than in the preceding year amounting to 151 million guilders against 147 millions in 1937. This fact endorses the conclusion that trade and industry in this country failed to attain an appreciably higher degree of activity than in 1937. The note circulation, however, showed a material increase in the course of the year. On January 10, 1938, the circulation of bank notes amounted to 875 million guilders; by December 27 the circulation had increased to 991½ millions, a rise of 116½ millions. It might be assumed that such an increase clearly indicated greater requirements of cash for commerce and industry, but it should be remembered that most of these additional notes were brought into circulation during periods of political tension, that is to say, in March and April and in September. The notes then brought into circulation have not yet found their way back to the bank. Throughout the year, abundance of supplies of capital was reflected by extremely low rates on the money market. Prolongation money was quoted at the constant figure of ½ per cent., and private discount rates were never above ½ per cent. These rates do not apply to September, when private discount rates touched 1½ per cent. and prolongation money occasionally commanded 2½ per cent.

Foreign Trade.—Both imports and exports declined in terms of both volume and value:—

(In millions of guilders)									
	IMPORTS				EXPORTS				
	1935	1936	1937	1938	1935	1936	1937	1938	
1st quarter.....	226	233	336	357	160	156	246	254	
2nd quarter.....	229	234	410	344	159	163	286	245	
3rd quarter.....	228	243	298	352	174	194	314	288	
4th quarter.....	253	307	406	362	182	233	302	272	

(In thousands of tons)									
	IMPORTS				EXPORTS				
	1935	1936	1937	1938	1935	1936	1937	1938	
1st quarter.....	...	4,506	4,846	5,135	...	3,137	3,789	3,555	
2nd quarter.....	...	4,841	5,951	5,523	...	3,093	4,022	3,479	
3rd quarter.....	...	5,407	6,591	6,208	...	3,347	4,081	3,650	
4th quarter.....	...	5,602	6,124	5,937	...	3,961	4,131	3,746	

The heavy fall in the volume of both imports and exports after the peak of 1937, is striking confirmation of the general trend away from prosperity at the beginning of 1938.

Prices.—The course of Dutch prices was downwards:—

WHOLESALE PRICES (1926-30 = 100)		General index
	Food	
1929	100.4	99.7
1936	66.4	63.8
1937	75.8	76.2
1938 (December)	74.5	70.6

The index of the cost of living was little changed:—

(1911-13 = 100)	
1934.....	140.1
1935.....	136.2
1936.....	131.9
1937.....	137.3
1938 (December).....	137.4

It will be seen that the index has now been above the 1935 level for two years.

Finance and Industry.—There was an increase in the gold reserves during the year.

(In million guilders)					
	1934	1935	1936	1937	1938
Gold stock (Dec.).....	843	670	654	1,147	1,461
Bank note circulation (Dec.).....	891	819	760	818	978
Official discount rate ...	2.50	3.99	2.84	2.00	2.00
Private discount rate (Dec.).....	0.87	3.15	1.71	0.28	0.19

The general Stock Exchange index showed an encouraging firmness:—

	1934	1935	1936	1937	1938
General index for shares (Dec.).....	55.0	55.0	66.0	104.0	97.8
Yield debentures (Dec.).....	4.03	4.24	4.19	3.33	3.20
Issues (million guilders)—					
New money.....	209	53	201	147	151
Conversions.....	2,043	173	87	2,448	1,940

The unemployment returns continued to fall from the high level of 1936:—

	1934	1935	1936	1937	1938
(In thousands)					
Number of unemployed (Nov.).....	332.8	384.7	414.5	368.9	355.4
Coal production during the year fell below the 1937 level:					
In thousand tons.....	1938	1937	1936		
	13,487	14,231	12,802		

Switzerland

DESPITE generally unsettled conditions, the economic situation remained good. Exports were maintained and even showed some advance; and unemployment fell slightly. But there was a fall in tourist traffic and the earnings of transport undertakings were diminished.

Money and Banking.—Since December, 1936, the official discount rate has been unchanged at 1½ per cent. Interest rates on long term deposits ranged in 1938 from 1 to 2 per cent., and rates were about 1 per cent. on short term deposits. The National Bank's gold reserve oscillated between 2,786 million francs and 2,889 millions. The sterling exchange ranged between 21.61 francs to the £ in January and 20.60 francs in December. Money was abundant and cheap, and the Federal Railways, Cantons and Communes issued conversion loans at 3 to 3½ per cent. Borrowings of the Confederation, Cantons, Communes and industrial and financial concerns totalled 818,436,000 francs, against 717,500,000 francs in 1937, while foreign issues on the Swiss market totalled 114,068,000 francs, compared with 266,830,000 francs in 1937.

Finance.—The Federal finances felt the heavy burden imposed upon them by the increasing expenditure for national defence. The estimated deficit of 42 million francs for 1937 was reduced to 15 millions, but the estimated deficit of 57 millions for 1938 is likely to be exceeded. For 1939, expenditure is estimated at 568 million francs, and receipts at 481 millions, with an estimated deficit of 87 millions. The rise in expenditure is mainly due to re-armament, for which over 650 million francs have been expended during the past three years. The receipts of the Federal post, telephone and telegraph services were very favourable, the aggregate surplus being 78.9 million francs for the first eleven months, against 75.3 millions in 1937. The receipts of the Federal Railways were lower at 321.4 million francs, compared with 338.3 millions in 1937, and their surplus was 104.7 millions against 126.4 millions in 1937.

Tourists and Employment.—During January-November 3,313,000 tourists, of whom 1,358,000 were foreigners, visited Swiss hotels, compared with 3,433,000 and 1,522,000, respectively, in 1937. Unemployment was lower than in 1937, except in December when, for seasonal causes, it rose above the 1937 figure. The number of registered unemployed was 95,722 in January (110,754 in January, 1937), 48,658 in June (50,830 in June, 1937), and 91,257 in December (87,311 in December, 1937).

Trade.—Imports in 1938 were valued at 1,606 million francs, compared with 1,807 millions in 1937, and exports at 1,316 millions, against 1,286 millions in 1937. Imports from the United Kingdom were 95 million francs (112 millions in 1937) and exports to the United Kingdom 148 millions (143 millions in 1937). The main features of foreign trade were the increase in machinery exports, which totalled 236 million francs, against 188 millions in 1937, and the satisfactory sales of the watchmaking industry, which amounted to 241 million francs, against 239 millions in 1937.

The index of wholesale prices (1914 = 100) ranged from 110 in January to 106 in December, while the cost of living index (1913 = 100) fell from 138 in January to 137 in December.

Eastern Europe

Hungary

THE outstanding event in 1938 was the return of 4,875 square miles of territory from Czecho-Slovakia as a result of the Munich Conference. The population of the territory is about one million, and the total population of Hungary now exceeds 10 millions. In addition to a German minority of about 500,000, there is a Slovak minority of approximately

300,000. There are about 600,000 Jews in all Hungary who, under proposed legislation, will have a special status; their economic and cultural activities will be restricted. As a result of the Austrian Anschluss and the inclusion of Czecho-Slovakia in the German political and economic orbit, Hungary has become increasingly dependent, both economically and politically, on Germany.

Economic recovery was interrupted by the radical political and social changes and the almost chronic uncertainty, which prevailed through the greater part of the year. In spite of the good harvest, the balanced Budget and the considerable export surplus, leading stock prices reached the lowest level for many years by the end of 1938. The severe recession in the stock market is largely caused by uncertainty about the economic status of the Jews who control or own a large part of the country's mobile capital. A contributory factor is the capital levy, necessitated by the re-armament and public works programme.

Five-Year Plan.—The operation of the Government's five-year plan for military equipment and social improvements, especially in rural districts, involving an expenditure of 1,000 million pengő, of which 400 millions will be raised by loans and 600 millions by a capital levy spread over several years, began in the second half of the year. The breaking up of large estates and the settlement of landless peasants also made appreciable progress.

Public Finance.—The ordinary Budget for 1937-38 disclosed a surplus of 68.8 million pengő and has more than counterbalanced the 49.3 millions deficit on the State enterprises. The surplus was spent on public works. Total receipts of the Administration in the budgetary year, ended June 30, 1938, amounted to 900 million pengő, against 871 millions in the preceding year. Revenue in the second half of 1938 continued to come in satisfactorily, and, in spite of the heavy military expenditure incurred on account of the mobilisation in the autumn, the available funds of the Government with the National Bank at the end of the year were still over 140 million pengő.

Currency and Credit.—The balance sheet of the National Bank reflects the important changes that have taken place in Greater Hungary. The note circulation of the bank at the end of the year amounted to 863.0 million pengő, against 466 millions at the end of 1937—an all-time high—which is partly explained by the exchange of Czecho-Slovak banknotes in the Northern districts into pengő notes, and partly by the withdrawal of saving deposits amounting to approximately 100 million pengő. The gold and foreign exchange holdings of the National Bank have risen from 149.4 million pengő to 220.6 millions. The Czecho-Slovak notes in the bank's portfolio are not included in the exchange reserve. The commercial bill portfolio of the bank increased slightly to 511 million pengő, compared with 449.7 millions at the end of 1937. The Government debt to the bank has increased to 191 million pengő as a result of the land reform policy. A special Government credit for the exchange of the Czecho-Slovak banknotes amounting to 78 million pengő was included in the Bank's balance sheet at the year end.

Foreign Trade.—In the first 11 months of the year the value of foreign trade increased by about 10 per cent. compared with the same period of 1937. Comparative figures are as follows:—

	In million pengő	
	1937	1938
Exports	528.4	478.0
Imports	428.7	373.5
Export Surplus	99.7	104.5

The increase in the export surplus is due to larger exports to Germany. Including exports to the former Austrian territory, Hungary's export surplus to Greater Germany increased from 24 million pengő in 1937 to 61 million pengő in the first 11 months of 1938. On the other hand, the export surplus to Italy in the same period fell from 40 to 20 million pengő. In spite of the increasing difficulty of securing convertible foreign exchange, Hungary has met the service of her foreign debts as agreed with her creditors in 1937.

Czecho-Slovakia

The Crisis.—Throughout 1938 Czecho-Slovak economic life was strongly under the influence of political events. Austria's Anschluss with Germany in March had considerable significance for Czecho-Slovakia, owing to Austria's

close economic relations with this country. Subsequent political agitation in no way improved the economic conditions in the Sudeten area and brought unrest into the money market. On May 21st part of the military reserves were called to arms. The Government later negotiated with the Sudeten-Germans and accepted the English suggestion that Lord Runciman should be sent to Czecho-Slovakia as a mediator. His efforts remained without effect. The Czecho-Slovak Government accepted almost all Henlein's demands, but he broke off negotiations. The Government had then nothing to do but accept the Anglo-French proposals. M. Hodza's Government was replaced by the Government of General Syrový. On September 23rd mobilisation was ordered. On September 30th the Government accepted the Munich agreement. President Benes resigned. In Slovakia and Subcarpathia independent governments were formed and the State was turned into a Federal Commonwealth. An agreement with Poland was reached regarding new boundaries and boundary revision between Slovakia and Hungary took place after the decision of the Vienna Conference. The Czecho-Slovak people remained on the whole steady. Peace was saved at the expense of Czecho-Slovakia, and the treaty obligations of her allies utterly broke down.

The diminished Czecho-Slovakia has been forcibly associated with the area dominated economically and politically by Germany. The external and internal orientation of Czecho-Slovak policy has altered. New forms of administration in Slovakia and Subcarpathia had to be created to conform to the Federal organisation. Party organisation was radically simplified by creating one political party only in Slovakia and Subcarpathia and a two-party system in Bohemia and Moravia. A new Constitution is being prepared.

The Price.—As a result of the Munich agreement Czecho-Slovakia lost 29.60 per cent. of her territory, and 33.42 per cent. of her inhabitants (including 1,161,016 Czechs and Slovaks). According to Polish statistics, in the territories ceded to Poland in the Teschen area there are more Czechs than Poles. Czecho-Slovakia consists now of 98,912 square kilometres and 9,807,096 inhabitants; 88.09 per cent. are Czechs and Slovaks. The German minority amounts to 3.90 per cent. and under present conditions is in a privileged position.

Czecho-Slovakia has lost 32.6 per cent. of her arable area; 63 per cent. of her hops, 84 per cent. of her tobacco, 59.7 per cent. of her vineyards, 36.3 per cent. of her fruit-trees, 26 per cent. of her forest, 31.3 per cent. of her cattle, and 30.1 per cent. of her swine. The greatest loss in mining is the loss of 54.7 per cent. of her coal and 93.2 per cent. of her lignite. In industry the greatest losses concern ceramics, glass, textile, musical instruments, toys, paper, hats, gloves, artificial flowers, small metal wares, fats, oils, dyes and similar chemical products. The task of readjustment is tremendous, and is being tackled by drastic internal administrative reorganisation and external negotiations.

Finance.—Owing to the crisis it was not possible to pass the Budget in time. The Government have prepared a Federal Budget and decided what revenues will be reserved for this purpose. Beside this, however, it will be necessary to prepare three separate Budgets for Bohemia-Moravia, Slovakia and Subcarpathia.

In September a moratorium was proclaimed limiting the free removal of deposits and the Stock Exchange has been closed. The uncertainty led to withdrawals and hoarding, but at the end of the year calm set in, deposits rose and outstanding currency declined.

Agriculture and Employment.—The harvest (for the whole former area of Czecho-Slovakia) is shown in the following figures:—

	Trucks		Trucks
Wheat	176,419	Oats	136,271
Rye	186,663	Maize	27,911
Barley	132,566		

The number of unemployed persons in January was 519,002, in September 61,697 and in December 142,316. Wholesale and retail prices rose a little; the wholesale index in January was 732, in April 727, in December 764.

Trade.—The most important event in commercial policy was the conclusion of a treaty with the United States of America on March 7th. Then, apart from the current adjustments and agreement, there have been negotiations with Germany regarding a duty-free regime with Sudetenland and a supplementary commercial agreement after the Anschluss.

Statistics of foreign trade cannot be properly compared with previous years owing to the territorial changes.

(In Mil. Cz.K.)

	Imports	Exports
1936	7,915	8,036
1937	10,982	11,983
1938 (Jan.-Sept.)	6,889	8,520
1938 (Oct.-Nov.)	1,500	1,722

The export surplus for January-September amounted to 1,631 million Cz.k. and for October-December 222 million Cz.k.

Poland

THE steady growth of the armament industry, the creation of a new industrial region in "the strategic triangle," and further development of the public works programme were mainly responsible for raising Poland's industrial output in 1938 to the highest level yet recorded. With a base figure of 100 for 1928, and a "depression low" of 54 in 1932, the general index of industrial production reached 147 in the final quarter of 1938. The acquisition from Czecho-Slovakia last October of the industrial region of Teschen-Silesia has substantially increased Poland's potential production of coal and foundry products, but the problem of finding markets for this increased production has not yet been solved.

It is disquieting that so much of the increased employment of labour and consumption of raw materials was required for military purposes, and that, in spite of all the effort and sacrifice involved, the political changes which occurred in 1938 much more than neutralised the growth in armaments. Authorities estimate that, if the military relationship between Poland and Germany was of the order of one to six at the beginning of 1938, the ratio at the end of the year was about one to ten. Increased expenditures on armaments and public works are proving an effective barrier to improvement in the standard of living. For at least 30 millions out of Poland's population of 35 millions the standard of living is probably the lowest of any European country.

Finance.—The Treasury and subordinate authorities now have a complete monopoly of the capital market, and investments in public works and the new industrial region are absorbing savings as fast as—if not, indeed, much faster than—they accrue. Complete and up-to-date figures on Treasury indebtedness, however, are not available. No new foreign loans were secured in 1938, and sales of munitions to countries at war, which were an important source of foreign exchange in 1936 and 1937, ceased about a year ago. With the defence programme requiring increased imports, the exchange reserves of the Bank of Poland were subjected to much strain in the latter part of 1938. The restrictive measures on dealings in foreign exchange were made still more drastic in November, 1938, when Polish citizens were ordered to make their foreign assets available to the Government. Gold and foreign currencies hoarded by Polish citizens in Poland, however, have not yet been called in. According to the published figures the gold and foreign exchange holdings of the Bank of Poland, which stood at 471.0 million zlotys at the end of 1937, were 463.2 millions at the end of 1938. The circulation of bank notes increased during the year from 1,060 to 1,406 million zlotys. Net gold exports in 1938, according to the foreign trade returns, were valued at 11.3 million zlotys. In 1937 there was a net gold import of 120.9 million zlotys. Conditions on the Stock Exchange, although quiet, improved steadily throughout 1938, the yield on Government stocks and high-grade mortgage bonds showing an average decline of nearly 2 per cent. to about 7½ per cent. There was an all-round increase in equity share prices, in some cases of more than 50 per cent.

Foreign Trade.—The following are the official trade figures for the last three years:—

	Imports	Exports	Balance*
	(In millions of zlotys)		
1936	1,003.4	1,026.2	+ 22.8
1937	1,254.3	1,195.5	— 58.8
1938 (prelim.)	1,300.4	1,184.8	— 115.6

* Export surplus +. Import surplus —.

Imports from the United Kingdom, compared with 1937, fell slightly, and there was a small increase in exports other than to the United Kingdom. From Germany, however, imports (for the first eleven months) rose from 218 million zlotys in value in 1937 to 272 millions in 1938; while exports to Germany rose from 202 to 247 million zlotys. The principal increases in commodity imports were in machinery, machine tools and electrical equipment. Coal exports rose from 11,003,449 metric tons in 1937 to 11,669,177 in 1938, or from 185 million zlotys in value to 217 millions.

U.S.S.R.

IN 1938, the first year of the third Five-Year Plan, Soviet energies were still concentrated on the campaign for political vigilance which the Communist Party had launched at the beginning of 1937. At the end of the year signs were that this campaign was drawing to a close. The long-term results of the almost complete change in personnel which it produced were still difficult to estimate. Its short-term result was a more serious slowing-up of Soviet industrial expansion than any that had occurred since the first Five-Year Plan began in 1928.

Industry.—The results of 1938 in industrial production (valued at 1926-27 prices), in milliards of roubles, are shown in the following table:—

	1937	1938	1938	1938
	(roubles: thousands of millions)			
Heavy, machine and defence industries.....	36.9	43.9	47.0	42.5
Lumber industry	3.0	3.8	3.8	2.8
Light industry	14.5	16.5	16.5	15.3
Food industry.....	12.8	14.0	14.1	14.7

The first version of the 1938 plan was published in November, 1937; the second in July, 1938. Even at the latter date Soviet planners failed to make due allowance for the economic difficulties—themselves both a cause and a result of the purges—with which factory and plant managers were contending. Total industrial production in 1938, it has been announced, was valued at 77,500 million roubles, compared with 69,200 millions in 1937. This was an increase, but far behind what had been planned. The original estimate for 1937, in the second Five-Year Plan, had been 92,700 million roubles; control figures for that year actually raised planned production to 103,000 million roubles. The original version of the 1938 control plan called for a total industrial production of 84,300 million roubles.

Detailed production figures for separate commodities have not yet been published. But it is clear that failure to fulfil the plan was most marked in the fuel industries and in those producing consumers' goods, especially textiles. Coal production amounted to 125.1 million tons, compared with a plan of 139 million tons. Cotton goods produced were 3,216.6 million metres, compared with a plan of 3,771 million metres. Slight increases were shown in some branches of heavy industry, with outputs of 15 million tons of pig iron, 18 million tons of steel and 13.5 million tons of rolled metal.

Agriculture.—Drought, which was most serious in the Volga region, in Eastern Ukraine, and in the North Caucasus, seriously affected the grain crop. No official figures have been published, but the total grain harvested has been officially stated to have been "less than in 1937," when the grain harvest was estimated at 111,384,000 tons, but "more than in 1935 or 1936," when it was estimated at 90,100,000 and 76,800,000 tons, respectively. Vegetable crops were also deficient, but the Government plan for flax was over-fulfilled, and the cotton crop was the largest on record.

Prices and Wages.—Without official figures of retail trade, turnover or prices it is impossible to document the belief of most foreign observers living in Moscow that the cash purchasing power of the Russian people has continued to increase at a much faster rate than the supply of goods and services to consumers. The country's gold production, the Government monopoly of foreign trade and a fixed price policy in retail stores have prevented this situation from developing any of the usual consequences of inflation. There has been, it is true, a slight upward tendency in prices during 1938, and occasional shortages, especially of manufactured goods, but neither of these has been severe.

The average wage, according to plan, was to be 309 roubles a month in 1938, and in many industries this figure is known to have been exceeded. In 1937 the average was 281 roubles a month. Since the production of goods by all light industries increased compared with 1937 by only 5.5 per cent. there resulted a real measure of "forced saving." Savings bank deposits rose to more than 6,000 million roubles, the increase in 1938 being 1,536 millions.

Foreign Trade.—Soviet exports and imports for the first nine months of 1937 and 1938 were as follows:—

	1937		1938	
	Thousand Tons	Thousand Roubles	Thousand Tons	Thousand Roubles
Exports	9,503	1,218,549	6,179	925,241
Imports	1,002	1,012,761	841	1,045,983
Export (+) or import (—) surplus	...	+ 205,788	...	— 120,742

An import surplus for the entire year was not expected to strain the Soviet Union's foreign bank balances after four successive years of export surpluses and with foreign commercial debt reduced to a minimum. A large part of the reduction in Soviet foreign trade during 1938 was represented by the fall in business with Germany, Japan and Italy.

Finance.—The 1938 Budget provided for income of 132,637,993,000 roubles and expenditure of 131,137,993,000 roubles. Total expenditure in 1937 was 93,921,000,000 roubles. The Red Army and Navy appropriations were increased from 18.6 per cent. of the total in 1937 to 23.5 per cent. in 1938, and this latter figure did not include expenditure on defence industries. Revenue continues to be raised chiefly from indirect taxation, with 83,300 millions from the turnover tax in 1938, compared with 75,900 millions in 1937.

Roumania

DRASTIC events in internal politics marked the year 1938. The successive steps were the suspension of the Constitution on February 10th, the pursuit of the Iron Guard resulting in the summary execution of its leaders on November 30th and the creation of a new single political party moulded on the new authoritarian Constitution published on February 21st. Such events did not favour economic revival.

Foreign Exchange.—The outstanding economic event was the abandonment of thorough centralisation of exchange transactions. The shortage of foreign exchange, caused by export difficulties, forced the Roumanian National Bank to admit, under certain circumstances, the free transfer of at least part of the *devisen* yielded by export transactions. At the end of the year the exchange rate stood at about 1,600 lei to the £, compared with an official rate of 600; the "black" rate for remittances is over 2,100 lei. In the first ten months of the year total entries in clearing accounts amounted to 11,700 millions of lei, compared with 15,100 millions during the corresponding period of 1937, and total payments of 12,900 millions against 14,700 millions.

State Finance.—The fiscal year (April 1st to March 31st), will probably end satisfactorily. Provisional figures show receipts of 28,900 millions of lei in the first 10 months of the calendar year compared with 24,100 millions in the corresponding period of 1937. The current Budget may be the third successive Budget without a deficit. The financial position of the State railways, too, appears to be steadily improving.

Agriculture.—The year's results were uneven. While wheat yielded a record crop, all other cereals, including maize, which is of outstanding importance for Roumania, fell below average levels. The total surplus available for export was returned at the beginning of the export campaign at 50,000 carloads of maize and 250,000 carloads of wheat. Maize prices were satisfactory without any State interference, but the price of wheat had to be again increased artificially by export premiums. Total exports of wheat were (in the first 11 months of the year) only 77,800 carloads compared with 93,400 in 11 months of 1937, and total exports of all cereals (maize included) were (during the first 10 months) 101,000 carloads, against 211,800. Large quantities of wheat have been recently sold to Germany (40,000 carloads) and Italy (35,000 carloads) for delivery during the spring.

Petroleum.—The falling off in oil output did not come to an end. Total output was 6.7 million tons, compared with the 1936 peak figure of 8.7 millions. Drillings fell to 300,000 metres compared with 394,000 metres in 1937. The total working capacity of all refineries is 11.6 million tons of crude oil per year, but actually they treated no more than half this quantity.

Trade.—Provisional figures show total exports of 21,700 millions of lei, compared with 31,600 millions in 1937, and total imports of 18,100 millions against 20,300 millions. The export surplus dwindled from 11,300 millions in 1937 to 3,600 millions, and this accounts for the heavy exchange strain. All the main export commodities declined; not only cereals and oil products, but also lumber.

Domestic trade was satisfactory, except during periods of political trouble. The aggregate output of electricity by 44 plants was (first eight months) 276.3 millions of kw., against 261.2 millions in eight months of 1937; and the turnover of most of the industries producing consumption goods is likely to reach the 1937 level.

Jugoslavia

Two divergent trends were the dominant features of Yugoslav economic life throughout 1938. One was a shrinkage of exports; the other a steady progress in domestic business, which, although it became less marked towards the end of the year, stood up well to the political shocks of the autumn. On balance, the year was a fairly good one, estimated national income increasing from 44,200 million dinars to 46,700 millions.

Foreign Trade.—In contrast to the previous year, 1938 saw a persistent falling away in foreign trade. Exports fell from 6,272 million dinars and 4,557,000 tons in 1937 to 5,047 million dinars and 3,702,000 tons in the course of 1938. Imports during 1938, on the other hand, in spite of a decline of nearly 5 per cent. in value from 5,234 million dinars to 4,975 millions, increased in volume by close on 15 per cent. from 1,105,000 tons to 1,270,000. In 1937 there was an export surplus of 903.7 million dinars; last year there was a surplus of exports amounting to 72.1 millions. The seriousness of the decline in exports lies in the fact that it occurred in trade with countries paying cash, and thus caused towards the end of the year a shortage of *devisen*. Smaller exports to countries paying in *devisen* were the result of the high price level obtaining in Yugoslavia in consequence of the high prices paid for Yugoslav produce by German importers. As a corrective measure, the Government has introduced an export rate of 262 dinars to the £ sterling against the previous rate of 238, and is planning to control both exports to countries with which it has a clearing arrangement and imports from countries paying in *devisen*.

Agriculture and Industry.—The year 1938 brought another record harvest, in spite of the fact that maize, with 44 million metric tons, yielded 9.3 million tons less than last year. The wheat crop was 30.3 million metric tons, against 23.5 millions last year; barley, rye and oats yielded an average of 10 per cent. more than in the previous year; grapes gave a record vintage of 4,000,000 hectolitres of wine, while other fruit crops were also good.

The most notable industrial progress was made in mining and metallurgy, owing to new mining developments and the setting up of several large enterprises, in some of which the Government took a prominent share. In mining the index of production increased from 140.4 to 158.4, and in smelting from 147.8 to 274.2 between November, 1937, and November, 1938. Headway was also made in the textile, chemical, mill, sugar and brewing industries, while forestry products, after a setback, showed signs of revival. Industrial progress is reflected in the increase in the number of insured workers from 716,700 in September, 1937, to 754,700 in September, 1938, and a slight increase in average daily wages from 23.42 to 24.32 dinars. The increase in wages, however, was to some extent neutralised by the rise in retail prices from 89.3 to 92.5 between November, 1937, and November, 1938, though the index of wholesale prices fell during the same period from 79.5 to 76.7.

Finance.—In finance the year was satisfactory. In spite of a smaller inflow of *devisen* the National Bank cover increased by 200 millions to 1,909 million dinars. Bank deposits in November showed a slight increase over November last year, amounting to 11,054 million dinars, against 11,033 millions; the modesty of the rise is explained by the fact that money only started flowing back into the banks in November after a wave of withdrawals during September and October. Deposits in State guaranteed institutions have for the most part come back, but deposits in private banks are still below last year's levels. The influx of new capital into joint-stock companies was greater than in 1937, amounting to 1,038 million dinars during the first nine months of last year.

The State Budget benefitted from the general business activity of the year, receipts for the first eight months of the 1938-39 budgetary year being 8,170 million dinars against 7,836 million dinars in the first two-thirds of the previous budgetary year. Expenditure during the same period was 7,260 million dinars, making a surplus of 920.3 millions. During the year settlements were reached with French, British, American and Swiss holders of Yugoslav loans, the amounts to be paid in cash by the Yugoslav Government being stepped up.

Bulgaria

In spite of unfavourable conditions abroad, the past year was satisfactory for Bulgaria in almost every way. The second quarter of the year registered some slackening in economic activity, but this was largely offset by a recovery

during the second six months. The general price index (1926 = 100) rose to 75.5 at the end of November, against 72.3 in November, 1937, a rise of 3.2 per cent. The rise in export prices was appreciable, amounting to more than 20 per cent.

Agriculture.—Owing to poorer crops Bulgaria was not in a position to export any cereals, but was content to export fruit, vegetables and other foodstuffs to Germany at prices considerably higher than world prices. Total cereal crop production amounted to 3,400 thousand tons, against 3,600 thousand tons in 1937, while tobacco production fell from 35,000 tons to 17,000 tons. Deficient cereal crops were balanced by abundant vegetables, grapes and other fruit, which even made it possible to increase the volume of Bulgarian exports. The embargo imposed on exports of cereals and forage-foods raised their domestic price, and the Cereal Board fixed the price for wheat and rye at about 250 per cent. over their world prices. This improved farmers' income and permitted industrial production to increase by 10 per cent.

Money and Banking.—Bank deposits increased by about 10 per cent. compared with the preceding year up to the end of September. The higher level of exports and increased industrial output led to the maintenance of banking activity, though there was no expansion of investment owing to general fluctuations and uncertainty. For the same reason the maximum level of rediscounts with the National Bank was only 850 million leva (in October) against a peak of 1,300 million leva in 1937. The average monetary circulation was 2 per cent. lower than in 1937. The gold stock of the National Bank showed a slight fall of 12 million leva during the first half of the year, and at the end of 1938 it amounted to 2,006 million leva.

The foreign exchange stock of the bank increased steadily and exceeded the record high level of 1,000 million leva. Unfortunately this increase was only in clearing exchange, the free-exchange position of the bank having considerably weakened, because export trade is chiefly directed to countries with which Bulgaria has clearing agreements. The shortage of free exchange is acutely felt.

Foreign Trade.—The value of Bulgaria's exports in 1938 was 5,578 million leva, against 5,019 millions in 1937, an increase of 11 per cent. As the estimate includes the compensation premiums paid, the actual increase in value is only 5 per cent. Imports, although greater in volume, fell in value by 1 per cent., totalling 4,934 million leva in value, against 4,986 million leva in 1937. Again, if the premiums are allowed for, the decrease is about 6 per cent., owing to lower prices of imports. The export surplus is estimated at 559 million leva, against only 52 millions in 1937. The lack of cereals and industrial plants for exports, previously directed to countries with free exchanges, has limited Bulgarian exports to countries with clearing *devisen*. Germany's share of Bulgaria's export trade has increased (Austria included) from 47 per cent. in 1937 to 58 per cent. in 1938, while imports from Germany fell from 57.5 per cent. of total imports to 52 per cent. Exports to countries with clearing systems increased from 67 per cent. of the total in 1937 to 81 per cent. in 1938. Exports to the United Kingdom fell from 14 per cent. of total exports in 1937 to 5 per cent. in 1938.

The Budget.—Economic recovery favourably affected ordinary State receipts, which, together with State railway receipts, amounted to 9,848 million leva in 1938, against 9,348 millions in the preceding year, an increase of 6 per cent. There was a surplus on the 1938 Budget of 460 million leva.

Greece

ON the whole, 1938 was a good year for Greece, thanks to good harvests. Economic activity was maintained at a satisfactory level, despite unfavourable international developments.

Agriculture, Industry and Commerce.—The yield of cereals, currants, wines, fruits and vegetables was abundant and of good quality. The output of tobacco, olive oil and cotton was smaller than last year's.

Industrial production was generally brisk and, aided by public contracts, showed an increase over the previous year. The index of production for the first nine months was 164.24 (1928 = 100), against 151.69 in the corresponding period of last year, or an increase of 7.27 per cent. Stocks were normal, but prices tended to recede, owing to the fall in the price of raw materials, strong competition, and reduced internal demand.

Foreign Trade.—Provisional figures for the first eleven months of 1938 show, compared with 1937, a small increase

in the volume and value of foreign trade. Imports were larger in quantity but lower in value, while exports were smaller in quantity but higher in value.

	1937		1938	
	Volume Tons	Value Millions Drachmæ	Volume Tons	Value Millions Drachmæ
Imports	2,474,534	13,848	2,511,464	13,526
Exports	1,253,035	7,782	1,240,644	8,468
Surplus of imports		6,066		5,058

The import surplus shows a decrease of Drs. 1,008 millions compared with the first eleven months of 1937. Imports fell in value from July, while the value of exports increased considerably in October and November. Germany again heads the list of countries trading with Greece. Imports from Germany in the eleven months amounted to Drs. 3,898 millions and exports to Germany to Drs. 3,119 millions. New compensation and clearing agreements were signed with Yugoslavia, Czechoslovakia, Bulgaria, Germany, Turkey and Italy.

Banking and Finance.—Bank advances had declined by the end of October (compared with October, 1937) from Drs. 21,106 millions to Drs. 20,240 millions, while investments had increased from Drs. 1,760 millions to Drs. 3,371 millions. The proportion of cash and balances with other banks to sight liabilities had fallen from 11.3 to 8.5 per cent.

The Budget accounts for the first eight months of the current year show the following results, compared with the corresponding months of the previous financial year:—

	Financial Year	
	1937-1938 April-Nov., 1937	1938-1939 April-Nov., 1938
(In millions of drachmæ)		
I. Revenue—		
(a) Estimated (for the whole year)	16,093	14,738
(b) Collected (8 months)	8,960	8,782
II. Expenditure—		
(a) Estimated (for the whole year)	17,030	15,711
(b) Liabilities incurred (8 months)	15,017	13,856
(c) Payments effected (8 months)	8,509	8,025

No agreement has yet been reached with the foreign bondholders about the service of the foreign debt, and the authorities continue to pay 40 per cent. of the full service.

Northern Europe

Denmark

THE traditional policy of strict neutrality was further emphasised by the Copenhagen declaration of July 24, 1938, whereby Denmark, together with Belgium, Luxembourg, Finland, Holland, Norway and Sweden, released herself from Article 16 (the sanctions clause) of the League of Nations Covenant. This step has been fully justified by subsequent developments and doubtless contributed to the feeling of relative safety from being drawn into European political storms that has prevailed in Denmark throughout the year. The Stauning Cabinet remained in power, as it has done since April 29, 1929.

Public Finance.—The State finances remain satisfactory, as the following figures suggest:—

	Accounts 1937-38	Budget 1938-39	Budget Bill 1939-40
	(in million kroner)		
Total revenue	520.9	492.8	489.9
Hereof: Taxation	193.8	185.1	182.9
Duties	301.5	292.6	295.0
Total expenditure	497.4	490.2	485.9
Hereof: Social purposes (sick benefit, old-age benefit, etc.)	162.9	165.9	173.7
Furtherance of trade and industry	57.7	35.0	34.7
Defence	59.2	59.1	52.8
Surplus	23.5	2.6	4.0

Business Activity.—There was a marked difference in economic activity between the first and the second half of

the year. Until June, prices continued the decline already begun in 1937; the wholesale price index in June was 111, against 119 in January. Since then the index has remained, practically speaking, steady. The continued fall in the prices of grain and feeding stuffs was offset by a considerable increase in prices of other goods, especially animal products. The index of import prices was higher during the first half of the year than in the second, but the total value of imports was lower during the first than during the second half of the year, owing to a shrinkage of activity in the building trades and other industries. There was a postponement from month to month of purchases both of raw materials and semi-manufactured goods. About the middle of the year the trend was reversed. The change was at first only slightly in evidence; later on it was speeded up by the favourable effect of an abundant harvest on agriculture. Prices of grain and feeding stuffs continued to fall, but prices of finished products were well maintained or even improved slightly. The passing of the political crisis at the end of September also gave rise to numerous purchases which had been temporarily held up. The building trades picked up, and increased activity in trade and industry created a demand for bank loans simultaneously with rising imports.

Foreign Trade.—In the field of foreign trade the rigid import control exercised by the Exchange Control Office was lifted for a great number of raw materials, semi-manufactured goods and certain consumers' goods. In most instances the revision of import restrictions resulted in immediate falls in price and larger selections of goods were offered for the benefit of consumers. The value of foreign trade in the last three years has been as follows:—

	Total imports	Total exports	Import surplus
	(in million kroner)		
1936	1463.7	1351.4	112.3
1937	1673.8	1568.5	105.3
1938 (preliminary figures)	1640.9	1550.6	90.3

Trade with Great Britain and Germany has moved as follows:—

	Imports from :	Exports to :
1937 :—	(in million kroner)	
Great Britain	637,628	824,078
Germany	404,275	297,449
1938 :—		
Great Britain	566,564	860,788
Germany	401,678	304,942

The increase in foreign exchange balances in the course of the year is estimated at 50 million kroner for the National Bank and the leading private banks taken together, and cash balances with foreign banks are now comfortably above 100 million kroner.

The discount rate has remained unchanged at 4 per cent., and a modest increase in loans and advances has been possible. In conjunction with the £ sterling the gold value of the krone declined by about 6 per cent. in the course of the year.

Sweden

THE year 1938 proved to be far better than was generally expected at the end of the record year 1937. The outlook for pulp, paper and timber, Sweden's main staple products, was then poor, and business activity was on the decline during the first half of the year. It recovered in the early autumn and has since shown an upward trend. The main support has been exceptionally brisk building.

Budget and Public Finance.—Budget estimates for the financial year 1939-40 provided for revenue and expenditure of Kr. 1,364 millions, compared with Kr. 1,373 millions for the current financial year. The National Debt increased during the year from Kr. 2,342 millions to Kr. 2,566 millions, mainly on account of an additional issue of 3 per cent. State bonds. The sterling rate was maintained by the Bank of Sweden unchanged at 19.40. The official discount rate has been 2½ per cent. ever since January 1, 1933.

Business Activity and Employment.—Business activity in Sweden reached its peak in August, 1937, when the general index of Swedish business activity (1935 = 100) reached 124.2. In January, 1938, the index was already down to 117.9, and subsequently it fell to the recent low record of 112.6 in July. In early autumn increased building activity caused a gradual recovery and in November the index was up

to 119.4. At the turn of the year building was working at full capacity. This has favourably affected the output of building materials, particularly of lower grade iron and steel. The index of iron and steel consumption rose from 94 in July to 126 in November. As the building industry employs, directly and indirectly, about one-third of all persons employed in industry, employment was satisfactory.

Foreign Trade and Prices.—The value of foreign trade fell (compared with 1937) by 8 per cent. for exports and 2½ per cent. for imports. In view of the highly unsatisfactory state of the markets for timber, pulp and paper, the decline might have been worse, but, as it was, the falling-off was partly counterbalanced by higher prices for iron ore and increased exports of engineering products. The value of imports fell from Kr. 2,123 millions in 1937 to Kr. 2,068 millions in 1938, while exports fell from Kr. 2,000 millions to Kr. 1,839 millions. Timber exports declined from Kr. 262 millions to Kr. 200 millions (or 24 per cent.), while pulp and paper exports fell from Kr. 588 millions to Kr. 472 millions (20 per cent.). Coal and coke imports totalled 7.71 million tons, compared with 8.94 million tons in 1937, and petrol imports were 738 million litres, compared with 664 million litres in 1937. Wholesale prices reached their record high level in July, 1937, when the general index of wholesale prices compiled by Professor Silverstolpe (1913 = 100) reached 143. At the beginning of 1938 the index was down to 137 and then fell further to 121 at the end of the year.

Money and Banking.—Money was easy throughout 1938. Interest rates were low; and this has become a subject of great concern for insurance companies and savings banks. Low money rates are a stimulus to industrial activity, and particularly to building activity, but large sections of the population, who derive their income from savings or have to pay insurance premiums, suffer adversely. The three big investment groups, commercial banks, insurance companies and savings banks, are at present studying means to stabilise interest rates at their present level. The reason for the present accumulation of funds is the credit surplus in the Swedish balance of payments, due to the absence of foreign lending and the influx of refugee money. At the same time saving is on the increase owing to the growth of life insurances. During the year the Bank of Sweden increased the gold reserve from Kr. 539 millions to Kr. 707 millions, valued at the statutory gold parity. At the same time, the total foreign currency reserve of the Bank of Sweden and the joint-stock banks declined from Kr. 916 millions to Kr. 711 millions.

Norway

IN spite of the recession which was in full progress on international markets at the beginning of the year, conditions in Norway continued to be favourable, at least during the first few months of the year. Activity was well maintained, although signs of anxiety and hesitation were not lacking as international complications continued to increase in force and significance. But a general review of industry and trade leaves the impression that conditions were less influenced by these circumstances than might have been anticipated. There were no alterations in the political composition of the Government, but on three different occasions the Premier had to have recourse to a referendum, which left him with a comparatively narrow parliamentary margin. The question of sanctions was thoroughly discussed at a meeting of the four Premiers of the Northern countries, at which the necessity of observing strict neutrality in international conflicts was strongly emphasised.

Budget and Finance.—The national accounts for 1937-38 closed with a surplus of 36.6 million kroner, revenue exceeding estimates by 57.5 millions, while expenditure was 21 million kroner in excess of estimates. The Budget for 1938-39, with total expenditure of 565.7 million kroner, represents an increase of 32 million kroner on the preceding Budget.

The money market has been characterised by an abundance of liquid funds. Low deposit rates created a heavy demand for Government and other gilt-edged securities, with consequent rising prices. This movement continued until September, when there was a temporary setback. The official discount rate was reduced on January 5th to 3½ per cent., and remained at this level all through the year. The note circulation rose from 449 million to 477 million kroner, while gold in the vaults increased from 135 million to 152 million kroner. Deposits with the Norges Bank rose by about 27

million kroner, while there was a slight decrease in loans and discounts, and a similar movement is traced in the balance sheets of private and savings banks. Most of the banks have increased their actual earnings, but expenses (especially taxes) have been higher, the result being practically unchanged net profits. Easy conditions in the money market induced the Government, as well as a number of municipalities and private concerns, to convert redeemable loans at very favourable terms. The stock market was greatly influenced by foreign market conditions, especially shipping, whaling and industrial shares; the tendency was downwards, while banking, insurance and miscellaneous shares were steady to firm.

Trade and Production.—The Norwegian kroner, as a "member" of the sterling bloc, depreciated in terms of dollars, the rate fluctuating between 3.98 and 4.32. The value of imports during the first eleven months was 1,095.4 million kroner against 1,186.4 millions in eleven months of 1937, while exports were valued at 700.7 million kroner against 737 millions. The decline in the value of exports was chiefly due to reduced shipments of paper and pulp, and also of timber, hides and metals. On the other hand, there was an increase in exports of minerals, fodder and fertilisers.

There was a rise of 8 points in the index of industrial production, from 121 to 129; but while the movement of the index for industry producing for the home market was definitely upwards, from 119 to 137, the index for the export trades fell from 126 to 115. Unemployment rose slightly compared with the preceding year, and the rise was especially conspicuous during the latter half of the year. Labour conditions were good, without conflicts of any importance.

Shipping and Fisheries.—Shipping had a year of considerably less activity than in 1937, idle tonnage rising from nil in January to 490,000 tons in October, and at the close of the year it was 395,000 tons. Gross freight receipts were estimated at about 625 million kroner against 800 million kroner in 1937. The total catch in the Antarctic amounted to 973,000 barrels of whale oil against 791,000 barrels in 1937, but prices were low and foreign competition keen. The fisheries proved fairly satisfactory as far as quantities landed are concerned, but on account of increasing difficulties in the various export markets, total exports were considerably smaller than in 1937, except for cured cod-fish.

Agriculture was hampered by inclement weather, especially during spring and early summer, but ample rains and warmer weather later on improved crop prospects. The crops of hay were somewhat above the average, while cereals were slightly below. In the forest industry the year brought a reduction in prices of about 40 per cent. compared with last year. Tourist traffic increased appreciably, and is calculated to have brought in a net income of about 80 million kroner.

Finland

THE peak of the trade cycle was passed in 1937. In 1938 economic life in Finland was marked by divergent tendencies. In some spheres the recession that set in on world markets in 1937 exerted its full effect; in others production and consumption were well sustained.

Public Finances.—The principal sources of revenue provided the Treasury with a larger yield than in the previous year, and in many cases even exceeded the Budget estimates. During the months January-November the current revenue of the State amounted to 3,859 million marks, against 3,578 millions in nine months of 1937. Expenditure also increased. The conversion of foreign loans and their replacement by internal loans continued. The total public debt was reduced in the course of the year by 201 million marks to 3,251 millions.

Prices.—During the first half of the year prices were falling. Later, however, the fall was arrested and the level of prices became steady, with some tendency to rise. In December the wholesale price index (1926 = 100) was 98, against 102 a year before, and the cost-of-living index (1935 = 100) stood at 109, the same as in December, 1937. Prices for exported goods fell more than the prices of imports.

Industry.—The recession affected exporting industries most: sales fell off and prices dropped severely for sawn timber, chemical pulp, paper and other goods. The index of the volume of production in these industries for the period January-September was 10 per cent. lower than in the same months of 1937, and the fall in the index of the value of production was over 27 per cent. During the third quarter of the year the gross value of production was 49 per cent.

lower than in the third quarter of 1937. The setback had not yet appreciably affected industries producing for the home market. For industry as a whole, however, the index of the volume of production for January-September was 176, against 180 in nine months of 1937, and the index of the value of production fell from 195 to 174.

Crops were generally satisfactory apart from rye, autumn wheat and potatoes. Building operations were lively, and employment was good. Towards the end of the year some falling off was evident, and the Government took special steps for combating possible unemployment.

Foreign Trade.—Compared with the record levels of 1937 foreign trade fell off. The value of imports was 8,612 million marks, a decrease of 7.5 per cent. The value of exports was 8,431 million marks, or 10.1 per cent. less than in 1937. Whereas the balance of trade had been active during the whole period from 1930 to 1937, there was a surplus of imports amounting to 181 million marks in 1938. The balance of payments, however, was on the credit side and (according to preliminary estimates) provided about 300-350 million marks for reducing foreign indebtedness.

The Money Market.—The money market was easy throughout the year. Deposits in the joint-stock banks increased by 725 million marks, against an increase of 1,432 millions in 1937, but the increase in credits was 604 millions, compared with an increase of 1,236 millions in the previous year. At the end of 1938 deposits in the joint stock banks reached a higher figure than ever before at 10,755 million marks. The Stock Exchange was generally dull and the level of share prices was low.

Latvia

SINCE the world crisis State control has played an increasingly important rôle in Latvian industry. According to the latest estimates, out of a total of 6,600 million lats invested in the Latvian economy, 2,000 millions may be attributed in one way or another to the State. Export monopolies for products such as meat and dairy produce have been set up; and the keystone of all this activity is the Latvian Kreditbank, whose capital is 40 million lats. Where private concerns have been liquidated by Government decision the Bank has in many cases taken over control; and occasionally, it has started new enterprises. In modern Latvia there is scarcely any branch of industrial activity which does not include some form of management by the State. Although no major economic changes occurred in 1938, and general conditions and purchasing power remained satisfactory, there was a movement towards cartelised control, especially in the timber industry. The State sugar refinery, owing to a poor sugar beet harvest, decreased its turnover. The beet harvest was 234,973 tons, against 284,384 tons in the previous year, and there was a lowering of the sugar yield from 18.5 per cent. to 16.8 per cent. Sugar production was 33,336 tons, against 45,174 tons in 1937, and this in turn affected the trade balance adversely. The Bank of Latvia and the Latvian Kreditbank lowered their discount rate by one-half per cent. This decision was also taken by the private banks, so that from January 1st the highest discount rate in Latvia was 6.5 per cent. Following a good harvest, the commercial position in 1938 was satisfactory. Butter exports rose from 19,219 tons in 1937 to 23,434 tons, and the number of pigs exported from 83,000 to 118,000; but, owing to diminished timber exports, foreign trade as a whole was less good than in 1937. Imports fell from a value of 231.3 million lats in 1937 to 227.4 millions; and exports fell from 261.1 million lats to 227.2 millions. Currency circulation rose from 142 to 162 millions, and gold and exchange reserves from 94 to 96 millions.

Lithuania

THE economic development of Lithuania was satisfactory in 1938; and the general position continued to improve. There was a clearly marked tendency for improvement to be spread over as wide an area as possible, and one important factor was the public works programme, which, with the help of State subsidies and propaganda, increased, for instance, the use of fire-proof materials. Brick production is thus up by 40 per cent. on the previous year. Good harvests increased peasant purchasing power; and the Government's wheat export policy also contributed towards this. Imports were mainly of finished goods and were valued at 223.6 million lits, against 212.6 millions in 1937. Exports were valued at 233.2 million lits, against 208 millions in 1937. Exports thus

increased by 12 per cent. and imports by 5 per cent., leaving an export surplus of 10 million lits, against an import surplus in 1937 of 4 millions. The German share of Lithuanian foreign trade has again increased: of imports from 21 per cent. to 23 per cent., and of exports from 16 per cent. to 26 per cent. Great Britain's share of imports rose from 28 per cent. to 31 per cent., but her share of exports fell from 47 per cent. to 40 per cent. Trade with Poland has not improved. Currency circulation rose from 143 to 170 million lits. The cover was 52 per cent., against 68 per cent. at the end of 1937. Demand in the money market was active and the private banks raised their loans from 467 to 488 million lits, while investments rose from 273 to 283 million lits. Exchange control was somewhat tightened. The rate of exchange remained throughout the year at 5.92 lits to the dollar. Prices kept firm. State revenue for the first ten months was 270 million lits and expenditure 289 millions; and the Budget for 1939 is balanced at 376 millions.

Estonia

As elsewhere the industrial depression in Estonia first became evident in the second half of 1938. In a number of cases the improvement of 1937 was even further strengthened, and this was noticeably so with agriculture, which enjoyed a good harvest and favourable price levels. The total value of agricultural production in 1938 is estimated at about 200 million crowns, against 192 millions in 1937. Beef production has increased by 3.4 per cent. and pig production by 1.4 per cent. For a number of agricultural products the Government fixed minimum prices which were high enough to guarantee a profit on the increased production. Industry did not fare uniformly. Home markets were not unfavourable, but in some branches of the export industry (wood, pulp, textiles) a depression was noticeable.

The total value of industrial production during the year was 113 million crowns against 110 millions in 1937. The State has been very active in the industrial field, and this year has established a cellulose plant, several brick kilns, and a peat production plant. Industrial wages increased through a shortage of labour. The cost of living changed little. Imports were valued at 107.2 million crowns against 111.1 millions in 1937, and exports at 103.9 million crowns against 106 millions. This recession is partly attributable to reduced prices and partly to fewer imports of raw materials and a decline in timber and other exports. The passive trade balance is, however, more than made up by receipts from the Estonian merchant shipping fleet. To that extent the exchange position was favourable during the year, and no difficulties over the provision of exchange for commercial purposes arose. Holdings by the Eesti Bank in gold and foreign exchange increased during the year by 0.4 million to 51.6 million crowns, while the note circulation increased by 2.6 millions to 51.7 million crowns. The increase in the note circulation was due to heightened commercial activity and partly to an improvement in wage levels. The banks did well and actually increased the amount of business passing: deposits rose from 108.4 million crowns to 123.4 millions and loans from 116.4 million crowns to 129.5 millions. The Government's financial position was normal; and the Budget for 1939-40 is balanced at 106 million crowns.

America United States

THE year 1938 opened in severe depression, with production over 30 per cent. below the level of mid-1937. This depression dragged on for the first six months; then business turned abruptly upwards at the mid-year; and, at the year end, about half the ground lost in the last half of 1937 had been regained. The share market was remarkably prompt in "dis-counting" the upturn, and between mid-June and mid-July reached the level at which the year closed.

Legislation.—The principal enactments of the second Session of the 75th Congress were the Wages and Hours Law, a modification of the Tax Act, and a Joint Resolution creating the Temporary National Emergency Committee. The Wages and Hours Law establishes a maximum working week of 44 hours, falling after two years to 40 hours, and a minimum wage of 25 cents an hour, rising gradually to 40 cents. The Tax Act virtually repealed the undistributed profits tax on corporations and amended the capital gains

tax on individuals. The Temporary National Emergency Council is to investigate monopoly and the concentration of economic power. In addition, Congress voted large increases in the Budget under the spending-lending programme, designed to stimulate recovery.

Treasury Finance.—At the end of 1938, gross public debt was \$39,427 millions, compared with \$37,279 millions at the end of 1937, an increase of \$2,148 millions. During April, the Treasury realised about \$1,200 millions from the release of the Inactive Gold Fund, plus \$200 millions from the monetisation of other gold. This operation was partially accomplished by redeeming maturing Treasury bills in the second quarter, and this type of Treasury paper was almost extinguished for a time. Four long-term Treasury issues were offered during the year—in March, a 10½ year bond at 2½ per cent. (refunding); in June another refunding issue of 20-25 year bonds at 2½ per cent.; in September, 12-14 year bonds at 2½ per cent.; and in December, 22-27 year bonds at 2½ per cent. and a 9-year issue at 2 per cent. In December, 1937, the Treasury had sold a 7-year issue at 2½ per cent. There were during the year three issues of the 5-year Treasury notes (tax-exempt), in June, September, and December, each carrying a 1½ per cent. rate; the issue of December, 1937, had gone to 1½ per cent. This indicates that during the year there was a decided decline in the interest rate on medium and long-term Government securities of the order of ½ per cent.

The Treasury Bills outstanding were greatly reduced by the release of the Inactive Fund, but were reinstated later in the year. The final issue of the year was subscribed at par, except for a fraction which went at a premium. The phenomenon of negative interest on the short-term public debt is not new, but this episode emphasised it.

Budget and Banking.—The following table shows the general movement of public finances:—

TREASURY OPERATIONS (\$000,000)				
Fiscal Year ended	Receipts	Expenditure	Deficit	
June 1936	4,116	8,686	4,550	
June 1937	5,294	8,442	3,149	
June 1938	6,242	7,826	1,384	
Dec. 1937 (half-year) ..	3,176	3,729	553	
Dec. 1938 ..	2,927	4,529	1,602	

Except for the reduction of one-eighth in required reserves in April (which increased excess reserves by about \$800 millions) the Reserve Banks took no active rôle during the year. By the transfer of \$1,400 millions of gold from the Treasury to the Reserve Banks in April, excess reserves were correspondingly increased. The abandonment of the Inactive Fund also directed new gold into the Reserve Banks, although at not exactly the same rate as imports occurred. At the year end excess reserves amounted to about \$3,070 millions. With the reflux of currency after December, excess reserves rose rapidly to new high ground.

The statements of the Reporting Member Banks showed contraction up to April, mostly as a result of falling loans; but, thereafter, deposits rose rapidly. Most of the increase in deposits was attributed to gold released or imported, but in the latter part of the year heavy buying of United States and fully-guaranteed securities contributed to the movement. As a result, demand deposits at the year end, at \$15,986 millions, were \$1,555 millions higher than at the end of 1937, and at a new high level—although total loans and discounts were only \$247 millions higher. Total reserves of the Reporting Member Banks were \$1,630 millions higher. Loans contracted slowly to about mid-year, and thereafter rose slightly. For the year as a whole, loans were down nearly \$1,000 millions and investments were up about \$1,200 millions.

Money and Investment.—To quote from last year's survey: "Except for Government paper there is no money market in New York." The call market is even smaller than a year ago, and its controlled rate never varied through 1937 or 1938—1 per cent. on call loans, 1½ per cent. on 3-month loans. Rates on bankers' acceptances were continuously ¾ per cent., but on commercial paper they weakened from 1 per cent. Both markets are no more than nominal. The 3-month Treasury Bills were virtually without interest through the year. The nearest thing to a money market in New York is in the Treasury note—the longest (5-year maturity) standing at about 1 per cent. through the year. With the 3-month Treasury Bill bearing no interest and with relatively small amounts outstanding, the excess reserves have come to occupy the functional position formerly held by the call market.

For the first five months of the year, the corporate new issue market was stagnant. In the last seven months it became

quite active. The demand was mostly institutional; the supply was largely re-unding bonds. On corporate issues of this type, the current yield offered at the year end was barely over 3 per cent.; on long municipal or State issues of high grade, it was 1½ per cent. At no time during the year was equity capital available in any considerable amount. During the first half of the year, there appears to have been a moderate outflow of foreign capital. In the last half, there was an enormous flight to the dollar, but apparently little of it sought prompt investment.

The share market rose in January and February, broke badly in March, steadied, and rose meteorically at the end of June and in early July. Thereafter, except for a brief weakness in September, it showed no decided trend to the year end.

New capital issues reported by the *Commercial and Financial Chronicle* were: municipal and State bonds, \$962 millions; corporate bonds, \$790 millions; corporate stocks, \$64 millions, of which only \$17 millions were common stock. Corporate issues described as refunding, amounted to above \$1,300 millions. The increase in the public debt publicly offered was above \$1,000 millions. Combining these figures, about \$2,000 millions of new capital was made available to the State and its subdivisions, compared with about \$850 millions made available to corporate enterprise.

Prices, Production and Agriculture.—The index of the Bureau of Labour Statistics sagged during the year, falling from 81 in January to about 77 in December. The net decline in the index from September, 1937 (when it was 87) to the end of 1938, was about 12 per cent. primary commodity prices in general sagged during the first half of the year, stiffened on the mid-summer upturn, and thereafter were inert or heavy.

The index of industrial production was 80 in January, 76 in May, and 103 in November—about the level of the second quarter of 1936. Residential building rose almost month by month from January (26) to October (57)—a higher figure than any reached in years. Other building rose from 56 in March to 110 in October, partly or largely under the influence of the spending programme. As is commonly the case, the factory employment index did not fall so low as the index of production, and lagged on the upswing.

Agricultural income in 1938 was estimated at 15 per cent. below the level of 1937. Weather conditions were favourable, yields good, but prices were lower than in 1937. These low prices affected principally cereals and cotton; but livestock, dairy products and miscellaneous items enjoyed fairly good prices. Farm income was supplemented by increased bounties of various kinds. On the whole, agriculture was less affected than industry by the depression of 1937-38, but to date has shown less evidence of resiliency. One of the most acute problems is that of the accumulated cotton carry-over. Some impression of the magnitude of the accumulation is obtained by describing it as of the order of one year's production or two years' domestic consumption.

Foreign Trade.—Generally speaking, imports dropped in the first half of the year and rose in the second half, following the course of the index of production, except that the November imports (\$176 millions) were barely above those of January (\$171 millions), while the production index had risen 25 per cent. Exports fell from \$289 millions in January to \$228 millions in July and rose slightly thereafter, though this rise was partially of a seasonal character. The net result was a continuous and large export surplus, which began (with the collapse) in September, 1937, and has continued to the present. Altogether, the cycle is far more clearly reflected in our imports than in our exports.

FOREIGN TRADE OF THE UNITED STATES
(\$000,000)

	Merchandise Exports	Merchandise Imports	Balance
1933	1,675	1,450	+ 225
1934	2,133	1,655	+ 478
1935	2,283	2,047	+ 235
1936	2,456	2,423	+ 33
1937	3,349	3,084	+ 265
1938*	2,825	1,790	+ 1,037

* 11 months only.

Gold imports were \$1,132 millions in 1934; \$1,739 millions in 1935; \$1,117 millions in 1936; and \$1,586 millions in 1937. In 1938 they were \$1,979 millions, of which \$1,100 millions came in September and October. The excess of merchandise exports is the largest for any year since 1921, and the gold imports the largest ever. In addition, the net silver imports in 1938 were \$271 millions, bringing total imports of the precious metals in 1938 to over \$2,200 millions, considerably exceeding our total merchandise imports.

Argentina

IN contrast with the remarkable economic prosperity of 1937, the past year has been very disappointing. In the 1937-38 agricultural season frost in late spring did great harm to wheat and linseed, and prolonged drought in summer destroyed fully half of the maize crop. Furthermore, 1938 saw a big fall in the price of pastoral and agricultural products. The volume of Argentine exports in 1938 was only 50 per cent. of the corresponding figure for 1937. Owing, however, to higher prices at the beginning of the year, the fall in their value is less marked, but it amounted, nevertheless, to 39.4 per cent. In the first half of the year imports were rising in response to orders booked during the prosperity of the previous period, while exports were falling fast. The balance of payments moved against Argentina, and in the first eleven months of the year there was an import surplus of 54,835,864 pesos compared with an export surplus of 751,795,229 pesos in the same period of 1937. During the year there was a substantial decline in the value of Argentine currency in the free market, despite drastic reduction of official expenditure, especially on public works. A big Budget deficit appears inevitable, and, owing to the menace of unemployment, immigration has been further restricted. Internal trade has suffered extraordinarily little, because the people who made big profits in 1937 were able more easily to bear the losses of 1938.

Agriculture.—Up to the end of November the weather was very favourable for the 1938-39 crops. As a result of regular and adequate rains in the winter and spring (for the seasons are the reverse of English seasons) there was a bumper wheat crop, estimated at 8,600,000 tons, notwithstanding a very late frost which occurred in December. The linseed did not fare so well, chiefly owing to parasites, and production is estimated at only 1,620,000 tons, which is only little more than last year. The exportable surplus of wheat will be about twice as large as in 1938, but optimism is tempered by the fact that prices are to-day only half as high as they were a year ago. In November, owing to the unremunerative price of wheat, the Government re-established basic prices—7 pesos per 100 kilos for wheat and 13 pesos for linseed. The minimum price for wheat, while benefiting the farmers, is expected to have an adverse effect on the State finances. December, one of the critical months for maize, was extremely dry, and the effects of drought were accentuated by heat and scorching winds, which reached their harshest in the first four days of January. Thus, maize production is not expected to be much higher than last year. The drenching rains which came in the middle of January were too late to save the maize in many parts of the country. The outlook for the Argentine cotton crop is very encouraging as a result of recent rains; the area sown with cotton this season is 412,000 hectares, compared with 424,000 hectares last year.

Foreign Trade.—Imports and exports in the first eleven months of 1937 and 1938 were as follows:—

	(In pesos)		
	Imports	Exports	Surplus
11 months:			
1937	1,413,946,686	2,165,741,915	(Export) 751,795,229
1938	1,325,990,308	1,271,154,444	(Import) 54,835,864

The great fall in exports in 1938 was almost entirely due to smaller shipments of cereals and linseed. The decline in the price of pastoral products was a minor factor. Among imports there was a rise in the value of machinery and vehicles and to a lesser extent in fuel. All other imports fell in value except tobacco and beverages, the fall being most marked in the case of iron and textiles. The position of Great Britain as a supplier of Argentina deteriorated slightly in 1938, chief progress being made by the United States of America. Towards the end of the year, rigid control of all imports was instituted, with a view to reducing the adverse balance of payments; and one immediate effect of the new regulations is expected to be to benefit Argentina's best customers, notably Great Britain, as well as domestic industry. An anti-dumping Bill, directed chiefly against the import of cheap goods from Japan and Italy, was presented to Congress during the year, but has not yet been considered.

Railways.—The Bills for the purchase by the State of the Cordoba Central Railway, with its subsidiary the steam tramway to Rafaela and the Argentine Transandine Railway, both British-owned, passed Congress, and have now become law, both lines being incorporated in the Argentine State Railway system. Owing to the return of recession, the railways failed to obtain authority to increase their charges. A concession, however, was granted in the form of a special rate of exchange for remittances of 16 pesos to the £ instead of 17 pesos, which is the present official rate, but the amount

transferred at this rate must not exceed the total transferred in 1938. Railway receipts fell considerably in 1938 owing to small crops.

Exchange.—The official export rate of exchange remained throughout the year at 15 pesos to the £. The official import rate was changed on November 7 from 16 pesos to the £ to 17 pesos, owing to the adverse trend of foreign trade. Early in 1938 the Central Bank halved the existing 20 per cent. surcharge on goods imported without prior permits, and at the same time allowed the free market rate to find its own level. During the year the rate fell as low as 20.66 pesos to the £. Towards the end of the year the Central Bank intervened from time to time to support the peso.

Brazil

THE political situation has remained quiet. The service on foreign loans which was suspended in November 1937, has not been resumed, but in the 1938-39 Budget, as in the 1938 Budget, 240,000 contos have been allocated for service, the sum being deposited in a special account in the Bank of Brazil. The 1939 Budget shows revenue of 4,070,969 contos and expenditure of 4,065,499.

Trade.—There has been a slight rise in the value of both imports and exports. The volume of imports fell.

Foreign Trade.—The figures for the first nine months of 1937 and 1938 are given below:—

	1937		1938	
	1,000 Tons	1,000 Contos	1,000 Tons	1,000 Contos
Imports	3,883	3,736	3,588	3,897
Exports	2,382	3,852	2,892	3,860
Surplus	...	...	...	...

The export items which showed the largest increases were:—

	1937	1938
	1,000 Tons	1,000 Contos
Rice	25	16
Maize	2	1
Cacao	67	164
Coffee (1,000 bags)	8,672	1,578
Cotton	184	774

Business Activity.—Although gold mines are still working to capacity, no new mines of importance have been opened up, and the output of iron and manganese has been handicapped by lack of equipment and rolling stock. The navy has purchased three submarines from Italy and ordered a number of destroyers from England, and in addition several cargo steamers have been bought from Holland and both passenger and cargo ships from Italy. In general, despite the handicap of falling commodity prices, the general trade and business activity of Brazil resisted the world-wide depression much more than in most countries.

Anglo-Brazilian Trade.—Ten years ago British exports to Brazil were valued at £18 millions a year. They have rapidly fallen away, as the following table of Brazilian imports by countries during the first half of 1929, 1932 and 1938 shows:—

In £1,000 :	1929	1932	1938
United States	14,483	5,355	7,690
Great Britain	9,097	3,702	3,002
Germany	5,362	1,599	7,554
Or in per cent. of Brazil's total imports:—			
United States	32.25	29.29	24.55
Great Britain	20.28	20.09	9.58
Germany	11.94	8.07	24.12

Since 1932, the advance of Germany's share of Brazilian imports is remarkable. American sales also increased by about 40 per cent. British sales actually fell 13 per cent. During this period, total Brazilian imports increased by over £13 millions.

That the large increase in German sales in Brazil is due to a great extent to the compensation mark system is true, but the same excuse cannot be given for the rise in American sales. Indeed, in many cases American prices are equal to or higher than British. A good deal of lost ground could clearly be won back by British exporters with greater initiative, more understanding of the Brazilian market, better propaganda, more expeditious methods and easier credit facilities.

Chile

THE economic results of the year have not been so favourable for Chile as those of 1937. Since the chief wealth of the country lies in its mining and agricultural production, the crisis in world markets had a direct effect on the country's prosperity. Yet there was at no time any real internal crisis. As it was, the Chilean commercial banks and the National Savings Bank expanded their credit operations by 7 per cent. during the year.

Foreign Trade.—The world crisis exerted a noticeable effect on foreign trade. Exports fell and imports rose. If the first eleven months of 1937 and of 1938 are compared, the value of exports fell from 880 million gold pesos of sixpence to 608 millions (or 31 per cent.), while the value of imports rose from 386 millions to 453 millions (or 17 per cent.). During the closing months of the year the balance of payments took a decidedly unfavourable turn. A marked scarcity in available foreign exchange caused a noticeable delay in dealing with applications for imports; and, at the same time, prices for free exchange showed a tendency to rise sharply. Although the Control Commission maintained the price of export dollars at the fixed rate of 25 pesos, by the end of the year the dollar in the extra-official market was quoted at more than 31 pesos, while the official price of the export pound sterling was 118 compared with 145 pesos in the free market. In some circles, this increase was attributed to the flight of liquid capital resulting from the unlooked-for outcome of the October Presidential elections, which gave victory to the Popular Front candidate, Señor Aguirre Gerda; but the chief cause was the unfavourable trend of trade.

Mining and Industry.—The following data of the most important items in Chile's economic activities relate to the first eleven months of 1938 compared with the corresponding months of 1937. While no figures are made public of the production of nitrate and iodine, this would seem to have somewhat decreased. On the other hand, the production of copper bars increased considerably from 241,520 to 308,160 metric tons, or 27 per cent. Coal output was slightly more than 1,800,000 tons, being thus maintained at the same level as the previous year. The output of gold was 8,230 kilos compared with almost 7,540 in 1937. The increase in manufacturing production (in fourteen lines) was relatively small, amounting (according to official indices) to only 3 per cent. In effect, manufacturing has been maintained at a stationary level for the last two years. This is especially true of textile production: only the manufacture of cotton cloth, which rose 27 per cent., showed any important increase in 1938. Building construction in the principal communes, which reached its highest figure in 1937, fell 10 per cent. in value and 6 per cent. in area during 1938. The volume of freight transported by rail showed an increase of 6 per cent.

Prices.—The reduction of world prices affected internal prices only moderately. The general index of wholesale prices showed a fall of only 5 per cent. The cost of living index, on the other hand, continued to increase and was, on the average, 5 per cent. greater during 1938 than in 1937. In consequence, the first measures taken by the new Government were directed towards the reduction of prices of principal food products, such as bread, meat and milk, which have really been relatively high in comparison to the low purchasing power of the great mass of the population.

Uruguay

POLITICAL conditions continue stable under the new President, General Baldomir. The fiscal accounts show a surplus; and the service of the entire foreign debt, including sterling and franc loans, is in process of regularisation. Due to low shipments and prices of wool, the supply of export exchange has been restricted, and the shortage was emphasised by the payment in produce for the machinery, etc., acquired from Germany for the Rio Negro hydro-electricity scheme. The control of exchange and of exports and imports is now centralised, import exchange quotas being allocated monthly to the various supplying countries, with Great Britain and Germany in the lead. With a view to reducing imports to within the Republic's purchasing capacity, the "controlled" importers' rate was raised at the end of 1938 from 8.58 to 9.50 pesos to the £ sterling, the increased exchange profits resulting to be included in a comprehensive four-year programme of public works which will cost in all nearly 80 million pesos. The outlook for 1939 is somewhat uncertain, being dependent largely upon the sale of the 1938-39 wool clip, the quantity and quality of which are reported to be up to standard.

Colombia

DR EDUARDO SANTOS assumed the Presidency of Colombia in August last, and his Government enjoys general confidence. Fiscal expenditure has been kept well within income, while the Government has set up an Advisory Council to assist the Finance Minister in negotiations with foreign creditors. At the end of 1937 the outlook was obscure by reason of Brazil's new policy of open competition in world markets for coffee, which is Colombia's chief product. Actually, Colombia adjusted herself to the new situation, and a noteworthy general recovery was recorded last year, due largely to the high price of Colombian coffee in New York, which more than made up for the losses suffered at the end of 1937. Total exports of coffee in 1938 were 4,263,049 bags of 60 kilos, representing an increase of 203,397 bags over 1937. Other agricultural products and cattle have enjoyed good markets.

The general recovery has been assisted by the heavy inflow of capital from abroad, chiefly on behalf of oil interests, and there has been a marked increase in the output of both petroleum and gold. The authorities have been able partly to relax the measures for controlling imports and foreign exchange operations introduced at the end of 1937, while allocations of exchange permits in payment for imports are now made without delay. There have been rapid developments in road and air transport, as well as in construction and manufacturing equipment generally, which, coupled with the favourable coffee prospects, afford a promising outlook for the future. The United States leads in the Colombian export and import markets, followed by Germany, whilst imports of British goods hold third place. At the end of 1938 it was announced that the existing Anglo-Colombian Trade Agreement had been extended indefinitely, but that, after September 30, 1939, either party might give three months' notice of cancellation.

Ecuador

A RETURN to constitutional government was effected in August, 1938; and subsequently Señor Aurelio Mosquera Narvaez was elected President. Following the decontrol of the exchanges in August, 1937, there was a short wave of prosperity, but, due mainly to excessive imports, there was a serious decline in the Central Bank's reserves, which led to the establishment of import controls and a monetary policy of deflation. Consequently, for the greater part of 1938 imports were reduced to minimum requirements, while, with the rediscount rate raised from 4 to 7 per cent., there was a contraction in currency circulation and bank credit, which enabled the Central Bank to maintain the rate of exchange at around 14.40 sucres per United States dollar. At the end of 1938 the Commission to authorise permits was suppressed, and it was announced that the allocation of import quotas by nations would be cancelled and that individual quotas would be granted to merchants in proportion to their average imports for the past three years. The United States secures the bulk of Ecuadorian trade, with Germany a strong competitor through the "Aski" mark system. On the whole, business in 1938 was generally satisfactory, and further expansion is anticipated in 1939; it is expected that the rigid control will be gradually relaxed. Total cocoa output in 1938 was 366,998 quintals, against 448,948 quintals in 1937. Cocoa prices at the end of the year were firm, with only small lots coming from producing centres, and these being eagerly competed for by exporters. The coffee market was dull, but the cotton crop was abundant and sufficient to satisfy local requirements. The Central Bank assisted in financing the cotton crop until the factories were in a position to absorb it.

Peru

THE more prosperous conditions experienced in Peru during recent years suffered a check last year owing to the failure of the cotton crop and the fall in commodity prices, although the repercussions were not so severe as might have been expected, and the foreign exchange market remains uncontrolled. The Budget should show another surplus for 1938, and, although some decline in revenue may be anticipated in 1939, the general outlook may be described as satisfactory. A scheme has been put forward for the settlement of the Guano Loan, which gives rise to hopes that proposals may be forthcoming in respect of the foreign debt service as a whole. The Government has actively pursued its programme of public works, particularly road building, ports and irrigation. Large sums have been expended on these projects and on the re-

building of the Presidential Palace and Courts of Justice, all of which have tended to assist local trade and keep down unemployment. There has also been great activity in private building, and there has been something in the nature of a building boom in Lima.

Largely as a result of the failure of the 1938 cotton crop, as well as of heavy imports, the export surplus showed a marked fall in 1938. The total value of imports during the first ten months was 213.4 million soles, against 188 millions and 166.4 millions, respectively, in the corresponding periods of 1937 and 1936. Exports totalled 272.8 million soles, compared with 308 millions in 1937 and 281.4 millions in 1936. Thus the export surplus at the end of October, 1938, was 59.4 million soles, against 120 millions and 115 millions, respectively, at the same date in 1937 and 1936. Imports have come chiefly from the United States and Germany, with Great Britain a poor third. German imports are assisted by the "Aski" mark system as well as by improvements in maritime and air transport connections. Large contracts also have gone to Germany, including the important hydro-electric plant which supplies light and power to Lima and the Rimac Valley. Prospects for the 1939 cotton crop are satisfactory, and, should prices prove remunerative, the country's prosperity should resume its upward trend.

Bolivia

A GENERAL ELECTION was held in Bolivia in March, and in May the National Assembly elected Lieutenant-Colonel German Busch as Constitutional President of the Republic. In July the peace treaty with Paraguay was signed in Buenos Aires, and the outlook for trade then became more settled. At the end of September the Bolivian Government removed the restrictions upon imports of luxuries that had been in force for some time, thus enabling all classes of goods to be purchased abroad, although, in order to control prices, special permits became necessary to import certain foodstuffs and other articles of prime necessity. The relaxation of import restrictions, however, was accompanied by a general raising of the Customs tariff. A single official rate of exchange of 141.40 bolivianos to the £ became operative in June, and has since remained unchanged, but the Government continues to acquire a percentage of export bills arising from shipments of tin at a special rate of 82 bolivianos to the £. Economic conditions in Bolivia depend very largely upon tin, the price of which fell gradually during the first five months of the year to under £160 per ton. Since the beginning of October, however, the price has been above £200 per ton, and, in consequence, the supply of foreign exchange in Bolivia should become more plentiful. Meanwhile, 1938 closed with exchange cover scarce and difficult to obtain; it was understood that only one-fifth of the amounts applied for were being authorised, allocation depending on the class of goods to be imported.

Paraguay

THE outstanding event in Paraguay during 1938 was the signing of the peace treaty with Bolivia after the protracted Chaco dispute, thus paving the way for a return to fiscal stability and normal social and political conditions. Congressional elections took place in September, and a new Cabinet was formed. With the elimination of the necessity to maintain large armed forces, national expenditure is being considerably reduced. Arrangements were made in February for the renewal of remittances to London for the sterling debt service, although they were interrupted for a time owing to the exchange shortage. Unofficial control of exchange was established in July by the Banco de la República in order that their sales of exchange might be restricted to cover the purchase of primary necessities. The German "compensation" mark is quoted at a large discount on the Reichsmark, and imports from Germany are thereby stimulated. A decree issued in June imposed an internal consumption tax which in effect has meant a small increase in import duties. The continued abnormally low level of the River Paraguay—the main artery of commerce—gave cause for anxiety due to the cost of transshipment and the dislocation of services. The cotton harvest was disappointing, which had an adverse effect upon trade. At the end of 1938, however, rain fell over the greater part of the country, affording brighter prospects for transport, cattle, cotton, timber and tobacco. The outlook for the coming cotton crop is good, and the output is expected to exceed that of last season.

Venezuela

THE political situation is still normal and the state of the national finances is satisfactory. Trade was restricted last year owing to merchants being over-stocked with most commodities; and there is little prospect of this position being liquidated for some time, as the coming coffee crop is expected to be only one-third of the normal yield, with the result that purchasing power in the interior will be reduced. Preference in foreign exchange was given to Government requirements, which decreased the amount available for commercial needs, but the position eased at the end of 1938, when the exchange market returned to normal. Heavy floods at the end of the year seriously interrupted communications, and caused much damage to crops, so that the agricultural situation reached a grave point. The principal event of the year, which is expected to improve the general situation, is the adoption of the comprehensive Three-Year Economic Plan, covering public works, social schemes, etc., work on which has been started. A decree issued in December provided for the exploration of a large section of Venezuelan Guiana, where extensive tracts of land, at present almost unexplored, are believed to be suitable for agricultural and mineral exploitation. Commercial policy is now based upon a system of reciprocity, and several arrangements with foreign countries have been made on this basis. Imports are now authorised according to global quotas for various classes of goods or according to the individual sources of imports.

Mexico

CONDITIONS in Mexico during 1938 were overshadowed by the decision of the Mexican Government in March to expropriate the oilfields worked by foreign companies. Diplomatic relations with Great Britain were subsequently broken off by Mexico on an issue not directly concerned with the expropriation decree, and relations with the United States were severely strained. The economic effect of this further step to alienate foreign capital cannot yet be fully judged, but figures published recently by the National Bank of Mexico show that the production of petroleum for export tended to decline last year. Foreign trade statistics from the same source also show a fall in the value of total exports in the months immediately following the expropriation of the oilfields, although for the first eight months of the year the figure was 594.8 million pesos against 584.1 million pesos in January-August, 1937. Imports in the eight months were valued at 334.9 million pesos against 406.3 millions in the same months of 1937, so that the export surplus was actually greater at the end of last August than a year before; it amounted to 259.9 million pesos against 177.8 millions.

Mexico is the world's largest producer of silver, which it sells almost exclusively to the United States, and much depends upon the silver policy of the United States Treasury. During the first nine months of last year the exportable production of gold, silver, lead and zinc showed an increase over the previous year, but later statistics may reveal the effect of the 12 per cent. export tax imposed in August last which, it was feared, would have severe repercussions on the country's valuable mining industry.

The currency has fallen from its former pegged level of 3.60 pesos per United States dollar to about 5 pesos per dollar, which increases the cost of importing supplies from abroad but cheapens the price of Mexican products in foreign markets. Recent developments, however, point to an extension of trade with other countries on a "compensation" basis, and closer economic relations between Mexico and Germany appear to be likely.

Other Countries

Turkey

OVER 1938 has hung the shadow of Atatürk's illness and death. It will long remain in Turkish memory as a fateful year. But economically there was neither crisis nor boom; and even the war scare was probably less acute in Turkey than elsewhere.

Foreign Trade.—Two phenomena have been outstanding: the appearance, for the first time since 1929, of an import surplus in trade, and the marked increase in the German share in Turkey's trade. At the end of November, 1937, Turkey could boast of an export surplus of £T15,882,108. At the end of November, 1938, the position was

reversed, and there was an import surplus of £T10,965,000. It is, however, possible that figures for the whole of 1938 will show some improvement. In any case, the adverse surplus does not reflect any serious deterioration of Turkish foreign trade; the import surplus was brought about by a spectacular rise in imports, which leapt from £T101,276,317 in the first eleven months of 1937 to £T137,557,000 in the corresponding months of 1938. At the same time, exports also rose from £T117,158,425 to £T126,592,000, though they failed to keep pace with imports. The increase in exports was particularly marked in the case of raisins and sultanas, hazelnuts, figs, cotton and barley, while sales of mohair, wheat, wool and hides were smaller than in 1937.

On December 31, 1938, the Turkish clearing owed to foreign countries a total of about £T63,000,000, of which the German share was about £T27,000,000 and the British about £T11,000,000. Although there has been a considerable effort to reduce Turkey's trade dependence upon Germany, the Reich's share in Turkey's trade rose sharply in 1938 from 45 per cent. in the first eleven months of 1937 to 51 per cent. in the corresponding months of 1938. The recently ratified German loan of Rm. 150 millions is expected to lead to a still greater advance. The British share of Turkey's trade in the same period advanced from 8 to over 9 per cent. While Turkish exports to the United Kingdom fell, imports from the United Kingdom rose, causing an increased Turkish indebtedness in the Turco-British clearing.

Agriculture and Industry.—The area of cultivated land at the end of the year was somewhat greater than in the agricultural year 1937-38, when it was 4,500,000 hectares compared with only 3,500,000 hectares in 1936-37. Total production was 103,000,000 cwts, against 84,000,000 in 1937.

State-controlled industrialisation proceeded according to plan. Among new factories, the Karabük steel mills are by far the most important, and they are expected to begin operations in April next. Private industry profited by a reduction in duties on raw materials and by a revision of the production tax, but in general private enterprise did not make the headway made by the public undertakings.

The Institute of Mining Research has continued to search for fresh ore deposits. Coal output is still handicapped by the Turkish peasant's reluctance to work in mines, and growing orders from nearby markets often cannot be met.

Budget.—State revenue at the end of the financial year 1937-38 amounted to £T323,602,000 compared with £T276,020,000 in 1936-37 and £T235,266,000 in 1935-36. There was some reduction in taxation. Turkey's re-armament programme is going ahead at full speed.

Japan

PRODUCTION, trade and finance have all been affected by the demands of war, and the national economy has been put under wholesale State regimentation. Production was intensified in the heavy industries, while light industries curtailed operations drastically owing to raw material difficulties. Export trade consequently suffered, but there was a small export surplus, the contraction in imports being more marked than in exports. Commodity prices were at a higher level than in 1937, but the upward trend was, under regulation, not so rapid as in the preceding year. The Government continued to finance the Budget deficit by inflationary borrowing, but no serious currency expansion occurred, and the money market remained quiet. The rice harvest was not up to expectations, and the late cocoon crop was rather unsatisfactory, but the farm income was more than compensated for by higher agricultural prices.

Public Finance.—The Budget for 1938-39 estimated expenditure at 3,514.5 million yen against estimated revenue of 2,395.4 million yen, revealing an appallingly large deficit of 1,119 million yen. Nearly 10 per cent. of this gap was filled by fresh taxation and the rest by a new loan. Expenditure on the China campaign, which was separately budgeted for, amounted to 4,850 million yen in 1938, against 2,548 million yen in 1937. Compared with the preceding year total national expenditure in 1938 increased by 2,834.8 million yen to 8,364.5 million yen. The national accounts for the first six months of the fiscal year ended September 30th show revenue amounting to 866 million yen and expenditure to 949.5 million yen, against 591 million yen and 1,027.4 million yen, respectively, in the corresponding period of 1937. The National Debt rose by 3,629 million yen to 15,522 million yen during the first eleven months of 1938. The Budget estimates (excluding war estimates) for the next fiscal year show expenditure at 3,694.7 million yen, against revenue of 2,801 million yen. The deficit of 893.6 million yen is again

to be covered by borrowing. The following table gives Budget estimates for the three fiscal years:—

	1937-38	1938-39†	1939-40†
	(In million yen)		
Expenditure	3,488.9	3,514.5	3,694.7
Revenue	2,172.9	2,395.4	2,801.0
Deficit	1,316.0	1,119.1	893.7

† Estimates of expenditure on the China campaign excluded.

Money and Investment.—The cheap money policy was well maintained, and conditions in the money market were on the whole easier in 1938 than in the preceding year. The note circulation continued to expand, particularly rapidly in the closing months of the year, and in December was some 300 million yen above the level at the end of 1937. Despite the long-continuing drain of foreign exchange resources, the yen exchange was still firmly pegged at 14d. in terms of British currency, and the movement of the yen-dollar exchange ranged between 29½c. and 27c. The new capital market was decidedly more active in 1938 than in 1937, though Government borrowing again took first place among new issues. New capital raised during the first eleven months of the year amounted to 4,676.4 million yen, against 1,555.4 million yen and 1,403 million yen, respectively, in the corresponding periods of 1937 and 1936.

Production, Profits and Prices.—Production was further intensified in the heavy industries, while output in the light industries reached the lowest level of recent years.

	Jan.-Nov., 1936	Jan.-Nov., 1937	Jan.-Nov., 1938
	(In thousands of square yards)		
Cotton yarn	Bales 3,280,812	Bales 3,691,437	Bales 2,640,116
Cotton cloth	Lbs. 1,644,662	Lbs. 1,688,458	Lbs. 1,489,974
Rayon yarn	Lbs. 236,320,200	Lbs. 301,590,200	Lbs. 196,790,000

Figures of the output of iron, coal and steel are, for strategic reasons, not available.

According to Mitsui Bomei Kaisha's half-yearly analysis of joint-stock industrial undertakings, the net earnings of

1,000 companies in the first half of 1938 amounted to 602,236,000 yen, compared with 526,559,000 yen and 565,237,000 yen, respectively, in the first and second halves of 1937. The Bank of Japan's index number of wholesale prices (July, 1914 = 100) was 201.8 in November, compared with 188.8 in November, 1937, and 161.8 in November, 1936.

Foreign Trade.—In the first eleven months of the year the total value of imports was 2,380.4 million yen, and of exports 2,394.3 million yen. Compared with the corresponding period of 1937, imports and exports fell in value by 1,145 million yen and 508.5 million yen. There was thus an export surplus of 13.9 million yen, against the 1937 import surplus of 622.5 million yen. The following table gives figures for the first eleven months of each of the past three years:—

	Imports Yen	Exports Yen (000's omitted)	Import (-) or Export (+) Surplus Yen
1936	2,479,165	2,396,163	- 83,002
1937	3,525,345	2,902,848	- 622,496
1938	2,380,403	2,394,323	+ 13,919

Both imports and exports were considerably lower in value each month last year, with the exception of November, but percentage decreases were higher in imports than in exports.

Compared with 1937, the largest decline in imports was in raw materials. Raw wool imports fell by 69 per cent.; wood pulp imports by 62 per cent.; raw cotton imports by 53 per cent., and crude rubber imports by 52 per cent. The decline in exports was most conspicuous in textiles; exports of cotton piece-goods fell by 29.9 per cent. and exports of raw silk by 13.9 per cent.

There was a considerable change in the distribution of trade. While trade with Manchukuo and China expanded markedly, trade with British India, the Union of South Africa, Australia and New Zealand, the Dutch East Indies and the United States of America contracted sharply. It is worthy of note that, in face of the general decline, Japanese purchases from Germany and Italy show little change, and even a slight increase in the case of Italy.

China

CHINA, with head bloody but unbowed, may well thank the gods for her unconquerable soul. Her shipping has been driven from the seas and the main inland waterways; her invaders have penetrated to the heart of the country; and life and property have been subjected to merciless destruction. Yet China survives as a nation and, while the Government depends for its supplies on newly developed communications with the outside world, traders still manage to transport their cotton and eggs to Shanghai and their silk, tea and other produce to Hongkong. Nevertheless, eighteen months of warfare have played havoc with the nation's economy; and the past year has witnessed Japan's unchecked efforts to monopolise the trade of the country at the expense of existing interests. As the year ends, all the main treaty ports, with the exception of Swatow and Foochow, are in the hands of the Japanese, while the Yangtze and the Pearl Rivers are closed to all non-Japanese merchant vessels. Foreign trade, apart from military supplies, is rapidly contracting and, although the Japanese are pinned to restricted areas by guerilla bands, the Chinese Government's writ runs only in a few provinces in the West and South-West.

Political.—For the first nine months of the year the capital of the country was Hankow. With the approach of Japanese forces the Government retired on Chungking, which is now the headquarters of Marshal Chiang Kai-Shek. Many officials subsequently moved to Kunming (Yunnan), which is connected by rail with the French port of Haiphong. Chiang Kai-Shek's administration commands the loyalty of the Chinese people, which has remained undisturbed by the defection of Mr Wang Ching Wei in the last weeks of the year. The belated financial aid being given to the Chinese Government by Britain and America is no doubt appreciated but it is hardly likely to break the present military deadlock.

Customs Revenue.—The total Customs revenue for the year amounted to \$254,570,000, compared with \$342,900,000 in 1937 and \$324,583,000 in 1936. The collections at the principal Customs stations in 1938 compared with 1937 were as follows:—

(In million \$ Chinese Nat. Currency)

	1937	1938	Increase (+) or decrease (—)
Shanghai	142.1	84.9	— 57.2
Tientsin	33.4	56.4	+ 23.0
Canton	12.8	19.5	+ 6.7
Kowloon	16.4	13.8	— 2.6
Hankow	25.8	8.2	— 17.6
Tsingtao	24.2	8.8	— 15.4

Revenue collected at ports under Japanese control has been deposited with the Yokohama Specie Bank, but, with the exception of one payment, none has been released to the Customs Administration. The service of foreign loans secured on the Customs revenue has been duly met at a cost of \$77.9 millions, one million more than last year. The American wheat and flour loan of 1931 and the cotton and wheat loan of 1933 have also been met in full, but in these cases payment was made from the flood relief surtax. Internal loan service has cost \$129 millions, and the funds required have been apparently advanced to the Customs by the Chinese Government.

Foreign Trade.—Statistics for the whole of 1938 are not yet available, but figures for the first eleven months are as follows:—

	January to November, 1937	1938
(In million \$ C.N.C.)		
Imports	900.7	814.1
Exports	783.0	703.0
Surplus of Imports	117.7	111.1

Exports of treasure amounted to \$80 millions, compared with \$334½ millions in the first eleven months of 1937.

The decline of approximately 10 per cent. in both imports and exports does not take into account the severe fall in the value of the Chinese dollar after the first half of the year. In ports such as Tientsin, Tsingtao and Shanghai a considerable quantity of merchandise has been imported from Japan without passing through the Customs. In addition, the Chinese Government is responsible for certain shipments of tea and metals (wolfram, tin and antimony) which do not appear in

the Customs returns. These shipments formed part of a barter arrangement with Russia in exchange for armaments, principally aeroplanes.

Currency.—During the early part of the year the Chinese dollar exchange was maintained at about 1s. 2d., but in March the Chinese Government introduced regulations requiring formal applications for allotment of foreign exchange. This led to the development of an unofficial exchange market and, despite the support given to official rates by some of the foreign banks, the business rate declined sharply and sank to 8d. in June. Since then there have been slight fluctuations and, at the end of the year, the rate was 8½d. The cross rate between Hongkong and Shanghai moved up from 110 at the beginning of the year to 180 in the autumn, but later dropped to around 170. In areas under Japanese control efforts have been made to force upon the people Federal Reserve Bank notes which are nominally linked to the yen, although unsecured. These efforts to obtain redeemable Chinese notes in exchange for notes of doubtful value have not been altogether successful.

Communications.—The main navigable waterways and most of the railways are now in the hands of the Japanese. With the fall of Canton and Hankow, the Chinese Government's lines of communication with the sea have been pushed back. For the greater part of the year Government supplies as well as ordinary merchandise were being transported from Hongkong over the Kowloon-Canton and Canton-Hankow railways, supplemented by road transport between Canton and Hankow during the periods when the railways were interrupted. Since October the French territory of Kwong-chow-wan and the port of Haiphong in French Indo-China have been the bases for supplying both military stores and merchandise. From Haiphong the railway to Kunming (formerly Yunnanfu) is the main feeder for the Chinese Government, but communication by road with Burma has now been established. Air services were suspended after the invasion of South China, but occasional flights are carried out between Hongkong and Kunming, and there is a regular service between the latter city and Chungking.

Egypt

EGYPT had to contend during 1938 with an unsettled situation in the Mediterranean and on her Libyan and Palestine borders. The chief domestic event was the dismissal of the Nahas Cabinet and the advent of the Mohamed Mahmud Ministry, which obtained a large majority at the elections in April. Defence measures were speeded up considerably after the September crisis, with a consequent unbalancing of the Budget. The business recession that started in the spring of 1937 continued right up to the end of 1938, which found the country in an unsatisfactory position.

Agriculture and Industry.—Agriculture presented a mixed picture. The 1937-38 cotton crop was by far the largest on record, namely, 10,600,000 kantars, and, with a bumper production in the United States also, prices declined heavily. Acreage was curtailed, and the 1938-39 crop, reduced by insect attacks, reached only 7,200,000 kantars. Yet prices fell below the level of the previous season. The wheat crop did not exceed domestic needs and prices were firmly held. The acreage under rice, which had been almost halved in the preceding year owing to unjustified fears of water shortage, reverted again to the earlier record figures, and, with the fall in prices that followed, both domestic consumption and exports registered an expansion.

In industry the main feature was the erection of new textile plant, the drastic tariff increase on foreign cotton goods and, towards the close of the year, the adoption of a quota system for imports based on the purchases of Egyptian raw cotton by manufacturing countries.

Trade.—The Egyptian flag advanced in 1938 to fourth rank in the traffic of the port of Alexandria with 543,502 tons out of a total of 5,621,955 tons, against 366,332 tons out of 5,696,161 tons in 1937, when Egypt came sixth.

Foreign trade fell off appreciably, chiefly owing to the decline in the value and volume of cotton exports:—

	1937	1938
(11 months)		
Exports	£E 36,165,099	£E 26,090,596
of which cotton	26,316,968	18,803,284
Imports	34,502,239	32,430,420

The import surplus was actually greater than shown, as the increased imports of war material are not included in the figures above.

Industry and Trade
Foodstuffs

Grain

THE following account of the 1937-38 wheat season is taken from the December issue of "Wheat Studies," published by the Food Research Institute, Stanford University, California:—

Scarcity continued to mark the crop year 1937-38, but it was met without severe strain and was significantly tempered by increasing assurance of large wheat crops in 1938. In consequence, the course of wheat prices was downward, in striking contrast to the advances through most of 1936-37.

A normal harvest in the United States—the first in five years—accounted for most of the substantial net increase in world wheat production in 1937. Severe crop damage in Canada and Argentina, and mediocre outturns in many other countries, were offset by large crops in Australia, Roumania, Italy and several minor producers. Soviet Russia, from big grain crops, exported more than for several years past. Wheat supplies for the world ex Russia were therefore slightly larger than in 1936-37, despite very low initial stocks.

International trade in wheat and flour was light; net exports of net-exporting countries totalled only 553 million bushels. Australian net exports slightly exceeded those of the United States. Canadian and Argentine exports were unusually small, and those from all other countries constituted an exceptionally large fraction of the total. Japan, restricting wheat imports and consumption, forced her flour into Chinese areas as her armies extended their domination and had net exports equivalent to 10 million bushels. Germany, seeking to build emergency reserves, and Spain, because of civil war, had the largest net imports for years.

Wheat supplies for 1937-38 were peculiarly distributed by classes. Soft white wheats were relatively most abundant, due particularly to Australia's good crops, but also to a record outturn in the Pacific North-West of the United States and to a succession of large crops in India. By contrast, exportable supplies of good hard wheats were exceptionally scarce. This was due to small 1937 carry-overs in North America and Argentina

and to short crops in Canada and Argentina that were not fully counterbalanced by surpluses of these crops in the United States.

Wheat utilisation in the aggregate was held down by fairly high wheat prices, and in many countries by Government measures, old or new. The world carry-over consequently rose to a figure equal to the average in the pre-surplus period.

The latter half of the 1937-38 season was dominated by the prospects of exceptionally high wheat yields on an enlarged world acreage. As is shown in the table below (which is compiled from statistics of the International Institute of Agriculture), world production in 1938 is now estimated at 4,400 million bushels, compared with 3,825 million bushels in 1937.

WORLD PRODUCTION, TRADING STOCKS AND PRICES OF WHEAT
(In millions of bushels)

Season August to July	World production (a)		World exportable supplies (b)	World import requirements	World export- able end-of- season stocks	Average Brit. Import (c.f.f.) Prices (shillings per cwt.)

* Countries not included in the totals. † The years indicated are those of the harvest, single years referring to the Northern Hemisphere, double years to the Southern. ‡ In calculating the totals account has been taken of the probable area cultivated in some countries for which estimates of production are available, but not those of area. (a) Including Austria. (s) Spring crop. (w) Winter crop. (b) Area provided for in the plan.

World exportable supplies in the current season, estimated at 1,135 million bushels, are thus more than double the expected purchases of importing countries, even when allowance has been made for the probable increase in the use of wheat as an animal feedingstuff, caused by the shortage of maize. This surplus has induced the Governments of exporting countries to take various measures to protect their farmers from the adverse influences of falling prices. In Canada, the Government has offered a wheat loan at a fixed price of 80 cents per bushel, and in the United States a similar policy has been accompanied by export subsidies and by bulk sales of wheat to Britain and other countries. Further, the British Government, as part of its Food Defence Plans, purchased an unknown quantity of wheat early in 1938, a transaction whose methods met with some criticism from the British milling trade; later in the year, bulk purchases were also made of Roumanian wheat.

* Including other items not given above.

In the United Kingdom, yields of barley and wheat were the highest on record, with a consequent slump in barley prices; the operations of the wheat quota continued to provide the British wheat grower with a guaranteed price.

Sugar

SUGAR prices continued in the first half of 1938 the downward trend begun in 1937, and the lowest level, of 4s. 9d. per cwt., c.i.f., basis 96 degrees, was reached in April. The excess of supplies over consumption pressed heavily on the market until in the autumn the very poor yield of sugar beet in Europe gave rise to prospects of a considerably increased demand from the consuming countries. The following table of sugar production in important countries is taken from the Bulletins of the International Sugar Council:—

* Exports to United States.

The International Sugar Council, meeting in July, reduced export quotas to the free market by 412,500 tons to 3,270,000 tons, and this reduction, assisted by Government purchases of sugar for emergency stocks and by the deterioration of the European beet crop, brought a considerable improvement in the market; the year ended with prices of raw sugar c.i.f. at London slightly above those recorded in January, 1938. Nevertheless, the outlook for 1939 was not

regarded by the market as very bright, as was shown by the marked discount for forward positions which developed towards the close of the year. World stocks at the end of the 1937-38 season had increased, mainly due to the larger holdings in Europe and the United States; the table below gives the estimates of world stocks published by Messrs Czarnikow, Limited:—

VISIBLE SUPPLY AND PRICES OF RAW SUGAR

Season ended September 30th	Stocks (in thousands of tons)					Average Price (a) (Cuban, 96°, c.i.f.)
	Europe	United States All Ports	Cuba Ports	Java	World	
1930.....	798	993	1,139	1,310	1,882	5,522
1931.....	1,702	459	1,092	1,225	2,287	6,765

1938.....	1,308	308	1,188	797	3,601	5 0½

(a) Calendar year.

Unless, therefore, the International Sugar Council is able to repeat and extend for 1939-40 the reductions in export quotas arranged for the 1938-39 season, the free market will again be threatened with excess supplies.

Tea

By a decision taken early in 1938, the International Tea Committee raised the export quotas of countries adhering to the international agreement by 5 per cent. to 92½ per cent. of the basic quotas for the season April 1, 1938, to March 31, 1939. This decision raised the permissible exports by 43 million lbs. to 767.9 million lbs. The increase in supplies was largely confined to the common teas, and, while prices of all varieties of tea fell during 1938, those of common teas suffered most. In the table are given the average prices recorded in the International Tea Committee's Bulletin.

AVERAGE TEA PRICES (per lb., London Sales)

Year	North India	South India	Ceylon	Java	Sumatra	All Tea

Imports into the United Kingdom in 1938 increased by some 40 million lbs. compared with 1937, but the greater part of the increase went into stock and not into consumption.

Cocoa

At the beginning of 1938, supplies of cocoa from the Gold Coast, the largest producer of cocoa, were held up by the growers as a protest against the buying agreements of the principal shippers, to which they attributed the sharp decline in prices during 1937. The hold-up came to an end in April; the United Kingdom Government appointed a Commission of Inquiry, the buyers agreed to suspend the working of their new arrangements until the Commission had reported, and the stocks of cocoa were liquidated in an orderly manner by the imposition of export quotas under the control of the Gold Coast Government. Exports from the Gold Coast were, however, much lower in 1937-38 than in previous years, owing to the deterioration of the stocks and to a partial destruction of the crop by the farmers. The following table is taken from the *Gordian*:—

EXPORTS OF COCOA BEANS FROM PRODUCING COUNTRIES (in metric tons)

	1929	1936	1937	1938†
World.....	535,517	709,084	640,537	658,670

Holland	49,800	66,956	53,227	73,000
France	35,762	47,418	41,313	43,000

† Provisional

The decline in net imports in 1937 was shared by nearly all the large consuming countries, while the increase in 1938 was due to larger purchases by Holland and by a number of smaller countries.

Prices, after falling sharply in 1937, were maintained in the early months of 1938 by the absence of Gold Coast supplies, but the decline was resumed when the accumulated stocks began to reach the markets. The price of Accra at the London Terminal market fell to 22s. per cwt. in June, and although prices recovered a little in succeeding months, the prospect of large crops in Nigeria and the Gold Coast again brought prices down to close the year at about 22s. per cwt. As the table below shows, there was a large increase in British stocks during 1938:—

BRITISH TRADE IN COCOA AND COCOA PRODUCTS

	Quantity			Value		
	1929	1937	1938	1929	1937	1938
Raw cocoa—	000	000	000	£	£	£
Imports	1,542	1,896	2,633	3,810,844	4,546,159	3,289,953

Re-exports	213	175	78	524,105	267,024	132,645
Stocks, Nov. 30 ...	447	710	1,324	...	...	...
Cocoa products—						
Imports	203	15,379	22,471	1,410,972	788,586	852,100
Home consumption	188†	14,967†	20,881†	...	...	...
British exports ...	186	479	417	1,136,240	857,882	812,512

† Eleven months ended November 30th.

The report of the Gold Coast Commission of Inquiry, published in October, acquitted the buyers from depressing the cocoa price, the fall in 1937 being due partly to a collapse of the speculative boom and partly to falling consumption. The Commission considered, however, that a buyers' monopoly was not desirable and proposed instead to organise the producers of cocoa in the Gold Coast in a compulsory marketing scheme. At the close of the year, it was announced that the Gold Coast Government had appointed a small commission to report on this suggestion.

Coffee

WORLD production of coffee declined slightly in 1938, the fall being concentrated on production of mild coffees. Consequently, the proportion of Brazilian coffees to total production rose from 71 per cent. in 1937 to 72.6 per cent. in 1938. The following statistics are taken from *Le Café*:—

WORLD COFFEE PRODUCTION (In thousand bags of 60 kilos.)

Season ended June 30	Brazil	Other Countries	Total	Brazilian Proportion of Total Production
1932	27,581	8,287	35,868	76.8
1933	14,502	9,239	23,741	61.2
1934	30,383	8,935	39,318	77.3

1936	16,128	25,845	5,789	8,130	20,718	80.1	40.8
1937	14,010	25,006	5,528	7,911	22,568	87.2	48.5
1938	14,797	25,609	5,648	7,230	19,066	75.7	31.5

(a) Calendar years.

(b) Basis altered.

Assisted by the fall in prices which accompanied the drastic reduction in November, 1937, of the Brazilian export tax, consumption improved considerably on the low levels of 1937, particularly for Brazilian coffees, and at the end of the 1938 season, stocks in Brazil were lower than for three years. Brazilian production is still, however, greatly in excess of world demand for her output and the policy of destruction at ports was continued during 1938.

Livestock and Meat

THE agricultural returns for 1938 are summarised in the table given below, which is published by courtesy of the Ministry of Agriculture. There was again a slight fall, of less than 1 per cent., in the number of dairy cows, while the number of other cattle continued to increase. There was a very marked expansion in the number of ewes kept for breeding, while, conversely, the number of breeding sows continued to decline. The slow decrease in the number of horses was continued:—

* Mostly from the Irish Free State.

2.3 per cent. in imports of mutton and lamb was due to an expansion of Empire shipments of mutton; imports of lamb declined by 7 per cent.

After a lapse of two years, the system of annual contracts for bacon pigs was resumed in January, 1939. By the Bacon Act passed in July, 1938, feeders of bacon pigs were guaranteed for three years a basic price for their pigs which was to vary only with the price of feedingstuffs. Similarly, the bacon curers were guaranteed for the same period a fixed margin between the price of pigs and the price of bacon irrespective of the actual level of bacon prices; provision was also made for schemes of rationalisation for the bacon industry. For the 1939 bacon contracts, the Pigs Marketing Board obtained a total of 1.4 million pigs; this compares with a total of 1.9 million obtained for 1937, when the bacon curers declared the contracts void, on the grounds that the number of pigs was insufficient to obtain an economical throughput for their factories.

The slump in sheep prices during 1937, caused mainly by the pressure of the large home supply, bore heavily on the sheep breeders and feeders. The extent of the fall in prices can be seen from the following table of meat prices at Smithfield:—

LONDON MEAT PRICES

Weekly Average	Beef		Mutton		Bacon	
	English Long Sides per 8 lbs.	Argentine Chilled Hinds per 8 lbs.	English Wethers per 8 lbs.	N.Z. Frozen per 8 lbs.	English No. 1 Sizeable per cwt.	Danish No. 1 Sizeable per cwt.
1937—March ...	4/7	3/9	7/-	3/8	94/-	92/-
June	5/4	4/6	7/-	3/8	90/-	90/6
September	4/7	4/6	5/8	3/9	105/-	104/6
December	5/-	4/2	6/-	3/6	100/-	100/-
1938—March ...	5/1	4/5	5/1	3/6	102/-	102/2
June	4/5	4/3	4/7	3/4	98/3	98/3
September	4/5	4/3	4/8	3/2	99/-	99/-
December	4/5	4/5			97/6	96/6

New Zealand mutton was less affected by the fall in prices than English and prices of New Zealand lamb were hardly lower in 1938 than in 1937. In December, it was announced that, beginning in January, 1939, imports of mutton and lamb would be placed under the control of the Empire Beef Council. Fat cattle prices also declined in 1938, but bacon prices improved.

Dairy Produce

THE long-awaited milk bill was published in the autumn and its terms followed on the lines laid down in the White Paper published in July, 1937. Criticism of the bill, led by the Milk Marketing Board, attacked particularly the sections concerning the independent Milk Commission, the local option on pasteurisation and the provisions for ten limited experiments in the rationalisation of milk rounds; before the end of the year the Milk Bill was withdrawn "for further consideration." Considerable progress was made with the registers for accredited and attested herds, and the schemes for the eradication of bovine tuberculosis were extended to include beef as well as dairy herds.

In spite of the long spring drought, production of milk increased in 1938 compared with 1937; aided by extensive advertising and the milk-in-schools scheme, liquid consumption increased slightly, but the amount used for manufacture also expanded, as is shown in the following table:—

SALES OF MILK UNDER THE ENGLISH AND SCOTTISH* MILK MARKETING SCHEMES

(Million gallons)

(Million gallons)					
Year, October to September	English			Scottish	
	Sold Liquid		Manu- factured†	Sold Liquid	Manu- factured†
	On Wholesale Contracts	By Producer Retailers			
1933-34	523.8	110.0	211.5	57.3‡	34.6‡
1934-35	552.0	113.2	315.7	70.9	44.6
1935-36	555.6	108.2	360.2	72.6	49.4
1936-37	579.6	104.0	208.8	75.3	45.1
1937-38	618.3§	...	310.9	76.2	44.8

* Excluding Aberdeen and District and North of Scotland Schemes. † Including milk used in farmhouse cheese-making. ‡ Ten months only. § Sales of T.T. milk and of milk by producers with less than 4 cows included from October, 1937.

The increase in wholesale milk prices obtained in the 1937-38 contracts for English milk supplies was augmented by a special increase of 1d. per quart on the retail price in July, which was awarded to meet the extra costs to the farmers of the drought. This additional increase was retained in the contract which the Milk Marketing Board and the Central Milk Distributive Committee negotiated for 1938-39; the retail price in London was stabilised at 7d. per quart for all months and the average wholesale price was raised from 15s. 11d. per dozen gallons to 16s. 3d. per dozen gallons. There was also a smaller increase in the Scottish wholesale and retail prices.

The butter market in 1938 was influenced by a decline in supplies from New Zealand and the disappearance of Russian butter; there was, however, an increase in imports from the Baltic countries, and, as the table below shows, total imports were slightly larger in 1938 than in 1937:—

BRITISH IMPORTS OF BUTTER AND CHEESE

Country of Origin	Quantity: '000 cwt.			Value: £'000		
	1929	1937	1938	1929	1937	1938
Butter:—						
New Zealand	1,304	2,951	2,583	11,277	15,352	14,478
Australia	768	1,492	1,798	6,342	7,522	9,630
Eire	566	320	327	4,580	1,311	1,185
Denmark	2,204	2,258	2,365	19,737	11,911	12,964
U.S.S.R.	290	273	...	2,299	1,258	...
Total (including other countries)	6,397	9,418	9,509	54,706	47,363	50,835
Cheese:—						
New Zealand	1,801	1,731	1,639	8,300	5,392	5,467
Canada	723	722	678	3,412	2,460	2,331
Netherlands	196	217	202	777	434	417
Total (including other countries)	2,994	2,936	2,928	13,913	9,257	9,884

This increase in imports was more than absorbed by the expansion in cold storage stocks which rose from the exceptionally low level of 134,300 cwt. on January 1st to 254,700

cwt. on December 31st. Consequently, in spite of a slightly increased home production (which amounted in 1938 to about 340,500 cwt.), butter consumption in the United Kingdom declined from about 24.8 lb. to about 24.2 lb. per head. The main reason for this fall was undoubtedly the increase in prices during the first half of 1938. The following table of prices is taken from the Weekly Dairy Produce Notes and represents the averages of top quotations at the London Provision Exchange:—

LONDON PRICES OF BUTTER AND CHEESE
(Shillings and pence per cwt.)

Averages of Weekly Figures	Butter			Cheese	
	New Zealand Finest Salted	Australian Finest Salted	Danish	New Zealand Finest White	Canadian Finest White
1936, Annual average	s. d. 101 3	s. d. 100 6	s. d. 119 6	s. d. 61 0	s. d. 67 3
1937—March	98 3	98 6	128 9	60 6	73 0
June	110 0	108 6	114 9	74 3	80 0
September	117 6	117 3	134 6	68 6	70 3
December	113 3	111 6	151 9	66 0	73 6
Annual average	110 9	110 0	127 3	67 0	74 3
1938—March	117 3	117 3	122 6	69 3	77 3
June	122 0	119 3	124 3	68 9	80 0
September	120 0	116 0	135 9	72 6	72 0
December	109 6	107 3	144 6	69 3	72 3
Annual average	117 6	115 3	130 3	69 6	76 0

The fall in butter consumption was accompanied by an increase of 13 per cent. in the deliveries of margarine.

There was a decline in 1938 in imports of cheese from Canada and New Zealand, which was offset by an increase in those from Australia. Total imports, as shown above, were a little lower than in 1937, but home production, both factory and farmhouse, increased from the exceptionally low level of about 755,200 cwt. in 1937 to about 873,700 cwt. in 1938. Wholesale prices of imported cheese were on the average a little higher than in 1937, when prices were also higher than in 1936.

Eggs and Poultry

THERE was again a decline in the number of fowls in the United Kingdom, but compared with the fall of 8 per cent. between 1936 and 1937, the fall from 69.1 millions in June, 1937, to 68.7 millions in June, 1938, was barely significant and was partly offset by a small increase in the number of other kinds of poultry.

NO. OF POULTRY IN THE UNITED KINGDOM*
('000)

	1932	1936	1937	1938
Fowls	73,489	75,241	69,053	68,717
Other	5,179	5,334	4,833	5,098
Total of Poultry	78,668	80,575	73,886	73,815

* On agricultural holdings above one acre in size.

Owing, however, to the larger decline in the number of older hens, the Imperial Economic Committee estimates that the home production of eggs declined from around 36.7 million great hundreds in 1937 to about 35 million great hundreds in 1938. Consumption of eggs is estimated to have increased from 156 to 159 per head of population in spite of the fall in home production, as imports of eggs in shell attained the record level of 27.7 million great hundreds. Most of the increase was due to an expansion in British imports from foreign sources.

IMPORTS OF EGGS AND POULTRY

	Quantity				Value (£'000)			
	1929	1936	1937	1938	1929	1936	1937	1938
Eggs in shell ('000 gr. hundreds)	24,964	24,607	24,742	27,697	17,856	9,886	10,443	12,374
Eggs not in shell ('000 cwt.)	782	887	848	944	3,621	2,152	2,180	3,058
Dead poultry ('000 cwt.)	554	422	506	445	2,960	1,659	1,981	1,747

Larger imports from Central Europe, the Netherlands, the Baltic countries, Egypt and certain South American countries

more than offset a decline in supplies from Denmark and China. Imports of eggs not in shell also increased in 1938, but there was a decline in imports of dead poultry. Egg prices were higher during the summer and early autumn of 1938 than in the corresponding periods of 1937; the following table gives monthly averages of the top prices of certain classes of eggs at London and is taken from statistics published in the Weekly Dairy Produce Notes:—

EGG PRICES AT LONDON
(Shillings and Pence per 120)

Averages of Weekly Figures	English N.M. Specials	Dutch 18 lbs.	English N.M. Standards	Danish 15½ lbs.
1936—Annual average	16/9	13/9*	15/6	11/3
1937—March	12/10	13/2	12/1	10/7
June	13/11	12/4	12/9	8/5
September	21/0	15/11	19/3	13/10
December	23/9	18/5	21/0	17/0
Annual average	17/3	...	16/0	11/7
1938—March	11/8	11/5	10/8	8/8
June	14/8	12/11	13/9	10/8
September	21/6	15/8	19/9	13/10
December	22/2	17/8	18/1	14/4
Annual Average	17/9	14/6	16/3	12/2

* 11 months.

The mild weather in both early spring and autumn increased supplies in these months and prices in February, March and December of 1938 were lower than in the corresponding months of 1937, although taken over the year as a whole, egg prices were higher in 1938 than in 1937.

Fruit and Vegetables

HORTICULTURISTS suffered severely from the vagaries of the weather in 1938. The exceptionally mild March was followed by severe frosts both in April and again early in May and growth was also hampered by the long spring drought. The early strawberry crop was most affected by the frosts and only Devon and Cornwall had supplies in any quantity. The yield of all fruits, whether bush or tree, was low; there was a fair crop of raspberries in the south-west, but the yields of apples, cherries, plums and pears were very poor in all districts. Prices for plums and culinary apples were fairly satisfactory to those growers who had good fruit to sell, but otherwise prices were low. The tomato crop was unusually affected by disease and prices were on the whole lower than in 1937.

The acreage under orchard and small fruit again contracted in 1938, as is shown by the following table:—

AREA UNDER CERTAIN FRUIT AND VEGETABLE CROPS
IN GREAT BRITAIN

(In thousands of acres)

	1928	1935	1936	1937	1938
Orchard fruit	249.5	263.6	262.6	259.9	252.0
Small fruit	72.7	69.0	65.2	61.8	59.4
Total	322.2	332.6	327.8	321.7	311.4
Potatoes	633.0	594.4	534.0	590.7	612.6
Cabbage*	27.9	37.5	43.7	38.2	43.2
Sprouts†	30.4	34.1	35.0	32.5	41.3
Cauliflower†	13.5	19.5	20.5	18.8	19.9
Carrots	10.3	16.4	17.4	14.5	16.3

* Including savoy, green kale, and sprouting broccoli for human consumption.
† England and Wales only.

After a good crop of potatoes in 1937, which brought prices to growers down to a lower level than those in 1936-37, both yield and acreage of main crop potatoes were higher in 1938 than in the previous year.

AREA,* PRODUCTION* AND IMPORTS OF POTATOES

	1936	1937	1938
Main crop:—			
Area '000 acres	471.7	472.6	492.1
Production '000 tons	3,250	3,480	3,643†
Wholesale price, King Edw. s. per cwt.	7.79	8.32	5.92
Earlies:—			
Area '000 acres	117.9	118.1	120.5
Production '000 tons	554	583	405†
Imports '000 tons	317	223	146

* On agricultural holdings in Great Britain.

† Estimated.

Consequently, the Potato Marketing Board enforced, early in the autumn, a comparatively high riddle and also prohibited the sale for human consumption of potatoes weighing more than 1 lb. The crop of early potatoes was affected by the late frosts and the long spring drought.

Fish

THE past year was memorable in the fishing industry both for the passing of the Sea Fish Bill and for the combined action of the East Coast owners of trawlers in restricting their catch. The large landings of fish and low values experienced in 1937 led to a voluntary agreement among trawler owners in Grimsby and Hull to lay up 20 per cent. of their vessels engaged in long-distance fishing as from January 1st, and a similar restriction was later agreed upon for North Sea trawlers. This restriction of output was attacked by representatives of fish merchants on the grounds that it involved unnecessarily high prices to consumers and a reduced consumption. The Sea Fish Bill, based on the recommendations of the Sea Fish Commission, provided for the registration of all producers of and dealers in white fish as a prelude to more efficient marketing of fish, and this registration was effected by the end of January, 1939. It was originally hoped that a producers' marketing scheme would be submitted immediately after the passing into law of the Sea Fish Bill, but no definite step had been taken by the middle of February, 1939, although it is believed that the British Trawlers Federation is planning a rationalisation scheme for the near-water fishing. The year 1938 also saw the reconstruction of the Herring Industry Board; the previous Board, which was representative of the various interests concerned, was replaced as from December 1, 1938, by three members appointed by the Government. The personnel of the new Board was the subject of a protest from the English Herring Catchers' Association, on the grounds that all three members

and not only the chairman should be on a full-time basis and that Scottish interests had received preferential treatment.

Total landings in 1938 showed a decline from those in 1937, but total value increased, as is shown in the table given below:—

BRITISH LANDINGS AND TRADE IN FISH
(000's omitted)

Kinds of Fish	Quantity			Value		
	1936	1937	1938	1936	1937	1938
England and Wales:						
Cod	6,523	6,949	6,446	3,555	3,669	4,239

Imports of fresh and frozen fish	1,648	1,596	1,636	2,497	2,683	2,802
Exports of fresh and frozen fish	1,327	1,131	1,076	1,143	938	843
Exports of cured or salted fish	3,133	2,787	3,203	2,578	2,409	2,830
Re-exports†	146	193	148	446	544	323

* Including other items not given above.

† Fish of all kinds.

The decline in landings of wet fish was due mainly to the laying up of trawlers at East Coast ports, but was also influenced by the political crisis in September and by the heavy gales experienced in October. The herring season was an exceptionally poor one, an unusual proportion of the catch being small or immature fish.

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

SINCE the establishment of its London Office forty-one years ago the Guaranty Trust Company of New York has aimed at the constant development of its services in order to render its customers the greatest assistance possible in their commercial and financial transactions both in and between Europe and America.

Every phase of modern banking business is undertaken and the management at any of the offices will be glad to explain the Bank's facilities in detail.

Coal

THE past year witnessed a moderate recession in the output of coal. The total quantity of coal raised in 1938, at 228.2 million tons, was only 5.4 per cent. smaller than in 1937. The recession was most marked in exports and shipments for the use of steamers engaged in foreign trade which, at 46.3 million tons, were 11 per cent. lower than in 1937.

As a result of the operation of the control of output and prices, the latter were only slightly lower, on the average, than in 1937. The Board of Trade index of coal prices, for example, fell from 124.9 in 1937 (1930 = 100) to 123.2 in 1938. As the table below shows, the average export price of coal was actually higher in 1938 than in the preceding year. The profits of the industry, consequently, have been fairly well maintained.

Apart from the recession in production, the feature of the past year was the passing of the Coal Act, 1938, which received the Royal Assent on July 29, 1938. The Act consists of three main parts. First, it provided for the purchase and administration by the State of the coal royalties. Secondly, it strengthened the provisions of the 1930 Act for compulsory amalgamations. Thirdly, it prolonged Part I of the 1930 Act which was the legal basis for the quota system and the selling schemes.

The table below summarises the experience of the industry in recent years:—

BRITISH COAL INDUSTRY

Year	Output	Exports (including Bunkers)	Average Export Prices (Board of Trade), F.O.B.	Unemployment in Coal Mining Industry				
	Thous. Tons	Thous. Tons	s. d.	%				
1929 ...	257,907	76,658	16 1	16.2

An account of developments in the main producing areas is given in the following extracts from the *Iron and Coal Trades Review* of January 20, 1939:—

South Wales.—Trade in the first few months of 1938 was active because of business held over from the previous year, but as this was worked off the high prices caused buyers to withhold contracts. The district's high production costs resulted in the loss of much business to subsidised foreign competitors. There were several important labour changes, the chief being the merging of the South Wales Miners' Federation and the Miners' Industrial Union, and the introduction of holidays with pay for miners. Production of coal reached about 36,500,000 tons compared with 38,250,000 tons in 1937; 137,000 miners were employed at the beginning of the year, but in the latter half there was a gradual deterioration to 133,000 in December. Shipments of coal, patent fuel and coke were estimated at 20,304,000 tons, a fall of 900,000 tons from the 1937 figure. Trade with France was difficult, partly

due to currency devaluations which made Welsh prices prohibitive. The announcement of arrangements to improve the French trade was therefore welcomed. The full effect of German competition was felt in the Portuguese trade.

Northumberland.—Official control made 1938 a difficult year for producers and exporters, but brought some stability to prices. The maintenance of prices was accompanied by periods of short-time working, for the effects of stocks accumulated in 1937 were felt until the autumn, and the trade agreements with Scandinavian countries were valuable in ensuring a proportion of trade for this country. Some business was lost to other districts, for in 1937 the collieries had held out for higher prices. Prices declined steadily until the beginning of September when the volume of trade improved slightly. The Australian strike in October placed producers in a sound position for the rest of the year, and although the export trade still left much to be desired the market closed on a steady note.

Durham.—The volume of trade was considerably below normal production, and large inroads into regular trade connections were made by foreign producing countries. The collieries producing gas- and coking-coal were most affected and many were compelled to curtail output. Prices were firmly controlled, but substantial reductions may be necessary to regain lost trade. The year was uneventful apart from the steady downward price movement. The bunker market was disappointing throughout the year, for prices never declined enough to divert vessels from foreign coaling ports. Prices of gas- and foundry-coke also declined, under the strict control of the International Coke Cartel.

South Yorkshire.—Both the home market and export trades suffered from the disturbed international conditions and short-time working in the textile districts reduced industrial fuel consumption. With the exception of June, profits were yielded throughout the year, prices being maintained by selling schemes. Holidays with pay helped to strengthen good relations between employers and employees. At the beginning of the year the number of Yorkshire mineworkers unemployed was 12,292, but by October it had risen to 34,338, the highest in any British coalfield. The year's shipments from Hull totalled 847,388 tons, compared with 1,017,405 tons in 1937.

Lancashire, Cheshire and North Wales.—The year opened brightly in the landsale trade and domestic demand was consistently good throughout the first three months. Business was then quiet until the second half of August, when there was a marked increase before the rise of 1s. 8d. per ton on September 1st. The selling scheme worked well in this section. Industrial demand was poor and large stocks were accumulated, but prices rose further. The coke market was reorganised and a price schedule drawn up, but most contracts went to "outside" manufacturers. Much of the bunkering trade was lost to Continental ports, where prices were lower.

Oil

THE rapid progress of the petroleum industry was checked in the past year by the recession in world economic activity. The trend of world production and consumption in recent years is shown below:—

WORLD PRODUCTION AND CONSUMPTION OF CRUDE OIL AND RELATED FUELS (In millions of barrels)

	Production			Consumption		
	U.S.A.	Rest of World	Total	U.S.A.	Rest of World	Total
1934	946	617	1,563	920	590	1,510
1935	1,035	661	1,696	981	617	1,598
1936	1,145	720	1,865	1,093	703	1,796
1937	1,329	781	2,110	1,168	752	1,920
1938*	1,205	790	1,995	1,130	750	1,880

Source: Messrs V. R. Garfias and R. V. Whetsel.
* Estimated.

But while production and consumption declined in the United States, there was little change in the rest of the world. The lower oil consumption in the United States was the direct consequence of the general setback in business. The upward trend in the use of petrol and heavy oil for all kinds of transport (road and rail as well as sea and air) was not interrupted last year, and the consumption of fuel oil in domestic and industrial oil burners made considerable headway in 1938. Consequently, the setback in the world's oil consumption can be regarded as temporary.

On the supply side some interesting changes occurred in the past year. Canadian output has been raised from 3.0 million barrels in 1937 to 7.5 millions in 1938. Since 1936 the Dominion's production has thus been increased fivefold. This remarkable achievement is the direct result of the Alberta (Turner Valley field) developments, which are still in full swing. Production in Bahrain, which had shown the largest percentage increases in recent years, increased in 1938 by only

600,000 barrels to 8.4 million barrels. In Roumania the decline in supplies due to reduced efficiency continued last year, but the tempo of this decline has slowed down. At 48.8 million barrels the 1938 figure was only 6.5 per cent. lower on the year, against a decline of over 18 per cent. in 1937. The increase in Russia's productions from 206.7 million barrels in 1937 to 217.5 million barrels last year, and the rise in Germany's output from 3.4 million barrels to 4.2 millions are of interest. In Russia some of the younger fields (particularly Maikop) are now increasing in importance, although the Baku field continues to contribute the bulk of the higher output. In spite of the higher level of production, Russia's exports continued to fall in 1938, and they have now reached an unimportant level. In Asia, Iran has curtailed its output slightly last year owing to reduced demand. In America, production in the United States has been cut for the same reason. Texas (which supplies over 40 per cent. of the U.S.A. oil) produced on a much smaller scale by closing the wells on two days each week during part of the year. In Mexico the output fell sharply (from 46.9 to 38.9 million barrels) after the expropriation of the foreign oil companies in the spring, while Venezuela benefited to some extent from the smaller Mexican supplies, and was thus enabled to raise its production from 186.9 to 191.6 million barrels. The United States has remained by far the largest producing country, followed by Russia, Venezuela and Iran.

OIL PRICES

	1934	1935	1936	1937	1938
Crude Oil (\$ per barrel):					
Pennsylvania	1.72	2.02	2.17	1.88	1.34
Mid-Continent	1.08	1.08	1.18	1.30	1.10

of large exports from Bahrein to Europe, and particularly to Great Britain, to which reference was made in the *Commercial History* of last year, proved unfounded. In the United States, there was again a revival of price-cutting and wholesale and retail prices for petrol declined throughout the year. Apart from some adjustments in the Pennsylvania crude price, however, the price level for crude oil remained stable until October, when a major cut was made, reducing the quotation to the level given in the price table. Owing to the unsatisfactory position on the United States' domestic market the export pressure of the country's oil industry was stronger than in recent years, and as the demand in the rest of the world was reasonably good, American exports showed a substantial rise on the year from 160.5 million barrels in the first eleven months of 1937 to 177.8 million barrels in the corresponding months of 1938. The State control in the United States showed less satisfactory results than in the preceding two years. The setback in consumption revealed the lack of control over refining in the Compact States, voluntary co-operation having been rendered difficult by the Madison anti-trust judgment of January 22, 1938, in which 16 oil companies and 30 of their executives were compelled to pay heavy fines. There is, however, reasonable hope that the control will be strengthened in 1939, as the Compact States have started a campaign for an increase in their membership and for an extension of their control activities, a campaign which has found the support of President Roosevelt.

Comprehensive stock figures for the countries outside the United States are not available. In the United States stocks of crude oil declined substantially during 1938, reaching 273.0 million barrels on December 31st (the lowest end-year level for over 15 years), against 303.4 millions a year before. Stocks of petrol, which had opened the year at 77.4 million barrels and had risen to 93.2 millions at the beginning of the spring season, fell to 71.7 million barrels on December 31st. On the other hand, stocks of fuel oil advanced sharply from 118.7 million barrels at the beginning of the year to 154.7 million barrels in the middle of November, and though there was a small decline to 144.8 million barrels at December 31st, stocks remained excessively high.

The oil tanker market, which is of great significance for the European oil and petrol price level, showed a disappointing tendency in 1938. The most representative rate for clean oil (Gulf-United Kingdom or Continent) fell from 32s. per ton at the beginning of the year to 12s. at the end of 1938. Similar reductions have been made in practically all other rates. The downward trend continued throughout the year and was interrupted by only a few short rallies. During the year 112 oil tankers, with an aggregate tonnage of 907,053 tons, were launched. This figure was the highest for some years, and compares with 769,744 tons in 1937 and 667,794 tons in 1936. In spite of the higher launchings, however, the world's oil tanker tonnage is by no means excessive, so that a revival of oil shipments would soon result in increased tanker rates.

Oilseeds and Oils

The oilseed crushing and vegetable oil industry had only a moderately satisfactory year. Although employment in the mills and refineries and the volume of trade were practically as high as in 1937, unsettled political conditions and the almost continuous downward trend of prices made business very difficult. World supplies of raw materials were good and apparently ample for all purposes. Imports of oilseeds, nuts and kernels into the United Kingdom, at 1,630,665 tons, were 8,404 tons more than in the previous year, but their value was only £14,690,585, compared with £17,499,561 in 1937, a decline of 16 per cent. Of these imports, 37 per cent. consisted of cottonseed from Egypt, British East Africa and the Anglo-Egyptian Sudan; oilnuts and kernels, practically exclusively from British countries, accounted for 35 per cent., and linseed from India and Argentina, 16 per cent. India has a 10 per cent. import preference and four-fifths of the linseed came from that country. Imports of soya beans were all from foreign countries and were maintained at about the level of the previous year but were much below the quantity purchased before the 10 per cent. duty was imposed. There was a substantial increase in imports of ground nuts, which amounted to 326,448 tons, compared with 270,370 tons in 1937. At the beginning of the year it was feared that linseed supplies would be insufficient; world shipments amounted to 1,686,000 tons, compared with 2,113,000 tons in 1937, but world requirements were so much smaller that there was no shortage. Consumption in the United States alone fell from 768,600 tons to 393,000 tons. The general trend of prices

was downwards, though there was some improvement in the last quarter of the year.

Imports of refined and unrefined vegetable oils amounted to 228,509 tons, compared with 213,903 tons in the previous year, an increase of 14,606 tons, or about 7 per cent. Palm, coconut and olive oils constituted 80 per cent. of this total. Imports of linseed oil were mainly from Holland but, at 18,832 tons, the quantity was only half that purchased in 1937. The import duty of £5 per ton was maintained, but efforts to increase it in order to afford further protection to the British crushing industry were unsuccessful. There was a further increase in the quantity of oil cakes imported, from 633,050 tons in 1937 to 656,557 tons in 1938. Approximately half was derived from Empire sources and therefore was admitted free and the other half from foreign countries subject to a duty of 10 per cent. The oilseed crushing industry has for some time been pressing for increased duties on foreign-made oilcakes and quota restrictions on the importation of those from India and other British sources. But, in view of the present condition of English agriculture, it is realised that there might be considerable difficulty in persuading the Government to take any step which would tend to raise the price of oilcake against the farmer.

Demand for vegetable oils was fairly good but prices showed a downward tendency. Thus, raw linseed oil was quoted at £29 10s. per ton in January, but by July had declined to £21 5s., the lowest point of the year. The international crisis in September caused prices to rise, but they quickly fell again and the year closed at £23 10s. Linseed oil did not suffer from such keen competition from Dutch linseed as in the previous year as the average price of the latter was higher. Refined cotton oil was subject to comparatively small fluctuations. Both home and domestic trade in ground nut oil showed a further expansion. Exports of castor oil also increased, though prices were about £5 per ton lower.

Export business was less satisfactory than in 1937, partly on account of the unsettled political conditions which affected foreign markets and partly because of the reduced demand from the United States for refined cotton oil. The values of vegetable oils and oilcakes exported were, respectively, £2,089,932 and £306,878 in 1938, compared with £3,151,946 and £134,641 in 1937.

The following table shows British supplies of vegetable oils in recent years, together with figures of net imports and exports.

BRITISH SUPPLIES OF VEGETABLE OILS
(In tons)

	1934	1935	1936	1937	1938
Home Production:					
Linseed oil	61,360	85,767	90,920	95,345	92,103
Cottonseed oil	90,980	109,207	100,352	112,021	103,474
Other seed oils	44,774	46,784	31,746	33,715	34,720
Palm kernel oil	61,158	67,540	65,258	67,422	60,234
Ground nut oil	50,792	68,367	82,815	121,758	146,902
Copra oil, etc.	60,506	73,634	77,996	51,485	70,897
Total	369,570	451,279	449,087	481,746	508,357
Deduct Exports:					
Unrefined	34,480	51,467	53,052	70,512	74,610
Refined	23,798	43,646	21,342	26,397	13,000
Remainder	311,312	356,166	364,693	384,841	420,538
Add net imports	196,489	223,326	212,865	228,509	213,903
U.K. Supplies	507,801	579,492	577,585	613,350	634,441

The estimated supply of oilcakes, including net imports, available for consumption was 1,750,000 tons, compared with 1,770,000 tons in 1937 and 1,530,000 tons in 1936.

Rubber

The following is a summary of Messrs S. Figgis and Company's Annual Review of the Rubber Market, 1938:—

The political situation in Europe and the big industrial decline in the United States in the first half of 1938 made the year a difficult one both for the rubber market and producers. The latter were affected not only by the lower prices but also by the very much smaller quantity allowed to be shipped. In 1938 permissible exports averaged 55 per cent. of basic quotas, or 712,388 tons, compared with 834,000 tons in 1937, or 1,053,993 tons, in 1937. In the second half of 1937 shipments up to 90 per cent. of basic quotas had been allowed and in the consequent heavy additions to stocks here and in the United States. At the end of June, 1938, they totalled 386,878 tons compared with 215,483 tons a year earlier, and for the second half of the year the quota was reduced to 45 per cent. On February 22nd the International Rubber Regulation Committee recommended a new restriction scheme for a further five years, 1939 to 1943. The basic quota during 1939 was increased by 184,000 tons, including Siam, whereas

the average increase in 1937 and 1938 had been 40,600 tons. After 1939 the increase will be small, and during the five years of the new scheme the total addition is to be only 50,000 tons. The chief increases have been given to the Dutch East Indies and Ceylon. Under a 50 per cent. restriction we estimate shipments during 1939 and during the first quarter to be as follows:—

BASIC EXPORT QUOTAS		
	Whole Year 1939 Tons	January-March 50% Tons
Straits Settlements, F.M.S., U.M.S., and		
Brunei	632,000	79,000

Ceylon	106,000	13,250
India	17,500	2,188
Burma	13,500	1,687
State of North Borneo	21,000	2,625
Sarawak	43,000	5,375
Siam	54,500	10,250
French Indo-China (estimated shipment)	...	15,000
Rest of the World	...	7,000

Shipments during 1938 from the quota countries exceeded their permissible amounts in many cases. The excess was 22,300 tons and total shipments amounted to 888,600 tons.

STOCKS AT THE END OF THE LAST THREE YEARS
(In tons)

	Dec. 31, 1936	Dec. 31, 1937	Dec. 31, 1938
Stock in America	223,000	262,204	245,413
Stock in United Kingdom	78,462	57,785	86,853
Dealers' stocks in Singapore, Penang, etc.	18,017	32,582	20,932
Port stocks in Singapore and Penang	8,952	12,210	6,152
Stocks in Province Wellesley, Labuan and Malacca	3,288	5,203	2,655
Dealers' stocks up-country	5,839	16,043	7,475
Stocks on Estates of 100 acres and over	26,044	24,488	47,670
Total	363,576	410,515	417,150

The total planted areas of the territories which are members of the new International Rubber Regulation Scheme are as follows:—

AREA UNDER RUBBER (in acres)	
Straits Settlements, F.M.S., U.M.S., and Brunei	3,273,100
Netherlands Indies	3,214,900
Ceylon	605,200
French Indo-China	314,200
India	128,000
Burma	104,000
State of North Borneo	126,000
Sarawak	228,000
Siam	312,000

The new scheme gives the right to plant up during 1939 and 1940 another 5 per cent. of the total acreage planted. It is also permissible to replant old areas, but without the former 20 per cent. limit. Many directors of estates consider this new planting unnecessary and recent planting has probably been of high-yielding clones whose output will be greater than that of old planted areas.

Consumption declined by 185,000 tons from the peak figure of 1,094,000 tons in 1937 to 909,000 tons in 1938, chiefly due to the reduced demand from the United States. The principal countries' consumption is shown in the following table:—

CONSUMPTION OF RUBBER (PARTLY ESTIMATED)
(In tons)

	1936	1937	1938		1936	1937	1938
America	575,000	543,600	411,000	Japan	61,700	62,200	45,000

* These are Russian figures for deliveries from warehouses.

Price fluctuations during the year were moderate, but the average price for 1938 was 7½d. per lb. against 9½d. in 1937. The market opened the year with the price of standard spot sheets at 6½d. per lb., advanced to 7½d. by the end of January, but dropped to 6½d. by the middle of March, when the failure and consequent liquidation of stocks of a Japanese house made prices fall rapidly, and on the last day of March the price reached the lowest point of the year at 5½d. per lb. The I.R.R.C.'s decision in May to reduce the exportable quota to 45 per cent. for the third quarter caused prices to rise and the year's highest point was reached on October 14th at 8½d. per lb. In November the market declined on the announcement of a 50 per cent. quota for January-March, 1939. Also it was felt that if American consumption was good there might be further increases in February for the second or third quarters which would prevent prices rising. There has been little interest in the market since November.

Copper

The following survey of the copper market is based on the annual review by Messrs Brandeis, Goldschmidt and Company, Ltd.:—

The severe fall in copper prices which occurred in the latter half of 1937 was continued into 1938, despite the renewed restriction of mine output from December, 1937. In May, 1938, the price of spot standard reached £32 10s. per ton and from July 1st the operative quota was reduced from 105 per cent. of the basic tonnages to 95 per cent.; during the summer price movements remained small until the threats of a European war sent the price up to the year's highest point of £48 6s. 2d. per ton on October 17th. The rise in prices was swiftly followed by the suspension of output restriction, but with the lessening in political tension demand again declined, and the price of standard cash closed the year at £45 per ton. Restriction of output was again imposed on December 15th, at 105 per cent. of the basic tonnages, and this level was reduced to 100 per cent. on January 1, 1939.

The main reason for the weakness in copper prices was the steady decline in American copper consumption, from a monthly rate of 75,000 long tons in the first six months of 1937 to about 24,300 tons per month in the first half of 1938. During the autumn the expansion in business activity in the United States led to an increase in the consumption of copper, which reached 58,300 tons per month in the last quarter of the year. The fall in demand in the early months led to a general decline in output from American mines, which did not, however, keep pace with the decline in consumption; stocks in America rose from 260,000 tons at the end of 1937 to 370,000 tons at the end of June, 1938, in spite of a large increase in exports of refined copper, from 263,700 tons in 1937 to 332,900 tons in 1938.

World consumption in countries other than the United States increased further in 1938, as is shown in the accompanying table, taken from the annual review of the metal markets by Messrs Brandeis, Goldschmidt and Company, Ltd. The expansion in German, Italian and Japanese imports is a reflection partly of the increased armament production in those countries and partly of an increase in home reserves; in the United Kingdom and France the fall in industrial demand during the early part of the year more than counterbalanced the growing need of copper in the armament trades.

World mine output of copper fell from about 2.2 million

JOHN MURRAY

tons in 1937 to a little less than 2 million tons in 1938. This fall was the net result of the smaller output of American producers, and of the mines within the restriction scheme, and of a somewhat larger production in Canada and other countries, of which Cuba, Newfoundland, Finland and Cyprus are the most important. A further increase in 1939 in the Canadian and Rhodesian output is quite probable.

According to Messrs Brandeis, Goldschmidt and Company, Ltd., one of the features of 1938 was the very high margin between the prices of standard and electro copper. Owing to the restrictions on the export of refined copper from Germany and the still relatively small tonnages of electro produced in Rhodesia, the determining factor has been the refining cost in the United States. The fall in the pound and the keen demand for prompt copper kept the sterling prices high, but it is expected that in 1939 some of the accumulated stocks of refined copper will be put on to the market.

Lead

We take the following account of the lead market in 1938 from the annual review by Messrs Brandeis, Goldschmidt and Company, Ltd.:—

The boom in lead which took place in the early part of 1937 was followed by a severe reaction, which had not spent its force at the end of that year. There was, therefore, little prospect of a recovery in price in the early part of 1938, and it was feared that there might be a further sharp fall in spite of the good European consumption. This, in fact, did occur, and on June 9th a quotation of £13 5s. per ton was reached for September shipment, which proved to be the lowest of the year. From that point there was a moderate recovery, and at the close of the year the price was about £15 10s. for forward shipment.

Taking the world as a whole, the figures for production and consumption showed a decline in accordance with the general shrinkage of world trade, but it is interesting to note that the whole falling off was accounted for by the decline in the United States of America, the rest of the world actually showing an increase in the aggregate.

In the United States of America, production was no less than 100,000 short tons lower than in 1937, and the decline in consumption was even greater. Stocks rose steadily during the first half of the year, and the price, as quoted by the American Smelting and Refining Company, fell to 4 cents per lb. at the end of May. In July, however, the accumulations began to shrink, and for the rest of the year the movement in stocks was downwards, the figure at the end of December being actually lower than it had been a year previously. The price moved in accordance with this trend and closed at 4.85 cents per lb., which had been the ruling price at the beginning of the year. Had it not been for the sentimental effect of the reduction in the United States zinc price after the conclusion of the Canadian/American Trade Agreement, the price of lead at the end of the year would probably have been higher.

The position in the world outside the United States of America showed a remarkable improvement in demand, especially during the second half of the year. There was a heavy increase in European buying before and during the September crisis, and although this ceased in the last months of the year, the apparent consumption of some European countries showed an increase over 1937. In France consumption was lower, but this was to be expected in view of the economic adjustments which have been taking place in that country.

The lead consumption of Great Britain showed a heavy increase, the apparent consumption amounting to over 380,000 tons. There was probably a good deal of restocking by works, who found they could buy more than twice the tonnage of lead in 1938 for the same money that it cost in 1937, and who for that reason had had to reduce their holdings previously; it is also likely that the tonnages bought for armament purposes were greater than those consumed. Nevertheless, it was expected that the steady decline in the value of building plans passed would have caused a fall in the industrial demand for lead, but so far the use of lead in the building trades has been well maintained.

* Estimated.

Production of lead in the countries outside the United States of America has shown relatively little alteration compared with 1937. The figures for Australia and Canada are virtually unchanged, and whilst certain mines, such as that of the Sulphide Corporation in Australia, are nearing exhaustion, the tonnages will doubtless be made up from other sources in years to come. In Mexico, labour difficulties have not seriously affected output, and as prices have fallen richer grades of ore have been treated. The output from Germany and from some of the smaller mines on the American continent has increased, and in France there has been no falling off, thanks to the extra subsidy which the Government has provided.

In September an agreement was concluded between the larger producers of lead outside the United States of America to form a Lead Producers' Association, with the object of adjusting the supply to demand. Whilst the United States of America is not within the scheme, the leading Australian, Canadian and Mexican producers, and those in Burma and Jugo-Slavia, are co-operating, which should ensure that it is effective. It may be assumed that the price of £15 per ton which prevailed at the end of 1938 is somewhat below the level with which the producers will feel satisfied, but the first objective of the Association will be to reduce production in order to establish a reasonable equilibrium between supply and demand. The present level of stocks is probably in accordance with the volume of demand, and so long as there is no further increase, producers should be satisfied.

The outlook for 1939 is not unfavourable, though some of the prospects may have already been discounted. Consumption in Great Britain may possibly continue at its present very high level, but in the long run a good deal of secondary lead must reappear and reduce the demand for virgin metal. In the United States of America, on the other hand, most of the secondary stocks have been absorbed, due to the low level of domestic production, so that a higher demand should soon become evident.

Spelter

THE speculative activity of 1937 and the wide variations in price gave way in the latter months of the year to more normal conditions. The price of spelter on the London market fell continuously from March to November, 1937, and the decline was continued, though at a far slower rate throughout the first half of 1938. The lowest price of £12 3s. 9d. per ton for September shipment was reached early in June; the political crisis in the early autumn brought a short-lived flurry, but the year closed at a price of £14 per ton. The large premiums paid in 1937 for high-grade metal again reverted in 1938 to the normal level, owing to the decline in demand, which in 1937 exceeded for a time the available refining capacity.

Developments in the lead industry in 1938 are summarised in the following extract from the annual review by

Messrs Brandeis, Goldschmidt and Company, Limited:—

Producers, who had had one good year after many lean ones, again found their profits diminishing. Even in the United States, where consumption in 1937 had beaten all previous records, the expectation of a demand at least as great as in 1936 was by no means fulfilled, and stocks showed a heavy increase. Between January and July the United States stocks had more than doubled, although later there was a considerable improvement in consumption and about one-third of the increase disappeared. A large part of the earlier increase in stocks, both in the United States and in the United Kingdom, was due to the depression in the galvanised sheet trade in both countries.

Generally speaking, the production of spelter in the world is adequate to meet all demands. At the moment consumption has not increased sufficiently to absorb the supplies of spelter resulting from the improved flotation of lead-zinc, copper-zinc, and other complex ores; the relationship between the value of such concentrates and the cost of shipping from the mine to the treatment point or to the market is too great to allow all the available production to be treated. So long, therefore, as prices remain low, the supply of concentrates will remain in the producers' hands and be kept off the market altogether. In fact, the tendency at present is for supplies to diminish, and a considerable improvement in the price would be necessary to reverse it.

Towards the end of the year the conclusion of an agreement between the larger producers of lead outside the United States automatically helped the spelter market. Considerable supplies of zinc ores and residues originate in the treatment of lead and silver, and a lowering of the production of either of these two metals always affects the output of spelter to some extent. A factor which should also make for a greater stability in the market is the reduction by 20 per cent. (from 1.75 cents to 1.40 cents per lb.) in the duty on Canadian zinc entering the United States. This reduction was embodied in the American-Canadian Trade Agreement in November, 1938, which came into force on January 1, 1939. A similar reduction of 20 per cent. in the duty on the zinc content of ores and residues entering the United States has also been made, so that there should now be adequate refining capacity both in Europe and on the continent of America to meet all normal demands. It should perhaps be mentioned that under the "most favoured nation" clause many other countries can export metal or ores to the United States on the same terms as Canada.

Mention must also be made of the question of the import duty on zinc of non-Empire origin entering the United Kingdom. Under the Ottawa Agreements, zinc of Empire origin re-

ceived a 10 per cent. preference in the United Kingdom market, and later this was altered to a fixed duty of 12s. 6d. per ton on foreign metal with free entry for Empire metal. Certain interests have urged that special protection should be given to the home

industry in the form of an increase in the duty on foreign metal and a corresponding subsidy from the Empire producers who would benefit by the increased duty. The matter is still being considered by the Import Duties Advisory Committee, but if a change is to be made it is to be hoped that it will be of a general and not of a particular nature, so that other potential producers will be encouraged to put up works here rather than on the Continent.

Whilst the immediate prospects for 1939 do not appear too bright, there are two facts which are encouraging. Firstly, the price level is very low, and will itself cause a reduction in output, and, secondly, any agreement to curtail production would favourably affect the price almost at once.

Tin

MESSRS BRANDEIS, GOLDSCHMIDT AND COMPANY, LTD., summarise the tin market in 1938 in the following paragraphs of their annual review:—

Throughout the year the market has been under the influence both of the decline in world demand and of the negotiations connected with the formation of the buffer pool, the ultimate completion of which provided a bullish feature. The price of standard tin opened the year at about £182 per ton, and it remained around that level until the middle of February, with the quotas at 70 per cent. Following the reduction to 55 per cent. for the second quarter, there was a small advance, but controversy regarding the buffer pool proposals caused a sudden drop in the price at the beginning of April to £165 per ton. In May a further fall took place to £152 10s. per ton (three months) which was the lowest price of the year. Not until the end of May, when the outcome of the referendum in Malaya was known to be favourable and quotas had been cut to 45 per cent., was confidence restored. At the end of June it was announced that the buffer stock scheme would be put into operation as from July 1st, and this caused a big jump in the price to nearly £194 per ton. Whilst previously a level of £200 had been mentioned, the buffer pool made this figure the lower limit, and £230 was given as the higher one. The highest price of the year was £218 5s. reached on December 30th, so that the market closed the year in sight of the pool's objective.

According to the statistics of the International Tin Committee (from which the tables here given have been compiled) the production of tin in 1938 amounted to about 145,000 tons, whilst apparent consumption was rather higher.

* Provisional.

It will be seen from the production table that almost the entire reduction in 1938 was at the expense of the participants in the scheme, whilst the unrestricted countries did not reduce their production at all. This would not have been the case at less remunerative price levels. It is estimated that despite the hostilities in the Far East, actual production in China will not yet have been severely affected, although there may have been some difficulty in exporting metal in the last few months of the year. One may assume that the unrestricted producers contributed about 25,000 tons, or approximately the same as in 1937. This compares with a yearly quota rate of about 100,000 tons for the restricted producers if the rate of 45 per cent., which prevailed for the last six months of 1938 and the first three of 1939, were to remain in force for a full year.

So far as consumption is concerned, there have also been great changes in the proportions taken by various countries pared with 1937. The largest individual decrease was in the United States, which took about 35,000 tons less than in the previous year, though undoubtedly some of the invisible stocks were consumed. In the United Kingdom there was also a big decline, the bulk of which must be attributed to a reduced production of tinplates. Countries which imported more tin than in 1937 were principally Japan and Germany, but it is impossible to estimate to what extent these imports represent an adjustment of the invisible stock position. Russian imports were lower, and no doubt some of the heavy stocks previously accumulated were absorbed. Towards the close of the year the tinplate industry in the United States began to show a very welcome upward tendency, and in 1939 this should continue and be reflected in increased United States consumption.

World stocks of tin can be considered reasonable, but, in contrast to 1937, almost half of the visible stocks are now in the United Kingdom or in the British Empire. About the same proportion of the stocks has had to be made available

for the London Standard Market under the buffer pool scheme. This has meant that foreign producers have had to exchange their metal for standard tin warrants, or arrange to make shipments to London if called upon, whilst producers in the Straits and the United Kingdom have had to earmark stocks in their works for the same purpose. This situation is satisfactory from the point of view of the defence of Great Britain but it is doubtful whether consumers in the United States, who in any case are none too well stocked, will look upon it as a safeguard in a rising market.

In considering the prospects for 1939 it is important to remember that the available supplies of tin outside the buffer pool are too small for normal world requirements, and, as consumption may soon be expected to improve, the liquidation of the pool should be possible, even at £230. There is, of course, the danger that when this price is reached the market will be allowed to advance still higher, but if this can be avoided both producers and consumers should be satisfied. If, however, consumption should fall severely during 1939, the liquidation of the buffer stock would become much more difficult, and might entail the reduction of production quotas to a level which would make some of the members of the scheme reluctant to continue their adherence.

Cotton

THE following table, compiled from the issue of *Cotton Statistics* for January, 1939, shows that world production of cotton in 1937-38 was considerably greater than in 1936-37, but such estimates as are available for 1938-39 show a substantial decrease from the previous year:—

WORLD'S COTTON CROP
(Thous. bales of 500 lbs.)

* Government estimate, 400 lb. bales.
† Ex Burma.

† Less than 500 bales.

The increase in world production was chiefly due to the larger crop in the United States, total output in other countries having declined slightly from 19,981,000 bales in 1936-37 to 19,884,000 bales in 1937-38. The next table shows world consumption of raw cotton by varieties, as compiled by the International Federation of Master Cotton Spinners' and Manufacturers' Associations, and changes in stocks at the end of the season in recent years:—

WORLD CONSUMPTION AND STOCKS OF COTTON
(Thous. running bales, excluding linters)

Season ended July 31st	Consumption					World Stocks, July 31st
	American	Indian	Egyptian	Other Varieties	Total	
1931.....	10,901	5,863	853	4,864	23,195	10,906
1932.....	12,316	4,788	980	4,235	22,319	12,144
1933.....	14,171	4,220	934	5,028	24,353	12,560

* Total British imports of raw cotton in 1913: quantity, 21,742,996 cents; value £70,570,547.

The volume of total imports of cotton in 1938 was 27 per cent. smaller than in 1937, while during the same period the value of imports declined by 39½ per cent.

A survey of developments in raw cotton during 1938 is given in the following summary from Mr F. W. Tattersall's *Cotton Trade Review* of December 31, 1938:—

On January 4, 1938, the quotation for Middling American cotton on the spot in Liverpool was 4.83d. The average price during the year was 4.93d. per lb., compared with 6.34d. per lb. in 1937; the lowest quotation was 4.20d. on May 31st, and the highest 5.27d. on December 29th. The year closed with the figure at 5.25d. The American crop for 1937-38 reached the record total of 18,946,000 bales, compared with 12,399,000 bales in 1936-37. Owing to the large supplies of raw material the United States Government decided substantially to reduce the area under cultivation in the current season. Conditions in the growing belt were not so favourable as in 1937, but the plants made good progress, and according to latest Government estimates the crop is likely to be about 12,000,000 bales. The Government has granted a further loan to farmers and now holds a very large amount of American cotton. Government policy has made American cotton relatively dear compared with other varieties and exports between July and December, 1938, were about 1,600,000 bales less than in the corresponding period of 1937. Many proposals have recently been made whereby the Government could move its large

holdings into consuming channels and some changes are expected in the farm programme for next season. World consumption of American cotton during the current twelve months is estimated at about 10 million bales, which would leave a carry-over of nearly 15 million bales at the end of the season.

The price of Fully Good Fair Upper Egyptian cotton on the spot in Liverpool on January 4, 1938, was 7.44d. Like American cotton, this variety was a little dearer at the end of the year, closing at 7.51d. per lb. on December 30th. The lowest price during the year was reached on June 14th, at 6.54d., and the highest on October 26th at 8.46d. per lb. The growth of Egyptian cotton during 1938 was much smaller than in the previous year, partly owing to the reduction in the area under cultivation and partly owing to unfavourable weather conditions which resulted in a smaller crop. This season's growth of Egyptian cotton is estimated at about 7,000,000 cantars. The carry-over of all kinds of cotton next July is expected to be about 26.5 million bales.

Silk

SUPPLIES of raw silk, which showed a substantial increase in the 1936-37 season, declined in 1937-38, and estimates for 1938-39 suggest that this tendency will continue. The following table, based on the estimates of Messrs Morel-Journal and Company, shows that the reduction was general, and in the case of exports from Shanghai large, but suggests an increase in the Levant crop in the current season:—

WORLD SUPPLY OF RAW SILK
(In metric tons)

The following account of the silk market in 1938 is a summary of Messrs Morel-Journal and Company's annual review:—

The silk market became healthier during the year. There were no speculative positions at the beginning, and the general shortage in the cocoon crops helped to balance production and consumption. As a result, prices were strong enough to resist outside influences, and are now higher than a year ago. This firmness in prices encouraged the industries using silk as a raw material. In the United States, monthly consumption, after declining in 1937, gradually increased, and total consumption in 1938 will probably be almost as high as in 1937. Italy remained out of the raw silk trade; imports of foreign silk were prohibited and a special bonus given to help export surplus Italian production, most of which went to the United States and Germany.

In this country the silk industry continued to expand and imports of raw silk in 1938 were 11 per cent. higher than in the previous year. This was only partly offset by a decline in imports of cocoons and waste. The quotation for Japanese silk was 8s. to 8s. 6d. per lb. on December 28, 1938, compared with 6s. 6d. to 7s. 3d. per lb. on December 29, 1937.

Wool

A FURTHER increase in production over that of the record 1937-38 wool-selling season caused prices to continue the downward movement which set in during the later months of 1937. There was some improvement towards the end of the year, but at the end of the season the index of raw wool prices, compiled by the *Weekly Wool Chart*, had fallen from 113 for 1937 to 89 for 1938.

The following table, compiled by the Imperial Economic Committee, gives figures of raw wool production in the leading export countries:—

Season	Production						Index of Wool Prices (July, 1914 = 100)
	Australia	Argentina	New Zealand	Union of S. Africa	United States	United Kingdom	
1930-31	913	361	259	300	435	111	3,812
1931-32	1,008	381	270	313	464	113	3,823

* 50's fine.

† 48's.

‡ None offered.

Recent changes in the wool market are summarised in the following extract from the *Weekly Wool Chart*, dated December 29, 1938:—

Estimated production in the five principal exporting countries amounted to 2,049 million lb. in 1937-38, compared with 2,043 millions in 1936-37, and the previous record of 2,046 millions in 1933-34, and at the end of the season there was a substantial increase in stocks of unsold wool at the various sources of supply. At no time during the year, however, could stocks in the United Kingdom be regarded as excessive or even normal. The moderate stocks of medium and coarse crossbreds were depleted by Government orders. Prices for carpet wools were so low that Argentine growers held much of the clip off the market, and it was difficult to obtain supplies. A remarkable feature of the year's trade was the slight fluctuation in prices. The downward movement which began at the end of 1937 continued until February, but during the greater part of the year that proved to be a level below which prices could not be depressed however bad trade might be.

Mainly because of the reduced requirements of Japan and the United States, the total quantity of wool sold in Australia in 1937-38 was only 2,793,164 bales, compared with 2,924,053, bales in the previous season, and the other main producing countries reported similar substantial reductions in sales. During the later months of the year wool consumption in the United Kingdom improved, and at the end of the year the statistical position was satisfactory. Consumption during the year has not differed appreciably from production, as low prices have secured preferential use as against other textile fibres.

Other Textile Fibres

PRICES of fibres in the United Kingdom show considerable changes from a year ago, some qualities being dearer and some cheaper.

An account of developments in the fibre market, taken from the Annual Review of Messrs Wigglesworth and Company, Limited, is given below:—

Soft fibres continued to be subjected to Government control of supply and exports. Russia, whose flax crop is by far the largest, was not releasing sufficient for foreign requirements, and the Italian Government raised the price of hemp above the parity of competitive fibres so that exports were seriously curtailed. Consequently these fibres were out of relation with the hard fibre group, which was depressed throughout the year, resulting in an uneconomic price level. Readjustment of values is naturally slow in a crop which takes two or three years to mature, but it may now be expected.

Flax.—Except in the heavy end, which benefited from important Government contracts towards the close of the year, the British linen trade had to contend with adverse conditions throughout 1938. Exports declined, particularly to the United States, and import restrictions and exchange regulations added to the difficulties of manufacturers. Many mills closed down for an extended period at Easter, and production was on a reduced scale for the greater part of the year. French and Belgian mills were also working below capacity, and their exports suffered from the reduced demand in the United States and higher production costs. The year closed on a more hopeful tone. Trade with America is expected to increase as a result of the tariff concessions on linen goods granted under the Anglo-American Trade Agreement, and of the transfer of the linen manufacturing mills in the Sudeten area which will probably now be fully occupied supplying the German market. United Kingdom imports of flax and tow for the eleven months to November totalled 51,506 tons, compared with 49,744 for the same period in 1937. Exports of linen manufactures were 47,660,000 sq. yards, against 77,596,000 sq. yards in 1937, and were £1,471,915 lower in value. Exports to America fell by 60 per cent. Shipments of fine linens to China showed a slight increase towards the end of the year.

Early in the year prices advanced sharply upon reports from the Baltic States and Poland that supplies would be less than earlier estimates; IV group Slanetz advanced from an opening level of £78 to £85 in March, Livonian from £72 to £75, and Ralo tow No. 8 from £61 to £68 per ton. Trading

was dull in the summer, and despite large sales to Germany, Sweden and Finland, prices declined. From November to the end of the year prices rose steadily under the influence of large scale business in new crop Baltic flaxes and orders for yarn in Belfast and Scotland. Closing prices were:—IV group Slanetz £96, Livonian £80, and Ralo tow No. 8 £73 per ton. The year ended on a firm note with a shortage of supplies.

The entire lack of offers of new crop Soviet flax is a serious matter, for the trade counts on a regular supply of this type. The quality of the 1938 flax crops in the Baltic States was reported to be superior to that of previous years. The Latvian crop was estimated at 21,900 tons against 23,000 tons in 1937, with an exportable surplus of 12,000 tons. In Estonia about 6,000 tons were expected to be available. The acreage under flax in Ireland increased from 19,000 to 21,000 acres, but the yield is likely to be smaller. The Belgian crop was fairly satisfactory. In April the Government of Northern Ireland announced their decision to spend up to £150,000 over three years to stimulate flax production.

Indian Hemp (Bombay).—The market has been quiet but steady throughout 1938. There was some improvement over the poor quality of the previous season, and all descriptions have been in moderate supply, despite the smaller crops. Towards the close of the season the finer qualities were practically exhausted, and shippers ceased to offer. They have shown great resistance to price reductions. Prices for fine Itarsi, fine Sewnee and fine Jubbulpore at the highest point, during the autumn, were £19 10s., £16 10s., and £14 10s. per ton, respectively. The market at the year-end was influenced by speculative activities on the new crop position.

Jute.—In contrast to many other fibres, the price of jute maintained a fairly high level, the average for firsts being £18 12s. 6d. per ton, against £20 10s. in 1937 and £18 7s. 6d. in 1936. The Calcutta market was under the influence of unrestricted production, an obvious excess of raw material supplies and favourable reports of the new crop. Towards the end of this period the low point was recorded. An agreement was accepted by 98 per cent. of the mills which, under the threat of Government intervention, restricted working hours in Calcutta to 45 per week, but this failed to reduce stocks of manufactures. Damage by floods to the new crop reversed the price trend, and towards the year-end prices were steadier.

Manila Hemp.—The year opened with spasmodic demand insufficient to support existing prices, and sharp falls were experienced. Dull trading continued until March-April, when at a meeting called by the Fibre Inspection Service, planters resolved to curtail production to 1,100,000 bales per annum. In July the Philippine Government authorised the formation of the National Hemp Corporation, which, working with the National Warehousing Corporation, would hold surplus stocks of Manila off the market until K reached £25 per ton. Neither organisation has yet operated as supplies outside the Davao province have been curtailed naturally, and there is some shortage.

	1935	1936	1937	1938

	534,025	519,175	543,500	494,420

August proved the slowest trading period, but the September crisis brought in buyers. With the political settlement prices eased, but since then a slow recovery has taken place. Except where short supplies hampered negotiations, the fine and medium grades followed the course set by the lower qualities. A dominant factor has been the marked expansion in the use of Davao hemp. American activity fell short of expectations and imports were the lowest for many years. Japan also lost ground and took only half her 1936 tonnage.

The statistical position is sounder than present prices suggest. Supplies at 1,174,000 bales compare with 1,314,000 bales for 1937. Stocks commenced at 157,000 bales, accumulated to 243,000 bales in October and were 184,000 bales at the end of the year.

East African Sisal.—1938 has been disappointing to producers, quotations resulting in the unremunerative average price of about £17 15s. per ton for No. 1. The lowest price was reached in September, at £15 15s. per ton, and until the end of December the market was featureless, and the year closed with a flat market, No. 1 being quoted at £16 15s. Estates are generally sold well ahead, and stocks are low in both Africa and Europe. There have been a number of measures aiming at closer co-operation between Africa and London, and matters concerning quality, grading, packing and the promotion and protection of the industry.

Java and Sumatra Sisal.—Prices showed remarkable stability throughout the year, and exports are not expected to

show much change from those of 1937. Quality is standardised and maintained at a high level.

Mexican Henequen.—All official reports are withheld, and it is difficult to judge the situation. From unofficial sources it appears that receipts at Progreso coincide very closely with shipments, but to what extent stocks are accumulating inland is unknown. It is presumed that a good quantity is used locally.

The next table shows British imports of flax, hemp and jute in 1936, 1937 and 1938:—

Country	Quantity			Value

BANK OF NEW SOUTH WALES

ESTABLISHED 1817

The first bank in Australasia and the largest, the Bank of New South Wales offers a unique banking service to investors, traders and travellers. Over 900 branches are maintained throughout Australia, New Zealand and the Pacific Islands. At the main London Office, 29 Threadneedle Street, the Intelligence Department is fully equipped to provide information on economic and financial conditions in these countries. The branch at 47, Berkeley Square, W.1 advises travellers and makes arrangements for them.

AGGREGATE ASSETS, £127,064,000

(Incorporated in New South Wales with Limited Liability.)

Manufactures

Iron and Steel

THE iron and steel industry suffered a sharp recession in the past year, in spite of the drastic curtailment of imports. The output of pig iron in 1938, at 6,764,000 tons, was 20 per cent. smaller than in 1937, while the production of steel ingots and castings also fell by 20 per cent. to 10,394,000 tons. The fall in production, however, probably exaggerates the recession in consumption, for in 1937 heavy stocks were accumulated which were worked off in the past year.

Despite the severe fall in demand, however, the official prices were maintained at boom levels throughout 1938. The Board of Trade index of iron and steel prices actually rose from 129.6 (1930 = 100) in 1937 to 139.1 in 1938.

Further progress was made with reorganisation during the past year. The steel furnace capacity of the industry was increased from 14,281,000 tons per annum at the end of 1937 to 14,483,000 tons per annum at the end of 1938. No less than two-thirds of the blast-furnace capacity existing in the summer of 1936 has now been replaced by modern plant, and the annual pig-iron producing capacity was increased from 9,151,000 tons to 10,124,000 tons during this period. The year 1938 also witnessed the completion of the first continuous sheet mill in this country at Ebbw Vale.

Developments in the industry in recent years are summarised in the following tables:—

BRITISH IRON AND STEEL INDUSTRY

Year	Output (Thousand Tons)		Iron, Steel and Manufactures thereof (Thousand Tons)		Price of Cleveland G.M.B. No. 3 per ton	Unemployment

Year	8497	6764	12964	10394	2033	1341	2574	1918

An account of the year's developments in the principal producing areas of the United Kingdom is given in the following extracts from *The Iron and Coal Trades Review* of January 20, 1939:—

North of England.—The severity of the industrial depression was most pronounced on the North-East Coast, which is so largely dependent on export trade. In 1937 home demand prevented the fulfilment of export orders and manufacturers were later unable to recover lost markets. Never has so little pig-iron been shipped from the Tees, and total clearances of all descriptions of iron and steel in 1938 were about 153,000 tons less than in 1937. Towards the end of the year the decline was arrested. Stocks were reduced and imports rigidly controlled, and it was hoped that price cuts would release a considerable volume of new business. Both means of production and manufacturing processes were improved during the year, but Cleveland's long supremacy in pig-iron production was challenged and eclipsed by the Derbyshire-Northants area. The transition from prosperity to slump was most marked in the hematite trade, where the September output was less than half that of March, and export trade had almost disappeared. Steel production was about 550,000 tons, or 20 per cent., below that of 1937, but this district still retains its lead over other producing areas and re-armament work and the reductions in prices are expected to lead to an improvement in 1939.

Scotland.—Trading showed a definite decline all round, production was curtailed for much of the year, and export business irregular and difficult to secure. The pig-iron trade

was hampered by the British Iron and Steel Corporation's over-estimation of the quantity of iron required, so that steelworks were unable to deal with the output and large stocks accumulated. The heavy steel trade was not affected until the end of April by the quieter business trend, as there were substantial arrears to be worked off. Stocks were extremely large, and the re-imposition of import duties in April did not produce normal conditions until the late autumn. The finished sections suffered further recession. The shipbuilding position was unsatisfactory, though naval and armament work was increasing. Despite the dullness in new business over the first half of the year, Scottish steel ingot production at 965,000 tons was higher than in the corresponding period in 1937. Total production during the year, however, was only 1,602,500 tons, compared with 1,884,800 in 1937.

West Cumberland and Lancashire.—In West Cumberland trade declined throughout the year, and at the end of 1938 the number of furnaces blowing was only half that at the end of 1937. The lessened importance of export markets has deprived the area of some of its geographical advantage, for the bulk of its output must now be transported to other parts of this country. The district benefited from armament work, but there was some short-time working in both Workington and Barrow. Hematite production probably did not equal that of recent years. In Lancashire some branches of the foundry trade were busy throughout 1938, but this was not a general experience. Machine tools, heavy electrical and other speciality forms were well employed, but textile machinists, light casting makers and jobbing foundries were not, though some obtained armament work. Stocks of pig-iron at foundries were reduced towards the end of the year, but replacements were limited in the expectation of price reductions.

Sheffield and District.—Sheffield did not suffer to the degree experienced in some other industrial centres, but there was a bad depression in the middle of the year, though during the autumn industry was returning to where it stood in January. When the year opened pig iron producers were working at high pressure, and little or nothing was going into stock, but by the end of March demand eased sharply and business was quiet and stocks accumulating until September. A few contracts to the end of the year were placed, but though stocks were obviously dwindling, forward business was hampered by the expectation of price reductions at the year-end. In the steel section activity was well maintained until May, after which conditions were slack until October, when production expanded and orders were more plentiful, though forward buying was suspended. In the iron and steel scrap trade the market became weak after the first quarter, and supplies remained well ahead of demand for the rest of the year.

South Staffordshire.—At the beginning of 1938 the excellent conditions of the previous year were expected to continue, but the position changed suddenly before the end of January and deteriorated so much that by the middle of the year many steelworks were operating only to half capacity. The whole of the year was unsatisfactory, and although many consumers had reduced their stocks at the end, many users had sufficient supplies for a considerable period of 1939. In pig-iron the year did not open so briskly as in steel and bar iron, and the depression continued throughout 1938. Hematite, low-phosphorus, forge and refined pig-irons all suffered severe setbacks after the first quarter of the year, and many consumers will have a large carry-over into 1939 in spite of a slightly improved demand for re-armament work towards the year-end. The foundry coke market followed the tendency of pig-iron, but there was a considerable improvement in the fourth quarter, the collieries having obtained substantial export and domestic orders. The position affecting sheets, small steel bars and strip was much the same as other classes, but there was a satisfactory demand throughout for steel supplies for colliery maintenance. In all sections the price reductions at the turn of the year are expected to lead to an improvement in trade.

South Wales.—The slackness in the tinplate and sheet industries affected steel production in South Wales and Monmouthshire. Output in 1938 totalled only 1,763,900 tons, compared with 2,632,000 in 1937. The tinplate works in the "pool" operated at an average of 47 per cent. of capacity compared with 72.4 per cent. in 1937. The demand for galvanised sheets was decreased by the decline in motor-car production and in export requirements, which was not offset by the improvement in other home demand. Prices were steady, only two changes being made. Conditions in the iron and steel scrap market were difficult; the smaller production of steel reduced the demand, imports made stocks alarmingly high in relation to production, and between April and December little new business was transacted. The outlook for all sections of the steel industry is unencouraging, particularly as productive capacity has been increased by the new works at Ebbw Vale.

The following table is compiled by the British Iron and

Steel Federation and gives figures of output in the most important producing countries in recent years:—

WORLD PRODUCTION OF PIG IRON AND STEEL
(In millions of tons)

Engineering

ACTIVITY in the engineering industry remained at a fairly high level for the greater part of the year. For the first seven months exports of machinery were consistently larger than in the corresponding month of 1937 and although there was a decline in the latter half of the year total exports for the twelve months were greater than in 1937. The number of insured persons unemployed in general and electrical engineering last year was higher than in 1937, but in marine engineering employment showed a slight improvement, chiefly due to re-armament work. The Board of Trade index of production for the engineering and shipbuilding industry rose from 134.9 (1930 = 100) in the third quarter of 1937 to 135.3 in the fourth quarter, but since then has declined gradually and in the third quarter of 1938 was 122.4. During December, 1938, however, there were signs of improvement in general and electrical engineering, though activity in marine engineering continued to decline.

The following is a summary of the description of developments in the industry from the Annual Trade Review of the *Chamber of Commerce Journal*:—

The year 1938 was one of crisis, change and uncertainty, but also of steady progress, with employment good and without

any serious trade disputes. The trade agreements between this country and Eire and the United States were mutually beneficial and the Palace of Engineering at the Glasgow Exhibition attracted a large number of visitors, but it is difficult to estimate the value of orders directly attributable to the exhibition. During the year a new institution—the Institution of British Agricultural Engineers—held its first meeting.

BRITISH ENGINEERING INDUSTRY

Year	Exports of Machinery	Unemployment		
		General Engineering	Electrical Engineering	Marine Engineering
	Tons	%	%	%
1929	562,472	9.7	4.5	10.4
1931	329,264	27.7	14.7	44.7
1932	301,178	29.1	16.4	58.6
1933	276,312	25.2	15.3	46.6
1934	335,030	16.0	8.6	31.9
1935	383,833	12.7	6.5	25.3
1936	380,495	8.5	4.3	14.4
1937	438,377	5.4	3.1	9.0
1938	459,990	7.4	5.0	8.25

The reports from most mechanical engineering works were generally satisfactory. Re-armament work helped to keep firms busy, particularly as the Government endeavoured to place its orders in depressed areas, thus reducing the burden of overhead charges and so putting firms in a more favourable position for competing for standard work. Some useful export orders were booked during the year, particularly in the Dominions. A

number of important extensions was made to engineering works and some of the shops of the North British Locomotive Company, which have been closed since 1923 owing to lack of orders, were reopened.

The volume of heavy electric work remained substantial, with considerable developments in power stations, but the demand for lighter products was not so great, and there was a slump in the wireless trade, largely owing to previous over-production and the excess capacity of the industry. The increasing use of individual motors for driving machine tools kept the motor builders busy. The electrification of railways continued, and a good deal of work is still on hand. The extension and erection of aircraft factories continued, and the work of aeroplane construction has reached the stage of mass production.

It may be claimed that 1938 was an interesting year, and that the engineering industry performed its part well in spite of all the complications of the international situation.

Shipping and Shipbuilding

THE past year has not been a satisfactory one for the British merchant shipping and shipbuilding industries. Both industries suffered (a) from the decline in international trade, and (b) from the intense competition of other countries. As a result, the share of the world's sea-borne traffic carried in British ships and the proportion of the world's new orders for merchant ships secured by this country showed a further decline. In 1938 the United Kingdom owned only 29 per cent. of the world's steam and motor tonnage (excluding Empire and American lake vessels), against 33 per cent. in 1929, while its share of the total mercantile tonnage commenced last year had fallen to 20 per cent., compared with 55 per cent. in 1929.

The position of the two industries has become so serious that they have asked the Government to come to their assistance. The shipping industry set up a Fact-Finding Committee to analyse the causes of the decline. The Deep Sea Tramp Fact-Finding Committee pointed out in its report that foreign tramp shipping has the advantage over the British industry by reason of:—

- The lower capital cost of ships, which cannot be ascribed solely to State aid;
- lower running costs—wages, manning, insurance and in some cases accommodation;
- lower cost and speedier execution of repairs;
- Government subsidies, indirect aids, preferences, and flag discrimination.

Shipbuilders, in turn, point out that theirs is only an assembly industry, and that the rise in construction costs is due to higher prices of materials and wages over which they have no control. Re-armament, in their view, has contributed to the rise in costs.

The principal changes in shipping and shipbuilding last year are illustrated by our usual tables. The first of these shows the changes in the shipping tonnage employed in Britain's overseas trade, the course of freight rates and of the proportion of insured persons unemployed in shipping and the docks:—

BRITISH SHIPPING

Year	Tonnage engaged in British Overseas Trade		The Economist Index of Freight Rates (1913 = 100)	Unemployment	
	Entered (With Cargo)	Cleared (With Cargo)		Shipping Services	Dock, etc., Services
	Thousand Tons	Thousand Tons		%	%

The year 1938 opened with freight rates in the midst of a recession which, after a temporary improvement in the early

autumn, continued until December. As the fall in freight rates was not accompanied by a corresponding reduction in costs, the income of many shipowners was insufficient to maintain the efficiency of their fleets by replacing old vessels with modern tonnage. The tonnage employed in Britain's overseas trade and unemployment in the shipping services showed a comparatively small reduction and increase respectively.

As the next table shows, the volume of shipping laid-up in the British Isles tended to increase with the reduction in world trade. The volume of idle shipping at the end of last year, however, was still appreciably smaller than during the depression.

TONNAGE LAID UP IN THE UNITED KINGDOM (Thousand tons net)

Laid up on:—	Average, 1927-30	1935	1936	1937	1938	1939
January 1.....	355	878	436	212	175	452
April 1.....	433	708	474	90	339	...
July 1.....	554	586	502	61	382	...
October 1.....	460	512	403	69	456	...

The following analysis of the tonnage of shipping entered and cleared at United Kingdom ports shows that while the total turnover has slightly fallen in the past year, the proportion of British ships has not declined:—

ENTRANCES AND CLEARANCES

As a result of the decline in the demand for shipping tonnage and intense foreign competition, the shipbuilding industry suffered a serious setback which is revealed by the table below, showing the tonnage commenced, launched and under construction, as well as changes in the price of a cargo steamer built to plain specifications, and in the proportion of the insured persons unemployed in shipbuilding and ship repairing:—

BRITISH SHIPBUILDING

† At end of year. ‡ According to "Fairplay." § Average.

The recession was not yet reflected in the tonnage launched (which actually showed an increase between 1937 and 1938) owing to the long time-lag between the placing of orders and the launching of vessels. On the other hand, the tonnage of vessels commenced last year was only half as much as in 1937, which points to a severe contraction of merchant shipbuilding activity in the current year.

The decline in orders, however, has already gone beyond the loss of foreign custom, for the comparatively high cost of construction has forced British shipowners to place orders abroad. At the end of 1938, when the tonnage under construction in this country for foreign owners was valued at £3,500,000, shipbuilders abroad were building vessels for British owners valued at £6,500,000.

The proportion of insured persons unemployed in shipbuilding was actually slightly smaller in 1938 than in 1937. This improvement was due to the increase in naval work; but it is doubtful whether increased naval work will be sufficient this year to offset the prospective reduction in mercantile construction.

The next table shows the merchant tonnage launched at home and abroad. Britain's proportion of the total remained unchanged at 34 per cent. last year, but, as only one-fifth of

MERCANTILE SHIPPING LAUNCHED (Thous. gross tons)

Period	Tons launched			British Percentage	Output as Percentage of 1909-13		
	U.K.	Abroad	World		British	Foreign	World
Average—							
1909-13.....	1,522	967	2,489	61	100	100	100
1922-25.....	1,050	1,087	2,137	49	69	112	86

World total.....	3,111	1,252	1,543	2,252	2,900	1,889

The tonnage under construction at the end of last year in the world was smaller than at the end of 1937. But the volume of work in hand in Italy, France, Denmark, Japan, Sweden and the United States showed an increase.

Motors

THE demand for motor cars is very sensitive to changes in general business activity or to expected changes in incomes. Many individuals respond to an expectation, or even the possibility, of a fall in their incomes by putting off the intended replacement of their cars. It is not surprising, therefore, that sales of motor cars showed a decline in the past year, nor that they fell below the levels of the two preceding years.

The fall in output last year, however, was comparatively moderate. The number of private cars and taxis produced in the motor year ended September, 1938, was 12 per cent. smaller than in the preceding year. But while imports were sharply reduced, sales abroad were fairly well maintained and were only slightly below those of the preceding year. Despite the reduction, however, output last year still exceeded the replacement demand, for, as the table overleaf shows, the number of cars in use showed a further increase between September, 1937, and the corresponding month last year.

Towards the end of the year, however, demand showed an improvement; in November, for example, new registrations of private cars exceeded the figure for the corresponding month a year earlier. The trend of the production, imports and exports of private cars is shown in the table below:—

UNITED KINGDOM—PRIVATE CARS AND TAXIS
(Number)

Year to September 30	Production	Imports	Exports	Total in use* (September)
1930	189,669	9,751	23,209	1,056,214
1931	158,997	2,118	18,992	1,083,457
1932	171,244	2,762	31,797	1,127,681
1933	220,779	3,619	41,028	1,203,245
1934	256,866	10,851	43,907	1,308,425
1935	311,544	13,563	54,280	1,477,378
1936	353,838	12,650	64,787	1,642,850
1937	389,633	18,840	77,901	1,798,105
1938	342,390	12,909	75,648	1,944,394

* Cars taxed on h.p.

In view of the recession in general business activity, a fall in the output of commercial vehicles was to be expected. The extent of the fall in production, imports and exports is revealed in the next table:—

UNITED KINGDOM—COMMERCIAL VEHICLES
(Number)

Year to September 30	Production	Imports	Exports	Total in use (September)
1930	68,859	1,527	6,545	448,004
1931	67,310	1,490	5,320	446,360
1932	61,475	310	8,381	453,313
1933	65,508	400	10,664	470,778
1934	85,633	1,637	13,742	496,575
1935	92,176	1,838	13,648	518,261
1936	107,609	2,700	16,928	543,087
1937	118,116	4,183	20,702	582,272
1938	105,171	2,721	15,835	580,143

The number of commercial vehicles produced in the past motor year was 11 per cent. smaller than in the preceding year. The percentage reduction was thus almost the same as in the case of private cars. As in the case of the latter, the output of commercial vehicles in the year ended September, 1938, was lower than in either of the two preceding years. Both imports and exports fell sharply, but the number of commercial vehicles in use showed a further increase.

Building

AFTER an unprecedented expansion in dwelling-house and commercial building, the volume of construction turned

* The method of compilation of this Index and its limitations are explained in Notes in *The Economist* of November 11, 1933, and September 5, 1936.
† Corrected for seasonal fluctuations. Method of compilation explained in the Trade Supplement to *The Economist* of July, 1936.

downwards in the past year. But if the year 1938 marked a turning point in constructional activity, the volume of work carried out was only slightly, if at all, lower than in 1937. In June, 1938, employment in building and public works contracting was still slightly higher than in the corresponding month of 1937. Moreover, the extent of the decline in constructional activity as a whole during the latter part of the year has been slight. Indeed, the absence of a more marked recession in general business activity last year was due, in no small measure, to the continuance of a high level of construction.

Building costs showed little change in the past year. As the index given in the accompanying table shows, they remained about 10 per cent. above the 1935 level.

The remarkable stability of the constructional trades last year was due, in part, to the increase in expenditure for defence, which has almost offset the reduction in civil construction. The figures of building plans passed and the index of building activity (based on the former series), given in the accompanying table, do not include direct Government contracts. Moreover, these statistics relate to future, rather than to past, activity; they therefore tend to exaggerate the extent of the downward movement in total constructional activity in the second part of last year.

But the marked reduction in the value of plans passed for dwelling-houses and other forms of building in 1938 portends a further fall in private construction in the current year, which is likely to be accentuated by the continued absence of war risk insurance facilities, a factor which has already tended to impair the attractiveness of property as an outlet for savings.

Chemicals

A SUMMARY of an account of the British chemical trade in 1938, prepared for the Annual Trade Review of the *Chamber of Commerce Journal* by Mr J. L. Rosenbaum, M.Sc., M.I.Chem.E., is given below:—

International tension and ever-mounting barriers to international trade influenced the chemical and allied group of industries, but the wide range of consuming markets helped to reduce the severity of the incidence of the adverse factors, and while trade as a whole was below the 1937 level it was still better than in 1936. Statistical data for the year are not yet available. Sulphuric acid output is still one of the most reliable indications of the trade trend, and the make of 100 per cent. acid fell from 564,000 tons in January-June, 1937, to 514,000 tons in the same period of 1938. During the first three quarters of 1938 the quantity of duty-free alcohol released by the Commissioners of Customs and Excise for industrial use amounted to 17.6 million proof gallons compared with 19.0 millions in 1937.

Home consumption of chemicals and related materials in 1938 was probably about the same as in 1937, increased rearmament work having compensated for the reduced demand in other trades. The values of both imports and exports were slightly below the 1937 levels, but were higher than those of 1936. Just over 50 per cent. of our exports went to Empire markets last year.

A number of noteworthy new plants were put into operation during the year, and although no major addition was made to British chemical products, steady progress was made in filling the gaps in materials which are essential if this country is to be free from the necessity of imports. The utilisation of

WORLD PRODUCTION AND CONSUMPTION OF PURE NITROGEN
(Year ended June 30th. In Metric Tons)

	1933-34	1934-35	1935-36	1936-37	1937-38
PRODUCTION					
Sulphate of ammonia:—					
By-product	307,050	321,000	376,000	429,000	411,000
Synthetic	534,743	533,000	630,000	688,000	765,000

CONSUMPTION					
Manufactured nitrogen	1,714,040	1,877,000	2,223,000	2,492,000	2,620,000
Chilean nitrate	163,550	195,000	218,000	238,000	252,000
Total consumption	1,877,590	2,070,000	2,441,000	2,730,000	2,872,000
Estimated agricultural consumption	1,673,000	1,812,000	2,106,000	2,369,000	2,492,000

* Including nitrogen products used for industrial purposes (except Chilean nitrates) and ammonia in mixed fertilisers.

petroleum gases for the manufacture of chemicals also continued to make headway.

Prices were fairly stable during the year. Metal salts fluctuated somewhat with metals, and fine chemicals had an uneventful year, but there was a continuous recession in prices of certain tar products. It is thought that consumers' stocks cannot now be large, and bulk orders would probably cause prices to strengthen. During the last quarter of 1938 the tone in the chemical markets was distinctly brighter, and, apart from outside influences, the trade should be able to look forward to a period of progress during 1939.

World production and consumption of fertilisers, estimated by the British Sulphate of Ammonia Federation, is shown in the accompanying table.

Both production and consumption continued the steady increase of recent years, and 1937-38 was a record year for the output of most of the products shown in the table. The most marked increases in output of manufactured nitrogen were in Germany and Japan, as in the previous year, but there was a decrease in the United States between 1937 and 1938 following an increase between 1936 and 1937.

Cotton Textiles

THE following table gives particulars of mill consumption of raw cotton and has been compiled from the publications of the International Federation of Master Cotton Spinners' and Manufacturers' Association. Total demand was substantially lower than in the previous season, but Continental countries consumed more than in 1936-37:—

WORLD CONSUMPTION OF RAW COTTON
(Thous. running bales, excluding linters)

Season ended July 31	United Kingdom	Other European Countries	United States	Asia	Other Countries	World
1929	2,800	8,112	7,023	6,720	1,217	25,872
1930	2,248	6,675	6,110	8,136	1,184	24,353
1931	2,470	7,472	5,669	8,149	1,351	25,111
1932	2,507	7,322†	5,337	9,139	1,496	25,801†
1933	2,773	7,614†	6,339	9,003	1,682	27,371†
1937	2,851	7,513*	7,938	9,512	1,908	29,723*
1938	2,500	7,842	5,750	8,032	1,967	26,093

† No returns from Germany. * No returns from Germany or Italy.
* No Returns from Italy.

The statistics of the British cotton trade reflect the deterioration which took place last year. Both imports of raw cotton and exports of yarn and piece-goods declined, prices and average earnings were lower and the average proportion of insured workers unemployed rose from 11.5 per cent. in 1937 to 26.3 per cent. in 1938.

† Trade Union figure: other figures are Unemployment Insurance returns.

All prices were below the levels ruling in 1937, and were lower at the end of the year than the beginning, with the exception of Middling American, which improved in the last

quarter owing to the large quantities of raw cotton held off the market by the American Government.

RAW COTTON, YARN AND CLOTH PRICES

The following is a description, summarised from the *Weekly Wool Chart*, of the main developments of the wool textile industry in 1938:—

The wool textile industry suffered severely from the international political unrest, and the home trade, on which the industry had largely to rely owing to the decline in exports, suffered from the general trade depression and the prevailing policy of reducing stocks and keeping commitments to a minimum. The low prices of the raw material did not stimulate buyers, and purchases were kept closely in line with diminishing trade requirements. During the latter part of the year substantial Government orders for uniform cloth contributed to an improvement, though the woollen trade showed a greater recovery than the worsted section. The number of workers unemployed was less in October and November than at any other period in the year.

During the greater part of the year quotations for both tops and yarns were below cost on the basis of current wool purchases, and considerable impetus was thus given to a scheme for the elimination of redundant spindles. A similar problem in the combing section has already been solved by co-operative effort, and a scheme is also in operation which aims at the elimination of the excessive competition in the dyeing and finishing section.

The falling-off in exports of semi- and fully-manufactured goods was in itself sufficient to account for an appreciable decrease in machinery activity. The industry had to depend mainly on the Dominions and Argentina, with Denmark as the best Continental market. Nearly all the principal markets showed a decline in purchases from the previous year, and for the eleven months January-November exports of woollen and worsted tissues fell by nearly 30 million square yards, while exports of yarns and tops declined by 5 million lb. and 7 million lb. respectively. Exports of noils and wastes were also smaller, though there was an improvement after the announcement of reduced import duties in the United States. In spite of the increase of home trade as a result of Government orders in connection with re-armament, the expansion was not sufficient to offset the decline in exports. It was estimated that the decline in the production of tops in this country in the year ended June, 1938, was not less than 40 million lb. in comparison with the previous two years. In the second half of 1938 and particularly in the last quarter, some leeway was made up, but the total consumption of wool during the year was less than in 1937.

Rayon

UNTIL two years ago it was usual to refer briefly to staple fibre at the end of any review of the rayon industry. Last year the world's output of staple fibre was within a very small percentage of that of filament rayon. The output of staple fibre increased by more than 50 per cent. between 1937 and 1938, due chiefly to the expansion of the industry in Germany, Italy and Japan, where its use has been made compulsory for many purposes in order to avoid as far as possible the purchase of cotton and wool. All manner of raw materials have been suggested for staple fibre, but at the present time there is no satisfactory substitute for wood-pulp. Changes in production are shown below:—

WORLD PRODUCTION OF STAPLE FIBRE
(In thousands of lbs.)

	1933	1934	1935	1936	1937	1938*
Germany	9,900	16,000	33,000	94,350	220,000	330,000
Japan	963	4,700	13,500	46,000	174,800	375,000
Italy	11,000	21,600	67,500	110,500	156,400	178,000
Britain	2,750	4,200	11,500	28,500	35,900	39,800
France	2,200	4,200	8,000	10,500	11,300	13,500
U.S.A.	2,100	2,200	6,000	12,000	20,100	30,000
Other countries...	440	700	1,200	2,550	3,700	13,150
Total	29,353	53,600	140,700	304,400	621,300	973,450

* Provisional.

While Germany is more or less self-sufficient in wood-pulp, Italy is largely dependent on Scandinavia, and Japan, though making big endeavours to meet her needs from Manchukuo and from home supplies, is largely dependent upon supplies from the United States and Scandinavia. Labour costs, incidentally, form a higher proportion of total cost in the production of rayon than in the manufacture of cotton goods.

The output of filament rayon, on the other hand, has shown marked contraction in 1938 in almost every country. The most notable reduction took place in Japan, where staple fibre has largely displaced filament rayon. As a result, the United States once again assumed the leading position as a producer of filament rayon. In other countries, as the table below shows, there has not been any marked change.

WORLD PRODUCTION OF FILAMENT RAYON
(In thousands of lb.)

* Provisional.

In Great Britain it was found necessary to restrict production in the spring of 1938. Prices of viscose yarns, after the agreement amongst the producers, have remained steady. In acetate there has been much price cutting, and although the volume of business may not have fallen as much as in viscose, the earnings of the firms engaged have been negligible. There are now signs of closer co-operation not only amongst the acetate producers themselves but between the acetate and the

viscose firms. Owing to the lower prices of cotton and wool, staple fibre has not made marked progress in this country, but large shipments were made to the United States, where demand temporarily exceeded supply.

In the United States, whose rayon industry is closely connected with that in this country, there has been considerable improvement. Prices which had dropped to uneconomic levels have been slightly improved and should rise further. The rush to buy which took place in the summer did not continue when manufacturers had replenished stocks, but production has been increased and the offtake is satisfactory. Staple fibre has been in greater request, but the demand for it was affected by cheap cotton and wool. Great efforts have recently been made to produce rayon yarns suitable to replace the imports of silk; the leading chemical manufacturers have produced an entirely new yarn on a mineral base for which great claims are made, and the commercial development of this will be watched with the greatest interest.

Transparent Paper

THE effect of the increase in the production of transparent paper (of which there are no official returns) is revealed in the returns of imports and exports shown below:—

UNITED KINGDOM TRADE IN TRANSPARENT PAPER

	1934	1935	1936	1937	1938
Imports	Cwts. 15,332	Cwts. 13,843	Cwts. 32,397	Cwts. 25,459	Cwts. 3,895
Exports	4,397	9,605	10,668	14,513	17,567*
Import surplus	+ 10,935	+ 4,238	+ 21,729	+ 10,946	- 13,672

* Based on eleven months' figures.

It will be seen that, whereas in 1936 imports exceeded exports by no less than 21,729 cwts., in 1938 there was an export surplus of 13,672 cwts. The trade is largely with Empire countries, but considerable headway has been made in foreign countries. Japanese competition has been much less severe, due partly to unsatisfactory quality and increased prices, but more particularly to the restriction of raw material supplies. Development of the product and of its use has made further progress, but the recession in trade has had a deterrent effect. Prices have not proved entirely satisfactory in a number of cases, and, despite the good statistical position, the reports of public companies have not been good.

Leather and Footwear

THE table shows that imports of hides of all kinds fell sharply between 1937 and 1938, the aggregate value declining by about 45 per cent. The value of imports of leather and manufactures thereof was 34 per cent. below the total in 1937. The index of sterling hide prices, calculated by the United Tanners' Federation, fell from 99 in 1937 (1923=100) to 79 in 1938. The index, which is adjusted for seasonal variations, touched its lowest point in June at 61, after which it rose to 74 in October and closed at 70 in December.

Developments in the market for hides and leather, and in the footwear trade, are summarised in the following extract from a survey in the *Leather Trades Review*:—

The year opened most unpromisingly; there was quite good inquiry and then the market collapsed. In the first half of the year prices declined by about 25 per cent., and purchases were only for immediate requirements. Between May and September there was an improvement both in demand and prices, but, on the average, tanners were unable to cover replacement costs. In August and September trade became brisk, but purchases were mainly of a precautionary nature, and were probably not absorbed by the boot and shoe and other manufacturing trades for some time. Demand declined as a result, but tanners, having cleared their stocks, were able to insist on higher prices. Towards the end of the year reduced inputs at the tanneries resulted in smaller supplies, a firmer market and a tendency towards still higher prices. The industry has been remarkably free from labour trouble during the year.

The Board of Trade index of the production of boots and shoes for 1937 was 118.8 (1924=100) and for the first three quarters of 1938, 111.6, 102.2 and 97.9 respectively. The proportion of insured persons unemployed in the footwear trade in Great Britain was 12.2 per cent. in 1938, compared with 10.9 per cent. in 1937.

Retail Trade

THE course of retail trade during 1938 has been affected by adverse circumstances. Two major political crises in Europe, in the spring and autumn of the year, added to uneasiness over the wars in China and in Spain, and an increasing anxiety as to Great Britain's capacity to defend herself, undermined the confidence of the retail customer in the stability of his world and have adversely affected his desire to spend. In some sections of retailing the resulting decline has been as great in the last twelve months as between the peak of 1929 and the bottom of the slump in 1932.

Percentage changes as compared with the corresponding period a year earlier in the aggregate value of retail turnover from February, 1936, to December, 1938, together with changes in the value of stocks at cost, are given in the first of the two tables overleaf.

The steady increase in the money value of retail turnover, which dated from the middle of 1933, was interrupted at the beginning of 1938, and the rate of increase dropped to 2 per cent. through the second half of the year, as compared with 8 per cent. in the previous year.

the more obvious products—increased in the same period by 4.0 per cent. This increase must be compared with that of 9.3 per cent. in the previous year, and it should be noted that in November, 1938, the smallest increase in the food division sales since October, 1933, was registered. In this connection, it must be borne in mind that food prices were lower in November, 1938, than in the previous year.

PERCENTAGE CHANGES ON THE CORRESPONDING PERIOD IN THE PREVIOUS YEAR

	Value of Sales (at selling)						Value of Stocks (at cost)

Jan.	+2.4	+6.2	...	+5.9	+7.6	...	+2.1	+3.3	...

The check to the normal trend of autumn trade is evident in all comparisons. In November and December the seasonal rise is shown in a slight upward movement, and while the sales in October give little evidence that trade restricted in September had merely been postponed, this holding-over may have reinforced the seasonal rise in non-food merchandise during December.

The principal changes in the sub-divisions of the non-food group were as follows:—

Increases: Women's wear (+3.3 per cent.); boots and shoes (+2.6 per cent.); and miscellaneous (+0.2 per cent.).

Decreases: Hardware (-6.0 per cent.); piece-goods (-5.4 per cent.); furnishing departments (-4.5 per cent.); sports and travel (-4.2 per cent.); fancy departments (-2.3 per cent.); men's and boys' wear (-1.6 per cent.).

On a geographical basis, the value of total sales for the period February to December, 1938, increased in the South of England (+5.3 per cent.), Scotland (+5.3 per cent.), Mid-

lands and South Wales (+5.0 per cent.), North-East (+4.1 per cent.), London, Suburban (+3.1 per cent.) and North-West (+2.5 per cent.).

BANK OF ENGLAND INDEX NUMBERS OF TOTAL RETAIL SALES

London Central and West End show a decrease of 7.6 per cent. In September, 1938, abnormal conditions were most evident in this district, a substantial decline being recorded for every category except food and perishables, in which division purchases of emergency supplies of grocery and provisions raised the sales of these commodities by more than 25 per cent.

The only other statistics which throw more detailed light on particular aspects of retailing are the Retail Distributors' Association index numbers of department store stocks. The rate of stock turn in this constant sample of department stores reached its highest point, 7.47, in April, 1937, after years of steady improvement and stood at 7.22 in November, 1937. These rates are obtained by dividing total sales (at selling) for all departments for each successive period of twelve months by average stocks (at cost) during the same period. During 1938, the rate declined from January to May, but rose again from June to December, in spite of a period of difficult trading and falling prices. It is clear that this particular aspect of retailing is being dealt with by these stores with increased efficiency.

J. A. McLEOD, President.

H. F. PATTERSON, General Manager.

Auditors' Report to the Shareholders:

We have examined the above General Statement of Liabilities and Assets as at December 31st, 1938, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were confirmed by us at the close of business on December 31st, 1938. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We report that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.

D. McK. McCLELLAND, F.C.A., of Price, Waterhouse & Co., Auditors.

G. T. CLARKSON, F.C.A., of Clarkson, Gordon, Dilworth & Nash, Auditors.

Toronto, Canada, 16th January, 1939.

The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the world. Particular attention is devoted to business with Canada, Newfoundland, and the West Indies, where Branches of the Bank have long been established—300 branches in all.

LONDON OFFICE: 108 OLD BROAD STREET, E.C.2.

E. C. MACLEOD, Manager.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, MARCH 25, 1939

No. 27

The Trend of Business

BEFORE Herr Hitler's coup in Czecho-Slovakia there had been signs of some revival in business confidence both in this country and elsewhere, reflected in the rise in the prices of industrial securities on the Stock Exchanges of London, Paris and New York.

After many months of hesitancy a large section of the British business world had taken the view—and not altogether without justification—that recovery was on the way. In the field of foreign politics the initiative appeared to have passed from Germany and Italy to the democratic Powers; and the growing military strength of the latter was widely believed—a belief resting on wishful thinking rather than on positive evidence—to have restored a measure of equilibrium and stability in international relations. In the sphere of domestic business the proposed increase in defence expenditure was thought to be big enough to offset, during the course of this year, all but the most catastrophic decline in private investment.

Moreover, the view was widely held that the recession in the United States was merely a temporary interruption of recovery and that the spring might herald the beginning of a further measure of expansion across the Atlantic. France appeared to have turned the corner, and the latest information indicated that business was on the upgrade. In the majority of other industrial countries recession seemed to have been arrested or slowed down, and the raw material producing countries were beginning to look forward to a rise in commodity prices which appeared to be about to start. Germany, suffering severely from the strains of her feverish armaments drive, seemed to be preoccupied with her own problems, and her industrialists—hitherto bent on undercutting British products wherever possible—suddenly showed a strong desire to conclude cartel agreements with their opposite numbers in this country.

Meanwhile, there was at least some evidence of improvement in business activity in this country. For example, *The Economist* index of Business Activity, adjusted for seasonal variations, rose from 101 (1935 = 100) in December, to 103 in January and 104 in February. The index of employment, after having remained unchanged at 110 since July, 1938, rose to 111 in February, a rise of one point over the figure for the corresponding month last year. The figures relating to coal consumption, building activity, iron and steel available for home consumption, raw cotton forwarded to mills and exports of domestic manufactures all showed a rise between January and February. On the other hand, the indices for the consumption of electric power, postal receipts, raw material imports, shipping movements and bank clearings registered a slight fall in the past month.

Compared with a year ago, the fall in unemployment last month was most marked in the consumption goods trades. Except in the case of rayon manufacture, there was a reduction

in the proportion of insured persons unemployed in all the textile trades, the aggregate fall amounting to no less than 4.5 per cent. of the numbers insured. Again, unemployment last month was smaller than a year ago in the clothing trades and in the food, drink and tobacco industries. The motor industry experienced a revival in demand for private cars, and new registrations in January showed an increase of 10 per cent. over the figure for the corresponding month last year. The revival in the consumption goods trades, moreover, continued in the first half of March, when the volume of new orders booked was substantial. Sales of cotton goods this month, for example, are reported to have been bigger than in any month for more than a year, and business in rayon fabrics has lately been heavier than at any time since the summer of 1937. Indeed, there were indications of a restocking movement for the home market, stimulated by the increase in private purchasing power and Government orders.

Even export business had been a little better.

The improvement was also reflected in the increase in the value of building plans passed last month, exclusive of direct Government orders. For the first time since last August, the value of plans passed by the

reporting local authorities was higher than in the corresponding month of the preceding year.

Again, there was a remarkable revival in the demand for iron and steel, which cannot be attributed entirely to Government orders. Our index of the quantity of iron and steel available for home consumption rose from 100½ in January to 117½ in February. The rate of operations in the tinplate industry advanced from just over 40 per cent. of its capacity at the end of January to 56 per cent. at the beginning of March.

This incipient revival has not yet become general, and in some industries, including commercial shipbuilding, activity is still declining. The tonnage of ocean-going vessels under construction at the end of last month, for example, was only 591,364 gross, against 1,165,936 gross a year earlier. But hopes of early Government assistance were running high.

In short, the stage appeared to be set for a measure of industrial recovery, when the German Government dealt a severe blow to the revival in business confidence by its high-handed action in Czecho-Slovakia. Although the full effect of Germany's renewed recourse to power politics cannot yet be assessed, it may well cause some hesitancy in the flow of private orders to industry, though probably not an immediate decline in industrial production. But, since it is now widely realised that Germany can only be held in check by a "spiked wall" around her frontiers, defence expenditure is likely to be increased even faster than was contemplated until recently. Consequently, it is probable that any possible decline in private activity will be offset in the course of this year by a considerable expansion in defence work.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of March. In the remainder they relate to the month of February.

COAL

The activity of the coal-mining industry has been fairly well maintained, though production and exports are still running below last year's level. The quantity of coal raised in February was 4.6 per cent. smaller than in the corresponding month last year, compared with a fall of only 2.3 per cent. between January, 1938, and January, 1939. The position has remained fairly satisfactory in most districts, with the exception of South Wales, which has seriously suffered from the fall in exports. Production in South Wales, for example, has recently been about 12 per cent. smaller than a year ago, while shipments in the foreign and coastwise trades have been as much as 20 per cent. lower. The volume of total exports of coal last month was 2.3 per cent. smaller than a year ago, whereas the figure for January showed a reduction of 6.9 per cent. from the previous year's figure. While exports have held up fairly well, shipments for the use of steamers engaged in foreign trade fell by 12.1 per cent. between February, 1938, and February, 1939, compared with a fall of 13.2 per cent. between January, 1938, and January, 1939. There have been significant changes in the distribution of exports between February, 1938, and February, 1939. Norway, Denmark, Germany and Argentina, for example, increased their intake of British coal, but shipments to France showed a heavy decline, from 716,800 tons in February, 1937, to 531,400 tons in the corresponding month of 1938 and 327,800 tons in 1939. The recession in the Welsh coal trade is due in no small measure to the reduced purchases by France.

IRON AND STEEL

Instead of the usual seasonal decline between January and February the output of pig iron and crude steel last month showed an increase. The output of pig iron rose by 3.1 per cent. to 516,000 tons, compared with a fall of 8.9 per cent. between January and February, 1938, while the production of crude steel showed an increase of no less than 19.6 per cent. to 971,100 tons, against a reduction of 2.2 per cent. a year ago. Compared with the figures for February, 1938, the output of pig iron and crude steel last month still showed decreases of 25.6 per cent. and 8.2 per cent. respectively. The relatively much bigger increase in the output of steel than in the production of pig iron is due to the longer time taken to step up the output of the latter. Owing to the delay in increasing the output of pig iron, the steel furnaces were compelled to use a bigger proportion of scrap; as a result the surplus stocks of scrap were rapidly absorbed, and a delegation has consequently been sent to the United States to make further purchases. To some extent the marked expansion in the output of steel last month is probably still a reflection of the severe curtailment in December, when production must have been well below consumption. But there are reasons to believe that consumption has, in fact, tended to expand, partly, no doubt, as a result of the cut in prices on January 1st, for the bulk of the orders placed in recent weeks is reported to have been for early delivery. Moreover, the improvement in consumption appears to have been fairly widespread and cannot be ascribed solely to increased defence orders. The recovery in steel production has been accentuated by the severe limitation of imports. Between February, 1938, and the past month, the imports of iron and steel materials fell from 230,402 tons to 89,194 tons, whereas exports only declined from 156,730 tons to 137,520 tons.

GENERAL ENGINEERING

Activity in the engineering industry showed a slight increase between January and February, reflected in a fall in the proportion of insured persons unemployed in general engineering from 8.5 per cent. to 7.8 per cent. Apart from the steady increase in Government orders for defence purposes, which represent about 25 per cent. of the industry's total output, there were indications in the past few weeks of an expansion in commercial demand. It is possible, however, that commercial demand may suffer as a result of the renewed shock to business confidence administered by Germany's annexation of Czecho-Slovakia. Exports last month were slightly smaller than a year ago; they amounted to 34,999 tons (valued at £4,562,954) against 35,608 tons (valued at £4,564,331) in February, 1938. The fall in imports has been rather more marked; they were 9,173 tons (valued at £1,747,513) compared with 11,184 tons (valued at £1,891,559) a year earlier. So far as industrial relations are concerned, the employers rejected the unions' demand for higher wages at a conference held on February 28th.

ELECTRICAL ENGINEERING

The electrical engineering industry remains very busy, and the proportion of insured persons unemployed actually showed a slight decline between January and February. Exports of electrical

machinery last month were 1,918 tons (valued at £343,035), against 1,921 tons (valued at £321,723) in the corresponding month last year. The value of exports of electrical goods and apparatus, on the other hand, showed a decline from £1,101,202 in February, 1938, to £993,243 last month. The decline was due chiefly to the smaller shipments to South Africa, British India and Australia.

AUTOMOBILES

Production of both private cars and of commercial vehicles improved between December and January; compared with a year ago, the output of private cars was rather higher, but that of commercial vehicles amounted to only 9,691 against 10,637 in January, 1938. Both imports and exports of motor vehicles have been smaller in the first two months of the current year than in the corresponding period of 1938.

BUILDING

Although constructional activity seems to be tending slightly downwards, the extent of the fall has so far been very small. The proportion of insured persons unemployed last month was only 2.8 per cent. higher than a year ago in building, and was actually 1.5 per cent. smaller in public works contracting. The improvement in business confidence before Germany's latest move is reflected in the increase in the value of building plans passed by local authorities. The value of plans passed by 140 local authorities last month was 37.6 per cent. higher than in January and 7.1 per cent. higher than in the corresponding month last year. This is the first time since August, 1938, that the value of plans passed has exceeded that of the corresponding month a year earlier. The improvement is the more significant as these returns do not include direct Government contracts. Compared with February, 1938, the increase in the value of plans passed was substantial in the case of dwelling-houses and factories and workshops. Plans passed for other categories of building showed a decline.

CHEMICALS

A steady business has been transacted in most sections of the home chemical market during the past month. Demand for industrial chemicals showed some improvement, and contract deliveries were quite good towards the end of the month. The improvement reported from the wood distillation industry during the previous month was maintained. Trade in pharmaceutical and other fine chemicals was about normal for the period. Products in good demand were salicylic acid, quinine, bromides and iodides. Trade in coal tar products has been on a somewhat better scale, but conditions in this market are still far from satisfactory. There was an improvement in overseas trade in chemicals, drugs, dyes and colours in February as compared with the same month of 1938, the value of exports increasing by £18,773, and of imports by £204,022.

POTTERY

Some improvement has been shown in the pottery industry during the past month. The percentage of insured persons unemployed fell from 27.7 in January to 23.4 in February, due largely to greater activity in North Staffordshire; in spite of this recent improvement, however, unemployment remains high and there is much short time. Exports of sanitary ware showed a distinct increase between January and February, when they were larger than in February, 1938; exports of earthenware, on the other hand, continue to decline.

FOOTWEAR

Production continues to be concentrated on the cheaper types of footwear, but even in these lines there is a shortage of forward buying. Leather prices remain firm, but the slow turnover in the retail trade makes it difficult for manufacturers to secure corresponding advances in the prices of their products. Exports of leather boots and shoes showed some recovery in February from the very low levels of January but are still lower than a year ago, while imports, both of leather and of rubber footwear, are larger than a year ago.

COTTON

During February and the early part of March, there was a distinct improvement in the Lancashire cotton trade. Yarn and cloth sales have been of larger dimensions than at any time in the previous twelve months. Deliveries of raw cotton to spinners in February showed an increase of 22 per cent. compared with the previous month; sales of some spinners have been equal to two or three months' production and stocks at mills have been very appreciably

reduced. Some idle machinery has been restarted and spinning production is now estimated at 60 per cent. of capacity compared with 55 per cent. in January and 70 per cent. a year ago. The domestic demand has continued to expand; large contracts have been secured by makers of sheetings, pillow cloths, linings, overall cloths and furnishing fabrics and further Government orders have been placed, chiefly in heavy fabrics. The export trade remains irregular, and the prospects have not been improved by the latest events in Central Europe.

JUTE

Raw jute prices have fluctuated in the last month, but there has not been any further advance. Employment in Dundee continues to grow, as the Government orders for sandbags keep the trade busy; there are, however, very few orders on private account. Exports of sacks and bags are at a higher level than a year ago, and there has also been some improvement in exports of other piece-goods.

LINEN

Flax prices are firmly held at the high prices prevailing, but spinners find it difficult to secure prices for their yarns which allow a profit margin. Production remains at low levels, except in firms working with the finer counts; new Government contracts are welcome, and there has also been a marked improvement in exports of linen piece-goods to the United States, since the reduction of duties on January 1st.

RAYON

The price increases for all types of yarns announced last month have been received very favourably by the trade and business, aided by greater confidence, has developed in a more satisfactory manner. Stocks of fabrics are low and the outlook is satisfactory. Hosiery business has developed well and stabilisation of prices in the warp

knitting industry is likely to prove highly beneficial. Exports of piece-goods has shown some improvement in recent weeks, chiefly due to an expansion in trade with the Empire.

WOOL

All classes of wool sold readily at the recent sales in Coleman Street, and prices were well maintained. Government orders are largely responsible for the strong demand for medium and low greasy crossbreds, but the home trade in woollen piece-goods appears to be improving slowly; worsteds, however, are still neglected. Unemployment showed a small decline between January and February.

AGRICULTURE

After the very heavy rainfall in January, the mild and dry spell in February was welcomed by arable farmers, particularly on heavy lands. Progress has been made with spring cultivations, and autumn sown crops are generally in good condition. Potato prices have improved in recent weeks, although some farm holdings have been damaged by frosts, and can only be cleared at lower values. Lambing reports in England are generally satisfactory, but in some of the hill districts of Scotland, ewes have suffered from the wet and windy weather in January.

SHIPPING

The freight markets remain dull and rates are little changed compared with a month ago. The Economist index of tramp shipping freight rates showed a slight improvement in February, when it rose to 93.1 (1913=100), compared with 92.8 in January and 102.1 in February, 1938, but this rise must be largely ascribed to the greater confidence in the international situation that prevailed early in March, rather than to an expansion in the demand for tonnage. Consequently, the latest developments in Central Europe may have an adverse reaction on freight levels.

* For method of construction and earlier figures (1924-1938) see Supplement to The Economist of July 25, 1938. This Supplement is now out of print, but a record of the complete index was given in The Economist of November 5, 1938. p Revised. p Provisional. † Annual indices represent averages of monthly figures.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Good rains have recently fallen in all States and have alleviated the parched conditions of the grazing and arable districts. Internal trade continues steady, according to a cable from the National Bank of Australasia, and industrial employment and building contracts are well maintained. The demand for wool remains satisfactory, and there have been considerable shipments of wheat flour to the Far East. Butter prices on the London market have been satisfactory in recent weeks, and it is hoped that the rains will prolong the butter export season. The estimate of this season's wheat production has been raised to 151 million bushels.

CANADA.—Business remains fairly stable, although the political uncertainties have a discouraging effect on private enterprise. The heavy industries are still short of orders, but most mines are very active. The value of building contracts awarded showed a further decline in January, and was considerably lower than in January, 1938. Newsprint production is still restricted, but lumbering operations in British Columbia are on a large scale.

SOUTH AFRICA.—There has been the normal seasonal recession in business activity, but retail and wholesale trade remain at a satisfactory level. Building contractors are well employed at Durban and Capetown, according to the Standard Bank of South Africa, but there has been a fall in the value of building plans passed in Johannesburg. The Transvaal mines produced 1,026,229 fine ounces of gold in December; production in 1938 amounted to 12,156,629 fine ounces, which considerably exceeded the previous record production of 11,740,891 fine ounces in 1937.

INDIA.—The Indian Budget, introduced on February 28th, provided for the doubling of the import duty on raw cotton. The increased yield, combined with the increases to be expected from the new Income Tax (Amendment) Bill, was estimated to bring total revenue for 1939-40 to Rs. 8,215 lakhs, while expenditure was estimated at Rs. 8,265 lakhs. Sir James Grigg stated that he hoped the increase in the duty on raw cotton would encourage the production in India of cotton of longer staples, the bulk of which is now imported, but meanwhile, the mills working on fine counts have found the price of their raw material increased, without any corresponding improvement in the market for their yarns. The piece-goods trade remains very quiet. Imports of merchandise in January, at Rs. 14,12 lakhs, showed a considerable decline when compared with the value of imports in January, 1938, but a slight improvement if compared with December; the value of exports, however, declined from Rs. 14,77 lakhs in December, 1938, to Rs. 13,72 lakhs in January.

EUROPE

FRANCE.—The latest evidence suggests that France has continued to make headway. The official index of industrial production (1928=100) showed a further slight rise, from 86 in December to 87 in January; production has thus recovered to the level of the corresponding month last year. There was an improvement in January in the chemical, textile, iron and steel, engineering, and building industries, and a slight decline in mining and a number of miscellaneous trades. Such evidence as is available for February and early March suggests that the improvement has been maintained. The number of unemployed in receipt of benefit, for example, fell from 420,009 on February 11th to 411,263 on March 4th. The value of imports rose from frs. 3,977 millions in January to frs. 4,518 millions in February, while the value of exports increased from frs. 2,819 millions to frs. 3,035 millions. Both imports and, especially, exports were appreciably higher than a year ago and, as a result of the relatively bigger rise in exports, the import surplus has fallen from frs. 1,977 millions to frs. 1,483 millions during this period.

GERMANY.—According to the latest statistics and reports business activity has been well maintained in the past month. The weekly index of business activity calculated by the German Institute for Business Research (1936=100) stood at 127.1 for the last week of February compared with 126.7 for the last week of January. The output of coal in the Ruhr district fell slightly during this period, from 425,000 metric tons per day to 411,200 tons per day. There was little change in car loadings, the figures being 160,100 per day in the last week of January and 160,900 per day in the last week of February. There was some increase in the volume of money in circulation, from Rm. 9,200 millions in the last week of January to Rm. 10,081 millions in the week ended March 4th. Short term interest rates showed a tendency to rise, but the yield on long term bonds remained practically unchanged. The prices of industrial securities showed a slight downward tendency. These statistics, however, do not reveal the severe strain from which the German economy is now suffering as a result of her Government's feverish armament drive.

BELGIUM.—Business conditions have shown little change since the beginning of the year. The number of partially unemployed declined between December and January, but those totally unemployed increased by about 5,000 to 175,000, compared with 146,678 in January, 1938. The number of building permits passed in the last three months of 1937 compares favourably with the corresponding period of 1937. Output of the iron and steel trades, while

below the level of a year ago, has risen considerably from the slack period in the summer.

SWEDEN.—The latest European developments led to a sharp fall in stock prices, but earlier in the month both the Stock Exchange and some industries were in a more hopeful mood. There was a better export demand for the products of the lumber and paper trades, and the iron and steel trades were also better employed in February, after a decline in activity in January. The building industry remains well employed and production in the ancillary trades, such as cement, bricks and some types of steel, continues at a satisfactory level. The number of registered unemployed in January was 27,500, compared with 21,700 in January, 1938; the increase is largely due to the decline in the activity of the export trades such as timber and pulp.

ESTONIA.—The trades working for export remain slack, although there was some improvement in the timber market during February. Unemployment showed the usual seasonal increase at the end of the year, but was in January only slightly higher than a year ago. Owing to the drift of labour to the towns, there is a noticeable shortage of workers in agriculture. The value of imports continued to decline in January, when it amounted to 6.9 million crowns, against 7.5 million crowns in January, 1938; the value of exports, on the other hand, was higher than a year ago, due partly to the high London prices for butter, bacon and eggs.

UNITED STATES OF AMERICA

Business activity in the United States has continued to mark time with only minor fluctuations. Thus, the Federal Reserve Board's index of industrial production, adjusted for seasonal variations, showed a further slight decline, from 84.9 (1929=100) in January to 83.2 in February. There appears to have been little change since, for the *New York Times* index of business activity stood at 89.5 for the week ended March 11th, compared with 89.4 for the corresponding week in February. Similarly, the rate of operations in the steel industry has varied only between 55 and 56 per cent. of the industry's capacity in recent weeks. A number of industries, including building, report improvements, but in others there has been some slight recession. Before Herr Hitler's coup in Czechoslovakia there was a marked revival of confidence reflected in the rise of prices of industrial securities. The latest cables suggest, however, that, while the outlook is not unpromising, the general level of business activity is unlikely to show very much change in the immediate future.

LATIN AMERICA

ARGENTINA.—Wheat sales continue at a very low level, and storage capacity is believed to be almost occupied. Exports continue at a low level and imports are being severely restricted, mainly at the expense of those countries which, in recent times, have sold to Argentina more than they have bought from her. Therefore, there has been a corresponding improvement in the position of Britain as supplier to the Argentine markets, but a considerable deterioration in the position of Italy and Japan. Argentine trade with United States is at a deadlock, with efforts being made to formulate a Trade Agreement. Immediate success attended the issue of two Argentine Government internal loans for a total of 150 million pesos.

URUGUAY.—The latest estimates indicate a substantial deterioration in the position of all crops. The exchange position remains difficult; import permits for British goods are being granted very sparingly, whereas importers of German goods are apparently being granted all the exchange they require.

BRAZIL.—The favourable trade balance at end-November, 1938, was only £281,000 (gold), against nearly £3,000,000 (gold) a year earlier. The new trade agreement with the United States provides for the resumption of Brazil of interest payments and amortisation on her American debt, in return for a loan of \$120 millions. This agreement may check the rapid expansion of German imports into the Brazilian market, which has seriously diminished the shares of both the United States and of the United Kingdom.

THE FAR EAST

Wholesale prices in Japan continue to increase in spite of the stability of prices in other countries. The consumption of raw cotton declined from more than 2,000,000 bales in the half-year ending on January, 1938, to 1,300,000 bales in the half-year ending last January, according to the latest statistics of the International Cotton Federation; the drop was largely due to the prohibition of the manufacture of all-cotton goods for the Japanese domestic market, though the decline in exports of cotton piece-goods was also a contributory cause. The Government will shortly introduce into the Diet a Bill providing for far-reaching changes in the internal trade in rice; all dealers in the rice trade are to be registered and the expansion of the farmers' co-operatives is to be limited; the whole trade is to be placed under the control of a Government corporation, which is to have powers to buy, sell and hold rice.

UNITED KINGDOM

(Population, mid 1938, 47,485,000; Area 95,030 sq. miles; 244,000 sq. kms.)
