

THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXXV

BEING FROM APRIL TO JUNE, 1939, INCLUSIVE

LONDON:
PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4

Axis and Entente

THE immediate intention of Signor Mussolini's speech of last Sunday is clear: he wishes to move the French Government to ask him what further concessions in the colonial field will induce him once again to declare that Italy's claims in Africa have now been settled to the last farthing.

Superficially, of course, the speech is, as usual, preposterous. But those who have acquired experience in the study of Signor Mussolini's oratorical technique will know by this time that the significance of his utterances is to be looked for not in the demagogic high-lights but in the shadows. In the speech of last Sunday the unobtrusive antiphonal texts are the formulation of Italy's claims on France in exclusively colonial terms, with no reference to Corsica, Nice or Savoy, and the admission that, while perpetual peace is damnable, a "long period" of peace just now would be very nice.

What conclusion are we to draw? Is Mussolini genuinely asking France for some trifle as a consideration in return for which the Italian Government will refrain from taking up hostile arms? Or is Mussolini slyly intending us to interpret him thus, while his real object may be to deter us from closing our ranks and undermine our morale while he and his ally complete their preparations? If Mussolini really is trying to save his face, the non-territorial price asked might not be too high. But he has himself made it impossible to reach an agreement. For the only commodity

for which any price at all would be worth paying would be the complete and sincere dissociation of Italy from all plans for future aggression. And how can Mussolini hope, at this hour of day, to convince anybody of his sincerity? Moreover, the reference to the Note of December 17th, in which, according to the Duce, Italy's claims were set out, may be a sign of moderation, but it is also a trap. This Note abandoned the Agreement made with M. Laval in 1935 (which was welcomed at the time) and, as for further claims, merely stated that the conquest of Abyssinia had given Italy larger rights. But, as M. Daladier pointed out in his admirably firm broadcast on Wednesday, to accept this thesis as a basis of negotiation would be fatal. "It means that every new conquest or concession will create new rights, and the claims would be practically unlimited."

The fact is that the dictators have made it almost impossible to pay any attention to the substance of their claims. Form has necessarily become all-important. "For years," as M. Daladier said, "the right of peoples to self-determination was invoked to justify certain acts. Afterwards we were told of 'natural aspirations.' Now we are told of 'vital space,' which is no more than the eternal will to conquer." France is doubly right in not closing the door to negotiations; but, in refusing to take the initiative that would infallibly be interpreted as weakness, she deserves and will get, the most complete British support.

It will also be common ground between all parties in both France and England that we must remain vigilantly on our guard, and that there are certain passages in Mussolini's speech to which we must simply turn a deaf ear. For instance, we must not allow ourselves to be deflected for an instant, or by a hair's breadth, from our already grievously belated attempt to build up a "Peace Entente" between the States that do not intend to be the authors of aggression while they do fear to be the victims of it. The Duce's thesis about alliance is the same as his thesis about intervention in Spain; what is sauce for the goose is not sauce for the gander. According to the Duce, Italo-German intervention in Spain has been a public-spirited crusade on behalf of civilisation, but any Anglo-French intervention in Spain would have been a treacherous breach of the Non-Intervention Agreement. On the same principle he tells us now that the Axis and the Triangle are instruments of peace and order, but that any defensive combination on the part of other Powers would be an aggressive gesture which would evoke reprisals. His threat that the Triangle may be provoked by our defensive measures to take the offensive in all quarters of the globe will not persuade us that our need to concert measures of common defence is any the less urgent. And on what grounds can the dictators object, except that they and their followers are privileged beings who are not as other men are, and who may therefore take liberties that are not permissible to the rest of us? Our proposed peace declaration is to be open to everybody, as is, in theory, the Anti-Comintern Pact; and we are not even retorting to the Fascist Front by trying to form a contrary ideological front of our own. We are seeking to unite a totalitarian Power like Russia with democratic Powers like Great Britain and France for a common purpose which has nothing to do with ideologies but is a sheer concern for our own preservation.

Our proposed declaration needs, of course, to be reinforced by a full defensive military alliance between the key parties—just as the Anti-Comintern Pact is reinforced by the Axis, which is a military alliance in fact by this time, even if it is not yet so in name. And in the forming of this alliance our own Government must go ahead with the utmost resolution and energy. The Anglo-French defensive alliance, which exists already, is an indispensable nucleus; but the setting of the seal on it, in the President's visit last week, is only the beginning, and not the end, of our two Governments' present diplomatic task. The alliance will not have begun to be adequate for its purpose until it includes at least Russia as well; and our mutual security will not be assured until Poland, too, has

been persuaded to come in. There are, unfortunately, difficulties in getting both countries into a partnership. But both are essential—Poland because of her geographical position, Russia because of her great potential strength—and it must be the task of Anglo-French diplomacy to find a means of enlisting the support of both. Our sceptical, or defeatist, critics, may question the Russians' steadfastness or efficiency or both. These were questioned in the same spirit in 1914, and on that occasion not without reason, as the sequel showed. Yet should we have won the war of 1914-18 if Russia had not entered it in alliance with us? And would Russia be a Great Power, or even a sovereign independent State, to-day if she had not then had allies who made use of the eventual common victory in order to undo the peace of Brest-Litovsk? Those among us who still boggle at a Russian alliance to-day must reply to a plain question: Would they prefer not to have Russia as an ally in the event of our being attacked? The answer to this decisive question can only be in the negative.

Still more urgent, both for us and for the Poles, is the question of Poland. The Polish Government has already signified its unwillingness to adhere to a mere declaration of an intention to consult in the event of further acts of aggression on the Axis Powers' part, and their caution is only natural. A declaration unfortified by precise military commitments would merely give Hitler an excuse for denouncing the German-Polish Non-Aggression Pact of 1934, without giving Poland any compensating increase in practical security. Both London and Warsaw have difficult decisions to make. We, for our part, must resolve to assume the very heavy burden of guaranteeing frontiers and states in Eastern Europe, of abandoning the comfortable, short-sighted dream that we may be left in immunity while Hitler drives East. And the Poles, for their part, must abandon their own pipe-dream, that they may be left in neutrality while Hitler drives West. For Poland, as for Britain, to persist in an attempt at isolation now would mean nothing but obediently holding our throats up to be cut in turn. Poland must also make the difficult decision of contemplating the receipt of support from Russia. Polish nervousness on this score can be understood, though an alliance with the Western Powers should help to allay it. But if Poland prefers possible death at Nazi hands to the dishonour of association with the Soviets, then it is among the foolish virgins that she will rank, not the wise ones.

For all of us these hard decisions must be taken, lest bitterer ones still befall us. Events are visibly forcing decisions upon us. May they be the right ones.

Defence and Democracy

HOPES of peace and fears of war fluctuate daily, almost hourly, in the capitals of Europe. In England, one determination must not alter; that is, the resolve to be strong to resist aggression against a frontier that is to-day as close to the Carpathians and the Bosphorus as it is to the Rhine and the English Channel. Even to change the direction of foreign policy overnight is not enough. It is no less needful to call together the nation's entire resources of men, material and organisation in a sincere and single-minded effort to preserve freedom and peace against the threat of force.

It is hardly possible to question that this objective is now clearly seen by the Government. The estimates that have been presented to Parliament for the fighting services and the decision to double the Territorial Army bear witness to the decision that has been taken to make England strong. In the sphere of civilian defence, too, after delays and hesitations that only lately threatened

disaster, a new hand with a new policy has forged the needed framework for action. The Civil Defence Bill, which was made public a week ago, summarises the steps taken or proposed by the Lord Privy Seal, in conjunction with the Home Secretary, the Minister of Health and the Secretary of State for Scotland, for the protection of persons and property in air raids. It vests in Sir John Anderson the executive powers that he has apparently lacked hitherto; and states the contribution the Exchequer is prepared to make in aid of the schemes that are outlined. It is an administrative and financial code for civilian defence.

The terms are far-reaching. Local authorities are given power to earmark private premises and acquire land for the provision of shelters, first-aid and hospital accommodation. Employers in factories, mines and offices with more than fifty workers are put under compulsion to furnish their staffs with approved protection and to secure

their training in air-raid routine. The powers already being exercised by local authorities to site and erect the steel shelters delivered free to poorer householders and to strengthen the basements of dwellings are regularised. Public utility undertakers are called upon to take appropriate measures, not only to ensure the functioning of essential services in war time, but also to train and safeguard their employees.

Notable gaps in earlier air-raid precautions are closed. Special measures are envisaged to maintain and expand railway, dock and harbour services, as well as public utilities. The Central Electricity Board is authorised to acquire the reserve stocks of plant and equipment without which the country's electricity supplies would be fatally vulnerable. Provision is made for the assembly of essential A.R.P. stocks: emergency supplies of water for fire-fighting; materials for repairing roads, bridges and buildings; and blankets, mattresses and vehicles for evacuation.

None of these items is new. It has been known for some time that, stone by stone, Sir John Anderson was constructing an edifice of this design. What is of great importance is the approach which the Bill makes to the financial obstacles that have hitherto impeded the progress of defence. The dual responsibility of central and local authorities for the financing of administrative services is, even at the best of peace times, scarcely satisfactory. In the case of A.R.P. it has been dangerously unsatisfactory, leading for more than two years to almost endless wrangling. Private firms and public corporations, too, have been uneasy and querulous about their undefined share of the burden of defending their property.

All this is now set down in black and white. The Government's readiness to advance some 70 per cent. towards the cost of local schemes approved under the 1937 A.R.P. Act was already known. This Bill virtually completes the picture. For local authorities, the provision of approved public shelters, above or below ground, will rank for grant under the 1937 Act. So, too, will the erection of steel shelters, the strengthening of basements and the adaptation and protection of hospitals. Local authorities are to be reimbursed for their outlay in assisting the Minister to plan and execute evacuation arrangements; and the Government will be responsible for the purchase of evacuation materials and equipment.

Owners or occupiers of factories, mines and offices will receive a grant per £ of their capital expenditure on shelter accommodation equal to the standard rate of income tax. Except in the special cases of railway and electricity undertakers, grants will be given up to 50 per cent. of approved outlay on measures to secure the due functioning of undertakings in war time, including camouflage and the dimming of lights. To the railway companies a grant not exceeding the total cost of measures taken to maintain essential services in war will be given—subject to the repayment of not more than half in the event of control of the railways being assumed by the State on certain specified terms. Up to 85 per cent. of the cost of providing services and facilities specially for war use will be given to dock and harbour undertakings; and the Central Electricity Board will receive up to 50 per cent. of the cost of acquiring reserve equipment and defraying the capital charges of steps to ensure the war-time functioning of electricity undertakings.

It may now be assumed that these financial details have been agreed to by the parties concerned. There may, indeed, be anomalies still to be smoothed out in practice. But the time for controversy of this kind is long since past. Read aright, this Bill should register not simply a policy and a programme, but an attitude as well, an attitude that does not end here with protection against air raids. The time has come for the acceptance by the Government and all sections of the people of their inescapable duty to do all that is necessary in the face of danger without debate

or demur. This Bill will compel public and private enterprises to protect their property and their employees. It is a step forward, but only a step. Every single citizen has an obligation in this matter. This, too, should be made legally binding. The voluntary method of recruitment has not failed. But it has not succeeded either, and there is no time to lose.

This is true over the whole of our national life. Compulsion is not a creed or doctrine to be accepted or denied. Nor is it a desirable thing in itself. It is now the sole possible means to an end that is ineluctably written in the logic of contemporary events. The rumour that the Cabinet is split over this issue is gravely disturbing; and it is a poor consolation that the publicly intransigent opposition of the Labour movement's leaders to compulsion of all kinds may be due to distrust of the Government's foreign policy rather than to deliberate indifference to realities. The facts can be simply stated: England is required to mobilise her resources to the last man, the last pound and the last machine to safeguard her own and Imperial frontiers and to resist aggression in foreign fields. It is the need for swift and drastic action, recognised by a vast majority of the population, that has made the compelling statement of every man's and every woman's immediate duty inevitable. To wait upon the outbreak of hostilities for the building up of the forces needed to fight by the side of our allies or for the introduction of the machinery required to make the maximum use of the country's capital, labour and commerce would be foolish and fatal; for the war has already begun. Only by realising this to the full, and acting upon it, can the peace the whole world wants be snatched from the jaws of disaster.

The truth is that, even in a free country, those who will the end must also will the means. Indeed, it is only in a democratic country that compulsion, if it is imposed by an elected Parliament to serve an end a majority of the people calls for, can be tolerable. It needs a Government with wider support than Mr Chamberlain's can claim at present to impose it. It needs to be applied at every point in the national hierarchy to be fair—and effective. But it is indispensable. The Peace Front cannot be forged in chancelleries alone. We need men to swell the fighting and defence services to war strength. We need men and women at full stretch to make essential goods. We need to mould production and distribution strictly to the pattern of military priorities and vital foreign trade. Because we are a democracy, the compulsion we impose upon ourselves will be deliberately more careful of violating tender consciences than totalitarian orders could ever pretend to be. But it is also because we are a democracy that we must act.

The democracy we are defending demands agreement, it is true; but not agreement on every item of the effort required; only on the general proposition that effort without stint or delay is in fact imperative. That agreement already exists. It has always been a national failing to confuse the true and only practice of democracy with actual English ways and institutions. The charge made by two distinguished—and democratic—foreign journalists in a letter this week to *The Times*, that it was our insular immunity from invasion, and not an "exceptionally strong democratic instinct," that enabled us to escape the more rigid obligations of national preparedness in the past, is no less than the truth. The test of our democracy to-day is not whether it can maintain the letter of its procedures intact but whether it can consent to defend its spirit to the uttermost. The obligations laid by Sir John Anderson upon local authorities and employers of labour are only a pale reflection of the obligations that ought at once to be laid upon industry by a Minister of Supply and upon all citizens by the Ministers of Labour and War. What we do not do by avowed consent to-day may be forced upon us by hasty fiat in a more menacing to-morrow.

Nazi Economics

IN comparison with the torrent of books on the political, moral and philosophical aspects and achievements of the National Socialist Revolution in Germany, there have been very few studies of the economic side of the Nazi regime. The majority of the studies that have been made of it have been of doubtful quality and of still more doubtful trustworthiness. It is therefore easy to understand the motives that led Mr C. W. Guillebaud to undertake an economic history of Germany since 1933. Unfortunately, even after his book* has appeared, it must still be regretfully recorded that the first comprehensive and instructive analysis of Nazi economics remains to be written.

Laudably, Mr Guillebaud is determined to be impartial. But there are two brands of impartiality. The first is for the student to rid his mind of all prepossession and prejudice, but to retain his analytical and critical faculties. The second variety of impartiality consists in merely recording without question the official accounts of what happened and the official explanations of why it happened. Of the two possible brands of impartiality, Mr Guillebaud has definitely chosen the second. He confines himself, for example, to German official figures. Official figures, it is true, must form the basis of all reasoning. But to accept them only, and without question, has two grave defects. First, it excludes all private estimates, either Mr Guillebaud's own or anybody else's; in the specific case of Germany, Mr Guillebaud's insistence on official figures causes him to omit all analysis of the Budget and to attempt no quantitative estimate of the part played by re-armament in the total of "Investment." Secondly, official figures frequently require close analysis before their meaning is clear; and Mr Guillebaud does not examine his tools.

Not only does Mr Guillebaud restrict himself to official sources. He persistently puts upon them an interpretation that Dr Goebbels could not make more favourable; he seems to be strangely unaware of all the contradictions in the beliefs he reports. A few examples will make this clear. The foreign creditor of Germany will lift his eyebrows at the statement "Down to the end of 1937 it was in fact possible to preserve a favourable balance of trade and to *redeem* (our italics) a considerable part of the foreign debt." After a lengthy explanation that prices, wages, profits, investment are all strictly controlled according to a central plan, and that demand is not allowed to affect production through prices or profits, Mr Guillebaud concludes: "It must be borne in mind that German National Socialism is opposed in principle to State management." Or, to take another case: Mr Guillebaud describes the very favoured and privileged position of the peasant in the Nazi scheme of things, but entirely fails to mention that there is a very large flight from the land, discussed with every semblance of alarm throughout the German Press. The most remarkable and significant fact about Mr Guillebaud's book, however, is this: only once in its entire length is it even suggested that the Nazi economy is a war economy. That is in a footnote, only four pages from the end, in which it is remarked (quite incidentally) that "the German economic system under existing conditions has many of the characteristic features of a war-time economy." Is it true impartiality to omit all political considerations in approaching an economic system that is entirely governed by politics?

Mr Guillebaud cannot be accused of incorrect facts or arguments. There are some slips (for example, the argument on page 45 that in the early years of the Nazi period employment went up more than unemployment

went down is contradicted, not confirmed, by the table on page 46) and quite a few contradictions (e.g. the statement on page 31—*itself an obiter dictum*—that "there was no question of a real recovery in the late months of 1932," is disproved on page 44 and again on page 52). But on the whole the book is all too "correct." So correct is it that it could be published in Germany without the alteration of more than a page or two. Knowing what we do of Dr Goebbels, that is severe criticism.

From the economist's point of view, Mr Guillebaud is chiefly interested in the Nazi experiment as a successful demonstration of the doctrines of expansionism that have been mainly associated with the name of Mr Keynes. The Nazis, he says, have proved that it is possible, by initiating investment and paying for it out of credit expansion, to increase employment and expand the creation of wealth. This can go on without any inflation until the stage of "full employment" is reached. Germany has reached this stage. Moreover, argues Mr Guillebaud, although the whole system is dependent on "Investment," it is not bound up with re-armament. What is more, the standard of living has not been depressed, it has risen to above the 1929 level. There is thus no reason why the system should not continue.

Now if it is true that the Nazi experiment is a triumphantly successful demonstration of the correctness of Mr Keynes' doctrines, the fact is one of supreme importance. It well deserves analysis. It will be as well, first of all, to examine the contention that Germany has reached "full employment." That there is a shortage of labour in Germany is undeniable; but how has it come about? The figures in the following table show what has happened to the working populations of Germany and Great Britain since 1929.* (1929 is, of course, the fairest basis of comparison, since comparison with 1932 would merely show that Germany had a more severe depression; in 1929 the unemployment percentage in Great Britain was 10.3 and in Germany 9.6):—

INCREASE IN POPULATION OF WORKING AGE AND DISPOSITION OF SAME, 1929-1937-1938, GERMANY AND GREAT BRITAIN
(All figures are in per cent. of population of working age in 1929)

	1937		1938	
	Germany	Great Britain	Germany	Great Britain
Population of working age	+4	+6½	+4½	+7½
Employed	+13½	+4½	+4½	+3½
Unemployed	-2½	+1½	-3½	+1½
Armed Forces	+2	+1½	+2½	+1½
Others (i.e. housewives, unoccupied, etc.)	+2½	+1½	+5½	+1½
	+4	+6½	+4½	+7½

The first two columns show the changes that occurred between 1929 and 1937. The German population of working age increased by 4 per cent. Of this increase, 1½ per cent. were absorbed into useful employment. The expansion of the armed forces took 2 per cent. (a low estimate), while a further 2½ per cent. went into the residual category, the largest constituent of which is formed by housewives. In short, half of the increase in the population of working age went into what is usually deemed employment, half into other categories. The reduction of 2½ per cent. in unemployment was almost exactly offset by the increase in the armed forces. In Great Britain, not only was the increase in the working-age population nearly twice as

* The calculations are based on official figures except for a very conservative estimate of the size of the German armed forces, which are put at no more than 1,000,000 in 1937 and 1,200,000 in 1938.

big, but as much as two-thirds of it was absorbed into useful employment. The fact that unemployment showed a small increase was due to the fact that there was virtually no increase in the number of uniformed men. The figures for 1938 (still in comparison with 1929) are naturally somewhat more favourable to Germany. But the fundamental truth is exactly the same: our unemployment experience has been less favourable, partly because our increase in working-age population has been larger, and partly because we have not raised a huge army. If what has happened in Germany is "full employment," then any country, it would appear, can attain it at any time by putting a million or two men into barracks.

Secondly, is what has happened in Germany a demonstration of Mr Keynes' theories? When the Nazis first took office they attempted to create employment by means of public investment of the usual (i.e. non-military) type. In 1933 and 1934 they had some success. But from the middle of 1934 until the middle of 1935, when re-armament began in earnest with the reintroduction of conscription, the progress was very slow. Up to this point the lessons of the German experiment would seem to be the same as those of the American experiment—namely, that a "public works" policy is of assistance in the first phase of recovery but that it appears to get stuck half-way up the recovery curve. Since the inception of re-armament the Nazi policy can hardly be regarded as a Keynesian experiment. For Mr Keynes' theory depends entirely upon the existence of the "multiplier"—i.e. upon the fact that men who are given work by public investment will spend their increased incomes and themselves create employment. But in re-arming Germany every effort has been made to defeat the multiplier. Every sort of device (described by Mr Guillebaud) has been adopted to prevent the re-employed worker from spending his increased income and to cut down the expenditure of other workers as well. There is a revealing footnote on page 238 of Mr Guillebaud's book. "It is actually easier (above all in a *laissez-faire* economy) to maintain full employment if there are not fruits (i.e. if investment is unproductive)." Precisely. The point of Mr Keynes' theory is that in a peace-time economy, because of the multiplier, a comparatively small increase in public investment will result in a comparatively large increase in the national income and that it is possible in this way to regain full employment. The Nazis, however, now regard "full employment" not as an objective but as a nuisance. What the Nazi policy proves is that if you go in for a gigantic re-armament policy, even if you try to suppress the multiplier, you arrive sooner or later at a shortage of labour, Mr Guillebaud could have proved this from the experience of any Great Power between 1914 and 1918.

Thirdly, what has happened to the standard of living? Mr Guillebaud thinks it is higher than in 1929. He arrives at this conclusion by correcting the official index of wages by the official index of the cost of living—a hazardous procedure in any country, but doubly so in Germany, where it fails to take any account either of deterioration in quality or of shortages. Mr Guillebaud reinforces his view with figures of consumption *per capita* of certain foodstuffs. The pitfalls of official statistics may be illustrated in this connection. Mr Guillebaud quotes figures of the consumption of meat, 44.9 kg. in 1929 and 45.9 kg. in 1937. These are the official figures. But there is another set of official figures of the total supply of meat, which was 51.60 kg. in 1929 and 53.22 kg. in 1937. Now if consumption is worked out as a percentage of available supply, the figures will be found to be 87.0 per cent. in 1929 and 86.4 per cent. in 1937. It is a matter of common knowledge in Germany that very large supplies of meat were being canned and stored for war-time in 1937. Thus if "consumption" was the same proportion of supply as in 1929, there is a *prima facie* probability

that it includes storage. But, in any case, the really relevant point is not whether the German standard of living is so many points above or below that of 1929. What is of significance is, first, that the German standard of living has been marking time during the past decade while that of Britain and other countries has been advancing at an astonishing speed; and, secondly, that since full employment is now attained, any further increase in re-armament, such as is announced every other week, must infallibly trench upon the standard of consumption. This is a dilemma from which no new tax plan, such as that announced this week (and reported on page 14), can provide a way of escape.

Mr Guillebaud's fourth point is that Germany's investment economy is not exclusively, or even mainly, an armament economy. That depends on definitions. According to Mr Guillebaud, the Second Four-Year Plan (which "it would be a mistake" to regard "as a whole as merely a phase of re-armament") is "the mobilisation of all the resources of modern applied science and technique in the service of economic progress." If the manufacture of synthetic rubber or petrol at several times the cost of the natural commodity is economic progress rather than preparation for war, then Mr Guillebaud is right.

It is a very great pity that an economist of Mr Guillebaud's standing should have allowed himself to be so bemused by the German success in reaching "full employment." As has been demonstrated above, there is nothing very remarkable about the German "full employment" or very creditable about the way in which it has been brought about. So far as the creation of employment is concerned we have done quite as well in Great Britain, with a great many other economic benefits to boot. Yet there are many sentences in Mr Guillebaud's book which can only be interpreted as meaning that he identifies "full employment" with "economic well-being." It is perfectly true that the classical economists paid far too little attention either to the evils of unemployment or to the amendments that its existence made necessary in their reasoning. But we shall surely be making a greater mistake if we elevate the mere obliteration of the unemployment register to the status of a supreme goal of policy. The Nazis have deliberately forsworn all the increase in consumption and in the standard of life that their system might have created in order to pile up weapons of destruction. "With any general measure of appeasement in Europe," says Mr Guillebaud, "leading to a decrease in armament expenditure, it should certainly be possible to raise further the German standard of living." *Que Messieurs les assassins commencent!*

It is not the custom of *The Economist* to devote two pages to the review of a single book. The exception may be excused on the ground that Mr Guillebaud's book illustrates the dangerous tendency among democratic economists to play the Nazis' game, to develop an economic inferiority complex towards them, and, looking only at the unemployment figure, to acclaim their policy as successful beyond the ordinary measure. Whether by good fortune or by good management, British economic policy has done just as well in the creation of employment and infinitely better in the enhancement of the standard of living. We have no reason whatever to fear any fair comparison. There are, indeed, lessons to be learned from Germany. But they are lessons in the skilful management of a war economy. The foremost of them are the Germans' success in controlling the foreign exchanges (i.e. distorting the natural intercourse of the nations for political ends) and in controlling prices and wages (i.e. preventing the worker from reaping the fruits of his labour so that they may be diverted to armaments). Thanks to the Nazis' success, these lessons will be useful to us. But they have little or no relevance to the economics of a peace-loving community.

* "The Economic Recovery of Germany." By C. W. Guillebaud. (London) Macmillan & Co., Ltd. 303 pages. 10s. 6d.

Capital Market Control?

SINCE the Chancellor's announcement, on February 20th, that we are to borrow £350 millions out of total defence expenditure of £580 millions during the coming year, discussion has been concentrated on the question whether such borrowing is likely to prove inflationary. In general, these arguments have reached only a provisional conclusion, for the effect of expanded borrowing, even on this scale, is limited, first, by the existence of various "slacks" in the banking system, and is dependent, secondly, upon the civil demand for long-term capital.

On the second factor, the conclusions suggested by a survey of capital market operations during the past quarter are reassuring. We may assume at the outset that positive inflationary reactions (as opposed to mild expansionary symptoms) are to be avoided and, further, that the authorities have not, as yet, contemplated any formal regimentation of the capital market (apart from the more or less *ad hoc* control exercised over foreign transactions). Under such conditions the authorities may well feel satisfied that the total amount raised by direct public borrowing during the first quarter of this year was lower than in the corresponding period of any year since 1932. Industry is not, at the moment, a serious competitor for available savings.

The total amount raised directly from the public last quarter amounted to no more than £19,633,300, compared with £27,733,700 for the first quarter of 1938. But the former figure, small though it is, was actually swollen to the extent of £7,387,500 by that rarity, a debenture issue

of a British railway company. If the totals shown in the first section of Table I are compared with the detailed analyses in Tables II and III, the poor contribution which British industry made to the capital figures last quarter will be readily seen. At the same time, direct borrowing by home corporations shows a fall from £9,669,300 to £1,455,000, for the close season in this market was only terminated in February by the successful Essex loan.

It is naturally tempting to relate the total of £20 millions for direct borrowing last quarter—a period of slowly strengthening confidence which terminated abruptly with a major crisis—to the potential margin between available savings and defence requirements next year. But if the burden of defence borrowing in the next financial year were to be split more or less equally between the banking system and the long-term market, there would seem to be no special technical difficulty, assuming that the terms were made attractive, in floating a loan of the order of £175 millions. Even in 1933, when the volume of national savings was almost certainly lower than it is to-day, the amount raised directly by the British Government exceeded £150 millions, and the figures for the past quarter suggest that the Treasury would be confronted with no greater volume of industrial borrowing than in 1933.

So far, the comparisons have been based on direct public offers, which constitute our "old basis." The second parts of Tables I and II analyse total issues and company issues

TABLE I
TOTAL BORROWING (Million £)

First Quarter of Year	British				Empire	Foreign	Total Issues	Indices
	Government	Home Corporations*	Others	Total Home				
By Direct Public Offer (Old Basis) 1928 = 100

on the "new basis" set up in 1935. Thus the figures include securities in respect of which the Stock Exchange gave "permission to deal." Total issues on this basis, however, also show a substantial reduction from £44,596,500 for the first quarter of 1938 to £31,815,500 for the first quarter of 1939. The latter figure, in fact, amounted to 43 per cent. of the total for 1935 and to only 27.7 per cent. of the total for 1937. Company issues on the "new basis" make no better showing than on the "old basis," for the total has fallen by £10 millions to £21.4 millions over the past twelve months. In other words, the fall in industrial issues made directly to the public has not been offset by an expansion in issues made to shareholders, or in the placing of blocks of new industrial securities in the market.

The moribund state of the capital market between January and March this year may have advantages for the formidable programme of defence borrowing which lies ahead, but it also reflects the pallid state of industrial enterprise. It is no accident that the list of important issues on page 67 consists very largely, and in the case of prospectus issues entirely, of fixed interest capital. The occasional small industrial offers which have appeared during the last quarter have adopted a yield basis for their equity shares which, in the heyday of the 1936-37 new issue boomlet, would have seemed fantastic. The ordinary share speculator who was willing to consider a yield basis of 10 per cent. or less three years ago is to-day left

almost unmoved by propositions offering 20 per cent. or more.

It is too soon to decide whether the new issue market, under the subjection of recurrent political crises, has relapsed into semi-permanent idleness. If competition for industrial capital were to become stronger, some measure of influence, if not direct compulsion, would doubtless be sought by the authorities. The latter have experience of the effectiveness of "requests," which worked so well to facilitate the War Loan conversion, and which to-day form the actual basis by which large areas of the new issue market, from corporation loans to foreign transactions, come under official scrutiny. But if control were to be sought, it would need to extend well beyond the formal boundaries of the new issue market. The truth is that so much of modern saving is semi-automatic in form—such as life insurance and mortgage payments, and amounts set aside to company reserves—that regimentation of the capital market, in the full economic sense, would form only one aspect of the mobilisation of finance and industry at large. But if the present trend of direct industrial borrowing is maintained, such steps may not be necessary, so long as defence borrowing is confined to its present limits, and so long as political conditions permit the raising of new defence money on reasonable terms to the Treasury and on attractive terms to the investor. Unfortunately, neither assumption can be regarded as certain.

Topics of the Week

Parliament and the Crisis.—Lord Baldwin's great talent as a commoner was his notable facility for changing his policy without losing his supporters. His successor in the Premiership has not the same political pliancy. Yet, at the moment, it appears more likely than not that the reversal of his policy of appeasement may leave Mr Chamberlain still entrenched in office. It was loyalty rather than conviction which moved the mass of Tories to stand by their leader without demur in the bewildering and disappointing post-Munich days. Now that Mr Chamberlain has opened his eyes to the true nature of the menace without, and now that in both diplomacy and arms he is clearly prepared to take forthright steps to buttress, not only England's safety, but also the independence of England's friends, conviction can reinforce allegiance. The Prime Minister's very definite statement to the Commons that the current discussions with like-minded Powers had gone much beyond mere consultations; his reported unqualified condemnation of the Fuehrer's "perfidy" in the vigorous address he delivered this week to the Conservative 1922 group; and Wednesday's decision to double the war strength of the Territorial Army: all these and other signs show that the differences between Mr Chamberlain and his critics have become differences of means rather than of ends. Nevertheless, once nation-wide agreement has been attained about the grim reality of present dangers and the need for strong measures to meet them, it is means that are all-important. Here lies the difference between the critical motion tabled by 35 dissentient Government supporters on Tuesday and the counter-expression of confidence put down by 177 of the faithful on the following day. Mr Eden, Mr Duff Cooper, Mr Churchill, their brethren on the Government benches, and a large part of the Opposition are calling for the re-formation of the National Government on a broader basis and the assumption of plenary powers over industry, wealth and manpower "to enable this country to put forward its maximum military effort in the shortest possible time." Released at last from the pious duty to approve a passive and dangerous foreign policy, the bulk of the Conservatives, on the other hand, are apparently content to leave things as they are; and, although their ranks probably include a majority prepared for conscription and compulsion, they seem sufficiently impressed by Mr Chamberlain's sincere confidence in the efficacy of voluntary methods to permit

him to give them a further trial. In this latter respect their stand is similar to the formal position of the Labour Opposition, who are afraid to concede full powers to Mr Chamberlain and his colleagues.

The Next Step.—Actually this state of "politics as usual" is an impermanent position. The fact is that all the parties are waiting to see what comes of the Peace Front, and, judged by the comparatively cordial exchange of questions and answers in the Commons this week, even the Labour leaders are ready to believe that Mr Chamberlain and Lord Halifax are doing their best to get results. It is generally realised that the decision here is not England's alone. But, when the best, or the worst, is known about the Peace Front, a drastic review of the balance of political forces in Parliament cannot be avoided. Even if, as seems not unlikely, Mr Chamberlain does sit more firmly in the saddle, it will only be by dint of taking into account two facts: first, that the war-time devices of a compulsory National Register, universal National Service and a Ministry of Supply are now absolutely necessary means to make his new policy work; and, secondly, that a large majority of the electorate, on the Left as well as on the Right, is willing, and even anxious, to accept the imposition of new and stringent duties. Such measures are not party measures. Whether Mr Chamberlain continues to rule or not, the only Government that can schedule and enforce universal national duties is a truly National Government. It so happens that, owing to the conjuncture of an autocratically led and docile Government group and an ineffective Opposition, such an administration, which alone would be really representative of public opinion, is not likely to emerge in the normal way. The true test of Mr Chamberlain's stature as a statesman in coming weeks will be whether he is willing and able to make such a Ministry. If he does not, then it will be England's political wisdom and resources of leadership that will be tested to the same inescapable end.

Making a Real Army.—This is a time for deeds, not words, and Wednesday's announcement that the field establishment of the Territorial Army was to be doubled

and brought up to a strength of 340,000 men (in addition to the 100,000 Territorials allocated to anti-aircraft duty) will do more to inspire confidence at home and abroad in England's firmness of resolve than a whole series of resolute speeches. The disposition of man-power for Home and Imperial Defence will remain unchanged, and the new divisions will be trained and equipped to expand the Field Force which will be available to act as an expeditionary army in Europe. The change is thus intended to implement directly England's new foreign policy. The Field Force will now consist, when complete, of 32 divisions instead of the 19 recently announced by the War Minister; it will be made up of six Regular and 26 Territorial divisions and will number over 400,000 men. Deeds do not end here, however: it will need a colossal recruiting campaign to raise the new personnel; and it will need a vast industrial effort to produce, as rapidly as possible, the training accommodation and equipment, the rifles, guns and materials that such a force will require. And it will need speedy success in the co-operative forging of fresh military commitments on the Continent to make the decision to build up a new Army worth while. This extension of our armed man-power is not an end; it is a promising beginning.

France in Conscription.—The decrees passed these last two weeks and valid until November 30th next carry the principle and practice of conscription into the lives of Frenchmen more thoroughly than ever before in the history of the Third Republic, the war years excepted. The consent of the French people to be organised for war can hardly go further than that already given to the powers which the Government has assumed, meaning as they do a deep-reaching control over man and machine power. Enough decrees have now been published to reveal the Government's intentions and permit a brief review. Broadly, the decrees divide themselves into three main classes, those affecting military defence, industrial production, and budgetary economy. As regards the first, the Army is to be strengthened by expanding the number of professional cadres to allow of an additional 422 professional officers and 2,500 non-commissioned officers, by a further mechanisation, and by the raising of new African levies. Key military commands are to be strengthened and reorganised, new personnel recruited for A.R.P. and, most striking of all, a much tighter control maintained over the publication of military information. Compared with our own Official Secrets Act the decree makes interesting reading: according to the *Journal Officiel* it is forbidden under all circumstances to divulge, give out, publish, or reproduce military information of any kind not already published by the Government. Another 2,600 ratings are to be recruited for the Navy, and conditions improved as an inducement to longer service. Thus far we are within the bounds of military conscription. The decrees affecting industry are another matter. Here there are radical, almost revolutionary, changes. In all "national defence industries" (and the term has a very wide application) the 40-hour week gives way to one of 60 hours or more, the only compensations being in the payment of overtime rates for hours worked above forty. Far-reaching in its effects on industrial organisation and its implications on personal liberty is the priority which all manufacturers must give to State over private orders; and complementary to this are decrees which forbid industries working on State contracts to compete for labour, or employers to take on men already in jobs, while registered unemployed workers are now bound to accept work on national defence on pain of losing a year's benefits if they refuse. The whole of this complicated procedure, serialised as it is with qualifications and obligations, is to be supervised by a committee established under the aegis of the Ministry of National Defence. Their task will be to co-ordinate in order of priority all "national defence" production, to buy raw materials, collect stocks, and finance contracts.

Along with this unstinted conscription of human and mechanical resources there is a number of decrees which

will carry further the work already done by M. Reynaud's "Axe Committee." The Government is taking the chance of economising in a number of ways which would be difficult if not impossible in the piping times of peace. The main purpose of the decrees under this heading is to bring under central control some of the 65 autonomous "offices" through which a part of French government is executed, with the dual aim of ending bad administration and of reducing the number of civil servants. The decision to limit the number of civil servants—no new posts are to be added in 1939 and vacant posts are not to be filled—again carries a step further measures advised by M. Reynaud last November (*The Economist*, November 19, 1938, page 368). M. Caillaux has called the financially independent "offices" the "seed-bed of all abuse," and their total expenditure is as much as 3½ milliard francs per year, a figure that will be a good deal reduced now that 15 of them have been abolished. Of the public services now to come under central control the most important are the administrations of the autonomous ports of Le Havre and Bordeaux, and a number of technical schools; and, of the offices to be suppressed, outstanding are the National Office for Industrial Property and the National Office for Liquid Fuel. The Government's present temper may be tested by the summary treatment meted out to the administration of Marseilles, whose corruption and misuse of power are almost legendary. A special administrator responsible to the Prime Minister has been appointed to haul Marseilles government out of its moral and material abyss and give it a new constitution which will resemble that of Paris. Against this concerted invasion upon their municipal and personal liberty the French have raised surprisingly small protest; only the C.G.T. has signified dissent by resolving against the 60-hour week, but even here the opposition promises to be for bargaining rather than for boycotting. And this silence can only mean that the French are thinking, as the *Temps* puts it, that "we are not at war—but we are no longer at peace."

Germany, Poland, Lithuania.—Poland's position today bears an unpleasant resemblance to Czecho-Slovakia's twelve months ago, after Hitler's seizure of Austria. Today, Poland, in her turn, is half encircled between two arms of the German octopus. On the south, the German protectorate over Slovakia outflanks the Poles, as the German annexation of Austria outflanked the Czechs; on the north, East Prussia and Memel play the same part in Germany's strategy against Poland as German Silesia played in the Czech tragedy. It is also not improbable that the northern arm of the octopus may be soon and seriously lengthened, to Poland's detriment. We cannot rule out the possibility that, in the near future, Lithuania may go the same way as Slovakia. On paper, Lithuania has obtained from Germany, in exchange for the retrocession of Memel, not only the promise of a free zone in that port, but also a guarantee of the integrity of what remains of her territory. This guarantee, however, is conditional on Lithuania's joining no anti-German alliance, and the outlet through Memel, which now depends entirely on Germany's good will, is the only outlet to the sea that Lithuania possesses. Thus Germany now has a strangle-hold on Lithuania, which may prove tantamount, in fact if not in form, to that protectorate over Slovakia which Germany has already established in plain terms. And the subjugation of Lithuania might be accelerated by domestic strains and stresses of which the change of Government at Kovno may be a portent.

These German moves to north and south of Poland are being accompanied, in the German Press, by a drum-fire of vituperation of the Poles on account of their alleged atrocities against the German minority in their midst. A similar verbal artillery preparation preceded each of the three German offensives against Czecho-Slovakia that have resulted, within a period of less than twelve months, in the extinction, at least for the moment, of the assaulted country's independence. This ominous

precedent has not been lost on the Poles, and the spirit of the people is no doubt expressed in an article, published on March 25th, in a newspaper which is the official journal of the Polish Ministry of War, declaring that Poland will fight for her independence against all comers, however strong they may be in man-power and equipment. An unobtrusive, but apparently extensive mobilisation is being carried out, and there is a most remarkable spate of private gifts to the Government for the country's defence. Whether the German threats are preludes to aggression or merely attempts to dissuade Poland from making any arrangement with Great Britain remains to be seen in the immediate future. But it is as certain as anything can be in this world that, if Germany does attack Poland, there will be war. But, if war there is to be, it is a matter of life and death for all of us that Germany should not be the victor. Polish gallantry cannot wholly offset Germany's big battalions and big munitions plants. And, if Poland were to insist on fighting our common battle without allies, she would be courting a disaster which would not be hers alone. This aspect of Poland's problem is touched upon in the first of our leading articles this week.

Germany Exploits Roumania.—Now that the facts are emerging it is possible to see how far-reaching is the hold which Germany's new trade treaty gives her on Roumania; and, having seen, to realise how little reason there is for the merchants and politicians of the rest of the world to sit back with sighs of relief. For if it is not true that Roumania has bound herself entirely to Germany, it is true that the future development of this country of nineteen million people will now be carried out only with the intimate collaboration of the Reich. With this in mind we may catch at the full implications of the policy of gentlemanly disinterest in Balkan Europe hitherto pursued, in fact if not in theory, by Great Britain: the history of the last three years shows Roumania ready (if not always over-willing) to do more trade with the Western Powers, and with each lost opportunity brought nearer the virtual surrender of her free development to Germany's skilful blend of patience and pressure. The new treaty, which is not far from that surrender, is to be operated within the terms of the commercial agreement signed between Germany and Roumania last December (*The Economist*, December 24, 1938) and arranges for Roumania to dispose of her surplus food production in exchange for machinery, manufactured goods, and armaments on lines explained by our Berlin Correspondent on page 16. Now that the Reich, with Bohemia-Moravia, provides 49 per cent. of Roumania's imports and buys 36 per cent. of her exports (against 38 per cent. and 26 per cent. respectively for Germany with Austria), the fact that Roumania may still make trade concessions and agreements with other countries is of limited consolation. In passing it may be remarked how

well these swollen proportions emphasise the purchase which the new Reich can exert on countries which traded with Czecho-Slovakia: Poland, for instance, now buys from Germany about one-quarter of her imports. All the emphasis in the treaty is on the planned adaptation of a complete national economy to another nation's requirements which must be rare if not unique in history. And although in looking at this adaptation a liberal eye might discern the outline of a new Eastern Europe integrated smoothly within itself and progressing towards higher standards of living whilst retaining its essential agrarian character, the outline would be marred by that menace of political domination which it is not possible to forget. It is silly to pretend that Roumania has let down the Western Powers: she has merely done the best for herself in the circumstances. The Roumanians least of all have desired those circumstances.

Facts About Roumanian Oil.—The most important fact about Roumanian oil is that the wells are steadily giving out. Production has been falling for several years, and in 1938 was only 6,603,000 metric tons. As things are, only a small fraction of Britain's oil supplies come from Roumania, only about one-tenth of Germany's, but as much as one-fifth of Italy's. The Petroleum Press Bureau has compiled the following table:—

	ROUMANIAN OIL EXPORTS BY COUNTRIES		
	(Metric tons)	1936	1937
Germany	1,072,402	435,281	703,732
Austria	341,804	91,710	*
Italy	653,222	575,800	556,535
United Kingdom	846,276	580,182	549,227
Czecho-Slovakia	290,799	354,131	294,887
France	866,322	603,868	289,338
Egypt	300,867	278,884	283,309
Greece	111,201	249,244	200,215
Hungary	252,166	288,411	198,078
Jugoslavia	132,955	164,658	143,161
Spain	166,273	229,351	142,853
Belgium	75,317	52,863	120,089
Other countries and ships ..	1,875,107	1,763,954	1,022,011
Total	6,884,716	5,668,337	4,503,431

* Included in Germany.

In 1938 Germany imported from Roumania 13.3 per cent. of her total oil imports of 5,268,000 tons (last December's agreement gave her the right to acquire 25 per cent. of Roumania's oil production), so she is still far from the goal of oil self-sufficiency within the confines of Eastern Europe. Moreover, it is relevant at least in peace-time that by far the greater part of Roumania's oil is produced by companies owned by foreign (i.e. neither Roumanian nor German) capital. The table brings out the fact that the United Kingdom is one of the leading buyers, that in 1937 France was actually at the top of the list, and that in 1938 France and Britain purchased 838,565 metric tons,

against Germany's and Italy's 1,260,267 tons. Meanwhile total oil exports have fallen from 6,884,716 metric tons in 1936 to 5,668,337 in 1937 and 4,503,431 in 1938, by products as follows:—

ROUMANIAN OIL EXPORTS BY PRODUCTS
(Metric Tons)

	1936	1937	1938
Crude oil	628,585	472,402	335,437
Gasoline	2,096,671	1,829,865	1,586,360
Kerosene	1,146,815	952,116	827,084
Lubricants	37,208	34,841	40,580
Gas oil	1,181,748	897,339	763,369
Fuel oil	1,764,167	1,454,086	917,605
Other products	29,522	27,688	32,996
Total	6,884,716	5,668,337	4,503,431

Aid for Shipping and Shipbuilding.—Ever since the publication of the shipping industry's proposals for assistance early this year (they were summarised on page 65 of *The Economist* of January 14th) both shipowners and shipbuilders have anxiously awaited the Government's decision. Although complete details of the Government's scheme have yet to be worked out, Mr Oliver Stanley was able to give a rough outline of its nature in reply to a question in the House of Commons last Tuesday. The Government has rightly decided to tackle the problems of shipping and shipbuilding as a whole.

(a) *Deep Sea and Near Continental Tramps.*—A subsidy of £2,750,000 per annum is to be made available for a period of five years, actual payments to be governed by a sliding-scale based on freight rates. As a condition the Government will expect the industry to continue its efforts of promoting an international agreement designed to adjust the demand of tonnage to the supply. There will be no subsidy for coasting tramps.

(b) Instead of the Liner Defence Fund demanded by the shipping industry, it is proposed to appoint an Advisory Committee for an experimental period of two years to examine and advise the Government "regarding requests for assistance from liner companies whose services are endangered by foreign competition." Each case would be considered on its merits.

(c) In order to encourage shipowners to place new orders with shipbuilders owners of tramps and cargo liners are to receive a grant not exceeding £500,000 per annum during the next five years, with the exception of any year in which earnings did not justify public expenditure. Secondly, the Government propose to make available £10,000,000 for loans to shipowners on favourable terms during the next two years for the purpose of building tramps and cargo liners, other than refrigerated and passenger vessels.

(d) Finally, the Government propose to make £2,000,000 available for the purchase of suitable vessels which, though still capable of service, would otherwise be sold to foreign makers for breaking-up. This proposal follows closely Mr Hieldin's scheme for the laying-up of a reserve of shipping to be used in emergency.

In addition to the financial assistance the Government will continue to take all possible steps to promote the interests of British shipping in connection with trade negotiations and other discussions with foreign Governments.

is entitled to have, what it has never been given, a convincing explanation by a disinterested inquiry, of why the costs of British shipping, and especially of British shipbuilding, are so much higher than those of other countries whose general position is not dissimilar from ours. It is all to the good that assurances have been received from the shipbuilding, marine engineering and steel industries that they will not raise prices as a result of the prospective increase in shipbuilding orders. But why is it that Great Britain, which used to build the world's cheapest ships, now builds almost the world's dearest?

The Cotton Bill.—We have become so accustomed to Parliamentary debates about the statutory regulation of industrial enterprise being made into bitter pitched battles by the intransigent opposition of vested interests, that the peaceable passage which the Cotton Industry (Reorganisation) Bill seems likely to receive appears at first glance surprising. It was read a second time in the Commons on Monday without a division and the Government spokesmen's comment on the debate, that no member had opposed the principle of the measure, was justified. True, the Opposition Committee are fighting a rearguard action. But their contention that the majorities received for the Bill in the ballots held in the various sections of the industry were not sufficiently large to justify statutory approval, reads only like, say, the claim of the Municipal Reformers in London that Labour wins local elections because the right sort of citizens refrain from voting. Many merchants are, admittedly, hostile to the Bill. But, as the merchanting and distributive sections of the industry are almost certainly too large and costly for its efficiency, to have aroused this hostility may in fact be a sign of grace in a measure which offends all too few interests in a business which is very urgently in need of very drastic treatment. The Opposition Committee claim, rightly, that the Bill will not ensure the recapture of markets lost in countries which now manufacture their own textiles or markets won by competitors with cheaper lines. No Bill could do that. Many of these markets have, in the nature of things, gone for good; and, for the rest, it is only by efficient production at lower prices still that ground can be regained. The Bill presumably represents the industry's own plans for scaling itself down to suit its shrunken world status and for achieving maximum efficiency under these conditions. It may very well fail to do this, because it may bear too conspicuously the mark of an "agreed" scheme, devised as a compromise to offend as few as possible of the people who have an interest in the *status quo*. It will certainly fail to do so if it simply puts up prices and leads to none of the surgical operations the cotton industry needs. A chance to do something bold and really effective for Lancashire may indeed have been lost. But, as the Opposition Committee's own crusted distaste for this Bill shows, the cottonmen, no more than the coalowners last year, are scarcely ripe for heroic measures.

Rayon's Claim.—As it stands, the Cotton Bill is at least innocuous. Even so, it is hardly reasonable that the different trade of rayon making should have been dragged by the heels into its scheme. The rayon industry is a newcomer in the textile field, but it employs over 100,000 workers. While the output of the cotton industry has fallen by 40 per cent. since 1913, that of the rayon industry has risen by 22 per cent. The earlier stages of rayon-making have no connection at all with cotton; the initial process of continuous filament spinning being carried out by exclusively rayon producers. The later stages are not so distinct: rayon can and is woven on the same looms as cotton; and it is for this reason that the Cotton Bill cavalierly proposes to bring rayon weaving (as distinct from rayon spinning, which is specifically excluded) within the scope of the cotton reorganisation schemes. On balance, the proposal, even if it has some justification in expediency, is unjust and uneconomic. Technically rayon is

far ahead of cotton. In consumption they are not seldom rivals. To impose the control of the cotton interests upon the rayon industry would be to risk the serious blocking of progress in technique and price in a branch of textile manufacture which has the unusual felicity to enjoy a prosperous outlook.

Death of a Republic.—On Wednesday, thirty-two and a half months after the first day's fighting, the civil war ended in Spain. While the Falangist "fifth columns" mingle with General Franco's soldiers in the surrendered cities of Madrid, Valencia, Cartagena and Alicante, the Republican leaders have gone and their armies are melting away. General Miaja has gone to Algeria, and his soldiers wearily back to their villages. No other reply was possible to the offensive which General Franco launched on all fronts during the previous week-end. The civil arm is taking over, and with its coming we may hope that there will be an end to drumhead justice; and, perhaps it was not without significance that the troops walking into Madrid were in time to fraternise with the last defenders. Both Signor Mussolini and Herr Hitler have sent General Franco wordy eulogies in telegraphic form, and Señor Suñer, Nationalist Minister of the Interior, has broadcast to the democracies the news that their struggle for Bolshevism is finally defeated. We can be grateful to them for reminding us that this was no ordinary civil war, no mere blazing away of one faction against another, but a conflict of Good and Evil, with the big battalions on the side of the angels. But the reminder is superfluous. For nearly three years the Spanish Republic was borne up by the willing sacrifice of human lives: if at the end it has perished beneath a flow of words and its obsequies attended by gross congratulation, we shall be the less likely to forget the real cause of its death.

Hungary and Slovakia.—On March 23rd, in Berlin, a treaty was signed establishing a German protectorate over Slovakia for 25 years, and conceding to Germany, in exchange, extensive military rights and facilities in Slovak territory. On the 24th it was reported from Bratislava that Hungarian troops had launched a fresh invasion of Slovak territory in the Už Valley, on the border between Slovakia and Carpatho-Ruthenia, and in this region the fighting has since continued, in the air as well as on the ground, with appreciable casualties on both sides. Does not this Hungarian military offensive bring the German-Slovak treaty of March 23rd into play? The Hungarians maintain that it does not—on the ground that the frontier between Slovakia and Ruthenia, unlike that between Slovakia and Hungary herself, has not yet been defined or delimited. The Hungarians' object is to gain control of the whole length of a railway, running up this valley and crossing the Carpathians at its head, and to safeguard it by obtaining vantage points immediately to the west, since this railway affords a third line of communication between Hungary and Poland.

The German attitude towards the affair remains sphynx-like. The news of the fighting has not been allowed to figure in either the German or the Czech Press. Manifestly the Hungarians are reckoning on being able to produce a *fait accompli* which it will not be worth Germany's while to countermand; and the calculation seems to be well grounded. Dr Goebbels was in Budapest this week, and doubtless explained the German attitude. In allowing Hungary to conquer Ruthenia, Germany was already waiving her previous objection to the establishment of a common frontier between Hungary and Poland, and, this decision once taken, it obviously matters little to Germany exactly how far east or west the new Slovak-Ruthenian frontier is drawn. Ruthenia would have been of importance to Germany if she had been able to wait long enough to enable her to build military roads along the

Slovak-Ruthenian corridor from Silesia and Austria to the Roumanian frontier and build up from Ruthenia a widespread movement of Ukrainian nationalism. But time is pressing; and in any case it becomes clearer each week that Hungarian sovereignty can only be exercised within the very narrow limits of the German ambit.

Japan, China and Europe.—On March 21st the Japanese Foreign Minister, Mr Arita, telegraphed to the German Foreign Minister, Herr von Ribbentrop, his congratulations on the German annexation of Czecho-Slovakia as a step which "will contribute much towards the stabilisation of Europe and the cause of world peace." Japanese diplomacy has a way of carrying the misuse of words to lengths so extravagant as to be humorous, if humour were intended; but we may be sure that Mr Arita no more meant to be funny on this occasion than the authors of the many previous gems of Japanese official phraseology. No doubt Mr Arita's real meaning is that Hitler's latest blow has so gravely disturbed the stability of Europe and so seriously prejudiced the cause of world peace that there will be good fishing for Japan as well as Germany in the troubled waters. This message from Tokyo to Berlin has to be read in conjunction with Signor Mussolini's threat, in Rome last Sunday, that any attempt to build up a defensive alliance of the peacefully intentioned powers might be countered by an attack upon them, on the part of the totalitarian Powers, in all quarters of the globe. Are plans being discussed for a Japanese seizure of British and French possessions in the Far East in the event of the Axis Powers launching an attack in the West? The military junta which is in the saddle in Japan to-day is in a position not unlike Hitler's; it can make spectacular conquests but cannot transmute these into economic harvests; and it may therefore be tempted to follow suit to Hitler in trying to conjure away the disappointment of its own people by sweeping off the board any pawns that happen to be commanded by its pieces. Yet the seizure of Hongkong or Indo-China would be still less decisive for the fate of the world than the seizure of Czecho-Slovakia; and acts of aggression which would bring down upon Japan a long-range Anglo-French naval blockade, and which might lead in the end to the intervention of the United States and Russia, would be disastrous for a Japan who is still bogged in China. This dilemma, it would appear, has come to a head in Tokyo recently as the result of a German proposal to turn the Anti-Communist Pact into a military alliance. To judge by a statement made by Baron Hiranuma, the Prime Minister, on Wednesday, the moderates have, for the moment, succeeded in convincing or in out-voting the military, since Baron Hiranuma was at pains to say that Japan was neither totalitarian nor democratic and therefore confronted neither *bloc*. This attitude is certainly in Japan's own interest—no less so because it is also in the interest of the democratic powers.

The World Overseas

The attention of our readers is drawn to an alteration in the presentation of this section of *The Economist*. Two changes are involved. In the first place, in addition to our Correspondents' dispatches, it is proposed to print in this section other articles of a factual and descriptive nature. To prevent misunderstanding, items contributed by our regular Correspondents will be specifically acknowledged to them (e.g. "From our New York Correspondent"), and they must not be held responsible for any article bearing no attribution, or a less specific acknowledgment (e.g. "From an American Correspondent.")

Secondly, our Correspondents' dispatches will, in the future, take the form more of articles on matters of particular interest than merely of regular reports. Such statistical and other information as has been regularly given in the Overseas Correspondence in the past will, however, continue to appear.

It is hoped that these changes, which are more of form than of substance, will add to the interest of this section of the paper without in any way detracting from its value.

Holland and the Next War

HOLLAND's problem is how to remain neutral. And this problem of how to avoid the impact of almost incalculable forces on small but vulnerable Holland and on her enormous, but equally vulnerable, colonial possessions, is at the centre of Dutch political discussion at the moment. The recent announcement by Dr Patijn, the Foreign Minister, that his country's territory would not be open to the free passage of "League" troops advancing against an aggressor, emphasises how alive the Dutch are to the chance they have of becoming the inhabitants of a battlefield. Holland has been neutral in Europe for over one hundred years: will she be able to remain so in the future?

She means to try. Both at home and abroad the Dutch Government is taking measures to detach itself from possible European quarrels: at home by preparing economic and military defences, and abroad by severing Dutch diplomacy from automatic commitments. Together with the other "Oslo" States Holland has declared that she cannot subscribe to those parts of the Covenant of the League which involve members in collective war; and in doing so Dr Patijn has only extended the policy which, under Jonkheer de Graeff in 1937, refused a guarantee treaty with Germany on the ground that the independence of Holland rested in natural right and the determination of the Dutch to defend it. King Leopold's visit to The Hague last November, cancelling as it did old scores reckoned up for years past, has completed the tale of Holland's good-neighbourliness.

The economic side of Dutch neutrality is causing much heart-searching in Holland at the moment and may be briefly stated. It is clear that the Dutch could be made to suffer grievously by German economic pressure, unless Germany's enemies would supply Holland with food and other necessities of life. In 1937 the port of Rotterdam, by river and canal traffic alone, handled 3,190 million metric tons out of a total for all Dutch ports, by sea, river, and canal, of 10,853 million metric tons; and the total effect of a closed German frontier may be gathered from the following table:—

IMPORT, EXPORT, AND TRANSIT TRAFFIC

	1937	
	In thousands of metric tons Inwards	Outwards
By sea	31,415	26,225
By river and canal:		
Over the Belgian frontier	9,285	14,431
Over the German frontier	33,589	25,938
By railway and light railway:		
Over the Belgian frontier	674	2,703
Over the German frontier	2,517	795
By road:		
Over the Belgian frontier	190	350
Over the German frontier	168	89

Thus 46 per cent. of all goods arriving in Holland come over the German frontier; and, apart from sea transport, the proportion is as high as 77 per cent.

But if the Dutch have much to fear from a closed German frontier, war experience showed that the effect of an Allied boycott would be entirely disastrous. Until well on in 1915

the Dutch had commercial cause to thank their stars for neutrality: after that date they had good reason to complain of the belligerents' conception of what neutrality should be, and by 1918 they were facing the prospect of genuine privation. Even with their ability to build ships for themselves they could not keep up with the sinking and commandeering which became more and more intense as the war lengthened. The piling up of contraband laws, the unrestricted submarine warfare, and, as a last straw, the invocation by the Allies in 1917 of the "Right of Angary" which excused them for laying hold of Netherlands shipping wherever they found it in harbour, these and other obstacles to Dutch commerce conspired to make of neutrality a sorry condition, and one which it was increasingly difficult to maintain without transgressing the narrow laws which each belligerent competed with the other to apply. Inward clearings to Dutch ports fell from 12,454 ships in 1914 to 1,177 in 1918.

Dependence on Imports

The following two tables show to some extent how Holland is dependent on imported goods:—

	1937	
	In metric tons Imports	Exports
Mining products.....	10,512,000	6,663,000
Agricultural products, including various foodstuffs	4,733,000	3,484,000
Textiles	100,000	87,000
Metallurgical, shipbuilding, carriage works	1,855,000	532,000

Although crisis regulations had been introduced at the earliest stages of the war and had reached by 1918 an immensely complicated structure based on import control by the Netherlands Overseas Trading Company, on export control by the Netherlands Export Company, and on control of home production by a great number of compulsory producers' associations; although by 1917 there existed laws for requisitioning ships and prohibiting the sale or hire of Netherlands shipping to foreign clients; and although general rationing was brought in towards the summer of 1918 and legislation drawn up for bringing grassland under the plough: nothing that was done or could be done was able to avert the prospect of dire shortage during the coming winter. The Armistice intervened just in time.

Below are listed several vital commodities which the Dutch must import. The figures shown are import balances expressed in metric tons:—

1937		1937	
Barley	209,134	Mineral oils other than petrol, benzene, and heavy combustion oils	499,300
Maize	961,710	Kerosene.....	258,910
Wheat	568,500	Heavy combustion oils	213,300
Timber	1,775,450	Rubber products	7,900
Petrol	265,581		
Benzene	242,320		

In 1937 the United Kingdom, with a population over five times that of the Netherlands, had an import balance of wheat amounting to 3,900,000 tons, and of barley to 250,000 tons, while the annual imports of oil into the United Kingdom are about 10 million tons compared with the Netherlands's 1,500,000 tons. To this list must, of course, be added heavy imports of coal and metallurgical goods, but enough has been said to show that, even if Germany were able to continue export of food and raw materials to Holland during time of war, without overseas imports Dutch industry would be unable to carry on. The trials of 1918, when Government control of food and raw materials had been more or less strict for three years, proved this: and it was even doubtful, at that time, whether the Dutch would be able to feed themselves from the products of their own soil.

The Dutch, therefore, have every reason to prepare for the next war with backward glances at what they suffered in the last. They are at present doing what they can to curtail some of their more obvious liabilities. At the end of last December the Government put before the States General eight bills containing a system of measures designed to enable peace-time organisation of economic as well as military defence, with particular regard to agriculture, rationing, prices, requisitioning of ships, and war insurance. Yet, in the end, it is clear that a neutral Holland can live through a long war only if the belligerents are prepared to respect her neutrality and also, in the case of the maritime Powers, to support it by allowing imports from overseas.

Neutrality depends on immunity from military attack; and it is on the military side that less clear-cut conclusions are possible. Along with their economic defences the Dutch Government are pressing on with re-armament and, largely through the enrolment of private enterprise, of civilian defence. A number of provincial municipal bodies and even separate industrial concerns are providing themselves with anti-aircraft batteries and staffs to man them, and the production of gas-masks, almost unheard of last October, is also going ahead. By 1941 the naval programme should be completed, providing Holland with a modern force of three cruisers, two flotilla-leaders, twelve destroyers, twenty-four submarines and, lately ordered, twenty Scott-Paine motor torpedo boats for coastal defence. The total airforce may be estimated at about 600 machines, of these the Navy having about eighty and the Colonial army about 117. Numbers are being increased by purchases abroad as well as by production at home.

Although a system of fortifications consisting of concrete pill-boxes and similar obstacles is in course of construction along the German frontier and on parts of the coast, no one in Holland imagines that the Dutch army would be able to defend the whole country from invasion. It is generally supposed that, in face of German attack, the army would retreat to the dyke area centring on Amsterdam and containing parts of the provinces of Utrecht, Gelderland, North and South Holland, including The Hague and Rotterdam; and, having blown up bridges and opened a number of dykes, keep the enemy outside the flooded area.

Given the dual consideration that Holland will resist invasion and, in fact, will be better able to pass on what food-stuffs she can (not a great deal, once imports are cut off and the needs of her own eight millions supplied) if left in comparative peace, it is clear that Herr Hitler had good reason for offering a guarantee of the Dutch-German frontier. How far he would go in wartime, and how far Holland would be able to resist his more pressing overtures, is much less clear. But the odds are on the side of successful neutrality.

America's Dwindling Millionaires

[FROM OUR NEW YORK CORRESPONDENT]

THIS is 1939, ten years since the fateful year 1929, when the Era of Prosperity unbounded ended. Men's minds are not a little filled with the contrasts and comparisons that a decade has wrought. To take one instance: according to the American Iron and Steel Institute, the United States production of steel ingots and castings in 1938 was 28,250,000 gross tons, or one-fourth of the world output. In 1929 it was one-half of the world output.

Or to take another case: the chief feature of the period 1921-29 was an enormous expansion of credit against stock market collateral—in direct bank loans to customers, in bank

loans to brokers in turn re-lent to the brokers' customers, and in stock market loans through brokers from non-bank lenders ("brokers' loans for the account of others"). Of that great fabric of loans only a fraction survived the Great Deflation.

The structure of credit has been rebuilt. But it has been rebuilt of credit extended to the Federal Treasury. Its economic derivations are quite different. In the 'twenties, confidence or, as it proved, over-confidence, gave the bank credit created an extreme velocity; in the 'thirties, although the volume of deposits exceeds, and has for a long time exceeded, even the high figures of the late 'twenties, the velocity of their turnover has remained low, both absolutely and relative to the total of deposits. Throughout the 'twenties, with only brief interruptions, our resources of material and personnel were almost fully occupied—almost continuously; so far, in the 'thirties, our resources of material and personnel have never been fully utilised; and, while it is doubtful whether our material is now equal to what it was in the late 'twenties, our personnel has increased year by year. The result is that the physical industrial equipment per employable adult is probably considerably inferior to what it was in the 'twenties—certainly the late 'twenties.

Ten Years of Change

The last ten years have seen drastic changes, too, in national wealth. The national income has fallen and there are fewer rich men to-day than there were in the Prosperity Era. These are the most bodeful changes, even though there has, of course, been a marked rise in national income and the number of fortunes since the depression days of the early thirties. Preliminary figures of the individual income tax returns for 1937 have been published by the Treasury. For 1937, 6,231,431 returns were filed, of which 3,310,201 were taxable. The number of returns was 16.8 per cent. greater than for 1936; and the number of taxable returns increased by about the same proportion. The total net income reported was about \$21,000 millions, or approximately one-third of the estimated "national income paid out," an increase of about 11.3 per cent. over 1936. The increase was in the lower income grades, so that the total income reported on taxable returns rose only 8.6 per cent., although the number of taxable returns increased 17.5 per cent.

The greatest increase occurred in the lowest income grade—in incomes under \$5,000 a year; the number of these returns rose from 2,165,404 in 1936 to 2,607,901 in 1937, with total incomes on the returns of \$5,281 millions and \$6,411 millions, respectively. The number of incomes in the \$5,000-\$10,000 bracket also rose from 417,111 to 469,149 returns, with total incomes of \$2,839 millions in 1936 and \$3,158 millions in 1937. In the \$10,000-\$25,000 bracket, the number of returns and the total of incomes increased only slightly. Above \$25,000 both the number of returns and the total income were lower in 1937 than in 1936.

The striking comparison, however, is between the figures for 1937 and those of, say, ten years ago. The most marked change has occurred in the top grades. If a single bracket is made of persons reporting net income in excess of \$100,000, persons who properly could be referred to as "the rich," the change is remarkable. And it is this class that has been

THE CHASE NATIONAL BANK

singled out for special attention in our tax legislation, as the following table shows:—

THE OVER-£100,000 BRACKET

	Number of Returns	Net Income (\$000,000)	Federal Tax (\$000,000)	Average Rate of Tax %	Net Income after Federal Tax (\$000,000)
1929	14,816	4,368	653	15	3,715
1930	6,202	1,571	239	15	1,332
1931	3,184	779	109	15	670
1932	1,836	383	110	29	273
1933	2,051	467	137	30	330
1934	1,907	420	180	42	340
1935	2,624	569	244	43	325
1936	4,691	970	488	50	482
1937	4,124	857	432	50	425

The so-called "average rate" in this table is not the actual rate of tax, but simply the proceeds of the Federal tax divided by the net income; the actual rates applicable to the lower incomes in the bracket have been, of course, substantially less than those on the higher incomes.

No Funds for Equities

These figures of the income left to this wealthy group after the payment of Federal tax are enormously important. In 1929, those very rich persons had a vast capacity for investment; and they had a preponderant preference for investment in equities. Ten years ago the sum disposable by this group, even making allowance for the fact that a considerable proportion of its income represented realised capital gains rather than current income, is comparable, let us say, to the sums annually available to the life insurance companies—the typical institutional investor, limited to investment in obligations. It is true that 1929 was, in regard to capital gains, obviously a "fluke" year. Even so, it is significant that in 1936-37, the best years since 1929, the number of income returns in the high bracket had fallen by two-thirds and, more important still, the group's net income after payment of Federal taxes has dropped by over four-fifths. The capacity of the very rich to invest out of income has been reduced almost to vanishing point.

Again, in the 'twenties, the high incomes were the principal source of equity capital for American enterprise, just as the insurance companies were the principal source of debt capital for American enterprise. Since the 'twenties the premium income of the insurance companies has been well maintained; there is a supply of debt capital available so large as to make the rates extremely low. But the supply of equity capital in so far as it came from these groups—and there is a good deal of evidence that it came in large measure from individuals in the rather high brackets—has been pretty well shut off.

To some extent, it has been shut off directly by taxation itself. The average tax rate is approximately three times what it was ten years ago. But a more important factor has been the actual disappearance of large incomes.

In the past, the principal source of equity capital in the United States has been the wealthy individual. As the number and wealth of wealthy individuals has shrunk, the supply of equity capital has shrunk. It is hard to avoid the conclusion that the shrinkage of the supply of equity or risk capital is intimately associated with the simultaneous development of the phenomenon of chronic (as contrasted with cyclical) unemployment.

Indeed, the shrinkage in the number of large individual fortunes has had a wide variety of social consequences. They are only gradually becoming apparent. For example, all kinds of charitable or philanthropic organisations have found their donations and bequests diminished; and various forms of religious activity have had to be curtailed. The diminution of the national income over the past ten years is an obvious and familiar fact. But the great changes in distribution are less well known; and it is probably these that have had the more important consequences for American society.

Germany's New Finance Plan

[FROM OUR BERLIN CORRESPONDENT]

THE continued political expansion of the Third Reich has led to further financial difficulties. The international situation and the need for economic reconstruction make any action in capital works and expenditure for the moment

impracticable; and the total public debt in Germany already amounts to about Rm. 60,000-70,000 millions. Once more new financial devices are needed.

Recent years have seen a succession of expedients to finance State expenditure. In March last year Dr Schacht made known a new plan in which Treasury delivery certificates were to replace the special bills formerly used to finance armaments. His object was to secure greater control over public expenditure and to limit the growing burden of debt; after six months the delivery certificates themselves were intended to disappear, and public works were to be paid for out of current receipts and Government loans.

The operation of this plan was prevented by political events, by the Anschluss and the Sudetenland crisis. This led to a financial crisis at the end of the year and, finally, to the removal of Dr Schacht from the Reichsbank presidency, when he was not permitted to put through his plan to cut the knot by considerably increasing taxes. Dr Schacht's successor then put into operation a programme of half measures and temporary expedients (*vide The Economist* of March 4, page 440). Recent events in Central Europe have further increased the financial tension; it is clear that Herr Funk's measures have been inadequate to solve the problem.

At bottom, Germany's financial problem is just this: public expenditure is far above public receipts. The growing volume of short-term debts must be consolidated and new short-term financing facilities must be created. It is to meet this situation that the New Finance Plan has been devised.

Briefly, the Plan is as follows. The delivery certificates, which replaced the special armaments bills last year, will themselves be replaced on May 1st next by tax certificates, of which there are to be two kinds. The Reich, the provinces, the communities, the railways, the Post Office, the motor highways and other public undertakings (as well as other organisations still to be named) are to pay 40 per cent. of the cost of contractors' deliveries and other services in these tax certificates, half to be paid in one kind of certificate and half in the other. The contractors, in turn, will have the right to use these tax certificates to pay for goods and services up to 40 per cent. of their cost; and the new instruments will thus be usable as cash.

Two Kinds of Tax Certificates

The first kind of tax certificates (Type I) will be accepted by the authorities at their nominal value as payment for Reich taxes and dues six months after their issue. The second kind of certificates (Type II) will be accepted for tax payments at 12 per cent. above their nominal value when 37 months have elapsed since their issue, which means that they pay an interest of about 4 per cent. In order to prevent the certificates of Type I from flowing back too quickly to the Treasury, they carry with them certain tax benefits for their possessors. For instance, a special allowance for depreciation charges (on machinery, etc.) is to be given to holders of the certificates, both in the case of taxes on capital and taxes on profits. This means that the possessors of tax certificates of Type I will be able to write off larger sums than correspond to the normal rate of depreciation. After uninterrupted possession of Type I certificates for ten months (only 6 months in 1939) the allowance will amount to 20 per cent. of the total holding of tax certificates; after another year it will be 25 per cent.; after another twelve months, 30 per cent.; and after a third year 35 per cent. Discrimination will also be made in favour of the export trades. The rate of rebate will be raised by 10 per cent. in the case of industries whose export business amounts to at least 25 per cent. of their total turnover.

By these means it is hoped to ensure that the tax certificates will only return to the Reich after several decades. One danger is that people may sell their holdings of Reich loans in order to buy tax certificates and reap the benefits of possessing them. To prevent this, the new decree specifies that in the case of tax certificates acquired by sale of Reich loan holdings, the special allowance is greatly decreased in value. The second kind of tax certificates (Type II) can be accepted as collateral for loans, and may be handled by the banks. Their circulation is to be guided in relation to volume of liquid assets available.

Since future tax receipts in cash will fall because these tax certificates are to be used for tax payments, an increased income tax is to be levied. Briefly, the tax will amount to 30 per cent. of the sum by which the taxpayer's taxable income has increased compared with the preceding year. The increase in the wages of State officials will not be affected

by this tax, since Rm. 600 of any increase in income are to be free of the tax: and there are, in addition, a number of other allowances and reliefs.

A Fresh Phase in Nazi Finance

The new Plan marks a fresh phase in Nazi finance. In future, Reich loans are to be issued only in exceptional cases. This means that the capital market should now be open to a much greater extent to meet the financial needs of private enterprise—which is specially important in present circumstances. So far as the Government itself is concerned, the financing of its expenditure by means of these tax certificates means that the Reich will be relieved of some of its obligations to pay interest. On the other hand, the burden of interest and amortisation on Reich loans since 1935 already amounts to Rm. 735 millions, and by 1947 it will reach a peak of Rm. 1,265 millions. The 12 per cent. to be added after three years to the face value of Type II certificates represents only a book-keeping transaction; it will not actually be paid out, but will be equivalent to a reduction in tax receipts.

The net effect of the Plan is that borrowing by means of short-term instruments will continue; the long-term method is no longer possible. But, in the new measures, care has been taken to see that repayment will stretch over a period of several decades.

It cannot be disguised that the introduction of tax certificates of this kind signifies a further step towards inflation, since (within certain limits) the certificates can be used as money. Meanwhile, the certificates have the somewhat meretricious advantage of not being counted as an increase in the currency circulation in the Reichsbank reports.

The truth is that the Plan cannot be regarded as a real clearing-up of the German financial situation. It never can be cleared up as long as expenditure is greater than income. All the Plan can do is to tide over an acute financial crisis. And the simultaneous introduction of a new tax shows that financial health cannot be restored without further increases in taxation. The point is simple: unproductive investment cannot be financed much longer without a deterioration of the standard of living of the people.

Indeed, even as a device to ease financial tension, the Plan is by no means certain to succeed. The actual value of the tax certificates that will be put into circulation cannot yet be estimated, but it is likely to run to many milliards of Reichsmarks during the next few years. Since the Plan means tying up, not only the short-term capital of industry and banking, but also other capital which would otherwise be employed for the purchase of Reich loans, the question arises whether the new system of financing may not lead to even greater tension. The fact is that it is by no means certain that, in these circumstances, the hope of making the capital market available for private industrial loans would in the event be realised.

Confidence and Revival in France

[FROM OUR PARIS CORRESPONDENT]

THE latest annexations of the Third Reich show the magnitude to which the foreign danger has grown in a single year. The fact that the United States has found it necessary to issue warnings to Germany and Japan shows that there is no country, however far afield, that can feel itself secure. The international situation is more menacing than ever.

Yet there are no signs of undue alarm in France. It is most noticeable that there has been no renewed flight of capital from this country during the present crisis. The reason for this calm is twofold. Since no country abroad or overseas is safe, investors feel that French capital must be defended in France itself. There is no haven of refuge.

Again, the domestic scene has changed. The social conflicts that lately split French economic life have ceased. The forty-hour week which impeded all attempts to rebuild industrial prosperity and speed-up the output of arms has gone in fact, if not entirely in principle. The Treasury is for the moment well stocked, and war orders are being promptly paid for.

French capital therefore is being used for home defence. Economic activity is more and more concentrated upon industries turning out the goods of war. Investment is in general limited to the short-term issues of the State for arms and defence purposes; and investment in private enterprise

lags far behind. The portfolio of the Bank of France of commercial bills stands at about the same value as in the crisis year, 1935, even though the franc has since been devalued by 60 per cent.

The activity of the war industries is already being felt. In February the index of industrial production stood at 89 compared with 87 in January, 86 in December and 81 in October. It was five points above the figure for February a year ago, which is remarkable when it is remembered that, say, the figure for last October was as much as 9 points below that for October, 1937.

Unemployment, too, is beginning to decline earlier in the year than usual, and more markedly. The number of persons wholly out of work on March 18 was 404,304. This was 3,146 fewer than in the previous week and 4 per cent. smaller than the total unemployed on February 11. Last year, by contrast, the corresponding fall was 1 per cent.

Average daily output in a number of major industries has also risen. The production of coal in February, for instance, was 4,022,127 tons: output per day was 188,336 tons, against 186,420 tons in January and 180,808 tons in February, 1938. Electricity output has risen, too: in January it amounted to 1,430 million Kwh. (reckoning in only the 114 most important companies) compared with 1,324 million Kwh. (by the same companies) in January, 1938.

Only the Beginning

The current revival is only the beginning. France has now been put upon a war-production footing by M. Daladier's latest decrees, whose effects have not yet been felt, and the centralisation of military supplies and output will produce large results. This week has seen only decrees supplementary to the initial reorganisation and reconstruction measures. One set of five registered the important decision to expand the personnel of the Navy. Another batch of four were designed to stimulate export sales by working out fiscal reliefs for manufacturers for the export trades.

Meanwhile, fiscal receipts are increasingly satisfactory. Indirect taxes yielded 5.1 million francs more in February than was estimated and 618 millions more than in February, 1938. And prices have remained firm.

	Wholesale Prices	Feb. 18th	Feb. 25th	Mar. 4th	Mar. 11th	Mar. 18th	Mar. 25th
General Index		675	676	678	678	679	680
Domestic products ...		698	700	703	703	706	707
Imported products ...		634	633	632	633	631	630
Foodstuffs		648	650	651	649	651	654
Industrial products ...		700	699	702	705	703	703

Nor has France remained idle in the sphere of trade diplomacy. A new trade arrangement has just been made with Poland, which will enter into force on April 1 and aims at reviving exchanges between the two countries, chiefly by a system of private compensations, for which purpose a new French-Polish organisation will be created. Negotiations with Bucharest, too, have been resumed and are likely to be rapidly concluded.

Democracy Defends Itself

[FROM A SWISS CORRESPONDENT]

THE threatened expulsion from Italy of three Swiss journalists—one from each language canton—for writing what was not pleasing to the Italian Government, is a reminder of the difficult position which Switzerland occupies in Europe. The Great War added much to Switzerland's neutral tradition; yet with the rise of the dictatorships that

The OCEAN

Head Office: 36-44 Moorgate, London, E.C.

FOR ALL CLASSES OF INSURANCE

role is increasingly difficult to play. The expulsion orders in question have now been revoked: the danger to Switzerland's freedom of the Press, both from within and from without remains. Since the *Anschluss* with Austria, with Nazi propaganda ever more active, that dual danger has been brought nearer.

Not long ago there were three newspapers in Switzerland which enjoyed German subsidies—the *Schweizerdegen*, the *Schweizervolk*, and the *Angriff*—copies of which were freely distributed in the German-speaking cantons. These newspapers were edited by veiled Nazi organisations like the *Volksbund*, the *Eidgenössische Sozialistische Arbeitspartei*, and the *Bund Treuer Eidgenossen*, and their object was to praise the Nazi regime on the one hand, and on the other to abuse the Swiss Government, criticise the authorities' decisions, make fun of democracy, and generally express contempt for the Parliamentary system.

Backed by public opinion, the Federal Government took measures to stop these and similar activities. Last December the Federal Council issued a decree against foreign intrigue and propaganda, providing heavy fines and imprisonment for any who tried to overthrow the constitutional regime of the Confederation or of the cantons. Fines of £100 and three months' imprisonment will be meted out to those who issue or circulate inaccurate news or news so altered as to endanger the Confederation in any way; to those who systematically ridicule democratic principles; and to those who stir up hatred against any section of the people on grounds of nationality, race, or religion. The decree further empowers the Federal Government to dissolve groups or undertakings which come under the above headings, to limit or stop their activities, and to confiscate their property. Offending newspapers may be suspended for periods of six months.

This decree remains in force until, during the present session, Parliament has voted a law to take its place. Although it was at first widely criticised in Switzerland as going too far and constituting a serious threat to the liberty of the Press—since it enables the Government to penalise even those who disagree only on legitimate policy—public opinion is now reassured. From the first it was clear, from their vigorous and widespread reaction, that German-speaking Swiss remained unimpressed and little influenced by Nazi propaganda. It was recently explained by Councillor Herr Baumann, chief of the Federal Department of Justice and the Police, and author of the decree, that there was no intention of threatening Press freedom so long as it was not misused, but only to restrain those who, deliberately and publicly, made a practice of scoffing at institutions which are the essence of Swiss democracy.

This is encouraging; but when the Government comes to discuss the measure, it is to be hoped that it will be very wary of creating what the *Journal de Genève*, last December, called "the crime of opinion."

Trade Alliance with Roumania

[FROM OUR BERLIN CORRESPONDENT]

UNDER the pressure of recent weeks' political events, the German-Roumanian economic negotiations which had been going on for some time were brought to a quick conclusion. Roumania has met the majority of Germany's demands and given up her opposition to a German monopoly of her foreign trade, presumably because she could expect no real and immediate help in resistance from the Western Powers. For the Third Reich, Roumania is an extraordinarily important source of foodstuffs and raw materials, especially since the Russian reservoir is no longer at her disposal and other raw material and food markets are being closed to Germany for political reasons.

The new economic agreement consists of an economic plan to operate over several years during which agricultural

production in Roumania (cereals, fodder, oil seeds, fibrous plants, etc.) is to be adapted to German needs. The same applies to Roumania's agricultural industries and refineries, as well as to her timber and forestry trades. The agreement provides for the exploitation of Roumanian natural wealth by Germans in exchange for German deliveries of machinery and fixed plant.

A mixed German-Roumanian company is to be founded for the exploitation of mineral oil, for working the deposits of copper sulphur pyrites in the Dobrukscha, the chromium ores of the Banat region, the manganese ores near Vatra Dornei-Rosteni and bauxite, and for the establishment of an aluminium industry. The Roumanian system of communications is to be enlarged and extended, and trade is to be facilitated by the creation of industrial and trade organisations, the institution of warehouses and free-port zones.

Germany has bound herself by the agreement to supply Roumania with war material and machinery for the armaments industry. Payments will be made through German-Roumanian clearings. The agreement is something new. It is not limited to the mutual expansion of commercial exchanges by the setting up of quotas, but rather sets out to organise and adapt the Roumanian economy to German needs that Roumania will automatically deliver the greater part of her goods to Germany; and Roumania's cereals, industrial plants, mineral oil and ores are of vital importance to Germany. In effect, Germany now has not only a foreign trade monopoly in Roumania, but also an economic monopoly.

The following figures show how close the connection between the two countries already is:—

ROUMANIAN FOREIGN TRADE

(In million lei)

	Imports	Exports	Germany's share (Germany and Austria)

A Country of Old Men

[FROM OUR DUBLIN CORRESPONDENT]

THE results of the Census of 1936 are now being published, and much interest has been aroused by the statistics dealing with the ages and fertility of the population. Eire is becoming a country of old people. The number of persons aged 65 years and over expressed as a percentage of those between 15 and 64 is 15.4 per cent., the highest in the world. This abnormal age-grouping is the result of the emigration of young people and of the fall in the natural increase of the population. The number of children under five fell between 1926 and 1936 by 6.8 per cent., and this decline was confined entirely to the rural areas. This is stated by the editors of the Census to have been the result of an increase in the average age at marriage and a decline in the fertility of married women from other causes. This decline in the rate of growth of the rural population is productive of many problems in the sphere of education; half-empty schools and redundant teachers are the order of the day.

The reports of the annual meetings of the railway companies were the occasion of much criticism of the Government's transport policy. While it was admitted that the difficulties of the railways were partly caused by the general economic depression in the country, it was emphasised that road competition was not only unfair but expensive in the long run, in that it would prevent the railways from keeping up their services to the public. Complaint was also made of the rising cost of labour and raw materials.

The Dublin Tramway Company is the only bright spot in the Irish transport system. This company, which possesses a monopoly of passenger transport in Dublin, has effected a change-over from trams to buses on many routes, has paid a dividend and has reduced fares. The whole transport problem is being investigated by a tribunal, whose task is by no means easy.

Pig Problems

The Prices Commission has issued a report on the bacon industry which is full of lessons on the difficulties inherent in the public control of business. The Commission states that bacon curers have made excessive profits. Prices have been fixed at a level calculated to remunerate the less efficient producers instead of being allowed to fall, as they would have done in conditions of competition, to the cost of production of the most efficient. The result of the high price of bacon has been that domestic consumption has fallen considerably and, if the consumption of bacon is any measure of the standard of living, the standard has undoubtedly receded. At the same time, the export quota to Great Britain has not been filled. This is owing to the shortage of pigs, the number of which has remained almost stationary for many years.

An increase in the production of pigs is generally agreed to be desirable, and attention is being devoted to this matter in agricultural circles. Pigs are easily produced on even the smallest holding, and there is an almost unlimited market for pigs and their various products—bacon, ham and pork—in the British and Irish markets. Breeding problems have been solved as a result of the enlightened policy of the Department of Agriculture, but advances remain to be made in feeding and housing. The substitution of potatoes, cooked or stored in silos, for cereals, the pasteurisation of separated milk and the erection of sanitary and sunny houses are matters that require attention. Improvements of this kind require capital, but there is no doubt that capital will be rendered available to farmers in sufficient amount provided that the lending agencies are satisfied that its investment will prove genuinely profitable.

Competition in Cotton

[FROM OUR EGYPTIAN CORRESPONDENT]

The failure of agriculture to make headway in the course of recent years is at the root of many of Egypt's present economic troubles. The Crédit Foncier Egyptian has recently compiled the following estimate of the total value of our seven principal crops:—

1934	£E. 54 millions	1937	£E. 53½ millions
1935	£E. 60 "	1938	£E. 49½ "
1936	£E. 50 "		

Whilst an analysis of the figures for the past three years illustrates the declining place held by cotton:—

	1936	1937	1938
	£E.	£E.	£E.
Seven crops	49,902,000	53,496,000	49,591,000
Of which cotton	25,241,000	24,499,000	16,920,000

Since over 90 per cent. of cotton produced is sent abroad, this loss to the trade balance is not made up by the increase in production of other crops, most of which are consumed in Egypt.

The Government has resisted popular agitation for intervention in the cotton market following the decline in values, and proposes to seek relief by increasing exports. For the first six months of the season shipments amounted to only 592,987 bales against 719,317 bales for the corresponding period of last season, and a drive is under way to develop existing outlets and open up new ones. Negotiations have been started with Russia and no time lost in recognising the Franco government. In the meantime, however, India, which takes about 7 per cent. of our cotton exports, has doubled her import duties.

With the totalitarian States the main difficulty resides in the currency. In order to avoid an accumulation of commercial debts, Egyptian exporters have abstained from over-trading with these countries; but this policy may now be dropped. The introduction of a quota system for cotton goods to be linked with sales of the raw article has already marked a departure from free trade practices; and there is a growing inclination, following the unsatisfactory state of the export trade, to give more favourable consideration to barter propositions. This inclination may be strengthened by the German decision to centralise cotton imports and place orders with those countries which are ready to buy industrial products.

It is an interesting commentary on the European armaments race that a large part of the economies made necessary by the burden of arms which Egypt is called upon to shoulder will be at the expense of the Ministry of Public Works, which, in Egypt, is mainly concerned with irrigation and land reclamation. Here is a very clear case of the deleterious effect which preparation for war exerts upon a country's progress towards better standards of living.

SAFETY FOR SAVINGS

In financial strength, the Temperance Permanent Building Society believes itself to occupy the premier position among Building Societies throughout the country. Reserves now represent nearly 19% of the combined share and deposit capital and are greatly in excess of those of any large Building Society with assets of £2,000,000 or over.

3½%

Your capital can earn good interest with absolute security and freedom from fluctuation in London's 85 years old Building Society. Since 1854 The Temperance has earned an unquestioned reputation for sound management and no one who has placed money with it at any time of its existence has lost a single penny or had to wait a day beyond the period of notice for withdrawal. An application form and full particulars will be sent on request.

INCOME TAX PAID
equivalent to £4.16.6 per cent where Income Tax is payable at 5/6 in the £ is now offered on Fully Paid Shares of £25 each and also on Subscribing Shares of £25 each (minimum subscription 4/- per month per share)

War Conditions in China

[FROM OUR HONGKONG CORRESPONDENT]

THE bleak wind generated by the Japanese invasion of adjacent Chinese territory is being tempered to the Hongkong investor by the glowing reports presented by local companies. The Hongkong and Shanghai Bank was the first to bring comfort to shareholders by maintaining its dividend at the same figure as for the past three years, despite the difficulties of banking business in the Far East during 1938. Public utility companies, such as the Hongkong Electric, Hongkong Tramways, Star Ferry and Hongkong Telephone Companies, have all strengthened their position, and with one exception have declared higher dividends.

These results are directly attributable to the influx of refugees, rich and poor, who are estimated to have raised the population of the Colony by about 25 per cent. The effect of this influx is shown by the remarkable figures quoted at the annual meeting of Hongkong Tramways, Limited. The number of passengers carried during 1938 amounted to 59½ millions, an increase of 12 millions, while profits rose by 54 per cent. (The fare charged is equivalent to nine miles for a penny, probably the lowest of any road passenger transport system in the world.)

The hideous methods of Japanese warfare were witnessed from the Fanling Golf Course by many local residents on the last day of the Chinese New Year holidays. Ten Japanese aeroplanes suddenly appeared and began bombing the market town of Shum Chun, about three or four miles away. In the course of the raid, bombs were dropped in British territory and a passenger train was deliberately attacked by bomb and machine gun. Within a quarter of an hour the planes disappeared, leaving over one hundred dead in Chinese territory and twelve killed on the British side of the border.

The incident has led to the re-entry of a large number of refugees who had been persuaded to return to their normal occupation last November, on the strength of an undertaking given by the Japanese commander to the Hongkong Government that no attack would be made on the region bordering British territory without 48 hours' notice. In view of the fact that Shum Chun is an open town of no military value and that all Chinese troops had been either captured or interned in Hongkong when the undertaking was given, there appeared to be no reason to suppose that any further attack on Shum Chun would be found necessary. The number of refugees now being maintained by the Hongkong Government is about 10,000.

Japanese in Charge

Reports from Canton state that the population of the city is still confined to the poorer classes of Chinese, but there is a growing number of Japanese. Such trade as exists is almost entirely in Japanese goods imported free of duty by military transports. Gambling houses and tea shops abound and, as usual in occupied areas, the narcotic traffic is being developed by Japanese agents. A systematic collection of scrap metal is being carried out for shipment to Japan. In the country districts, which are free of Japanese troops, rice mills are starting up again and several silk mills are at work. The output is being transported to Macao for shipment to Hongkong, but considerable risk is run and recently there have been many seizures of junks carrying cargo.

At very short notice the Japanese authorities have given permission for one of the regular river steamers, flying the British flag, to make a return trip to Canton next week. Only passengers and possibly mail will be carried; but no cargo. Whether the ban on shipping is now to be lifted is not known but, with the exception of one steamer carrying relief workers and supplies for refugees, this is the first mercantile steamer to leave Hongkong for Canton since the fall of the city in October.

The chairman's speech at the annual meeting of the Hongkong and Shanghai Banking Corporation was frankly non-committal about politics. Japanese contempt for treaty obligations was deplored. China's efforts to maintain her credit were applauded. But the general effect of the speech was that the sooner the two countries came to terms the better for the world generally. The bank cannot condone the aggression of a powerful neighbour, but the suffering of millions of desperate people is at stake and, until peace is restored, this suffering will be intensified by brigandage in addition to war.

Books and Publications

Canadian Railways

THE magnitude of the Canadian railway problem in terms of mileage and capital involved, and its vital significance for the whole social and economic life of the Dominion, are such as to justify detailed statistical investigation and an exhaustive survey of possible measures for ending a situation which is, incidentally, profoundly disturbing both to investors and the Canadian Exchequer. Canadian railways carry a debt of more than \$80,000 per mile, and their total deficits between 1918 and 1936 amounted to \$1,245 millions.

In both these items a more than proportionate share is attributable to the Canadian National Railways, which as an undertaking have been bankrupt from their inception. They have received direct Government grant aid amounting to \$1,200 millions, and they enjoy Government guarantees and credits to a slightly larger amount. Despite the fact that no adequate allowance is made for depreciation and obsolescence, their deficits (after paying interest on the funded debt in the hands of the public) average over \$1,000,000 per week.

The Canadian Pacific has a much better financial record, but its present position is unsatisfactory—as the most recent returns demonstrate. Traffic densities on a mileage which is greater per 1,000 of population than in any other country except Australia, are low, and operating results show no sign of appreciable improvement. Radical action is patently imperative and the central question is to determine what form it shall take.

Mr Leslie R. Thomson's study* deals with this vast problem with the maximum degree of exhaustiveness open to an independent investigator working without official help. It includes a history of the Canadian railways; a demonstration of their relation to the whole transport system of the Dominion; full comparative analyses of the financial and operating results of the Canadian National Railways and the Canadian Pacific Railway; an examination of suggested solutions for the problem; and, finally, a set of recommendations.

Of Mr Thomson's industry and disinterestedness there can be no doubt. His reasoning from factual findings to concrete proposals is close and conscientious; and some incidental features of his work are indeed remarkable for their scope and originality. For example, his Table 40 demonstrates a method of recording the history of railway amalgamations which is hardly less successful than most existing attempts to present the subject in a more strictly literary form, and Table 177 represents a scheme of reasoning from general principles to specific proposals which is almost worthy of a medieval schoolman.

But the book as a whole is unpardonably wordy and repetitive. Mr Thomson has made the mistake of including within the covers of a single volume what are, in fact, two separate books; one an outline statement of some eighty pages and the other a virtual encyclopædia of the Canadian railway problem. These flaws may prevent his very thoughtful and practical recommendations from securing the attention they undoubtedly deserve.

Briefly, Mr Thomson recommends the common management of all Canadian railways under a single board; and the setting up of a Dominion authority for the regulation of the whole transport structure. This compromise solution, he claims, avoids the pitfalls of a more thoroughgoing scheme of unification, and guards against precipitate action in conditions partly brought about by world depression. Whether it would circumvent the political opposition which has so far prevented any major step forward and checked any effective action on the recommendations of the Duff Commission of 1932 is another question.

There are further difficulties, which Mr Thomson duly notes, arising from the close relationship between the transport system of Canada and that of the United States of America, particularly in the matter of freight rates; and from the complicated legal situation which would arise in the

event of a large part of the Canadian National undertaking being placed in bankruptcy. But Mr Thomson's figures and arguments may be said to give a fairly convincing demonstration that large savings could be achieved by some such plan as he recommends.

Economic theorists will regret that the undue length of the book obscures rather than reveals the interesting possibility of finding in Canada a laboratory for an experiment in railway management comparable in scale to that which has been undertaken in Australia in the matter of labour legislation. The present transport position in the Dominion is sufficiently unsatisfactory to make such an experiment a practical proposition which could hardly fail to give some relief to investors and to the people of Canada.

Shorter Notices

"The Stock Exchange Official Year-Book, 1939." Compiled and edited by the secretary of the Share and Loan Department of the Stock Exchange. Thomas Skinner and Co. (Publishers), Ltd. 3,645+ccxxxv pages. £3 net.

The public has for so long been accustomed to look on this book and its two predecessors as the most comprehensive and authoritative means of comparing Stock Exchange information, that the general excellence of the work's production, arrangement and scope is perhaps too readily taken for granted. In the 1939 edition, details of separate companies and the special tables, lists and articles on various aspects of finance and company practice follow the same useful lines as before. But a new section has been added for securities guaranteed under the Trade Facilities and other Acts, and the iron, coal and steel section is preceded by a summary of the 1938 Coal Act.

THE BUSINESS WORLD

London Transport Finance

DURING the past fortnight the Railway Rates Tribunal has been occupied by a joint application of the four main-line railways and London Transport for an increase in passenger fares in the London area. This is the first occasion on which the Tribunal has been called upon to exercise its jurisdiction under the London Passenger Transport Act of 1933, and in many ways the proceedings are unusual. The railways' application is explicitly for power to increase fares in respect of suburban passenger services by approximately 5 per cent.—the same rate of increase as was awarded by the Tribunal for the rest of the country in 1937. But the companies are unable to plead on the present occasion, as they could in 1937, the standard revenue provisions of the Railways Act of 1921, since these provisions are specifically excepted from the purview of the London Transport Act of 1933. For its part, London Transport already possesses the necessary legal powers to increase its fares, to the extent proposed, without seeking the sanction of the Tribunal—apart from an insignificantly small proportion which arises from joint lines. In brief, the various parties to the London Passenger Pooling Scheme envisage an increase in receipts, if their applications are granted, of some £1,179,000, of which only £220,000 needs the formal sanction of the Tribunal. Towards this sum it is estimated that the railways would provide £515,000, and after the operation of the pooling scheme would receive £447,000—divided as follows: L.N.E.R., £71,000; L.M.S., £60,000; Great Western, £16,000; and Southern £300,000. The Board would add £664,000 to the Pool and receive £732,000 after pooling.

It would be improper in any way to anticipate the findings of the Tribunal in regard to this joint application. Its jurisdiction, so far as London passenger fares are concerned, is wide, and its decision is not subject to appeal. Hence its responsibility is correspondingly great, not only towards the participants in the Pooling Scheme, but also towards the 4,317,979,132 passengers who travelled in the London Transport area last year. But, quite apart from the merits of the application, the evidence which has been submitted is of particular value for the London Transport "C" stockholder. On November 5th, last year, *The Economist* ventured the suggestion that the Board might in future publish its pooled receipts, in addition to its weekly gross contribution to the pool, since the latter was an inadequate—and, on occasion, misleading—guide to the Board's effective receipts after pooling. The proceedings during the past fortnight have thrown much valuable light on the operation of the London Transport pool, which has hitherto been shrouded in mystery. No apology, therefore, is needed for an examination of the evidence on this matter to the exclusion of other factors.

Under the 1933 Act the Board and the main-line railways are required to set up a pooling scheme, to which the whole of the passenger receipts of the parties, arising within the London Transport area, shall be contributed. From these receipts operating allowances, based on mileage run, are deducted, and "additional allowances" are provided for new capital expenditure. Finally, the parties share in the net balance of the Pool on the basis of a standard year. The account for the standard year—1932—which has been submitted to the Tribunal shows how the Pool proportions were originally built up. The passenger receipts of the parties (including joint lines) amounted to £38,354,842 for that year, of which London Transport undertakings accounted for £27,996,993, or 73 per cent. From these

gross contributions, operating allowances were deducted, totalling £22,122,610, of which the Board's share was £18,091,686. Hence, of the net pooled receipts of £16,232,232, the Board was responsible for £9,905,307 in the standard year. These figures, however, were adjusted to give effect to capital not fully remunerative and to participation in joint lines, and the total effect is summarised in the following table:—

POOL ASCERTAINMENT FOR STANDARD YEAR 1932

	London Transport	G.W.R.	L.M.S.	L.N.E.R.	S.R.	Total
Passenger receipts	27,996,993	461,809	1,537,770	2,204,353	5,701,281	38,354,842*
Operating allowances	18,091,686	271,228	790,353	1,238,519	1,637,990	22,122,610*

PROFESSOR ERNEST WEEKLEY (Observer)

HARRAP'S STANDARD French and English Dictionary

Edited by J. E. MANSION

"Scholarly though it is, this dictionary is the workaday volume we want," said *The Economist*. "Very nearly all things to all men." Though the business man may not necessarily require references for the latest scientific and engineering terms he will want to know the exact equivalents for phrases in his market reports and in writings on political and economic subjects. With this dictionary on his shelf he has a standard authority he can consult with complete confidence. Every office that has contacts with French speaking countries should invest in this great dictionary.

HARRAP (Dept. 7) 182 HIGH HOLBORN, LONDON, W.C.1

62.10364 per cent. at the expense of the main-line companies. Its application to the traffics of each year, however, is somewhat complicated at first sight. Exhibits have been placed before the Tribunal showing the Pool accounts for each year since 1933-34, together with an estimate in respect of the current year. For purposes of illustration, it may be convenient to set out, in summary form, the results for 1937-38, and the current year's estimate, which appear below:—

LONDON PASSENGER POOLING SCHEME
(Including allocations from joint lines)

	Main Line Companies				London Transport	Total
	L.N.E.R.	L.M.S.	G.W.R.	S.R.		
Year to June 30, '38						
Gross contributions	2,364,224	2,213,714	603,802	6,908,424	29,820,013	42,120,179
Operating allowances	1,271,593	861,134	295,951	1,896,283	19,886,987	24,211,948
Additional allowances	1,746	7,472	344	106,385	138,400	254,347
Total allowances	1,273,339	868,606	296,295	2,002,668	20,025,387	24,466,295
Pooled receipts	1,290,885	1,355,108	307,507	4,905,758	9,794,626	17,653,884
Pool proportion	1,059,096	896,841	235,138	4,499,104	10,963,705	17,653,884
Receivable from or payable to the pool	231,789	458,267	72,369	406,654	1,169,079	...
Gross receipts after pooling	2,332,435	1,745,447	531,433	5,501,772	30,989,092	42,120,179
Estimate for year to June 30, 1939						
Gross contributions	2,516,000	2,205,000	577,000	6,934,000	30,119,000	42,351,000
Total allowances	1,301,000	881,000	297,000	2,156,000	20,494,000	25,129,000
Pooled receipts	1,215,000	1,324,000	280,000	4,778,000	9,623,000	17,222,000
Pool proportion	1,033,000	875,000	229,000	4,389,000	10,696,000	17,222,000
Receivable from or payable to the pool	182,000	449,000	51,000	389,000	1,071,000	...
Gross receipts after pooling	2,334,000	1,754,000	526,000	5,545,000	31,190,000	42,351,000

This table goes far to explain the disparity between the Board's weekly traffics and its effective receipts after pooling. In respect of 1937-38, the "C" stockholder has hitherto known merely that the gross receipts for the 52 weeks to June 25th amounted to £29,388,200, and its receipts for the full year, after pooling, to £30,758,440. Stockholders may have sought in vain to relate this latter figure to the Pool's total receipts of £42,120,179 by applying the Board's Pool percentage of 62.10364 to the total. The fact is, of course, that the Pool percentage is applicable, not to gross contributions, but to pooled receipts after deducting the operating and capital allowances. The operating allowances are in fact calculated by taking the actual cost per mile of the vehicle or train, as the case may be, and multiplying by the number of miles run in any given year. Additional allowances are made for capital expenditure since the Pool was formed. Hence, in 1937-38 the Pool proportions were applicable not to gross contributions (which totalled £42,120,179), but to pooled receipts after operating and additional allowances (which totalled £17,653,884). After applying the percentages, the Pool proportions to which the parties are entitled are shown, and these differ from their pooled receipts. For example, the pooled receipts of London Transport last year amounted to £9,794,626, but the Board's Pool proportion was increased to £10,963,705 by net contributions payable by the main-line companies to the Board. These contributions, totalling £1,169,079, represent the difference between the pooled receipts and the Pool proportions due to the main-line companies.

It is necessary to guard against any misconception regarding the nature of these differences receivable from or payable to the Pool. To take the case of the Southern Railway, it would, of course, be wrong to suppose that the operation of the Pool last year diverted from the company the sum of £406,654 which, but for the pooling scheme, would have been available to swell the Southern Railway's net revenue. In large part, it represents takings for services not performed by the company, in respect of through tickets. In any case, it is a figure arrived at by the application of principles laid down by statute. The final step, having calculated the Pool proportions, is to deduct or add back differences to the gross contributions of the five parties in order to ascertain their gross receipts, after giving effect to the pooling agreement.

The pooling scheme has been well described as a hybrid, and part of its apparent complication arises from the fact that it is necessary to avoid yearly recalculation of the

respective shares of the parties. The accurate ascertainment of the rights of each party is a complicated matter, and the operating and new capital allowances are designed to avoid annual revision of the proportions. Save in the unusual event of a material alteration of circumstances, the respective partners share on an equitable basis, and this also forms the foundation of their joint application.

In order to round off the argument, at the risk of introducing a further complication, it remains to relate the Board's gross receipts after pooling last year to the actual sums shown in its accounts to June 30, 1938. The table opposite shows the figures for the pooling parties, including their respective interests in joint lines. But the Board's revenue account suggests that receipts from joint lines are included as net income under "other receipts" and not as gross passenger traffic receipts. Hence, to compare the gross passenger receipts of £30,758,440 shown in the Board's last report with its share in the Pool last year, it is necessary to divide the latter (shown opposite at £30,989,092 between the Board proper and the pooled contributions it receives from joint lines. These two figures are £30,787,207 and £201,885 respectively, and the former compares closely with the Board's gross receipts. Expressing the latter as a percentage of its gross contributions to the Pool gives the following results:—

	LONDON TRANSPORT ONLY		Pooled Receipts as % of Contributions
	Gross Contributions	Gross receipts after pooling	
1933-34	27,685,937	28,274,994	102.1
1934-35	28,194,375	28,921,872	102.6
1935-36	28,657,642	29,554,620	103.1
1936-37	28,840,354	30,101,491	104.5
1937-38	29,501,107	30,787,207	104.4
1938-39 (est.)	29,807,000	30,990,000	104.0

The comparative basis, admittedly, is crude, but the implication for the "C" stockholder should be obvious. In the past two years the Board's takings have been increased, after pooling, to the extent of 4½ per cent.

Meanwhile, what are the prospects for the near future? The estimated Pool account for the current year shows an increase in London Transport's gross receipts, after pooling, from £30,989,092 to £31,190,000. After excluding the income-tax windfall of £230,000 which arose last year, the Board's deficit below standard 5½ per cent. interest on the "C" stock was approximately £618,000. Hence, if the estimate for the current year is realised, the outlook would not appear to differ greatly from the results of last year, since the tax credit would be roughly counterbalanced by £200,000 additional gross receipts.

That, however, is not the conclusion of the story. Evidence this week has suggested that the Board contemplates an extra deficit of the order of £100,000 in the current year. Certain operating costs have increased. Various authorised commitments, including A.R.P. work, may make a severe call upon the maintenance reserve, which stood last June at £386,638, after being credited with £340,000 from revenue. Finally, an important point arises with regard to new capital works. These extensions come into operation at various dates, commencing this year, and their earnings at first may not be wholly sufficient to meet the interest charges against revenue. Last year the revenue account was spared a charge of £215,292 under this head, which was debited to capital account, out of the total interest charge of £351,841 payable to the London Electric Transport Finance Corporation. The conclusion, therefore, must be that, even if the present applications succeed, and the Board receives its estimated benefit of £732,000 from the Pool, there will be no substantial margin to provide for a reserve fund. Further distant, in 1943-44, there lies the problem of making provision for the redemption of the Board's prior stocks, though provision may only be made after payment of the standard dividend on the "C" stock.

Hence, it may be that, on the basis of the application, the Board may succeed in providing sufficient revenue for standard "C" stock dividends, but it will be with a narrow margin. But on this point the Tribunal has first to speak.

10-HORSE SENSE

There is no other car in the world which offers such value as the Vauxhall Ten. Consistently improved since its introduction, over 25,000 have been sold.

Ordinary horse sense says "get value for money." 10-horse sense says "that means a Vauxhall."

Why not try one to-day

Your Dealer — without obligation — will arrange for you to drive a Vauxhall Ten fitted with a special test tank. Check petrol consumption and performance together.

DEPENDABILITY: Vauxhall designers do not regard reliability as a crowning triumph. They start by assuming it to be essential.

COMFORT: Any car can be comfortable when it is stationary. The Vauxhall Ten is comfortable at any speed, thanks to the special system of independent springing.

ECONOMY: The only Ten that gives a genuine 40 m.p.g. with normal driving, without any sacrifice of performance.

PERFORMANCE: There when you want it. Even if you don't use the high speed and brilliant acceleration, the fact that there is power in reserve means easier driving.

SAFETY: All steel construction. Hydraulic brakes. All controls handy. Safety glass all round.

MECHANICAL FEATURES INCLUDE:
All-steel chassis - less construction: trouble-free independent springing: controlled synchromesh: hydraulic brakes: inverted handbrake lever under dash: overhead valves: six-phase carburation: fully counterweighted crankshaft: compensated voltage control.

EQUIPMENT INCLUDES: Safety glass all round: self-cancelling direction indicators: twin mechanical windscreen wipers: rear side arm rests: cubby holes in instrument panel: body conformity front seats (adjustable). Luggage boot at rear. On de Luxe Saloon (£175), No-draught ventilation, sliding roof, etc.

VAUXHALL 10

There are also Vauxhalls of 12 h.p., 14 h.p. and 25 h.p. at prices from £189 to £630. All are available on convenient terms. A postcard to Vauxhall Motors, Luton, Beds, will bring unusual and interesting literature.

A Plan for the Gas Industry

ONE by one the basic industries of the country are coming under the detailed scrutiny of a P E P report, in the search for means to increase their efficiency and to mould their future development in accordance with the national interest. The reputation of these reports is based partly on their expert and impartial character, but mainly on the fact that, unlike the innumerable schemes for the nationalisation of this, that or the other industry, they are not content merely to set up a framework of controlling machinery, but investigate the fundamental economics of each industry as it comes under the microscope.

In no branch of the economy is the substitution of a well thought-out national policy for haphazard development as urgent and necessary as in the utilisation of our coal resources. The P E P reports on the coal and electricity supply industries contained a wealth of material as well as positive suggestions which should be valuable in the elaboration of a national fuel policy. With the publication of its report on the gas industry* this week (which necessarily traverses some of the ground already covered by Mr P. Chantler in his recent study†), the preliminary spade-work has been carried a further stage forward.

During the first half of the nineteenth century the development of the gas industry was left largely in the hands of private enterprise, and there was little public regulation of the fierce competition in the industry until the middle of the century, when it was already emerging from its "teething" period. It was then that local authorities, often the principal consumers as street lighting authorities, themselves began to construct gas-works or to acquire existing companies. Moreover, in 1847, the surveying officers of the existing system of lighting towns with gas reported that "the existence in the same town of two rival gas companies does not appear to us to benefit the consumer"—one of the first dawning doubts of the pure gospel of *laissez faire*. They considered that the duplication of capital equipment "must inevitably serve in the end to raise the general price of gas." Direct competition between gas companies was largely abandoned in the fifties, and the industry subsequently developed on the basis of a local monopoly, sanctioned by Parliament, subject to a measure of public control of prices and profits.

With the passing of the Electric Lighting Act of 1882, the gas industry lost its lighting monopoly, and the period up to the War witnessed a transition of its principal function from the supply of light to the provision of heat. After the Great War the industry was challenged in all its functions by the rapid growth and the increasing cheapness of electricity. But although the gas industry was condemned to the list of declining industries years ago, it has so far contrived, by enterprise and technical progress, not only to hold its own, but even to increase its output. During 1937, for example, the output of the gas industry in terms of energy was still twice as large as that of the electricity supply industry. Gas provides direct employment for some 125,000 persons, serves about eleven million consumers (10 per cent. of whom supply about one-half of the industry's total revenue), and has capital assets estimated at £200 millions. The present uses of gas are roughly as follows: domestic, 60-70 per cent.; commercial, 10-20 per cent.; industrial, 10-20 per cent.; public lighting, 5 per cent.

The future of the gas industry depends largely on the comparative convenience and price of gas and other forms of light, heat and power. An estimate of the cost of production and distribution of gas applicable to undertakings in neither particularly favourable nor unfavour-

able circumstances, given in the P E P report, is shown below:—

COST OF GAS IN PENCE PER THERM				
Manufacture	...	...	...	d. 4½-6
Less income from coke and other residuals	...	...	...	2-2½
				2½-3½
Distribution	...	...	...	1-1½
Capital charges	...	...	...	1-1½
Total	...	...	...	4-5½
Sales, service and maintenance (less rental account)	...	...	...	1-1½
Capital charges thereon, say	...	...	...	1-1½
Management	...	...	...	1-1½
Rates	...	...	...	1-1½
Miscellaneous	...	...	...	1-1½
Total	...	...	...	6½-9

After comparing the relative advantages and prices of gas and electricity the authors of the P E P report conclude that the forecast of the Fuel Research Board made in 1919 has not been invalidated. The Board then reported that the sheet anchor of the gas industry in the future must necessarily be its possession of the cheapest known means of distributing potential heat energy in a convenient form. For lighting and power production the electricity supply industry of the future might seriously contest the field with the producers of gas; but for the supply of heat gaseous fuel ought to remain supreme if its production and use were developed on sound lines.

So far as coal is concerned, gas may provide an economic alternative, unless means can be discovered of using raw coal with high combustion efficiency and without the production of smoke. For domestic purposes, where the efficiency of coal appliances is apt to be low, gas at 9d. to 10d. per therm is considerably more expensive than coal for continuous heating. Even at this price, however, gas has justified its use by convenience and flexibility, for cooking and intermittent use. At between 4d. and 6d. per therm, on the other hand, gas can compete with raw coal at 50s. per ton for continuous heating and, indeed, for all domestic purposes.

Competition between gas and oil is most marked in the case of small-scale steam raising and central heating. As both fuels are of virtually equal convenience price is the determining factor. At between 3d. and 4d. per therm gas can compete favourably with oil at 70s.-80s. per ton.

Gas coke is used chiefly for domestic and commercial central heating, hot-water supply and for the open fire. For medium and large-scale use coke at 37s. to 40s. can compete effectively with raw coal and oil and corresponds to gas at about 3d. per therm and electricity at ½d. per unit. For the open fire coke is at present sold at 40s. or more per ton; but it competes usually with old-fashioned coal grates and ranges of low efficiency, and may show a distinct saving compared with raw coal.

The P E P survey thus reaches the conclusion that the gas industry still has considerable scope for expansion. Its present difficulties arise largely from the fact that gas is subject to severe competition in all its functions, whereas one of the main competitors, electricity, enjoys a virtual monopoly in the lighting of newly-built houses and in some kinds of power demand, i.e. over a large part of its field. This advantage enables the electricity supply industry to resort to the differential price system in a way that the gas industry, having no secure and important monopoly load, is unable to follow. It is essential that the gas industry should re-examine its price structure in relation to the nature of its production and distribution costs in order to secure and enlarge its markets by making the fullest possible use of such price differentiation as is open to it.

Secondly, in the view of the authors of the report, some measure of reorganisation of the structure of the industry is essential if it is to flourish. While the authors

do not subscribe to the view that gas ought to be manufactured in a small number of very large plants and distributed over long distances, on the lines of the electric "grid," they do hold that the number of small, independent undertakings should be appreciably reduced. In their view an annual output of 1,000,000 therms is big enough for economic operation; but on this basis, 1,070 of a total of 1,250 undertakings are too small. Moreover, there should be co-ordination of technical and commercial policy and an improvement in the quality of the industry's personnel.

In order to bring about the speedy reorganisation of the industry, a central impulse and guidance seem to the authors of the report to be essential. In the absence of national planning, sporadic attempts at grouping or bulk purchase of gas, and the extension of holding company control (there are at present 18 holding companies controlling 242 undertakings and producing 9 per cent. of the total output of gas by all statutory undertakings in Great Britain) may sometimes proceed in a way which will render subsequent planning more difficult.

Briefly, the P E P scheme envisages the organisation of the industry on the basis of (a) the small local unit

dealing directly with the consumer, (b) the regional group planning production and supply in the region as a whole and giving direction and support to the local unit, and (c) the National Gas Authority seeking Parliamentary powers to group undertakings by regions, to co-ordinate production, distribution and marketing policy, and to deal with commercial development, recruitment and training of personnel, research, public relations, and other national responsibilities of the industry. Finally, while the National Gas Authority would thus be responsible for the development of the industry, ultimate Government control in the interests of consumers might be transferred from the Board of Trade to a body of expert gas commissioners on the analogy of the Electricity Commissioners, subject to Parliamentary control.

It has not been possible to do more here than pick out a few of the wealth of facts and suggestions contained in this painstaking survey of the gas industry which embodies no less than five years' research. The impression left after careful study of the facts is that the gas industry is still full of vitality, but that its future depends in no small measure on its ability to adapt itself continually to changing circumstances.

Finance and Banking

The Rise in Discount Rates.—The rise in discount rates has made considerable headway over the past week. This is particularly true of longer-dated paper, the fine six months' bank bill being quoted at 1½ per cent. to over. The main jump in this upward progression of rates was made at last week's tender for Treasury bills, when the discount market syndicate obtained no less than 73 per cent. of its applications on the basis of a rate of discount of 15s. per cent. This was, from the point of view of the market, a much more favourable result than had been expected, and the fact that although so large a proportion of the bills was issued on a basis of 15s. per cent., the actual average rate of discount should have worked out at no more than 14s. 7d. per cent. shows that many "outside" tenderers paid much more than they need have done for their bills. The reasons for the steepening in the rise of discount rates are many. In the first place, the changes in the international situation have obviously been calculated to make for a mood of caution which finds its expression in a harder tendency of discount rates. Secondly, the fact that the bills to be tendered for included the June 30 maturities may paradoxically have been partly responsible for the decision of the market syndicate to base their tenders on a high rate. This is because the authorities, at the end both of March and of September, try as far as they can to leave the Treasury bill tender to the market and to withhold semi-official tenders normally made through the agency of the Bank of England. Their reason for doing this is that the end-June and end-December bills will ultimately be needed by the banks, and must therefore be made available to them through the discount market. Normally, the unofficial outside competition for the end-June or end-December bills is sufficient to keep the rate for these popular maturities low. But on this occasion this competition was largely neutralised by the considerable encroachment on foreign and other "outside" bank resources of two factors: the employment of funds in dollar swap operations which yield over 1½ per cent. for one month as against ¾ per cent. for three months on Treasury bills; and, secondly, the tying up of a considerable amount of credit in the financing of arbitrage gold shipments across the Atlantic. Consequently, the discount market "syndicate" had the tender for the June 30 bills virtually in its own hands and used the opportunity to good account. Ignoring the influences acting on the discount rate from the direction of international politics, the level of these rates should tend to fall once the special factors now acting on the short-term credit position, including the incidence of the end of the quarter, have spent their force. But it should not be forgotten that a considerable expansion in the supply of Treasury bills may be in prospect.

Record Gold Shipments.—The pressure by hoarders to sell gold and buy dollars had in the main spent itself by the latter part of this week. The turnover at the daily gold fixings has been moderate, and last week's abnormally large post-fixing deals have disappeared. The authorities, however, have deemed it necessary to maintain the level of gold arbitrage shipments to the United States at a comparatively high level in order to support the sterling exchange. As reselling from hoarders has not been adequate to provide the necessary supply of gold, the Exchange Account has on most days of the

† The British Gas Industry. By Philip Chantler. Manchester University Press. 7s. 6d. net.

week supplied some gold in the market. The main interest of the market, however, has been the completion of the large shipments arranged last week. These shipments have been running at record level. Following last week's exports of £14,701,000 of gold to the United States, a further £34,260,000 was exported during the seven days to Thursday of this week. The greater part of the past week's shipments consisted of official gold—both Exchange Account gold shipped against recent official sales of dollars in the foreign exchange market, and Continental central bank gold being transferred from London to New York as a precautionary measure. The pressure of these official shipments has been sufficient to strain the insurance machinery, and once again reinsurance of gold has been arranged at figures ranging up to ten times the customary premium of 1s. per cent. charged on "open cover" policies.

Exchange Accounts and Gold Movements.—All Exchange Equalisation Funds have taken elaborate measures to safeguard the secrecy of their operations. The United States authorities, who believe in giving the public all the facts, have agreed to oblige the European Exchange Equalisation Accounts by withholding information about the changes in their gold held under earmark in New York. Yet, when it comes to an acute tension, the European monetary authorities usually give themselves away by arranging heavy gold shipments to New York exactly at a time when such transactions are liable to attract the maximum of publicity. It would have been easy for the British, Swiss, Dutch and Belgian authorities to build up a formidable gold reserve in New York, in anticipation of the next attack on their currencies. That such an attack was a mere question of time has been obvious even to the layman ever since the Munich agreement. It would have been a matter of common sense to take advantage of the period of political lull gradually to transfer a really substantial part of the European gold reserves, at a time when such transfers would have been regarded as a sensible measure of precaution, and not as a panic measure or as an evidence of a flight of capital to the United States. While this was done to some moderate extent, the amounts accumulated in New York were evidently not sufficient. Since the invasion of Czecho-Slovakia the various monetary authorities have decided to dispatch across the Atlantic substantial quantities of gold. The evidence of such a gold rush—coming as it does in addition to arbitrage shipments connected with dishoarding—was bound to produce an unfavourable psychological effect. Even though the relative share of the various Exchange Accounts in the gold transfers is not known, on such occasions the public is inclined to suspect the worst whenever any particular currency is under fire.

MONEY MARKET NOTES

Foreign Exchanges

BUSINESS in the sterling-dollar exchange has, on the whole, been of small proportions and fluctuations in the spot rate have been narrow. Nevertheless, Control support has been necessary for the greater part of the week to maintain the pound at the level of around 4.68½, as selling pressure, though slight, has been persistent. On Wednesday it increased to an extent that induced the Control to drop the peg to 4.68½, at which level the pound was held for the rest of the day. A more disquieting sign was the bigger purchases of forward dollars. The premium for the three months' forward rate, after widening to 2c. last Saturday, contracted to 1½c. on Monday, but increased sharply on Wednesday to 2½c., while that for one month rose on the same day from ¾c. to ¾c. On Thursday the market

was quieter again, and rates were virtually unchanged from the previous day. Francs have been very steady and have tended to appreciate against sterling, the spot rate on Thursday afternoon being quoted at 176½, compared with 176½ at the end of last week. The discount on forward francs has again contracted and is tending to run off altogether for the one month franc. This presumably reflects the confidence felt in the ability of M. Daladier's Government to maintain the value of the franc rather than reassurance over the international situation. Swiss francs have been rather erratic; on Thursday the Swiss Control altered its peg in face of the adverse pressure, and the rate in London rose to 20.88½ to the pound. The Brussels spot rate has tended to move in sympathy with the dollar and appreciated against sterling on Tuesday and Wednesday. Uneasi-

ness over the Belgian political situation, however, is apparent in the widening of the forward discounts, which on Wednesday were 30½c. and 70½c. for one month and three months, respectively. The South African Reserve Bank has raised both its buying and selling rates for sterling by 5s., as a result of the high insurance rates on gold shipments.

The Bank Return

THE Issue Department's gold has this week been valued at Wednesday's fixing price of 148s. 6d., which is 1d. higher than last week's price. The consequent increase in the value of the gold holding has been transferred not in gold but in cash, thus reversing the action taken three weeks ago. The drain on the Reserve resulting from the increase in the

Building Societies Bill.—The promised Government Bill to amend the law relating to building society advances bears some evidence of the effect of the "Borders" case in its provisions. Broadly, it may be said that it lays down statutory rules for the administration of advance business supported by collateral security which have been followed, and would be endorsed, by most responsible societies. As expected, it gives specific validity to existing advances covered by collateral security. It then defines six classes of collateral which will be permissible in future, including charges upon life assurance policies; guarantees by insurance companies; guarantees by local authorities; charges given by members on cash or trustee securities; guarantees accepted by the society with the written consent of members; and "guarantees given in pursuance of a continuing arrangement" as defined by a Schedule. It is this last class which, in plain terms, covers builders' pool collateral, over which control will be strict. Advances supported by builders' pool guarantees must not exceed 95 per cent. of the purchase price involved, while the society's basic advance is limited to 75 per cent., and, hence, the excess advance may not exceed 20 per cent. In respect of the first five guarantees (in other words, houses sold and supported by the builder's covenant) the builder will be required to make a deposit of the whole excess advances involved, and for subsequent guarantees not less than one-third of the excess advance. These deposits will be generally available as security for such sums as become due to the society, and the builder's guarantee will not be released until the advance in question has been reduced to two-thirds of the purchase price of the property. Detailed regulations for the withdrawal of collateral deposits are also provided. If societies wish to retain their rights of recovery in transactions where collateral security is taken, they must give notice in writing to the member, stating whether the advance includes an excess advance. Moreover, a society shall be deemed to warrant that the purchase price is reasonable, unless it gives the member notice stating that no warranty is implied. Penalties will also be inflicted if representations are made by financially interested parties that the making of an advance implies an assurance that the estate is sufficient security for the advance. In a widely-drawn clause, the Bill seeks to make illegal the offer of any commission, gift or favour for the introduction of business to a society—a point which appears to involve legitimate agency business, though its intention, to prevent an undesirably close connection between builders and building societies, is undoubtedly salutary. First impressions suggest that the Bill will provide a workable and reasonable measure for the protection of the public, and will be welcomed by those leading societies who have urged the dangers of the more extreme forms of competition which have become manifest in the past year or two.

note circulation of £4.6 millions to meet end of month requirements has therefore been offset to the extent of

the small increase. In the Banking Department the deflationary influence of the bigger note circulation has been more than counteracted by the switch-over from public to bankers' deposits. As noted in the money market section, the market syndicate concentrated its payments for last week's Treasury Bill allotment on Thursday, and the drop in public deposits reflects this action. The expansion in the note circulation has also been neutralised by an increase of nearly £3 millions in Government securities. In the event bankers' deposits show a net rise of £6.3 millions, which explains the easy credit conditions in spite of the sharp rise in discount rates.

The Money Market

THE discount market's success at last week's Treasury Bill tender is discussed in a Finance Note. The fact that it had concentrated the bulk of its payments on Thursday of this week accounts for

the comparative monetary ease during the early part of the week. This was especially the case on Tuesday when maturities were considerable; and accommodation was readily forthcoming

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

at the usual ½ per cent. against bills, even bond money being available at ¾ per cent. in the afternoon. Even on Thursday money remained in comfortable supply, although, in view of the large amount of bills to be taken up, some stringency had been expected. The firmer tone established in the discount market has been maintained. There has naturally been less demand for commercial paper, and the three months' fine bank draft on Thursday was quoted at 7-1½ per cent.

The Bullion Market

GOLD movements resulting from the recent activities in the bullion market and Control operations are discussed in a Finance Note. One reason for the contraction in the daily turnover described therein was the absence of shipping facilities in the early part of the week. This caused many sellers of gold to hold up their offerings until arbi-

INSURANCE NOTES

a^(m) and a^(f) 3 per cent. The resulting reserves are stated to be larger than would have been required on the previous basis, but the additional cost is not given. Hence the effect is to reduce the surplus shown for the past quinquennium:—

	1929-33	1934-38
Surplus earned during quinquennium	2,394,235	1,815,529
Brought forward	363,651	378,826
	2,757,886	2,194,355
Allocations:—		
Policyholders' bonuses	1,691,002	1,617,050
Strengthening actuarial reserves	160,000	99,414
Investment reserve	199,811	328,247
Written off assets	378,826	477,891
Carried forward	2,757,886	2,194,355

Of the carry forward of £477,891, the sum of £343,608 represents a reserve in respect of policies not yet entitled to participate and, in this sense, is not a free surplus. This office has a distinctive system of bonus distributions in the whole life class, under which policies begin to participate in profits when premiums accumulated at 4 per cent. per annum compound amount to the sum assured. Policies effected on the old scale of premiums and now participating for the first time receive a bonus at 28s. per cent. in respect of each complete year of duration up to December 31, 1938, excluding the years 1914-1918, compared with 30s. per cent. on the last occasion. Policies which have already participated receive additions at rates varying from 30s. per cent. to

trageurs were in a better position for absorbing them. On Wednesday, however, the weaker trend in sterling encouraged unhoarding of gold in the expectation of a higher price, and the

* Above or below American shipping parity. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

turnover at the fixing rose to £945,000 while subsequent dealings brought the day's total to about £1,100,000. As pointed out in the Finance Note, the Exchange Account has had to supply some of the arbitrage demand; but as is usual on the last day of the week, when the exchange market is very narrow, last Saturday the Account was unwilling to act as seller. The price was quoted at par with the American shipping parity; and this gave a direct encouragement to arbitrageurs who, as a result of the very small amount on offer from private sources, were able to obtain less than half of their requirements. There has been little interest shown in the silver market. Buying has been chiefly by American operators, while most of the sales have come from speculators.

36s. per cent. per annum, compared with from 30s. per cent. to 40s. per cent. per annum five years ago. The whole life premium rates were reduced in 1928; for this class of policy, reversionary additions at the rate of 15s. per cent. per annum are allotted, whether for the first or subsequent participation. Endowment assurances receive a bonus of 35s. per cent. per annum compound, compared with 38s. per cent. in 1933. New sums assured last year amounted to £3,159,000 against £3,313,000, and the net rate of interest fell by 2s. 5d. per cent. to £3 15s. per cent. Death claims were smaller by £140,000 at £876,000, and the incidence of the claims is stated to have been favourable. Total assets amount to £25,755,000, showing an increase of £329,000 on the year. Mortgages and loans were practically unchanged at £1,787,000, but British Government securities were £582,000 smaller at £8,452,000. Foreign and Colonial Government securities and debenture stocks show little change from the 1937 totals of £1,497,000 and £3,467,000 respectively, but preference shares increased from £2,885,000 to £3,006,000 and ordinary shares from £3,478,000 to £3,921,000. The middle market prices of the Stock Exchange securities at December 31 last are in excess of the aggregate book values, but the amount of the difference is not revealed. The investment reserve fund remains unchanged at £600,000.

Investment

Political Markets.—The remarkable present fact about the security markets is their lack of crisis mentality. Of the past week's dealings it would be true to say that the markets' political concern has varied in inverse relation to their impression of the extent to which British Government policy was strengthening. It is not the war risk, as such, which has dominated the market's moves, but the search for signs that this risk may be met in a more resolute spirit. It was significant, for example, that the announcement of the strengthening of the Territorial Army on Wednesday produced a firmer close after a really weak opening, particularly in the gilt-edged market. Nervousness regarding the Central European situation and, in particular, the Polish situation has in no way abated, but the market remains extremely narrow, and in certain direc-

American: *Standard Statistics* Index of 50 Common Stocks.

tions, at least, it is still difficult to make reasonably large investment purchases. As the accompanying chart plainly shows, the past fortnight has robbed Wall Street of the whole and Throgmorton Street of nearly the whole of the recovery of the previous six weeks. In London, *The Financial News* ordinary share index, which fell to 73.7 at the end of January, has reacted from its high point of 88.0 on March 10th to the uneasy ranges of the 80's. Some investors may be agreed that defence borrowing on the projected scale must underline the long-term attraction of equity shares, but they are certainly abstaining from putting the argument into action. In Wall Street the reaction of common stocks seems to be attributable mainly to political fears, but also to a certain disappointment that American recovery this year has so far been lame.

The "House" Prepares.—At an extraordinary meeting, on Tuesday, the Proprietors of the Stock Exchange passed, without modification, the two special resolutions submitted by the Trustees and the Managers, which were outlined in *The Economist* of March 18, page 574. The validation of these resolutions requires

the active support of proprietors holding two-thirds of the total votes exercisable on a poll, and the laborious task of securing the necessary quota by individual writing is now in progress. The relaxation of the Deed of Settlement to reduce the necessary proportion from two-thirds to a simple majority is, in fact, the second of the objects of the present Resolution No. 2. The proposed amendment also includes provision for an "emergency procedure," since under present-day conditions, the proprietors' interests might be seriously imperilled if the Trustees and Managers were unable to act by Special Resolution within a period which, for administrative reasons, can hardly be less than 2½ months. If the Trustees and Managers certify that the implementation of any resolution is a matter of emergency, and a copy of their decision has been included in the notice convening the meeting, it will become immediately operative when passed and confirmed by the requisite majority of proprietors attending the meeting. There was no discussion on the proposed alteration of the voting procedure or of the emergency provision. Resolution 1, extending the definition of the word "Members" so as to include corporate bodies, which is necessary to carry into effect the Committee's scheme for allowing firms to form themselves into unlimited liability companies, was also accepted without criticism. A small minority, however, was evidently somewhat dubious about the powers proposed to be conferred upon the Trustees and Managers to acquire property outside the City, in anticipation of the need for alternative accommodation during a state of war or other emergency. There were, however, only 12 dissentients when the resolution was put to the vote. It can be assumed that the report that definite decisions have been taken to acquire alternative accommodation is incorrect, Mr Cripps, who presided, intimated that a number of factors were under consideration, including the possibility of an arrangement with Provincial Exchanges. The interests of both members and proprietors appear to be adequately safeguarded by the fact that no steps could actually be taken without the full co-operation of the Committee with the Trustees and Managers with whom the theoretical power alone resides.

Unit Trust Control.—The House of Lords on Tuesday considered the Sharepushing Bill on the report stage. The chief matter, which was not completed in Tuesday's discussion, concerned the publication of accounts relating to the trust. An amendment was considered to include the managers' accounts, in the following terms: "Including accounts of the managers in relation to the trust and statements in connection with his remuneration therewith." The question of publication of these accounts, however, was left for final consideration, and a further amendment may be moved by the Lord Chancellor at the next stage of the Bill. An amendment was also agreed to facilitate the registration of underlying securities in the names of companies which are wholly owned by the trustee and under its control. But a motion by Lord Buckmaster to insert a new paragraph in the schedule to the Bill providing that no trustee shall be entitled to act as manager or hold, directly or indirectly, any interest in a management company, was withdrawn after discussion. But in the course of his reply, the Lord Chancellor admitted the weight of the amendment that a conflict of interest might arise, though he held that no harm had yet resulted from directors of trustee corporations acting as directors of management companies. Some revision of Clause 16 (b) under which the Board of Trade has power to determine what constitutes an authorised unit trust scheme may be introduced, so that the persons who are respectively managers and trustees may operate independently of each other.

Canadian Pacific Report.—The detailed preliminary figures of Canadian Pacific results last year (reviewed on page 577 of *The Economist* of March 18th) rob the annual report of much of its interest. The board emphasises, however, that the rapid recovery in the gross traffics position was due to the free marketing of the highest wheat crop since 1932, thanks to the Dominion's guaranteed price. Hence an increase in rail earnings from grain and grain products is shown of no less than \$9,302,490, although freight earnings as a whole were reduced by \$717,089. Working expenses increased by \$163,204, since the increase of \$4,526,000 attributable to the progressive restoration of wage rates, coupled with other increased costs, was largely offset by the smaller volume of traffic. The substantial fall in other income was the striking feature of the preliminary figures, and the report attributes the severe setback in steamship earnings to the natural fall in traffic due to the Coronation in 1937, to the unsettled international situation, and to higher fuel, wages and port charges. Some further light is thrown on the position of the "Soo" guarantees, which was not available in the cabled results a fortnight ago. The first mortgage bond interest due July 1st last year was provided and absorbed \$1,260,800. These bonds have now passed their maturity date, and the Canadian Pacific board regards the guarantee as having lapsed from last July. Hence direct guarantees now involve a sum of only \$805,830 annually. The saving on the first mortgage bonds would represent 0.9 per cent. on the preference stock, which received no payment last year, although earnings were equivalent to 0.92 per cent. No extended reference is made to the policy of abandoning unremunerative lines and to the method of providing for the necessary writing-down of assets. Last year such amounts (including \$279,918 arising from the Vancouver dock fire) totalled \$1,402,348, against \$2,495,361 in 1937. Such sums, in accordance with the company's policy, are not a determining factor in dividend decisions. But in view of the fact that available earnings would have permitted a small dividend on the preference stock last year, stockholders would probably welcome a further statement regarding abandonments.

Dunlop Rubber Recovery.—The satisfactory Dunlop Rubber profits announcement (which was briefly reviewed in last week's issue of *The Economist*, page 627) has been followed by a no less satisfactory report. The aggregate profits of the group, after providing for depreciation, have, it is true, declined by 8½ per cent. from £2,478,000 to £2,265,469, but the former figure applied to a particularly good year, while the latter contains no trace of the directors' reference, at the end of September last year, to a "material reduction" in trading profits. Hence, the figures suggest a sharp recovery in business during the last quarter of the year, which may well have been associated with the recovery in the motor trade at that time. In the following table and chart, the results of the parent company in recent years are analysed:—

	Years ended December 31,		
	1936	1937	1938

† After paying £108,750 on Dunlop Plantations preference.

Although the company has had to implement its guarantee for the Dunlop Plantations preference dividend, at a cost of £108,750, its net profits have slightly increased to £2,025,375. This factor, in conjunction with a sharp fall in the tax provision to £386,109 (a point which

DUNLOP RUBBER PROFITS, 1928-38

suggests that some adjustment has been made in the company's basis of assessment), results in a relatively sharp increase in the available equity earnings, and the 9 per cent. ordinary distribution is covered with the respectable margin of 4.7 per cent.

COMMERCIAL SERVICE

The Bank has over 380 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW contains information on all South, East and Central African matters of Trade and Commercial Interest. Copies will be sent post free on application.

The format of the accounts, which is unexampled among British companies, reveals a number of significant changes. The assets of certain subsidiary and associated companies "situated in countries of which the economies are closely controlled" have not been consolidated, but are separately shown in the consolidated statement. Such interests (stated at their sterling book value) have increased during the year from £353,769 to £1,358,480. The previous year's figure referred largely to Germany; the latest year's figure certainly includes Japan and may include other areas also, according to the definition of "close control," which appears to be somewhat wider than exchange control. The effect of these changes on the consolidated structure, however, is small, for the group's total assets stand at £32,348,506, against £32,455,562. Stocks, both for the group and for the parent company, show a significant reduction—in the latter case from £3,237,682 to £2,496,324. The parent company, which in effect acts as banker for the group, as comparison of its cash assets with those of the group plainly reveals, has increased its bank balances from £1,616,746 to £2,940,756. A comparison of the financial position over the past six years (which is conveniently provided in the report) shows that a considerable strengthening has occurred. At 26s., to yield £6 18s. 6d., the £1 ordinary stock units may be regarded as a reasonable industrial holding. And the report and accounts may be regarded as a convincing reply to those who argue that consolidation is impracticable, or even meaningless.

* * *

London and Thames Haven Oil Wharves.—The London and Thames Haven report has been awaited with considerable anxiety, and it discloses a serious position. In the first place, a substantial decline in profits has occurred from £203,767 (after deducting £19,806 paid under guarantee) to £88,745 (before paying £28,529 under guarantee). Secondly, the bank overdraft has been increased from £688,213 to £978,007. The reasons for this situation are, of course, well appreciated both by shareholders and by the reconstituted board. The company's financial position and steady earning power has in recent years greatly deteriorated. Its relations with important oil interests became strained until in 1937 the company lost its valuable contract with "Shell" Transport, while last year the Anglo-American Oil Company also gave notice of termination. The Irish National Refineries project has been stopped by the new board. This company, which intended to set up a competitive refinery for supplying all petroleum products in Eire, was financed through Parent Petroleum Interests, Ltd., which is described in the directors' report as "the company's subsidiary." An additional complication arose last year, when the limit line for petroleum vessels was extended up the river to Purfleet, and thus prejudiced the business hitherto handled by the Thames Haven Wharves. The new board is attempting, as far as possible, to concentrate on the original wharfing business of the company, and has already established relations with former customers. Again, although much preliminary work has been carried out in connection with the Irish venture, the company is limiting its extraneous commitments and proposes to dispose of them as soon as possible. Altogether, the sum of £730,887 has been drawn from reserves to write down various assets, and Parent Petroleum Interests now stands in the books at £500,000 after special write-off of £666,849. A circular issued by two shareholders of the company this week expresses grave misgivings about the policy and administration of the company, and considers that an immediate investigation is

urgently called for if the interests of shareholders are to be protected. Further information regarding the position of Parent Petroleum Interests is obviously desirable.

* * *

U.S. Steel Position.—The approximate earnings position of "Big Steel" in 1938 was known already from the quarterly statements, but the detailed annual report illumines the future trend more clearly. Broadly speaking, movements in 1937 and 1938 were in opposite directions, though changes in the former year were much the more violent. In 1937 production continued at a satisfactory rate until the late summer, and operations became severely curtailed in the autumn. The low level reached in December, 1937, hardly changed during the next seven months or so, the average percentage of capacity in operation being 32.6 in the first three quarters of 1938, against 81.5 a year earlier. A modest improvement set in about August, and rolled and finished steel operations in the last quarter were higher than at the end of 1937, at 46.9 against 40.6 per cent. of capacity. The report, however, states that this recovery was due chiefly to the consumers' goods industries. Production of rolled and finished steel products in 1938 was 48.6 per cent. lower, or some 6,563,000 tons, and varying rates of change were shown by other products. The new price basis involved a certain amount of cutting and dislocation, but gross operating earnings from all sources fell at a slightly lower rate than finished steel production, from \$1,396 to \$767 millions, and operating expenses at only a slightly lower rate. Preferred dividends of \$25,220,000 for 1938, though paid in full, were short-earned by \$32,937,000—a deficit equivalent to \$3.78 per common share—and the earned surplus is thus reduced to \$247,419,000. The improvement in output so far recorded this year has been on a very moderate scale.

Mining Reports

Union Corporation.—Union Corporation must be congratulated on such an excellent result for a year of great difficulty for mining finance houses. Total profits were actually £674,857 as compared with £779,468 for the preceding year, and this moderate decline of 13 per cent. may be taken as an indication that market operations constitute a secondary factor in the corporation's earning capacity. Actually, the net profit for the year showed a still smaller decline at £611,535 compared with £682,854, the latter figure having been struck after deduction of a non-recurring item of £35,117. The most interesting item in the accounts is a rise of £615,241 in share and debenture holdings, at or under cost, to £3,390,447. The actual increase is probably greater, as the directors have followed their former policy of providing for contingencies by reducing the book value of certain holdings both below cost and also below market price. Holdings in some of the younger offshoots have presumably been increased. In the case of Marievale, for example, the company had the right to subscribe for 339,167 shares at par, 250,000 shares at 15s. and 17,500 shares at 15s., making a total of 606,667 shares. If only because of ruling market conditions, this additional block is probably still in the portfolio and may remain there in view of the progress being made by Marievale. The 12s. 6d. shares stand at 7½ to yield £5 10s. 9d. per cent. on the 8s. total dividend, the distribution of which actually represents £4,465 more than the available net profit. Prospects for this year provide few signs as yet that the Corporation's scope for profitable share dealings will improve. On the other hand, dividend receipts should be enhanced by increased or maiden distributions from East Geduld, Grootvlei and Van Dyk, against which must be set the minor factor of a smaller liquidating dividend from Modder Deep.

* * *

Anglo-American Corporation.—The character and interests of the Anglo-American Corporation necessarily clothe its results with an impression of volatility. But the

fall of £623,911 (or just over 37 per cent.) in revenue in 1938 to £1,053,382 is not more than commensurate with the rise which took place in the years when markets were active. An active dealing policy, and a portfolio comprising large copper and diamond interests as well as gold shares, fully explains this sensitivity. Net revenue, after providing for tax, was £457,064 lower at £879,089, and represents earnings of 30.1 per cent. on the £2,450,000 ordinary capital, just covering the 30 per cent. dividend (against 40 per cent.) recently declared. The fact that the 10s. shares at the present price of 2½ offer the high yield of £7 3s. 3d. per cent. reflects the general fall in values which has occurred since the end of 1938, and the improbability that earnings can be maintained unless there is a markedly more favourable turn in the market during the remainder of 1939. The balance sheet shows an increase in shares, interests and investments from £6,920,703 to £7,290,353, and while this may reflect participation in last year's Venterspost issue, the absence of a detailed list of holdings and of any indication of the method of valuation (other than "at cost, less amounts written off") prevents any significant analysis of the balance sheet. A net surplus of current assets of £1,643,115, however, is shown, against £2,009,676 at the end of 1937. This surplus includes loans to affiliated companies and others of £1,309,255, which show a decline of £231,171. The report reaffirms that as soon as market conditions are more favourable "West Driefontein Gold Mining Company, Limited," will be floated.

* * *

Springs.—Though Springs is well advanced into healthy middle age, it succeeded in raising the tonnage crushed to a new record in 1938, despite a minor accident which adversely affected output to the extent of 36,000 tons last October. Some 1,827,400 tons were milled—an increase of 3,000 tons—but the profit was reduced by £147,031 owing to a drop of 7.5d. in the revenue per ton to 39s. 11.7d. and an increase of 1s. 0.2d. in working costs. The maintenance of the dividend at 2s. 7½d., despite a reduction of £83,081 in the net balance of revenue over expenditure to £1,845,591, was made possible by a reduction in the amount absorbed by Government taxes and participation and by capital expenditure. After providing £10,927 under the latter head, the unappropriated balance at December 31, 1938, was £76,631 against £62,048 brought in. It is encouraging to note that although the total development footage accomplished declined by 2,842 to 20,480 feet, the percentage of payability rose from 38.5 per cent. to 45.7 per cent. and the average assay value from 10.27 dwt. to 11.80 dwt. Development in the southern portion of the mine has been actively pursued, but owing to the formation it is not expected that the reef will be intersected before about the end of the current year. Results shown in this section, when available, will have a considerable bearing on the ore reserve position, which amounts to 9,001,985 tons, of an average assay value of 5.31 dwt. over a stoping width of 43.06 inches, showing a decline of 652,439 tons, a decrease in value of 0.26 dwt. and an increase in stoping width by 0.32 inches. Prospects in this portion of the mine seem quite promising and diminish the significance of the decline in available tonnage now shown. The present price of the 5s. shares is 27s. 6d. and the yield £9 11s. per cent.

* * *

West Springs.—Although the ore milled by West Springs in 1938 fell by 36,500 tons to 1,061,500 tons, and costs rose by as much as 2s. 3.5d. to 18s. 7d. per ton, the actual working profit rose from £513,559 to £553,488. This reflects an increase, for the fourth year in succession, of the grade of ore sent to the mill. The yield was 4.08 dwt. compared with 3.65 dwt. in 1937 and only 2.97 dwt. in 1935. Even now there is a big margin compared with average value of the ore reserve which, at December 31st last, was 5.3 dwt. The mining policy is, of course, dictated by the onerous terms of the lease covering the old section of the property. But the low return of £6 1s. 1d. per cent.

on the shares at 2½ (on the basis of the 2s. 6d. dividend) indicates the market expectation that a new agreement amalgamating this old lease with the new and much more favourable lease covering the south-western section of the property will be negotiated when the tonnage possibilities of the latter have been more fully investigated. Since the No. 2 shaft and its sub-vertical shaft in the south-western area are now in full commission, it is expected that this year will see extended development in the new ground. Under the existing situation, it does not pay to hoist better grade ore from the old section, and the improving grade of tonnage milled presumably reflects the increasing proportion taken from the south-west section. This factor is also apparent to some extent in the rise in costs. Reduction expenses per ton were little changed, but development charged direct and stoping each required 3d. extra, underground transport 1.8d. extra, timbering and packing 2d. extra, and shovelling and tramming 4.8d. extra. Some part of these increases may reflect the pace of development in the south-west portion. Development accomplished amounted to 23,845 feet, showing an increase of 6,004 feet, but the percentage of payability declined by 6 per cent. to 50.6 per cent. The value rose by 1.94 dwt. to 14.94 dwt., but the width declined sharply from 43.61 inches to 31.68 inches. The pay limit for development disclosures was the same as that for 1937, and the recalculation of the reserve shows a slight decline of 7,440 tons at 4,545,170 tons, the average value being 0.11 dwt. higher at 5.25 dwt. and the stoping width 0.87 inches lower at 53.36 inches. After providing for the two dividends of 1s. 3d. and £107,367 for capital expenditure, the balance unappropriated at December 31, 1938, was £53,123 lower at £62,052. Now that the No. 2 shaft has been fully equipped, the period of high capital expenditure is completed. A long life is in prospect, and the investment valuation of the shares must be governed to a large extent by the possibility of adjustment of the old lease.

* * *

Brakpan.—The position of Brakpan was maintained in 1938, and while the technical situation does not offer much scope for speculative interest there is no reason why earnings on the present scale should not be recorded for many years to come. The tonnage milled actually reached a new record, at 1,648,500 tons, but owing to an increase in costs by 11.4d. per ton, not quite offset by an increase of 0.01 dwt. at 5.13 dwt. in the yield, the total working profit was £41,232 less at £1,299,180. The available net profit covered dividend No. 52 of 1s. 6d. per share and No. 53 of 1s. 7½d. per share, with a surplus of £12,638, but as £32,119 of capital expenditure was charged to revenue, the unappropriated balance at December 31, 1938, was £19,481 lower at £76,568. Capital expenditure this year is expected to be smaller. The flotation plant to deal with the current sand from the reduction works was completed in August and an improvement in revenue values is expected. Although costs for the first two months of the current year again show an increase, the net profit per ton is slightly higher, and these factors encourage the hope that the dividend may be raised fractionally this year, say, to 3s. 3d. The grade of ore sent to the mill is well up to the average of the reserve, and the trend of development in the older section indicates that the point of maximum earning power is at hand. The holding of 361,067 "Sallies," however, offers a new income prospect, the ratio being approximately one "Sallies" for every thirteen Brakpan. Development footage was 5,049 feet lower at 64,339 feet, the percentage of payability declined by 3 per cent. to 38.1 per cent. and the value from 12.26 dwt. to 11.72 dwt. Ore reserves at the end of the year were virtually unchanged at 7,082,840 tons, but both the value and the width again showed slight declines at 5.61 dwt. and 45.9 inches respectively. The development figures include the Witboek section, and while results here are quite satisfactory the position may be said to suffer from the lack of a sufficiently powerful dynamic element, which is reflected in the yield of £6 10s. per cent. offered by the shares at their present price of 2½.

Daggafontein.—Last year Daggafontein made further solid progress. A slightly lower grade of ore was sent to the mill, and the yield was 0.31 dwt. lower at 5.67 dwt. per ton, but an increase of 136,400 in the tonnage milled at 1,701,000 and a reduction in working costs by 6d. per ton led to an increase of £46,247 in the working profit to £1,668,590. In the absence of any major expansion scheme, capital expenditure absorbed only £20,313, and after making this provision the net profit just covered dividend No. 11 of 1s. 3d. and dividend No. 12 of 1s. 3½d. per share with a surplus of £2,359, leaving an unappropriated balance at December 31, 1938, of £76,223. Provided that the supply of native labour is adequate, a further modest increase in tonnage milled should be achieved this year, and as the working profit per ton is a few pence higher there is some ground for hoping that the dividend will be brought up to at least 2s. 7½d., or possibly 2s. 9d. On the 1938 distribution the yield on the 5s. shares at 1½ is £6 14s. per cent. In view of the long prospective life of the mine, which must extend over several decades at least, there is no need at this stage to take into account amortisation. The ore reserve at the end of the year was calculated at 8,002,133 tons, having a value of 6.37 dwt. over 40.67 inches, a decline of 0.21 dwt. and 0.26 inches respectively. The ore mined during the year was 0.22 dwt. below the average value of the reserve. Development work was approximately 10,000 feet lower at 43,386 feet, but little significance need be attached to this, or to the decline in the payable percentage from 58.3 per cent. to 51.4 per cent., or in the average assay value from 18.73 dwt. to 15.83 dwt. These figures do not include 2,584 feet on the Kimberley Reef horizon. Payability here was 27.2 per cent., the average value being 7.02 dwt. over a width of 45.92 inches or 322 inch-dwt. The mine is gradually coming to full maturity, and the technical position is one of redoubtable strength. In considering future dividend prospects, the holding of 437,500 10s. shares of East Daggafontein, which is due to start production this year, must be taken into account, though the holding represents only one East Daggafontein for sixteen Daggafontein.

Rand Mines.—Rand Mines is in a class apart in mining finance. Though, in an accounting sense, it is strictly speaking a finance company, the established financial policy and the great strength of the Rand Mines-Central Mining-General Mining combination together endow the shares with something approaching investment trust status. Profits accruing from investment realisation are not realised for dividend purposes, and the detailed list of holdings published each year shows that the directors' decisions are influenced by long-term considerations. Although investment and other income is no longer separated, profits on realisation are shown and the stability of the revenue confirms the reliable foundation on which dividends are paid. The 5s. shares at 8½ yield only £4 14s. on the 160 per cent. dividend paid for 1938. Excluding profits on the sale of investments, revenue for 1938, at £924,218, shows a decline of £36,360 compared with 1937, and represents earnings of 173.7 per cent. on the capital. The closer association established during the year between the "Corner House" and General Mining is, perhaps, reflected in the addition to the portfolio of 126,356 West Rand Consols, this being the only important change. More than 85 per cent. of the holdings, by value, consists of gold-mining interests. These include certain interests past maturity, such as 301,645 New Modderfontein, 141,315 Rose Deep and 58,904 Geldenhuis Deep.

But the long-term outlook is compensated by equally important interests in companies which have yet to reach the milling stage or are in course of expansion, including 302,622 Durban Roodepoort Deep, 335,041 Blyvooruitzicht, 419,962 Vogelstruisbult, 43,447 Grootvlei and 81,158 Van Dyk. The portfolio is not entirely domestic, but it has, of course, a "family" flavour, and its general prospects are fairly suggested by the aggregate mining results of the whole of the Central Mining-Rand Mines group. During 1938 the ore milled totalled 19,005,700 tons, an increase of 415,700 tons. The average working costs were unchanged at 19s. 4d. per ton milled, but owing to a decline of 0.085 dwt. in the yield of 4.019 dwt. the total working profit was slightly lower at £8,885,418.

West Rand Consolidated.—This company provides another instance in which stable profits have been achieved by variation in the value of ore mined. Tonnage milled rose slightly from 2,050,000 to 2,126,000 tons, and the price of gold rose by an average of 1s. 9d. per ounce. On the other hand, the grade fell slightly from 4.096 to 4.058 dwts., and working costs rose from 16.86s. to 17.13s. per ton. The result was a rise of £117,598 in the gold account to £2,977,259, and of £90,770 to £1,260,700 in mining expenses. Net working revenue amounted to £1,184,367, against £1,158,914, and after charging other expenses the amount earned for dividends was practically unchanged at £723,067. This covers, with a margin of £14,734, a dividend of 25 per cent. on ordinary shares (as for the preceding three years) and 708½ per cent. on the deferred shares. Ore reserves at the end of 1938 showed an increase of 120,000 tons to 10,750,000 tons, with an unchanged average value of 4.4 dwts. At a current price of 35s. 7½d., the 10s. ordinary shares yield £7 0s. 3d. per cent.

Vlakfontein.—As the technical development of Vlakfontein proceeds it must attract increasingly close attention. Step by step the correlation of underground conditions with those ruling on the adjacent Sub Nigel gradually tends to confirm the views of those who see in Vlakfontein a valuable mine. The haulage from Sub Nigel crossed the boundary towards the end of the year, and in the last few weeks was advanced 495 feet in this company's property. Some 445 feet was sampled, of which 195 feet proved payable, showing an average value of 75.9 dwt. over a reef width of 6.9 inches. In order to expedite the opening up of this section of the property, development operations have been commenced from this haulage. Indications to date are fully compatible with the thesis that the Sub Nigel shoot system persists, and no untoward deductions are to be drawn from the fact that at the end of the year the intersection of the Main Reef, in the east sub-vertical shaft at a depth of 6,568 feet and in the west sub-vertical shaft at a depth of 6,647 feet, showed unpayable values in each case. The indications are that these intersections occur between shoot zones. The next twelve months' work will show the real potentialities of the property. The depth of the mine and other factors necessarily indicate a large capitalisation. Working capital has now been exhausted, and in view of prevailing market conditions the directors have arranged for temporary advances to finance operations until more favourable market conditions emerge. Accordingly, three of the largest shareholders, Lace Proprietary, Anglo-American Corporation and New Consolidated Goldfields, have agreed to advance up to £500,000 at 5 per cent. per annum. It is estimated that this amount will suffice to finance the company for approximately twelve months. The lenders obtain a preferential right to subscribe for 25 per cent. of any issue or issues, on the same terms as to shareholders, as may be sufficient to repay the funds advanced. Power is being taken to increase the capital from £2,375,000 to £3,000,000 by the creation of 1,250,000 new shares of 10s. in the hope of being able to make a fresh issue before the increased resources are absorbed.

The Week's Company Profits.—This week the number of reports published is more normal, and our usual analysis of profit and loss accounts on page 66 covers 55 companies, excluding banks and businesses for which comparable figures are not available. Net profits of these 55 companies amount to £4,724,000, against £5,768,000, and thus show a decline of 18 per cent. Aggregate net profits of 657 companies whose reports have been received this year to date amount to £89,423,000, and show a reduction of 8½ per cent. from the level of £97,651,000 earned a year earlier. The week's results are discussed in preceding Notes and on page 57 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings commence on page 44. At the *National Bank of India* meeting, Mr R. Langford James explained that the reduction in the bank's deposits last year arose from the diversion of money into short-dated Government securities which provided more attractive return, but suggested that this might prove a passing phase. Sir Charles Innes, at the *Mercantile Bank of India* meeting, referred to the high level of Indian credit, and pointed out that on several occasions recently India 3½ per cent. paper stood higher than 3½ per cent. War Loan. At the *Chartered Bank of India, Australia and China* meeting, Mr A. d'Anyers Willis referred to the courageous efforts which are being made to build up a new economic system in the Western Provinces of China and to develop that potentially rich region. At the *Employers' Liability Assurance* meeting, Sir Courtauld Thompson, M.P., pointed out that the major portion of the Corporation's business, being in North America, South Africa and Australia, was fortunately remote from the most likely centres of political disturbance. Mr Robert E. Dickinson, the chairman of the *National Provident Institution*, voiced regret at the tendency for members to choose policies maturing in their own life time rather than first covering themselves fully by whole-life assurances. Sir Alexander Roger, addressing shareholders of *British Insulated Cables*, suggested that it

should still be within bounds of possibility to secure commercial understanding between Germany and England on sound lines in order to provide more and better trade facilities. Record output and sales were reported by Mr R. W. Cooper at the *British Aluminium* meeting. Mr Cooper reported that new plants were being installed in Australia and India. Mr Robert C. Stanley referred to the development of the *International Nickel Company's* subsidiary in Finland. The mining programme was progressing satisfactorily and operations should commence by the autumn of 1940. Mr Edward Robson disclosed that the sales of *Pinchin Johnson* since November last year had shown an increase each month. At the *British Ropes* meeting, Mr Herbert Smith declared that the board was not satisfied that the full earning power of the undertaking had been reached. Addressing members of the *Halifax Building Society*, Brig.-General Whitley emphasised the importance of the Society's £22 millions of liquid assets and the spread of 250,000 separate mortgages over the United Kingdom which, in itself, provided security against heavy loss from air raids. At the *Moss Empires* meeting, the chairman considered the past year's results more than satisfactory in relation to the effect of the crisis upon the entertainment business. Certain aspects of New Zealand taxation were criticised by Mr D. F. Anderson at the *Bank of Australasia* meeting. Sir Malcolm P. Stewart, at the *Associated Portland Cement* meeting, pointed out that economies due to capital expenditure had been better than expected. *Associated Electrical Industries* members were informed by Sir Felix Pole that some valuable overseas orders had been recovered. A reduction in prices owing to increased efficiency was reported by Sir Alexander Roger at the *Automatic Telephone Electric* meeting. Members of *Godfrey Phillips* were informed by Mr Arthur I. Phillips that slightly lower prices of high-grade leaf had been offset by a less favourable exchange rate. The importance of technical developments was stressed by Mr H. James Yates at the *Radiation* meeting. At the *Maple and Company* meeting Mr C. C. Regnart referred to large contracts in hand, including that for the "Queen Elizabeth." The chairman of *Ericsson Telephones* reported that a record volume of orders was in hand.

THE STOCK EXCHANGES

London

TICKET	ACCOUNT
APRIL 11	APRIL 13

THE market has improved this week on those occasions when it seemed more evident that a firmer attitude was being adopted by the democratic powers. The Prime Minister's announcement, on Wednesday evening, regarding expansion of the Territorial Army provided a firm close after a rather patchy day. On Thursday morning, again, M. Daladier's speech replying to Italian claims again gave the markets confidence. But over the week as a whole the market has been distinguished by an extremely small volume of trade and by erratic and rather meaningless movements in prices.

On Tuesday, it is true, a certain amount of selling, particularly of gilt-edged, was reported, and War Loan in fact closed a point lower at 95½. Gilt-edged were again a weak market on Wednesday and in the course of the day War Loan was marked as low as 94½ before closing with a spectacular rally, unaccompanied, however, by any volume of business, to 95½ bid. The actual level of prices has, in fact, been almost irrelevant this week. Spasmodic movements around any given level have no significance in a market which is a study in indecision.

Chinese bonds staged a sharp initial advance on Monday, following a report

that negotiations had commenced regarding the service of the Customs and Salt Loans, most issues closing 1 to 1½ points higher. Japanese bonds also improved in mid-week but European issues were uncertain, Czech bonds in particular reacting fairly sharply on Tuesday. Most of the Central European issues were weaker and further selling of Brazilian bonds was reported.

Home rails opened in fairly firm style but business was narrow in both directions. The first "plus" of the year by L.M.S. gave some encouragement to the market, but Thursday's early gains were

soon lost. Business in Argentine issues was at low ebb.

The industrial market was thoroughly dull. Price movements were irregular or slightly downwards, and there was very little business passing. Apart from fractional declines on Tuesday, iron and steel shares were steady. Wm. Beardmore were a strong feature. Coal shares did not maintain Monday's firm tone, while the trend among engineering issues was uncertain. Electrical equipment shares began well, and then receded slowly. Exceptionally, Reyrolle strengthened in mid-week. On Tuesday, motor shares fell rather more sharply than other descriptions, but

MATURED AND BOTTLED AT CHATEAU DE COGNAC

towards mid-week there were some instances of recovery. Aircraft shares were neglected, and tended to weaken. Textiles fell back after a satisfactory start, and rayon shares reacted—partly on the implications of the Cotton Bill for the rayon industry. Brewery shares were mostly lower on small provincial sales, and there were fractional losses in tobacco shares. Provision and catering issues lost ground after early strength, and in the stores group also the leaders gave way. The tone in the miscellaneous section was heavy, though movements were rarely important. Monday's improvement in a few leaders such as Turner and Newall, and Lever Brothers and Unilever was not maintained. In mid-week, an exception to reactionary prices was provided by shipping shares, which hardened on news of the Government subsidy.

Oil shares began the week idly, but prices were steady. In sympathy with the rest of the market, prices were marked down on Tuesday, though satisfactory resistance was shown later. Business remained in a small scale. Rubber shares were virtually indifferent to fluctuations in the commodity price, but nearly all movements in quotations consisted of declines. There was too little business in the tea market for prices to be tested.

Mining shares closely followed the general trend of the market. A quiet but steady opening was followed by some recession on renewed fears regarding the international situation, but a steadier tone developed in mid-week. On Monday Kaffirs were dull but not noticeably weak. They gave way later on, until support from Paris brought a steadier tone. Developing mines were more sensitive than the dividend-payers to changes in the market's mood. Movements in Rhodesian copper shares were typical of the rest of the market. Other base metal issues were dull and lower for choice.

We are officially informed that on March 23, 1939, Mr Percy George Stark, trading as Jones and Moore, was declared a defaulter upon the Stock Exchange.

ACTUARIES' INVESTMENT INDEX

THE improving market trend in February and the earlier part of March was reversed after the annexation of Czecho-Slovakia. In the past few days, however, security price movements have had little significance. The Actuaries' index of 160 industrial equity prices stood on Tuesday, March 28, 1939, at 61.8, against 62.0 a week ago, 63.5 a month ago, and 65.2 a year ago, while the corresponding average yields are 5.82, 5.80, 5.70 and 5.65 per cent. Gilt-edged

stocks have, on the whole, suffered worse than equities. Industrials make a mixed showing, but several groups are still above their end-1938 levels. Fixed interest securities, on the other hand, have declined on balance over the three months almost without exception. We give below a selection of the component series of the industrial share index, and also the usual monthly particulars of fixed-interest securities:—

New York

THIS week Wall Street and London have moved closely in sympathy, and trading volume has been abnormally low almost throughout. Monday opened well, but there was not enough business to sustain the firm tendency, and prices began to drift. The next session began with prices marked lower all round. There was, however, very little selling, and movements during the rest of the day were only fractional. And though no further break of any importance occurred, this stagnation persisted into the middle of the week. Apart from general political questions, the market was inclined to wait, in particular, for M. Daladier's speech. Steel shares again remained somewhat in the background. Steel ingot production this week is estimated by *Iron Age* at 55 per cent. of capacity, or ½ per cent. lower than a week ago. There are reports of a large French order for aero-engines from United Aircraft, but aircraft issues failed to show much interest in the news.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

Paris

ACTIVITY on the Paris Bourse being March was, at the best, dull, and at the worst paralysed. But the decline in prices which inevitably occurred after the annexation of Czecho-Slovakia was more moderate than might have been expected. Selling was never large and was confined mainly to professionals. The private investor, in fact, was rarely active throughout the month. In the first fortnight business was very quiet, but prices were steady on the whole.

After March 12th, the Bourse, like other centres, took a day or so to grasp the implications of what had happened. There then followed a series of weak sessions alternating with occasional rallies. Sentiment was entirely dominated by foreign events and fears for the future, though the relatively good resistance shown at times was attributed to a satisfactory situation at home, to the settlement in Spain and to a healthy technical position.

Berlin

In the earlier part of the month the Berlin Bourse remained in the same apathetic state as in recent months. The amount of business was negligible, but prices were not unsatisfactory. In mid-month, however, business was affected by the situation in Czecho-Slovakia. Prices fell all round, and response to the news was rather quicker than it was in other centres. Conditions then became calmer, and the German-Roumanian trade agreement provided a small fillip. Towards the end of the month, however, the tax finance plan caused renewed weakness.

Canada

THERE was a slight setback in the Canadian stock markets in the opening days of March but about March 4th they suddenly burst into real activity in sympathy with London and New York, and during the following week showed their most persistent strength for months. Brazilian Traction, which is widely held in Canada, also moved up as the result of the new financial arrangements between the Brazilian Government and the United States. The Czecho-Slovakian crisis, however, brought slowly falling prices and steady trickle of selling orders. But the full reaction to European news was delayed for a time, and the volume of selling became heavier towards the end of the month. Mining shares, particularly base metals, were in the forefront of most falls and of the occasional rallies. Conditions became calmer as the end of the month approached, and business grew quiet, but there was a renewed break at the close of March. The "Investors' Index of the Bureau of Statistics, which stood at 104.2 on February 17th, was at 105.6 on February 25th, and had declined to 105.2 on March 2nd.

WEST RAND CONSOLIDATED MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL:

Registered and Issued £2,150,000
In 4,250,000 Ordinary Shares of 10s. each and 25,000 Deferred Shares of £1 each.

DIRECTORS:

SIR GEORGE W. ALBU, Bart. (Chairman).
DR. HANS PIROW. PAUL STRAKOSCH. A. G. GILL.
C. S. GOLDMAN. J. FRIEDLANDER. S. C. BLACK. C. S. McLEAN. T. SHEARER.

EXTRACT OF ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons crushed	...	2,128,000
Yield (3.926 dwts. per ton)	...	417,396 fine ozs.
Working revenue (28.01s. per ton)	...	£2,977,259
Working Costs (17.13s. per ton)	...	1,820,548
Working profit (10.88s. per ton)	...	£1,156,713
Sundry Revenue	...	77,784
Total Profit	...	£1,234,497
Credit Balance brought forward from 1937	...	67,857
Total available Profit	...	£1,302,354
Appropriated as follows:—		
Income Tax (Government of the Union)	...	£476,908
Miners' Pithis—Provision on account of outstanding Liability	...	1,813
Capital Expenditure—Amount expended in excess of Fixed Loan from General Mining and Finance Corporation, Ltd.	...	22,083
Interest—On Fixed Loan from General Mining and Finance Corporation, Ltd.	...	10,000
Sundry Taxes, etc.	...	628
Ordinary Dividends Nos. 14 and 15, totalling 25 per cent.	...	£531,250
Deferred Dividends Nos. 5 and 6, totalling £7 1s. 8d. per share	...	177,083
Unappropriated Profit carried forward	...	708,333
		£2,591
		£1,302,354

Ore Reserve.—The fully developed ore reserve, as recalculated at the 31st December, 1938, amounted to 10,750,000 tons of an average value of 4.4 dwts. over 44 inches. (1937: 10,630,000 tons at 4.4 dwts. over 44 inches.)

General.—The extension of the South Reduction Plant, which, when fully commissioned, will provide a crushing capacity for the mine of 220,000 tons per month, was brought into use towards the end of the year.

Copies of the full Report and Accounts can be obtained from the London Secretary, Winchester House, Old Broad Street, London, E.C.2.

CANADIAN PACIFIC RAILWAY COMPANY

FIFTY-EIGHTH ANNUAL REPORT

OF THE DIRECTORS OF CANADIAN PACIFIC RAILWAY COMPANY

YEAR ENDED DECEMBER 31, 1938

To the Shareholders:

The accounts of the company for the year ended December 31, 1938, show the following results:—

INCOME ACCOUNT

Gross Earnings	\$ 142,258,980.78
Working Expenses (including taxes)	121,506,514.89
Net Earnings	20,752,465.87
Other Income (after providing for depreciation of steamships and hotels)	7,363,672.66
	28,116,138.53
Fixed Charges	\$ 24,767,938.74
Interest on bonds of Minneapolis, St. Paul & Sault Ste. Marie Railway Company, guaranteed as to interest by your Company, and on notes secured by pledge of bonds so guaranteed	2,085,817.51
	26,853,756.25
Balance transferred to Profit and Loss Account	1,262,382.28

PROFIT AND LOSS ACCOUNT

Profit and Loss Balance December 31, 1937	\$ 139,950,787.83
Dividend of 2 per cent. on the Preference Stock, declared from the earnings of the year 1937, paid April 1, 1938	2,745,138.42
	137,205,649.41
Balance of Income Account for the year ended December 31, 1938	1,262,382.28
	138,468,031.69
Debit:	
Loss on lines abandoned and on property retired and not replaced	\$ 1,402,348.40
Miscellaneous—Net Debit	96,033.03
	1,498,381.43
Profit and Loss Balance December 31, 1938, as per Balance Sheet	136,969,650.26

The balance of income account available for transfer to profit and loss account was \$8,199,902 less in 1938 than in 1937.

RAILWAY EARNINGS AND EXPENSES

The comparative results of railway operations were as follows:—

	1938	1937	Increase or Decrease
Gross Earnings	\$ 142,258,981	\$ 145,085,558	2,826,577
Working Expenses (including taxes)	121,506,515	121,343,311	163,204
Net Earnings	20,752,466	23,742,247	2,989,781

Working expenses, including taxes, amounted to 85.41 per cent. of gross earnings, as compared with 83.64 per cent. in 1937. Excluding taxes, the ratio was 82.29 per cent., as against 80.69 per cent. in 1937.

The decrease in gross earnings amounted to 1.9 per cent. Commencing with the month of February, decreases were recorded each month until August, when grain from the new crop began to move in volume.

Passenger earnings had the first serious setback since the low point recorded in 1933, being \$511,638, or 3.1 per cent., less than in 1937. Owing to mild weather conditions highways remained open generally until late in December, whereas, in 1937, they were closed in many parts by November. The reduced volume of seasonal employment in Eastern Canada and the decline in tourist business incident to the recession also contributed to the unsatisfactory result.

Freight earnings decreased \$717,089, or 0.6 per cent. During the first part of the year, traffic was seriously affected by the crop failure of 1937. While the early indications of large crops on the Prairies in 1938 were not finally realised, the wheat yield was the highest since 1932. Owing to the fact that the Dominion Government guaranteed a price of 80 cents a bushel for No. 1 Northern wheat f.o.b. Fort William, wheat was marketed freely and approximately 70 per cent. of the total grain crop is estimated to have been loaded and moved prior to the end of the year. Handlings of all grain for the year amounted to 165 million bushels, as compared with 94 million in 1937. This may still be regarded as below normal, being 35.0 per cent. below the annual average of 254 million bushels handled during the five years 1925-29 and only 11.5 per cent. above the average of 148 million bushels during the drought period of 1930-37. The improvement in grain traffic resulted in an increase of \$9,302,490 in rail earnings from grain and grain products. Notwithstanding the larger crop, the purchasing power of Western Canada did not materially change owing to the drastic decline in prices of grain as compared with 1937, and, therefore, the increased return traffic which usually results from a large crop did not materialise.

Working expenses increased \$163,204, or 0.1 per cent. The progressive restoration of basic rates of pay was completed on April 1st, and involved an increase of \$4,526,000 in expenses. Increases also resulted from higher prices for coal and certain other classes of material and heavier tax disbursements. These increases were almost offset by the reductions brought about by reason of the smaller volume of traffic, temporary layoffs of station, shop and clerical staff, and other economies. During the year the senior officers of the company were subject to 5 per cent. deduc-

tion from basic rates, the directors and members of the executive committee 10 per cent., and the chairman and president 25 per cent.

Maintenance expenses decreased \$1,625,743, or 3.3 per cent., and represented 33.8 per cent. of gross earnings, as compared with 34.2 per cent. for the previous year and an average of 32.2 per cent. for the ten-year period 1928-37. Expenditures incidental to air-conditioning were less this year, 90 passenger cars being so equipped, as compared with 141 cars in 1937. Charges for retirement of rolling stock amounted to \$6,016,000, an increase of \$529,000 over 1937. In the early part of the year, a programme of repairs for locomotives and freight cars based on anticipation of a larger crop than actually materialised was carried out, and, at the end of 1938, 85.8 per cent. of the company's locomotives and 94.9 per cent. of its freight cars were in serviceable condition, as compared with 84.1 per cent. and 93.2 per cent., respectively, at the end of 1937.

Transportation expenses increased \$1,267,023, or 2.4 per cent., and represented 37.8 per cent. of the gross earnings, as compared with 36.2 per cent. for the year 1937. The increase in wage rates more than accounted for the increase in the ratio. The average freight train loading and average freight train speed showed improvement. The former increased from 1,544 tons in 1937 to 1,604 tons in 1938 and the latter increased from 16.7 miles per hour to 17.1 miles per hour. The average fuel consumption for freight trains was reduced from 106 pounds per 1,000 gross ton miles in 1937 to 102 pounds in 1938.

Other working expenses increased \$521,924, or 2.7 per cent., reflecting heavier pension disbursements, higher wage rates, and increased taxes, the increase in the last mentioned amounting to \$167,000, or \$4,000 more than the increase in total working expenses.

OTHER INCOME

There was a substantial reduction in other income, which, after provision for hotel and steamship depreciation, amounted to \$7,363,673, a decrease of \$4,266,038.

Dividend income amounted to \$4,867,206, a decrease of \$1,667,650, due principally to the fact that dividends received from The Consolidated Mining and Smelting Company of Canada, Limited, were reduced from \$5,888,750 in 1937 to \$4,206,250. Lower base metal prices had an adverse influence on that company's earnings, and dividend disbursements totalled \$2.50 per share as compared with \$3.50 in 1937.

Net income from interest, exchange, separately operated properties and miscellaneous was \$1,492,530, a decrease of \$176,806 from 1937.

Net earnings from ocean and coastal steamships, after deducting \$3,781,990 credited to depreciation reserve, amounted to \$591,071, a decline of \$1,867,760, of which all but \$166,816 occurred in ocean services. Earnings from both passenger and freight traffic on the Pacific showed a small increase, notwithstanding the continued dislocation in economic conditions incidental to the hostilities in the Orient. On the Atlantic there was a slight improvement in freight earnings, which was more than offset by a sharp decrease in passenger earnings, attributable partly to adverse economic conditions on this continent and partly to the absence of the Coronation traffic enjoyed in 1937. Cruise earnings were much lower than for the previous year, being affected by the unfavourable business outlook at the commencement of the year.

Net earnings from hotel, communication and miscellaneous properties, after deducting \$1,246,687 credited to hotel depreciation reserve, totalled \$412,865, a decrease of \$553,822, made up of decreases from hotels of \$271,926 and from communications of \$390,385, as against an increase from miscellaneous properties of \$108,489.

FIXED CHARGES AND GUARANTEED INTEREST

Fixed charges increased \$726,405. The two principal contributory items were (1) \$206,924 interest on the 3 Per Cent. Equipment Trust Series "E" issued to finance part of the purchase price of new rolling stock and (2) \$368,172 interest on the Serial 4 Per Cent. Secured Notes issued to finance in part the acquisition by your company of certain notes of the Soo Line as referred to in the last annual report.

Provision was made from income for the liability for bond interest of the Soo Line guaranteed by your company. The guaranteed half-yearly interest payment due July 1st on First Consolidated Mortgage Bonds which matured on that date amounted to \$1,260,800. The two half-yearly interest payments due July 1, 1938, and January 1, 1939, on Second Mortgage Bonds maturing January 1, 1949, and on First Refunding Mortgage Bonds Series "B" maturing July 1, 1978, aggregated \$805,830.

DIVIDENDS

While earnings for the year were sufficient to meet all expenses and fixed charges, including provisions for depreciation and taxes—with a modest surplus—the directors of the company decided that, in view of the serious decline in the net results as compared with 1937, it was inadvisable to declare any dividend on the preference stock in respect of the year 1938.

PROFIT AND LOSS ACCOUNT

Property investment account was credited during the year with the cost of all property retired and not replaced and, in connection with such retirements, charges aggregating \$1,402,348 were made against profit and loss. For the most part, these charges were the result of the abandonment of unremunerative lines and redundant facilities, the retirement of which will produce operating economies.

LAND ACCOUNTS

Sales of agricultural lands during the year totalled 116,085 acres for an aggregate amount of \$996,214 and at an average price of \$8.58 per acre. Total sales included 3,109 acres of irrigated land at an average of \$48.34 and the remainder at an average of \$7.49 per acre.

Owing chiefly to the improvement in crop conditions on the Prairies, there was an increase in the collections of interest on deferred payments, which offset the decrease in the collections from land sales, so that the cash receipts from lands, including interest on deferred payments, again exceeded land expenditures, including taxes, irrigation, immigration and colonisation, and interest on note certificates.

Despite improved farming conditions, the company found it necessary to continue its policy of making concessions to farm contract holders in Western Canada. Interest rebated during the year totalled \$395,942, while reductions on account of principal outstanding and further concessions in interest for cash payments amounting to \$1,150,825 were also made. Since 1932, when the company led the way in relieving the distress of the Western farmers, the total amount of assistance extended by way of interest rebates and capital adjustments has been \$13,023,849.

The company continued to co-operate with the Dominion and Provincial Governments in the relief of the drought areas in the Prairie Provinces by way of reduced rates and free transportation on certain classes of shipments. Based on the normal rates, the company's contribution in this respect during the year was slightly in excess of \$700,000.

BALANCE SHEET

The general balance sheet is presented in its usual form, providing a concise and self-explanatory record of the company's position. The principal differences as compared with last year are due to the purchase of new equipment and the acquisition of the Secured Soo Line Notes. These items largely account for the increase in Property Investment, the increase in Notes and Equipment Obligations and the reduction in current cash funds.

FINANCE

On June 1, your company entered into an Equipment Trust Agreement with The Royal Trust Company as Trustee, under which \$11,880,000 Equipment Trust Certificates were issued, guaranteed as to principal and interest by your company. This issue, designated as Series "E," maturing in equal annual instalments from May 31, 1939, to May 31, 1953, inclusive, is payable in lawful money of Canada and bears interest at 3 per cent. per annum. Under this agreement new equipment costing \$14,857,398 was purchased by the Trustee and leased to your company. The difference between the proceeds of the sale of the Equipment Trust

Certificates and the cost of the new equipment was provided from the current funds of your company.

Equipment obligations to the amount of \$2,962,769 matured and were paid, and Consolidated Debenture Stock to the amount of \$268,000 pledged under Series "D" was released and cancelled. An amount of \$2,399,150 was deposited with the Trustee of the Equipment Trust, maturing July 1, 1944. Under the terms of the Agreement covering that Trust, the Trustee purchased and cancelled \$2,849,000 of the Equipment Trust Certificates and expended \$2,694,290 in the purchase of new equipment under the terms of the agreement.

On June 23rd, loans totalling \$10,000,000 were obtained from Canadian banks on your Company's short term promissory notes, which were collaterally secured by deposit of certain securities, including \$5,000,000 Consolidated Debenture Stock. These loans were repaid in full on December 9, the collateral was released and the Consolidated Debenture Stock cancelled.

As you were informed in the previous annual report, \$13,422,500 of your Consolidated Debenture Stock was deposited as collateral security to \$9,935,000 of your Serial 4 Per Cent. Secured Notes, which were issued in connection with the acquisition of Soo Line Secured Notes. In accordance with the provisions contained in your Company's notes, an additional amount of \$1,573,500 of your Consolidated Debenture Stock has been deposited as further security therefor. Later in the year a further amount of \$18,500 of the Soo Line Secured Notes was acquired for cash, so that your Company is now the holder of all the Soo Line Secured Notes referred to with the exception of \$11,000.

PENSIONS

The Company's pension disbursements for the year amounted to \$2,515,157 and were included in working expenses.

Since the inception of the contributory pension plan on January 1, 1937, the total employee contributions have amounted to \$3,910,247. As was anticipated would be the case during the first few years of operation, disbursements from the pension fund were negligible. The operation of the plan is proving to be satisfactory.

STOCK HOLDINGS

The holdings of the Capital Stock of the Company in December, 1938, were distributed as follows:—

	ORDINARY	PREFERENCE	Percentage of Ordinary and Preference Stocks combined
No. of holders	Percentage of Stock	No. of holders	Percentage of Stock
Canada	26,505	160	12.75
United Kingdom and other	19,641	25,714	65.47
British	15,725	60	15.86
United States	3,835	585	5.92
Other Countries	65,706	26,519	

Your Directors desire to express their sincere appreciation of the efficient services rendered by the officers and employees of the Company throughout the year and their continued devotion to its interests.

For the Directors,
E. W. BEATTY,
President.

MONTREAL, March 13, 1939.

Industry and Trade

Who Provides Britain's Oil?—Consumption of mineral oil in the United Kingdom is now at the rate of 11 million tons annually, and all but a fraction of this quantity must be imported from overseas—either in the form of crude petroleum for treatment in British refineries or of finished products for immediate consumption. Indeed, imports are actually in excess of home consumption, for there is a modest export, re-export and bunker business. The fact that the bulk of the country's oil trade is in the hands of the subsidiaries of a few large groups naturally influences the course of shipments; for, although the marketing organisations in the United Kingdom operate as separate units, they take the bulk of their supplies from their affiliated companies in various parts of the world. The sources of British oil imports in 1929, 1937 and 1938 are shown in the following table, where Venezuela and the Dutch West Indian islands are treated as a single entity. This is necessary in view of the fact that the crude oil output of the former country is shipped mainly to Curaçao and Aruba—where the Shell and Standard interests operate refineries which are amongst the largest in the world—either for immediate re-export to other countries or for refining and subsequent sale in the form of finished products:—

	MINERAL OIL IMPORTS (Thousand Gallons)		
	1929	1937	1938
Venezuela/Dutch West Indies	295,811	1,217,394	1,215,224
Iran	500,486	596,517	626,880
U.S.A.	753,808	379,860	562,255
British countries	137,091	155,764	252,670
Iraq (crude oil only)	—	117,084	142,040
Roumania	71,438	142,002	93,330
U.S.S.R.	202,185	85,164	79,902
Mexico	110,549	143,893	54,334
Other foreign countries	123,990	237,074	181,387
Total	2,195,357	3,074,752	3,208,022

Taking first the changes between 1929 and 1937, it may be noted that Britain's import requirements registered a 40 per cent. advance in this period. The most notable features are the remarkable growth of shipments from Venezuela-Dutch West Indies, the appearance of Iraq as a crude oil supplier, and the heavy reduction in imports from the United States and the Soviet Union. The increase in the first-named item is due not only to the rapid development of Venezuelan oilfields and the concurrent expansion of refinery activity in the Dutch West Indies, but also to the imposition in 1932 of prohibitive import duties by the United States. These duties made it necessary to divert Venezuelan oil from the United States market to Europe (and particularly to the United Kingdom) and, at the same time, enabled American producers to expand their home sales. The sharp decline in Russian entries reflects the rapid growth of consumption in that country and the failure to achieve a commensurate increase in output. The decline was continued in 1938, when total British imports rose by over 4 per cent. Roumanian production has been declining for the past two years, which accounts for the 34 per cent. drop in British imports from this source last year. The decline of over 60 per cent. in entries from Mexico is evidence of the boycott which followed the expropriation of the British and American oil companies just over a year ago. Supplies from that country were largely replaced by increased purchases in the United States, while there was also a notable advance in imports from British countries (almost entirely Trinidad). Although

sending a trifle less than in the previous year, Venezuela and the Dutch West Indies supplied no less than 38 per cent. of British requirements in 1938. In times like the present it may not be considered irrelevant to point out that the proportion of Britain's oil supplies coming across the Atlantic has risen from 59 per cent. in 1929 to 65 per cent. last year.

Germany and the Cork Market.—Cork-growing is a slow business, and since it takes fifty years before a cork tree will yield bark of good quality, production cannot be quickly increased. The world's producing areas are limited; Portugal is by far the largest exporter of raw cork, but Spain is also an important source of supply. Before the civil war in Spain the output of the adjoining Spanish provinces of Andalusia and Extremadura was largely sent to Barcelona for manufacture and export. But after July, 1936, Andalusia and Extremadura were separated from their domestic market and their supplies were diverted to Germany. German imports of raw corks from Spain rose from 2,071 tons in 1936 to 18,500 tons in 1937 and 16,700 tons in the first eleven months of 1938. Although her imports from Portugal declined, Germany rose last year to the leading place among the world's cork markets. Her imports were considerably in excess of domestic needs, and, in order to re-export the surplus, clearing arrangements, financial facilities and even political pressure were brought into play. Hungary must now import two-thirds of her requirements from Germany and only the remaining third from Spain, while Bulgaria and Turkey depend entirely on German supplies. The National Bank of Yugoslavia has lately refused to release foreign exchange for purchases of Portuguese cork. Last December the Roumanian Government raised by 70 per cent. the exchange rates for cork importers, thereby debarring Portuguese cork from the market. As a result of German activity and of a decline in American demand, Portuguese exports of raw cork fell by a third between 1937 and 1938. The question now being asked is what will become of the Portuguese trade, now that the cork forests of Catalonia and any factories that may have survived the war have joined those already under German control. There is no doubt of the ability of the Germans to exploit the Spanish cork resources to the full. But it is not easy to increase consumption. The main use of cork is, of course, in bottling, and here the trade has met with serious competition from the metal cap. There are other uses, as floor material and in the chemical industries, but there is no market capable of rapid expansion. Germany's manipulation of the Spanish cork trade has already led to a fall in the price of Portuguese cork and may adversely affect British investments in the industry of that country.

Retail Trade in February.—The statistics for the value of retail sales in January, published in the *Board of Trade Journal*, showed very little improvement over the corresponding figures for the same month in 1938. In February, however, there was an increase of 2.3 per cent. compared with a year ago in the daily value of retail sales in the reporting concerns. This increase varied in size from 4.1 per cent. in the Midlands and South of England to a fall of 3.8 per cent. in Central and West London. Sales of food and apparel were also larger, but sales of household goods declined slightly compared with a year ago. It is probable that the March returns will be affected by the increasing political tension which has followed the absorption of Czecho-Slovakia by Germany; it is reported that the high-class retail trade has shown some decline in the last few days, but, on the other hand, the approach of Easter normally brings an increase in retail turnover.

Additional Bacon Imports.—Bacon prices usually reach a seasonal peak in the late summer, with another and usually smaller peak in the spring months. Last year an exceptionally firm demand in the spring carried the prices for English and Danish bacon, No. 1 sizeable, on the London Provision Exchange to more than 105s. per cwt. in April. In order to prevent a similar rise in prices in the current year, the Board of Trade has, during the last two months, arranged for additional supplies of some 384,000 cwt. of bacon to be imported before the end of June. These extra allocations from countries whose exports of bacon to Great Britain are regulated by quota, are, however, partly offset by the decline in the Canadian shipments to this country. In the first two months of the current year imports of bacon from Canada totalled 189,000 cwt., against 261,000 cwt. in the corresponding period in 1938, and the low level of pig killings in Canada indicates that larger supplies from that country cannot yet be expected.

Suspension of Silver Quotations on L.M.E.—The committee of the London Metal Exchange announced this week its intention to discontinue on and after April 1st the fixing of official quotations for fine silver. This step is a direct result of the sharp contraction in the London dealings in silver in recent months and years. The Exchange had resumed dealings in silver on May 1, 1935, after an interruption of twenty-five years, but before the end of 1935 silver purchases in London by the American Treasury were discontinued, so that the main basis of silver dealings on the L.M.E. was lost before the new contract was one year old. This decision of the committee of the Exchange will not affect the London silver bullion market, which is controlled by four long-established firms of bullion brokers, Mocatta and Goldsmid, Sharps and Wilkins, Pixley and Abell and Samuel Montagu and Company. Although the turnover in the bullion market has also fallen in the last few years, it is still the world's leading free market for silver, and its quotations for cash and two months forward have considerable importance. The uncertainty over the silver policy of the United States' Government has made London prices very erratic in the past six weeks. Owing to a bear squeeze, due to forward sales in December when a reduction in the American Treasury prices was expected, the cash price rose in the second half of February not only well above the forward price but also above the United States parity. Consequently some United States shipments were made to this country for the first time for years. In the past fortnight, however, the arrival in London of a larger consignment of Japanese silver eased the position and again forced the quotations below 20d. per ounce, but the course of prices will remain uncertain until the market knows the attitude of the American Treasury towards the Silver Purchase Act of 1934, which comes up for discussion during the summer.

American Cotton Exports.—After rumours of one kind and another during the past few weeks, President Roosevelt has this week made public his proposals for dealing with the surplus of American cotton supplies; at present, the Government holds more than 11 million bales of cotton on loan from farmers. The President suggested that farmers who release material from the Government loan should be paid 1.25 dollars per bale, and that a "moderate" subsidy, the amount of which has not yet been determined, should be granted on all cotton sent abroad. It is understood that the export subsidy will apply to 8,000,000 bales. The New York market was practically unaffected by this news, but on Wednesday last the Liverpool cotton market was thoroughly disorganised and prices fell ½d. per lb., that is to say from 4½d. to 4½d. for current crop futures. The immediate effect of this development was to check trading in manufactured goods, but some buyers were attracted by the lower level of prices, and fair contracts were arranged. There was a substantial buying movement of yarn in the Manchester market during February and the

early part of March, and some users went "long," but the bulk of this buying did not take place at higher rates than those ruling to-day. Lancashire spinners have been harassed for some time by the difficulty of securing supplies of certain kinds of American cotton, and the position will now be eased, but a further decline in prices would have the effect of checking business.

C.W.S. Trade for 1938.—The report of the directors of the Co-operative Wholesale Society for the year ended January 14th reflects a twelvemonth of difficult trading conditions and of falling values in many commodities. The sales totalled £125,015,316 (of which grocery and provisions accounted for £91,008,452), an increase of £5 millions, or 4½ per cent. For strict comparison, however, the increase was only 2½ per cent., as the 1938 accounting year was one of 53 weeks as against 52 in 1937. Trade in the London and southern area showed the most marked advance, while some departments in the Manchester area recorded decreases—in line with the industrial depression in co-operative centres. More significant was the lessened demand for the production of the C.W.S. works, which dropped by £279,672 to £43,303,528, caused principally by lower flour prices. Though the directors do not decry lower commodity prices, which should cause an expansion in the purchasing power of their members, they have seen the effect in the constriction in business activity. The aggregate profit was £2,891,485, after providing for interest on capital and charging all productive and distributive expenses. From this, society-members have received a dividend of 4d. in the £ on their purchases and an additional 3d. in the £ on their purchases of C.W.S. productions. This leaves £150,000 for the dividend equalisation fund and £252,076 for the reserve fund, which stands at £2,918,231. The sales of the agricultural department were increased to £3,160,977 by the closer trading relations established with the co-operative agricultural societies. Supplies of butter for the factories at Brislington, London and Cardiff were valued at £2,929,451; the weight of butter sent to societies was 494,645 cwt., on which the profit was only £1,758. Though the value of the margarine produced decreased by 12 per cent. to £2,450,335, the quantity fell by only 4 per cent., with a resultant surplus of £132,153. The value of the turnover in milk supplies advanced by 21 per cent. to £3,533,110. At the delegate meetings to be held this month approval will be asked by the directors of their act in sending goods to the value of £3,000 to the relief of Spanish co-operators through the International Co-operative Alliance.

Check to Rise in Prices.—Before Herr Hitler's occupation of Bohemia and Moravia, there were signs that the stage was set for a re-stocking movement, and for an upward turn in the prices of primary products. The

last week, and for export they are still quoted at 20s. 3d. per basis box f.o.b. Relatively business in the home market is more active than in the foreign trade. The heavier branches of the iron and steel industry in South Wales continue exceptionally busy.

★

News from Abroad.—Conditions on international steel markets have remained under the influence of the uneasy international situation. The number of purchases to provide for an increase in stocks in case of transport difficulties is surprisingly small. Although enquiries from some parts of the world have recently been more numerous and requirements for armament work are further increasing in many countries, steel producers complain of a disappointing export trade.

As far as the Belgian producers are concerned, the only satisfactory feature has been the sale of semi-products which are enjoying a keen interest by British buyers. This fact, and the improved domestic demand for steel products, have resulted in higher total bookings of the Belgian works compared with last month. Fair orders have recently been placed by Scandinavia and some South American countries, particularly Argentina, where outside competition is disturbing. Substantial enquiries from the Far East, especially Japan, have been taken up by American exporters. It is hoped that the improved domestic demand will mitigate American competition on world markets, although it seems that in this respect much depends on the future price trend. If the American exporters can secure fair prices for their exports, their interest in foreign markets will on the whole be maintained, but if prices should further recede many producers might withdraw from export business until demand and price have improved.

New negotiations are being carried on by the Co-ordinating Committee of the Steel Cartel to overcome the differences which have arisen with the American exporters. Otherwise, the main activity of the sales organisations of the Cartel is at present to secure business against outside competition by an elastic price policy.

Textiles

Cotton (Manchester).—Demand has continued much quieter, the general tone of the market being distinctly slower. The sharp fall in raw cotton prices following the announcement of the subsidy plan in the United States, has had a very disturbing effect upon trade. It is not yet clear whether the American Government's plan for releasing "loan" supplies will be accepted.

Spinners have had a much quieter week. Prices have been easier and more irregular, the total sales being less than production. Although in the cloth section prices have been tested on a fair scale, the resulting business has been smaller than in recent weeks. The confidence of buyers has undoubtedly been shaken by political events, and the decline in raw cotton prices. An increased inquiry has been experienced for India, and a few more sales have been arranged. Although the Legislative Assembly has rejected the trade agree-

ment, it is expected that it will be ratified by the Government.

★

Wool (Bradford).—The London wool sales ended on Thursday last week. Prices derived sustenance from increased purchases by Russia and showed little variation throughout the series. A feature of the wool trade is the ready absorption of raw wool at all selling centres. There does not seem to be a slack market anywhere, and all overseas cables report firm prices. This is the last week of heavy offerings, when something approaching 100,000 bales are being catalogued, and during the remainder of the selling season in Australia, New Zealand and South Africa, only average wools will be available.

Notwithstanding so little movement in prices and a quiet market in Bradford, reports our correspondent, there is evidence that consumption of raw wool is substantial. Complaints are still very persistent that both home and export demand is exceedingly limited, but no less than about 80 per cent. of combing and spinning machinery is estimated to be running in the West Riding. Indeed, the cause of complaints is to be found not so much in turnover as in unsatisfactory profit margins.

THE COMMODITY MARKETS

WITH a few exceptions, the commodity markets were marking time during the past week and the prices of the most sensitive materials showed very little change.

Among non-ferrous metals, for example, copper and tin were slightly dearer on Wednesday than a week ago, while lead and spelter were a little cheaper. The market in rubber was firmer, but linseed was marked down. Raw sugar prices continued their upward trend, while wheat was again cheaper after a slight rise a week ago. Cotton prices again fell sharply on the confirmation of reports that the United States Government proposed to release part of its holdings.

In the United States the trend of the prices of sensitive commodities was slightly downwards, reflected in the fall in Moody's index from 142.2 (December 31, 1931 = 100) to 141.2, during the week ended last Wednesday.

Metals

Copper.—The demand for copper was very small this week, but at the same time sellers were reserved, and the price of standard copper gained 2s. 6d. to close on Wednesday at £43 1s. 3d. per ton. There was a report that Italy has concluded a contract for the delivery of 10,000 tons of Spanish copper, but other Governments were not in the market during the week.

★

Tin.—After rising to £217 per ton, cash tin relapsed on Wednesday to £215 15s. per ton, a net rise of £1 10s.

on the week. In this market also buying was at a low ebb, and supplies were difficult to obtain. A plan for the redemption of the surplus exports has been forwarded to the Bolivian Government, but the details are not yet known. It seems, however, that the I.T.C. is anxious to have the accumulated surplus removed by the middle of this year. Whether such a plan can be carried out is doubtful, as social and labour difficulties have arisen in most of the restricting countries owing to the low rate of the quotas. The I.T.C. is to meet again on April 27th, before the end of the first month of the next quota period. This fact indicates that the Committee is taking the question of supplies seriously and will probably decide on additional measures if the recent adjustment in the quotas should prove ineffective.

★

Lead and Spelter.—The price of lead closed on Wednesday 6s. 3d. down at £14 11s. 3d. per ton, while spelter lost 1s. 3d. to close at £13 12s. 6d. per ton. The activity of the market was very low. The political tension gives rise to fears that the spring building season may suffer, and there was no increase in armament purchases during the week.

★

Mercury.—Due to fears of a shortage in supplies owing to the position in Spain, the price of the metal was again raised by 8s. 6d. to £16 18s. per flask of 76 lbs. The present price is £3 3s. higher than six months ago. It was reported from Rome that negotiation for a revival of the Italo-Spanish cartel (which broke down at the beginning of 1937) have been resumed in the Italian capital and an agreement is expected before long. As Italy and Spain are in need of foreign exchange and have no domestic use for the great bulk of their supplies fears of a shortage seem exaggerated.

Grains

IN spite of the unsettled political situation, which might be expected to bring a higher level of wheat prices, the market remains dull and prices on the week are a little lower. The new Argentine crop continues to weigh on the market, although the Grain Board is not pressing sales below a price of 20s. per quarter. Sales from the Argentine have so far been confined to other South American countries and to countries such as Germany, with whom barter purchase has been arranged. Some fears are expressed that wheat sold on these barter terms may be resold on the free market by the purchasers. There has been little business in maize; European countries have sold most of their last crop and the new Plate crop is not expected on the market until early in May.

Other Foods

Provisions.—The Board of Trade has arranged for additional supplies of bacon to be imported before Easter; the market was again very firm last week and prices of English and Danish

were marked up on the London Provision Exchange. Except for the trade in small fat pigs, the Smithfield meat market remains dull.

★

Colonial Produce.—The unsettled international situation continues to overhang the market, and the price of raws showed a further, though slight, improvement during the week; the volume of business is small, both in raws and refined, and an advance in the prices of refined sugar at the end of last week could not be maintained. There was little request for cocoa at the terminal markets and the price of Accra has again weakened.

Miscellaneous Commodities

Oils and Oilseeds.—The poor take-off in oilcakes has resulted in a low

level of demand from crushers and little business has been transacted in linseed or linseed oil. Prices are a little lower than last week, but are firmly held. The price of Egyptian cotton seed has fallen to new low levels and is now quoted at £5 12s. 6d. per ton for March and April shipment to Hull. The United States Department of Agriculture reports that intended sowings to linseed in that country are 82 per cent. larger than the corresponding estimates last season.

★

Rubber.—The market has again been dominated by political events and by the reactions to them of the New York market. After small fluctuations during the week, the price of standard sheet on the spot closed ½d. higher at 8d. per lb. The statistics of the American tyre trade have been encouraging, when compared with those of last year;

there was, however, a slight increase in manufacturers' stocks in February.

★

Timber.—After a hesitant period in January, when it seemed doubtful if the low prices then ruling would be maintained, there was a sharp improvement in the market for most kinds of imported timber. Larger Continental purchases and the knowledge that the export quotas of the main suppliers are smaller this year than last were largely responsible for the improvement, which enabled exporters to place very fair quantities of timber on the British market at rising prices. Importers have found, however, that the low level of home demand, particularly in the South of England, has hindered a corresponding rise in the prices of delivered goods, and the last two weeks have seen a lull in the market, emphasised by the uncertain political outlook.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have audited the above Balance Sheet with the Books in London and the certified Returns from the Branches. We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, containing the particulars required by the Regulations of the Company, and is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

COMPANY MEETINGS

THE MERCANTILE BANK OF INDIA, LIMITED

REVIEW OF PAST YEAR'S OPERATIONS

SIR CHARLES INNES'S ADDRESS

The forty-sixth annual general meeting of the Mercantile Bank of India, Limited, was held, on the 28th ultimo, in London.

Sir Charles A. Innes, K.C.S.I., C.I.E., the chairman, in the course of his speech, said:—Ladies and gentlemen,—Though our profits have been well maintained, the balance-sheet total is down by roughly £1,500,000 compared with 1937. On the liabilities side our deposits are less by more than £1,000,000 and on the assets side a decrease of nearly £2,500,000 in bills receivable and loans and advances is only partially set off by an increase of nearly £1,500,000 in investments and cash. To some extent, however, the decrease in bills receivable is more apparent than real. It is partially accounted for by the introduction of the air mail. A large proportion of these bills consists of bills purchased by our branches in the East and sent home to London, and the amount of them outstanding at any one time is roughly the amount in transit between the East and London. If we take Malaya as an example, when the mails came by sea, the time of transit was not less than three weeks, and we had three weeks' supply of bills always on the water. The air mail takes only seven days, and naturally the amount outstanding is smaller.

SHORTAGE OF BILLS

This, of course, is only a partial explanation of the decrease. It is common knowledge that there is a shortage of bills in London owing to the diminished volume of international trade. Similarly the decrease in loans and advances and the increase in investments are partly due to the fact that at the end of 1937 we had a large amount of money out at short notice in London at a low rate of interest. During 1938 most of this money was invested, but the mere fact that it was surplus to trade requirements is in itself a sign of the times, and, generally speaking, it may be said that our balance sheet reflects poorer trading conditions in 1938. Nor is this surprising. International tension was the dominant factor throughout the year. The Munich Agreement brought some relief, but did not suffice fully to restore confidence. The war between China and Japan continued to drag on, and disorganised trade with the Far East. Finally, though there was some improvement of trade in the United States of America in the later months of the year, it came too late and was not sufficiently pronounced to have much effect on the trade of the countries in which we are interested.

In the circumstances, it is satisfactory that our profit at £192,443 shows an improvement on the figure of the previous year, and again we have good reason to congratulate Mr Crichton and his officers. We are maintaining our dividend at the usual 12 per cent.

INDIAN TRADE

I pointed out last year that India and Burma, though now separated, still constitute a single currency unit, and that the combined figures of the seaborne trade of the two countries give the true picture of the balance of trade. These figures show that exports fell from 220 crores to 180 crores and imports from 154 to 140 crores. The favourable balance of trade in merchandise thus declined from 66 crores to 40 crores. There was also a decrease in the net export of precious metals. By far the largest decline was in the export of raw cotton, due to decreased imports of Indian cotton by Japan, and exports of manufactured and raw jute, hides and skins, and seeds also declined. Imports of machinery again show a large increase, and machinery has now displaced cotton manufactures as the largest single import into India. Imports of cotton yarn and cloth continued their downward progress from 1,576 to 1,461 lakhs, and Lancashire again had a smaller share of the trade. It is good news therefore that the long drawn out negotiations for a trade pact between India and this country have at last been brought to a successful conclusion, and that Lancashire will benefit by the new agreement which has just been signed.

The figures I have given show that India did not escape the effects of the general recession of international trade, but the reports I have received indicate that the decrease of foreign trade was to some extent offset by increased industrial activity inside India, and these reports are confirmed by the statistics of rail-borne traffic. The agriculturist, however, had a bad year. India, in fact, is up against the old problem. It is comparatively easy to foster the growth of industries by high tariff duties. It is a much more difficult matter

to improve the lot and increase the purchasing power of the agriculturists who constitute so large a proportion of India's population. This is not to say that the problem is not realised or is neglected by the Governments of India. On the contrary, they are attacking it by the improvement of agriculture, by rural development schemes, by debt redemption schemes and by extending the policy of prohibition. But progress is necessarily slow, and in the meantime the high tariff duties now in force send up the cost of living for the rural population.

TEA AND OTHER INDUSTRIES

The tea industry had a less satisfactory year than 1937. The higher rate of release under the regulation scheme brought about an increase in stocks, with the result that prices tended to sag, the fall being heaviest in respect of common teas. On the other hand, production increased, with the result that stocks at the end of the year were heavier. A small reduction of quotas for the year ended March 31, 1940, which has just been announced should improve matters. The iron and steel and cement industries continued to flourish, but prices of coal declined, probably owing to a large increase of production.

The troubles of the great jute industry to which I referred last year continued till September last, when the Bengal Government intervened and imposed a temporary limitation of working hours on the mills in Bengal. This intervention had the desired effect, and the industry has now come together and has signed a five-year agreement for the limitation of hours of work. I hope that the industry will now regain some of its former prosperity. The progress of the cotton industry continued, and production reached a very high level. The Bombay section of the industry should benefit by the passing of the Trades Disputes Act.

India's credit remained on a high level. Indeed, it is a curious fact that though money is dearer in India than in this country, India 3½ per cent. paper stood higher than the British Government's 3½ per cent. war loan on more than one occasion in December and January last. Two local governments successfully floated loans at just over 3 per cent., and the average rate for the Central Government's Treasury bills was only Rs.1.4.10. India's high credit is, no doubt, the result of many years of cautious and conservative finance evidenced by balanced budgets and the extraordinary small amount of unproductive debt. But it is also partly due to the fact that India has not found it necessary to spend huge sums on armaments, and that she is probably the only important country in the world whose military expenditure is less now than it was ten years ago, and one cannot help feeling that the problem of Indian finance is likely to become more difficult.

The mainstay of provincial finance has hitherto been land revenue and excise. The former is at best a stagnating source of revenue, if indeed it is not actually declining, and the policy of prohibition which most Provincial Governments are adopting necessarily involves a sacrifice of excise revenue. For instance, one Provincial Government, whose excise revenue was 320 lakhs two years ago has announced that it is prepared to sacrifice 180 lakhs of this revenue. The difficulty, of course, is to find alternative sources of revenue, and some of the new taxes imposed or proposed seem to trench on fields of taxation hitherto regarded as belonging to other authorities. Three instances will suffice. One Province proposes to impose a tax on urban rateable values in its chief town which would appear to encroach on a field hitherto reserved for the municipal authorities. In another an employment tax is proposed. It is to be graduated according to income, and is just an additional income tax. In others again there is a sales tax on petrol, which must tend to reduce consumption, and thereby to affect the revenue derived by the Central Government from the import duty and excise on petrol.

TAXATION

Developments of this kind must be an embarrassment to the Central Government, which already has taxation problems of its own. Indeed, it is not easy to see what reserve of taxation it has for use in an emergency. The revenue budget for 1939-40 shows that nearly 50 per cent. of its revenue comes from customs duties and nearly 70 per cent. from customs duties and income tax. The rate

INTERNATIONAL NICKEL COMPANY OF CANADA, LIMITED

SATISFACTORY PROGRESS IN FINLAND

MR ROBERT C. STANLEY'S STATEMENT

The annual meeting of the International Nickel Company of Canada, Limited, was held, on the 29th ultimo, at Toronto.

Mr Robert C. Stanley (the chairman and president, said):— You will have noted that net profit in 1938 of \$32,399,470.23 was \$17,900,153.58 less than the figure of \$50,299,623.81 reported for 1937. The decrease in earnings was due to a lower volume of nickel sales, to the lower prices realised for copper and platinum metals, and to the weakening of sterling in terms of the dollar.

Sales of nickel during 1938 amounted to 164,378,245 lb., comparable with 207,700,943 lb. in 1937. This decrease is a departure from the year-to-year increases shown since 1932, and may in large measure be attributed to the world-wide dislocation of industry caused primarily by the fear of war.

The recession which developed in United States trade during the autumn of 1937 continued until the summer of 1938, and the company's nickel business in that country during this period was only 38 per cent. of the business for the like months of the previous year. However, there was steady improvement during the last six months of 1938. On the other hand, overseas nickel business, which seldom fluctuates to the extent of United States business, was comparatively steady, so that for the entire year under review the company's total sales of nickel attained a level equal to 79 per cent. of that for 1937. Our selling prices remained unchanged.

Copper sales of 292,129,727 lb. at 9.80 cents per lb. in 1938 compare with 291,880,403 lb. at 13.20 cents in 1937. This difference in price applied to the tonnage sold accounts for approximately \$10,000,000 in terms of gross profits. The same condition to a lesser extent held for sales of the platinum metals, of which total sales in 1938 of 193,195 oz. at \$29.75 per oz. compare with 188,756 oz. at \$37.55 per oz. in 1937. The realisation on platinum metals was, therefore, less by approximately \$1,500,000.

Projected expenditures in 1939 call for approximately \$10,600,000, comparable with \$10,750,707.10 expended in 1938.

The mine development programme in Finland is progressing satisfactorily. Barring unforeseen emergencies, this mine, smelter and hydro-electric development will be ready for operation by the autumn of 1940.

OPERATING AND DIVIDEND POLICY

As to the rate of future dividends I can only repeat what I have said at former meetings: "That it is the policy of your directors to make dividend disbursements compatible with the company's current earning power, business prospects and after provision of adequate cash reserves."

Our policy is to operate our works as nearly as possible at a uniform rate, building up stocks of nickel during periods of business recession, and liquidating stocks during periods of business activity.

DEVELOPMENT AND RESEARCH

When the world war was over, this company found itself possessed of mines and works of great capacity and only a limited outlet for its metals. In order to cope with this serious problem, research and market development work were expanded in many directions, and in 1922 the development and research division was organised with increased personnel and, as an important feature of this activity, more adequate laboratory facilities were provided. Tangible results from this new activity were rapidly forthcoming and were highly satisfactory. In addition to the three central research laboratories, there are four well equipped works laboratories, located at Acton, England; Clydach, Wales; Huntington, West Virginia; and Port Colborne, Ontario. The work of these units is largely devoted to improvement of existing metallurgical processes, and to the development of new and better plant products. The Acton laboratory, in addition to its process research, is conducting an active campaign to develop new uses for the platinum metals.

The seven laboratories mentioned cost \$1,270,336 and now employ a staff of 218 mainly technically trained men. There is currently expended on research and market development activities, inclusive of supporting publicity, about \$2,500,000 each year. That these expenditures have accomplished their objective is best exemplified by comparing our sales of nickel in the decade 1919 to 1928 of 520,323,280 lb. with 1,127,682,039 lb. during the last decade, 1929 to 1938, a period in which the world suffered one of its worst industrial depressions.

The report and accounts were unanimously adopted.

of income tax is already high, and it is doubtful whether it could be raised much more without placing an undue burden on industry. The customs duties consist partly of protective duties imposed primarily for revenue purposes. But the general level of these latter duties—20 or 30 per cent. *ad valorem*—is so high that in effect they have assumed a protective character, and in any case there is always the danger of setting in motion the law of diminishing returns. Some at least of the lost customs revenue should be recovered, however, by internal excise duties.

A new Act has just been passed by the Indian Legislature to amend the Indian Income Tax. One of the most controversial features relates to the definition of Residence in British India so far as it relates to companies and firms. Any company or firm will be regarded as resident in British India if, in any year, its income arising in British India exceeds its income arising without British India. It is not very clear what the effect will be, but it looks as if any company or firm which makes profits in British India will be required every year to disclose to the Indian income tax authorities its total profits, wherever made, and to pay Indian income tax on those total profits in any year in which more than half of them are made in British India. It is not surprising that this part of the Act has aroused much criticism.

The prospects for the current year in India may, perhaps, be said to be more hopeful than they were a year ago, but everything, of course, depends on how the international political situation develops.

CONDITIONS IN BURMA

Burma, I am sorry to say, was in an unsettled state in 1938. Labour unrest was followed by serious communal riots in July and September between Burmans and Indians. In December a campaign of mass civil disobedience was launched by way of protest against the measures taken by the Governor to restore order, and finally since the close of the year Hindu-Muhammadan riots among the Indians themselves have added to the turmoil. All our reports dwell on the injury done to trade by these disorders. The only bright feature in the picture is that an excellent rice crop has been harvested, and that there is a large surplus available for export. Burma, therefore, should be able to look forward to a better year provided that law and order are restored and the conditions re-established in which alone commerce and industry can flourish.

CEYLON

In Ceylon two events of special importance occurred. In December last the Governor's proposals for the amendment of the Constitution were made public. The most important was the discontinuance of the present system of government by committees and the institution of a Cabinet system, the Prime Minister to be selected by the Governor himself. The proposals are now being debated in the State Council, and while they have been criticised in some quarters, they have been generally well received in business circles. It has also been made known that the Government contemplates an alteration in the currency system. At present the Colony's note issue is based on the Indian silver rupee. Although actual proposals have not yet been announced, it is understood that, among other things, the intention is to demonetise the Indian silver rupee and to place Ceylon currency on an Indian rupee exchange standard in much the same way in which the Indian rupee is now maintained on a sterling exchange standard. The matter is one of more importance than is generally appreciated. It is also one of which the exchange banks have expert knowledge, and it is hoped that full consideration will be given to the views which they have expressed before a final decision is come to. It was not a good year for trade.

The outlook for 1939 is perhaps not unfavourable. Tea should continue to enjoy a modest measure of prosperity, and as far as one can judge the omens for the rubber industry are better. What producers want is an increase in permissible exports provided that it is not accompanied by a collapse of the price. Ceylon's basic quota has been increased, and, for reasons which I will explain when dealing with Malaya, hopes are entertained that the export quotas may be increased for the second half of the current year.

The prosperity of Malaya is bound up with that of the rubber and tin industries, and the drastic cut in the export quotas of both products had a disastrous effect on the trade of the Peninsula. The outlook for the rubber industry appears to be improving. The prospects of tin are more obscure.

I hope that you will agree that, considering the difficulty of the times we have been passing through, the bank did well in 1938. Indeed, we shall be fortunate if we do as well in 1939. But there are too many uncertainties for any prudent man to commit himself to prophecies.

The report and accounts were unanimously adopted.

NATIONAL BANK OF INDIA, LIMITED

DIVIDEND 16 PER CENT.

MR R. LANGFORD JAMES'S REVIEW

The ordinary general meeting of the National Bank of India, Limited, was held, on the 27th ultimo, at the Wesleyan Hall, Bishopsgate, London, E.C., Mr R. Langford James (chairman of the company) presiding.

The general manager (Mr E. H. Lawrence) having read the notice convening the meeting and the auditors' report,

The Chairman said:—The aggregate figures of liabilities and assets are less by nearly £3,000,000 in comparison with those shown at the end of the previous year, and this is mainly accounted for by a decrease of about £2,500,000 in current, fixed deposit and other accounts. The low level to which the banks have been compelled to reduce deposit rates owing to the difficulty of finding profitable employment for their resources has had the effect of diverting money formerly in our hands to short-dated Government securities and other investments where more remunerative terms are obtainable. In India this was particularly the case where the high yield on Treasury bills proved an attraction for "short" money and led to the transfer of bank deposits to Government. This may be a passing phase, and when the volume of trade is again on a scale requiring greater finance from the banks it should be possible to offer terms for deposits which will induce the return of money now perhaps temporarily withdrawn.

The decrease in deposits is reflected in our holding of British and Indian Government securities, which together aggregate £13,518,824, as compared with £15,304,062 on December 31, 1937. Bills payable are less by £185,244, and acceptances on behalf of customers are also down by £145,607. Among the assets, cash and bullion on hand and in transit amount to £4,861,444, as compared with £5,303,152 in the previous balance sheet. Cash and securities combined show a ratio of approximately 66 per cent. to the bank's total liabilities to depositors. Bills of exchange at £3,637,769 show a reduction of £888,073, while discounts, loans receivable, etc., at £10,118,560 have increased to the extent of £44,833. House property and furniture account appears as £931,698, which is £278,784 higher than the figure shown a year ago, and here I should like to inform shareholders that the increase is due to the recent acquisition by us of the building in which you are sitting, a portion of which we have rented from the Wesleyan Methodist Society since 1903. We were glad to be able to come to terms for the purchase of a property, the site of which is eminently suited to a business such as ours, and to obtain the extra accommodation so much needed and of which we shall be able to avail ourselves when we get possession of the entire property next year.

PROFIT AND DIVIDEND

Turning to the profit and loss account, you will see that the net profits amount to £444,063 3s. 8d., as compared with £465,861 16s. 8d. in the previous year. This sum has been arrived at after making provision for all bad and doubtful debts. With £249,816 15s. 6d. brought in, the available amount is £693,879 19s. 2d. An interim dividend at the rate of 16 per cent. per annum, less income tax, was declared in September last, and the directors now recommend the payment of a final dividend at the same rate. These together will absorb £320,000, and we propose to add £50,000 to staff pension funds and to place £75,000 towards reduction of premises account, leaving £248,879 19s. 2d. to be carried forward to next account. We deem it desirable to make this substantial allocation to property account in view of the purchase to which I have just alluded and of the further expenditure which the necessary structural alterations will entail.

As it was necessary to make provision for income tax and National Defence Contribution to the extent of approximately £25,000 more in 1938 than in 1937, I think you will agree that the results of the year's working are satisfactory. You will also agree, I believe, that, in view of the uncertainty of the times and the desirability of making such ample allocations as those to which I have just referred, a reduction in the rate of distribution from 18 per cent. to 16 per cent. is justified.

INDIAN TRADE

India showed a favourable trade balance in 1938 of Rs.29.77 crores, helped thereto by net exports of gold to the value of £11,699,000, which figures compare with £13,708,000 in 1937 and

£24,870,000 in 1936. Trade recession, reflected to a considerable extent in the volume of imports, which began to make itself felt in the early part of the year, assumed such proportions that, had it not been for the timely steps taken to effect every possible economy, the Government of India's closing accounts would have shown a serious debit balance. The actual final deficit was Rs.265 lakhs. These economies are to be continued in the year 1939-40, and the prospective deficit amounts to not more than Rs.50 lakhs—a shortfall which the yield from the doubling of the import duty on cotton is expected to cover. This is the principal feature of the Budget, which, incidentally, is the last to be presented by Sir James Grigg, whose term of office is drawing to a close. The favourable position disclosed in these estimates will be attained to a considerable extent by the increased revenue expected from income tax, super tax and company super tax under the new Act, which passed through the Legislative Assembly and the Council of State last month. Those of you who are familiar with the provisions of this Act will realise that it will inevitably lead to difficulties and complications for sterling concerns with business interests in India.

It is noteworthy that the sterling requirements of the Government of India for the year 1939-40 are estimated at about £27 millions, compared with £36 millions in 1938-39 and £37 millions in 1937-38—a factor which should strengthen their hands in carrying out the pledge, recently reiterated, to maintain the present rupee ratio.

Political events during the year have again claimed the attention of all those interested in the welfare of India. The work of the autonomous Provincial Governments has been followed with the keenest interest, and, while it is much to be deplored that communal troubles have again arisen and that labour disturbances have taken place, there is ground for hope that more ordered conditions will be the outcome of the devolution of power and responsibility to those in whose hands they are now entrusted.

Banking conditions in India during the year under review have been no less difficult than those experienced by others engaged in Eastern trade, but we have been in a position to take advantage of whatever opportunities offered of financing desirable business and of maintaining our valuable connections.

COTTON

To refer now, briefly, to the principal industries in which we are interested. I mentioned last year that the Bombay cotton industry, which was showing signs of improvement, from the profit-earning point of view, had experienced a setback in the shape of a 12 per cent. to 14 per cent. increase in its wages bill imposed at the instance of the local Government. To compensate that Government for loss of revenue, caused by the imposition of prohibition, a 6½ per cent. sales tax on cotton goods and an increase in property tax are now being imposed. Though in theory the sales tax will be met by the consumer, in a country such as India, where individual incomes are so small that even articles of every-day necessity must be cheap if they are to attract customers, it seems unlikely that the manufacturers will escape from paying at least some part of the bill. As the doubling of the cotton import duty by the Central Government will also affect working costs—though this refers principally to the mills manufacturing the finer counts—prospects for the industry cannot be described as bright.

After some years of strenuous effort, agreement has at last been reached by the Indian Jute Mills Association under which working hours will be controlled during the next five years, to bring production into line with demand. As the association now embraces in its membership all the Bengal mills with the exception of two—one of which is Indian and the other American owned—the control should be effective. The association is to be congratulated on this achievement.

TEA AND RUBBER

1938 was not as good a year as its predecessor for the tea industry, the quota released by the International Tea Committee being a little on the generous side, as events proved, with a resultant increase in stocks and fall in prices. Still the great majority of companies should show fairly profitable working when their accounts come to be published. An event of interest was the attainment, on January 10th last, of the centenary of the London auctions of Indian

HALIFAX BUILDING SOCIETY

ASSETS OVER £128 MILLIONS

The eighty-sixth annual general meeting of members of the Halifax Building Society, held in Halifax on the 27th ultimo, again revealed increased assets, a growth of borrowers and of the liquid reserves.

Proposing the adoption of the report and balance sheet, the President, Brigadier-General Sir Edward N. Whitley, K.C.B., C.M.G., D.S.O., D.L., said: The year which ended on January 31st was full of anxiety to everyone who had the care of other people's money; repeated shocks to confidence owing to the uncertainty of affairs on the Continent of Europe culminated in the crisis of last September, and it is with profound gratitude that I record the steadiness with which our great Society met the shocks. To be able to say, as I can, that there was no pressure of withdrawals and that the business of the Society was carried on smoothly throughout the crisis, is a tribute no less to the steadfast character of our members than to the prudence of our policy for many years past of keeping a proportion of our assets in a liquid form.

Turning now to the year's accounts you will see that the advances on new mortgages during the year amounted to £20,340,996, a little less than in 1937, but for the fifth year in succession over-topping the £20,000,000 mark. The total amount now outstanding upon mortgages is £105,177,549.

The Society's mortgage accounts continue to be in a very satisfactory state: there are no properties to be reported in the statutory schedule as being in possession for more than twelve months, and the actual losses during the year on a capital sum of over £100 millions are less than £44,000, which is a strong testimony to the care of our surveyors and valuers.

The liquid assets amount to £22 millions and are represented by cash in the bank, loans to local authorities repayable at early fixed dates and other gilt-edged securities. It is the strength of these liquid resources which enabled us to face the crisis in September without fear. The policy of the directors is to maintain them at a high level even though this safety precaution does cost an appreciable amount each year.

IMPRESSIVE FIGURES

The total assets of the Society amount to £128,242,856, being an increase in the year of over £5,500,000. The number of accounts of investing shareholders and depositors increased during the year by 10,913 to a total of 484,180, so that the average holding of each of our investors is £252.

The balance of profit for the year after making provision for all management expenses, income tax, National Defence contribution, and interest due to depositors up to the date of the accounts, and for depreciation of investments and office premises, amounts to £3,222,614, to which has to be added the balance brought forward from last year of £66,167, making a total of £3,288,782, out of which the following appropriations have been made: Interest to shareholders £2,652,076, staff superannuation fund £50,000, and to the general reserve fund £400,000, making £3,102,076, leaving a sum of £186,705, from which the directors have allocated, subject to confirmation at this meeting, a bonus of 10s. per cent. to the paid-up shareholders Class 1, and a bonus of £1 per cent. to the monthly subscription investing shareholders, which absorbs £120,614. The balance to be carried forward is £66,090, practically the same as last year.

The total reserve funds and undivided profits of the Society, including the £400,000 which the directors have put aside this year, amount to no less than £5,466,090, or 4.26 per cent. of the assets of the Society.

WAR DAMAGE

The Government has announced through the Chancellor of the Exchequer the outline of a plan for dealing with the damage caused by enemy action, and while we are, as people largely interested in this question, grateful for the statement so far as it goes, we shall scrutinise with the utmost care the legislation which implements the promise. The wide distribution of our risks is in itself a great security against any very heavy loss from air raids, if unhappily the country has to suffer such calamities. We have 250,000 separate mortgages spread over England, Scotland, Wales and Northern Ireland, and it would be bad luck if the enemy picked out the properties belonging to our members as targets for his bombs.

The subject of compensation for war damage is engaging the attention of the Building Societies' Association, and through our two members of its Council, Sir Enoch Hill and Mr David Smith, we shall do all we can to ensure that the Legislature is fair to the individual as well as to the community.

The accounts were approved.

tea, an occasion to which you doubtless saw reference at the time in the Press. The area under tea in the British Empire is some 1,440,000 acres, of which, in round figures, 841,700 acres are in India, 559,200 in Ceylon, 35,900 in Africa, and 3,150 in Malaya. Taken at a conservative figure, the value of these plantations must be in the region of £120 millions, a century's achievement of which the industry has reason to be proud.

With regard to rubber, a continuance of the disturbing political conditions on the Continent was reflected in the general decline in the world demand for crude rubber. Compared with 1937, world absorption in 1938 fell by 184,380 tons, to 908,000 tons, off-take in the United States of America—the largest consumer—showing a decline of over 24 per cent. This falling off in demand and its effect on price necessitated drastic action by the International Rubber Regulation Committee, whose efforts to meet a difficult situation merit commendation. Exports from territories participating in the regulation scheme were curtailed in the last half of 1938 to 45 per cent. of basic quotas, and, as a result, net exports during 1938 were reduced to 889,406 tons, against 1,135,337 tons in 1937, and world stocks showed a slight contraction. Any improvement in the world demand for rubber must be dependent upon an improvement in the international situation, applicable to America as well as to Europe, and the continuance of the Rubber Regulation Scheme ensures to the industry some measure of adjustment of production to consumption which would otherwise be impossible.

Indian sugar had a reasonably prosperous year, which can be attributed largely to the efforts of the central selling organisation.

CEYLON

So far as Ceylon is concerned, prices of coconut products have continued at an extremely low level, a factor largely affecting the income and consequently the spending power of the population. The prosperity of the country is still dependent on its three principal agricultural products, tea, rubber and coconuts, and with no certainty as to the future trend of the price of these commodities the question is being asked whether the growth of expenditure on schemes introduced by the State Council is not beyond the capacity of the island to bear.

Another matter which has been forced into public prominence in Ceylon is the proposal recently made to alter the currency system of the island. The present system is interwoven with the Indian currency system as the metallic backing for the notes issued by the Ceylon Government is the Indian silver rupee and the link with sterling through India has served to maintain stability of exchange which has been of the utmost importance in conducting the island's overseas trade. The proposal to part with the Government's holding of Indian rupees and substitute a currency based on a Ceylon rupee is one that does not appear to be justified by any experience tending to prove that a change is called for. One of the reasons brought forward in favour of an alteration is that, in the event of a devaluation of the Indian rupee, Ceylon could decide whether to adopt the new ratio or not. The recent emphatic pronouncement that no alteration will be made in the Indian rupee ratio deprives this consideration of its force and, even if such a change took place, it would not be in the interests of Ceylon to possess a currency of a different exchange value from that of India, with which her trade is so closely allied.

BURMA'S RICE CROP

In Burma, the rice crop though of normal dimensions suffered severely from unseasonable rains during the harvesting season, and the bulk of the crop was damaged. Partly for this reason, and partly in sympathy with the downward trend of grain markets generally, prices were considerably lower than in the previous year. Prices of teak also declined. The oil industry suffered from labour troubles, and altogether the year was, in Burma, one of unsettled conditions and declining prosperity. Communal rioting during July/September had disturbing effects both on local trading and the general political situation, and, unfortunately, these effects are still being felt.

There is not much change to report so far as conditions in East Africa are concerned. Prices secured by Kenya coffee growers have been a little better, though still disappointing. The market for sisal continues very poor. Generally speaking, East Africa is rather more prosperous than was the case a few years ago, though the return on capital invested in that quarter, with a few exceptions, can only be described as poor. The gold-mining industry does not appear to be fulfilling yet its early promise.

In conclusion, I take this opportunity—an opportunity to which I look forward year by year—of expressing our appreciation of the services of the staff, both here and overseas during the past year.

The report and accounts were unanimously adopted.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

COMMERCIAL TRADING SERIOUSLY DISTURBED

OUTLOOK FOR THE CURRENT YEAR

The eighty-fifth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held, on the 29th ultimo, at 38 Bishopsgate, London, E.C.

Mr A. d'Anyers Willis (the chairman), in the course of his address, said: Our net profits for the year amount to £335,309, against £491,065 a year ago, a decrease of approximately £156,000, and I would also point out, although possibly it is quite unnecessary, that the figure of £335,309 includes a transfer from contingencies account to meet depreciation on Government securities. I shall now endeavour to explain to you the adverse factors that have brought about this reduction in profits.

There has been a decreased volume of trade in various spheres where we operate, but it is the deteriorating business conditions in China and Japan that have been our chief concern. Most of you have followed events there closely, and I need not elaborate on these at the moment. I need only say that ordinary commercial trading, which it has been our business to finance, has in the past eighteen months been seriously disturbed. If this seemed to be a passing phase, or if we could visualise a return to more normal conditions in the near future, we would be happier. With regard to the introduction of a new currency into North China, and the endeavour to force unwilling traders to confine their finance dealings to Japanese banks in the new currency, this is a portent of interference with normal trading which we cannot ignore in relation to the future success of our business in China, and particularly North China.

CONSERVATIVE DIVIDEND POLICY

Further, during the last two years there has been a very substantial fall in the price of Government securities, of which our holdings, as I have mentioned in previous years, consist largely of short-dated stocks. Here again it is not possible to be optimistic about the future.

With these considerations in view your directors, after making the necessary provision for bad and doubtful accounts out of current profits, decided that the current profits for the year should be charged with the amount required to write down securities to market value and to transfer from contingencies account the balance required to provide for the proposals submitted to you.

I need hardly say how much my fellow directors, the management and I regret the proposal of a reduced dividend, but I am sure that our conservative policy will, in the circumstances, receive your full approval.

P. & O. BANKING CORPORATION

You will observe in the balance sheet, against our holding of P. and O. Banking Corporation, Limited, shares, a note stating that "A contract has been entered into for the purchase of the undertaking of the P. and O. Banking Corporation, Limited, with effect from February 1, 1939." You will, I feel sure, be glad to learn that practically the whole of the business hitherto conducted by the P. and O. Bank has been transferred to the Chartered Bank, and this accretion to the volume of our business will, I hope, prove of considerable value to this bank in the future.

I should perhaps particularly refer now to one of the assets of the P. and O. Bank which we have taken over and which will hereafter appear in our own future balance sheets as a separate item. The P. and O. Bank acquired in 1921 23,403 (93½ per cent.) of the ordinary shares in the Allahabad Bank, Limited, and these are now being transferred into the name of the Chartered Bank.

CONDITIONS IN INDIA

Money conditions in India during the year were easy. Call money rates, for instance, in the slack season were quoted as low as ¼ per cent. to ½ per cent., with very little demand even at that low level. The Government's usual borrowings by means of Treasury bills sold to the Money market were obtained at an average rate for the year of 1½ per cent. per annum. In May the Government of India successfully floated a large Rupee loan, the terms being 3 per cent. at 98, repayable at par 1963-65. This reflects the excellent state of the Government of India's credit.

As regards the external trade of India, the recession begun in 1937 continued last year. In June, however, business seemed to take a turn for the better, but the international political situation later on prevented material progress. The total value of the exports of India and Burma during 1938 was Rs. 180 crores, which compares unfavourably with Rs. 220 crores in 1937. Imports were valued at Rs. 140 crores in 1938, against 154 crores in 1937. This decrease in the surplus of exports over imports naturally tended to weaken the external value of the rupee, and, unfortunately provoked rumours of its impending devaluation. The Government of India wisely reaffirmed by public announcement their decision to maintain the rate at 1s. 6d. Since then, with more active exports, the exchange position has righted itself.

The largest factor in the decline in exports was a big decrease in raw cotton exports to Japan. I may add that this adversely affected our own turnover, as the finance of raw cotton from India to Japan has been one of our interests for many years.

Another item of India's external trade in the finance of which we have been keenly interested for many years is the import of Lancashire cotton piece-goods. The value of this continues to decline, and reached the paltry total of £4,570,000 only in 1938. Decreased imports of cotton goods from Japan and Britain have been offset by increased production of the mills in India. The Indian mills have, therefore, been able to absorb a good deal of the raw cotton which in the normal course would have gone to Japan. The total mill consumption of Indian cotton, in fact, during 1937-38 reached a record high figure. Production of cloth and yarn by the local mills has since proceeded at a high rate, and a position has been reached where consumption has not kept pace with production. Stocks of cloth and yarn are, therefore, increasing, and prices are depressed.

Tea has not experienced a particularly good year, the increase in the export quota from 87½ per cent. to 92½ per cent. decided on a year ago having resulted in an appreciable rise in the stock position. The International Tea Committee has now decided to reduce the export quota to 90 per cent. for the coming twelve months, which would appear to be justified and to meet the position fairly as between producers and consumers.

MALAYA

Quotas under the international restriction schemes for rubber and tin had to be drastically cut for 1938 owing to decreasing demand.

The average price of tin was some £50 lower than in 1937, and rubber 7½d., compared with 9½d. It is not surprising, therefore, to find that the total value of all exports from Malaya decreased from \$903,600,000 to \$581,500,000. This, expressed in sterling, is a drop of over £37,000,000. You will realise from these figures what a heavy curtailment there has been in the bank's exchange business in that important sphere of operations.

WIDESPREAD ECONOMIC DISLOCATION IN CHINA

Since I addressed you a year ago the situation in the Far East has deteriorated considerably from the standpoint of British trade and finance in China. The struggle between China and Japan has continued along an ever-widening front, and after a year and a half of pitiless combat, widespread destruction and economic dislocation, an enduring settlement seems to be as far off as ever. The Central Provinces remain devastated and depopulated, and the whole of that once prosperous area has ceased to be an outlet for constructive international trade. The Yangtse is no longer an artery of commerce, and the produce markets of Hankow and other river ports have been closed; the Chinese Government have lost control of Canton; and for all practical purposes the whole of the Chinese seaboard has come under Japanese surveillance, while in North China, Japan is attempting to obtain a position of political and economic hegemony very similar to that which she has acquired in Manchuria.

I need not remind you that although this bank has large interests in other Eastern territories, the volume of business transacted in normal times through our system of branches in China formed a substantial proportion of our aggregate operations.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED

CONTINUED PROGRESS

The fifty-eighth ordinary general meeting of this corporation was held, on the 29th ultimo, in London.

Sir Courtauld Thomson, K.B.E., C.B. (the chairman), said that on their premium income of £6,632,000 their total underwriting profit was £335,000, an increase of £183,000 over 1937 and, in fact, the highest profit for 20 years. Their investments showed an appreciation over book values. They had been able to continue their policy of augmenting their reserves in various directions. After all necessary provisions had been made and after a dividend well within their interest income had been declared at the usual rate, they had a surplus on the year of £100,000, which increased the amount carried forward to over £400,000.

WORLD AFFAIRS

The year 1938 was over-shadowed throughout the world by international uncertainties and recurrent crises. The business of insurance must go on under all circumstances, but could hardly fail to be affected by the lack of confidence which prevented economic development. Only three weeks ago confidence was reviving. The recent events in Central Europe had made it necessary to review prospects afresh.

Although no business could be immune from the effects of European events, so much of the corporation's activities were in North America and also in South Africa and Australia that the major portion of their business was fortunately away from the most likely centres of disturbance.

Their fire account continued to show healthy growth and a satisfactory profit. Taking their accident and general accounts together, the premiums had decreased by £524,000 compared with the previous year. That was mainly due to a large decline in workmen's compensation premiums in the United States, caused by the cumulative effect of less business activity and to their having eliminated the premiums of certain agencies where the results had not been satisfactory. In spite, however, of the reduced United States premiums, they had actually written in 1938 in that country more policies than in 1937. In almost every other part of the world they had increased their business, not least at home, where again he was pleased to report a record volume of premiums. The underwriting profit shown in the accident and general account was the largest since 1919.

Referring to their investments, the stocks and shares in their balance sheet had increased from £7,243,000 to £7,500,000 during the year. It was satisfactory to be able to report that while at December 31, 1937, there was a depreciation on book values, at the end of 1938 that had been turned into a small appreciation, taking into account the favourable rate of the dollar exchange. The main changes in their investments during the year were first the large increase in the United States Government securities and second the considerable decrease in their holding of railway and other debentures and debenture stocks in the United States. Throughout 1938 they had continued to reduce their holding of railway bonds. The railway position in the United States had continued to be unsatisfactory. They had also sold public utility and industrial bonds on which the yield had become unattractive when compared with that of similar Government bonds.

APPROPRIATION ACCOUNT

After adding the underwriting profit of £335,000 to the interest item of £225,000 and deducting a small net loss on investments realised of £11,000, they had a total balance of £549,000 to carry to the appropriation account. The directors recommended the payment of a final dividend of 2s. per share. This final dividend would cost £111,000, making a total of £195,000 in respect of dividends for the year. The directors recommended that the surplus then remaining, amounting to £100,000, be added to the amount of £305,000 brought in, making the total to be carried forward £405,000. Although the general reserve still stood at the substantial figure of £2,500,000, they had continued to add to other reserves and in addition had an important flexible reserve in the form of their carry-forward of over £400,000.

He thought that stockholders would agree that the picture he had given of the progress of the corporation last year had been satisfactory, following as it did on the successful results of recent years. The corporation was stronger than ever; it was well equipped to deal effectively with the constant problems of insurance business; and the great position which it held in North America was one upon which they might congratulate themselves.

The report and accounts were unanimously adopted.

Although the situation in China presents so many distressing and disturbing features, a development is taking place which is full of hope for China and for the world. I refer to the courageous efforts that are being made to build up a new economic system in the Western provinces of China and to rehabilitate in that potentially rich but hitherto undeveloped region the shattered livelihoods of refugees from the Yangtse valley. It is estimated that many millions of Chinese, among them many merchants, artisans and craftsmen, have migrated westwards. The task of setting these people to work would appear at first glance to be an impossible one, but it is being tackled with energy and enthusiasm by responsible officials of the Administration, and I have little doubt that the characteristic adaptability and industry of the Chinese people will prove equal to surmounting the consequences of one of the great tragedies of history.

Since the beginning of the present century, friends of China have repeatedly urged upon the Chinese authorities the desirability of opening-up to international commerce the rich provinces of the west by the establishment of a trade route through Yunnan and Burma, but without success. Now, through "force majeure," the Chinese are themselves seeking an outlet for primary products across the Burmese frontier, and much progress has already been made in constructing a system of roads to connect the more important cities of Nationalist China with Burma and the navigation headways of the Irrawaddy.

EFFECTS OF CURRENCY STABILISATION FUND

Confidence in the Chinese currency, when I referred to the matter a year ago, had already been undermined by the restrictions placed upon the sale of sterling and other foreign currencies by the Chinese authorities consequent upon the establishment of the Federal Reserve Bank of China in Peking and Tientsin, and the issue by that bank of a new currency in North China. In spite of generous allotments of foreign exchange for some months, the Shanghai-London rate rapidly declined from 1s. 2½d. to around 8d., at which it has been maintained with moderate fluctuations since June last year until the present.

The maintenance of a stable currency in China is of the utmost importance to British trade, and the announcement made in Parliament on March 8 by the Chancellor of the Exchequer regarding the formation of a currency stabilisation fund of £10,000,000, in which this bank will participate under the guarantee of H.M. Treasury, will doubtless be welcomed as a means toward this end. Unfortunately, this fund will not influence, except indirectly, the position in North China, which, I understand, forms the subject of vigorous protests addressed to Japan by the Governments of this country and of the United States of America and France. The fact that, as already stated, the rate of exchange in the Shanghai market has been maintained on a relatively stable basis since June last, with only moderate and intermittent support, gives reason to hope that, in spite of the many uncertainties of the position, the stabilisation fund will prove successful.

THE ANGLO-AMERICAN TRADE AGREEMENT

Having given you an outline of the principal features affecting trade in the major zones where we have branches, I would like to make brief reference to one matter which seems to me to have a bearing on the future of international trade. This is the new Anglo-American Trade Agreement. I might perhaps refer to it as a British Empire-American Trade Agreement, as its terms are not confined to trade between the United States and Great Britain. Now here is an endeavour by two great communities to improve and simplify the conditions that govern the interchange of commodities in order that trade may be encouraged and developed, and so bring material advantages to all concerned.

I also welcome the decision of our Government to secure for the Exports Credit Guarantee Department wider powers to provide a fuller measure of assistance to the export trades of this country. If only we could get free of international tension and strife it would indeed not be difficult to visualise a welcome improvement in world trade, with better prices for primary commodities and a consequent rise in the standard of living in the Eastern countries in which we are so much interested.

There is, I think, a rapidly growing recognition of the fact that international trade cannot be one-way traffic; its benefits must be reciprocal, and if the world could only settle down I am sure that we should see an extension of these trade agreements in other spheres.

The report was unanimously adopted.

At a subsequent extraordinary general meeting proposals for the renewal of the bank's charter were submitted in the form of a resolution which was carried unanimously.

BANK OF AUSTRALASIA

TRADE CONDITIONS IN AUSTRALIA

NEW ZEALAND TAX BURDENS

MR D. F. ANDERSON'S ADDRESS

The one hundred-and-fifth annual general meeting of the Bank of Australasia was held, on the 30th ultimo, at the office, 4 Thread-needle Street, London.

Mr D. F. Anderson, in the course of his speech, said: Last year the balance sheet total stood at the record figure of £55,846,000, the growth of roughly £4½ millions during that year being due largely to increases of over £1½ millions in fixed deposits and over £2 millions in current accounts. This year fixed deposits and current accounts are each down by about £600,000, and their fall has caused a reduction in our balance sheet total by rather more than £1 million.

BALANCE SHEET ITEMS

The assets side of the balance sheet shows more variation. The first item—specie, bullion, etc.—is lower by nearly £4,700,000, and we are glad to see it, for it means that we have been able to find a useful and we hope profitable outlet for something like that much more money. As a result specie, bullion, Government notes and cash balances at £5,378,000 represent just over 13½ per cent. of our total deposits, as compared with nearly 25 per cent. last year. If we add British, Australian, and New Zealand Government and other securities, the total for this year is over 35 per cent., or 7s. in the £ of our total deposits, compared with 45 per cent. or 9s. in the £ last year.

On this occasion last year the chairman remarked on the unusual strength of this position, but he added that we would rather have more money employed in safe commercial advances, and during the last year conditions have made this possible. Advances have increased by £3,600,000 during the year. They amount to 93.6 per cent. of total deposits—a figure which might alarm bankers in this country, but which is nothing unusual in banks operating in Australia and New Zealand. The reason for this difference is that in an industrial country industry tends to raise its capital from the public. The bank is not its permanent source of working capital. In countries where primary producers are the chief borrowers this is not so, and the individual pastoralist looks either to his bank or to the pastoral companies for his capital. Forty-five per cent. of our advances are to pastoralists, graziers, farmers and industries allied to them, while 10 per cent. are to manufacturing and other secondary industries.

While showing how much of our business is concerned with the man on the land, this does not mean that we neglect the man in the street—far from it. We have this year introduced what is to Australia a pioneer scheme which we call the small loans scheme. Its object is to assist those who require financial help for what we consider good reason, but who, although in steady employment, can offer no security beyond their character and their earning power. The loans are quite small for the most part, and are repayable in instalments over a period, and, although we are still feeling our way with caution, the scheme has met with a ready welcome.

A SATISFACTORY RESULT

In the profit and loss account two features stand out—an increase of £44,000 in salaries and general expenses in Australia and New Zealand, due largely to awards and out of our control, and of £80,000 in rates and taxes. This is the first full year in which we have paid National Defence Contribution. We have, however, with a net profit of £310,049, maintained last year's dividend and provided a small addition of £22,000 to the carry-forward, which now amounts to £227,000 odd.

We hope that you will not be dissatisfied with this result. If it is not spectacular, it has certainly not been achieved without a great deal of constructive thought and energy being put into their work by all the officers of the bank.

So much for our domestic affairs, but, before moving on to trade topics, I would like to re-echo the pleasure with which Australia has greeted the news of the appointment of H.R.H. the Duke of Kent as Governor General in succession to Lord Gowrie, whose

long and strikingly successful service in Australia is coming to an end this year. I need not say that their Royal Highnesses will have a rare welcome in Australia, which is distinguished not only by its loyalty to the Crown but also by its genuine hospitality to all visitors, however humble or however highly placed.

COURSE OF TRADE

I do not propose to give you many trade statistics, which are hard to follow unless they are in front of you, but you will wish to know how Australia and New Zealand have fared during the year. Imports into Australia in 1937-38 amounted to £111½ millions sterling, as against £90½ millions in the previous year, while excluding gold and silver, exports amounted to £112½ millions sterling, against £117 millions. The reduced value of exports was more than accounted for by wool alone, which dropped from £50 millions sterling to £37½ millions sterling. Not only had the price fallen by about 24 per cent., but the clip was about 9 per cent. less.

The United Kingdom took last year 55 per cent. of Australia's exports, excluding gold and silver. Wheat and flour, of which we took 30 per cent., and wool, of which we took 42 per cent., have the widest market and are the most important exports, but we took 95 per cent. of her exports of meat and 96 per cent. of her dairy products, and these are two of the particular branches of production which it is hoped steadily to expand. New Zealand, with a smaller quantity and proportion of wool, less mineral wealth and more meat and dairy produce, both actually and proportionately, to sell, is to an even greater degree affected by the capacity of the United Kingdom market to absorb the same or increasing quantities of her produce, and the importance to the United Kingdom of this feature of the economy of both Dominions is illustrated by the fact that these sales to our market make possible such large purchases from our factories and workshops, amounting to £38 millions by Australia and £19 millions by New Zealand last year.

IMPORTANCE OF WEATHER CONDITIONS

You will all have sympathised profoundly with those who suffered from the terrible bush fires lately experienced in Victoria, New South Wales, and South Australia. Few disasters can be so complete or so devastating. It is pleasant at least to say that many parts of Australia have now had excellent rains after experiencing quite exceptional droughts, and few who do not know the country can realise how far removed from a mere topic of conversation good rains in Australia are. They change the face of the country, and their absence can lose and their presence can make a difference of millions to the national income.

The latest weather news is contained in the following cable from our superintendent:—"Following on severe drought good rains have fallen recently over practically the whole of Australia with the exception of portions of Queensland, Western district of Victoria, and part of Western Australia, where further rain is needed. Season's prospects are generally favourable at present in Australia, and with normal following rains the seasonal outlook generally speaking may be considered good. In New Zealand dry conditions prevail at present and good rains are needed."

NEW ZEALAND TRADE

We have, as you know, an important stake in New Zealand, which, like Australia, has experienced during the past year a decline in the value of exports and increase in the value of imports. In the two years ended June 30, 1936 and 1937, the excess of exports from New Zealand over imports into New Zealand was practically the same at £NZ14 millions. Both exports and imports had risen sharply in the second of these years, and by the same amount—namely, £NZ11 millions. In the following year, however, up to the end of June, 1938, while imports continued to rise by another £NZ7½ millions, exports fell by £NZ2½ millions and the favourable balance dropped by £NZ10 millions to £NZ4½ millions. It must be

remembered that about £NZ7½ millions sterling is required for debt service in this country.

The beginning of 1938 was the high-water mark of prosperity, but by September the normal seasonal decline in sterling funds had become abnormal and rapid. In October, 1937, the net overseas funds of the reserve and trading banks had amounted to £NZ28 millions. By October, 1938, this had dropped to £NZ11½ millions, and by the end of November to £NZ7,800,000—a rapid fall which was due, in part, at least, to a flight of capital. In early December the Government assumed control of the exchange and of the import trade. All imports now require licences, while the trading banks, must hold the sterling proceeds of all exports at the disposal of the reserve bank in exchange for New Zealand funds at the current rate of exchange.

Such are some of the steps that have been taken to meet the exchange difficulty, but they have not deterred the Government from developing an ambitious social programme, which includes the Social Security Scheme covering pensions and health services, which is estimated by the Minister of Finance to entail an annual budgetary provision of about £2,000,000 per annum, or getting on for £1 5s. per annum per head of the population, being the shortage after taking into account the special tax contribution of 1s. in the £.

HIGH QUALITY OF PRODUCTIONS

New Zealand is a wonderfully productive country, and no one can fail to be impressed with the quality of stock both of man and beast that she produces. Millions of people in this country must be regular consumers of New Zealand butter and Canterbury lamb, and the fact that many of them are under the mistaken impression that Canterbury is only a city in Kent does not alter the fact that New Zealand lamb and New Zealand butter are not only of best quality but are well advertised, well graded and well distributed. All New Zealand butter and cheese, as you know, is now bought by the Government, at a fixed price, and the London exchange resulting from this business is no longer available to us.

A TAXATION GRIEVANCE

Dairy produce amounts to over 40 per cent. of New Zealand's exports, and the loss of such an important section of our trade was a sad blow, but it is no policy of ours to criticise what the Government thinks fit to do in the interests of the country and the producers. We do, however, consider that in the matter of taxation in New Zealand we have a real grievance, and one which, although repeatedly brought to the notice of the competent authorities by us and by other banks, privately and publicly, has not yet been remedied. Our argument in a nutshell is this—that whereas we should heartily dislike but could not call unjust an income tax, however high, on the profits of all businesses, we not only dislike but call unjust a basis which may require the banks, and only the banks, to pay income tax on a loss. (Hear, hear.)

In respect of this past year we expect to be called upon to pay in New Zealand income tax more than 20s. in the £ of profit made there. In other words, our profit will, we fear, have been turned into a loss, and, unless an alteration is made, we may quite well find before long that in a year when we have made an actual trading loss in New Zealand we are called upon to pay even more income tax than in 1937-38. This alarming possibility springs from the basis on which tax is levied on the banks, namely, an arbitrary percentage of assumed profit of the total assets and liabilities in the Dominion. The present Government, which, it is but fair to add, inherited and did not initiate this basis, has undertaken to re-examine it together with the rest of the income tax system which it is to revise very shortly, and although it has made no promises, we hope that it will think with us that the present basis is scarcely just.

I am sorry not to end these remarks on a happier note, but I am bound to point out where our shoe pinches as well as where it fits. Let us hope that by this time next year your chairman will be able to tell you not only that some of our own peculiar difficulties have vanished, but also—that what is far more important—that the world will have composed some of its fears and solved some of its more pressing problems.

The report and accounts were unanimously adopted, and the retiring directors and auditors were re-elected.

At a subsequent extraordinary general meeting resolutions were passed approving the making of an application for a Supplemental Charter and altering the bye-laws.

After the termination of the proceedings a presentation was made to Mr C. G. Hamilton commemorating his re-election as a director for the forty-fifth year of office, it being the eightieth year since his father was first elected in 1860.

GODFREY PHILLIPS, LIMITED

SOUND FINANCIAL POSITION

The thirtieth annual general meeting of Godfrey Phillips, Ltd., was held, on 30th ultimo.

Mr Arthur I. Phillips (chairman and managing director) presided, and in moving the adoption of the report, said that current accounts with subsidiary companies were increased by £143,000, mainly as the result of the additional supplies of leaf that were shipped them during the last quarter of last year for which the indebtedness remained to the parent company at the time of the accounts. Generally those overseas factories had made good progress during the year under review. That in Australia had had its record year for turnover and earnings.

The factory in India was now operating; its production was confined to those of the company's brands which could not carry the high import duty into India and still sell at popular prices. The ever-popular and large selling Cavanders brand would continue to be manufactured in London. Some progress had been made and the development account had served well towards that end. The board did not think at this moment that that branch factory would need to call upon the account in future.

INCREASED STOCKS

Stock was increased by £171,000. Actually leaf tobacco in bond had increased by a larger sum, but duty paid and other stocks were reduced. Prices this year had brought but very little relief to the average costs. The prime cost of the higher grades of leaf tobacco from the United States of America was a fraction lower than that of the previous year, but that slight relief had been more than entirely offset by a less favourable sterling exchange. Leaf from the Dominions and Colonies was particularly high and such high prices were not conducive to greater use by manufacturers.

The company's stock position continued to be very sound. The figure at which it stood to-day was somewhat higher than they would have permitted it to reach in ordinary circumstances, but it would be obvious that the political situation that faced the world at the time the new crop became available, necessitated the possession of leaf in greater quantity if continued good quality was to be assured.

De Reszke Minors retained both its exceptional quality and great popularity and an ever-increasing number of knowledgeable people were realising that for those idle moments between events no cigarette gave greater pleasure and value—with the minimum of waste. It was encouraging to see, as one so often did, the handsome tin containing sixty, which sold at the remarkably low price of 2s. on the desks of many of the leaders in every sphere of life, which gave added emphasis to the slogan "De Reszke Minors" are the "ten minute smoke for intelligent folk." In fairness to its big brother, he must not overlook the increasing demand for De Reszke Majors, a long satisfying smoke at the popular price of ten for 6d. He was hoping that shareholders would continue to support the company by insisting that only the brands of the associated companies were in their homes.

IMPROVED NET PROFIT

Turning to the profit and loss account, the net profit showed roughly £2,000 more than in the previous accounts. Had it not been for the increased cost for interest and the larger sums payable for income tax and N.D.C., the amount transferable to the appropriation account would have been considerably higher.

However, with a slight extra provision under the heading "Pensions and Provision for Employees," there remained a balance to be transferred to the appropriation account of £223,699 which compared with £230,283 last year.

There was no doubt that the unsettled state of world affairs did interfere with their company's normal progress last year and in particular had affected the last quarter in which they had always been accustomed to sell the larger portion of higher priced goods.

In foreign markets there was much more competition even than usual, most of that being due to the natural desire of exporting manufacturers, including their company, to maintain sales in spite of the artificial regulations created by foreign Governments, which always tended to reduce margins; but if stability in international affairs was to come, as it surely would, failure to maintain supplies of their popular brands now would be of little avail when trading times became better. In spite of those things, as the profit and loss account showed, the net profit for the year was more or less equal to that of the record profits of last, only additional interest charges preventing an even larger sum being added to the carry-forward.

The report was unanimously adopted.

BRITISH INSULATED CABLES, LIMITED

SATISFACTORY RESULTS IN A YEAR OF FALLING PRICES

SIR ALEXANDER ROGER ON THE SITUATION

The forty-third ordinary general meeting of British Insulated Cables, Limited, was held, on the 28th ultimo, at Exchange Station Buildings, Liverpool.

Sir Alexander Roger, chairman, presided.

The Chairman, in the course of his speech, said the profits on trading (after contingent reserves adjustment), dividends, etc., amount to £807,874, a decrease of only £13,484 from the record figure achieved last year. Having regard to the international crises which occurred in 1938 and to the fact that we are not a company with any large direct interest in armament work, I am sure that you will consider, as your directors do, that the results for 1938 are very satisfactory. Adding to the profit of £807,874 the balance brought forward from last account of £446,992, we have a total of £1,254,866. Depreciation of fixed assets absorbs £156,402, and after providing for directors' remuneration, interest on debenture stock, and dividends already declared and paid on the preference and ordinary capital there is left available £886,558.

Out of this balance your directors propose to transfer £100,000 to reserve account and to pay a final dividend of 10 per cent. (less tax) on the ordinary stock, making, with the interim already paid, a total dividend, for the thirteenth year in succession, of 15 per cent. (less tax). In addition your directors are pleased to recommend that for the fourth successive year a cash bonus of 5 per cent. (less tax) be again distributed on the ordinary stock. After making these appropriations the balance left to be carried forward to 1939 is £486,558, an increase of £39,566 as compared with the amount brought forward to 1938.

From the preliminary announcements made of our dividends, stockholders will doubtless have observed with some gratification that the deduction this year for income tax will be at the rate of 4s. 10d. in the pound, against the standard rate of 5s. 6d. in the pound. This is due to an exceptional accumulation of Dominion income tax relief which could not be passed on to our stockholders pending final decisions being obtained on certain important matters.

DIFFICULT CONDITIONS

The past year's trading showed a contraction in sales and in the volume of output compared with the previous year, in which, you will remember, the highest records for the company were established. Trading conditions were not easy, and selling prices continued to show a downward trend. Industry generally suffered from the menace of the disquieting international political situations which culminated in the crisis in September last, when, thanks to the remarkable personal efforts of the Prime Minister, the country turned a bad corner successfully. That the fall in profits is so small is due to the increased efficiency in our factories, the constant effort made throughout our organisation to effect real economies backed up by a willingness to incur capital expenditure on improvements, and by hard work on the part of all grades of employees.

You will remember that last year I referred to the contract with a value of over £1,000,000 which we were fortunate in securing from the L.N.E.R. Under it we are responsible for the overhead and track equipment from Manchester to Sheffield and also in the neighbourhood of Liverpool Street, London. It is the most important railway electrification contract of the kind yet carried out in this country, and you will be interested to know that the preliminary work of arranging layouts for the many tunnels, bridges, and complicated sidings involved is proceeding normally, and we are just about to commence delivery of material to the sites.

Our important subsidiary, British Copper Refiners, Limited, continue to give excellent results both in the matter of the quality of output and in the financial results of its trading.

EXPORT TRADE

I should like also to refer to general export business, which is not only of importance to the British Insulated itself, but also to its subsidiary and associated concerns. Circumstances affecting world business are changing with breathless rapidity, and it is dangerous to express views based on facts as we know them to-day in case entirely fresh considerations arise to-morrow which may have the effect of nullifying everything that precedes it.

The wants of the world are still far from being satisfied, whereas one would have thought the opinion was held in various places abroad that world business had reached a static position and it

had to be indecently scrambled for. There is no limit to expansion of business in a peaceful world, and it is tragic when one sees the possibility of peaceful prosperity endangered by the rulers of Germany. One is driven to the conclusion that monopoly and domination is their aim, whereas the view of the business men in this country, widely and generally held, is that there is sufficient business in the world both for England and for Germany, and indeed enough for all the great industrial nations.

It has hitherto always been open to German industry to trade in the British Empire. It is true that the Ottawa Agreement gave us a natural position of preference, but this was never raised to the point where foreign manufacture was excluded from Empire markets. This fair treatment of Germany hitherto gave us the right to say to German competition that while we recognised their preponderant position in many parts of Europe, we could not admit that their position would ever become one of monopoly to our complete exclusion.

In a commercially sane world there surely can be no territorial allocation of world markets either to Germany or to England, or indeed any other country, on monopolistic lines, and it ought to be still well within the bounds of possibility and ingenuity to secure commercial understandings on sound and healthy lines in order to bring benefits to both countries in more and better trade.

The only sure road to peace is by way of universal trade on a basis which enables the easy and rapid passage of goods between all countries. But if present political conditions develop on the lines being pursued by certain Continental countries the consequence will be to set up fresh barriers between nations far higher and more insurmountable than any tariffs yet designed.

EMPIRE BUSINESS

With regard to Empire business, it is important to note that one of the direct results of German policy is the determination of our Dominions and colonies to pursue a policy of developing secondary industries for the purpose of making available to themselves goods manufactured within their own borders and with little regard to the large purchases which this country makes from them.

We would naturally prefer to continue to manufacture here and export to the Dominions and thus assist in maintaining exports so necessary to this country, but we have been and are being gradually forced to follow the alternative and take up interests in manufacturing concerns similar to our own in various of the Dominions. We do not pursue this policy alone. These interests have been acquired jointly with other members of the Cable Makers' Association, which comprises the bulk of the cable industry in Great Britain.

As a contrast to this tendency it is pleasant to be able to record that we have been recently successful in securing an important contract for super-tension cables from the Johannesburg municipality, having a value of about £200,000.

I cannot conclude my remarks on our export business without tendering our thanks to and expressing our admiration of the Hon. R. S. Hudson, head of the Department of Overseas Trade, who is now touring various countries in Europe for the purpose of improving trade relations with this country. These meetings and conferences are methods which are understood by the commercial world, who hold the view generally that direct action of this sort is much more likely to be productive of good than through the medium of long-range communications and third parties. The business as well as the political world will await the result of his tour with great interest.

I am glad to say that our relations with labour continue to be of the most cordial character. As you know, it has been our endeavour over years to provide the best conditions possible for our workpeople and to afford them as many privileges as we find it economically possible to do.

We are now able to grant holidays with pay. We have a compassionate fund in operation which cares very satisfactorily for a number of needy cases arising from illness and old age. We, as you know, have sports grounds at the two principal factories, and help wherever we can over means of recreation.

At the moment we have a satisfactory balance of orders in hand, and the indications up to a week or two ago were that we could expect a normal year. Providing no international catastrophe intervenes, your board thinks that our expectations will be realised.

The report and accounts were unanimously adopted.

THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED

DIVIDEND OF 20 PER CENT.

SIR P. MALCOLM STEWART'S SPEECH

The fortieth ordinary general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 30th ultimo, at the Council Chamber of the Federation of British Industries, 21 Tothill Street, London.

Sir P. Malcolm Stewart, Bt., O.B.E., D.L., LL.D., the chairman and one of the managing directors of the company, presided.

The chairman, after dealing with the details of the accounts, continued:—We are able to recommend the payment of the final dividend on the preference stock and of a final dividend on the ordinary stock of 12½ per cent., making 20 per cent. for the year, which compares with 22½ per cent. paid last year. There will then remain a balance of £2,806 to be added to the carry-forward, which will thus stand at £208,699.

Speaking frankly, the results are somewhat better than was expected a year ago, our total sales being well maintained. Further, we reaped to a greater extent than anticipated the benefit of economies arising from capital expenditure on works. Had it not been for the advance of 3s. a ton early in the year, to meet the substantially increased manufacturing costs, the results submitted to you to-day would have been of a very different character.

THE FRUITS OF SELF-HELP

Several factors have operated to bring our industry out of adversity into prosperity. In the first place, cement manufacturers have had to learn through hard experience the lessons of adversity. This has undoubtedly helped common sense to prevail and encouraged the spirit of give and take. During the past thirty years there has been a varying degree of co-operation. There have been trials and errors, but from the efforts made there has always emerged something constructive which has strengthened the common faith in the cause of co-operation. Government assistance has not been sought to put our house in order; it has been an effort of self-help.

A high degree of efficiency has been procured in respect of production, but for some time there have been weaknesses, which have been a matter of common knowledge, with regard to distribution and selling of Portland cement. The liaison between our group of companies and the Tunnel company made some twelve months ago is working well. It has directly contributed to the possibility of making more orderly the somewhat chaotic selling conditions. What is now sought is the provision of a similar plan to benefit the industry as a whole and, as opportunity affords, the consumer. This should, of course, give a more complete control of the price at which cement is sold. More effective control if obtained need not of itself be a matter for objection. The true issue that arises is whether control will be wisely used to the advantage of all interested, including the consumer. I maintain there is no warrant for the assumption that the position will be misused in view of our past record and known determination to encourage construction of all description by the fixing of prices at as low a figure as is reasonable.

HOW THE CONSUMER FARES

Let us consider the plain facts as to our treatment of the consumer. If the cost and the net home prices per ton realised in 1925 are represented by 100, then our total cost of production has come down from 100 in 1925 to 68 in 1938—that is to say, we have effected a reduction in cost of 32 per cent. on every ton manufactured. I think you will agree that this is a very satisfactory achievement, bearing in mind the advance in prices of materials required for maintenance and manufacture, as well as the increase of wages paid to our employees, whose improved conditions of service I will refer to later.

Now, with regard to the consumer, taking the average net price per ton obtained in 1925 as 100, the 1938 average price received from him was only 66 per cent. of what he paid us in 1925, a reduction of 34 per cent. as compared with fourteen years ago. Thus, in addition to giving away the saving in the cost of production on each ton sold in the home market, we have given the consumer a bonus of 2 per cent.

Last year the margin of profit earned per ton was only 61 per cent. of that earned in 1925, a decrease of 39 per cent. It goes without saying that it would not have been possible for us to have reduced our prices to the consumer so substantially and made more

recently overdue improved returns to our stockholders had we not been successful in marketing a much larger tonnage.

Reverting to our reduction in cost of manufacture, I should like to stress the fact that this reduction has not been obtained in any way at the expense of our employees. Since 1925 increases in wages amounting to 8s. per week have been granted, and wages are now about 16 per cent. higher than they were in that year; all our employees have for twenty years enjoyed a week's annual holiday with pay and for eleven years a profit-sharing bonus scheme. More recently contributory pension schemes have been instituted.

The published prices for Portland cement usually quoted are those to the consumer at destination. A fact often insufficiently appreciated is that from these prices heavy deductions have to be made before the net price at works can be arrived at. These deductions embrace such items as freight and handling, merchants' rebate, deferred rebate, discount and bags. These charges vary according to method of distribution and distance of transport, but under favourable circumstances they represent 30 per cent., and in some circumstances 45 per cent., of the price charged to the consumer at destination.

THE SERVICE RENDERED BY COMBINES

I have spoken of industrial organisations, and now I will say something of combines. Speaking after many years of industrial experience, during which I have fought both against and for combines, I am convinced the advantages envisaged have amply accrued and that generally speaking combines render a greater service to the community than would be obtainable from the aggregated individual service of the component firms which form them. Investigation will, I believe, show that this is true. Labour in particular has benefited. Wages, rates of pay and conditions of work in combines are found to be of a higher standard.

It has been represented to me that I should urge the claims of concrete in connection with A.R.P. work. I must decline to do so since it has been publicly stated that the whole question of the provision of deep and other forms of shelters is receiving close consideration. The experts are at work, and the Cement and Concrete Association has offered its services. Certain aspects of the problems involved are not simple and a decision must be awaited with patience.

NEED FOR DEMOCRATIC SERVICE

With regard to the present serious international situation I venture to offer a suggestion; it relates to an aspect which has perhaps been somewhat overlooked. Should not the Government, the Churches and the Press bring more influence to bear in the teaching of what will be primarily required now that aerial warfare would bring the horrors of war into our homes? Let these authorities clearly tell every citizen that his first duty is to show the same calm courage and fortitude as was so gloriously displayed by our officers and men in the Great War. Is it fair play between man and man to place responsibility of service only on those willing and ready to do their duty? If our people did but realise the menace which hangs over them they would rise and say arms alone will not suffice and demand what I term democratic service as their unhesitating answer to the tyranny which threatens peace and liberty. Democracy will not survive on the merits of its past achievements, however great, but only through its courage in adapting itself to the necessities of to-day. Would not a period of democratic service strengthen the true spirit of democracy, help to lessen invidious class distinctions and, above all, give that sense of comradeship which was born in the war and survives to-day in the British Legion. Why wait for war to light again what peace can kindle now? Let us re-learn the meaning of Nelson's immortal words "England expects every man to do his duty."

I will now review the prospects for the current year. We have not made such a good start as we did last year. Our home trade deliveries are down. After making allowance for the unfavourable weather early experienced there is evidence that the demand has fallen off although it has started to pick up as is usual at this time of the year. However, we can hardly expect to reach this year the peak deliveries of the past year.

The report and accounts were unanimously adopted, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

BRITISH ALUMINIUM COMPANY, LIMITED

RECORD OUTPUT AND SALES

The twenty-ninth ordinary general meeting of the British Aluminium Company, Limited, was held, on the 28th ultimo, in London.

Mr R. W. Cooper, M.C. (the chairman), in the course of his speech, said: The profit for 1938, amounting to £909,851, shows an increase of £136,419 over the previous year. This result is consequent upon the output of aluminium of the company and of its subsidiary companies having reached a new high record, coupled with the sale of a considerably larger tonnage than in the preceding year. The sale price of ingot aluminium was reduced by 4 per cent. during the year, but prices of rolling-mill products remained steady. The large capital expenditure involved in our programme of expansion became productive to some extent during the year, but full output from the enlarged Lochaber works was not obtained until the last quarter of the year. I mentioned last year that the first half of the additional plant at Lochaber commenced production in March, but later it was found desirable to dewater the fifteen-mile-long tunnel in order to effect the connection of the new pipelines with the tunnel. This work was satisfactorily carried out, and the opportunity was taken of inspecting the whole length of the tunnel, which had conveyed water under pressure continuously for nearly nine years. I am glad to say that the tunnel was found to be in excellent condition. The present programme of enlargement of the Lochaber works is now completed, as are also the extensions of the Burntisland alumina works.

NEW ALUMINA WORKS AT NEWPORT

The erection and equipment of the new alumina works at Newport, Monmouthshire, have been actively proceeded with during the year, and after some constructional delays production is now scheduled to commence next month. Additions to the rolling-mills were carried out during the year, and further extensions are still in progress.

Two years ago, in association with others, we formed a company in Australia, and following detailed investigation that company is now erecting a rolling-mill in that country. This mill will not only satisfy the requirements of the existing market, but will also provide for the new demand of the aircraft industry, which is in course of establishment in Australia.

For many years we have been the main suppliers of aluminium in India, where we possess fabricating factories. We have now decided that the time has arrived when the potentialities of the market in that country warrant the production and rolling of aluminium locally, and consequently, in partnership with others, we are now engaged in providing the necessary plants in India.

The third and last stage of the civil engineering works at Lochaber still remains to be constructed, and I am pleased to be able to tell you that royal assent was obtained in July of last year to a bill confirming a provisional order which was promoted by the Lochaber Power Company. Under the terms of this Act we have been given a further seven years in which to commence and complete these works.

At a previous annual meeting I informed you of our interest in the production of magnesium metal through our substantial holding in the Imperial Magnesium Corporation, Limited. That company, through an operating subsidiary company, the Magnesium Metal Corporation, Limited, has been engaged for some time past in the erection of a plant at Swansea, and it is anticipated that the production of magnesium will be commenced in the near future.

CAPITAL EXPENDITURE

The balance sheet figures reflect the increase in our trading and the capital expenditure to which I have referred. The increase in the latter item amounts to £619,700, to which has to be added £609,933, by which amount our loans and advances to subsidiary companies have increased—the greater part of this being represented by capital expenditure.

We are in a position to recommend the same dividend as was paid for the year 1937—namely, 12½ per cent. on the ordinary stock. But on this occasion the whole of the ordinary stock, which was increased by 50 per cent. towards the end of 1937, ranks for dividend for the full year.

With regard to business for the current year, I may say that as far as can be seen at present the demand is likely to be maintained, if not increased. The outlook for the immediate future of our industry may therefore be regarded as satisfactory.

The report and accounts were unanimously adopted.

NATIONAL PROVIDENT INSTITUTION

SATISFACTORY NEW BUSINESS

The 103rd annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 24th ultimo, in London.

Mr Robert E. Dickinson (the chairman) said that their new business continued to be satisfactory. During the past year they issued 3,576 policies for sums assured of £2,095,000, and after allowing for £48,000 reassured the net amount retained at their own risk was £2,047,000. Although this figure was not so large as that of last year it had only been exceeded once during the history of the Institution. The net result of the year's working was that their life assurance and annuity fund had increased by rather more than £300,000, and now amounted to £12,750,000.

At the present time the financial position of the Institution was strong, their current trading profits were substantial, and, if peace was preserved, there was every prospect that when the triennial actuarial valuation was made at the end of the current year they would find themselves in the position once again of being able to distribute substantial bonuses.

Life insurance was more valuable and more important to the ordinary man than ever before. For most people it was the only means of obtaining adequate protection for wife and children, while as a means of saving for retirement and old age it accorded facilities which no other form of investment could give. The quotation in the report that "there is nothing in the commercial world which approaches even remotely the security of a well-established life office" was just as true to-day as it was when it was written many years ago.

They regretted the tendency for members to choose policies maturing in their own lifetimes rather than to aim first at the fuller cover given by whole-life assurances. The first object of life assurance was the protection of one's dependants, and any given annual premium would naturally buy a larger amount of assurance under a whole-life table than under the endowment table. Alternatively there was the endowment bonus policy, a doubly attractive plan, which combined permanent whole-life assurance with some provision for one's own retirement. He invited members and agents to examine the merits of this policy.

The report was unanimously adopted.

BRITISH ROPES, LIMITED

25 PER CENT. DIVIDEND

Mr Herbert Smith (the Chairman), at the annual general meeting held, on the 28th ultimo, in London, in the course of his speech, said:—

The position disclosed by the accounts is satisfactory, which result has been attained despite the difficulties experienced during the year under view, especially during the latter months.

The profit for 1938 amounts to £238,056, after making provision for depreciation, debenture interest and redemption and taxation. While the figure is somewhat smaller than last year, it is a satisfactory profit having regard to the generally unsettled trading conditions, and the directors recommend that the dividend on the ordinary share capital for the year be maintained at 25 per cent. I would remind you that this only represents a dividend of just over 3 per cent. to the original shareholder who had his ordinary shares written down from 20s. to 2s. 6d. in 1934.

While we, as a board, feel a certain amount of gratification at the position in which the company now finds itself, we are by no means satisfied that the full earning power of our undertaking has been reached.

The board have considered on many occasions the question of rectifying the capital position by some measure or by some means increasing the value of our issued ordinary share capital. To write up the value of our assets is against both our principles and instincts. It might be argued that we could use the £400,000 of reserves by issuing shares against that sum, but at present we do not think it policy to do this, as we must have adequate reserves to take care of situations which may arise in the future.

The first accounting period of Rand Ropes (Proprietary), Limited, in South Africa, is encouraging. The profits of our Canadian subsidiaries are not unsatisfactory.

During the last twelve months we have been engaged on the installation of an electro-galvanising plant, part of which has just commenced working. It will give us a much finer product than has ever previously been obtained in this country.

I consider, assuming the maintenance of reasonable trading conditions, that the outlook is very favourable.

The report was unanimously adopted.

AUTOMATIC TELEPHONE AND ELECTRIC COMPANY, LIMITED

INCREASED ORDERS AND PROFITS

The nineteenth ordinary general meeting of the Automatic Telephone and Electric Company, Limited, was held, on the 30th ultimo, in London.

Sir Alexander Roger (the chairman) said that orders received and factory output were the most satisfactory in their history and they reported a net profit of £202,074 against £148,624, despite higher costs and keener competitive conditions. The directors recommended a final dividend of 7 per cent. on the ordinary stock, making 10 per cent. for the year, plus a bonus of 2½ per cent., and a dividend for the year of 10 per cent. on the deferred stock and shares plus a bonus of 2½ per cent. The carry forward would be increased from £105,632 to £153,159.

Personally, he was not in favour of Government-owned commercial enterprises, but he cordially agreed that the General Post Office conducted its telephone department in a manner which commanded admiration. The public did not realise or appreciate fully the bold and able policy which had energised the vast expansion of the Post Office telephone system in this country during the past fifteen years at a cost exceeding £200,000,000.

For the scrutiny of the Public Accounts Committee they had every respect, since they were a national safeguard for the Public Purse and the evidence submitted to that committee year after year amply showed that the Post Office with its able body of experts conducted continuous examination of prices in the most meticulous fashion, while the manufacturers on their side afforded them every reasonable facility.

They as a company had again been able to reduce their prices as a result of improved production efficiency and increased volume of output. The price of completed main exchange equipment was only 60 per cent. of its equivalent price of ten years ago, notwithstanding rises in costs of labour and material, while for a number of years miscellaneous telephone equipment had been supplied at figures yielding little or no profit to the manufacturer.

EXPORT BUSINESS

Broadly speaking, they traded all over the world. In 1938 they exported to 62 different countries, which was by way of being an achievement in these times. Apart from the multitude of restrictions and regulations which had to be surmounted in one way or another, the position of the exporter from this country in the main was that he no longer traded against individual competitors; he was the individual competitor trading against the group competition of industries owned and controlled in all but name by Governments and certainly directed under Government supervision.

What was the effect of the trading methods of which the principal originator and exponent was Germany? Rising taxation in that country and internal economic difficulties had driven Germany into amazing psychological misconceptions. In her eagerness to trade with the world, she forgot that it was not alone the quality of the goods, the technique of the manufacturer, or power politics which induced permanent export sales; there was another and intangible but indispensable quality, the element they called goodwill. To create that and to retain customers, it was necessary to respect their ideas, philosophy and their moral principles, and for those—satisfied that National Socialism was faultless—she had little or no regard.

There was ample trade for Germany and for the other manufacturing and exporting countries, and it was certain that millions in Germany would prefer to pursue peacefully the methods of trading with the world she had found successful in the past. It was even more clear that the entire population of Great Britain would infinitely prefer to have the priceless advantages which would accrue from trading in a peaceful and prosperous world. He made no apology for expressing views on so-called politics. The life of the nation was at stake and consequently the life of the company.

THE OUTLOOK

As to the outlook for the current year, with a full order book in their possession and with good prospects in addition, he believed they would show even better results than those for the year under review. With Germany's critical economic condition and the profound necessity for several years of peace in order to complete her internal reconstruction, he doubted whether they were going to have any political catastrophe in 1939 to prevent their hopes being fulfilled.

The report was unanimously adopted.

RADIATION, LIMITED

THE IMPORTANCE OF RESEARCH

MR H. J. YATES'S ADDRESS

The annual meeting of Radiation, Limited, was held, on the 30th ultimo, in London.

Mr H. James Yates, the Chairman of the company, who presided, said that when Radiation was formed, central research laboratories had been established at Radiation House, London, and he could say without hesitation that the research work which had already been done, and which he hoped would always continue, had revolutionised domestic gas apparatus. During the present year further important developments should become practical propositions. For that reason they had a staff of highly trained men—the Radiation Technical Service Department—whose time was devoted to dealing with gas undertakings on technical matters. All that was, of course, arranged with the full co-operation of the gas undertakings, and he was confident that that section of the Radiation organisation would prove to be of increasing value in extending the good relations already existing between the undertakings and Radiation.

CENTRAL RESEARCH KITCHEN

The company's Central Research Kitchen was also at Radiation House, and they had in addition a large demonstration kitchen at their Birmingham works. Students from cookery schools, demonstrators, and others could receive advice from their trained experts. The Radiation School of Cookery, with its service of lectures, and practical help and advice to inquirers, had been greatly appreciated by housewives all over the country. The Central Research Kitchen at Radiation House had witnessed some really remarkable demonstrations of the variety of dishes which could be cooked in the "New World" Cooker under "Regulo" control.

From time to time they had been asked to make the tests required for the final judging of recipes submitted in connection with national competitions—a tribute to the appreciation with which Radiation and its consistent efforts to improve the standard of domestic cooking in this country was viewed. The Radiation Cookery Book was in its twentieth edition, and 1,340,000 copies had been sold. Its wealth of detailed information, including the "Regulo" settings for a great variety of recipes, made it a standard household reference book. That book went all over the world and had even been translated into Chinese. They had also published a book "The Economy of Good Carving," dealing with the selecting of joints, poultry, game, etc., and the preparation recommended before cooking. It was fully illustrated to show the best methods of carving various joints and birds. That book had met with a great demand.

THE "NEW WORLD" COOKER

The "New World" Cooker, with its single burner at the back of the oven, and with the "Regulo" control, was used in all parts of the world where gas was available. There was no oven-heat control so accurate and reliable as the "Regulo." That word was among their most valuable trade marks, and had been registered in many countries. The most recent improvements to their "New World" cookers were self-lighting hotplate burners, together with refinements in burner design and manufacture, which gave such an increase in flame stability that that latest type of burner was technically described as "non-lighting-back" or "self-righting."

Naturally, many of their improvements in domestic appliances had been adapted to other types of their apparatus. The large cooking apparatus for hospitals, hotels, restaurants, etc., had been continually developed, and he could say confidently that they led also in those types of appliance. The Radiation stand at the British Industries Fair, Birmingham, recently held, had been devoted almost entirely to a display of the company's large cooking apparatus, and any of the shareholders who had seen the Stand would, he was sure, agree that their exhibit showed what very fine apparatus Radiation manufactured. In particular, he thought one could not help being impressed by the 16-oven hotel range.

As to their "Radio" porcelain enamel, during the last few years they had enormously extended their plant, and as a result of their continued research work their enamel was of the highest quality obtainable in the present state of the art. That was of great advantage not only to the householder but also to the gas undertakings.

In the case of hot water apparatus, gas possessed the great advantages of cleanliness and convenience. Their domestic hot water appliances of various types—instantaneous for use over basin or bath, storage heaters with "Regulo" control, and others, for providing really hot water wherever required in the house—had been further developed during the past year.

The report and accounts were unanimously adopted.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED

RECORD OUTPUT AND PROFIT

The thirty-ninth annual general meeting of the Associated Electrical Industries, Limited, was held, on the 30th ultimo, in London. Sir Felix J. C. Pole (the chairman) said that the profit for the year, including dividends from subsidiary companies, whose dividends in the aggregate were less than the profits earned, amounted to £1,399,499. That was the largest profit earned in the history of the company, and was £109,491 greater than in the previous year. After providing for the dividend on preference stock, £75,843, there remained £608,480, and the directors recommended a dividend on the ordinary stock at the rate of 10 per cent. per annum, less tax. The inflow of orders during 1938 was greater than in any previous year, except the year 1937, which was a record. That was in accordance with expectations, having regard to the abnormally large quantity of orders received in 1937. All the works of the group were fully employed, and the output was the highest in the history of the company. Special efforts had been made to effect deliveries, and the unexecuted orders on hand at the end of the year were slightly less than at December 31, 1937.

GOVERNMENT WORK

From what had appeared in the press, stockholders would have gathered that the company had placed its manufacturing, engineering and research facilities at the disposal of the Government. A considerable amount of Government work was in process of manufacture, and the factory at Trafford Park had been extended to cope with Air Ministry and War Office contracts. Naturally, he could not particularise the many directions in which they were assisting the Government in the vital and essential work of re-armament, but he might mention Sir Kingsley Wood's announcement in the House of Commons on November 10th last with reference to the manufacture of aircraft by the Metropolitan-Vickers Electrical Company in technical collaboration with A. V. Roe and Company. A factory for this purpose was nearing completion on land adjoining the Trafford Park works. Also, in co-operation with John Brown and Company, a financial interest had been acquired in the Westland Aircraft Company, of Yeovil.

The directors had continued the policy of keeping in personal contact with overseas markets, and had received some valuable orders, notwithstanding the difficulties of competing with certain countries. He would like to take the opportunity of expressing appreciation of the Government's keen interest in export trade and cordially to commend the active steps now being taken by the Department of Overseas Trade to negotiate trade treaties and to encourage international trade. They also acknowledged gratefully the assistance they had always received from the Export Credits Department of the Board of Trade. Their companies were represented, and were active in overseas markets, and were determined to secure—in the national interest as also in their own—a fair share of the available business, even though the ruling price levels were often unsatisfactory.

AN IMPORTANT ORDER

The use of electricity in this country continued to increase, and naturally this growth demanded the manufacture of more generating and other equipment, for which they had received a large volume of orders. The largest machine ordered was a 60,000 kw. turbo generator set. He might particularise one export order which had been secured notwithstanding extreme competition. It was for Enso-Vallinkoski, Finland, and comprised four 30,000 K.V.A. water wheel alternators. These machines were estimated to weigh over 400 tons each, and would be the largest yet built in this country.

The necessity to uphold the position of pre-eminence in engineering technique that the company had achieved gave added value to the activities of their engineering and research departments. Under the adverse conditions of world trade existing to-day, it was more than ever important that their companies should remain in the vanguard of engineering progress, and it was only by doing so that they could maintain their proper position in the export market. To that end they continued to spend large sums each year on engineering development and research work.

From what had been said at previous meetings, stockholders would be aware that the Education Department was an outstanding feature of their activities. Last year there had been an interesting development in association with the Lancashire Education Authority, viz., the provision of a new school in the Trafford Park Works. The school had been built by the company, and the staff would be provided by the Lancashire Education Authority.

The report and accounts were unanimously adopted.

MAPLE AND COMPANY, LIMITED

LARGE CONTRACTS IN HAND

The forty-ninth annual general meeting of Maple and Co., Ltd., was held, on the 30th ultimo, in London.

Mr C. C. Regnart (the president) said that the year under review had been the most disturbed and anxious period since the end of 1918, and the repercussions on the trade of this country and particularly the retail trade of the West End of London had been far-reaching. Despite the conditions the branch in Birmingham continued to progress. It was unquestionably the finest furniture shop in the Midlands. Upon the expiration of their lease at Gervin Place, Bournemouth, they transferred, on February 1st last, to new premises in St Peter's Road. Those premises had proved most attractive and had not only commanded the general approval and admiration of all visitors, but the trade done during the first few weeks showed very satisfactory increases. It was again acknowledged to be the most beautiful furniture emporium in the South of England. He was pleased to report continued progress of their branch in the Argentine, despite a further fall in the rate of exchange, which was still causing British Companies considerable anxiety.

Regarding their Paris company, the directors considered it was a triumph of good management on the part of their branch managers that they were able to come through the year without making a loss. As regards their factories at Cheltenham, known as H. H. Martyn and Company, Limited, here again they had considerably extended, especially on the metal side, and he thought the future policy of the board would, in the near future, be entirely justified. They had, at the moment, large contracts in hand, including those for the S.S. "Queen Elizabeth" and other ships.

The financial position of the company was as strong as ever. If they enjoyed a peaceful era they would prosper as in the past. He was sure shareholders would not expect him to hazard any prognostications as to the future, but this he could say: he felt confident that, come what may, Maple and Company would weather the storm and sail into calm waters. There was a great future for the company, and stockholders should not be unduly disappointed because the dividend proposed was reduced.

The report was adopted, and the dividend of 5 per cent. approved.

MOSS' EMPIRES, LIMITED

SATISFACTORY RESULT DESPITE DIFFICULTIES

The fortieth ordinary general meeting of Moss' Empires, Limited, was held, on the 24th ultimo, at the company's London offices.

Addressing the stockholders, Colonel J. J. Gillespie (the chairman) said:—The amount owing on debentures is over £7,000 less than 1937. Reserve account is slightly more, being £449,562. This, together with the surplus of valuation over book values on properties, £428,149, and the amount to be carried forward on profit and loss account, £26,967, makes a total reserve of well over £900,000, and there is nothing included in the balance sheet for goodwill.

On the other side of the balance sheet, additions to properties are £1,578 less than in the previous year. The additional amount written off properties is £4,532, mainly for amortisation of leaseholds. The total amount standing to the credit of leasehold reserve is £92,578. Depreciation written off furnishings is £19,630.

The figures in the profit and loss account differ very little from 1937, except that income tax and N.D.C. are nearly £10,800 up. The net trading profit is within £1,000 of 1937. The amount paid in entertainment tax is very large, and this keeps people of limited means out of the higher-priced seats. The directors hope for some relief from this heavy imposition on the "living stage." The net result of the year is that the carry-forward is only £1,587 less than in the previous year.

He considered that the year's results were more than satisfactory when one considered the effect of the crisis on entertainment business.

Right up to the month of August last year the board hoped to present a profit and loss account showing enhanced profits as compared with the year 1937. The trading profit for 1938 until the month of August showed a considerable increase as compared with the corresponding period of the preceding year. The crisis then became acute and business declined, this company's theatres being adversely affected in common with the whole entertainment business.

It is too early to forecast, but trading results as a whole are not quite so good.

The directors' report and accounts were adopted and a dividend was declared on the ordinary stock of 5 per cent. actual, less income tax—making 10 per cent. for the year.

PINCHIN, JOHNSON AND COMPANY, LIMITED

COMPANY'S HIGH STATE OF EFFICIENCY

The annual general meeting of Pinchin, Johnson and Company, Limited, was held, on the 28th ultimo, at the Hotel Victoria, London.

Mr Edward Robson (the chairman), in moving the adoption of the directors' report and balance-sheet for the year 1938, said: When I had the pleasure of addressing you a year ago, the prospects for a continuance of satisfactory trading were quite definite. In fact, for the first five months of the year our sales were generally well maintained. Subsequently, however, the trade recession began to make itself felt.

The unfavourable conditions that developed were intensified by the serious international political disturbances that ensued in the early autumn.

In November, however, a definite recovery set in and, commencing with that month, sales not only substantially recovered but, in fact, have shown an increase in each month to date this year.

The decrease in profits is due entirely to the conditions to which I have referred, which have affected equally both the home trade and also our revenue from associated companies overseas.

FOREIGN MARKETS

In spite of the most difficult situation that has existed in Shanghai for a long time, it is gratifying to report that our China company is now working at a profit.

For the past two years the industrial position in France has been unsatisfactory, but there has been in recent months a very definite improvement.

Through the French company, we are interested in a trading unit in Barcelona, and I am pleased to say it has continued operations throughout the war period, and the factory is intact.

You will hardly expect me to attempt to anticipate very definitely the future prospects. It will, perhaps, be sufficient for me to say that if world conditions are reasonably satisfactory our business is bound to progress. Our organisation, technically and industrially, is in a very high state of efficiency and the future of our business should be in the direction of steady advancement.

The report was adopted.

BY STOCK EXCHANGE INTRODUCTION

Jonas Woodhead and Sons, Ltd.—Particulars of 100,000 6 per cent. convertible cumulative £1 preference shares taken by Messrs Erlangers at par, subject to 6d. p.s. commission, and a fee of £500. Proceeds to purchase 99 per cent. of share capital of Ibbotson, Brothers and Company of Sheffield. Shares redeemable from March, 1944, to 2039 at 22s. 6d. Convertible to March, 1944, into four 5s. ordinary per one £1 preference.

vertible cumulative £1 preference shares taken by Messrs Erlangers at par, subject to 6d. p.s. commission, and a fee of £500. Proceeds to purchase 99 per cent. of share capital of Ibbotson, Brothers and Company of Sheffield. Shares redeemable from March, 1944, to 2039 at 22s. 6d. Convertible to March, 1944, into four 5s. ordinary per one £1 preference.

ISSUE TO SHAREHOLDERS ONLY

Lewis's Investment Trust.—Issue of 58,750 £1 ordinary shares at 21s., in proportion of one for 20 held.

BONUS SHARES

Churchill Machine Tool.—It is proposed to capitalise £65,940 of profits, and issue to existing ordinary stockholders one £1 share for £3 of stock held.

CONVERSIONS AND REPAYMENTS

British Columbia Investment Company (5 per cent. 1st mortgage gold bonds—Series A—1960).—The whole of these bonds now outstanding will be redeemed on June 1, 1939.

SHORTER COMMENTS

Company Results of the Week.—COLTNESS IRON COMPANY report that coal output in 1938 was rather higher than in 1937, but the foundries were not so busy; total profits are £12,464 lower at £341,016. Despite a decline in voyage profits,

The re-election of the directors and auditors followed, and the meeting terminated after a hearty vote of thanks to the Chairman, proposed by Mr Wm. C. Howard.

ERICSSON TELEPHONES, LIMITED

RECORD TURNOVER AND PROFIT

The annual general meeting of Ericsson Telephones, Limited, was held, on the 29th ultimo, in London.

Mr T. Kirkham (managing director) presided in the absence in America of Sir Harold Wernher, the chairman, and read a speech prepared by him.

Mr Kirkham, in the course of his address, said:—We may congratulate ourselves that notwithstanding the disturbed conditions which prevailed throughout the past year, our company emerged in a stronger position than ever. The order-book was again a record one, and the careful planning of the preceding years enabled us to achieve a much greater output. It is appropriate to report that during the past few years our output has trebled, and we now have upwards of 4,500 employees, all working full time. This is particularly noteworthy, inasmuch as we have been employed, in the main, upon our normal activities and not upon so-called war work.

You will have observed recently the emphasis placed by other nations upon the importance of export trade, but to this country, built up during the past 100 years so largely upon foreign commerce, the matter is one of supreme importance. I am, therefore, always particularly glad when I can inform you, as I can to-day, that our sales abroad have again shown a substantial increase, and every effort is made to expand these.

As may be expected from a record turnover, the net profit is also a record, being £161,293 (which includes £5,579 dividends received from a subsidiary company), as compared with £148,704 for 1937. As you will see, taxation has risen from £59,003 to £83,268, this being due, of course, to the higher standard rate applied to the greater profits and to the new Defence Contribution.

The past is gone and we face the future. Fortunately, perhaps, it is given to none of us to see "which seed will grow and which will not." We are all conscious of the clouds which threaten the international horizon, but this at least we can say, whatever the future holds, your company meets it in a strong and healthy condition. We again have a record volume of orders in hand with splendid prospects of further large contracts.

The report was adopted and the dividend of 18 per cent., free of tax, plus a bonus of 7 per cent., free of tax, was approved.

ROYAL MAIL LINES are maintaining their 5 per cent. dividend. The balance sheet reflects the Pacific Steam Navigation acquisition. The full report of JOHN BARKER AND COMPANY confirms the satisfactory impression made by the preliminary statement. Net profits are £385,870 against £379,068. Profits of PROVINCIAL NEWS-PAPERS are fully maintained, and the dividend is being raised from 2 per cent. to 3 per cent. Although orders received by A. REYROLLE AND COMPANY in 1938 were lower, they came in at a satisfactory rate, and sales rose considerably. Trading profits thus amount to £335,035 against £247,305. A setback has been experienced by STEEL BROTHERS AND COMPANY. The year's total profit of £320,272, moreover, contains larger profits of a capital nature. JOSEPH TRAVERS AND SONS have maintained their turnover, but in consequence of increased competition, have experienced a decline in net profits. TUNNEL ASBESTOS CEMENT report a decline in sales, and no dividend is being paid on the deferred shares.

MISCELLANEOUS

Royal Mail Lines.—Voyage profits for 1938, £903,187 (£1,035,460). Total income 1938, £980,222 (£1,111,141). Administration expenses £345,017 (£351,201). Net profit £617,933 (£743,055). To fleet replacement £136,165 (£146,435). To insurance account £25,000. (For 1937 £100,000 was placed to general reserve.) Ordinary dividend maintained at 5 per cent. Carry forward reduced from £35,228 to £29,296. Balance sheet shows cash down from £1,125,000 to £225,000, but investments in subsidiaries stand at £607,815 against £14,520.

Finance

GOVERNMENT RETURNS

For the week ended March 25, 1939, total ordinary revenue was £19,997,000, against ordinary expenditure of £11,255,000. Thus, excluding sinking fund allocations, Defence expenditure from loans, and interest paid and received under the Defence Loans Act, the deficit accrued since April 1st last is £11,001,000, against a surplus of £32,131,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On March 24th applications at £99 16s. 3d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, and Thursday of following week were accepted as to about 73 per cent. and applications accepted at higher prices in full. Applications at £99 16s. 4d. for bills to be paid for on Friday and Saturday were accepted in full. £45.0 millions of Treasury bills are being offered on March 31st.

CENTRAL AND SOUTH AMERICA

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of Bolivia and Paraguay, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate.

Bolivia.*	Sight selling rate on London was 141-40 bolivianos per £ (nominal) on February 28, 1939.
Colombia.*	Sight selling rate on New York was 175-45 pesos per 100 U.S. dollars on March 6, 1939. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was 14-95 sucres per U.S. dollar on March 3, 1939.
Guatemala.	Sight selling rate on New York is maintained at one quetzal per U.S. dollar, but a commission of 1 per cent. is charged by the Central Bank for the sale of drafts.
Nicaragua.*	Sight selling rate on New York for payment of imports was fixed by the National Bank at 5-52½ cordobas per U.S. dollar (including 10 per cent. tax and ½ per cent. commission) on March 4, 1939.
Paraguay.	Exchange is quoted on Buenos Aires; the sight selling rate was 71-50 Paraguayan pesos per Argentine "free" paper peso on February 24, 1939.
El Salvador.	Sight selling rate on New York was 2-49½ colones per U.S. dollar on March 8, 1939.
Venezuela.	Sight selling rate on New York has been maintained at 3-19 bolívares per U.S. dollar since April 27, 1937.

* Exchange controls are operative in these countries.

Central Bank of Chile.—Discount rate for member banks, 4½%; discount rate for the public, 6%. (a) 4½% applied to banks and credit institutions. (b) 5% applied to private persons and firms.

OIL OUTPUTS

Phoenix Oil Transport.—To write down book values and establish a capital reserve, it is proposed to use £25,000 of carry forward and to write down capital by £2,349,320. Existing capital is £3,737,588 in £1 shares, and £50,000 in 1s. shares (carrying rights to about 13½ per cent. of distributions, each share being worth about 23-40ths of a £1 share). New capital will be £1,438,268 ordinary stock, all of one class. Reduction effected by reducing 3,737,588 £1 shares to 6s. 8d. (or £1,245,863 in all), and transferring 854,432 shares of 3s. 4d. each, rateably to the 1s. shareholders, who will thus hold £192,405 of the new ordinary stock. Effect is to give £1 shareholders, £33 new stock per £100 held, and 1s. share-

holders, £19 stock per 100 1s. shares, with fractions in cash.

Mexican Eagle Oil.—It is announced that discussions between the President of Mexico and Mr. Donald Richberg were completed on March 22nd, and Mr. Richberg is returning to the U.S.A. to report. The position so far is that, while discussions have been cordial, agreement has not been reached on any of the fundamental questions.

Anglo-Iranian Oil Company, Ltd.—Production in Iran for December, 1938, 862,370 tons. The total production for 1938 was 10,195,371 tons.

British Controlled Oilfields, Ltd.—Total output week to March 11, 1939,

11,846 barrels. Total output week ended March 18, 1939, 11,678 barrels. Total output week ended March 25, 1939, 11,750 barrels.

Dacia Romano Petroleum.—Gross output February, 1939, Dacia 1,450 tons; Perimeter X, 2,297 tons; Starnaphta, 541 tons.

Trinidad Petroleum Development.—Output week to March 11, 1939, 54,106 barrels. Output week ended March 18, 1939, 51,915 barrels. Output for week ended March 25, 1939, 52,416 barrels.

Venezuelan Oil Concessions, Ltd.—Total output week to March 18, 1939, 822,832 barrels. Total output week ended March 25, 1939, 848,437 barrels.

(c) 1 per cent. free of income tax.
† Free of income tax.

DAILY MAIL TRUST.—Interim dividend reduced from 2½ to 1½ per cent., tax free.

HUDSON'S BAY COMPANY.—Dividend, 2½ per cent., subject to tax (compared with 3 per cent. for 1937) from profits of trade. In addition, there is again a 1 per cent. dividend, on which tax is not payable, from surplus of land account.

RHOKANA CORPORATION.—Interim dividend, 25 per cent., as before.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the last dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in £,N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis.
 (h) Yield on 4½% basis. (m) Based on payment of 2½%. (n) To redemption at par, in year shown. (o) Yield worked at 3½% of face value.
 (p) Yield worked on a 10% basis. (q) Yield worked on a 5½% basis. (r) Yield worked on a 14% basis. (s) Yield free on 2.0925% basis.
 (w) Yield based on 40% of coupon. † Free of Income Tax. (y) Yield based on 47% of coupon. (z) 1% paid free of income tax.

* Bid and offered prices are free of Commission and Stamp Duty. (a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (h) Yield on 20% basis.
 † Free of Income Tax. (i) Yield worked on 6% basis.
 ‡ Including bonus of 5% free of tax. (p) Annas per share. (e) Allowing for rate of exchange.

DAGGAFONTEIN MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £2,000,000. Registered and Issued £1,750,000.
In 7,000,000 shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons Milled	1,701,000	Yield (per ton 5'67 dwts.)	482,534 ozs.
Revenue (per ton milled 40/4-6)	£3,434,546	Government Taxes	£499,709
Working Costs (per ton milled 20/9-2)	1,765,956	Government participation in Profits	258,482
Working Profit (per ton milled 19/7-4)	1,668,590	Reserve for Liability under Miners' Phthisis Act	1,798
Sundry Revenue, less expenditure	18,446	Dividend No. 11—25 per cent.	437,500
Total Profit	1,687,036	Dividend No. 12—26 1/4 per cent.	459,375
Add:—		Directors' Special Remuneration	7,500
Balance to credit of Appropriation Account on 31st December, 1937	73,864	Appropriated for Capital expenditure	20,313
	£1,760,900	Balance unappropriated at 31st December, 1938	76,223
			£1,760,900

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, and disclosed the following:—

Tons	8,002,133
Stope Width (inches)	40.67
Stope Value (dwts.)	6.37
Inch-dwts.	259

DEVELOPMENT.—The development accomplished during the year on the Main Reef Leader Horizon was 43,386 feet, a decrease of 10,601 feet compared with the previous year. The percentage payable was 51.4, average reef width 20.62 inches, average assay value 15.83 dwts. Inch-dwts. 326.

Kimberley Reef.—In addition to the above, a total of 2,584 feet was accomplished during the year on the Kimberley Reef horizon from No. 3 Shaft, and of the footage sampled 460 feet (27.2 per cent.) proved payable, with an average value of 7.02 dwts. over a width of 45.92 inches or 322 inch-dwts. The corresponding figures for the previous year were 423 feet developed, 70 feet (34.1 per cent. of the footage sampled) being payable, the value being 6.54 dwts. over a width of 42.50 inches, equivalent to 278 inch-dwts.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

WESTERN REEFS EXPLORATION AND DEVELOPMENT COMPANY, LTD.

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £2,000,000. Registered and Issued £862,500.
In 3,450,000 Shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

FINANCE.—The Capital Receipts and Expenditure from the inception of the Company to the 31st December, 1938, were as follows:—

Working Capital:—		Property, Options and Rights on Farms	£525,736
2,442,500 Shares at 5s. each	£610,625	Shaft Sinking, Development and Equipment	1,253,939
1,007,500 Shares at 37s. 6d. each	1,899,063	Boreholes and Prospecting	316,730
		Joint Prospecting Ventures	38,524
		Shares and Interests in Co-operative Concerns	2,377
		Stores and Materials on Hand	22,782
			2,160,118
		Cash and Cash Assets, less Creditors	339,570
3,450,000	£2,499,688		£2,499,688

OPERATIONS.—During the year under review satisfactory progress was made. No. 1 Shaft was sunk to its final depth and development work was started from this shaft. At No. 2 Shaft sinking operations were continued without any serious delay. Details of the work accomplished and the results obtained are given below.

SHAFT SINKING AND DEVELOPMENT

No. 1 SHAFT.—To a depth of 2,320 feet the formation encountered in this shaft was lava; at this elevation the contact of the Ventersdorp lava and Witwatersrand quartzites occurred. Sinking continued in the quartzite and various reefs were exposed. In June, shaft sinking was completed at a depth of 2,820 feet, the footage sunk for the year being 1,181 feet.

As sinking progressed, stations were cut and advanced a small distance at various horizons in the shaft. Stations were located in accordance with information obtained from the earlier diamond drilling, and were cut as follows:—

Station.	Depth Below Shaft Collar.	Station.	Depth Below Shaft Collar.
No. 2 (17 Level)	1,700 feet	No. 5 (26 Level)	2,600 feet
No. 3 (20 Level)	2,000 feet	Conveyor Belt Station	2,720 feet
No. 4 (23 Level)	2,324 feet		

Development was started on the four levels mentioned above and also on the Conveyor Belt Station. Most of this work, being in the nature of station roadways and general station layout, was off reef. A total of 2,515 feet was accomplished for the year. The only horizon where work was in the vicinity of the reefs was the 23 Level. Here 916 feet was advanced, of which 200 feet was on reef. In this area the No. 1 and No. 2 Reefs are separated by only a small parting of quartzite, and a complete exposure of both reefs could generally be obtained in a development heading of normal dimensions. Consequently these two reefs can be regarded under present conditions as a composite body, for which the sampling results are as follows:—

Footage sampled (feet)	200	Percentage payable	77.5
Average value (dwts.)	9.69	Average value (dwts.)	11.40
Average width (inches)	71.32	Average width (inches)	75.96
Footage payable (feet)	155	Inch-dwts.	866

No. 2 SHAFT.—During the year this shaft was sunk 3,035 feet, making the depth at the end of the period under review 4,211 feet. At 3,425 feet the contact of the Ventersdorp lava and Witwatersrand quartzites was located, but no values were found at this horizon. At 3,440 feet a reef was intersected but owing to faulting, the exposure was not complete. Sampling results showed 2.4 dwts. over 33 inches. At 3,452 feet a further partial exposure of reef was faulted, the result being 1.8 dwts. over 38 inches. At 3,916 feet the shaft entered the Gold Estates Reef, which was 64 feet in width; sampling results disclosed no values of economic importance.

At a depth of 2,182 feet a station was cut for the intermediate pump chamber. The main shaft station was located at 4,080 feet, and the loading bin station at 4,200 feet. A commencement was made with the cutting of these stations. This work, as well as the construction of the ventilation partition in the shaft, will take a considerable time, and it is therefore not anticipated that development from this shaft will be started until the second half of 1939.

DIAMOND DRILLING OPERATIONS.—During the year three new boreholes were commenced and three existing holes were deepened. A total of 17,393 feet was drilled during the year, of which 8,930 feet was in the Ventersdorp System, 7,155 feet in the Elsburg and Upper Witwatersrand beds, and 1,308 feet in the Lower Witwatersrand beds.

The principal reef disclosures for the year were as follows:—

Borehole.	Depth of Reef.	Reef Width.	Reef Value.	Inch-Dwts.
Goedgenoe No. 51	3,375	73	2.7	195
Goedgenoe No. 5	3,401	29	6.1	177

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

EAST DAGGAFONTEIN MINES, LTD.

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £2,000,000. Registered £1,800,000 in 3,600,000 shares of 10s. each.
Issued £1,350,000 in 2,700,000 shares of 10s. each, fully paid.

The Issued Capital has since been increased to £1,800,000 in 3,600,000 shares of 10s. each fully paid by the subscription of 900,000 shares offered to the shareholders at £1 per share in January, 1939.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

FINANCE.—The capital receipts and expenditure from the inception of the Company to the 31st December, 1938, were as follows:—

RECEIPTS		EXPENDITURE	
Working Capital:—		Purchase of 50 per cent. undivided interest in 179 Discoverer's Claims	
2,100,000 Shares at 10s. each, fully paid	£1,050,000		£102,803
330,000 Shares at 10s. each, fully paid, issued at 30s.	495,000	Shaft Sinking, Development and Equipment as per Schedule attached to Balance Sheet	
270,000 Shares at 10s. each, fully paid, issued at 37s. 6d.	506,250		2,248,598
			Shares and Interests in Co-operative Concerns
			2,008
			Stores and Materials on Hand
			20,922
			2,374,331
		Creditors in Excess of Cash and Cash Assets	323,081
2,700,000	£2,051,250		£2,051,250

DEVELOPMENT.—The footage accomplished on the Main Reef Leader horizon was considerably increased, and work on the Kimberley Reef, which had only just commenced at the end of 1937, was continued with very gratifying results. The necessary arrangements in the shafts in connection with hoisting and ventilation requirements are almost completed. On the surface, construction proceeded according to programme. The footage accomplished on the Main Reef Leader horizon was 29,577 feet, an increase of 10,080 feet on the previous year's figure, of which 23,013 feet was on reef. Sampled 22,970 feet, reef width inches 11.48, assay value 12.58 dwts. Of the footage sampled during the year 19.0 per cent. (8,950 feet) proved payable, and disclosed an average value of 25.13 dwts. over a width of 11.48 inches, equivalent to 288 inch-dwts.

In addition to the above a total of 3,352 feet was accomplished on the Kimberley Reef horizon, of which 2,255 feet was on reef. Sampled 2,245 feet, reef width inches 17.27, assay value 21.18 dwts. Of the footage sampled during the year 2.005 feet, equal to 89.3 per cent., proved payable, having an average value of 23.34 dwts. over a width of 17.09 inches, equivalent to 399 inch-dwts.

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, disclosing the following:—

	Tons	Stope Width, Inches.	Stope Value, Dwts.	Inch-dwts.
Main Reef Leader	1,466,303	37.79	8.98	226
Kimberley Reef	135,275	40.00	8.59	344
Total	1,601,578	37.97	6.18	235

No. 1 SHAFT.—This shaft was sunk 143 feet during the year to a final depth of 3,743 feet, and good progress was made with the excavations necessary for the revised station layout.

Development was commenced at the Kimberley Reef horizon in order to expedite the connection between this shaft and the May Shaft on this reef.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

THE SOUTH AFRICAN LAND & EXPLORATION COMPANY, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £1,000,000. Registered £437,500 in 2,500,000 shares of 3s. 6d. each.
Issued £433,125 in 2,475,000 shares of 3s. 6d. each fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons Milled	264,600	Yield (per ton 5'06 dwts.)	67,417 ozs.
Revenue (per ton milled 37/0-6)	£493,950	Provincial Companies Tax	£5
Working Costs (per ton milled 28/5-7)	379,597	Reserve for Liability under Miners' Phthisis Act	1,704
Working Profit (per ton milled 8/6-9)	114,353	Dividend No. 1—14 1/4 per cent.	61,875
Deduct:—		Directors' Special Remuneration	594
Proportion of administration charges to 30th June, 1938,		Capital Duty and New Share Issue Commission and Expenses	26,927
less sundry revenue	574	Balance unappropriated at 31st December, 1938	41,736
Total profit	113,779		
Add:—			
Balance to credit of Appropriation Account at 31st December, 1937	19,062		
	£132,841		£132,841

OPERATIONS.—During the year under review the Company reached the production stage, and milling started on the 29th June. From the commencement of operations the tonnage milled has increased monthly, and after the second month a working profit was declared, which has steadily improved.

DEVELOPMENT.—The total footage accomplished for the year was 31,967 feet, of which 12,351 feet and 5,119 feet were advanced by Brakpan Mines and West Springs respectively. The percentage payable was 49.7, the average reef width 28.39 ins., average assay value 14.65 dwts. Inch-dwts. 416.

Development work on the Company's behalf was discontinued by West Springs in May, and by Brakpan Mines in June, when the development headings being advanced by these mines were connected with the main collecting haulages from your No. 1 Shaft. During the year efforts were primarily directed towards preparations for stoping, and completing the underground transport and ore handling arrangements. This explains why the footage in 1938 was 19,600 feet less than that accomplished during the previous year.

Included in the above is an advance of 1,342 feet accomplished on the Footwall Reef, of which 1,115 feet was sampled and 58.7 per cent. (655 feet) proved payable, having an average value of 8.62 dwts. over a width of 47.08 inches, equivalent to 406 inch-dwts.

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, disclosing the following:—

Tons	3,030,690
Stope width (inches)	36.49
Stope value (dwts.)	6.02
Inch-dwts.	280

No. 1 SHAFT.—This shaft was completed in February at a final depth of 4,644 feet, the advance for the year being 176 feet.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

BRAKPAN MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £1,250,000. Registered and Issued £1,150,000.
In 4,600,000 Shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons Milled	1,648,500	Yield (per ton 5-13 dwts.)	423,000 oz.
Revenue (per ton milled 36'5-5)	£3,005,354	Government Taxes	£456,082
Working Costs (per ton milled 20'8-4)	1,706,174	Government Participation in Profits	124,974
Working Profit (per ton milled 15'9-1)	1,299,180	Reserve for Liability under Miners' Phthisis Act	3,508
Sundry Revenue, less expenditure	24,272	Dividend No. 52—30 per cent.	345,000
Total Profit	1,323,452	Dividend No. 53—32½ per cent.	373,750
Add:—		Directors' Special Remuneration	7,500
Balance to credit of Appropriation Account at 31st December, 1937	96,049	Capital Expenditure	32,119
	£1,419,501	Balance unappropriated at 31st December, 1938	76,568
			£1,419,501

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, and disclosed the following:—

Tons	7,082,840
Stope Width (inches)	45-90
Stope Value (dwts.)	5-61
Inch-dwts.	257

DEVELOPMENT.—The development accomplished during the year was 64,339 feet, a decrease of 5,049 feet, on that done during 1937. The percentage payable was 38·1, the average reef width 31·54 ins., average assay value 11·72 dwts. Inch-dwts. 370. The footage accomplished on Hanging Wall Leaders was 6,262 feet, or 1,741 feet less than in 1937. The footage sampled was 4,830 feet, of which 42·8 per cent. was payable, with an average value of 7·42 dwts. over a width of 49·65 inches, equivalent to 368 inch-dwts.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

SPRINGS MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £1,750,000. Registered and Issued £1,560,000. In 6,240,000 shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons Milled	1,827,400	Yield (per ton 5-63 dwts.)	514,012 ozs.
Revenue (per ton milled 39'11-7)	£3,652,233	Government Taxes	£456,631
Working Costs (per ton milled 19'10-3)	1,814,219	Government Participation in Profits	527,513
Working Profit (per ton milled 20'1-4)	1,838,014	Reserve for Liability under Miners' Phthisis Act	9,361
Sundry Revenue, less expenditure	7,577	Dividend No. 38—25 per cent.	390,000
Total Profit	1,845,591	Dividend No. 39—27½ per cent.	429,000
Add:—		Directors' Special Remuneration	7,576
Balance to credit Appropriation Account at 31st December, 1937	62,048	Capital Expenditure	10,927
	£1,907,639	Balance unappropriated at 31st December, 1938	76,631
			£1,907,639

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, and disclosed the following:—

Tons	9,001,985
Stope Width (inches)	43-06
Stope Value (dwts.)	5-31
Inch-dwts.	229

DEVELOPMENT.—The footage accomplished on the horizon of the Main Reef Leader was 20,480 feet, showing a decrease of 2,842 feet compared with the previous year. The percentage payable was 45·7, average reef width 30·21 ins., average assay value 11·80 dwts. Inch-dwts. 356. **Kimberley Reef.**—Exploratory development was continued from No. 1 Shaft. The footage accomplished was 924 feet, of which 830 feet was sampled, giving an average value of 0·14 of a dwt. over a width of 68·25 inches. No payable values were disclosed. These results are in addition to those obtained on the Main Reef Leader tabulated above.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

WEST SPRINGS, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Registered and Issued £1,935,000. In Shares of £1 each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1938.

Tons Milled	1,061,500	Yield (per ton 4-08 dwts.)	216,358 ozs.
Revenue (per ton milled 29'0-1)	£1,539,681	Government Taxes	£43,338
Working Costs (per ton milled 18'7-0)	986,193	Government Participation in Profits	205,323
Working Profit (per ton milled 10'5-1)	553,488	Reserve for Liability under Miners' Phthisis Act	3,374
Sundry Revenue, less expenditure	3,666	Dividend No. 26—6¼ per cent.	120,938
Total Profit	557,154	Dividend No. 27—6¼ per cent.	120,937
Add:—		Directors' Special Remuneration	9,000
Balance to credit of Appropriation Account at 31st December, 1937	115,175	Capital Expenditure	107,367
	£672,329	Balance unappropriated at 31st December, 1938	62,052
			£672,329

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1938, and disclosed the following:—

Tons	4,545,170
Stope Width (inches)	53-36
Stope Value (dwts.)	5-25
Inch-dwts.	280

DEVELOPMENT.—The footage of 23,845 feet accomplished during the year was 6,004 feet more than that for 1937. The percentage payable was 50·6, average reef width 31·68 inches, average assay value 14·94 dwts. Inch-dwts. 473. **No. 2 Shaft** and its Sub-vertical Shaft were completed during the year under review. No. 2 Shaft was brought into commission during February. The Sub-vertical Shaft was sunk 1,226 feet during the year to its final depth of 1,275 feet, which is 6,401 feet below the surface. The whole of the equipment was installed by the end of the year, and the shaft was put into commission on the 29th December, 1938.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

Britain Girds Her Loins

"I FIND myself," said Mr Winston Churchill in the House of Commons on Monday evening, "in the most complete agreement with the Prime Minister. I listened to his speech with the greatest attention, and both in its assertions and its reservations, in its scope, in its emphasis and in its balance, I find myself entirely in accord with what he said." All those who, with Mr Churchill, have bitterly regretted the perilous delays of the years that the locust hath eaten and have prayed that the eyes of the Government would be opened before it was too late, can now say no other. The eyes are open.

So sudden was the conversion which Mr Chamberlain announced in his Birmingham speech on March 17th that suspicions of its completeness and sincerity were only legitimate. The fortnight of apparent inaction that followed appeared to confirm the suspicions, and it was possible for the Nazi propagandists to crow that the Birmingham policy had already failed. But appearances were deceptive and the suspicions unfounded. The guarantee given to Poland last Friday and the explanatory statement made by the Prime Minister on Monday prove that the conversion is, after all, complete. It is true that even now the usual irresponsible commentators, who have done such infinite harm to British probity and policy in the past, are hard at work reading dishonest meanings into the Government's statements. But the Government's foreign policy can only be judged by the categorical statements of the Prime Minister and the Secretary of State for Foreign Affairs. And the plain meaning of these

statements is unmistakable. It would possibly be slightly misleading to describe the new British policy as collective security, since that term has been overlaid with a number of special meanings. But, in a historical parallel which must be in Mr Chamberlain's mind, the policy is that of William Pitt. Great Britain is taking the lead in organising a Grand Alliance to defend Europe against an attempt at world domination.

The guarantee to Poland, as the Prime Minister pointed out, although it is only an interim measure and a first step, is decisive. It is in flat contradiction to the whole of British policy ever since the war. It is not a normal development so much as a revolution in British policy. Its direct effect is to show that Britain is now seeking her security in Eastern Europe—since, of course, no pretence has been, or could be, made that it is not in direct defence of her own interests that Britain is now acting. But perhaps more important than the diplomatic and strategic change is the change in attitude and psychology that is reflected. For six long years the dictators have drawn strength from the fact that, while they put their ambitions above peace, the democracies have seemed to put peace above their safety. That is now ended. For the first time since 1918, Great Britain has taken a stand, knowing that she thereby runs the risk of war. We stand face to face with the dictators now on a plane of psychological equality—indeed, on a superior plane, for, as Monday's debate showed, there is virtual unanimity behind the Government and it is the unanimity of free men. Si

vis pacem para bellum is not a maxim of universal validity. But it is very true when one is dealing with treaty-breaking aggressors. Over and over again it has been urged in these columns that the price we have to pay for peace is one of courage—the courage of not being afraid of war. The country is now ready to pay that price and gains enormously in strength thereby. Pray God the new resolution does not come too late.

There is, of course, no longer any concealment that our policy is directed against Germany, and the German reaction has been one of boundless fury. In every German speech and article, the new British policy is described as "encirclement"—the nightmare of every German. Now "encirclement" may have two meanings. It may mean an offensive alliance of aggressive intent to crush the encircled nation. Or it may be a purely defensive alliance of self-protection, which will never come into operation if the encircled nation acts as a good neighbour. The British policy is emphatically of the second variety. That has been made clear by the Prime Minister. Indeed, it is explicit in the terms of the guarantee to Poland, which is not to come into effect unless there is an attack on Poland's independence of such a character that Poland herself feels compelled to wage war against a far stronger foe to prevent it. But it is revealing of German intentions that no trouble is taken to distinguish between the two varieties of encirclement. The British policy is described as an attempt to constrict the German people's *Lebensraum*. This can only mean that Germany demands the right, within her circle of influence, to make demands so indefensible that her neighbours (not one of whom is half her size) would be driven in desperation to take up arms. This must be the meaning of German policy, since the British plan would not operate against anything else.

It would be foolish, however, to close our eyes to the fact that the cry of "encirclement" is one to which the German people instinctively reacts, and it is being used with powerful effect by the Nazi propaganda machine. It would be foolish, too, to assume that because Herr Hitler's speech at Wilhelmshaven was mostly taken up with the familiar abuse of the democracies in general and of Great Britain in particular, that he has accepted check-mate. One of the most dangerous aspects of an undeniably dangerous situation is that the Fuehrer, constitutionally inclined to self-exaltation, has been led by his long series of unopposed triumphs to exaggerate his strength, to lose his caution, and to believe himself invincible. Nobody who is acquainted with the mentality of the Nazis will find it advisable entirely to exclude the possibility of a sudden attack without warning on any or all of the countries that are now moving towards a defensive alliance. And it can be taken for granted that, even if Germany does not take to the field to break the alliance, her diplomacy and that of her allies will be indefatigable in probing for the weakest links in the chain of the alliance. The German Press is full of threats against all who are in communion with London. Italy threatens to put pressure on the Balkan countries through Albania. There are confident reports that General Franco will sign—or that he has already signed—the anti-Communist Pact. And though Japan has apparently declined to convert the Pact into a military alliance, every pressure will be exerted upon her to play her allotted part. All the not inconsiderable resources of German diplomacy will be enlisted to prevent the consummation of a plan which, if it is successfully brought to birth and maintained in existence, spells the end of the Nazis.

For this reason there is need of the utmost speed in cementing the Grand Alliance. And the cement that will give it the strength it needs is the adherence of Russia. This was the point on which Mr Lloyd George fastened in Monday's debate, and though his declaration that "if we are going in without the help of Russia we are walking into a trap" is exaggerated—since Poland and Roumania are

essential members of the alliance and by no means inconsiderable military powers—it is true that the new position we have taken up will not be secure until it is supported by Russia. It is not merely a question of preventing "ideological differences" from blocking the road to Anglo-Russian collaboration. In Mr Lloyd George's phrase "it is a military matter of the very first importance"; or, as the Soviet Ambassador remarked not long ago, the future of the world may depend upon the degree of co-operation between Moscow and London. The difficulties in the way must not be ignored. In particular, it is unlikely that Poland will form a direct alliance with Russia. But these difficulties should not be impossible to surmount. If Poland is allied to Great Britain and France and the two western powers are allied to Russia, the effect would, in time of war, be the same as a direct Polish-Russian arrangement. But in any case the adherence of Russia is essential.

There is, of course, an economic side to all these proposals. The mere fact that defensive arrangements are being debated is proof that Germany is regarded at the very least as a potential aggressor. Is it not merely common sense to see that she enjoys no special economic favours by which she may increase her striking force? In principle, no dispute with this is possible. But in practice, great care and foresight are necessary in treading this path. There is already, in many countries, a silent and unorganised refusal to buy German goods. This will inevitably and rightly increase. But the organisation of boycotts, especially by governments, is a thorny and difficult problem. There should, of course, be no question whatever of re-opening commercial discussions of the Duesseldorf type; the pity is that they have not been more forcibly denounced. Since German goods are confessedly subsidised, there would be the fullest commercial justification for the imposition of anti-dumping duties, such as has already been done in the United States. Further, there is no possible exception to the principle of the exchange clearing, though it is a little hard to see how the imposition of an Anglo-German clearing, as distinct from a reduction in British purchases of German goods, would affect the issue. All these are measures which should at once be considered—and considered, be it said, in the fullest concert with our friends. But if we are thinking of going any further and of initiating anything in the nature of economic sanctions against Germany, we should be very clear in our minds that sanctions are a form of war and will be treated as such. If we impose them in a cause for which we are not ready to take up arms, we run the risk of humiliation such as we suffered in 1936.

Economic defence, however, like every other form of defence, begins at home. Much more urgent than the economic weakening of Germany is the economic strengthening of Britain. It is abundantly clear that the doubling of the Territorial Army is only the first instalment of a gigantic increase in our defence efforts. It should also be abundantly clear that, as Mr Hore-Belisha said months ago, no substantial increase in supplies of equipment is possible with our present system. Moreover, on the financial side, whether or not the borrowing of £350 millions will be inflationary, the borrowing of well over £400 millions, which we must now contemplate, would undoubtedly be inflationary unless measures of control were taken. The two irresistible conclusions are that, on the industrial side, we need at once a full-blown Ministry of Supply and that, on the financial side, we need to begin without delay formulating and applying a wartime financial policy designed to secure resources of labour and capital for the needs of the State by methods more direct and less harmful than an uncontrolled rise in prices.

These subjects, it is known, are under consideration by the Government. Nobody will accuse them of inconsistency if on these great issues also they will show that their eyes have been opened.

The Sport Industry

LOOKED at in one way, the demand for entertainment is simply a demand for a pleasant means of spending spare time. It is just the same as the demand for motor cars or the demand for wireless sets. It is a social phenomenon tied up with the much-debated problem of leisure and leisure pursuits in an urban and mechanical age. Looked at in another way, however—that is, on what the economists call the "supply side"—entertainment is quite a different proposition. It is an industry like, again, the motor car industry or the wireless industry. It affords employment to thousands of workers of both sexes and of all grades in turning out goods and services to meet our demands; and secondly, it is an industry with special problems of policy and organisation all worthy of close attention.

The first feature of the entertainments industry which strikes the enquirer is its size and the rate at which it is expanding nowadays. In the middle of last year nearly 140,000 persons, consisting, roughly, of 85,000 men and boys and 55,000 women and girls, were insured against unemployment in this industry. This is a surprising figure when it is remembered that this number of employees is larger than the 115,000 employed in electrical engineering and not so far short of the 200,000 or so employed in cotton weaving. If we make an index number of the insured workpeople in entertainment and sport, it has risen from 100 in 1923 to 233.7 to-day.

These figures include, of course, the old-established theatres, cinemas and dance-halls as well as the sport industry proper—that is, the industry whose business it is to provide the mass spectacular pastimes like football, greyhound racing, ice hockey and speedway racing. Of the latter group, football—that is, association football—has the strongest traditional standing. It provides entertainment for over 14 million spectators in a year, and it receives in payment for admission to football grounds over £2 millions annually. Greyhound racing is only 14 or 15 years old, having been started in 1925 in that home of so many novelties, Manchester; probably 25 million attendances, including 11 million in London, are recorded every year. Something like £6 millions are invested in greyhound racing tracks, half of which represents the paid-up capital of public companies. Speedway racing is newer still, and, compared with football or greyhound racing, is not very important, providing only about a fifth of the meetings provided by "the dogs." Ice hockey in its present form is the newest of them all. It is a curious thing about modern English history that for the last fifty years or so ice skating and ice rinks have come into popularity in cycles. The researches of Dr Shannon into the company history of the nineteenth century revealed both a high birth rate and a higher mortality in what were called in those days "glaciara." The latest passion for the ice began in 1926, and to-day perhaps a million pounds are invested in skating rinks.

All this is very impressive, particularly when it is remembered that it does not include the sport of kings, publicans and sinners, horse racing, which has deeper roots in English tradition than any other sport, save football. But, impressive though these figures are, they do scant justice to the financial magnitude of the entertainments industry, since they exclude the huge ancillary industry of betting. Every year over £50 millions are spent on betting on greyhounds and not far short of the same sum on betting in the football pools. In the financial and statistical sense, this is much the most important aspect of the industry of sport.

Even so, statistics tell only part of the story. It is the

entertainments industry's economic problems that have most to tell observers of social trends. And first and foremost among these problems is that of maintaining public interest. Perhaps the most important fact about the entertainments industry is that it is dependent upon fashion and fancy. Association football, like county cricket and horse racing, has had a very long innings in the public favour. But the tenure of popular enjoyment by all these sports has had ups and downs, and the revenue derived from their organisation is similarly precarious. The central economic problem of the entertainments industry is to stabilise demand and to spread the risks of enterprise.

This problem has become especially important in the years since 1918. There is every sign during this period of an increasing restlessness in the search for amusement. One after another, pony racing, speedway racing, dog racing, all-in wrestling, pin-table saloons, football pools and even crossword puzzles have attracted the public interest. Some have survived, some have fallen by the wayside. This flourishing of crazes and innovations is important in two ways: in the first place there are vast windfall profits to be made by the first in the field; in the second place, there always comes a point when the rush of entrants into any particular branch of entertainment kills the margin of profit; and then it is the efficient or the fortunate who survive. In the same way, within the entertainments or sports which survive despite their ups and downs—such as, again, football, racing and the like—there are as many failures as successes in the financial sense. In association football, for instance, many are called into the professional field but singularly few are chosen. The aristocrats, like the Arsenal and Wolverhampton Wanderers and Everton, coin money hand over fist—though it costs them a great deal in expenses to do so; the small fry in the second and third divisions live from hand to mouth, and only too often on the charity of well-disposed business men seeking publicity for the town they trade in.

Let us, therefore, look at the devices which have been adopted to eliminate the risks of sporting fashion. One of the inconvenient facts about sport is that each and every one of its departments are seasonal. Cricket is played in the summer; football is played in the winter, though it does snatch a good deal of cricket's ostensibly sunny period for its own purposes. In racing, horses are permitted to run undeterred by the obstacles of hurdles for the spring, the summer and autumn; in the winter, rising to the grand and arduous climax of the Grand National, they become steeplechasers. So, too, with other sports. Greyhound racing is mostly confined to the summer; speedway racing is similarly seasonal. Football is played on Saturdays in the afternoon. Greyhound racing, speedway tracks and ice rinks are used in the evening on certain days of the week. The problem, then, is to make the greatest possible use of the costly capital facilities which each of these sports entails. In one way or another they all require expensive tracks, elaborate seating arrangements and enormous stadia. The reasonable way to spread the cost of these overheads over the largest possible number of days and meetings is to use them for several different sports. That is precisely what has been done.

It is interesting in this connection to see how the newer forms of entertainment have fared, faced as they are by the inherent precariousness of the industry. Greyhound racing leapt ahead from 1929 to 1932, the number of attendances rising fourfold. Between 1932 and 1938, however, they rose by more than a fifth but less than a quarter; the novelty had worn off, and the windfall profits of the first promoters had gone. It was now necessary to find new means

of stimulating interest and support, and in the case of greyhound racing the attempt to restimulate interest has been remarkably successful. The Greyhound Racing Association, which has a capital of £1,200,000, controls four tracks in London; in 1929 it paid 10 per cent. on its ordinary shares; in 1932 it paid 15 per cent.; in 1934 it paid nothing; in 1937 it paid 40 per cent.

Speedway racing, too, has had its vicissitudes since it started. It will never rank with football or greyhound racing. On the one hand it lacks human interest; on the other hand, it lacks betting value. But, and this is the important point, it has served surprisingly as the necessary supplement to greyhound racing itself. When interest in greyhound racing flagged, the speedway or dirt track riders were brought in to bring in the crowds, and advertise the stadia.

The fourth of this group of sports—ice hockey—is in some ways a thing apart. For one thing, it has the ominous record, as we have seen, as a craze that lives only a short time; for another, it needs special equipment. Footballers cannot play and greyhounds cannot race on a skating rink. To some extent, however, this has been solved in two ways. On the one hand, skating as an individual pastime provided a supplement to ice hockey as a mass spectacle. On the other hand, the growing national interest in swimming has been used. At the Wembley Empire Pool, for instance, there is swimming, there is skating and there is ice hockey. This alliance with swimming is important, because it cancels out the seasonal disadvantages which skating and ice hockey have. People swim in the summer

and skate in the winter and the equipment of restaurants and dressing rooms at Wembley is, by this happy combination, kept in use the whole year round. Ice rinks are a costly business. Between £80,000 and £100,000 is needed to build a new rink; it costs between £10,000 and £12,000 to convert a dance hall into a rink; and it costs something like £300 a week to run a rink, once it has been opened. Nevertheless, the device of joining with other diversions to bring in a large public to spread the use of the facilities over the whole year and to make the best use of capital equipment, has proved strikingly successful.

It is not possible in a brief article to give more than a sketch of the economics of the sport industry—or even of that more restricted section of it that has been chiefly under review here. But enough has been said to show that the newer branches of the industry have three main economic problems: first, the demand for certain sorts of mass and usually spectacular entertainment is extremely fluctuating; secondly, the past, present and future of these sports is tied up with betting; and, thirdly, one problem stands out conspicuously in the case of all of them: the problem of stabilising the demand. In fact, the long and short of it is that purveyors of sports of this kind must be purveyors of sport in general rather than purveyors of sport in particular. They must set up their stadia, build their bars and restaurants and their totes and then try their hardest to get all sorts and kinds of sports and pastimes to use the equipment they have provided. This is the direction of the most publicised section of the sport industry to-day.

The Year's Revenue

YEAR by year it is becoming more difficult to summarise the result of the year's Exchequer operations in a single figure. In the year 1938-39, which ended on March 31st, the revenue of the Exchequer (excluding the self-balancing items) was £927,285,034. On the expenditure side, there is a variety of figures that can be taken to compare with this revenue total. The total of what the official return calls "Ordinary Expenditure," which is expenditure charged to revenue, excluding sinking fund, was £926,779,724. For those who like their illusions *couleur de rose* there can thus be said to be a surplus of £505,310. If the sinking fund allocation is added in, the total of expenditure was £939,998,905. This, in the days when Budgets balanced, was the comparison by which the surplus or deficit was calculated; the result for 1938-39 would be a deficit of £12,713,871. But neither of the two figures of expenditure mentioned above includes £128,050,000 spent out of loans under the Defence Loans Acts. If this figure is added to the two previous figures in turn, the resulting deficit can be said to be £127,544,690 or £140,763,871 respectively. Still another basis of comparison is possible. On the revenue side, the Chancellor has done worse than he expected to the tune of £17,365,000 (i.e. revenue is by that amount below the estimate), while on the expenditure side the amount spent is £33,651,000 more than was provided in the Budget Estimates—a total "deficit" of £51,016,000. Five alternative results have now been quoted, and for each of them some theoretical justification could be pleaded. If the effect is bewildering, it only measures the degree of confusion that re-armament has imposed on British public finances.

The revenue side of the account, which is shown in the first table at the head of the next page, is still comparatively simple. The results, on the whole, have been disappointing, for though tax revenue was £55.2 millions more than in the previous year, it fell £20.1 millions short of the estimates. Nearly every item shared this

shortfall. The biggest drop was in death duties. The yield of death duties in recent years has usually exceeded the expectation, and though it was doubtless optimistic of the Chancellor, in view of the level of security prices, to estimate a yield barely £1 million less than last year, the fall of one-eighth in the yield is surprisingly large and suggests that the hazards of mortality among millionaires have been working, this year, against the Exchequer. If so, no further decline in 1939-40 is to be expected. A shortfall of over £5 millions in income tax is also disturbing. If it is due merely to delays in payment, the coming year will correspondingly benefit. But if it is due to an unexpectedly sharp fall in the corpus of taxable income, the same factor may be still at work. In any case, a decline in the yield of income tax is to be expected this year, as the incomes of 1938-39 (on which tax is now to be levied) are certainly lower than those of 1937-38. The profits of companies reporting since July 1st (this date allowing a time-lag of three months) have been, in sum, 6 per cent. below the previous year. Other constituents of income are not, of course, as volatile as profits, but a fall in yield of something of the order of £10 millions may have to be reckoned with. The disappointing performances of Stamps and of Customs and Excise all reflect the course of trade, on which they will likewise depend in the coming year. The yield of N.D.C., on the other hand, has been above the estimate.

The expenditure side, now that defence borrowing is so large, is of little more than formal interest. The provision for interest and management of the National Debt was increased by £6 millions to £230 millions in last year's Budget, but the increase has not been needed. Part of the increase in "Other Consolidated Fund Services" is due to the transfer of £2 millions to this heading from Supply Services, consequent upon the Agreement with Eire. This also partly explains the fact that expenditure on civil and revenue votes was less than the Budget estimate, even

REVENUE, 1938-39 (£000's omitted)				EXPENDITURE, 1938-39 (£000's omitted)			
	Actual Receipts	Estimate 1938-39	Larger (+) or Smaller (-) than Budget 1937-38		Actual Issues	Estimates 1938-39	Larger (+) or Smaller (-) than Actual Issues 1937-38
Income tax	335,901	— 5,249	+ 37,915	Interest and Management of National Debt	216,781	— 13,219	+ 548
Sur-tax	62,530	+ 530	+ 5,470	Payments to N. Ireland	9,459	+ 559	+ 572
Estate, etc., duties	77,430	— 10,570	— 11,550	Other Consolidated Fund Services	4,825	+ 1,625	+ 1,710
Stamps	20,980	— 3,020	— 3,190	Total Consolidated Fund ...	231,055	— 11,035	+ 2,830
National Defence Contribution...	21,890	+ 1,890	+ 20,470	Army, Navy and Air Votes	254,406	+ 1,158	+ 57,156
Other Inland Revenue	1,550	+ 300	— 180	Civil and Revenue Votes*	441,309	— 7,741	+ 33,544
Total Inland Revenue	520,281	— 16,119	+ 48,935	Total Supply Services* ...	695,715	— 6,583	+ 90,700
Customs	226,326	— 1,624	+ 4,765	Total Ordinary Expenditure	926,780	— 17,618	+ 93,530
Excise	114,200	— 1,950	+ 500	New Sinking Fund	13,219	+ 13,219	+ 2,675
Total Customs and Excise...	340,526	— 3,574	+ 5,265	Total Expenditure	939,999	— 4,399	+ 96,205
Motor Vehicle duties	35,608	— 392	+ 1,000	Sums met out of Loans under Defence Loans Acts	128,050	+ 38,050	+ 63,183
Total Tax Revenue	896,415	— 20,085	+ 55,200	* Excluding Post Office and broadcasting.			
Post Office (net receipt).....	9,500	+ 830	— 970	SELF-BALANCING REVENUE AND EXPENDITURE (£000's omitted)			
Post Office Fund	1,400	— 1,000	+ 575	Post Office and Broadcasting ...	78,950	— 1,542	+ 2,870
Crown Lands	1,330	...	...				
Sundry loans	5,699	+ 449	+ 469				
Miscellaneous receipts	12,941	+ 2,441	— 569				
Total Ordinary Revenue ...	927,285	— 17,365	+ 54,705				

though Supplementaries exceeded the Budget provision by £7½ millions. Total defence expenditure (i.e. including sums borrowed) is shown quarter by quarter in the following table:—

DEFENCE EXPENDITURE (£ millions)				
	1935-36	1936-37	1937-38	1938-39
First quarter	27.5	37.5	46.3	65.8
Second quarter	30.3	41.2	58.3	86.4
Third quarter	37.3	48.0	68.3	102.9
Fourth quarter	41.8	59.4	89.3	127.5

Expenditure in a single quarter has come within £10 millions of the annual expenditure in 1935-36.

The prospects for the forthcoming Budget are a little puzzling. Supply Service expenditure to be debited to revenue is £674.0 millions, but some provision for Supplementaries, which can hardly be less than £5 millions, will have to be made. The Consolidated Fund services can be put at £238 millions, assuming that last year's

increase in the debt provision is cancelled. Thus the lowest probable total for expenditure is £917 millions. On the other side, revenue, on the existing basis of taxation, will have difficulty in reaching this figure, unless there is some unrevealed windfall to swell Miscellaneous Receipts. When the Estimates revealed, a month ago, that the revenue was to be relieved of £44 millions of defence expenditure, it was widely—and naturally—assumed that this was done in order to balance the Budget without any new taxation. There was, at least, no other apparent reason for selecting the precise figure of £44 millions. Now this assumption begins to look unsafe and there may be a gap of a few millions to be closed, even if no provision is made from revenue for the additional expenditure now to be incurred. The taxpayer will have to wait until Budget day to learn whether he is to be asked to assume new burdens.

Topics of the Week

Sentence on Terrorists.—I.R.A. activities increased again last week with the planting of bombs on Hammer-smith Bridge, in Fleet Street and in other parts of London, and also in Birmingham and Liverpool, with threats of more to come. It is presumably more than a coincidence that these explosions, in which it was lucky that no one was directly hurt, took place only a day or so after sentence had been passed on nine members of the I.R.A., and while others were awaiting sentence. The speed of the authorities in bringing these men to trial is a matter for sincere congratulation. Even in the case of the Hammersmith explosion two men were arrested and detained on the same day as it occurred. The sooner the perpetrators are under lock and key the better it will be for all concerned. But it is certainty of conviction rather than severity of sentence which acts as the surest deterrent, and it is no mere spirit of criticism that leads one to think that the Courts have been rather too severe. Of the nine men sentenced last Tuesday four received long sentences, respectively of seventeen, fifteen, twelve and ten years; while at Manchester Assizes on March 10th five men were each sentenced to twenty years' penal servitude. There may be every reason for these heavy sentences, but it would be a mistake to fall in with the tactics of the I.R.A. by giving them a handle with which to play on public sympathy. As things stand, their campaign to frighten the British public into some vague and undefined act of restitution has

failed utterly; their activities are universally regarded with complete contempt. There is no reason why their cause should benefit from that quite illogical sympathy which is accorded to those whose punishment is excessive.

* * *

Railway Wages.—The sense of the Railway Staff National Tribunal's decision early last month went far to support the railwaymen's case in asking for the minimum weekly wage of 50s., although this demand, among others, was in fact rejected. But a moral award, based on the Tribunal's observation that a great part of railway wages is too low for human needs and contemporary standards, is an empty victory when funds are lacking to put it into effect. This week the National Union of Railwaymen have considered their line of policy. They have wisely eschewed the appeal to direct action. Inevitably, they were also compelled to reject the Tribunal's award in its entirety, though in doing so they lost the concessions affecting Sunday duties and spreadover adjustments, which the Tribunal allowed. The delegate conference has instead decided to put a renewed claim before the companies for a 50s. minimum, unaccompanied by any other demands. It is estimated that the cost of this concession in the conciliation grades would amount to £1,087,000, and the companies estimate the cost to all grades at £2,566,000. Thus the union has maintained a strong strategic position. It has

rejected the Tribunal's findings, but without, apparently, imperilling the negotiating machinery set up in 1935. Its case for a minimum standard has been conceded. Whether this standard can be provided without an appreciable improvement in railway revenues has now to be tested.

* * *

The "Grid's" Progress.—Among our modern technical and economic experiments, few have been more successful than the Central Electricity Board. It has achieved its task—to provide the most efficient generation and large-scale distribution of power. And it is already paying its way fully from revenue. Indeed, the "Grid" is so well inside its cautious budget that interest on all stocks allocated to general purposes was charged to revenue last year, although last year interest on only £9,550,000 of general purpose stocks out of a total of £36,725,000 was specifically chargeable to revenue, and full revenue obligations do not become operative until 1942. The Board's credit balance from trading amounted to £2,754,368, and showed an increase of £739,860 compared with 1937. The report for 1938 underlines the two major economies provided by the "Grid." It estimates that total capital saved by the reduction in reserve generating plant is of the order of £22 millions—nearly three-quarters of the total capital expenditure on the construction of the "Grid" itself. Secondly, the inclusive average cost of generation per unit from steam stations under the Board's control has been reduced by 24 per cent. compared with 1932, or 17 per cent. after including the Board's capital charges, despite the substantial rise in fuel costs since 1935. To some extent this increase has been offset by higher fuel efficiency. By concentrating output at the most economical stations, average fuel consumption last year was 20 per cent. lower than in 1932 under independent operation. Of 171 stations under the Board's control, only 30 were in continuous operation last year, and 14 of the most efficient stations supplied 50 per cent. of the total units generated for the Board. Such achievements are impressive. They do not depend upon abnormal benefits from the "cold snap" last December, from which the Board derived no more than £75,000, a figure much lower than some estimates. The Board has now placed orders for an emergency pool of switchgear, transformers and other equipment to replace temporarily any apparatus damaged in the event of war.

* * *

Defence in the Dominions.—Australia is the first nation of the British Commonwealth to adopt a compulsory national register of man-power. After an experiment with a voluntary register, the Australian Cabinet decided last week to introduce compulsion. This followed an important statement by Mr Lyons, in which, after giving his cordial support to Mr Chamberlain's foreign policy, he declared that the time for making further concessions in the hope of preserving peace had passed. Within the last week the Cabinet had authorised additions to the existing armament programme amounting to £65 millions in three years, which would raise it to the rate of £26 millions a year, and this might not be the end. The militia had been enlarged and reorganised, and the air force now consisted of 132 first-line machines, with reserves. Immediate action (as Sir Kingsley Wood also announced in the House of Commons on March 23rd) would be taken to make in Australia airframes of British design, not only for the Australian force but also for the R.A.F. in the Far East. The production of munitions had likewise nearly reached the stage at which Australia could produce for other parts of the Empire as well as herself. In an optimistic review of South Africa's defence preparations, Mr Pirow also stressed the fact that the Union would soon be self-sufficient in ammunition. The four chief ports of the Union and South-West Africa were being armed with 15-in. and 9.2-in. guns. The air force consisted of nine squadrons, with reserves, and over 2,000 pilots were available. Canada is also accelerating her defence plans in the light of the increased international danger, more especially in the direction of improving the air defences of the coasts. Though it is for each Dominion to decide the nature

and extent of its participation in any war involving the United Kingdom, this determined girding on of arms cannot fail to make a valuable international impression.

* * *

Canadian Policy.—In Canada, even more than in South Africa, because the needs of local defence are less demonstrably urgent, preparations to enable the Dominion to take part in a world stand against aggression are hobbled by the isolationism of a minority. In a debate on external policy during the past week, Mr Mackenzie King, obviously anxious to avoid widening the fissure in national outlook, returned to his familiar equivocation about Canada's attitude in the event of a war involving Great Britain. He opposed the enactment of a measure declaring that Canada would remain neutral until a separate declaration of war had been made by His Majesty on her behalf, on the ground that it would provoke a passionate controversy which would impair national unity, and because enemy nations might draw the unwarranted conclusion that Canada had made up her mind to be neutral in any conflict. Canada's decision about participation in a war would, he said, be determined by deeper forces than the legal position. The decision would be made by Parliament—but he did not go on to say that Parliament could well decide now its policy towards an outburst of aggression that involved the democracies in a death struggle. Mr Lapointe, the Minister of Justice, was firmer and franker in his declaration that neutrality was impossible for Canada. The Statute of Westminster, he said, was a statute of union, not of disintegration. For these expressions he has been hauled over the coals by some of his fellow French-Canadians, one of whom declared that if a majority tried to force the minority to take up arms for the defence of a foreign territory, that would be the end of the Canadian confederation. The impression left by the debate is that if Great Britain were involved in war against aggression the mass of Canadians would favour Canada's coming in with all her power, but that any attempt at conscription would meet with bitter hostility.

* * *

France and Italy.—The first Italian rejoinders to M. Daladier's broadcast of March 29th were made before Mr Chamberlain's announcement, on the 31st, of the British guarantee to Poland. Presumably the new departure in British foreign policy, the rally of the whole nation behind it, and the welcome that it has received throughout the world, must be causing Signor Mussolini to think furiously about the prudence of trying conclusions with the Western Powers and their friends to the east of the Axis. It is all the more remarkable that, even before last Friday afternoon, the Italian reaction to the French Prime Minister's courteous and reasonable yet firm and plain speech should already have been unwontedly mild. "Italy does not intend to remain a prisoner in the Mediterranean" was Signor Mussolini's only comment in a speech which he made, on his Calabrian tour, at Cosenza on the 30th—and, to this, Signor Gayda's interpretative echo was "Italy is not impatient; she can wait." This last theme was developed by the Duce at Reggio on the 31st. "We think," he said, "in decades, and consequently we are always ready to wait with the confidence of a nation which has plenty of arms and sound hearts." He explained his meaning by declaring that the strong nations are those which are fertile, the weak are those which are sterile, and that when these latter are reduced to a miserable handful of old men they will have to bow to the whip of the young master. Whether fertility in itself is really a passport to world power may be debatable; the evidence of India and China does not point that way; but it is undoubtedly true that a persistently sterile nation would be bound eventually to forfeit its heritage; and if Italy's policy is to wait until she becomes the residuary legatee of her less fertile neighbours, nobody will want, or be able, to say her nay. The neighbours in question are primarily the Arab and Berber peoples under French rule, or French protectorate, in North-West Africa; and the Arabic version of M. Daladier's broadcast was enthusiastically

received from the Libyan frontier of Tunisia to the Atlantic seaboard of Morocco. These North African peoples, like the Italians just across the water, are "young" in the sense of being newly awakened to a national consciousness. They have rather suddenly developed a strong will to live and grow; and they evidently believe that they have a better chance of doing this under the aegis of a democratic France than under the heel of a Fascist Italy.

* * *

The mildness of the Italian reaction to M. Daladier may, however, be deceptive. Italian activities in the Mediterranean have not been abandoned. An extension of the already dominant Italian influence in Albania appears to be in prospect, with the possible object of reminding the countries of the Balkan Entente, especially Yugoslavia and Greece, that Italy has a foothold in their peninsula. And in the West, although General Franco has proclaimed the official end of the war in Spain, there is no sign of a move to repatriate the Italian troops. On the contrary, there are reports of reinforcements.

* * *

New Constitution in Denmark.—The Danes are in process of reforming their democratic system one step further. The Landsting, or the Upper House (the Lower House is called the Folketing), last month voted itself out of existence; this week's general election has created the new Parliament necessary to place the constitutional reform on the Statute Book; a referendum will next be taken, followed by Royal Assent to the reform; and, finally, another general election based on the new Constitution will return a reformed Parliament. The root cause of all this goes back to the middle of the nineteenth century; in brief, the Folketing has always been socially in advance of the Landsting, which has consistently hindered the Folketing's reforming zeal. In the general election of 1935 the Socialist-Radical Government of Hr. Stauning returned considerably strengthened and was in a position to initiate constitutional reform; but even with its added strength the Government could get the reform through the Upper House only by 43 votes to 32, while it passed through the Lower House by 90 to 23. Monday's election put back the Stauning Government for a fourth term of office with the loss of only four seats, and the voting left no doubt that the new constitution will be approved by referendum. In the new scheme of things Parliament will consist of a Rigsdag of 210 members, 175 of whom will be elected in the normal way; and 140 of these will form the Folketing—a reduction of nine seats in the Lower House. The remaining 35, elected by proportional voting from and by the 175 elected members, will join with 35 other members elected from a National List to form the Rigsting, or new Upper House. In cases of disagreement between the two Houses they will assemble together in a "united Rigsdag," and a majority vote will be recorded. Less pleasant in present Danish politics is the increase which Monday's elections showed in the German Nazi vote by 2,500 votes and in that of Hr. Clausen's Danish Nazi Party from 16,000 to 31,000. The Danish authorities have lately been troubled by bands of German youths crossing the frontier and distributing seditious literature; and the last few days have seen a recrudescence of anti-Danish propaganda in the German Press. The Germans in Slesvig are treated considerably better than they would be in Germany; but that fact will not exempt Denmark, when the time is ripe, from being the object of atrocity propaganda fabricated in Berlin.

A Double Tragedy in Iraq.—King Ghazi, the son of King Feisal and the second king of Iraq, was killed in a motor accident on Tuesday. A few hours after the accident a mob, infuriated by agitators who accused the British of the King's death, attacked the British Consulate in Mosul, murdered the consul, and burnt down the building. Martial law was at once declared in the Mosul area, and four men have been arrested and are to be tried in a special

court. The last day of King Ghazi's six-year reign was thus the most to be regretted; and that, as is commonly known, is saying a great deal. For King Ghazi was a bad king, impatient, indifferent, irresponsible, a direct contrast to his father. The measure of his unfitness for a position which asked great skill, courage, and judgment, is the amount of active political intrigue rife in Iraq during the past few years. To his credit it may be said that Ghazi at least kept out of most of this intrigue, though he was implicated in the *coup d'état* of General Bekir Sidky; equally he did nothing to curb it. The future does not seem over-bright. Ghazi is succeeded by his four-year-old son; the regency goes to the Emir Abdul Illah, who will require all his wits and courage to steer a Government through the nets of new intrigue which Ghazi's sudden death threatens to spread.

Road Accidents.—The Select Committee of the House of Lords on the prevention of road accidents has chosen an appropriate time for the publication of its report,* for the first Bank Holiday of the year generally marks the beginning of the seasonal increase in the number of casualties. These are illustrated by diagrams on page 112, and the melancholy picture there presented makes the public apathy, rightly condemned by the Committee, quite extraordinary. A hundred deaths in a smallpox epidemic would cause consternation throughout the country; yet the public, and the Government, seem quite content to allow 6,000 persons to be killed every year and thirty times as many to be injured. One of the chief recommendations, therefore, of the Committee, is that a Department of Propaganda should be set up to carry on an extensive and persistent campaign among all adult road users, and that instruction in road safety should form part of the curriculum of every school. The Committee, however, does not accept the Ministry of Transport view that over 90 per cent. of accidents are due to human errors of judgment and thoughtlessness, although it agrees that these probably account for the majority. It is of the opinion that road improvements could make a substantial reduction in the number of accidents; but it realises that in making its detailed recommendations for putting such improvements into effect it is up against the problem of expense and the division of responsibility between the Ministry and local authorities. For instance, it is virtually impossible for a County Council to construct dual carriage-ways, which have proved very effective in reducing accidents, as the Ministry offers only a 66½ per cent. grant for them, against a 60 per cent. grant for single carriage-ways, although a dual carriage-way costs from 75 to 100 per cent. more to construct. Moreover, progress on the trunk roads, for which the Ministry is wholly responsible, does not seem to be any faster. Obviously, the Ministry should

have more power over local authorities; but it should also be willing to shoulder a far greater part of the financial burden than it does at present. The Committee's proposal for regional committees, consisting of representatives of local authorities and the police, is both novel and admirable; for they could do much towards securing more uniformity in road construction and enabling a large-scale programme to be carried out. But road improvements, however desirable, must take time. If there is to be an immediate fall in the death-rate on the roads, it can only be done by awakening public opinion to the responsibility which rests on drivers, cyclists and pedestrians alike whenever they are using them.

"Wireless" by Telephone.—Although the Ullswater Committee on Broadcasting recommended in 1936 that the services of the relay companies (i.e. companies which, within their local areas, distribute radio programmes by wire to subscribers' houses) should be taken over by the Post Office, Major Tryon announced in the House of Commons on Thursday last week that their licences are to be extended for a period of ten years until the end of 1949. In addition, the Post Office will introduce a service for the distribution of three or four broadcast programmes over the telephone. The Government hopes to be able to start this new service in a few districts this year and to extend it later. The cost of this new service to subscribers has yet to be worked out. In contrast to the relay companies, which hire out loud-speakers connected to a central receiving set, the Post Office's programmes will be transmitted through the telephone wires to the subscriber's own receiver. The new service, which is already in extensive use abroad, will be of considerable advantage in an emergency, for, unlike transmission "over the air," broadcasting by telephone cannot be easily interrupted, nor can it serve aircraft as direction-finding signals. There are already more than 3,000,000 telephone subscribers and the new service might ultimately be extended to non-subscribers. It is to be hoped that it will be developed with all possible speed.

Trade with Scandinavia.—The visit of Mr R. S. Hudson, the Secretary of the Department of Overseas Trade, to Sweden and Finland has once again directed attention to Anglo-Scandinavian trade. Whether judged by total consumption or by consumption per head of British goods, the four Northern countries—Finland, Sweden, Norway and Denmark—with a population of 17 millions, constitute a most important market. Last year their imports from us totalled over £40 millions, 18 per cent. more than in 1929 and more than those of either India or South Africa, our two largest individual customers. In particular our coal and coke exports to Scandi-

navia rose by 50 per cent. between 1929 and 1938, and now represent nearly a quarter of our total foreign sales. But, in spite of these increases in Scandinavian purchases of British goods, our imports have continued to exceed our exports. Last year our surplus of imports from Scandinavia, though much less than in 1929, was still substantial. Details of Anglo-Scandinavian trade, including an analysis of the principal imports, is given below:—

TRADE WITH SCANDINAVIA
(Figures in £'000)

		Finland	Sweden	Norway	Denmark	Total
Total Imports into U.K.	1929 ...	14,945	25,709	14,149	56,178	110,981
	1937 ...	22,437	26,191	11,574	36,750	96,952
	1938 ...	19,282	24,552	11,032	37,860	92,726
Domestic Exports from U.K.	1929 ...	3,363	10,548	9,858	10,670	34,439
	1937 ...	5,962	13,021	8,939	16,902	44,824
	1938 ...	5,524	11,725	7,566	15,783	40,598
Re-exports from U.K.	1929 ...	530	1,156	469	829	2,984
	1937 ...	398	952	375	667	2,392
	1938 ...	327	1,109	268	586	2,290
Excess of Imports	1929 ...	11,052	14,005	3,822	44,679	73,558
	1937 ...	16,077	12,218	2,260	19,181	49,736
	1938 ...	13,431	11,718	3,198	21,491	49,838

BRITISH IMPORTS FROM SCANDINAVIA
(£'000)

	1929	1937	1938	1938 Percent. of Imports from all Countries
Mainly Danish:—				
Bacon	29,240	16,585	17,200	56
Butter	23,854	13,705	15,540	31
Eggs in shell	5,231	4,810	5,100	41
From Norway and Sweden:—				
Iron ore and scrap	1,626	2,672	2,940	27
Iron and steel manufactures	1,823	3,013	2,567	18
From Norway, Sweden and Finland:—				
Timber	16,308	19,881	14,776	35
Paper-making materials	9,389	12,051	12,689	79

A feature of our trade with Scandinavia, not shown in these tables, is the relatively small proportion, 12½ per cent. of imports and 30½ per cent. of exports, carried in British vessels. In part this is due to the general failure of British shipping to compete successfully in the timber-carrying trade even between Empire ports. But not entirely; while British vessels carried £25 millions' worth of Anglo-Scandinavian trade in 1937, Scandinavian vessels carried £75 millions of trade between Britain and non-Scandinavian countries. As a result Scandinavia is one of the few parts of the world in our exchanges with which shipping is actually an invisible import. If it may be surmised that the balance of our invisible trade with Scandinavia does not amount to very much either one way or the other, then our balance of payments as well as our balance of visible trade would be about £50 millions. Scandinavia, if the surmise were correct, would alone account for the deficit in our balance of payments with all countries. It must not, of course, be assumed from this that our Scandinavian trade is a source of weakness. Quite the contrary is the truth. For one thing, since the Scandinavian countries are members of the sterling bloc, deficits on our accounts with them do not affect the exchange value of the pound. And secondly, our excess of imports with Scandinavia forms part of the chain that is (or was) the classical example of the advantages of multi-angular trade. The overseas primary producing countries in which British capital is invested sell raw materials to Germany; Germany sells manufactures to Scandinavia; Scandinavia exports to Great Britain; and so the interest on our capital invested in the tropics comes home in the form of Scandinavian timber.

* * *

The Slovak-Hungarian Frontier.—The Slovaks are quickly discovering that the German protectorate which Herr Hitler has conferred on their country is to be an instrument for furthering Germany's interests and not Slovakia's. During the latter part of last week the fighting between Slovak and Hungarian troops in the Slovak-Ukrainian borderland died down, and at Bratislava

31st, the Slovak-Hungarian Mixed Commission agreed upon a frontier line, in this sector, between Slovakia and Hungary, which substantially accords with the Hungarian demands. The Uzh (or Ung) valley, with the railway from Budapest to Lwów running through it, is to fall to Hungary, and the new frontier is approximately to follow the watershed between the rivers Uzh and Laborc. If all Ukrainians south of the Carpathians are to be regarded as Hungary's legitimate prey, the new line is not so unfair, since the old line assigned a fringe of Ukrainian population to Slovakia. It is obvious, however, that the Hungarian motives for demanding the present revision of the frontier have been not ethnographical but strategical, and that the Slovaks have capitulated not to abstract justice but to *force majeure*. They have been unable to resist Hungary because Hungary has enjoyed Germany's tolerance, while the Slovaks themselves have looked in vain for German support. Had they been sharper sighted, they might have saved themselves the trouble of asking for it, since Germany's attitude towards the present Slovak-Hungarian conflict was predictable in advance. For the moment, Germany's Slovak pawn has served its turn by ministering to the break-up and extinction of Czechoslovakia. On the other hand, Hungary has still to serve her turn by ministering to Germany's designs on Rumania. Therefore, for the moment, Hungary must be humoured and Slovakia be left in the lurch. If Hitler's grand design is not now thwarted by Mr Chamberlain, Hungary's turn will come later; for Poland may be brought to the ground by the erection of a German puppet state in the Polish Ukraine, and no doubt, if and when this step is duly taken in the Fuehrer's march towards world dominion, Hungary will be required to yield up the Sub-Carpathian Ukraine as her contribution to the manufacture of the new German pawn. It is thus a matter of indifference to Germany where exactly the momentary frontier between Hungary and Slovakia may be drawn. But the Slovaks must already be ruining the day when they repudiated the protection of the Czechs and threw themselves on the Germans' mercy; and the Hungarians and Ukrainians must be reflecting that it is not much fun for them to be the next pawns in the German dictator's game.

* * *

Appeasement in Yugoslavia.—The disappearance of Czechoslovakia has made more than ever desirable a rapid solution of the Serbo-Croat problem, and from current reports it seems that formal negotiations may be expected to bear fruit in the near future. An immediate rumour following the invasion of Bohemia was that the same technique would be applied to Yugoslavia, and on his side Dr Matchek, the Croat leader, did his best to counter this by an important statement in which he said that "the Croats sincerely desire the maintenance of existing frontiers and of the Serbian dynasty, but demand their liberty." He was ready, he added, to take part in a coalition Government while a federal solution was being worked out, "but the question must be resolved with the least possible delay." In view of his accustomed silence a good deal of importance should be attached to these remarks, and it is interesting that the censor permitted their publication in Yugoslavia. Dr Matchek is politician enough to take advantage of the present situation to press his demands more urgently, a hint which has not been lost by the authorities in Belgrade; a political amnesty was announced a few days ago, and, in order to clear the way for the passage of laws preparatory to formal negotiations, the Budget was pushed through the Senate almost without discussion. The attention of the Skupstina is already bent on the matter of electoral and Press law reform, but how far the Government will go towards federalism remains to be seen from the important talks held in Zagreb this week between M. Tsvetkovitch, the Prime Minister, and Dr Matchek. Meanwhile there are fresh rumours of a German attempt to secure virtual monopoly in Yugoslav trade; and although the rumours are officially denied the suspicion remains that something of the kind is in the wind. Given the widespread desire which exists in Yugoslavia to do more trade with Britain, a German success here would be deplorable.

Japan's New Islands.—Japan, like Germany, is now showing her hand. Last week she proclaimed the annexation of the Spratley Islands, a group of islets and reefs in the South China Sea about half-way between the southern tip of French Indo-China and the northern tip of British North Borneo. The Power immediately affected is France, who herself formally annexed these islands in 1933; but this latest Japanese move cannot leave either Great Britain or the Netherlands or the United States indifferent. The pretext for the Japanese annexation is the working of the phosphate deposits on the islands by Japanese nationals. But no other Power was interfering, or thinking of interfering, with this legitimate and harmless Japanese economic activity; and the inference is that Japan now intends to put the islands to their other possible use; that is, to convert them into an air-base. This prospect is of serious concern to the British Empire and the United States, for the Spratley Islands command the sea-route between Singapore and Hongkong, while Manila will be taken between two fires when the Japanese armed forces are established in the Spratley Islands on one side as well as in Formosa on the other. When the Japanese occupied the Chinese island of Hainan it was all but certain that this move was directed, not against China, but against the Western Powers; but we gave Japan the benefit of the doubt, in consideration of the assurance that the occupation would be only for the duration of the Sino-Japanese "incident," and that the purpose was to prevent the shipment of munitions to the Chinese army. The Spratley Islands, however, have nothing to do with China or the Sino-Japanese War, and Japan has annexed them outright. Therefore, there can be no doubt, this time, about what may be Japan's objective. The dangers of complacency in the face of aggressive intentions are as great in the East as in the West.

* * *

Rayon Production: A Correction.—A Note in last week's *Economist* with the title "Rayon's Claim," which commented on the proposal to include the rayon industry within the purview of the projected organisation of the cotton industry, contained an unfortunate slip. The Note argued that it was illogical to put a young and rapidly expanding industry under the control of an old and shrinking industry which is in many ways its competitor and, in developing the argument, stated that "while the output of the cotton industry has fallen by 40 per cent. since 1913, that of the rayon industry has risen by 22 per cent." This should, of course, have read "by 22 times," or "by 2,200 per cent." The argument gains a hundredfold by the correction.

WILLS & TRUSTS

In acting as an executor or trustee, the Westminster Bank aims at putting itself in the position of a private trustee. It is therefore its practice to employ the family solicitor, if there is one, or any other solicitor the client may name; by such means the Bank succeeds in combining domestic tradition with business efficiency. A book showing the advantages of corporate executorship and the terms of appointment may be had at any branch

Belgium's Problems

AS well as dealing with budgetary troubles the Belgian Parliament elected last Sunday will have to haul down the kites of a more serious menace to its stability. At a time when every small nation must look to its minorities if it wants to remain united and independent, Belgium is awake to sharpened hostility between the two great parts of its population, the Flemings and the Walloons.

It is not too much to say that the biggest influence on last Sunday's results was Herr Hitler. By providing so timely an example of what happens to nations split within themselves he roused Belgian fears to such a pitch that the Flemish Nationalists (the V.N.V.), contrary to previous expectations, succeeded in obtaining only one additional seat in the Chamber, at a time when the Rexists, in some sense their rivals, were losing seats by the handful.

The Chamber returns little altered in its main composition. The Catholic and the Liberal parties have won an additional ten seats each at the expense of the Socialists, who are reduced from 70 to 64 in payment for M. Spaak's appointment of Dr Martens, and also at the expense of the Rexists, who have lost 17 out of their 21 seats. Although the Liberals and Catholics have now a combined majority over the Socialists and the small parties, it is probable that the next Government, as were those before it, will be a Catholic-Socialist-Liberal coalition; but unlike them it will have the advantage of being able to work in a normal rather than a surcharged political atmosphere. It was noticeable in Brussels during the election campaign that each party was making an effort to pile the blame of upsetting the apple cart on to someone else, and that there was a common feeling of exasperation at what was thought to be an unelevating exhibition of irresponsibility. The Belgians as a people are ardent politicians: now that they have had catharsis in an election campaign they should be content to get down to work again. The failure of the Heimattreuefront, the German party in Eupen and Malmédy, to make much headway, is an encouraging sign of this.

The immediate cause of Flemish-Walloon tension was M. Spaak's appointment to the newly-formed Flemish medical academy—founded to appease those many Flemings who resent the implied superiority of French culture—of a man whom King Albert had condemned to death for separatist activity during the war, but whom the Crown had pardoned in 1937. Upon this hapless man, whose name is Dr Martens, was focused the hope of Flemish autonomists and the hatred of Walloon patriots. He was at once the figurehead of a principle in which he declared he no longer believed and an example of shame for his supporters' opponents. His appointment and later refusal to withdraw caused the fall of one Government and the impossibility of forming another; but now, in close agreement with the impetuous spirit of Belgian politics, he has solved his own problem by resigning from the academy.

His resignation does not end the matter. The new Chamber will have to devise further measures of appeasement. For while it is true that Flemish separatism finds little response in the wide spread of public opinion, movements which have their roots in genuine racial, traditional, and religious differences are difficult to calculate and sometimes impossible to contain. The ancient rights of local government to which the Belgians cling provide good soil for those roots; and the record of successes which the Flemings have scored since the war in the field of linguistic privilege might have carried them on the wings of a fanatical minority far beyond their original intentions. With the rude shock of events in Central Europe the risk of that has disappeared.

But disruptive forces remain. Least dangerous, because most impractical, is the Verbond van Dietsche Nationaal-solidaristen, whose object is to found a composite Netherlands State, called Dietschland, including Belgium, Luxembourg, Holland and other groups. As a source of university talk this movement is good fun: it has no other significance. Less impractical is the Vlaamsch Nationaal Verbond, with separatist ambitions confined to Belgian Flanders, and seventeen seats in the new Chamber. This is the real danger to Belgian unity, finding its strength in a deep-seated resentment of things French, in a harking back to Flemish artistic

glories, in the friction caused by a community of land-workers cheek-by-jowl with an industrialised community.

Were it not for one fact of immense political importance the V.N.V. might go much farther than it has. That fact is the essentially non-party aspect of Flemish nationalism. The political parties cut heedlessly across the linguistic division. What the Flemish sections of the Socialist and Catholic parties want (the Liberals have little influence in Flanders) is simply an extension of linguistic privilege, and in this they meet the main current of popular opinion.

Walloon trade unionists may grumble at seasonal labour imported from Flanders on the cheap, and Flemings at what they think idleness on the part of Walloons who will not bother to learn Flemish; but these dissensions, and others like them, are instinctive in the Belgian political animal and will never lead to separation. When the Army mobilised 380,000 men last October Flemish regiments were met with acclamation in Liège and Charleroi, and this is only one example in many of the ties which bind Belgium together. Another of those ties is the person and popularity of the King, and it is matter for sincere regret that among those who have suffered from *l'affaire Martens* King Leopold should have a leading place. His signature to the appointment of Dr Martens was read by Walloons already jealous of his Flemish accent as a mark of recognition for a man whom his father had sentenced to death. There was talk of intrigue; and although a movement for verbal disarmament is now in progress, the King's impartiality has been impugned and some of the mud will stick.

Balancing the Budget

Attempts to form a Government after the fall of M. Spaak shipwrecked as much on the budgetary as on the Flemish problem. Party prejudice has done its best to obscure issues which are really quite simple. The ordinary Budget for 1939 has to cover a deficit of 353 million francs, the extraordinary Budget a deficit of over two milliards, or about 2,500 millions in all. There is fairly general agreement that the ordinary deficit, amounting to 3.3 per cent., can be balanced by non-controversial economies: the fat was in the fire because the Liberals were accused of making party capital out of Dr Martens' appointment, and the Catholics out of the budgetary situation, in order to throw overboard the Socialist programme of public works.

The key problem rests in the deficit on the extraordinary Budget. Broadly speaking, there is the alternative between a loan or a devaluation with subsequent taxation of profits. The first of these carries difficulties which may after all persuade the Government to adopt the second alternative. Borrowing at home, however, will not be easy for a number of reasons, chief among which is the unreceptiveness of the money market. An internal loan issued after Munich last year was successful on a premium basis, but the fact remains that the tendency to hoard is common and that savings, even if ample, are not readily forthcoming. The opponents of public works point out that this situation has been aggravated by the large amounts raised internally for capital expenditure in recent years: 2,486 millions in 1936, 2,877 millions in 1937, and 2,573 millions in 1938. Borrowing abroad was carried through without mishap in Holland and Switzerland in 1938, but promises to be less easy and less cheap in 1939. There are, on the other hand, a number of strong arguments for another devaluation, or at least for an attachment to sterling rather than to gold, for nowhere is the course of the pound more closely watched and felt than in Belgium.

Belgium lives by exporting raw materials and manufactured goods at prices cheaper than neighbouring countries can manage, but the general movement of her foreign trade since 1931 has been far from satisfactory. The year 1938 showed a serious fall in exports:—

Foreign Trade	Imports (Millions of francs)	Exports (Millions of francs)
1936	21,700	19,750
1937	27,650	25,500
1938	23,185	21,730

Stocks of coal rose from 676,000 metric tons in December, 1937, to 2,222,000 metric tons in December, 1938; steel production fell from 3,843,000 metric tons in 1937 to 2,465,000 in 1938; and the daily average of registered unemployed rose from 179,000 in December, 1937, to 241,000 in December, 1938. Renewed competition by French industries working with the advantages of a devalued franc is a further argument for devaluing the belga. But at the moment counsels of caution prevail, founded on *rentiers'* reluctance and the probability of labour claims on the profits of devaluation.

It will be for the next Government to decide. To obtain public confidence must be their first objective, for too much damage has been done in the past few months by vacillation and internal dissension to allow a new Government to take office as if nothing important had happened. The international situation should be a further aid towards that compromise which they must in any case achieve; its elements will now be heavily in favour of the Liberal-Catholic thesis of retrenchment and against the spending programme of the Socialists. As far as one can see, *l'affaire Martens* will be buried in the same grave as some of the more expensive public works projects, and the ordinary Budget balanced by a national defence, will require most careful thought; it may perhaps be said that the arguments for a measure of devaluation seem powerful enough to overcome a rooted reluctance in financial circles to take this step.

For the Flemings the Government is likely to have soothing words pointed by linguistic concessions. In this they are expected to collaborate closely with the recently appointed Minister of Education, a well-known *Flamingant*, who proffers a dual administration of the ministry on bilingual lines. The appointment of this professor has stood firm through this month's marchings to and fro; he represents the sane and moderate side of Flemish particularism, and if the new Government acts with dignity and decision, there need be no fear of danger to the unity of Belgium.

Germany's New Economic Policy

[FROM OUR BERLIN CORRESPONDENT]

THE Third Reich's financial and economic policies were described once more in a speech made by Herr Funk, Reich Minister of Economics and President of the Reichsbank, some days ago to the central committee of the Reichsbank. With her new territories Germany has become the largest industrial country; and, by the aid of political pressure, has succeeded in creating for herself an "economic area" which stretches from the Baltic to the Black Sea.

The recently negotiated German-Roumanian trade treaty has a distinct rôle to play in Germany's trade policy; and it is also intended as a model for future agreements. With a dig aimed at Great Britain and the United States, Herr Funk emphasised that no "silver bullets" were to be fired with this agreement, and that "odious political loans and oppressive interest and currency obligations" would not be employed. The treaty, he said, served rather to develop Roumania's production and to raise her standard of living, while providing Germany with raw materials and increasing her exports. "We grant long-term credits in half-finished and finished goods," he explained, "and these are wiped off by the labour of the Roumanian people as soon as these investments become productive. In this way our goods act in Roumania as currency, and on our side Roumanian raw materials act as foreign exchange. On this basis, Roumania is financing her increased production with additional lei, while we finance ours with additional Reichsmarks."

This would seem to forecast an extension of the economic and financial system which, so far, has been restricted to Germany. The security of the currency is no longer based on the gold supply, but on the labour capacity of the nation—on the principle that each newly-created mark must be balanced by a corresponding increase of production. This in turn means that the stability of gold will be replaced, with the German-Roumanian treaty, by stable prices, production, and wages; and thus leave Roumania to run the danger of complete financial and economic isolation from the rest of the world, and of entire dependence on Germany. There is, too, the further danger that this dependence will force Roumania to institute a system similar to Germany's, so as to regulate dealings and movements in foreign exchange, goods, consumption, exports and imports. Furthermore, while Germany has a limited capacity to deliver industrial products to Roumania, the latter can deliver an unlimited quan-

tity of agricultural produce and oil to the Reich, with the result that very soon considerable amounts of Roumanian capital will become frozen credits in Germany.

With regard to Germany's economic relations with other nations, Herr Funk stated that Germany would never again allow herself to be caught in the net of international gold movements or international debts. The Reich, however, would be prepared to co-operate in the settlement of international economic questions as a partner with equal rights, and provided that respect were accorded to Germany's "national needs." With her 90 million inhabitants Germany was a desirable partner who could not be disregarded by the world, and least of all by neighbouring nations.

But the present trend has forced Germany to mobilise all her internationally negotiable assets in order to maintain her imports; and it has also shown that only in a very limited area can nations be coerced into supplying Germany. Willingness to sell and buy, closely connected as they are by Germany's lack of gold and foreign exchange, are rather a question of trust and friendship. With this in mind, Herr Funk explained that he considered the trade negotiations with England and France as only temporarily interrupted, thereby leaving the door open for their continuation. His attitude is significant.

The President of the Reichsbank also showed his dislike of the British Government's confiscation of private property owned by inhabitants of the Protectorate of Bohemia and Moravia; the British action, in his opinion, would make the prospective international financial and economic negotiations more difficult. He then mentioned the stand-still negotiations which, according to German ideas, should lead to a new basis of agreement. Germany has fought against the cancellation of credit lines during recent years, since she depends to a great extent on them for the financing of her foreign trade. In this connection, Herr Funk asked that private property should be internationally respected, and this, coming from him, sounds somewhat peculiar, National-Socialist Germany having financed a considerable share of her armaments at the cost of foreign creditors.

Dealing with the Reichsbank

A complete reorganisation of the Reichsbank is in sight. The international general council, and the commissioner in control of the note issue, were dropped in 1930. In February, 1937, Herr Hitler placed the Reichsbank entirely under the sovereignty of the Reich; and now, with the new Reichsbank law, Herr Hitler is given supervisory and directive rights over the bank and is thus master over German currency, finance and credit policy. The functions of the Reichsbank president and directors will now be confined to administration and advice. Against this system it may be complained that the head of the State cannot be subjected to restrictions regarding contracts and credits.

The capital of the Reichsbank, amounting to Rm. 150 millions, is to be entirely repatriated, although at the moment from Rm. 26 millions to Rm. 40 millions are in foreign possession. Foreign holders are to be "loyally" compensated, presumably by means of new bonds, with interest and amortisation paid in foreign exchange. The domestic shareholdings will also be affected since Reichsbank shares are to become State property. This would allow for the reduction or elimination of the 12 per cent. Reichsbank dividend, and would liberate resources that could be devoted to the export drive.

Speaking on the subject of currency and credit, Herr Funk declared that the Reichsbank's credit could not be safe in an authoritarian State, if the State credit itself were unsafe. The motto "The stronger the State, the stronger the Reichsbank" (or, in other words, that sound currency and credit depend on the strength of the State) is intended to justify unproductive State investment as well as to disprove the theory, which is not confined to foreign opinion, that there is

a serious maladjustment in the Third Reich between consumer goods production on the one hand, and Government indebtedness and capital goods production on the other. Taking into consideration the excessive number of blocked marks (Sperrmarken) quoted at an unusually high rate of discount, Herr Funk's remark is rather curious: "In a healthy economy there is no bad currency, and in a disorganised economy there is no good currency." For the so-called "free Reichsmark," which is reckoned at the old parity, is only a fiction, since it is used neither for foreign buying nor selling, and even in the home market lacks buying power corresponding to its formal parity.

The Capital Market

The stabilisation of wages and prices, which are considered the most important prerequisites of a sound currency—and the balance between the monetary circulation and the production of goods, will, it is said, be facilitated by the consolidation of the two posts of Reich Economics Minister and President of the Reichsbank. The carrying-out of exceptional State projects can, according to Herr Funk, be continued without permanent harm on the triple assumption that no more contracts are granted than are possible with regard to available materials and man-power; that a reasonable relationship is maintained between capital and consumer goods; and that necessary exports are assured. Present developments have shown, however, that all plans to establish healthy conditions have been ruined by Germany's foreign policy.

The "New Finance Plan" is (as was described in last week's issue of *The Economist*) a continuation by different methods of the old system of indebtedness. The repayment of debts contracted by Germany's political expansion is charged to future generations. Since the Reich's need of money is still great, and large sums are to be immobilised by the use of tax certificates, it is questionable whether the industrial, mortgage and Reich Railways' issues planned for the current year and amounting to 2 to 2½ milliards, can be placed on the market. To create the necessary conditions on the capital market and on the Bourse the Loan Stock Law (which limits dividends) and the special tax on the sale of securities (speculation tax) have been repealed. The ban on mortgage credits has been lifted so as to encourage housing construction. The ban on issues by local authorities will also be raised to meet the lack of money now being felt by public enterprises connected with the Four-Year Plan.

The continued and acute demand for money by the State, and the demands made on business for taxes, has placed a strain on the Reichsbank. The total of Reichsbank credit reached a record level at the end of March at Rm. 9,207 millions, against Rm. 6,358 millions in the previous year; of this sum Rm. 8,137 (against Rm. 5,813) millions consist of bills, mainly armament bills. At the same time the currency circulation reached a new high point at Rm. 10,388 millions (against Rm. 7,571 millions in the previous year); whilst of this, the note circulation inclusive of Rentenbank notes, amounts to Rm. 8,699 millions (as against Rm. 6,013 millions).

* * *

Unemployment.—The Reich Labour Ministry has decreed that no unemployment figures are to be published in future, since, apart from those changing jobs, there are no more unemployed persons. As a result of the "flight from the land" there is a great labour deficiency in agriculture. In the old Reich territory there are 135,000, and in Austria 16,500 jobs open on the land, for which there were only 13,100 applicants in all. Two hundred thousand workers will come in from abroad, mainly from Italy.

Capital and Employment in America

[FROM OUR NEW YORK CORRESPONDENT]

THE first quarter is virtually ended, and there is as yet not one American statistical series that can be said to give positive indication of the expected Spring upturn. Since November the indices, making some allowance for seasonal considerations, have remained for five months on a sort of plane; about 20-25 per cent. above the first quarter of 1938, with a sagging rather than a rising tendency; but on the whole with no evident trend. Hope of a brisk second quarter upturn has by no means been abandoned, but the absence of positive harbingers is making this hope difficult to validate.

This hope rested partly upon the widely accepted doctrine of cyclical determinism—the theory which, stated in its baldest terms, is simply a conviction that what goes down

must come up, under the influence of "natural forces." This feeling is widely entertained, and goes so far as to believe that these "natural forces" are so powerful as to over-ride "artificial factors" although the latter are credited with some capacity to delay the effectiveness of the "natural forces." A second foundation of this hope was faith in the efficacy of the Spending Programme. As this correspondence has often remarked, even those who opposed the Spending Programme, conceded its efficacy as a recovery measure, resting their opposition, not on the argument that spending would not bring recovery, but that such a recovery would be brief and unstable. Some, if not a majority, of the most ardent budget-balancers "in principle" were at the same time more than acquiescent in the Spend-Lend programme announced a year ago. Proponents of the Spending Programme, of course, entertained no doubts of its efficacy.

The rather prompt sequence by which the upturn in the third quarter of 1938 followed the inauguration of the Spending Programme in the second quarter seemed to confirm these views; and the period of mid-winter quietude did not dispute them. But, as this correspondence has suggested previously, a failure of the recovery to extend itself by the second quarter of 1939 would be extremely disconcerting to the great body of American opinion; but again it may be emphasised that the rather disappointing record of the first quarter does not of itself forecast a poor second quarter.

The following table taken from the "Federal Reserve Bulletin" summarises new capital issues of recent years:—

NEW CAPITAL ISSUES (\$000,000)			
	Local Government	Federal Agencies	Corporate
1929	1,418	0	8,002
1930	1,434	87	4,483
1931	1,235	75	1,551
1932	762	77	325
1933	483	64	161
1934	803	405	178
1935	855	150	404
1936	735	22	1,192
1937	712	157	1,227
1938	962	481	854

Source: "Commercial and Financial Chronicle," retabulated in the "Federal Reserve Bulletin."

The table of local government issues is not strictly cumulative. Local government securities are commonly of the sinking fund or serial type, and of the \$15-\$20-odd billion outstanding in 1929, the provided retirement might be computed to average in excess of \$500 million a year. It is questionable if there has been a material net increase in local government debt in the past decade. The same general consideration would hold for corporate financing, although the serial or sinking fund obligation is perhaps not as frequent as in the local government field; and some allowance would have to be made for "disinvestment" in the form of default and bankruptcy. The year 1929 is not a good statistical "base," for it was a boom year, and of the new corporate capital issues, an incalculable portion were of a "financial" rather than a "productive" nature.

However, making all sorts of allowances, it seems clear that the rate of the flow of investment into corporate enterprise has a definite relation to unemployment. Approximately 1,000,000 persons a year come of working age, and of these it may be estimated that all the men and between a quarter and a half of the women expect to become employed. In modern industry, the tools of production are commonly expensive, although the investment per worker varies enormously from industry to industry, being highest in railroads and utilities, and lowest in the service industries that are in or near the handicraft stage. In 1929, there was an apparent "public" investment of about \$8,000 per person coming of working age; in 1938 it had fallen to about \$850—and that was above the average of recent years. The precise figures of new investment in enterprise required to provide all economic neophytes with the capital goods required for their productivity would be beyond calculation; but from the simple statistical fact that in 1929 the investment was apparently adequate and subsequently quite inadequate, one might arrive at an uncertain figure of considerable relevance.

In 1929 American enterprise sought about \$3 of new capital through shares, to \$1 of fixed obligations. Again, it may be emphasised that many of the shares of 1929 were distinctly financial investment trusts, holding companies, etc. But making all allowance, American enterprise in the '20's commonly financed itself with a relatively large proportion of shares to bonds. Since that time, it has been able to secure little share capital; or, more exactly, of the little capital American enterprise has been able to obtain, only a small fraction has been share capital.

Decline of Equity Capital

The table in the "Bulletin" further breaks down the corporate issues into fixed obligations and shares:—

NEW CORPORATE ISSUES (\$000,000)		
	Bonds and Notes	Shares
1929	2,078	5,934
1930	2,980	1,503
1931	1,239	311
1932	305	20
1933	40	120
1934	144	35
1935	334	69
1936	839	352
1937	819	408
1938	790	64

One may make certain obvious deductions from this table. The supply of debt capital annually accumulating in the United States does not appear to have greatly diminished since the 'twenties—that is the combined figures of Federal issues absorbed by the public, of local government obligations, and of corporate obligations would compare not unfavourably with comparable figures for, say, 1928 or 1929, allowing for the fact that in the former years, the Federal debt was shrinking. But the supply of equity or "risk" capital appears to have diminished enormously. One might go so far as to say that the current level of long-term interest rates compared with 1929 indicates that the supply of debt capital, relative to the demand (including the demand of the Federal Treasury) is greater currently than in 1929; but the supply of share capital has shrunk to a minute fraction of what it was. Whether the data should be interpreted to indicate that total savings available for investment have diminished in some proportion analogous to the figures of issues; or that the accumulation of debt-capital continues while the saving of equity capital has ceased; or that there is an accumulating uninvested saving of equity capital, is largely a matter of opinion. The simple facts seem to be (a) that American enterprise has not in recent years had access to any such supply of capital as would enable it to provide incoming potential workers with productive equipment, and (b) that the deficit has been most marked in the supply of equity or "risk" capital, and (c) that these factors appear to be related directly to the continuing question of whether the unemployed are to be cared for by the Federal Treasury or to find places in private enterprise.

Fall in Italian Shares

[FROM OUR TURIN CORRESPONDENT]

It was characteristic of business last year in Italy, as elsewhere, that the Stock Exchange was remarkably quiet. There was a marked and general fall in share values, and the following table of index numbers shows how drastically the prices of certain selected groups have been reduced since 1924:—

(Basis 100 = 1924)

	1935	1936	1937	1938 Feb.	1938 Nov.
Transport by sea....	6.2	11.9	15.3	15.7	12.6
Silk	13.7	20.3	23.2	23.4	17.3
Miscellaneous	12.9	16.1	18.5	18.3	17.9
Land & real estate	18.8	23.0	23.5	23.6	22.6
Cotton	16.5	22.6	29.8	30.6	25.8
Insurance.....	32.7	39.8	39.6	31.7	28.5

In the case of this group some shares are at a level which is actually only 30 per cent. of their 1924 value; and to explain these losses, it must be remembered that in this group are included old companies which, for special reasons, have suffered during the crisis enormous capital losses, and whose values will possibly never recover. Shipping, silk, land and insurance companies, moreover, live to-day in a very different world from that of 1924; and shareholders, writing off past dead losses, must be ready to consider, in one way or another, present values as normal.

These, however, are extreme examples of the fall that has taken place. Examination reveals other classes of shares whose value has not fallen so steeply. The next group includes industries whose share-values, at 30-50 per cent. of the 1924 level, remain below the general average:—

	1935	1936	1937	1938 Feb.	1938 Nov.
Rayon	26.5	34.5	40.6	44.7	38.0
Engineering.....	26.6	36.8	38.6	39.9	40.0
Chemical	29.0	35.9	38.5	41.2	40.9
Foodstuffs	36.7	40.0	43.4	45.0	45.0
General Index	35.3	45.3	48.9	50.0	48.8

This group is also very heterogeneous, and runs from rayon, which is a new industry, to the provision of food-stuffs, and to engineering and chemical concerns, which should profit from the self-sufficiency programme.

The general index has fallen to a bare half of the base-index for 1924. True, 1924 was perhaps the most prosperous stock exchange year in the present century; but the fact that shares dealt in on Italian bourses, notwithstanding two legal lowerings of the gold content of the currency unit, average only half the value of 14 years ago, is liable to be interpreted as an indication of the diminished net productivity of joint-stock companies.

It is important, on the other hand, to notice the important industries whose shares have by no means fallen so much in value as the general index. The following group includes industries whose share values, though still below the 1924 level, are above the prevailing general level:—

	1935	1936	1937	1938 Feb.	1938 Nov.
Iron and steel ...	41.8	57.1	56.8	61.5	58.4
Motor cars	46.3	60.3	59.8	56.8	59.3
Linen and hemp	44.7	59.4	75.3	71.6	66.5
Wool.....	60.3	64.9	79.0	83.8	68.5
Land transport...	60.0	77.2	73.3	77.5	72.5
Banking	62.0	77.7	82.1	83.3	73.8
Electricity	59.2	76.2	81.4	84.7	86.3
Mines	70.1	87.9	101.3	107.3	99.7

Finally, the picture is incomplete without reference to the small but significant group of industries, the value of whose shares has increased in some proportion to the reduction of the gold content of the lira:—

	1935	1936	1937	1938 Feb.	1938 Nov.
Water	106.7	119.2	120.7	122.5	117.3
Financial	62.8	87.3	107.7	118.0	117.5
Financial (ex Railways).....	84.3	108.0	122.9	127.7	120.5
Sugar	142.5	173.0	169.0	170.4	168.7

No general explanation can be given of the relatively high level reached by these groups. Water companies enjoy a monopoly, and sugar is highly protected; but as other groups have the same advantages, the real foundation of their improvement seems to be their conservative, exceptionally prudent, management. Financial companies (and ex-railway companies must be classed under the same head) have been able to shift their investments and pick the best securities in the market. They offer to the investing public, therefore, a type of investment which may be compared to that offered in Great Britain by trust companies, and their success points to a more optimistic conclusion than would follow from a cursory examination of the figures quoted above. Capitalists are not bound to remain faithful to investments selected in 1924; if, cutting old losses, they had begun anew in 1935 they would not have fared so badly. True, the general index rose only from 35.3 to 48.8, and is well below past levels; but after a fall of 64.7 per cent. between 1924 and 1935, a recovery of 38.2 per cent. between 1935 and 1938 is welcome.

An Indo-German Trade Treaty?

[FROM AN INDIAN CORRESPONDENT]

THE announcement that Dr Schacht, ex-President of the Reichsbank, is to visit India at the end of this month synchronises with the decision of the Federation of Indian Chambers of Commerce to press the Government of India to examine the question of negotiating a barter agreement with Germany on the basis of the exchange of German machinery for Indian cotton. Advantage is almost certain to be taken of Dr Schacht's presence here to explore the possible directions in which Indo-German trade can be enlarged. The Federation of Indian Chambers represents purely indigenous interests and includes within its membership the largest and most influential Indian business houses. It stands for economic as well as political *swaraj*; and, for political rather than for economic reasons, it would like to see Indian overseas trade increasing in non-Empire countries.

The fact that Great Britain is India's best customer is not entirely palatable politically. Indian Nationalist thought is looking for opportunities, not so much to curtail the total volume of Indo-British trade, as to minimise its preponder-

The Business Outlook in Canada

[FROM OUR OTTAWA CORRESPONDENT]

It is still not possible to forecast with any confidence the revival in business which has been expected for some time. Many signs of improved trading conditions can be discerned, but the prospect of their taking shape in the form of a genuine recovery remains uncertain. A week ago there seemed to be renewed confidence about the outlook for the coming months, but optimism has now been considerably chilled by Germany's sudden move against Czecho-Slovakia and the return of acute tension in Europe. Hopes for general appeasement, which might lead to the revival of international trade and produce the expanded market Canada's natural products urgently need, have been nipped.

It is encouraging, however, that the general index of business activity of the Bureau of Statistics showed an upward tendency in March. The index has lately moved as follows:

Week ended	Car-loadings	Wholesale Prices	Bank Clearings	General Index
March 12, 1938	77.15	83.2	95.8	109.6
February 25, 1939 ...	68.5	73.3	88.3	105.8
March 4, 1939	68.5	73.2	98.0	107.6
March 11, 1939	69.5	73.2	96.2	108.3

Stocks in the hands of merchants are reported to be low, and the recent increase in railway carloadings devoted to merchandise and miscellaneous freight is an indication of heavier buying of goods by retailers.

The revival of business confidence in the United States, which is being promoted by the recent change in the attitude of the Roosevelt administration to business, is also counted of good augury for Canada. In February there was a substantial increase in Canadian exports to the United States. They were valued at \$23,790,572, compared with \$17,303,798 in February, 1938. It is true that the figures for February this year include shipments of gold bullion to the value of \$3,601,290; but, even apart from these, the increase in exports was approximately three million dollars.

Conditions in the prairie provinces, except in a few limited areas, are much better than they were a year ago, and no serious reduction in wheat acreage is expected. The building industry, too, has started the year well, and the value of new contracts placed in February was \$11,322,900, compared with \$7,260,800 in January and \$6,551,700 in February, 1938.

The activity of the mining industry is still high and in February, which was a short month, exports of copper, nickel and zinc amounted to 395,111 cwts., 187,867 cwts., and 240,757 cwts., respectively, compared with 354,467 cwts., 193,109 cwts. and 281,288 cwts. in January and 327,727 cwts., 193,022 cwts. and 277,298 cwts. in February, 1938. The total production of gold was 370,725 fine ozs., compared with 438,699 fine ozs. in January and 333,315 fine ozs. in February, 1938. The newsprint industry is just about holding its own, and its output for February was 200,631 tons, compared with 208,382 tons in January and 202,601 tons for February, 1938. The export demand for lumber is well maintained and in February exports of planks and boards amounted to 124,056,000 board feet compared with 117,734,000 feet in February, 1938. The trade outlook is at least not discouraging.

Indeed, it is the slackness of manufacturing that is mainly responsible for the unsatisfactory employment figures in the last bulletin of the Bureau of Statistics covering up to February 1st. Instead of the increase in employment, which for the last 18 years has been usual in January, there was a fall of 15,623 in the number of workers on the payrolls of reporting firms. There has also been an ominous increase in the number of recipients of public relief. In January, according to a statement made to the House of Commons by the Minister of Labour, these numbered 978,000—which, however, was still less than in January, 1938.

★ ★ ★

Government Revenue.—The collections of Federal revenue in February totalled \$29,393,530, compared with \$30,672,295 in February, 1938. The aggregate expenditure for the month was \$29,639,330, compared with \$25,584,574. For the first eleven months of the current fiscal year the total yield of Federal revenue has been \$457,454,955, compared with \$468,701,159 in the previous parallel period, and in the same period expenditure has totalled \$445,694,284, compared with \$439,051,037. Accordingly, with the returns for one month still to come, the Budget position is nearly 18 million dollars worse than it was at the same date in 1938.

ance over other and less important foreign trade connections. The project of exchanging German machinery for Indian cotton was brought to India in the autumn of last year by the representative in Germany of the Federation of Indian Chambers of Commerce. Last November it was announced that a plan was under consideration whereby the German Government would buy 100,000 bales of cotton in excess of her present purchases at an approximate value of Rs. 2 crores, payment to be made in machinery. German manufacturers have made quite substantial sales of sugar, cement and printing machinery in this country in the last four or five years. Low initial costs have been made even more attractive by the granting of long-term credits.

A formal barter agreement would, of course, give a considerable fillip to German enterprise in India. In his latest report, published only a few weeks ago, the Indian Trade Commissioner at Hamburg pointed out that India was the only important country besides the United States of America with which Germany had no trade agreement of any kind. The only reason that India's trade with Germany has not suffered in any serious manner so far is perhaps the fact that the commodities which India exports to Germany are the commodities of which Germany most stands in need.

Germany's Trade with India

There has always been some dispute between the authorities of the two countries as to the size and nature of the trade balance between them. The Germans contend that, as a substantial proportion of her purchases from India find their way to Germany via the United Kingdom, she is not given proper credit for them in the Indian official statistics. Recently the German Government, through its Trade Commissioner in India, commenced issuing periodical summaries of the trade position, the latest of which, published only a few days ago, declares that India's trade balance with Germany, which was in favour of India by about Rs. 21 millions in 1937, moved further in the same direction in 1938.

Imports from India into Germany in 1938, according to these figures, amounted to Rs. 141,955,000 and exports from Germany to India to Rs. 106,588,000. This left India with an export surplus of Rs. 35,367,000 in trade with the old German territory. If the former Austrian and Sudeten territories are included, the figures are Rs. 151,200,000 and Rs. 114,300,000, respectively, for German imports and exports, leaving a favourable balance for India of about Rs. 37 millions.

Up to and including 1937 the German trade figures included Burma in the British Indian figures and for 1935, 1936 and 1937 they were as follows:—

	German Imports from India Rm.	German Exports to India Rm.
1935	121,328,000	111,335,000
1936	142,061,000	121,638,000
1937	168,585,000	147,591,000

The figures for Burma's trade with Germany (including the new territories) for 1938 are: German imports from Burma, Rs. 21,100,000; and German exports to Burma, Rs. 3,400,000.

The Indian official figures are not so up to date, but they show that Germany's trade with India during 1937 registered an appreciable increase. Imports from India increased by 18.6 per cent., while exports to India rose by the slightly higher percentage of 20 per cent. As might have been expected, during the first quarter of the year 1938-39 both exports and imports declined, compared with the corresponding quarter of 1937. Imports from India fell from 44 million Reichsmarks to 41.6 millions, though, as the latter figure excludes imports from Burma, the actual decline is possibly not more than a million Reichsmarks. Exports, on the other hand, show a much more pronounced decline, falling from 34 millions in the first quarter of 1937 to 28 millions in the first quarter of 1938, or to 29 millions, if exports to Burma are included. Imports of cotton, groundnuts and manganese are the commodities in which the decline is most marked.

The barter project is, as yet, only in an embryonic stage but it is symptomatic of the energy with which Germany is prosecuting her export programme and symptomatic, too, of a significant modification of Indian economic thought. Two important factors are likely to affect the situation which Dr Schacht will study upon his arrival here. The first is the imminence of a new Indo-British trade agreement. The second is the suspension of the negotiations between the British and German Governments for a trade agreement which would clearly have had considerable bearing upon the terms of Germany's trade with the countries of the Commonwealth.

The Eastern Policy

ANYONE who was in the Chamber of the House of Commons last Friday and heard the united approval which greeted Mr Chamberlain's announcement of a guarantee to Poland, and yet remembered another day some six months before, when the arrival of a message from Germany was met with a chorus of relief disheartening to those who believed in the martial qualities of the British people, must be deeply impressed by the change. They may, indeed, echo the question of an onlooker on Friday, who said, "If a guarantee is right to-day, why was it wrong six months ago?"

This is the most important question in the present international scene. And there is no simple answer to it. The change may in part be due to the influence of tradition; and this is the girding of our loins against a new Napoleon, a more terrible Armada. Without doubt it is partly due to the existence of a material preparedness absent in the autumn. It certainly marks a new *morale*. Yet if Hitler's invasion of dismembered Czecho-Slovakia was the last straw, the steady piling of the camel's back has been going on for long enough. Readers of the 1937 volumes of the *Survey of International Affairs*,* which Professor Toynbee and his collaborators have written with their perennial excellence, will realise to what extent 1937 and the years before it were years of preparation, and how, in contrast, 1938 was indeed a year of fulfilment. Those who perceive how intimately the Powers' interest in Spain is bound up with their general policy will feel especially grateful for the second volume of the survey for 1937, which gives not only an account of the war up to the end of that year, but also an incisive picture of the Spanish background and an appraisal of the issues involved.

The revolutionary quality of the change of policy involved in the British guarantee to Poland comes home with particular force after reading the valuable reviews, hammering fact on fact upon the face of history, written by Mr Hamilton Fish Armstrong† and Professor Seton-Watson‡, whose credentials need not be repeated. It is a sorry tale that they reveal, of betrayal that was everything but illegal, of unscrupulous (and yet shame-faced) undermining of the Czecho-Slovak Government's position, of facile and insincere excuse for German brutality, of things said and written which any Englishman or Frenchman might blush to hear and read. With Mr Chamberlain's reversal of policy the many who did blush have now some reason to be consoled. The special number of the *Bulletin of International Affairs*§, which has just come out, recording the final destruction of Czecho-Slovakia and the events that followed, is as justly inclusive in its record as was the special number which appeared after Munich; and for that reason it makes less harsh reading. The facts, indeed, are not in dispute. These studies and records of contemporary history agree in condemnation of an irresolute and short-sighted British foreign policy, whether the agreement be implicit in Professor Toynbee's rounded phrases or in the explicit tones of Mr Armstrong and Professor Seton-Watson. If anything can warn and discourage those who still believe that Munich was a victory for peace instead of a mere postponement of a more or less imposed settlement—imposed on Germany or on the Western Powers—these books can do it.

Mr Chamberlain has called the guarantee to Poland a departure from traditional ideas which "will have a chapter to itself when the history books come to be written." Hardy League enthusiasts are already emerging from their depression of the last few years eager to start anew with "zones

of interest" and "regional commitments," some in wrathful declamation, others mildly pleased at this new form of collective security. But for the moment we shall do well to pitch our aspirations less high than the reconstruction of Geneva. We must bind ourselves to be severely practical; and although M. van Zeeland is unquestionably right in saying that the "important thing is not to establish responsibilities, but to solve a practical problem as it presents itself to us to-day," there is no room for the vague generalities, however admirable the frame of mind which they express, of the type propounded in this Cambridge lecture||. In material terms, the Eastern Policy means the preservation of a balance of military power essential to our safety until Germany abates her tone: on the moral side we have a good case and therefore need not stress it. But even if we do not mean to set ourselves up as universal policemen, we can perhaps agree with Samuel Butler that though the world will always be governed by self-interest, we are not trying to alter this, we are merely trying "to make the self-interest of the cads a little more coincident with that of decent people."

THE BUSINESS WORLD

Chinese Loan Problems

THE "China Incident" is nearing the end of its second year. Japan is now master of the Chinese coast line; she has seized most of China's railways; and she has imposed her economic and political will, though with equivocal success, in the occupied areas. Traders quickly learned what the "Open Door" means in China to-day. Now it is the investor's turn to face the same problems. During the past two weeks, two defaults have occurred on Chinese obligations: the March coupon on the 5 per cent. ("Crisp") gold loan of 1912 has not been met, and the April coupon on the Tientsin-Pukow Railway loan of 1908 (on which the resumption of interest payments was agreed only last August) has also been passed.

Investors, however, can hardly have counted on the transfer of funds for these junior securities in view of the position of the Customs loans, on which the Chinese Ministry of Finance announced, in the middle of January, the deferment of payment. The official statement from Chungking recorded that China desired to pay all her Customs obligations, and was prepared to consider any fair arrangement to meet them. But the spokesman proceeded to emphasise two conditions—first, that the due share of pledged revenues must be received from areas in Japanese control; secondly, that interference with the Chinese currency must cease. If China's senior obligations were thus in jeopardy, it was clear that the Salt and railway loans could not hope for more favourable treatment. That view was confirmed a fortnight ago, when the Chinese Government declared that negotiations had been initiated with a view to making some arrangement for the service of the Customs and Salt loans. The Chinese Government does not contemplate default; it is prepared to make due provision according to its means. But it is no longer able to make up from its own strained resources the substantial diversion of Customs revenues into the Japanese pocket.

Granted China's economic difficulties, few bondholders would quarrel with her attitude towards the debt. In recent years, China has done much to strengthen her credit by offering reasonable terms for resumed service on the railway loans, and her senior obligations have enjoyed an unblemished record. Chinese resurgence, unlike so many national movements, was not accompanied by the desire to rob foreign creditors. Indeed, last year, which was the blackest in China's modern history, the Treasury, unable to obtain the release of pledged revenues from the Japanese collectors in the occupied Treaty Ports, made good the deficit for the Customs obligations from unattached resources. Reference to the Customs collections in 1938 gives no guide to the true position. Superficially, the fall in collections was not extreme, under conditions of war. Indeed, if the Chinese Government had received the full sums (\$254,570,000 against \$342,900,000 in 1937) the pledged revenues would have covered total Customs obligations with a comfortable margin. But approximately four-fifths of last year's Customs revenue was collected in ports under Japanese control. As a result of the fall of Hankow and Canton six months ago, the residual interest of the Chinese Government in the Maritime Customs is nearer one-sixth than one-fifth of its former total. As an example, revenue collected in Japanese controlled ports last October amounted to 68 per cent. of the total. In the following month, the proportion reached 84 per cent. The final insult is provided by apparently well-authenticated accounts which suggest that considerable smuggling of Formosan sugar into Shanghai has recently occurred, at a loss to the Maritime Customs of

"several million dollars." The fact that the Shanghai Customs collections are at present impounded by the Japanese does not make this revelation more palatable to those investors who recall that the strength of the Chinese Customs loans was founded on the integrity of the Maritime Customs service.

Clearly, then, it is not China's willingness, but her ability, to pay which is affected. The immediate question, therefore, is: what form should an interim settlement take pending the conclusion of hostilities? The first stage towards the answer is to discover the interest and sinking fund obligations on Chinese Customs loans for the current year, and to relate them to the prospective revenue. The detailed figures for the service of the Customs loans due this year are set out below:—

CUSTOMS LOANS SERVICE DUE 1939

	Interest	Sinking Fund
4½ per cent. Gold Loan, 1898	£149,919	£670,225
5 per cent. Dollar bonds, 1925-47.....	\$1,176,404	\$2,782,850
6 per cent. 1928 (Belgian)	\$43,377	\$424,700
6 per cent. 1934.....	£60,300	£134,000
5 per cent. Reorganisation 1913	£971,808	£511,440

These loans are arranged in order of precedence. The 4½ per cent. loan of 1898 is within four years of complete repayment, for the last sinking fund operates on March 1, 1943. The next two loans represent the balance of converted Boxer Indemnities, while the British Indemnity loan of 1934 is secured on the British portion of the Boxer Indemnity. The indemnities as a whole rank after the 4½ per cent. loan. Finally, the service of the 1913 Reorganisation loan is provided from the Customs revenue, subject to prior rights. Taking the U.S. dollar at current rates, the total sterling obligation for the Customs issues this year (disregarding certain other Boxer annuities) is very approximately £3,450,000, of which £1,450,000 represents interest and £2,000,000 sinking funds. The provision of such a sum would cost China far more to-day than it did fifteen months ago. At the beginning of 1938, the Chinese dollar was worth 1s. 2½d. By the end of the year it had fallen to 8d., and at to-day's rate interest alone would involve the collection of 42½ million Chinese dollars. On the assumption that the Government is receiving no more than 16 per cent. of the Customs receipts—say 40 million dollars on the basis of last year's collections—there is obviously no margin.

The coincidence of the two figures may suggest that the maintenance of full interest and the temporary cessation of sinking fund operations represents the best adjustment which can be made. Closer examination, however, raises several doubts on this point. If full interest were taken as the criterion, it would affect the three groups in the Customs loans very unevenly. Analysis of the current service on the senior 4½ per cent. loan shows that little more than 18 per cent. of the total service is required for interest. The Boxer group (items two to four in the table) as a whole show that interest obligations this year represent approximately 28 per cent. of the full service. The junior security of the list, the 5 per cent. Reorganisation Loan of 1913, however, would obtain practically two-thirds of its full service if interest alone were maintained. These proportions, moving in exact converse to the order of precedence of individual issues, do not suggest that full interest payments would provide an equitable temporary solution of the problem. If China's Customs resources were sufficient to meet full interest charges they would surely be more equitably distributed by providing full service on the 4½ per cent. loan, including

sinking funds, full interest on the Boxer group, and approximately one-third of full interest on the Reorganisation loan. Full interest payments have a superficial simplicity which is fortified by the argument that the period of difficulty may be short. But even if it is short in fact, that is no reason for working inequity upon the holders of the 4½ per cent. loan. And it cannot be regarded as certain, at this stage, that arrangement would prove strictly temporary.

As for the Salt loans, the problem is neither so large, nor so complicated. Ruling out the issue of 5 per cent. gold bonds last May, and also the yen obligations which have received no payment since 1925, total payments due in the current year amount to approximately £690,000, of which almost £300,000 represents interest and the balance sinking funds. Of this balance as much as £250,000 is represented by the Anglo-French loan, while the remainder is attributable to the "Crisp" loan of 1912, on which sinking fund instalments have been outstanding (though the bonds have been drawn for repayment) since September, 1935. Interest on the latter would involve £179,800, but, as we have seen, the March

instalment has gone unpaid. While there would be fewer difficulties in reaching a composition among the Salt creditors, it is far more difficult to attempt any estimate of the actual level of Salt revenues in China to-day. In 1937, collections amounted to 213 million dollars. Doubtless, there is some opportunity for collecting Salt revenues in the western areas, where a new political and economic order is being built up by the Chinese Government. Formerly obscure towns in the interior now enjoy banking facilities, and in the unoccupied area, at least, China's domestic trade is relatively active. No better illustration of the natural resilience of the Chinese people could be found. But, unfortunately, China's own budgetary need remains great and her ability to transfer even greatly reduced debt payments has been acutely affected by the damming of her commercial outlets. One thing, however, is certain. Provided that the service on Chinese loans is equitably adjusted, bondholders will assent with willingness to a temporary measure of relief to China, for her past behaviour merits a display of accommodation which would rightly be denied to several more affluent, but less honourable, debtors.

Defence Borrowing

THE new financial year will impose very heavy burdens both on the taxpayer and on the capital market. The taxpayer's probable fate is discussed in an article on page 76. But the capital market is at least equally anxious to know in what precise ways it is to be called upon to play its part. The general magnitude of the task is known: the Chancellor of the Exchequer revealed a month ago that the sum of £350 millions was to be borrowed for defence. Indeed, the ultimate figure may well be even larger, since the latest turn in international politics has already required a still greater intensification of our re-armament effort. But the unknown dimensions of these additional expenditures cannot yet be taken into consideration; we can deal at present only with the figures we know or can closely estimate. Total expenditure, excluding any additions, will be from £1,265 to £1,280 millions. After deducting the £350 millions to be borrowed, revenue will presumably be adjusted to bring in from £915 to £930 millions.

It is possible to make an approximate estimate of the distribution of revenue and expenditure, and hence of the deficit, over the four quarters of the year. It is common knowledge that the bulk of the revenue is collected in the last quarter of the financial year, but it is less well known that expenditure also tends to be concentrated in the last quarter. This fact, which is very relevant to the proper timing of borrowing, is brought to light in the following table. In preparing this table the assumption has been made that the proportionate distribution between the four quarters of the revenue and expenditure will be the same as the average of the last three years (revenue is taken at £928 and expenditure at £1,278 millions):—

ESTIMATED REVENUE AND EXPENDITURE, 1939-40 (£ millions)					
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Total
Revenue.....	140 (15%)	181 (19%)	182 (20%)	425 (46%)	928
Expenditure.....	110 (19%)	128 (22%)	151 (26%)	191 (33%)	580
Defence.....	82 (34%)	36 (15%)	82 (34%)	42 (17%)	242
Cons. and.....	91 (20%)	114 (25%)	110 (24%)	141 (31%)	456
Civil.....	283 (22%)	278 (22%)	343 (27%)	374 (29%)	1,278
Total.....	— 143	— 97	— 161	+ 51	— 350

The last line in the table shows the Government's borrowing needs, quarter by quarter. They drop from £143 millions in the first quarter to £97 millions in the second quarter and then rise to £161 millions in the third quarter. For the last quarter of the year a net surplus of £51 millions is forecast.

The two methods of borrowing are, of course, by public issue of Defence Loan stock and by increasing the floating

debt. As has been emphasised in *The Economist* and elsewhere, an increase in the floating debt should form an essential part of the borrowing programme. On March 31st the tender issue of Treasury bills was £136 millions below the figure on March 31, 1938. Moreover, as recently as March 4th, the decline in the issue, as compared with the previous year, was as high as £176 millions. This figure is so nearly half that of the prospective total borrowing that the obvious suggestion is to raise half the £350 millions in Treasury bills and half in Defence Loan. This solution would not merely reduce the size of the public issues to be made; by providing the banks with a plentiful supply of liquid assets (which they now lack) the creation of a firm gilt-edged market would be assisted. Moreover, it is essential that the borrowing by Treasury bills should be done *before* substantial money is raised by loan. Each of the two previous Defence Loans has been made in the spring. But if such a course were followed again this year, and if the full sum involved were quickly called, the net effect would be to reduce the liquid assets available for the money market considerably below even their present uncomfortably low figure. It may be suggested, therefore, that the proper course would be to allow the floating debt to increase by about £175 millions before heavy calls were made on a Defence Loan.

A programme of this character can be followed out quarter by quarter, as follows:—

	(£ millions)	Govt's Needs	Floating Debt	Defence Loans
First Quarter.....	143	143	...	...
Second Quarter.....	97	47	50	...
Third Quarter.....	161	36	125	...
Fourth Quarter.....	— 51*	— 51*	...	...
Complete Year.....	350	175	175	...

* i.e. Debt repaid and floating debt reduced.

With this time-table the whole of the Government's needs of £143 millions for the first quarter of the year would fall on the floating debt. The borrowing by public issue would appear during the second and third quarters of the year; and meanwhile the floating debt would have risen by £226 millions between March 31st and December 31, 1939. The fourth quarter would witness a revenue surplus of £51 millions over both ordinary and Defence Loan expenditure. The floating debt would be reduced by this amount and no Defence Loan would be issued.

The best dates for the appearance of specific Defence Loans depend upon a variety of considerations, including August holidays, the dates of large Government dividend disbursements, and also the state of the market. The last is necessarily incalculable, but it may be pointed out that

dividends are disbursed at the beginning of every month. The December 1st War Loan dividend is the biggest payment in the second half of the year, and the early October payments rank next in magnitude.

One way in which the programme would work out (to give a *pro forma* example) would be for a Defence Loan of £100 millions to be issued in the middle of July, with subsequent calls in early August, September and October, the last call, falling within the third quarter, amounting to £48 millions. A second loan of £75 millions could then come towards the end of October, with calls in early November and December. In this way the receipt of the proceeds of these loans would be spread over the second and third quarters of the financial year, in the proportion suggested in the last table. This, it should be emphasised, is nothing more than an illustrative time-table. A similar

effect could be achieved by spreading the calls on any Defence Loan issued before July 1st to fit the same incidence of financial need.

The precise figures given in this article are certain to be invalidated, if by nothing else, by the additional expenditure not yet estimated. But the main point will stand except in the event of unparalleled expenditure in the immediate future. That main point is that, in the interests of banking liquidity (on which the success of the whole programme largely depends), there should be no precipitate raising of large sums by Defence Loan before July 1st. There is no reason why the authorities should fail to take advantage of favourable market conditions, provided that early calls are strictly limited in amount. But damage might be done to the gilt-edged market by undue haste to collect the full amounts required.

Finance and Banking

Over One Per Cent.—Last week's Treasury bill tender fully confirmed the hardening trend of discount rates apparent over the previous week. The average rate at which the Treasury bills were allotted jumped from 14s. 7.4d. per cent. to 25s. 6.7d. per cent. Some increase in the rate had been anticipated if only because the bills tendered for last Friday were the unpopular early July bills as against the June 30th maturities on which the previous tender had been concentrated. Even so, the jump of over ½ per cent. took most outside tenderers by surprise, and the market syndicate, which tendered for the bills at £99 13s. 7d., was able to obtain its bills at a rate of 25s. 8d. per cent., and at this figure was given the generous allotment of 71 per cent. of its applications. One factor only appeared to be militating against the continued hardening of the discount rate; that was the accumulation of funds in Public departments owing to the recent operations of the Exchange Equalisation Account in the exchange and bullion markets and the consequent possibility of the Treasury bills being under-allotted. This, in fact, occurred, only £42,000,000 being allotted out of the £45,000,000 of bills on offer. But this factor was wholly offset in its influence on the result by the atmosphere prevailing on the morning of the tender. The growing German-Polish tension, and the uncertainty regarding the statement which the Prime Minister was to make on the afternoon of Friday in the House, made inevitably for a mood of exceptional caution which tended to keep outside interests out of the tender, and which the market itself translated into higher rates. Following the "cut" in the allotment last Friday, the amount offered this week has been reduced to £35,000,000. This fact need not be regarded as a particularly potent factor making for an immediate sagging of the discount rate since the current maturities of Treasury bills are now running at a very low ebb. None the less, the general opinion in the market is that the top of this particular rise in the Treasury bill rate has been seen, and that a moderate downward reaction is about due.

Czecho-Slovak Obligations.—The Czecho-Slovakia (Restrictions on Banking Accounts, etc.) Act is now in force, and further attempts are being made to clear up outstanding financial matters between the two countries. With this end in view, the Bank of England is seeking, on behalf of the Treasury, details of certain financial obligations due from Czecho-Slovakia to British holders (including persons ordinarily resident or conducting business in the United Kingdom) and held by them on March 14, 1939. The classes of obligations referred to are loans issued by the Czecho-Slovak Government or by any public authority or any company incorporated before March 15, 1939, under Czecho-Slovak law; shares or participations in any such company; balances with Czech banks as on March 14, 1939; or miscellaneous financial obligations such as interest-bearing or revenue-producing

claims on persons or institutions in Czecho-Slovakia. Commercial debts or any debts other than those described above are excluded from the inquiry, and so too are obligations due from Sudetenland. Banks and financial institutions which have already reported these claims should not report them again. No reason has been given for this new inquiry, but there is an obvious danger that such obligations may be blocked by Germany in reply to our blocking of Czech balances in London. The sterling bonds of the Czech Government and the City of Prague are an obvious case in point, while the Czech guarantee to the Austrian 4½ per cent. sterling guaranteed loan raises a new and more complicated problem. The first step is for the British authorities to find out the total amount involved, and this is almost certainly the object of this new inquiry.

What is your Capitalised Value to your family?

If you listed all your personal assets and converted them into cash what would be the total? Now assuming from a safe investment interest on this amount could be obtained at the rate of 3½ per annum tax free, what income would this produce?

This is the test which you should apply to your own resources, so that you will know exactly what the financial position of your wife and family would be in the event of your death—a contingency which it is unwise to ignore. Most men are disappointed and not a little perturbed after this self examination.

THE "SAFEGUARD" POLICY is specially designed to augment personal assets by providing an income (tax free and payable monthly) for your dependants in the event of death. If you survive the period of your family responsibilities the policy provides capital for your own retirement.

You are invited to make an enquiry for full details and for an illustration suited to your own circumstances. Rest assured you will incur no obligation by doing so.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

South African Exchange.—Late last week the South African Reserve Bank announced that as from April 1st its selling rate for sterling would be raised from £SA100 17s. 6d. to £SA101 2s. 6d. per £stg100. The South African banks at once made the necessary alteration in their own rates, their buying rates for T.T. on South Africa having been adjusted from £SA100 17s. 6d. to £SA101 2s. 6d. per £stg100 and other rates in proportion. The official explanation of this 5s. increase is that it is designed to cover the recent increase in the war risk insurance rate on gold shipments. Normally, one way in which the Reserve Bank maintains its stock of sterling is by means of gold shipments to London, where the gold is sold for sterling to the British authorities. Obviously, quite apart from the state of the market in South African exchange, the rise in insurance rates has increased the cost to the Reserve Bank of replenishing its sterling balance, and so apparently justifies this increase in the price which the bank is prepared to accept for sterling. The basic assumption behind this argument is that gold shipments from current Rand production form the main way in which the Reserve Bank obtains sterling. This is true under normal conditions, for gold is South Africa's chief export. But since the September crisis gold exports have been practically suspended, the gold being sold to the British Exchange Equalisation Account and earmarked in its favour in South Africa. One effect of this arrangement is that the British Exchange Account may have to give gold in London to cover South African payments to countries outside the sterling area, and in course of time indeed the British authorities might find that they were holding an ever-increasing proportion of their gold in South Africa. An obvious remedy would be direct gold shipments from South Africa to, say, the United States, but recent American returns reveal little signs of any such movement. This increase in the South African exchange rate and the explanation given for it therefore suggest that gold shipments to London may be resumed. In view of the international situation and its reaction on insurance rates, it is arguable that direct shipments to New York, either of South African gold or gold held in South Africa under British earmark, would be the better course.

* * *

National Bank of Egypt.—At the general meeting of the National Bank of Egypt, held in Cairo on March 23rd, Sir Edward Cook discussed the bank's relations with the Egyptian Government. During recent years the National Bank has assumed several of the chief functions of a

central bank. Thus it manages the Egyptian currency and acts as the Egyptian Government's banker. The bank, however, has no assured position equal to that of a modern central bank, and its charter is due to expire in 1948. Both the Government and the bank feel that the position needs regularising, and Sir Edward Cook informed the shareholders that the Government had recently put forward conditions for the granting of a new charter, and that these were under examination by the bank. Obviously, Sir Edward Cook could do no more than discuss these developments in general terms, but he said that the shareholders needed some assurance as to the security of their capital, while the bank must be able to preserve the efficiency of its *personnel* and also its freedom from political influence. This implied that State regulation, so far as it was necessary, must be by law or by the bank's statutes, and not by any power of interference in the bank's day-to-day administration. He had reason to believe that the Government appreciated these vital points. Clearly much further negotiation must take place before the bank's new charter takes its final form, but in principle the proper relations between a Government and its central bank have by now been so well explored, that there should be little serious difficulty in arriving at an agreement. The fundamental points are that Egypt needs a properly constituted central bank, and the National Bank is in every way fit to occupy that position without sacrificing either the interests of the shareholders or the wisdom and experience of those responsible for its management.

* * *

Bank of Scotland.—In common with several other Scottish banks the Bank of Scotland has suffered small falls in deposits and profits in its latest financial year. The latter are down from £313,253 to £305,634, which may be attributed to heavier taxes and higher management expenses, but the dividend is maintained at 12 per cent. Deposits show a drop of nearly £1½ millions at £37,851,691, but as the cash items show an increase from £5,627,456 to £5,908,151, the bank has preserved a very liquid position. The total of cash, money at call and short notice, bills and investments amounts to 79 per cent. of its liabilities to the public. Advances are down by £140,890 to £9,727,397; but acceptances at £4,448,119 show a rise of £735,534 and are now at the highest figure in the bank's history, thus providing evidence of extended business connections. The bank has had, therefore, as the chairman pointed out at the annual general meeting, a satisfactory year, and is in a position to make a substantial increase in advances to credit-worthy borrowers with any improvement in industrial and agricultural conditions.

MONEY MARKET NOTES

Foreign Exchanges

THE foreign exchange market has again been under the influence of international politics, but movements in rates have not been wide and the various Controls have had no difficulty in resisting the selling pressure. Last Friday, Mr Chamberlain's statement caused a slightly firmer tendency for sterling to be apparent in the later dealings; but the demand for forward dollars increased, and the premium for three months widened slightly to 2½c. and again on Saturday to 2½c. Some reassurance was evidently derived by the market from Hitler's speech, for there was a general buying of European currencies on Monday; and although the best rates were not maintained, the Exchange Funds must have regained some of the foreign exchange lost in the previous weeks. The pound rose from 4.68½ to close at 4.68½ after being as high as 4.68½, while the three months' forward premium contracted to 2c. On

Tuesday, however, there was a relapse, on a less favourable view being taken of Anglo-German relations, and although selling was comparatively light, the Exchange Account allowed the rate to fall to 4.68½, the three months' forward premium again widening to 2½c. On Wednesday, there was a further decline in the spot rate to 4.68½ and a further increase in the three months' forward premium to 2½c. Swiss francs also recovered on Monday to 20.85½, but relapsed again on Tuesday to 20.87½ and on Wednesday afternoon were quoted at 20.87½. Belgas have benefited from the results of the elections and were down to 27.79 on Monday, although in common with other European currencies they lost some of the improvement on Tuesday and Wednesday. The discount on the three months' forward belga, after being as wide as 90c. last Friday, has come back to 51c. The Icelandic krona is to be devalued by 20 per cent. to compensate for lost export markets.

The Money Market

THE discount market also remains under the shadow of political events. The sharp rise in the rate of allotment at last Friday's Treasury Bill tender to a rate which beat that recorded in the crisis of last September is discussed

* Viz. 12 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 14 per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

in a Finance Note. Discount rates have been well maintained in consequence, although on Monday the more cheerful view taken of the international outlook,

which was reflected in the foreign exchange market, may have been responsible for the very slight relapse in rates which occurred. The banks, which at the end of last week had withdrawn from the market, resumed their purchases. These, however, were still on a modest scale and were on the comparatively high basis of ¾-¾ per cent. for June bills and 1½ per cent. for Mays, while July bills could only be placed outside the clearing banks. On Tuesday, when the market had to take up a large part of the bills allotted at the Treasury tender, some special buying of early June bills at ¾ per cent. was reported to relieve the position, for the clearing banks were again accepting only very limited quantities. The rates for commercial paper rose sharply last Friday in accordance with the result of the Treasury Bill tender. The three months' bank draft, which on the previous day had been quoted at ¾-1½ per cent., rose to 1½ per cent. and has since been maintained at about this level, while the six months' draft is quoted at about 1½-¾ per cent. There has been a keen demand for credit this week, and borrowers against bonds have on occasion been

forced to go to the clearing banks and pay 1 per cent. The latter, too, are obviously feeling the drain of Easter currency withdrawals, which, together with the accumulation of funds in public deposits as a result of Exchange Account operations, must have reduced their deposits at the Bank to a point which readily explains their unwillingness to lend, having regard to their strong desire for liquidity under existing political conditions.

*

The Bullion Market

IN a Finance Note it is suggested that the South African Reserve Bank's increase in its selling rate for sterling might herald the resumption of Transvaal gold shipments. It is, therefore, interesting to note that the "Capetown Castle" has on board £64,982 of refined gold in addition to the usual consignment of unrefined Rhodesian gold. The amount, however, is so small that it would be premature to conclude that it represents the beginning of the resumption of official shipments from South Africa. It may be gold which had

INSURANCE NOTES

representing about 7½ per cent. of Stock Exchange book values at the end of 1938 took place during that year. There is a small investment reserve fund amounting to £100,000, while the undistributed surplus carried forward from the 1937 valuation was £333,000. It is probable that the society's subsidiary companies are taken in the balance sheet at values considerably smaller than their real worth. On referring last year to the depreciation suffered in 1937, which probably amounted to about £1,000,000, the chairman rightly pointed out "... market values are comparatively unimportant in the long run, provided that the income continues satisfactory and the investments are intrinsically sound ...". The further large depreciation in 1938 combined with the virtual maintenance of the rate of interest earned gives added point to this view.

*

Employers' Liability Assurance.—This company obtains a much greater proportion of its premium income from the U.S.A. than any other British insurance office, but it is concerned only to a minor extent with fire insurance in that country. Last year's combined fire and accident premium income amounted to £755,000 against £727,000, but in the general branch, which includes motor insurance, and workmen's compensation outside the United Kingdom, premiums fell from £6,417,000 to £5,877,000. This is by far the most important branch, and the prosperity of the corporation depends to a unique degree on conditions in the U.S.A. In spite of some further increase in expenses, underwriting profits in this branch were the best since 1932. Following its custom, the corporation has maintained the reserve for unexpired risks in the general branch at 40 per cent. of the main volume of premium income, but no reserve is held for a portion in which the risk had expired at the close of the year. This reserve amounts to 35.5 per cent. of the total premiums. The underwriting results of the last two years are as follows.

been earmarked for private buyers under the facilities provided by the South African banks last December. Moreover, the fact that four large com-

signments of gold depart for Canada at the end of this week, which are presumably official shipments, suggests that the authorities are still concerned to keep part of the gold reserves overseas.

	1937		1938	
	Amount £	% of Prem.	Amount	% of Prem.
Fire	37,352	9.6	28,117	7.0
Accident	2,531	0.1	2,915	0.8
General	112,590	1.8	304,128	5.2
Gross surplus ...	152,473		335,160	
Profit and loss balance	122,000		264,245	
	30,473		70,915	

Included above in the profit and loss items are £50,000 and £70,000 in 1937 and 1938, respectively, being amounts written off the corporation's investment in the Merchants' Marine. In addition to a largely increased provision for income tax, £32,000 is set aside in 1938 for N.D.C. Total assets are practically unchanged at £11,561,000. Investments in Stock Exchange securities appear at £7,501,000, showing an appreciation of £43,000, or 0.6 per cent., compared with a depreciation of £589,000, or 8.1 per cent., in 1937. Taking into account the surplus of £43,000 and converting other current assets and liabilities at the exchange rate of December 31, 1938, there is a depreciation of £282,000 against the depreciation of £606,000 a year ago. Amongst Stock Exchange securities there is a large increase in U.S.A. and other foreign government securities from £2,931,000 to £4,448,000 (of which only £73,000 relate to "other" government securities), and this figure amounts to 38 per cent. of the total assets. Debenture stocks show a decrease from £2,471,000 to £1,317,000. The balance-sheet value of the corporation's unfortunate investment in the shares of the Merchants' Marine is further reduced from £75,000 to £5,000; the reserve in respect of this company remains unaltered at £400,000 and is held partly in connection with the corporation's guarantee of the Merchants' Marine policies. The book value of the share holding of the Clerical, Medical and General is £487,000, which is greatly below the true value of the investment. The balance of appropriation account, after providing for the final 1938 dividend, is £405,000, while general reserve remains at £2,500,000. The dividend, for the fourth successive year, is 70 per cent.

Investment

Unit Trust Accounts.—It is typical of the prolonged stages of the Prevention of Fraud (Investments) Bill that instead of completing its third reading in the House of Lords on Tuesday, the debate was adjourned. The point at issue was relatively unimportant, but the rules of the House were involved, and the result may well be delay in passing the measure into law. Their Lordships were concerned with unit trust control and accounts, and an amendment was moved to Clause 16 providing, in effect, for the independence of the manager and the trustee. Paragraph 5 in the Schedule of matters for which trust deeds must provide was then considered. This deals with the audit and publication of accounts relating to the trust, including accounts of the manager in relation to the trust and statements of his remuneration in connection therewith. The Lord Chancellor moved to omit "publication" and to insert "the circulation to holders of units." Lord Rankeillour, however, proposed in a further amendment to add the words "who so desire." Technically, however, this manuscript amendment would have required special sanction of the House, which is rarely given. The suggestion that the words might be inserted in the Commons was not taken up, and the debate was accordingly adjourned. The point at issue, of course, is a small one, for Lord Rankeillour's amendment merely seeks to save unit trust managers from expense by limiting the circularisation of accounts to those unit holders who may desire them. The proposal is reminiscent of the practice of the L.M.S., which issues only a summary of its accounts in the first place, but provides the full report on the stockholder's application. It will be hoped that such a small point will not delay the passage of the Bill into law.

Foreign Bond Setback.—The relatively small drop last month of half a point in the index of 106 bond prices computed by Municipal and General Securities Company conceals very considerable changes in an eventful month, as the following table shows:—

AVERAGE JANUARY-JUNE, 1934-1940

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Under- faulted Bonds	De- faulted Bonds
				States	Pro- vinces	Total			
1938	(28)	(31)	(4)	(35)	(11)	(46)	(109)	(54)	(55)
March ...	83.4	73.9	97.2	61.3	49.4	58.2	69.6	74.9	64.8
June	(27)	89.0	68.5	98.0	65.9	51.2	108	(48)	(80)
September	(26)	88.5	66.2	96.1	57.7	44.4	107	(47)	61.7
November	85.0	65.0	91.7	56.3	40.9	52.1	64.1	72.3	59.0
December	78.1	64.2	87.0	53.7	40.7	50.2	61.3	70.7	56.0
1939	(25)	89.1	66.2	96.1	57.7	44.4	107	(47)	61.7
January ...	69.1	57.7	83.2	56.2	40.2	51.9	58.3	64.7	53.8
February ...	75.1	59.1	82.0	55.8	42.9	52.4	60.1	67.5	54.9
March ...	66.5	60.3	78.8	57.5	45.7	54.4	59.6	66.0	55.1

N.B.—Figures in brackets denote number of bonds included.

As a result of the Czecho-Slovak crisis, a heavy fall of 8.6 points occurred in the European index, which reached a new "low" of 66.5. Egyptian bonds showed a further decline, but the remaining groups recorded rises. Brazilian issues in particular were assisted by hopes that the agreement with the U.S.A. might be followed by an offer to British holders, and in the Eastern section, Chinese bonds rose moderately.

Industrial Profits in March.—March is one of the peak months for the publication of company reports, and the rate of change in profits disclosed should normally be highly representative. The course of industrial profits over the past two years is shown in the following table:—

INDUSTRIAL PROFITS 1937-39

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Change on prev. year
1937		£	%	1938		£	%

Feb. ...	202	29,792,378	5.52	Feb. ...	211	31,893,884	-5.19
March ...	337	56,721,336	9.19	March ...	293	41,440,326	-11.57

* After debenture interest.

The recorded decline of 11.57 per cent., however, exaggerates the position. Much of this substantial decrease is due to the heavy fall, exceeding £2,000,000, in Courtauld's earnings. If this company's results were eliminated, profits reported last month would amount to £41,088,000 against £44,490,000—a reduction of approximately 7½ per cent., which probably gives a truer indication of the trend of profits. Certain groups, however, record satisfactory improvement in March. Iron, coal and steel net profits are 5½ per cent. higher at £9,363,000, and an even better rate of increase is recorded by electric light and power companies.

Company Notes

British Oxygen.—The preliminary announcement of British Oxygen a fortnight ago indicated a satisfactory rise in the net profits of the parent company from £455,481 to £508,059. These results are confirmed by the full report issued this week. Since a statement of consolidated profits is available for the first time, and a change has been made in accounting income tax, as a result of which dividends are now shown net, stockholders will probably restrict their comparisons to the past two years. It may be said at once that this comparison is fully satisfactory. The consolidated profits of the undertaking increased from £1,118,996 to £1,162,675 last year, and after providing for depreciation and income tax, net consolidated profits show a moderate increase from £570,693 to £581,064. After deducting the amounts retained by subsidiary companies, the parent company's participation is increased from £455,481 to £508,059. As the following table shows, the 17 per cent. distribution is covered with a larger margin of earnings, and the general reserve provision is increased from £50,000 to £62,160, while special provisions against assets (in addition to depreciation) are increased to £50,000 against £9,901 for 1937:—

	Years ended December 31		
	1936	1937	1938
Consolidated figures:—

† Gross; subsequently net. * On £2,485,674. ‡ And 6½ per cent. capital bonus.

BRITISH OXYGEN PROFITS, 1928-38

The break in the chart above is intended to distinguish the "gross" method of accounting tax payments up to 1936 from the "net" basis adopted in the latest report, for which comparable 1937 figures are provided.

The British Oxygen group is still in process of expansion. The capital was increased in July last year by the issue of £1 million 5 per cent. £1 second preference shares, and it is doubtful whether the additional funds

have yet come in full employment. The proceeds of the issue amounted to £1,125,000, but fixed properties show an increase from £2,189,154 to no more than £2,416,435, while cash is increased from £33,604 to £388,082, and the bank loan, which appeared in the 1937 balance sheet at £200,000, has been repaid. The £1 ordinary stock units at 67s. 6d. provide a yield of £5 4s. per cent., which, in view of their further expansionary possibilities, appears reasonable.

Cable and Wireless Dividend.—The market's pleasure at the maintenance of Cable and Wireless (Holding) ordinary dividend at 4 per cent. in respect of 1938 was measured by a rise of three points in the ordinary stock to 46½ and 3½ points in the preference stock to 84 on Tuesday. A necessarily rough estimate published in *The Economist* of January 28th last suggested that actual earnings applicable to the Holding Company's ordinary stock might possibly not exceed 2 per cent. for the year. In fact, however, the results appear to have been substantially better than this, since the operating company, whose distribution is reduced from 3½ per cent. to 3¼ per cent., has not been compelled to draw on the sum of £300,000 which was placed to reserve in 1937 in anticipation of the introduction of the Empire flat rate scheme. The operating company's dividend costs £975,000 gross, compared with £1,050,000 for 1937. Of this sum, however, the Government share amounts to £84,500, but, as an offset, the termination of the Beam Rental from March 1st last year saved £208,500. On the other hand, the movement in the traffic index numbers last year suggested a fall in gross receipts of the order of £612,000. Hence, so far as the operating company's operating profits are concerned, it was reasonable to look for a reduction of the order of £400,000 last year. On the basis of the 1937 profits and assuming other expense items unchanged, this calculation would have led to an estimated net profits figure some £118,000 lower than the dividend which is actually to be distributed. The Holding Company's gross receipts from Cable and Wireless, assuming they were fully distributed by the old cable companies, would be reduced from £1,050,000 to £890,500, a reduction of £159,500, which, other things being equal, would entail a draft on the Holding Company's balance carried forward of £135,000. But the increase in the Marconi's Wireless Telegraph distribution from 9 per cent. to 12 per cent., plus a 3 per cent. tax-free bonus, would provide up to £145,000 more for the Holding Company. The full explanation, however, of this surprisingly satisfactory result must await the publication of the full reports early next month.

Vickers' Dividend Prospects.—The inference drawn from the reports of the Vickers' group in these columns was broadly confirmed by Mr A. A. Jamieson in his speech last Monday. Almost every department of the undertaking is working at full pressure. Mercantile shipbuilding, of

New Boom Ahead

Another Challenging Forecast

by Major L. L. B. Angas

Internationally known Investment Consultant. Author of "Investment for Appreciation," "The Problems of the Foreign Exchanges," etc., etc.

In this challenging new pamphlet, Major Angas explains how Hitler is indirectly inaugurating industrial revival in England, which will be preceded by a Stock Exchange boom. Suggestions are made as to how to ride the coming boom.

course, is much reduced, and orders are not being received in sufficient volume by Taylor Brothers to maintain the existing level of production. But the level of activity elsewhere suggests that a cautious accounting policy was followed in 1938. And the emphasis which the chairman placed on the desirability of a "substantial increase" in cash assets beyond the present sum of £6,111,618 suggests that conservatism is to be retained. The reference to the possibility of a maiden ordinary dividend from Vickers-Armstrongs may, however, have some relevance for Vickers' stockholders. Last year arrears on the "B" preference capital of Vickers-Armstrongs were paid off for a period of five years and two months. If the dividend is brought up to date at the end of the current year the payment would cover five years and three months—representing an increase of £12,700 net to be received by Vickers. If, in addition, an ordinary dividend were also declared, the ordinary stockholders of the parent company would share to the extent of 1.28 per cent. for every 1 per cent. declared by Vickers-Armstrongs—assuming, of course, that no part of the increase was absorbed by higher charges or provisions. In view of the board's policy last year, however, it might be wise not to over-rate such possibilities.

Dunlop Rubber Outlook.—The decision of the Dunlop Rubber Company—which provides more information to its shareholders than any other British company—to discontinue the issue of half-yearly statements is readily to be understood after the experience of the second half of 1938. Stockholders may regret that, instead, the Board has not chosen to make quarterly announcements, though they will agree that sudden changes in business conditions may render even the best intended half-yearly statement ultimately misleading. On the manufacturing side, the group is still enjoying the benefits of the recovery which set in with such dramatic suddenness in the last quarter of 1938. The new Fort tyre "with teeth" has established itself, and the range is being extended. Replacement business was satisfactory, and original tyre equipment orders, after the recovery in motor sales late last year, improved considerably. Sir George Beharrell pointed out, in this connection, that the company has fully maintained its contractual position—a matter of some importance in view of the keen competition in the motor accessories field. Moreover, the group is interested at several points in defence work, for it produces aircraft components, road vehicle equipment, and balloons for the aircraft barrage. Progress is also recorded in the numerous overseas branches of the company, while export trade remains quite profitable and its volume is being maintained. Although the chairman again emphasised the need for a cautious financial policy, the current yield of £6 18s. 6d. per cent. on the ordinary stock at 26s., on the basis of last year's 9 per cent. distribution, appears satisfactory for present business conditions.

Rubber Company Results.—A specialised trust such as Rubber Plantations Investment Trust is likely to be vulnerable to the changing fortunes of the commodity markets. No trace, however, of lower rubber profits are to be found in the Trust's report for 1938. Instead, it shows a moderate rise in earnings. Much of this stability is, of course, due to the operation of the time-lag, for in 1938 the Trust would be receiving some dividends, at least, from the high rubber profits of 1937. Moreover, the Trust has large interests in tea, which is subject to less

violent fluctuations both in price and output than many other commodities. But, when these points are allowed for, the Trust's report is most satisfactory. One of the best features of the accounts is that market values of the securities were still above book values at the end of 1938. The 1938 experience of rubber plantation companies, however, is a different story. In the following table, recently reported particulars of the output and profits of some important producers are shown:—

Company (years to December 31)	Crop	Price per lb.	Profit	Earned for Ord.		Div.	Current

* After estate and general expenses (where shown). † £1 shares.
* London landed equivalent.

Net profits, in general, have been at least halved—a result for which lower quotas and prices seem equally to blame, while costs, no doubt as a result of reduced output, have fallen by a smaller ratio than output. The more stable price conditions of the latter part of 1938, however, have clearly provided a welcome check to a decline in profits which, a year ago, threatened to be even more severe than it proved in fact. Broadly speaking, realised prices (London landed equivalent) are not more than about ½d. lower. Profits of Lanadron, whose average realised price was reduced by as much as 1.83d., are significantly only one-third of the 1937 level. Present market conditions are undeniably stagnant, and though the price outlook is steady, prospects of a large rise in American consumption and hence of higher releases (the present quota is no higher than 50 per cent.) are not bright.

Mining Reports

Robinson Deep.—The 1938 report of Robinson Deep again continues the record of gradual progress. Working profit at £970,195 shows an increase of £23,134, chiefly attributable to the increase of 2s. in the average net price for gold to 142s. 6d. per fine ounce. Ore milled was actually 69,500 tons higher at 1,419,500 tons, but this increase was offset by a slight reduction in the yield to 4.662 dwt. per ton and an increase of 1.8d. per ton in the working costs. The dividend on the "A" shares (absorbing £37,500) and the two dividends of 2s. 6d. each on the "B" shares (absorbing £500,000) left a small surplus of £4,366 to add to unappropriated profits, while in addition some £57,000 was provided from revenue for capital expenditure. As the "A" shares will presumably be extinguished by repayment on January 1, 1941, and capital expenditure is likely to be on a diminishing scale, there is a fairly definite prospect of relief to the revenue account to the extent of 1s. per "B" share in the next two years. A moderate further increase in the tonnage milled may be expected, as the increase in the nominal capacity to 125,000 tons per month only became fully effective in the second half of the year. Owing to labour shortage, development accomplished during the year was only 25,022 feet, as

compared with 39,260 feet for 1937. The amount sampled totalled 14,335 feet, of which 6,455 feet, or 45 per cent., proved payable, and showed an average value of 5.7 dwt. over 53 inches. Ore reserves at the end of the year were 394,000 tons higher at 7,001,000 tons, the average value being 0.2 dwt. lower at 4.6 dwt. and the stoping width 0.2 inches higher at 55.8 inches. Highly encouraging results continue to be obtained in the lower levels of the south section. An improvement in hoisting efficiency is expected as a result of the electrification of the steam hoists at the Chris shaft, which should shortly be in commission. The mine is very deep, and the question of providing still further ventilation facilities is necessarily coming under renewed consideration. Nevertheless, the technical position is sound and, while the limits of further attainment are now fairly clearly defined, there is a long prospective life on the basis of the present scale of operations. The present price of the "B" shares is 63s. 1½d., offering a yield of £7 18s. 6d. per cent.

Simmer and Jack.—With the completion of the south deep vertical shaft last March Simmer and Jack entered on a new expansion phase. During 1938 ore milled at 1,356,500 tons showed an increase of 147,000 tons. The nominal milling capacity of the plant was then raised to 118,000 tons per month. In September the progressive technical situation led to the decision to take full advantage of the improved hoisting facilities by embarking on a major expansion scheme. This provides for an increase in the nominal milling capacity to 180,000 tons per month in two stages. Milling at a higher rate will be commenced early in 1940, and every effort will be made to build up tonnage before the capacity of the plant as rapidly as possible. The rising trend of profits is, therefore, likely to continue for some time to come. In 1938 working profit increased by £127,531 to £664,725, representing the combined result of increased tonnage, an improvement of 0.046 dwt. per ton in the recovery, a reduction in working costs by 2.2d. to 20s. 10.4d. and an improvement of 1s. 11d. in the average price obtained for gold to 142s. 6d. Ore reserves at the end of the year, at 2,956,000 tons, showed an increase of 582,000 tons, the average value being 0.2 dwt. lower at 4.7 dwt. This, however, still shows a surplus over the grade of ore sent to the mill. The decline in the average value reflects large tonnages of partly developed ore in the upper areas of the mine, previously classed as unpayable, which have been brought within the range of payability as a result of the higher gold price, and within the range of working by the completion of the south shaft and the 53rd level haulage. In order to open up the mine at depth, two incline shafts, the Central tertiary and Eastern tertiary, are being advanced to the 53rd level. Development accomplished during the year again showed an increase at 68,441 feet, of which 47,330 feet were sampled and 21,330 feet (or 45.1 per cent.) proved payable. The average value was 10.6 dwt. over 27.6 inches. Dividend policy is still subordinated to the requirements of the capital expenditure programme, and will be for some time to come. While the cost of dividend No. 18 of 5d. and No. 19 of 6d. per share was £293,750, some £134,987 was provided out of revenue for capital expenditure, and the unappropriated balance at December 31st was £45,426 higher at £114,853. A further 750,000 2s. 6d. shares were issued to shareholders at 12s. 6d., and the balance of working capital in hand at the end of the year amounted to £455,807. While the revenue account is not likely to be relieved entirely in the immediate future, a progressive increase in future distributions may be hoped for. The shares at the present price of 18s. 1½d. offer a yield of £5 1s. 3d. per cent.

South African Land.—This promising mine reached the production stage last year, and is still working towards the full nominal capacity of the present plant. In the last six months of 1938 tonnage milled was 266,600. In March this year the figure was 69,700, and in a few months' time it should be approaching 100,000 tons per

month. While this process is proceeding, working costs are falling. Costs averaged 28s. 5.7d. last year, but the latest figure is 24s. 8.93d., and there is considerable scope for further reduction. Working profit amounted to £114,353, and after providing £61,875 for dividend No. 1 of 6d. per share and £26,927 new issue expenses, the unappropriated balance at the end of the year was £41,736. Development work showed a sharp drop from 51,567 feet to 31,967 feet, since efforts were primarily directed last year to preparations for stoping and completing underground transport and ore handling arrangements. This fact invalidates criticisms of the smallness of the increase in the ore reserve, which is 287,080 tons higher at 3,030,690 tons, having a value of 6.02 dwt. over a stoping width of 46.49 inches. Capital expenditure absorbed £740,211, but this year it is expected not to exceed £35,000, which is covered by the balance of the capital fund still in hand. The capital, as now increased, amounts to 2,475,000 shares of 3s. 6d. each fully paid. Dividends more in line with the present price of the shares of 68s. 9d. should be seen this year.

East Daggafontein.—Satisfactory progress with the erection of the reduction plant is reported by East Daggafontein, and it is anticipated that crushing operations will commence about the middle of the year. At the end of 1938 creditors showed a surplus over cash assets of £323,081, but the new issue brought in £900,000 earlier this year and left a net balance of £574,669 available for further expenditure, which should suffice until the production stage is reached. When the issue was made it was stated that the recalculation of the ore reserve was expected to show an increase of 400,000 tons as the result of development during 1938. The actual improvement disclosed in the report is greater and, including 135,275 tons of Kimberley Reef, the total at the end of the year amounted to 1,601,578 tons, an increase of 590,639 tons, the average value being 6.18 dwt. over a stoping width of 37.97 inches. This increase is due to the excellent development results achieved during the year. On the Main Reef leader the footage accomplished was 29,577 feet, an increase of 10,080 feet over the 1937 figure. Of this footage 22,970 feet was sampled and 8,950 (39 per cent.) proved payable, showing an average value of 25.13 dwt. over a width of 11.48 inches. On the Kimberley Reef horizon development accomplished was 3,352 feet, of which 2,005 feet, or 89.3 per cent., was payable, showing an average value of 23.34 dwt. over a width of 17.09 inches. The No. 1 shaft was sunk a further 143 feet and reached its final depth of 3,743 feet. It is possible that some small maiden distribution might be made at the end of the current year, but the first distribution bearing any relation to normal earning capacity cannot be expected before June, 1940. The present price of the 10s. shares is 20s., and on this basis the property is capitalised at the moderate figure of £2,700,000.

East Rand Proprietary.—The condition of this large property presents several interesting features. Attention will be first directed to the technical situation, in view of last year's flurry in the shares on the poor figures revealed by the June quarterly report. It may be said at once that the misgivings then expressed show no sign of being justified. During the whole year, development footage accomplished was 3,985 less than in the previous year at 107,636, but the percentage of payability rose from 35 per cent. to 39 per cent. Available ore reserves rose by 457,980 tons to 10,739,300 tons. On the other hand, development included footage payable owing to the higher gold price, and the overall value of the ore reserves is again 0.1 dwt. lower at 5.2 dwt. Moreover, the report states that in the comparatively low-grade western area footage and tonnage developed were lower than in 1937; hence the analysis of the development statistics usually given in the chairman's speech must be awaited before the extent to which the central portion of the mine (where satisfactory values and a high percentage of payability are recorded) has contributed to the development results of the year can be assessed. In 1937, over 40 per cent. of payable tonnage developed came from the western section, but the average value per ton was only 3.8 dwt. The decision to sink a circular shaft from the 34th level near the south-west vertical shaft, to facilitate development of the far-western area, is interesting in this context. In considering dividend prospects, it is necessary to take into account, on the one hand, the surplus—equal to about 1s. per share—of profits over the present dividend rate of 3s. 6d., and, on the other, continuing requirements for capital expenditure. In 1938, expenditure on capital account amounted to £259,991, of which £171,224 was provided out of the year's income, the balance being found from the carry-forward. Capital expenditure during the current year is expected to be heavy—presumably heavier than last year—largely on account of the equipment of the central vertical shaft, which has now reached its final depth of 5,981 feet, and the sinking of the circular shaft, together with underground winding equipment. Though current profits are running at a higher level, therefore, the immediate dividend prospect is limited by these considerations. At the present price of 49s. 4½d. the shares yield £7 2s. per cent. on the 3s. 6d. dividend rate.

THE STOCK EXCHANGES

London

SETTLING DAYS	
TICKET	ACCOUNT
APRIL 11	APRIL 13

WEDNESDAY saw the end of an Account which few operators will be sorry to forget. The first three days of this week provided no significant alteration to the market's waiting mood, although there was a small increase in buying on Monday which was duly enlarged in terms of prices. Improvement even on Monday was not satisfactorily maintained and on Tuesday, when business was even lower in volume and the noise from Europe rather higher in volume, the industrial markets lost more or less what they had gained on Monday. Wall Street's acute depression caused erratic movements in the international group, and although some industrial shares were slightly firmer on Wednesday the tone of the market was very dull.

In the *gilt-edged market* undated stocks made the best progress in Monday's moderate recovery; War Loan closing ½ higher at 95½ with comparable rises in other undated stocks. The short dated list, however, continued to be depressed by the rising tendency of money rates and by Budget uncertainties. On Tuesday, the gilt-edged market, in common with the rest of the "House," turned dull and losses of up

to ½, led by War Loan, were common both in the undated and dated groups. India and home corporation stocks were quiet and rather dull and it was difficult to place small lines of colonial stocks.

The *foreign bond market* showed some improvement at first under the lead of Roumanian bonds. The Stabilisation 7 per cent. issue jumped 5½ to 24½ and the 4 per cent. External 4 to 23 on Monday, and these rises were accompanied by a general recovery in the European group. They were not, however, fully maintained on Tuesday, when losses of up to 1½ points in Roumanian loans occurred. A demand was reported for Brazilian bonds at the opening but selling was resumed on Tuesday. Little reaction to the Chinese defaults (discussed in a leading article on page 89) was noticeable.

Home rail stocks were affected at the beginning of the week by a possibility of direct action on the 50s. minimum wage demand, and were carried downwards by the mid-week trend, despite the increase of £128,000 in the traffics for the four lines. Business in Argentine rails remained small but San Paulo jumped on the unexpectedly favourable dividend announcement.

After a moderate technical recovery on Monday, prices of *industrial shares* resumed their sagging trend. Political uncertainties and the approach of the

The Week's Company Profits.—Our usual analysis of profit and loss accounts on page 120 covers 46 industrial companies for which comparable figures are available. The net profits of these 46 companies amount to £4,310,000, compared with £4,460,000, a decline of 3½ per cent. Aggregate net profits of 703 companies reporting in 1939 to date are £93,732,000, a decrease of 8½ per cent. from £102,111,000 earned by the same companies a year ago. The week's results are discussed in preceding Notes and on page 99 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue reports of company meetings begin on page 104. Lord Henry Scott's survey of the *Bank of Scotland's* position is referred to in a Note on page 92, and Sir Edward Cook's address at the *National Bank of Egypt* meeting in Cairo is discussed on the same page. An increase in business activity during 1938 is reported by *Hungarian General Creditbank*, owing partly to the absorption of the Hungarian General Savingsbank. At the *Wesleyan and General Assurance Society* meeting, Mr John B. Field referred with satisfaction to the increase in total premium income of £80,770 to £2,319,362. Mr A. A. Jamieson's remarks at the *Vickers'* meeting and the review of Sir George Beharrell at the *Dunlop Rubber* meeting are discussed on pages 95 and 96. The equipment of theatres for television was discussed by Mr Mark Ostrer in his address to *Provincial Cinematograph Theatres* members. Important development work at certain properties was reported by the chairman at the *Coalmines of Salgó-Tarján (Hungary)* meeting. Mr Arthur E. Hadley explained to the *Rhodesia Railways* members that £200,000 out of the £321,567 increase in gross revenue was due to general goods traffic. Sir Alexander Roger informed *Anglo-Portuguese Telephone* shareholders that the year's increase in the number of stations was the largest in the company's history. Surveying conditions in the current year, Mr G. H. Champion informed *Jasin (Malacca) Rubber Estates* shareholders that greater restriction was partly offset by a higher standard production. At the *Equity and Law Life Assurance Society* meeting, Sir Dennis Herbert pointed out that in the short space of six years to the end of 1938 total funds had risen from £10 millions to £30 millions.

Easter holiday between them left the market in an inactive mood. Iron and steel shares began well, but became irregular later. There were, however, a number of gains, with some support in particular for Stanton, Vickers and Beardmore. Coal shares were quiet but firm, while little interest was shown in engineering issues. There was little business passing in electrical equipment companies. Motor shares followed the general trend and became uncertain after a good opening. Aircraft share prices were well maintained, though turnover was small. Textiles became dull after a fair opening session. Breweries followed other sections of the market, while tobacco shares showed some resistance after Tuesday's weakness. Great Universal were a firm spot in the stores group. Provision and catering issues were dull, though prices were steady. Many of the miscellaneous leaders went ahead on Monday on bear-covering, and though prices were inclined to sag later, movements were never very large. Cable and Wireless stocks rose sharply before and after the announcement of the maintained distribution (discussed on page 95).

Oil shares were typical of the rest of the market, and after a relatively bright start, prices gave way. Selling from the Continent was an important factor in the mid-week weakness. Rubber shares were a little firmer on Monday, and

though subsequent losses were only fractional, the steady tendency was not maintained.

Turnover in *Kaffirs* remained on a small scale. An improved trend on Monday was not kept up, and though losses were confined to small amounts, the market's mood became more uncertain. So little business passed on local account that moderate operations from Paris and the Cape influenced prices unduly. Rhodesian copper issues followed the general trend, for satisfaction with the maintenance of the Roan Antelope interim was not enough to offset the market's listlessness. Among other base metals, Trepsa were supported from Paris.

New York

ON Wall Street, last week closed with some recovery from the bad break on Friday, March 31st, on unfavourable European news. This week opened with a further rally, but it proved very short-lived and since then the trend has on the whole been downward. Trading volume, moreover, was distinctly large, and heavy selling contrasted with the stagnant conditions in most of the last week of March. This weakness was partly in sympathy with foreign markets—Wall Street reacts more violently to European political news than Europe herself—and partly because operators are taking a more bearish view of the industrial position at home. A decline in estimated steel output for the current week from 56.1 to 54.7 per cent. did not help matters, and the fall of the Dow industrial average to a level just under the Munich "low" induced sales by the chart-readers.

PUBLIC OFFER

Warner's Holiday Camps, Ltd.—Issue at par of £60,000 6 per cent. first mortgage debenture stock and 300,000 2s. ordinary shares. Issued to acquire two holiday camp companies. Properties and equipment valued at £91,856; purchase price £87,856, in £32,856 cash and 550,000 2s. ordinary shares. Combined profits: 1935–36, £9,308; 1936–37, £10,079; 1937–38, £16,193. Lists closed 9.5 a.m. April 4th. The shares were oversubscribed and the debenture stock fully subscribed.

BY STOCK EXCHANGE INTRODUCTION

Sheffield and District Gas Company.—Issue of £500,000 4 per cent. debenture stock, redeemable July, 1964, or from 1959 on three months' notice. Proceeds to repay mortgages. Issue taken by Messrs G. S. Herbert and Sons at 100½ net.

BONUS SHARES

R. W. Crabtree and Sons.—It is proposed to distribute a bonus, in the proportion of four new shares for each ordinary share held by capitalising £120,000 of general reserve. This will make total capital £150,000 in 1s. shares. It is proposed to consolidate these into 600,000 5s. shares.

SHORTER COMMENTS

Company Results of the Week.—Revenue of the RIVER PLATE TRUST LOAN AND AGENCY COMPANY has fallen by £34,000 to £340,741, but owing to a smaller exchange loss the decline in net profit is less than £10,000, and dividends are maintained. GENERAL AIRCRAFT, by increasing turnover in 1938 by 112 per cent. (partly through a new acquisition), have converted a trading loss of £15,110 into a trading profit (after contingencies) of £60,678. HOULDER BROS. record a satisfactory advance in total profits, from £61,661 to £72,959. Though the decline in investment trusts revenues has not left ALLIANCE TRUST unscathed, the depreciation on quoted investments is no more than 3.83 per cent. UNITED GLASS BOTTLE total profits have fallen from £436,118 to £397,046, though the report offers no comment on these results. VAN DEN BERGHS AND JURGENS record a satisfactory 7 per cent. rise in total profits to £1,257,668. One of the best reports of the week is that of ALLEN WEST AND COMPANY, makers of electrical control equipment. Net profits are £126,001 against £82,923, and the dividend is raised from 7½ to 10 per cent. Although investments in subsidiaries again yielded satisfactory results, net profits of BRITISH UNITED SHOE MACHINERY have fallen from £594,981 to £542,877. The balance sheet is now presented in an improved form, and gives fuller details of the fixed assets, together with the year's changes. The decreased numbers of overseas visitors and last autumn's crisis severely affected SAVOY HOTEL, whose net profits amount to £39,666 against £69,408. Units sold in 1938 by subsidiaries of SOUTHERN AREAS ELECTRIC rose by 14 per cent., but coal costs rose and there were certain tariff reductions. Net profits of the Corporation amount to £31,985 against £37,953, but the 5 per cent. dividend is maintained.

BANKS

Eastern Bank, Ltd.—Net profit for 1938, £111,601, or £15,572 less than 1937. Ordinary dividend again 7 per cent. Contingency allocation reduced from £50,000 to £40,000. Carry-forward raised from £81,191 to £82,972.

Chase National Bank of the City of New York.—Deposits, March 31, 1939, \$2,594,437,000, against \$2,234,333,000 on December 31, 1938. Total resources, March 31, 1939, \$2,888,271,000 (\$2,523,167,000 December 31, 1938). Cash \$1,229,178,000 (\$861,439,000). Investments in U.S. Government securities \$650,330,000 (\$639,878,000). Loans \$608,609,000 (\$638,734,000). Undivided profits \$33,266,000 (\$35,247,000).

Guaranty Trust Company of New York.—Deposits, March 29, 1939, \$1,670,216,227 compared with \$1,446,430,628 on March 31, 1938. Total resources have risen from \$1,770,408,085 to \$1,988,747,869 in the period. Capital funds amount to \$272,956,690.

(Continued on page 111)

Industry and Trade

Further Increase in Employment.—The latest employment and unemployment returns lend further support to the widespread belief that recovery was on the way when Herr Hitler once more dealt a severe blow to business confidence. The estimated number of insured persons aged sixteen to sixty-four in employment in Great Britain, exclusive of agriculture, rose by 167,000 to 11,586,000 between February 13th and March 13th, while the total number of registered unemployed showed a fall of 170,000 to 1,727,000. As in February, the improvement last month cannot be attributed entirely to seasonal influences. Indeed, in March *The Economist's* index of employment, adjusted for seasonal variations, reached its highest level since November, 1937, while our index of unemployment for March is lower than for any month since February, 1938. The estimated number of insured persons on March 13th, exclusive of agriculture, showed an increase

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN

Date of Return	Unemployment				Employment	
	Registered unemployed aged 14 and over (incl. agriculture)			Percentage of insured persons (aged 16-64) unemployed (excl. agriculture)	Insured persons aged 16-64 employed (excl. agriculture)

Mar. 13	1,727	84.6	1,429	...	11,586	111½

of no less than 196,000 over the figures for the corresponding month last year, while the total number of registered unemployed was 22,000 lower than a year ago. The improvement, moreover, was well spread, both geographically and as between different industries. With the exception of shipbuilding and ship-repairing, all the important industries registered a decline in unemployment between February and March. Compared with March, 1938, the reduction in unemployment was most marked in the principal textile trades and in the motor vehicles, cycles and aircraft industry; on the other hand, the number of persons out of work in the building, engineering, shipbuilding and distributive trades was still higher last month than a year ago. It must be remembered, however, that the unemployment count took place just before Germany's annexation of Bohemia and Moravia and that the figures, therefore, do not yet reflect any effect of the deterioration in international relations during the past three weeks.

Revival in Shipbuilding.—Mr Oliver Stanley's announcement of the Government's proposals to assist the shipping and shipbuilding industries, outlined on page 10 of *The Economist* of April 1st, has produced a rush of new orders for merchant vessels. The statistics given in the following table (based on the *Shipping World's* returns) show that these orders have come none too soon. The number of ocean-going ships under construction at the end of last month was only 52, against 144 a year

MERCHANT VESSELS UNDER CONSTRUCTION
(In thousands of gross tons)

District	Liners		Cargo Vessels		Tankers	
	Mar., 1938	Mar., 1939	Mar., 1938	Mar., 1939	Mar., 1938	Mar., 1939
Clyde	250	173	52	...	127	52
Scottish outports	31	22	35	10	...	7
North-east Coast	125	40	168	43	152	68
Rest of England	55	34	...	...	16	8
Belfast	108	59	...	...	8	...
Total	570	328	256	53	303	135
Of which launched	65	200	65	16	30	49
Of which on stocks or order	505	128	190	37	273	86

ago, and the tonnage of vessels on hand had fallen from 1,128,729 gross to 516,331 gross. But many vessels still under construction at the end of last month had already been launched, and the tonnage on the stocks or on order was only 251,400 gross, compared with 968,900 gross a year ago. In the absence of new orders the industry would therefore soon have been without any commercial work. But the rate at which orders have been placed suggests that the shipbuilding industry has at last turned the corner.

Yarn Price Agreement Renewed.—At the end of last week there was considerable uneasiness in various sections of the Lancashire cotton trade when it became known that difficulties were being experienced in securing a renewal of the price agreement for the range of counts known as 42's American weft. This agreement in the past has comprised 52 firms, owning about 4,000,000 spindles, and is one of the most important sections of the industry. At a meeting of the members it was announced that, with the exception of two mills, all the firms had signed forms agreeing to an extension of the pact for three months. On Friday last strong representations were made to these two firms, and ultimately they agreed to fall into line, and the price scheme will be continued until the end of June. If the pact had broken down there would have been severe price-cutting, especially in view of the fact that many mills hold rather heavy yarn stocks. It is understood that immediately after the Easter holidays all spinning companies in the American section will receive proposals for a comprehensive agreement covering yarn prices, which has been drafted with a view to being ready when the Cotton Industry (Reorganisation) Bill has been passed by Parliament.

Coal Production by Districts.—During the first two months of this year the total output of coal was slightly below production in the corresponding period last year. But, as the following table shows, the changes in production since last year were far from uniform:—

PRODUCTION OF COAL
(In thousands of tons)

District	January-February		Percentage change from 1938
	1938	1939	
Northumberland	2,296.9	2,267.3	- 1.3
Durham	5,493.8	5,174.0	- 5.8
Yorkshire	7,892.2	7,719.3	- 2.2
Lancs, Cheshire and North Wales	2,924.5	2,947.9	+ 0.8
Derby, Notts and Leicester	6,316.8	6,199.2	- 1.9
Staffs, Wores, Salop and Warwick	3,513.3	3,565.3	+ 1.4
South Wales and Monmouth	6,447.4	5,694.9	- 11.7
Other English districts*	955.7	907.3	- 5.1
Scotland	5,090.5	5,055.4	- 0.7
Total	40,931.1	39,530.6	- 3.4

* Including Cumberland, Gloucester, Somerset, and Kent.

While total production showed a reduction of 3.7 per cent. between the first two months of 1938 and 1939, the output of two coalfields (Lancashire, Cheshire and North Wales, and Staffordshire, Worcestershire, Salop and Warwickshire) was actually slightly higher than a year ago. On the other hand, South Wales has suffered a severe recession, largely owing to the reduced intake of France. As our Cardiff correspondent points out on page 102, representations are now being made to the Mines Department to secure the more effective application of the agreement concluded last December.

Fall in Shipping Freight Rates.—After a slight improvement in February, *The Economist's* index of shipping freight rates declined in March to the lowest level registered since September, 1936.

The Economist INDEX OF FREIGHT RATES
(1898 = 1913 = 100)

	Average, 1913	Feb., 1938	Mar., 1938	Dec., 1938	Jan., 1939	Feb., 1939	Mar., 1939
European waters...	110.0	117.6	109.3	109.1	107.4	105.8	106.4
North America	113.1	109.3	110.6	110.3	111.6	110.7	111.3
South America	123.4	122.4	129.6	113.2	110.4	117.1	104.7
India	106.3	130.3	120.0	106.4	108.6	108.2	109.6
Far East and Pacific	117.4	120.4	111.8	97.0	97.8	98.7	94.6
Australia	127.9	113.4	111.6	111.3	111.3	110.0	108.3
Total	116.3	118.9	115.5	107.9	107.9	108.4	105.8
1913 = 100	100.0	102.1	99.2	92.8	92.8	93.1	91.0

As the next table shows, the decline in the index last month was due mainly to the sharp fall in homeward freight rates from South America.

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	99.4	+ 0.6	South America:—	76.3	- 3.9
Bay—outwards	115.6	+ 5.6	Outwards	133.0	- 19.0
Bay—homewards	125.9	...	Homewards	89.2	- 2.0
Mediterranean:—			India—outwards	130.0	+ 4.8
Outwards	77.4	...	India—homewards	94.6	- 4.1
Homewards	120.8	- 3.2	Far East, etc.	108.3	- 1.7
North America	111.3	+ 0.6	Australia	...	...

In view of the low level to which tramp freight rates have now fallen without a corresponding reduction in costs, the Government's proposals to assist the industry have come none too soon.

INDUSTRIAL REPORTS

THERE are no signs, as yet, of a check to the expansion in industrial activity. The textile trades have not booked many new orders, but activity has been maintained on orders received before the deterioration in European political relations. The cotton industry has increased its sales to India, a consequence of the new commercial agreement. The coal trade remains active, except in South Wales, and total production is now almost as high as a year ago. The demand for iron and steel remains on the up-grade, a reflection of the expansion of activity in the steel-consuming industries. Shipbuilders have already secured substantial orders since Mr Oliver Stanley's announcement of the Government's proposals to assist the shipping and shipbuilding industries.

Coal

Sheffield.—Demand for industrial fuels shows some further improvement, and steam coal generally is in better request. Prices are steady for South Yorkshire and Derbyshire hards at 18s.-19s. per ton at pits. Small coal is moving more freely to coke works, and there are more inquiries for rough

slacks and coke breeze for electricity undertakings. Gas coal is taken up less readily, and household coal has gone rather quiet. Fuller production of pig iron is helping the coke industry.

Export demand is poor, and prospects are not encouraging, prices being regarded as too high compared with quotations from Scottish and north-east coast pits.

Newcastle-on-Tyne.—Demand for Durham coking coal continues to be the feature of the north-east coal market. Export inquiry for this class of fuel is brisk and in addition local industrial requirements are showing a gradual improvement. Bunker trade remains quiet. Northumberland steam collieries continue to experience difficulty in clearing smalls, which forces a curtailment in large coal production. Patent oven coke has a steady outlet abroad, whilst in the home trade there is evidence of greater activity.

Glasgow.—The Scottish coal market remains steady in tone. In the home market the household trade is showing the seasonal slackening, but this is

Rhodesian Copper Expansion.—At the annual meeting of Rand Selection Corporation, the report of which was published early this week, the chairman pointed out that Rhokana Corporation, the largest Rhodesian copper producer, has now completed its expansion programme. As a result the company was able to raise its output to a peak level of 13,000 tons per month during the brief period of unrestricted production late in 1938. In other words, it appears that Rhokana's annual capacity is now in the vicinity of 150,000 tons, which is 30,000 tons more than was commonly expected. Roan Antelope, the second of the Rhodesian producers, is able to supply 120,000 tons, while Mafikeng, the third of the companies now producing copper in Northern Rhodesia, has a capacity of 90,000 tons which, however, will be raised further by development work now in progress. Altogether the three Rhodesian producing mines have at present a capacity of 360,000 tons. In addition to these three companies the N'Changa Consolidated Copper Mines, Ltd., a subsidiary of Rhokana, decided to recommence its development work at the time of high copper prices in the first quarter of 1937. Operations may start with the pilot plant this summer, and although it will take some years for the development work to be completed, this mine may ultimately produce as much copper as Rhokana. Consequently it appears practically certain that Northern Rhodesia will be able to produce within a few years about 500,000 tons of copper per annum at very low costs of production, which average now less than £25 per long ton. Consequently the developments in Northern Rhodesia are of outstanding significance for the international copper market, as they tend to support a policy of reasonable copper prices.

Higher Aluminium Prices.—On July 21, 1938, the export price of aluminium was reduced from £100 per metric ton, at which level it had stood since 1932, to £90 per ton. Last week it was raised again to £95 per ton. Since the aluminium cartel has in the past been anxious to avoid price changes in either direction, it is presumed that consumption in the first quarter of 1939 has shown a marked increase. Between 1933 and 1937 the stocks accumulated by the cartel were absorbed by the rising consumption, which outstripped the steady increase in production. Productive capacity in many countries,

(Continued overleaf)

meantime offset by the busier conditions now ruling in the industrial market, where demand from the heavy trades in particular has broadened out considerably owing to the pressure of work in connection with the re-armament programme.

The shipping trade is also being well maintained on the whole, and with the Baltic season due to open soon the prospects in this department are viewed with a fair degree of confidence, although the international developments are naturally having an unsettling effect in various directions. Prices generally remain steady, and the majority of the collieries in all districts are having regular employment.

Cardiff.—In view of the approach of the Easter holidays shipments are a little more active at the South Wales docks. Last week they totalled 372,700 tons, compared with 345,200 tons the previous week and 394,395 tons in the corresponding week last year, and a favourable stemming position is reported for the whole of the current week.

There has been no appreciable expan-

including the United Kingdom, is again being expanded, but re-armament demands, coupled with the growing use of aluminium in other industries, is likely to absorb the higher level of supplies.

* * *

The Indian Sugar Industry.—In March, 1931, the Indian Government imposed duties ranging from 1 to 8 rupees per cwt. on imported sugars, with the object of stimulating the home industry. In this, the duties have undoubtedly been successful. Indian production of white sugar increased from 355,000 metric tons in 1930-31 to 1,275,000 metric tons in 1936-37, while imports have fallen in the same period from 825,000 tons to 40,000 tons. But this very rapid growth in the home industry has now been checked by the appearance of over-production in the domestic market. The record crop of 1936-37 brought a severe fall in sugar prices, which not only threatened the existence of many of the smaller and less efficient factories but also caused a fall in the prices paid to the ryots for their cane. Consequently, the Governments of the two States mainly concerned, Bihar and the

United Provinces, passed in 1937 Sugar Control Acts which provided for the organisation of the factories in a Sugar Syndicate, which has powers to fix minimum selling prices and to regulate factory output by means of quotas. Prices paid to the growers for their cane sugar are now fixed by the two Governments, after consultation with the Sugar Syndicate. The main result of these Acts is reflected in a rise in the price of Indian sugar (first crystals, ex-Kantapur) from Rs. 8.4 in March, 1938, to Rs. 11.4 at the present time. The United Provinces Government has, however, recently ordered a further increase in sugar cane prices, while the Sugar Syndicate is unwilling to raise further the wholesale price of sugar, which is already so high that competition at ports from duty-paid Java sugar is increasing. Costs of production in India are very much higher than in Java, partly because the sugar cane is grown mainly outside the tropics, and so has a low sugar content, partly because standards of cultivation are low, and partly because of the inefficient working of many of the smaller factories erected in the post-tariff boom. Consumption of sugar in India is still extremely low, and the present level of prices, which has undoubtedly benefited the cane-growers in Northern India, is more likely to restrict than to increase the level of consumption.

sion, however, in the volume of new business. Small orders have been placed by the Palestine Railways and the Swedish Navy, but recent political events in Continental Europe are not stimulating any exceptional demand for steam coals, and this week representations are being made to the Mines Department with a view to the more effective application of the terms of the agreement between the French and the British Governments of December last.

There has been a slackening in the inland demand for household coals, but the improvement in the demand for industrial qualities is being maintained. Steam smalls are quiet, but for other small grades there is a better tone, and particularly for coking qualities. Prices are nominally unchanged.

Iron and Steel

Sheffield.—The iron market shows up poorly by comparison with the activity in the steel market. There is a slight improvement in the demand for foundry pig iron, but forge requirements are very slight. Basic pig iron, on the other hand, is in steady request, and business in hematite is showing signs of revival. Finished iron continues stagnant, although there are some transactions in marked bars.

Basic steel billets are being bought much more freely, and forward business is on a better scale than for some time. Acid billets are in steady request, as are wire rods and strip. Better delivery specifications for structural steel are being made, and new business shows distinct improvement.

With full supplies not too easy to obtain, there is much activity in the iron and steel scrap market. There are plenty of buyers of heavy basic steel for melting at 59s. per ton, and good business is being done in high-speed steel at £55 per ton. Heavy foundry cast iron is readily taken up at 75s., and heavy wrought shearing iron is a good market at 72s. 6d. per ton.

Steel output is being expanded, largely to meet Government requirements, but ordinary commercial demand is also increasing. The heavy branches of industry in this district are booked up, and at some establishments day and night working is necessary.

Middlesbrough.—Activity in this area is concentrated on the production

of basic steel, the demand for which is increasing. In addition to the requirements of Government departments, further orders are being received from commercial users, and orders placed for new steamers on the Tyne and Wear are bringing inquiries and orders for steel from the shipyards.

Shipments of manufactured steel from the Tees during March amounted to 32,000 tons, of which 20,000 tons went abroad; shipments of pig iron amounted to 2,924 tons, of which 1,734 tons went to foreign destinations.

The demand for Cleveland foundry pig iron is unchanged, but the foundry owners who have been using iron scrap are now finding this difficult to obtain. East Coast hematite deliveries are increasing, and stocks in makers' hands are being reduced. Only odd parcels of special quality are sold to the Continent. The increased output of basic iron will, it is expected, necessitate increased imports of foreign ore.

Imports of ore during March amounted to 104,000 tons, which is approximately 7,000 tons more than in the previous month. Heavy steel melting scrap is scarce, merchants having no difficulty in disposing of any quantities which come on to the market.

Glasgow.—Steel production in the west of Scotland is at a very high level and this notwithstanding that orders for shipbuilding material are exceedingly moderate. Improvement in this direction is looked for at an early date, as a result of the Government's plans to assist shipbuilding. Even now works are operating practically at capacity and output is being rapidly absorbed. Sheet re-rollers and sheet galvanisers are also working to capacity and are finding it impossible to meet the full demands of users. Makers of tanks and all classes of containers, sheet metal workers, engineers, machinery makers and most other branches of the iron and steel industry in the west of Scotland are exceedingly busy and, provided supplies of raw material are readily obtainable, there is every prospect of the improvement being sustained for many months.

Cardiff.—In the week ended March 25, the production of tinplates declined slightly compared with that

in the previous week, but inquiries generally are more active and unexecuted orders for the current year have been increased during the week from about 4 million boxes to over 4.4 millions. Exports were disappointing last week, but home deliveries were expanding. Prices are nominally unchanged. The home demand for sheets is exceptionally strong, and the heavier departments of the iron and steel industry are operating well up to capacity.

News from Abroad.—Recent reports on the activity of European steel producers have been more cheerful. Although this is due not so much to a revival of international trade as to increased armament orders, it is possible that sooner or later this improvement will have favourable repercussions on international trade. Up to now, the scarcity of export orders has had a depressing effect on prices and the political uneasiness has further aggravated matters, although the Cartel only recently reaffirmed the official price level. But it is symptomatic that certain French steel exporters who hitherto sold below official prices have lately discontinued this practice owing to the enlarged French armament programme. Similarly, Polish competition on several markets, which was mentioned a few weeks ago, has perceptibly diminished. It is very likely that the anxiety of steel producers to book export orders will decrease further, thus removing the pressure under which international steel markets have hitherto suffered.

British purchases of semi-products, particularly in Belgium, have remained on a large scale, but the arrears under the Cartel agreement are still formidable. In Holland, American competition is particularly keen in plates, and Scandinavia is purchasing only medium tonnages. Trade with the Far East has been quieter.

The Comptoirs of the Steel Cartel met in Paris on March 29 and 30 and discussed, in addition to routine matters, the price policy towards competition from outsiders. Rumours according to which the Comptoirs have given instructions to their members to accept any price quoted by outsiders, are reported to be based on a misunderstanding. Actually, it is left to the Comptoirs to decide whether an outside quotation

should be accepted, although this is being done in many cases, especially when large orders are involved. A final solution of this problem has not yet been found.

Textiles

Cotton (Manchester).—Traders have been harassed by uncertainties relating to politics and raw cotton prices. On the whole, however, rather more business has been done than might have been expected, the undercurrent of demand being encouraging. Raw cotton prices varied with rumours concerning the future policy of the United States Government. There is some doubt as to whether the export subsidy plan will be put into operation. It has been stated that the Government has offered to trade direct with important Lancashire spinning organisations. Some local cotton merchants have been concerned at the course of events and representations have been made to Washington that any action taken should be through the usual commercial channels.

The yarn market has been unsettled, business being disorganised by the many ups and downs in raw material prices. Fair weights, however, have been booked in coarse American counts. Some difficulties arose in connection with the renewal of the price agreement for medium American wefts, which is discussed on page 100. Orders in Egyptian yarns have been given out rather unevenly.

Manufacturers of piece-goods have not been short of inquiry, but actual business has been irregular. Most of the contracts secured have been in descriptions suitable for the home trade, and quite a number of Government contracts have been placed in fine and heavy materials, and also in bandage cloths. Buying for India has increased, and a considerable turnover has taken place in well-known styles. Further orders have been obtained in fancies for Java and the Straits Settlements. Irregular buying has taken place in poplins and limbrics for South America.

Jute (Dundee).—It is now becoming very evident that there is to be a squeeze for raw jute before the new crop becomes available. Sellers are most reserved and never has there been such a scarcity of offers made by shippers at this period of the season for both old and new crop. The reports of the weather affecting the latter have been unfavourable recently, continued lack of rain holding up ploughing and sowings. This is a critical period for the new crop and if rain does not come soon, the expected increase in the area this season may not take place. Imports of old crop into Calcutta for the first nine months of this season to March 31st were 8,375,000 bales, compared with 8,600,000 bales last season, while the Indian jute mills have bought in the same period 5,400,000 bales and 5,200,000 bales, respectively. If the mills do not wish to deplete their stocks further this year, they have yet to purchase approximately 600,000 bales to meet their requirements, estimated at 6,000,000 bales, compared with their actual consumption last season of 7,038,000 bales, when there was unrestricted production. With the exception of a few small establishments working 72 hours, all mills are now running only 45 hours per week.

In spite of the reduction in working hours in India and the fact that the British Government placed orders for 200 million sand-bags with the Calcutta mills, stocks of hessians at that centre continued to increase until they are approximately 500 million yards. Business here has continued quiet and there has been little doing apart from sand-bags for the Government, deliveries of which are maintained at 4,000,000 bags per week, and also for private firms. Prices are very firm all round, as both spinners and manufacturers are busy.

THE COMMODITY MARKETS

THE general movement of the prices of sensitive primary products was downwards, due to the uncertain political situation and to the growing belief that recovery in the United States may be delayed. Many consumers, consequently, are again securing only their immediate requirements. Moody's index of the prices of sensitive commodities in the United States (December 31, 1931 = 100) declined from 136.1 to 135.1 during the week ended last Tuesday.

Among individual commodities, wheat prices are scarcely changed on the week, but raw sugar prices continued their upward trend, due, largely, to the poor European crop. Raw cotton prices varied with rumours concerning the American Government's future policy, and jute rose in price on renewed fears of a shortage of supplies. The market in rubber was dull, but prices showed little change. Copper, lead, spelter and tin were all marked down a little.

Metals

Copper.—The event of the week was the reduction of the United States domestic price from 11.25 cents to 10.75 cents per lb. on Monday last. So far the cut was only made by the American Smelting and Refining Company, the largest United States producer, but it is most likely that the other big concerns will follow suit. After displaying great resistance to the adverse outside influences, the standard cash price of copper in London fell considerably on Tuesday in sympathy with the American price reduction, and closed on Wednesday at £42 16s. 3d. per ton, a net loss of 6s. 3d. on the week. The demand was slightly larger than in the previous week, but still well below normal.

Tin.—The demand for tin was very small and prices fluctuated considerably to close on Tuesday £1 down at £215 per ton. Moreover, the March statistics were not too good. According to A. Strauss and Company, Ltd., London, the total visible supply of tin declined from 33,652 tons at the end of February to 32,872 tons at the end of March. The reduction was solely due to the sharp drop in the Straits carry-over. New supplies amounted to 9,063 tons in March, a decline of 102 tons on the month, while world deliveries, at 8,187 tons, were up by 1,856 tons. Even at the higher level, however, they remained well below normal.

Lead and Spelter.—Quotations for lead declined by 10s. to close on Tuesday at £14 3s. 9d. per ton, while the cash price of spelter fell by 12s. 6d., thus closing at £13 1s. 3d. per ton. The demand for the two metals continues to be restricted by the uncertain political outlook which may influence the amount of new building, while international supplies are plentiful. Stocks of spelter in official warehouses totalled 24,321 tons on March 31st, against 25,771 tons a month before, while lead stocks fell from 13,976 tons to 13,536 tons. In both cases the stocks at the end of March were comparatively low, although the figures do not impress the market. It is learned that the question of the British spelter duty may be settled before the end of April and this would, of course, remove one of the chief uncertainties of the zinc market.

Grains

CHANGES in political sentiment have influenced the grain markets more than purely commercial considerations. After a rise in prices at the end of last week, the wheat market again declined and Canadian wheat was cheaper on Tuesday than a week ago. Australia continues to sell cargoes of flour to the East and consequently there is little pressure of Australian wheat in London. The maize market remains steady, but little business has been transacted in feeding barley.

Other Foods

Provisions.—Bacon prices were sharply reduced at the end of last week, except for Danish. With smaller imports from Continental countries, egg prices were firmer than in previous weeks.

Colonial Produce.—The futures market for raw sugar was firm early in the week; demand for refined was also good and prices were advanced 1½d. per cwt. for all types at the end of last week. Business was brisk at the London tea auctions until the last auction before the holidays, when the tone was quieter.

Fruit and Vegetables.—Until larger supplies came on to the London markets early this week, wholesale prices of English potatoes showed steady advances. The approach of Easter brightened trade in vegetables and fruits and all forms of salad have been in brisk demand.

Miscellaneous Commodities

Oils and Oilseeds.—These markets are generally steady, with the exception of that for Egyptian cotton seed, the price of which has eased further to £5 10s. per ton for March loading to Hull. English crushers have ample supplies of oilcakes on hand and the international markets are supported mainly by the steady level of American buying.

Rubber.—The volume of business has been small, but prices have remained steady, with only minor fluctuations caused by changes in political feeling. The price of standard ribbed sheet on the spot closed on Tuesday unchanged at 8d. per lb.

COMPANY MEETINGS

BANK OF SCOTLAND

SATISFACTORY RESULTS OF YEAR'S OPERATIONS

STRONG LIQUID POSITION

POSITION OF SCOTTISH INDUSTRIES

LORD HENRY SCOTT'S REVIEW

The annual general meeting of the proprietors of the Bank of Scotland was held within the Head Office, Edinburgh, on the 4th instant. In the absence abroad of the Right Honourable Lord Elphinstone, K.T., Governor of the Bank, the Lord Henry Scott, Deputy Governor, presided.

In submitting the directors' report the chairman said:—
Ladies and gentlemen, I assume that, as usual, we may hold as read the report by the court of directors of the affairs of the Bank as at February 28th last, a copy of which you have all no doubt received.

The directors regret the loss by death during the year of Mackintosh of Mackintosh, who had been an extraordinary director since 1927.

TRADE AND INDUSTRY

The year has been an anxious one, and political unrest throughout the world has made conditions of trade and industry difficult and uncertain in this country as elsewhere. It is greatly to be hoped that means may be found to remove the suspicion and fear with which the nations of the world have come to regard each other, and it is to this end that the efforts of all men of goodwill should be turned, efforts which might be signally aided by restraint and moderation of statement and criticism in public and private speech, in the Press, and by radio. Until the removal of this mistrust is brought about there can be no real improvement of trade conditions between the countries, which all of them so greatly need for their mutual advantage and prosperity.

In our own country the condition of normal trade and industry has been adversely affected by those world conditions. It is true that, as countering this result in some measure, the Government programme of re-arming and protection has brought about increased activity and employment in various directions, such as, for example, in the case of coal, iron and steel, and jute, in shipbuilding for the Admiralty, as well as in work for the Air Ministry. In shipbuilding, however, if we except the companies which undertake Admiralty orders and are consequently full of work, there has been a marked decline in the construction of mercantile tonnage. Among the contributory causes of this are the subsidies and aids granted by foreign Governments to their national shipping and shipbuilding industries. It is essential that the position of our merchant shipping should be strengthened on both the owning and building sides of the industry if we are to maintain the volume of shipping necessary for our vital needs in peace and in war, and the scheme just announced by the Government is a welcome contribution to this end.

The weakness so often pointed out in Scottish industry that it is too dependent on the heavy trades to achieve uniform prosperity is being progressively removed by a gradual extension of the lighter industries, and this has been increasingly evidenced during the year at Hillington at well as in other areas. Agriculture, owing principally to extremely unfavourable weather conditions at harvest time and to heavy falls in the prices of cereals, sheep and wool, has had a most disheartening year, and there must be few farmers who have not suffered loss. Any plans which the State may devise in an effort to give new life to this staple industry will be worthy of sympathetic support from the people of the country. In the fishing industry definite progress has been absent. The recently appointed Herring Industry Board, however, announced a few weeks ago a scheme providing for grants to herring fishermen for new motor boats, and this, combined with other plans being formed for improving markets for the product, will, it is hoped, result in some progress during the ensuing year.

THE BANK'S BALANCE SHEET

If you will now turn to the balance sheet you will, I think, agree that the results of the operations of the past year are satisfactory. The deposits at £37,851,691 show a decrease of £1,446,759, but this is due to the course of ordinary business fluctuations. Our

connections generally, both throughout Scotland and in London, continue to be maintained.

The note circulation at £3,414,725 shows an increase of £50,958. The average circulation for the year is again substantially in excess of the corresponding figure for the previous twelve months.

The item drafts issued calls for no special comment.

The increase shown in acceptances is due to extended connection and increased business.

STRONG LIQUID POSITION

On the assets side, cash, bank balances, documents *in transitu* and money at call and short notice amount to £9,929,151, i.e. 22 per cent. of our liabilities to the public. Bills discounted (including £450,000 of Treasury bills) and our investments amount to £26,259,729, or 57 per cent., giving a total of £36,188,880, or 79 per cent., of our liabilities to the public in liquid assets.

ADVANCES

Our advances at £9,727,397 show a small decrease of £140,890. We would be glad to welcome a substantial increase in the demand for loans from borrowers worthy of credit, and, needless to say, we are in a position to meet all the reasonable demands of our customers and connections for legitimate banking accommodation.

INVESTMENTS

Our investments at £25,676,799 show a decrease of £434,995. With the exception of £938,709, they are all in British Government securities. The surplus in the market value over the value appearing in our books, while lower than a year ago, is very substantial.

BANK PREMISES AND HERITABLE PROPERTY

During the year a new branch has been opened at Bishopbriggs. The reconstruction and renovation of the premises at several of our branches has been completed, including our Princes Street, Edinburgh, branch. In addition, various properties have been acquired as premises and as houses for agents. At present some internal reconstruction is being carried out at our head office to provide accommodation for an increased staff. Notwithstanding all the expenditure involved, the Bank's premises and let property stand at the same figure in the balance sheet as formerly, viz., £465,000. It will be readily understood that in our property account we have a large surplus.

RESULTS FOR THE YEAR

It is noticeable that although our capital employed is now large the net profits at £305,634 are £7,619 under those of last year. The lower net profits are due to higher taxation and the considerably increased charges for staff remuneration.

I need not assure you that before our net profits are arrived at every known bad and doubtful debt has been fully provided for.

The net profits are	£305,634
Add: The balance from last year	150,084
	<u>455,718</u>

Deduct:	
Applied to reserve fund	£50,000
Transferred to trustees for officers' pension fund	30,000
Transferred to heritable property accounts	15,000
Dividend at 12 per cent. per annum, less income tax	208,800
	<u>303,800</u>

Leaving to be carried forward	£151,918
-------------------------------	----------

THE TREASURERSHIP

As you will see from the report, Mr A. W. M. Beveridge, who has been treasurer of the Bank since May, 1934, expressed the wish to retire at October 31st last. I need hardly say with what sincere regret the board accepted his resignation, but we felt that after forty-eight years' service in the Bank Mr Beveridge was entitled to what we all hope will be a long period of well-earned leisure.

We have placed on record in our minutes our high appreciation of the valuable services rendered by him during his tenure of office, of the ability and success which characterised his management, and of the manner in which he maintained the best traditions of the office.

It gives me great pleasure to mention here that the staff of the Bank have combined to show their regard and esteem for Mr Beveridge by presenting to the Bank his portrait, painted by Mr James Gunn. They also presented Mrs Beveridge with her husband's portrait executed by the same artist. These spontaneous acts on the part of the staff give the directors much gratification as confirming their own high appreciation of Mr Beveridge. I am sure the proprietors will join with the board and the staff in their good wishes to him on his retirement.

As a successor to Mr Beveridge the board appointed as treasurer Mr J. W. Macfarlane, the secretary of the Bank, and Mr J. B. Crawford, formerly manager at Glasgow, as secretary in succession to Mr Macfarlane.

BANK STAFF

I wish once again on behalf of the court of directors to express our appreciation of the excellent services rendered by the executive, managers, agents and staff generally throughout the year. In this connection I would again refer to the very useful work performed by the staff joint council, which includes five elected representatives of the staff.

Mr James Brown, assistant secretary and accountant of the Bank, some time ago expressed the desire to retire as at April 30th after

WESLEYAN AND GENERAL ASSURANCE SOCIETY

SATISFACTORY PROGRESS

MR JOHN B. FIELD'S REVIEW

THE SOCIETY'S ACTIVITIES

Let me again call your attention to the fact that, with the exception of marine risks, the Society transacts every description of insurance business. In particular, I desire to point out a most attractive form of life assurance contract which should specially appeal to young married men, and which is known as the "Triple Benefit" policy. As an example of this, a man aged 30 next birthday can for a monthly premium of £2 3s. assure the payment of £1,000 at age 65 or at previous death, and, in addition, should he die within 20 years from the date of the contract, his widow will receive £150 a year for the balance of the twenty-year period. Thus, while the policy owner cannot pay more than £903 in premiums (not to mention the benefit of income tax rebate) and may pay a great deal less, the maximum benefit under such a policy is £4,000 and the minimum £1,000.

The facilities for house purchase offered by the Society are most comprehensive and should be more widely known. In this connection it should always be remembered that, in the event of the borrower's untimely death, the advance is automatically repaid and the house freed from mortgage.

The Society grants annuities at attractive rates, and amongst its other activities are the issue of contracts providing pensions for life, the insurance of groups of employees upon special terms, and the transaction of fire, accident, motor vehicle, employers' liability and similar types of insurance.

It should also be borne in mind that every member of this Society who holds a life or endowment policy for £500 or over has the privilege of being medically examined, if he so desires, once in every two years at the Society's expense.

TRIBUTE TO THE STAFF

I am pleased to say that the members of the staffs have continued to show their loyalty by honest hard work, and have made it abundantly clear that they realise that their united efforts as a team will help the Society to further achievements which will enable both policyholders and employees to enjoy even better benefits in the future than in the past.

The report and accounts were unanimously adopted.

The rate of reversionary bonus allotted to ordinary department with-profit policies is £1 18s. per cent. of the original sum assured. The directors are gratified that it has been possible to maintain this good rate, which is the same as that allotted for 1937.

In the industrial department a profit-sharing scheme was instituted in the year 1927. Under this scheme the sum of over £720,000 has been allocated to industrial policy owners, although, under the conditions of their policies, they have no claim to any such allocation. This year £64,935 has been allotted to them to provide the continuation, until March 31, 1941, of the same scale of mortuary bonus as was previously granted.

BONUSES

PREMIUM INCOME, INTEREST AND ASSETS

The total premium income amounted to £2,319,362. This is £80,770 greater than the corresponding figure for 1937, and may be taken as a measure of the Society's progress.

The net rate of interest earned on the funds, at £4 3s. 1d. per cent., was only 1s. 6d. less than in the previous year, notwithstanding the higher rate of income tax and provision for National Defence Contribution.

The expense ratios of both the ordinary and industrial departments have been further reduced.

The assets now amount to nearly £16½ millions, and are over £800,000 greater than a year ago.

NATIONAL BANK OF EGYPT

POSITION AS CENTRAL INSTITUTION

SIR EDWARD COOK'S ADDRESS

The thirty-ninth annual general meeting of the National Bank of Egypt was held, on March 23rd, at the head office of the bank, Cairo, Sir Edward Cook, C.S.I., C.I.E. (the Governor), presiding.

BALANCE SHEET, DECEMBER 31, 1938

GOVERNOR'S SPEECH

The Governor said: A year ago I spoke to you of record crops and of greatly increased purchasing power. Since then there has been a setback, the cotton cultivation having been doubly hit. The low level of prices to which cotton fell two years ago was largely compensated by the size and quality of the crop. Last year prices remained as low, while throughout most of Egypt the producer obtained a very poor yield per acre, owing to floods and pests. It is mainly cotton that pays rents and taxes, and there is no doubt that many cultivators have recently been going through a difficult period.

Similarly, it is principally on the export of cotton that Egypt depends for the funds wherewith to purchase the goods she needs and for her other foreign payments. Exports of cotton have recently improved, but are still substantially behind those of last year. This reduction, combined with lower prices, has had its effect on the balance of trade. During the previous five years this had, on an average, been favourable to the extent of nearly £E.3 millions a year. In 1938 there was an adverse balance of nearly £E.7 millions. Fortunately, the mechanism for maintaining the stability of the piastre-sterling exchange is fully adequate to meet all such trade variations.

Past experience has shown any attempt to bolster up cotton prices must in the long run do more harm than good. There can be no question that in the long run Egypt stands to gain by following her traditional policy of growing as much cotton of the finest quality as she can and selling each crop at the best price she can obtain, without waiting for something better to turn up or expecting her Government to attempt the impossible.

At a time when things may seem not so bright, it is well to remember the old saw "Count your blessings." I have often reminded you of the many advantages which Egypt possesses—her fertile soil and hard-working peasantry, finances that have been carefully nursed, a public debt which is probably unique in being lower than before the Great War, and a currency which is sound. Past experience has shown that she has a marked resiliency and recuperative power.

THE BANK'S YEAR

There has been a general fall in all Gilt-edged values during the past twelve months, but our securities have been so conservatively valued in our books that it has not been necessary for any charge on account of depreciation to fall on the profit and loss account.

There was a somewhat greater demand for loans during the year, owing to the larger stocks of cotton carried by the export firms, our advances of all sorts on December 31st being £8.5 millions, as compared with £6.6 millions at the end of the preceding year. Our net profits, after providing for bad and doubtful debts, have thus risen from £459,575 to £474,641. We ask you to approve the payment of the same dividend as in the previous year, absorbing £450,000, and leaving £24,641 to be added to the carry-forward, which will then stand at £264,085.

PROBLEM OF BANK'S FUTURE

There are many who would go so far as to say that, in the National Bank, Egypt already possesses a bank which, if not a central bank of the classic type, is, for all practical purposes, as

HUNGARIAN GENERAL CREDITBANK

SATISFACTORY RESULTS

The board of directors of the Hungarian General Creditbank at their meeting, on the 20th ultimo, approved the balance sheet for the business year 1938. This balance sheet shows for the first time the assets and liabilities of the Hungarian General Savingsbank, Limited, merged into the Creditbank in March, 1938. After writing off 1,576,051.72 pengő, and including the surplus of 3,233,662.15 pengő from 1937, there was a net profit of 5,498,300.15 pengő, as against 5,033,662.15 pengő for the previous year, resulting after writing off 674,447.80 pengő and including the surplus of 2,479,959.83 pengő from 1936.

The board of directors decided to propose to the general meeting convened for March 30, 1939, that out of the available net profit the following appropriations be made: payment of a dividend of 1.50 pengő per share, 1,242,000 pengő; transfer to ordinary reserve fund, 500,000 pengő; to depreciation reserve fund, 200,000 pengő; to employees' pension fund, 1,200,000 pengő; for a Baron John Harkányi relief fund to be created in memory of the late chairman of the bank, 100,000 pengő; leaving 2,256,300.15 pengő to be carried forward.

The business activity of the bank showed a material increase during 1938, partly owing to the absorption of the Hungarian General Savingsbank, Limited, with its extensive network of branch offices, and partly owing to the expansion of current business. There may be noted in particular the development of deposits, which can be termed quite satisfactory, considering the difficult conditions prevailing during last year, and the further important decline in the foreign liabilities of the bank. The investment contribution (capital levy) assessed under Act XX of 1938, amounts to 9,444,822 pengő; according to the proposal of the board of directors this capital levy would be covered, as provided by the Act referred to, out of the capital reserve, and the amount remaining after payment of the sums falling due would be shown on a capital levy suspense account. Capital reserve would thereby be reduced to 10,958,410 pengő, as against 20,403,232 pengő shown at December 31, 1937.

The cash turnover rose from 3.2 milliard pengő in the previous year to 4.4 milliard pengő, while the turnover on current accounts increased from 9.1 milliard pengő in 1937 to 12.8 milliard pengő, there being also a considerable advance in the number of customers.

The aggregate amount of deposits held by the Creditbank and the Hungarian General Savingsbank amounted to 298.6 million pengő at the end of last year; of this total, savings deposits amounted to 88.9 million pengő and current account deposits to 209.7 million pengő. Deposits held by both banks, as shown separately for the last time before their merger, amounted in the aggregate to 288.5 million pengő, whereof 111.4 million pengő were savings deposits and 177.1 million pengő current account deposits. The net increase of 10 million pengő thus resulted from a decline of 22.5 million pengő in savings deposits and an increase of 32.6 million pengő in the amount of current account deposits.

The sum of 7.3 million pengő shown in the balance sheet as liabilities towards inland creditors under the head of "Sundry Creditors" represents transitory items. Foreign liabilities, figuring under the head of "Sundry Creditors" declined from 24.7 million pengő to 18.8 million pengő and were thus 5.9 million pengő less than in the previous year, notwithstanding that this item includes also the foreign creditors of the Hungarian General Savingsbank, Limited.

Cash in hand, clearing account deposits and accounts with banks and bankers show an advance totalling 7 million pengő as compared with last year.

Securities and participations are shown up in the combined balance sheet for 1938 at 71.7 million pengő, including 6.9 million National Investment Loan bonds, subscribed by the bank.

Guarantees have increased by 5.7 million pengő, notwithstanding a considerable decline in foreign liabilities of this kind, which has been, however, outweighed by the extension of guarantees due to the further development of banking business done within the country and especially to the investments programme of the government.

The results achieved by inland and foreign branches of the bank were satisfactory also in the past year.

As to the various items of the profit and loss account, earnings from interest and commission expanded owing to the increase, due to the merger, in claims outstanding. Profits on transactions in stocks and foreign exchange show a slight decline. The increase in expenditure was mainly due to the merger and in part to new appointments on the staff, as well as to extraordinary donations for public purposes.

"central" as is possible in Egypt's present stage of development.

This may be true, yet the present position is not entirely satisfactory, either to the Government or to the bank. The fact is that our position *quid* Central Bank, our privileges as well as our responsibilities, rest on no assured or statutory basis. We may be to a large extent a central bank in fact, but we are not so in form. The Government feels that it has no guarantee that the bank will always continue to act in the same spirit as at present or that its ownership may not pass into hands where it may be undesirable in the national interests that the ultimate power over the management should lie. Further, it considers that the framework and powers of an institution, designed to meet the conditions of 1898, are in some respects not suited to the needs of modern Egypt. The bank on its side feels that it has no guarantee as to its own future, and is therefore unable to take the long views necessary if it is to continue to build on the foundations already laid.

A patient study of the whole position has shown both parties that there may be no need to adopt a course which would be as intensely disagreeable to ourselves as it would be harmful to the best interests of the country. We have recently been informed by the Government of the conditions upon which they are prepared to advise His Majesty to grant the bank a new charter. These are now under our examination, and if we feel able to recommend their acceptance we shall summon you to an extraordinary general meeting in order that you may consider any amendments to our present statutes that the proposals may involve.

Before agreeing to retain their capital in the bank for a further period, the shareholders have a right to require some assurance that on the financial side any new arrangements will not be likely in themselves to impair the security of the money they have so invested. Further, the success of the bank during the forty years of its existence and the services that it has been able to render to Egypt, have been due mainly to two things. First, the efficiency of its personnel who, entering the bank's service as young men, have been trained in the technique and in the best traditions of their profession. Second, the bank's freedom from political influences. We have reason to believe that the Government do not regard the safeguarding of these vital points as incompatible with those national interests which it is their duty to protect.

The report was adopted.

RHODESIA RAILWAYS, LIMITED

LARGER REVENUE

The annual general meeting of the Rhodesia Railways, Limited, was held, on the 5th instant, in London.

Mr Arthur E. Hadley, C.B.E., the chairman, said that the gross revenue of the company had amounted to £5,030,636—an increase of £321,567, or 6.8 per cent. General trade in Southern and Northern Rhodesia had been well maintained, and general goods traffic had accounted for £220,000 of the increase. Receipts from passenger traffic had increased by £20,000, the balance of £82,000 being mainly accounted for by additional receipts from mineral traffics. Copper from the mines in Northern Rhodesia and the Belgian Congo had been well maintained at 287,028 tons; there had been a decline of 11,848 tons in the output of zinc from the Broken Hill Mine, while the railage of chrome ore had fallen by 24,088 tons, due to the reduced demands in the United States; asbestos at 56,220 tons was less by 4,782 tons. Coal and coke traffic, due to increases in the local requirements of the general public and the copper mines, had risen by 42,597 tons to the substantial figure for the year of 950,359 tons. Operating expenditure, including provision for depreciation and renewals of £518,161, showed an increase of £333,956 at £3,110,363.

As a result of the year's operations, there was a surplus of gross revenue over working expenditure of £1,920,273, or only £12,389 less than the previous year—the best in the history of the company. The available profit was £827,860, comparing with £916,772, and, in accordance with the terms of the Railway Legislation in force in the territories of Southern Rhodesia, Northern Rhodesia and Bechuanaland Protectorate, £100,486 of the profit had been placed to the credit of the rates stabilisation account, £100,000 had been transferred to the dividend account and £627,373 had been credited to the statutory reserve account. From the dividend account, which now amounted to £100,226, the directors now recommended that £100,000, less tax, should be distributed to the members. As regarded the current year, the fall in gross revenue was partly due to reductions in the rates for the copper mining companies, but the trade position in the territories served by the railways continued to be satisfactory.

The report was unanimously adopted.

DUNLOP RUBBER COMPANY, LIMITED

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES

SIR GEORGE BEHARRELL'S ADDRESS

The fortieth ordinary general meeting of the Dunlop Rubber Company, Ltd., was held, on the 4th instant, at the Edward VII Rooms, Northumberland Avenue, W.C.

Sir J. George Beharrell, D.S.O., the chairman of the company, in the course of his speech, said:—

The report which your board has been able to make on the results of the year 1938 has, no doubt, been an agreeable surprise to you.

You will remember that when I addressed you last year, I felt it necessary, in spite of the good showing of the year 1937, to sound a serious note of caution. I pointed out that though each month of the year had shown an improvement over the corresponding month of 1936 the rate of improvement had tended to decline, and that there had been quite a sharp fall in the last quarter. This tendency was reflected in a slowing down of our own business during the latter part of the year, and was accompanied by a general fall in commodity prices, including rubber, which, on December 31, 1937, had fallen to 7d. You will remember that I warned you that if the price continued at that level the accounts of the Plantations Company would present an appearance very different from that shown in the report for 1937.

DECLINE OF PRICES

These tendencies were continued during the first half of 1938. The price of rubber fell steadily till June, the average price for May being under 6d. All through the first half of the year the index figures for wholesale prices, imports, exports and industrial production steadily declined. Indeed, the rate of the decline in national production was of unprecedented severity.

Most serious of all from your company's point of view was the very heavy reduction in the output of motor vehicles, both here and overseas, which necessarily involved a heavy decline in the demand for tyres as original equipment.

These conditions were before your board when they came to consider at the end of September the results of the company's trading during the first six months of the year. The general results showed a serious falling off when compared with the corresponding period of 1937. Nor was there much encouragement to be derived from a study of either the economic or political horizon, since the meeting of the board took place on the very day of the Munich Conference.

In these circumstances the board, when considering the terms of their usual half-yearly statement to the Press, felt bound to strike a note of warning, and you will recall that the statement which they issued referred to the fact that there had been a material reduction in the company's trading results and mentioned as the main causes the extremely unsettled conditions prevailing throughout the world, together with the restriction of the Plantations output and the heavy fall in the price of the crop.

As you will have seen from the directors' report, in the second half and especially in the last quarter of the year, a general and rapid improvement in the company's results took place. Whereas the results of the first seven months showed a heavy decline from those of the same period in 1937, the total net profit for the whole year as you will have seen from the report, was very little below the figure for 1937, which was, as you will remember, a year of excellent trade both for your company and for the country as a whole.

The net profit of the Dunlop Rubber Company for 1938 is £1,501,000 and, adding the balance of £591,000 brought forward from last year, the total available for appropriation amounts to £2,092,000.

The total of surplus and reserves has risen from £4,347,000 at December 31, 1933, to £5,706,000 at December 31, 1938, representing an increase in the five years of £1,359,000.

The result of this ploughing back of the profits is reflected in the surplus of current assets over current liabilities of the main company. This surplus has risen from £3,193,000 at December 31, 1933, to £4,603,000 at December 31, 1938, representing an increase in the five years of £1,410,000.

SURPLUS OF CURRENT ASSETS

In this same period, the surplus of current assets over current liabilities of the whole Dunlop group of companies has risen from £8,067,000 at December 31, 1933, to £10,200,000 at December 31, 1938, an increase of £2,133,000.

In view of your company's world-wide interests and the uncertainty of the outlook, it is indeed fortunate that it has been possible

to strengthen so greatly its financial position. This should enable your company to weather any economic storms that there may be ahead. When, on the other hand, the political and economic conditions of the world once more become normal and international trade revives, your company is in a position immediately to take full advantage of such an improvement in world affairs.

I turn now, in accordance with our usual custom, to a survey of the Dunlop group's activities during the year under review, dealing first with the Plantations Company.

DUNLOP PLANTATIONS

Chiefly owing to the lower average selling price of rubber during the year, the results of the plantations showed a substantial decline: the decrease in net profit for the year being £320,000. As a result, the dividend on the preference shares had to be paid by the Dunlop Rubber Company under its guarantee.

During the year about 4,600 acres of budded rubber were brought into tapping and practically the whole of the remaining area (about 16,000 acres) will come into tapping during the current year. The yields of the budded areas are quite up to expectation, and on full maturity a further increase of potential yield will be obtained. The physical condition of the trees has been greatly improved by manuring with a consequent increase in yields. Further improvements in potential output will be realised within the next few years.

You will have seen from announcements in the Press that the board of the Plantations Company, after very full consideration, has decided that the interests of the company will be best served by transferring the administration and control of the estates to Malaya, where the properties are situated. A new company has, therefore, been registered in Malaya with the name of Dunlop Malayan Estates, Ltd., to which Dunlop Plantations, Ltd., is transferring its undertaking in return for ordinary shares in the company.

The guarantee by the Dunlop Rubber Company of the dividends and capital of the preference shares of Dunlop Plantations, Ltd., remains unaffected.

Your board are satisfied that the new arrangement will improve the position of this company which, of course, continues to hold all the ordinary shares of Dunlop Plantations, which, in turn, will own those of the new Malayan Company.

The greater part of the crop of the plantations company continues to be sold in the form of latex, and the future of the business depends entirely on the price of the commodity and the permitted output.

I come now to a review of our home companies and divisions.

The Dunlop cotton mills suffered a considerable drop in production during the first part of the year, but the position improved later, and the twelve months' profits showed a small increase on those for 1937. Another important development in the construction of cord for tyres has now been introduced, and this has resulted in a marked improvement in tyre performance. We are now also producing rayon cord in considerable quantities. This is being used in commercial vehicle tyres which are exposed to exceptionally heavy service and is yielding excellent results. We were pioneers in this development.

TYRE DEVELOPMENTS

Turning to our tyre division. In replacement business the year proved a satisfactory one, and the faith in our new Fort tyre, "The Tyre with Teeth," which I expressed to you last April, has been fully justified. Indeed, the unique principle embodied in this tyre has proved so successful that we are extending its use.

Our continued success in the replacement field is due both to the energy and ability of our sales force and to the great attention which we give to quality and technical advance. Each year produces improvements both in design and construction, and in 1939 this policy will be maintained.

Our original equipment business, both for passenger and commercial vehicles, was, as I have indicated, unfavourably affected during the first half of 1938, but with the recovery in motor vehicle manufacturing during the latter months of the year our sales to manufacturers naturally improved. We have fully maintained our contractual position and are, therefore, well placed to profit by the improved situation of the motor industry which, I am glad to say, continues.

There was a marked falling off in the manufacture both of cycles and motor-cycles during the year, and this adversely affected our

sales of tyres to manufacturers. However, the business showed signs of recovery at the end of the year, and increased bicycle production is anticipated for 1939, though the record figures of 1937 may not be reached.

AEROPLANE EQUIPMENT

The expansion of the rearmament programme resulted in increased demands for our aeroplane equipment, and these will, no doubt, continue. We are making considerable developments in the use of rubber components, not only for road vehicles, but also for aircraft.

Our sales of rubber wings for motor vehicles, which are, you will remember, a comparatively recent development, continue to increase, and there is every indication that our success in the passenger bus field will be repeated in the goods vehicle market. The wing is flexible, weatherproof, and cannot corrode, so that it substantially reduces maintenance costs.

Sales of Dunlopillo upholstery were well maintained and we are encouraged by the increased usage of the material in motor-car manufacture. In bedding and furnishing upholstery its position is firmly established and we are developing new uses. Our faith in the future of this Dunlop invention is as firm as ever.

Our rim and wheel companies had a successful year and their prospects are good. A heavy amount of research work has been necessary to enable us to meet the requirements of the Government's re-armament programme.

WORLD SPEED RECORDS

Before passing to our rubber products group I would like to remind you that the land speed record was in 1938 broken three times in three weeks on Dunlop tyres and wheels. First by Captain Eyston with a speed of 345.49 miles an hour. Then by Mr John Cobb with 350.21 miles, and then again by Captain Eyston with 357.5 miles. This was surely a worthy achievement for the company in its Jubilee Year, and the figures are astonishing when it is remembered that the 1937 record, also made on Dunlop equipment, was 312 miles.

Another remarkable feat performed during the year was that of Major A. G. T. Gardner, who, on a German motor road, drove an 1,100 c.c. M.G. car (approximately an ordinary 12 h.p. engine with a special body) at an average speed of more than 186 miles per hour over a measured mile and kilometer both ways, actually achieving a speed of 194½ miles one way. This record was also made on Dunlop tyres and wheels. For this Major Gardner was awarded the Segrave Trophy, which is given for the most meritorious performance of the year.

RUBBER PRODUCTS GROUP

The rubber products group again made a satisfactory showing in 1938, though the results of its different divisions varied in accordance with weather and other conditions. The general rubber goods division was assisted by orders for the re-armament and A.R.P. programmes, and it will interest you to know that a large proportion of the balloons for the barrage are made by Dunlop.

The footwear division again experienced severe competition from Hong Kong with its very low labour cost. The Government being unable, owing to the Ottawa Agreements, to protect the home industry, suggested that a representative of it should visit the colony to negotiate an agreement with the local manufacturers. As a result, it is hoped that an arrangement can be arrived at which will have the effect of protecting the profits of home manufacturers.

SPORTS DIVISION

The sports division maintains its position. We have brought out a new 65 golf ball which has the length and feel that made the original 65 ball famous, and in addition, a tougher cover which gives the ball longer life, while, by a new process, the pattern is made more permanent, which helps the control of flight accuracy. We have been highly successful in golf tournaments. In 110 tournaments at home and abroad, the Dunlop ball was successful, and taking all competitions of any prominence, the winners in only five played other than Dunlop, and those five were not of the first importance.

We also had a very successful season with our tennis balls and rackets. No less than 99 players at Wimbledon used Dunlop rackets, a large figure when you remember the number of foreign competitors. Both the men's and women's all-England badminton championships have just been won with Dunlop rackets.

In all these divisions which form the rubber products group, no effort is spared to perfect the goods we produce. Plant, processes and design are continually being revised and quality and appearance improved. As a result, the Dunlop brand is now pre-eminent in the various fields in which it is applied.

The results now being obtained justify fully the policy of the board

in seeking to broaden the basis of the products manufactured by the company.

OVERSEAS INTERESTS

The French Dunlop Company was able to make a small advance on its 1937 results. With the advent to power of M. Daladier in April, 1938, a determined effort was made to deal with the rising costs and falling production which were demoralising the French market. As a result, conditions improved steadily during the latter part of the year.

In America business conditions during the first half of the year were very difficult and, in common with the industry, trading results of the American Dunlop Company were adversely affected. In the second half of the year, however, conditions rapidly improved, and the American company made a profit in this latter period, which was nearly sufficient to absorb the loss incurred in the first six months. Subject to the continuance of the improved conditions in America, the outlook for 1939 is more promising than it has been for many years.

In Canada business generally declined, but the net sales of the Canadian Dunlop Company were well maintained and the final net profit slightly better. The company's status in the market is definitely improving, and since the financial reorganisation last year it is in a much stronger position.

Our Japanese company has naturally been adversely affected by the unsettled conditions in the Far East. However, we have been able to obtain payment of a substantial dividend in respect of 1937.

Our associated company, the Dunlop Perdreau Rubber Company of Australia, almost exactly repeated the good results of the previous year. The Rt. Hon. W. A. Watt, the distinguished chairman of that company, visited this country last summer, and inspected our various factories and operations. His visit further cemented the cordial and mutually helpful relations between our two companies.

In Ireland trade was poor during the early months of the year, but improved after the signing of the Anglo-Irish Agreement. The results for the whole year were, however, satisfactory, and we remain confident of the prospects of the company.

The productive capacity of the South African factory continues to expand in line with steadily increasing sales, and results for 1938 show a substantial advance on 1937. Further progress is confidently anticipated during 1939 and prospects can be regarded as satisfactory.

In India, in spite of the repercussions of disturbed conditions in the Far East, the strong position of the Indian Dunlop Company has been well maintained and I am glad to report an increase in net profits. The prospects of the company for the present year are undoubtedly good, the quality of its products being excellent.

In the export sales markets conditions on the whole deteriorated in 1938 compared with 1937. Very little (if any) relaxation was noticeable in foreign import quotas and financial restrictions. Added to this, the events connected with the September crisis increased the lack of confidence of the buying public all over the world.

PROSPECTS

You will now wish me to say a few words about prospects. If we look at the economic conditions alone, there is no doubt that trade in this country improved in the third and fourth quarters of last year, although the general improvement was not so marked as that which took place in your company's business. These better conditions have continued up to the present time.

We must not, however, overlook the fact that the improvement is not altogether a normal and healthy one, but is to some extent due to armament expenditure.

In passing, I might say that the total turnover of your company on re-armament work has only amounted to a very small proportion of our business, so that it will be realised that the closing of the re-armament programme would have a very slight effect on our results directly, but I am concerned about the possible effect on industry generally, which would, of course, react on our business.

This re-armament expenditure must cease some time or other, although it is impossible at present to foresee the conditions under which it will cease. On the other hand, the uncertainties arising out of the political situation of Europe, which make the re-armament programme necessary, are undoubtedly acting as a serious check to normal private enterprise. Quite apart from the possibility of war, therefore, it seems to me that we are confronted with a situation which makes great caution necessary. In all the circumstances, notwithstanding the good results of 1938 and the stability which the conservative policy of your board has been able to give to your company's finances during recent years, your board feels, and I am sure you will agree, that we must maintain that conservative policy.

The report and accounts were unanimously adopted, and a dividend of 8 per cent., less tax, plus a bonus of 1 per cent., less tax, were approved.

EQUITY AND LAW LIFE ASSURANCE SOCIETY

FUNDS EXCEED £30,000,000

The annual general meeting of Equity and Law Life Assurance Society was held, on the 4th instant, in London.

The Right Hon. Sir Dennis Herbert, K.B.E., M.P. (the chairman), in the course of his speech, said: In all the six completed years in which I have been chairman, prior to the year now under review, the new business of the society has shown a substantial increase; in 1938 the new business has shown a decrease; every year I have warned you that we could not expect those yearly increases to go on indefinitely, and I do not think we need be unduly depressed by last year's results.

RATE OF INTEREST

Our total funds increased last year by £2,719,159—from £28,117,742 to £30,836,901. Claims by death were well within the expectation, and resulted in a substantial profit, as did all claims arising by maturity. Our rate of interest was £4 8s. per cent. net; this is lower than last year because that was the last year of a valuation period, which for special reasons always gives a figure above the average; but it is about 2d. higher than the average for the last two valuation periods (eight years), notwithstanding the increased rate of income tax and N.D.C.

In the short period from 1932 to the end of 1938 our total funds (in round figures) have increased from £10,000,000 to £30,000,000; this increase is large; our comparatively small and unimportant business has grown in seven years to one of substantial size and importance; the profits of an assurance business arise mainly from the excess of income earned over the interest assumed for calculation of liabilities; our average rate of income earned in those years has been more than 1 per cent. above the assumed rate, but, taking an excess of 1 per cent. only, we can look for an annual business profit from this source alone in this and subsequent years of at least £300,000 per annum, without taking into account other sources of profit, such as profit on reversions falling in, profit on favourable mortality experience and other items.

NEW BUSINESS AND PROFITS

The large increase of new business necessarily involves an additional burden on the fund during the period of increase: out of the first premiums there have to be provided, firstly, the expenses of obtaining the new business, including all commission, procurement fees, stamp duties, and so on; next comes the heavy charge of the initial reserves, which are at once set up in respect of every new risk accepted. It will be seen, therefore, that the benefit and profit of new business does not mature immediately, but rather that new business causes a temporary reduction, or at least postponement of profits.

Our abnormal increase of new business has involved the application of large sums to actuarial reserves set up against the risks or liabilities which form the normal business of assurance; these actuarial reserves do not appear in the published accounts or balance sheets, but, resulting as they do from the sound and cautious methods traditional in British assurance business, they inevitably produce in course of years a surplus beyond the liabilities to be met as the risks mature. Thus they are at first an obstacle in the way of accumulating general reserves of the kind disclosed as such in published accounts; but as such new business grows in age the profits therefrom materialise.

In recent years investment business has admittedly been exceptionally difficult. British Government securities and Bank of England stock have been slightly increased. Ordinary stocks and shares are very slightly lower, while debentures, preference and guaranteed stocks are very slightly higher. Foreign Government and foreign municipal securities (a comparatively small amount) have been reduced by rather over £100,000, or about 25 per cent.

As I have told you in previous years, it has been the deliberate policy of the board to invest a substantial portion of our funds in carefully selected ordinary stocks and shares; we believed, and still believe, that this is a sound policy, in view of probable gradual inflationary tendencies; at the same time, this has to some extent contributed to what we hope is only a temporary depreciation resulting from market conditions at the end of 1938.

We may therefore well hope that before our next valuation date (December 31, 1940) this depreciation will have been wiped off; a great part of it had been wiped off by rise in market values since December 31st last until the fall a few weeks ago on recent political developments in Europe.

The report was unanimously adopted.

VICKERS LIMITED

MR A. A. JAMIESON'S ADDRESS TO THE STOCKHOLDERS

The seventy-second annual general meeting of Vickers Limited was held, on the 3rd instant, in London.

Mr A. A. Jamieson (the chairman), in the course of his address to the stockholders, said: In the balance sheet of Vickers Limited I wish to call your attention to the substantial increase in the holding of cash and British Government securities.

It is necessary to remember that this company provides finance as and when required by the operating companies, and, since the scale on which they operate is large, it is necessary for their success that the parent company should be plentifully supplied with cash. The total of cash and British Government securities is £6,000,000, and from my knowledge of the possible financial requirements of this group, I confess that I should like to see a substantial increase in this figure, large as it may seem at first glance. I would remind you that our possible commitments may also be on a large scale.

The profit has increased by £47,797, and, after an allocation of £100,000 to contingencies and a transfer of £350,000 to reserve, the carry-forward is increased by £84,226.

The trading profits of Vickers-Armstrongs show an increase of £789,130, and of that increase £361,000 was distributed in dividends, the balance being required for higher taxation and increased depreciation. That company, eleven years after incorporation, is still in arrears in the payment of dividend on its "B" cumulative preference shares.

The interim dividend declared in October is the first interim dividend that has been paid by this company for 19 years, and this fact indicates the difficulties involved in declaring interim dividends in a business such as ours. It is, however, the intention of the directors to pay interim dividends so long as practicable.

After reviewing the position of the company's various interests, the chairman concluded: Under present conditions armament manufacture must absorb the largest share of our energies, and it follows that commercial work must receive less attention. We can, however, assure you that we are not unmindful of the time when we shall have to rely in greater measure on commercial work.

The report was unanimously adopted and the final dividend of 6 per cent. approved.

PROVINCIAL CINEMATOGRAF THEATRES, LIMITED

GAUMONT-BRITISH SUBSIDIARY'S STRONG POSITION

The twenty-ninth annual ordinary general meeting of Provincial Cinematograph Theatres, Limited, was held on the 31st ultimo in London.

Mr Mark Ostrer (the chairman) said that the net profit for the year, including income from investments and transfer fees, was £516,350. He thought it would be agreed that there was every cause for satisfaction, especially in view of the general recession in trade and the international crisis during 1938. The directors recommended the payment of the following dividends:—A dividend of 15 per cent. on the ordinary shares; a further dividend of 1½ per cent. (making a total of 9½ per cent. for the year) on the cumulative participating preferred ordinary shares; and a further dividend of 7½ per cent. on the ordinary shares (making a total of 22½ per cent. for the year).

Last year he drew attention to television, since when great progress had been made. The day was not far distant when the majority of homes would be equipped with television sets. The Baird Company had perfected the big screen for showing television in cinemas. Many of the shareholders would remember the recent transmission of the Boon-Danahar fight, witnessed by large audiences at the Gaumont-British theatre at Marble Arch and the Tatlers, which proved that such events were eminently suitable for television.

To meet the competition which would undoubtedly arise, as a result of the entertainment which would be available to the users of television in the home, it would become necessary to equip other theatres as soon as possible. Owing to the foresight of the Gaumont-British Corporation in associating themselves with Baird Television, they were in the fortunate position of being able to obtain early deliveries of the big screen apparatus manufactured by that company.

As to the current year's outlook, he felt sure that, given reasonable conditions and a restoration of confidence, the company would continue to show satisfactory results.

The report and accounts were unanimously adopted.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED

A SATISFACTORY YEAR

The annual general meeting of The Anglo-Portuguese Telephone Company, Limited, was held, on the 5th instant, in London.

Sir Alexander Roger, the chairman referred first to the great loss sustained in the death of their late vice-chairman, Mr Frederick Kerr.

Continuing, he said that there was a net profit of £78,967, compared with £78,013. The dividend of 8 per cent., less tax, for the year on the ordinary stock and the "A" ordinary shares had absorbed £75,364, leaving a carry-forward of £32,371, as against £27,069 brought in.

Twelve months ago they had anticipated that the reduction in net profit for 1937 as against 1936 would be overhauled during 1938, but anticipations had not yet been realised. Increased political tension throughout the world, indirectly if not directly affecting all countries, and the fact that the Brazilian exchange regulations had reduced the income of many Portuguese nationals, had contributed to unsettled commercial conditions in Portugal, which in turn had militated against the natural growth of their revenue. There was little doubt also that the war in Spain, now happily terminated, had had an adverse effect on conditions in Portugal. The year's development in terms of stations represented a net gain of 3,672—equivalent to 7.7 per cent.—and in point of numbers was the largest annual addition in their history, making a total of 51,098 at the end of the year. It could be assumed from that that Portugal was not yet fully telephoned, although they did not anticipate future development to be maintained at that rapid rate.

An important project of expansion during 1939 would be an extension of 2,000 lines of automatic equipment to the Norte Exchange in Lisbon, which would bring the capacity of that exchange to 13,200 lines.

PORTUGAL'S PROGRESS

It was pleasing again to record that under the stable policy continued by the Government the financial position of the country remained sound. It was a remarkable tribute to Dr Salazar's ten years of administration as Finance Minister that during that period there had been successive Budget surpluses, the floating debt had been extinguished, public services had been vastly improved, and unemployment had greatly diminished—a fine record, which was not only appreciated in Portugal but commanded the admiration of her ally, Great Britain, and many other countries.

So far as the Portuguese Post Office was concerned, considerable progress had been made in the plans approved by the Government last year for the modernisation of the State trunk and local systems. Contracts for the cable network to serve the principal new automatic exchanges of the Government were placed by the Post Office early in 1938, and towards the close of the year the Automatic Telephone and Electric Company of Liverpool, with which the company was associated, had had the honour of being awarded an important contract for the supply and installation of the automatic equipment required for those exchanges. That contract, which was for the substantial sum of £650,000, spread over a period of 15 years, was secured in the face of keen foreign competition and would provide employment both here and in Portugal.

Any statement regarding the country would be incomplete without reference to the notable tour of her West African colonies recently carried out by His Excellency the President of the Republic. It was a success from every point of view.

The report was unanimously adopted.

COALMINES OF SALGÓ-TARJÁN (HUNGARY)

SATISFACTORY RESULT OF A DIFFICULT YEAR

The seventy-first ordinary general meeting of the Coalmines of Salgó-Tarján Company, Limited, was held on the 27th ultimo.

Mr Ferenc Chorin, Privy Councillor and member of the Hungarian Upper House, chairman of the company, presided.

The report stated that the new frontiers of Hungary benefited even

(Continued from page 99)
Spillers. — Profit £652,000 against £586,000 before tax, which requires £230,000 against £175,000. Ordinary dividend, 15 per cent. Deferred dividend 15 per cent., both maintained.
Allen West and Company.—Gross profit for 1938, £139,050 (£97,907). Net

profit, £101,050 (£63,736). Ordinary dividend 7½ per cent. plus a bonus of 2½ per cent., against a 7½ per cent. dividend with no bonus. To general reserve £35,000 (£15,000). Carry forward raised from £36,200 to £53,500.
Union Castle.—Profit on voyages, after depreciation, £196,505 against £510,257

the company's special interest, because the mines of Salgó-Tarján and Dorog lay on the former border of Czecho-Slovakia.

The decline in economic activity increased during the past year. Unstable economic conditions and the increase in the burden of taxation disturbed industry. But substantial public investment, an excellent harvest and the one million new consumers gained by the extension of Hungary's frontier counterbalanced the unfavourable conditions to such an extent that the production of the industry was maintained at the level of the previous year.

The coal production increased from 2.39 million tons in the year 1937 to 2.44 million tons in the year 1938. During the year the company undertook important development work in its mines of the County Nograd, Esztergom and Tolna-Baranya.

IMPRESSIVE FIGURES

The improving business of the company during the past year is reflected in impressive figures. According to the accounts submitted, the balance sheet for the year 1938 shows a net profit of 2.6 million pengő. The accounts reflect the increase of taxation and social burdens, but it was possible to make some economies in production costs. The net profit permits an allocation of 150,000 pengő to the ordinary reserve fund, 200,000 pengő to the pensions account, 10,000 pengő to the coalminers' sanatorium, 23,000 pengő for the employees' fund and 50,000 pengő for charities. The dividend of 1.75 pengő per share permits a balance of 290,000 pengő to be carried forward.

There are no important changes in the capital and the reserve. The mines owned by the company are valued at 7.6 million pengő, buildings, factories, etc., at 2.3 million pengő, cash in hand and shares at 32 million pengő, plants, machines, etc., at 97.4 million pengő, all of which remain unchanged, but the last mentioned account has been depreciated to 77.4 million pengő. The valuation of the stocks declined from 8.2 million to 7.4 million pengő, and debtors increased from 36.8 to 38.7 million pengő. On the capital and liabilities side the capital account is 79.3 and creditors 25 million pengő.

The Hungarian Work for Ferro-Alloys, Limited, began its production in February of this year. The quality of the production is as satisfactory as had been expected.

The turnover of the Hungarian Works for Artificial Fertiliser, Acydsulphuric and Chemicals, Limited, exceeded the previous year. The favourable increase of consumption of artificial fertiliser reached 20 per cent. The company's shares are allotted a dividend of 2 pengő, as was the case last year.

The Klotild Chemical Works, Ltd., pays an unchanged dividend of 6 per cent.

The Hungarian Elektriciry Supply Co., Ltd., raised its production by 5 per cent. as a result of the increase of electricity consumption in private households.

Charles de Belitska, Baron Boldizsár Lang and Charles Schmidt were elected as new members of the board of directors of the Salgó-Tarján Coalmines Company.

JASIN (MALACCA) RUBBER ESTATES LIMITED

Presiding at the twenty-ninth annual general meeting of the Jasin (Malacca) Rubber Estates, Limited, held on the 4th instant, in London, Mr G. H. Champion (the chairman) said that the profit had declined from £8,702 to £1,863. With the balance of £5,048 brought forward, the total available was £6,911. The directors recommended the payment of a dividend of 3 per cent., less income tax, compared with 10 per cent. for the previous year.

For the first six months of the current year their exportable allowance was at the rate of 47½ per cent. of standard, compared with an average of 55 per cent. for 1938. The greater degree of restriction was to some extent offset by the increase in their standard production, but unless releases were increased during the second half of the year it seemed that they would not be allowed to export so large a crop as in 1938. On the other hand, present indications were that they might receive a slightly higher average price for their rubber.

As regarded the prospects for the industry generally, the statistical position might be said to be improving satisfactorily.

The report was unanimously adopted.

(after depreciation and taxation). From taxation reserve, £105,685. Revenue from investments, £81,526 against £109,908. After debenture interest, profits are £171,889 against £446,833. After preference dividend, balance carried forward increased by £38,944 to £189,836.

GOVERNMENT RETURNS

For the 6 days ended March 31, 1939, total ordinary revenue was £21,777,000, against ordinary expenditure of £9,670,000. Thus, excluding sinking fund allocations and defence expenditure from loans, the surplus or the financial year 1938-39 is £505,000, against £39,330,000 for 1937-38. Or, when sinking funds are deducted, there is a deficit of £12,714,000, against a surplus of £28,786,000. The Revenue return for the year is printed in full on page 115.

OVERSEAS BANK RETURNS

NOTE.—A return of the Bank of Spain appeared in The Economist of May 28, 1935. N.B.—Exchange Equalisation Fund and assets are 538,543,653 frs.				

Shell Union Oil Corporation.—Net operating income, 1938, \$11,318,422 (\$20,669,000). Dividend on common shares \$0.70, against \$1.00 for 1937. Combined net income was equal to 72 cents per share on 13,070,625 common shares, against \$1.44 in 1937.

Alliance Trust Company.—Total revenue for year to January 31, 1939, is £676,493, against £707,013. After taxes of £137,090 (£139,663), and other expenses, balance is £509,168 (£535,482). Interest £156,902 (£158,055); preference and ordinary dividends £262,599 (£272,202). Ordinary dividend again 25 per cent. To general contingent fund £100,000 (same). Carry forward £41,337 (£52,170). Total investments stand at £11,657,904; bond and stock investments show a depreciation of 3.83 per cent. on valuation.

Central Mining and Investment Corporation.—Net profit 1938 (after £12,000 for N.D.C.) £444,920, against £708,863 after £35,000 was provided for nine months' N.D.C. Dividend for year reduced from 12½ to 10 per cent. Provision for income tax £45,000 (£100,000).

Van Den Berghs and Jurgens.—Profits for 1938, £1,257,668 (£1,172,644) after management expenses, depreciation, etc. Tax and N.D.C. £116,739 (£84,684). Preference and preferred ordinary dividends absorbed £297,625 and ordinary dividend £676,250, as before. Ordinary dividend rate 12½ per cent. To reserve fund £100,000 (£200,000). To contingencies reserve £50,000 (£50,000). Carry forward raised from £150,325 to £187,525.

Imperial Chemical Industries.—This company, which holds all ordinary shares of Magadi Soda Company (operating in Kenya) offers to purchase all of other classes of shares as follows: 4s. for 6 per cent. first £1 preference; 9d. for 6 per cent. second 5s. preference; 1s. per fully paid 5s. preferred ordinary; partly-paid 5s. preferred ordinary would pay up uncalled capital less 1s. per share. Magadi net profit for 1938 is £18,787 (£2,700 more), but is all required for debenture interest and arrears. Offer closes May 1, 1939. Of first preference holders, 93 per cent. have accepted.

London Merchant Bank.—In connection with an offer to purchase most shares, capital reorganisation is proposed. "A" £1 shares to be sub-divided into 5s. "B" units and arrears (from January, 1931) cancelled; "B" £7 shares (£3 10s. paid) to be sub-divided into 5s. shares (2s. 6d. paid) and uncalled liability per £5 share; "B" holders offered £3 cash and 15s. in new shares per £5 share, and relief from uncalled liability (non-assenting holders to pay liability in cash). Bank will dispose of banking business (Guinness Mahon and Company take over certain current business) and become an investment trust (London Merchant Trust, Ltd.). Makers of offer will sell certain German investments to bank for £382,000 cash, and £300,000 German standstill claims.

(Continued on page 118)

(a) Week ended April 1.

(Continued from page 111)

Ashanti Goldfields Corporation.—Profit for six months to March 31, 1939, is £656,467, or £165,332 higher than for the corresponding period of the previous year.

Bibiani (1927).—Profit for six months to March 31, 1939, is £57,346, against £25,733 for corresponding period of 1937–38.

John Lewis and Company.—The balance of profits carried forward by this company at the end of the year to January 31, 1939, is £51,531, compared with £28,821 a year earlier. We regret that these figures were incorrectly stated in our issue of March 25th.

E. B. Ridsdel.—The death is announced

of Mr. Ernest Bramwell Ridsdel of the firm of E. B. Ridsdel and Company, Ltd., on April 2nd. Mr. Ridsdel was interested in some sixty rubber and industrial companies.

British Timken.—Net profit 1938, £91,879, after depreciation, compared with £133,007. To taxation reserve £30,000 (£40,000). To general reserve £25,000 (£60,000). Ordinary dividend again 15 per cent., absorbing £39,150, against £33,750. Carry forward reduced from £25,139 to £22,869.

Aktiebolaget Elektrolux.—Net profit for 1938, after Swedish taxes, amounts to S. Kr.8,901,465, compared with S. Kr. 9,152,222. Dividend 13½ per cent. for the year. For 1937 an interim of Kr.5 per

Kr.100 share was paid. The shares were then reduced and a final dividend of Kr.5 per Kr.75 share, or 6½ per cent., was paid. Surplus carried forward is Kr.16,150,019, against Kr.13,248,554.

Aktiebolaget Volvo.—Report for 1938 shows that 6,655 vehicles were sold for a sales value of Kr.37,052,783, against 6,325 vehicles with sales value Kr.36,359,691 for 1937. Net profit Kr.2,311,346 (Kr. 2,116,422). Dividend raised from 5 to 6 per cent. Surplus end of 1938 Kr.2,338,937, against Kr.1,119,591.

Abitibi Power and Paper Company.—A plan of procedure for purchase of this

The Week's Aggression

THERE is no need to waste many words in characterising the Italian seizure of Albania—the Axis Powers' Aggression-of-the-Week. It is enough to say that it is a typical example of totalitarian brutality, an attack delivered without warning, provocation or excuse. There are, indeed, one or two refinements of cynicism peculiar to this case. The choice of Good Friday for the attack and the compulsion placed upon the Queen of Albania (at whose wedding a year ago Count Ciano was the chief witness) to flee into exile with a three-day-old baby are details which Macchiavelli himself would acclaim as being in the finest Italian tradition. But, in general, the Albanian incident merely serves to show that in unbridled ambition, in brutal arrogance, in cynical dishonour and in candid mendacity the junior end of the Axis has nothing to learn from the senior.

The purpose of the occupation of Albania was purely and simply strategic—that is to say, warlike. No other explanation will bear a moment's examination—as is, indeed, shown by the derisory nature of the excuses put out in Rome. For years Albania has been, in fact if not in form, an Italian dependency. King Zog, who has been kept in power by the Italians, was powerless to do anything in the diplomatic or economic sphere that displeased his masters. But he was apparently patriot enough to refuse agreement to an Italian military occupation of his country. So the occupation was carried out against his resistance. There are no economic gains for Italy from last week's aggression, since Italy already dominated the country. The

only substantial change is the fact of Italian military occupation. Nothing could more clearly illustrate the purely strategic nature of the operation or the prospect that Albania is merely to serve as a springboard for further action.

The strategic consequences for the neighbouring countries are discussed in notes on later pages. The grand strategy, however, is clear. Though the dictators fulminate against any attempt to form a defensive alliance as "encirclement," they are themselves the grand encirclers. The occupation of Austria encircled Czecho-Slovakia. The capture of Bohemia and Slovakia encircled Poland. Now Albania encircles Yugoslavia. And if Yugoslavia should fall, she and Bulgaria will encircle Roumania. Meanwhile, Franco Spain keeps France encircled.

still in favour of peace." It cannot be emphasised too often that a policy of supporting the small nations of Eastern Europe is dangerous in the extreme without the assistance of Russia. It would be wrong to assume, in the absence of evidence, that the fault for the delay in reaching a firm Anglo-Russian understanding is entirely on one side. But there is no more urgent and vital diplomatic task.

In spite of his strong condemnation of the Italian action, the Prime Minister was not prepared to denounce the Anglo-Italian Agreement. The reasons are severely practical, for one of the provisions of that Agreement is that the Italian troops in Spain are to be withdrawn. This pledge has been renewed in the last few days, and it has been explained that the troops, including the "legionary air force," will leave immediately after General Franco's victory parade in Madrid, which is understood to be fixed for May 2nd. There can, of course, be little confidence that this pledge will be honestly kept, or, in view of General Franco's attitude, that Spain will be any less dutiful a client of the Axis for the Italians' departure, or, indeed, that some new aggression will not be perpetrated before May 2nd. But so long as there is the smallest chance of securing anything from the ill-fated Agreement, there is a case for swallowing our dignity and giving the Duce a chance to show that, by way of exception, he can keep some of his promises. To this, however, there must be two all-important provisos. First, there should be a rigid time-limit. The troops were to have been withdrawn *immediatemente* after the end of the war. The meaning of the word must not be stretched any further. And, secondly, the period of waiting until May 2nd must not lead to the slightest delay or relaxation in the plans for resisting aggression. We must make it possible for Signor Mussolini to forswear his career of aggression if he should wish to. But delay in our own plans is a price that

we can no longer afford to pay for the chance of such an extremely improbable event as the Duce's conversion.

More than ever, our safety (and our peace, too, if that can still be preserved) depend on our winning a race against time. There are at least five danger spots on the map of Europe and the Mediterranean. First, there is reason to believe that Germany's demands on Poland (for Danzig, a "corridor across the corridor" and, apparently, a small Silesian district) are again being pressed. The rumours of German plans to invade Holland are taken sufficiently seriously for the Dutch Government to man its frontier. The troops being poured into Albania may continue their march; acquaintance with the technique of the dictators would lead one to take the assurance to Greece as evidence that a march to Salonika is in fact intended as the next move. There are heavy troop concentrations in Libya, which probably threaten Egypt rather than Tunisia. And, finally, there are the ominous troop movements in Spain. Any one, or all, of these five danger spots may come to a head at any moment, and it is clear that nothing that the most fantastic imagination can conceive can be ruled out as impossible.

The materials for a defensive combination firm and strong enough to stop the gathering momentum of aggression are in existence. The small countries will fight for their independence if they are quite sure they will not be left to fight alone. Russia is suspicious, but willing to assist. President Roosevelt has taken the unexampled step of announcing that America's destiny would be involved from the outset in any world war—a reinforcement of the powers of peace whose importance it is impossible to exaggerate. The task of British statesmanship is to build these materials into an impenetrable barrier. The task is not easy. But it is also dreadfully urgent, and delay will only increase the difficulties.

Inflation Ahead?

THIS week's issue of *The Economist* contains the annual Budget Supplement in which for many years it has been the custom of this journal to collect for its readers a compendium of facts and figures bearing upon the management of the national finances. Six weeks ago the problem of the Budget (in the rather narrow meaning of the term which re-armament finance has forced upon us) appeared to be relatively simple. The Estimates showed that the Chancellor of the Exchequer had decided to provide out of Defence Loans not merely this year's increase in defence expenditure, but an additional £44 millions which, in 1938-39, had been met out of revenue. The inference seemed to be obvious that this particular sum had been chosen so as to reduce the figure of Budget expenditure (i.e. of expenditure to be met out of revenue) to the amount that would be covered by the revenue to be expected from the existing rates of taxation.

This inference, however, now seems a little less obvious. The revenue returns published on March 31st were in some respects disappointing, and it is difficult, without a very great admixture of optimism, to compose an estimate of revenue that will bring in as much as the minimum probable total of expenditure, even after the transfer of the £44 millions. Moreover, the events of the past month in Bohemia and Albania have already resulted in the decision to double the Territorial Army at a cost for equipment which has been stated to be about £50 millions, and further large increases in defence expenditure will be unavoidable. The Chancellor may well think that some small part of this additional expenditure should be raised by taxation, even though the bulk of it will almost certainly be borrowed. There is thus enough uncertainty

left to give Budget Day a little of its usual excitement.

Nevertheless, the main interest of British fiscal policy to-day lies outside the Budget. It turns on the amount to be borrowed. When it was announced that the total of borrowings in 1939-40 would be about £350 millions, it was pointed out in these columns that there are three separate aspects from which such a large increase of debt can be approached. There is, first, the technical aspect. Can the money be raised? The answer is that it certainly can be, especially if care is taken to borrow a substantial part of it in the form of floating debt. Secondly, there is the question whether the raising of such large sums is in the best interests of the prudent management of the national finances. On this point *The Economist* expressed some doubts, but judgment on the relative prudence of financial policies is necessarily a matter of opinion. We get back into the realm of quantitative estimation with the third aspect of defence borrowing. Can it be done without inflation?

Some interesting figures bearing on this question have recently been published in articles in *The Financial News* and *The Banker* by Mr R. W. B. Clarke. Mr Clarke's estimates are based on the fundamental assumption that a Government deficit, whatever it may be spent on, is analogous and similar in its effects to "investment" (in the economist's sense of that term) by private individuals. This being so, the total of investment is compounded of two parts, private investment, for which Mr Colin Clark's estimates are available, and the Budget deficit (which has to be adjusted for any surplus or deficit realised by the Unemployment Fund). Working on this assumption, Mr Clarke finds that the total of "investment" was £829

millions (gross) in the financial year 1937-38 and £799 millions in 1938-39. For 1939-40, on the assumption that private investment remains at its present level, Mr Clarke reaches a figure of £1,005 millions. Moreover, this is an average figure, and in the last quarter of 1939-40 investment will be running at the rate of £1,072 per annum, or about £192 millions more than the present rate. These figures, it may be added, are based on borrowing of £350 millions, and in so far as the actual figure is higher (as it certainly will be) the resulting figures of investment will be increased.

What will be the economic effect—and, in particular, the effect on employment—of these figures? If the output of the average employed person can be put at £250 per annum, the direct effect of an increase of £192 millions per annum in investment expenditure would be to provide employment for about 770,000 persons. But, as is now a commonplace of economic thought, the employment directly provided is supplemented by employment indirectly provided, and the common assumption is that the indirect addition is roughly equal to the direct amount. If this estimate of the "multiplier" is correct, the increase in investment expenditure will provide employment for something of the order of 1,500,000 persons.

It is as well to re-examine the assumptions on which this figure is based before drawing any conclusions from it. The first assumption is that changes in employment owing to fluctuations in investment expenditure are not offset by opposite changes in expenditure on consumption. For this proposition there is a great deal of general evidence, and in the particular circumstances of the moment there seems to be no reason to anticipate any large and sudden decrease in the consumption of the British people, especially since no large increase in taxation is in prospect. Secondly, it is assumed that private investment remains unchanged in the coming twelve months. Normally, an increase in employment and in general prosperity due to re-armament expenditure or any other cause would lead to increased investment. It seems reasonable to assume that, in default of control, there will at least be no reduction in private investment. Thirdly the calculation is based on the assumption that the "multiplier" is 2 (i.e. that employment indirectly created equals that directly created), which may well be too high. But, finally, the figures are based on borrowing of £350 millions, which is certain to be exceeded. On a balance of considerations it seems probable that the execution of the defence programme, in the absence of any restriction either of consumption or of private investment, will provide work for 1,500,000 persons.

Where are this million and a half to come from? With an unemployment register of 1,727,000, even with the addition of certain reserves of unemployed persons in the clerical and professional grades, it is very doubtful whether the labour force required can be found from those now out of work. If the borrowing is restricted to £350 millions and the "multiplier" turns out to be nearer one and a half than two, the task might be accomplished. The opinion expressed here on February 25th would hold good, that the programme "can be financed without leading to inflationary competition with other existing avenues of expenditure; but it will be a right squeeze." But if the borrowing is more than £350 millions, the resources of labour and capital required will only be made available by being taken from other employments.

This position, when it arrives, will be, by any reasonable definition of the word, an inflationary situation. Britain will then be in the same position as Germany found herself in twelve months ago. It will then become a matter of primary importance to decide by what means the employment of labour and capital in peace-time pursuits is to be restricted in order to liberate resources for re-armament.

There are, broadly speaking, three ways in which such a

situation can be handled. The first is to allow the competition for the available supplies of labour and capital to force up prices and wages—the classical form of inflation. In any such competition, the needs of the Government always win, since they must be met regardless of cost. But the consequences of the policy—even if extreme hyper-inflation is ruled out—are not such as to commend it. A general inflation of prices is inequitable as between the social classes. It produces its effects haphazard and without any possibility of control in detail. In particular, many forms of expenditure other than re-armament would be encouraged to expand at the cost of normal consumption. And it leads straight to the whole vicious circle of rising cost of living, labour trouble and rising wages. The whole experience of the decade 1914-24 is against its adoption.

The second method is to diminish consumption by increasing taxes. In time of war, when it is necessary to restrict all forms of consumption, taxation plays a vital part. In our present circumstances, however, it is a somewhat clumsy weapon. What it will be necessary before long to restrict is not the general consumption of the necessities and petty luxuries of life, but certain specific forms of expenditure, such as private investment and any expenditure that competes with re-armament for the products of, for example, the steel and engineering industries. Any increased taxation should therefore be carefully designed to secure this end. Increased taxation on motor vehicles or on company profits would be cases in point. In theory, a tax on "excess" (i.e. increased) profits would be ideal, and it is to be regretted that the practical defects of the first version of N.D.C. led to a shelving of its principle which, whether or not it was suitable to the circumstances of 1937, will be admirably applicable to those of 1940.

The third method of procedure is by direct control and rationing of those varieties of labour and raw materials which are in short supply. In its fullest form, this policy would involve a complete control over all purchases of capital equipment, whether or not the money was raised by an issue of capital. It would include a complete system of compulsory priorities for the use of certain raw materials (e.g. steel), for the output of certain varieties of factories (e.g. those of the motor industry) and for the employment of certain grades of skilled labour. This programme may be too much for a democracy to stomach in time of peace. But if we borrow and spend huge sums and yet refuse to control the economic consequences of their expenditure either directly by priorities or indirectly by selective taxation, we shall inevitably run into the dangers of inflation. The main contribution of the Nazis to economic experience has been their demonstration of the methods by which a position of latent and potential inflation can be prevented from upsetting the normal relationships of wages and prices. If, without the Nazis' weapon of compulsion, we cannot match the completeness of their achievement, we shall nevertheless do well to go as far in this direction as we can.

It goes almost without saying that any such system of control must be directed and co-ordinated at the centre. In short, it necessarily involves a Ministry of Supply. What was previously an objection to a Ministry of Supply—that it would interfere compulsorily with the normal course of business—has now become its chief *raison d'être*, for in the inflationary situation that can be anticipated before long, interference becomes essential to avoid the evils of uncontrolled price increases, which reach the same goal by a much more haphazard and inequitable route.

The Budget speech is traditionally a wide review of all the problems of national finance. Sir John Simon in ten days' time will be maintaining the tradition, and doing a service to the community, if he extends his survey to cover the broader issues of economic policy to be followed in the difficult days ahead of us. The British people, in the economic sphere as in the military, will not flinch if they are clearly told what is expected of them.

The German Air Force

The size, striking power and general quality of the German Air Force are the dominating facts in the present position of European diplomacy. Statements made about Germany's alleged superiority in the air played their part in forming opinion at the time of the Munich Agreement. Unfortunately, there is no subject on which, in the absence of ascertained fact, wilder misstatements are current. Since the export of information about the Air Force is, in Germany, a form of high treason, the disentangling of the probably true from the certainly false is a task of considerable difficulty. An attempt has been made here to present such estimates as seem reasonably securely based on fact.

THE treaty of Versailles imposed upon Germany a total prohibition of all forms of military aviation. This prohibition was never observed; indeed, it was unreasonable to expect that it would be. The German Government at all times owned a certain number of warplanes, sometimes as many as 300, some of them kept outside Germany, others disguised as newspaper planes or long-distance mail planes. A flight of camouflaged single-seater fighters, the so-called Reklame-Staffel, was the main item in the programme of many an "Air Sport Rally" long before Herr Hitler came to power. The German aircraft firms maintained factories in other countries, at which aircraft were built for the Government, and the results of Government-subsidised research were tested. This system produced many types famous in their day, such as the Junkers G 38, Ju 52 and W 33, the Dornier Wals and Superwals and the Heinkel He 70, which were all used as civil aircraft in Germany, but when built at the foreign plants were first-class military aircraft. Continuous study of patterns of training and tactics was also maintained in Germany, and it was for revealing some of the details of this secret aerial re-armament that Carl von Ossietzki, the Nobel prize-winner, was sentenced to imprisonment.

When General Goering took over the Air Ministry in 1933, Germany was by no means devoid of military aircraft nor ignorant of military aviation. The expansion of the Air Force began at once after the Nazi Revolution.

THE GERMAN AIRCRAFT INDUSTRY

The German aircraft industry consists of approximately 29 large and small firms, with about 51 factories altogether; in addition there are 17 plants making aero engines. Most of these are on the Baltic coast, around Berlin and in Central Germany. The old-established factories, especially those of Junkers, Dornier and Heinkel, have, of course, very greatly expanded since 1933. Junkers, for example, besides expanding the original plant at Dessau, has set up new factories in Breslau, Köthen, Leipzig, Magdeburg and Leopoldshall.

The industry is organised in such a way that the design and construction of prototypes (i.e. new models) is completely separated from mass production. Thus the two Heinkel plants at Rostock and Warnemünde are entirely concerned with prototypes, while the other plants of the firm, such as the huge factory at Oranienburg near Berlin, are confined to the assembly of parts, supplied by sub-contracting firms, which cover a wide range of industry, including, for example, some of the shipbuilding firms. This Oranienburg plant is said to have a weekly output of ten to twelve He 112 twin-engined bombers.

The number of workmen employed by the aircraft industry itself, excluding the sub-contracting firms, is at least 170,000 men and women (from a quarter to a third are women). The average working time of 52 hours a week is often extended to 58 or even 60 hours, and cases of even longer hours are not unknown. According to official figures, the average wages per hour for skilled workers are

78½ pfennigs (1s. 4d. at the official rate of exchange, 9d. at the old parity) an hour, while unskilled men receive about 62½ pfennigs and women's wages are much lower.

OUTPUT, STRENGTH AND TYPES

At the end of 1938 the German Air Force appears to have consisted of about 280 squadrons. The full strength of a squadron is nine machines, with three more planes on the station reserve. If all the squadrons were up to full strength, the total number of first-line fighting planes would be about 3,400. To these must be added about 500 planes of first-line quality employed by the police, about the same number of transport planes and a number (said to be 700) of single-seater aircraft for training fighter pilots. The total of fighting planes of first-line quality that could be mobilised in time of war would probably be from 5,500 to 6,000, in addition to the second-line and third-line reserves, which are numerous but of unknown fighting value. To these must now be added the spoils of Czecho-Slovakia: 76 squadrons of a first-line strength of about 750 machines. But these machines are, of course, of types quite different from the rest of the German air force.

By the usual methods of calculation, however, the front-line strength of the German Air Force appears to be about 4,200 planes, of which about 2,500 are bombers. This figure is confirmed by such statements as have been made as coming from the German authorities. Thus the *Essener Nationalzeitung*, which is closely connected with Field-Marshal Goering, the Air Minister, printed, with approval, on October 26, 1938, an Italian estimate that at the time of the Munich Conference Germany's first-line strength was 3,000 machines. The editor of an American aeronautical journal has reported that he was informed by the German authorities that the monthly output was 800 planes of all kinds, which would suffice to replace the whole first-line strength in four months. This would give a figure of 3,200 planes. The last precise British programme was for a first-line strength of 2,370 machines in the metropolitan force by March 31, 1939, and this programme has been achieved, and probably exceeded. The conclusion appears to be that some months ago Germany's air force was little more than half as large again as the British.

The figure of 800 machines a month is probably an exaggeration of the actual output, certainly in the last quarter of 1938, unless it is intended to refer to possible output. It seems probable that the actual output in the last few months of 1938 was no more than 500 machines a month, and that it may be 600 a month now. Here again the current ratio between Britain and Germany appears to be 2:3, as British production is believed at the beginning of this year to have been 400 machines a month. But the rate of increase is almost certainly greater in Great Britain than in Germany. In Czecho-Slovakia Germany has gained skilled workmen and well-equipped factories. But the factories will not be of direct use to the Reich until they have been reorganised for the production of German types.

Much larger figures than these have been published in many places, especially in Germany. But it is quite clearly advantageous to Germany's propaganda to have larger figures in circulation.

The two tables at the foot of page 125 attempt to make a comparison between the chief types of machine currently in production for the British and German Air Forces (the introductory note should be read). These tables omit both those types which, though still in service, are not being produced and also models which have not got beyond the prototype stage. The tendency in Germany is for fighters to get larger and bombers smaller, and for both to get faster. Thus two new fighter prototypes are the Messerschmitt Bf 110 with two engines of 1,300 h.p. each and a

maximum speed of over 350 m.p.h. and a new Heinkel whose calculated maximum speed, according to its designer, is to be 440 m.p.h. A specially prepared version of the latter has been flown at 463.8 m.p.h.—though only at 150 feet from the ground. But so far as the service speeds are concerned, the German fighters do not seem to be as fast as the British Spitfires and Hurricanes, with "well over" 362 and 335-340 m.p.h. respectively.

The German Air Force has more "dive-bombers" than any other Air Force. The R.A.F. has few machines specifically of this type, but the Air Ministry has specified that all fast single-engine bombers, such as the Fairey Battles, must be constructed in such a way as to stand the strain of dive bombing.

The chief difference of policy between the two countries appears to be in bombers. When Lieut.-General Udet took over the technical Directorate of the German Air Ministry the construction of four-engined long-distance heavy bombers was suspended, and twin-engined bombers of shorter range and carrying capacity but higher speed were substituted. The R.A.F. is still building long-range bombers, as is dictated by strategical considerations.

The performances of the German machines are undoubtedly good. There is no proof at all that the latest types are poorly finished or of inferior design, or that they have suffered significantly through any abandonment of high standards of construction. On the other hand, the use of substitute materials has dangers and disadvantages, which would increase in time of war. Unquestionably, however, the performance of the British machines, type for type, is superior to that of the German. The superiority is most marked in the fighters; but among the bombers, the Germans have no type to compare with the Blenheims.

There is no evidence to show that German designers have found it possible to concentrate on a smaller range of types than the British—rather the contrary. On the other hand, German production methods probably approach more closely than British to mass production.

ORGANISATION

The German Air Force is at present divided into four air fleets for purely offensive purposes: in Berlin for the East, in Brunswick for the North (i.e. Britain), in Munich for the South (i.e. France), and in Vienna for the South-East. There are in addition four independent commands: (1) at Königsberg, (2) and (3) the commands of the Army Co-operation and Naval Air Arm units, and (4) the command of the "Air Defence-Zone West" at Wiesbaden.

The smallest strategic unit is the *Staffel*, or squadron, of nine planes plus a station reserve of three. Three *Staffel*

form a *Gruppe*, and three *Gruppen* a *Geschwader*. The personnel of the German Air Force amounts to more than 150,000 officers and men. Volunteers for appointment as pilots have usually undergone preliminary training, either in gliding or in small motor craft, at one of the local branches of the *National-Sozialistische Flieger Korps*, which is said to have already issued 60,000 certificates. It does not, of course, follow that Germany has that number of pilots trained to war standard. On the contrary, the supply of pilots is reported to be one of the chief factors imposing limitations on the possible speed of expansion. Following Russian precedents, two parachute training centres have been opened at Stendal and Wiustock a. d. Dosse.

The German Air Force has about 900 aerodromes at its disposal, of which 180 are permanent military aerodromes. There are rather over 400 aerodromes and landing grounds in Great Britain.

RAW MATERIALS AND FUEL

Many efforts have been made in Germany to reduce the amount of imported raw material in aircraft. A light plane for training, the Arado Ar 79, has been built with only 16 per cent. of imported materials, and plastic materials are being increasingly used in fuselages and wing coverings. Great use is also made of aluminium, which would probably be available in adequate quantities in time of war. But the supply of raw materials would still be a very difficult problem for the German authorities in war-time.

Perhaps the weakest point in Germany's air armaments is the supply of fuel. According to the Four Year Plan, Germany's peace-time requirements of fuel of all kinds will be 6.3 million tons in 1940. Of this amount, only 1.2 million tons are being produced in Germany at present. Moreover, the wartime requirement has been assessed at as much as 15 or 20 million tons a year. The expansion of domestic production would be limited by the time required to construct the plant, by the difficulty of mining the enormous quantities of coal that would be required and the impossibility of providing workers. The daily consumption of a first-line air force of 6,000 planes (of which 50 per cent. are twin-engined bombers) with engines of an average output of 800 h.p. and an average consumption of 200 grams of fuel per h.p. per flying hour, and with an average flying time of two hours a day, will amount to over 3,000 tons a day or 1,000,000 tons a year. All these figures are extremely conservative, and make no allowance for training or transport or the manifold other requirements of an air force. Germany's Air Force alone would consume at least twice as much oil as is now being produced there.

TYPES OF AIRCRAFT IN CURRENT PRODUCTION, BRITAIN AND GERMANY

The performance of a fighter is judged by its armament, rate of climb, ceiling and speed; for a bomber, its bomb load, range and speed. For both types landing speed is also important, as determining whether the planes could be flown from war landing grounds. The following tables give such information as is available. The general remark must be made that the German tendency is to give maximum performances registered on special occasions; the British to give average performance under service conditions. THIS MUST BE BORNE IN MIND IN COMPARING THE TWO TABLES. This remark is particularly applicable to figures of speeds.

BRITISH TYPES

	No. & h.p. of engines	Climb, to ft. in min.	Ceiling, ft.	Maximum speed, m.p.h.

First Year of the Films Act

THE completion of the first year's operation of the Cinematograph Films Act, 1938, provides a suitable occasion for determining the effect of this measure in building a "bigger and better" production industry in this country. Such an examination is facilitated by the registrations of all new films published each week in the *Board of Trade Journal*, and by official and other authoritative statements made in Parliament and elsewhere, and by the experience of the trade itself. The number of "long" films registered by renters is shown in the following table:—

Year ending March 31	British	Foreign	Total
1935	190	477	667
1936	215	506	721
1937	225	521	746
1938	228	614	842
1939	103	535	638

With quite unimportant exceptions every film seen in any cinema must have been obtained from a licensed renter; hence the whole of the supply of films available to British exhibitors, and therefore to the public, is indicated by these figures. They show that the total of "long" films registered in the past year was 204 less than in the previous year, and less than in any recent year. Has there, in fact, been a decline, or do these figures conceal certain movements and changes in the character, quantity and time of registration of the films included in the above totals? The answers to both questions are very definitely in the affirmative, and as far as possible allowance for these changes must be made before a judgment on film supply can be formed. Practically all of them will be traceable to alterations in the law, and might have been foreseen, though not capable of precise calculation, before the beginning of the renters' quota year.

The most notable provision of the new Act was the introduction of a cost test for the British films which the renters of foreign films were compelled to acquire. Under the old Act the importation of 500 foreign films cast an obligation upon the importers to acquire about 120 British films at a possible cost of £700,000 to £800,000. The new Act reduced the number of British quota subjects to 88 in the first year, but the minimum cost of each of these—having regard to their average length—was £20,000, and the total cost more than £1,800,000. With such an increase in sight it was not unreasonable to expect a certain amount of "forestalment" by arranging for the importation, trade show and registration of every available film before the old Act expired. A similar tendency became noticeable again during March, 1939, in anticipation of the increase of renters' quota rate from 15 to 20 per cent., and the financial advantage to be gained from hastening the importation of foreign films as much as possible. The effect is visible in the number of trade shows of foreign pictures, which rose from an average of about 40 in the months of January and February to 105 in March. A reasonable estimate of these "forestalments" is that about 60 pictures have been affected in the two years, of which about 40 would normally (i.e. if the Act had not been changed) have been registered in 1938-39 instead of 1937-38, and about 20 in 1939-40 instead of 1938-39—that is, the "foreign" total would have been about 40 lower in 1937-38 and 20 higher in 1938-39.

Another change introduced by the new Act affecting the number of foreign films to be registered should also be noted. The so-called "special" film imported from Continental countries, and shown to specialised audiences in certain West End cinemas, and never in more than one house on any day, can now be exempted from quota obligation. This is a valuable concession, and has led to a large increase in the number of such films brought in during the

past year. Actually the number of foreign films so exempted in the past year was 34, which is probably 20 more than the number of similar films in the previous years. Taking both these influences into account, there appears to be no justification for the complaint of exhibitors and others in the trade that there has been any actual reduction in the supply of American films or indeed any check in the progressive increase of from 15 to 20 American subjects per annum. Pictures that would have been imported in April have been trade-shown in March.

Whatever reduction there has been in the past year must be due to the supply of British films. This conclusion is borne out by the figures at the head of this article. Only 103 British films were registered in 1938-39, compared with 228 in the previous year. It is true that the average value of each of these pictures was incomparably higher, and their intrinsic acceptability by both exhibitors and public very considerably greater. How far, however, does this improvement in quality make up for the devastating reduction in quantity?

A valuable pointer to an answer to this question is contained in the following analysis:—

NUMBER OF BRITISH FILMS REGISTERED IN 1938-39			
Exhibitors' quota only*		25	
Renters' and Exhibitors' quota:			
Single quota		47	
Double quota		21	
Treble quota		10	
		78	
		103	

* Films registered for exhibitors' quota only are (a) those which have cost less than the minimum necessary to qualify them for renters' quota; and (b) films made in the British Empire but not in a studio in the United Kingdom. These films, when shown in cinemas, count towards the exhibitors' quota but they cannot be counted as part of the renters' quota.

To qualify for renters' quota a picture must now prove to have cost not less than £3 a foot; if the cost is about £9 a foot the picture can be counted for "double" quota, and if it amounts to £15 a foot for "treble" quota. (Actually the cost test is applied to "labour costs" only, which are roughly estimated at about one-half the full cost.) The figures for the average lengths in each of these categories are not yet available, but it is known that during the first eight months the average for all British films registered was 6,800 ft., so that the minimum cost for each of the above categories of renters' quota films was roughly £21,000, £62,000 and £105,000, respectively. Making a reasonable allowance for the cost of exhibitors' quota films, a simple calculation shows that the *minimum* expenditure on the above films must have been about £3,500,000. In answer to a question, the President of the Board of Trade informed Parliament some days ago that the actual labour cost proved to his department in 1938-39 averaged £3 5s. per foot, which would bring the total cost for the year up to £4,500,000, or 30 per cent. higher than the minimum cost calculated above.

Two comments may be made on the foregoing estimate. The first is that the Preliminary Report of the Census of Production states that the cost of all films produced in British studios in 1937 was £5,700,000. If the method of costing was approximately the same in the two cases the value of the production in the past year shows a decline of more than 20 per cent. There is reason to believe that the system of costing instituted under the Act by the Board of Trade has the effect of making the labour cost more than one-half of the total cost by an amount not a present determinable; in that case the actual reduction in total cost must be appreciably greater than 20 per cent. This conclusion is corroborated by the evidence of unemployment among technicians, among whom—according to

a memorandum submitted by their recognised trade union to the Cinematograph Trades Council—an average of 8½ weeks' employment per member existed in the previous 39 weeks, and the actual membership had declined because a large number of technicians had left the industry.

Though the quantity of films produced has declined considerably, there has been an unmistakable improvement in quality. Some proof of this is provided by the increase in average cost from £25,000 to more than £55,000. Further and more convincing proof is provided by the enthusiastic reception accorded to many recent British productions not merely at home, but also throughout the Empire, in New York and—in several cases—throughout the United States. Subjects like "A Yank at Oxford," "Pygmalion," "The Citadel," "Sixty Glorious Years," "The Vessel of Wrath," "The Drum," "The Lady

Vanishes" have created a new attitude to British films. These successes are limited, however, to subjects of the treble-quota class, and there are regrettably no cases of pictures of lower grade—measured by cost—enjoying any similar reception and appreciation abroad. The evidence is far from convincing that a turn in the tide of fortune for British films has taken place. Successes are still few and failures too many. British pictures at least as good as three-fourths of those coming from America can obtain no release in that country. More than half the studio space in this country has been idle during the past twelve months. Less than one-half of the production capacity of the remaining stages has been utilised in that time. If it were not for the increase of quota rate to 20 per cent. there is reason to believe that the volume of production in the current year will show no increase, and might even diminish.

Topics of the Week

Albania Invaded.—Exactly one year after the Italian Government had promised not to modify the status quo in the Mediterranean, Italian troops took possession of Albania and so completed with a military flourish—for the vaunted efficiency of Good Friday's invasion came to little more than that—nineteen years of peaceful penetration. The operation was carried out at dawn on April 7th by a comparatively large number of troops assembled during the past fortnight at Bari and Brindisi; landings were made at Durazzo, Valona, Santi Quaranta, and San Giovanni di Medua, after ships of the Italian navy had shelled these open towns; and, at the same time, a fleet of four hundred warplanes flew over Albania and dropped propaganda leaflets warning the Albanians not to resist. Tirana was occupied early on Saturday morning, soon after which the Italian Foreign Minister Count Ciano (who is to be the Viceroy) arrived by air from Rome. By the same evening Italian troops were in command of all important centres, although the irregular but, by all accounts, determined opposition which they encountered in the coast towns was repeated at Scutari; after King Zog had got away to Greece, week-end reports still spoke of isolated bands which were holding out in the hills. By Monday, however, the invasion was complete, local nobilities were making homage to Mussolini and a provisional administrative council, which is to precede the establishment of a regular Government, was in course of formation. On Wednesday it was announced that the crown of Albania had passed to King Victor Emmanuel. This, it is explained, is not annexation by Italy. It is merely a personal union between the crowns of two independent States. This sophistry is presumably necessary to allow it to be argued that the status quo has not been altered. By a touch that must be delighting the wits of

Rome it is said that the relations between Italy and Albania will be the same as those between Great Britain and the Dominions.

* * *

Past and Present in Albania.—Not much more than a century ago it looked as though the Albanians might be the principal heirs of an expiring Ottoman Empire. As far afield as Syria and Egypt, not to speak of Greece, Albanian soldiers of fortune were carving "successor-States" out of derelict Ottoman provinces. But the Albanians in the Levant in the nineteenth century, like the Goths in the Roman Empire in the fifth century, swiftly suffered a complete reversal of fortune; and, by the time that the process of redistributing Turkey-in-Europe was completed in the Balkan wars of 1912-13, the Albanians' own homeland would have been partitioned between Serbia and Greece, if the strategic importance of this territory had not then moved Italy and Austria-Hungary to insist that at least a minimum Albanian national State should be established. The outcome of the war of 1914-18 left Italy to enjoy the fruits of this joint creation of an Albanian State; and, ever since then, Italy has been working to confirm her hold. Italian ambitions in Albania have, however, had to reckon with two obstacles: Yugoslavia's fear of being encircled and the Albanians' fear of losing their lately and precariously acquired national independence.

* * *

Motives.—Yet Italy's paramount interest dates from the Treaty of Tirana signed in 1920, the year of Albania's admission to the League under Italian auspices (the

analogy is with Abyssinia); and it has continued without interruption since then, except for a brief period in 1924, when the man who later became King Zog marched into Albania with Yugoslav help and overthrew the Italian protégé, Bishop Fan Noli. By November, 1926, the Italian Government had contrived to get Zog into their pocket by a judicious use of hard cash; a five-year pact of friendship and mutual assistance was signed; and intensive economic penetration began forthwith under the control of the newly-formed Banca Nazionale d'Albania. Albania received loans for public works, and it was generally understood (and, outside Yugoslavia, with complacency) that Albania was henceforth to be regarded as an Italian dependency, and it is even believed that an attempt was made to force an Italian protectorate on Albania at that time. To forestall any counter-measures which the Yugoslav Government might think to take, there was signed

almost at once an Italo-Albanian military alliance which was to be valid for twenty years. Italian historians like to compare this alliance with that between the British and the Portuguese entered into at the beginning of the last century; one of the pretexts for last week's invasion was that Zog had lately showed himself averse to its terms; and whatever may be the truth of this, it is clear from their frequent risings against Zog—there have been three risings since 1935—that many Albanians have resented Italian penetration; while it is certain that Zog himself was by no means always the willing puppet. Another and more credible pretext was that Zog had misused the loans received from Italy; but, if this refers to funds for public purposes, it seems strange that the all-seeing eye of the Banca Nazionale d'Albania should have winked at such obvious peculation. At the same time, it is true that Italy has not received from Albania economic compensations in any way comparable to the money she has spent in loans, which, in 1936, were estimated at a sum equivalent to 280 million gold francs: but the primary purpose of those loans was, after all, political. More disappointing has been the mineral poverty of Albania, relieved only by the comparative success of the oil concessions at Valona, into which 180 million lire had been sunk by 1936 to supply, in the current year, about one-tenth of Italy's petroleum needs. But the real reason for Italy's action, as our map shows, was strategic.

Jugoslavia and Bulgaria.—The encirclement which Jugoslavia has feared throughout the post-war (or inter-war) period is to-day nearly complete. The armed forces of Italy now stand at Jugoslavia's gates along the Yugoslav-Albanian frontier, as well as in the Adriatic and along the Yugoslav-Italian frontier at the head of that sea. At the same time Germany, as well as Hungary, now marches with Jugoslavia on the landward side, and there are German and Magyar, as well as Bulgarian and

Albanian minorities on the Yugoslav side of the line. With the Adriatic now sealed by Italy, Jugoslavia's only remaining free lines of communication with possible friends and allies in the outer world run down the Vardar valley, where Jugoslavia marches with Greece, and across the Danube, where she marches with Roumania; and both of these vital corridors are perilously narrow. The Yugoslav passage to Roumania is hemmed in between Bulgaria and Hungary; the passage to Greece is hemmed in between Bulgaria and an Albania which henceforth, from the military standpoint, must count as part of Italy. Of these two threatened corridors, the Macedonian is the more important (though the way into Jugoslavia through Roumania might gain an importance which it does not possess at the moment if Russia were to intervene in South-Eastern Europe in order to counter the designs of the Rome-Berlin Axis). The Macedonian corridor gives Jugoslavia a line of communications with the Western Powers through the great Greek port of Salonica, on the open Aegean, whereas any communications between Jugoslavia and the West via Roumania would have to take the circuitous route through the Straits to the Roumanian Black Sea port of Constanza. The importance, to Jugoslavia, of the railway from Salonica via Nish to Belgrade gives the measure of the importance of Bulgaria in the new stage of the international crisis which the Italian seizure of Albania has opened; and the prevailing anxiety throughout Jugoslavia, extending also to the Croats, shows how well this people realises its danger and how little comfort they have drawn from Italian assurances during the week-end.

Jugoslav Macedonia—or at least the southern part of it, astride the Vardar valley railway between Skopje and the Greek frontier—is Bulgar in nationality, sentiment and aspiration; and although this Bulgarian part of Macedonia has been under Serbian occupation since the Balkan War of 1912 (with one interlude of Bulgarian occupation in 1915-18), neither the Macedonians themselves nor their compatriots in Bulgaria have ever renounced the hope of one day liberating and uniting the whole of the Bulgar national patrimony. During the twenty years of grace that they have enjoyed since the peace settlement, the Serbs have been even more intransigent towards the Macedonians than they have been towards the Croats. It would be small wonder if, to-day, Macedonian and Bulgarian hearts were to beat excitedly at the prospect of liberating Macedonia with the aid of the Rome-Berlin Axis. Already, the greater part of Bulgaria's foreign trade is transacted with Germany, while an Italian Queen is the consort of the Bulgarian sovereign. If Bulgar and Italian forces were to make contact on the Vardar, Bulgaria would realise her national aspirations, while Italy would have gained a Bulgarian satellite beyond the Adriatic, to match her Spanish satellite across the Western Mediterranean. Therewith, not only Jugoslavia but also Roumania would be encircled save for the single roundabout route via the Dardanelles and Bosphorus—while, even in the Black Sea, the maritime communications between Roumania and the West would be open to attack from the Bulgarian seaboard.

Greece's Anxieties.—The seizure of Albania has at once led to negotiations for a British guarantee to Greece and Turkey. But the immediate threat is to Jugoslavia. The Bulgar minority still remaining within the Greek and Turkish frontiers is to-day infinitesimally small, so that Bulgaria has not the same incentive for lending herself to any designs of the Rome-Berlin Axis against Turkey and Greece as she has for co-operating with the Axis against Jugoslavia. In the second place, Greece, as well as Turkey, can be more easily assisted than Jugoslavia can be by British sea-power in the Eastern Mediterranean. At the same time, neither Greece nor Turkey could watch, with indifference, the incorporation of Macedonia and Bulgaria, as well as Albania, into the Italo-German military-political-economic system; for, with the submergence of their two present Continental European allies, Jugoslavia and Roumania, Greece and Turkey might find their

own continental European frontiers impossible to defend—extending, as these frontiers do, in a long line in the immediate hinterland of the north coast of the Aegean and the European shores of the Straits. Both Greece and Turkey can do much to preserve the independence of Jugoslavia and Roumania, not only by themselves giving aid, but also by granting the Western Powers passage via Salonica and via the Straits. This would make it much more difficult for the Axis to overcome Jugoslavian and Roumanian resistance; and therefore Rome and Berlin will be as anxious to bully Athens and Angora into closing these two vital routes as London and Paris will be to induce them to keep these routes open. The immediate pressure upon Greece is likely to be the more severe, both because she immediately adjoins Albania and Italy and also because, if the Axis could compel Greece to place her coasts and islands at the disposal of Italo-German sea and air power, this would enable the Axis to close not only the route to Jugoslavia via Salonica but also the route to Roumania and Russia via the Straits, since the passage to the Straits from the Mediterranean via the Aegean could be barred effectively by Italy, if she were in command of Crete and the Cyclades as well as the Dodecanese. Next, therefore, to Jugoslavia, Greece would seem to be the most imminently threatened of the Balkan countries; and this Italian threat to Greece was in fact focused upon the Greek island of Corfu. A naval Power based on Corfu could harass, if not sever, the Italian communications with Albania across the Straits of Otranto; but, precisely in order to make Corfu innocuous to Italy, Italian diplomacy saw to it, in 1913, that the Græco-Albanian frontier on the continent should strike the coast half-way along the channel between Corfu and the mainland—thus exposing the ships of Greece's allies at Corfu to the gunfire of the Italian masters of Albania.

The Position of Turkey. At the moment, Turkey is not so immediately threatened as Jugoslavia, or even as Greece or Roumania; but, in making herself, as she is now doing, the head and front of collective resistance in the Balkans to the aggression of the Rome-Berlin Axis, Turkey is showing her awareness of the inexorable fact that, if her Balkan allies go down, her own turn will come for being the victim. The meeting at Istanbul between the Turkish and Roumanian Foreign Ministers was significant of the wider issues which now confront the Balkan Entente. Even before the fall of Roumania and Jugoslavia, Turkey might (as we have noticed already) be implicated in their fate owing to her control of the life-line that runs through the Straits to Constanza and, via Roumania, to Belgrade. But, if Roumania and Jugoslavia were to be submerged without Turkey's having been sucked into the maelstrom, this would not mean that Turkey could reckon upon being thenceforth out of danger. For, if once the Italo-German empire in South-Eastern Europe were to be extended as far as the European frontiers of Turkey in Thrace, then Turkey herself would be in mortal danger owing to her possession of three things that the Axis would then be more eager than ever to seize. These three coveted Turkish assets are the water-route through the Straits, which would then afford the sole remaining means of European communication (save, perhaps, via Murmansk) between the Western Powers and Russia; Turkey's own national domain, which could provide valuable raw materials for German factories and congenial homesteads for Italian colonists; and the overland route, via the now all but continuous line of railway from the Asiatic shore of the Bosphorus to the head of the Persian Gulf, which offers Germany a road into Asia which could not be cut by the British Navy.

Though Turkey is vigilantly on her guard to-day, she is as anxious for the preservation of peace as are the Western Powers. The Turks' first desire is to complete the reconstruction of their own national life by reorganising their country on Western lines and repopulating its great empty spaces. Though Turkey, like Russia, suffered vast

territorial losses in the war of 1914-18 (in contrast to Italy, who made considerable territorial gains), Turkey, to-day, like Russia (and unlike Italy), is numbered among the "haves" and not among the "have-nots." Every Turk knows that, in losing the former Balkan and Arab provinces of the Ottoman Empire, Turkey has been relieved of an incubus and has been set free to develop the Turkish people's own national patrimony. Every Turk also knows that the present Turkish national State, small though it may be by comparison with the old Ottoman Empire, is fully sufficient for the Turkish people's needs, while at the same time it is as much an object of covetousness as the old Ottoman Empire was to aggressive Powers round about. The Turks are aware that their natural friends and allies to-day are their former subjects in the Balkan and Arab countries and their late opponents the Western Powers and Russia. These are the determining factors in Turkey's present policy.

Government and Opposition.—Throughout the crisis the leaders of the Opposition have been kept closely in touch with events by the Government. It is right that when war is in the air and national resolution is imperatively needed there should be a truce to party strife; and Mr Greenwood, Sir Archibald Sinclair and Mr Attlee have played their part in Parliament and on public platforms with dignity and common sense. Last September they were bitterly opposed to the Prime Minister's policy of settlement by concession and it was their duty as chosen representatives of a large part of the people to say so. Events have not disproved their strictures of six months ago, and it is the Opposition's own alternative policy that Mr Chamberlain had twice before stated to the House of Commons before he rose on Thursday to announce the Government's steps in the light of the Albanian coup. This time the Government's lead is, in principle at least, one which Liberal and Labour leaders can follow in good conscience, and the spectacle of national solidarity, secured by agreement and by no other means, has been impressive. Yet it is not complete. It is not for any responsible politician, however anxious to render the aid that is the Government's due in difficult days, to surrender his duty to press for a policy that will be as effective in detail as it is desirable in general outline.

This week has seen doubts in Labour and Liberal circles; the Peace Front still has its gaps and starting holes; Russia is still outside; and, which has caused most concern of all, stories (officially denied as without basis) have been freely told of the Prime Minister's readiness to give Signor Mussolini yet another chance to demonstrate the worth of his personal promise. Let it be said at once that there is no tangible sign that the Government's determination to be firm in foreign policy, and to arrest aggression by undertaking unheard-of and

There is a way to ease the burden of Estate Duties

2, 3 & 4 COCKSPUR STREET, LONDON, S.W.1

unexampled commitments, is any less thorough than it has been stated to be. No Opposition spokesman, except perhaps Mr Gallacher and Mr Lloyd George, is disposed to translate his doubts into partisan accusations. But the fact remains that the National Government we have will only prove to be the National Government we need in proportion as its policy seems likely to succeed. The Government's policy is now the nation's policy. That is a great gain. But the Government still excludes the men who lately fell into party disrepute because they sponsored the very policy that is now in train, and the means to cement that policy by the fullest mobilisation of manpower and supplies are still lacking. It is time for Mr Eden and Mr Churchill to take their places in the councils of the State. It is time for a Ministry of Supply. It is time for compulsion to add speed to the widespread willingness to serve. If Mr Chamberlain can widen his advisers in proportion to the breadth of his new policy; and if he can forge forthwith the tools to make it succeed at home and abroad, then he will echo the voice of the nation, and the doubts, which democracy and patriotism alike still require of the Opposition's leaders, will disappear.

* * *

"Under Our Present System."—A new and belated campaign for the recruitment of a quarter of a million men for the Territorial Army is now in full swing. Information bureaux have been set up. Posters, pamphlets and publicity devices of all kinds have been pressed into service. Some 38 public relations officers are to work in co-operation with T.A. associations to tell citizens of the nation's need and their own duty. Each city and county association is to receive a grant of £500 from the Government to further the campaign. The price of security and strength in terms of man-power will at last be brought from the half-light of insular inhibitions into the full light of the dangerous days we live in. The response from the nation's young men has already been eager and impressive. It must continue and grow from hour to hour. Yet success is far from certain, because the conditions for creating the trained army we must have are still withheld. Foremost in the picture there is the Schedule of Reserved Occupations: of the 6·7 million covered by the schedule nearly half are under 45 years of age, and for them the recruiting office is forbidden. It is true that the schedule is only provisional, but the only revision so far made actually added 30,000 more to the sheltered ranks. It is doubtful whether voluntary recruitment could in any case bring in the numbers needed in the desired time. It is certain that it cannot with the obstacle of a list of reserved occupations, only too obviously drawn up on the outworn and dangerous principle of "business as usual," in the way. The schedule does not stand alone: it is the same reluctance to accord military requirements the priority that the pressure of events has already bestowed upon them that will not permit the interference with civil industry that a Ministry of Supply would mean. Yet, without such an organisation, the rapid equipment of the Field Force that is now being built up, even if the men themselves could be garnered, would be next to impossible. Mr Hore-Belisha has said, and from him it is no new view, that we are doing all that we can "under our present system." We may indeed be doing that; but the proper comment is that it is not enough. If we do not envisage using at once the means that we would quite certainly use the moment war broke out, then the Field Force of 340,000 men, trained and fully equipped, will remain a mirage, and the nation will wear out its great willingness to serve in fruitless effort.

* * *

National Defence.—It would be unfair and disloyal to concentrate in these days of crisis upon the gaps which still remain in the Government's defence policy. It is quite certain that the country is immeasurably more prepared to repel attack than it was six months ago; and it is well known, too, that below the surface of departmental activity there have already been devised and organised the Ministries upon whom would fall the

burden of national defence if the worst befell. One sign of the skeleton which exists already of war-time administration was last week's appointment of Mr W. S. Morrison to be head of the Food Defence Plans Department; and of the advance lately made in civil defence, last week's debate on the second reading of the Civil Defence Bill gave notable proof. We know now that the distribution of the 400,000 steel shelters that are to be free to poor people is practically completed, and we have it on Sir John Anderson's own authority that the next step in his shelter policy, which is to strengthen the basements of certain types of houses by means of corrugated steel plates and steel props, is ready to be taken. The Lord Privy Seal's office has also made it clear that the street shelters without which the nation's work might be brought to a perilous standstill by air raids are to be speedily begun. So too are the communal shelters for the inhabitants of dwellings where neither family steel shelters nor basement strengthening are feasible. Only on the most debated and most expensive kind of shelter, the deep bomb-proof kind, is there still no official fiat. If the Government's shelter policy is examined in the light of the notably informative first bulletin of the Air Raid Defence League,* it is now well contrived to prevent that dislocation of war effort which, rather than actual casualties, is the aim of air raiders. Its weaknesses are three. The first is that too much of the programme is still only on paper; the greater part of the urban population still has no shelter, and there are no street refuges. The second is that opinion is still too divided about the efficacy of basement strengthening for it to be made a vital part of civil defence. And the third is the delay in reaching the inevitable decision that, in specially vulnerable target areas, there must be some deep bomb-proof shelters, if only to permit workers in vital jobs to rest and recuperate. In general, however, the Government's unwillingness to put out a shelter policy so comprehensive that it would involve the whole working population in downing tools and pens in the event of raids is the merest strategic wisdom. The nation's business must go on, not as usual but as war demands, and defence policy must give priority to this need. This is why the evacuation of all who are not needed in dangerous places is so essential, and why the Minister of Health's statement in last week's debate on the progress of evacuation and billeting plans, like the London County Council's published arrangements for dispersing nearly a million and a-half children, teachers, mothers and blind persons over an area from Land's End to the Wash, was so welcome.

* * *

Towards Agreement in Palestine.—The Italian assault on Albania has evoked immediate resentment and alarm throughout the Islamic world, from Morocco to Bengal; and this alarm, which is felt in particular by the Palestinian, Syrian and Moroccan Arabs, is significant of a timely realisation that it is the Axis Powers and not the democracies which threaten Arab liberty and well-being. The continuance in Cairo of the Palestine talks has been assisted a good deal by the energetic co-operation with the British Government of the Egyptian and Iraqi Governments, neither of which has anything to gain by furthering a situation which immobilises in Palestine British troops that might be employed in defending Egypt; and it seems likely that the international situation will help rather than hinder an Arab-Jewish settlement. Wednesday's meeting in Cairo of delegates from the Arab States and from Palestine considered new British proposals transmitted through the Egyptian Ambassador in London, and sent back counter-proposals to the British Government. It is, of course, no longer a question of ideally open negotiation such as was the case at the initiation of the London talks: the British Government has more or less categorically stated the solution which will be imposed failing agreement, and the limits within which further negotiation is possible. It is against this

* "The Shelter Problem." Air Raid Defence League. Bulletin No. 1. March 1939. 10 Great College Street, London, S.W. 1. 6d.

background that Jews and Arabs, through contacts between Dr Weizmann and the Egyptian Prime Minister, are now facing each other. Given the British Government's determination to impose a cantonal solution, the vital point of discussion has become the length of the period of transition from the present state of things to co-operative self-government. It is reported from Cairo that the latest suggestions from the Colonial Office aim at a transition period of ten years: but once this key point has been settled there arises a host of questions dealing with the distribution of administrative powers and responsibilities, and with the provision of minority safeguards. The immediate steps must be for the British Government to reach agreement with the Arab States on a solution which will be as little unjust to the Jews as possible: and the delegates of the Arab States must then be got to persuade their Palestine fellows into a spirit of co-operation. If that procedure is followed the minor difficulties which will then be encountered within the agreed solution need not cause serious anxiety. Above all, it is to be hoped that the Palestine Arabs, who up to now have shown themselves to be both impatient and unyielding and have thereby done themselves little good, will in the meantime learn the wisdom of toleration.

* * *

Industry's Own Courts.—The statutory grant of powers of self-government to representative bodies in various industries and groups of producers in recent years has involved the setting up of what are virtually courts lect. Marketing boards and similar organisations are given semi-legislative powers with which must go the authority to enforce the rules they make; through their domestic tribunals they try offenders and punish them by fines. Nine months ago, when the Sea Fish Industry Act was going through the Commons, involving as it did the feudalisation by the State of yet another corner of private enterprise, some general criticisms were voiced of the way in which the power to penalise individuals was in fact used by some of these new baronial courts. A committee was set up by the Treasury to examine the problem as it arose in the operation of schemes under the Agricultural Marketing Acts, the Coal Mines Act and the Herring Industry Act, and their report has now been published. Rightly, they regard the power of fine and punishment as a necessary adjunct of the new mode of industrial government—as necessary in fact as the similar powers enjoyed by established industrial and professional associations: rules and regulations without sanctions are useless. With equal wisdom, however, the Committee emphasise the need for strict safeguards in a system of semi-judicial character where the tribunal simultaneously occupies the rôles of prosecutor, jury and judge. Each scheme's disciplinary committee should have an independent chairman with legal qualifications; the existing right of appeal to an arbitrator should be supplemented by a right of appeal to the High Court on questions of law; meetings should where possible be frequently held in the provinces so as not to penalise provincial members; and—a most important and vital point—it should always be clear beyond a peradventure that the rules enforced by fine reflect the wishes of the majority in the industry. The freer past has gone for good, but it is well that publicity should be given to the great judicial as well as legislative powers which the New Feudalism confers upon private people.

* * *

Teachers and Education.—Teachers always meet in conference at Easter and they always talk about the same things. This year, as usual, the National Union of Teachers registered a plea for equality of pay between the sexes and between teachers in different grades of school, a claim which has only strong reasons of expense to confute it. The National Association of Schoolmasters, for their part, recorded their usual vote against equal pay for men and women, and, with the conventional jibes against feminism, went on to argue that only the instruction of all boys by

men teachers could produce a virile democracy. So far the debates ran on familiar lines. But, as befits the guardians of the nation's youth, both trade unions had more important points to make. The English educational tradition is lopsided, and it has always relegated physical training and technical instruction to a subordinate and inferior position. The nation has suffered, and is suffering, economically, socially and, be it said, militarily, from this attitude which is, at bottom, snobbery. Both conferences show an aliveness to this lack; the N.U.T. welcomed the proposals of the Spens Report to balance grammar, modern and technical education on an absolute parity at the post-primary stage; the N.A.S. called for "a workshop in every school." The plea of Mr Kenneth Lindsay for physical training for the three million boys and girls between 14 and 18 years of age who are now getting none was warmly welcomed. To-day's teachers were brought up in the academic tradition, but it has not clouded their vision of the unbounded limits of true education.

* * *

An Official Centenary.—None of the teachers at the Easter conferences seems to have realised, with that humility which becomes the servants of a Government department, that one hundred years to a day before Bank Holiday Monday the first foundations of the Board of Education were laid in the shape of the Education Committee of the Privy Council. Six years before, in 1833, the first Government grant to educational effort was given. On April 10, 1839, the Education Committee was set up to supervise the private beneficiaries of these public funds. The great majority of the children of poorer classes were then without any better opportunity of getting educated than they could derive from their probably illiterate parents and their almost inevitably illiterate playmates in the streets and factories. Half the men and women of the country could not write their own names, much less read a newspaper or book. The first efforts to improve this state of affairs had been made by a handful of reformers at the beginning of the nineteenth century. The Sunday School movement of the later eighteenth century, like the Charity School movement which had preceded it, had failed to make any appreciable contribution to the task. The Dissenters took up the work of Joseph Lancaster (in 1814), and the Anglican Church began (in 1811) the National Schools with which the name of Dr Andrew Bell will always be closely associated. They collected funds, built schools and trained teachers. The funds were never more than a fraction of what the situation demanded; the accommodation was such that to-day the schools would nearly all figure on the black list; and, despite the fact that no teacher had a training which lasted as long as six months, the number of teachers turned out by both societies after more than twenty years' effort would hardly suffice for one year's recruitment of our schools to-day. It was these pioneer societies that the Government grants and the Education Committee were to aid. The early years of the Committee were arduous and embittered by dissensions between religious denominations. Above all, the Committee's work was hampered by inadequate financial support. After ten years' work its budget was the pathetic sum of £125,000. Nothing but the genius and devotion of its first secretary, Sir James Kay-Shuttleworth, enabled the Committee to lay the foundations of better things. The religious difficulty remained and financial resources grew but slowly. Not until 1870 was an adequate supply of elementary schools assured by Forster's Education Act, by which the State was to fill the gaps in the private system. Compulsion to attend them followed, and with it began the movement to abolish fees. In 1902 State education, elementary and secondary, was codified, under the administration of the new counties and county districts only lately set up, and under the direction of the three-year-old Board of Education. The Privy Council's pioneer Committee, replaced by the Board, had done its job; and it is perhaps a little startling that the only mention of its successor by the conferring teachers on its centenary date was the demand by the N.A.S. that the Board should be abolished, to "take education out of politics."

The World Overseas

Roumania and Germany

(From a Roumanian Correspondent)

SINCE the trade agreement between Roumania and Germany was signed last month, public opinion has tended to exaggerate the political consequences for Roumania, in the same way that it exaggerated the political influence of France up to the downfall of M. Titulescu some three years ago. Actually, Roumania ignored hints from the Quai d'Orsay regarding her policy towards Russia and always sought to improve her relations with Italy notwithstanding Italo-French controversies. Nor has she now become Germany's vassal merely through signing this additional agreement. The value of reassuring official declarations may be minimised; the sincerity of semi-official intimations to the effect that similar agreements could usefully strengthen the economic ties between Roumania and France or England may be doubted; nevertheless, it should not be forgotten that in some cases the real intentions of signatories to a pact are not always disclosed by the wording of their commitments, and before final judgment is passed on the clauses of the agreement, it would be as well to wait to see how they are interpreted when applied.

In the economic sphere Roumania's policy in the last twenty years has been influenced by the vigorous struggle to recover her national prestige which she began soon after the Great War. At home this took the form of disregarding the interests of foreign capital, nationalising the subsoil and supplanting the minorities, including the Jews, in all occupations. In economic or financial negotiations with other States, it meant persuading foreign capital or foreign technical skill to help in promoting Roumania's economic expansion without offering them a controlling, or even a leading, part in the companies created.

So far as Germany is concerned, it has never been contested that the economic structures of the two countries are, to a very high degree, complementary. For some years past Germany has made serious efforts to exploit to the full the possibilities of barter with Roumania. Not only has she constantly increased her regular purchases of farm products; for at least five years she has also tried to adapt Roumania's agricultural production to her own needs by encouraging the growing of soya beans, flax and hemp. Roumania, on the other hand, has an especial need of the German market, because her farm products are of widely differing standards, and large quantities of them are not marketable in the western countries, where better qualities are required. To a certain extent, therefore, the new agreement with Germany is no more than an intensification of tendencies which have been apparent for many years.

What is entirely unprecedented is that Germany will give technical and financial help towards a wholesale reorganisation of farming in general, metal-mining and crude oil production. Accordingly, the economic collaboration between the two countries would begin on Germany's side with systematic prospecting of the Roumanian subsoil, the drilling of testing-wells in prospective oilfields, the equipment of the newly-opened mines and the building of roads and railways in mountainous districts; whereas Roumania would sell, to begin with, increased quantities of petroleum (her only sacrifice) and farm products, thereby abolishing her normal export difficulties. Thus, at first sight, the agreement, like all other agreements made with Roumania since the war, would appear lopsided from its very start. If Germany is to obtain the substantial advantages she expects from it, she will have to interfere constantly in purely internal problems of Roumania, or else see her plans for her exploitation of the country defeated by administrative difficulties.

This is where Germany will leave the economic sphere for the political. Roumania will only be able to supply the Reich with the maximum of foodstuffs and raw materials if drastic changes are made in her economic system. But, however desirable it may be, from her own standpoint as well as Germany's, to increase the efficiency of labour, improve farming methods, cut down the incredibly high number of religious and official holidays and rationalise the roads and railways, Roumania would never tolerate such a reorganisa-

tion if it involved open interference by Germany in Roumanian internal affairs.

Germany, however, need not take such a risky course. She could make her influence felt just as well through using a powerful weapon which has been at hand for some time, but which has never yet been fully tested—the Iron Guard. Its actual strength is unknown; but it may be recalled that in December, 1937, when the last general elections in Roumania were held, it had about 14 per cent. of all votes cast. Moreover, the temperament and age of its followers give it an influence out of all proportion to its numerical importance. At present, most of the leaders are either permanently or temporarily silenced; but extremely severe police measures are necessary, and the present Government can only hope that their subjugation of the Iron Guard will last long enough for them to drain its strength away by tempting the new generation into their own camp. Two factors are necessary for King Carol's and M. Calinescu's success: freedom for a time from the exigencies of international politics, and the ability to persuade the masses that their regime will carry out the two promises of the Iron Guard—the extermination of the Jews and an energetic fight against corruption. M. Calinescu, however, is not an anti-Semite in the German sense, and was even compelled last autumn to damp down the anti-Semitic movement lest his country be accused of abandoning its policy of equilibrium between the Axis and the Entente powers. His energetic actions to secure better administration, honesty in high offices and a new spirit of self-sacrificing patriotism go straight to the root of the problem; but, so far, their practical results are falling short of what would be needed to convince his opponents. Nor does his Government even enjoy the full confidence of the many who do not endorse the political views of the Iron Guard. Doubts are felt about whether he will be able to achieve his aim; for he has had to saddle his Government with encumbrances from previous regimes—leading politicians of the "old school" and their prominent industrialist friends. He has, too, to maintain relations with the "camarilla," which, although less conspicuous than a few years ago, is still very unpopular.

Germany, therefore, has plenty of opportunity for stirring up trouble, if she finds the Roumanian Government unwilling to interpret the trade agreement as she wishes. Roumania may not have accepted the Reich's suzerainty in signing it; but if she tries, as she has tried in other agreements, to work it to her exclusive advantage, she will find her independence threatened by intensified political intrigues fostered from without. However much controversy may rage over the increase to Germany's war potential, this much at least is certain: the present political situation in Roumania is ripe for exploitation, and Germany can be relied upon to make every effort to turn it to her own ends.

Calm and Political Stability in France

[FROM OUR PARIS CORRESPONDENT]

THE far-reaching measures for the security of the country decided upon at the Cabinet's last meeting were taken so discreetly that the French public has remained quite calm. Their nature was, however, sufficiently well known in informed circles for Frenchmen and foreigners to be now fully aware that France is prepared for any surprise manoeuvre whatsoever. The Stock Exchange has been clearly troubled this week by the rising international tension; but selling orders have been easily absorbed by a market, which on the whole, remains very inactive. The country is ready, and simply awaits the next move.

The country's calm expectancy is in no small measure

due to last week's Presidential election, as well as to M. Daladier's cool and confident policy. For the second time in the 70 years of the French Republic's history (the first was President Grévy whose second tenure of office lasted only two months) the retiring President was re-elected. This manifestation of continuity was impressive and important. The first decision of M. Lebrun will be to maintain M. Daladier as Prime Minister, which he has now been for a year—as well as Minister of War, which he was made three years ago by M. Blum. This example of continuity is almost without parallel in the history of the Republic and contrasts markedly with the justly criticised Ministerial instability of past years.

The sense of political stability is not without its financial and economic effects. The franc has been stable in relation to the pound for nearly a year. The rediscount rate of the Bank of France stays steady in a way which is in notable contrast to its thirteen changes in the twelve months of 1936. Public funds, after their speculative rise at the end of 1938, did, indeed, fall back in recent weeks in face of external fears, but even they are now recovering.

	Apr. 19, 1938	Sep. 28, 1938	Dec. 30, 1938	Apr. 4, 1939
4½% 1932 "A"	77.65	75.00	91.95	88.50
4½% 1937	110.80	124.25	157.35	155.75
4% 1917	73.00	67.20	90.25	84.55
Treasury debentures				
4½% 1933	820.00	738.00	1,016.00	1,000.00
300 French shares (index 100 = 1913)	214.00	195.00	244.00	228.00
A typical industrial debenture 4½% 1930	597.00	575.00	811.00	819.00

The Stock Exchange itself, though worried this week, now shows better resistance to alarming rumours and ideological campaigns. Finally, wholesale prices, too, in spite of an increased monetary circulation and an increased burden of taxes, show an encouraging stability. In politics, in finance, in economics, as well as in the social domain, continuity and stability prevail. After the domestic battles of 1936 and 1937, this is the country's great strength in face of the hard tasks which the foreign menace has thrust upon it.

Compared with a year ago, the French internal situation is incomparably better. Compared with what it might be, however, it is not adequate. Investment has still to be revived. Monetary and Treasury difficulties have still to be ended. If the totalitarian danger is to be firmly faced these things will be needed. But, so far so good. There are no grounds for pessimism. Capital returns. The money market is well supplied. The Treasury is well supplied, too, even though its last long-term issue was nine months ago. Rising war orders are now regularly paid for, and satisfactory activity in the heavy industries is being maintained.

Economically, however, there are less satisfactory features. The first quarter of the year did not confirm the hopes aroused in the last months of 1938 of revival in the consumption trades. Fears of new international complications are undoubtedly responsible for this. So, too, are the burden of taxation and the high cost of living. The income of the saving public has been deeply affected by two years of monetary depreciation. Wages, although much higher than they were, are badly adjusted to the cost of living—particularly after a hard winter which has shortened the supply of vegetables and other foods. And the beneficial effects of longer hours of labour and a lower rate of interest are counterbalanced by the increased burden of taxes.

The French economy is now in a transitory period, in a space between the monetary disorders of yesterday and the war dangers of to-morrow. The structure of French industry, the country's deficiency of population, the temperament of French people, their maintenance of a semi-liberal system in contrast to the totalitarian States: these are the realities of modern France and they have made economic recovery by brutal authoritarian means impossible. But recovery is in train. The new atmosphere of stability which now prevails and the progress in the production already achieved prove that.

Foreign Trade

Foreign trade in March showed a general contraction in both value and tonnage:—

	March, 1938	Feb., 1939	Mar., 1939
	(000,000 francs omitted)		
Imports—			
Foodstuffs	891	1,217	1,030
Raw materials	2,081	2,596	2,276
Manufactured goods	552	705	685
Totals	3,526	4,518	3,992

Exports—			
Foodstuffs	294	403	404
Raw materials	687	1,012	884
Manufactured goods	1,245	1,620	1,591
Totals	2,226	3,035	2,880
Deficit	1,299	1,483	1,111

Figures for the first quarter show a distinct improvement in value, however, but not so much in volume, over the first quarter of last year.

	1938	1939
Value (000,000 francs omitted)—		
Imports	11,698	12,488
Exports	6,975	8,736
Deficit	4,723	3,552

Volume (metric tons)—		
Imports	12,652,571	10,455,225
Exports	7,198,782	6,434,868

The share of the French colonies in total French trade is still increasing. Exports to the colonies in the first quarter of this year were valued at 2,496 million francs and amounted to 688,466 tons, against 1,848 million francs and 509,314 tons in the first quarter of 1938.

Foreign trade during these three months, if compared with 1938, shows that the volume fell while the value rose. This is probably due to the decline of the franc (which stood at 150 frs. to the £ at the beginning of 1938, compared with 177 now), which led first to an increase in imports and then to a limitation of imports and higher export values.

The *Statistique Générale de la France* has just published its monthly statistics:—

	Feb., 1938	Dec., 1938	Jan., 1939	Feb., 1939
Production (1928 = 100)				
General Index	85	86	88	89*
I. Mines	92	96	94	95
II. Chemical industries	102	103	103	105
III. Paper	163	173	172	175
IV. Textiles	82	87	92	95
V. Leather	69	74	75	76
VI. Iron and steel	79	74	76	81
VII. Engineering	86	81	83	85
VIII. Automobile	89	106	109	110
IX. Building	58	63	65	67
X. Gas and electricity	132	126	...	...
XI. Miscellaneous	104	107	105	107

* Provisional.

No Substantial Signs of Recovery

[FROM OUR NEW YORK CORRESPONDENT]

THERE is still no statistical evidence of the upturn in business. As was generally surmised such changes as there were in the index of production between January and February were principally due to the seasonal adjustment. The importance of this statistical device is illustrated over the past year by the following table:—

	Adjusted	Unadjusted
January, 1938	80	79
February, 1938	79	79
March, 1938	79	80
April, 1938	77	78
May, 1938	76	77
June, 1938	77	77
July, 1938	83	81
August, 1938	88	87
September, 1938	91	91
October, 1938	96	97
November, 1938	103	104
December, 1938	104	98
January, 1939	101	99
February, 1939*	98	99

* Preliminary.

In this production index the autumn rise was largely assignable to an increase in the manufacture of durable goods, in which the previous depression was most severe.

INDICES (UNADJUSTED)

	Durable Mfgs.	Non-durable Mfgs.	Mineral Production
January, 1938.....	53	94	103
February, 1938	54	95	98
March, 1938	57	94	95
April, 1938	58	91	91
May, 1938	56	93	90
June, 1938.....	53	94	91
July, 1938.....	58	97	92
August, 1938	63	104	97
September, 1938.....	66	109	102
October, 1938	80	109	106
November, 1938	92	113	105
December, 1938	86	108	103
January, 1939.....	84	111	105
February, 1939	83	111	104

The rise in durable goods actually reflects in the main an increase in iron and steel production, and in the output of motor cars.

INDEX OF PRODUCTION (UNADJUSTED)

	Iron and Steel	Automobiles
January, 1938.....	50	65
February, 1938	53	62
March, 1938	55	63
April, 1938	55	66
May, 1938	51	59
June, 1938.....	46	52
July, 1938.....	58	45
August, 1938.....	69	26
September, 1938.....	75	26
October, 1938	88	63
November, 1938	101	115
December, 1938.....	89	117
January, 1939.....	90	105
February, 1939	91	98

Not only were the steel and motor industries the centre of the autumn upturn, but they have both experienced substantial recessions from November.

The building industry is, during the winter, definitely affected by seasonal considerations, so the following table is on the seasonally adjusted basis. And construction follows contracts more closely in residential building than in non-residential building. The great spurt in non-residential contracts near the year end is entirely or almost entirely a reflection of the spending programme; but of the contracts let, only a part have yet been translated into actual operations.

BUILDING INDEX (ADJUSTED)

	Residential	Non-Residential
January, 1938.....	26	73
February, 1938	32	66
March, 1938	33	56
April, 1938.....	37	65
May, 1938	37	62
June, 1938.....	42	64
July, 1938.....	49	68
August, 1938	53	77
September, 1938.....	56	96
October, 1938	57	102
November, 1938	56	128
December, 1938	57	128
January, 1939.....	55	111
February, 1939	55	85

It is against this background that the absence of any substantial change between January and February may be regarded.

BUSINESS INDICES (1923-25=100; ADJUSTED FOR SEASONAL)

	Feb., 1938	Jan., 1939	Feb., 1939
Industrial production, total.....	79	101	98
Manufactures, total	75	100	97
Durable	54	88	83
Non-durable	94	110	109
Minerals	103	110	109
Construction contracts, total	51	86	71
Residential	32	55	55
All other	66	111	85
Factory employment, total	88.9	91.7	91.3
Durable goods	81.0	83.6	83.4
Non-durable goods	96.4	99.4	98.8
Factory payrolls, total	76.9	83.2	85.3
Durable goods	67.2	76.4	78.3
Non-durable goods	87.8	90.9	93.1
Freight car loadings	62	69	67
Miscellaneous	69	76	75
Department store sales	88	88	87
Department store stocks	70	67	68

One can divide this index into groups; one group composed of series that show a pronounced rise compared with a year ago; another of series that show almost no change from a year ago. For example, the index of durable goods manufactures is up more than 50 per cent.; of non-durable goods,

almost 20 per cent.; residential building is almost double; freight car loadings and factory payrolls show smaller increases; and employment, department store sales and department store stocks almost no change.

It must be remembered that indices like an index of production are essentially symbolic rather than photographic. It is presumed that the selected components of the index are representative of the omitted elements of the economy. Yet, when one finds that the Federal Reserve Board's production index is about 25 per cent. above last year, that *The New York Times* index of business activity is up only half as much, and that the banking figures for debits to individual accounts (which, except for erratic fluctuations, have long been highly esteemed for their representative character) by an even smaller margin, one can recognise that business generally is better than it was a year ago, without being very confident of the statistical amplitude of that betterment.

The first quarter of 1939 is completed. The average production of the quarter was approximately that of the first quarter of 1938. The fact that March passed without producing any indication clearly pointing to an extension of the recovery movement has been extremely disappointing. At the end of March, 1939, the share market average stood no higher than in January, 1938, although the index of production was 20-25 per cent. higher, and the level of corporate earnings irregularly better.

Government Employees to Pay

The Supreme Court, by affirming the right of New York State to collect a State income tax from an employee of a Federal agency, has apparently cut a Gordian knot which every recent administration (possibly every administration since the Federal income tax was imposed) has sought in vain to unravel. It would appear that, under this decision, some 2,500,000 local government employees become liable for Federal income tax, while about 1,100,000 Federal employees become liable to State income taxes. Of course, not all come within the tax paying brackets, for the individual and family exemptions are rather liberal; and few public salaries extend to what are known as the "higher brackets."

Some 33 States impose taxes. The amount of resources which will accrue either to State or Federal revenue is not large, but the principle is rather important. It is inferred that analogous reasoning would apply to the now tax-exempt local government obligations of which somewhat under \$20,000 millions are outstanding. The decision of the Court requires legislation; for, under it, the liability of officials extends back retroactively to the beginning of the income tax to which they are now liable and to which, by decision, they have always been liable, unwittingly. To students of American constitutional law the reasoning of the justices in this case has the highest historical significance.

German Retail Trade Trends

[FROM OUR BERLIN CORRESPONDENT]

THERE is no question about the scarcity of certain commodities in German shops. Nor is there any doubt that in the case of other commodities there has been a clear deterioration in quality and an extensive introduction of substitutes. Nevertheless, it would be incorrect to read too much into these undisputed facts. Last year the total turnover of Germany's retail traders reached its highest level since the war, being valued at Rm. 34,000 millions, due in part to the high prices ruling, but very largely, too, to the large volume of business done.

Actually, the most interesting fact about retail trade in recent years has been that, while specialised shops of all kinds have shared fully in the increase in turnover, department stores have lagged behind. It is true that in 1938 the turnover of department stores increased by just 10 per cent., against 8.8 per cent. and nearly 9 per cent., respectively, in 1937 and 1936. It is true, too, that, compared with 1933, department stores' turnover was higher by 29 per cent. Compared with 1929, however, it was lower by 29½ per cent.

An analysis of last year's figures shows that the department stores which sold food increased their turnover by 11.3 per cent. over 1937, while those that did not sell food only increased theirs by 7.7 per cent. There is a very obvious explanation for this. Department stores often sell their food-stuffs at prices below the maximum, while the specialised food shops maintain the maximum, even though the quality

of the goods they are selling may be worse. Thus people tend to buy more food from the department stores.

The following figures indicate the proportion of the total turnover of department stores taken by different groups of commodities:—

	Percentages of Total Department Store Trade				
	1931	1933	1935	1937	1938
All Department Stores—					
Foodstuffs	13.4	13.2	10.7	9.3	9.1
Textiles	58.1	58.9	61.1	60.7	60.4
Household goods	14.5	14.5	15.8	17.5	17.5
Miscellaneous	14.0	13.4	12.4	12.5	13.0
Department Stores with Food Sections :					
Foodstuffs	20.5	20.9	17.4	14.6	14.1
Textiles	46.7	46.9	48.9	49.4	49.5
Household goods	17.7	17.8	18.7	20.3	20.1
Miscellaneous	15.1	14.4	15.0	15.7	16.3
Department Stores without Food Sections :					
Textiles	79.9	79.5	80.7	80.2	80.3
Household goods	8.3	8.9	11.2	12.8	12.7
Miscellaneous	11.8	11.6	8.1	7.0	7.0

Among the commodities of which there is a definite shortage in the shops, coffee and eggs are perhaps conspicuous. Although Rm. 1.6 millions' worth more coffee was bought from Brazil in February than in preceding months, a marked shortage of coffee still exists. The greater part of the imports was used to replenish stocks which had fallen low during recent months. Actually, the nation's demand for coffee is being only about half satisfied. The coffee control authorities have issued new quota regulations, which curtail by a quarter the use of the higher grades and seek to encourage the use in greater quantities of the cheaper Central American variety and of Brazilian coffee. The coffee roasting companies must keep 3 per cent. of their quotas for reserves, and, to stop hoarding, the sale of raw coffee is forbidden.

The egg shortage has begotten a substitute. Consumption has lately tended to increase and imports have declined. Accordingly, to eke out supplies, an *ersatz* product for kitchen use has been devised. This milk and white of egg substitute, called *milei*, can be used for cooking as well as for baking, and it can be beaten. It is a powder, and dissolves in water. With a yearly consumption of 118 eggs per person, it is officially estimated that 50 eggs per head are used for cooking purposes; and it is hoped that the use of the substitute will make it possible to reduce real egg consumption by about half. As it is, Germany imported eggs to the value of Rm. 93½ millions last year, of which about Rm. 11½ millions' worth were preserved or dried.

Balkan Self-Help

[FROM OUR ATHENS CORRESPONDENT]

BEFORE the World War Greece was almost entirely an agricultural country. Such industries as existed were unimportant, due partly to a lack of coal mines, and the country's principal revenues were drawn from agriculture, trade, and the merchant marine. In 1910, a few industries began to appear, and concurrently with this the national income was substantially improved by favourable economic conditions and by increasing remittances from emigrant Greeks, particularly from those who had gone to America. The national economy had entered a period of slow transformation. But it was the Balkan wars, and later the World War, which, whilst much increasing the territory and the population of Greece, were the means of radically changing the financial situation and economic structure of the country. Wider horizons also brought new and difficult problems. A rapid and important industrial expansion was one of the consequences.

Several factors contributed towards it. There was first a swift increase of the population—from 2,631,952 in 1907 to 5,531,474 in 1920, to 6,204,684 in 1928 and to more than 7,000,000 (estimated) in 1937—largely from the inclusion of territories liberated during the wars and the influx of refugees from Asia Minor. Added to this was the fact that emigration was no more possible; in consequence the urgent problem arose of settling this comparatively huge surplus population and enabling it to earn a living.

The establishment of new industries and the expansion of those already existing was, in the circumstances, the only possible means of absorbing the disproportionately increased urban population. And this development, rendered possible by the existence of a wider domestic market than was available before 1910, was also favoured by the inflow of Greek and foreign capital during and since the World War, by the post-war spirit of economic nationalism, by the depreciation

of the Greek currency, by State industrial policy, by tariffs, and, after 1931, by import restrictions and foreign exchange control.

A few figures will show the amplitude of this movement towards industrialisation. The number of manufacturing and handicraft businesses employing over 25 workers registered in recent censuses (a new census will be taken this year) was as follows:—

Census year	No. of Firms	No. of Workers
1917	282	23,300
1920	488	42,149
1930	1,039	197,651

The total number of persons employed in industry generally was, naturally, much higher: 123,561 in 1907, 295,210 in 1920 and 429,831 in 1928. Industrial employment has further increased since 1928, the relevant index having risen from 100 in 1928 to 119.3 in 1937.

The index of industrial output (1928 = 100) follows a parallel course: from 61.34 in 1921 it went to 153.87 in 1937 and to 164.24 in 1938 (first nine months). The capital invested in the principal industrial undertakings was in 1930 about £30 millions (gold). There are no statistics of the capital invested at present, but it must be much higher. At least £1,000,000 has been invested between 1931 and 1937 in industrial companies alone.

Deprived of coal—for native lignite is not yet extensively used and is more expensive than imported coal—and poor in basic metals, Greece could develop no heavy industries. Accordingly, industrial development has been in the direction of consumers' goods, especially those for which raw materials may be got within Greece. Those industries which need foreign raw materials rely for help from tariff protection, currency depreciation and import restrictions. Cheap labour and a good geographical position partly balance the disadvantage of having to import fuel and raw materials, and even enable certain industries to export to neighbouring countries.

The value of industrial output in 1937 was estimated at Drs. 13,772 millions. The percentage share of the output of each group of industries of the total production is illuminating: metallurgical 0.6, mechanical 4.3, construction 3.8, textile 28.8, alimentary 17.5, chemical 20.5, leather 8.2, paper 3.5, clothing 0.3, wood 3.7, tobacco 1.5, electricity 7.3. It will be seen that Greek industries are mainly producers of consumers' goods. The following quantitative index numbers show the effects of industrialisation since 1928 (unfortunately there are no indices previous to that year):—

	1928	1937
Consumption of industrial goods :		
(a) Home-made	58.61	74.41
(b) Imported	41.39	25.59
Raw materials used by industry :		
(a) Domestic	56.85	70.98
(b) Foreign	43.15	29.02
Imports of foreign manufactured goods	100	74.45
Exports of manufactured goods ...	100	139.93

Important though the recent growth of industry has been, it could never have sufficed in itself to solve the problems of post-war Greece, and especially the population problem. Climatic and geological conditions, to say nothing of tradition, favoured the development of agriculture, and so it was to the land that the efforts of the authorities turned, and increasingly after 1923. Thanks mainly to the loans raised abroad under the auspices of the League of Nations, large reclamation works were carried out, wide areas of land made arable and suitable for refugee settlement. The methods of cultivation were improved and the system of agrarian credit extended and reorganised. With all this, the area under

Subscribed Capital	£6,000,000
Paid-up Capital	£2,000,000
Reserve Fund	£1,000,000
Currency Reserve	£500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

cultivation has since 1923 almost doubled, and the yield per cultivated unit has markedly increased.

The area sown with wheat alone increased from 4,300,145 stremmata in 1923 to 8,566,512 in 1937 (1 stremma is equal to 0.2461 acre). The yield per stremma rose from 56 to 95, and production from 238,992 to 817,825 tons. In 1938 the output was even larger. The price of home-grown wheat is higher than the world price, the protective measures being aimed at a cereal production which will reduce the adverse balance of trade, since imports of wheat in 1938 amounted to 475,000 tons, representing nearly £4,000,000. Exportable Greek products—tobacco, currants, fruits, olive oil and wines—meet with keen competition, and it would be extremely difficult to expand their export enough to pay for large quantities of wheat. Cereals covered over 67 per cent. of the total area under cultivation in 1937. The proportion was higher in 1938, and will show a further increase this year. The estimated value of the total agricultural production (not allowing for the depreciation of the currency since 1928) rose from Drs. 11,269 millions in 1928 to Drs. 25,682 millions in 1937, of which cereals in 1937 accounted for Drs. 8,558 millions.

The Strain of Reich Building

[FROM OUR BERLIN CORRESPONDENT]

OWING to the immense military construction of barracks and fortifications, to the building schemes of the Nazi Party and the Government, and to the many projects for municipal reconstruction, the German building industry has become overburdened. The consequent difficulties in providing labour and raw materials could only be overcome by curtailing the building of dwellings and restricting private building in general.

In Germany, at present, there are 1½ million too few flats. In the light of the National-Socialist policy for bringing about an increase in the population, it is estimated that 4½ million flats will have to be constructed during the next ten years if the demand is to be more or less satisfied. A commissar with full powers over the industry had to be appointed to operate the regulation of building, and to assure private building of a certain proportion at least of the industry's capacity. At the moment the State dominates the picture. The following figures show how public construction far surpasses private building; and, if fortifications were included, the difference would be even greater.

Percentages of all Building		
	1937	1938
Public construction :		
Reich motor highways	16.2	16.0
Reich railways	3.7	4.5
Single public investments	27.4	21.3
Reich post	0.3	0.2
Reich construction administration	3.6	3.5
Reich water highways	2.9	4.9
Provincial construction	6.1	5.9
Municipal construction	7.6	6.3
Construction of the NSDAP*	4.9	5.6
Construction for organisations, etc.	0.1	0.6
Total public	72.8	68.8
Private construction :		
Industry	22.3	24.3
Commerce and communications	0.4	0.5
Banks and insurance companies	0.5	0.4
Agriculture	0.2	0.2
Settlement associations and private building	3.8	5.8
Total private	27.2	31.2

* National Socialist German Labour Party.

The total value of all building rose last year to Rm. 11,000-12,000 millions, which was Rm. 1,000-2,000 millions more than in 1937. Private building which, as we have seen, accounted for less than a third of this total, is also hampered in its operations. Unless private schemes are of an industrial nature and necessary to the Four-Year Plan, they are allowed practically no iron at all; and they must make sparing use even of timber.

Trade with Egypt

Germany's interest in securing greater cotton supplies from countries like India and Egypt is considerable. It has been enhanced by the annexation of Austria and the Sudetenland, both with textile industries. Officially, the news of forthcoming trade negotiations with India on the occasion of Dr

Schacht's visit to that country is not confirmed. A trade agreement with India is wanted but the present political circumstances are not propitious for such discussions.

Trade with Egypt, because of this need for cotton, is important, too. In 1937, Egypt exported Rm. 47.6 millions' worth of goods to the Reich and imported German goods to the value of Rm. 49.2 millions. The balance of payments (excluding the payments in foreign exchange for the use of the Suez Canal) was thus passive to the tune of Rm. 1.6 millions. Last year, Egypt bought from Germany Rm. 52.6 millions' worth of goods and sold to Germany Rm. 48.6 millions' worth, and the passive balance this time was approximately Rm. 4 millions.

Egypt imports cotton goods on quotas determined by the amount of raw cotton each country buys from her. Under this scheme last year, Germany sold 18 million square metres of cotton goods to Egypt valued at Rm. 6½ millions. German coal exports to Egypt fell from 620,000 tons in 1937 to 300,000 tons last year; while English exports, on the other hand, increased by 200,000 tons.

Germany sells agricultural machinery to Egypt; and it is hoped that, with the restriction of types in the automobile industry, cheaper motor car exports will be possible, which should mean considerable sales possibilities in Egypt. On the whole, however, German exports suffer from the fact that the delivery periods are too long; and this, of course, is due to the overriding claims of intensive re-armament.

If Germany wants raw cotton in particular, in general and most acutely the Reich needs foreign exchange to pay for essential imports of all kinds. The latest measure concerning the Jews bears upon this need. German and Stateless Jews have for some time been legally obliged to turn over to the Government all objects containing precious stones and precious metals in their possession. A new decree of the Minister of Economics, however, permits the emigrating Jew to take with him such valuable objects if he can pay to the Reichsbank their worth in foreign exchange.

Tourists and Oranges

[FROM OUR PALESTINE CORRESPONDENT]

THE recent economic record of Palestine has not been encouraging. Unemployment, stagnant business and declining trade have given rise to social and economic problems which afford a somewhat depressing background for the final efforts to end the present political deadlock. It is therefore not inapposite to ask at this juncture what the course of trade and employment seems likely to be in the near future. And the answer must depend to a considerable extent upon the view held of the outlook for Palestine's orange and tourist industries.

The end of the orange season in April will set free some 20,000 or 25,000 Jews now engaged in orange picking. There are also some 12,000 Jewish supernumerary policemen, whose occupation will disappear with the restoration of order, and a not inconsiderable number employed on military and police buildings who will also become surplus. On the other hand, the restoration of order would provide a stimulus to trade and industry, though scarcely sufficient to bring employment back to the figures of the boom years of 1934 and 1935, on the basis of which the possibilities of immigration were then estimated.

The citrus industry is an all-important basis of the Palestinian economy. There were great hopes of the tourist industry also, and these hopes were supported by the rising tide of tourists, until it ebbed away with the financial collapse in the United States. Affairs in Europe, the natural timidity of tourists in a troubled world, the impoverishment of the greater part of European Jewry, and the persistent disorders in Palestine, have all contributed to wreck the tourist industry. The Government's figures show that, month by month, more money is now spent out of Palestine by visitors from Palestine than in Palestine by visitors from abroad. The latest figures, for November, show that, against £8,681 spent by visitors in Palestine, £45,171 was spent by Palestinians abroad.

The citrus industry, however, is also in a bad way. The widespread planting of oranges and grape fruit has increased exports from under a million cases in 1920-21 to over eleven millions last season and the many new plantations of 1933 and subsequent years are only now beginning to bear fruit for export. The result is that the orange business, which was a very profitable one in the early 'twenties, is now run at a loss. On the average, mainly through over-production, oranges and, still more, grape fruit, have shown practically no profit for some years past.

Letters to the Editor

Free Trade for Cotton

TO THE EDITOR OF THE ECONOMIST

SIR,—Throughout the controversy on the question as to whether the Lancashire cotton industry should have an "Enabling Bill" the chief concern of the protagonists has centred upon the calamitous decline of the export trade. How the trade is to benefit from a Bill which sets out to raise prices, to stifle competition, and to destroy machinery is but one of the problems which remains unanswered in this age of economic unreason.

In every round of tariff bargaining—the Indian cotton duties, the Ottawa Agreements and other trading agreements—Lancashire's once prosperous industry has been used as a counter to be sold or given away in order that some other industry might gain an advantage. The present proposals, in fashion, or by what method, it has not yet been explained. If exports are to be increased then obviously imports will be increased also, and the country has a Government which is resolutely determined to curtail imports. The sole justification for the Bill is that the export trade is in dire distress, but the proposals in the Bill which show how exports are to be increased are nebulous in the extreme.

By the terms of the Bill new charges will be laid upon the industry which is even now overburdened with higher prices, which other producers levy on it. Apart from raw cotton, almost everything (including the cost of living) which enters into the finished cloth has been increased in price by restriction in some form or other. The obvious remedy would have been to obtain relief from the burdens which tariffs and levies have meant in the increased costs of coal, oil, leather, dyes, iron and steel, etc.

But the Bill will do nothing to reduce costs. On the contrary, with its levies, minimum prices, redundancy schemes, the purchase of idle machinery by the trade that it may remain idle, costs will be further increased. The individual firm will be unable to avoid these costs, but it will be possible for the combines to overcome "unfair competition" in production costs by setting the loss on one process against the profit on another process. This is the method of all combines, and it is the usual method of freeing a market of the smaller independent firms.

Acting in restraint of trade has always been regarded with suspicion in our country, but, in these days of adversity, it is regarded as almost the chief aim of industrial leadership. In the organisation of production engendered by post-1931 conditions restraint of trade is an entirely new technique. To speak or write of stimulating demand and consumption is to be charged with uttering shibboleths, and brings forth the fashionable reply that controlled production is the only remedy. The Enabling Bill is in restraint of trade, and, should it become an Act, the small, independent, and often more efficient, firm will be squeezed out, and there will eventually be restraint of work and wages for Lancashire operatives.

The Bill is a negative remedy for the distresses of the cotton trade. Unfortunately, the positive remedy would seem rather like a counsel of perfection in these days. Lancashire can raise its voice to ask that it shall once again be allowed to buy its requirements in any market, and that it shall not be penalised for the benefit of any financial interest or for any other industry. Lancashire has voted for State restriction; has accepted restriction by the State without a protest; and is now planning for even more restriction, instead of clamouring for a policy which would bring back the flow of trade to its natural channels.

Yours faithfully,

HOUGHTON DIGGLE,
Secretary, North-Western
Free Trade Union.

Manchester.

England and Germany

TO THE EDITOR OF THE ECONOMIST

SIR,—I have just read the leading article "England Awakes" in your esteemed paper of March 25th. The reading of this article is not a pleasant one, but the reading of *The Economist* never was for a German, your anti-German attitude being only too well known. But to two points of your

article I wish to draw your attention. You write: "We run the risk of doing what none of Hitler's triumphs has succeeded in doing—uniting the German people in his support." This you do certainly! The artificially roused and anti-German attitude of the British public is for us fully unintelligible, because what happened does not touch British interests at all. We only repaired what was made wrong in 1919 and let again disappear one of the far too many new frontiers created at that time.

Secondly, you write: "We can still save Europe by our example and England by our exertions." Truly Great Britain can do that, but certainly not by rousing a continent for collective security. It is never too late to mend and, if you are willing to mend some of the blunders made in 1919, if you will give us back our colonies, then truly you can save Europe and Great Britain.

In No. 4,912 of October 16, 1937, you published a letter of Mr T. G. G. Powell, from which I repeat the following: "... the terms on which Germany laid down her arms contain a pledge that she shall retain her colonies. This pledge is to be found in President Wilson's address of February, 1918, which, unlike his address containing the 14 points, was accepted without any qualification by the Allies as part of the peace terms, etc. We as a nation can at least remove from ourselves the stigma that inevitably attaches to any failure to honour a pledge; for we can still carry out our pledge so far as territory mandated to us is concerned."

Do that and tear up the bloody treaty of Versailles and you and the world will have peace

Yours faithfully,

HERMANN WOLFF.

Köln.

[*The Economist* is proud of the fact that it has consistently been, and still is, pro-German. Some day the German people themselves will once more be pro-German.—EDITOR.]

Hungarian Economics

TO THE EDITOR OF THE ECONOMIST

SIR,—I read with amazement Mr Sima's letter published in your issue of March 25th (page 617), and would like to express my opinions on the matter. The dates I mentioned in my report (criticised by Mr Sima) were published in the official publication of the Hungarian Office for Statistics. Mr Sima considers that the statement that industrial production declined is incorrect, and points out that the consumption of industrial coal rose from 3.32 million tons in 1937 to 3.39 millions tons in 1938. If, however, he will kindly refer to my article (March 4th, page 442) he will see that I made no such statement.

Furthermore, I would like to mention in passing that the figures given by the distinguished Press Attaché of the Hungarian Legation in London are the figures for the year 1936-37 and correctly the consumption of industrial coal rose from 3.39 million tons in 1937 to 3.45 million tons in 1938.

I did not mention the data concerning coal consumption because it was the iron and machinery industries which increased the consumption, raising theirs' from 0.93 million to 1.02 million tons, but the coal consumption of the textile, leather, rubber, glass, stone, brick, etc., industries declined. Therefore, the data of the coal consumption cannot give a representative view of the evolution of Hungarian industry.

Mr Sima writes that the index of the production of the textile industry rose from 186 to 188. The data published in the last report of the Hungarian Institute for Economic Researches proves that the production was 17 per cent. less in the year 1938 than in 1937.

Yours sincerely,

Books and Publications

The Fascist Economy

NOT many recent books about Italy are as useful as Mr Welk's.* His painstaking work sets out to discover what moved the Fascists in their development, and how they have fared. In this he is handicapped by the usual difficulties of those who examine totalitarian economics. For it is doubtful to what extent Fascist economics, being not so much the study of wealth or of well-being as of mass psychology, can be discussed from the strictly economic point of view; and it is characteristic that most of Mr Welk's conclusions should be in the form of suppositions rather than statistics. It may be true in fact that the Italian Government pursues a programme of self-sufficiency because it lacks foreign exchange, and that it lacks foreign exchange because Italy's markets abroad have been bartered against Imperial gains: in theory it is because self-sufficiency is a corollary of State intervention which is both right and good. In fact it may be true that agricultural tariffs are higher than suits the pocket of the townsman because the peasant must have assistance: in theory it is because Fascism is "a rural phenomenon" and imported wheat a form of slavery to the foreigner.

Against the sort of myopic wish-fulfilment so common in current Italian discussion, Mr Welk struggles very gallantly to see things as they are. On the whole he succeeds, but in the effort to be objective his book becomes more a record than an estimate, more an examination of method than of results. He suffers from a tendency to lump figures together and leave them for the reader's uneasy digestion; there are a number of points which might have been more clearly made with the help of a little recent fieldwork; and in some directions there are noticeable gaps. In a country with a rural population running to many millions, it is inadequate to dismiss agriculture with half-a-dozen pages, and the teased matter of land reclamation by a few general references, whilst devoting massy sections to the organisation of employers and employed.

It is in these directions that the Bank of Italy's three monumental volumes† provide the specialist with the statistical guidance he wants. The studies cover in considerable detail Italian economic developments between 1931 and 1936, and follow two earlier publications dealing, respectively, with the periods 1914-24 and 1925-30. The first of the three present volumes records, in general terms, the establishment and growth of the corporative system and the outstanding developments in industry and agriculture, money and banking, foreign trade and public finance. The second and third volumes cover each different branch of activity separately, and include a mass of information not hitherto placed conveniently together.

The first volume suffers a little from the fact that the last year considered is 1936; sanctions were still in operation in the early part of that year; the lira was devalued only in October; while in 1934 Italy was still suffering from the deflationary effects of the Great Depression. It is difficult, without additional knowledge of subsequent events, to disentangle the temporary from the permanent effects of sanctions. Thus, Germany's share in Italy's foreign trade, to-day in the region of a quarter, is enormously greater than before or during the depression, but still less than the 39 per cent. of Italian exports and 29 per cent. of imports recorded during the sanctions period. Industrial production and employment were also distorted. Between 1931 and 1934 the Italian balance of payments was threatened, and consequently measures were taken, as in many other countries, to exclude imports, particularly foreign manufactures, and to encourage home industry. During this period, too, the principal export industries, cotton and silk, suffered badly. The current usefulness of these volumes is limited by the fact that they do not cover the period of autarky, but as a survey of legal and administrative developments and changes

in the production and trade of each branch of industry and agriculture, they are unrivalled.

They lend weight to Mr Welk's book and make his conclusions doubly valuable. Those light-hearted theorists who look to Italy for a new interpretation of democracy should ponder his statement that the corporative system "has been, and is likely to continue to be in the future, not an agency for the economic self-government of the people, but an instrument of economic control used by the totalitarian Fascist State for the achievement of its ultimate economic and political ends"—or, in other words, since those ends are purely personal to the Fascist leaders, Fascist economics are first and foremost empirical. They provide a planned economy but come perilously near forgetting the plan. And one wonders how many Italians with administrative responsibility are willing to think out the train of argument which leads Mr Welk to say that, "Population growth, economic independence, and colonial expansion are being paid for by the mass of Italians through a lowered standard of living."

Shorter Notices

"Man or Leviathan?" By Edward Mousley. Allen and Unwin. 463 pages. 15s.

The thesis that the chief cause of war between sovereign States is the existence of sovereign States is not new. The view that the only alternative to a regime of binding international law is a perpetual state of war is a commonplace. Yet, in a world which has seen the League of Nations abandoned and the next war already begun, these truths probably transcend all others; and it is the virtue of this book that it presents these issues with all the concrete sanity of a humane lawyer's outlook. It was Thomas Hobbes who defined the powers of Leviathan and the state of war more clearly than any philosopher before or since; he accepted the authority of the State and its clashes with other States as inevitable. In a book which is rich with a passion for law and order and peace, Mr Mousley does not; he would catch Leviathan within the rule of law. So, too, would the economist, who figures only slightly in this book beside the lawyer, the philosopher and the politician. When States clash it is their economic interests that are blamed for the conflict. But it is only for political reasons that economic causes are given for war. It is co-operation that the economic interests of all communities truly call for; and it is more likely that the need for peaceful trade and exchange will ultimately dissuade or drive Leviathan—after bitter and barbaric experiences—from the resort to force than that Mr Mousley's lawyer's plea for a Two Hundred Year Peace Plan will prevail. Actually in our own times both solutions seem condemned to outright failure. For the moment, Hobbes is right.

"America and the Refugees." By Louis Adamic. Pamphlet No. 29. Public Affairs Committee. 32 pages. 10 cents.

From the early days of the seventeenth century, America has developed a tradition of asylum for the oppressed and persecuted. This tradition is still alive. But, just when Nazi persecution has created a pool of human beings, numbering some hundreds of thousands, who are in desperate need of asylum, America is faced with difficulties in freely following that tradition. Economic difficulties, with many millions unemployed, and the social and political problems involved in quickly absorbing refugees in large numbers, make traditional humanitarianism a hard doctrine to follow in practice. This pamphlet sketches what in fact is being done by some 21 organisations and 30 colleges and universities to tackle the difficulties; and outlines the steps that might be taken, by special handling of the quota system, to meet the urgent need. The economic difficulties, though obviously appreciable, are perhaps less than the social and political. Economically refugees are very much more likely to be an asset than a liability. But great care is required in handling immigration to avoid anti-foreign prejudices, and it seems clear that malignant propaganda spares no effort to fan such prejudices. Yet America is as little lacking in administrative determination as in loyalty to her ideals of asylum. The pamphlet's telling diagrams and a short bibliography succeed both in illustrating the poignancy and in underlining the urgency of a problem which America has magnanimously made in great measure her own.

THE BUDGET

This survey of British national finances continues the long series of annual Budget Supplements of *The Economist*. Its purpose is to give, in brief space and convenient form, a compendium of the chief facts necessary for appreciating the present position of the national finances in general, and the problems of the forthcoming Budget in particular.

Revenue

ALTHOUGH revenue collections in 1938-39 fell short of estimates by £17.4 millions, they exceeded the 1937-38 figure by £54.7 millions, which is the largest amount of increase in recent years. But when it is remembered that 1938-39 was the first year to bring in any appreciable return from N.D.C., revenue from all other sources

(whose non-payment was the reason for the duties) were compounded for a lump-sum payment by Eire of £10 millions. After allowing for an increase in consumption of dutiable goods to produce nearly £5 millions more, but a loss of roughly £4 millions annually in Eire duties, the Chancellor in his 1938 Budget expected the net increase in revenue on the basis of the then existing taxation to be no more than £739,000. But increased duties were to produce £8,100,000 more: £2,750,000 by raising the tea duty by 2d. a lb. (that is, to 6d. on Empire tea), £5,000,000 by levying 9d. against 8d. a gallon on petrol and oil, and £350,000 from a new 9d. a gallon duty on power alcohol. Receipts under the main heads in earlier years are shown in the accompanying table.

In contrast with 1938-39, higher receipts in 1937-38 were entirely due to increased consumption, for the 1937 Budget contained no changes in duty of any financial importance. Tobacco is the largest single revenue-producer by a comfortable margin, though beer, spirits and wine between them still bring in well over £100 millions annually. To petrol and oil, however, falls the chief honour

was rather less buoyant than in 1937-38. Income-tax and customs and excise duties fell short of estimate by the relatively small amounts of £5.2 and £3.6 millions respectively, but the deficiency in estate duties (£10.6 millions) and stamps (£3 millions) was comparatively severe.

DIRECT AND INDIRECT TAXES

	Direct	% of Total	Indirect	% of Total
£ millions			£ millions	
1913-14	78.0	47.8	85.0	52.2
1929-30	376.9	55.6	300.0	44.4
1934-35	364.5	51.4	345.3	48.6
1935-36	379.1	51.3	359.8	48.7
1936-37	400.5	51.1	382.6	48.9
1937-38	447.1	53.2	394.1	46.8
1938-39	499.3	55.6	397.1	44.4

Details of Exchequer receipts are given in the first of the accompanying tables, and in the second we show the relationship between direct and indirect taxation. Direct taxes are taken to include all Inland Revenue duties except Stamps, while indirect taxes consist of Customs and Excise, Stamps, and Motor Vehicle duties. The effect of N.D.C. is to raise the proportion of direct taxes.

Customs and Excise.—In 1938-39 these duties yielded £5.3 millions more than in 1937-38, against an expected increase of £8.8 millions. Improvement has thus been on a more modest scale than in previous years, especially as most of the rise is due to increased duties. This is partly due to the cessation of special duties on imports from Eire, following the agreement of April 25, 1938, whereby the disputed debts in respect of land annuities

of producing a useful and steady natural increase in revenue. Between 1932-33 and 1937-38 revenue from petrol and oil duties rose from £35.3 to £50.2 millions, though in that time the only change in duty was the imposition of 8d. a gallon on heavy oil.

As for consumption, the main trends are the declining tendency shown by spirits, cyclical changes in beer consumption as distinct from a long-term tendency to fall, and the rise in tobacco and in petrol and oil. Tea consumption does not vary very widely from year to year (the Customs and Excise authorities estimate a 2 per cent. drop in 1937-38 after allowing for forestalments), and while requirements of sugar tend to rise slowly the large proportion of home-grown sugar now used has caused a long-term decline in revenue from this source.

Inland Revenue.—In 1938-39, these taxes brought in £520.3 millions, which falls short of estimate by £16.1 millions, but is £48.9 millions above the previous year's receipts. But 42 per cent. of this net rise in inland revenue is due to N.D.C., and though income tax fell short of estimate by less than 2 per cent., death duties were as much as 12 per cent. below estimate, no doubt owing to the decline in security values.

Income Tax.—Exchequer receipts from this source in 1938-39 topped the £300 millions mark, and were £5.2 millions below estimate, but £37.5 millions above 1937-38 receipts. In the 1938 Budget it had been estimated that the yield on the basis of existing taxation (allowing for various checks on tax avoidance) would bring in £21,014,000 more than in 1937-38. The 6d. increase in the standard rate was estimated to provide a further £28 millions, while on the other hand higher wear and tear deductions and relief on the first £135 of taxable income were expected to cost £3,750,000. A further temporary loss of £2 millions in 1938-39 was estimated owing to provisions for paying tax under Schedule A by instalments in certain cases.

* Including whole of Ireland.

† Calculated on basis of net produce of tax. ‡ Estimate.

The only change in allowances in the 1938 Budget was that tax on the first £135 remains at one-third of the old rate of 5s. At present the exemption limit is £125, the personal allowance is £100 for single persons or £180 for a married couple, and £60 is allowed in respect of each child. One-fifth of earned income up to a £300 maximum is deducted, and on the first £135 of taxable income the rate of tax is 1s. 8d. There has been no other alteration in allowances since the 1936 Budget, which introduced the minor change of an extra £10 for married couples, and a further £10 for each child other than the first. The incidence of taxation is illustrated by the annexed table of specimen incomes and the tax payable.

Under the 1937 Finance Act, the standard rate was again raised by 3d., and so returned to its 1931-34 level. It had been estimated that about £17½ millions would

arise from the normal growth of income and a further £13 millions from the extra 3d. tax, but in the event receipts in 1937-38 were as much as £40½ millions above those for 1936-37. According to the Inland Revenue report, gross income (that is, the total coming within the Department's purview, before deductions of any kind) was £3,800 millions in 1937-38, against £3,573 millions. After deducting exemptions and reductions for wear and tear and so on, there remained an actual income of £3,050 millions, against £2,873 millions. After earned income, personal,

ANALYSIS OF ACTUAL INCOME (£ thousands)

Schedule	(United Kingdom) Income from	1913-14	1935-36	1936-37	1937-38 Estimate
A	Land, etc., ownership.....	175,662	312,970	322,018	330,000
B	Occupation of lands, etc.....	5,373	29,621	29,192	29,000
C	British, Dominion and Foreign Govt. securities	47,776	143,936	137,967	141,000
D	Business, Professions, etc.	584,346	858,038	944,117	1,030,000
E*	Salaries of Govt., Corp. and Company Officials	137,884	814,187	857,146	900,000
	Ditto, weekly wage-earners		551,138	582,992	620,000

* In 1913-14, employments were assessed under Schedule D.

and other allowances, the taxable income was £1,440 millions against £1,326 millions, and on this sum the net produce of tax was £44.3 millions higher at £305 millions. This amount, however, represents the ultimate yield in respect of 1937-38, and does not correspond to the Department's actual receipts in that financial year.

The accompanying table shows how actual income was spread among the different schedules in 1937-38. In the long-term, only income under Schedules A (house and land ownership) and E (wages and salaries) have shown a rising trend. The least variable class is Schedule B income, which consists mainly of farmers' profits. Of the gross income of £1,281 millions assessed under Schedule D for 1936-37, roughly one-third arose from manufacturing and productive industries and one-third from distribution and transport other than railways.

It was estimated that in 1937-38 some 8,800,000 individuals had incomes above the £125 exemption limit, and of these, 3,650,000 (or 200,000 more) were chargeable, the remainder being entirely relieved through allowances.

Sur-Tax.—It had been estimated that sur-tax in 1938-39, after allowing for increased revenue due to tax avoidance measures, would exceed 1937-38 receipts by £4,940,000, or 8½ per cent. Exchequer receipts have exceeded estimate by £530,000, and make 1938-39 the highest year since 1932-33. Although the peak year for revenue from sur-tax is not until 1939-40—there is a two-year time lag between earnings and tax payments—the possibility of receipts approaching the 1931-32 "high" of £76.7 millions is remote.

It would seem that variations from year to year in the total income assessed to sur-tax depend more on changes in the number of assessments than on changes in income,

SUR-TAX (United Kingdom)

1938-39	2,000	*	*	62.53

* Not available.

† Super-tax.

for in recent years total income has varied in roughly the same proportion as has the number of persons. In 1936-37 95,750 persons with incomes of £2,000 or more received a total income of £483.7 millions, on which the net tax (assessed in 1937-38) was £57.4 millions. But three-quarters of the people paying sur-tax are in receipt of incomes up to £5,000 only.

National Defence Contribution.—This new tax, imposed for the five years to March 1942, levies 5 per cent. on the profits (calculated on income-tax principles) of companies and 4 per cent. on those from the businesses of individuals. Public utility and railway undertakings are exempt, and so are professions and salaried employments, while profits up to £12,000 are allowed an abatement and those under £2,000 are entirely exempt. For building societies there is an overriding maximum of 1½ per cent. of total profits before paying deposit interest, etc.

The produce of a full year's tax was estimated at £25 millions, but the Chancellor budgeted for only £20 millions in 1938-39, on the grounds that it is not until the third year of operation (1939-40) that all businesses will be paying on a full year's profits. Exchequer receipts in 1938-39, however, were somewhat above estimate, at £21.9 millions.

In 1937-38 there were 5,425 assessments made in the United Kingdom. Profits chargeable were £47,239,000, less abatements of £2,141,000. The tax assessed was £2,111,000 (that is, very close to the £2,000,000 Budget estimate) and Exchequer receipts £1,420,000.

Death Duties.—A considerable element of chance in the number and size of large estates makes a close estimate of receipts in any one year especially difficult. On the other hand, these duties reflect changes in general prosperity more promptly than do other direct taxes. In estimating receipts for 1938-39 at only £1,000,000 below

† i.e. up to £500 gross value.

the £89 millions received in 1937-38, Sir John Simon was reckoning upon a continuance of the low level of security prices, but not, it seems, on a further fall. Thus these duties have yielded £10.6 millions below estimate in 1938-39.

It will be seen from the annexed table concerning estate duty (which provides all but £9 or £10 millions of annual receipts from death duties) that the broad distribution of wealth changes little. There is some fluctuation, however, in the large estates. In 1937-38, for instance, 26 per cent. of net receipts came from fifty estates of over £500,000, against 21 per cent. from thirty-nine such estates in 1936-37. The increase in 1937-38 receipts over 1936-37 can in fact be attributed to the larger number of big estates, for the total capital values involved were very little changed.

In 1937-38 the gross capital value of all property was £639.9 against £638.3 millions, and of this Stock Exchange securities accounted for £349.1 millions (or 54.6 per cent.) against £356.3 millions. House property, etc., represented £84.4 against £81.1 millions, and cash plus insurance policies £85.6 against £77.5 millions.

Stamp Duties.—Exchequer receipts in 1938-39 were £3,190,000 less than in 1937-38, and it would seem that allowance had not been made for any considerable further decline in Stock Exchange activity, for the 1938 Budget provided for as little as £170,000 net decrease in receipts. The accompanying table shows the composition of stamp revenue in earlier years. A sharp drop in receipts

in 1937-38 was almost entirely due to the fall in security transactions, and though the decrease in revenue from

share capital duty was of small importance to the Exchequer, the rate of decline of 35 per cent. illustrates the low degree of new issue activity in 1937-38.

Motor Vehicle Duties.—Motor duties provide a slowly and steadily increasing revenue, apart from a slight check in 1935-36 as a result of the reduced rates of duty. The changed method of financing roads, however, affects the comparability of issues from the Road Fund itself, and expenditure under Classes VI and IX of the Civil Votes. The Road Fund remains in being, and meets its expenditure on roads in any one year mainly out of Civil Votes, and to a minor extent by drafts (if necessary) upon

the balance brought in (as happened in 1937-38), and by small miscellaneous receipts. But even when the Fund received a pre-arranged share of the motor duties, it did not spend its whole income on roads. In each of a number of years it handed over to the Exchequer the previous year's surplus, and it also made a fixed contribution towards the Exchequer's block grants to local authorities for general purposes. In the accompanying table we summarise some of the features of road and motor finance, and for comparative purposes show Customs receipts from petrol and oil.

Non-Tax Revenue.—This consists of miscellaneous receipts, Post Office and wireless licence net profits, receipts from sundry loans and net revenue from Crown lands. For 1938-39, miscellaneous receipts were estimated

at £10,500,000, which is £3,010,000 less than 1937-38 Exchequer receipts and the lowest estimate for some years. In the event, receipts in 1938-39 were above estimate by £2,441,000. Post Office net receipt (including an estimated £400,000 from wireless licences) was £970,000 lower than in 1937-38 at £9,500,000, and in order to make up the usual contribution to the Exchequer a draft of £1,400,000 (which was, however, £1,000,000 less than expected) was made upon the Post Office Fund. The other items of non-tax revenue do not vary much from year to year. Some details of receipts from loans and investments made by the British Government appear in the annexed table.

Expenditure

A YEAR ago the Estimates had just been published when the Austrian *Anschluss* made it highly probable that large Supplementaries would be needed for arms in 1938-39. And this year the annexation of Czecho-Slovakia, following soon after the publication of the Estimates, again makes it practically certain that the proposed expenditure will be exceeded. But it has been known for some time that recourse will be had to borrowing on a much more generous scale than seemed likely when the 1937-38 estimates provided for a modest £80 millions from loans. And owing to the proposal to meet at least £350 millions of gross expenditure for 1939-40 from loans, the revenue to be raised will be around £35 millions less than in 1938-39—that is, if the new Estimates have not too great an air of unreality, in view of events since their publication.

* Without provision for eventual Supplementary Estimates. † Excluding sinking fund allocations of £2.8 millions which the fixed debt charge was insufficient to meet. ‡ Former Road Fund self-balancing expenditure transferred to Civil Services for comparison.

The 1938 Budget provided (apart from Post Office and broadcasting) for an expenditure in 1938-39 of £934.4 millions, plus a margin of £10 millions for civil supplementary estimates and for a further £90 millions for arms from loans. During the year supplementary estimates (including a reduced civil estimate and an addition to Consolidated Fund services) were issued for £17.3 millions from revenue and £32.1 millions from loans, while actual total expenditure has been £940 and £128.1 millions respectively. Thus, combining loan and ordinary expenditure, Exchequer issues in 1938-39 exceeded those for

† Including Road Fund expenditure, but not Post Office. * Figures of National Income refer to calendar years, figures of expenditure to financial years ending March 31st of following calendar year. ‡ Annual average. † Estimate. ‡ Figures are taken from "National Income and Outlay," by Colin Clark (Macmillan, 1937), pages 88, 90 and 232; they represent net National Income, as defined by Mr. Clark. The figures for 1936 and after are tentative estimates for which Mr. Clark is not responsible; the 1939 figure in particular is necessarily no more than a guess. ‡ Inc. Sinking Fund.

1937-38 by £159.4 millions, original estimates for 1938-39 (including the provision for Supplementaries) by £123.7 millions, but fall short of final estimate by £15.5 millions.

A comparison between 1939-40 estimated expenditure and actual issues in previous years is given in the first of the accompanying tables.

In the second table an attempt is made to compare the gross expenditure of the Central Government with the National Income over a long period. Expenditure on the armed forces and on civil defence out of loan proceeds is included, and the "defence" subdivision is taken to include civil defence. Until 1938-39, the depression of 1932-33 had been the only period to show a Government expenditure absorbing a fifth or more of the estimated National Income. In the coming year, however, the defence items alone will probably require well over one-tenth of that income.

Consolidated Fund Services.—Owing mainly to interest requirements on new Government loans, National Debt interest and management (discussed in more detail on page 146) cost in 1937-38 £216.2 millions against £210.9 millions. Hence the fixed debt charge of £224 millions did not quite cover the specific sinking funds of £10.5 millions, and in order to ensure an adequate future provision the fixed charge was raised to £230 millions for 1938-39—the first alteration since 1933-34. Payments to the Northern Ireland Exchequer were £9,459,000 in 1938-39, a lower payment for the previous year consisting chiefly of the net share of reserved taxes, plus £1,616,000 for unemployment. The discharge by Eire of all her financial obligations under the April, 1938, agreement has resulted in a transfer from Civil votes to the consolidated fund of the various land purchase charges, and the provision for "other consolidated fund services," originally estimated at £3,200,000 for 1938-39, has since been raised to £5,239,000.

Defence Services.—It is not known how far the cost of the arms programme in the five years to March, 1942, will exceed the original estimate of £1,500 millions. But it has been more than ever apparent since the White Paper on Defence (Cmd. 5944), which indicated a total expenditure on the fighting services of £1,173 millions in the three years to March, 1940, that the excess must be substantial. And it is increasingly clear that issues from loans are not based on any attempt to separate capital from current expenditure, but are chiefly to make up what cannot be met from taxation. Thus the defence Supplementaries for 1938-39, involving £44.3 millions gross, have

DEFENCE SERVICES NET EXPENDITURE (£ thousands)

all been for token sums only from Votes (apart from £2,410,500 for the Navy), the balance being met from loans. Actual issues for the defence services in 1938-39 were £254.4 millions from votes or £384.5 millions after adding issues from loans and the 1937-38 Budget surplus.

In 1937-38, £64.8 millions were issued from loans; the latest estimates for 1938-39 provide for £131.9 millions of such issues (against £128.1 millions actually issued, and original estimates of £90 millions), while in 1939-40 loans are actually to provide more than Votes, at £350 millions, including £46 millions for civil defence. Total borrowing powers have been raised for the time being from £400 to £800 millions, out of which £180 millions nominal of Defence Loan and Bonds have already been placed, and

the 1937-38 Budget surplus of £28.8 millions also counts towards the £800 millions.

The separate services pay interest at 3 per cent. on the amounts actually issued to them from loans in previous years. A total of £5,888,000 is included for interest in the 1939-40 estimates, against £2,128,000 for 1938-39.

Civil Defence.—Air Raid Precautions made their first appearance in the published Government accounts in 1935-36, when £54,000 was spent by the Home Office. In the coming year more than a thousand times that modest sum is to be provided for the group of services known as Civil Defence. And for the first time money raised by Defence loans can be applied to these passive defence services no less than to the Navy, Army and Air Force. Though civil defence has by now acquired almost the status of a separate Service, expenditure on it is controlled through different Votes in Classes III and VI. The recognised heads of expenditure are summarised in the accompanying table, which shows also the cost of the Defence services

proper, for purposes of comparison. A.R.P. is the oldest form of civil defence, and so far the most costly. The Essential Commodities Reserves Fund (mainly food storage) was inaugurated in 1938-39, and in the coming year will require £1,500,000 from loans as well as £3,500,000 from Votes. No details, other than those contained in the recent Civil Defence Bill, are yet available of assistance to public utilities and other essential services. But the A.R.P. Vote includes a token sum for this purpose, and it can only be inferred that, in accordance with the Defence White Paper, some £9,000,000 will be spent—presumably from loans. Civil defence expenditure to be met from loans in 1939-40 will thus probably be £46 or £48 millions.

Navy.—Large as the rise in expenditure is during the past few years, the cost of the Navy has not grown in nearly so heavy a proportion as that of the other services, and 1939-40 is the first year in which total expenditure on the Navy is the lowest of the three forces. Original

* Temporary maximum. ‡ After adding proportion from Defence Loans.

estimates for 1938-39 required £93.7 millions from Votes and £30 millions from loans. Last May a supplementary estimate for £2,410,500 from Votes was presented, of which £995,000 was for increased pay and allowances,

while the cost of the September mobilisation was covered in March, 1939, by an additional £1,750,000 from loans.

Estimates for 1939-40 required £69.4 millions from Votes plus £80 millions from loans. The increase of £21.6 millions in gross expenditure as compared with final estimates for 1938-39 is due mainly to an increase of about £16 millions in shipbuilding contract work, £1.2 millions in matériel, and about £3½ millions for works, buildings, etc. But the separate vote for the Fleet Air Arm appears no longer, as the cost is distributed among the other votes. The sections for matériel and contract work alone include over £8 millions in respect of aircraft.

The shipbuilding programme for 1939-40 requires £46.1 millions against £37.8 millions for new construction

Army.—Expenditure on the Army and the ordnance factories will exceed the cost of the Navy for the first time in 1939-40, when £83.1 millions from votes and £82 millions from loans will be required. The original estimates

* Temporary maximum. ‡ After adding proportion from Defence Loans.

for 1938-39 were for £86 millions from votes and £30 millions from loans. But this loan figure was raised to £39.1 millions by two Supplementaries, one of £6.2 millions for the Army (due chiefly to acceleration of the works programme, but also to improved service conditions and to operations in Palestine) and one of £3 millions for the ordnance factories.

The main heads of expenditure for the Army, excluding the ordnance factories, are shown in the accompanying table. The largest single increases are of £15.3 millions for the warlike stores and £6 millions for the works, buildings, etc., groups. In addition to these major items, grants to county associations for the Territorial Army have increased substantially, while the larger numbers of and the improved conditions for the Regular Army are reflected in the votes for pay, clothing and general stores.

Of the total estimated cost of £16.9 millions for the ordnance factories in 1939-40, all but £1,164,000 is to be met from loans. Total capital expenditure is estimated at £16.7 against £9.5 millions.

Air Force.—There has been a tendency in recent years for expenditure on the R.A.F. to overhauled that on the other Forces, but right up to the 1938 Budget the Air Force involved a smaller gross cost than the Navy. Supplementary estimates (all from loans) for 1938-39, however, and still more the estimates for 1939-40, have raised the R.A.F. to a pre-eminent position.

Original estimates for 1938-39 required £73½ millions from votes and £30 millions from loans, but supplementary estimates doubled the expenditure to be met from borrowing. A supplementary for £22.9 millions in July, 1938, was for general expansion, including an increase in the personnel, and still further acceleration led to a supplementary for £8.1 millions in February, 1939. Thus the number of effectives in 1938-39 was originally 83,000; it was then increased to 96,000, and later to 102,000.

The most important increases in the 1939-40 estimates (the main heads of which are summarised in the annexed comparative table) are of £40.2 millions in technical and warlike stores and of £17.7 millions in works, buildings,

† After adding proportion from Defence Loans.

etc. The omnibus item for "aircraft and balloons" alone amounts to £93.6 millions in 1939-40. Though small beside the cost of machines, the rising cost of the reserve and auxiliary forces and of civil aviation is significant.

Civil Estimates.—The rise in armaments expenditure may be spectacular, but 1939-40 will be the first time in recent years that civil expenditure is actually exceeded by the gross defence estimates. Comparison of the civil services over a period of years is made difficult by the new method of financing the Road Fund and by the intrusion of defence upon the civil votes. For, quite apart from part of the cost of wars past (through the Ministry of Pensions vote), wars future are provided for through the civil defence sections of Classes III and VI, and wars present are responsible for much of the sharp rise in the foreign and imperial group. But when all allowance is made for those votes which are not for genuine civil purposes, the fact remains that most classes of civil expenditure have been rising slowly and persistently, though increases have recently been on a modest scale. And 1938-39 is the second year to show a saving on the civil estimates, for issues in that year were £10.6 millions below final estimate.

In 1937-38, net expenditure on the civil and revenue departments (excluding post office and broadcasting) fell short of final estimates of £422.7 millions for that year by £17.2 millions, without taking into account the £10 millions margin allowed in the 1937 Budget for supplementaries. Nearly £10 millions of this saving was due to unemployment assistance, but there was in addition an underspending of £1,805,000 on A.R.P., some £1,173,000 on Class II and £1,032,000 on the beet-sugar subsidy. Original estimates for 1938-39 provided for £439 millions plus £10 millions for supplementaries, which eventually required £15,177,000 (including £9,290,000 for civil defence), less a deduction of £2,301,000 made possible by the Eire agreement. Actual issues in 1938-39 were £441.3 millions, compared with final estimates of £451.9 millions and 1937-38 net expenditure of £405.5 millions. If civil defence is eliminated, the comparison would be about £423.4, £434.0 and £402.1 millions respectively. The allocation of expenditure among the different classes and their subdivisions is shown in the table on page 145.

CENTRAL GOVERNMENT (Classes I, II, III).—Class I, covering Central Government and Finance, is by far the smallest of the separate civil classes, though its proportionate increase in recent years is considerable.

As its absolute expenditure is not large, Class II does not attract much public attention, but its rapid increase since 1937-38 is one of the main features in the civil estimates, and yet it is due entirely to disturbances outside this country. Our table shows the rise from 1937-38 to 1939-40 to be £7,281,000, although the earlier year included £2,542,000 for Eire services which are now transferred to the Consolidated Fund owing to the agreement with Eire, and which no longer appear in the estimates. Palestine, and to a smaller extent Spain and China, caused original estimates for 1938-39 to be £2,164,000 above 1937-38 expenditure.

During the year, supplementaries were presented for £3,693,000 (mainly on account of Palestine) and a reduction of £1,748,000 in the Eire services. For 1939-40, however, the increase over 1938-39 final estimates is due chiefly to a rise from £2 to £5.3 millions in grants towards military expenditure from Indian revenues.

Class III also is affected by the Eire agreement, though as the Irish Land Purchase section covers Northern Ireland as well as Eire this vote is roughly halved, at £1,225,000, and not eliminated. During 1938-39, there was a reduced estimate of £554,000 for Irish Land Purchase and a supplementary estimate of £790,000 for A.R.P.

EDUCATION.—Expenditure on education has the distinction of showing, in the long term, a large proportionate increase, and yet it is less subject to special factors or to circumstances beyond direct control than almost any other civil class. Between 1934-35 and 1939-40, total Class IV votes (excluding broadcasting) will have risen by nearly a fifth, though in that time the average number of children attending elementary schools will have fallen from 4,907,453 to 4,392,000. On the other hand, the 80 per cent. more costly secondary school attendance has risen from 448,421 children in March, 1934, to 494,321 in October, 1938, while salary cuts have been restored. In fact, it is the quality and not the quantity of educational facilities that has been rising, and much of the higher cost is due to services of a non-scholastic character. In elementary education, teachers' salaries now form 59 per cent. of the cost per pupil, yet before the war, when the scale of remuneration was lower, this proportion was about 64 per cent. Some particulars of education in England and Wales are given in the accompanying table.

EDUCATION IN ENGLAND AND WALES

	Board's Net Estimates		Total Expenditure by L.E.A.s†		Cost per Elementary Pupil
	Total Vote	Grants to L.E.A.s	Elementary Education	Higher Education	
1933-34	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ s. d.
1934-35	14.7	12.8	25.6	4.4	4 15 2

* Provisional.

† Including proportion borne by the rates.

In 1939-40, grants to local authorities for education account for £58.5 millions net out of the Board of Education and Scottish public education votes combined of £60.3 millions. Such grants represent very roughly half the gross expenditure on education. In secondary schools, the gross cost per pupil in 1937-38 was about £36 2s., against £35 8s. in 1936-37, fees and other receipts reducing this gross cost by about £5 10s. per pupil. Reorganisation preparatory to the raising of the school-leaving age has resulted in some increase in miscellaneous expenditure.

HEALTH, LABOUR AND INSURANCE (CLASS V).—*Health.*—The greater part of the "health" and miscellaneous services consist of housing grants, and most of the balance is attributable to contributions to the National Health Insurance Fund, which will receive £6.6 millions from votes in 1939-40. Direct grants for specific health services still represent a trifling fraction of national expenditure, though they have been increasing rapidly in recent years. Grants for physical training, however, are borne on the Education votes.

Labour.—Unemployment assistance and allocations to the Special Areas Fund are the main causes of fluctuation in Class V votes. Most of the net cost of the Ministry of Labour consists of the Government's contribution towards the Unemployment Fund, and as this depends on the number of persons in employment it is a relatively stable item of expenditure, while the vote for the Unemployment Assistance Board (which in 1937-38 cost £10 millions less than the final estimate) is more fluctuating. But the method

of financing unemployment—partly through the Fund and partly through allowances—is such that variations in the gross cost of unemployment do not show up clearly in the civil votes. Thus for 1939-40 Government contributions to the Unemployment Fund are slightly lower, though gross expenditure on benefit is estimated at £51 millions, against £39 millions in 1938-39, while allowances will cost about the same, at £39 millions. The gross cost of administering benefit and allowances is about £6.4 millions. The remaining labour items consist of employment schemes (on which expenditure has been falling slowly, and which will cost £3,280,000 in 1939-40), financial assistance in the Special Areas and the Special Areas Fund. The latter provision for 1939-40 is halved at £3,750,000, but the Fund had an estimated balance in March, 1939, of £3,300,000.

Pensions.—Since 1934-35 the Old Age Pensions vote has risen by 17 per cent. and, as in 1937-38, it was necessary in the year just elapsed to present a supplementary estimate for £200,000. The rise in the vote for contributory pensions is due partly to the automatic annual increase of £1,000,000 under the Widows' and Orphans' and Old Age Contributory Pensions Act of 1936, and partly to a new item of £1,950,000 in respect of the voluntary scheme introduced under the 1937 Act.

TRADE, INDUSTRY AND TRANSPORT (CLASS VI).—Even excluding roads, expenditure on this class of the estimates has risen remarkably in the past seven years, due mainly to direct or indirect assistance to agriculture and to the fishing industry. In our table, the composite item, "Agriculture, livestock and fisheries," comprises expenditure on the Ministry of Agriculture and Fisheries (and the relative Scottish votes), the beet sugar and oats and barley subsidies, milk, bacon, land fertility and the Scottish herring industry. Since 1933-34 this group of expenditure has risen from £5.8 millions to £15.4 millions in 1939-40. Individual items (and especially the beet sugar subsidy) fluctuate

from year to year, the rising trend being due chiefly to new methods of assistance.

For the first time since expenditure on roads was transferred to the civil votes, a proper comparison between two years is possible. In 1939-40 the grant to the Road Fund will be £23.5 millions against £21.6 millions. The Fund had outstanding in March, 1939, commitments of about £57.9 millions to highway authorities and £13.1 millions for trunk roads. New commitments in 1939-40 are estimated respectively at £21.7 millions and £18.4 millions, and payments at £18.2 millions and £7.0 millions. The balance in the Fund in March, 1939, was about £2,045,000.

Other votes in Class VI include £780,000 for the Board of Trade and Mercantile Marine Services, £650,000 for the Forestry Commission and £1,355,000 for Development Fund and Grants.

OTHER CIVIL AND REVENUE VOTES.—Though not of great absolute importance, Class VII votes for Common Services (Works, Stationery, etc.) have risen sharply since 1936-37, mostly on account of increased expenditure on public buildings and Government offices. During 1938-39 supplementary estimates totalling £1,178,000 were presented. In 1939-40 some £3,149,000 is required for rates and £3,436,000 for stationery and printing; the remainder is mostly for buildings.

Out of the total Class VIII vote for 1939-40, some £36.7 millions will be distributed in actual war pensions, which are now declining by roughly £1,000,000 a year. Exchequer contributions to local revenues (Class IX) vary only very slightly from year to year. A sharp rise in 1937-38 was due entirely to the cessation of former contributions from the Road Fund. Expenditure on the two Revenue departments shows the same slowly rising trend as in many other sections of the civil votes. The Inland Revenue, however, now has additional work in connection with N.D.C. In 1937-38 the cost of collection was 1.72 per cent. of gross sums collected by the Inland Revenue, against 1.85 per cent. for 1936-37.

POST OFFICE AND BROADCASTING.—Another decrease in Post Office net receipt (of £970,000 in 1938-39) suggests that relations with the Exchequer may have to be reviewed again. At present the Government is entitled to a fixed £10½ millions (excluding the share of wireless licences, and subject to adjustments). The Post Office hands over its actual working surplus, and any deficiency below the fixed contribution is made up from the Post Office Fund, which alternatively receives any excess profit. Receipts from the Fund are normally small, but the last Budget provided for a payment of £2,400,000 by the Fund in 1938-39. Even after offsetting an over-payment to the Exchequer of £220,000 in 1937-38, this represented a large draft upon a Fund whose balance in March, 1938, was £3,084,000, but finally only £1,400,000 has been drawn upon.

Growing business activity, the better quality and scope of the services rendered by the Post Office, and especially rapid developments in air mail and telephone services, are reflected in a considerable increase in expenditure in recent years. Excluding broadcasting, estimates for 1939-40, at £79.6 millions, are one-third higher than 1934-35 expenditure.

The Commercial Accounts for 1937-38 show operating income on general account, excluding broadcasting, of £87.7 against £84.1 millions, to which postal (including postal and money order) business, telegraphs, telephones, and remuneration for work done for other departments, contributed respectively £48.1, £3.3, £32.0 and £4.3 millions, against £46.3, £3.3, £30.4 and £4.1 millions. Operating expenditure was £70.8 (against £66.4 millions). This includes £36.5 millions salaries, etc., to the non-industrial staff, and £8.5 millions for plant depreciation, but not £6.3 millions interest on capital. The year's surplus, after charging this interest and bringing in other receipts, was £11.2 against £12.3 millions. Although gross telephone receipts expanded, the operation in a full year of reduced charges introduced in October, 1936, affected profits, and the telephone surplus for 1937-38 was over £1,000,000 lower at £429,000. Postal business showed a rather more

moderate growth than in the previous year. Capital expenditure in 1937-38 was £17.2 against £13.6 millions, while in 1938-39 the Exchequer issued £22.6 millions for capital purposes. These advances are repaid by means of annuities charged on the Post Office vote, which includes £13.9 millions for this purpose in 1939-40.

The National Debt

IT is clear that the upward movement in both the nominal value and the annual cost of the National Debt already apparent two years ago will become still more pronounced as borrowing for armaments continues. By March, 1938, the dead-weight debt had been lifted for the first time above £8,000 to £8,026 millions, owing to an increase in the Exchange Equalisation Fund and to the first Defence Loan placed in April, 1937. On a comparable basis, the debt was probably about £8,166 millions at the end of March, 1939, and there is some indication that a year hence it will be nearer to £9,000 than to £8,000 millions.

Nominal Value.—The latest year for which full details are available is 1937-38, and we show in the accompanying table how the dead-weight debt was made up in March, 1938, and certain earlier years.

† Includes National Savings Bonds (now about £3½ millions).

Net Indebtedness.—The preceding table, however, does not give a completely accurate picture of the position of the National Debt. On the one hand, it takes no account of assets acquired against the debt, and on the other omits interest accrued on Savings Certificates, for this interest is only charged in the accounts as repayments are made. There are also other capital liabilities of the State, amounting to £123 millions in March, 1938, but as there are physical assets against these liabilities, it seems proper to exclude them entirely from an estimate of net indebtedness. Payments of interest and principal on War debts have virtually ceased since the Lausanne conference of 1932, and official statements of assets exclude all War debts due from foreign countries or the Dominions to this country. It is thus logical to exclude also our own external debt to other countries, chiefly to the United States of America.

In the accompanying table a figure of the State's net

The 1939-40 estimates for broadcasting (technically included in the education votes) are double the 1934-35 expenditure. An increasing share of gross wireless licence revenue, which was £4,269,000 in 1937-38, goes to the B.B.C., and for 1938-39 the Exchequer share is estimated at no more than £400,000.

indebtedness is estimated. The assets shown are of a financial character only, and do not include the value of physical assets such as Government buildings or Crown lands. No

1937-38. The amount received from Eire under the Agreement, in discharge of all her liabilities, has been re-issued, mainly for Irish stocks debt redemption.

The Debt Charge.—In the 1937 Budget no alteration was made in the fixed debt charge, but during the year 1937-38 the total cost of interest and management (as

we show in the following table) rose by about £5.3 millions. This increase was due to the charge of a full year's interest on the 2½ per cent. Funding Loan 1956-61, to the issue of the 2½ per cent. Funding Loan 1952-57, and to the payment of interest (though not for a full year) on the 2½ per cent. National Defence Bonds 1944-48. As a result, the fixed debt charge was not quite enough to meet the statutory sinking funds as well. Partly for this reason Sir John Simon in April, 1939, raised the fixed debt charge from £224 to £230 millions. The cost of armaments borrowing

however, is not, and will not be, reflected in the Consolidated Fund payments. The Defence services are paying 3 per cent. on the sums from loans issued to them in preceding years, so the charge is carried in the Supply Votes.

Debt Redemption.—The composition of the nominal sinking fund during the six years ended 1937-38 is shown in the next column. But issues to the New Sinking Fund are far from representing a net redemption of debt. New loans for general purposes are raised from time to time. Budget surpluses or deficits reduce or increase debt. Sometimes there are special maturities to be provided for, such as £27.3 millions of 2½ per cent. Treasury bonds in February, 1937. Then each year there is some net change in the principal of outstanding National Savings Certificates, and nearly always a number of special transactions.

On a cash basis, there was a net redemption of debt of £13.5 millions in 1935-36 and £5 millions in 1936-37, but an increase of £226.7 millions in the course of 1937-38. Since March, 1938, there has been an issue of £79.6 millions (cash) of 3 per cent. National Defence Bonds, but an increase in the floating debt of £78.6 millions has been

necessary to meet the Budget deficit of £12.7 millions, issues out of Defence Loans in excess of sums actually borrowed (£48.4 millions), and various other payments (in particular the £10 millions placed at the disposal of (000's omitted)

LOCAL AUTHORITIES

THE latest year for which detailed Local Government accounts are available is 1935-36, and we have estimated that in that year expenditure incurred in Great Britain and Northern Ireland, by the Central Governments, Road Fund and local authorities combined, was about £1,163 millions, against £1,113 millions in 1934-35. For later years the estimated revenue from rates was £171.5 million in 1936-37 and £176 million in 1937-38 respectively in England and Wales, and £20.3 and £20.5 millions in Scotland. The table and other information which follow refer to England and Wales only.

Rate fund services in 1935-36 cost £287.6 millions for general expenses, plus £62.9 millions for loan charges, on revenue account, and £75.0 millions on capital account, against £277.2, £63.1 and £62.1 millions respectively in 1934-35. On revenue account (including loan charges) elementary and higher education cost £92.2, against £86.9 millions; all public health services, including mental treatment, £64.9 against £61.6 millions; poor relief, £37.8 against £36.2 millions; police, £23.9 against £22.3 millions; and roads, £48.6 against £47.5 millions. Housing schemes (including the acquisition of small dwellings) cost £7.9 against £12.8 millions for general expenses, plus £31.6 millions (about the same) for loan charges on revenue account, while capital expenditure was £37.9 against £29.4 millions. Housing is the largest item of capital expendi-

ture, but in addition £6.3 millions was spent on education, £12.5 millions on public health and hospitals, and £9.1 on roads, against £4.7, £11.2 and £8.1 millions respectively. Of the total spent for capital purposes, £66.6 against £53.8 millions was for new works and £8.4 millions (about the same) for sinking fund or repayments.

On revenue account expenditure on the rate fund services was met to the extent of £51.4 against £56 millions from fees, rents and other recoupments, and £85.4 against £77.1 millions from Government grants, so that a balance of £213.7 against £207.2 millions was met out of rates. Housing contributed £22.1, against £27.5 millions in rents, etc. Of the specific Government grants, £43.4 millions were for education, £13.8 for housing and £11.5 for police, against £40.4, £13.4 and £10.7 millions respectively. Of receipts on capital account of £74.6 millions in all (compared with £59.3 millions in 1934-35), £58.6 against £43.8 millions came from loans and £12.3 against £12.0 millions from other capital receipts.

For the trading services (electricity, water, gas, transport, etc.), working expenses in 1935-36 amounted to £81.0 millions, loan charges to £35.2 millions, income of service to £124.1 millions, and capital expenditure to £28.7 millions, against £76.5, £35.5, £117.9 and £25.1 millions respectively in 1934-35. Measured by the revenue it produces electricity supply is the most important trading service; transport, which comes next, is half as large. Water supply is a close third, but its loan charges bear the highest proportion of all to income of service.

Of gross loan debt outstanding in March, 1936, £967.7 millions were for rate fund, and £483.6 millions for trading, services. But towards these sums, £63.3 and £35.6 millions respectively stood to the credit of sinking funds.

SOCIAL SERVICES

TOTAL expenditure in Great Britain upon the social services in 1936-37 and earlier years is summarised in the first of the accompanying tables. The gross cost is shown

* Exchequer contribution was £15,000,000 in 1936-37. (a) Unemployment and Health Insurance: insured persons.

Receipts in 1936-37 from various sources (Government grants, rate funds, and contributions, rents or fees) are shown in the second table. Expenditure out of the rate funds cannot be allocated between local rates and Government block grants, as the latter are not earmarked for specific purposes. The health services are still financed locally for the most part. In normal times this is also true of poor relief. In 1936-37 capital expenditure for all purposes was about £45.5 millions, of which £32.2 millions was for housing and £9.0 millions for schools, etc.

ASSISTANCE TO INDUSTRY

In July, last year, the Chancellor of the Exchequer told the House of Commons that in about seven years from October, 1931, some £55 millions had been spent from public funds in subsidies to industry and agriculture. In the accompanying table we set out particulars of some of the main forms of assistance that can be brought under this head. The figures refer to the whole of the Votes in question, and as they include miscellaneous expenses in some cases, they may overstate the direct subsidies actually received by producers. The Civil Aviation Votes especially for 1938-39 and 1939-40 are much influenced by the Defence programme.

It will be seen from the table that in the six years to March, 1940, about £67 millions will have been spent in direct subsidies. This is essentially a minimum amount, for

* 1938 latest, 1939 Budget estimates. † Paid to growers, years beginning August 1st. ‡ A five-year scheme, not provided for in the Estimates, is under consideration.

in addition to these provisions from Votes, there are many other forms of indirect assistance through protective duties or levies, whose value can be guessed at with varying degrees of success. For the sake of comparison we show the amounts paid to growers under the wheat scheme, though the figures are not brought into the totals. Then the beet sugar industry has, in addition to the direct subsidy, a revenue advantage which is shown by the *Agricultural Register* to have been of the order of £2½ millions to £3 millions a year. Oil produced in this country from coal is entirely relieved of the 9d. a gallon Customs duty, and the concealed subsidy it receives is thus about £3¼ millions, assuming an annual production of 100 million gallons of light oil.

Even among the direct subsidies, the ultimate amount of assistance in 1939-40 is likely to be much larger than the £15.6 millions indicated in our table. Since the Estimates were published, details have been issued of the proposed scheme for aid to the shipping and shipbuilding industries, which will cost over £3,250,000 a year.

The significance of these subsidies, indeed, is not their absolute size, but the fact that they have tended to increase through the introduction of new forms of assistance, and that they present an incomplete picture of the help of all kinds given through legislation.

THE BUSINESS WORLD

“Open Covers” in Gold Insurance

THE recent acceleration in the flow of gold from Europe to the United States has served to bring into greater prominence than ever before the thoroughly unsound principles on which the market for insuring the marine risk on gold shipments operates in such abnormal circumstances. Whenever the rush to ship gold across the Atlantic is stimulated either by the arbitrage profit to be made on such shipments or by the search for greater security, or as was recently the case, by a combination of these two factors, the concentration of gold on single vessels becomes such as to render the insurance of that gold too big a mouthful for the market to digest. One need only instance in illustration of this fact the case of the “Manhattan,” which, on its last voyage from this country to the United States carried gold to the value of about £12,000,000, at least three times the value of the ship and all the rest of its cargo. The premium paid by the shippers for the marine risk on this gold can have been a total loss of this shipment the insurance market would have had to allocate for this purpose the whole of the premium collected on international gold shipments since at least the beginning of the present century. At the normal rate of 1s. per cent., it would be necessary to insure £24,000,000,000 of gold or about four times the aggregate monetary reserve of gold in the whole world to collect in premiums the amount required to meet the potential loss on this single shipment. It is not surprising that the marine insurance market should in the face of such experience have come to the conclusion that such business is thoroughly bad underwriting. The system which produces such results cannot be allowed to remain in operation, and but for the glamour of the word specie in underwriters' eyes it would have ceased long ago.

The circumstances that are capable of producing abnormalities such as those symbolised by the “Manhattan” case derive from the “open cover” system under which the bulk of the marine risk on gold leaving this country is insured. An open cover is a contract, terminable at specified notice, giving shippers of gold the right to have up to a given amount of metal on any one vessel covered against the ordinary marine risks. There are between twenty and thirty of such open covers granted to banks and bullion dealers in London. The facilities they offer in one bottom range from about £200,000 to a top figure of around £1,250,000. Assuming that the available covers provide facilities averaging £500,000 per steamer per cover, it follows that if every open cover in London is being utilised in respect of a particular vessel that vessel will be called upon to carry between £10,000,000 and £15,000,000 of gold. On this assumption the “Manhattan” when it carried £12,000,000 of gold across the Atlantic was in fact carrying nearly the potential maximum feasible under the existing open cover facilities. The fault with this system is that it should be possible for this potential maximum ever to be realised in practice.

In the normal course, not more than five or six of these open covers are used with any regularity. Among the twenty to thirty banks and bullion houses to which such facilities have been granted there are very considerable variations in the efficiency with which they undertake gold arbitrage business. Certain institutions have the experience, aptitude and facilities which enable them to work

on a price which would leave others no profit margin whatsoever. The more efficient are the houses which provide the normal gold arbitrage machinery in this centre and which are working with some regularity. Their open covers are therefore being consistently used to the profit both of themselves and of the underwriters. The same cannot, unfortunately, be said of the large majority of open covers. These are granted to firms which only begin to arbitrage gold when the profit margin becomes abnormally large. It may, therefore, be assumed that when these marginal open covers become utilised the facilities available to the better-placed firms are already being operated to capacity. Therefore, these marginal covers merely increase the congestion both of gold being shipped on each available vessel and therefore of the gold insurance market. For it must not be assumed that underwriters, faced with the inordinate piling up of their gold commitments on a single vessel, have done nothing to protect themselves. They have under such circumstances endeavoured to restrict their commitments to reasonable proportions by re-insuring part of the gold in question. But whereas the premium received by them from the shippers was fixed in advance by the terms of the open cover contract—and has ruled for some time at 1s. per cent.—the rates paid for reinsurance have moved freely and in accordance with the degree of gold congestion on each individual vessel.

Thus the twelfth £1,000,000 of the £12,000,000 of gold recently shipped by the “Manhattan” was being reinsured at 20s. per cent., i.e. at 20 times the premium paid by the shippers and received by the original underwriters under the open cover policies. On such a shipment, needless to say, the original underwriters had to pocket an appreciable loss. The bullion market has in recent months been particularly vocal in its criticism of the insurance market. One well-known firm in its annual review of the gold market for 1938 did not hesitate to assert that “no institution made more money out of the (September) crisis than the insurance market or lost more prestige.” But the boot is sometimes on the other foot and the insurance market could well respond with the assertion that part of the substantial profits made by the bullion market out of arbitrage of gold with New York has in fact been made at the direct expense of certain interests in the insurance market. It is probable that the majority of the rarely used open covers involve their underwriters in loss. They are only utilised at times when the channels of gold arbitrage are already congested and when the gold insured under these covers has therefore to be reinsured—always at a loss—by the underwriter.

It should be possible to devise means whereby this obvious defect in the gold insurance machinery could be remedied. One way of doing this would be to make open cover policies subject to a minimum annual premium, which would ensure their utilisation only by interests which operate them with fair regularity. This minimum need not be high enough to involve any real restriction in the freedom with which the efficient banks and firms in the gold market would arbitrage gold with overseas centres. But it would not have to be particularly high in order to rule out the marginal open covers, which, on the few occasions on which they are used, are likely to involve the underwriters in loss. It might also be possible to cancel all existing open covers and only reinstate them subject to an overriding clause limiting the aggregate amount of gold to be carried by any one vessel and cancelling the

facilities provided by the cover once that limit had been reached. There should certainly be no need to abolish the open cover principle from the gold insurance system. It has justified itself by providing a firm basis on which the delicate calculations of arbitrage costs can be made in advance of any intended operation and is thus essential to the functioning of the whole arbitrage machinery. On

occasions the open cover system has led to the development of abnormal and unsatisfactory conditions in the gold insurance market. But the responsible defects can be eradicated without tampering with essential features of the machine. The real problem is that of preventing hungry underwriters, when offered these gold covers, from swallowing the bait of "specie."

Market Gardening

THE need for the provision of a more plentiful supply of cheap fresh fruit and vegetables has been emphasised in almost every report on nutrition. In particular, stress has frequently been laid on the necessity for the extension of market gardening. So far, however, progress has been slow. According to the Occupational Census of 1931, only 115,000 persons were then engaged in market gardening, and in July, 1938, there were only 78,000 insured persons in this branch of activity. The average size of the individual business unit is small; in 1931, for example, there were only three insured persons per independent worker. Apart from its role as a supplier of fresh fruit and vegetables, the importance of the industry is derived mainly from its local concentration.

Since December, 1931, the industry has enjoyed the protection of comparatively high import duties. But asparagus growers round Evesham, owners of tomato houses in the Lea Valley, broccoli growers in Cornwall, the flower farmers in the Scilly Isles, and the soft fruit growers in Kent, Norfolk, Cambridge, Worcester and Lincolnshire, had clamoured for a tariff for years before the Horticultural Duties Act of December, 1931, and the Import Duties Act of March, 1932, were placed on the statute book. The effect of these import duties, which amount in some cases to 100 per cent., can be seen from the following table, which gives the value of imports of various types of horticultural products:—

	1930	1931 (£'000)	1936	1937	1938
Raw fruit	29,333	30,177	22,525	23,719	25,198
Vegetables*	7,849	8,010	7,018	6,945	7,773
Cut flowers	765	1,064	539	637	635
Bulbs	1,680	1,470	1,566	1,617	1,816

* Excluding potatoes.

There has been a fall in imports of fruit and cut flowers; but the total value of imported vegetables, as a group, has not been much affected, and imports of bulbs have increased both in value and in quantity. There has also been a very considerable shift in the source of our imports of fruits and vegetables. An index of the volume of fruit imports, including eight types of fruit, calculated by the Agricultural Economics Research Institute at Oxford, fell from 100 in the base period 1927-29 to 86 in 1937; but while the index for Empire shipments had risen to 174 in 1937, the figure for the volume of imports from foreign countries had fallen to 47. As the duties are usually highest in the season when home production is available, there has also been a shift in the timing of foreign imports, towards very early or very late supplies; this has been very marked in the case of tomatoes.

Broadly, there has been a steady decline in the acreage under small fruit, but a marked increase in the output of vegetables, and in the acreage under orchards. It is probable that import duties have been partly responsible for the latter phenomenon, but they have clearly not saved the growers of small fruit from an unprofitable enterprise. In all forms of horticulture and in the case of small fruits, particularly, where imports, even in 1931, provided only a small proportion of total supply, the vagaries of the weather and of pests have the determining influence on the grower's financial returns, and in fact the fall in the acreage under small fruit is due very largely to the rapid spread of disease. Hampshire, for example, which used to be one of the main suppliers of strawberries, has been so infected by "yellow-edge"

and "crinkle" that the industry is now dying out in that locality. The heavy cost of spraying (which has to be done several times a year with different washes to deal with different pests), of orchard heaters, or of soil sterilisation in the case of greenhouse crops, has also been a serious handicap to the small growers. The trade in cut flowers, however, has undoubtedly benefited by protection, and there has also been a considerable expansion in the acreage of bulbs, and in green-house crops.

The next table shows changes in the acreage under various crops grown on holdings of more than one acre in the United Kingdom:—

	1921 (Acres)	1930	1937
Orchards	...	241,779	258,575
Small fruit	75,587	65,432	52,103
of which—			
Strawberries	19,364	23,032	21,242
Raspberries	6,741	6,137	5,401
Currants and gooseberries	21,617	28,714	22,965
Carrots	8,224	9,430	13,924
Onions	2,973	1,534	1,656
Brussels sprouts	12,507	35,580	32,245
Cauliflower and broccoli	8,583	15,783	18,843
Celery	4,211	7,310	6,063
Rhubarb	5,333	7,843	7,376
Beans	...	13,218	13,194
Peas, for market	...	57,445	45,616
Cabbage, for human consumption	...	35,702	38,245

Vegetable growing has suffered from a peculiar form of internal competition. As the table shows, the acreage under carrots, cabbages, cauliflower and broccoli has noticeably increased since 1930, but this increase has been due largely to the activities of the general farmer, and not to an extension of market gardens. The slump in cereal prices since 1929, and the need of many arable farmers to grow more cash crops, has resulted in the adoption of cabbages or other vegetables as part of the crop rotation of arable farms, with a consequent revolution in the methods of cultivation. Tractors, manure spreaders and other machinery have been adapted to the cultivation of vegetables, and the number of such crops which can be grown in fields is still increasing; even asparagus, which has been regarded as essentially the small man's crop, is being taken up by arable farmers. Consequently, the small market gardener has found the market for many of his products swamped by the cheaper if somewhat inferior output of large farms.

The very steady import of many kinds of fruit shows, however, that there is still a large market available if only the home grower can tap it. Apart from a limited quantity of luxury products, the imports of bananas, oranges and apples supply mainly the cheapest and out-of-season market, so that an expansion in home production can now occur, not by pushing up still further the price of the foreign product, but only by cheapening the price to the consumer of the home production. Technical progress in cultivation will help, but undoubtedly the greatest economies could be secured by a reform in the methods of marketing. Since the Linlithgow Committee in 1923 criticised the distribution of agricultural produce, little has been done to improve wholesaling and retailing methods. The railways have, indeed, improved their fruit and vegetable services, and co-operative selling by producers has made modest advances on earlier efforts. Ever since 1895 the Scilly Isles Bulb and Flower Association has been developing the sale of early flowers grown on the Scillies with remarkable success; it is only com-

paratively recently, however, that other growers have followed this example. For some years the Pershore Co-operative Fruit Market and the Littleton and Badsey Growers' Association have been working co-operative development schemes. More recently Devonshire violet growers and Cornish anemone growers have set up organisations to supervise sales, which have in addition been conducting publicity campaigns in the national press, using in some cases the "National Mark." Efforts have been made by English tomato and Scottish raspberry growers to introduce marketing schemes on the lines of the Agricultural Marketing Act, so far without success. Despite all this the improvements are piecemeal; co-operative selling organisations, with a few exceptions, lead a fitful life at the best, while the proper grading of supplies sent to the ordinary markets is still a rare event.

The inefficiency of present methods of fruit and vegetable retailing has been shown by a prominent chain of variety stores. This concern approached fruit and vegetable farmers in districts near some of its principal branches and guaranteed to take all their produce at agreed prices; then, by organising its own transport, it has been able to sell fruit and vegetables at prices well below those of independent retailers. Similar success has attended the sale of tomatoes from the Scilly Isles by the same concern. There is no doubt that prices could be lowered and consumption of fruit and vegetables increased by an extension to all large towns of these methods of sale by contract, but such an improvement involves either the substitution of small units by large, or co-operation between groups of producers and retailers.

Such developments are hindered, not only by the individualistic outlook of many horticulturists and shopkeepers, but also by the highly seasonal nature of many of these products. The home grower can in a normal season keep the British housewife supplied with vegetables of one kind or another throughout the year, but the season for British fruit is still limited to the six months from June to December. An extension of the home production of fruit involves, therefore, not only the eradication of disease and an improvement in marketing methods, but also the development of the comparatively new industry of fruit preservation. It is worth noting that in 1938, Britain imported preserved fruits to the value of £8 millions, together with tinned tomatoes valued at £1 million.

Fruit preservation in the form of jam is, of course, an old industry, which uses a considerable quantity of home-grown fruit and of imported fruit pulp. Canning in Great Britain is still applied largely to vegetables,

such as peas and asparagus, but increasing quantities of fruit and of tomato juice are being preserved in this way. Both these operations must be conducted on a large scale in order to be commercially possible, and consequently, both jam making and canning firms must be able to obtain regular supplies of good quality produce near at hand. Here, again, therefore, if production is to be expanded, small growers must either co-operate in growing the same variety of fruit and vegetables, in grading and in transport, or they must give way to market garden farms.

The making of fruit juices and fruit syrups is a rapidly growing industry in America and on the Continent. In England, these methods of using fruit came into prominence only with the growth of milk bars in the last few years, and the use of these products directly by the housewife is still very rare. Much research has been done at Long Ashton, the Ministry of Agriculture's research station for fruit and vegetable preservation, and commercial production is now carried on by a number of firms. These products have the great advantage, not shared by jam or canned goods, that they can be made out of the second grade fruit (provided it is not diseased) which provides the bulk of the seasonal glut. Consequently, this industry could well be taken up as a side-line to schemes of co-operative marketing, if growers could raise the necessary capital and co-operative spirit, though the problems of retail distribution are admittedly difficult.

The latest development in this field is the appearance of "frosted" fruit and vegetables, which have been preserved, sometimes for many months, by storage at low temperatures. At present the commercial possibilities of this process are limited by the difficulties of selling; "frosted" foods deteriorate very quickly when thawed, and consequently distribution is still limited to those wholesalers, retailers and housewives who have refrigerators.

But technical progress in these new industries is very rapid, and with the greater attention now paid to nutrition there should be scope for a greatly increased production of fruit and vegetables in this country. But tariffs are of little use in this development, since the possibilities for expansion lie in tapping the poorer markets, in which these products are still largely unknown. Science applied to cure disease and to preserve temporarily unwanted produce, and a radical overhaul of the methods of marketing to the urban centres of population—on these two factors depend the future of the market gardeners in this country.

Finance and Banking

The Money Squeeze.—The coincidence of the Albanian crisis and of the Easter holidays has rendered the impact of political events on the money and discount markets rather more severe than it would otherwise have been. This is because the precautionary calling in of funds and raising of rates, which international developments would in any case have caused, occurred on a credit position already strained by the withdrawal of currency for holiday purposes. Supplies of credit have also been contracted by the continued intervention of the Exchange Equalisation Account in the foreign exchange market in support of sterling and by the consequent immobilisation of credit in Public deposits. The weakness of the forward sterling rate in terms of dollars has, moreover, made further headway this week, and the attractive yield to be earned on the dollar swap has withdrawn from the money market a certain amount of outside money which would otherwise have been available to relieve the tension. The demand for money has expanded simultaneously with the temporary contraction in its supply. This is because the discount market has recently had a run of big allotments at the weekly Treasury bill tenders and has found the outlet for bills with the clearing banks much more restricted than usual. The outcome of this combination of factors

acting on the supply of and demand for short term credit has been a considerable hardening of all money rates. On Tuesday one of the clearing banks increased its rate for fresh money against bills from $\frac{1}{2}$ to $\frac{3}{4}$ per cent. On Wednesday another bank made this higher figure apply to the whole of its "night money"—whether for old or new loans—and in addition increased by $\frac{1}{4}$ its rate on Treasury One's and short term bonds, bringing these up to 1 per cent. and $1\frac{1}{4}$ per cent. respectively. In the pressure of Tuesday up to $1\frac{1}{8}$ per cent. was paid for loans against bills secured from lenders other than the clearing banks. Considerable relief has been given to the discount market by special purchases of bills, the authorities taking up substantial amounts of early June bills at $1\frac{1}{8}$ per cent. These are reflected in the latest Bank return, which shows an expansion of £8,315,000 in Government securities. By Wednesday afternoon the effect of these open market operations was beginning to make itself felt and this factor, together with the increasing momentum of the reflux of notes from holiday circulation, gave a distinctly easier appearance to the short loan position. None the less, discount rates, which were immediately adjusted to the more stringent money conditions at the beginning of the week, have remained firm with the three months' bill at $1\frac{1}{2}$ to

1½ per cent., and six months' paper quoted at a nominal 2 per cent., and only placed at this figure with some difficulty. At this level of open market discount rates the traditional margin between these rates and the official Bank rate has about been restored.

* * *

Brazilian Exchange.—Following the granting of the American credits, the Brazilian authorities have announced a reversion to the system of exchange dealings in force up to the end of 1937. The arrangement then in existence was that 35 per cent. of the proceeds of export bills had to be sold at the official rate to the Bank of Brazil, which applied it to the service of the external debt, and the remaining 65 per cent. could be disposed of in the free market. Since the end of 1937, however, all foreign exchange has had to be sold to the Bank of Brazil. The new arrangement is that the central bank takes 30 per cent., while 70 per cent. can be disposed of in the free market. The hope is that the 30 per cent. will yield enough foreign exchange to cover the service of the American portion of Brazil's external debt, amounting to about £2,400,000 a year, though nothing has been said about the claims of the British bondholders. The real crux is the state of Brazil's trade balance. Last year the export surplus was negligible, and unless there is an improvement, either part of the 30 per cent. will have to be released to pay for imports—so that it will be impossible to cover even the American debt—or else accounts due to foreign exporters will become blocked. The terms of the new arrangements, however, are tantamount to a moderate depreciation of the milreis. In November, 1937, the Bank of Brazil's official buying rate was 56\$700, and the free rate was 85\$000. On this basis, exports worth £1,000 yielded 75,095 milreis. Last month the central bank's buying rate was 80\$980, and it applied to all foreign exchange, so that £1,000 yielded 80,980 milreis. According to recent advices, the new official buying rate is to be 77\$240, and the free rate is 86\$600, which means that exports of £1,000 will yield 83,792 milreis, or 3.5 per cent. more than under the recent regime. Conversely, imports will now have to be paid for at the free rate, plus 5 per cent. tax, whereas the Bank of Brazil had been prepared to sell exchange at 82\$980 plus 5 per cent. tax. This increases the cost of imports by 4.4 per cent., and it must also be remembered that the tax was only raised to 5 per cent. a short time ago. The intention is to improve the trade balance by giving exporters a better price in milreis, while penalising the importer, but the net result is an exchange depreciation of about 4 per cent. It is not expected that the alteration in the exchange system will have much effect on German trade with Brazil, for business in aski marks flourished under the 1937 general exchange regime. The American long-term credit of \$50 millions, for the provision of capital goods, is a much more direct move against the aski mark, when it is remembered that Germany has been buying Brazilian coffee and cotton against sales of railway material. On the whole, this new arrangement is to be welcomed as a return to freer dealings in exchange, but it remains to be seen if any advantage accrues even to the American bondholder; while so far the British bondholder is left completely out in the cold.

* * *

National Bank of Egypt.—Following the hints dropped recently by Sir Edward Cook at the general meeting of the National Bank of Egypt, the Egyptian Government have now revealed twelve points which they think should be embodied in the bank's new charter. In deciding to take advantage of the experience and high traditions of the National Bank rather than to operate a new institution, and many of the twelve points relate to normal central banking practice. Thus the bank is to continue to act as Government banker, and apart from its remuneration in respect of the note issue to perform all ordinary Government banking business free of charge as hitherto. Special duties such as the service of the public debt and the floating of new loans are to be subject to remuneration to be arranged by mutual agreement, and the bank is to make

from time to time advances to the Government on the usual terms of interest. The remaining points deal with the transformation of the bank into a mainly Egyptian institution. Thus the board should have an Egyptian majority by 1945. Future Governors, subsequent to the present incumbent, shall no longer be *ex-officio* President of the board. So long as the function of President and Governor are combined, the board shall appoint an Egyptian Vice-President, but the appointment of neither President nor Vice-President shall be subject to Government sanction. The board is to co-opt three new Egyptian directors as soon as the new statutes are voted. No person in receipt of a Government salary is to be a director of the bank. Part of the shares are to be nominative, but the exact relation between nominative and bearer shares is still under discussion. The local recruiting of the bank's staff is to be confined to Egyptians, and recruitment from abroad in exceptional cases is to be subject to the approval of the Finance Minister. Finally, the London committee of the bank is to be replaced by a body with residence abroad whose object is to maintain the international relations of the bank. The statement adds that the Government will in due course supplement these arrangements by legislation to confirm the legal tender status of the bank's notes, to maintain the stability of the piastre-sterling exchange, and to systematise the general banking position. *Prima facie* these proposals appear reasonable, nor do they conflict with Sir Edward Cook's plea that the bank's efficiency of personnel must be maintained and that the bank must remain free from political influence. The real test is the practical application of the principles laid down in these twelve points, but there seems no ground for serious apprehension on this score.

* * *

March Clearing Bank Averages.—The March returns of the ten English clearing banks reflect the completion of the spring revenue collection. Deposits are reduced since February by £24.1 millions, while the redemption of Treasury bills out of the quarter's revenue surplus explains the contraction of £21.7 millions in discounts. Advances have risen by £11.1 millions. There is some disposition to ascribe this last movement to a further expansion in business, but a similar increase of £15.5 millions occurred a year ago when business was certainly not improving. A more mundane but more likely explanation is that of temporary borrowing by bank customers for the purpose of making income tax payments.

(In £ millions)

* Amended figure.

The past month's contraction in deposits and discounts has reduced the banks' "liquid asset" ratio to 29.2 per cent. This is just below the normal 30 per cent. minimum, but as it is a purely seasonal reduction, which is likely to be rectified this month, it did not call for any special measures such as a general restriction of credit. A year ago the ratio was down to 31.1 per cent. This 29.2 per cent. ratio, however, lends point to the argument that an increase in the supply of Treasury bills must precede the issue of Defence Loans. The tender issue, however, has already risen by £48 millions since the low point of £346 millions touched at the beginning of March.

Gold by Parcel Post.—The device of using the French parcel post facilities to arbitrage gold from this country to the United States—a procedure which was explained in *The Economist* of March 18th—has at last succumbed to the repeated assaults which it has had to withstand from adversely interested parties. Its demise has been ensured by an order from the U.S. postal authorities prohibiting the import of gold by air mail or parcel post in amounts exceeding \$50. The order was issued on Wednesday of this week and became immediately effective. One of the results of the disappearance of this parcel post gold arbitrage will be to make for greater uniformity in the dollar shipping parities at which various arbitrage houses are able to undertake gold shipments to New York.

MONEY MARKET NOTES

Foreign Exchanges

ONCE again a considerable amount of intervention has been necessary by the different Controls to keep exchange rates steady in face of a renewed flow of funds to New York. Fortunately, the fact that many markets were closed from Friday to Monday inclusive tended to restrict purchases of dollars, and on Saturday in London little difficulty was experienced in keeping the sterling-dollar rate at 4.68½. When the market reopened on Tuesday, however, much stronger support for sterling was needed, although the closing rate was unchanged. The following day the selling pressure abated somewhat, but overnight dealings in New York had made the rate open ½c. lower at 4.68¼, at which level it was firmly held throughout the day. On Thursday in a very quiet market it showed little change. In the forward market an interesting feature of the week has been the forward rate which has given the best indication of the capital outflow to New York, and on Tuesday the premiums for one month and three months widened at one time to 1c. and 3c., respectively. Official intervention then caused a contraction to ½c. and 2½c., while on Thursday the three months' premium was back to 2½c. The belga has tended to appreciate against sterling, showing a gain of 1c. on Wednesday at 27.81½. The discount on the three months' belga widened sharply on Tuesday to 90c., compared with 60½c. on Saturday, but contracted again on Wednesday to 77½c. as a result of bear covering operations. Swiss francs have been fairly steady except for an initial period of weakness on Saturday morning when the rate rose to 20.89. They have since been quoted at around 20.87-87½. Forward French francs have not escaped the weaker tendency apparent in other European forward rates, and on Tuesday the discounts widened to ¾f. for one month and 1½f. for three months. Registered marks were firmer on Thursday after being at a discount of 63 per cent. on Wednesday.

The Bank Return

RATHER surprisingly the note circulation shows a fall of £1.7 millions this week. This follows an expansion of £9.4 millions last week, but usually the week including Easter witnesses a further small increase as the notes do not as a rule return immediately. Last

week there was no sign of any action to offset the note expansion, and Government securities were actually £2 millions lower. This week, however, they are up by £8.4 millions, which is the result of special bill purchases to relieve the abnormal situation in the money market. The net rise in bankers' deposits is only £5.7 millions. The return of notes from circulation and the

increase in Government securities have been offset by a switch-over to public deposits owing to Exchange Account support of sterling and a fall in discounts and advances which last week rose by £3.7 millions as a result, presumably, of a special transaction for a private customer. The rise in other deposits last week by £4.2 millions is attributed to the creation of the Chinese Stabilisation Fund.

The Money Market

LAST week's Treasury Bill tender resulted in a further rise in the average rate of allotment to 26s. 2.83d. per cent. The total amount applied for showed a small rise at £58 millions, but the market syndicate felt confident to make another reduction in its bid to £99 13s. 5d. In the event, it only

secured a 44 per cent. allotment, against 71 per cent. in the previous week; this was owing to a fall in the total amount allotted from £42 millions to £32 millions. The amount on offer this

week is again to be reduced, being only £30 millions. The accumulation of sterling funds by the Exchange Account is presumably the cause of the reduction in the tender issue of Bills. Maturities next week will only be £22 millions, so that with the outlet for bills at the banks still very restricted the syndicate will doubtless not worry if it again gets a smaller allotment. The rise in other money rates and credit conditions are described in a Finance Note.

*

The Bullion Market

WHEN the market reopened on Tuesday after the Easter holidays, there was a noticeable increase in the amount of unhoarding from Continental sources, as is usual nowadays in a time of international tension. At the fixing the turnover was only £557,000, for in spite of the weaker trend of sterling the Exchange Account did not release any gold to arbitrageurs who would have doubtless readily absorbed more in view of the absence of any premium in the price over the American shipping parity. Subsequent unofficial dealings,

however, were large, and are estimated to have brought the day's turnover up to at least £1,000,000. On Wednesday, the authorities again refrained from supporting the pound by sales of gold for arbitrage. The fixing turnover was larger, but unofficial dealings were much smaller. A big shipment of Transvaal gold, amounting to £794,843, is due to arrive in this country on April 21st. The four large consignments of gold that were to have been made to Canada at the end of last week were cancelled. The silver market has been quiet. There has been a certain amount of covering by bears which has offset any speculative selling, and prices have hardly changed.

INSURANCE NOTES

pense ratio, at 19 per cent. of the premium income, is higher than is usual for life offices and is in part explained by the low premiums under the Association's deferred bonus scheme. Death claims, which fell from £353,000 to

£281,000 in 1937, showed little change last year at £277,000. Assets increased from £8,438,000 to £8,625,000. Loans on Public Rates were 50 per cent. higher at £1,261,000, and policy loans were

Investment

London.—It is idle to speculate on what the London market might have done had it been open last Saturday morning. Unquestionably, the reaction to the invasion of Albania by Italy would have been severe. But having had the advantage of a week-end to absorb the shock, investors on Tuesday wisely decided that no new positive policy was open to them. Indeed, the latest episode, and the week of tension which has followed, is only different in degree from the leaden political atmosphere to which investors have already become inured. Measured by price movements, the market's response to a critical situation has been stoical. In terms of turnover, there has been no suggestion of panic selling, and the price-making machinery, though apparently working normally, has become a matter of semi-automatic reflex action. The following table sets out the movements of leading gilt-edged and industrial securities, after Munich, at the January "low," after the invasion of Czecho-Slovakia, and during the past week:—

	Sept. 30, 1938	Jan. 27	Mar. 20	Apr. 6	Apr. 11	Apr. 12	Apr. 13	Fall this week

Ordinary shares	83.5	73.7	82.7	80.8	79.1	79.1	79.3	1.5

The market's aplomb can be measured by the fact that equity shares stand higher to-day than last January. The *Financial News* index, at 79.3, is some 3½ points above the low level of September 28, 1938, and January 27th last. In other words, the process of discounting industrial improvement is still evident in to-day's prices. Unfortunately, it is an improvement which depends very considerably upon expansionary arms finance, and prices are still counting on the avoidance of war, and perhaps of industrial regimentation short of war. Under these conditions it becomes virtually impossible to offer the investor any useful counsel. But it is evident that a less propitious selling opportunity than the present could hardly be found.

— And Wall Street.—Before the London market had registered its political concern on Tuesday with falls, moderate in the circumstances, of up to ½ in undated gilt-edged stocks, Wall Street had given full weight to the Easter crisis. On Thursday last week the American market was seized with alarm at rumours of the Albanian invasion, as a result of which the Dow Jones industrial average

slumped four points. The actual event was marked by a fall of nearly 5 points last Saturday in the average, which reached a new "low" since June 21st last year of 121.44. "Chartist" selling has been a feature of Wall Street dealings, for the index on Thursday last week broke decisively through the September "low" of 129.91. The course of leading rail, industrial and utilities stocks at important points since that date, together with the corresponding Dow Jones averages, is shown in the following table:—

	Sept. 26, 1938	Jan. 26	Mar. 10	Apr. 5	Apr. 6	Apr. 8	Apr. 11	Apr. 12	Apr. 13

Industrials	129.91	136.42	152.21	130.21	126.32	121.44	123.75	126.15	127.51

After Saturday's hectic selling, some technical respite was to be expected, and Wall Street supplied it on Monday. The following day, however, found the market in erratic mood, and at the end of the second hour the Dow Jones industrial average had fallen to 120.83, while U.S. Steel were no higher than 44½. These falls, however, were recovered, and in mid-week the market was disposed to the view that political news was more favourable, and staged a broad recovery. As in London, the first response to the Prime Minister's speech, with its guarantees of Greece and Roumania, was favourable. At the end of the third hour's trading, indeed, the Dow average had reached 128.88. Whether the closing reaction to 127.51 is indicative of second thoughts, or whether it merely marks a natural halt to a rapid recovery has yet to be seen.

Stock Exchange Report.—The reduction, for the second year in succession, of the Stock Exchange dividend, from £14 to £12 10s. per share, is the consequence of a difficult year. The full report shows that total receipts were reduced by £27,728, to £506,186, principally owing to a reduction in clerks' subscriptions from £132,785 to £119,755, and in entrance fees from £87,685 to £72,382. Members' subscriptions actually showed a slight increase from £233,777 to £235,809. On the expense side, tax provision required £10,250 more at £19,250, but N.D.C. (which was an operative factor in last year's dividend reduction) was reduced from £17,000 to £8,000. In the result, net revenue was reduced from £323,017 to £266,213. The net membership at the end of the year was 4,053 against 4,048, but the total number of members and clerks having entry to the "House" shows a fall from 6,206 to 6,048. The repayment of the £294,800 3 per cent. debentures in January is reflected in a fall in Treasury Bill holdings from £379,536 to £79,896.

Union Castle Setback.—Although some fall in Union Castle earnings was expected last year, the 55 per cent. drop is distinctly severe and the market showed its disappointment last week by marking the ordinary stock down from 12s. 6d. to 8s. 6d. The explanation of the adverse results is probably to be found in a lower volume of traffic rather than reduced freight rates. The control exercised by the South African Government prevented the company from enjoying material benefit from higher

freight rates in 1937. Hence, it is to be expected that last year's reduction did not affect Union-Castle severely. A decline in cargo earnings is recorded and a further substantial loss arose in the latter part of 1938 through the cessation of gold shipments from South Africa, when gold was retained under car-mark in South Africa. Total profits have fallen from £620,166 to £278,031, and although full preference dividends have been paid they are covered only by bringing in a special credit of £105,685 from taxation reserve no longer required. A comparison of profits in the past three years is given in the following table:—

	Years ended December 31, 1936	1937	1938
Voyage profits	£ 473,450	£ 510,258	£ 196,505
Total profits	593,728	620,166	278,031

Special provisions	200,000§	150,000§	Cr 105,685†
Carry forward	149,355	150,892	189,836

* Includes payment of 1½ years' arrears on 6 per cent. "A" preference shares. † From taxation no longer required. § For re-engining.

The company is undertaking an extensive replacement and re-engining programme which has enabled it to calculate its depreciation provisions (at the usual rate of 5 per cent.) on a somewhat longer life for the re-fitted vessels. Outstanding advances on this work, however, have risen from £3,063,020 to £4,482,903, and the interest charge has been mounting steeply year by year. In the course of the next few years, heavy annual repayments will fall due, and the directors are still keeping in view the desirability of putting this finance on a more permanent basis, although so far no definite proposals have been advanced. In 1937, no less than 15.7 per cent. for the ordinary stock was earned (assuming normal preference requirements) and in addition to the payment of all dividend arrears on the 6 per cent. "A" preference shares, £150,000 was specially provided for re-engining. The satisfactory progress of the replacement programme may remove the need for further provision on a similar scale, but the brute fact remains that preference dividends last year were short-earned by £66,741. The resumption of gold shipments has been welcomed by ordinary stockholders, although in itself it hardly warrants undue optimism regarding the prospects for the current year. The £1 ordinary stock units are now quoted at 9s. 3d.

"Three Counties" Electric.—The 1938 accounts of Shropshire, Worcestershire and Staffordshire Electric (an important subsidiary of Edmundsons Electricity) are not readily comparable with those of previous years. The bill promoted by the company to consolidate its Acts and Orders was passed during the year, and as from July 1, 1938, it absorbed a number of undertakings in its area of power supply. The accounts give effect to these acquisitions. The main change in the balance sheet is an increase in capital expenditure on plant, etc., of £766,338, which is largely offset by a fall in "loan to associated company" of £725,000, leaving total assets practically unchanged. The profit and loss account shows a more surprising trend. The net revenue from the sale of current, etc., is up by £35,540, but interest and dividends received from subsidiary and associated companies are lower by £57,771. After providing an extra £20,000 for reserve (or, properly speaking, depreciation), the earnings available for the "B" capital show a fall of no less than £35,847. Hence, the dividend of 5½ per cent. is short-earned by 1 per cent., a deficiency which is made up by a transfer of £27,500 from income tax reserve. On the increased capital expenditure account, the appropriation to reserve of £260,000 is some £50,000 below depreciation calculated according to our standard scale. Results for the past three years are analysed in the next column.

	1936	1937	1938
Units sold (millions)	234	269	...
Increase %	17.0	16.5	...

Paid %	6½	5½	5½
Carried forward	55,411	65,343	66,927*

* After transferring £27,500 from income tax reserve.

The sharp drop in earnings is presumably not attributable to any falling off in sales of current, although the report, unfortunately, does not include particulars of units sold as in previous years. It is more likely that the company's new charter has involved reductions in prices and more restricted scope for the payment of dividends. It will be hoped that the chairman will throw some light on this point at the forthcoming meeting.

Colvilles' Prospects.—Colvilles' output in 1938 was slightly below that of the previous year, but trading profits were slightly higher at £919,596, compared with £911,004. The movement in profits is not important, but it is significant. Last year was not, in fact, the first which derived benefit from the large-scale reorganisation programme which the group is now carrying out, but the new plant at Glengarnock and Motherwell provided further production economies. The subsidiary companies were less fortunate,

The French Line is at your service when business or pleasure takes you to New York. A modern fleet, unexcelled for speed and reliability, offers you extreme luxury and faultless service—the best of France afloat in all things.

for their profits, after contingencies, show a decline from £791,505 to £648,856, before providing taxation and depreciation at somewhat higher rates than in 1937. By reducing their allocations to free reserves, however, the subsidiaries have broadly maintained their net dividend payments to the parent company, which total £129,005, compared with £135,126 for 1937. Hence, the parent company has, in fact, maintained its distribution without employing the subsidiaries' profits, for its appropriation to reserve is maintained at £150,000. Profits for the past three years are analysed below:—

	Years to December 31		
	1936	1937	1938
Trading profits	658,638	911,004	919,596
Dividends from subsidiaries	80,516	135,126	129,005
Total	739,154	1,046,130	1,048,601
Depreciation, etc.	185,000	295,000*	300,000*
Taxation	135,000	240,000	285,000
Fees	2,000	2,000	2,000
Preference dividends	84,219	82,844	80,437
Ordinary stock:—			
Earned	332,935	426,286	381,164

Earned %	11.1	14.5	13.4
Paid %	7	8	8
To reserve	Nil	150,000	150,000
Carried forward	247,137	288,251	292,080†

* Includes supplementary depreciation: 1937, £110,000; 1938, £100,000.

† Estimated, on basis of tax at 5s. 6d. in the £.

By reckoning additional depreciation as a charge, and making an estimate of the net cost of the final 5 per cent. dividend on the basis of tax at 5s. 6d. in the £, the rate of earnings for Colvilles' ordinary stock has declined only slightly from 14.5 per cent. to 13.4 per cent. Meanwhile, certain improvement schemes have still to be completed. These include the new coke ovens and blast furnaces and the melting plant extension at Clydebridge Steel Works. Already part of the plant is in commission, and the full schemes should be ready for operation within the next few months. When the coke ovens and blast furnaces are completed, the company will be able to meet a reasonable proportion of its pig iron requirements from its own up-to-date plant, instead of relying, as hitherto, upon outside supplies, largely from English sources. These extensions involve the provision of £1,000,000 on loan from an insurance group, of which £500,000 had been taken up at the end of the year. The alterations at the Mossend works, at Government expense, for treating and machining steel plates, are now in operation. Thus, the group should obtain further production economies during the current year, and it should have a useful share of armament and shipbuilding steelwork. Hence, the ordinary stock units, which yield £11 14s. per cent. on earnings and £7 5s. 6d. per cent. on dividend, at the current level of 23s. seem reasonably priced.

Amalgamated Metal Corporation.—An unexciting report for the year to March 31st measures Amalgamated Metal's success in an unfavourable year for the metal markets. For only a slight trace of the year's difficulties is to be found in total earnings, which are merely 1½ per cent. below 1937-38. The year 1938, in fact, brought a lower level of prices, but fluctuations were less violent, and in that respect 1938 was more satisfactory than its predecessor. The net earnings of the constituent companies of British Metal Corporation and Henry Gardner and Company, of course, show greater variations, but the decline

from £397,091 to £359,288 between 1937 and 1938 is less severe than between 1936 (when net profits amounted to £461,299) and 1937. The comparative stability of Amalgamated Metal profits is, however, partly due to changes in provision made for contingencies by the constituent companies. The following table shows the division of the group's profits over the past three years:—

	Years ended December 31,		
	1936	1937	1938
Constituent cos.' earnings	£461,299	£397,091	£359,288

Income tax credited

Carry forward

* Years ended March 31, 1937, 1938 and 1939.

As in the previous two years, the 7 per cent. ordinary dividend is slightly short-earned, and the distribution is maintained by crediting a moderate sum from income tax provision no longer required. The parent company does not carry reserves, but the two constituent companies show unchanged reserves of £886,000. The chief changes in the combined balance sheet are a rise in stocks from £1,584,456 to £3,009,865 (91 per cent. against 87 per cent. being offset by forward sales, and therefore valued at net sale price), and a reduction in cash from £1,311,011 to £297,223. The rise in stocks may be due partly to a return to a more normal level, partly to increased demand for re-armament, and partly to the rather better prices prevailing at the end of 1938 than at the end of 1937. The Corporation's ordinary shares are quoted at 20s. 6d. to yield £6 16s. 9d. per cent.

London and Thames Haven Developments.—Sir Vernon Thomson's candid review of the present predicament of London and Thames Haven Oil Wharves at last week's meeting fully satisfied the demand made in these columns for fuller information regarding the position of Parent Petroleum Interests. This unfortunate adventure has failed in two major respects—its Mexican oil interests have been expropriated, though, to be sure, that is no fault of its past or present directors. Secondly, its Irish refinery project (which was the original justification for the Mexican investment) failed for lack of promised finance, to say nothing of open opposition of certain large oil distributors, whose withdrawal of custom from Thames Haven led to the serious situation that half the tankage capacity was empty. The financial consequences of this dilemma were reviewed in *The Economist* of April 1st. It now remains to build up what is left of the resources of this once substantial company on a new basis of trading. Originally, Thames Haven was interested to the extent of only 40 per cent. in Parent Petroleum Interests, but as a result of the transfer of the W. R. Davis interests in June, 1938, Thames Haven increased its holding to two-thirds, while the remainder is represented by the Inverforth interests. A large part of the P.P.I. capital is now unrepresented by assets. Hence, the task of the present directors of Thames Haven is to reduce the bank overdraft, which stood at £978,007 at the end of 1938, either by the issue of prior-charge capital or by the sale "as and when possible" of extraneous assets. But to revert to a normal basis of trading means a resumption of the original wharfing business, at a time when the large oil companies have now installed their own tankage installations in other areas, and when, in the official view, Thames Haven is too vulnerable to aircraft attack to afford

adequate storage facilities for petrol stocks for time of war. Sir Vernon, having frankly described the company's problem, then accepted an amendment that the accounts be received but not adopted, and that a committee of five, including representatives of the Prudential and Pearl assurance companies, should be appointed to make a full investigation into the affairs of the company and its subsidiaries. This amendment was supported by the board and carried. It can at least be said that an unfortunate affair was properly handled at last week's meeting—and without the outbursts of recrimination which so often mar such proceedings.

Mining Reports

Government Areas.—The chief feature of interest in the Government Areas report is the consulting engineer's reference to the Kimberley Reef and Black Reef prospects. Both these deposits have been accorded wide market attention and have served as the basis of reports implying an unexpected and considerable extension to the likely life of the mine. Prospecting on the Kimberley Reef again yielded discouraging results; only a minor amount of development was accomplished, and it is now plain that, as a factor in the future of the mine, it can be virtually written off. On the Black Reef a good deal of work was carried out. About two-thirds of the total mining area is underlain by these strata, and of this some 40 per cent. has been investigated to a certain extent by boreholes. They have been disappointing and disclosed few payable values. One payable lens was located, and an estimated amount of 300,000 tons of an average value of 5 dwt. was available at the end of the year. To expedite development, a small vertical shaft in the western portion of the property, and an inclined winze on the southern rim, are being sunk. While it is not yet possible to estimate the payable tonnage which will be extracted from this reef, the fact that values, when they occur, are at differing horizons on the reef body—which in itself varies from a few inches to forty feet thick—shows that costs must necessarily be high and that the discoveries are of secondary importance in relation to the scale of operations. Ore milled during 1938 amounted to 2,498,000 tons, a decline of 54,000 tons, while recovery declined by 0.883 dwt. to 4.99 dwt. and working costs were fractionally higher at 18.109s. Hence, working profits were reduced by £826,641 to £2,190,135. The maintenance of the dividend at 70 per cent., absorbing £980,000, was covered with a margin of £74,527. Ore reserves at the end of the year were 635,000 tons lower at 9,612,000, the value being 0.3 dwt. lower at 5.7 dwt. At the present price of 26s. 3d., the 5s. shares can only be considered as virtually a liquidation proposition, but on this footing they are probably not over-priced.

Randfontein.—The Randfontein problem is to feed the mill at the tremendous rate of approximately 400,000 tons per month without encroaching on the reserve position. Partly owing to a shortage of labour and partly to more fundamental mining considerations, some difficulty is being experienced in attaining this object. The report for 1938 shows that ore reserves at the end of the year amounted to 13,550,000 tons, representing a further decline of 550,000 tons on the year and a decline of 1,345,000 tons from the peak reached in 1935. Moreover, the average value has declined and is now only 3.8 dwt., which, however, is still fractionally higher than the grade of ore sent to the mill. As much as 210,283 feet of development was accomplished during the year. The total footage sampled in all sections was 98,580 feet, of which 53,875 feet, or 54.651 per cent., were payable, and averaged 8 dwt. over 33 inches. Notwithstanding the loss of 450 claims of Main Reef series as a result of the Witpoortje fault, the resources of the property are still tremendous, though by no means excessive in relation to the high scale of milling.

Ore crushed last year reached the new record of 4,670,000 tons, but the yield per ton was lower at 3.17 dwt. and costs were slightly higher. As a result, working profit was £251,920 lower at £1,357,630. After providing for total dividends of 4s. 6d. per share, and after appropriating £148,205 for capital expenditure, the balance carried forward was £20,002 lower at £381,360. At the present price of 35s. the shares yield £12 16s. 6d. per cent., a return which reflects the rather uninspiring technical position and the somewhat lower rate of current profits.

New State Areas.—The 1938 report brings out the fact that New State Areas, after "bumping along the top" for several years, is now gradually entering the period of decline. The major development programme has been virtually completed, and though considerable exploratory work in areas of lower payability remains to be done, it is clear that accretions of ore from such sources can hardly keep pace with crushing. Ore reserves at the end of the year were 146,000 tons lower at 4,057,000 tons, while the development accomplished was the lowest for many years at 22,036 feet. Of this total, 20,465 feet on the Reef were sampled, and 8,075 feet proved to be payable, showing an average value of 17.6 dwt. over a channel width of 17 inches. Though ore crushed showed an advance of 7,000 tons to the new high level of 1,482,000 tons, and working costs were 0.4d. lower at 18.28s. per ton, working profits were £116,025 lower at £1,696,810 owing to a reduction in recovery from 6.08 dwt. to 5.763 dwt. Two dividends, each of 3s., were paid on the £1 shares, as in the preceding year, and after appropriating £30,351 for capital expenditure the balance carried forward was increased by £9,541 to £180,713. The immediate outlook suggests that profits and dividends should be maintained, but the fact that the grade of ore sent to the mill last year was somewhat above the average grade of the reserves provides a pointer to longer term prospect.

Vogelstruisbult.—Vogelstruisbult is taking rather a longer time to get to the dividend stage than was originally expected, owing to the additional capital expenditure necessitated by the poor ground at first encountered at the bottom of the No. 1 shaft. Although the working profit for 1938 showed an improvement of £206,422 to £361,946, the greater proportion was absorbed by expenditure on equipment and advanced development, and no Government taxation or State's share of profits was payable. Ore milled totalled 807,900 tons, an increase of 151,850 tons. Outputs are now being secured at the enhanced rate of 70,000 tons per month, and these will be increased by minor additions to a rate of about 74,000 tons per month, which should become effective in the second half of the current year. A further improvement in profits can thus be anticipated and, while the revenue account will have to bear the burden of further capital expenditure, the prospects of a maiden dividend in June seem promising. Expectations, however, should not be pitched too high, for the capitalisation of 5,028,571 10s. shares is large in relation to the scale of operations. Ore reserves at the end of the year showed an improvement of 300,000 tons at 1,451,000 tons, and the average value of 5.7 dwt. was 0.1 dwt. lower. A larger amount of development footage was accomplished with improved results. Some 74,748 feet were advanced, compared with 56,859 feet, of which 55,050 feet were sampled and 26,100 feet (or 47.4 per cent.) proved payable, indicating the high average value of 20.1 dwt. over a reef width of 13.6 inches. Development disclosures in the No. 2 shaft showed a definite improvement, increases being registered in footage sampled, percentage payability, width and value. These results should mitigate the disappointing 1937 results in this area. The technical position as a whole is reasonably satisfactory, though it appears that the high hopes originally entertained of the property may prove to have been somewhat excessive. The 10s. shares stand at 19s. 4½d.

ASSETS EXCEED £17,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

Palmietkuil Gold.—The approach of this mine to the producing stage is indicated by the decision to increase existing nominal capital from £1,700,000 to £2,750,000, and an offer will be made to shareholders in due course. Shaft sinking was virtually complete by the end of 1937, and satisfactory development work subsequently has made possible an estimate of ore reserves totalling 1,000,000 tons at the end of December last, with an average value of 4.2 dwt. over 37 inches. Capital expenditure in 1938 at £353,192 was smaller than in 1937, when £116,001 was spent on shaft sinking. Development in 1938 cost £277,543 against £151,578, the total footage being 49,805, against 21,003 feet; the balance sheet shows expenditure on development to date of £429,122 and on shaft sinking £631,597. To finance the company's requirements pending the issue of fresh capital, the controlling companies have arranged to make a loan up to £100,000, and at the end of 1938 £38,000 of this had been provided. The 10s. shares now stand at 9s.

Western Reefs.—As the results of further exploratory work carried out during the year were not encouraging, the prospecting ventures of this company in the Transvaal and Orange Free State have mostly been abandoned, though the options over the Wit Extensions area are being maintained pending the outcome of work in progress on neighbouring prospects. Interest, therefore, is mainly confined to the mine itself. Good progress was made in shaft sinking and development, with satisfactory results, though it is still far too early to assess mining potentialities. The No. 1 shaft was sunk 1,181 feet during the year and was completed at a depth of 2,820 feet. Preparatory work was sufficiently advanced by October to permit development to be commenced on four levels, but the only horizon where work was done in the vicinity of the Reef was the No. 23 level, where the Nos. 1 and 2 Reefs are so close together that they may be regarded as a composite body. Some 200 feet were sampled, showing 77.5 per cent. payability, and the values were 9.69 dwt. over 71.32 inches. In the No. 2 shaft, results were less promising. The shaft was sunk 3,035 feet, making the depth at the end of the year 4,211 feet. Ore horizons were sampled at depths ranging from 3,425 feet to 3,916 feet, but disclosed nothing of payable value. Actual development from this shaft, however, is not expected to start until the second half of 1939, when the necessary constructional work will have been completed. The decision to open up this property

as a large mine was reached entirely on borehole results and the fulfilment of expectations must await further development results.

The Week's Company Profits.—Our usual analysis of profit and loss accounts, which appears on page 178, contains 66 companies, of which rubber companies form by far the largest group. Total net profits recorded amount to £4,790,000 against £5,572,000, and show a drop of 14 per cent. Aggregate net profits of the 769 companies reporting to date in 1939 are £98,522,000, a decrease of 8½ per cent. as compared with £107,683,000 earned by the same companies a year earlier. The week's results are discussed in preceding Notes and on page 160 under the heading "Shorter Comments."

Company Meetings of the Week. Reports of company meetings commence on page 165 of this issue. Mr Sidney Skinner, addressing the meeting of *John Barker* shareholders, frankly remarked that the current year was likely to be as difficult as any the company had experienced for some time, but he emphasised the directors' determination to obtain improved results. The directors' report presented to the shareholders' meeting of the *Bank of Athens* recorded that, despite the difficulties created by restrictive measures, the turnover of the bank had been satisfactory last year. Mr Walter Woodbine Parish pointed out that the mortgage loans and properties in Buenos Aires now accounted for only 19 per cent. of the total assets of *River Plate Trust Loan and Agency*. Members of the *Leeds City and District Building Society* this week approved the recommendation of the directors to amalgamate with the Brighton and Sussex Building Society. This merger is the sixth which the latter society has undertaken during the past two years. At the *Eagle Star Insurance* meeting, Sir Edward Mountain referred with satisfaction to the steady decline in the expense ratio over the past four years to 13 per cent. of premium income. Sir James Lithgow, at the *William Beardmore* meeting, emphasised the financial obligations which had been assumed in the national interest by the company. Shareholders of *United Glass Bottle Manufacturers* were informed by Sir Max Bonn of a broad understanding for a technical liaison with the Owens Illinois Glass interests. Shareholders of *Oreogum Gold Mining* were informed that the high-grade reserves had been increased last year by mining 46 per cent. of tonnage from stopes outside the payable reserve.

SETTLING DAYS

TICKET ACCOUNT
APRIL 25 APRIL 27

THE London market, having had a week-end to consider the implications of the Italian invasion of Albania, reacted by lowering prices of undated gilt-edged stocks by ¼ and of leading industrial shares by 9d. to 1s. These movements were unaccompanied by any serious selling pressure, for although the political crisis was fully appreciated in the "House," the reaction both of professional operators and of the general investor showed commendable calm. In mid-week the tone of the market was distinctly steadier, although business was reduced to even smaller proportions. During the greater part of the day on Thursday the market showed scarcely any movement in anticipation of the Prime Minister's statement of policy. In closing dealings gilt-edged were a shade firmer, although the market's first impression of the speech was not enthusiastic.

Initial falls in gilt-edged stocks were of the order of ¾. The undated list opened half a point lower on Tuesday, and after a slight midday recovery the net loss on the day was approximately ¾ for War Loan, or ¾ compared with the pre-Easter close. Almost equal falls were registered by the dated list, which, with the exception of the obvious "shorts," showed general losses of ¼. The mid-week improvement was limited to about ¼ in War Loan, but Old Consols and Local Loans were merely maintained and the dated list showed further declines, following the further rise in short money rates. A fair amount of selling was reported in the Dominion list, Australian stocks in particular being affected.

The European bond market showed sharp falls, particularly for the Italian 20-year bonds and Dawes and Young Loans. Greek and Roumanian issues were depressed and Polish 7 per cents. were at first marked down two points to 49. Belgian bonds were also a weak feature. Brazilian bonds made no response to the so-called "freeing" of the exchange. Japanese issues were

weak, but the Chinese group became steadier after the initial fall.

Dealers in home rail stocks marked prices down fairly sharply at first, but there was no pronounced volume of selling. The stimulating traffics assisted the tone of the market on Wednesday, and the ordinary and the marginal preference stocks showed modest gains on the day. London Transport "C" stock showed no improvement after its fall to 68. Argentine rails were dull and featureless.

As the result of the Easter crisis, the industrial markets reopened moderately lower. But as the week went on, fair resistance was shown, and only small further losses occurred. The volume of business, however, remained very small throughout. On Tuesday, iron and steel shares were marked down as a precautionary measure, and though movements were irregular later, the tone became steadier. The Colvilles results were well received, and on Thursday some interest was shown in locomotive shares on the news of the receipt of orders. Coal shares were

neglected and tended to sag. Electrical equipment issues shared in the general tendency when the week opened and then turned dull. British Insulated reacted after early strength, and Siemens were affected by news of the strike. Movements in the motor section were irregular, but downwards for choice. Fords reacted on profit-taking after a display of strength. Aircraft issues were quiet and prices reacted. Most textiles lost a few pence, though rayon shares showed some resistance in mid-week. Provincial sales affected breweries, while tobacco shares were sensitive to taxation fears. The stores group became firmer after early weakness in common with all sections. Movements among provision and catering issues were irregular. Miscellaneous shares gave way on Tuesday, though the marking down of prices was precautionary rather than the result of any selling pressure. The tone became irregular later and then steady. Lever Bros. and Unilever were particularly sensitive, and lost ground on Tuesday and Wednesday on sales from Amsterdam.

Oil shares provided no exception to the general trend, and Continental sales on Wednesday acted as an additional cause of irregularity. Rubber shares weakened, although in common with other sections a more resistant tone was shown in mid-week. Selling never assumed large proportions, but there was a complete lack of buying support. Tea shares were inactive, and any changes in quotations were downwards.

The mining market was equally idle. Prices were marked down all round on Tuesday, and although they became steadier they showed little recovery, except for some revival in Kafirs in mid-week, when the Cape lent some encouragement. There was little business passing, but Paris was a seller of the dividend-payers. Rhodesian copper issues tended to improve on Wednesday on Wall Street's firmer opening, but became uncertain on the cut in the American domestic metal price.

New York

WALL STREET'S reaction to the Albanian invasion is set out in detail on page 154. The Dow industrial average having lost four points on Thursday of last week, lost nearly five points on Saturday after its fears had been confirmed. This week's movements, apart from a flurry during the early hours of Tuesday, have shown greater steadiness. Monday's partial recovery took the Dow average 2½ points higher compared with Saturday's low level, and the erratic movements on Tuesday were reflected in a fall of more than three points in the first two trading hours, which was almost fully recovered by the close. In midweek a general advance took the average up nearly 2½ points. There have been few specific market pointers in this week's trading, for operators remain obsessed by political fears. The estimate of the American Iron and Steel Institute shows a fall in steel activity from 54.7 per cent. of capacity to 52.1 per cent. in the current week. This estimate depressed the steel group at first, but, with this exception, the bulk of domestic business news was regarded as somewhat better. Foreign bonds were a very weak feature, and some second-grade rail issues were also depressed on Tuesday. The bond market, however, shared in the mid-week recovery.

BY TENDER

Farnham Gas and Electricity.—Offer for sale by tender of £10 ordinary shares to produce £5,926 and £10 5 per cent. perpetual preference shares to produce £6,345. Minimum price for ordinary is £13, and for preference £11 per share.

TO SHAREHOLDERS ONLY

Newall Engineering.—Shareholders are offered 60,000 6 per cent. cumulative redeemable £1 preference shares in this company at 20s. 3d., free of stamp. Montrose Trust makes the offer, after acquiring issue at par less 3½ per cent. and paying £250 expenses.

UNIT TRUSTS

Orthodox Unit Trust.—Managers, Orthodox Unit Trusts, Ltd. (a subsidiary of Parfield Trust, Ltd.). Cumulative trust, 20-year life. Proportions of portfolio fixed: 20 per cent. gilt-edged, 15 per cent. debenture and preference, 10 per cent. bank and insurance, 5 per cent. in each of nine industrial equity groups, 10 per cent. gold. Securities fixed, but flexible within each sub-section. Cash fund basis of management. Initial charge, 6½ per cent.; half-yearly charge, ½ per cent.

SHORTER COMMENTS

Company Results of the Week.—Total profits of PRIMITIVA GAS CO. OF BUENOS AIRES have risen from £447,192 to £482,117, and even allowing for higher expenses, net profits have slightly increased. Severe falls in profits continue to be recorded by rubber companies. BIKAM RUBBER ESTATE, for instance, which obtained an average net sale price of 7.65d. against 8.50d. a lb., has halved the dividend, at 5 per cent. Satisfactory results are reported by two shipping companies. ANCHOR LINE gross profits rose slightly, and net earnings at £37,764, are little below the 1936-37 level, but no preference dividend was paid in February owing to the maturity of temporary loans. KING LINE total profits amount to £228,061, against £215,748, and the dividend is raised from 8 per cent. to 13 per cent. Several profitable voyages coming into the 1938 accounts, however, were begun in 1937. BRITISH DRUG HOUSES total profits have fallen moderately, from £77,230 to £71,775, owing to the unsettled state of Europe and to exchange and other restrictions. The 6 per cent. dividend is maintained. Recession in revenue continues to be shown by investment trusts. AMERICAN INVESTMENT & GENERAL TRUST, whose total income for 1938-39 is £186,220, have reduced the dividend from 6½ to 6 per cent. DAILY MIRROR NEWSPAPERS total profits have fallen from £444,693 to £419,967. The 15 per cent. dividend is repeated, but the directors' report contains no recommendation of a special tax-free payment out of capital profits, such as was made in previous reports. The drop in SUNDAY PICTORIAL NEWSPAPERS total profits from £218,882 to £155,726 is rather more severe. Good results for 1938 are shown by cement producers. RUGBY PORTLAND CEMENT trading profits are over £16,000 higher at £55,300, but capital has been increased during the year, and most of the increase is absorbed by additional debenture interest. TUNNEL PORTLAND CEMENT also have maintained output, and net profits are £325,485, against £279,862. But in view of the outlook for the current year, the dividend is reduced from 25 per cent. to 22½ per cent. Combined general trading profits of the subsidiaries of JOHN THOMPSON ENGINEERING CO. are as much as 38 per cent. higher at £327,756. The parent company's dividend remains at 17½ per cent. WALSALL CONDUITS trading profit is practically maintained at £155,623, though net profits show a small decrease. ALBION MOTORS have had a satisfactory year, and are paying 15 per cent., against 12½ per cent. A setback has been experienced by BRITISH TIMKEN. Total profits are £116,999, against £154,562, but the dividend is maintained at 15 per cent.

INSURANCE

Royal Exchange Assurance Company.—Total premium income 1938, £10,360,635, an increase of £260,749. Total assets at December 31, 1938, £32,080,320, a rise of £1,644,366. Ordinary dividend maintained at 30 per cent. Tax and N.D.C. £17,000 (£65,000). To pension fund, £25,000 (£25,000). Written off office property, £20,000. Carry-forward reduced from £1,230,604 to £1,027,821.

General Accident, Fire and Life Assurance.—Final dividend, 40 per cent. on ordinary shares, making 70 per cent. for 1938, as before. Net profit (before £25,000 to fire additional reserve, £50,000 to staff pensions and £200,000 to depreciation of investments, etc., reserve) was £555,974. For 1937, profit was £444,505 before £10,000 to staff pensions and £1,388 to depreciation of investments.

Royal Insurance Company.—Final dividend 3s. 3d. per share, making 6s. 6d. for 1938. Capitalisation is proposed of £699,991 (part of undivided net profits), to discharge 2s. 6d. of amount uncalled on each share, thus reducing liability to 7s. 6d.

Atlas Assurance Company.—Total profits for 1938, £417,637, against £384,297. To reserves, £100,000 (same); to staff

pensions, £25,000 (£20,000). Dividend again 32 per cent. tax free. Carry forward, £359,572 (£326,821). In life department in 1938, total value of new assurances, £1,221,930 (£1,681,833); number of new policies, 6,752 (6,264); department's total revenue, £2,574,692 (£2,201,672).

MISCELLANEOUS

Barry and Staines Linoleum.—Preliminary statement shows profits for 1938 of £159,687, against £213,359. Total ordinary dividend again 12½ per cent.

Laurence, Scott and Electromotors.—Dividend maintained at 15 per cent. for 1938, but is payable on increased ordinary capital of £400,995. Profits increased by £12,620, to £123,300; £6,258, against nil, goes to preference redemption reserve.

Albion Motors.—Net trading profits for 1938, £198,689, an increase of £14,140, after depreciation and all charges, including loss incurred by a subsidiary company. To reserve, £55,000 (£50,000). Preference dividend requires £8,032. Ordinary dividend, 2½ per cent. higher, at 15 per cent., less tax. This will absorb £74,610; carry-forward, £76,165, an increase of £20,047. For tax and N.D.C., £41,000 (£38,000).

John Thompson Engineering Company.—Trading profits year 1938, £335,610, against £242,289. Ordinary dividend, 17½ per cent., as before. To dividend reserve, £45,000 (£25,000). To investments reserve, £5,250 (£4,250). Loss on sale of investments, £1,533 (nil). Special tax provision, £24,350. To deferred repairs, etc., £20,000 (nil). To pension fund, £10,000 (nil). Carry forward, £44,962 (£44,973).

Daily Mirror Newspapers.—Trading profits for year to February 28, 1939, £419,674 (£444,249). Debenture interest, £106,407 (£108,109). To reserve, £20,000 (£20,000). To pensions, £10,000 (£10,000). Carry-forward raised from £131,515 to £141,075. Ordinary dividend maintained at 15 per cent. (In previous year a special distribution of 10 per cent. out of realised surplus from sale of investments was paid.)

Sunday Pictorial Newspapers.—Profits for year ended February 28, 1939, £155,726, after tax, N.D.C., etc., against £218,882. For pensions, £5,000 (same). Net profits are down from £213,882 to £150,726. Total distribution for year is reduced by 2½ per cent., to 10 per cent.; £20,000 again goes to reserve. Carry-forward, £125,896 against £140,170.

Rugby Portland Cement Company.—Trading profits for 1938, after depreciation, £55,300, against £45,814. Debenture interest, £12,313 (£647). Ordinary dividend, 11 per cent., as before. Employees' profit sharing, £1,500 (£1,500). Carry-forward raised from £33,889 to £35,326.

Walsall Conduits.—Profit for 1938, £155,323, against £156,084. To tax and N.D.C., £48,472 (£44,000). Ordinary dividend maintained at 55 per cent. Carry-forward raised from £27,077 to £46,803.

Anchor Line.—Total profit for year to September 30, 1938, £252,505 (£248,604). General expenses, £200,475 (£201,218). Net profit, £37,764 (£39,313). Preference dividend paid to July 31, 1938. Carry-forward raised from £22,504 to £43,310.

Ideal Boilers and Radiators.—Trading profits 1938, £295,597 (£363,149). Written off preliminary expenses, £10,000 (£10,000). Net profit, £190,643 (£266,914). Ordinary dividend raised from 10 to 22½ per cent., tax free. Carry-forward reduced from £414,517 to £397,661.

Hope Brothers.—Ordinary dividend reduced from 8 per cent. to 6 per cent. for year to February 28, 1939. Net profit fell by £13,591 to £39,461. To staff fund, £1,000 (£1,000). Carry-forward reduced from £64,743 to £62,704.

Horne Brothers.—For year to January 31, 1939, profits fell from £86,173 to £75,492. For depreciation, tax, N.D.C., £34,433 (£34,865). The year's preference dividend has been paid. Carry-forward raised from £60,920 to £63,179.

(Continued on page 173)

Industry and Trade

Need for Preventing Steel Shortage.—The rapid expansion of the activity of the iron and steel industry continued last month, when the output of crude steel was only 7,400 tons below the record established in November, 1937. The increased output, moreover, reflects a genuine expansion in demand, for there appears to have been no appreciable accumulation of stocks. Nor can the revival in the intake of steel be ascribed solely to increased defence requirements, for the recovery in the motor and other consuming industries suggests that commercial demand has shown a substantial improvement, assisted by the reduction in prices at the beginning of the year. With the speeding-up of defence work and the recovery of the commercial section of the shipbuilding industry, moreover, demand is likely to show a further increase. It is quite possible, therefore, that the iron and steel industry will soon have to face problems similar to those of two years ago, when, partly owing to lack of foresight, there was a scramble for supplies. At the end of last year the steel furnace capacity of the industry was estimated at 14,483,000 tons per annum. On the basis of last month's output, the margin of unused capacity is already small. In order to prevent a shortage of supplies, it will be necessary to make provision before it is too late both for adequate supplies of

the United Kingdom was less than 10 per cent. of the world's total. Nor, as the Fact-finding Enquiry of the Chamber of Shipping showed, do foreign subsidies explain the whole of the decline. At the end of last month only 18.1 per cent. of the tonnage under construction in British

TONNAGE OF MERCHANT SHIPPING COMMENCED

shipyards was intended for registration abroad or for sale. Moreover, apart from Germany and Italy, Denmark, Holland, Norway and Sweden all had ships on the stocks for registration in this country. The Government's proposals to assist the shipbuilding industry in this country may stimulate activity—many contracts have already been placed—and prevent British orders from being placed abroad; but, if the industry is to flourish again it must be able to attract foreign orders by competitive prices.

* * *

Comprehensive Cotton Yarn Price Scheme.—After protracted negotiations, the committee which was empowered to formulate a comprehensive cotton yarn price agreement has published its proposals. The details of the scheme, which covers all yarns spun from American and Indian cotton, have been sent to nearly 250 spinning companies controlling about 20 million spindles. In a circular to the trade signed by the chairman of the committee, Mr Frank Platt, all spinning employers are invited to approve the terms of the proposed agreement and they are asked if they would be prepared to sign it, provided that the committee is able to satisfy them at a later date that the scheme has the support of a sufficient number of the firms concerned. The scheme divides the section of the industry concerned into four groups, according to the counts spun, and a membership of not less than 90 per cent. of any of the groups will be necessary before the agreement can operate. An executive council will fix the minimum prices for the individual American-type yarns. If, in the opinion of the executive council, the business of members in export markets is being adversely affected by the operation of the minimum prices or by unfair prices of foreign competitors, they may allow the members concerned to make specified or general reductions from the minimum prices in such manner that there shall be no discrimination between one member concerned and another. The whole of the proposals are contained in a pamphlet of twenty-four pages, which has been drawn up with the assistance of Messrs

* * *

Shipbuilding at Home and Abroad.—The accompanying diagram, based on Lloyd's Register Shipbuilding Returns, shows the trend of new orders for merchant shipping tonnage at home and abroad since 1927. It clearly reveals the relative decline in the British shipbuilding industry in recent years. Ten years ago shipbuilders in this country obtained more than one-half of the world's total new orders for merchant shipping tonnage; in the first quarter of this year the tonnage of vessels commenced in

John Taylor and Company, solicitors to the cotton industry organisations. It is urged by the committee that the agreement should be brought into force in order to cover the period of time which must elapse before the Cotton Industry (Reorganisation) Bill, now before Parliament, becomes law. Spinning employers have been requested to consider the scheme and give their reply not later than April 29th.

* * *

Germany's War Stocks.—To what extent has Germany been building up stocks of essential raw materials? Despite the secrecy with which such information is naturally guarded, some information is inevitably provided by the official import statistics. Between 1936 and 1938 there were big increases in Germany's imports of nearly all vital industrial materials, despite the increase in home supplies. Clearly large stocks were being accumulated last year. Between 1937 and 1938 the value of Germany's total imports increased, whilst total exports declined; an export surplus was turned into an import

NET IMPORTS OF GERMANY (OLD REICH)					
	1936	1937	1938	1938	1939
				Jan.-Feb.,	
				(000 metric tons)	
Crude oil	978	1,193	1,324	155	144
Refined oil	3,026	2,967	3,513	399	514
Rubber	82.1	122.9	108.2	17.6	16.8

Tin	8.48	10.24	11.84	2.06	1.42
Lead	67.7	72.9	74.9	9.7	5.7
Nickel	3.33	3.28	3.90	.88	.69

NOTE.—The figures for 1936 and 1937 include, and those for 1938 and 1939 exclude, imports from Austria. These are, however, very small.

surplus. Taking the trade of the old Reich with countries other than Austria, Germany's visible imports in 1937 were 93 per cent. of her visible exports; in 1938 they were 104 per cent. And as exports have continued to decline this year, by 7½ per cent. comparing the first two months of 1939 with the same period of 1938, Germany has been forced to restrict imports. In fact, imports have continued this year, as last year, at a level of about four per cent. above exports. The curtailment in the import of certain materials may be seen in the last column of the table. Unless Germany succeeds in securing larger foreign markets for her exports, she will be compelled not "to die," but at least to refrain from augmenting her already large stocks of war materials.

* * *

Germany's Purchases of Nickel.—Imports of nickel ore during the first two months of 1939 were nearly five times as great as during the corresponding period last year. The value of nickel as a constituent of armaments is well known, and there is no need to emphasise the significance of this spurt; but it is worth recalling that an equally spectacular rise occurred in the early months of 1914. A more puzzling point is the origin of these exceptional imports. In the first two months of 1938, of total German imports of nickel ore amounting to 20,773 quintals, 15,233 came from Canada, and 4,936 from Burma. In January and February of this year Canada's share rose to 20,190 quintals, while Burma's fell to 1,977; but as to the origin of the other imports—no less than 73,601 quintals—the German trade returns preserve a discreet silence. It is, however, reasonable to suppose that the bulk of them must have come originally from Canada; for Canada produces about 90 per cent. of the world's nickel. Most of the remainder is produced in New Caledonia—a French island in the Pacific—while small quantities are produced in Burma, the U.S.S.R., Greece and Norway;

but in no case is the total annual output of any of these countries equal to more than a fraction of the amount which Germany has imported in two months. Canada is therefore presumably the origin of the main part of the mysterious 73,601 quintals; but as German imports from Canada are specifically given as 20,190 quintals, it would seem that the remainder must have come indirectly through other countries. In this connection the rise in Canadian exports of nickel matte to Holland from 36,982 cwt. in April-September 1937 to 65,161 cwt. in April-September 1938 may be significant, although even if the surplus was subsequently passed on to Germany it would only account for a small part of her abnormal imports.

* * *

Italy's Imports.—Italy has been suffering perhaps even more than Germany from a shortage of foreign exchange. In 1937 Italy had a large deficit in her balance of payments, in part due to the milliard lire spent on wheat imports. In 1938 Italy was compelled to reduce her imports, despite a slight increase in exports and an actual export surplus of cereal products. This year the total of imports from foreign countries is only half what it was a year ago, whilst exports are down by 5 per cent. The decline in imports has been mainly but not exclusively in food and other consumption goods.

ITALY'S NET IMPORTS					
	1936	1937	1938	1938	1939
				Jan.-Feb.,	
				(000 metric tons)	
Coal	8,713	12,461	11,807	1,747	1,511
Iron and steel scrap ..	365	537	604	102	111
Crude oil	296	936	1,474	214	257
Petrol	185.7	194.0	34.5	4.2	8.6
Rubber	16.0	24.0	28.3	3.7	4.1
Cotton	101.4	166.4	157.1	29.8	19.3
Wool	16.3	39.2	32.6	5.4	5.8
Cellulose	220.2	247.6	263.2	69.8	48.1
Copper	83.2	76.1	77.3	15.9	19.6
Nickel	2.83	2.82	3.69	0.82	0.42
Lead	8.38	10.89	8.61	1.66	1.09
Tin	3.72	3.64	4.44	0.97	0.76

But imports of capital goods and materials are also down, including coal, cotton and iron and steel (though not scrap). The accompanying table suggests that Italy has found it difficult to replenish stocks dispersed during the sanctions period. Indeed, she has probably found it difficult to keep up the supply of materials to sustain the increased activity of her metallurgical and engineering industries. Caution must however be exercised. For example, more than a third of Italy's oil requirements, being used by the fleet and air force, do not appear in the trade returns. Nor does the export of war material to Spain appear. The big reduction in imports this year may therefore be purely statistical, the substitution of direct military purchases for purchases by civilians recorded in the official trade returns.

* * *

A New Shellac Contract.—From the beginning of next week futures trading in shellac on the London market will be reorganised. In the past, the lowest unit of a contract was 100 packages (144 cwt.). No deposit was required and no settlement took place until the maturity of the contract. This practice facilitated the big shellac speculation of 1933 to 1935, which ended in a disastrous breakdown; also a minor failure on the London market early last month, which forced down the price from 41s. 6d. per cwt. at the beginning of March to 37s. per cwt. at present. To prevent such breakdowns the London Shellac Trade Association is now to subject futures trading in shellac to the London Produce Clearing House system, as from April 17th. Under this system both buyers and sellers will have to deposit £15 per lot of 50 packages (72 cwt.) with the Clearing House. At the present price this deposit exceeds 10 per cent. of the value. If major price fluctuations occur during the period of the contract the deposit must be increased accordingly. Failing such an increase, settlement takes place at once. This practice has proved very satisfactory on the sugar and cocoa markets.

INDUSTRIAL REPORTS

THE flow of new orders to industry has been interrupted by the Easter holidays and, in some trades, by the increase in political tension. The heavy industries remain active. The demand for house coal has declined with the rise in the temperature, but the industrial intake is increasing. The production of iron and steel has shown a sharp increase, and the expansion in demand is likely to continue with the speeding-up of defence work and the revival in commercial shipbuilding. The volume of new business in the principal textile trades has been less satisfactory, and the setback in the cotton industry has been accentuated by the downward trend in raw cotton prices.

Coal

Sheffield.—There has not been much activity this week. Good deliveries of industrial fuel were made before the holiday, and for the moment buying is on a small scale. Demand for household coal is moderate. A slightly better inquiry exists for blastfurnace coke, but domestic sorts are not very brisk.

Export demand for prompt delivery is poor, and there is a very limited forward inquiry. Best hards and washed trebles are the best features. Both inland and export prices are unchanged.

*

Newcastle-on-Tyne.—As both inland and foreign demand for industrial coal has continued to expand, most collieries in the Durham section are now fully stemmed for several weeks ahead. A number of collieries producing the prime grades of coking coal have sold their potential output for the next three or four months. Northumberland collieries experience a good demand for their large coal, but there is still difficulty in disposing of smalls. Patent oven coke is a steady market, the feature last week being the purchase by Sweden of approximately 60,000 tons for stocking purposes in case of emergency.

*

Glasgow.—The Scottish market remains very steady in tone, with business well maintained in all directions. The political developments have not so far had any notable effect on the trend of business, although in various directions more inquiry has been reported. Industrial demands are on a good scale, and this is offsetting to some extent the seasonal contraction in the household trade. Shipping business is moving steadily, and last week's tonnages despatched from the ports showed a good increase. While there is no stringency in regard to supplies, the market tone is firm for all classes of coal.

*

Cardiff.—Work was suspended only on Easter Monday under the holiday-with-pay arrangements, but absenteeism on Tuesday was considerable, and the output for the week was approximately 25 per cent. below the

recent weekly average. On the Cardiff coal market there have been very few inquiries, and the collieries have been almost exclusively employed in the execution of contracts. Prices are nominally unchanged. At the South Wales docks of the Great Western Railway Company last week shipments in the foreign and coastwise trades totalled 337,800 tons, compared with 372,700 tons in the previous week and 398,870 tons in the corresponding week of last year.

Iron and Steel

Sheffield.—The holiday has slowed down business on the iron and steel market, and turnover this week has been very limited. A few parcels of foundry iron have changed hands, but forge is almost neglected. Basic iron, on the other hand, is in steady demand, and hematites are in somewhat better request. Business in finished iron continues meagre.

The lull in the demand for basic steel billets and steel bars is merely temporary. Government requirements are bringing substantial inquiries for structural steel, and a steady business is being done in wire rods.

The holiday suspension made little difference to the iron and steel scrap market. There is heavy buying of most classes of material, and where prices are not controlled they are tending to rise. There is a shortage of heavy basic steel scrap for melting, and the official prices are firmly maintained. Foundry heavy cast iron is quoted up to 80s. per ton, with a heavy demand, and heavy wrought shearing iron is fully taken up at around 72s. 6d. per ton.

At most of the works here the holiday has been as short as possible. There is pressure of Government work, but a satisfactory flow of ordinary commercial orders continues to come in, and every effort is made to prevent the delivery of these falling into arrears.

*

Middlesbrough.—Although there was no market this week on account of the Easter holidays, this has not affected the position. Orders already placed for semi-finished and finished steel, sheets, etc., will keep these departments running at full capacity for some time. The demand for Cleveland foundry iron has slightly improved. Heavier deliveries of East Coast hematite are being called for under existing contracts. The production of basic iron is being steadily increased, but none of this comes on to the market, as it is all required by the steelworks in this area. Heavy melting steel scrap is still scarce, while the demand remains strong. Imports of iron ore are increasing, being now approximately double those for the corresponding period in March. The placing of orders for new ships on the East Coast is resulting in additional contracts being placed with the steelworks for plates, angles, etc., and as these departments were slack, the new orders are particularly welcome.

Glasgow.—Already there is an improved demand for shipbuilding material, and there is no doubt that this will further improve within a very short time as a result of the recent shipbuilding orders placed with Clyde and other shipbuilders. In addition to the six escort vessels which, it has just been announced, have been placed with Clyde yards, there is every prospect of substantial additional Admiralty orders. Now that the further order for air-raid shelters has been placed, sheet re-rollers and galvanisers are assured of steady employment till the end of July at least. Plant will be taxed to the utmost to meet all the requirements of users of both black and galvanised sheets during the period. Re-rolled steel bars are also in greater demand. Business continues to improve in the tube trade, and makers in this district are busy, and have several months' work on their books.

*

Cardiff.—Owing to the Easter holidays, production has fallen substantially during the current week, but in other respects the position in the tinplate and other departments of the iron and steel industry remained unchanged. In the week ended April 1st the output under the tinplate pooling scheme was 51.68 per cent. of capacity, compared with 46.58 per cent. in the corresponding week last year. The pressure of demand in the heavy branches is greater than at any other period since the recovery, and local supplies of scrap for the smelting furnaces have now been almost exhausted.

*

News from Abroad.—A slight improvement was perceptible on international steel markets before the Easter recess. A number of consumers in a good many countries entered the market, and although the tonnages actually purchased were not particularly large, there was a favourable reaction on prices. Since, however, previous revivals during the last few months proved short-lived, having been interrupted by the recurrent political tension, there are no definite prospects of a continuation of this improvement. It is, on the other hand, quite possible that, once the ice is broken, coverings for requirements over a longer period and speculative purchases will assume very substantial dimensions.

The recent reaffirmation of official Cartel prices was largely responsible for the better tone, but a contributory factor was doubtless the stronger position of steel producers on account of large armament orders. The Far Eastern market, which was dormant during recent weeks, lately showed signs of a slight revival. Several South American countries, particularly Argentina and Brazil, bought quite sizeable tonnages, whereas the Scandinavian countries and Holland were interested only in medium quantities. British purchases of semi-finished products have remained on a satisfactory level. After Easter, owing to the new crisis, no definite tendency has yet developed.

Concessions on official prices, which

were spreading until recently, are less easily made. Nevertheless, thin sheets are offered at 5s. to 10s. (paper), galvanised sheets at 6s. to 7s. and thick plates at 10s. to 15s. per ton below Cartel prices, but actual contracts at these reduced prices are comparatively small. An official price reduction has been made for Cuba in order to meet American competition. As regards the alleged American infringements of the export agreement, a detailed statement of the facts is now being prepared and will shortly be submitted to the London Bureau.

Textiles

Cotton (Manchester).—Holiday influences have prevailed on the market, but the chief disturbing factor has been the political news from the Continent, and the trade outlook remains very unsettled. Buyers and sellers have not been prepared to enter into important negotiations. Raw cotton prices have tended to decline, and are now on a lower level than for about six months. A good deal of interest has been taken in the proposal that the United States should exchange cotton and wheat for rubber and tin on a barter basis. Exports of cotton from America so far this season are over 2,000,000 bales less than a year ago.

There has not been much activity in the yarn market. Most users of American and Egyptian counts have purchased from hand to mouth. All spinners of yarns made from American and Indian cottons have been supplied with details of the comprehensive yarn price-fixing agreement. Demand in the cloth section has been patchy, the turnover consisting, for the most part, of miscellaneous lots. Some fairly substantial contracts have been put through for the Services, and firms engaged on this class of work are being urged to expedite delivery. The more active demand for India has been maintained, and free buying has taken place in a variety of cloths. Fancies have attracted some attention for Java and Singapore. A fairly encouraging turnover has been reported in standard makes for South America. Order lists of manufacturers remain irregular.

★

Wool (Bradford).—There has been little change in the position of wool markets during the past fortnight. Although the international political outlook is not satisfactory, the balance of the British Dominions' clips is expected to be sold at about current prices. There remain about 400,000 bales to sell in Australia before the end of the current wool year, and two more auctions will mark the termination of the New Zealand season. The principal offerings at present in South Africa are short clothing wools, which are selling very well, notwithstanding the fact that Germany's quota is about exhausted. Since Italy's invasion of Albania export business has suffered a setback. Prices have remained firm, but turnover on home account is not satisfactory, due to the uncertainty regarding future clothing requirements. The War Office has placed substantial orders.

THE COMMODITY MARKETS

OWING to the Easter holidays the turnover on the commodity markets has been limited during the week ended last Wednesday. Prices, moreover, have shown little change, despite the growth of political tension.

Wheat prices, which rose during previous international crises, are scarcely changed on the week, probably because supplies remain very heavy. Raw sugar prices, on the other hand, continued their upward trend, initiated by the poor European crop. Raw cotton was again marked down on fears of heavier American exports, but wool prices remained practically unchanged. The market in rubber was dull, and its price is again slightly below 8d. per lb. The prices of the principal non-ferrous metals varied within narrow limits.

In the United States Moody's index of the prices of sensitive commodities fell from 139.8 (December 31, 1931-100) to 138.7 during the week ended last Wednesday.

Metals

Copper.—The official domestic price in the United States was reduced from 11.25 cents to 10.75 cents per lb. on Monday. This followed the previous week's cut by the American Smelting and Refining Company, and on Wednesday this company announced a further reduction to 10.50 cents per lb. It is expected that the other producers will again have to follow suit. The price reductions are aimed at stimulating domestic buying, and it is hoped that export pressure will relax. In London the standard cash price of copper closed at £42 2s. 6d. per ton on Wednesday, 2s. 6d. lower on the week.

★

Tin.—After falling back to £214 per ton, the lowest level for nearly a month, standard cash rallied and closed £1 higher on the week at £215 15s. Demand was not active, but on Tuesday a considerable selling pressure was noticeable, a fact which suggests that speculators still hold supplies. The market is now waiting for the International Tin Committee's meeting on April 27th, which will probably clarify the position of over-exports. Before that date no major change in the situation is to be expected.

★

Lead and Spelter.—Both lead and spelter closed 2s. 6d. higher on the week, at £14 1s. 3d. per ton and £13 3s. 9d. per ton, respectively. Offerings of lead and spelter were smaller than those of other metals, but the position in these markets is still unsatisfactory. According to the Metallgesellschaft, production of zinc outside the United States was 99,830 metric tons last month, against 99,781 metric tons in February. These figures compare with a monthly average of 96,873 tons for the record year 1938. Production of lead outside the United States

amounted in January, according to the same source, to 97,303 metric tons, against 100,546 tons in December and a monthly average of 105,649 tons in 1938. This decline is solely due to the strike in Mexico and does not indicate that restriction of output has become effective.

Grains

Grains.—The wheat market has maintained a generally steady tone, and prices, helped by the political crisis, have advanced 1½d. to 9d. a quarter. The United States Bureau estimate of the production of winter wheat was published on Monday, and, at 549 million bushels, was about 11 million bushels higher than the average of private forecasts. The agricultural situation in Southern Hemisphere countries is considered quite favourable. The maize market has been generally steady, though conditions were rather dull. Trading in barley has been restricted by the holiday.

Other Foods

Provisions.—Business in most classes of provisions was restricted after the holiday, but the markets were steady. Butter prices were slightly lower, but other commodities showed little change.

★

Colonial Produce.—The raw sugar market was firm and prices of all grades advanced, largely owing to the political tension. Tea prices were also higher, though sales at the London auctions were small.

★

Fruit and Vegetables.—The market was quiet after the holiday, but business was good throughout last week. Prices remained firm, and supplies of most of the regular seasonal lines were limited. Vegetable supplies were heavier than expected on Saturday and prices weakened.

Miscellaneous Commodities

Oils and Oilseeds.—The price of linseed is higher on the week, though the market was not very active. Crushers have ample supplies of oilcakes, and there is still a large quantity on passage to Europe. The demand appears to have fallen below normal, though American buying is expected to be maintained until the domestic crop becomes available in the autumn.

★

Rubber.—The market has been dull, and prices fell on account of political tension. Standard ribbed sheet on the spot closed at 7½d. per lb. on Wednesday, ½d. lower on the week.

COMPANY MEETINGS

UNITED GLASS BOTTLE MANUFACTURERS, LIMITED

SUCCESSFUL TRADING RESULTS

SIR MAX BONN'S SURVEY

The twenty-sixth ordinary general meeting of the United Glass Bottle Manufacturers, Limited, was held, on the 13th instant, at 8 Leicester Street, London.

Sir Max J. Bonn, K.B.E. (the chairman), said:—The directors' report and accounts have been in your hands for some time—owing to the Easter holiday intervening—and I trust you have studied them with a sense of satisfaction, having regard to the difficult political and trading conditions during 1938.

You will notice from the assets side of the account that fixed and loose plant and machinery (after writing off £101,206, our normal rate of depreciation, and wear and tear of moulds) at £645,071 compares with £647,192. Shares in subsidiary companies are increased to £1,150,280 from £1,134,314; but trade investments show a reduction from £13,758 to £1,252, due to an associated company having become a subsidiary, by the purchase of further shares. Stocks, stores, packages, etc., have risen from £647,329 to £688,473. Debtors, after making ample provision for doubtful items, amount to £471,619, against £513,623. Cash at bankers and in hand is increased to £148,684 from £139,937.

PROFIT AND DIVIDENDS

The net profit for the year amounts to £257,592 (as against last year £280,811), to which is added the balance from last year, £44,738; after making allocations to reserves previously referred to, the amount available is £204,760. The full year's dividend, less income tax, on the preference shares, £65,324, and an interim dividend, less income tax, on the ordinary shares, £28,344, have been paid, and it is now proposed to pay a final dividend on the ordinary shares of 6 per cent., less income tax, making 9½ per cent. for the year (same as last year) and a cash bonus of 2½ per cent., less income tax (same as last year), £68,836, and to carry forward a balance of £42,255. Again we have received a satisfactory contribution by way of dividends from British Bottles, Limited, identical with last year, apart from the increased income-tax deduction. You would wish me to emphasise that a substantial surplus of the profits earned by the Northern Group has again been retained and added to the reserve of British Bottles and/or operating companies. As the merger terms were based on earning power (as distinct from valuation of assets), the issue of the new U.G.B. shares, exchanged by way of purchase consideration, automatically created a large goodwill item. Whilst we have every confidence in the earning power of the Northern Group, we are anxious to continue for some years to come a conservative policy on the same lines as we have pursued in the U.G.B. accounts proper.

SUBSIDIARY ACTIVITIES

Our other main subsidiary, Kork-N-Seal, Limited, has had another satisfactory year. Further extensions to the buildings have been completed; the new layout of the factory has resulted in greater efficiency and economies. The company has installed a number of fully automatic moulding presses for the production of Phenol and Urea mouldings. These presses, together with the injection moulding machines mentioned in my speech last year, enable us to cater for a greater variety of moulded articles.

I should also like to refer to the excellent results of our St. Helens box manufacturing department; sales of beer, mineral water and similar types of boxes and cases have been well maintained.

WAREHOUSING AND TRANSPORT

In 1930 the late chairman explained our policy of establishing "outside" warehouses, apart from any enlargement within the factories. By 1938 we had no less than 23 points ensuring first-class delivery services. When during the height of the Christmas season many roads were icebound, and some impassable to long-distance traffic, the test had come. I am proud to tell you that not one single customer was held up in his Christmas trade owing to any default on our part. Your directors had great pleasure in congratulating Mr C. A. Roberts, the excellent head of our transport department,

on behalf of every driver in our service. Quite recently we have secured additional facilities (subject to completion) outside the London area, and yet well placed from our Charlton base, which should relieve congestion, and at the same time secure a further spread of risks. In this connection the Southern Railway gave us every possible assistance.

The bulk of our traffic continues to be carried by rail, and whilst we are critical of any abuse of powers—whether in regard to transport, fuel or any raw material—we appreciate the service and facilities we receive from the main lines.

PRICES AND COSTS

Last year I spoke of the greater price stability within the industry. Detailed comparisons of the increase in our extraneous costs, i.e. fuel, raw materials and labour, during the last two years are most significant. Assuming that the incidence of these burdens is more or less identical throughout all glass bottle concerns, I am satisfied that customers have had a very square deal; equally so, that at the price levels prevailing up to the moderate increases since 1936, we should have found it impossible to pay reasonable dividends and yet build up adequate reserves.

A.R.P.

Before I turn to the future, I wish to look back at the special difficulties encountered during the summer of 1938. Earlier in the year your board decided to prepare for an emergency, as quickly as possible according to the special needs and within the possibilities of our factories both in England and Scotland. Mr Alexander and Mr Tipping—the mechanical assistant to the general manager—became a most competent committee of two. Thanks to the encouragement received from the authorities, we obtained for Mr Haig (of Charlton) admission to a course at Falfield Anti-Gas School and thus secured specialised knowledge at an early date. By the middle of September I had the satisfaction of seeing Charlton clearing the entire working floors within four minutes. After our board meeting in November at Sherdley we witnessed a most efficient display in all the activities which legislation is about to impose by way of compulsion on industry. Nevertheless, it would be idle to pretend that there are no marked differences as regards voluntary service, both as between localities and individuals. All reasonable preparations for "blackout" had been made throughout the whole organisation; some of these measures were of a temporary nature and have since been improved, and will, I trust, satisfy the present official standards. The actual expenditure under this heading will have to be dealt with in next year's accounts.

THE OUTLOOK

You would hardly expect me to hazard any forecasts for 1939. Up to date, business on the whole has been well maintained, but you know my reluctance to generalise from any short-period experience.

Early this year I visited the United States, largely for the purpose of making personal contact with our friends in Toledo. I am grateful to Mr William E. Levis, the head of the Owens Illinois Glass interests, and his associates for their kind reception and their interesting and informative hospitality.

Subsequently Mr Moorshead spent some time in the United States—he is only just back—and as the result of our talks we have arrived at a broad understanding for a technical liaison as regards containers and closures. From the very size of their research work and the larger scope of their manufacturing operations we should be the gainers; nevertheless, I am confident that, thanks to our technique and new developments, it will not be an entirely one-sided arrangement.

You, my lords, ladies and gentlemen, will readily appreciate the practical advantages and intangible safeguards of such an arrangement; the very lack of any formal tie-up enhances, in my opinion, the value of this prospect. It is some comfort to be able to conclude my observations on this happy note.

The report and accounts were unanimously adopted.

EAGLE STAR INSURANCE COMPANY, LIMITED

SUCCESSFUL YEAR'S OPERATIONS

STRONG FINANCIAL POSITION

DIVIDEND 30 PER CENT.

Presiding at the annual general meeting of the Eagle Star Insurance Company, Limited, held in London, on the 13th instant, Sir Edward Mountain, Bart, J.P., in moving the adoption of the report and accounts, said that in the life department 3,097 new policies were issued for £10,522,804 gross, of which £209,543 was re-assured, and the premium income in the current funds had increased by over a quarter of a million pounds. The expense ratio now stood at 13 per cent. of the premium income, and it was a matter of satisfaction that during the past four years it had shown a steady and continuous decline. The gross rate of interest earned by the current funds was £4 18s. 11d. per cent. A transfer of £40,000, as an interim payment, had been made from the current fund non-participating life business to the shareholders' profit and loss account. The total assets of the life department (including both current and closed funds) now exceeded £16½ millions, being an increase of £541,160 during the year. The current sinking fund and capital redemption account had expanded during the year by approximately £85,000 and now stood at over £644,000.

"STAR" AND "SCEPTRE" FUNDS

The valuation of these two closed funds was made at the end of 1938 on the same stringent basis as on the last occasion. In the Star Fund a surplus of £705,677 was shown, which enabled the directors to maintain the reversionary bonus of 4 per cent. per annum. In the Sceptre Fund the surplus was £145,178 and they were able to repeat the record rates of bonus declared five years ago.

FIRE DEPARTMENT

The premium income was £808,464 and showed a profit of £54,447.

ACCIDENT DEPARTMENT

The premium income from ordinary personal accident and sickness insurance showed an increase from £81,258 to £89,565, while the premiums on special contracts, the liabilities under which terminated at the close of the year, amounted to £14,536. An amount of £12,995 was transferred to profit and loss account.

GENERAL INSURANCE

In the general insurance account, which includes various miscellaneous classes of business now shown separately, there was an increase in premium income which now exceeded half a million. The results had again been very satisfactory, a profit of £94,973 being carried to profit and loss account.

EMPLOYERS' LIABILITY ACCOUNT

The premiums increased to £247,242 and a profit of £1,407 was carried to the profit and loss account.

MOTOR DEPARTMENT

Despite the difficult conditions obtaining in motor car insurance, last year's results showed an improvement on the previous year. The premium income was £1,607,231. The claims paid and outstanding amounted to £918,715 and after providing for expenses, a sum of £18,401 was transferred to profit and loss account.

MARINE DEPARTMENT

In that account £320,485 was brought forward, which, with the net premiums for 1938, £275,060, gave a total of £595,545. Claims paid during the past year and for all previous years amounted to £220,905. Expenses, including taxes, amounted to £56,532, and they were able to carry forward £318,108, which represented 115.65 per cent. of the premium income.

PROFIT AND LOSS ACCOUNT

With the credit balance brought in of £294,521, net interest from investments of £358,392 and transfers from the various trading accounts, there was available a total of £954,055. Of that the payment of the dividends absorbed £328,204 (which it would be observed was more than covered by the net interest earnings alone), and after making provision for taxation, expenses and transferring £50,000 as an additional claims reserve to the motor insurance

account, there was carried forward a balance of £402,134 against £294,521 brought in.

In conclusion, he wished to thank all the members of the staff and agents for the support they had given to the company during the past year and to add that he thought they might all look forward to the future with confidence, subject, of course, to the international situation.

The report and accounts were unanimously adopted, and the proposed dividend of 30 per cent. was approved.

BANK OF ATHENS

RESULTS OF A DIFFICULT YEAR

The directors' report for 1938 was presented at the annual shareholders' meeting on March 24, 1939.

The following were among the more salient points:—

World economic activity, already so tested by the new crisis arisen since 1937, has had to face during the past year disturbances provoked by the anomalies of the international situation. These anomalies, which have followed on one another for several years, in 1938 have become acute. These unfavourable conditions have been further accentuated by the alarming events of September, which have upset the European *status quo* which was the outcome of the war of 1914. In spite of this troubled atmosphere, which has perforce exercised its influence on Greek affairs, the economy of the country has again shown appreciable progress.

The disquieting turn taken by the European political situation, especially during the last half of the past year, has imposed a cautious policy on banking. Despite difficulties which result from restrictive measures in force, the turnover of the bank has been satisfactory, as is shown by the balance sheet submitted to-day for your approval.

The results obtained have been neutralised by the application of collective contracts in Greece. We are the first to recognise the timely nature of this measure, which, in present circumstances, creates new conditions. We hope, however, that the bank will soon be able to adapt itself to these new conditions. We base our hope on the vitality of the bank which, with the help of its shareholders, has already been able to face numerous new charges imposed on it successively in the course of a relatively short lapse of time.

Furthermore, the strong position of the bank has been clearly proved by the increased turnover of various items of the balance sheet during the last three years.

The profits for 1938, after deducting the usual provisions and amortisations, amount to Drs.18,920,242, as against Drs.20,958,659 for the preceding year. This allows us to propose the distribution of a dividend of Drs.12 per share, leaving a balance to be carried forward of Drs.3,231,502.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED

INCREASED ORE RESERVES

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 13th instant, at Southern House, London.

The Hon. A. T. J. Fraser, D.S.O., the chairman, who presided, said that the results of the year's working had been very similar to those of the previous twelve months. The total recovery of gold had amounted to 51,301 ounces, an increase of some 600 ounces, and the average selling price had been £7 2s. 2½d.—an increase of 2s. 10½d. per ounce. The profit was £56,742, and after sundry allocations there was now available £28,665 or almost exactly the same as last year, from which the proposed final dividend of 6d. per share on the preference and ordinary shares would leave to be carried forward £10,266.

The principal event of the year had been the completion of the air conditioning plant on the mine. Ooregum was one of the half-dozen deepest mines in the world, with the deepest point no less than 8,361 feet vertically below the surface, and some 5,400 feet below sea level. The plant had been working well and the results appeared to be coming fully up to expectations or even beyond them. There was no doubt that the lowering of temperature would have a very considerable effect on the efficiency of the native labour and still more of the white supervision; indeed, that had already taken place to a marked degree.

During the year the intensive scheme of development had been continued. The Central and Northern portions, especially Bullen's section, were the areas on which any real prosperity for

WILLIAM BEARDMORE & COMPANY, LIMITED

ARMAMENT COMPANY'S OBLIGATIONS

The ordinary general meeting of William Beardmore and Company, Limited, was held, on the 13th instant, in London.

Sir James Lithgow, Bt. (the chairman), said that effect had now been given to the scheme of arrangement accepted by the shareholders last June and duly approved by the Court. The figure of £8,000,000 of authorised capital simply represented the amount of capital upon which duty had been paid and which, if required, was available for issue without further expense of that nature. The directors had in view nothing which would appear to call for the issue of any of the unissued capital, and the present position might, therefore, be regarded as fully covered by the issued capital of £950,000 5½ per cent. cumulative preference stock and £950,000 ordinary stock. The 4½ per cent. mortgage debenture stock, which had been issued in satisfaction of the old income debentures was largely held by certain banks and by interests controlled by him. A certain portion was in public hands. The stock was repayable in ten years as it was thought quite probable that within that time moneys realised from the sale of surplus assets might be available towards reduction of this obligation.

Under the heading of sundry creditors and credit balances there was carried a substantial amount of income tax deducted on the redemption of Interest Certificates and from other payments which would eventually require to be accounted for to the Inland Revenue. Apart from that, the figure of £496,429 was made up of normal trade creditors and credit balances. The total was considerably less than it was twelve months ago. The directors had thought it wise to create immediately a reserve to cover the dividend on the cumulative preference stock for a certain number of years in which profits might not be earned. The sum suggested of £160,000 was, he thought, fully in line with good practice in such matters.

THE ASSETS

On the assets side of the balance sheet, land, buildings, plant, machinery, etc., included all the assets belonging to the company situated at the Parkhead Works, which were all at present in full production as well as three small properties adjacent to Parkhead which were let to outsiders and also the old railway wheel works now leased to the Glasgow Railway Engineering Company. The value of the fixed assets had been ascertained and adjusted under the scheme of arrangement.

Their subsidiary companies were Newton Mines, Limited, the Dowson and Mason Gas Plant Company, the British Ljungstrom Marine Turbine Company, John Broadfoot and Sons, and Beardmore Diesels, Limited. Associated companies consisted of a half-share in the Glasgow Iron and Steel Company, a half-share in Beardmore Motors, Limited, and a number of sundry investments.

Current assets showed a substantial increase owing to the increased activities and work in progress, less instalments received, was substantially up and was accounted for by the greater volume of work. Sundry debtors and debit balances included the purchase price of a part of the Dalmauir property but was otherwise made up of normal trade debtors and debit balances.

DEFENCE REQUIREMENTS

The company's resources of plant and staff had been heavily strained throughout the year to meet the requirements of the Defence Departments of the Government. These requirements were not always fully understood by the public, particularly that aspect of them concerned with the careful designing and preparation necessary for their execution. The public was apt to forget that during many years the plant of their company, like others designed primarily for armament work and quite unsuitable for anything else, was allowed to languish by reason of a national policy which had unfortunately proved to have been mistaken. It was no easy task looked at either from the financial or the physical point of view to repair rapidly major errors of this kind—errors for which no one connected with the company could in any sense be responsible.

It did not seem to be so easy for the general public to appreciate the sacrifices that had been made and the debt that had been accumulated in the national interests. He hoped that in public discussion of the profits of those companies who had laid themselves out specially to support the country in a crisis of this kind, some consideration might be given to the huge financial obligations they had undertaken and upon the stability of which the ultimate fate of the country still depended.

The report was unanimously adopted.

the mine depended. Owing to continued intrusions of pegmatite no stopping ground had been opened up there of any importance since the 82nd level, but on the 88th level, though no actual ore shoot was as yet showing, pegmatite was now very largely absent, and judging from the past history of all the Kolar Mines, that indicated a very distinct possibility of ore shoots making at a lower horizon. Ore reserves at December 31st stood at 260,346 tons, averaging 10.11 dwts., and showing an increase of 26,634 tons. In addition there was approximately 80,000 tons of low grade ore profitable at the present price of gold. It had been possible to maintain and even increase the high grade reserves by mining a considerable tonnage from outside known ore reserves and from reclamation work in the higher levels where it had been possible to win ore from the fringes of stopes formally considered worked out, but now, with the high price of gold, distinctly payable.

Mr S. Taylor, describing the operations on the mine during the year, said that reclamation work had been continued energetically and more ground had been made available for stoping in the middle and upper sections of the mine. In fact, some 46 per cent. of the mine output last year had come from stopes outside the payable reserve. The indications were that, provided no unforeseen contingencies occurred, they ought to be able to maintain the current rate of output from those sources for some years to come. It was particularly pleasing to be able to report that the ore reserves showed a further increase.

The report was unanimously adopted.

JOHN BARKER & COMPANY, LIMITED

DIVIDEND MAINTAINED AT 15 PER CENT.

The 46th ordinary general meeting of this company was held, on the 12th instant, in London.

Mr Sydney M. Skinner, J.P. (chairman and joint managing director), after expressing regret at the death of Mr Francis Barker, brother of Sir John Barker and one of the original directors of the company, said that the year covered by the accounts had been a particularly difficult one. The major happenings since they had last met were a matter of history; the frequently recurring crises were fresh in their memories; and he was sure that shareholders would readily understand what a seriously adverse effect they had had upon the trade of the country and, indeed, upon the trade of the world generally. In view of that, together with the unavoidable inconveniences and restrictions caused by their rebuilding arrangements, he thought it would be agreed that, with a final net profit of £347,941 as compared with £344,817 for the previous year, or an increase of £3,124, they had emerged from a troubled year reasonably well.

The item of freehold and leasehold properties in the balance sheet showed an increase of £251,333, which in the main represented part of the finishing costs of the western section and the demolition and rebuilding costs of the central section.

The item of fixtures, fittings, etc., showed an addition during the year of approximately £129,000, a very heavy but necessary outlay.

Stock-in-trade was fairly steady at £546,393, as compared with £533,135. Watchful eyes were kept throughout the year on the most vital factor in their trading. At every stocktaking each department was taken on its merit and any necessary writings down or writings off were effected. By that process and by their ability—by reason of their cash resources—to buy in the cheapest market, they were able to keep their stocks constantly replenished and to give the fullest advantage to their customers, so maintaining their motto of "Value for money."

The final net profit for the year was £347,941, after making all necessary provision for current liabilities and providing for liability to income tax and N.D.C. The vexed question of taxation was one which was ever with them. Present indications showed no likelihood of relief, and that, coupled with the N.D.C. charge, made the outlook anything but encouraging.

In his judgment the current year was likely to be as difficult as any that they had had to face for some time. The view given by him and supported by his co-directors laid the obligation upon them to make every effort to steer the company's affairs towards a better result, if possible, for the coming year.

Summing up the position he said that the available balance was £459,099. The directors proposed to write off £25,000 from fixtures, fittings, plant and machinery, to place £100,000 to rebuilding and modernisation reserve, and £10,000 to the pension and benevolent fund, paying a final dividend on the ordinary shares of 10 per cent., making 15 per cent. for the year.

The report and accounts were unanimously adopted.

BRIGHTON AND SUSSEX BUILDING SOCIETY

AMALGAMATES WITH
LEEDS CITY AND DISTRICT BUILDING SOCIETY

At a meeting held, on the 11th instant, at the Philosophical Hall, Leeds, fresh history was made in the annals of building society history.

The occasion was the meeting of the Leeds City and District Building Society members, which was attended by Mr Lewis Cohen, managing director of Brighton's biggest building society, Mr C. J. M. Whittaker, the society's solicitor, and Major Milner, M.P.

The meeting was presided over by the chairman of the Leeds City and District Building Society, Mr George Wright, who, in his address to the large attendance of members, said that his board had very carefully considered the Brighton and Sussex Building Society's proposals of amalgamation and that they unhesitatingly recommended their members to endorse their action in agreeing to the union.

Mr Whittaker then read the deed of union and carefully explained the position, pointing out the advantages to be gained.

In his speech Mr Lewis Cohen stated that this was the sixth building society the Brighton and Sussex had amalgamated during the last two years, and he was convinced that this was the logical direction which building society policy should take. He referred to the action of the banks during the latter part of the nineteenth century when they took the pioneer step of strengthening themselves by union, and he said that it seemed reasonable and wise that to-day in view of the problems ahead, the great building society movement, with its assets of over £650,000,000, should travel the same road.

There were in all just on one thousand societies, and he was convinced that, if this number could be materially reduced by amalgamating their resources, it would give even greater stability to the movement. The path was clear, the Brighton and Sussex had shown them the way, and whilst they hoped to continue their successful policy, they sincerely trusted that other societies would follow their lead, for they felt it was beneficial both to the movement and to the public.

The Chairman put the motion to the meeting, and it was carried unanimously.

(Continued from page 153)

£50,000 smaller at £366,000. British Government securities fell by £142,000 and Colonial and Foreign Government securities by £23,000. Debenture stocks were practically unchanged at £1,523,000, while preference and ordinary stocks each showed moderate increases.

★

Merchants Marine Insurance Company.—The marine premium income of this company, which had been falling steadily for a number of years, increased from £150,000 in 1936 to £197,000 in 1937, and last year the total was £208,000. Generally speaking the marine results have been definitely bad and have resulted in a large profit and loss debit balance which now amounts to £468,000. There is a small fire account which has regularly shown good underwriting results. The results of the last two years are given below:—

	1937	1938
Marine	Dr. 18,909	Dr. 53,000
Fire	8,192	5,976
Investment profits	2,013	Dr. 692
Other profits	Dr. 8,704	Dr. 47,577
Interest	Dr. 6,263	Dr. 7,203
	Dr. 14,967	Dr. 54,780

The whole of the share capital is owned by the Employers' Liability, which guarantees the policies and which no doubt will sooner or later take steps to improve the balance sheet position of the Merchants Marine. Total assets amount to £954,000, including the debit balance at profit and loss of £468,000.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED

CONDITIONS IN THE ARGENTINE

The meeting of the River Plate Trust Loan and Agency Company, Limited, was held, on the 12th instant, at the offices of the company, 211 Moorgate, London, E.C.

Mr Walter Woodbine Parish (the Chairman), who presided, said that though there had been a falling off of £34,200 in revenue, there had been a saving of £24,600 in expenses, due to a smaller charge for loss on exchange through reduced income remittances, and to a lessened provision for taxation, and the final result was a reduction in the net profit for the year of only £9,600 as compared with 1937. The moratorium law originally brought into force in October, 1933, and its subsequent extensions had had the effect of emphasising and increasing the rate at which the basis of the company's business was changing. To-day loans on first mortgage, properties purchased or taken over under foreclosure and the company's freehold premises in Buenos Aires together totalled only £1,127,000, or slightly less than 19 per cent. of their total assets, which amounted to £5,857,000.

For the six years to December 31, 1932, the average amount of outstanding loans on first mortgage of freehold properties had been £2,000,000; at December 31, 1933, two months after the introduction of the mortgage moratorium measure, the figure in the company's balance sheet representing loans was £1,980,026, but since then there had been an annual successive decline, and, in the balance sheet now before them, for the first time for many a year this figure of mortgage loans had dropped below the million mark and stood at £952,562.

With the ending of the extension of the mortgage moratorium law in October last, a new measure, the Mortgage Moratorium Liquidation Law, had come into force aiming at a gradual liquidation of mortgages, and the liquidation of those loans would be a matter of patience. The fact that the board had thought it best to face a capital loss and bring funds home had proved to be the wiser course. Had those funds not been remitted, a very much heavier loss would have had to be faced to-day.

The report and accounts were unanimously adopted.

Provincial Insurance Company.

—In these days of preparation for emergency evacuation of City offices to safer areas, it is of interest to note that the chief office of the Provincial has always been at Kendal. The company's results for the past two years are given below:

	1937	1938
Amount of % of Profit Premiums	43,783 20.1	39,593 17.7
Accident & Gen. Marine	57,759 5.6	57,093 5.1
	Dr. 7,004	Dr. 6,737
Items charged to profit and loss	94,538	89,949
	Dr. 65,432	Dr. 54,307
	29,106	35,642

Last year fire premium income increased from £217,000 to £223,000 and accident premiums from £1,027,000 to £1,110,000. The accident account shows alteration in the treatment of reinsurance recoveries on outstanding claims, as a result of which the reserve for outstanding claims at the end of 1938 has fallen from £391,000 to £354,000, although, as the report points out, the actual amount reserved per claim has increased. Marine premium income increased from £171,000 to £185,000 and the ratio of marine fund to premium income has increased from 102.4 per cent. to 103.1 per cent. No transfer was made from the marine fund to profit and loss, and the underwriting losses simply reflect interest credited to the fund in the two years. Assets total £2,405,000, and notwithstanding further depreciation of securities during the year the market value of investments on December 31st last exceeded book values. General reserve increased from £500,000 to £550,000. Interest income fell from £63,000 to £57,000.

Scottish Amicable Life Assurance.—In view of the Insurance Act in force, the Scottish Amicable decided to discontinue the transaction of new business in that country as from December 31, 1937, and thus severed a long and friendly connection extending over one hundred years. New sums assured last year, however, reached a new record of £2,131,000. Claims by death amount to £330,000, compared with £360,000 in 1937, and represented 83 per cent. of the amount expected according to the A1924-29 Ultimate Mortality Table. For the years 1935-37 the corresponding figures were 77 per cent., 87 per cent., and 93 per cent. respectively, and the average age at death was 66.1, 68.7 and 65.1; last year the average age worked out at 65.5. The net rate of interest on the life assurance and annuity funds fell by 2s. 5d. per cent. to £4 0s. 5d. per cent., and total assets increased from £13,146,000 to £13,332,000. Mortgages and loans of all kinds increased from £2,082,000 to £2,524,000. Mortgages of property increased from £72,000 to £230,000, while the loan to the Standard Property Investment Company increased from £493,000 to £767,000. The latter is an old-established and successful Edinburgh concern which lends on security of heritable property in Scotland, whose share capital is held in approximately equal parts by the Scottish Amicable and the Scottish Equitable Life offices. British Government securities were reduced from £3,013,000 to £2,726,000, but otherwise changes in investments were unimportant.

African Survey

(All figures relate to Africa south of the Sahara, i.e. the area shaded on the map).

We are indebted for the figures used in this chart to "An African Survey" (by Lord Hailey, 1,837 pages, 21s.), and "Capital Investment in Africa" (by S. H. Frankel, 487 pages, 10s. 6d.), both published for the African Research Survey by the Oxford University Press.

Finance

GOVERNMENT RETURNS

For the 8 days ended April 8, 1939, total ordinary revenue was £17,560,000, against ordinary expenditure of £27,411,000 and issues to sinking funds of £245,000. Thus, including sinking fund allocations, the deficit for the 8 days is £10,095,000, against £8,288,000 for the corresponding 9-day period a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for on Tuesday are 89-day bills, except those paid for each Tuesday, which are 88-day bills. On April 16th applications at £99 13s. 5d. per cent. for bills to be paid for on Tuesday, Wednesday, Thursday, Friday and Saturday of following week were accepted as to about 44 per cent. and applications at higher prices in full. £30.0 millions of Treasury bills are being offered on April 14th.

emphatic assurance of community of interest between the three Great Powers and a practical arrangement for the supply to Poland and Roumania of Russian help, sufficient to strengthen their resistance, but not so overwhelming as to threaten their independence. The new policy of resistance will not have succeeded until this dual result has been achieved. There are, of course, obstacles both in the West and in the East. In Moscow the chief difficulty is to be sure that Britain is at last in earnest. It is our task to dissolve these suspicions. Every hesitation in the new policy will redouble them; every sign of courage and firmness will help to dispel them.

Though Russia is the centre of the diplomatic problem, there are other segments of it as well. The most urgent of these, to give them geographical labels, are Turkey, Bulgaria and Spain. Geography makes Turkey of crucial importance, and the appointment of Herr von Papen as German Ambassador in Angora shows that it is at this point that the Nazis consider their chances of breaking the Grand Alliance stand highest. With Turkey, as with Russia, it is a matter of bringing conviction that the British Government have the resolution to carry out their designs and the strength to honour their commitments. The importance of Bulgaria is far greater than the size of the country would indicate, for a disaffected Bulgaria could be used by the Axis to encircle both Yugoslavia and Roumania. This danger can be allayed if some satisfaction can be given to Bulgaria's demands for consideration of her not unreasonable grievances. Primarily, this is a matter for her immediate neighbours, more especially for Roumania. But British diplomacy can usefully play a mediating role. Spain is the most difficult of the diplomatic problems. The policy of patience and forbearance has brought us no rewards hitherto, save a mounting pile of evidence of Spanish hostility. If it does not produce more promising results within a very short time, such steps as are possible will have to be taken to erect defences against possible attacks coming from Spain.

The economic aspect of collective resistance has hardly yet emerged in public discussion. The object of the guarantees to Poland, Greece and Roumania is to prevent those countries from falling unwillingly under German domination. But a country whose foreign trade is dominated by Germany is hardly capable of political independence. If resistance to German demands would involve not only armed invasion, but also the immediate disappearance of two-thirds or four-fifths of a country's export trade, the promise of assistance from far-off Britain and France might not be of much avail. The political guarantees, if they are to be worth anything, must be backed up by measures to maintain the commercial independence of the guaranteed countries. There is no question here of driving Germany out of her natural markets, but merely of ensuring that the countries of South-Eastern Europe have some freedom of choice left. On the other hand, this is a wider matter than the mere defence of existing British trade, and it cannot be governed by purely commercial considerations. The long and the short of it is that we must be prepared to spend money on buttressing the economic independence of our new allies.

On the military side, many of the problems are moving towards solution. In a survey of Germany's Air Force in *The Economist* last week it was estimated that at the New Year the ratio of production of aircraft stood at 3:2 in favour of Germany. In the past three months very great progress has been made and British production of aircraft will, within a very few weeks, be in excess of the German. In naval armaments we are increasing our already long lead, except perhaps for the smallest craft. These successes, however, merely throw into sharper relief the woeful inadequacy of the British Army. It is obvious that the very wide commitments we have undertaken cannot be satisfactorily fulfilled without a considerable increase in our land

forces. We may still be able to do without an army of millions; but we need an army of at least one million, and the recruitment, over a period, and training, over a longer period, of a quarter of a million spare-time soldiers is not nearly enough.

The answer is conscription. It is true that many people have strong scruples against conscription. Some of these scruples are reasonable and should be met. For example, it would be wrong to conscript man-power alone. But this can be met by a short declaratory Act of Parliament placing the whole man-power, wealth and industrial capacity of the nation at the service of the State, to be called upon as required. The argument that conscription would be undemocratic can be answered by settling the matter democratically: let it be put to the vote. But every day that we spend in philosophic discussion gravely weakens both our strength and our influence.

The problem of industrial mobilisation is as urgent as that of man-power. There are several industries in which resources of labour and of capital (especially of skilled labour) will not be available in the volume required to carry out this year's Estimates unless they can be taken away from civil work. If the priorities can be arranged voluntarily, so much the better. But the main thing is that they should be arranged without delay, and the Government's new Bill to secure this end is very welcome.

The financial aspect of this problem of industrial mobilisation is now beginning to receive the attention it deserves. Mr Keynes has this week, in articles in *The Times*, lent the weight of his authority to the views that have frequently been expressed in *The Economist*. The present financial year is a period of transition, during which we shall forsake the problems of unemployment and meet those of labour scarcity. It may be that the threshold of inflation will not be reached until next spring—that is to say, that the increase of Government expenditure in the course of the present year may, in general, be accomplished without diverting resources on a significant scale from other employments, which is the same thing as saying that it can be financed by borrowing without fear of inflation. Mr Keynes's insistence on the safety of borrowing during the transition period tended, perhaps, to obscure the danger of unlimited borrowing after its end. We shall very soon reach the stage at which a definite restriction of non-military expenditure will be necessary—and in any such restriction very drastic increases in taxation must inevitably play an important part. This is what is meant by the conscription of wealth. It will be very prudent to have plans ready for securing a signal reduction in all forms of luxurious living. And it would immeasurably smooth the path for the conscription of man-power if it could be announced that the plans were ready.

Finally, there is the immense problem of civil defence, the present state of which is outlined in a Note on a later page. In this sphere an enormous amount has been done since September—almost as much as remains to be done. Perhaps the greatest need now is not for the making of plans but for their execution and, so far as is possible, their rehearsal. Here again, it would be unwise to rely entirely on a spontaneous mobilisation of the unbounded popular goodwill that unquestionably exists.

This is a forbidding list. Under every head the need is for leadership and energy. Inevitably the question arises whether either can be provided in sufficient measure by a Cabinet most of whose members have been continually in office for more than seven gruelling years. There are too many men of doubtful competence in high places, too many men of proved competence outside. If there are doubts about the Cabinet's policy, it is for the Cabinet to dispel them. But in politics no less than in any other sphere this is a time for the concentration of all our forces.

British Budgets

NEXT Tuesday is Budget Day. We know that, in the financial year 1939-40, the Government is to spend at the rate of at least £3½ millions a day, and laymen anticipate, somewhat uneasily, that, in spite of the vast dimensions of this year's projected borrowing, taxation may be increased. Experts are agog about the economic implications of this new phase in financial policy which, beginning with the re-armament loans of 1937, now promises to exercise, for a time, a dominating influence on national business.

The historians of public finance can take a more Olympian view. It is possible, by examining the words that have fallen year by year from the lips of Chancellors of the Exchequer on Budget Day, to trace the way in which principles and practice have grown and changed. This is precisely what Professor Macgregor, in his Oxford eyrie, has done: in a brief book*, freely dotted with quotations from the last hundred years' financial discussions in Parliament and illuminated equally by technical learning and common sense, he has caught the quintessence of British Budgets. The period is well rounded: "from about 1840 until the reversal in 1932 of our financial policy was the period of what may be specially described as British public finance." It was associated with a programme of free trade and the gold standard; and it was marked by a notable continuity in the arguments by which successive Budgets were justified.

Indeed, the story is eminently one of magic words and phrases. Until the 'eighties of last century they were "retrenchment" and "economy." "There are three principles on which all good finance should be based," summed up Gladstone in 1882 on the very eve of the new era of public spending which the democratisation of English politics made inevitable.

The first is that there should always be a certainty that, whatever the charge may be, it can be paid. The second is that in time of peace and prosperity the country should reduce their debt. The third is that they should reduce their expenditure.

Half a century before, Althorp had stated the prime ground for this classic sternness.

The best way to relieve the burden of the labouring classes is to give them employment; and this can only be assured by reducing the taxes which press most immediately upon productive industry.

And it was Bright who argued, surprisingly to us who belong to a generation of State Socialism, that taxes mean

bareness of furniture, of clothing and of the table in many a cottage . . . absence of medical attention . . . and hopeless toil.

There were two other theses which defended the virtues of economy. One was the so-called doctrine of "fructification": the remission of the taxes (said Peel) would make money "fructify more in the hands of the people than in those of the State"; and it is only two decades since Asquith, echoing this view, argued that

the effect of an income tax is, not merely to curtail the enjoyments and comforts of a large number of our middle classes, but also to dry up the streams which fertilise the whole field of employment and of industry.

The other was the argument that taxation, and the income tax in particular, should be held in reserve for times of emergency, and especially for war. "Let this tax always be wedded to war," said Wilberforce of the income tax; and Disraeli went so far as to say that

There is no fleet and no army which gives England such

power and influence in the councils of Europe as the consciousness that the income tax is in a virgin state.

A low income tax and a large Sinking Fund: these were the symbols of financial rectitude.

Yet, before the nineteenth century ended, the "great, rapid and menacing expenditure" about which Gladstone had warned Parliament in 1868 was coming into its own. In Peel's time the Budget was £50 millions. In 1895 it was £100 millions and, by 1914, it was £200 millions. To-day it is over £1,000 millions. According to a very tentative calculation made by Professor Macgregor, the proportion of the national income spent by both central and local authorities stayed steady between 1840 and 1880 at about 13 per cent. (if debt charges are included); quite likely it actually declined. In 1914 it was 17 per cent., and to-day it is about a third.

The causes of the expansionary policy which took charge from the 'eighties onwards are not far to seek. Balfour put it straightly:—

All the increase is due to the desire of this House to ameliorate the social position and to carry out great reforms . . . all the forces of political life—honest, honourable and patriotic forces—move in the direction of increasing and not of diminishing expenditure.

Democratic parties had to meet the needs and win the suffrages of a proletarian electorate; their competition with one another for office and popular favour resulted in what Professor Macgregor calls the "echelon" advance of social expenditure. "The sovereign people (said Northcote) is a most expensive sort of sovereign"; and it was as early as 1908 that Mr Lloyd George could say "no one need be afraid of any taxes being taken off in my time."

It was not simply political pressure, coupled with the cost of a vast Civil Service to administer the new social policies and the expense of the naval establishment needed to secure that immunity from attack which Mr Lloyd George, again, called "an essential part of our national wealth," that speeded expansion on its way. Old principles were given a new interpretation. "The idea that public spending may itself create the incomes which enable it to be carried on" arose: "fructification" was now deemed possible in the State's own pocket;

a tax is like the sun. It draws up the moisture from the sea, and sends it back in the form of rain to some other part of the world's surface.

It was the graduated income tax which revealed the full resources of taxable capacity; and retrenchment had lived "in a world of meagre sources of revenue."

The full weight of the new policy was felt after the war of 1914-1918. War inevitably steps up spending and swells debt greatly, and it is impossible in practice to bring it down again. Despite the restatement of financial orthodoxy in 1920 and the reduction of the Budget from £1,195 millions in that year, which was six times the 1913 figure, to £810 millions in 1922, the policy of expansion persisted. In 1913 public expenditure, central and local, was 16 per cent. of the national income. In 1924 it was close upon 30 per cent.

This is the period to which Mrs Hicks has devoted a remarkable volume of exposition and analysis.† She begins in 1920 with the close of war finance. She ends in 1936 on the eve of its reappearance. It is a book typical of the new approach of experts to public finance. It is an almost complete critique of the consequences for all parts of Britain's economy of taxation and public spending. It is too full a survey of modern financial policy to be justly

* "Public Aspects of Finance." By D. H. Macgregor. Oxford University Press. 137 pages. 5s.

† "The Finance of British Government." By Ursula K. Hicks. Oxford University Press. 391 pages. 15s.

discussed in a brief argument like this, but to a point it is only the old story writ large. A continuous advance in social services has brought their annual cost to over £500 millions. While the national income has been raised to 2½ times its 1913 figure national expenditure has grown five-fold. Nor are economic grounds lacking in defence of this tendency; the maintenance of the volume of popular spending in the depression was a major factor in the quite remarkable recovery which came a few years ago;

the automatic expansion of social services in bad times (says Mrs Hicks) is not a phenomenon which should cause alarm, but which if properly foreseen and financed is itself a useful tool for fighting depression.

It is 127 years since Southey put the case for public spending in depressions, though not on social services.

No time can be so proper as seasons of pressure for national works, for making new naval stations and improving the old, for cutting roads, draining fens and recovering tracts of country from the sea—better would it be for the State to build pyramids in honour of Nelsons and Wellingtons, or towers of Babel for star-gazing than that men . . . should hunger for want of employment.

Public works and social services are not, of course, the same in kind, but both mean public spending and popular purchasing power. Genuine public works policy has indeed had small success, as Mrs Hicks points out, in post-war finance: its timing has been difficult, and its effects indecisive.

This year sees a dramatic change. Next Tuesday will mark it. Britain's present rearmament programme is the greatest public works programme ever devised in time of formal peace, involving as it does loan expenditure of about 8 per cent. of the national income.

It is not, in itself, the fact that expansionary spending has persisted into the post-war period that raises economic doubts. The new form of spending on State aids to industry has, indeed, brought up serious problems; subsidies, marketing schemes, quotas and tariffs have led to the augmentation of producers' power to exploit consumers; they have vested new interests with disadvantageous powers, social, political and economic; there are good grounds for believing that they are detrimental to national economic progress, on which national revenue

depends. But even this is not alone the crucial issue in current public finance. It is rather the tax structure itself and its relation to the nation's means. It will be difficult for Sir John Simon next week not to couple his determination to meet the "demand note" which the cost of necessary armament represents with something of a warning for the Budgets of years to come.

The discussion of the tax structure, of the relation of the various forms of tax to business activity, savings, investment and national productivity and of the effect of cyclical changes upon the tax burden is the best part of Mrs Hicks's exhaustive book. "On the score of convenience and ability to pay" (she rightly says) "a graduated income tax gets very high marks indeed." But when rates are high in relation to income the net return on investment is diminished and the incentive to invest, especially in depression, is impaired; and there is "a limit above which it may become dangerous even in normal times (assuming it is combined with a highly progressive surtax)." With our population threatening to fall, our openings for overseas investment diminished and international trade restricted by ourselves and others, we are at or very near that limit. It is by the size and rate of growth of taxable capacity, that is, of national income, and by the effect of taxation upon it, that public financial policy must be assessed. It is wrong to say that money necessarily "fructifies" more in the pockets of the people than in the pockets of the State. It is no less wrong to assume the reverse as a dogma, i.e. that it always fructifies more in the pocket of the State.

But these are not normal times. As Hobbes put it:—

War consisteth not in battle only, or the art of fighting, but in a tract of time in which the will to contend in battle is sufficiently known.

We are at war, and we must budget accordingly, though the long-term problem remains unaltered. If one lesson more than another emerges from the story of British Budgets it is that expenditure depends on policy. "The principles of legislation (Peel laid down) are to be determined by the observation of facts"; and the facts upon which the Chancellor will rest his call for huge borrowings and maybe for more taxes, too, are inescapable. The new era of war financing by deficit will be fairly launched.

Russia's War Potential

IN appraising the military strength of any country there are a number of factors, such as social morale in the armed forces and civilian population, on which nothing more than informed conjecture is possible. This is especially the case with Soviet Russia, a country of bold social change and big surprises. Purely economic matters, however, play a very large part in modern warfare, and on some aspects of these more precise information is possible. Nowadays, armies march on their fuel supplies as well as on their bellies, and their fighting power depends largely on their factories.

The Bolsheviks have never ceased to fear a complete economic boycott or even combined military attack by the rest of the world; and it is to resist such an attack, and not to take the offensive themselves or to operate in the defence of other countries that, psychologically and physically, they have made ready. To preserve the social system they had inaugurated, the alternatives were to extend the revolution to the industrial West, or to industrialise Russia at an unprecedented speed. Fortunately for world peace the second course was decided upon.

Soviet figures of industrial production in money terms show the 1913 output to have been regained as early as 1926 (after the catastrophic economic collapse consequent on war, revolution and civil war) and a sevenfold increase

by 1936. These figures must be taken with some reserve, since the smaller enterprises, which accounted for a larger percentage of output in the earlier years, are excluded, and the special "fixed rouble" prices used for the purpose of such calculations unduly overweight the output of new industries. Such figures as the following, showing output of specific commodities in physical quantity, are less liable to miscalculation, though they say nothing of quality and make no allowance for wastages, which in Russia are still much above the average for all industrial countries. Nor do they take into account the very low standard of maintenance of plant which until lately, when the purely political control of industry was diminished, was chronic:—

	1913	1928	1932	1937
Coal (million tons)	29.1	35.5	64.7	128
Oil (million tons)	9.2	11.5	22.3	31
Electricity (million kw./hours) ..	2	5	13.6	36.5
Steel ingots & castings (million tons)	4.2	4.2	5.9	17.6
Tractors (thousands, reduced to 15 h.p. units)	None	1.3	50.6	115*
Automobiles (thousands)	None	.7	24	200
Metal-cutting machines (thous.) ..	1.5	1.8	18.1	36
Sulphuric acid (thousand tons) ..	121	211	552	1,208*

* 1936

Soviet statisticians have calculated the share of Russia in world industrial production at about 3 per cent. in 1913

and 1928, and 13.2 per cent. in 1936. The following table gives Russia's share of world output for specific commodities in 1928 and 1936, which are comparable points in the world trade cycle:—

	1928 Per cent.	1936 Per cent.
Coal	2.9	11.2
Oil	5.7	12
Electricity	1.9	8.6
Steel	4	15.4
Copper	1.8	7.6
Aluminium	None	9.9
Superphosphate	1	9.7

The proportion of Soviet industrial production directly devoted to arms is probably at least as large as in Germany. Of the eleven Commissariats concerned with industrial production, four are now devoted to defence. The seven civil Commissariats are for Heavy Industries, Light Industries, Machinery, Timber, Textiles, Food and Local Industries. The four Defence Commissariats are for Aviation, Shipbuilding, Military Supplies (i.e. equipment and explosives) and Armaments (artillery and instruments); and they usually come first in the State Planning Commission's preference lists for the allocation of available supplies. The war industries also get the best qualities of materials and tend to attract the best technicians and workmen. Soviet industry (as indeed all aspects of the highly centralised social and economic system) is kept in a permanent state of "mobilisation preparedness," to use the Russian phrase. Such factors as the twist of Soviet economy towards rapid capital development, the Russians' low consumption of manufactured goods as compared with Western peoples, and the absence of a wealthy class to modify by luxury demand the austere utilitarian shape of production should be remembered in comparing the war potential of Soviet industry with that of other countries. For example, over 80 per cent. of the motor vehicles made are lorries, and only a tenth of the total building allocation last year was for housing. On the other hand, the quality of finished goods is lower than in older industrial countries, but this may be less true of armaments and machinery than is generally imagined. Soviet aircraft and guns appear to have worked well in Spain. Wastage, on the other hand, is considerably larger than in other countries; and so much of steel and other raw and semi-finished materials is used simply to patch the holes in existing, ill-kept equipment that the volume of finished goods turned out is not commensurate with the output of materials.

Russia has no idle productive capacity and labour on which to draw in time of war. Her output at any given time represents the maximum at the prevailing level of labour and managerial efficiency. Some reserve of production could be found, however, in extending the hours of labour, which at present amount to seven a day in most industries; and already the new measures for industrial discipline, discussed by *The Economist's* Moscow Correspondent on page 197 of this issue, may be making use of this reserve.

An important factor in Russia's war potential is the high speed of her industrial development. The Third Five-Year Plan foresees Soviet production in 1942 as approximately double that of Germany in 1938 and two-thirds of the United States' boom level. This objective, which amounts to doubling production in six years, is not altogether impossible, for labour efficiency is still improving fast, and the Government is determined to maintain the present high rate of capital development until the threatening war breaks out or is averted. It is possible for a fall in production to occur for political reasons, but the economic pressure is still for a steady increase in output.

Industrialisation is but one aspect of the drive for self-sufficiency in peace or war, and in this the results are no less impressive. Pre-war Russia was as dependent on imports for components and machines as Great Britain is for food, and the Great War revealed very serious gaps in

her production of military supplies. In 1937 imports of machinery amounted to only 3 per cent. of domestic production. The unique variety of Russian mineral resources and the vigour with which they are now being exploited were made clear at the World Geological Congress recently held in Moscow. For foodstuffs, fodder and agricultural raw materials self-sufficiency is complete, at the present low standard of living, except for part of the tea and wool requirements and relatively unimportant tropical cultures. Russia no longer needs to import cotton, while labour and resources have been liberally expended to create a synthetic rubber industry, which in 1937 provided 70 per cent. of the amount consumed. A substantial gold reserve is being accumulated: the 1936 output was worth some £50 millions (at £7 per ounce).

The Bolsheviks have not been slow to use their geographical advantages for strategic purposes. The Ural-Kuznets Combine, a new industrial base with a metallurgical output approaching that of Japan, is situated midway between Germany and Manchukuo. The Third Five-Year Plan envisages a further shift of production east of

the Urals. There are large new naval shipyards in the Far East (Komsomolsk) and on the Arctic coast.

Russia's great weakness is still in her transport system. The railways are woefully inadequate in length, although their capacity has improved considerably since 1934. The trans-Siberian has been double-tracked, and its new arm in the Far East, running for 2,000 miles from Krasnoyarsk to the Sea of Japan, in some parts 300 miles north of the present line and well away from the Manchurian border, is reported to be nearing completion. Motor highways linking Moscow and the Ukraine with the Western frontier are under construction at forced rates. As was the case 25 years ago, the lack of roads to the villages will delay peasant mobilisation, although it should be remembered that the railway-linked urban population is twice its pre-war size. But transport difficulties will, at the best, make Russia's war effort slow and ponderous and subject to disorganisation in detail.

But have the Bolsheviks' preparations for war been too thorough? Is the combined burden of huge land and air forces, the effort to become a great naval power, continued rapid capital development and costly self-sufficiency, too great to bear? The burden has been carried hitherto by a continuing rapid improvement in labour productivity. This has even enabled the planners to permit some increase, for large sections of the urban and rural population, in the per capita consumption of manufactures and foodstuffs since the abolition of rationing in 1935. This rise is difficult

to measure. It is slower than was expected, but there is a general conviction, amongst the younger people especially, in a bright future when war preparations to protect their "Socialist Fatherland" are no longer necessary. The degree of confidence in the regime and its leadership is difficult to assess, save for the obvious fact that it is greater in the towns than in the countryside. But there is little evidence of active popular discontent, and there remains very little popular support of national separatist movements in the Ukraine, Caucasus and Central Asia.

Soviet Russia's most serious weakness is one common to all totalitarian States. Behind the façade of enforced unanimity may smoulder differences over policy which are liable at any moment, particularly in wartime, to flare up with disastrous results. The recent Moscow trials and widespread arrests of executive personnel alleged to be wreckers and traitors may conceivably betoken a gain in strength by the removal of such a potential weakness. It is true that the conspirators do not appear to have had any substantial popular backing. But the widespread existence of treason and the consequent necessity of its physical removal are not a sign of health in the body politic. An atmosphere of servile unanimity on controversial issues remains, in intensified form. This must, in the long run, be a source of grave weakness. The immediate weakening of the State, consequent on the replacement of so many business, political and military executives by hastily promoted workmen, young technicians and soldiers, was at its height during 1937. Judging by figures of industrial production for 1938, which show an increase of 11 per cent. over the preceding year, the danger point appears to have been passed in industrial administration at least. Whether the same can be said of the armed forces must remain an open question.

Road Transport in War

THE progress of road transport during the past twenty years has considerably increased the potential mobility of men and supplies in war, and few aspects of the problem of industrial mobilisation are of greater importance than that of providing for the most efficient utilisation of our road transport resources in an emergency. As there are more than 200,000 owners of commercial motor vehicles, it has clearly not been practicable for the emergency preparations of motor transport to be entirely dealt with in private consultations between a relatively small number of big firms or trade organisations and the Government Departments concerned. In consequence a good deal has been published, and more information is available on the emergency plans for operating road transport than on those for other industries. Experience in the September crisis, moreover, has revealed some of the difficulties to be overcome, and has pointed the way to their avoidance.

The first task is the settlement of priority claims for the use of vehicles. This requires the co-ordination of the claims of different Government departments and local authorities, and the provision of an organisation which will ensure, for instance, that omnibuses required for evacuation, and insulated meat vans, are not commandeered for the transport of munitions. The proper basis for allotting to each task the most suitable vehicles is a census showing in detail the types of vehicle in use and the work on which they are normally engaged, together with particulars of the owners; this is being carried out on behalf of the Minister of Transport by the Chairman of the Traffic Commissioners, and the returns made are being kept up-to-date in the form of a permanent register maintained in the Area offices. The Minister of Transport has the assistance, in preparing his plans, of the Road Trans-

And, in general, it remains true that, though the purges have ceased, the technique of personal "liquidation," so hampering to the smooth working of business and industry, seems still to be inseparable from the Russian system.

If a conclusion can be hazarded on such a large and obscure subject, it is that the Russia of 1939 has several times the strength, in material terms, and especially in production, of the Russia of 1914. The difficulty of deploying that strength on a battle front remains her chief technical weakness. And the state of *morale* both in the armed forces and in the nation at large remains an open question. Although it is only guesswork, it is probable that good *morale*, like good nutrition, is more evident in the army than among the people at large, just as the Stakhanovites are better fed and more contented than the industrial rank and file, and the urban workers better fed and more contented than the peasants. And the Russian soldier has a traditional stoicism in face of short commons.

It is clear that, even with all due reservations, Soviet Russia is capable potentially of exercising a decisive influence on the side of the Peace Front against aggression. It is less clear how that help could in fact be quickly given in the shape of men, aeroplanes or war materials. Inadequate transport and the absence of a *point d'appui* for military adventures beyond the frontier, since the destruction of Russia's Czecho-Slovak ally and the German requisition of her flying fields, are obvious obstacles. The Russians are mightily ready to defend themselves, but rather less ready to do more. But the fact remains that, industrially, militarily and strategically, Russia holds a key to the present precarious situation in Europe with which we cannot dispense. Whether she can or will turn that key remains a matter for to-morrow's historian.

port (Defence) Advisory Committee, appointed shortly before the September crisis, and consisting of persons with special experience in the management and operation of the different classes of road transport, including representatives of the railways and of labour engaged in the industry.

The principle underlying the emergency road transport organisation is the voluntary grouping of operators on a territorial and functional basis, with a view to reducing the number of separate units and combining sufficient vehicles in each group to offer some scope for the elimination of unnecessary mileage. The recommendation is that groups should normally consist of not fewer than 25 nor more than 100 vehicles (the average number of vehicles per operator is only two), and that they should be composed of vehicles of comparable types engaged in peace time on the same class of work. It has been stated that any petrol rationing scheme would be based on the group and that operators who had not joined a group would fare very badly. The road transport and other trade associations are co-operating in the establishment of these groups, and the fact that fuel rationing may be necessary from the outbreak of war emphasises the desirability in the operator's own interest of joining a "shadow" group without delay. On the assumption that the typical group will consist of some 50 vehicles, something approaching 10,000 groups will be required to cover all commercial vehicles.

The group will be under the control of an organiser nominated by the members, and he will be responsible for distributing the work equitably and for organising the activities of the vehicles in the most economical way. The group organisers will in turn be subject to a sub-district manager, chosen by themselves, who will have important duties in connection with rationing fuel and supervising the operations of the groups; there will be over 450 such

sub-district managers, or one to approximately every 20 to 25 groups. The sub-district managers will themselves be controlled by district transport officers, who will be officials of the Ministry of Transport and will number about 90, and who will have the assistance of a district advisory committee selected from persons engaged in the industry. The district transport officers will be responsible for co-ordinating the activities of the sub-district managers, and themselves will be under the authority of the Chairmen of the Area Traffic Commissioners (to be known as Regional Transport Commissioners in war), of whom there are twelve. The Chairmen will be assisted by Area Advisory Committees selected from persons engaged in the industry and will, of course, be responsible to the Minister of Transport, but they will also have to co-operate closely on all matters affecting road transport with the Regional Commissioners appointed under the Civil Defence plans. They would represent the Minister of Transport in the Regional Areas. The scheme would appear in outline to be both sensible and potentially efficient, provided that operators can be induced to enter groups and that all the necessary officials are appointed beforehand and acquainted with their emergency duties. It may not be unfair to ask, however, whether the scheme is not too dependent on the voluntary co-operation of a very large number of individuals. While it is believed that considerable progress has been made in the formation of groups, there are thought to be a fair number of operators who have not even sent in the returns of their vehicles. In an emergency the "petrol sanction" would probably compel these laggards to come forward, but in order to ensure the efficient operation of the scheme it is essential that the shadow organisation should be completed beforehand.

The grouping method, apart from facilitating the operation of a rationing system for motor fuel, would enable the authorities, if each group consisted of vehicles engaged in the same work, to allocate the rations without undue complexity on the basis of priority rights allotted to particular industries according to their war-time importance. Those actually engaged in war work would presumably be entitled to the largest rations and those employed in the distribution of luxuries the smallest.

So far as ancillary users are concerned, grouping is to be looked upon as a temporary expedient applicable under emergency conditions only, but the effects on public hauliers may well be more far-reaching. One of the chief difficulties in the way of better organisation of the road haulage industry has been its excessive sub-division; 30 per cent. of "A" licence, or full-time public haulage, vehicles are owned by concerns with one or two lorries only, and the proportion in the case of "B" licence, or part-time public haulage, vehicles is even higher. This makes for uneconomical running with insufficient loads and militates against the operation of regular services. Groups of the size advocated can overcome these difficulties, and probably represent the optimum size for most road haulage undertakings under present conditions. It might be found that the advantages of a unit of this size would lead to further amalgamations in peace-time.

No indication has yet been given whether any plans have been prepared for the training in peace-time of a reserve line of drivers for heavy lorries, which, as the most economical units if full loads can be obtained, would presumably be used most intensively in an emergency. These could be recruited primarily from the drivers of the light vehicles attached to the luxury trades which would become redundant, though individual firms might consider training additional drivers. Similarly, no indication has been given of the arrangements, which ought to be made now, for undertaking necessary repairs on heavy lorries, which may be used more intensively in an emergency.

So far as the material equipment of the road transport

industry is concerned, Great Britain is well placed with regard to the number of vehicles registered and also to manufacturing capacity, but less well placed when consideration is given to the adequacy of the road system. There are 495,000 goods vehicles (excluding those owned by the Government) in Great Britain. This compares with a claimed total of 500,000 in France, 400,000 in the Greater Reich and 86,000 in Italy. It is not possible to give the total carrying capacity of the various fleets, and the information published does not enable a satisfactory comparison to be made of the relative sizes of vehicles in the different national fleets. Taking the dividing line between a light van and a lorry at two tons unladen weight, 177,000 of the vehicles in Great Britain fall into the lorry class, and, of these, 9,200 are of over five tons unladen weight. Germany and Italy have both of recent years encouraged the use of the particular types of heavy-weight most useful for military purposes by favourable fiscal treatment, and of late have attempted to speed up motorisation in the interests of military requirements by abolishing all taxes on commercial vehicles. In omnibuses, the relative superiority of Great Britain, with 50,000 vehicles of a total seating capacity of 1,900,000, is probably more marked than in goods vehicles. France claims 38,000 omnibuses, Germany 23,000 and Italy 10,000, and the average seating capacity of British omnibuses is certainly much higher than that of the others. In private cars the scales are also tilted in favour of Great Britain, with 1,980,000 units; France has 1,750,000, Germany 1,380,000 and Italy 304,000. Only in motor-cycles does Germany hold first place, and here the discrepancy is enormous. Germany has 1,630,000 motor-cycles, or more than three times the number owned either in France or Great Britain; Italy has only 155,000. But in Europe, Great Britain leads in productive capacity, having manufactured 445,000 motor vehicles, other than motor-cycles, last year. Germany came second with 340,000, then France with 225,000 and Italy with 70,000. Czecho-Slovakia produced 14,000 vehicles.

The British road system, however, does not compare favourably with those of the great Continental Powers. The mileage of new roads built in this country has been negligible, and even the improvement of existing roads has fallen far short of requirements. Motor roads linking up town and town, like the German *Autobahnen*, are non-existent, and, although British road surfaces are generally good, high speeds are rarely possible on account of the narrowness of the carriageway and scarcity of straight stretches unencumbered by side roads. Perhaps of even more importance in a highly urbanised country like Great Britain is the lack of fast roads into and out of the towns. Of 4,500 miles of trunk roads, only 27½ miles have dual carriageways, while 750 miles measure less than 30 feet from hedge to hedge; only 220 miles are of 80 feet or over, the minimum width normally recommended by the Ministry of Transport, while there is still no example in the country of a "clover-leaf" road junction. Congestion on the existing roads is frequently appalling under normal conditions, but the present impasse over the Bressey Report does not suggest the likelihood of early action, even in London, where the need is most pressing. The assumption by the Ministry of Transport of responsibility for the trunk roads has made no perceptible difference at all. On a purely statistical basis of the number of vehicles per mile of road, British roads are the most congested in the world. Plans have been drawn up by the County Surveyors' Society for the construction of 1,000 miles of new motor roads at a cost of £60 millions, a development which would be quite justified by the ordinary growth of traffic and the present yield of motor taxation of nearly £90 millions a year, quite apart from the desirability of providing alternative facilities on the most vital traffic routes to meet emergency requirements.

NOTES OF THE WEEK

A Department of Supply.—The Cabinet's much-belated decision to give statutory recognition to the imperative need for priority over the whole field of industry for Government orders must be warmly welcomed. Yet the Prime Minister's statement on Thursday of the concessions he was prepared to make to the clamour for a Ministry of Supply was disappointing. It is a good thing that all the fighting services will be given a first lien on industrial output by the projected Bill. It is a great deal gained, too, that a Ministry of Supply in the full sense of the word, with power to co-ordinate the claims of these services in a shifting schedule of priorities, is now accepted in principle. But it is wholly unreasonable that such a Ministry, its desirability having been accepted, should not have been set up on the instant. Instead, we are to be fobbed off with a Ministry restricted to the problems of Army supply, and without authority to give effect to the general priority that is to be given to Government contracts by setting the needs of the departments in order of their importance. The fact is that this truncated Ministry of Supply, apart from being the sort of half-hearted and long-delayed sop to criticism that we had come to expect from the Government in matters of this kind and had hoped not to see again, is no more than a recognition of the desperate state of ill-equipment that the country's very modest projected Army is likely to find itself in: we cannot fit out at war strength the Army we have, let alone the Army we want. This need, indeed, the Ministry of Supply may meet, but it should have powers to do very much more; its task should essentially be to organise the whole structure of defence claims upon the country's industrial capacity. It is true that this stunted department will take over from the War Office responsibility for meeting certain civil defence requirements that, again, are desperately urgent. But its limitations are symptomatic of the Government's lingering lack of resolution where the question of taking bold measures involving interference with "business as usual" arises. Such an attitude may prove fatal. Nor does it diminish disquiet that this vitally important office has been given to one of the junior members of an undistinguished company. Mr Burgin has shown no particular marks at the Ministry of Transport of political courage or administrative energy. Both will be needed in full measure in his new office.

* * *

The Diplomatic Scene.—The lull which the declaration of the President of the United States and the birthday celebrations of Herr Hitler put upon events this week has not been extended to the sphere of diplomatic talks or diplomatic visits. Anglo-French diplomacy is still very busy. Having touched on Central Europe and the Balkans, it is now extending its purview to the Near East, Russia and the Far East, and thus linking up once more with American concern for the Pacific and China. Herr Hitler's Berlin birthday party aimed to impress Eastern Europe with the armed strength of the Third Reich, while discouraging too great confidence in the British and French guarantees. There are also the Italian talks in Rome and Venice which have as their aim the consolidation of Hungary, Yugoslavia and Bulgaria under the ægis of Italy; and, finally, there are the independent contacts of the small States themselves, for whose patronage the Great Powers are vying with each other. The centre of this group of talks is Roumania; the Roumanian Government, relieved if not completely fortified by the British guarantee, is obviously attempting to ward off the imminent threats which surround the country. Though M. Gafencu appears to have been reassured in Berlin that Germany would not support Hungarian claims in Transylvania, Count Ciano seems to have been simultaneously assuring the Hungarian Foreign Minister that

Italy would give full support to Hungary; while, scarcely more than a week ago (on April 14th), the Hungarian Foreign Minister himself declared that Hungary wished to respect her neighbour's frontiers. For the time the political dependence of Roumania on Great Britain and France and its economic dependence on Germany continue side by side. The talks between King Carol and Prince Paul continue to be mentioned as imminent, though the hope of drawing Bulgaria into the Balkan entente is somewhat overshadowed by the Italian hope of drawing Yugoslavia out of it. The appointment of Herr von Papen as German Ambassador to Turkey can be taken as a sign of the importance the German Government puts upon the friendship of Turkey; Turkish-German relations have considerably improved since the death of Atatürk, though the anti-German influence of the Turkish Generals remains, and the relations between Turkey and Russia are cordial. The most that Germany can possibly secure would be Turkish neutrality and closure of the Straits. Meanwhile, Estonia has taken the precaution of "exchanging views" with the Soviet Government and despatching its chief of military staff to Warsaw. If the anti-aggression forces fail to win the diplomatic contest that is going on war will be the inevitable result.

* * *

America's Share.—Any American President, as the world well knows, is restricted in the exercise of foreign policy by the necessity of carrying opinion with him not merely in general (as any democratic statesman must do), but in detail. Moreover, it is opinion in Congress rather than opinion in the public that is of most direct and immediate relevance. There is impressive evidence that Mr Roosevelt is not going too far for the majority of the people. The indications of the attitude of Congress are less definite. But, in any case, Mr Roosevelt's actions in the past week have shown that, even within the limits set for him, he can take a firm hand in the international poker-game. His telegrams to the two dictators make it very clear where American sympathies would lie in the event of an attack by Germany or Italy on any of their neighbours. His speech to the Pan-American Union a few hours earlier equally definitely took sides—if it is taking sides to preach defence against aggression.

Only a few days ago, he said, the head of a great nation referred to his country as a prisoner in the Mediterranean. A little later another Chief of State, on learning that a neighbour country had agreed to defend the independence of another neighbour, characterised that agreement as a threat, as an encirclement. Yet there is no such thing as encirclement, or threatening, or imprisoning any peaceful nation by other peaceful nations.

The return of the American fleet to the Pacific is doubtless designed mainly to defend American interests. But it also serves to warn the would-be aggressors. It is proof that the main bulk of the British and French fleets will be in European waters—for otherwise the defences of America's Atlantic seaboard would not have been withdrawn. It warns Japan of the possible consequences to herself of naval adventures in the Far East, especially in view of the importance attached in Washington to the trade route by which America receives from Malaya and the Dutch East Indies the most important raw materials that she cannot provide herself. And in degree as Japan is warned, Russia is encouraged to entrust herself to the anti-aggression front. Finally, well-advertised consultations have been proceeding at Washington on the best means of liquidating, in the event of war, the American assets of Britain and France. Here again the immediate purpose is the protection of American interests, but the bearing on the diplomatic

picture is obvious. British opinion is chronically at fault in exaggerating the willingness of America to take a hand, and it is salutary to record the care with which Mr Roosevelt made it clear that in his telegrams to the dictators he was offering to be an "intermediary," not a "mediator" between them and the democracies. But, though nothing is committed and nothing is precise, the outlines of the action that America would take immediately on the outbreak of war are beginning to appear: non-intercourse with the aggressor, the supply of materials to the democracies and maintenance of naval peace in the Pacific. Behind these lies the probability that the engagement of America's sympathies and the moral condemnation of aggression would lead before long to more drastic American action.

* * *

Recruiting.—Without doubt the only way to make sure of getting all the men needed for the fighting and civilian defence services in the time required would be by compulsion; though, when they had been brought in, with our present methods, they would probably lack training facilities and war equipment. Meanwhile, the voluntary method is being persevered with; and it is a pity that its necessarily restricted results should be still further limited by avoidable defects. There is a scarcity of information bureaux and at the existing stations there is a shortage of clerical staff. Enthusiasm to join up is damped by waiting and by long delays after enrolment. There is no reason at all why the number of bureaux and recruiting stations should not be spectacularly increased and their staffs greatly multiplied. There is no reason why a full supply of doctors should not be present to make medical examinations on the spot, to lessen the time it takes at present between joining up and getting on with the job. Publicity has been improved, but it is still tentative and inconspicuous, and a first-class advertising agency, given the task, could raise the rate of recruiting by leaps and bounds. The worst hindrance, however, is still the Schedule of Reserved Occupations, which debars some 4,000,000 men between 18 and 45 years of age from coming forward for the Territorials. The rumour that the status of nearly 3,000,000 of these is being reconsidered is unconfirmed. If true, it is the merest common sense. If conscription has in the end to be introduced the schedule will be *ipso facto* torn up. There is no reason why it should not be radically cut down at once. Actually, compulsion is already with us, compulsion of the most undesirable kind which is one of the chief arguments against the voluntary system and in favour of conscription. Some employers put pressure on their workers to join up; others do not. Some offer rewards; others punishments. This is the "white feather" method, selective, undiscriminating and unfair. If the State wants the men it must take them, not rely upon private press-gang methods to raise the needed numbers. The power of compulsion is the Government's alone, and they should use it to protect individuals against personal intimidation as well as to recruit the army we must have.

* * *

Air Raid Precautions.—In spite of the wholly praiseworthy progress that has been made in the planning of civil defence, the vulnerability of ordinary citizens living and going about their business in crowded urban areas is still the country's potential Achilles heel in time of war. Splinter and blast-proof shelters are being made and given out; but they are not yet on sale to the people not entitled to receive them free. The strengthening of basements in certain types of houses is projected; but it has not yet begun. Communal and street shelters, too, are to be provided; but none of them yet exists. The protection of works, offices and public utility undertakings has been covered by statute; but it has, very largely, still to be effected in practice. So far, the serious deficiencies are simply the reflection, first, of the deplorable delay there was in planning civil defence before the advent of Sir John Anderson and, secondly, of the reluctance of the

Government to take steps to give administrative and industrial priority to the meeting of urgent defence needs. Both plan and partial priority are now in being, for only this week local authorities have been asked to give air raid precautions precedence over all other work for the next three months, and the Supply Department which the Government has decided to institute has, among its functions, responsibility for certain civil defence requirements. Things will very soon be much better than they are now, but a large majority of citizens is still dangerously ignorant or uncertain about what to do in the event of air attack.

* * *

In two respects, however, there are still doubts which no current plans promise to remove. The first is about deep bomb-proof shelters. The Finsbury Borough Council's scheme for deep shelters, on which the debate has been, probably too much, concentrated, has been rejected by Sir John Anderson's expert advisers, and so by Sir John himself. Everyone who knows how long it takes to fill or empty a theatre or a football ground will see the force of the official claim that to reach and enter these shelters in the five or seven minutes' grace given in a raid would be next to impossible for, say, the 12,000 odd to be provided for in the scheme under Finsbury Square. But the Government has still no scheme for deep shelters. Some deep shelters there may be: surely the British Broadcasting Corporation and the Ministries that will remain in Whitehall in war are not the only elements in national life for which deep shelters can be justified; and they are to go underground. So, too, must other special classes in specially dangerous places. Moreover, the aim of civil defence is to enable business to be carried on. To do that the workers who remain in target towns must be able to move about freely from their home (which is to have a shelter) to their work (which is to be protected, too). The second doubt is about equipment to fight the consequences of incendiary bombs; on any count, this still falls far short of needs; and, once again, the deficiency is the joint product of indecisive planning and unsatisfactory supply arrangements.

Food Defence Plans.—In December, 1917, more than three years after the outbreak of war, the Ministry of Food introduced the first rationing scheme, for sugar, and this was followed in 1918 by the issue of ration cards for meat, butter, margarine, and lard. An announcement by the Food (Defence Plans) Department, which is reported to be busily engaged on steps to increase flour reserves by arranging with bakers to keep extra stocks, indicated that preparations are well advanced for the introduction of a similar scheme of rationing for these commodities,

immediately on the outbreak of any future war. The issue of individual ration cards for important foods will be combined, as at the end of 1918, with State control of food imports, of the methods of distribution, and of the prices of certain foods. Traders will become State agents working on fixed margins under the immediate supervision of local and representative food control committees, which will operate on the lines of the same organisations in 1918. It is reported that the executive officers for each of these 1,400 local committees have already been appointed, together with the regional food officers, who will be responsible to the Ministry of Food for the supervision and enforcement of the Ministry's orders. These plans also provide for the absorption in the Ministry of Food of the various agricultural Marketing Boards, with their valuable records and their experience in the administration of complicated marketing schemes. They show that, in probably the most vital branch of war-time regulation, a scheme which took an unduly long time to be elaborated and put into practice in the last war will spring fully-armed into operation at the very outset of the next. It is an encouraging example of that preparedness without which national strength and resources run dangerously to waste.

* * *

Fleet Movements.—The announcement on April 13th that the customary spring exercises of the German Fleet would take place this year off the coast of Spain heralded large-scale fleet movements in all oceans. Two days later orders were suddenly issued to units of the United States Fleet cruising in the Atlantic to return immediately to their normal stations in the Pacific. Shore leave was cancelled, rapid refuelling was started, and the fleet set sail on April 20. These orders referred to the whole American Fleet except the newly created Atlantic Squadron. Great Britain is also building up her naval strength in Eastern waters. Though it remains to be seen what practical co-ordination exists between Great Britain and the United States in Far Eastern waters, close collaboration between the British and French Fleets in the Mediterranean can be assumed. This is apparent in the immediate precautionary measures taken by the two Admiralties. The German squadron was said to be made up of two "pocket battleships," two cruisers, two destroyer divisions—six vessels in all—and three flotillas of submarines together with the appropriate number of accompanying ships. Seven towns in Spain are to be visited as well as Lisbon, Ceuta and Tangier. The official version is that only one ship will actually enter the Mediterranean, but there have been many speculations whether the ultimate destination of the squadron was not Italian waters. Although the departure of the German Fleet so far from home ports may be intended as evidence that Germany intends no new surprise for the world until the safe return of the visiting vessels to port in May, Britain and France

are taking all naval precautions in the Mediterranean, while naval and military precautions are reported from other Mediterranean countries. Almost the entire British Mediterranean Fleet is concentrated in the neighbourhood of Malta, and ships cruising last week in Italian waters have been withdrawn. Only one British warship remains at Gibraltar, but 16 French warships, drawn mainly from the Atlantic Fleet, are now there. Entrance to the harbour is now blocked by the placing in position of booms across both entrances to the Admiralty harbour. At the same time, military steps have also been taken. Barricades have been placed between Gibraltar and La Linea, and the 1st Battalion of the Welsh Guards is being sent to strengthen the Gibraltar garrison.

* * *

Troops in Spain.—The naval precautions show how seriously the preparations of the Axis Powers in Spain are regarded in Paris and London. The activities of German technicians in the neighbourhood of Malaga, Algeiras and La Linea have been watched with considerable apprehension, and the departure last week of 100 German technicians from Algeiras intimated the completion rather than the abandonment of strategic purposes there. Whether in fact the Axis Powers, to whom General Franco shows increasing favours, aspire to the taking of Gibraltar or whether they are merely taking precautions against the necessity under which the British would find themselves in the case of war with a hostile Spain—to clear Southern Spain of bases for the continuous bombardment of Gibraltar—remains to be seen. What is certain is that the Axis Powers would certainly try to command the straits with long-range land batteries, both from the north and from the south, and the British would be forced to take drastic counter-measures. The Spanish authorities at Tetuan have reassured the British Consul in Tangier that no German occupation of that international settlement is contemplated. For the first time since the beginning of the Spanish Civil War the Portuguese Government apparently shows certain signs of alarm at the preparations of General Franco and his two allies. The strategic importance of Portugal in the event of war is vital to both sides, on account of the excellent base provided by the mouth of the Tagus for operations in the Mediterranean and the Western Atlantic. Since Portugal is tied by traditional friendship and a treaty of alliance with Great Britain, the Portuguese have cause for alarm at the rumours of troop movements on their Spanish frontier. Spain continues to be the scene of troop movements which might be ominous. Some 55,000 men paraded before General Franco in Seville on the 17th and troops were reported to have left the neighbourhood of Gibraltar for this purpose. A naval demonstration is being held in Valencia next week and the famous Madrid Victory Parade is now settled for May 15th. After this date, according to Italian official assurances, all Italian troops will leave Spanish soil. This expectation is not in any way confirmed by reports of further landings of Italian troops at Cadiz, although reports come from Almeria of arrangements being made for their subsequent departure. It is also reported that Spaniards will be enlisted in the Italian army which is in Libya, and it is again denied that Germans have been dispatched there. The attitude of neutrality adopted by General Franco in September is no longer perceptible. In a speech to Falangists in Seville on April 17th, he announced his intention of retaining half a million men with the colours "ready for any eventuality"—the present army, he said, numbered a million. Instructions were also given to war industries to be ready to begin the manufacture of munitions and war material at a moment's notice.

* * *

Jugoslavia's Difficulties.—An announcement that M. Tsvetkovitch, the Yugoslav Prime Minister, and M. Matchek, the Croat leader, "expect to come to an agree-

ment in the course of this week" was made in Zagreb on Monday of this week, after talks had been resumed on the question of Croat autonomy. These talks were made a serious possibility after the replacement at the beginning of February of M. Stoyadinovitch, with whom M. Matchek refused to negotiate, by M. Tsvetkovitch. The latter proposed the enlargement of the Central Government to include representatives of the Croatian autonomists and the formation of a joint Serb-Croat Commission to study the practical elaboration of local autonomy. The Croats, however, insisted not only that the Government should be enlarged to include the Serb as well as the Croatian Opposition but that a new constitution should there and then be elaborated which granted full autonomy to the Croats. Once this constitution had been drawn up, Dr Matchek maintained new elections should be held and a truly national Government formed on the basis of these elections. During the conversations, however, it appears to have been intimated that the Croats would not insist on the full granting of their immediate constitutional demands, if they were given satisfaction on the question of the boundary of the future autonomous Croat State Territory. About the boundary wide differences of opinion were apparent, not only between Serbs and Croats, but also with the Bosnian Moslems as well, who are demanding that Yugoslavia should be transformed into a fourfold Federal State consisting of Serbs, Croats, Slovenes and Bosnians. On Monday M. Tsvetkovitch saw both Dr Spaho and Mgr. Koroshetz, the leader of the Catholic Slovenes, who plays a mediatory part. These negotiations for a radical change in the constitution of the Yugoslav State are taking place in an atmosphere of international tension which directly menaces Yugoslav integrity. Indeed, it is the external threat that lends them their extreme urgency. Italian pressure, however, is exerted more on Belgrade than on Zagreb, which is traditionally out of sympathy with the totalitarian methods of Germany and Italy. The Yugoslav Foreign Minister, M. Cincar-Markovitch is meeting Count Ciano in Venice at the end of this week, and this meeting, following as it does on Hungarian visits to Rome and Berlin, is expected to bring fresh pressure to bear on Yugoslavia to dissociate herself from her allies in the Balkan Entente—Roumania and Turkey—in so far as these show favour to the designs of London, Paris and Washington.

* * *

Poland on Guard.—Though Colonel Beck appears to see no insuperable contradiction in having what amount to military alliances with Great Britain and France, together with a non-aggression treaty with Germany, the development of the internal situation inside Poland would seem to preclude an entirely unhampered choice between his obligations should the decisive moment arrive. M. Witos and M. Korfanty, the exiled leaders of the Polish Peasant Party and the Christian Democratic Party respectively, who returned to Poland as a patriotic gesture at the beginning of this month, both have a large and important following in the country and are strongly opposed to the policy of capitulation to Germany which the German treaty has all along inevitably entailed. M. Witos is making fiery speeches in the country, in which he does not fail to draw the consequences of the Czechoslovak disaster nor to throw a parting stone at the country which succoured him throughout his seven-year exile. The following of M. Korfanty is largely in Polish Silesia, and is strongly anti-German in character—it was M. Korfanty himself who led the *coup d'état* that seized Polish Silesia in 1921. The reconciliation this week between Colonel Beck and M. Grazinski, the strongly anti-German Governor of Upper Silesia, has also not passed without note, and the new internal unity of Poland is definitely on an anti-German basis. As in other countries, the prospect of the total failure of a certain foreign policy has united the country behind its originator in the apparent faith that he—in this place Colonel Beck—is the best person to change it. A deputation received by the Polish Prime Minister informed him that all Polish journalists had resolved to sink their political differences so as to give the Government full support in the interests of

national unity and national defence. The need for both does not diminish, and this week rumours of an approaching German occupation of Danzig were again rife. The Poles continue to protest that such an attack means war, though by the Germans it is put about that Danzig is the weakest link in the anti-aggression chain (it was not included in the list of guarantees for which President Roosevelt asked), and its rupture would have the double effect of discrediting the British guarantee and giving Germany a military stranglehold on Poland which would prevent German-Polish hostilities from ever needing to break out. The key to the situation is Russia, and both Roumania and Poland see in the Western attitude towards Russia an essential reservation so far as their own guarantees are concerned. Both countries are loth to see Russian armies on their soil, and yet both know what they are indispensable if their own armies are not to be beaten down before a German advance. Before M. Gafencu's visit to Warsaw and Berlin it was believed that Roumania was ready to accept, not only materials and the aid of the Russian air force, but also serious and effective assistance from the Russians. From Colonel Beck, M. Gafencu will have learnt the British attitude. Colonel Beck is said to have expressed himself with considerable reserve, and to have impressed on the Roumanian Foreign Minister the necessity of no independent Roumanian action in this direction. On the other hand—no doubt as the influence of his varied if united supporters begins to make itself felt—the attitude of Colonel Beck towards Russian assistance is said to be undergoing a change, and for the first time an article appears this week in a Polish Governmental paper suggesting that Russia disposes of a powerful military force.

The Need for Nurses.—The Minister of Health has launched an appeal for 100,000 volunteers to train for nursing service in war-time. This call underlines the serious shortage of trained nurses even for peace-time purposes; and it added emphasis to the general conviction expressed by the House of Commons in a debate on the subject last Thursday that the time was overdue for the radical reform of recruitment and working conditions in the nursing profession. It is only a short time since the Report of the Athlone Committee strongly advocated changes in pay, conditions, accommodation, holidays and disciplinary methods which can be more than justified on grounds equally of efficient nursing, the interests of the ninety or so thousand nurses themselves and national need. The position is that to meet the present normal demand, which is rising every year, over 10,000 more entrants are required yearly. It is not that the number of entrants has been falling. In fact, the number has risen 50 per cent. in the last decade. It is rather that the demand for nurses has risen sharply with the extension of health, medical and hospital services. The need every year of the voluntary hospitals for

an extra 500 nurses; the transformation since 1929 of Poor Law institutions into efficient local authority hospitals; the sharp rise in recent years in the use of hospitals in cases of severe illness; the development of new medical techniques needing specialised nursing assistants; the increase in visiting and after-care services; and, which is in many ways most important of all, the welcome spread of organised domiciliary nursing: these are the chief factors in the shortage of nurses, and it is the fact that demand has greatly outrun supply that accounts in the main for the indefensibly long hours that many nurses work.

* * *

This is no time to argue whether or not the criticisms of nurses' conditions have been much exaggerated. The contention that the nobility of the nurse's calling requires hard living, laborious days and short commons is pointless and futile. If the finances of the voluntary hospitals will not stand an improvement of conditions that is not so much an argument against the improvement as a criticism of the financing methods. The nation needs many more nurses; and nursing is entitled, in addition, to at least as much consideration as, say, the teaching profession. First, the organisation of recruitment from the schools needs drastic overhaul. Secondly, the combination of intensive preparation for examinations with the hardest of practical work needs alleviating. Thirdly, nursing hours need considerable reduction, by statute if necessary, from the 13 or so hours which now may be worked daily. Fourthly, the profession is entitled to something like a Burnham scale of pay. Finally, all nursing quarters should be fit to live in. Much improvement has been made in many places. Much more is needed with Government backing if the requirements of peace and war together are to be promptly met.

* * *

Mr Speaker.—The Select Committee of the Commons lately set up to consider what steps, if any, should be taken to ensure that the Speaker of the House should not be required to contest an election, turned at once to consider the practice elsewhere. In general, in other democratic countries, the officer who presides over the popular assembly is elected by the same machinery as his fellows. In the assembly, chosen for the Chair by free vote, he presides impartially. This is precisely the English way. The Speaker is at once the impartial arbiter of debate, the guardian of the rights of minorities in the House and the non-political embodiment of the Commons to the outside world. He must himself be a Commoner, chosen by the same electoral machinery as other Commoners. In countries where a new chairman is chosen after each election the need to debar holders of the office from party activities out of session as well as in the assembly does not arise. In England, where the Speaker is expected to end his political career in the Chair, it is essential that he should take no share in party activities. The last occasion on which the Speaker was beaten in an election was in 1710; and, before the Labour party made it a point of electoral principle to contest the present Speaker's seat at Daventry, the last time he was opposed was in 1895, in exceptional circumstances. Labour's point is that it is unfair to deprive a constituency of its right to choose a representative freely. The Committee, whose report has now been published, formally agree, and they refuse to recommend special machinery to secure the Speaker's uncontested election. But, even more strongly, they deprecate the Speaker's being involved in a party contest. They conclude that matters should be left as they are, with the hope that electors may be educated to realise that in fact, there is no disfranchisement in the Speaker's constituency. The present position may not be strictly logical, but its lack of logic is only serious if the unfettered conflict of parties is regarded as the be all and end all of Parliamentary practice. Before the law, this is not so: single constituencies return their single members, and it is a privilege rather than a deprivation that the representative of one should be chosen to speak for the Commons as a

whole. Is it too much to hope that the Labour party, even with their passion for straining at gnats, may realise the great worth of the principles for which the Speaker stands in a totalitarian-ridden world, and so accept the common-sense conclusions of a Committee on which they themselves were ably represented?

* * *

Summer Air Services.—For the greater part of the winter British air services to Europe failed to make an illustrious showing compared with certain of their competitors. This week's introduction of summer schedules should go far to redress this unfortunate prejudice to British air transport's prestige. Eight week-day flights in each direction are provided on the Paris service and the flying time of seventy minutes rivals that of any competitor. These services are operated by Imperial Airways with the Frobisher class air liners, whose belated entry into regular service is sincerely to be welcomed. The prospective merger between Imperial Airways and British Airways, the terms of which are expected to be made known next month, has, in effect, been anticipated in the Paris service, which, although operated by Imperial Airways, is the joint undertaking of the two companies. British Airways has also introduced its summer schedules, which include, in addition to the usual week-day service between Heston and Stockholm, a London-Berlin-Warsaw service and a London-Frankfurt-Budapest service, in 6½ and 6¼ hours respectively. Revised subsidy arrangements have been announced this week, as a result of which the London-Paris service will receive £67,000, the Warsaw service £53,500 and the Budapest service £53,000 for the period April 16th to October 7th. The two latter sums are based on the assumption that the operating company will secure exemption in the countries concerned from duties on fuel and oil. In a world of national antagonism, fostered by fear of air attack, it must be gratefully recorded that the representatives of forty nations agreed last month to recommend to their Governments that aviation fuel and oil should be exempted from local Customs and Excise duties. There is an internationalism, as well as a nationalism, of the air.

* * *

The Australian Premiership.—The election of Mr R. G. Menzies as leader of the United Australia Party, and therefore as prospective Prime Minister of Australia, was surprising, and may have troublesome consequences. He had been deputy leader, and obvious successor to Mr Lyons, until a few weeks ago, when he resigned both from that position and from Cabinet office because he thought it a breach of the electors' trust to shelve indefinitely the national health insurance scheme. The decision to do so had been taken under pressure from the Country Party, the junior partner in Mr Lyons' coalition. Mr Menzies, while agreeing that the scheme cannot be introduced as soon as had been planned and that some of its aspects should be re-investigated, has not shifted in the least from his position of principle. Nor has the Country Party. His election by the U.A.P. may thus be taken, not only as a tribute to his own personality, but also as an act of defiance towards the Country Party and a rebuff to the members of the Government who had deferred to its pressure. Sir Earle Page, leader of the Country Party, has vacated his temporary Premiership with a violent personal attack on Mr Menzies, and the Coalition seems to be dead. The most probable sequel appears to be a single-party minority Ministry dependent on Country Party votes given *ad hoc*, a precarious state of affairs which experience in this country suggests may injure the Country Party more than anybody. A general election in Australia now on the issue of national unity in face of world dangers might well produce a triumph for the Government. But an election on an issue of party disagreement would be the finest opportunity for the Opposition.

THE WORLD OVERSEAS

The Greek Dictatorship

GREECE'S internal politics have for some time been a matter of interest to this country, though British diplomacy has not, perhaps, always been spectacularly successful there. With Great Britain's guarantee to Greece after Italy's Albanian coup the interest has grown livelier. Even the English newspaper-reader likes to know what he is guaranteeing.

For nearly three years now, conditions in Greece have seemed to the outside world unusually stable. On August 4, 1936, General Metaxas, protesting that he was merely forestalling the Communists, made himself Dictator of Greece. Since then opposition has been gagged. A timely series of deaths, a few months earlier, amongst rival politicians had no doubt helped; arrest, exile and a certain apathy amongst the Greek people, sick of party bickerings and parliamentary deadlocks, did the rest. Rumours of revolutions from time to time; a hopeless attempt at insurrection in Crete last summer—little more. Greece was so quiet that when, a little over a year ago, there was a new batch of arrests and deportations, for a section of the English Press seemed to be unaware that for eighteen months Greece had been living under a dictatorship.

Even now, in the face of the threat to Greek independence clear in the Italian occupation of Albania, the internal situation remains for the moment unchanged. The leaders of the political parties are in exile in the islands. The officers, Venizelists and Republican sympathisers, expelled from active service in the Army, after the abortive revolution of March, 1935, are still on the reserve list. Yet few people would deny that these officers comprise the finest military elements in the country. Without them Greece lacks many of her best soldiers. Now that British support is assured, what, in the event of a general conflagration, would be the attitude towards them of the Greek Government? Mobilisation without them would be only half effective. They could return to active service if the political leaders now in exile intervened on their behalf. Would General Metaxas's Government, nervous of the opportunities for yet another insurrection afforded by mobilisation, herd them into the safe keeping of a concentration camp?

Liberal opinion, cautious but eternally optimistic, persists in hoping that the perils of the times, in conjunction with the possibility of British influence, may even now bring about a change in the Greek political situation. Moderate voices privately suggest a general composing of quarrels, the recall of the exiled politicians and their inclusion in a fully representative government. But for such a step the arbitration of a leader outside party politics is essential. If the King of the Hellenes were to decide to make a move towards reconciliation, the weight of popular opinion would be with him. The general amnesty with which his reign resumed in 1935 won the approval of all except, ironically enough, the Royalist extremists; if later, when he was confronted by the intransigence of political factions, he had had the boldness to take control instead of leaving it to a political Dictator, the risks of unconstitutional action might have been more than balanced by popular support.

Instead, the Greeks found themselves handed over to a dictatorship which, though it certainly had not the extreme severity of its German and Italian models, showed a disturbing readiness to organise the country on totalitarian lines. It has never been a dictatorship much loved by the people; without the prestige of the Crown and the Army's loyalty to the King it would have been unlikely to last until now. But educated Greek opinion is wondering whether King George possesses, at this second opportunity, the necessary resolution; whether he is not, even now, too dependent on his Prime Minister to play a part in uniting the country. And that, say the private voices, is where the possibility of British influence comes in.

It is to the interest of Great Britain that Greece, for which she now stands as guarantor, should be strong, united and free from dissatisfied minorities and the embarrassment of stifled liberties. The recall of the exiled leaders would be a stride towards national unity which, it is hinted, Great Britain would be wise to encourage. To those who might object that the former political system in Greece was a failure, a carica-

ture of a true parliament, the retort is that a return to the parliamentary system is not asked for; what is wanted is a Government of Public Safety to run the country, with the King as supreme head, a Government which would not reject the services of General Metaxas, in which, indeed, he might remain as Prime Minister.

It has been said often enough, and often enough denied, that General Metaxas's personal sympathies are pro-German. But, whatever the persistent influence of his German military education, he is not blind to the real interests of his country. No doubt, had Great Britain been prepared to help Greece by buying her tobacco, he would have been ready, when he came to power, to further British interests in return. The key to control of the Balkans is economic; the crux of the Greek economic problem is the tobacco industry. Two years ago General Metaxas declared to an interviewer: "I ask only one thing of Great Britain. Let her buy 5 per cent., no more, of her total tobacco consumption from Greece, and Anglo-Greek trade will once more return to its former proportions." To-day, public opinion in Greece is overwhelmingly on the side of the democracies. But observers, Greek and English, complain that nothing effective was done by the democratic Powers, that time was wasted in bargaining, in deploring the impossibility of buying Greek products. Meanwhile, Germany was allowed to gain her familiar economic stranglehold over Greece, with all its attendant political advantages.

Lately the *rapprochement* with Turkey has done a good deal to stiffen Greece in her desire to escape domination from Central Europe, and last summer there seemed a good chance that she might break away from her commercial entanglements with Germany. The Munich Agreement and the dazzling successes of the Axis Dictators dealt a severe blow to British and French prestige in Greece; more, they encouraged General Metaxas in his readiness to imitate, with more enthusiasm than he had previously shown, the Italian and German regimes. But the situation in Greece is not analogous to the situation in Italy or Germany. Two important factors are different: the position of the King, and the temper of the people. In Greece we have the unfamiliar spectacle of a Dictator with less popular backing than the sovereign, a Dictator who could still be overruled by the Throne. And we have, too, a people indifferent to heroics and little susceptible to organised propaganda. The Greeks have learned in the last three years to hold their tongues in public and to accept a censored Press—not an easy lesson for a race accustomed to café politics and the elaborately libellous newspapers of the good old days. They have seen the foundation of a Youth Movement; they have mastered the technique of sending congratulatory telegrams to General Metaxas on August 4th, anniversary of his *coup d'état*. Three years of dictatorship and the blessings of a vast secret police have taught them little else.

Comparatively speaking, perhaps, the regime has been mild in its effects. After the first severities, after the rounding-up of Communists and supposed Communists, the ugly stories of brutality, torture and murder in prisons and concentration camps, the thorough-going deportations of Left-Wing

politicians and intelligentsia, the country settled down to a malcontent quiet. On the whole, it was sufficient not to profess Communism, not publicly to criticise the Dictatorship, in order to be left alone. The well-to-do middle classes, the business men, have been inclined to favour General Metaxas's Government; stability, they have felt, was not too dearly bought by extra taxation and a certain degree of control of labour. The poor complain of rising prices. "Expense, expense," the crowds growled at the wedding festivities of the Crown Prince; expense is a thing to be considered in a country where the staple foods are bread and oil, and the sale, one year, of the olive oil crop meant that the poor lived on bread and seed oil. No class is much impressed by Italian protestations of friendship or by German propaganda. Perhaps in the ironic good sense and critical acuteness of the Greek people will yet lie the solution to their present political impasse. But Britain has it in her power to do something at least to help.

Roosevelt, the Reich and Raw Materials

[FROM OUR BERLIN CORRESPONDENT]

PRESIDENT ROOSEVELT'S message to the heads of the two big European dictatorships has created a sensation in Berlin. It is almost certain that Herr Hitler, who is placed in an extremely difficult position by this message, will reject the proposals. His answer to President Roosevelt will not be made directly through the usual diplomatic channels. It will be announced before the Reichstag, which has been called for April 28.

The attitude here to the American President's suggestions is wholly adverse. They are regarded as a strengthening of the encirclement policy inaugurated by Great Britain, and as an attempt to erect a second Versailles system. National Socialist circles, which themselves are none too particular when it comes to matters of form, object mainly to the manner in which the note was transmitted and made public. They say, with emphasis, that the questions raised in the message could have been made the ground for discussion, had the suggestions come from the head of some other Government.

It may be said to-day that—barring unforeseen events—Herr Hitler will reject President Roosevelt's suggestions in a three-hour speech, in which he will outline to the Reichstag his policy of armed negotiations. At the moment there is no evidence to suggest that the Reich Chancellor will announce counter-proposals for the starting of international conversations and for the settlement of international political and economic problems. At the same time, it is a quieting sign, even if only of temporary significance, that the Third Reich apparently does not intend to present the Reichstag with a new *fait accompli* in Poland. The fact that there is now no direct connection between the Reich and East Prussia is, however, described as an intolerable situation. Nor is it understood why the Polish Government refused to accept the German proposal for a "corridor through the Corridor." Whatever attitude Herr Hitler is going in the event to take with regard to President Roosevelt's message, the Polish question remains the most disturbing and threatening element in European politics.

Meanwhile there are other problems. In the new Protectorate of Bohemia and Moravia, for instance, in addition to large cash credits, Great Britain has outstanding contracts for a sizeable quantity of armaments placed with numerous Czecho-Slovakia concerns in order to give economic aid to the Republic which was dismembered by the German in-

vasion; and these contracts have not yet all been fulfilled. The firms which were to be responsible for delivery, mainly the Skoda and Bruenner Waffenwerke, have their factories partly in the Protectorate of Bohemia and Moravia and partly within independent Slovakia. With regard to the English armament contracts which are being executed in the factories in Bohemia and Moravia, it may be stated that there has so far been no disturbance, either from the English or from the German side, and deliveries are proceeding normally. As a result of the international tension, however, the Germans intend to repudiate the English contracts, that is, to stop carrying out the orders already given.

Domestic economic problems, too, are growing, and not least among them is the very question of raw materials and international trade which the American President's proposed conference was to tackle. The National Socialist programme to raise production, which was based mainly on armaments, could, when it began, rely upon erecting large stores of raw materials. Then shortages were caused by the fact that imports did not keep up with the increase in production. It was possible to maintain imports to a certain extent by the use of the Reich's foreign holdings and of the German, Austrian and Sudeten gold and foreign exchange reserves; and imports of raw materials in 1938 were valued at Rm. 1,850 millions against Rm. 1,973 millions in 1937. Although the money value of the imports fell, the amounts imported were actually larger, since the prices had fallen by 15 per cent. In this way German industry could more or less replenish its stocks; but, compared with industrial production, which is valued at Rm. 85,000 millions yearly, these supplies are relatively small.

In addition, Austria and the Protectorate of Bohemia and Moravia have no important natural resources except timber and coal. They, too, are dependent on imports. The difficulty of buying raw materials from abroad is increased by the fact that imports depend upon exports, which are meeting with new obstacles; and another relevant factor is that German foreign trade is operated on the basis of bilateral agreements, so that purchases are not made in the cheapest markets, which raises the cost of imports appreciably. An increased number of semi-finished goods had to be imported last year—valued at Rm. 1,041 millions against Rm. 963 millions in 1937—which meant that Germany had to finance with its foreign exchange a greater share of foreign labour costs.

The following figures show the trend of German raw material imports:—

	1913	1929	1933	1936	1937	1938
Wool—						
In 1,000 quintals	1,993	1,690	1,577	1,033	1,032	1,388
In Rm. mill.	369	603	195	178	219	207

Since 1933 cotton imports have decreased by 40 per cent. and wool imports by 12 per cent.; these figures indicate, incidentally, the increasing domestic output of cellulose wool. Imports of petrol have risen by only a third, while the number of motor vehicles in use has doubled; the balance of the demand for motor fuel is covered in large part by domestic production. The large iron and copper imports are clearly explained by the demands of the armament industry.

French Morale Stiffened

[FROM OUR PARIS CORRESPONDENT]

IMPORTANT steps have been taken to make available the figures, hitherto lacking, which are necessary for any attempt to appraise the present economic position of France. For several months no up-to-date statistics of industrial production have been published. Last week the Administration rectified this by issuing current figures; and the Minister of Finance has decided to publish a monthly statement of the public debt. This is something new in the management of French affairs.

The first statement of the public debt runs as follows:—

Categories of Debt (Millions of francs)	Situation on	
	Jan. 1	Feb. 28
Perpetual	54,610	54,609
Redeemable by drawings	173,458	176,590
Redeemable by annuities	62,364	62,371
Middle term maturing after January 1, 1941	26,543	31,577
Middle and short term maturing in 1940	26,756	29,509
Middle and short term maturing in 1939	40,563	36,376
Bank of France	36,157	36,097
Totals	420,451	427,135

These figures emphasise the help that has been given by the short-term market to the re-armament programme. M. Reynaud promised, when he joined the Cabinet in November, to avoid any appeal to the capital market during the next six months, that is, until May 1st; his object was to encourage a rise in public funds. This abstention, however, was only made possible by heavy subscriptions to Treasury bills, since the needs of the Treasury every month exceed its normal resources by 2,000-3,000 million francs. And the table shows that, actually, the public debt increased by 6,684 million francs during the first two months of 1939, chiefly in middle and short term.

This new way of financing re-armament by an increase in the floating debt has been helped by two factors. There has been greater confidence in foreign markets in the outlook for the franc, notably in Belgium and Holland; and confidence at home has grown in response to the firmness of the Government.

There is, of course, still apprehension of a European conflict which leads people to seek to keep their resources liquid. The French people hate war, but their fear of it, owing to a host of steps lately taken, has been much lessened. The diplomatic collaboration between London and other capitals; the measures of security lately taken much more efficiently than last September; the new control over foreigners in France so that they can be used on work of public importance in case of war; the measures to use the country's labour resources to the full under extraordinary powers entrusted to the Minister of Labour; the intensification of production which the increase in weekly working hours to 60 where needed makes possible; taken together, all these steps are impressive and greatly encouraging. Public opinion is very struck by the speed with which the Government has gone to work, by the complete discipline of the workers affected and by the lack of panic which has accompanied the taking of these security measures.

The re-establishment of order and efficient administration, and the favourable effects already seen in a very short time, have restored the confidence of the country in its destiny. The net effect is to maintain a timely *sang froid* in public opinion. Wild and unconfirmed rumours are now greeted with scepticism. The country is even-tempered, and, in the last resort, even the chances of war are received with calm. All this is highly favourable to the prospects of peace.

Nor do technical economic factors work against this calm and confident state of mind. It is true that the cost of living is at the highest of the year. But the time for the usual seasonal decline in food prices has already come, and in recent weeks the index of wholesale prices has fallen sharply.

	Mar. 11	Mar. 18	Mar. 25	Apr. 1	Apr. 8	Apr. 15
General Index	678	679	680	681	676	674
Domestic products ...	703	706	707	708	703	699
Imported products ...	633	631	630	631	628	629
Foodstuffs	649	651	654	652	643	638
Industrial products...	705	703	703	706	706	706

Moreover, the dearthness of foodstuffs is counterbalanced, among the industrial classes at least, by the latest increases

in wages and by the overtime earnings received for the extra hours now being worked.

Yet, though the atmosphere and the temper of the people are excellent, the position is still serious. Diplomatic and military demonstrations by the totalitarian States must lead to further measures for security, such as the calling up of more reservists and further financial charges, and these in turn will entail renewed fiscal strain. National sentiment is ready for this strain, but public opinion is calling for a policy of economy designed to bring revenue and expenditure more nearly into line.

The burning of the "Paris" proves again the need for the ruthless application of the recent police measures to restore internal order. The severe criticisms of the Press will undoubtedly lead to new Government measures in this direction, and this affair, though expensive, will in the long run be beneficial, if only for the publicity given to the need for such further measures.

The number of unemployed last week fell again, from 395,347 to 392,253. The decrease since February 11th amounts to 28,000, and the number of unemployed is now 3,000 lower than it was a year ago.

Poland Prepares

[FROM OUR WARSAW CORRESPONDENT]

WITHIN the brief space of a few weeks a profound change has come over Poland. At the beginning of this year the discontent of the Ukrainians in East Galicia, actively fomented by agitators trained in Germany, seemed to point to an early explosion; anti-Semitism, aggravated by Nationalist propaganda and economic distress, had reached dangerous heights; there was chronic dissension in internal politics; and nobody felt sure about where the Government stood in its external policy. An insidious whispering campaign, now known to have been inspired from Germany, cast grave doubts on the integrity and patriotism of important members of the Government.

The journey of Colonel Beck, the Foreign Minister, to Herr Hitler at Obersalzberg early in January, and the visit to Warsaw of Herr von Ribbentrop, German Foreign Minister, at the end of the month, to commemorate the fifth anniversary of the Polish-German pact, only added to the confusion and perplexity felt by opinion at large. But, by the time Count Ciano, the Italian Foreign Minister, came to Warsaw on an official visit at the end of February, a public opinion which for months had been kept in the dark on foreign affairs began to understand the plans of the totalitarian States for "lining up" Poland with the Axis. What at first was little more than an ingrained suspicion of anything German rapidly became a deep hostility after Germany's seizure of Czecho-Slovakia and the annexation of Memel to the Reich. While declaiming against the alleged encirclement policy of Great Britain, Germany herself was actively engaged in encircling Poland—not only politically, but with armed forces.

The reaction was swift and decisive. Public apprehension was allayed when it was seen that Marshal Smigly-Rydz, Inspector-General of the Forces, and his military associates had virtually assumed full responsibility for internal and external policies; that military precautions on a large scale were being taken; and that the financial and economic resources of the country were forthwith to be mobilised for national defence. All aircraft and munitions factories were immediately put on a 24-hours-a-day basis, and, most important of all, internal dissension disappeared almost overnight.

Political discussion now seems to have been dropped "for

the duration." M. Witos, the former Prime Minister, and other Opposition leaders who had been in exile and fugitives from justice for nine years, returned to Poland and submitted themselves without reserve to the authorities. They were released after a few days, and are now working for the nation. Colonel Slawek, another former Prime Minister and a die-hard reactionary, obligingly committed suicide on the day M. Witos, whom he had hounded out of Poland in 1930, came back.

Such were the immediate consequences of Germany's action in Czecho-Slovakia and Memel, and the intimations threateningly conveyed from Berlin that Nazi attention was now focused on Danzig and "the Corridor," with the familiar blackmail of "minority persecution and terror." Herr Hitler and Herr von Ribbentrop thus did for Poland something which the Poles themselves had striven in vain for twelve years to achieve—a nation completely united behind a powerful army which has never known the meaning of fear.

There is no disposition at present to count the cost in terms of money or economic hardship. Subscriptions to the new Air Defence Loan reached a total of more than 200 million zlotys in the first ten days, and voluntary gifts to the National Defence Fund daily reach an imposing figure. From Poles in the United States alone nearly \$100,000 has been donated in the last fortnight. A nation as poor as Poland cannot survive economically for any length of time on a war basis, but it is presumed that Great Britain and France are making arrangements so that there will be no breakdown in the supply of raw materials essential for national defence industries.

The Choice for Yugoslavia

[FROM OUR BELGRADE CORRESPONDENT]

ATTENTION here is focused on the impending German-Yugoslav trade negotiations, and on the question whether

YOUR CAPITAL

can earn good interest with absolute security in London's 85 years old Building Society

Germany will attempt to obtain from Yugoslavia economic conditions similar to those she has obtained from Roumania.

Since the occupation of the Czech territory Germany's position as against Yugoslavia has grown greatly in importance. During 1938 exports from Yugoslavia to Germany, Austria and Czecho-Slovakia together amounted to 2,515 million dinars, out of total exports of 5,047 millions. Imports from them during the same period were 2,490 million dinars, out of a total of 4,975 millions. The territories now under the Greater Reich claim 50 per cent. of both Yugoslav exports and imports—a proportion which was fully maintained during January and February, 1939. During those two months exports to the Reich and to Czecho-Slovakia amounted to 169 million dinars out of a total of 339 millions, and imports to 126 millions out of a total of 402 millions.

Nor is this proportion likely to change. All attempts on the part of Yugoslavia to increase exports to other countries, primarily to Great Britain and France, have met with little more than sporadic success. Thus, during the last nine months, exports to Great Britain have been consistently below those of the corresponding period of last year, while those to France have always been low. From a commercial point of view, therefore, Germany would be in an excellent position to put pressure on Yugoslavia to accept conditions similar to those imposed on Roumania.

Even if political factors are disregarded, as well as the fact that the dinar would suffer further depreciation and the price-level be distorted, a dependence which would require Yugoslavia to intensify her agriculture and arrest her industrial development would be definitely against her interests. With a population which now exceeds 15 millions and an annual increase of about 200,000, or 16 per cent. for the last decade, Yugoslavia urgently needs to diversify her economy. This is particularly the case since most of the increase is in rural areas, and the soil, under the present distribution of land, is not capable of absorbing more of the population. At present 20 per cent. of the villagers have no land at all; another 69 per cent. possess less than 4 hectares per family, and there are only 11 per cent. with more than 4 hectares. Of those possessing land altogether 51 per cent. produce either just sufficient for themselves or even have to buy food.

Hence there is always a surplus population pushing from the land into towns, which makes industrialisation a necessity. In November the number of insured workers reached 728,000 with an insured wage of 439 million dinars. Any attempt to stop this tendency by discontinuing industrialisation and keeping the population forcibly on the land would only result in heavy economic and social dislocation and disturbance.

For such industrialisation, however, Yugoslavia herself does not possess the capital, and Germany, even if she favoured the policy, could not supply the capital. At the present moment, out of a total of nearly 20,000 million dinars invested in business, one-third is foreign, Great Britain and France holding first and second places. Czech capital, with 989 million dinars, invested chiefly in chemical and textile industries, comes third. There is practically no German capital, German investment being hampered by the fact that Germany is a trade debtor to Yugoslavia, while attempts to create investment capital in other ways have hitherto been unsuccessful.

Yugoslavia has to rely on foreign capital and it is a question whether such capital would be willing to come into the country if Germany were granted a privileged economic position. These are the conditions, therefore, which counsel Yugoslavia that, while she has of necessity to accept closer economic relations with the Reich, she would be courting grave economic and social consequences if she accepted in an unmodified form conditions similar to those accepted by Roumania.

Italy Through the Albania Crisis

[FROM A CORRESPONDENT IN ROME]

BEHIND the smokescreens of official celebrations, congratulatory telegrams and triumphant addresses which fill the inspired Press, the Italian people have received the news of the latest addition to their Empire with a curious blend of indifference and extreme annoyance. The indifference springs from their impotence, the annoyance from the extent to which the crisis has affected their family life and daily bread (both

Speeding-up Soviet Farming

[FROM OUR MOSCOW CORRESPONDENT]

THE year 1939 is an important one for Soviet Russia in both industry and agriculture. It is the first year since the "cleansing" of the governmental and industrial apparatus began early in 1937 that Soviet economy is operating under normal conditions. The country is turning from politics to business.

Government decrees in this second year of the third Five-Year Plan have indicated a determination to establish, in a single stride, if possible, the discipline and efficiency in productive work that required decades for their growth in England; and the statistics of production for 1939 will show whether the Soviet worker, hitherto subjected primarily to appeals based on patriotism and social service, will now react favourably to administrative pressure.

I. AREA UNDER CROPS IN THE SOVIET UNION
(In millions of hectares)

	1913	1934	1935	1936	1937	1938	1938 as percent. of 1913
Total area	105.0	131.5	132.8	133.8	135.3	136.9	130.4
Grain	94.4	104.7	103.4	102.4	104.4	102.4	108.5
Industrial crops ..	4.5	10.7	10.6	10.8	11.2	11.0	244.4
Truck farming	3.8	8.8	9.9	9.8	9.0	9.4	247.4
Fodder crops	2.1	7.1	8.6	10.6	10.6	14.1	671.4

This is not to say that the powerful stimulus of "socialist competition" (i.e. friendly contests for record outputs between several shops in one factory or among a number of factories in a single industry) is no longer a potent force in Soviet Russia. Encouraged by the official Press and by trained propagandists, such competitions are now being organised on a national scale.

All these efforts are designed to regain that striking industrial momentum which was a feature of the first Five-Year Plan, and of the second Plan until the summer of 1937. Similar steps are being taken in agriculture. The latter measures are most significant this year in view of the setback of the 1938 harvest, when the vital grain crops decreased by 21 per cent. compared with the record yield of 1937 (Table II).

II. GROSS PRODUCTION OF GRAIN AND INDUSTRIAL CROPS
(In millions of centners)

	1913	1934	1935	1936	1937	1938	1938 as percent. of 1913
Grain	801.0	894.0	901.0	827.3	1,202.9	949.9	118.6
Cotton (raw)	7.4	11.8	17.2	23.9	25.8	26.9	363.5
Flax (fibre)	3.3	5.3	5.5	5.8	5.7	5.46	165.5
Sugar beet	109.0	113.6	162.1	168.3	218.6	166.8	153.0
Oil seed	21.5	36.9	42.7	42.3	51.1	46.6	216.7

The severe drought last summer in several important regions led some foreign observers to predict a serious food shortage in the winter and this spring. The shortage did not

of which are infinitely more important to them than restoring the Roman Empire).

First of all, the mobilisation of a number of military classes in the week before Easter wrecked a host of long-planned family reunions and holidays. It was exasperating after a son had been absent in Spain for over a year to have him shipped off to Albania just three days before the feast. More serious are the financial aspects. The King spoke the bare truth when in his address to Parliament a few weeks back he said that no country's finances were in greater need of normal conditions than those of Italy. And now, so soon after the warning, the country has again been committed to heavy military expenditure; and the citizens of Italy are not amused.

When the news leaked through that King Zog had made good his escape with all the gold in Albania and his sisters with the silver, the Italians pulled long faces. "And we foot the bill." The blatantly advertised distribution of money to the poor in Albania has roused even more resentment, for the Italians ask why, if there was so much to spare, they have seen so little of it. This murmuring and discontent might not be so serious did it not come on top of a hard winter and vastly increased taxation. A few weeks ago, in Naples, organised rioting broke out in the streets in protest against the grinding poverty of the people, and for some days the situation was ugly enough for Signor Mussolini to cancel a propaganda visit and go to Sicily instead.

But the crisis does not merely increase the financial load the Italians must bear. It also stops up one of the most important sources of what little money they can earn. It has been a disastrous Easter from the point of view of the tourist trade. Instead of the welcome appearance of freely-spending, excited, gullible English and Americans, the only guests have been an inexorable flood of Germans from across the mountains. German tourists are not articles for export. Loud-voiced, uncouth, domineering, they crowd through Rome, beating down the shopkeepers, haggling over prices and taking advantage of Italy's unfavourable trade balance with Germany to get everything—hotels, railways, excursions—at 50, 60, 80 per cent. reductions. Undoubtedly this is an important factor contributing to the Italians' intense dislike of the Axis.

It is this fear and dislike of the German connection which lies at the base of the Italians' exasperation over Albania. There reigns in Italy from highest to lowest, in peasant, shopkeeper, party official, from north to south, a universal and intense hatred of the Germans. You need to be no more than twenty-four hours in Rome to meet it. Once you have met it, you cannot forget it for a single day. It is not merely a question of the German tourist behaving as though Italy were already a German protectorate. Its roots lie not in irritation, but in fear.

In an alliance there is always one who rides and one who is ridden, and the Italians can feel the spur. For example, though they cannot give names, the Italians know that there are commercial agents in every Ministry and in every key position in the State, that Signor Mussolini himself is spied upon, and that, in self-defence, he is coming more and more under the thumb of Germany. The northern plains of Italy would be defenceless against a sudden swoop from the north, nor are the Italians easy about the South Tyrol.

This dependence upon the other end of the Axis terrifies the Italians, for their nightmare is to be dragged into war against France and England, just in order to serve the purposes of the Germans. It is firmly believed that the Albanian adventure was forced on Italy by Germany and that the Italians were given their marching orders during the German-Italian staff talks held early in Holy Week. The fact that Good Friday was chosen for the invasion convinces the Italians that Herr Hitler fixed the matter down to the last detail, and took pleasure in delivering an incidental smack at the Church of Rome. And, they argue, now that their dependence is so great, what mad and sanguinary adventure will they be driven into next? Hence the intense anxiety among the people to catch at any straw of friendship with England. Mr Chamberlain's visit is still talked of with real enthusiasm—"un vero uomo di pace."

And the Government? No one knows or understands their attitude. Yet, although the people are impotent, it is conceivable that the Government can ignore the weight and virulence of the Italian hatred of Germany. Signor Mussolini may be bound to the German chariot by mixed feelings of hurt, prestige and fear, but we need not suppose that he enjoys being "taken for a ride." In fact, Italy's position is not altogether dissimilar from that of Poland. A guarantee by a Great Power would put her in a better position to come to terms with her powerful neighbour. Can this guarantee be given without wounding her extremely delicate sensibilities? That might be a task for English statesmanship.

eventuate. In some of the larger centres, it is true, there were brief periods when there was less than a satisfactory supply of dairy products, fish and fresh meat. The cause of this, however, could be traced in large part to inefficient distribution; and the failure of refrigeration facilities to expand in proportion to the growth of supplies was a contributory factor. It is certain that if such a drought had occurred in Tsarist days famine would have been inevitable in several parts of the country. As it is, the mechanisation of agriculture and the elimination of inefficient small holdings by collectivisation made it possible to secure a grain yield last season 18 per cent. greater than that of 1913.

There was a shortage of finished textiles again last winter. This shortage was not due, however, to decreased agricultural production, the output of cotton and flax in 1938 being substantially at the level of 1936. The fact is that demand and national purchasing power in the U.S.S.R. have been for many years running far ahead of supply, even though supply rises annually.

The persistent spread between demand and supply needs narrowing. Therein lies one explanation for the energy with which the country is now swinging into the vital spring sowing campaign. The speed with which 500,000 square miles of cultivated land will be sown should in large measure determine the success of the harvest. It is planned, in most regions, to complete the sowing in six or seven days.

Unusual Government measures this spring reflect the official concern to get the agricultural year off to a good start. It is realised that unfavourable preliminary conditions must be overcome by more efficient organisation. Little snow has fallen during the past winter, resulting in a decreased amount of necessary moisture, and exceptionally low temperatures this spring have frozen the soil in many places to a considerable depth.

One important step by the Commissariat for Agriculture to encourage greater speed during the sowing period has been to remove the restrictions on the consumption of fuel by agricultural machinery. This measure is particularly significant because obviously the lag in oil output had made it necessary to penalise users who exceeded the fixed norms of consumption.

Another measure, and probably a more effective one, has been the Government's guarantee of double pay for the crucial period of planting to all agricultural workers, including tractor drivers. Wage payments, under the collective farm system, are made by the individual farm from the proceeds of the compulsory sale of products to the Government. Part of the wage is paid in kind and, after a good harvest, most peasant households are able to sell a considerable surplus of their share of the produce in the open market.

Mechanised Agriculture

Yet, though administrative measures to stimulate greater individual effort are significant, the Kremlin basically relies upon the steady growth of mechanisation in agricultural processes to raise productivity (Table III).

III. MECHANISATION OF SOVIET AGRICULTURE: TRACTORS, COMBINES, ETC.

(In thousands)

	1933	1934	1935	1936	1937	1938	1938 as percent. of 1933
Tractors	210.9	276.4	360.3	422.7	454.5	483.5	229.3
Combines	25.4	32.3	50.3	87.8	128.8	153.5	604.3
Internal combustion and steam engines	48.0	60.9	69.1	72.4	77.9	83.8	174.6
Complex and semi-complex grain threshers	120.3	121.9	120.1	123.7	126.1	130.8	108.7
Trucks	26.6	40.3	63.7	96.2	144.5	195.8	736.1

This spring fully half the area to be sowed on Russia's 243,000 collective farms will be sowed by machine. The number of tractors in use has grown from 26,000 in 1928 to close upon half a million this year. During the period of the second Five-Year Plan the number of combines increased by 600 per cent. Tractors, combines and automobile trucks are now being supplied to agriculture annually at the rate of 30,000, 25,000 and 50,000 respectively.

With only one-eighth of the land suitable for agriculture now in use, Soviet Russia could vastly expand the present cultivated area, but it is not likely that this will be done in the near future. Although Soviet agriculture is operated on the largest and most mechanised scale in the world, and is more fully equipped with modern machinery than in any other country, the number of machines available in the

countryside is still small in proportion to the number of collective farms. There is a great deal to be done yet on the land already in use.

There are only two tractors and 1.5 combines to each collective farm. The distribution of other agricultural machinery is even thinner. Thus, when the harvest is completed in one part of the country it is necessary to transport tractors and combines to other regions which take in their crops later. Manpower, of course, remains a vital factor in the countryside, but the authorities aim to reduce hand-labour in agriculture to a minimum. Hence, again, the primary importance of machinery.

Motors and Motoring in Switzerland

[FROM OUR GENEVA CORRESPONDENT]

This year's Geneva Motor Show apparently proved a great success. The number of exhibits was higher than last year, and the motor car and lorry section includes the stands of 65 firms, 17 American, 15 German, 12 French, five Italian, three Czecho-Slovakian, three Swiss, one Belgian and nine British. Among the 14 exhibitors of motor cycles four are British, and the pedal cycle section includes five British out of 22.

The motor trade has been much developed in Switzerland during the past ten years, and there are now 197 firms selling motor vehicles and 650 garages together employing 17,000 workers. But though the motor trade is relatively new as an important occupation, the motor industry has a long history in Switzerland.

The first internal combustion motor was built in 1888 at Frauenfeld by Mr de Martini, a few weeks before Mr Saurer built a similar one at Arbon. This was the beginning of the Swiss motor industry. In 1913 there were 6 motor cycle factories (of which 3 still remain), 7 motor car factories (all of which have disappeared) and 5 motor lorry factories (of which 4 still exist, namely, Saurer, Berna, Arbenz and F.B.W.). In that year, motor exports reached a value of £1 million.

There was a boom after the war, and in 1921 motor exports totalled £2,840,000. Then the Swiss motor industry was hard hit by foreign competition and the last motor car factory closed down in 1927. Efforts have since been concentrated on the manufacture of heavy vehicles. In the last ten years or so the value of motor exports has averaged about £1,200,000 a year, while annual imports have been valued at about £2,500,000. During the period 1931-37, Switzerland imported 4,229 British motor cars and 3,904 British motor cycles. Since 1937, however, imports of British cars and motor cycles has dwindled, mainly owing to the competition of cheaper Italian, French, German and American cars. Most of the American vehicles are now assembled in Switzerland, which means an important saving in Customs duties.

Meanwhile Swiss people have become keen motorists. On May 25, 1905, M. Chesse, of Montreux, was the first to cross the Simplon Pass (6,562 ft.) on a Swiss Martini car, and later in the same year Count Cognard, driving a Peugeot, climbed to the Saint Gothard Pass (6,935 ft.). Until 1932, when a Federal law regulated and unified motor traffic regulations, motor cars were banned by several cantons, or allowed only on certain roads and on certain days.

The number of motor vehicles in Switzerland, which was 11,331 in 1913 (5,411 motor cars, 920 lorries, and 5,000 motor cycles) rose to 120,800 in 1937 (73,100 motor cars, 19,500 lorries and 28,200 motor cycles), or one motor vehicle to every 35 inhabitants. The yearly increase in the number of motor vehicles is about 2,500, and nearly 9,000 are imported every year. The Swiss market is not unimportant, and the British motor car industry might look to Switzerland to increase its sales.

Motoring, which is a chief item in the modern tourist industry, is now an important asset to the Swiss economy. The good condition of roads, the attraction of the splendid scenery of the Alpine passes, and the special facilities given to foreign tourists, every year attract an increasing number of foreigners. In 1938, 432,295 foreign motor cars came to Switzerland; that is, nearly 1,300,000 persons who, on the average, spent 2½ days in the country, and left a sum estimated at 75 million francs (about £4,623,200) in Switzerland, entered by car.

Letter to the Editor

Nazi Economics

TO THE EDITOR OF THE ECONOMIST

SIR,—The long and interesting discussion of my book on "The Economic Recovery of Germany, 1933-38," in your issue of April 1st, raises far too many points to be dealt with in a letter. But I should be grateful for the opportunity to make some observations on one or two of the controversial matters at issue.

First, on a small point of detail, you say of me: "He entirely fails to mention that there is a very large flight from the land, discussed with every semblance of alarm throughout the Nazi Press." In actual fact I devoted five pages, pages 114-19, to an analysis of this very problem, in the course of which I cited the official German estimate of a decrease of 700,000 in the agricultural population between 1932 and 1938.

The comparison which you make between the German and British employment figures for 1929 and 1937-38 is, I submit, in reality an unfair one, for many reasons. To mention only two: in 1929 Germany was at the peak of a very intense cyclical boom, fed—in spite of reparations—by a large, most abnormal and necessarily transient, net import of foreign capital. In Great Britain conditions in that year were by no means those of high general prosperity. On the other hand, the Germany of 1937-38 had no importation of foreign capital and, unlike Britain, no foreign investments on which to draw whether for capital or income. In general, your argument reminds me of the old Free Trade controversy, where the Free Trader proved, by comparing the figures at the bottom of a preceding slump with those at the top of a subsequent boom, that Free Trade was the source of England's prosperity; while the tariff reformer, by reversing the process, was equally convinced that he had proved the opposite. Towards the end of your review you say: "Whether by good fortune or by good management, English economic policy has done just as well in the creation of employment and infinitely better in the enhancement of the standard of living. We have no reason to fear any fair comparison." But quite irrespective of the validity of your comparison (are there no unemployed in England to-day?), by its introduction you are drawing a red herring across the trail of my book. It was no part of my purpose to compare the economic development of Germany and England since 1929 or 1932, nor have I done so.

I can assure you that I am not "bemused by the German success in reaching full employment." A democratic country might well say: "What shall it profit us if we reach full employment by these means and lose our own soul in the process?"

The vital point at issue between us, as I see it, is this: I hold that the economic recovery of Germany since 1933 is an economic phenomenon of great interest and importance, and one which deserves to be studied by economists for its own sake. You appear to hold that its only actual and potential interest is as a study in the economics of war.

I see an economic experiment which has hitherto been largely, though by no means wholly (your comment on the Second Four-Year Plan is wide of the mark), subordinated to strengthening the military power and resources of Germany. Even so, it has absorbed more than six million unemployed with hardly any rise in prices, in spite of an inflationist type of finance. Does this not merit the attention of the economist? But I see also an experiment, which could at any time be switched over to raising the standard of living to a much higher level, combined with at least the possibility of a large measure of control over the trade cycle.

Surely it is only a mind bemused by political prejudice which could assert that the economic events of the last six years in Germany, and the possibilities for the future which this experiment holds, "have little or no relevance to the economics of a peace-loving community." For the same technique could be used by Germany to produce the desiderata of peace as has been used, to so great an extent, to produce the desiderata of war.

Yours faithfully,
C. W. GUILLEBAUD.

Cambridge.

[1. An injustice was done Mr Guillebaud by the phrasing of our comment on his treatment of the Nazi agricultural policy. The point of our comment was that it is misleading to give a glowing description of the privileged status of the peasant without simultaneously mentioning the flight from the land. The fact that, a hundred pages away, there is a discussion of the agricultural employment problem, is not a complete defence. But the words used failed to make this clear.

2. It is true that in a financial sense Germany was more prosperous than Great Britain in 1929. But so far as concerns employment (which is alone relevant to the argument in question), the unemployment percentages, as was mentioned in our article, were 10.3 in Great Britain and 9.6 in Germany—i.e. close enough to make 1929 an eminently fair basis for comparison of unemployment experience. This being so, Mr Guillebaud's simile of Free Trade-Protection controversy is quite beside the point.

3. Our assertion that British economic policy has done just as well in the creation of employment holds good. Mr Guillebaud's parenthetical reference to the continued existence of unemployment in England suggests that he is unable to distinguish between the creation of employment and the reduction of unemployment. If so, he is indeed "bemused by the German success in reaching full employment."

4. The usefulness of the Nazi experiment as a model relevant to a peace-time economy depends entirely on the assertion that it "could at any time be switched over to raising the standard of living." Mr Guillebaud thinks it could be so switched over. He cannot know. Moreover, when the Nazis were pursuing their economic ideas without the aid of re-armament their success was partial and indifferent. When the Nazi system has successfully beaten swords into ploughshares and not until then will it become of relevance to the economics of a peace-loving community.—EDITOR.]

Books and Publications

Catholicism v. Weltanschauung

In 1937, Mr William Teeling published a book called "The Pope in Politics," in which he criticised the political policy of the Vatican for its sympathies with Fascism—a policy more recently somewhat obscured by the gallant stand of Pius XI against paganism and racial creeds. The tendency to identify the Catholic Church with the totalitarian idea, he argued, was not only doubtful wisdom so far as world affairs were concerned, but also a danger to the unity of the Church itself, as between the New World and the Old.

At the basis of Vatican policy was its abhorrence of Bolshevism as the most dangerous of modern threats to those institutions of family and church which are fundamental to Catholic philosophy. The error was in assuming that Fascist opposition to Bolshevism was a sufficient ground for coming to terms with the Fascist dictators and working successfully with them.

In Italy the policy had had some success, viewed from the standpoint of the welfare of the Italian people. But that was because Italy was predominantly Catholic and the College of Cardinals predominantly Italian: the Church was looked to as the natural body to supply certain needs; and the authorities understood those needs. In Germany, the same policy had met with disastrous failure: the internal situation was greatly different; and the authorities in Rome were largely ignorant of the differences. Catholics in America and other democratic countries were being alienated without any positive gains to justify the risk.

examination of the German problem, justifying in the main his earlier conclusions. Primarily, therefore, it is addressed to those persons who are particularly concerned with the religious situation in Germany, and especially to those of Mr Teeling's own faith. But for others who wish to understand the many currents in the present flow of history, there is also much in this book which is of value.

In the first place, though Mr Teeling is a critic of Vatican policy, he is a critic from within. His statements of Catholic arguments and intentions are, for that reason, a healthy corrective to a good deal that has been written of late upon the significance of the Papal throne. Catholicism has its own ends, which are not essentially those of either democracy or totalitarianism, and shifts in policy or utterance designed to achieve those ends should not be too hastily assumed to signify the taking of sides in the more immediate political struggle.

Secondly, Mr Teeling has concerned himself with a single question: What is happening to the Catholic Church in Germany? To find the beginnings of his answer he has gone back as far as the seventeenth century rivalry between Northern and Southern Germany. He gives a detailed study of the Catholic Social Movement in Germany and of the organisation of young workers' fraternities on a national basis which arose out of it; and he dwells particularly on the development of the Centre Party as the dominant line of political Catholicism in Germany, attempting to interpret Papal teaching in a policy of educational rights and social development, opposition to nationalism and adherence to constitutional practice.

He shows, from his own investigations over the past two years, how the dissolution of the party by the Nazis has brought with it, on the one hand, the collapse of the Catholic Social structure and, on the other, the bewilderment of the older political Catholics who are ignorant of any other form of organisation and, even more, of the problems now to be met. This exposition suits Mr Teeling's powers of observation and recording ability particularly well.

The third cause for commendation in this book is Mr Teeling's examination of the place of Herr Rosenberg and his philosophy in the National Socialist order. The tendency of most writers has been to regard this as a relatively unimportant matter, and to concentrate on the more general effects of radio propaganda and mass demonstrations as the significant factors in the outlook of the German people. Mr Teeling shows that it is not with the mass of the German people that Herr Rosenberg is working, but with the leaders in the Nazi Party, and particularly with the youth organisations.

Already, in a hundred schools in Germany, the new ideas are being taught; a thousand young men are being sent out each year into key positions in the State after a four-year course in the *Weltanschauung* orthodoxy. Among the present 200,000 S.S. men the faith is dominant. This is the most significant factor of all for Catholicism; its importance in international politics cannot be disregarded either.

THE BUSINESS WORLD

Outlook for Profits

PRE-BUDGET discussion this year has been concerned with the modern economic alchemy by which the Government creates incomes before it taxes them. The measurement of taxable capacity, in which *The Economist's* analyses of industrial profits have played their part during the past thirty years, has been pushed into the background. Hence, a reduction of 9.9 per cent. in the profits of 656 industrial companies whose reports were published during the first quarter of this year seems almost incidental to the fiscal problem of 1939-40. Already events have overtaken the published Defence Estimates; it may well be necessary to borrow more than the £350 millions already announced. But since our fiscal health—no less than the magnitude of the burden to be financed—demands that taxable capacity should be closely scrutinised, *The Economist's* profits records have not entirely lost their relevance.

Industrial profits first showed a setback for the September quarter of 1938 with a modest fall of 1.4 per cent., which was succeeded by a fall of 4.4 per cent. in the December quarter. Last quarter's experience, as Table I on this page shows, was not far removed from that of a different list of 596 companies whose reports were published in the first quarter of 1931. The new index of profits, which was introduced in *The Economist* of January 14th this year (and is reproduced in Table III), shows a fall from 130.3 (July, 1935-June, 1936=100) for the twelve months ended December, 1938, to 127.1 for the twelve months ended March, 1939. Neither the fall in the March quarter, nor the decline in our new index between December last and March, provides an accurate measure of the fall in taxable industrial profits which must be taken into account by the Chancellor of the Exchequer next Tuesday. The fiscal year includes company results to March 31st, and reports bearing this date represent over 16 per cent. of the total in the average year. Hence, nothing more than an interim guess is possible regarding the fall in industrial profits which will be assessed for income-tax purposes in 1939-40. Taking the total profits reported for the nine months since last June, the fall represents no more than 6½ per cent. But the June quarter reports (which cover an average accounting period to about February 8th) will certainly depress this average. An informed guess

suggests the possibility of a decline in industrial profits relevant to the current fiscal year of the order of 7½ per cent. But this figure must be regarded as provisional, since little more than one-tenth of the profits which are normally to be expected during the second quarter have so far been reported.

First quarter companies in 1937 reported, on the average, to December 21st of the preceding year, and there is no reason to suppose that this date has changed significantly. Hence the total profits, after debenture interest, of the 656 companies included in the latest quarter's sample, which fell from £98,549,191 to £89,651,061, cover several months of sharply falling industrial activity about a year ago, and have obtained no benefit from the slight improvement of the present spring. Compared with a fall of 6½ per cent. in business activity, however, a fall of 9.9 per cent. in industrial profits arising in the calendar year 1938 cannot be reckoned extreme, for they are subject to an element of "gearing" and respond more than proportionately to a given industrial stimulus, whether positive or negative.

Important stabilising influences are to be found, however, in the profits of companies reporting during the first quarter. Banking profits, of course, are excluded from our reckoning, but of the five groups whose profits exceeded £10 millions (the detailed figures are set out in Table A on page 229) two showed minor falls, two showed increases of 3½ and 7 per cent., and only one—though that one is the large miscellaneous group—a significant fall of 18 per cent. Shops and stores, electric light and power, and tobacco reports are an annual feature among first quarter companies, and the profits they reveal are usually less susceptible to recession than those of industry at large. In fact, the 75 companies in these three groups increased their profits slightly from £32,687,315 to £33,076,076, and thus accounted for nearly 37 per cent. of the total profits reported last quarter. The influence of such large companies as F. W. Woolworth, Imperial Tobacco and the large electricity undertakings is clearly evident in these figures.

When the profits are examined industry by industry, however, interesting differences are revealed. Heavy industry had a profitable year in 1938, and the earnings of 40 companies in the iron, coal and steel trades reported

TABLE I.—PROFITS OF FIRST QUARTER COMPANIES, 1929-39

Reports Issued during First Quarter	No. of Companies	Total Profits (after deb. interest)	Change since preceding year (same companies)	Total Preference and Ordinary Capital	Ratio of Profits to Capital
1929	454	£59,869,628	+ 1.5	£537,360,324	11.1
1930	516	62,021,337	+ 1.8	595,281,227	10.4

TABLE III.—THE ECONOMIST PROFITS INDEX
(July, 1935–June, 1936 = 100)

Year	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
1929	...	...	113.0	113.1
1930	113.8	116.5	115.5	111.7
1931	107.4	101.3	93.6	87.2
1932	81.7	73.3	69.9	69.1
1933	66.3	67.6	66.8	68.5
1934	70.1	74.6	76.7	79.7
1935	83.8	88.9	90.2	92.4
1936	96.6	100.0	102.0	104.5
1937	108.6	118.3	120.9	125.2
1938	128.7	131.7	131.6	130.3
1939	127.1	...	...	...

The method of calculation of this index was explained in *The Economist* of January 14, 1939. Each figure refers to the profits earned by companies reporting in the four quarters ending with that against which the figure is recorded. Earnings are related to the base period by the chain method.

last quarter showed an increase of 3.81 per cent., from £10,131,531 to £10,517,829. The steel industry, endowed with re-armament orders, and able to resist pressure for reduced prices until the beginning of this year, has taken the recession in its stride, and with output now running close to record levels it is highly probable that steel profits will still be impressive a year hence. Not all large concerns, however, provide a cushion to meet falling profits. The 38 companies in the textile group, whose reported profits last quarter hardly exceeded a quarter of the previous year's level, are dominated by Courtaulds, whose experience last year was the worst in the company's recent history. And reductions in profits considerably higher than the average (though not of the greatest absolute importance to the total) are recorded by rubber companies (59.1 per cent.), shipping (27.8 per cent.), tea (29.0 per cent.), newspapers and printing (16.7 per cent.) and miscellaneous industrial companies (18.0 per cent.).

Table B on page 229 analyses the dividend rates declared during the past quarter, and provides a comparison of equity dividend rates with those of the preceding year. Of the twenty-five groups which are represented, no more than four show increases, and these—tramway, food, tobacco, and warehouse companies—may be regarded as special cases. But reference to Table II on page 201 suggests that the ordinary shareholder has fared as well as he could expect in a period of declining earnings. Out of a total pool of divisible profits itself reduced by nearly

10 per cent., the proportion paid in preference dividends has naturally tended to increase, to 18.4 per cent. of the total, compared with 17.0 per cent. of the higher profits of a similar, though not identical, sample of companies which reported in the first quarter of 1938. The ordinary shareholder has actually received a slightly higher proportion (though a lower cash sum) from the pool, and reserve policy has been tempered accordingly. It would be premature, however, to read any special significance into the slight proportionate reduction in amounts carried to reserves, to 27.7 per cent. for the latest quarter. With the exception of 1938, which was a year of record earnings, the proportion of profits ploughed back is still the highest for any first quarter over more than a decade. The same conclusion is suggested by a comparison of equity earnings and dividend rates which are shown in the same table. The 646 companies whose reports were published in the first quarter of 1938 disclosed earnings at the rate of 15.8 per cent., while their average ordinary dividend amounted to 10.2 per cent. The latest sample of companies shows equity earnings of 13.9 per cent. and ordinary dividend payments averaging 9.2 per cent. on a very similar total ordinary capital. The contraction of the ploughed-back margin from 5.6 per cent. to 4.7 per cent. is a new, but hardly surprising, feature of the past quarter's reports.

So far industrial profits have dipped to a relatively limited extent. It may well be that the business improvement which now appears to be in progress will check any repetition of the normal cyclical movement in industrial earnings, if "normal" can be said to have any precise meaning where profits are concerned. But, to summarise the outlook in terms of our new index of profits, no repetition of the fall from the peak of 116.5 in 1930 to the trough of 66.3 at the beginning of 1933 seems in prospect. And since the economic case for increased taxation may well be stronger a year hence than it is to-day, the prospect of nothing more than a modest reaction in industrial earning power for the next few months, followed by a positive recovery at least in certain sections of domestic industry, is to be welcomed. This conclusion may not be entirely consoling to the ordinary shareholder. Indeed, if the gradual assimilation of the economic system to a war-time basis proceeds to the point of full employment and defence priorities, he may have to prepare himself for the possibility of some form of dividend control, on the German model.

The Stock Exchanges' Future

(By a Stock Exchange Correspondent)

NO thoughtful observer of modern financial tendencies can fail to detect the intimations of fundamental change in the structure of the security dealing organisation in this country. Within the exchanges themselves—among the members constituting the London Stock Exchange, for example—realisation of the magnitude of the issues involved and interest in their solution on radical lines may be said, as yet, to be individual rather than collective. It was, therefore, an event of some significance when Mr R. B. Pearson, in the brief interval between laying down his office of Chairman of the retiring Committee for General Purposes and his election to the same office for the year 1939-40, took the opportunity presented by the annual dinner of the Provincial Brokers' Stock Exchange to express views which may well possess far-reaching implications. The tenor of Mr Pearson's remarks may be epitomised by two of his sentences:—

I look on this legislation (the "Share Pushing" Bill), which is passing through Parliament at the moment, as a significant warning to those of us who are members of the stockbroking profession. I believe that now is the time when we... who are subject to discipline, who are indeed genuine brokers, should improve our status.

In the development of his argument, Mr Pearson suggested that the importance for brokers of the "Share

Pushing" Bill lay less in its actual terms than in marking a definite phase in the development of stockbroking. He left it to be inferred that it would be contrary to the experience of other professions if the legislature were to disinterest itself in future developments, but he directly suggested that the co-operation "to the utmost" of all genuine broking organisations was necessary to make their own machinery adequate and efficient.

Such phrases give a powerful, though personal, lead to those in financial and political circles who fear that the organisation and control of the stock-dealing industry in this country lags far behind banking, insurance and the learned professions. In fact, stockbroking appears to be one of the few to show a definite inability to keep abreast of the times during the past fifty years. In this period, the investing public has enormously expanded. Thanks to the increasing use of telephones, private exchanges and the teleprinter, communications have been speeded up, and as a result of the centrifugal effect on the distribution of business, the relative predominance of the central London market has tended to decline. Provincial exchanges, though still mainly feeders to the London market, to-day transact between themselves a larger proportion of their own business. Again, direct dealings, from the most reputable type of transaction between banks and discount houses

down the scale to the wholly undesirable transaction in unmarketable securities, have taken an increasing volume of business from the market in recent years. And outside share marketing organisations, ranging from the lightest shade of grey to the deepest black, have appropriated a significant proportion of business. The multiplication and diversification of these dealing agencies has proceeded in an entirely unco-ordinated manner. Dealers in stocks and shares owe allegiance to no central authority, their business standards and methods vary greatly, and there is no means either of formulating or expressing the views of the profession on any particular matter. Such anarchical conditions must encourage disorder and possibly abuses, and, while the legislature may tackle part of the problem piecemeal, no effective solution on broad lines seems feasible unless there is the necessary degree of domestic control within the profession itself. The first, and most important—as well as the most difficult—step in this direction would be to establish closer association between the existing recognised Stock Exchanges. But it would be idle to underestimate the constitutional, practical and personal obstacles which have first to be surmounted.

The three principal broking organisations represented at the Provincial Brokers' dinner included the London Stock Exchange, the Associated Stock Exchanges and the Provincial Brokers' Stock Exchange. The professional life of members of the London Stock Exchange is absolutely controlled by their elected Committee. The Council of the Associated Stock Exchanges, however, is hardly more than a consultative body consisting of delegates from the twenty-two Provincial Exchanges in the Association. The organisation of the Provincial Brokers' Stock Exchange is as all-embracing as conditions allow, but since its 332 members are spread throughout the British Isles (excepting only London and the provincial centres which have their own exchanges) difficulties of a constitutional and disciplinary nature are necessarily considerable. To secure the necessary degree of collaboration for a comprehensive broking organisation, in these circumstances, would call for the surrender of individual and local independence and a general assimilation of rules and practice, which could only be achieved by an infinity of work and patience. In "The Book of the Stock Exchange," Mr F. E. Armstrong records the great, though abortive, effort which was made forty years ago to secure the adoption of a standard code of laws by the Associated Exchanges. The defection of Edinburgh and Glasgow (whose independent attitude on certain occasions in recent years will be recalled) was largely responsible for the failure of the attempt. The sub-Committee laid down the task regretfully, expressing the hope that a new generation would think again, and their faith finds an echo in the views of Mr C. H. Goode, President of the Council of the Associated Exchanges, who has recently suggested the general adoption of the Rules of the London Stock Exchange.

More than this, however, will be necessary if the security-dealing profession is to present a united front to the legislature, to the financial world and to the public. It might well be unavoidable, in the long run, to create a super governing body possessing plenary powers. Such a conception may be unpalatable to a highly individualistic profession, but undue delay might exact a grievous penalty if the growth of competitive dealing agencies continues at its present pace. It must be recognised, however, that apart from differences of practice there are fundamental divergences of interest to be reconciled or, at least, balanced. It should be possible to devise some effective constitutional apparatus—a federal type of structure—to unify the general direction of policy, without attempting first to solve such difficult problems as the co-ordination of the London jobbing system with the provincial "shunting" organisations. Provincial dealers naturally aim at increasing their share of the available trade; London, on the other hand, is concerned with the defence of its established broking and jobbing channels, and argues that the maintenance of the marketing and quotation facilities on which the activities of other centres finally depend, justifies and requires the canalisation of dealings. But, for the time being, each exchange must place the direct interests of its members first, and any attempt to rationalise the whole system at too early

a stage would involve such wholesale adjustment of established interests as to predestine failure for the whole venture. The first stage in association, therefore, might be to codify the common elements in the rules and practices of the recognised exchanges and brokers' associations, and to delegate all matters within this sphere to a representative council, reserving freedom of action to the individual authorities within certain defined areas.

Mr Pearson's speech itself provides a guide in this direction, for it analysed the powers with which the governing body of any well-managed association of stockbrokers must be endowed. These comprise admission and expulsion of members, compilation and alteration of rules and regulations, and the granting or refusal, without giving reasons, of trading facilities. A large measure of common agreement under these heads would enable the profession to tackle decisively the problem of agency, to evolve measures for counteracting the diversion of business through non-professional channels, to contrive machinery for securing the maximum freedom of dealings, to establish formal standards of proficiency on which admission to the stockbroking profession would be granted, and to co-operate towards the elimination of abuses in outside dealings.

If the leaders of the stockbroking community throughout the country realise the present opportunity for action on these broad lines, they will be performing a public service which will ultimately provide benefit for their own business associations. But if, through undue emphasis on established interests and local considerations, the opportunity is allowed to pass, the time may come when the reform of the nation's security-dealing organisation will be rudely handled by some external authority. The experience of Wall Street provides an object lesson from which a valuable moral can be drawn. The chairman of the London Stock Exchange Committee has made his own position clear, and the way for exploratory discussions between the authorities immediately concerned is open.

'I'll be there on time all right—I'm flying by KLM'

WELL EARNED and jealously guarded is the KLM record for punctuality. It is efficiency in all departments—in planes, in pilots and in ground staff—that keeps KLM schedules so precise, and ensures that by KLM you fly always punctual to the minute. Playing a big part towards this end are the famous Douglas air liners. These fast and luxurious machines have proved their supremacy in millions of miles of faultless flight. It will certainly pay you to fly KLM on business, on holiday, or to make your leave much longer.

Finance and Banking

Money in Perspective.—Looking back over recent weeks it is easy to see why money and discount rates have stiffened. The political tension drove out of London the final remains of foreign hot money and also a certain quantity of more permanent balances. The latter were also tempted to take advantage of the premium on the forward dollar, which yielded a fair profit on temporary transfers of funds to New York. Add to this the Easter currency withdrawals, which added some £9 millions to the note circulation, and also a natural desire of bankers to hold rather more cash than usual and also to confine their bill purchases to the shorter dates, and it is easy to understand the rise in rates. Nevertheless, no one is ready to admit that we are entering an era of dearer money, and indeed there is every reason why the policy of cheap money should be maintained. The clearing banks are still renewing their regular loans at $\frac{1}{2}$ -1 per cent., according to collateral, though in most cases an additional $\frac{1}{4}$ per cent. is being charged for new loans. A rise in loan rates was rejected by the clearing bank representatives at their meeting early this week. Three months' bills eased on Thursday from $1\frac{1}{8}$ to $1\frac{1}{2}$ per cent., and early June maturities are no higher than $\frac{1}{8}$ per cent. Although June is a popular date, this disparity also illustrates the banks' preference for the shorter bills. One question is whether the authorities could have done anything more to prevent this temporary stringency. Bankers say that the recent pressure for money has not been nearly so keen as it was last September, and there is also evidence that the authorities have given a fair amount of help. In spite of the Exchange Account's recent support to sterling, public deposits have not been unduly high, though they have risen to £22.1 millions this week. On April 1st and again on April 8th £3 millions was cut off the Treasury bill tender, while during the past fortnight there has been special buying, first of June bills and later of July bills, $1\frac{1}{8}$ per cent. being paid for July maturities. There is little doubt that these purchases were made for the Exchange Account, for in spite of the Account's gold sales tap issues of Treasury bills have remained nearly unchanged during recent weeks, while there has been no inordinate increase in public deposits. Thus the Account must have been investing the sterling in tender Treasuries bought in the market, and in future weeks, as these bills mature and are replaced, there will be a new change-over from "tender" to "tap." The authorities, therefore, can claim to have done a fair amount, while the market is not grumbling at the fact that bills are at last showing a profit. On the other hand, the Easter currency withdrawals from the banks could have been foreseen, and in the week before Easter bankers' deposits dropped momentarily to £91.9 millions. It might have minimised the disturbance if more special buying had been in evidence before Easter, so as to have prevented this temporary drop in bankers' deposits. In any case there is no public interest to be served by dearer money, though the damage done by rising rates will be small if they are confined to the money market.

INSURANCE
NEEDS**

Head Offices:
LIVERPOOL LONDON
North John St. Lombard St.

Marine War Risks Reinsurance.—The Government's scheme for reinsuring the war risks of cargoes at sea has received a general welcome. Not only has it spared British traders the drastic increases in rates which, in self-defence, insurers would otherwise have imposed, but it has actually produced reductions. Government reinsurance facilities are limited to shipments to and from the United Kingdom, for the obvious intention is to give British trade the protection which the insurance market cannot provide except at ruinously high rates and at the risk of a repetition of the market disorganisation of last September. Further, the relief is in respect of hostilities against this country—"King's Enemy Risks"—leaving other more manageable war risks to be borne by the market. This significant State assumption of liability in time of peace has enabled underwriters and companies to quote rates as low as 1s. 6d. per cent. for shipments to and from the United Kingdom and the near Continent and 2s. 6d. to and from the United States, while the highest rate is now 7s. 6d. Comparable rates before the scheme was announced were 5s. for the near Continent, 2s. 6d. (outwards) and 5s. (homewards) for the United States, and 10s. for the Black Sea. Some indication of the potential increases in quotations in the absence of Government reinsurance is revealed by a comparison of rates for shipments between overseas countries, which are not within the scheme. Typical rates under the new schedule include 40s. for voyages to and from Continental ports and the Black Sea and 35s. to and from such ports and the Mediterranean, compared with the earlier rates of 10s. for the Black Sea voyages and 7s. 6d. (outwards) and 10s. (homewards) for the Mediterranean. A sharp differentiation is thus made between shipments, according to their eligibility or non-eligibility for Government reinsurance. Moreover, eligible shipments are subject to an over-all maximum rate of £1 per cent. (10s. for specie) agreed with the Government, so that even if the schedule is revised, traders (and arbitrageurs) know the upper limit of their premiums.

The Working of the Pool.—The scheme involves some sacrifice of insurers' individuality. Underwriters and companies will establish a pool with which they will reinsure their war risks insurances, so far as voyages to and from the United Kingdom are concerned. The pool will then reinsure King's Enemy Risks with the Board of Trade at premiums calculated according to an agreed formula. The pool will be left to bear the remaining war risks. Underwriters and companies constituting the pool will share in its resulting profits or losses, in proportions to be determined by the managers of the pool. These are now under consideration in detail, but one-half will go to the underwriters as a whole and one-half to the companies. The scheme appears to be a happy compromise between State and private transaction of war risks insurance. It is not open to the objection, which applied for the greater part of its existence, to Government reinsurance during the Great War—that the State was left with the bad risks and received none of the good. Unless a war is imminent, it allows the Board of Trade to accumulate reserves. These will be available, not only for the continuing liabilities to which the Government would be committed from the outbreak of hostilities involving this country; but also for the full operation of State cargo insurance which would presumably follow. The White Paper explaining the scheme (Cmd. 6002) explicitly makes provision for a State cargo insurance office. Hulls do not come within the present scheme. It was announced some time ago that insurers of hulls—for the most part, the mutual "clubs"—are held covered by the Government for 80 per cent. of their liabilities, without payment of premiums in peace-time.

Together, cargo and hull reinsurance by the State go to relieve the market of an impossible burden, and to provide traders with adequate cover without penal rates.

Building Societies Bill.—Wednesday's debate on the second reading of the Building Societies (No. 2) Bill—the numbering is necessary to distinguish the Government measure from Miss Ellen Wilkinson's measure—developed into a discussion of the responsibility of building societies for housing standards. Mr A. Henderson moved an amendment regretting that the Bill contained no provisions for the greater protection of occupying-owners against the sale of houses of unsatisfactory quality, although he was not prepared to put the primary responsibility for building standards upon the building societies themselves. The case for leaving the building societies unshackled by legal liability for the quality of houses on which they make mortgage advances is based simply on the argument that it would be unfair to burden a lender with the responsibility of guaranteeing to a borrower that the assets pledged are of a given standard. On the other hand, the problem of so-called jerry building, and the fear that some building societies at least have not avoided the reproach of contributing towards it, have aroused considerable public comment, of which the building societies, in their own interest, must take notice. The Government's Bill provides safeguards against unwise lending and should prevent any undesirable association of interests between building societies and builders. It should also strengthen the adequacy of the survey arrangements which building societies made. The problem of building standards goes well beyond the scope of building society operations, but, on the other hand, the societies, who have rightly emphasised the mutual character of their constitutions, and are certainly more expert in valuing property than their lay members, might surely consider the practicability of providing the latter with their expert view of a property submitted for an advance. Perhaps more detailed survey reports would fulfil this purpose. To the plea that they would be more expensive, the answer is surely that they might well be less expensive than the costs of rectifying a faulty house. The offer of the Attorney-General, at the close of the debate, to give careful consideration to suggestions regarding building standards is certainly to be welcomed.

Politics and the Belga.—The strain on the belga shows no sign of abating despite the formation of a Government out of the fresh orientation of parties thrown up by the recent elections. One of the reasons for this is no doubt to be found in the difficulties that have attended the task of forming a Ministry. The first formula on which M. Pierlot, the leader of the strongest party, the Catholics, worked was a coalition of the three main parties—Catholics, Liberals and Socialists. A Ministry was actually formed on this basis, but proved to be stillborn, the Socialist Congress meeting on the day the new Cabinet was sworn, deciding against the participation of its representatives in a coalition Government. On the next day M. Pierlot succeeded again in forming a Ministry, this time based on the Catholic and Liberal Parties (which command 106 out of the 202 votes in the Chamber) but liberally sprinkled with non-party experts such as M. Gutt, the Minister of Finance. These preliminaries do not augur too well for the stability of the new administration, since its majority in the Chamber is precarious and since the Catholic Party, in particular, is no longer the homogeneous organism which it was in former years. Then it was a typical equivalent of the Conservative Party in this country. To-day it includes elements such as the Démocrates Chrétiens, who have been described in Belgium as "des poissons rouges qui nagent dans de l'eau bénite." With the political prospect so uncertain, any rigorous deflationary attack on the budgetary and monetary problems appears to have little chance of success, and hence

the possibility of an ultimate devaluation of the currency is brought nearer. This is the real reason for the continued strain on the belga. For the time being, however, orthodox principles of monetary control are still being applied. This week, in face of the continued weakness of the belga and of the consequent persistent loss of gold, the National Bank of Belgium raised its discount rate from $2\frac{1}{2}$ to 4 per cent. The outflow of capital has had some effect on the banks' liquidity, and the raising of the Bank rate is the classical answer to their increased recourse to rediscount facilities at the central bank. The raising of the Bank rate has, of course, tended to accentuate the discount on forward belgas, though the one month rate at 70 c. and the three months at 1.20 belgas discount are completely out of alignment with the relevant interest rate parities. Meanwhile the National Bank pursues its policy of transferring gold from Brussels to London for obvious precautionary reasons. During the past week a further £11½ millions of gold was so transferred.

War Risk Pool and Gold Arbitrage.—As applied to specie shipments, the Government scheme for reinsuring the war risk is setting the gold arbitrage houses some difficult problems. The details circulated to the market make it clear that it is impossible under this scheme to reinsure the war risk on gold arbitrated to New York in terms of dollars. The sum reinsured under the Government scheme is to be the value of the gold calculated at the price for gold in London on the day on which the shipment was due to arrive at its destination, and that sum is to be expressed in sterling. Since it is an inherent part of almost every gold arbitrage transaction to sell forward the dollars which will be received for the gold on arrival in New York, the cover provided under the Government scheme is not, in fact, a full cover of the risk run by the arbitrageur. To receive a sum in sterling (which itself will be ascertainable only by reference to the London price of gold at some future date) will not provide the arbitrage operator with the dollars which he will have sold forward in the course of his transaction. Where, during the past week, the war risk on gold shipped to New York has been covered in terms of dollars, the policies have specifically made the transaction subject to the conditions appertaining to the Government's reinsurance scheme. This has, in fact, nullified an essential aspect of the contract. In view of the inadequacy of the cover provided under the official reinsurance scheme, it is probable that there will be less arbitrage competition for the gold offered in the open market, and this week already the premium formerly paid over the nominal dollar parity has disappeared.

MONEY MARKET NOTES

Foreign Exchanges

CONTROL support has been necessary throughout the week to maintain the sterling-dollar exchange. Buying of dollars has not increased to any appreciable extent, but the authorities have dropped the peg from 4.68½ at the end of last week to 4.68½ on Monday and 4.68 on Wednesday. These retreating tactics are rather surprising, as last week the pound was firmly held at 4.68½, and the selling pressure has not increased to an extent that would justify the lowering of the peg, which tends to encourage speculation by undermining confidence in the ability of the authorities to control the rate. The forward premiums, which were as wide as 1c. for one month and 2½c. for three months last Saturday, have since contracted, and on Thursday afternoon were quoted at 1½-¾ and 2½-¾, respectively. The belga is discussed in a Finance Note. On Thursday afternoon the spot rate was quoted at 27.85½, while the discount for three months was fluctuating rather widely at well over 1 belga. The South African Reserve Bank, which a few weeks ago raised its buying and selling rates for sterling by 5s. per cent., has now reduced them both by 2s. 6d. These reductions have been made because, as a result of the British Government's insurance scheme, which is discussed in a Finance Note, the war risk insurance rate from the Cape has fallen, and the cost of shipping gold has been lessened accordingly.

*

The Bank Return

FOR the fourth week in succession the gold in the Issue Department has been valued at 148s. 6d. per fine ounce, the price this week being ¾d. below the price at the fixing on Wednesday. More Easter currency has returned from circulation, but the total note circulation is still appreciably higher than the pre-Easter level. The Reserve has increased by the exact amount of the decline in the note circulation, but bankers' deposits are down by £1.1 millions. Any benefit they may have derived through the return of notes has been more than

offset by an increase in public deposits and a fall in Government securities. The rise in public deposits of £4.4

Issue Dept.:	Apr. 20, 1938	Apr. 5, 1939	Apr. 12, 1939	Apr. 19, 1939

Proportion	19.7%	24.1%	24.0%	26.7%

millions is easily explained by transfers of tax money and especially by Exchange Account support of sterling. The decline of £6.7 millions in Government securities, however, is surprising in view of the fact that special purchases of bills have again taken place in the open market. As pointed out in a Finance Note, these have been made on behalf of the Exchange Account and not of the Bank, which, rather oddly in view of the conditions obtaining, has allowed its holding of Government securities to drop in order, presumably, to offset the return of currency.

*

The Money Market

THERE was a further sharp rise in the Treasury bill rate last Friday. Total applications were only £51.3 millions, and the market syndicate secured a 50 per cent. allotment in spite of the drop in its bid to £99 12s. 2d. The average rate worked out at £1 11s. 2.37d. per

however, the tendency has been easier. There has been a better demand for bills both from the clearing banks and from outside quarters, and even July bills have found an outlet. Credit conditions have also been more comfortable, and bond money is obtainable outside the clearing banks at ½ per cent.

*

The Bullion Market

AN interesting feature of the bullion market this week has been the absence of any premium in the price over the American shipping parity on every day except Monday. The bulk of the gold on offer has again been absorbed by arbitrageurs. On Wednesday the supply, which this week has come chiefly from hoards, was insufficient to meet the demand; and as the Exchange Account was unwilling to offer gold at a price which included no premium, in spite of the continued pressure against sterling, buyers had to be rationed, and only obtained some 30 per cent. of requirements.

Date	Gold			Silver price per oz. standard	
	Price per fine oz.	Prem. or Discount	Amt. dealt in £'000	Cash	Two Mths.
1939	s. d.	d.	£'000	d.	d.

* Above or below American shipping parity. This week's calculations are based on a temporary parity, in which the war risk rate is taken as 1s. 3d. per cent.
† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

Silver has been fairly firm. It will be recalled that during the last bear squeeze in February many speculators renewed their positions in the hope of recouping some of their losses. This raised the possibility of another squeeze about now; and though it has not materialised, there has been a certain amount of bear purchases arising out of the maturing of contracts, which has produced a firmer tone in the spot market.

replaced E.L. Table No. 6, and the rate of interest has been reduced from 3½ per cent. to 3 per cent.

The ordinary branch bonus is again 38s. per cent., calculated on the sum assured. Policyholders in the industrial branch receive the same allocation as in 1937, consisting of an addition to the sum assured payable in claims arising by death or maturity between April 2, 1940 and March 31 1941, equal to 2½ per cent. of the sum assured for policies of ten years' duration, increasing by ½ per cent. for each additional year up to a maximum of 10 per cent. Total assets increased from £15,645,000 to £16,446,000 and market values of securities on December 31st last were still in excess of book values. In addition to the investment reserve of £500,000, general reserve stands at

£100,000. Loans and mortgages increased from £5,303,000 to £5,625,000, of which £4,168,000 consists of mortgages on property, mainly in connection with the society's house purchase scheme. Among the investments, debenture stocks have increased from £1,796,000 to £2,050,000.

*

Atlas Assurance.—New sums assured by Atlas Assurance in 1938 showed considerable reduction from the 1937 record total of £4,536,000 to £4,043,000, but annuity consideration moneys increased from £454,000 to £667,000. The net rate of interest on the life assurance and annuity fund fell from £4 7s. 10d. per cent. to £4 3s. 2d. per cent. The last triennial distribution to policyholders from surplus was made on December 31, 1937, but an annual valuation of liabilities is made and the results are published in the report. Trading profits last year appear to have been satisfactory, and £40,000 has been applied to strengthen the reserves. In the miscellaneous branch, fire premiums amounted to £1,748,000, compared with £1,802,000 in the previous year, while accident premiums increased from £636,000 to £660,000. Marine premiums were slightly greater at £157,000 and there was a welcome reduction in first year's claims from £57,000 to £36,000. The underwriting results for the past two years are shown below:—

	1937	% of Pre-miums	1938	% of Pre-miums
Fire	174,713	9.7	168,858	9.7
Accident	51,039	8.0	53,327	8.1
Life	30,198	...	34,081	...
Marine	...	...	40,000	...
Charged to profit and loss	255,950		296,266	
Net trading surplus	192,547		207,761	
	63,403		88,505	

Total assets of the company and its subsidiaries amount to nearly £22 millions, and the general reserve stands at £2 millions. Stock Exchange securities, taken at cost or under, are in total below the market value of December 31st last, less accrued interest. Life assets amounted to £15,430,000, against £14,213,000 at the end of 1937. Loans account for £4,788,000 against £4,072,000, and British Government securities increased from £779,000 to £813,000. Foreign and Colonial Government securities, on the other hand, fell from £1,935,000 to £1,747,000. Debenture, preference and ordinary stocks each showed some expansion. The dividend is again 32 per cent. free of tax, and costs £176,000 compared with interest earnings, apart from interest on the life and annuity fund, of £120,000.

*

Royal Exchange Assurance.—New life assurances of Royal Exchange Assurance in 1938 amounted to £4,359,000, compared with £4,655,000 in 1937, while net consideration moneys increased from £183,000 to £355,000. The net rate of interest earned on the combined life and annuity funds fell by 3s. 10d. per cent. to £3 15s. 3d. per cent. In the fire branch, premium income was slightly smaller at £1,449,000, but this decrease was more than offset by an increase of £24,000 to £1,229,000 in accident premiums. There was a substantial reduction in marine premium

income from £861,000 to £728,000. The underwriting results for the last two years are given below:—

	1937	% of Pre-miums	1938	% of Pre-miums
Fire	176,939	12.2	158,415	10.9
Marine	Dr19,581	-2.3	Dr19,003	-2.6
Life	30,446	...	30,446	...
Accident	63,842	5.3	55,194	4.5
Annuity	11,174	...	11,174	...
Capital redempt'n	1,288	...	1,288	...
Trustee & executor	12,246	...	9,912	...
	276,374		247,416	
Charged to profit and loss	151,153		101,341	
Net trading surplus	125,221		146,075	

Apart from the usual reserves for unexpired risks and outstanding claims, additional reserves in the fire and accident departments amount to £900,000 and £400,000 respectively, each item having been increased by £100,000 during the year by transfers from profit and loss. The marine fund amounts to £957,000 (after transferring £150,000 from profit and loss) and is equal to 131 per cent. of the premium income of the year. Total assets increased from £23,928,000 to £24,962,000, of which £14,185,000, £2,384,000 and £8,393,000 is attributable to the life, annuity and general funds respectively. Stock Exchange securities have been taken at or below market values at December 31, 1938, less accrued interest. For the fifth successive year the dividend is maintained at 30 per cent. and costs £207,000, compared with net interest earnings of £208,000.

*

Eagle Star Insurance.—This company has for some years specialised in group schemes, which no doubt account in great part for the increase in new business in 1937 from £5,734,000 to £10,465,000. Last year the number of policies increased from 2,792 to 3,097, but sums assured fell slightly to £10,313,000. The net rate of interest on the life assurance and annuity fund was 2s. 11d. per cent. smaller at £4 1s. 3d. per cent. The quinquennial valuations of the liabilities and assets of the "Star" and the "Sceptre" closed funds were made on the same bases as on the previous occasion; from the former £58,348 has been carried to profit and loss in respect of the shareholders' proportion, but the transfer from the Sceptre, amounting to £13,207, is being carried to the 1939 accounts. High rates of bonus have again been declared by these funds, and a substantial margin exists between market and book values of their assets on December 31, 1938. In the fire branch, premiums declined from £819,000 to £808,000 and underwriting profits, although not unsatisfactory, were not so good as in the last few years. Accident premiums, at £104,000, were somewhat greater and employers' liability premiums increased from £210,000 to £311,000. Results in the motor branch showed improvement, although premium income fell by £24,000 to £1,607,000; the sum of £50,000 has been transferred to the motor account to strengthen the reserves. Marine premiums show little change at £275,000 and the results are again unprofitable. Premiums in the general branch expanded from £477,000 to £506,000. The underwriting results

of the past two years are given below:

	1937	% of Pre-miums	1938	% of Pre-miums
Fire	89,099	10.9	54,447	6.7
Accident	14,232	14.2	12,995	12.5
Employers' liability	1,447	0.7	900	0.3
General	102,072	21.4	94,973	18.6
Motor	Dr43,744	Dr2.7	18,402	1.1
Marine	...	...	99,548	...
Life	...	...	163,096	281,265
Charged to profit and loss	129,994		154,349	
	33,102		126,916	

Total assets of the company, including subsidiaries, decreased from £27,504,000 to £27,443,000, of which over £16½ millions relate to the life department. Of the life assets mortgages and loans are practically unchanged at £3,146,000; British Government securities increased from £3,899,000 to £4,255,000, but debenture stocks fell from £2,455,000 to £2,157,000. Preference and ordinary stocks at £2,233,000 and £1,836,000 each showed some increase on the previous year. The present market value of the assets is "considerably in excess" of book values. General reserve fund at £2½ millions remains unchanged but an investment reserve of £300,000 has been established by a transfer from contingency fund. The dividend is 30 per cent. and costs £257,000 compared with net interest earnings of £287,000.

*

Norwich Union Life Assurance.—This society is the largest of the purely life offices and its foreign business, together with its ownership of the share capital of Norwich Union Fire Insurance Society, makes it one of the most widely known of the insurance organisations. Last year new sums assured increased from £11,530,000 to £11,756,000. New business in this country increased by £501,000 to £8,078,000 and in the Dominions by £108,000 to £2,943,000, but a reduction of £383,000 to £734,000 in new assurances from foreign countries. Consideration moneys for annuities amount to £371,000 against £301,000 and the net rate of interest earned on the life assurance and annuity funds fell by 4s. 1d. per cent. to £4 2s. 5d. per cent. compared with a valuation rate of 2½ per cent. for assurances and 3 per cent. for annuities. Assets and liabilities in currencies other than sterling have been converted at market rates of exchange on December 31st last. Previously, foreign assets were converted at par of exchange up to the amount of the liabilities in each currency, and at current rates for surplus foreign assets. The revenue account shows reduction in the funds of £1,439,000 due to this adjustment. Total assets increased from £47,400,000 to £48,483,000, of which mortgages and loans of all kinds increased from £16,134,000 to £16,881,000. Mortgages on property (which have always been an outstanding feature of the society's investment policy) increased from £6,842,000 to £7,889,000 within the United Kingdom, but decreased from £5,138,000 to £4,902,000 outside this country. British Government securities, which amounted to £3½ millions at the end of 1937, are practically unchanged, but Colonial and foreign government securities fell from £4,154,000 to £3,729,000. Debenture stocks at £9,442,000, compare with £9,192,000, and preference stocks amount to £3,096,000 against £3,374,000.

Investment

Gilt-edged Disparities.—The conventional argument that short-dated stocks afford the best medium for the investor who wishes to protect his capital against risk of depreciation arising from political crisis or war is not working out according to exact plan. Among the significant movements of the gilt-edged market since March 10th—which saw the peak of political optimism before it was swept aside by the invasion of Czecho-Slovakia—none is more remarkable than the fall in $4\frac{1}{2}$ per cent. Conversion and the attendant rise in its yield from £1 18s. 9d. per cent. on March 10th to £3 12s. 3d. per cent. at the close of business on Wednesday this week. Analysis of the gilt-edged market into "shorts," medium dated stocks, and "longs," proves that the movement of this "ultra-short" is no isolated occurrence. The following table clearly shows that the relatively greater yield increases have been coupled with greater absolute price movements in the short-dated list:—

Stock	Redemption Date	March 10, 1939		April 19, 1939		Fall in price	Rise in Yield %
		Price	Redemption Yield %	Price	Redemption Yield %

(a) Flat yields.

(b) By annual instalments; taken to 1946.

Rarely have all sections of the gilt-edged market, from the shortest to the longest dated securities, stood on such a closely identical yield basis. To some extent, such disparities are due to special factors. Official requests to smaller discount houses regarding the eligibility of $4\frac{1}{2}$ per cent. Conversion may have played some part in its relative depreciation. But special factors of this sort have not been confined to the "shorts." For example, on several occasions this week selling of Funding $2\frac{1}{2}$ per cent. and Funding $2\frac{3}{4}$ per cent. has been reported, and it appears to be attributable to the operations of discount, or at least finance, houses. Such stocks, among the medium to long dated issues, would not appear to be ideal repositories for short-dated funds, and it is difficult to establish the extent to which this week's selling has been connected with the recent "requests" to the money market. Among the "shorts," again, the fear of a rise in the banks' lending rates has acted as a depressing influence, and the very fact that such stocks are employed as a first reserve of liquid assets may possibly make their reaction to cash selling the more marked. But the short-dated stocks are vulnerable to another factor, on the assumption of war or accelerated defence borrowing. If, by the time that the $4\frac{1}{2}$ per cent. Conversion issue becomes callable in 1940, the British Government is already compelled to borrow at high rates of interest at short term, the repayment of this and other short-dated stocks might well be postponed. Whether this is a valid argument, of course, depends on the efficacy of Treasury policy. If the authorities adopt the counsel of Mr Keynes, for example, they will expect to finance all their requirements at a maximum rate of $2\frac{1}{2}$ per cent., and the risk of deferred repayment of the "shorts," through the competition of new securities at higher rates, will not arise. The longer-dated stocks, though affected by

prevailing political uncertainty—War Loan is only fractionally above the minimum prices of last September—have been standing aside from this particular controversy. On any normal basis of calculation, it must be concluded that the losses in the short-dated list are unduly large, but in the past month normality too has been at a discount.

* * *

Mobilising U.S. Securities.—Wall Street, no less than London, is taking thought on the possible effect of war upon security dealings. No investor who recalls the highly successful mobilisation of American securities during the Great War will fail to appreciate the reports which are emerging, not always with exact consistency, but at least with the same general tenor, from Washington. Discussions have recently taken place between Treasury, R.F.C., S.E.C. and New York Stock Exchange officials on the question of maintaining open markets in time of war. The aspect of greatest immediate interest to the British investor is the mobilisation and marketing of British and French holdings of American securities in such a way that market disturbance would be avoided. Earlier reports that the R.F.C. itself would undertake this task appear to be unfounded, for the chairman, Mr Jesse Jones, has declared this week that the banks themselves could easily meet any demand for loans to finance sales of securities on foreign account. An alternative suggestion is that securities might be pledged against bank loans, in order to avoid both the risk of indiscriminate selling in Wall Street and also any necessity for U.S. Government loans or guarantees. It is not surprising that a cut-and-dried plan to deal with this problem of war-time finance has not been evolved in the mere space of a few days. The importance of the discussions for the security of individual investors in this country and for the financing of war-time operations, however, could not be over-rated.

* * *

War Risks and Securities.—In the course of their business, stockbrokers frequently hold securities belonging to their clients in readiness for sale, or awaiting instructions after purchase. Like other property, such securities are now uninsurable against war risks, and are accordingly only covered against peace-time loss or destruction. Some firms, it is understood, have consequently informed their clients that securities will only be held on the condition that the brokers are not to be held liable for war risks. Others feel that the matter is hardly suited to individual approach, and that some form of official ruling might first be made to members. The legal position is of some complexity, and direct authorities are hard to find. It appears, however, that a broker who holds his customer's securities may be regarded as a bailee for valuable consideration. If so, it follows that he is charged with the responsibility of taking the same degree of care of his clients' securities as any prudent person not engaged in the business of security dealings would regard as necessary. But even the most prudent person cannot insure against war risks to-day, and therefore it would appear that if the broker could prove that he took the most careful precautions which were available against war-time destruction, he could not be regarded as liable for damage. A notice to a client, declining responsibility for war risks, is an effective method of contracting out of the liability, but many brokers are naturally averse from giving any impression of deserting their clients' interest. The war risk problem for securities, of course, is less urgent than for shipping and real property, for even negotiable documents of title, like bearer bonds, can usually be duplicated, if reasonably conclusive evidence of destruction is supplied. But the issue of duplicates, even of registered security certificates

(which are merely supporting evidence of title), is subject to stringent safeguards and also to delay. One ultimate protection for the investor, which deserves consideration by company directors, would be provided by the transfer of stock registers or, alternatively, by setting up duplicate registers, in safe situations.

Company Notes

Cunard Setback.—Express Atlantic liner services are not self-supporting even in good years, and 1938 was not a good year. Cunard-White Star suffered a substantial reduction in passage money and freight receipts from £8,222,041 to £6,940,160 (a figure reminiscent of 1936). Unsettled European conditions were responsible for a fall in passenger business, and cargoes were restricted owing to the revision of duties under the Anglo-American Trade Agreement. Operating profits are reduced from £1,305,829 to £497,956. At this point, the accounts lose touch with economic realities, for no depreciation is provided against the fleet—an item which absorbed £976,280 in 1937. Hence the balance of profit, after meeting interest on the £1,750,000 first debenture stock, of £461,887 is not strictly comparable with the surplus of £146,352 for 1937. During the past year, both the "Queen Elizabeth" and the "Mauretania" were launched, and they are reflected in the increase in shipping assets from £12,962,149 to £14,979,474, while preparation for further payments on the new tonnage is indicated by a rise in cash holdings from £379,735 to £1,169,036. The company has received further sums of £2,500,000 on first debenture to finance the "Queen Elizabeth" and also £289,312 on income debenture (Class C) which is secured by second charge on the "Queen Elizabeth" and ranks *pari passu* with the Class A income debenture stock which is similarly secured on the "Queen Mary." The Cunard Steam Ship Company, which owns 62 per cent. of the Cunard-White Star capital (the remainder being held by Oceanic Steam Navigation) shows little change in dividends and gross shipping earnings, at £359,308 compared with £355,382 for 1937, and the balance of net profit, after providing for debenture service, amounts to £36,238 against £24,517. Preference shareholders, who have received no dividend since June 1931 will hardly discern much improvement in the near future. The introduction of the "Queen Elizabeth" should provide significant working economies, but the largest asset of Cunard Steam Ship—the ordinary shares in Cunard-White Star—seems fated to remain dividendless for some considerable time to come.

* * *

Hudson's Bay Report.—Results of the Hudson's Bay Company traditionally reflect changes in the prosperity of Canada. But this dependence is not absolute, for fur prices at the London auctions are an important factor—and, in fact, their decline in 1937 was the main cause of the setback recorded in that year. On the other hand, the volume of furs handled has been increased considerably by the company's developments (largely in the Persian lamb trade) in countries other than Canada—in Afghanistan, India, South America, South West Africa, and in Scandinavia. A further decline on total profits, however, was recorded in 1938-39. Canada continued to feel the effects of the general recession which set in late in 1937 and which continued during most of 1938, despite some recovery towards the end of the year. And the benefit of a doubled wheat crop, after the drought of 1937, was largely offset by a considerable decline in prices. Better crop conditions, moreover, did not protect the retail stores from a further reduction in profits. As for fur prices, the low levels of the end of 1937 prevailed during the first half of 1938, but an improving tendency was subsequently shown. The resulting movement of trading profits is shown, together with land revenues, in the following table.

Trading Account	Years ended January 31		
	1937	1938	1939
Total profits	383,731	326,520	267,853
Depreciation and expenses	157,036	157,211	157,350
Preference divs.*	368,360†	56,788	57,677
Ordinary shares:—			
Earned	...	112,521	52,826
Paid	...	61,605	51,402
Earned %	†	5.5	2.6
Paid %	...	3	2½
Carry forward	43,186‡	54,102	95,527
Land Account			
Total receipts	71,900	61,483	65,981
Taxes and expenses	38,624	35,262	35,171
Net profits	33,276	26,221	30,801
Dividend	...	24,922§	24,922§
Capital reserve fund	10,054	12,726	11,262
Carry forward	33,256	21,830	16,456

* Estimated. † 6½ years' dividend; earned for ordinary, assuming normal preference dividend, 8.9 per cent. ‡ After crediting £112,525 from insurance reserve. § 1 per cent., tax-free.

The reduction in dividend is not fully proportionate to the fall in profits, and the $2\frac{1}{2}$ per cent. dividend on trading account is covered with only a modest margin. A tax-free dividend of 1 per cent. is again paid on land account which, in contrast with the trading account, shows a small increase in receipts. But both the acreage sold and the average price declined, and the higher receipts may be due to increased cash collections. The upward movement in business activity on the American continent at the end of 1938 has lost its momentum; in the present international situation, the prospects for Hudson's Bay £1 shares, quoted at 18s. 9d. to yield £4 14s. gross on total trading and land distributions, can only be regarded as obscure.

* * *

Rubber Company Amalgamation.—When the first planters laid out their small rubber estates, their instincts were wise, according to the technical and economic precepts of the time. Cultivation was extensive, rather than intensive, and it often paid to move to jungle rather than await the recuperation of a hard-worked estate. The industry is still almost untouched by the modern tendency towards large-scale amalgamation. Yet the economic arguments in favour of larger scale and greater efficiency, as Mr H. J. Welch suggested at the Rubber Plantations Investment Trust meeting this week, have become more

BANK OF LONDON & SOUTH AMERICA LIMITED

conclusive. The crude cropping of earlier days has given way to scientific tapping. New methods of grafting and fertilising demand high skill and readily available capital. Management, moreover, has become more efficient to handle larger acreages. Mr Welch touched a sore spot when he declared that there are still too many small companies which are necessarily working under less economic conditions than their larger colleagues. And he might have added that the task of amalgamating such companies into larger units is not facilitated by the fact that company directors have a human pride and interest in the continued existence of their companies. The economic case for amalgamation, particularly of contiguous estates, is however very strong. So is the case for straight equity capitalisation of rubber companies, whose desirability Mr Welch also stressed on Wednesday. Again, few rubber shareholders give close attention to the question of amortisation of planted areas, although the working life of a rubber tree may extend for little more than a quarter of the working life of a Rand mine. If the rubber plantation industry would act on Mr Welch's suggestions, it would become more efficient, its finances would be more stable, and its securities more popular with the investor.

* * *

Central Mining.—The decline in Central Mining profits for 1938 from £708,863 to £444,920 is attributed in the report to two factors—the provision of depreciation to meet the fall in the value of the Corporation's holdings in certain developing mines in the Far East Rand and fewer opportunities for profitable share transactions. It is also stated that the total value of shares, investments and interests for which market prices are available is very substantially in excess of the book value and "only slightly below that of the previous year." The significance of this remark is obscure, for the balance sheet shows a fall of £411,084 in the book value of investments to £6,650,910 against £7,061,994. It is not, presumably, intended to suggest that the appreciation over book value has increased by some £400,000 in 1938—such a conclusion would be hard to reconcile with the known course of market values, from which the Central Mining group has not been immune. The figures, however, might be tentatively reconciled by assuming that the amount written off the Far Eastern Rand holdings has absorbed a very large sum. The three properties on the Far Eastern Rand referred to are presumably Holfontein (T.C.L.), which accomplished during the year 18,105 feet of development, only 900 feet of which were proved payable; Rietfontein (No. 11), where 16,308 feet of development failed to disclose any payable values; and Welgedacht, where 49,672 feet of development disclosed 3,855 feet classed as payable, though of a low value. The experience of these three properties (which, with Palmietkuil, form a continuous block) has proved effectively, and expensively, the eastward limit of the payable Witwatersrand deposits. The Corporation's profits for the year just cover the 10 per cent. dividend on the basis of which the £8 shares at 15 offer a yield of £5 16s. 6d. per cent.

* * *

Rio Tinto Position.—Rio Tinto shareholders may feel some gratification that, in a difficult year, the company has succeeded in obtaining total profits of £575,261, against £511,034 for 1937. These sterling figures, moreover, take no credit for substantial peseta proceeds to which no precise sterling value can at present be attributed. The total of pesetas, valued in the 1938 revenue account at

£3, is little changed from 1937 at Ptas. 15,159,025, and they include sales proceeds held in Spain in pesetas, pesetas receivable in exchange for sterling handed over (as a condition of being allowed to export ore), and the proceeds of requisitions for goods, copper, etc. The 1937 balance sheet showed that £38,768 had been received in respect of requisitions (quite apart from an unpaid balance which was taken into account at nominal value only), but the latest balance sheet shows only proceeds due under this head. The balance sheet at the end of 1937 showed peseta debts and balances due to the company of Ptas. 21,116,046; at the end of last year the total had increased to Ptas. 36,275,071. The net return on sales of produce is increased from £195,155 to £234,765, an apparently satisfactory result for a year in which both shipments of ore and copper prices declined, though physical shipments may be an imperfect guide to trading results in present circumstances. In 1937, it will be recalled, the quantity of ore shipped rose substantially, but revenues were lower. Dividends and interest received from the company's Rhodesian copper and other investments have provided an increased return of £340,464 against £315,851. After deducting a reduced amount for expenses and charges, there is a balance of £148,157 against £14,387, but after paying the normal preference dividend, the excess of profits is added to the carry-forward, which is increased to £451,820. Prospects for the current year are not clear, though before the next accounts it may be possible to put some value on the Ptas. 30 millions (excluding Ptas. 6,374,122 receivable, for which £150,156 is due to Spanish authorities) which are now valued at nominal sums. The fall in Rhokana profits for the half-year to December last, coupled with the laggard state of the metal market and tighter restriction, is not the best of indications of prospective investment income for Rio Tinto, though the former company's interim dividend has been maintained at 25 per cent., and the 62½ per cent. dividend paid for 1937-38 was covered with a margin of over 12 per cent. In the circumstances, it is difficult to justify a price of 11½ for Rio Tinto £5 ordinary shares, which have received no dividend since 1930.

* * *

De Beers Finance.—The payment of only six months' preference dividend and the course of the diamond market had prepared shareholders for a marked setback in De Beers' profits for 1938, but the reduction from £2,536,603 to £656,473 on diamond account is worse than was feared. A rise in investment revenue is largely offset by a fall in profits on sales of investments, and the net result is that total profits amount to £1,622,907, against £3,478,991. After charging mining and other expenses, and providing only £8,000 (against £220,000) for income tax, the balance earned for dividend is £629,588, compared with £2,264,260, which suffices to cover the half-year's preference dividend (£400,000) to June last and a transfer of £200,000 to reserve for expenditure on machinery and plant. Consolidated Diamond Mines of South-West Africa have fared little better, for total revenue is £343,760, against £949,057, and although only six months' preference dividend is paid, it is short-earned by £108,249. The outlook for the current year fortunately seems rather better. Since the latter part of 1938, some recovery in the diamond market has been apparent, and De Beers stands to gain by its acquisition of 2,500,000 further shares in Diamond Corporation last December. The Corporation is purchasing the production of important diamond producers outside the Union, and as it receives priority for its sales, De Beers will receive, through its holding in the Corporation, profits on a larger share of total diamond sales than hitherto. While it is readily understood that De Beers is the ultimate recipient of profits from the additional £1,000,000 capital raised by Diamond Trading Co. (the Diamond Corporation's subsidiary), the finance was not provided by De Beers direct. The 2,500,000 shares in the Diamond Corporation were bought from Anglo-American Investment and the Barnato Brothers interests for 125,000 De Beers deferred shares, £250,000 cash, and for £1,000,000 cash

(or deferred shares at the sellers' option) at the end of 1939. The sellers of the Corporation shares have in turn subscribed to the new capital of Diamond Trading Co. Fuller explanation of the effect of these transactions by the chairman would undoubtedly be welcomed by shareholders. There have been other important capital changes since the previous balance sheet, for in 1938 3,000,000 out of the 5,000,000 African Explosives and Industries ordinary shares were converted into 5½ per cent. preference shares, and 1,500,000 of these preference shares (two-thirds of which belonged to De Beers) were offered for sale last July. The result was a special profit of £999,545 arising from the higher book value of the African Explosives owing to the capital reorganisation, which has been added to general reserve. De Beers £2 10s. deferred shares stand at 6½.

The Week's Company Profits.—Rubber companies are again prominent in our usual analysis of profit and loss accounts, appearing on page 231. The table contains in all 64 companies for which comparable figures are available, whose profits, at £4,647,000, show a fall of 23 per cent from the total of £6,021,000 earned a year earlier. Aggregate net profits of the 833 companies reporting in 1939 to date amount to £103,169,000 against £113,704,000, a fall of 9 per cent. The week's results are discussed in preceding Notes and on page 224 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—In this issue reports of company meetings commence on page 217. Mr Ernest Hicks pointed out to *Norwich Union Life Insurance* members that the net rate earned was still £4 2s. 7d. per cent., while reserves were held on a basis assuming a net rate of only 2½ per cent. At the *Norwich Union Fire*

Insurance Society meeting, Mr Hicks remarked that all three departments of their business showed progress in income and some reduction in expense ratios. At the *Amalgamated Metal Corporation* meeting, Mr Henry Gardner warned his hearers against over-rating the effects of re-armament demand. Prices and turnover, he stressed, are more favourably influenced by normal industrial demand than by armaments. At the annual meeting of *Sunday Pictorial Newspapers*, Mr John Cowley discussed the effects of a decline in newspaper advertising and in income from investments in newsprint on the latest results. *British Enka* shareholders were informed by Mr A. D. Carmichael that the company's plant had been completely renovated and adjusted, and the benefit of lower costs was being felt in the current year. Sir Harry Goschen pointed out at the *Agricultural Mortgage Corporation* meeting that investments held on account of the Government Guarantee Fund and special reserve showed a market value over £100,000 above the balance-sheet figure. At the *Alliance Trust* meeting, Mr James Prain discussed conditions in the British Empire and the United States in relation to the Trust's activities. Mr H. J. Welch's speech at the *Rubber Plantations Investment Trust* meeting is discussed on page 209. At the *Champion Reef Gold Mines of India* meeting, the Hon. A. T. J. Fraser described the considerable progress that had been made with the scheme for deep development for which extra capital was raised three years ago. Reviewing the achievements of *King Line* in its jubilee year, Sir F. Vernon Thomson reported that all arrears of depreciation had now been made good. Sir Vernon detected a better tone in the freight markets. Mr John Cowley, discussing the control of *Daily Mirror Newspapers*, declared that no individual holding was sufficiently large to command a controlling interest. At the *Lanadron Rubber Estates* meeting, Mr Eric Macfadyen referred appreciatively to the policy of the Rubber Regulation Committee last year. At the *Ledbury Rubber Estates* meeting Mr Macfadyen demonstrated the effect of lower restriction releases on costs, which had risen by 1½d. per lb.

SETTLING DAYS

TICKET	ACCOUNT
APRIL 25	APRIL 27

LITTLE response to the hopefulness engendered by President Roosevelt's message survived the week-end, and even amid the dull weeks that the Stock Exchange has recently experienced, the past week is among the least interesting. Unlike industrials, gilt-edged began to lose ground from the very start, but a steadier trend became apparent in most sections on Wednesday and Thursday.

Gilt-edged were affected by the

general outlook for fixed-interest stocks, by institutional operations, and by the approach of Budget day. On Monday the dated stocks were the worst hit, and War Loan was notably firm. Weakness in the medium-dated stocks became more pronounced on Tuesday, and Defence 2½ per cent. fell no less than a full point to 93, but the short-dated stocks were more resistant. But in mid-week there was some institutional support for the "shorts," and bear-covering brought a steadier tone throughout. Among home corporations, dealing conditions were difficult, since prices required adjustment to gilt-edged levels. Australian issues became steadier after a fall on domestic political news. The

tone in New Zealand stocks also became steadier.

Movements in European bonds were diverse, and not as a rule significant. Japanese issues were helped temporarily by news of the City of Osaka repayment, but the improvement was short-lived, and the bonds gave way in mid-week. Chinese issues sagged. Brazilian bonds lost ground slightly, after making useful gains.

Home Rail stocks were among the most steady sections of the market, but quotations did not change greatly, and little business was passing. Debentures and preference stocks responded to the traffics. Transport "C," however, was

54 YEARS OF SERVICE

to borrowers. Large funds available for House Purchase in London, Home and Southern Counties. The C.E.B.S. plan is simple and straightforward and every transaction is carried out with promptness and efficiency.

54 YEARS OF SAFETY

for investors. C.E.B.S. £25 shares (or available from 5/- monthly) bear interest at 3½% per annum, tax free. Deposits 3% tax free. Interest starts at once, promptly paid each half-year. Prompt withdrawals without fees or loss, when required.

Church of England BUILDING SOCIETY

DON'T BE VAGUE —
ASK FOR
Haig

consistently weak, and lost further on consideration of Mr Pick's statements before the Railway Rates Tribunal. Argentine rails were dull, though fairly steady.

The industrial market remained extremely quiet, but prices showed a satisfactory steadiness, for over the week there was only a small decline on balance. Prices gained slightly on Monday, but tended later to weaken fractionally. Until the international situation is clarified, operators are marking time. Although a slightly firmer tendency was noticeable in mid-week, iron and steel shares were irregular, and diverse movements occurred in individual shares. Indian Iron reacted on the decision to pay no interim dividend. Engineering issues were also irregular and dull, and coal shares inactive. Quotations in electrical equipment issues moved narrowly, and were mixed in character. On Tuesday, Johnson & Phillips were firm in anticipation of the report. The behaviour of the motor group was satisfactory, and in mid-week, with a few exceptions, there was a marked recovery in the "heavies," with Albion in the lead. At first aircraft shares were quiet and steady, but tended to react towards mid-week. Tobacco shares were rather more active after the week-end but more than lost their gains as the week progressed. Brewery issues, at first narrowly uneven, became firmer on moderate support from provincial buyers, and were later held fractionally higher. Textile shares were rather featureless, small upward movements being practically reversed by late mid-week. In the stores group, Marks and Spencers were firm in a generally irregular market. Among the provisions issues, Cerebos moved upwards pending the final dividend announcement. Price movements in the miscellaneous group were diverse, General Refractories being particularly weak, but the net movement of most miscellaneous issues was small over the week.

Following President Roosevelt's message, oil shares improved on Monday. A slight setback then followed on Continental sales of the leaders, but was succeeded by a firmer tendency. In idle trading, rubber shares slowly drifted downwards. Sales were small, but there was no buying support. Tea shares also were neglected, and quotations—where changed—were downwards.

Apart from a mid-week rally, mining shares eased. Kaffirs were inactive, and Cape selling of the developing mines helped to depress prices at first. When these Cape sales ceased in late dealings on Wednesday, an additional fillip was given to a general tendency towards improvement. Paris was not an important factor. After a firm start, Rhodesian copper issues sagged and then rallied. Among other base-metal shares tin issues lost ground.

New York

WALL STREET, in common with other centres, is adopting a waiting attitude, and throughout the week the volume of trading was abnormally low. Price movements were somewhat varied, but the amount of change was moderate. Monday opened rather lower, and from sheer absence of support prices drifted slightly downwards, although there was no pressure to sell. This phase continued throughout Tuesday, but towards mid-week there was a cautious rally, helped by the news that the British Ambassador would shortly return to Berlin. Turnover, however, remained throughout on a small scale. No section of the market has been prominent, though one of the few really bright features of the week was a rise in American Telephone. Steel mill activity for the current week is estimated by *Iron Age* at 50.5 per cent. of capacity, against 51.5 per cent. a week ago.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

Industry and Trade

Rayon and Cotton.—On Thursday the Cotton Industry (Reorganisation) Bill reached the Committee stage in the House of Commons, and the rayon producers are striving hard to have the Bill amended in order to prevent their industry from passing under the control of cotton interests. The rayon industry has undoubtedly a strong case, for if the present Bill becomes law, there is no guarantee that its interests will not suffer as a result of price and redundancy schemes designed to assist the cotton industry. Something like 55-60 per cent. of the total domestic consumption of rayon yarn goes to the weaving industry, and although part of this is used by the silk, woollen and worsted and linen trades, the bulk of it is woven by the cotton industry and will therefore be covered by the Bill. The proportion of the home consumption of staple fibre processed by the cotton industry is even higher. An increasing proportion of rayon yarn—some two-thirds of the total—is made into pure rayon cloth. The rayon industry's claim to be regarded as a separate industry seems therefore justified. And there appear to be no solid technical reasons why the rayon industry should be linked up with the cotton industry against its will, in a scheme which, after all, is primarily designed to assist the reorganisation of the cotton trade. Unfortunately, the rayon industry, unlike the section of the cotton industry opposing the Bill, has been tardy in registering its complaints. But the industry's belated demand for provisions which will ensure that its interests are not disregarded by the cotton industry nevertheless deserves serious consideration, and the Bill should be modified accordingly, for as the rayon producers rightly point out in a statement of their case, "statutory powers require statutory safeguards against abuse."

Increase in Car Sales.—Sales of semi-luxury goods, such as private cars, are very sensitive to actual and expected changes in incomes. It is therefore of interest that the improvement in new registrations of cars taxed on horse power (mainly private cars) in Great Britain compared with the corresponding month a year earlier began as long ago as last November. Moreover, the improvement has been maintained in subsequent months, and in February—the latest month for which returns are

† Mainly private cars.

available—registrations showed an increase of no less than 23.5 per cent. over the figure for the corresponding month last year, an indication of the improvement in

confidence, reflected also in the estimates of the value of building plans passed and other business indicators. Registrations of goods vehicles, on the other hand, have continued to decline, and the figure for February was still 11.9 per cent. lower than a year ago. It will be interesting to see whether the improvement in private car sales will be maintained in coming months.

Condensed Milk Prices.—Since the middle of 1933 the imports from foreign countries into the United Kingdom of condensed milks and milk powder have been regulated by voluntary agreement between the home producers and the foreign suppliers. Under this arrangement imports from foreign countries have been progressively reduced to about half the level prevailing in 1932-33, and, at the same time, the selling prices of most types of condensed milk and milk powder have been standardised. That the level of prices in the home market is higher than those in other countries was shown by the agreement concluded in September last between the English Milk Marketing Board and the Central Milk Distributive Committee, in which it was laid down that the price of milk sold for manufacture into condensed milk should be 7 1/2 d. per gallon if the product was sold in the United Kingdom and should vary, for condensed milk exported from this country, with the cheese-milk price, within the limits of 6d. and 7 1/2 d. per gallon. The marketing arrangements for these products were, however, seriously disturbed at the end of last year by increased sales of Canadian and New Zealand processed milks, whose exports to this country were not included under the voluntary quota. In face of a sharp fall in selling prices, particularly of milk powder, the Central Milk Distributive Committee appealed to the Marketing Board for a reduction in the price of milk sold for condensing and Sir Stephen Demetriadi was appointed arbitrator. His award, made public last week, recommended that the price of milk sold for manufacture into condensed milk should remain unchanged, pending the result of the negotiations now being carried on for a new and more inclusive price agreement among the suppliers of condensed milk. This award will no doubt be a further stimulus to the English manufacturers to secure a new price agreement. But the British housewife, to whom condensed milk is the cheapest substitute for the expensive liquid milk, may well question the value of trade agreements which enable British manufacturers to export condensed milk to the tropics at lower prices than they charge in this country.

Wheat Discussions.—In January, 1939, the members of the Wheat Advisory Committee agreed that the calling of a world conference would be desirable and that export quotas and minimum wheat prices should be part of any proposed agreement. In February the Sub-Committee submitted a draft agreement to the Governments represented on the main Committee and the chief non-member wheat-producing countries. The replies are now being examined, and although no official announcement on the progress of the current discussions has yet been published, it is learned that the negotiations are proceeding favourably and that a basis for a world wheat conference will probably be found. The discussions have been stimulated by the fact (reported on page 636 of *The Economist* of March 25th) that the area sown to winter wheat in Europe shows a still further increase on the record of 1938, which is only partly counterbalanced by a fall in American sowings.

Overseas Trade in March.—In spite of a large increase in imports of wheat and of petroleum, the value of British imports in March fell by 8.1 per cent. when compared with March, 1938. The value of exports was well maintained, so that the excess of imports over exports

was again reduced. As the accompanying table shows, the adverse balance of trade on merchandise account in the first quarter of the current year was less than four-fifths of that in the corresponding period of 1938.

Overseas Trade by Commodities.—As mentioned in the preceding paragraph, the most striking features of the month's trade returns are the increase in imports of wheat and petroleum, compared with a year ago. Imports of wool and of jute also increased considerably, but imports of cotton were smaller. British exports of iron

Iron and steel manufactures	94	277	102
Machinery	12,136	14,884	12,749

and steel manufactures and of machinery declined in comparison with March, 1938, while exports of textile yarns and piece goods showed small increases. Exports of

iron and steel scrap, mainly in the form of ships sold for breaking-up, were larger than a year ago, although considerably smaller than in March, 1937.

Egyptian Yarn Prices Advance.—In August last year spinners of Egyptian cotton who are members of the price convention decided to grant a 5 per cent. rebate to all customers prepared to buy all their yarn from members of the convention. This movement was generally successful, but at the end of last year it was decided to give yarn users three months' notice of the withdrawal of this concession, the date fixed being April 15th. Towards the end of last week there was heavy buying of yarns as the cancellation of the rebate referred only to new orders. This week list rates have been restored to the level existing last August, and this action has meant virtually an advance of 5 per cent. Buyers are now disposed to resist the new prices as many customers are well covered, and there is some uncertainty as to the developments which may take place in the near future. The members of the price convention control about 83 per cent. of the spindles in this branch of the industry.

Rise in Prices.—There are indications that the upward trend in prices, which was interrupted by the increase in political tension since March, is beginning to reassert itself. Thus, *The Economist's* sensitive indices of the prices of primary products in this country and in the United States rose between March 29th and April 19th. The advance was very marked in the United States, for our latest index for that country has registered a record for the year. The improvement is, however, as yet scarcely noticeable in the more comprehensive indices for the two countries.

* This figure relates to April 15th.

† Monthly average.

The latest official index for France is slightly lower, but the figures for Italy and Germany show little change. Details of the constituent series of *The Economist* comprehensive index are given below:—

	(1927=100)	Sept. 18, 1931	Apr. 12, 1938	Mar. 29, 1939	Apr. 19, 1939
Cereals and meat...	64.5	87.0	70.0	71.2	71.2
Other foods	62.2	60.4	60.0	59.6	59.6
Textiles	43.7	55.3	53.0	53.3	53.3
Minerals	67.4	93.2	91.1	90.8	90.8
Miscellaneous	65.8	76.2	74.0	73.7	73.7
Complete index	60.4	74.0	69.1	69.2	69.2
1913 = 100	83.1	101.9	95.2	95.3	95.3
1924 = 100	52.2	64.0	59.8	59.8	59.8

A rise in the figures for cereals and meat and textiles was offset by a slight fall in the figures for other foods, minerals, and miscellaneous commodities.

INDUSTRIAL REPORTS

THIS week's industrial news is again fairly cheerful. The demand for coal, allowing for the seasonal reduction in purchases for heating purposes, remains on the upgrade; even in South Wales the position of the industry is steadily improving. The consumption of steel, assisted by defence orders and by the revival in merchant shipbuilding, also remains on the upgrade, but the shortage of scrap is already causing some difficulty here and there. Thus, our Cardiff correspondent reports that it has been found necessary temporarily to suspend operations at four furnaces in South Wales. The returns of the value of building plans passed in March by 142 local authorities show an increase of 12.2 per cent. over the figures for February and one of 8.3 per cent. over those for the corresponding month last year. Reports from the cotton trade suggest some expansion in the volume of new business.

to be reflected in a strong industrial demand. Prices all round remain firm.

Cardiff.—Business on the Cardiff coal market is a little more active. The strike in the United States has led to the purchase of a few cargoes for the West Indies, and there are inquiries for further prompt supplies. Moreover, the Egyptian State Railways have placed a contract for 300,000 tons, and other purchasers include the Finnish and Latvian Railways, the Algiers and Bona electricity works, and the Tunis tramways. But there has been no material improvement in shipments. Last week these totalled 281,800 tons, compared with 301,300 tons in the corresponding Easter week of last year. There has been an increase in stocks during the past week. There are no changes in current permit prices.

Iron and Steel

Sheffield.—Active conditions prevail in the iron and steel market, and business this week has been on a good scale. There is an insistent demand for basic pig iron, supplies of which are hardly more than equal to current requirements. Foundry iron is in rather better request, but forge continues rather weak. With increasing consumption full deliveries of hematite are being made, and new business is of more satisfactory proportions. There is little change in finished iron, though makers are receiving rather better orders for common bars.

There is good buying activity in basic steel billets, and the demand for small steel bars shows further improvement. Strip and wire rods are good features, and structural steel is in considerably better request. The output of steel in this district is being further increased, and more furnaces are being put into operation for the production of stainless and other special qualities.

The shortage of scrap supplies is causing some difficulty pending the arrival of imported material. Heavy basic steel scrap for melting is not easily obtainable in full quantities at up to 59s. per ton, and heavy foundry cast iron is keenly competed for at up to 80s. per ton.

Middlesbrough.—The demand for all classes of iron and steel continues to expand. An additional blast furnace is being lighted this week for the production of basic pig iron. Cleveland foundry pig iron continues in better request now that foundries are unable to obtain supplies of iron scrap. East Coast hematite is in rather better demand and deliveries under existing contracts are being speeded up.

Semi-finished steel is in good demand whilst most departments producing finished steel are busy; sheets and light sections are also in good request.

There is a distinct scarcity of heavy steel melting scrap, and it is now reported that a purchase of 50,000 tons has been made of American scrap for shipment to this country. The consumption of blast furnace coke is increasing but supplies are ample. New business in foreign ore is not heard of, but imports so far this month were about 50 per cent. higher than in the corresponding period of March.

Glasgow.—Steelmakers in the West of Scotland are now very heavily booked, the orders placed covering every class of material and including a substantial tonnage for shipbuilders. Full-time working is already assured for many months to come and buyers are placing orders for forward delivery. The demand is growing, not only for shipbuilding material, which is a very important item, but also for material for practically every branch of the engineering trade and for re-rollers. In addition to the shelter sheets, which are providing such a large amount of work for sheet makers here, demand from manufacturers for both black and galvanised sheets continues to expand and although working at high pressure sheet makers are finding difficulty in satisfying the requirements of users in regard to delivery. Re-rollers of steel bars are also busy this week and the tonnage booked again shows improvement. It is estimated that the value of the new Admiralty orders, which it was announced at the beginning of this week had been placed with Clyde shipbuilders, is in the region of £2½ millions.

Cardiff.—The scarcity of scrap is being felt severely in the steel industry, and although imports are expected at an early date it has been found necessary to suspend operations temporarily at four furnaces. The recent improvement in the tinplate trade is being maintained, and in the week ended April 8th production represented 59.69 per cent. of capacity under the pooling scheme. It is anticipated that the amalgamation of firms in the Llanelli area will lead to the installation of a more modern centralised plant, but no active steps have yet been taken in the direction of rationalisation by the Committee appointed some time ago to deal with the problem of small redundant works. The inland market continues to absorb the bulk of the products of all branches of the iron and steel industry in South Wales. Prices are nominally unchanged.

News from Abroad.—The revival on international steel markets, which began shortly before the Easter recess, has been maintained in spite of the adverse international situation. In some cases inquiries have further increased, but actual purchases of the individual consumers seldom involved large quantities. It appears that a great number of buyers who had postponed their coverings as long as possible, have recently been compelled to enter the market, although part of the purchases resulted from the desire to amplify stocks in case of an emergency. The fact that the buying movement has not gone as far as during the September crisis is widely regarded as proof that the markets are far from consolidated, whereas it is scarcely doubted that as soon as consumers have regained their faith in the price structure, an improvement of purchases over a longer period is very likely.

Germany has recently sold substantial quantities of heavy steel products, particularly to Roumania, Italy, Finland and Japan, on long-term contracts and has also booked prompt orders for Spain and Argentina. The Scandinavian countries showed interest especially in merchant bars, and the

British purchases of semi-products, wire rods and merchant bars have further increased. Inquiries for substantial quantities have recently been received from the Far East.

Although the Cartel has continued selling medium tonnages to several markets at reduced prices in order to curb competition, and although new reductions are intended, e.g. for the South American and South African markets, on the whole the rebates on official prices have further tended to decrease. Thus, the increase in the general price level during recent weeks is estimated at about 5s. (gold) per ton. American competition has recently been less keen on some markets but is still conspicuous in plates. The examination of the alleged American infringements of the export agreement with the Cartel through the London Comptoirs has not yet yielded tangible results, but in view of the improved situation sellers are less susceptible to outside competition than previously.

Textiles

Cotton (Manchester).—A rather better feeling has prevailed on the market, despite much uncertainty with regard to future developments. There has been a recovery in raw cotton prices from the low point reached a week ago. The United States Government are still experiencing much difficulty in finding a solution of the excessive supply problem. The several plans put forward appear to meet with strong opposition from interested parties.

Yarn inquiry has been of fair extent, but buying has not been active. Moderate weights have been put through in coarse American counts. At the end of last week there was heavy buying of Egyptian qualities previous to the withdrawal of the 5 per cent. rebate on prices. A persistent inquiry has been met with in piece goods, and in some directions a useful business has been done. Further buying has taken place for India in regular styles. Probably the best foreign outlet has been South America, and fairly free operations have occurred in printing and finishing qualities. Government contracts have again been placed, and many firms are busy on A.R.P. cloths. General prospects may be considered rather brighter and demand from day to day is sufficient to warrant the assumption that trade would improve quickly if the nervousness relating to political matters could be removed.

Jute (Dundee).—A sharp advance has taken place in raw jute prices during the past fortnight and the value of full group Daisee-2/3 has been raised to £28 15s. per ton for April/May shipment, while new crop, October/November, has been sold at £24 17s. 6d., compared with £23 2s. 6d. only a short time ago. Sellers are now making very few offers of either old or new crop. The reason in the case of the former is that supplies are decreasing and imports into Calcutta rapidly falling off, and new crop reports are unsatisfactory.

The imports of jute into Calcutta this season to April 15th were 8,575,000 bales, while Indian mills' purchases were 5,425,000 bales in the same period. The world requires about 10,000,000 bales this season, and there are fears that this quantity will not be yielded by the crop, which, however, was estimated last September at only 6,696,000

bales. This might have been a warning to consumers to secure their needs as early as possible, but it is understood that there are many who may run short before the new crop becomes available.

Common 8-lb. cops have been fairly freely sold at 2s. 7½d. and 8-lb. spools at 2s. 8½d., after 1d. less had been taken, and all other qualities are ¼d. to ½d. per lb. higher. Cloth has ruled quiet, but manufacturers are now quoting the higher rates of 3¼d. to 3½d. for 10-oz. 40-in. and 2½d. to 2½d. for 8-oz. Calcutta goods have also participated in the rise in prices.

THE COMMODITY MARKETS

PARTLY as a result of the relaxation of political tension, the downward trend in the prices of primary products was reversed in the past week. While the improvement was by no means general, it included the majority of commodities.

Wheat was slightly firmer and raw sugar continued its advance as supplies are now none too plentiful. Cotton prices recovered from the low level to which they had fallen last week, though the American Government's policy remains undefined. Jute was marked up sharply in price on fears of a shortage of supplies. Among the four principal base metals, copper showed a decline, but lead, spelter and tin, the latter on American purchases, were dearer than a week ago. Rubber prices are scarcely changed on the week.

In the United States, Moody's index of the prices of staple commodities (December 31, 1931 = 100) rose from 138.7 to 139.9 during the week ended last Wednesday.

Metals

Copper.—In London, the price of standard copper lost another 7s. 6d. to close on Wednesday at £41 15s. per ton. Demand remained well below normal, the pressure from the political crisis being accentuated by the disappointing March statistics. Consumption in the United States, at 50,486 short tons, was about 11,000 short tons below new production, and stocks rose in March by about 11,500 tons to 320,446 short tons. On the other hand, consumption outside the United States amounted to 107,580 tons, more than 5,000 tons larger than new production; and extra-U.S.A. stocks, at 185,945 short tons, while 1,700 short tons up on the month, are barely sufficient for two months' consumption. The outlook of copper, therefore, depends largely on the course of events in the United States. There the position has improved in the past fortnight owing to the two cuts in the domestic price, which is now 10.50 cents per lb.

Tin.—Some United States buying, which revealed immediately a shortage of current supplies, brought a rise in the London tin price, which closed on Wednesday at £218 10s. per ton. The outlook depends entirely on the maintenance of these purchases, which may be stimulated by the small American stocks. The I.T.C. is meeting on Thursday next to discuss the question of over-exports.

Lead and Spelter.—The cash price of lead gained 6s. 3d. and closed on Wednesday at £14 7s. 6d. per ton, while spelter closed 3s. 9d. higher at £13 7s. 6d. per ton. The turnover was very low throughout the week, but no forced selling was noticeable. According to the *Metallgesellschaft* the world lead smelter output fell from 132,047 metric tons in January to 119,330 metric tons in February, due chiefly to the shorter month. The Mexican strike forced the output in that country in February down to 4,668 metric tons, against the monthly average of last year of 17,256 tons.

Grains

THE Liverpool wheat market has remained steady throughout the week; in view of the large supplies of wheat in exporting countries, the political tension in Europe has not brought any appreciable rise in prices. American wheat and flour, aided by the export subsidy, is selling steadily to the Far East, as well as to Europe; the Department of Agriculture announced last week that between July 1, 1938, and April 1, 1939, some 79 million bushels of wheat and flour have been exported.

Other Foods

Provisions.—With higher prices in Continental supplying countries, egg prices rose further in London during the past week. The bacon market has been steady at the lower prices prevailing in the past ten days. Supplies of English and Scottish lambs have sold readily at Smithfield and prices at livestock markets for fat pigs are also firmly held.

Colonial Produce.—The sugar market continues to be affected by the political tension and prices for refined of all types were advanced by two stages of 1½d. per cwt. At the first tea auctions after the Easter holiday, a strong market developed for Indian and Ceylon grades, with an advance in prices.

Fruit and Vegetables.—Old potatoes maintain their prices, but more interest is now being shown in arrivals of the new crop. Trade in London has been good; English and Guernsey tomatoes are increasing in quantity and salads are in good demand.

Miscellaneous Commodities

Oils and Oilseeds.—Business in these markets is still restricted, but the tone remains steady. The offtake of oil cakes from the mills is poor and consequently crushers are in no hurry to buy. Refined cotton oil has further declined in price to £19 10s. per ton ex Hull, but supplies of soya bean oil are scarce and prices firm.

Rubber.—Little business has been transacted in the past week and price fluctuations, which left the closing price of standard sheet on the spot unchanged compared with last week, reflected changes in political feeling. The American consumption in March proved to be higher than had been expected and stocks declined by 11,600 tons to 219,800 tons.

COMPANY MEETINGS

THE ALLIANCE TRUST COMPANY, LIMITED

SATISFACTORY RESULTS OF DIFFICULT YEAR

DIVIDEND OF 25 PER CENT. MAINTAINED

MR JAMES PRAIN'S ADDRESS

The annual ordinary general meeting of The Alliance Trust Company, Limited, was held in the company's registered office, Meadow House, 64 Reform Street, Dundee, on Wednesday, April 19, 1939.

The chair was taken by Mr James Prain, and after formal evidence of the proper calling of the meeting had been submitted, the Secretary, Mr Alan L. Brown, read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—

REVENUE AND DIVIDEND

It is now my duty to submit for your approval the directors' report and accounts for the past year. The revenue statement shows an income from investments of £676,000, a figure which falls short of the amount collected in the previous year by £30,000, partly due to a diminution in our regular income but still more to a reduction in the amount of arrears paid up. In that year our income reflected a relatively high level of commercial prosperity in this country and the United States, a level which was not maintained throughout 1937 and the early months of 1938; in addition, as is stated in the directors' report, income of that year had the benefit of exceptional receipts of over £21,000 in settlement of accumulated arrears of dividends, windfalls which have not been repeated to the same extent this year. This is an uncertain form of revenue—the aftermath of depression years—and naturally the number of companies which have yet to deal with their arrears has grown less. The amount, therefore, which we may expect from such sources is not now an important figure. The result then is that there is available out of the year's revenue after payment of the prior charges a sum equal to 36.65 per cent. on the ordinary stock. This, I think, is satisfactory in the circumstances. The main interest of our stockholders lies in a dividend record free from severe fluctuations. If, therefore, in a year of less prosperous conditions we can recommend that last year's distribution of 25 per cent. on the ordinary stock be repeated, we have gone some way towards serving that interest, while the substantial surplus after payment of that dividend puts us in a strong position for the more difficult times that may lie ahead of us.

VALUATION OF INVESTMENTS

The past year may well be described as a year of crisis, and the conditions of crisis are still with us. The indices of market quotations of representative stock exchange securities show by the severity of their fluctuations a record of the hopes and fears we have all experienced and are still experiencing. We have made, as usual, a valuation of our investments at the close of the year on January 31st, the result of which shows that there was a depreciation at that date of 3.83 per cent. on the book value. Beyond recording the fact that at that particular point of time great uncertainty existed in all our minds as to the prospects for peace in the world, the valuation is on this occasion of no great interest, and is of little value to us to-day as a guide to the potential earning power of our investments. Since that date much has happened in the history of Europe. A valuation in the hopeful and buoyant markets of February and early March would have shown a very different result, but in the light of subsequent events of equally transitory interest.

INVESTMENT OUTLOOK

So much for the results of the past year. You will expect me no doubt to give you my views on the outlook for invested funds at the present time. We live in times when great changes, political or economic, happen overnight. I shall content myself, therefore, by outlining as briefly as possible the position as I see it to-day.

To-day our activities are largely confined to the British Empire and the United States. Outside of those areas, with few exceptions, the standards on which an investor must rely no longer exist. For various reasons, ranging from currency restrictions to dishonest appropriation of private property, capital is frightened away.

STIMULUS OF GOVERNMENT EXPENDITURE

In this country we are now in a state of emergency and tension. While it may be true that market quotations which reflect this state of affairs bear little relation to the intrinsic value of the securities themselves, they do point quite clearly to a lack of confidence which in the absence of any stimulus to trade from another quarter would quickly bring about a slump of considerable severity. There is, however, such a stimulus in the form of Government expenditure, which so long as it continues on the present scale will no doubt effectively counteract the absence of private enterprise. It has become evident that this encouragement to trade, whether in the direct form of defence expenditure, or more indirectly as in the shipping subsidy, now covers a wide field. The number of trades involved is large and the increased purchasing power in the communities directly benefiting will find its way into the consumer industries. The immediate outlook, therefore, is by no means one of stagnation but rather one of considerable industrial activity with the emphasis naturally on the iron, steel, and engineering industries. So far as one can take a view there seems ground for expecting that there will be no severe falling off in our income from investments in this country during the current year, subject, of course, to no major crisis arising. I do lay emphasis, however, on the shortness and provisional character of this view. When one looks further ahead, the problems which will arise either from a continuance or a termination of Government expenditure on a large scale, are sufficiently weighty to discourage any facile optimism.

POSITION IN UNITED STATES

In the United States the position seems to me to have changed greatly for the better during the past year. There has been a definite recovery in trade, and although it now shows signs of wavering, that appears to be the result of the unsettling effect of events in Europe rather than lack of confidence in the domestic situation. To observers here the relations between Government and business, which have done so much in recent years to hinder the expansion of trade, appear to be greatly improved. Evidence is not lacking of that improvement—notably in the recent compromise between the Government and one of the large public utility companies—a continuance of which would do much to remove the uncertainty which we have felt in recent years regarding the United States as a field of investment.

I have not attempted on this occasion to give you a detailed survey of present-day conditions, as they appear to me to be of a temporary and artificial nature. It seems likely that in the near future we shall have to adapt ourselves to an entirely new set of conditions, either a war economy or one based on disarmament, but a continuance of the present state of affairs with its vast expenditures and atmosphere of tension is surely not likely to be tolerated for any length of time by any form of society.

Before moving the adoption of the directors' report and accounts, I must once again express my appreciation of the services rendered by our staff here and by our agents in America during the past year.

I now beg formally to move that the directors' report and accounts be adopted and that final dividends be declared as therein recommended, viz.:—On £700,000 preference stock at the preferential rate of 4½ per cent. per annum; on £650,000 preference stock at the preferential rate of 4 per cent. per annum; on £750,000 preference stock at the preferential rate of 5 per cent. per annum; on £100,000 "A" preference stock at the preferential rate of

4 per cent. per annum; and on £1,050,000 ordinary stock at the rate of 14 per cent. actual, making 25 per cent. for the year, all subject to deduction of income tax.

The report and accounts were adopted, and resolutions declaring dividends, re-electing the retiring director, and appointing auditors were unanimously passed.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED

DIVIDEND OF 40 PER CENT.

HON. A. T. J. FRASER'S REVIEW

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 14th instant, in London.

The Hon. A. T. J. Fraser, D.S.O. (chairman of the company), said:—I think I may once more congratulate you on a very successful year. During the 12 months under review the mill crushed 159,580 tons for a recovery of 70,508 oz. of gold. The average of the ore milled was 9 dwt. and the recovery was no less than 98.24 per cent. Our gold sold at an average price of £7 2s. 2½d., or 2s. 10½d. higher than the previous year. The total income for the year was £483,921, and expenditure, including additional royalty to the Mysore Government, was £293,369, leaving a profit of £190,551, some £11,000 less than the previous year.

The amount standing at profit and loss, after taking in £14,380 from the last account, is £206,726, from which the following amounts must be deducted: £58,012 the interim dividend, £38,800 income tax and N.D.C. reserve, £10,000 written off machinery and plant, £8,000 off Heathcote shaft, and £3,000 transferred to insurance and contingency reserve. There is left a disposable balance of £88,913, some £8,300 less than last year.

From this sum a final dividend of 2s. 3d. per share has been paid (making 4s. in all), which leaves £14,326 to carry forward, practically identical with last year's figure. In thus reducing the total dividend for the year by 3d., or 2½ per cent., the directors were influenced not only by the reduction of £11,000 in the profit, but also by the increased effect of income tax and N.D.C. From 1940 onwards we shall feel the full effect of the new lease which we hold from the Mysore Government. This will cause our contribution under the royalty on profit clause to be half again as much as we are now paying. In a year such as this, when a dividend of 4s., or 40 per cent., is paid, our contribution to the Mysore Government would be approximately £24,000 instead of £16,000, which we pay this year.

PROGRESS OF DEEP DEVELOPMENT SCHEME

During the year very considerable progress has been made with the scheme for deep development, for which extra capital was raised three years ago. Gifford's shaft has been sunk to the required depth and practically all the underground work is finished. A considerable amount of the plant is on the mine; erection of this is commencing, and the remainder will shortly be shipped. The original estimate for shaft sinking, as well as machinery and plant, amounted to £226,000, but it is now calculated that the final figure will approximate £266,000, or £40,000 more than the original estimate.

It is easy to explain how this has come about. When the estimate was made in the spring of 1936 prices were very low, but it took nearly a year to get out details and specifications of this very special and largely novel type of plant, capable of hauling from a depth of 6,500 ft. By the time tenders were asked for the late boom was just starting and prices had risen considerably.

Development for the year has been very satisfactory. On our main producer, Glen's ore-shoot, development has chiefly been confined to opening up the 84th level and sinking winzes to the 85th. The 84th level gives a length of 900 ft., averaging over 38 in. 26½ dwt. The width and grade are fully up to former levels, but the length of the ore shoot is some 20 ft. shorter than at the 82nd. The winzes sunk from this level are 14 ft. shorter than at the deal of work has been done all the way from promising. A great level on the northern folds, and there is no doubt that to the 81st we are opening up a very considerable tonnage of ore in this area though definitely lower than the rich Glen's shoot.

Mr Sydney E. Taylor then gave the shareholders an extensive review of the technical progress at the mine.

The report and accounts were unanimously adopted, and resolutions were passed amending the articles of association in reference to the conversion of shares into stock and converting the 650,000 issued shares of the company into stock.

AGRICULTURAL MORTGAGE CORPORATION, LIMITED

DIFFICULT FARMING YEAR

The tenth ordinary general meeting of the Agricultural Mortgage Corporation, Limited, was held, on the 19th instant, at Stone House, Bishopsgate, E.C., Sir Harry Goschen, K.B.E. (the chairman), presiding.

The Chairman, after having expressed regret that they no longer had Sir Otto Niemeyer as a colleague on the board, in moving the adoption of the report and accounts said: During the year just ended we have granted further long-term loans of £473,522, bringing our grand total of loans up to £12,889,740, secured on first mortgage of 879,038 acres of land, together with the necessary farmhouses and buildings, valued in all at £20,269,022. In addition, loans of a further £174,491 have been approved by the directors and will be completed as soon as the necessary formalities have been complied with.

The total of loans granted under the Improvement of Land Acts has increased to £117,066. These loans are repayable by means of rent charges under the Absolute Order of the Minister of Agriculture and Fisheries of £8,388 per annum.

I am sorry to have to report that the improvement recorded last year in the payment of interest and repayment of principal has not been maintained, and there has been an increase in the total of our arrears. I think, however, that, having regard to the particular difficulties of the past year, we must regard the receipt of 92.6 per cent. of the total due, within seven days of the end of our financial year as not unsatisfactory.

DISAPPOINTING FARMING YEAR

The farming year of 1938 has been a difficult one for almost all producers and there have been very few cheerful features to offset the many disappointments. The dependence of agriculture on weather conditions was again strikingly illustrated, and farmers learned anew the old lesson that moisture is the vital factor which influences crop growth. Up to the beginning of August the year 1938 was exceptionally dry, particularly in the Eastern Counties. Grass keep was short for all classes of stock, and many farmers were compelled to feed full winter rations of concentrates through the early summer months. It was not until September that enough rain fell to revive the pastures to any great extent, and a general shortage of hay gave prospects of expensive winter feeding.

Farmers in general will have no regrets at the passing of 1938. They do, however, entertain new hopes for the future. The Government has pledged itself to find immediate means to aid the industry, and agriculturists are looking forward to a period of stable and remunerative prices such as would bring the industry back to prosperity.

THE ACCOUNTS

I should now like to direct your attention to the balance sheet and profit-and-loss account. Again this year we have had heavy special repayments of loans; £445,000 was accepted otherwise than as provided for in the mortgage contracts, and there is a small decrease in the balance of loans outstanding.

Owing to the international situation the prices of all Government stocks were very depressed at the date of the closing of our accounts, and it was therefore necessary to reserve a sum of £94,000 to write our other investments down to market price. This amount has been provided from general reserve and contingencies account. You will no doubt note that the investments held on account of the Government guarantee fund and special reserve show a market value over £100,000 above the figure at which they stand in the balance sheet.

We have continued our policy of granting new loans at the basic rate of interest of 4½ per cent., a rate actually lower than we are paying on our debenture stocks, and this, coupled with the fact that we still have large surplus funds temporarily invested in Government stocks and earning little more than 3½ per cent., has resulted in a further reduction in net earnings. After making provision for all bad and doubtful debts and setting aside a sum sufficient to cover and not received by the end of our financial year, in addition to reserving the considerable sum necessary to write down our other investments to market price, the amount available on profit and loss account is £3,974. Of this sum £2,664 has been transferred to special reserve, leaving a balance of £1,310 which the directors propose to carry forward.

The report and accounts were unanimously agreed to.

THE KING LINE, LIMITED

FIFTIETH YEAR'S TRADING

A JUBILEE BONUS

SIR VERNON THOMSON ON SHIPPING POSITION

The fiftieth annual general meeting of The King Line, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, E.C.

Sir F. Vernon Thomson, Bt., K.B.E. (Chairman of the company), presided.

The Secretary (Mr F. W. Matthews) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, the directors' report and accounts for the year 1938, the fiftieth year of the company's trading, having been circulated to the shareholders, you will, I hope, as customary, take them as read. (Agreed.)

As stated in the directors' report, several profitable voyage contracts entered into in 1937—which, it will be recalled, was an outstandingly good year for shipping—were not completed until 1938, and are accordingly included in this year's profits. These profits are thus largely an overflow from the better trading times of 1937. The year 1938 was not in itself a good year for tramp shipping.

The net profit of the King Line, Limited, for 1938, after providing for cost of Lloyd's Surveys, amounts to £193,017, to which has to be added £22,853 brought forward. The directors have applied the sum of £70,278, plus £13,222 surplus on the sale of an old steamer during the year, making together £83,500, to depreciation of the company's fleet, and have written £26,995 off the book value of investments.

ARREARS OF DEPRECIATION MADE GOOD

Shareholders will be interested to know that the arrears of depreciation upon their ships have now been made good. These arrears had accumulated during the periods of acute depression in the freight markets which were so pronounced during the years 1930-34, when it was not even possible to earn depreciation, let alone make profits.

An interim dividend of 4 per cent. was paid in October and the directors now recommend a final dividend of 4 per cent. less income tax, making 8 per cent. for the year ended December 31, 1938, and in addition a bonus of 5 per cent., less income tax, in order to mark the fiftieth anniversary of the company carrying forward the balance of £71,471. The company being now in a sound position, the directors thought it appropriate and due to the shareholders to celebrate its jubilee in this very modest way, more especially as no dividend was paid during the seven years 1930-36 inclusive.

The King Line, Limited, now own 9 motorships and 5 steamers of a total deadweight of 115,570 tons. The average age of the fleet is 13 years 8 months, and the average age of the motorships 10½ years. The whole stand in the company's books, after deducting depreciation, reserve fund, etc., at £2 15s. 7d. per ton deadweight. Their market value to-day in the aggregate considerably exceeds this. The company has no debenture or other indebtedness.

POSITION OF TRAMP SHIPPING

The economic position of British tramp shipping was much strengthened by the trade recovery and consequent improvement in world freight markets in 1936-37. This improvement unfortunately was short lived, as freights declined substantially during 1938. In the first quarter freight markets were on a remunerative basis, but trade gradually declined during the remainder of the year, freights becoming so unremunerative that tonnage had to be laid up. This company had four vessels laid up at the end of 1938. The volume of world trade in 1938 was nearly 9 per cent. less than that of 1937. Undoubtedly the uncertainty created by the threatening position internationally hampered trade seriously during the period under review.

In the absence of a revival of world trade, the outlook for a more permanent improvement in tramp shipping is not bright, but quite recently there has been a better tone and a broadening demand

in the freight markets. There are some indications that the general trend of world trade may be again on the up-grade, that is, wars and international complications apart. Our boats are well found, and even when laid up are kept in good condition, and are thus always in a position to participate immediately in any trade improvement.

GOVERNMENT ASSISTANCE

For some time the directors have been considering the acquisition of new tonnage, but hitherto have not felt justified in contracting at the present ruling prices as it was impossible at current rates of freight to employ vessels profitably on such a capital value. To meet the present position resulting from shipowners being unable to trade vessels remuneratively at to-day's building costs, H.M. Government are taking steps to bridge the difference to some extent. Although so far full details are not available, the broad lines indicate that this will have the desired effect of modernising the Mercantile Marine and increasing tonnage supplies in case of war.

As you are aware, proposals will shortly be submitted to Parliament for a measure of assistance to the shipping industry in the form of a subsidy. It is encouraging to the British Mercantile Marine to have this tangible evidence that they have the wholehearted support of the British Government. While details are not yet published, it is thought the subsidy proposals will incorporate a sliding scale based on a freight index, the idea being that in the event of much improved freight markets no subsidy would be payable.

I shall be glad to answer any questions to the best of my ability, and now have pleasure in moving: "That the report and accounts, as submitted, be received and adopted, and that a final dividend of 4 per cent. be declared and paid for the year ended December 31, 1938 (making with the interim dividend paid in October last 8 per cent. for the year) together with a jubilee bonus of 5 per cent., less income tax."

Mr George M. Dodd seconded the resolution.

A SHAREHOLDER'S CONGRATULATION

Mr A. Hunt said that it was a happy coincidence that their jubilee meeting should synchronise with the very pleasing condition of their affairs which the chairman had unfolded to them, a position so satisfactory that he was sure shareholders would all join in congratulating the directors on what had been achieved.

The chairman having thanked Mr Hunt on behalf of his colleagues and himself, the resolution was put to the meeting and was carried unanimously.

The chairman, in proposing the re-election of Mr George M. Dodd as a director, said that it had been his privilege to work in the service of the company with Mr Dodd as a colleague for over thirty years. Mr Dodd's great experience of chartering and of the management of tramp ships had been of inestimable value to the company. (Applause.)

The resolution was seconded by Mr Percy Cross and unanimously approved.

The auditors (Messrs James Brown and Sandeman) were re-appointed and the proceedings then terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

NORWICH UNION LIFE INSURANCE SOCIETY

RECORD NEW BUSINESS
ECONOMY OF MANAGEMENT

The 131st annual general meeting of the Norwich Union Life Insurance Society was held, on the 18th instant, at Norwich.

Mr Ernest Hicks (the president) said that it was a matter of great satisfaction to the directors that in a particularly difficult year such as was 1938 they were able to submit a report which showed continued progress. Indeed, in the matter of new business they had again established a record. In the accounts they had converted all moneys into sterling at the rates of exchange ruling on December 31st last. The total funds were increased by £1,073,405, and now stood at £48,123,716. The net amount of new business, after deduction of re-assurances, was £11,755,700, and of this 69 per cent. was obtained from the United Kingdom (an increase of £500,772 over their previous record), 25 per cent. from the Dominions, and only 6 per cent. from foreign countries. This was the result of a deliberate policy on the part of the board, but nevertheless the necessary cutting down of business from foreign countries was a matter of regret. This Society might claim to have been one of the pioneers of life assurance in the foreign field, but the continued growth of a narrow spirit of nationalism had made it extremely difficult for a British mutual office to carry on life business in many countries. The only countries in which the Society now transacted business outside the Empire were France, Belgium and the Argentine. It would be folly to continue operations in countries where, owing to restrictions, business could not be carried on with fairness to the interests of their other policyholders.

The board had always insisted upon economy of management as being one of the essentials for the proper conduct of a mutual life society, and they were glad to be able to report, particularly in these times, a further reduction in the expense ratio to 14.28 per cent. This represented a fall of .37 per cent. in the year, and, when applied to their premium income of £4,551,477, meant a cash saving of no less than £16,840.

Their mortality experience had again been extraordinarily favourable, and indeed represented a record for the Society.

They had been able during the year to put out no less than £2,000,000 in carefully chosen mortgages, and as a further protection against depreciation the directors had increased their holding of real property.

RATE OF INTEREST EARNED

During the year there had been some increase in the gross rate of interest at which new money could be invested, but unfortunately this had been accompanied by an increase in the rate of income tax, while as investments made some years ago fell in it was impossible to reinvest the money at the old rates. The result had been a fall of 3s. 5d. per cent. in the net rate of interest earned on their total funds. This net rate was still, however, £4 2s. 7d. per cent., which in present circumstances was a very satisfactory one, and he would again remind members that the Society's reserves were held on the basis which assumed a net earned rate of only 2½ per cent. The past year had seen a further considerable fall in the market values of Stock Exchange securities, but, owing to the conservative policy adopted by the board in past years, the margin in their favour between the present market values of their Stock Exchange securities and the values at which they appeared in the balance sheet was a very considerable one.

The new business figures did not include the considerable business which the Society did, and had done for many years in respect of special staff pension schemes. They had a highly skilled department which confined its attentions entirely to this particular aspect of insurance work. This Society, in conjunction with their associated office, the Norwich Union Fire, catered for every class of insurance business. So far as life insurance was concerned, many people during these anxious months must have considered carefully the amounts for which they were insured, and he ventured to suggest that in many cases such amounts must have been found to be not entirely adequate. He would remind members that the ordinary policies issued by this mutual society were in all normal cases entirely unconditional.

A life policy was the only satisfactory way of making proper provision for the increasingly heavy burden of death duties. He hoped that the time might come when the Government would be able to make the concession that policies effected for the purpose of paying death duties should not be aggregated, so as to avoid raising the rate of duty payable in respect of the estate as a whole.

The report was unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED

PROGRESS IN ALL DEPARTMENTS
EFFICIENCY OF THE ORGANISATION

The annual general meeting of the Norwich Union Fire Insurance Society, Limited, was held, on the 17th instant, at Norwich.

Mr Ernest Hicks (the Chairman) said that unfortunately he had to address the members at a time when international affairs were still in a most unsettled condition. The year 1938 was overshadowed from the start by events leading up to the crisis in the autumn, so that the business world had had many distractions little conducive to the progress and development of commerce and industry which provided their opportunity for service. Many of their hopes therefore had been unrealisable, but, having regard to the circumstances with which they had to contend, the results now submitted might be considered satisfactory.

FIRE ACCOUNT

Fire business gave them a premium income of £1,789,270, an increase of £45,465 over the preceding year. The results, as was almost to be expected, were not so profitable as in that period, and the profit was £90,699, or 5.07 per cent. as compared with 9.71 per cent. earned in 1937, a year of revived national prosperity.

ACCIDENT ACCOUNT

When compared with last year, there was an increase in premiums and a larger percentage of profit in the Accident Account, reflecting great credit on the underwriters and their cautious policy, which had made possible such an achievement in the face of the well-known and increasing difficulties with which they had had to contend. The increased premium came very largely from the home field, which was profitable. Their foreign business in this branch presented a difficult problem, particularly motor business. They had, therefore, continued their efforts to develop profitable classes whilst limiting the less desirable, and they believed that the various foreign accounts would have an improving tendency during the current year.

A most gratifying feature was the consistent progress in volume, and general good results of the various home accident departments, in which they catered for almost every contingency which could be guarded against by insurance. The Accident Account as a whole had a premium income of £1,556,031, which was £68,990 more than in the previous year, whilst the profit amounted to £105,409, or 6.78 per cent., as compared with 5.91 per cent. in 1937.

The Marine Account had a premium income of £254,746, an increase of £29,251, and the year 1936, which they had closed, showed a profit.

THE ASSETS

The total assets of the Society now amounted to £6,191,323, an increase of £185,372 over the preceding year. Their Stock Exchange securities had been taken year by year "at or under market value," which in effect had meant that there had been an undisclosed appreciation, which a few years ago ran into big figures. Whilst a substantial amount remained, this difference had diminished in recent years, but on the other hand, their United States investments were still maintained at \$4.86 to the £, whereas the rate at December 31st last was \$4.64, which meant that the sterling value was correspondingly greater.

All three departments of their business showed progress in income and some diminution in the ratio of expenses. The total premiums now amounted to £3,600,047, and the increase in the year aggregated £143,706. In view of world conditions, he felt that this was creditable to the management, but he was sure that their organisation would be capable of obtaining far better results in this direction if world conditions were favourable to the extension of trade, both domestic and international.

Naturally, in view of conditions abroad, their attentions had been specially directed to the home field. With their old connections and widespread organisation they had built up a valuable business which had been making further headway in recent years. This they hoped to see continued, and they never allowed any opportunity to pass for perfecting the service to their insured. In recent times the demand for a most comprehensive technical service had increased enormously, and continued to do so. This service they were continually striving to maintain in the highest state of efficiency so that they might be able to answer every call of the insuring public.

The report and accounts were unanimously adopted.

AMALGAMATED METAL CORPORATION, LIMITED

DIVIDEND OF 7 PER CENT. MAINTAINED

MR HENRY GARDNER'S SPEECH

The tenth ordinary general meeting of the Amalgamated Metal Corporation, Limited, was held, on the 14th instant, at the Chartered Insurance Institute, 20 Aldermanbury, E.C.

Mr Henry Gardner (deputy chairman) presided.

The Chairman said:—Gentlemen, you will, I am sure, regret the absence of your chairman, Mr Sale, and more particularly because the reason is illness. I am happy to say, however, that he is making a good recovery and hopes to be with us again within the next two or three weeks.

We have to deplore the death of Mr J. J. Warren, a member of our board and of that of Henry Gardner and Company. He was the president of the Consolidated Mining and Smelting Company of Canada, Limited, with which company our relations have been very close and friendly for many years. Mr Warren was a loyal friend and a shrewd adviser, and we shall greatly miss him.

The report and accounts having been in your hands for some time, I will, with your permission, take them as read.

The directors' report gives you full information regarding market prices, investments, profits, and the proposed distribution. The accounts give also the corresponding figures for the previous year, so that it is scarcely necessary for me to comment in detail. The chief alteration to note is the change over from cash to stocks. During the year opportunities offered for carrying transactions on the metal and rubber exchanges, and of these we took advantage. The margins were profitable but not large.

You will no doubt notice in this report, as in previous reports, that our market risks are negligible. This is our considered policy.

Whilst on the subject of the accounts I would add a word, not for experts but for those who are less accustomed to analysing figures. Those of the Amalgamated Metal Corporation, which is a holding company, naturally contain little information. That company merely distributes what it receives from its constituent companies, and the dividend depends entirely on those receipts—that is, on the dividends paid by the constituent companies. It is therefore to the consolidated balance sheet of the constituent companies that you should look for the most important information and for those facts which would enable you to arrive at the value of your investment.

Before turning to more general topics, there are one or two subjects of particular interest to which I would like to refer.

EXPANSION ON TECHNICAL SIDE

The changes in the investment group have not been important. The most notable expansion in our business is on the technical side. Our technical companies are Huntington, Heberlein and Company, Limited, and the British (Non-Ferrous) Mining Corporation, Limited; the former are chemical and metallurgical engineers and the latter are primarily engaged in managing mining companies. Their activities are greatly increasing in their ordinary field, and, in addition, a new process known as the sink and float process, of which we think highly, has been developed. It is now past the experimental stage, and the first plant on a commercial scale has treated 40,000-50,000 tons of lead-zinc ore, has eliminated 55 per cent. of the gangue at very low cost, and the losses of the metals contained have been negligible, so that the total recovery has shown a very marked improvement. The process, whilst not of universal, is nevertheless of wide application, and will in many instances very greatly increase recoveries and reduce costs. Sales of plant have already begun on a compounded royalty basis and we have many inquiries.

The Greenside Mine, to which the chairman referred last year, has been put into production on a preliminary scale and is an interesting development of base-metal mining in the United Kingdom.

The political and financial events of the past 12 months need not be discussed in detail because most of them will be only too fresh in your memory. Suffice it to say that for your board and for the management it has been a period of difficulty and uncertainty. That the board is able to recommend the repetition of a dividend of 7 per cent. is, therefore, as gratifying to them as, no doubt, it is to you, and all the more because it can be paid without trenching upon our reserves or upon our handsome carry-forward.

RE-ARMAMENT AND METALS

I must now turn to wider subjects. At the beginning of the year I was inclined to a moderate optimism. The expected industrial

revival in the United States had begun and appeared likely to continue, and even recent events may perhaps not stop it. If this is so, there will be favourable reactions in the rest of the world.

Those not closely in touch with the industry are, I think, apt to overrate the effect of the demands for re-armament on the non-ferrous metals. Whilst this demand has certainly done much to keep up the activity of our industry during the last year, our experience shows that prices and turnover are more favourably influenced by demand for normal industrial purposes than for re-armament. The state of uncertainty that makes re-armament a necessity kills much enterprise and probably cancels more orders than it creates.

Of the four metals with which we are principally concerned three are under control. The tin restriction scheme is the most complete, and the producers of copper and lead have taken steps to regulate production in accordance with the requirements of the market. In all three cases the objective of these schemes is to provide the consumer with sufficient supplies at a reasonable price to avoid the mining, smelting, and distribution of wasting assets at a loss, and to prevent heavy stocks from accumulating and weighing on the market. The prices at which these schemes aim may be considered reasonable and no attempt has been made, or is likely to be made, to exploit buyers. There is no arrangement covering spelter at the present moment, but hopes are entertained that an agreement may ultimately be reached.

RUBBER

Another commodity in which we are vitally interested is rubber, which again is controlled. Difficult conditions faced the Control Committee throughout 1938.

The 90 per cent. rate of release ruling at the end of 1937 produced a heavy increase in world stocks, which reached some 565,000 tons last April. The Control Committee took increasingly drastic action to check this, and by the end of 1938 the quota had been brought back to only 45 per cent. Stocks declined by the end of 1938 to some 457,000 tons, and the Committee's action was considerably helped by a welcome rally in the U.S.A. rate of consumption, which had fallen to very low levels in the first half of the year.

The export quota is now at 50 per cent. for the first half of this year, and, if world consumption can be maintained at its present rate, a still further decline in the stock figure is anticipated.

Naturally the unsettled state of world affairs has seriously interfered with market activity. Prices fluctuated rather widely: 1938 opened at about 7½d. and dropped to 5d. in March, since when the price level has gained ground, and a little over 8d. was established early this year.

It is perhaps a satisfactory feature that, in spite of the latest crisis, the market has kept round the 8d. basis. This steadiness can be attributed to a sound market position based on a favourable statistical situation.

What the future has in store for us it is impossible to forecast, but the metals are part of the vital necessities of modern civilisation, whether in peace or war, and we have a first-class organisation and a very strong financial position. It is certain that the stocks in the hands of consumers are small and that any improvement in the general political conditions would be followed quickly by a buying movement.

I must conclude with a tribute to our staff, to whose efforts so much is due during the difficult times through which we have been and are indeed still passing. We give our warm thanks to every member of the staff, whether in the constituent or subsidiary companies.

I now move the following resolution:—"That the directors' report, balance sheet and profit and loss account for the year to March 31, 1939, as now presented, be and are hereby approved and adopted and that a dividend of 7 per cent., payable less tax, in respect of the year to March 31, 1939, upon the ordinary shares of the Corporation be and is hereby declared payable on April 18, 1939, to the members now on the register."

Captain Oliver Lyttelton, D.S.O., M.C., seconded the resolution, which, in the absence of question or comment, was put to the meeting and carried unanimously.

The retiring directors, Sir George E. Leon, Bt., Mr William Mure, Mr William Murray, the Hon. R. M. P. Preston and Mr R. C. Stanley, were re-elected, and Messrs Deloitte, Plender, Griffiths and Company having been re-appointed auditors, the proceedings terminated.

DAILY MIRROR NEWSPAPERS, LIMITED

MR JOHN COWLEY'S REVIEW

The nineteenth ordinary general meeting of the Daily Mirror Newspapers, Limited, was held, on the 20th instant, in London, Mr John Cowley (Chairman of the Company) presiding.

The Chairman said: The profit of your company for the year ended February 28th last amounted to £313,559 14s. 11d. From this sum we have placed £20,000 to reserve account and allocated £10,000 as a provision for pensions. We propose to pay a final dividend of 7½ per cent., making a total payment on the ordinary shares of 15 per cent. for the year.

Owing to the world financial depression, your company's investments, which are many, have suffered a serious depreciation in value and our income from this source has been reduced. However, the earnings of the *Daily Mirror* newspaper itself have been maintained, despite dearer newsprint, during the year under review.

Each year, for several years past, at our meetings, I have made reference to the newsprint industry.

These references have been made for three reasons. The first because paper is the largest item of expenditure in the production of a national newspaper, the second because of the question of security of supplies and safeguarding of a proper price, and the third because your company has big holdings in two large paper mills—Messrs Albert E. Reed and Company in England and the Anglo-Canadian Paper Mills in Quebec.

NEWSPRINT CONSUMPTION

At our meeting a year ago I spoke of the big decrease in the consumption of newsprint. There has been so great a fall in the demand that some mills in Canada are producing but little more than fifty per cent. of their capacity. On this basis few newsprint mills in that country are able to earn dividends or even meet their first charges. I stress the position of the newsprint industry in Canada because of your company's holdings in the Anglo-Canadian Pulp and Paper Mills, Limited. In that company we have a very large financial interest comprising debentures, preference and common shares. Despite the abnormal conditions prevailing in the industry that company has been fortunate so far in being enabled to meet its debenture interest and sinking fund obligations. I regret to say, however, that if there is no rapid increase in the demand for newsprint, the Anglo-Canadian company may be faced with a position which will jeopardise the payment of its full debenture interest.

NO CANVASSING

Shareholders' money continues to be squandered by certain national newspapers in their endeavours to increase circulation figures.

The management of the *Daily Mirror* does not resort to this means of securing new readers. The motto of your paper is "No canvassing, no free gifts." As I mentioned a year ago, this policy has paid your company and we have a 100 per cent. goodwill of every newsagent in the country as a result.

A newspaper bought on its merits is worth possibly five times as much to an advertiser as a newspaper which is purchased as the result of having been canvassed. Advertisers know this, and it is one of the chief reasons why the *Daily Mirror* carries an increasing volume of advertisements at a time when business conditions generally are not good. Our motto, "No Canvassing. No Free Gifts," has earned for the *Daily Mirror* the goodwill of advertisers and newsagents. This policy pays us. It pays the advertiser and it pays the newsagent.

During the year your directors have made what they consider to be a sound investment. Although for some years, several of the London morning papers have had complete printing plants in Manchester, the *Daily Mirror* has been satisfied with just an additional printing establishment in London necessitated by additional pages and increasing sales.

However, your directors considered it wise to safeguard the interests of the business by adding to this plant all the equipment necessary for producing your newspaper from start to finish: in effect, an independent unit has been created. In order to accommodate this plant two extra floors have been added to our Clerkenwell premises. The total cost of this safeguard will be over £100,000. The buildings at Geraldine House and Back Hill are now so equipped that both the *Daily Mirror* and the *Sunday Pictorial*, which we print under contract, can be completely produced and published at either establishment. The question of arranging printing facilities outside London has not been overlooked.

The report and accounts were adopted.

SUNDAY PICTORIAL NEWSPAPERS (1920), LIMITED

A DIFFICULT YEAR

The nineteenth ordinary general meeting was held, on the 18th instant, in London.

Mr John Cowley, who presided, said: The profit for the year ended February 28, 1939, after providing for income tax, national defence contribution, working, office and other expenses, contingencies, etc., amounted to £155,726 6s. 11d., which is £63,156 less than the profit of the previous year. We recommend the payment of a final dividend of 3½ per cent., which will make a total dividend of 10 per cent. on the ordinary shares.

The reserve account has been made up to £320,000 by the addition of £20,000, and the addition of £5,000 to the provision for pensions brings this account up to £70,000. Similar provisions have been made for a good many years.

The item creditors, surplus on sale of investments and reserve for contingencies, is down by £39,070 at £495,561 3s. 7d. This reflects a real reduction in the amount we owed at the date of the balance sheet, the reserves included being higher.

VALUE OF INVESTMENTS

Investments at cost or under figure at £2,282,372 14s. 1d. are down by £39,611. The difference is caused mainly through the redemption of part of our holding of Anglo-Canadian Pulp and Paper Mills, Ltd., debentures. The effect of this redemption is reflected in the improved cash position. You will notice a foot-note on the balance sheet regarding the value of our investments. Last year at our meeting I made reference to the drop in the market value of our holdings after the date of the balance sheet, and mentioned the possibility of having to utilise part of our reserves to write down our investments if prices did not recover. You will therefore not be altogether surprised at the necessity for the foot-note on the balance sheet to which I have called your attention.

A year ago, after I had given a brief review of the previous year's business, I expressed the hope that the year 1938 would bring a clearer political atmosphere and with it a restoration of confidence which would reflect itself in better trade and improved newspaper advertising. That hope, I regret to say, was not fulfilled. Following the Austrian crisis in March last year, there was no return of confidence during the summer. On the contrary, the lack of confidence was further increased in September, when events, in connection with the Sudetenland, came to a head. This further shock, coming upon an already depressed world, was devastating in its effect upon business generally, and inevitably newspaper advertising suffered severely. Also, your company, as the holder of investments in the newspaper and newsprint industries, has suffered a reduced income from these sources. The effect of these factors is, of course, shown in the accounts you have before you.

EFFECTS OF UNREST

Since the close of our last financial year, February 28, a further shock was administered to the world by the invasion of Czechoslovakia and Memel, followed later by the occupation of Albania. What the effects of these latest German and Italian moves will be I will not venture to predict, but it is obvious that until there is a return to a better feeling, and contentment on the Continent of Europe, there cannot be that sense of security which would enable trade to make headway, and lead to the restoration of prosperity. It is a little early yet to envisage what will be the outcome of the call for peace made by President Roosevelt.

Last year I made reference to the company's interest in the Canadian newsprint industry. We have, as you know, considerable financial interests in Messrs. Albert E. Reed and Company in England and the Anglo-Canadian Pulp and Paper Mills, Limited, in Canada. While the Reed business has suffered in its earnings, consequent upon the depression referred to, the Anglo-Canadian Company has suffered to a greater degree. In common with other Canadian newsprint companies, it has been adversely affected by the depression which prevails in America, but, in addition to this, the temporary financial embarrassment of one of the largest consumers of newsprint in the United States has added further to the difficulties of the Anglo-Canadian Company.

However, there is a bright side to the gloomiest conditions. You have in the *Sunday Pictorial* an excellent property, capable of big expansion in sales and advertisement revenue if only world conditions sufficiently improve to enable business to go ahead in a normal way. When better conditions prevail, you will, I hope, find the improvement reflected in the accounts of your company.

The report and accounts were unanimously adopted.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED

DIVIDEND OF 10 PER CENT.

The thirtieth ordinary general meeting of the Rubber Plantations Investment Trust, Limited, was held, on the 19th instant, at 19 Fenchurch Street, London.

Mr H. J. Welch (the chairman) said that notwithstanding that the period since their last meeting had been one of continual international anxiety, advantage had been taken of low prices to increase the Trust's investments in rubber and tea shares and also to sell relatively higher-priced or poorer quality shares and re-invest the proceeds in more promising securities. The result had been to improve the intrinsic value of their investments and their dividend-earning capacity, their main object being to ensure the safety of capital and to increase their revenue-earning capacity.

With the sale of their tea plantations to the Sumatra Tea Estates, Limited, the Trust had ceased to be the direct owner of plantations and, except for undeveloped lands standing in the balance sheet at £1, all its investments now consisted of debentures, shares or other securities. Of the total book cost of £3,318,396 of investments, nearly 54 per cent. of the 268 holdings was invested within the British Empire and 45 per cent. within the Netherlands East Indies; 54 per cent. was employed in rubber, 29 per cent. in tea and 12 per cent. was in cash or invested in banks and other securities. Of the total, 94 per cent. was in ordinary shares or stock.

VALUATION OF INVESTMENTS

The valuation of their investments at December 31st last amounted to £3,357,404 and showed an appreciation over book cost of £39,008. In these days too much importance was not to be placed upon a valuation, especially of plantation shares, at any particular date, but they had brought their valuation up to a few days ago, and that showed a depreciation on book cost of £166,393, which, of course, was amply covered by their reserves.

During 1938 their gross income had been £273,480 as compared with £265,938 in the previous year, and it was proposed to pay a final dividend of 6 per cent., less tax, making a total of 10 per cent. for the year. It was difficult to forecast the prospects for the current year. The total dividends—especially those receivable in the first half of the year—would doubtless be reduced. They had in the dividend equalisation reserve a sum equal to nearly 3½ per cent. net upon their capital, and that was available for dividends whenever it was required and circumstances justified its use. He would add that in his opinion the comparative quality of their plantation investments had never been better.

There were still too many small companies which were compelled to work under less economic and efficient conditions than their larger brethren. It became increasingly obvious that the salvation of the rubber industry would depend upon more economic production and the consequent lower price at which rubber could be supplied to the world. Perhaps the most important collective enquiry which would be likely to help the industry would be a searching one into the possibility of reducing the cost of producing crude rubber and placing it upon the market. In such a search savings of very small fractions of a penny per lb. should not be despised.

He was of opinion that plantation companies, and especially rubber companies, were not the proper subject for debentures and preference shares; the income was too irregular and the fixed interest or dividends payable often became almost intolerable in times of depression. Among the special points for investors to consider were the net capital cost per planted acre and the amount of net liquid assets possessed by a company. The differences of assessment per acre under regulation should be taken into consideration, and the provision for amortisation of planted areas. The division of profits up to the hilt in dividends was to be deprecated, and depreciation of buildings, etc., should be amply provided for. The best companies generally complied with these conditions.

THE OUTLOOK

In existing international conditions any forecast of the rubber-producing industry must be a "shot in the dark." Should political tension slacken, there was hope that the improvement in American consumption might continue. At present it seemed to him that absorption this year was not likely to fall short of one million tons. The use of rubber for agriculture, the substitution of rubber for steel-tired vehicles, its growing employment in upholstery, the increasing uses of rubber in automobiles for purposes other than tyres, and numerous other uses, offered a large potential field for expansion of consumption.

The report and accounts were unanimously adopted.

LANADRON RUBBER ESTATES, LIMITED

SOUND FINANCIAL POSITION

The 31st ordinary general meeting of the Lanadron Rubber Estates, Limited, was held, on the 20th instant, in London.

Mr Eric Macfadyen (the chairman) said that a year ago they had had under review the best accounts of a decade; those now before them made a poor showing by comparison. Their accountable crop had had to be limited to 1,375,587 lbs., against 1,831,715 lbs.; they had had a rise in cost, due in the main to the reduced output, of three farthings per lb., and an average realised price nearly 2d. lower. Profits, in consequence, had dropped from £33,549 to £11,299, and their dividend recommendation was 3 per cent., as against 9 per cent.

One pleasant feature was the appearance of a profit on Sungei Sabaling Estate in place of a loss. That marked a definite stage in the progress of that young property. For two months last year they had tapped there and got highly encouraging results. He had no doubt that investment would pay Ledbury and themselves well once conditions justified tapping the place commercially. Both companies had decided to utilise the new planting rights allotted to them in extending Sungei Sabaling. These extensions, which would bring the cultivated area up to 1,275 acres, were the chief work in progress on the estate. On Lanadron Estate, where some of the rubber was almost 40 years old, they were engaged in an extensive programme of replanting. Lanadron continued in the class of cheap producers, and, as bark reserves were if anything improved, it should hold its own in that respect. As to the financial position of the company, in relation to their commitments they were amply provided with funds.

They were under a deep obligation to the Rubber Regulation Committee. The years in which they had been in the saddle had been critical and difficult. The aggregate international quotas of 1,519,000 tons for 1938 did not exaggerate total productive capacity and, as absorptive capacity this year could not be put much higher than one million tons, it was easy to guess the position if there had been no international agreement. Unregulated during those years rubber might easily have ruled under 4d. per lb. throughout and could frequently have been below 2d., as in 1932. The Committee had earned their gratitude and commended their confidence.

The report was unanimously adopted.

LEDBURY RUBBER ESTATES, LIMITED

DIVIDEND OF 3 PER CENT.

The 30th ordinary general meeting of the Ledbury Rubber Estates, Limited, was held, on the 20th instant, at 1 Great Tower Street, London, E.C.3.

Mr Eric Macfadyen (the chairman) said that apart from the £5,000 of tin receipts put to reserve, the year's trading had resulted in a profit of £6,275. That was a low figure compared with the previous year. The accountable crop was reduced in round figures from 661,000 lbs. to 440,000 lbs., due to the lower rate of releases allowed and as a consequence costs had risen fully 1½d. per lb. Not only did those factors tell against the profit-earning capacity of the company, but in addition the net sale price was nearly ½d. per lb. under the corresponding figure for 1937. Those facts would explain the reason why they did not feel justified in recommending a higher dividend than one of 3 per cent. They would then carry forward to next account rather more than the balance brought in.

The estates had been maintained in good order. A further 28 acres were replanted, bringing the replantings to date up to 143 acres. They had this year sanctioned the replanting of an additional 147 acres on Kinrara and it was with this policy of replanting in mind that £5,000 of the tin receipts had been transferred to property depreciation reserve.

Owing to the low quota releases allowed to the tin mining industry, Sione Tin (F.M.S.), Limited, had mined a comparatively small area, just under 8½ acres during the year. Satisfactory reports continued to be received regarding Sungei Sabaling Estate. For the short time during which two of the fields were tapped, the yields were exceptionally good. That young property had 815 acres planted.

Under prevailing political conditions little could be said regarding the current year's prospects. The permissible export for the first two quarters of 1939 had been fixed at 47½ per cent. in Malaya and unless the outlook clarified in such a way as to put fresh confidence into markets, the 1939 prospects for rubber companies were not such as to promise much improvement on 1938 results.

The report was unanimously adopted.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED

IMPROVING OUTLOOK

The fourteenth ordinary general meeting of shareholders of the British Enka Artificial Silk Company, Limited, was held, on the 17th instant, in London.

Mr A. D. Carmichael presided.

Mr J. H. Jennings, F.C.I.S., on behalf of the secretaries (Union Corporation, Limited), read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his remarks, said:—Operations for the year resulted in a working loss of £7,976, but it should be remembered that this loss arises after charging an exceptional expense of £34,367 for special renovations in the factory, and after writing down our wood pulp to the market price at the end of the year, whilst we incurred some expenditure on Air Raid Precautions.

The major reason for the working loss is the state of trade during the year. In common with other rayon producers, we had the lowest demand for our product for many years. After the first three months of the year we had to reduce our production considerably, but in spite of this stocks continued to increase, and we finally had to make a further material reduction. This necessarily meant a very serious increase in cost price, as it is impossible to reduce expenses *pro rata* to the reduction of production. Although we were working on a rather better selling price for the latter part of the year, these serious reductions in production meant that margins of profit entirely vanished.

MORE EFFICIENT PRODUCTION

During the year we have completely renovated and adjusted our plant to give us increased efficiency. As a consequence we now have a thoroughly efficient and up-to-date plant capable of producing good quality rayon at a low cost price. In the current year

we have already felt the benefit of this, and as we have been able to increase considerably our production, we are at the present time working with a margin of profit.

The British Viscose Association, to which Mr Pott referred in his speech last year, has worked in a very satisfactory manner throughout the period under review. We have taken an active part in the membership of this and believe that it is largely due to the formation and satisfactory working of this association and its happy relationships with Messrs Courtaulds, Limited, that the better price position in the industry has been achieved.

We have noted with great satisfaction the arrangements between the two leading rayon producers, and we hope that the industry is now entering a period of prosperity. These arrangements, combined with the benefits derived from the British Viscose Association, make me hopeful that we shall be working on a somewhat better price level for the whole of the current year.

EXPANDING INDUSTRY

We have again improved the quality of our product, and it is now the very best in the market. If confidence can be restored and we have a reasonable demand for our product, our company can look forward to a genuine turn in its fortunes. We have confidence that our industry is an expanding one and that our company will share in that expansion. Export trade is negligible and can only be done at prices which are quite unprofitable, but in the home market we believe there will be an increase in rayon consumption, which could be fostered to the full if the heavy excise tax of 6d. per lb. were removed.

We have continued to receive the assistance and collaboration of A.K.U., and we are greatly indebted to them for the technical advice which has resulted in the renovations and improvements to our plant enabling us to reduce our cost of production.

The report and accounts were adopted. At the subsequent extraordinary general meeting the motion for the change of name of the company to "British Enka, Limited," was passed.

(Continued from page 212)

Nature of New Borrowing (Excluding Conversions)

Year to date	Deb.	Pref.	Ord.
1939 (New Basis)	16,583,919	2,300,796	17,884,715
1938 (New Basis)	20,083,390	4,108,277	24,191,667
1939 (Old Basis)	12,807,435	928,447	13,735,882
1938 (Old Basis)	14,580,122	2,280,722	16,860,844

Note.—"Old Basis" includes only public issues and issues to shareholders only. "New Basis" includes all new capital in which permission to deal has been granted.

CONVERSIONS AND REPAYMENTS

City of Osaka Five per Cent. Sterling Bonds.—The Yokohama Specie Bank announce that these bonds, which mature May 1st, will be duly repaid on that date. The outstanding balance is £1,787,660 out of a total issue of £3,084,940 made in 1909.

SHORTER COMMENTS

Company Results of the Week.—The decline in profits generally experienced by brewers is reflected in the WHITBREAD & CO. accounts, but the 18 per cent. dividend is repeated. Rubber companies' profits are still running at about half the level recorded for 1937. The drop in CHEVIOT earnings, however, from £47,120 to £34,201, is relatively moderate. JOHN I. JACOBS AND COMPANY have reduced the ordinary dividend from 8 per cent. to 6 per cent., but the company did not feel the full force of the 1938 drop in tanker freights, since a certain amount of business had been arranged ahead. Profits of SELFRIDGE PROVINCIAL STORES for the year to January 31st last are £172,825, compared with £115,795 earned in the preceding six-months' period. ARMY AND NAVY STORES have experienced a sharp decline in net profits, which amount to £128,306 against £174,683. BRYANT AND MAY total profits have fallen by no more than 1½ per cent. to £622,365, and the 25 per cent. tax free dividend is repeated. The 1936-37 accounts of ITAS LTD. have been amended, since when originally presented they did not show certain liabilities.

A loss for 1937-38 of £80,447 is shown, and this is practically the same as the (corrected) loss for 1936-37. LAURENCE SCOTT AND ELECTROMOTORS report higher profits, at £105,388 against £95,680. Output was considerably higher, but owing to Government supervision of costs, profits did not rise in proportion. A substantial rise in earnings from £75,757 to £220,399 is shown by JOHN MACKINTOSH AND COMPANY, who are amalgamating with their subsidiary, A. J. CALEY AND SON. A moderate fall in SKEFKO BALL BEARING profits has not affected the distribution, which remains at 30 per cent. tax free. The AULT AND WIBORG dividend is reduced by 1 per cent. to 14 per cent., and earnings amount to £51,430 against £55,028. Satisfactory stability of profits is shown by W. T. HENLEY'S TELEGRAPH WORKS, for trading results are only 1½ per cent. lower at £445,159. In common with similar types of business, AUSTIN REED show a drop in profits, but the dividend is again 10 per cent. Aggregate operating profits of the subsidiaries of ENO PROPRIETARIES are £174,366, against £204,487. The Overseas group did better than in 1937, but a substantial sum was set aside in respect of exchange restrictions. Another company which reveals stability of profits is EVER READY TRUST, whose gross revenue totals £31,690, against £33,764.

MISCELLANEOUS

Lever Bros. and Unilever Ltd., Lever Bros. and Unilever N.V.—Final dividends: English Co., 6 per cent., making 10 per cent. for 1938; Dutch Co., 4½ per cent., making 7½ per cent. Net profits (before appropriations, after taxation), £6,319,244 (against £6,576,317) and Fl. 27,083,588 (against Fl. 23,217,516) respectively. To make Dutch Co's. net profits comparable with previous year, add to 1937 profits Fl. 3,243,510, representing preferential dividends of subsidiaries now replaced by preference capital of Dutch Co. Report will be published April 26th.

Marks and Spencer.—Final dividend is 27½ per cent., making 42½ per cent. (same). Capital bonus on "A" and "A" Ordinary again 10 per cent. Profits, £1,781,958, against £1,602,450. To reserve, £342,203.

J. and P. Coats, Ltd.—Net profit, £1,535,297, against £2,077,459. Total distribution for year, 10 per cent. (same). From dividend reserve, £200,000. Carry forward £481,865 (£551,568).

Babcock & Wilcox.—Preliminary statement shows profits of £809,902, against £601,058. Final dividend of 6 per cent. plus 2½ per cent. bonus, making for year 12½ per cent., against 10 per cent.

Selfridge Provincial Stores.—Trading profits for year to January 31, 1939, £172,825, against £115,795 for previous six months. Debenture interest, £33,948. Tax absorbed £10,766 more at £25,202. Net leases depreciation, £5,000 (£2,500). Net profit, £54,840, against £48,640 for six months. Carry-forward raised from £10,917 to £11,381. Ordinary dividend reduced from 3½ to 2½ per cent.

Sir Lindsay Parkinson and Company.—Net profit 1938, £197,384 (£63,649). Deferred ordinary dividend, 18½ per cent. (3s. 7½d.), compared with 10.0346d. per share for period July 13 to December 31, 1937. The 5 per cent. preferred ordinary shares receive a total for year of 12½ per cent. From 1938 profits, £50,000 to general reserve and £70,000 for tax and N.D.C. (against £18,050). Carry forward, £7,221.

Associated Manganese Mines of South Africa.—Trading profits for 1938, £74,517. In previous three-month period to end of 1937, profits were £35,145. Net profits, £63,724. Tax provision raised from £2,000 to £3,812. To general reserve, £20,000 (£10,000). Ordinary dividend, 10 per cent. against 7½ per cent. for initial period. Carry-forward raised from £8,324 to £16,285.

Henley's Telegraph Works.—Profits for 1938, £374,042, against £383,112, after depreciation of £61,012 (£60,602). Ordinary dividend maintained at 20 per cent., including 5 per cent. bonus. To reserve, £100,000 (£100,000); £9,168 to reserve against trustee securities, and £7,000 against depreciation of these securities since December 31, 1938. Carried forward, £415,394 (£426,520).

GOVERNMENT RETURNS

For the week ended April 15, 1939, total ordinary revenue was £10,433,000, against ordinary expenditure of £18,995,000. Thus, including sinking fund allocations, the deficit accrued since April 1, 1939, is £18,658,000, against £13,842,000 a year ago.

ORDINARY AND SELF-BALANCING REVENUE AND EXPENDITURE

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On April 14th applications at £99 12s. 2d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday of following week were accepted at about 50 per cent. and applications at higher prices in full. £30.0 millions of Treasury bills are being offered on April 21st.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the "cum div." shares. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Money and Men

IF one large preliminary assumption can be made, Sir John Simon's second Budget can be regarded as a workmanlike achievement and exempted from any but detailed criticism. The figure of £24 millions once having been arrived at, as the gap between existing revenue and the expenditure to be charged against it, the Chancellor's proposals for levying the additional taxation required were fair and reasonable. There are, as with all Budgets, matters on which different persons would have arrived at somewhat different conclusions. Thus, Sir John very properly decided to lay new taxation on the motor industry which would both increase the revenue and release some of the industry's resources of plant and skilled labour for armament work. But it is legitimate to question whether the first object could not have been equally well, and the second better, secured by raising at least part of the money from a tax on the sale of cars, especially new cars. It is, after all, not the use of large cars that absorbs skilled labour but the production of new cars.

Again, granted that something of the order of £11 millions had to be raised by indirect taxation, it may be questioned whether it was right to confine the increases to sharp rises in the rates of duty on tobacco and sugar, which are consumed in very different proportions by different people. Or, again, even given the anomalies of the present medicine stamp duties and the administrative and other difficulties of devising a substitute, is there really a strong case for abandoning revenue of three-quarters of a million

a year? But these are matters of detail appropriate to the Committee stage of the Finance Bill. In its main outlines, and subject to the over-riding preliminary assumption, the Budget should meet with general approval.

The hypothesis by which this conclusion is governed, and on which Sir John Simon's Budget speech was wholly founded, is this: that it is possible, in these times, to mark off a portion of the national finances—and that the least dynamic portion—to surround it with a picket fence of arbitrary demarcations and to consider it without any relation to what is happening, and to what is likely to happen, outside the charmed circle. Any such assumption is manifestly untenable. Yet Sir John Simon clung to it with single-minded tenacity.

It is common ground that a very large part of this year's defence expenditure will have to be borrowed. But there is no economic issue facing the country nearly as important as the decision how much to borrow. At the inception of defence borrowing, the principle was laid down that recurrent costs at least should be met from taxation, and non-recurrent costs from borrowing. It is questionable whether that principle was ever closely applied, and it has certainly gone by the board now. But the Chancellor offered nothing to take its place, save the statement that "if there is a limit to what can be conveniently or tolerably raised by taxation, there is also a definite limit to what can be wisely and successfully raised by borrowing." Are we to take the fact that an additional £20 millions was put on

to revenue to mean that the limit of borrowing is £380 millions? Or would it be safe to assume that any further additions to the costs of re-armament will be similarly divided between taxation and borrowing in the proportion of two to three? Is the limit to borrowing a static one, or can it be said to vary with the economic conditions of the country, in particular with the volume of unemployed resources of labour and capital available for use? All these are questions of the very first magnitude. It is no exaggeration, but the literal truth, to say that the social stability of the country depends upon the correct answers being given to them. They will have to be answered within a few months, certainly before the next Budget. But Sir John Simon offered no guidance on them to the country.

Much also depends upon the precise means by which this year's borrowing is accomplished, upon the proportion in which it is divided between the floating and the funded debt. If the Chancellor did not wish to initiate a debate on the generalities of defence borrowing, vitally important though they are, he might have provided some light on this technical matter, which is very proper for the attention of the Chancellor of the Exchequer. But on this, too, he was silent. Or again, he might usefully have spoken about the measures that the Government proposed to take to control the general economic effects on prices and the labour supply of the gigantic borrowings foreshadowed. It is impossible to hold that these effects will not soon be very disturbing, and imprudent to hold that nothing should be done about them. We are, by universal admission, in a state rather more than halfway from peace to war. But we still have no adequate notion of the Government's plans for the financial side of a war economy.

These are the real issues of financial policy. The £24 millions with which the constructive part of the Budget speech was concerned is in any case an arbitrary figure—the Chancellor could have made it £24,000 or £124 millions if he had chosen. In the shadow of the fundamental problems he left untouched, it fades into insignificance. Budget Day has acquired its importance because it traditionally provides a survey, on the widest canvas, of the national finances as a whole. There should be a Budget Day, in this sense, in 1939. We have not had it yet.

It was widely known while Sir John Simon was speaking that the Cabinet had decided on a measure of compulsory military service, and the official announcement was made on the next day by the Prime Minister. The plan is to impose on young men between their twentieth and twenty-first birthdays the compulsory obligation of undergoing six months' training in the Regular Army. After the six months they will have the option of three and a half years' service in the Territorial Army or of passing to a Special Reserve. Provision is made for anticipating or postponing the period of service in case of need and, by a welcome provision, conscientious objectors will be exempted if they will undertake work of national importance. The numbers affected will be small. At the time of the 1931 Census there were 309,798 males in Great Britain aged 12, who would be 20 now. The figure will be reduced by deaths, by exemptions, by postponements and by medical rejections, so that the net figure may be no more than about 200,000. But this may only be a beginning, and in any case it is the principle that matters.

The necessity for these measures is widely, if not universally, accepted. Nevertheless, there will be a considerable body of opposition. For those who oppose on genuine grounds of conscience, or because they believe the voluntary principle should have been given a more extended chance of proving its efficacy, there will be nothing but respect. It is a little more difficult to understand the position of those who have steadily urged a foreign policy of mounting commitments, but now consider the interests of Labour endangered by the necessary counterpart of those commitments. But by any of the normal tests, the over-

whelming majority of public opinion approves the principle.

But though it is thus possible to approve the substance of the Government's decision, it is far more difficult to feel happy about either the manner or the time of its announcement. For one thing, it increases still further the artificial character of the Budget. The £50 millions of Defence Supplementaries foreseen by the Chancellor can hardly have included any provision for the new measures, and the whole question of increased borrowing or increased taxation is thus raised before the Finance Bill has even been brought in.

There is, however, another financial issue raised by the new measures. The Prime Minister's announcement recognised that it would be utterly inequitable to introduce the conscription of man-power without at least laying plans for the conscription of wealth, and he attempted to give some embodiment to this phrase. He pointed out, first, that wealth was already heavily conscripted by direct taxation; secondly, the Government would introduce legislation to tighten the control of armament profits; and thirdly, in time of war, measures would be taken to "impose special penalties on profiteering" and to provide that "any increase of profit or increases of individual wealth should be appropriately curtailed to the benefit of the State." These are steps in the right direction, but, as is this Government's wont, only steps where strides would be more fitting. The first of the three points is almost irrelevant; for whatever the "conscription of wealth" means, it means something more than the mere maintenance of existing progressive taxation. Any system of profit-control inevitably suffers from the dilemma that, if it is effective, it hinders production, and the recently published report of the Comptroller and Auditor-General on the Air Ministry's price control system is not encouraging to those who believe that the profit can be "taken out of war" by this means. And lastly, most people will argue that increases in profits or wealth in wartime should be more than "curtailed," and that it is not merely increases in income, but existing incomes also that will have to be subject to very heavy impositions. The Government's conception of the conscription of wealth (admittedly not a pleasant thing to contemplate) is somewhat diluted.

This, in fact, brings us to the kernel of the whole matter. By general consent, the adoption of conscription is one of the most serious steps that the British people can be asked to take in time of formal peace. This in itself is sufficient reason against indulging in partisan controversy at this time. But it would be to ignore the realities of the situation not to inquire whether the present Cabinet provides the inspiring leadership necessary for such a grave departure. The present Government is, in substance, a single-party Government—one, moreover, which, at least until very recently, has been bitterly distrusted by the formal oppositions. It has not even enjoyed the unanimous support of its own followers. On issue after issue of the great problems of foreign policy and defence, the Government has taken one stand, its critics another. On issue after issue the Government's policy has been proved wrong, its critics' policy proved right. There has hardly been a precise utterance of policy but the words have had to be eaten. Conscription is the latest case, and has involved the Prime Minister in placing upon his pledge a meaning that was certainly not attached to it by those to whom it was addressed. The Labour Party, it is true, is in its usual state of doctrinaire futility and is thereby tempting the Cabinet to play the party game. But there are men within the Conservative ranks and outside the Government whose competence is at least equal to many of those within and who have the added advantage of having been consistently right. Conscription requires a strong and popular Government if it is to be imposed without danger to the national unity. The only way in which the Government can preserve its moral solvency is by extending its basis without further delay to the widest possible extent.

Seeking Peace

ON Friday evening Herr Hitler addresses the Reichstag in reply to President Roosevelt's appeal for guarantees of non-aggression. As we go to press nothing is known of what the Fuehrer will say, though it is as nearly certain as may be that he will reject the President's proposals, denouncing them as uncalled-for, impertinent, provocative and mischief-making. This has been the tone of the German Press, which has lately excelled itself in personal vilification of the President; and the diplomatic manoeuvres of the dictatorships suggest the same line.

Faced with President Roosevelt's call to the bar of world opinion, and with the intensified efforts of England to complete the structure of collective resistance to aggression in Europe, Germany and Italy have been conducting a busy diplomatic drive. To Italy has fallen the task of winning over Yugoslavia to the Axis, to be used with Hungary and Bulgaria as a counterpoise to the countries, Poland, Roumania and Greece, which have already accepted a British guarantee. Here Count Ciano's success in securing an economic and political agreement of some scope at Venice cannot conceal his failure to obtain Yugoslav adhesion to the Anti-Comintern Pact; and the Germans' attempt to persuade M. Gafencu, Roumanian Foreign Minister, on his way via Berlin to London, that his country's real interests lie with the Axis and not the Peace Front, has been even less successful. Nor has the effort to secure from the Axis's third partner, Japan, firm pledges of military aid borne fruit.

Meanwhile, to the small States for whom President Roosevelt sought a guarantee from the dictators the Fuehrer has addressed a questionnaire, asking whether they knew of the President's intentions beforehand and whether they do in fact feel menaced by the Reich. The questionnaire has little more than a formal significance. It is a peculiarity of the Latin language that certain suffixes are appended to questions according to whether the answer "yes" or "no" is expected. Herr Hitler's questions have the same character, expecting as they do an inevitable disclaimer of any suspicions of the Reich's intentions from countries who cannot feel themselves sufficiently safe to speak more frankly. The implied suffix to his questions is *num* or "surely not?" In most cases the negative answers, which the Fuehrer presumably wishes to fling back in the American President's face on Friday, were a foregone conclusion. According to report, only Roumania and Egypt have permitted themselves in their answers to throw any doubts upon the peaceful and friendly nature of German policy, and it is significant that both these countries enjoy specific pledges of British protection.

It is unlikely, therefore, that the Fuehrer will have any signal triumphs to bruit abroad on Friday. But, whatever the tenor of his discourse, the problem for England and her allies is clear. Whether he places his cards on the table at last or not, whether his conclusion is a challenge or a defiant *apologia*, the question is: What is to be our attitude to the German claims for restitution, economic, territorial and colonial, many of which before the rise of Herr Hitler were accepted by almost all parties in England as *prima facie* reasonable? It is of the essence of President Roosevelt's own plan that, given acceptable guarantees of non-aggression, Germany's grievances in trade and the supply of raw materials should be the subject of fair discussion and arbitration, and it is not wise, or just, for a completely intransigent attitude towards these matters to develop in England, as a consequence of our sharpened realisation of the dire and immediate menace of the aims and methods lately pursued by Herr Hitler.

Our task now is clearly to plan for war, so that we may be so strongly prepared that no war will come merely because only the aggressor is ready. It is the job of our Government, not only to complete the Peace Front by pledges and agreements, but also to render those pledges and agreements effective, abroad by dispensing economic, as well as the promise of military, aid to our friends, and at home by the fullest and speediest mobilisation of all our resources. There must be not the slightest slackening in any of these preparations because of any words that may come from Berlin.

But we must plan for peace, too. *Si pacem vis para bellum* is only a short-term policy at best. It postpones war, but does not remove its causes, and mounting armaments inevitably mean conflict at the last. That we have embarked upon a policy of power arises from the incorrigible employment of force by the dictators themselves. That it is now next to impossible to consider concessions to German and Italian claims springs from the brutal methods signalised by the indefensible theft of Bohemia, Moravia and Albania; and the possession of these spoils by the aggressors is the greatest barrier of all to the cool discussion of their claims. Yet it is our aim to seek peace: we do not wish to seem to encircle Germany or to stifle her rightful demands; we must make clear beyond a peradventure where we stand. War is a bloody and inconceivable horror, however idealistically we may couch our calls for national service to-day, and it will settle nothing. We need to draft at once the peace settlement we are prepared to sign if the preliminary lunacy of warfare can be averted.

The first item of our policy is, admittedly, a short and sharp "no." We can make no concessions of any kind to threats of force. We cannot even discuss the claims of Germany and Italy until they can advance not merely assurances but effective guarantees in earnest of their good faith and limited and peaceful intentions. The policy of appeasement has been a ghastly and dangerous failure, and there must be no more of it. Too many pledges have been broken for the democracies to have faith in the dictators' promises, so long as their guns are pointing and their men arrayed. We must be implacable against aggression in thought and word, no less than in deed. Realistically, in present conditions, we must hold what we have. If Sir Neville Henderson's sudden return this week to Berlin, swiftly followed by the envoy of France, betokens a readiness to woo Herr Hitler with soft words, it was a grave error. It was unwise in any case, even if the British Ambassador bore a warning to the Fuehrer on the eve of his fulminations, because it spelled weakness in the reading of the Germans and Italians themselves and weakening in the eyes of America. It invited and received a rebuff.

The second item in our policy, for the sake of peace, must be generosity in return for security. If we can get from Herr Hitler effective and reliable guarantees of his peaceful intentions, then we must for honesty's sake be ready to discuss his grievances with an open mind. We must be prepared to consider concessions in the colonies which were wrested from Germany with the sole excuse of force. Italy's claims in the Mediterranean, Germany's desire to assist her minorities in Europe, the vexed frontiers of Central Europe could then all be reconsidered—as they cannot to-day. In the avoidance of Armageddon we have all a part to play. If it is our view that, in no circumstances, are we ready to discuss or concede, then we have accepted war as inevitable—unless we are rashly gambling on the fact that Germany may never feel

strong enough, or reckless enough, to wage it. Yet we must have guarantees before we can seek peace properly. A beginning would be the pledges of non-aggression that President Roosevelt is seeking; but that is not sufficient, since pledges are habitually broken under the pressure of the creeds that rule the Central Powers. The ghost of Czecho-Slovakia is a grim warning. Demobilisation, full and entire, would be a beginning, too, though this again would promise no more than a brief lull in aggression and much less than its cessation. Only disarmament, military and economic, promised, organised and maintained for a reasonable period, could suffice to create the conditions in which Germany could seek and find the relief she calls for. In such conditions we could be open-handed. We could build a bridge anew between the dictatorships and ourselves and prevent catastrophe. With-

out them we can only keep our powder dry and look into an arid future.

It may be said that these conditions cannot be secured; that the seizure of Czecho-Slovakia and Albania—like the rape of Manchuria and Abyssinia—is not only the reason why we seek guarantees, but also the demonstration that we shall not get them. If this is true, then we must face the truth that any sure prospect of peace has slipped out of sight; just as, if on the other hand we refuse utterly to contemplate any concessions in any circumstances to Nazis and Fascists, we must face the same warlike outlook. Only good faith and good will, tangibly proven, can buttress peace. For these we look to Berlin, for we ourselves have broken no major pledges and, as we wait, our hand is unhappily on the trigger. The next and deciding word is with Herr Hitler. The last may be ours.

Education for Work

THERE is already a shortage of skilled workpeople in England and, as the Government's defence demands upon industry grow, this shortage will become more acute. The shortage is not simply one of men and women trained in specific industrial skills. There is also a lack of workers trained and experienced in the principles and methods of manual and mechanical processes. It is, in fact, a shortage of educated citizens.

The cause is twofold—apart from the wasting effect of long years of depression in the not very distant past. In our present provision for technical education there are faults of outlook and attitude; and there are defects of organisation. On the one hand, technical training is regarded and treated as inferior to more academic and literary instruction; and, on the other, its arrangement is uncompact and haphazard. Both flaws have their origins in history.

Technical education, like all branches of English education, is not based on any thought-out scheme. It is the product of the *ad hoc* adaptations of a hundred years. Here, as in the case of elementary education, the rôle of the State has been to aid and supplement voluntary effort until, bit by bit, a national system has emerged. The industrial revolution broke up the old craft apprenticeship system; and, because England had fifty years' start on its rivals in industrialisation, the Government had no incentive to see to the filling of the gap, until the rise of foreign competition made technical training an obvious national asset. Meanwhile, it was left to private agencies to provide vocational instruction. It was groups of artisans who established the mechanics' institutes of the early nineteenth century; it was local and private effort that set on foot the first science and art classes; it was the London Livery Companies who founded the City and Guilds Institute; and it was a private benefactor, Quintin Hogg, who formed the first of the Polytechnics. These were the prototypes of the diverse institutions that grew up to make the outline of a system of technical education.

At first, the State's function was simply to supervise through the Science and Art Department. Then it was to assist by grants-in-aid. Finally, it was to assume direct responsibility, first, by creating local technical education authorities in 1889, and, secondly, by encouraging the general education authorities set up in 1902 to take over the voluntary technical institutions. To-day, only about 4 per cent. of technical schools and colleges are independently run; but the whole of the municipalised system bears the marks of its unplanned and scattered origins. Technical education has never been properly dovetailed with other types of schooling; nor has its relation to the needs of industry ever been fully worked out. The basis of

the system is still voluntary, in striking contrast to the compulsory day continuation schools and apprenticeship training of Germany or the subtle French blend of centralisation and local autonomy with its *tax d'apprentissage*. Neither employers nor young workers are under any obligation to make use of the facilities for technical education, which vary startlingly from district to district; and technical education (including commercial training as well) tends to be a part-time trimming, rather than an integral part of either business life or of education in general.

It has an amateur status, so to speak, and its place in public esteem is a subordinate one. This is not for lack of repeated expert advice to the contrary. Fifty years ago Matthew Arnold, an inspector of schools, wrote:—

The technical school is in fact a secondary school, to follow the elementary school, after some manual training has been given.

Royal Commissions have echoed this; and it was precisely the view taken, only a few months ago, in the Spens Report on secondary education, which suggested the creation of technical high schools to be parallel with secondary schools and equal in status with them.

The barriers are social and economic. Secondary school training as we know it has a prestige value; it provides the *entrée* to universities and a passport to medium-paid posts in business. Technical education is left to the labourer and the clerk who must leave school very young to earn their living, and then, if they are ambitious, spend their evenings, after a full day's work, in study.

The outstanding feature of English technical education is that it is predominantly part-time evening work. There are about 1,050,000 students at all sorts of technical (including commercial) institutions and just over 40,000 are full time. For over a million, technical or commercial education is an "extra." There are, perhaps, 25,000 full-time pupils in the junior technical and commercial schools, which provide children over eleven years of age with continued general education plus some preparation for employment, either in a specific trade or, more generally, in some industry or occupation, such as building, engineering or housewifery. Another 8,000 or so are full-time pupils in technical day classes, and, perhaps, 10,000 senior pupils are taking full-time courses at technical colleges. In addition, a further 45,000, though part-time, are receiving instruction during the day, and so are not being called upon to pile their essential technical training on top of a full week's work; of these, there are some 25,000 at technical day classes in colleges and other institutions; and another 20,000 or so at the less vocational day continuation classes, for which employees between the ages of fourteen and

eighteen may be released on certain days by arrangement with their employers—2,500 are in day continuation classes actually provided by business firms for their own young workers. The balance of the 1,050,000 technical and commercial students—about 970,000—are not only part-time pupils. They are also spare-time pupils, like the hundreds of thousands more who seek training by correspondence.

This state of affairs is wasteful and inefficient. The essential link in true technical training is too often lacking; that is, close co-ordination between practical work and instruction, involving careful co-operation in organising and conducting classes between employers, working "learners" and educational authorities. Too many evening students attend classes blindly as individuals, with only an uncertain hope of advancement as their spur. Too few can approach their courses as correlated parts of their daily work. Too many fall by the wayside; and too few skilled artisans are turned out.

The outlines of reform are easy to sketch, and their achievement depends upon technical instruction being brought to rank on a parity with all other sorts of education. It should begin in the elementary school with the manual training for all that Matthew Arnold wanted, a training much more purposive in principles and methods than the scattered manipulative exercises that too often feature in curricula. It should continue either in the technical high school, where a general syllabus would be focused upon industrial techniques, or in full or part-time day courses, jointly arranged by employers, trade unions and technical teachers as preparation for specific trades or industries. From the high schools and the trade and industrial classes equally should be chosen the picked pupils to pass on, with the aid of scholarships, to technical colleges and the technical departments of universities. Students at technical high schools and in trade classes should be given experience in workshop practice. Juvenile industrial

workers should compulsorily attend part-time day classes for a fixed number of hours every week. At colleges and universities no degree or diploma should be given in a technical subject until an extensive period of practical work has been done. Technical training should be woven into the fabrics of education and industry alike.

Much has been done in these directions already. Part-time courses for apprentices are common. The National Certificate examinations set at technical institutions are prepared by professional technical bodies under State supervision. But apprenticeship covers too small a section of industry nowadays, and too many workpeople are left to their own spare-time devices. Day technical classes and day continuation schools are steps on the right road. Junior technical and trade schools are doing excellent work. But the bulk of industry's youthful human material is still going to waste. Something more comprehensive is needed, and more speed in the present welcome progress.

The director of French technical education has proposed that every young person employed between the ages of fourteen and seventeen should be automatically deemed an apprentice and therefore be obliged to intersperse his or her work with the relevant courses of technical instruction. This is the right policy. In England we have our charter in the Education Act of 1918, which envisaged

a complete and systematic plan of further education properly related to elementary and secondary schools and universities, adapted to local needs and particularly to industrial needs, and offering to each student facilities for a course of instruction suited to his or her requirements.

So far we have not made full use of it. This year we shall spend on technical education almost exactly 1 per cent. of our defence expenditure. We ought not to waste such restricted means; and industrialists, even more than administrators, have a powerful part to play in ensuring that next time England's industry is at full stretch there will not be the scarcity of skill we are menaced with now.

The Budget Accounts

SIR JOHN SIMON is not the man to depart from a tradition as venerable as that which dictates the form of a Budget speech. He dealt first with the results of last year, then with the prospects for the current year as they appeared on the published Estimates and the yield to be expected from the existing taxes. Then, having established the figure of the prospective deficit, he turned aside, in the traditional manner, to deal with minor matters until the markets were closed. At the end came his proposals.

The Chancellor's remarks on last year's experience added comparatively little to what was already known. He revealed that the yield of customs had gained both from forestalling in March and also from the failure of the domestic sugar beet crop, which led to larger imports, but had lost from the provisions of the Trade Agreement with the United States. He ascribed the good yield of surtax to the measures taken against evasion, but gave no special explanation of the surprisingly large fall in the revenue from the death duties. On the expenditure side, he pointed out that the Civil Supplementaries had exceeded the Budget provision mainly for non-civil reasons, such as A.R.P. and the trouble in Palestine. Savings on other votes, however, brought the total of the Civil Supply votes to £7,750,000 less than the Budget estimate.

When he turned to the present year the Chancellor retained the provision for the service of the National Debt at last year's figure of £230 millions, in order to leave a margin for the statutory sinking funds. The other Consolidated Fund items show increases, mainly because of

the transfer to this section of the Budget of Irish charges. For Supplementary Estimates on the Civil Supply Services, Sir John allowed a margin of £5 millions, hoping to secure savings on some of the votes. This brought the provisional total of expenditure to £922,444,000, including £227,738,000 for defence. The Civil Estimates show an increase of £12 millions over last year, and the Chancellor pointed out that this was mainly due to increased expenditure (most of it automatic) on the social services. Civil expenditure, apart from debt, defence and war pensions, has increased by £186 millions since 1925, and the expenditure of local authorities out of rates in the same period has risen by about £42 millions.

The next section of the speech was the estimate of revenue for the coming year on the existing basis of taxation. Customs and Excise were put at £2½ millions below last year's yield; the correctness of this estimate will depend very largely on the policy pursued by the Government regarding the balance of trade, which is almost sure to be an issue within the twelve months. Income tax is expected to produce £9 millions less and surtax, with its longer time-lag, £3½ millions more. The yields of Death Duties and Stamps were put at the same figure as last year—perhaps pessimistically in the former case and certainly optimistically in the latter. N.D.C. will bring in the originally estimated sum of £25 millions. The minor items brought the total figure, estimated hopefully, to £918,330,000, leaving a deficit of just over £4 millions.

Of the minor items, the two which deserve mention are

the decision to take into the Exchequer—not necessarily this year—the sum of £1½ millions from the unclaimed dividend account, and the announcement of further measures, with retrospective effect, against the evasion of surtax and death duties by the ingenious manipulation of one-man companies. Before tackling his main problem, the Chancellor also reduced two small taxes and imposed one new one. The proposals of the Select Committee on the Medicine Stamp Duties were not accepted owing to the administrative difficulties involved, and Sir John took the unexpected step of repealing the duties altogether. The “living theatre” was also given a further relief from entertainments duty. To offset these losses of revenue, a new excise tax was imposed on photographic film, with a corresponding increase in the existing customs duty.

The first indication of the character of the Budget came when the Chancellor announced his intention of raising from revenue £20 millions of the £50 millions which it would be necessary to provide for Defence Supplementaries owing to the new measures decided upon since the Estimates were framed. (This figure of £50 millions apparently allows nothing for the cost of the conscription measures announced on the day after the Budget.)

This raised the prospective deficit to £24 millions, which Sir John proposed to levy both from the direct and from the indirect taxpayer—or, more accurately, both from the well-to-do and from the mass of the people. The motor vehicle duties were selected for the major part of the burden designed to be laid on the more comfortably endowed. The stiff increase from 15s. to 25s. per horsepower, as from January 1st next, will provide £6¼ millions

towards this year's deficit. A further £4 millions is to be found from surtax; the standard rates, which have been raised by 10 per cent. since 1931, are to be further increased by 5 per cent. up to £8,000 and by 10 per cent. above that figure. There is also to be an increase of 10 per cent. in the rates of Estate Duty on all estates of over £50,000. (The new rates and their incidence are detailed in a note on page 247.) The indirect taxpayer provides £11 millions, £7 millions by a stiff increase of 2s. a lb. on tobacco, and £4 millions by an increase of ¼d. per lb. (a quarter of the present rate) on sugar. The effect of these changes is as follows:—

	1939-40	Full year
	£	£
Apparent deficit	4,200,000	...
Defence Supplementaries	20,000,000	...
Repeal of Medicine Stamp Duties	590,000	770,000
Reduction of Entertainments Duty	190,000	290,000
	24,980,000	1,060,000
Unclaimed dividends	...	1,500,000
Photographic films	800,000	1,005,000
Motor vehicles	6,250,000	11,500,000
Surtax	4,000,000	5,000,000
Estate Duty	3,000,000	5,000,000
Tobacco	7,000,000	8,000,000
Sugar	4,000,000	4,500,000
	25,050,000	36,505,000

The result is to leave a formal surplus on this year's accounts of £156,000. The delayed full effect of the changes will produce an automatic increase of revenue of £11,175,000 next year. The final balance sheet of the year is shown in Table III opposite.

NOTES OF THE WEEK

The Diplomatic Mêlée.—The clear and direct line in British foreign policy which has restored Anglo-French initiative to the affairs of Europe has been somewhat confused this week by the sudden and unexpected return of the British Ambassador to Berlin. Though no return to an earlier policy was, it is said, intended, the reversion to the tactics of warning Herr Hitler, familiar during the September crisis, has once more caused suspicion and doubt in the minds of those smaller countries for whom there could be no going back once the anti-aggression policy was adopted. Though the precise nature of Sir Neville Henderson's mission has not—no doubt owing to the studied contempt of the Germans—been revealed, the fact that it was accompanied by a firm declaration that this country did not “in any way” recognise the annexation of Czechoslovakia, and that it was followed by conscription in this country, seems to show that it was a diplomatic blunder rather than a political change of heart on the part of the British Government—a blunder underlined by the studied discourtesy of Herr von Ribbentrop in refusing to receive the Ambassador. More serious has been the failure to produce definite and concrete results in the Anglo-French talks with Soviet Russia. Although the talks are said to be progressing well and to show a definite approximation to each other of the views of the Eastern and Western Powers, the considerable delay which has already taken place has been well exploited by Germany in her relations with the smaller Powers of Central and South-Eastern Europe. The talks with Turkey are also apparently in the same state. The visits of M. Potemkin, Soviet Vice-Commissar for Foreign Affairs, to Bucharest, Sofia and Ankara, show that Russia is taking direct steps to counter German activity and assimilate Russian and Turkish policy. The renewal of diplomatic contact between Bulgaria and Soviet Russia is of first-rate importance and, if pursued, may yet prove decisive in the future affairs of the Balkan Peninsula and the balance of power in Europe.

Ministerial Changes.—Neither in the supply of Ministers nor in the supply of materials for the defence services have the Prime Minister's latest arrangements been of the happiest. The choice of Mr Burgin to be Minister of Supply was hardly inspiring, and the series of routine adjustments that followed has not produced any very noticeable accession of strength to the Ministry. Captain Euan Wallace, whose work as Financial Secretary to the Treasury has not invited criticism, was moved to the Ministry of Transport, where Mr Burgin has left a very great deal to be done; Captain Crookshank, whose tenure of the Department of Mines was marked by laborious and disappointing days with the Coal Bill, borne with skill and patience, came to the Treasury on the eve of the Budget;

THE WORLD OVERSEAS

This week the section of *The Economist* that is devoted to contributions by Our Correspondents in countries overseas and by other experts on the spot contains articles on:—

Mr Geoffrey Lloyd, who was the first to inject some energy at the Home Office into air-raid precautions, before Sir John Anderson took charge, was given the Ministry of Mines with the mission of making pits safer for miners; and Captain Peake was promoted to the Under-Secretaryship at the Home Office. The reshuffling of these reasonably competent and comparatively youthful men only underlined the deficiencies in the Government which so unnecessarily complicate Mr Chamberlain's task of persuading his critics to accept extraordinary measures. The absence of Mr Churchill and Mr Eden from the Cabinet is still the Prime Minister's greatest handicap.

* * *

Supply Problems.—Second thoughts about the organisation of supplies involved in the appointment of Mr Burgin have not altered the first impression that his powers as Minister of Supply are to be needlessly curtailed. He is to have authority simply to enforce the prior claims of the Government for War Office supplies and certain defence materials. The War Office, faced with the task of equipping the Regular Army and a doubled Territorial Army, as well as the young men now to be conscripted, is in great need of this reinforcement; but the wider issues which have been exercising the minds of the advocates of a Supply Ministry for many months—problems of allocation and priority which will be made enormous as the Government's £630 millions of defence expenditure come into the markets for men and materials—are left untouched. The essence of the supply problem is the apportionment of claims, not only between the services, all of which have competing claims for labour and materials as well as common needs for the creation of reserve plant and equipment, converted and ready for use, but also between military and civil requirements. The existing Ministerial priorities committee is another organ of co-ordination, not of executive action; it has not the controlling powers needed to redesign the nation's productive economy in these ways. It will be folly to wait until the inevitable bottle-necks, rivalries and dislocations have developed before putting into operation the complete authority which, it is announced, the actual Ministry of Supply Bill will provide for. The whole Bill, and nothing less than the whole Bill is wanted at once.

* * *

Jugoslavia on the Anvil.—The pressure of the Rome-Berlin Axis on Yugoslavia has been brought this week to bear directly on M. Cincar-Markovitch, the Yugoslav Foreign Minister himself, in visits to Venice over the week-end and to Berlin on Wednesday of this week. The contradiction between the policy which the national interest requires and that which external circumstances permit has given rise to a number of conflicting reports as to the extent of Yugoslavia's surrender to the demands of the Axis Powers. Yugoslavia is now suffering the full consequences of the policy of M. Stoyadinovitch. Having been the sure ally of none, she finds not a single effective ally on whom she can rely. Having opened the gates to German and Italian intrigues in Central Europe and the Balkans, she now finds herself the direct object of those intrigues. Having prised open the Little Entente for Germany and Hungary, she finds herself expected also to prise open the Balkan Entente. Having facilitated the German disruption of Czecho-Slovakia, she finds herself, in the absence of any other single industrialised State between Germany and Russia, before a choice she is unwilling to make. Having opposed in September, 1936, the proposal that the Little Entente as a whole should make a pact of mutual assistance with France, she finds herself to-day without the guarantee of the Western Powers or the shelter of the Little Entente. In addition, in the economic sphere, she has come under a dangerous degree of German dominance. As is shown by a full account of her economic position on page 248, Yugoslavia, more than any other country, was economically

affected by the annexation of Bohemia and Moravia. Though official quarters in London insist that "Jugoslavia is not lost," there is no sign that sufficient pains are being taken by the British and the French to conduce to this end, and more should be done than is being done. As for the Yugoslav Government, they would be thankful to achieve neutrality and the continued integrity of their frontiers. It is clear that Italy has no interest in the disruption of Yugoslavia by Germany, and has this time promoted concord rather than discord in the Serb-Croat talks, which are reported to have reached a final agreement. But should the continuation of a Yugoslav State prove inconvenient to the Axis, Italy may insist that intervention is an Italian and not a German right. The presence of Germany on the Adriatic is even less desired in Rome than was her presence on the Brenner.

* * *

Roumania's Position.—The visit of the Roumanian Foreign Minister to London has proved an unmitigated success. The impression made by M. Gafencu on all those with whom he came in contact was as happy as seems to have been the impression made on M. Gafencu himself. The seriousness with which both countries are taking their common foreign policy has caused considerable mutual satisfaction. Though the economic consequences of this policy are being discussed in Bucharest by the delegation headed by Sir Frederick Leith-Ross, and the military and naval consequences will have to be discussed by the competent experts, the fact that M. Gafencu came from Poland, Berlin and Brussels, and returns to his country via Paris and Rome, enables the two Governments to judge the exact political situation of Roumania in relation to Europe as a whole. M. Gafencu was well received in Poland, as was to be expected in view of the Roumanian-Polish alliance which is being gradually strengthened to cover all emergencies and not exclusively an attack from the East. In Berlin, M. Gafencu was also pleasantly received, in spite of the disfavour into which his two allies have fallen, and the powers of resistance which Roumania is showing to the "penetration" envisaged by the German-Roumanian trade agreement. The position of Roumania, though worse than that of Poland in so far as her relations with Hungary and Bulgaria are concerned, is stronger in respect of her close relations with Turkey and her less negative attitude towards Soviet Russia. Roumania, to a limited extent, has inherited the rôle of her ally Czecho-Slovakia, and her safety depends on the effectiveness this time of co-operation between Eastern and Western Europe. Though she has not the military strength or the strategic position of Czecho-Slovakia, she has the advantage of being accessible by sea from the West and by land from Russia. The utilisation of this advantage depends on the primary agreement between the Black Sea Powers themselves and on close relations between Britain, Turkey and Russia.

* * *

Civil Defence.—It cannot be too strongly stated that the aim of urban defence against air raids is to enable essential industrial and distributive activities to be carried on with the maximum degree of safety for citizens consonant with this aim. This is why, on balance, Sir John Anderson and his expert advisers, whose conclusions were made public this week, have decided in favour of dispersed shelters, giving protection against blast and splinters, rather than mass underground refuges. There are other powerful reasons, too: the construction of deep, bomb-proof shelters for the whole civilian population would cost a very great deal and, more cogently, would divert resources on a large scale from the purposes of active defence; the technical difficulties of building a shelter system that would give sufficiently speedy and uncongested access to its users have not yet been overcome and any kind of deep shelter would take a long time to construct. Even if these views are granted, however, there is much ground still to be gained. The key points are vital services which, all these arguments apart, must have

very heavily protected shelters, have still to be chosen; and so far the system of dispersed shelters officially favoured for general use has itself only been begun. There is still a scarcity of steel garden shelters, as well as of the reinforced basements, communal shelters and street refuges that are to supplement them. And the rejection of deep shelters will necessitate some expansion in evacuation plans. If the time factor and the need for speedy preparation have been a strong argument in ruling out deep shelters, they are an even stronger argument in favour of completing the alternative arrangements. Sir John Anderson has planned his precautions with common sense and a cool head, but the sooner the goods are delivered the sooner will his contribution to national safety be fully appreciated.

* * *

Freedom and Censorship.—Some sort of control over the disclosure of news and the dissemination of opinion is inevitable in war-time and, as Mr Chamberlain has truly said, we can scarcely be said to be at peace even now. Already calls for a censorship are being made and rumours are abroad about the Government's restrictive intentions. Actually much of this excitement is misguided. The request of Sir George Broadbridge, Conservative M.P. for London and an ex-Lord Mayor, for the immediate appointment of a censor, a request which has made Sir George something of a hero in the Nazi Press, is a case in point. It is not to protect essential secrets or to further the defence of the realm that he has made his suggestion; it is simply and solely to limit freedom of speech and writing, in the interests of business activities which thrive upon confidence and optimism, even if these, by being falsely founded, lead in the end to limitless calamity. Sir George will surely receive short shrift. Gossip is also busy about the Government's alleged plans to take over the British Broadcasting Corporation. Here again the tales are, to say the least, premature. The B.B.C.'s independence of direct control, like the liberties enjoyed by the Press, has engendered a sense of responsibility in comment and statement that makes control needless and unwise until it is a question of preserving official secrets.

* * *

In essence the position of individual private Members of Parliament is similar to that of the Press and the B.B.C. The final report of the Commons' Select Committee on the Official Secrets Acts, issued this week, makes this point. The Committee deprecate the introduction of legislation, either to define Members' immunity from prosecution under the Acts or to state their liability to penal action. The privileges Members enjoy to seek out information and to base criticism upon it in the interests of their constituents are, like all parliamentary privileges, purposely imprecise. So long as individual Members are properly discreet, so long as the House as a whole, with its power to imprison or expel Members, keeps a watchful eye upon their proceedings in this respect, and so long as Ministers do not abuse the authority given them by the Official Secrets Acts, so long will the present position of privileged freedom tempered by good sense remain too valuable to destroy. It is only when the State is likely to be directly endangered by irresponsibility—not when weaker minds are disturbed by the painful truth—that newspapers, broadcasters and politicians will require to be curbed by regulation. We will not be able to escape control, but we can eke out the term and scope of the freedom we prize by our own discretion.

* * *

Investment Overseas.—Last week, in reply to a question in the Commons, the Chancellor of the Exchequer made an announcement of capital importance. There already exists an embargo, operated "unofficially" through

the Foreign Transactions Advisory Committee, on the purchase of foreign securities for resale. Now, it is the earnest wish of the Chancellor that British capital shall not be transmitted abroad by the purchase of securities for investment. The complete mobilisation at home of the country's financial resources for purposes of defence and re-armament has clearly been made imperative by the magnitude of the claims which the Government has decided to make upon the nation, and the export of capital, in normal peace time an important factor in the building up of national wealth, has become a dangerous diversion of assets. So far there are no signs that the Government's wishes are being flouted, and a Finance Note on page 258 shows that the recent gold losses of the Exchange Equalisation Fund have not been large. Nevertheless, measures of control that are distasteful and inexpedient in peace time become essential when a war economy is being arranged. The only possible test of the voluntary principle, in this sphere as in others, is whether it works. There is, accordingly, everything to be gained by a strict adherence to the Chancellor's wishes.

* * *

The Far Eastern War.—The Parliamentary undertaking by the Prime Minister last week—that he would bear in mind the desirability of including China and other Far Eastern countries in any combination of Governments for the purpose of resisting aggression—comes as an important reminder both of the interest of the United States and Russia in Far Eastern affairs and of the fact of war in Asia which has been somewhat overshadowed by the fear of war in Europe. In the last few weeks the Chinese forces appear to have made immense advances in Kwangsi, Honan, Shansi, Hopei and Kwangtung, and according to some reports have recaptured 5,000 square miles, equivalent to the Japanese gains since October. An important part in the Chinese advance has been played by the guerillas, who now seem in many districts to be liberally equipped with machine guns and trained to co-operate efficiently with the Chinese regulars. The Chinese claim that their real offensive has not yet been begun and though this is strongly denied by the Japanese, the latter admit that the Central Army has not yet been brought into action and that their troops have made "strategic withdrawals" in Southern China. These they now claim to have stopped. The immediate military threat to the Japanese conquest is not perhaps very severe—Japan can hold the ports, the Yangtse and the railways. But the situation in China is not likely to increase the anxiety of Tokyo to convert the Anti-Comintern Pact into a military alliance. Such an alliance would mean, in the event of European war, that the Chinese would be reinforced by the French, the British, probably the Russians and possibly the Americans, while any help that Germany and Italy could give to Japan would be very

remote and indirect. No wonder even the ideological fanatics in the army are hesitating, while the navy is reported to be opposed to anything that might bring it up against Russian submarines and British and American battleships, all at the same time.

* * *

Mr Menzies' Cabinet.—Mr R. G. Menzies, appointed Prime Minister of Australia last week, lost no time in forming his Government. It has sixteen members, all of them members of the United Australia Party. The most significant appointment is that of Mr R. G. Casey, formerly Treasurer, as Minister of Supply and Development, a new portfolio. The function of the Ministry, as Mr Menzies explains, includes the rapid development of Australian industry for defensive purposes and the making of plans to preserve the Australian economy in the event of blockade or an interruption of overseas trade. Mr Menzies himself has taken over the Treasury. Mr W. M. Hughes is Attorney-General and Minister for Industry, and Sir Henry Gullett returns to Cabinet office as Minister for External Affairs. Brigadier Street remains at the Defence department. It is a young and sound-looking Cabinet, all the stronger internally, by comparison with Mr Lyons' team, for being drawn from one party only. The future relations between the Government and the Country Party are still uncertain. By his attack on Mr Menzies, Sir Earle Page "banged, bolted and barred" the door to co-operation so long as the Country Party remains under his leadership; but his attitude has so offended many party members that they may prefer another leader with whom Mr Menzies can compromise. Two Country Party members of the Lower House have already declared their support for the Government.

* * *

New Zealand Checks Imports.—New Zealand importers and consumers received a severe shock when the Minister of Finance, Mr Nash, announced the schedule of import restrictions for the second half of the current year. A long list of imports, comprising luxury goods, like wines and wireless sets, and goods capable of being made in New Zealand, like beer and boots, are to be prohibited altogether. Partial restrictions, with a substantial preference for British goods, will apply to a further list, including glass and china ware. No assembled motor cars will be imported, and the quota of unassembled vehicles has been cut from 100 per cent. to 60 per cent. of previous quantities. These drastic restrictions are necessitated, according to a statement by the Minister, by the previous heavy surplus of imports over New Zealand's real ability to buy. He points out that the visible excess of exports in 1938 was only £3 millions, whereas over £12 millions was required for the service of overseas debt. Some correction of the balance of trade was certainly necessary, if New Zealand was to remain solvent in respect of her sterling public debt (the relevant figures are given in a Note on page 259). The method of control by licence, however, is full of dangers. Dislocation and profiteering in internal industry can be prevented only by measures of governmental control which will tend to make New Zealand's economic system more and more like Germany's.

or even as the highest office open to the Diplomatic Service. Many of the qualities that are most needed in a diplomat accredited to other capitals would unfit their possessor for the very different requirements of the mission to the United States. Both the present Ambassador and his predecessor have been diplomats *de carrière*, but exceptional in the Service for their approachability and human qualities. There is, however, a long record of distinguished amateurs being sent to Washington and, after a professional interlude, it is very welcome that a public figure of Lord Lothian's distinction has been chosen to succeed Sir Ronald Lindsay. Lord Lothian is, in fact, an excellent choice. He has a very long and intimate acquaintance with the United States and, as Secretary of the Rhodes Trust, has been closely associated for many years with an institution that is not only an enduring link between the two countries, but also one of the very few British-founded charities from which American citizens benefit. Lord Lothian's name has been associated, in the recent past, with the advocates of a particular foreign policy for Britain which is not popular in America. But that policy is now dead and Lord Lothian's recent speeches show that he personally has abandoned it. The task of the British Ambassador to Washington is compounded in about equal parts of diplomacy and of what is known in America as "public relations." Lord Lothian has some experience of both arts; he should be able to make a contribution to that mutual respect and understanding between the British and American peoples upon which the future of our civilization manifestly depends.

* * *

Barter Proposals.—The suggestion of the United States Government that America's surplus stocks of wheat and cotton might be exchanged in a barter transaction with the British Government for supplies of strategic raw materials, such as rubber and tin, needs very careful examination. While it is clearly true that it is in the interests of national defence that this country should build up war stocks of wheat and cotton, it is even more apparent that the present proposals spring from the desire of the wheat, and especially of the cotton, interests in the United States to get rid of their surplus supplies. The desire to do this is very understandable as a commercial motive, but it is not in itself sufficient reason for the British Government to embark lightly upon a plan which raises a number of difficult and complicated problems. In the first place, as the United States Government should know from their own hard experience, the holding of large stocks of raw materials for purposes of influencing price, even though disguised with a defence aspect, cannot be prevented from exercising a depressing effect upon the markets which they overhang, or from involving their holders in loss, however much schemes of restriction and price-control may be elaborated. Secondly, even defence considerations do not easily justify the British Government's making a large-scale bilateral arrangement with a single producer to the exclusion of other suppliers. Finally, granted that the United States has surplus stocks to get rid of, it is difficult to see how, at this juncture in world trade politics, either Britain or America stand to gain by an encouragement of barter methods, against which they have both repeatedly inveighed. The American plan is worthy of consideration but, on balance, it seems to carry many more disadvantages than benefits.

* * *

Merchandise Marks.—The Merchandise Marks Act of 1926 provided that overseas manufacturers sending goods to this country should be required to mark them as being of foreign origin. The intention was, of course, protectionist; but it is a protectionist device which in no way penalises the consumer—which, indeed, adds to the information at his disposal. The Act, however, provides that goods need not specify the actual country of origin but may be merely marked "Foreign" (or "Empire"). In some cases the name of the country of

origin has been a positive recommendation—thus, glass "Made in Czecho-Slovakia" has hitherto been highly regarded. But other countries have thought, doubtless correctly, that their goods stood a better chance if they were exposed for sale under the semi-anonymity of "Foreign." The Federation of British Industries have forwarded to the Government a recommendation that the Act should be amended to provide that all goods which require to be marked with an indication of origin should now carry the name of the country of origin. This is a useful suggestion, which should be adopted. There is nothing to be lost and much to be gained by letting the consumer know which goods are "Made in Germany" or "Made in Japan."

* * *

New Rates of Taxation.—The effect of the Chancellor of the Exchequer's proposals for surtax and estate duties is, in each case, to introduce a new element of progression into taxes that are already progressive. In the case of estate duty, there is no change in the rates levied on all estates up to £50,000 (the rate on estates between £45,000 and £50,000 is 14 per cent.). Above that figure, the existing rates are increased by one-tenth. The existing rates go up by a somewhat irregular progression from 15 per cent. on estates between £50,000 and £55,000 to 40 per cent. on those between £1,000,000 and £1,250,000, 42 per cent. between £1,250,000 and £1,500,000, 45 per cent. between £1,500,000 and £2,000,000 and a maximum of 50 per cent. over £2,000,000. All these rates will now be increased. The result is that after a gradual rise, there will be a sudden jump from 14 per cent. to 16½ per cent. at the £50,000 mark, while the maximum rate on estates over £2,000,000 will now be 55 per cent.

* * *

In the case of surtax rates, which have been subject to a surcharge of 10 per cent. since 1931, the surcharge is to

be 15 per cent. up to £8,000 and 20 per cent. above that figure. The existing and proposed rates are as follows. It should be remembered that surtax begins at £2,000 and that all these rates are additional to the standard rate of income tax, which is now 5s. 6d. in the £.

Slice of Income £	Existing Rate in the £		Proposed Rate in the £	
	s.	d.	s.	d.
2,000 to 2,500	1	1·2	1	1·8
2,501 to 3,000	1	4·5	1	5·25
3,001 to 4,000	2	2·4	2	3·6
4,001 to 5,000	3	3·6	3	5·4
5,001 to 6,000	3	10·2	4	0·3
6,001 to 8,000	4	4·8	4	7·2
8,001 to 10,000	5	6	6	0
10,001 to 15,000	6	0·6	6	7·2
15,001 to 20,000	6	7·2	7	2·4
20,001 to 30,000	7	1·8	7	9·6
30,001 to 50,000	7	8·4	8	4·8
Above 50,000	8	3	9	0

The combined rate of tax on the part of the largest incomes that exceed £50,000 thus becomes 14s. 6d. in the £ or 72½ per cent., as against 13s. 9d. or 68½ per cent. last year. The effect of these changes on a few standard incomes may be illustrated. The taxpayer is assumed to be married but childless and to have an income derived entirely from investments (the effect of the various allowances, of course, becomes more and more negligible as income rises):—

Income	Income Tax and Surtax							
	1938-39		1939-40					
£	£	s. d.	£	s. d.	£	s. d.	£	s. d.
2,000	474	12 6	23·75		474	12 6	23·75	
3,000	811	10 0	27·1		814	6 3	27·1	
5,000	1,636	10 0	32·7		1,651	16 3	33·1	
10,000	4,194	0 0	41·9		4,288	1 3	42·9	
50,000	29,631	10 0	59·2		31,038	1 3	62·1	
150,000	98,381	10 0	65·6		103,538	1 3	68·95	

On the largest incomes, it will be seen, the increase is by no means negligible.

THE WORLD OVERSEAS

M. Reynaud's New Plan

M. PAUL REYNAUD'S new batch of decree-laws has the object of increasing the military and economic strength of France. They are a further step in the recovery policy begun last November, which has already wrought a considerable change in the economic position of the country. The provisions of M. Reynaud's first plan five months ago could be grouped under two headings:—

1. **Monetary Consolidation.**—The object was to reduce the Budget deficit both by cutting expenditure and raising revenue. The former means was pursued by the reduction of appropriations for the ordinary Budget of 1939, by abandoning the rates for the civil public works programme and by greater part of the administrative reorganisation. Revenue was increased by increasing direct and indirect taxes. In all, the total estimated deficit for 1939 was reduced from 55 milliard francs to about 35 milliard francs (about £200 millions).

2. **Increase in Productive Capacity.**—The November decrees settled the vexed question of the hours of work. The 40-hour week, as an absolute limit to the length of work, was abolished. Overtime was permitted up to 48 hours a week, overtime wage rates were reduced to a reasonable increase (10 to 25 per cent.) on the standard rates, and the procedure for securing approval of overtime was simplified. These measures ensured that any increase in industrial production would not be arrested, as happened in 1937, by a shortage of labour.

These were the essential elements of the November plan. Their general purport and intention was to clear the way for the spontaneous recovery of a free economy. The reduction of the deficit was intended to strengthen the currency and induce a repatriation of capital. The increase of working

hours was to permit the rise in production which could be expected in view of the favourable competitive position of French industry. The conditions were created in which business men could decide to expand their operations.

Almost six months have now elapsed since M. Reynaud went to the Ministry of Finance. The results already achieved equal the most hopeful expectations. Production has risen since November by 11·2 per cent. The seasonal increase in unemployment, from November to March, was only 39,000 this year, compared with 73,000 last year. The average number of hours worked per week has risen from 39·2 to 40·3. The proportion of workers working more than 40 hours a week has risen from 10½ per cent. to 22 per cent.

The industries showing the most rapid increases have been the metal industries (the index of production here rose from 63 in July and 61 in September to 81 in February), textiles (84 in July, 82 in October and 95 in February), and the motor industry, which has shown uninterrupted progress for a year. Even the activity of the building industry is gradually rising; the index was 61 in July and had risen to 63 in December and 65 in January and February. Engineering and the chemical industry have also shown improvement.

As a result of this industrial improvement, the yield of taxes is rising, although prices show no significant increase. Moreover, the franc has been reinforced by a continuous reflux of capital, which did not dry up even at the severest point of the international crisis. Each day brings its quota of pounds and dollars, and the gold gained by the Exchange Stabilisation Account since November can be put at 20 milliard francs, or about £112 millions. Short-term interest

rates have fallen steeply and there is now a plethora of funds on the Paris market. Even the long-term rate has fallen from 6.4 per cent. on the average of the first nine months of 1938 to 4½ per cent. in March.

M. Reynaud's new measures are, up to a point, a continuation of those of November. The reduction of expenditure on public works, the imposition of a new armaments tax and the withdrawal of the Treasury subsidies to industrial alcohol and wheat are all aimed at improving the state of the Budget, and thereby help to consolidate the currency. The abolition of overtime wages for hours up to 45 a week is intended to reduce costs of production and assist the export trades.

There is thus an obvious link between the November measures and those of April 21st. But it would be a misconception of the significance of the new plan to regard it as no more than a continuation of the old. Since November, a considerable change has occurred in the French economic and financial position. The November plan was essentially a liberal plan. The new plan—or, more accurately, the outline of it that appears in the new decrees—is a plan for a war economy. The problems have changed. It is not now a question merely of increasing production, but of increasing the production of specific commodities, even at the cost of impeding the production of other articles which are deemed unnecessary in present circumstances. It is not now a case of reabsorbing the unemployed or of extending the effective length of the working week. What is now needed is to secure the most effective possible use of the available labour force. In this respect M. Reynaud's new plan accepts some of the suggestions made for British use by Mr Keynes in his recent articles in *The Times*. Consumption must now not be stimulated but limited, so that any productive resources not now employed can be reserved for industries working directly for the defence forces. A balanced Budget is no longer desirable only as a means of safeguarding the franc, but also as a means of limiting the creation of money in order that incomes may not be swollen in an economy which will soon have reached a state of full employment.

Towards a War Economy

These are the main intentions of the new plan. The detailed measures can be classified in three groups:—

1. *Effective Distribution of the Labour Force.*—The chief decree coming under this head is that which provides for the retirement of surplus officials. There is ample justification for this in the steady fall of the French population, which amounted to 1½ millions between 1931 and 1936. The employers' freedom of engagement is also to be limited, as a means of directing available labour towards the industries that are most important for defence. On the other hand, several measures taken to encourage a return to the land run directly counter to the present needs of the French economy. What is far rather needed is that part of the rural population should be attracted to industry.

2. *Limitation of Consumption.*—The most important measure in this group is the suppression of overtime rates for hours up to 45 a week, which will put a check on the increase of working-class income and consuming power. The principle of this group of measures is excellent, but M. Reynaud runs the risk of encountering practical difficulties. The transfer of labour from industry to industry is difficult, and M. Reynaud has declared that he does not intend to use measures of compulsion. But if the present world-wide state of insecurity persists, if the desire for liquidity continues, and if in addition every check is placed on the increase in the income of the pre-eminently consuming classes, there is a risk of producing a new depression in the consumers' goods industries. Consumption has already shown a significant decline since the New Year. The index of the volume of sales in department stores, which had risen from 54.7 in October to 62.1 in December, fell again to 61.5 in January, and to 50.1 in March.

3. *Limitation of the Creation of Money.*—The new decrees require an increase of 15 milliards in expenditure, which, in the absence of countervailing measures, would increase the 1939 deficit to 50 milliard francs. This deficit would be more than could be covered by loans, and recourse would have to be had once more to advances from the Bank of France. But in an economy that will soon have reached full employment (in some industries at least), the creation of money in this way would mean inflation with all its classical consequences—a rapid rise of prices, distortion of production, and the rest. To prevent this, M. Reynaud has turned mainly to increases of taxation. A new armament tax, levied in the form of a 1 per cent. sales tax, is to bring in about 7 milliards. The abolition of the alcohol and wheat subsidies will reduce expenditure by 4 to 5 milliards, and the remainder is to be found by the reduction of profits of firms working on defence orders and by more stringent measures against tax evasion.

France is thus turning her face towards a war economy. The question inevitably arises how long it will be possible to maintain monetary freedom. All that can be said with certainty at the moment is that the means of maintaining that liberty have been increased by the strengthening of the currency and by the gain of some 20 milliards of gold. But there can be no doubt that if exchange control should become necessary, M. Paul Reynaud would not shrink from it. For the moment, however, France has everything to gain from currency freedom.

Another obvious question is whether the measures that have now been taken in pursuit of the different objects distinguished above will be sufficient. The answer would appear to be that they are only a first instalment. As production increases in the war industries, and as the activity of the peace industries falls, there will have to be a large-scale transfer of labour, for which compulsory methods will be needed. Consumption will have to be further restricted. Taxes will have to be increased again. These and other measures will be necessary if the French economy is to provide what is with growing insistence demanded of it: a powerful war machine.

Germany Over Yugoslavia

[FROM A CORRESPONDENT IN BELGRADE]

WITH the daily calling of new men to the colours the people of Yugoslavia are realising, though their Government have known it from the first, that they are isolated within what the rest of Europe has come unofficially to accept as "no man's land." Disappointment at not receiving a British guarantee, fear that this was partly due to the bad repute of Serbo-Croat dissension, and fresh apprehension that Yugoslavia may be broken in pieces if she is not firmly united: these, and the knowledge of their isolation, are the reasons why the Yugoslav Government, with Prince Paul and the Serbian oligarchy behind them, have now reached an agreement with the Croat People's Party (representing the other non-Serb provinces as well as Croatia-Dalmatia).

By creating a situation of international tension in which Yugoslavia may fear the loss of parts of her territory to Germany, Italy, or Hungary, the Germans have brought Serbs and Croats into virtual agreement. After this, the next most important aspect of Germany's influence on Yugoslavia is economic; and, while Yugoslav importers may complain of the worsening quality of German goods, they seldom if ever complain about the manner in which Germany is conducting her commercial activities. The Germans, indeed, are being surprisingly deft in their deference to Yugoslav national feelings. Having established their virtual indispensability to Yugoslavia by capturing about 50 per cent. of Yugoslavia's foreign trade, they are now employing with great effect the argument used to explain the working of their trade treaty with Roumania: that Germany supplies capital in the form of production goods; and that this is not and cannot be a drag on the country which accepts it, because Germany draws no dividends but is paid only by "the productive force of Yugoslav labour."

Once they had adopted the policy of high agricultural prices, the Yugoslav authorities made it next to impossible for themselves to avoid the present predominance of Germany, for no peasant will admit the subtlety that prices are not really what they seem. This being so, it is fatally tempting for the Yugoslav authorities to fall in with the German line of argument. Though they are unquestionably anxious to increase their trade with free-exchange countries, and have even made efforts to stem the German inflow, they are clearly prepared to accept with more fatalism than the facts warrant the thesis that, until the free-exchange countries buy more Yugoslav goods, the Germans are only doing Yugoslavia an essential service. More trade is wanted with Britain, but nothing is done to alleviate the exchange control adopted in 1936. It is apt to recall the difficulties encountered a short time ago by a British company which had sold an air compressor to the State Railways. The Railways said that no contract could be signed until an import licence had been obtained; the National Bank, in its turn, declared itself unable to issue a licence without first seeing the contract. The British company has not yet succeeded in exporting its compressor.

As it is, the policy of neutrality has now slithered over to the Axis in the economic sphere as well as the political.

Of very considerable importance is the credit, understood to be for a period of five years, which by all accounts will soon be an established fact. This credit is the heir of Herr Funk's optimistically forecast 10,000 million dinar credit, which made the ears of Belgrade buzz some months ago, and is to be for 3,500 million dinars (the dinar is officially quoted at 200-215 to the £). The following details may be taken as approximately correct, and account for the main single items:—

1. 200 million dinars for extensions to the Zenica ironworks.
2. 200 million dinars for extensions to the Kragjuvac high-explosives arsenal.
3. 200 million dinars for the establishment of a powder factory.
4. 300 million dinars for the purchase of German military aeroplanes.
5. 200 million dinars for the payment of artillery ordered from Skoda of Pilsen and delivered after Germany's annexation of Bohemia-Moravia.

This credit must be regarded against the background of the barter system which Germany has operated in the Balkans for some years. The Yugoslav authorities are eager to assure an Englishman that it is no new thing. The Zenica works, in fact, are already running on Krupp equipment, which is being paid for by deliveries of ores over a period of five years. "The Germans provide the machinery," runs the official argument, "but the factories remain ours."

But, although it may be roughly true that this system does not prevent Yugoslavia from trading elsewhere, the long-term effect is to draw the country and its sympathies more and more into the German orbit. This is especially true of Croatia, where German propaganda is both intense and effective. From the Yugoslav point of view, too, these credits form a welcome alternative to the flood of typewriters or ladies' bust-bodices, which in other circumstances might be the only way in which Germany could balance her purchases of Yugoslav agricultural produce. In the sense that Yugoslavia cannot get capital from elsewhere, it is quite true that Germany is rendering her a most useful service.

It is important to remember, however, that Germany's activities are restricted to credits of this kind and, lately, to the purchase of a number of mining concessions. The latest reliable figures of foreign capital invested in Yugoslavia are for 1934, and they show that, out of 6,215 million dinars invested, French investors owned 1,056 millions, British investors 874 millions, and German investors 55 millions. To the total under German control must now be added the investments of Austria, the Sudetenland and Czechoslovakia. Analysing the 1934 figures (which have not substantially changed, except in the case of the Czechs, who in 1938 owned 989 millions) Germany now controls capital invested in Yugoslavia as follows:—

	Germany	Austria (in million dinars)	Czechoslovakia
Banks	...	62.2	255.7
Industry	40.7	270.6	447.2
Commerce	1.9	14.2	33.1
Transport	11.3	11.6	...
Various	0.7	7.6	5.2
Totals	54.6	366.2	741.2

The Reich has therefore now taken the leading place.

The whole question of increasing Britain's trade with Yugoslavia depends solely on whether or not the British Government are in favour of incurring an inevitable risk. If the decision is against it, then the blame should not be laid at the door of Yugoslavia. Hard words here will get us nowhere. Rather must the British Government be determined to make clear its point of view to that predominant number of Yugoslavs who will otherwise count it as not far from one of enmity.

American Hopes Deferred Again

[FROM OUR NEW YORK CORRESPONDENT]

IN thirty days to the first week in April average share values in New York dropped about 20 per cent. In amplitude, the decline is about double the break of last September or that of January; and in amplitude and timing it is almost precisely the duplicate of its course in the same months of

1938. It cancelled about two-thirds of the rise of last summer. By the first week of April, America had reached a level virtually as low as any touched in 1937, and as low as any in 1938, except for part of the second quarter.

A decline of this rapidity and magnitude cannot be dismissed as a mere stock market phenomenon. It is an economic portent; and one which does not lend itself to prompt and satisfactory interpretation.

The skeleton of the movement is clear. First, the initial wave of selling came from abroad. This does not always mean selling by foreign holders; but rather that the market in New York opens on the cue of the London closing. Secondly, while each of the successive waves of liquidation coincided with particularly disturbing events in Europe, the individual selling waves, and the amplitude of the decline to date, appear to have been far more severe than in any European market. Thirdly, at no time was the volume of sales really heavy.

Fourthly, March, although probably lower than February, was not a month of business recession. On the contrary, the weekly business data were steadier during March than in any of the past four months. But the absence of the anticipated upturn was discouraging to the very many people that had expected it. Fifthly, actual business news in the first week in April has pointed downwards—and one is confronted with the old question whether the March market merely forecast or actually caused a certain chill in the business atmosphere.

Finally, this chill is as yet confined to the steel and motor industries. In steel, the seasonal peak usually occurs around the end of March; this year the peak was absent—the first quarter being practically a plateau. In motors the spring peak is commonly a little later, and in this cycle it appears to have been actually before the turn of the year, with the first quarter of 1939 practically a plateau.

In sum, while the decline in the market is almost unanimously attributed to events abroad, and while it seems not unlikely that these events provoked successive waves of liquidation, the absence of compensatory buying may be interpreted in terms of uncertainty about the business outlook. Uncertainty at home, no less than uncertainty abroad, has been a cause of the decline.

Recovery Still Expected

It is uncertainty rather than pessimism. The strong surge of revival lasted from last July to November. Then, about the end of the year, distinct hesitation appeared, particularly in the steel and motor industries. This hesitation was accepted as the prelude to a spring revival, and this diagnosis was tenable until spring itself came. When March failed to disclose any positive evidence of vigour, hopes for the spring had to be abandoned. But, so far as your correspondent can learn, the business community is not particularly apprehensive about its own outlook. It does not accept the spring disappointment as a forecast that the summer will take a turn for the worse.

It may be worth adding that, while Wall Street is almost unanimously inclined to describe the market almost entirely in terms of foreign affairs, business men describe their problems almost entirely in terms of domestic circumstances, attributing comparatively little influence to events abroad. Further, Wall Street interprets events abroad largely in terms

of their ascribed repercussions on the stock market, and has been at some loss to account for the greater repercussions in this market than in markets nearer the scene.

Two Markets for Capital

While the share market was undergoing a major revaluation, the bond market was conspicuously firm. In this respect the current spring is in marked contrast to March, 1937, when a disturbance in the bond market coincided with and even preceded a disturbance in the share market.

This phenomenon illustrates a fact which is increasingly discussed in American economic circles and which seems to have been unappreciated formerly. It may be described as the "compartmenting" of capital. It has usually been assumed that capital moved freely and competitively over all areas of the market, in response to such familiar influences as variations of yield and risk, etc. Events of recent years have not merely brought this theory into question, but have gone far towards refuting it. The data show that there is approximately as much capital seeking riskless, fixed income securities in recent years as in the blooming days of the New Era. Indeed, taking all things into account, it is questionable if ever (except during the war period) our market absorbed such a volume of fixed-income securities as in 1936; and even in 1937 and 1938 the figures, although much smaller, compare not unfavourably with the 'twenties—a fact the more remarkable because in part of that period the banks were actually reducing their holdings. To be sure, the securities taken by the market have been mostly issues of the Federal and local Governments; and as these issues (especially those of the Federal Government) are usually omitted from tabulations of "new capital issues," the belief has gained currency that the new capital market has greatly shrunk and that "over-saving" (i.e. the accumulation of uninvested capital funds) is a conspicuous fact of our capital market.

But, while the demand for fixed-income securities appears remarkably strong (whether measured by the volume absorbed or by the prevailing rates), the supply of equity or hazard-bearing capital seems to have shrunk to a comparatively small portion of the former figure. The inability of the railroads to finance by equity issues had become a conspicuous fact even in the 'twenties; in the 'thirties it seems to have been communicated to corporate enterprise in general. At the same time, undistributed corporate profits—a large source of capital in the 'twenties, have (over American enterprise as a whole) virtually disappeared in the 'thirties.

A certain degree of compartmentation in the capital market has long been recognised. For example, the annual availabilities of the life insurance companies (one of the largest channels of capital formation) have always been restricted by law to fixed income securities. Trust funds, i.e. estates in the hands of trustees, have always been canalised into fixed-income securities of a prescribed quality. The ubiquitous and multifarious variations of tax exemption have been another important influence in compartmenting the capital market. The incidence of high surtaxes on both income and capital gains, combined with the limitation of capital losses which can be deducted from taxable income, has been a distinct influence, too, in the compartmenting of capital. The growth of the trust companies has been another, although trust companies are not confined absolutely to fixed-income securities for their clients' investments.

A number of other influences or factors could be cited, but they all point in one direction, and to four conclusions:

1. That the supply of and demand for fixed income, non-risk bearing capital is not materially smaller than in the 'twenties.
2. That most of this is canalised into Government obligations, while in the 'twenties, the aggregate of Government debt (Federal and local) was scarcely expanding, as the retirement of Federal debt approximated to the expansion of local Government debt.
3. That the supply of risk-bearing capital of all forms

has been reduced to negligible amounts, whereas in the 'twenties it was large.

4. That the capital market appears to have become, for a variety of reasons, so rigidly compartmented that even extremely low yields on "riskless securities" do not induce a diversion into "risk-bearing securities."

One would hardly be justified in affirming that the compartmentation is air-tight—that capital habituated to seeking fixed-income securities absolutely does not flow into equities, and would not under any circumstances. But the evidence suggests that there is little communication or competition between the two markets.

The Danube and the Bargee

[FROM OUR ROUMANIAN CORRESPONDENT]

ON January 16th last M. Gregore Gafencu, Roumanian Minister for Foreign Affairs, was present at a meeting held in Galatz by the National Regeneration Party. In his speech he referred to Roumania's interest in the Danube, for recently this time-honoured river and artery of Europe has attracted the attention of politicians and economists in all the countries through which it flows, and not least in Roumania. M. Gafencu said that the Roumanian Danube must serve as a show-window turned towards the East and the Black Sea, and that this fact placed certain duties upon the shoulders of Roumania.

The importance of the Danube has lately been increased by various plans for canals connected with its upper and lower reaches. On May 11, 1938, the German Government promulgated a law for the construction of the Rhine-Main-Kelheim (Danube) canal. This canal, which is to be finished in 1945, forms a part of the German system of economic campaign and the Roumanian Press talks of Baghdad as the goal towards which it is aimed. It will carry vessels up to 1,200 tons.

On November 19, 1938, a convention was signed between Germany and Czechoslovakia for the construction of another canal from Kosel on the Oder through Moravska Ostrava to the Danube above Bratislava.

For several years the Roumanian Government has had in its archives plans for the construction of a canal to unite by a straight line the Danubian port of Cernavoda with Constantza. Hitherto the Government has done little more than play with this very interesting proposal for shortening the journey to the port of shipment of grain-laden barges from the west, north-west and north of Roumania, and of cargoes from countries further west, by cutting off the whole curve of the river, where it bends north at Cernavoda, and thus reaching Constantza by a direct route.

The voyage of cargo steamers would be reduced by about 300 km. by loading at Constantza instead of at Braila or Galatz. Below Braila the average depth of the river is about 24 ft. so that it is navigable for sea-going vessels. Higher up, the depth decreases, owing to moving banks of sand and silt that reduce it in places to 2-6 ft. The transshipment of river-carried goods is at present effected mainly at Braila and Galatz, which are both equipped with modern plant for that purpose. The proposed canal would divert traffic from these ports and make Constantza the principal port for grain, as it already is for petroleum products. The experts consider that the depth of the canal would have to be 8-10 ft., and its length is calculated at 70 km., or about half the distance between Cernavoda and Braila.

The Government is at present busy studying this proposal. It has long been left in abeyance partly from considerations of expense and partly, perhaps, because of the tradition of the old grain ports; but the difficulties at the Sulina mouth of the Danube have revived interest in it.

Another canal of purely local importance has been planned to join Bucharest with the Danube, using convenient reaches of the rivers Ialomitza and Arges which, it is claimed, could easily be made navigable. The engineer in charge of this proposal has calculated that it will cost some 900 million lei, and that this sum might be redeemed in one or two years.

The most far-reaching proposal for a canal which, if it were ever carried out, would radically affect the Balkan countries, is for a waterway running from the Timok river, a Danubian tributary below Belgrade, and by the Nishava to Nish, thence down the River Morava to the River Vardar, and finally to the Mediterranean at Salonika. This canal

would shorten the goods route from Central Europe to Salonika by 1,429 km.; it would, of course, kill the lower Danube ports of Braila, Galatz and Sulina.

The Danube Delta

It thus becomes a question whether it will be worth while to incur vast expense on the maintenance of the Danube delta navigation. Trouble over this dates from as far back as 1835-51. According to the admirable History of the European Commission of the Danube, published in 1931 to celebrate the 75th year of its existence, the Sulina mouth, always the most accessible to navigation, was at that early time a veritable trap for grain merchants. The little town of Sulina had some 1,000 to 1,200 inhabitants, mostly Ionians,

Greeks and Maltese, who vied with each other in brigandage and piracy. The sea-going vessels loaded with cereals at the shipping ports were of no more than 160 to 170 tons, but nevertheless they were unable to cross the Sulina bar in full draught. They were obliged to unload a large proportion of their cargoes on to lighters belonging to this band of river brigands, whose lighters were made with double bottoms which provided plenty of grist for the flour mills of Sulina, and left the grain shippers with a deficit of cargo.

After the European Commission of the Danube was created by the Treaty of Paris of 1856, a great struggle began against the forces of nature at the Danube mouths, and was marked with increasing success. The essential problem was one of dredging. The following figures show the development of Danube navigation:—

	No. of Ships	Total tonnage	Average tonnage of Ships
1856-60	12,852	2,249,374	175
1876-80	8,342	3,088,560	375
1896-00	6,613	6,993,846	1,018
1906-10	5,853	9,837,926	1,672
1926-30	3,743	7,389,266	1,969

Dredging operations increase in volume every year, and the budget of the European Commission of the Danube amounts to some four million French francs (gold), mainly on the Sulina Arm, though the other two channels of St. Georges and Kilia also demand attention.

Up to the last few years a depth of 24 ft. was considered ample, but now numerous voices are raised demanding an increase for larger vessels. In 1938, after a great storm from the north, the depth fell to 20 ft. in spite of the superhuman efforts of the Commission's dredgers, and for some time it was found impossible to reach a depth of more than 22 ft. Certain measures have been taken to prevent the repetition of such a disaster and the question of making another channel is being discussed.

Navigation conditions on the maritime Danube can therefore be summarised as follows: the works on the Sulina Canal and on the mouth of the Danube at Sulina cannot finally assure international navigation. They were accepted in 1856 only as provisional, and this is how the matter still stands, after 83 years of tremendous achievement. The commercial world, especially Germany, realises the position, and hence the reason why the seemingly fantastic project of a Timok-Salonika canal is put forward as a practical solution.

Boom in German Machinery Manufacture

[FROM OUR BERLIN CORRESPONDENT]

SINCE 1933, the German machinery industry has, with the mining industry, shown the greatest advance. This is because German industry is based primarily on armaments. Building activity has only a secondary influence, and the capital needs of industry itself gained importance only in the last two years.

MACHINERY PRODUCTION

(Value in Rm. millions)

	Domestic Sales	Exports	Total
1929	2,120	1,430	3,550
1932	690	750	1,440
1934	1,563	490	2,053
1937	3,700	801	4,500
1938	4,700	825	5,500

The value of machinery output has been multiplied by four since 1932, and it is 60 per cent. greater than in 1929. The quantity of output is far in excess of previous levels, since prices have fallen considerably. Domestic sales are seven times greater than in 1932, but exports have risen by only 10 per cent., and the percentage of exports in total sales has fallen from 52 to 15.

The number of workers employed in the machinery industry has increased by 500,000 since 1932, and there are 150,000 more employed than in 1929. At the same time there is an acute shortage of labour, even though, as a result of rationalisation, the value of output per head in the industry has risen from Rm. 5,800 in 1929 to Rm. 7,500 in 1938. The average working time in the industry is 8.39 hours daily.

The decline of exports relative to total machinery sales is of great importance, in view of the Reich's need for foreign exchange to provide raw materials for industry. Next to the chemical industry, the machinery industry has long been the largest source of foreign exchange. The proportion of raw

materials used in the construction of machinery is small, only small sums of foreign exchange are used, and the labour costs, which are paid in domestic currency, are large.

The following figures show the trend of machinery exports and their share in Germany's total exports:—

	Machinery Exports as Percentage of Machinery Sales	Machinery Exports as Percentage of Total Exports
1929	42.7	11.1
1932	52.1	13.8
1934	23.9	11.6
1937	17.8	13.5
1938	15.0	15.7

In the world's exports of machinery the United States comes first with 44 per cent., Germany second with 30 per cent. and Great Britain third with 26 per cent. Only 10 per cent. of the proceeds of German machinery exports goes to purchase imported raw materials; the remaining 90 per cent. is used to buy domestic material and to meet labour costs. The following table shows the value of exports in the separate branches of the industry. It suggests that machinery exports have now come to something like a standstill; in several cases there is actually a falling away. This is due to stronger foreign competition and to political considerations detrimental to the purchase of Reich goods abroad.

EXPORTS (Rm. millions)	1934	1935	1936	1937	1938
Machine tools	87	78	148	209	204
Spinning and leather working machines	101	99	123	136	113
Agricultural machinery	17	17	23	30	31
Steam locomotives	4	12	12	15	36
Power machines	39	40	52	66	76
Pumps and air-pressure machines	19	19	28	38	39
Wagons	10	11	11	18	19
Paper and printing machinery	32	41	55	68	66
Office machinery	13	16	22	29	26
Machines for food manufacture	16	11	32	36	33
Other machinery	123	122	98	120	123

The investment goods industries have doubled their purchases of machinery since 1935, but the consumption goods industries have increased theirs by only half. In the former case it was the necessity for replacing machinery that played an important part at the outset of this increase, but later the need for new investment in plant and machinery, owing to the rationalisation made necessary by the labour shortage, became an important factor. The demand for construction machinery, particularly in connection with fortification and municipal rebuilding work, has increased in recent years; and, as a result of the Four-Year Plan, the mining industry has shown an increased demand for wagons and drilling machinery.

The demand for agricultural machinery, again, is related to the shortage of labour as well as deriving in some degree from the campaign for increased production. In the 1937-38 season Rm. 463 millions was spent on agricultural machinery, against Rm. 210 millions in the 1933-34 season.

A key department in the machinery industry is the machine tools branch. Since armaments have a heavy and prior claim on machine tools, delivery periods now run to as long as three years.

The textile industry, too, has increased its use of machinery. Until lately the industry suffered from a lack of raw materials. The increased output of synthetic threads, however, has recently made changes in existing machinery necessary, and the construction of new plant has become imperative.

Finally, the manufacture of machinery for making artificial materials has become important. This industry has enjoyed a boom owing to the increased use, encouraged by the Four-Year Plan, of plastics. Stamping and spraying machines are most produced, and are, indeed, sold in great numbers to foreign countries.

In sum, the machinery industry is working at full stretch. The branches stimulated by armaments are working at 120 to 150 per cent. of their normal capacity, while employment in the consumer goods groups, on the other hand, lags behind, and the section of the industry which is connected with the manufacture of foods is employed at only 65 per cent. of its normal capacity. Roughly it can be said that the machinery industry generally is employed at some 107 per cent. of normal capacity.

Profits in the industry have accordingly increased considerably. According to the figures for 163 companies, gross earnings rose from Rm. 423 millions in 1932 to Rm. 1,099 millions in 1936, while net profits rose from Rm. 10 millions

in 1932 to Rm. 42 millions in 1936. Simultaneously, three times these sums have been written off.

* * *

Foreign Trade Revival.—For the first time for many months German foreign trade has shown an increase. Greater Germany's imports in March were valued at Rm. 504.2 millions, against Rm. 471.5 millions in February. The value of exports, too, increased from Rm. 411 millions in February to Rm. 480.5 millions last month. For the first quarter of the year, however, there is an import surplus of Rm. 115.2 millions, against only Rm. 39 millions for the same period of 1938 in the old Reich territory alone. If the old Reich alone is taken for the first quarter of this year, there is an import surplus of Rm. 26.7 millions.

The character of the March increases are noteworthy. The main advances in imports were in imports of raw materials for use in armaments, such as motor fuels and lubricating oils. More coal and more ships were imported from Great Britain, and against an increase in imports from Great Britain of Rm. 4.3 millions there was a rise in exports to Great Britain of Rm. 5.5 millions.

* * *

Shortage of Motor Fuels.—Although the Reich without Austria imported approximately 5 million tons of mineral oils last year, compared with 4.3 million tons in 1937, and although the domestic production of petrol rose from 1.26 million tons to 1.5 million tons, a shortage of motor fuels has become apparent as a result of increased motorisation, particularly of the army. Consequently, the authorities in control of mineral oils have decreed that all omnibuses with more than 16 seats must shortly be changed over to use liquid gas. Liquid gas is formed in great quantity during the manufacture of synthetic petrol, and until now there has been little demand for it, even though the cost of converting omnibuses to its use was reduced by a half by means of tax reductions. Liquid gas is said to be 10-15 per cent. cheaper than petrol, and to possess good qualities.

Agriculture's Call on the Banks

[FROM OUR SYDNEY CORRESPONDENT]

LAST year's Australian banking figures were significant of general economic trends. They reflected the prevalent low export prices and drought. In spite of a decline in holdings of Treasury bills and sales of Government securities, the ratio of cash to deposits fell in the June and September quarters to 10.5 per cent., the lowest point for some years. With the beginning of the export season in the December quarter, however, the ratio improved slightly to 11.1 per cent.

(Trading Banks)

Quarter ended	Deposits	Advances	Cash	Treasury Bills	Govt. Securities	Ratios	
	£A.	£A.	£A.	£A.	£A.	Cash to Deposits	Advances to Deposits
1937: Dec.	313	273	38	21	21	12.3	87.1
1938: Mar.	320	277	40	20	23	12.4	86.4
June	319	284	34	19	22	10.5	89.0
Sept.	311	287	33	17	20	10.5	92.3
Dec.	317	290	35	19	19	11.1	91.4

The ratio of advances to deposits increased from 87.1 per cent. in the last quarter of 1937 to 91.4 per cent. in the final quarter of 1938. Although deposits rose during the period by £A4 millions, advances rose by £A17 millions.

Not only were farmers' and graziers' receipts low because of the fall in world commodity prices, but in areas suffering from drought there was also the expense of purchasing fodder or renting country in other districts to keep the stock alive. Accordingly, the level of advances rose steadily as the banks had to help finance this expenditure.

After the drought had broken, in some areas there were further demands for advances to restock properties and build up depleted fodder reserves. At the same time, however, an

increasing discrimination in granting new advances was evident, and banks tended to grant them only in cases where additional finance was necessary to keep properties in production.

An integral part of the development of the Australian banking system has been the necessity to provide for current droughts and maintain an elasticity sufficient to tide the country over bad seasons. This is instanced in the wide fluctuations in banking ratios from year to year, as the banks, by building up their resources in good times, prepare to meet the next period of strain. The adaptability to changing conditions which has thus been developed in the Australian banking system is one of its greatest sources of strength.

The Loan Council left the market clear for the £A68.6 million conversion operation in the first half of the current financial year, and did not float a public works loan. With the conversion operation out of the way, subscriptions were invited in February to a £A8.5 million Commonwealth internal loan to finance public works, issued at par and with an interest rate of 3½ per cent. When the lists closed, only £A4.8 millions had been subscribed, leaving £A3.7 millions to be taken up by the underwriters. Redemption yields on

Government stocks rose during 1938, and it was no doubt expected that the new loan would carry a higher rate of interest, following, as it did, so soon upon the other. Those who had failed to convert their holdings in the old loan were not attracted by the returns under the new one.

The Commonwealth Bank subscribed to just under £A2 millions of the loan before it closed, and in addition took up its share of the £A3.7 millions that were left on the hands of the underwriters. It thus seems probable that the expansionary effect of the Central Bank subscriptions to the loan more than offset the loss of cash by the trading banks in paying for their quota as underwriters. The more liquid cash position of the trading banks which appeared in the final quarter of 1938 was thus maintained. Trading banks' cash rose £A2.6 millions during January, and at the same time their holdings of Treasury bills rose £A4.7 millions. Presumably the Commonwealth Bank discounted Treasury bills with the trading banks to provide itself with cash to pay for the Government securities taken up by it. As deposits rose £A2 millions, while advances declined slightly during the month, the banks were then in a decidedly more liquid position than in the June and September quarters of 1938.

Letter to the Editor

First Year of the Films Act

TO THE EDITOR OF THE ECONOMIST

SIR,—Your leading article "First Year of the Films Act" (April 15th, page 126) is an important contribution on the working of the 1938 Act, but there are points which need further explanation.

First, in regard to the inquiry held under Section 9 of the Import Duties Act, 1932, in respect of production, etc., in the cinematograph film trade, the cost of all films produced in British studios in 1937 was computed at £5,700,000; and the analysis given in the *Board of Trade Journal* for January 12, 1939, shows that the proportion of this figure applicable to "long" films was £5,000,000. It must be emphasised that this figure for production during the calendar year 1937 bears no relation to the cost of films registered with the Board of Trade during any one quota year. Were figures available, the sum of £5,000,000 could be split under the following headings:—

- (A) Films registered before March 31, 1937.
- (B) Films registered between April 1, 1937, and March 31, 1938.
- (C) Films registered between April 1, 1938, and March 31, 1939.
- (D) Films abandoned, "on the shelf," or not registered at March 31, 1939.

However, it is possible to make a reasonable computation for (A), (C) and (D).

(A) would obviously consist of "quota quickies," and a generous estimate of cost would be £150,000. For (D) four films alone probably account for £350,000. (C) Here the cost provisions of the 1938 Act help, as analysis shows that 1937 production registered in the first year of the 1938 Act consists of the following:—

	No.	Cost each say £	Total £
Exhibitors' quota only	2	5,000	10,000
Renters' and Exhibitors' quota—			
Single quota	6	15,000	90,000
Double quota	4	50,000	200,000
Treble quota	5	100,000	500,000
			800,000

This leaves £3,700,000 to be allocated against (B), and the analysis can be carried further. (B) covers 228 films, but this includes 18 Empire importations and one silent subject, leaving 209. This figure can again be broken down to 175 subjects over 5,000 feet and 34 subjects between 3,000 and 5,000 feet. The cost of the latter would be negligible (£200,000 would be generous), leaving £3,500,000 for 175 subjects, an average of £20,000 each. (It is doubtful if this figure is correct, as the true average cost was probably not £10,000, when one considers that at least 40 per cent. of the 175 films consisted of the much-maligned "quota quickies" produced at 15s. to £1 a foot.)

Now to analyse the registrations for the first year of the 1938 Act we have:—

	No.	Cost each say £	Total £
Exhibitors' quota only	25		
Deduct Empire subjects	2		
	23		
Over 5,000 ft.	14	6,000	84,000
Between 3,000 ft. and 5,000 ft.	9	3,000	27,000
Renters' and Exhibitors' quota—			
Single quota	47		
Deduct "The Citadel" * ..	1		
	46	15,000	690,000
Double quota	21	50,000	1,050,000
Treble quota	10		
Add "The Citadel" * ..	1		
	11	100,000	1,100,000
	101		2,951,000

* "The Citadel" is a treble quota class film but was registered as single quota.

To check back on this figure, take Mr Stanley's statement that proved labour cost in 1938-39 averaged £3 5s. per foot, assume total cost average £6 per foot, and take average length of 6,800 feet for the first eight months as applicable to the whole year; we get a total cost of £3,182,400 for the 78 subjects registered for renters' and exhibitors' quota. This compares with £2,840,000 shown above, so it can be taken that a round figure of £3,000,000 is approximately correct.

This figure of £3,000,000, which averages £38,500 for each of the 78 subjects registered for renters' and exhibitors' quota in 1938-39, compares with £3,500,000 for 175 subjects registered in 1937-38. However, when one questions the accuracy of the average cost of £20,000 for the latter, it would seem that the cost of productions registered in 1938-39 approximates to, if it does not actually exceed, the cost of registered in 1937-38.

Such a conclusion is reasonable; quality has been substituted for quantity, but quality costs money. The Films Act of 1938 has been attacked from many quarters, but at least it has forced American renters to sit up and take notice: they have found that really worthwhile British films, costing perhaps 20 times that of a "quota quickie" (but only counting the equivalent of three), conquer the world market.

Yours faithfully,
F. SHERWOOD.

London, W.C.2.

[We agree with the writer that films registered in any year are not the same thing as the films made in any year. The one refers to a point in time and the other represents a duration of time. Normally it would be expected that the "carry overs" from year to year might prove to be of the same order of magnitude. In that case, films registered in 1938-39, which were wholly or partly made before April 1, 1938, might be offset by films wholly or partly made before April 1, 1939, and registered after that date. Mr Sherwood does not allow for this later "carry over."—EDITOR.]

Shorter Notices

"Mowrer in China." By Edgar Ansell Mowrer. 216 pages. Penguin Special. 6d.
 "China Struggles for Unity." By J. M. D. Pringle. With 24 maps by Marthe Rajchman. 182 pages. Penguin Special. 6d.

In the bad old days these books would each have cost at least seven and sixpence. And by any standards they would have been worth it. For, taken together, they represent as full a picture of what is happening in China as can be found, not only because of the facts they give (though Mowrer drops into Oriental fancy sometimes) but because their authors see with such different eyes. With a subject so large and vigorous as China it is certain that no two men will see it alike, and in this case, with Pringle writing from Manchester and Mowrer from Chengtu and the Yellow River, the contrast in result is as wide as it is useful. Pringle and Rajchman are concerned to give you the hard facts and they do this with efficiency and skill; Mowrer illustrates those facts on the spot. Together they conspire to destroy for the Western reader, whose ideas on China are too often limited by Limehouse and school-readings of the "Heathen Chinese," the common notion of Cathay, and replace it with a picture of a land full of human beings whose sufferings, just now, are more than most could bear. Mowrer is a good journalist and, as such, needs no puff. Special praise ought to be given to Pringle's text and Rajchman's maps, though one would like to see more evidence for the stated proportion of the "occupied" areas which in December, 1938, were still under Chinese control. Included in the 24 maps are approximate details of Chinese mineral and agricultural wealth, of foreign investments, communications, educational centres and general references to economic wealth. They do their job very well and promise to be valuable forerunners to more detailed information which we shall require after the war is over and economic reconstruction is under way.

The French Line is at your service when business or pleasure takes you to New York. A modern fleet, unexcelled for speed and reliability, offers you extreme luxury and faultless service—the best of France afloat in all things.

Compagnie Transatlantique Ltd., 20 Cockspur St., London, S.W.1, and all leading travel agents.

"Railways, Roads and the Public." By Sir Charles Stuart Williams and Ernest Short. Eyre and Spottiswoode. 157 pages. 6s.
 "The Railway Crisis: The Problem and its Solution." Issued by The Railway Companies' Association.

Both these publications advocate greater justice for the railways. The first views the present problem from the standpoint of the junior stockholders. Its arrangement is rather confused, but it deals at various points with the merits of nationalisation, the necessity for road-rail equality in matters of rate charging, railwaymen's wages and several subsidiary matters. The authors' views on nationalisation have little value, but their chapters on rail facilities would do credit to any advertising manager; their statement of the wagon problem and its remedy is excellent, but their treatment of the "watered capital" question shows weakness in matters of accounting theory. In fact, this is a patchy book. The stockholders' case is vigorously put, though the authors' manifest prejudice lessens the value of some sound arguments. Grasp of the broader aspects of the road-rail problem is lacking, but there are several shrewd statements on particular points, such as the vital necessity for careful control of "C" licences in any co-ordination scheme. The new pamphlet issued by the Railway Companies' Association states with brevity and force the origin and nature of the "Square Deal" proposals, and brings the matter up to date by reprinting three official memoranda on the subject. The latter are in themselves models of clear and convincing statement.

THE BUSINESS WORLD

The Rayon Industry

TO the layman, rayon, or artificial silk as it was formerly called, is just one of many textile materials in common use. So, indeed, it is, for its basic ingredient, as that of other textile fibres, is cellulose, a fibrous mass of plant cells. The term artificial silk, while scarcely applicable to the modern product, provides a clue to the genesis and early history of the rayon industry. The habits of the silk worm, which turns mulberry leaves into fine threads, have ever aroused the curiosity of man. As long ago as 1664, Dr Robert Hooke speculated on the possibility of emulating the silk worm:

And I have often thought (he wrote) that probably there might be a way found out to make an artificial glutinous composition, much resembling, if not full as good, nay better, than that excrement, or whatever other substance it be out of which, the silk worm wire-draws his clew. If such a composition were found, it were certainly an easier matter to find very quick ways of drawing it out into small wires for use.

This hint, therefore, may, I hope, give some ingenious inquisitive person an occasion of making some trials, which, if successful, I have my aim, and I suppose he will have no occasion to be displeased.

But it was not until engineering and chemistry had made considerable progress that Dr Hooke's idea could be translated into actual commercial practice.

The rayon industry, indeed, is in some respects a modern, mechanised version of the tiny silk worm. While it is technically possible to use all kinds of plants in the manufacture of rayon, wood pulp and cotton linters have in actual practice been found to give the best results, and are now the two principal raw materials of the industry. By means of a number of chemical processes a "spinning" solution is prepared; this solution, a viscous mass, is pressed through fine apertures (the "spinning" jet) and the thin, continuous thread or filament which emerges from the spinning jet is then coagulated and finally wound. After various other treatments the thread or filament is ready for weaving and other forms of processing as "continuous filament" rayon. In the manufacture of "staple fibre" the process is identical as far as the coagulation stage, after which the filaments are cut into short staples of the same length as cotton or wool. These are subsequently spun into "spun rayon" on cotton, woollen or worsted machinery. But while continuous filament rayon closely resembles silk, "spun rayon" produced from staple fibre can be made closely to resemble yarns of a cotton, woollen or worsted type.

There are four different chemical processes in use for the production of rayon: the viscose process, the acetate process, the cuprammonium process, and the nitro-cellulose process. The viscose process, based mainly on wood pulp, is much the most important and accounts for something like 90 per cent. of the world production of rayon. Next in importance comes the acetate process. The output of cuprammonium rayon is very small, and that of nitro-cellulose filaments quite insignificant.

Owing to the marked technical progress in the production of rayon since the Great War, and the consequent improvement in its quality and reduction in price, the industry has made rapid headway, as is shown by the table in the next column.

Before the Great War the output of rayon was still insignificant. But since 1918, it has grown by leaps and bounds. Staple fibre, an offspring of rayon, scarcely known ten years ago, now equals continuous filament in importance, for, although it has to undergo two spinning

processes, it is considerably cheaper to produce. Moreover, the scope of staple fibre, which can be spun into cotton, woollen or worsted type yarn, is much greater than that of filament rayon, for while the former can compete over almost the whole range of cotton and woollen goods, the outlet for filament rayon, resembling silk, is more limited. The importance of the modern rayon industry is revealed by the fact that in 1938 its proportion of the total consumption of textile fibres, by weight, was 5.6 per cent. in France, 6.6 per cent. in Britain, 9.1 per cent. in the United States, and no less than 26.5 per cent. in Italy, 28.1 per cent. in Germany and 29.1 per cent. in Japan, where considerations of self-sufficiency come before cost. And, as the recent development of nylon (a new synthetic material) in the United States shows, the technical possibilities of extending the range of rayon products have been far from exhausted.

In this country the improvement in the quality of rayon and the reduction in its price have both been responsible for the rapid growth of production. For example, the price of a standard grade of viscose yarn (inclusive of excise duty) has fallen from 63d. per lb. to 33½d. per lb. during the past ten years, while a representative type of staple fibre, now priced at 10d. per lb., cost 21d. in 1933, when this material was first produced in commercial quantities. Continuous filament rayon has been subject to an excise duty of 1s. per lb. between 1925 and 1934 and 6d. per lb. since then, but the tax on staple fibre, which was 6d. per lb. until 1935, was removed in that year.

The number of rayon-producing companies in Great Britain is small; eight concerns are responsible for over 98 per cent. of the output of continuous filament rayon and staple fibre. Courtaulds and British Celanese are the two leading concerns in the industry, the one using chiefly the viscose process and producing virtually the whole of the output of staple fibre, and the other employing the acetate process. The main centres of production of the new textile fibre are Coventry, Wolverhampton, Spondon, Preston and Flint. Until recently the rayon trade, like all young industries, was fiercely competitive. But in the spring of 1937, after the rate of increase in the demand for continuous filament rayon had slowed down, the viscose producing companies concluded a price pact which was extended to acetate early this year, when Courtaulds and British Celanese came to terms. These agreements ended the period of price-cutting in continuous filament rayon which had done much to drive down Courtaulds profits from £3,743,827 in 1929 to £352,265 in 1938. Joint price control does not extend to staple fibre, which, however, is produced mainly by Courtaulds and is still in the early stages of development. Another indication of the closer co-operation of the rayon producers is the recent formation of the Rayon and Silk Association, an offspring of the Silk Association. Moreover, they have been drawn together in defence of their common interests, which might suffer if the Cotton Industry

PRODUCTION OF RAYON AND STAPLE FIBRE
(In millions of lbs.)

	1913	1929	1937	1938
Continuous filament—				
United Kingdom	6.6	52.7	119.7	106.4
World (inc. U.K.)	25.2	435.2	1,197.2	993.1
Staple fibre—				
United Kingdom	—	2.6	32.7	31.7
World (inc. U.K.)	—	7.2	627.9	969.2

(Reorganisation) Bill, now in the Committee stage in the House of Commons, were passed in its present form and gave control of the spinning of staple fibre yarn and of the staple fibre and continuous filament weaving and finishing processes of the industry, for pure rayon as well as for mixtures, to a Cotton Industry Board on which the rayon producers will not be represented.

While the leading rayon producers themselves process part of their output, the bulk of it is made into pure rayon or mixed tissues, hose, etc., by other concerns. The distribution of consumption, on the basis of the Census of Production returns for 1935, is shown below:—

CONSUMPTION OF RAYON YARN IN 1935

(In thousands of lbs.)

Silk and Rayon Trade:—	
Used in same works	11,300
Purchased (mainly by silk and rayon weavers)†	40,296
Total	51,596
Cotton (spinning and doubling)	6,829
Cotton (weaving)	22,499
Woolen and worsted	2,764
Hosiery	21,346
Lace	2,968
Elastic webbing	1,378
Incandescent mantles.....	47
Total	109,427
Total production	124,426
Exports	18,174‡
Retained imports	2,480‡

Available for home consumption

† Including transfers from other works of the same firm.

‡ Including yarn mixed with other materials.

Of the total output of continuous filament rayon, about 50 per cent. is woven into tissues, while the bulk of the remainder is made into hose and lace or exported. In the case of staple fibre, on the other hand, virtually the whole output goes into tissues. The cotton industry processes some 40 per cent. of the rayon yarn woven into tissues, but this is not sufficient reason against safeguarding the interests of the rayon trade in the Cotton Bill. The proportion of rayon yarn and staple fibre made into pure rayon tissue

has tended to increase, and mixed fibres containing continuous filament rayon now account for only about one-third of the total home consumption of this material.

The future of the rayon industry in this country depends largely on the extent to which it can improve its competitive position, in terms of price, quality and range of products, relative to other textile materials. Staple fibre is already cheaper than wool but still dearer than cotton. For example, the current price of staple fibre is 10 pence per lb., compared with about 5 pence for cotton (American middling) and 16½ pence for wool (46's crossbred). Staple fibre cotton type yarn (type 42's) costs 18½ pence per lb., compared with 10½ pence per lb. for cotton yarn (42's weft), while a worsted type (2/48's) is sold at 32½ pence per lb., against 40 pence per lb. for worsted yarn (type 2/48's). If the price of staple fibre can be brought into closer relation with that of cotton, the market for it will, of course, show an enormous expansion. At present the cost of production of rayon and cotton yarn is made up of the following elements:—

Cotton Yarn		Rayon Yarn and Staple Fibre	
	%		%
Raw cotton	50	Wood pulp and cotton	10
Other materials	15	linters	15
Labour	20	Chemicals and other ma-	35
Overheads, taxation, etc.	15	terials	25
		Labour	30
		Overheads, taxation, etc. ...	30
	100		100

The cost structure of the natural and the synthetic yarns thus differs considerably. The higher charge for overheads, etc., in the case of rayon yarn is due to the greater volume of plant required. That rayon will replace cotton and wool in a free market in the immediate future is unlikely. On the other hand, there can be little doubt that the industry (the rayon producers already employ a capital of £50,000,000 and a labour force of 25,530) will continue to make rapid progress. And it would be quite indefensible if it were to be hamstrung, as the industry fears it might be, by an Act primarily designed to assist the cotton trade.

Lever Brothers and Unilever

“COLOSSUS” is the common-place description to apply to the Lever Brothers and Unilever group, but it is none the less true. It bestrides the narrow seas with one leg in Great Britain, and the other in Holland. Its ramifications extend throughout the British Empire (which since the group's reorganisation in 1937 has become the preserve of Lever Brothers and Unilever Limited) and throughout the New and Old Worlds (which comprise the sphere of Lever Brothers and Unilever N.V.). Following the convention adopted in the directors' report, these companies will be described as “Limited” for the British company, and “N.V.” for the Dutch company in the present discussion of their results and prospects.

Before the results of the past year are examined in detail, it will probably assist investors if the character of the reorganisation of 1937 is briefly outlined, for it has a crucial bearing on the dividend equalisation arrangement between the two companies. Shareholders in the old British Unilever company were in an unfortunate position up to 1937. The company's earnings were expanding, but their distribution was held in close check, since the Dutch company's profits had been seriously affected by trading difficulties in Continental countries. Under the dividend arrangement, ordinary dividends for each company were declared in Dutch guilders (to which the sterling shareholders ranked on the capital basis of £1=fls. 12). This equal pooling arrangement between the two major partners thus acted as a brake upon the potential distributions of the British company, whose surplus profits were increasingly ploughed back to reserves. Hence the latter's transfer of non-British assets to the Dutch company in 1937 enabled N.V. to increase its available profits and correspondingly released

for distribution a balance of profits earned by the British company, which would otherwise have been inexorably set aside to reserves. In terms of total profits Limited lost and N.V. gained; in terms of ordinary dividends both partners benefited.

Such was the general effect of the 1937 scheme, and it provided immediate fruits for shareholders. The Limited company's total profits for 1937 were reduced by approximately £300,000, while N.V. profits rose by £723,000. N.V., which had paid 5½ per cent. in 1936, raised its distribution to 7½ per cent. Limited, whose capital had been more considerably changed owing to the consolidation of the Lever Brothers branch, declared a dividend of 10 per cent. How have profits fared in 1938? The following table sets out the profits that would have been available for distribution to the equity shareholders of Limited and N.V. if the subsidiaries had distributed their full earnings:—

PROFITS ACCRUING TO ORDINARY SHAREHOLDERS (After deducting outside interests)

	1936	1937	1938
Limited	3,085,050	2,787,752	2,400,457
N.V.	1,496,632	2,219,314	2,300,672
Total	4,581,682	5,007,066	4,701,129

All consolidated figures in this and later tables have been converted at the fixed rate of Fls. 9 to the £. The total profits available for equity dividends by the two sections of the undertaking, assuming that the subsidiaries had fully distributed their available earnings, fell from £5,007,066 in 1937 to £4,701,129 in 1938. This reduction of £305,937

actually consists of a fall in Limited's available earnings of £387,295 and a rise in N.V.'s profits by £81,358 to £2,300,672. But the aggregate consolidated profits of the group (set out in the second section of the table below) showed a greater fall of £529,384 from £12,749,991 to £12,220,607 last year. The explanation lies in the fact that the United Africa Company experienced a sharp fall in profits last year, of which Limited (through its holding in the Niger Company) had to bear only 80 per cent., leaving outside interests to carry the balance of 20 per cent. The fall in Niger Company net profits was, in fact, almost £800,000 last year. Largely for this reason, the third party share of aggregate profits accruing to ordinary shareholders in subsidiary companies is reduced from £817,608 to £629,154, and this reduction tempers the fall in profits attributable to Limited ordinary stockholders. N.V. shareholders, for their part, should have no cause for dissatisfaction with the improved results.

The ordinary dividends of Limited and N.V. are maintained at 10 per cent. and 7½ per cent. in respect of 1938. They are covered, respectively, by earnings of 20.2 per cent. and 11 per cent. compared with 22.3 per cent. for Limited and 10.6 per cent. for N.V. in 1937. Such results, for a year of depressed commodity prices and industrial recession, carry an important implication for stockholders. Apart from the substantial fall in United Africa profits (due less, perhaps to the stoppage of cocoa trading, which was later resumed, than to lower prices for all crops which in turn reacted upon general trading), the group has maintained a steady level of earning power. It seems fair to suggest that what the Lever group gains or loses from fluctuations in raw commodity costs—with the important proviso that sales of raw materials to other consumers are directly affected by price movements. But the fact that the group is integrated from raw materials to finished products implies that the course of Lever profits is largely determined by the volume of sales of soaps and manufactured fats, and experience suggests that, in these sections, turnover is affected in relatively small degree by cyclical trade movements.

That conclusion is a simple inference from the published profits, but the figures (though set out with admirable clarity in the report) are, in origin, far from simple. The trading conditions of the partners are not exactly similar. N.V., as its record to 1936 clearly showed, was seriously affected by economic nationalism and blocked exchanges. Probably few groups have shown greater ingenuity than N.V. in obtaining the release of blocked resources by indirect methods. It was fortunate, for example, that the group placed substantial orders for tonnage some time ago with German shipbuilding yards. But this method of escape from the deadly grip of the Devisen control is, in all probability, likely to offer fewer opportunities during 1939, and transfer through the *Konversionskasse* is a far costlier pro-

cess. Hence the profits of N.V., which include earnings from countries with restricted currencies only to the extent that transfers have been effected in sterling or florins, may be correspondingly affected during the current year and in 1940. On the other hand, the absorption of Austria and Czecho-Slovakia within the Greater German sphere probably meant little difference to the 1938 results, for both economies before their absorption had already operated some form of exchange control. Some part, however, of the losses arising from the change in frontiers was charged against profits in 1938.

A second feature of interest lies in the group's American trading. It will be recalled that, in 1937, Limited and N.V. together provided, from current profits and reserves, a sum (reputedly of the order of £1 million) in settlement of a patent action in the United States. Although the directors' report, as usual, confines itself to an analysis of the financial results of the year, it is probable that N.V. (to which the American profits are now accountable) has no reason for dissatisfaction with the American business in 1938. The main *riposte* of the American manufacturers with whom the N.V. group competes, however, is felt in Limited's British markets, but a very rough guess based on last year's profits suggests that, although competition has been keen, particularly in soaps and cooking fats, Limited has probably increased its total turnover in this country. The total market may have expanded, but there is also a presumption that the increased productive and selling efficiency of the two leading competitors in the British market has diverted business from other producers. The battle which the Lever and American interests have carried into each other's camp has probably produced advantages for each party. And this counterpoint of Lever and American interests in the United States and Great Britain does not seem to affect the relative results of Limited and N.V.

Both Limited and N.V. have now been consolidated into closer knit organisations. Limited merged the old Unilever and Lever British companies in 1937; N.V. completed last year the consolidation with the Anton Jurgens and Hovema companies, which is reflected in the increase of N.V.'s preference dividend requirements, and accounts, in part, for the expansion in that company's florin profits. The group, however, still controls over 400 manufacturing subsidiaries in almost every country of the world; hence the process of consolidation must inevitably be confined to the leading controlling units in the hierarchy. This fact goes far to justify the directors' practice of providing only a limited range of consolidated figures for the twin Lever companies and their subsidiaries and allied companies in which 50 per cent. of the ordinary capital is held or controlled. Extracts from these consolidated figures are given in the third section of the table. They show that the group last year reduced the value of its stocks—a movement which is due to lower prices, and not apparently to reduced quantities—although net current assets have increased from

£41,949,000 to £43,899,000. Free reserves retained by the group have also increased further from £23,313,479 to £23,733,675. The directors of Limited, however, have decided to maintain that company's general reserve at the estimable round figure of £10 millions, and to make provision instead against shares in subsidiary companies. It is to be presumed, therefore, that the £600,000 which has been written off shares in subsidiaries in 1938 is not required against actual depreciation of subsidiary interests.

What are the group's prospects for the current year? It has come through the recession with improved strength. Its manufacturing business remains active, though the prices for its primary commodities (and in consequence the return trade in which Limited, in particular, is interested along the West African coast) are still low. Evidently,

Lever Brothers and Unilever is not a company from which the investor should expect spectacular profit movements. He should be fortified by the knowledge that N.V., which in recent years has hitherto held the key which unlocks dividends for Limited, covered its distribution last year one and a half times from earnings. Hence, there is now a reasonable cushion of profits which permits some elasticity under the dividend equalisation arrangement. If, on the other hand, N.V. in future is less successful than in the past in transferring controlled profits, this margin may not be fully maintained. On present indications, profits and dividends for 1939 may show relatively little variation from those of last year. On the current yield basis of £6 1s. 3d. per cent., the ordinary stock of Limited, quoted at 32s. 10½d., would thus appear to be justly valued.

Finance and Banking

The Demand for Dollar Notes.—During the last fortnight or so there has been a considerable increase in the demand for dollar notes. While in the past the demand was mainly for notes of small denomination by people who could not afford to open dollar accounts, the present demand is mainly for notes of large denomination, mostly by people who now prefer this form of hoarding to gold hoarding. The change in the preference of hoarders is indicated by the fact that, while until recently dollar notes were at par with the rate for cable transfers, and gold coins were at a premium in relation to gold bars, now it is dollar notes which are at a premium, while the premium on gold coins has disappeared. The premium on dollar notes varies widely—its extreme limits in recent weeks have been ½ per cent. to 1½ per cent.—according to the fluctuation of the supply, which again largely depends upon the

arrival of mail boats from New York. Every mail boat carries large consignments of dollar notes, which are absorbed as soon as they reach the market, and pending the arrival of the next mail boat the premium rises to a high level. (At present, the premium is at the lower figure, for supplies have been greatly increased by one or two large shipments.) The reason why, in spite of this, most banks are reluctant to hold substantial amounts, lies in the cost, which includes, besides loss of interest, a commission of about one per thousand charged by American banks for the dispatch of notes. Should the trend change temporarily—as it might easily do—the banks who have acquired a substantial stock-in-trade in dollar notes stand to suffer a loss. And since the premium is not high enough to attract non-banking operators—who in any case would have to finance the transactions at a higher cost than the banks—the volume of notes available in the market is seldom in excess of the immediate demand. Should this state of affairs continue, a forward market in dollar notes will probably develop, which would presumably be dealt in for delivery on the arrival of mail boats.

The Exchange Account's Gold.—Immediately after last January's transfer of gold from the Bank of England to the Exchange Equalisation Account, we estimated the latter's gold stocks at £440 millions, valued at 150s. per fine ounce. Since then, there have developed new political fears as the result of the German annexation of Czechoslovakia and subsequent political developments, and this has led to a fresh exodus of funds of gold from Europe to New York. Sterling, too, has been under pressure during the past seven weeks. This raises the question of the Exchange Account's gold losses since the New Year. To examine this, it is simplest to begin with the physical movements of gold into and out of the United Kingdom during the past four months.

GOLD BULLION MOVEMENTS, December 30, 1938, to April 20, 1939

Imports from		Exports to	
	(£ millions)		
Belgium	31.8	United States	158.4
Switzerland	3.5	Canada	4.7
Holland	1.7	Switzerland	2.1
U.S.S.R.	6.0	Other countries	1.3
Other countries	6.7		
Total	49.7	Total	166.5

The main outflow has naturally been to the United States, but, unlike last year, France has not been a contributor. There has been a big influx of gold from Belgium, whose own troubles have been superimposed upon the prevailing political uncertainty. Small amounts have come from Holland and Switzerland. Arrivals from South Africa have been negligible. The period has thus witnessed a net outflow of £116.8 millions from the United Kingdom.

Not all this gold came from the Exchange Equalisation Account, for much of it represented private sales of gold in the London market against purchases of dollars. This gold was either bought direct by arbitrageurs or else merely passed through the Exchange Equalisation Account as a channel. There have also been transfers of gold belonging to foreign central banks from London to New York for purposes of safer custody; and these equally figure in the export returns. It is impossible to do more than guess at the division of the net loss of £117 millions between these various heads, but an examination of the course of the bullion and foreign exchange markets since the New Year suggests that private gold sales and foreign central bank transfers may have accounted for as much as £70 millions out of the £117 millions. This suggests that since the New Year a net amount of £47 millions of British Exchange Account gold left London. Moreover, there are still two off-setting factors to be mentioned. First the £4.7 millions export to Canada may represent Exchange Account gold transferred there for safer custody in the event of war. Next, practically no newly-mined South African gold reached London during this period. This gold, which amounts since the New Year to about £25 millions, has presumably been ear-marked in South Africa in favour of the Exchange Equalisation Account. Taking cognisance of this Canadian and South African gold, it looks as if the Exchange Account has only lost something of the order of £20 millions of gold since the New Year. This suggestion of a very moderate net loss finds support in the reduction since the New Year of £13 millions in tap issues of Treasury bills; though against this last reduction must be set the special purchases of tender Treasuries made recently in the money market on behalf of the Exchange Equalisation Account. It is true that the Account has lost in the London market alone anything up to £25 millions since March 16th, but January and February were not bad months for the Account, and week by week during the whole 3½ months it has been accumulating gold in South Africa. Thus, so far, our gold reserves have withstood this year's political shocks with comparatively little loss.

Gold Shipments and Insurance.—Shipments of gold to and from this country during the week which ended at noon on Thursday have again broken the previous record, totalling as they have £64.4 millions. The bulk of this enormous mass of gold represents the reserves of central banks and exchange funds fleeing to greater security.

This can be said of the imports into this country during the past week of £10,950,953 from Belgium, £3,275,624 from the Netherlands and £12,306,177 from Switzerland. Of the £28,509,226 exported during this period to the United States it is estimated in the market that not more than one-fifth represented private gold arbitrage, the rest being continental central bank gold sent for earmarking in New York or Exchange Equalisation Fund gold sent as a counterpart of recent operations of the Account in the dollar market. The continued abnormality of the shipments across the Atlantic is inevitably causing unusual congestion of gold on single vessels and high reinsurance rates have again been paid on such shipments. The insurance market has now begun to translate into action its determination to amend the open cover system of gold insurance so as to avoid such congestion. As open covers fall in, they are being drastically cut down and as far as can be gathered from the experience of bankers whose facilities of this kind have already been reduced, the marine insurance market appears to have set a limit of £250,000 per boat on the amount for which they are prepared to grant open cover facilities. This bears no relation to the activities of the more important dealers in the arbitrage market, and the arbitrary cut made quite irrespective of the extent to which shippers have utilised their open cover facilities in the past is inevitably causing some difficulty and friction. At the moment, however, the main cause of congestion in gold shipments is the size of official consignments. These are normally insured under the Bank of England open cover which is, of course, the largest open cover granted in the London market, and which is understood to have provided for shipments of up to £5,000,000 per vessel. This maximum is being reduced by the insurance market to £3,000,000. Even this lower figure represents the maximum quota of gold on a single vessel which the insurance market can comfortably carry. For the time being, the amendments to the open cover system are being made in an essentially tentative and empirical manner and the whole subject is likely to receive more considered and reasoned treatment when the complications caused by the introduction of the Government pooling scheme for war risks have been cleared up.

Exchange Difficulties in New Zealand.—New Zealand's exchange difficulties have yielded so grudgingly to the scheme for the control and restriction of imports imposed towards the end of last year, that, as reported in a Note on page 246, a drastic tightening of that scheme was announced this week. The need for drastic action

COMMERCIAL SERVICE

The Bank has over 380 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW contains information on all South, East and Central African matters of Trade and Commercial Interest. Copies will be sent post free on application.

Foreign Exchanges

THE big recovery in the belga has been the outstanding feature of the foreign exchange market this week. From the gold export point the spot rate has fallen sharply to rather below the gold import point, being quoted on Thursday afternoon at 27.66½, while the three months' forward discount, which at one time last Friday was as wide as 140c., has declined to 32½c. Bear covering, particularly after M. Pierlot's statement on Tuesday afternoon that the Belgian Government had rejected devaluation, has been mainly responsible for this improvement, but there has also been some evidence of the repatriation of capital. Buying pressure has been strong enough to enable the authorities to regain some of the foreign exchange lost last week. Francs have been steady and were unaffected by the new French decrees. A measure of the steadiness of this currency since last November is provided by M. Reynaud's announcement that Frs. 5 milliards of gold have been

MONEY MARKET NOTES

transferred from the Stabilisation Fund to the Bank of France. Both Swiss francs and guilders have appreciated against sterling. On Wednesday the former was bid down to 20.82, although it reacted later to close at 20.84½, against 20.86½ at the end of last week. On Thursday a further appreciation to 20.83½ took place. Guilders on Thursday afternoon were quoted at 8.77½, compared with 8.81½ on Monday. The Budget had hardly any influence on the sterling-dollar rate, which has been very steady. The small changes that have taken place have been in the pound's favour.

The Bank Return

THE stringency in the money market this week is easily explained by the Bank return. The note circulation shows a rise of £4.1 millions; and as it is too early for the rise to be attributed to end of the month requirements, it is probable that the inter-

national situation is again responsible. How much is due to public demand

	Apr. 27, 1938	Apr. 12, 1939	Apr. 19, 1939	Apr. 26, 1939
	£ mil.	£ mil.	£ mil.	£ mil.

Proportion	23.6%	24.0%	26.7%	24.3%

and how much to the strengthening of till money by the banks as a precautionary measure, however, it is not possible to say. Some attempt has been made to offset the currency withdrawals, for Government securities show a rise of £5.2 millions. Part of this rise may represent the special purchases of bills in the market, but it is probable that most of the latter have again been made on behalf of the Exchange Account and not of the Bank.

is self evident. Since the beginning of this year the sterling reserves of the Reserve Bank have risen from £4,678,000 to £4,872,000 only. As for the trading banks, their holdings of London funds had in January (the latest available figure) risen by £1,000,000 to £3,147,000. The total sterling holdings of £8,000,000 represent less than eight months' requirements of the New Zealand external debt service and other invisible debit items in the balance of payments. Imports in January and February were only £305,000 down on the previous year and the export surplus for the first two months of the year was only £2,865,000, as against £3,299,000 in the corresponding months of 1938. The need to fortify the reserve of London balances is enhanced by the approach of the maturity

next January of £17,000,000 of 3½ per cent. stock. Under existing conditions in the capital market, it may be difficult to convert this loan on reasonable terms. The New Zealand authorities are believed to have purchased about £500,000 of the maturing loan, and if the conversion operation is to be approached with fair hopes of success the official purchases of the stock will have to acquire far greater momentum over the coming months. In order to close a loophole through which capital has in recent months escaped from New Zealand the Reserve Bank has now decided to refuse for payment notes paid into banks out of New Zealand. The moderate flight of capital which had taken the form of smuggling notes out of the Dominion has thus been brought to an end.

The increase in public deposits of £4.9 millions looks as if the Exchange Account's support of sterling has, in fact, been greater than might have been expected from the steadiness of the sterling-dollar rate, although funds may be accumulating in preparation for the May 1st dividend disbursements. In any case, bankers' deposits have suffered and are down by as much as £5.1 millions.

★

The Money Market

THE easier tendency in both discounts and credit conditions noted last week has not been maintained. The Treasury Bill tender, it is true, showed a fall in the average rate of allotment to £1 6s. 10.35d. per cent. and a rise in applications from £51.3 millions to £66 millions. It is understood that the

	Apr. 28, 1938	Apr. 20, 1939	Apr. 29, 1939
Bank Rate	2½	2½	2½
London Deposit Rate	2½	2½	2½
Short Loan Rates:			
Clearing Banks	12-14	12-14	12-14
Others	12	12	12
Discount Rates:			
Treasury bills	12	17½	15½
Three months' bank bills	17½	11½-9½	15½

* Viz. 12 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

high rate realised at the previous tender had tempted applications from many firms which normally refrain from

tendering. There was an immediate fall in other discount rates when the result of the tender was known, and 1½ per cent., against 1½-1¾, was quoted for the fine bank draft and ¾ per cent. for June Treasuries; but since the week-end there has been no further fall. The banks are still providing only a very small outlet for bills, and special buying of June bills at ¾ per cent. and July's at 1½ per cent. has been in evidence. This official action has relieved to some extent the credit situation, which, nevertheless, remains acute. On Tuesday calling in of loans by some clearing banks from the market was reported; and advances for the night were difficult to obtain, although old loans against bills were still continued at ½ per cent., with ¾ per cent. generally charged for fresh loans. Bond money has usually been obtainable from outside quarters at ¾ per cent., but 1 per cent. was sometimes paid on Tuesday. The clearing banks are all charging 1½ per cent. for fresh advances against bonds.

★

The Bullion Market

THE turnover in gold has been very small, except on Tuesday, when renewed fears about the international situation and, possibly, nervousness about the Budget proposals, caused a big increase in sales from Continental hoarders. Unofficial dealings on that day were also large and probably exceeded the amount at the fixing. The

absence of any premium encouraged arbitrageurs, who took almost the whole amount on offer. A large shipment of Transvaal gold, amounting to £1,125,000, is due to arrive at South-

ampt on May 5th. There has been a considerable increase in unhoarding of gold coins, which are now at a small discount on their bullion value and are in some cases being melted down to be made into bars.

Last Friday the statement of the Governor of the Federal Reserve Board to the Senate Banking Committee, recommending the cessation of silver purchases, caused a small decline in both the cash and forward prices of silver; but the market was not disposed to take the statement seriously, and prices have since recovered.

Budget and Conscription.—Only twenty-four hours elapsed before Sir John Simon's matter-of-present-fact Budget had been demonstrated as a fiscal hypothesis, rather than a real measure of the financial burden which defence finance will involve during the current year. Within the limited context which the Chancellor set himself, it was a Budget as satisfactory as the City could expect. The absence of any change in income tax is always a signal for market relief, if only short-term relief. Motor and tobacco shares, chiefly affected by the new imposts, showed no dismay—indeed, the latter group recovered significantly on Wednesday. Brewery and oil shares marked their relief at the absence of new taxation, with particularly impressive gains in the former group. The gilt-edged market, which nothing will cheer in these sombre days, looked askance at the increase in the borrowing programme to £380 millions, with the uncomfortable feeling that even this sum might not represent the end of its burdens. But *ad hoc* budgeting has been followed by the new fact of conscription, whose importance, both in altering the Treasury's estimates, and the investor's calculations, could hardly be over-rated. Shareholders in "firms mainly engaged in the re-armament programme" will face a new form of control of profits—new, presumably, since legislative power is to be given to control. How far this definition extends down the hierarchy of contractors, sub-contractors and suppliers of essential materials has yet to be revealed. How arms profits will be computed for mixed firms whose civil business is still important has yet to be defined. Experience in the aircraft and contracting industries suggests that profits control has worked with unequal effect. But it is highly probable that firms which escape official control, but are still closely connected with defence business, will keep a strict watch on dis-closed profits and dividends. Meanwhile, the withdrawal of conscripts from industry, coupled with the establishment of defence priorities, suggests that the profits outlook for concerns in non-essential trades has been adversely affected. And the conclusion of the Prime Minister's statement on Wednesday shows that some form of levy on increased profits and wealth is reserved for war time. Will the economic exigencies of a "near-war" economy involve a revision of this policy?

★

Tobacco and Motor Shares.—Tobacco shares were slightly affected in the "Street" market on Tuesday evening, following the unexpectedly drastic increase of 2s. per lb. in the duty, but they recovered appreciably on Wednesday. The investor has always regarded the demand for tobacco as fairly inelastic. But that demand has been facilitated to a major extent by the conventional price structure for cigarettes. The popular packet of twenty cigarettes for one shilling weighs rather under one ounce; hence the increase in duty involved is slightly below 1½d. for this size of packet. If prices are to be maintained, to suit the manifest convenience of consumers and also to continue the use of existing automatic machines, it follows that the rise in duty would mainly have to be passed on by smaller cigarettes or a reduction in the number per packet. On the rough assumption that twenty cigarettes weigh one ounce, the total duty formerly payable was 7.125d. In order to maintain the total duty charge at that figure (any other adjustment would involve difficult re-allocations of distribution costs and retailers' and manufacturers' margins) it would be necessary to reduce the total tobacco content by 17½ per cent.—a large adjustment by size. No formal decision has yet been reached by the manufacturers, but tobacco shareholders may feel that the industry will be fortunate if it succeeds as well as it did after the

September Budget of 1931 (when the duty was raised by 8d. per lb.) in passing on the increase in costs without affecting consumption.

★

★

★

The immediate reaction to falling incomes or rising horse-power taxes is to transfer demand from larger cars to the smaller. To the marginal motorist, choosing between, say, an 8-h.p. and 10-h.p. car, the addition of £1 to the tax differential may be significant. Hence, even if the industry maintains its total output of new units, they will be smaller on the average, and the low-horse-power categories, on which the manufacturers already concentrated last year to meet the recession, are already a highly competitive market. All the leading manufacturers, joined by Standard last year, have an 8-h.p. model or its equivalent, though Vauxhall produces no smaller car than a 10-h.p. model. But for those companies which specialise in large part upon high-power cars, the 10s. increase per horse-power may well have serious consequences. To particularise, Birmingham Small Arms (which controls the Daimler Company) and Alvis may suffer. But it happens that both companies have interests in aero-engine construction, and the guiding rule which has been operative in the motor share market for some time—to concentrate attention upon those motor concerns which have charge of shadow factories or have undertaken equivalent defence work—should not be changed by the increased motor duty.

★

★

★

Patent Medicine Changes.—Although the fiscal and industrial effect of the remission of the patent medicine duty is not far-reaching, its importance for the investor is increased by the concentration of a large proportion of the business in the hands of Beechams Pills, Limited. This company, by its absorption of Macleans, Ltd., and Eno Proprietaries during the past year, has become one of the most important units in the trade. It is impossible, of course, to compute the relief which will accrue to the group by the remission of duties and, presumably, many of its products are sold free of stamp duty by the normal process of disclaiming proprietary interest and disclosing the formula. For a group whose capitalisation is already relatively high-g geared, however, the consequences for the equity shareholders may well be of some importance. The relation of the cost of the remission (£770,000) to the gross cost of an extra 10 per cent. dividend for the deferred shares of Beechams Pills (£151,250) is thus of some interest to shareholders.

Foreign Investment Purchases.—The broad implications of Sir John Simon's expression of hope last week that no purchases of foreign securities will in future be made for investment purposes (purchase for re-sale is,

INSURANCE NOTES

London Assurance.—In 1937, for the sixth successive year, London Assurance obtained record net new life business. Last year, however, the number of policies assured fell from 3,635 for total sums of £2,956,000 to 3,091 for £2,679,000. There was a considerable reduction in death claims from £318,000 to £232,000, and the net rate of interest earned was £3 14s. 8d. per cent., against £3 16s. 8d. per cent. In the fire branch premiums increased by £122,000 to £2,133,000, but underwriting profits were less favourable than in 1937. Premiums in the accident branch amounted to £1,501,000, against £1,405,000, and underwriting results were very satisfactory. In the marine branch premiums increased from £775,000 to £820,000, and, as in 1937, £50,000 was transferred to profit and loss. The fund, at £994,000, is equivalent to 121 per cent. of the premium income, contrasted with 115 per cent. a year ago. Results for the last two years follow.

	Profit 1937	% of Premiums	Profit 1938	% of Premiums
Fire	181,328	7.0	135,291	6.3
General accident	98,078	9.0	114,837	7.7
Marine	50,000	...	50,000	...
Life	22,500	...	22,500	...
Charges to profit and loss	351,906	...	322,628	...
	185,436	...	176,245	...
	166,470	...	146,383	...

Total assets increased from £20,238,000 to £20,985,000, of which £10,719,000 are attributable to the life assurance fund. No special changes are apparent in the distribution of assets among the various investment categories. A year ago the chairman mentioned that the market values of the Stock Exchange securities in the life department showed a surplus of £494,000 on the book values; at the end of 1938 market values were still in excess of book values. The general reserve fund remains unchanged at £3 millions. The dividend is repeated at 45 per cent. and costs £224,000, compared with available net interest earnings of £202,000.

World Auxiliary Insurance.—Premium income amounted to £275,000, compared with £282,000 in 1937. The underwriting results of the past two years are shown below:—

	Profit 1937	% of Premiums	Profit 1938	% of Premiums
Fire	6,922	7.8	6,608	7.5
Accident and general	7,598	9.7	3,117	4.2
Marine	10,667	...	5,865	...
Charges to profit and loss	25,187	...	15,590	...
	15,889	...	14,784	...
	9,298	...	806	...

Total assets amount to £1,201,000. Book values of Stock Exchange securities appear at £1,037,000, compared with market value on December 31st last of £1,022,000. Special reserves total £260,000, and the profit and loss balance, after payment of the 1938 dividend, is £153,000. The dividend is again 7½ per cent., free of tax, and costs £22,500, against interest earnings of £27,000.

Managers: BRITISH GENERAL FIXED TRUST LTD., 36/37 King Street, London, E.C.3

of course, already controlled) are discussed in a Note on page 245. It is not surprising, however, that the City should feel the need for some further amplification of the Government's wishes, for the dramatic significance of the Chancellor's almost casual remark, viewed from the angle of the security markets, hardly seems to have received adequate official consideration. Further questions this week have elicited the information that the "ban" does not refer to purchases of sterling securities of British countries abroad, and that legislation is not contemplated at present to control capital exports. In the absence of any authoritative direction, the Stock Exchange has taken no formal steps to recognise the situation and, for the time being, the main result has merely been to introduce a conscientious objection to foreign investment which is observed according to individual inclination. The matter can hardly be left in this position. But when alternative action is considered, a number of technical difficulties of real importance immediately present themselves. There is, really, no effective compromise possible between complete divorce of the London market, with its accompanying arbitrage machinery, from its overseas connections, on the one hand, and allowing the matter to remain on the existing loose basis. The objection to the latter course is that it favours less scrupulous dealing agencies and investors at the expense of the public-spirited. It is clear, however, that the suggestion that the London market in international securities could carry on independently by providing dealing facilities for the pool of stocks already held in this country is only practicable to a limited degree. The requisite market fluidity which jobbers are normally able to maintain in, say, leading American stocks, depends on the knowledge that they can cut short or long positions quickly through the arbitrage houses. Even so, dealings in the morning hours before Wall Street opens are comparatively limited, and it is clear that, if it had to operate on an entirely independent basis, the market would undergo such a contraction as to exclude the major part of the "punting" operations which now form the bulk of the turnover. Hence the specialist dealers in American stocks, while willing to fall in with the official view, feel that its scope should be enlarged to cover all capital exports, and that it should be given statutory force. Happily there is no substance in the reported suggestion that London offices of Wall Street houses, by introducing full "clearing" facilities in dollar stocks, are out of step with London arbitrageurs. Full co-operation, in the spirit of the Chancellor's request, is assured.

Fine Spinners Reorganisation.—Since the end of September last year, when the directors' reorganisation scheme failed to obtain the required sanction, preference stockholders have awaited the formulation of alternative proposals with increasing expectancy. At the end of last week, the Preference Stockholders Committee issued a revised scheme which they "now consider to be fair and reasonable to the three classes of stockholders and intend to recommend to the directors." It should be emphasised that this scheme represents the independent view of the Preference Stockholders Committee, and that the British Insurance Association and the Association of Investment Trusts were not consulted in connection with it, although an earlier scheme was submitted to the board by the Preference Stockholders Committee jointly with these bodies last December. Hence, the reason for publishing the new scheme seems somewhat obscure, for the committee itself records that the board decided in January last to postpone the submission of a revised scheme to

stockholders until the results for the year to March 31st have been published. In a reply issued at the end of last week, the board indicate that it is not feasible under present trading conditions to prepare a scheme which could be recommended as fair and equitable to all classes, and it is hardly surprising that they cannot recommend the proposals set out in the committee's circular, which would appear to represent the maximum which preference stockholders could expect.

Company Notes

Marks and Spencer Progress.—This company's record of continuous progress is unbroken. The preliminary results for the financial year ended March 31st last show an increase in net profits, before charging depreciation and tax, of 13 per cent., which compares favourably with the similar rise achieved in 1937-38. Such expansion amply justifies the company's policy of retaining a high proportion of available profits in the business, and it provides full scope for the regular capital bonus policy. In addition to the cash dividend of 42½ per cent. a 10 per cent. scrip bonus is again declared in respect of 1938-39. For a year of partial recession, which affected popular purchasing power adversely, such results are most satisfactory. The extensive ploughing-back of profits is at once the result and also the cause of the healthy expansion of the group. In the following table, the allocation of profits is set out for the past three years:—

	Years ended March 31st		
	1937	1938	1939
Net profits*	1,723,488	1,954,340	2,213,003
Depreciation, repairs, etc. ...	290,238	351,891	431,045
Taxation	238,544	325,699	374,444
Staff funds and deb. redempn. ...	36,166	36,760	37,495
Preference dividends	105,000	105,000	105,000
Ordinary shares—			
Earned	1,053,540	1,134,990	1,265,019
Paid	633,884	742,605	816,866†
Earned %	75.3	73.5	74.6
Paid %	40	42½	42½
Capital bonus %	10	10	10
Properties contingencies ...	61,457	64,598	93,022
General reserve	308,846	324,730	342,203
Carry-forward	82,584‡	85,641	98,569

* After debenture and other interest, and fees. † Estimated.
‡ After £54,453 issue expenses and discount.

The rise in 1938-39 profits has, in fact, fully kept pace with the general growth of assets, and earnings for the ordinary shares are a little higher than in 1937-38. Provision for depreciation and repairs should normally rise with the general growth of assets, but the increase in the allocation to properties contingencies reserve is a substantial sum for a single year. No further information has so far been revealed regarding the additional finance to which reference was made at last year's meeting to provide for the expansion of the business over two or three years. At a current price of 57s., including rights worth about 5s. 3d., the 5s. shares yield £4 2s. 3d. per cent.

Union-Castle Outlook.—Mr Robertson Gibb's last speech as chairman of Union-Castle deserved a more auspicious background than last year's results to commemorate his work for the company. Union-Castle was adversely affected in 1938 by international tension and by domestic South African problems. Mr Gibb showed that political measures in South Africa had led to a curtailment of purchase of British goods, while the car-marking of gold in the Union further increased the reduction in freight revenue. Homeward baled cargo had been affected by the stipulation in German-South African trade agreements that goods bought by Germany must be carried in

German or Dutch ships, while the familiar German technique of offering high prices for essential imports had lowered British purchases of South African wool. But, in addition, Union-Castle, together with other Conference lines, reduced the rate on fruit—already barely economic—by 7s. 6d., at a cost of £85,000. The group has expended substantial sums on refrigerated tonnage to handle this traffic, and its operating costs in this trade have increased. The chairman declared that the shipbuilding and re-engining programme had reached its financial peak of £4½ millions—the re-engining programme was completed in December, and the shipbuilding programme this month. But under the terms on which these advances were made, Union-Castle must make large annual repayments or alternatively contemplate a funding programme. Hence, financial policy is likely to remain cautious, for the existing 5 per cent. debenture stock stands at 99½. The company timed its large rebuilding programme shrewdly, and considerable operating economies should result. Unhappily, there is but little sign of an improvement in general cargoes and freights.

Spillers' Progress.—Spillers' results for the year to January 31st last suggest that the company's long-term programme of reorganisation and expansion has comfortably carried it over a period of short-term uncertainty. The directors again recommend a dividend of 15 per cent. on the ordinary and deferred ordinary stock (which has been increased to the extent of £173,184 following the acquisition of Hosegood Industries), and it is covered by an improved margin of earnings. Total profit for the year amounted to £671,096, an increase of about 11 per cent. compared with 1937-38, but the increase is almost entirely absorbed by a rise of £55,000 in the allocation to taxation. An increased turnover has probably resulted from the entry into operation of the Newcastle plant and the acquisition, together with its new plant, of Hosegood Industries. The following table analyses the course of profits over the past three years, though a consolidated statement of earnings would be more informative:—

	Years to January 31		
	1937	1938	1939
Trading profit‡	607,237	561,945	626,501
Total profit	655,639	605,224	671,096
Directors' fees	19,000	19,000	18,840
Taxation and N.D.C.	185,000	175,000	230,000
Preference dividends	52,293	51,579	49,864
Ordinary & deferred stocks:*			
Earned	399,345	359,645	372,392
Paid§	307,774	301,308	305,065
Earned (%)	19.5	17.3	18.3
Paid (%)	15	15	15
To reserves	100,000	50,000†	75,000†
Carried forward	167,505	175,842	168,169

* Ordinary and deferred ordinary rank in order for non-cumulative 15 per cent. dividend, and *pari passu* in balance of profits.
† Includes £50,000 to contingent reserve in 1938, and £25,000 in 1939.

‡ After provision for depreciation.
§ Includes co-partnership dividend of 15 per cent., and in 1939 only, a dividend of 3½ per cent. on 86,592 ordinary and 86,592 deferred shares.

Interest in the balance sheet centres upon three points. Cash balances have declined by £564,275; British Government securities have increased by £877,788; and shares in subsidiaries show an expansion of £513,916. These movements partly reflect the acquisition of the ordinary share capital of Hosegood Industries and also the sale of the company's interest in British Oak Insurance, for a consideration which is not disclosed in the report, but which may have limited the fall in cash and account for the expansion in gilt-edged holdings. The Spillers group is now equipped to handle an expanding output, which

depends largely on the maintenance of collaboration between the Millers Mutual Association (which appears to have been strengthened last year), on the reaction of the animal foods market to Government agricultural policy, and thirdly on the inter-relation between the Government's cereal storage policy and peace-time demand. Spillers deferred stock units stand at 44s. 6d. to yield £6 15s. per cent.

Thread Companies' Results.—For some time past investors have been more or less resigned to the prospect of substantial declines in sewing cotton profits last year. The preliminary statement of J. and P. Coats and English Sewing Cotton in each case show a fall in earnings in 1938 of over one-quarter. Cotton prices fluctuated less in 1938 than in 1937, but the general level was lower and the export position deteriorated still further, British exports of cotton thread, for instance, falling by 15 per cent. to 13½ million lbs. Since profits in 1937 were already depressed by the provisions made against stocks to meet the low level of prices prevailing at the end of the year, the 1938 trading results are even less favourable than comparison suggests. Perhaps the most that can be said for the 1938 profits of both J. and P. Coats and English Sewing Cotton is that the rate of decline has caused no surprise, and that dividends, if not earnings, are still satisfactory. J. and P. Coats' net profits amount to £1,535,297, against £2,077,459, before paying preference dividends of £330,000 in each year. The balance represents 8.2 per cent. earned for the ordinary capital, against 12.5 per cent., but the 10 per cent., now paid for the fourth successive year, is maintained. Such results for a concern with world-wide trading interests are not surprising in view of last year's difficulties. The capitalisation is low-g geared, and the maintenance of the 10 per cent. dividend is possible only by a transfer of £200,000 from dividend reserve (which is thus reduced to £2,000,000) and a draft of about £70,000 on the carry-forward. English Sewing Cotton net profits total £135,064 against £192,968, and are now less than half those earned in 1936. Earnings for the equity represent 4.3 per cent. against 7.1 per cent., and although the dividend is reduced from 10 per cent. to 7½ per cent., this distribution—as in the case of J. and P. Coats—is only made possible by drawing again on dividend equalisation reserve, to the extent of £50,000 and taking £15,000 from the carry-forward. Both companies have substantial reserves, and the building up of equalisation funds in the past is now proving of benefit. The outlook for the current year does not point to any marked change. There is no reason to expect a pronounced improvement in exports or prices. It is of interest to note, however, that the directors of J. and P. Coats do not expect to derive any benefit from the Cotton Industry Bill and desire to be excluded from its provisions.

Sofina Report.—In recent years this utility holding company has not shown large profit movements, and the accounts for 1938 convey a similar impression of stability. Total profits are shown at fcs. 152,120,000 against fcs. 124,176,000, but about half of this apparent increase is due to the inclusion of management receipts in the total, whereas in the past these receipts were deducted from

NORANDA MINES, LIMITED DIVIDEND NOTICE

Notice is hereby given that an interim dividend of \$1.00 per share, payable in Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable June 15th, 1939, to shareholders of record at the close of business May 20th, 1939.

By order of the Board. J. R. BRADFIELD,
Toronto, April 14th, 1939. Secretary.

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £17,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

administrative expenses. On the other hand, Belgian income tax has been deducted at source, which eliminates the special tax provision from profits. After deducting all expenses and preference dividends, the remaining balance is practically unchanged at fcs. 88,072,000, and the dividend is repeated at 88 per cent. tax free, or 440 fcs. per share net. As in past years, the report contains a comprehensive survey of the progress of the electricity industry generally, and of the company's individual interests in particular. From the individual summaries, it would appear that gross receipts and output have risen on balance, though the parent company's results indicate that this expansion has not been reflected in dividends. An undertaking of the large scope of Sofina is prevented from obtaining the full benefit of electricity development by governmental interference and taxation, to which the report devotes a special section. Last year, the subsidiary Transports Electricité et Gaz had no option but to sell its Turkish installations outright to the Turkish Government. Despite these difficulties, however, the results for stockholders have proved satisfactory in recent years.

* * *

"Shell"-Royal Dutch Dividends.—The "Shell"-Royal Dutch groups usually declare a "further interim" dividend in May which in fact represents a final distribution, payable shortly after the issue of the annual report in June. On April 21st, however, "Shell" Transport declared a "further interim" payment of 10 per cent. tax free, making 17½ per cent. tax free declared so far in respect of 1938. The phraseology is in accordance with precedent, but an element of uncertainty has been introduced, since the announcement is about a month earlier than usual, and the date of payment is May 22nd instead of July. Is the dividend strictly to be regarded as a second interim, or will it, in fact, represent the final payment for 1938? If it completes the 1938 dividends, the year's tax free distribution will have been reduced from 20 to 17½ per cent. Similar uncertainty arises from the accompanying Royal Dutch announcement. A second interim dividend of 8 per cent. (making 14 per cent. to date for 1938 against 17 per cent. for 1937) has been declared, but the possibility of a final payment remains open, for a further decision is to be taken when the accounts are closed. Before the Budget, the market tended to take the view that the dividends represented the complete payments in respect of 1938, but the absence of any increase in the oil duties has prompted a revision of that conclusion. In view, however, of the behaviour of the crude oil market in the United States, particularly in the later part of 1938, an actual reduction in the "Shell"-Royal Dutch dividends, even to the levels indicated by the "second interims" would not come as a complete surprise.

* * *

Rand Leases.—The Rand Leases report for 1938 marks a decided step towards the fulfilment of the great potentialities of the property. The production programme, the mining position and the financial results point to a progressive improvement in the dividend rate. Tonnage milled increased by 484,500 tons to 1,502,000 tons. In recent months the output has advanced further, and in March attained 158,000 tons, which is approximately the maximum capacity of the present plant. Extensions in hand, however, will increase this figure to 175,000 tons per month. If everything goes according to plan, output this year should approach 1,800,000 tons with a further increase to 2,100,000 tons or more in 1940. This capacity is well within the rate of mining which might be considered justified by the indicated resources of the property and is fully compatible with expectations of a very long life. A further increase of 4,844 feet was achieved in development footage, at the high figure of 74,676 feet. The footage sampled on the Main Reef series amounted to 41,545 feet, of which 31,165 feet, or 75 per cent., were payable, and showed a value of 10 dwt. over a reef width of 28 inches. This satisfactory work is reflected

in the further strengthening of the ore reserve position, which is 337,000 tons higher at 5,669,000 tons. Though the average value is 0.1 dwt. lower, at 4.6 dwt. it shows a healthy margin over the grade of ore milled during the year. As a result of the increased tonnage crushed and a reduction in costs by 1s. 6d. to 20s. per ton, profit rose to 8s. 7d. per ton while gold revenue rose from £1,471,303 to £2,149,670. Capital expenditure, amounting to £151,564 was not charged against revenue, but instead, a sum of £137,815 was applied to eliminating the flotation and underwriting items from the balance sheet and in increasing the carry forward by £31,043 to £129,004. The two dividends of 1s. and 1s. 3d. on the 10s. ordinary shares were covered with a comfortable margin. Dividend hopes for this year and next are indicated by the relatively low yield of £5 14s. per cent., which the shares offer at their current price of 39s. 4½d.

* * *

Western Holdings.—But for the results obtained in the St. Helena No. 7 borehole, announced last week, the situation revealed in the Western Holdings report for 1938 could hardly provide sufficient indications of a positive nature to sustain market interest in this "prospect." Any more definite description of the property would overstate the facts, by as wide a margin as the current market capitalisation of over £1,000,000, indicated by the present price of 10s. 4½d. for the 5s. shares. The report states that the most important feature of the year's operations was the intersection in the various boreholes put down, of shales, quartzite and conglomerate, which "has been tentatively correlated as belonging to the Witwatersrand system." It is for the management to decide whether this is a suitable working hypothesis, but none of the characteristics which the term "Witwatersrand system" denotes to the investment mind seems yet to have been revealed. If they were revealed, if the extent and regularity of the formation over a really large area could be substantiated, and if consistent values comparable to those on the economic portions of the Rand were shown, a number of major hurdles would still remain to be surmounted before the possibility of profitable exploitation was opened up. The results of the boreholes have failed to show any correlation of formation with the results at St. Helena No. 1. In St. Helena No. 5, situated to the north-east of No. 1, a reef was intersected assaying 7.4 dwt. over a narrow width, and it is stated that the geological succession "conforms generally" with that disclosed in St. Helena No. 3, which is situated still further to the north-east. Here the drill passed through a formation which "appeared to belong to the Ventersdorp system." Below 1,705 feet a succession of quartzite and well-defined conglomerate bands was encountered, which "are thought to constitute the uppermost strata of the Witwatersrand system." Such results do not provide any reliable indicator of the presence of economically workable deposit. The St. Helena No. 7 borehole, situated to the north of No. 5, has created a market flurry by two disclosures, one at 1,086 feet, showing an average assay of 3.17 dwt. over a true width of 62 inches, and one at a depth of 1,443 feet, showing 22.44 dwt. over a width of 74.4 inches. In the second strike one band of conglomerate averaged 35.2 dwt. over a true width of 52.4 inches. In the absence of any effective correlation of the strata, the significance of this strike is limited. Despite these results, the general geological position remains obscure.

The Week's Company Profits.—Our usual analysis of profit and loss accounts, appearing on page 290 covers 57 companies for which comparable figures are available, and shows a high profits total of £10,307,000, due to inclusion of the Lever Bros. and Unilever results. These companies earned £11,171,000 in the previous year, so that the latest results show a fall of 7 per cent. Aggregate net profits of 890 companies which have reported this year

to date amount to £113,476,000, a reduction of 9 per cent. compared with the total of £124,875,000 earned by the same companies a year ago. The week's results are discussed on preceding pages and on page 286 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Reports of company meetings commence on page 271 of this week's issue, Mr Robertson F. Gibb's review at the *Union Castile Mail Steamship* meeting is discussed on page 262, while the results of *Sofina* are described on page 263. Addressing members of *Royal Exchange Assurance*, Lord Bicester showed that the policy of investing substantial sums in short-dated securities had avoided any but the smallest depreciation on the life fund and left resources which could now be re-invested at appreciably higher rates. Sir Francis Norie-Miller pointed out that the carry-forward of *General Accident Fire and Life Assurance* was regarded as a dividend equalisation account, and that it would provide more than three years' dividends at the existing rate. Mr R. Olaf Hambro declared that the preference and ordinary dividends paid by the *London Assurance* were below the total of dividends and interest earned, plus the annual contribution from the life department. At the *Royal London Mutual Insurance* meeting, Mr J. K. Wiseman referred to the introduction of a regular bonus system in the industrial branch, the rate being £1 per cent. per annum at the last valuation. The chairman of *World Auxiliary Insurance* referred to the prospect of a more favourable outcome from marine underwriting last year. Sir John Stavridi, at the *Ionian Bank* meeting, stressed the

importance of the acquisition of control of the *Banque Populaire de Grèce S.A.* and the formation of the *Ionian General Insurance Company* under the bank's auspices. At the *Crown Mines* meeting Dr John Martin referred to the possible installation of large-scale cooling equipment at the mine and to the extended use of mechanical appliances. At the *Rand Mines* meeting, Dr Martin referred to the welcome improvement in the supply of native labour and to the reduced incidence of disease among the "tropical" natives. Dr Hans Pirow pointed out that the great depth of the *City Deep* workings prevented any considerable reduction in costs, but that the average grade mined this year should again show a slight increase. Brigadier-General Sir Frederick Gascoigne pointed out to shareholders of *Army and Navy Stores* that the falling purchasing power of the rentier groups, on which the stores depended for their business, had been partially offset by economies and reorganisation. At the annual meeting of the *San Paulo (Brazilian) Railway*, Mr O. R. H. Bury dealt with the improved revenue from passenger and goods traffic and the company's efforts to obtain statutory revision of rates. Sir A. H. McMahon informed shareholders of *Oriental Telephone and Electric* that the Mauritius undertaking had been sold to the Government, while subsidiary companies had maintained their profitability. The unfortunate effect of international tension on the hotel industry was described to members of *Gordon Hotels* by Major-General Guy Dawnay, who emphasised the efficient management of the company's properties. An increase in the variety of products manufactured by *British Timken* and its success in the export market was reported by Mr M. B. U. Dewar. Mr A. S. Smith reported that *Oxendale and Company (Proprietors)* almost maintained their turnover last year and carried out extensive capital improvements.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
MAY 9	MAY 11

BUSINESS on the London Stock Exchange this week has fallen to even lower levels than in recent weeks. The whole market was dull on Monday awaiting the Budget, and the outcome was generally considered a purely provisional balancing of credit against debit. The gilt-edged market has again been under fire, and although the Budget victims, like tobacco and motor shares, maintained relatively steady prices on Wednesday, the most impressive response was shown by brewery issues at the absence of any new taxation.

The gilt-edged market, which normally would have responded to the absence of any increase in income tax, remained depressed by the increase in the Chancellor's borrowing provision from £350 millions to £380 millions and by the fear, confirmed on Wednesday in the announcement of conscription, that this figure would actually be exceeded. War Loan was specially depressed from the outset and failed to maintain its recovery on Wednesday. This stock, which closed at 91½ ex interest on Tuesday, was actually quoted at 90½ on Thursday afternoon. Other long-dated stocks showed similar movements, and although the redeemable group was more resistant in the earlier part of the week, the continued setback in gilt-edged prices showed its effects on Thursday. Dominion issues became steadier after initial selling, and on Thursday prices showed a general reaction.

In the *foreign bond* market, Japanese issues were consistently weak owing to the turn of events in the Far Eastern war, but most Chinese bond prices were maintained. European bonds remained relatively steady, and Egyptian issues showed a significant recovery after their recent recession.

The general lack of tone caused a reaction in *home rail stocks*, particularly among the ordinaries and marginal preference issues. The traffic gains were not up to general expectations, and Wednesday's recovery was not maintained.

In the *industrial market* there was no relief from the dullness and small turnover that have been in evidence in recent weeks. Prices, however, scarcely changed. Before the Budget a cautious waiting attitude was only to be expected, but the slightly more cheerful

tone due to the absence of any rise in income tax faded out by mid-week. Iron and steel shares became steadier after an initial period of irregularity, though uncertainty returned after Wednesday's announcement on the limitation of arms profits, which depressed armament and aircraft shares on Thursday. Motor shares were weak, and after the Budget speech, even the "heavies" gave way. The aircraft group was affected by the announcement of profits control. Textile shares were dull, and English Sewing Cotton fell both before and after the profits announcements. Rayon shares improved slightly in mid-week. Breweries provided no interesting features until after the Budget, but owing to relief on the absence of change in taxation, there was a sharp general gain on Wednesday. Tobacco shares fluctuated. The week started with a general marking down on taxation

FIFTEEN MOORGATE UNIT TRUSTS

fears, succeeded by some bear-covering. The group reacted on the Budget news, but recovery followed in mid-week. Stores made a mixed showing, with Marks and Spencer a firm feature amid the general weakness on Tuesday. With some exceptions, provision and catering issues were firmer. Miscellaneous shares improved after early dullness.

There has been little demand for oil shares. On Tuesday the market proceeded to discount the effect on oil consumption of a possible increase in the horse-power tax, and consequently prices were maintained on the Budget announcement. The improving position in rubber stocks was insufficient to rouse interest in rubber shares, which remained featureless throughout the week. Following pre-Budget nervousness on the possibility of a higher tea duty, tea shares improved later.

The cabled results of the latest Western Holdings bore-hole provided a diversion among mining shares, and the rally was maintained till after mid-week. Copper and diamond shares were dull, Paris demand for the latter being absorbed without price changes. The rising price of tin caused a sympathetic recovery in tin shares.

ACTUARIES' INVESTMENT INDEX

As compared with the previous week, ordinary share prices on Tuesday last showed little change, but over the past month a moderate decline is evident. The Actuaries' index of 160 industrial ordinary share prices stood on Tuesday, April 25, 1939, at 59.4, compared with 61.8 a month ago and 69.3 a year ago. The fall in gilt-edged stocks, however, has been relatively more severe, and the index for the price of 2½ per cent. Consols has dropped by nearly 3½ points in the month to 117.1. The average yield on ordinary shares is 6.03 per cent., compared with 5.82 per cent. a month ago and 5.36 per cent. a year ago, a rise which is partially associated with rising interest rates. We give below a selection of the component equity indices, and the usual monthly particulars of fixed interest securities:—

New York

SOME broadening of activity and a mild recovery of prices in mid-week did little to relieve the general dullness of the market. For about a fortnight price movements have been relatively slight, and the volume of trading exceptionally small, so that changes in quotations of individual shares have been out of proportion to the amount of business. On Wednesday, only 580,000 shares were traded, yet this was the highest figure since April 15th. Like other markets, Wall Street has been marking time until the Reichstag speech, and has, on the whole, been indifferent to home business news. Dealers were also inclined to await the signal of the United States Steel preferred dividend. The announcement of the regular payment was expected, but the setback in profits caused general, though temporary, disappointment. United States Steel and motor shares were the leaders in the mid-week activity. Partly as the result of the coal strike, steel mill activity for the current week is estimated by *Iron Age* at 48.5 per cent. of capacity, against 50.5 per cent. a week ago.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

BY STOCK EXCHANGE INTRODUCTION

Manders (Holdings).— Issued capital, 785,600 5 per cent. cum. £1 preference shares and 1,200,000 10s ordinary shares. Profits of subsidiaries after depreciation: 1935, £98,468; 1936, £86,789; 1937, £104,390.

Industry and Trade

Higher Film Duties.—When the film duties were first imposed in the third War Budget introduced in September, 1915, Mr McKenna estimated their yield at £400,000 a year. In the same Budget the patent medicine duties were doubled so as to produce an estimated additional revenue of £250,000 a year. By a strange coincidence both duties came under notice again in this week's Budget. But whereas the medicine duties are now to be abandoned at a cost to the revenue of £770,000 in a full year, the film duties are to be revised with a revenue gain of almost exactly this amount. The actual yield in 1937-38 was £182,000, and the Budget estimate of the yield of the new duties in the first full year is £970,000—an increase of £788,000. Improvement in the technical qualities of film has been the principal cause of the steady decline of revenue from Mr McKenna's figure. With this experience to guide the Treasury, photographic quality has been ignored in the new scheme, which is concerned only with quantities. A new excise duty is to be imposed on raw stock at a rate equivalent to 4s. 3½d. per 100 feet. The countervailing Customs duty will be double this amount on either raw stock; 6d. a foot on the first importation of either negative or positive of any subject, and 2d. a foot for every subsequent copy. It is believed that this system of duties will encourage British manufacturers of raw stock and British laboratories engaged in printing copies of films for exhibition. An estimated additional cost of less than £100 per subject should not be unduly burdensome to the struggling British film industry in relation to total costs ranging from £15,000 to £150,000. Approximately one-half of the total tax will be paid, it is believed, by the American companies established here, and there seems no immediate likelihood that any part of the tax will be borne by the exhibitor or passed on to the public. If the trade can bear the tax without excessive hardship, it will demonstrate at once the resilience of the film industry and the ingenuity of the Treasury.

Anglo-French Coal Trade.—The administration of the French coal import licensing system is far from giving satisfaction to British coal exporters. It was thought that the differences between the British and French Governments over the working of the terms of the agreement of June, 1934, had been completely adjusted by the amended agreement of December 10th last. Under the latter the French Government undertook (1) to discontinue the practice by which an over-issue of import licences encouraged purchases of cheaper Continental coals at the expense of the United Kingdom quota, (2) to ensure the purchase by French public utility undertakings of 49.5 per cent. of their requirements from this country, and (3) to limit the transfer to other countries of British licences to a maximum of 3 per cent. of Britain's normal quota. Notwithstanding these assurances, our exports to France have continued to decline. It is true that under the economy measures introduced by M. Paul Reynaud the aggregate coal imports of France from all sources of supply have fallen heavily. In January-March they amounted (in terms of coal) to only 4,517,000 metric tons, compared with 6,193,000 tons in the corresponding period of 1938, and there was a corresponding decrease in the declared c.i.f. value of coal, coke and patent fuel imports from Frs. 1,248 millions to Frs. 943 millions. The biggest decrease has been in the intake from Germany, where there is an acute shortage of fuel; but while imports from the United Kingdom have dropped from 1,831,000 tons to 1,142,000 tons, supplies from Belgium, Holland and Poland have increased. Consequently, in January-March the United Kingdom supplied only 25.3 per cent. of the total French coal, coke and patent fuel imports, compared with 29.6 per cent. in the first quarter of 1938.

France reserved the right to discontinue the agreement if the French (including French North Africa) share in the United Kingdom imports of iron ore fell by more than 5 per cent. compared with 1938, but the recent course of this particular branch of Anglo-French trade does not, apparently, give France cause for complaint, for although our imports of iron ore have been much less this year than they were in the early months of 1938 the French share of our total imports has actually increased. The attention of the Mines Department has been drawn to these facts, and on the strength of the communications which have taken place an improvement is expected in the near future.

Coal-Mining Profits.—The accompanying diagram shows the trend of costs and proceeds per ton in the coal-mining industry, as well as the output per manshift, on the basis of the *Quarterly Statistical Summary* issued by the Mines Department. Costs, however, have been computed before deducting interest on debentures and loans, bank charges, amortisation and taxation which the Mining Association estimates to amount to about 3d. per ton. The diagram reveals that, after a long period of losses or meagre earnings, the industry has operated at a profit since the middle of 1935. Moreover, as the results for 1938 show, the industry's profit-earning capacity has been well maintained in face of a reduction in demand. The returns for the last quarter of 1938, published last week, reflect the usual seasonal decline in costs per ton, due to increased total output, accompanied by an increase in proceeds per ton, consequent upon the operation of

COSTS AND PROCEEDS PER TON

winter prices. The credit balance per ton (the margin between costs and proceeds) in the last quarter of 1938, at 1s. 9.81d., was actually 2.54 pence higher than in the corresponding period of 1937, although the total quantity of coal disposable commercially declined from 56,288,000 tons to 52,455,000 tons during this period. The total credit balance in October-December, 1938, was £4,767,552, against £4,284,171 in the corresponding quarter of 1937. While not a single district recorded a loss in the last quarter of 1938, the credit balance per ton of the individual areas shows considerable variation; it

was as high as 2s. 10.96d. in the South Derbyshire, Leicestershire, Cannock Chase and Warwickshire district and as low as 0.48 pence in the case of South Wales and Monmouth, due largely to the fall in exports. The output of coal per manshift showed a slight seasonal increase in the last quarter of 1938 but, at 23.18 cwt., was again slightly lower than a year earlier. The downward trend in the output per manshift since 1937 is one of the least satisfactory developments in the coal-mining industry.

* * *

Rising Sugar Prices.—During the last six weeks the London price for raw sugar (Cuba, 96 per cent. nearest future c.i.f.) has risen by 1s. per cwt. to 7s. 10½d. per cwt., the highest price since the spring of 1930. Since it was known last autumn that the yield of the European beet crop was very low, prices have tended to rise on the London market. Supplies are limited by the export regulations concluded under the International Sugar Agreement, and, in addition, a poor season for cane sugar in India has necessitated larger imports from Java, with a corresponding diminution in the Javanese supplies available for Europe. There is also considerable uncertainty whether the remainder of the Czecho-Slovakian export quota will be utilised. There is, therefore, every reason to expect a very firm sugar market for the remainder of the current season, and it is, perhaps, unfortunate that the increase in the sugar duty should have coincided with a period of rising prices. On the other hand, there is no reason to assume that the main cause of the present improvement in prices—the small supplies of European beet sugar—will be operative in the coming season. The European area reported to have been sown to sugar beet is indeed slightly larger than a year ago, and, given a normal yield, the International Sugar Council will not find it easy to maintain in the next season the level of sugar prices now ruling in the London market.

Idle Shipping.—Like the movement of freight rates, the Chamber of Shipping's latest returns of merchant tonnage laid up in British ports suggest that there has been comparatively little change in the volume of international trade during the first quarter of this year:—

	Number and Tonnage of Idle Shipping			
	British Vessels No.	Net tons (000)	Foreign Vessels No.	Net tons (000)
1938 April 1st	139	232.8	51	106.5
July 1st	159	245.3	39	86.7
October 1st	190	363.3	42	92.4
1939 January 1st	174	342.4	49	109.9
April 1st	185	341.3	32	76.4

While the number of British vessels laid up at home ports rose from 174 to 185 during the first quarter of this year, their tonnage actually showed a slight decline, but was appreciably higher than a year ago. Both the number and tonnage of foreign vessels laid up in this country on April 1st, on the other hand, were substantially smaller than on January 1st and a year ago. The merchant tonnage on the United Kingdom Register increased by 37,000 gross during the first quarter of this year. As the tonnage laid up declined by about 3,000 gross during this period, the capacity of United Kingdom vessels in commission must have increased by 40,000 gross tons.

The Poultry Bill.—The text of the Poultry Bill, which has now been published, follows faithfully on the lines laid down in earlier pronouncements of the Government. There is to be a Poultry Commission, appointed by the Ministers concerned, who will prepare and enforce schemes for the control of breeding stock and eggs sold for hatching in order to improve the health and quality of poultry stock. Dead poultry and eggs offered for sale are, after an appointed day, to be graded and marked to show the grade, a reform that is to be welcomed in the interests both of the trade and of the consumer. The Board of Trade is given power to regulate quantitatively the imports of eggs or poultry if, "having regard to the interests of all classes of persons concerned . . . the making of such an order appears desirable in order to secure the stability of the market." It is to be hoped that this vague phrasing will not allow the Board to be stampeded by producing interests into a drastic restriction of egg imports, which still provide a quarter of our supplies.

* * *

Germany's Purchases of Nickel.—A note on the large rise shown by the statistics of Germany's imports of nickel ore appeared in *The Economist* of April 15th. Further information which has subsequently become available suggests that this note may have been misleading. The nickel content of nickel ore may vary very greatly. It is true, as was stated, that Germany's imports of nickel ore in the first two months of 1939 were nearly five times as great as in the corresponding period of 1938; but the abnormal imports, amounting to over 7,000 tons, consisted not, as was suggested might be the case, of Canadian ore containing nearly 50 per cent. nickel, but of low-grade ore from another source containing probably not more than 3½ per cent. of nickel. The real significance of the rise in imports of nickel ore is, therefore, not nearly so great as it appears: in terms of nickel content it amounted to not 500 per cent. but about 50 per cent. Moreover, as against this increase must be set the 23 per cent. decrease in imports of metallic nickel during the same period from 900 tons to 691 tons. On balance, the total increase in imports of nickel in ore plus metallic nickel was about 12½ per cent. The large importation of low-grade ore in the first two months of 1939 was not a recurrent transaction and illustrates the search by Germany for alternative sources of supply.

* * *

Rise in Tin Prices.—The price of tin, which had fluctuated around £215 per ton between the end of last year and the middle of this month, has undergone a considerable improvement in the past fortnight. On Thursday the standard cash price closed at £224 5s. per ton, the highest level since October, 1937. There is but one reason for the recent rise, the resumption of United States buying on a more normal scale. In the past six months United States' consumers had reduced their stocks considerably, but in view of the uncertain political outlook they found it advisable to increase them. As free supplies of the metal are not large the American demand immediately had a strong influence on prices. In addition to the private consumers, the Government is anxious to accumulate a war reserve of tin, as is shown by the negotiations over a barter exchange with Great Britain, discussed on page 246 of this issue. These developments in America have undoubtedly improved the immediate outlook of the tin market. Despite the prevalence of a large over-export and the accumulation of large minehead stocks in the chief tin-producing countries, therefore, the International Tin Committee, at its meeting of Thursday, did not alter the level of supplies in the current quarter. It must be remembered, however, that the recent advance in prices was primarily due to the war scare; unless, therefore, the political outlook grows worse, the recent rise in the price of the metal does not necessarily suggest a major increase in export quotas in the near future.

INDUSTRIAL REPORTS

THE latest reports from industrial centres suggest that the trend of business activity remains upwards. The demand for coal by industrial consumers is increasing and there are some indications of stocking against an emergency. Activity in the iron and steel industry is rapidly expanding and as it now looks as if domestic capacity may soon be insufficient to meet commercial and defence requirements, heavy purchases abroad are understood to have been made to supplement home output. Commercial orders in the cotton and wool textile industries have been none too plentiful, but Government contracts continue to be placed freely. Further details of the position of various industries as well as of the trend of general business activity will be found in the *Trade Supplement* accompanying this week's *Economist*.

Coal

Sheffield.—There is an improved demand for industrial fuel in the inland market, and works are accumulating stocks. South Yorkshire and Derbyshire hards are quoted at 18s.-19s. per ton at pits. Household coal is in less active demand. Small coal is moving more freely, due to the increasing demand for blast-furnace coke, and because electricity undertakings are adding to stocks. Demand for gas coal has fallen away with the advent of summer time.

In the export market there is moderate business for prompt shipment. Forward inquiries include those from Scandinavia, Italy and Germany. British collieries are being called on to make up part of the deficiency in production in the last-named country. Bunker coal shows little improvement.

*

Newcastle-on-Tyne.—The strength of the coal market in this area is well maintained, collieries in the Durham section being fully stemmed until the second half of May. Stocking against an emergency and additional trade from foreign coaling stations, due to the American coal strike, is giving a stimulus to the market, but there is also considerable improvement in the local industrial demand. Collieries producing coking coal are inundated with inquiries for immediate and forward delivery. Northumberland large coal is very firm, but collieries producing these grades have large stocks of smalls on hand. Patent oven coke is a firm market.

*

Glasgow.—A feature in the Scottish trade has been a further expansion in shipping business, due no doubt to the extra amount of precautionary buying now taking place, coupled with accelerated requirements as a result of re-armament work. Enquiries for forward shipping trade have also been on brisker lines. Active conditions remain the rule in the home market. Household demand is now tapering off, but this is offset to a considerable extent by the heavy requirements of industrial consumers. The market tone generally remains firm.

*

Cardiff.—Shipments at the South Wales docks have suddenly become more active than at any other period

since last October. Last week they totalled 453,800 tons, compared with 400,500 tons in the corresponding full working week last year, and the stems up to Wednesday morning indicated the probability that this improvement in trade would be maintained this week. The resumption of anthracite exports to Canada partly accounts for the revival, while the miners' strike in the United States has led to the diversion to South Wales of prompt orders which, in the aggregate, are estimated to total about 42,000 tons, and there is generally a better demand from European and South American markets. Practically all classes of coals have been affected by the recovery, while the orders placed for patent fuel will absorb the current producing capacity up to the end of June. There has been a considerable decrease in the stocks of steam smalls, and their prices are rising. France is a disappointing market, but representations are being made to the Mines Department against the delays in giving effect to the assurances under the new agreement of December last.

Iron and Steel

Cardiff.—Business continues very active in the iron and steel industry. Towards the end of March there were 70 more mills in operation compared with the corresponding period last year and work has been resumed at many more during the past few weeks. Last month the steel production of South Wales was again the highest of any district in the United Kingdom, and practically every available furnace is now working. The increase in the price of tin has been responsible for an advance in the prices for tinplates to 20s. 4½d.-20s. 9d. per basis box for the inland trade, but for export quotations are unchanged at 20s. 3d. In spite of the stoppage of work on Easter Monday the production of tinplates for that week was within about 3 per cent. of that of the previous week. There appears no likelihood of any immediate relaxation of the present pressure of work, but the activity of the industry rests mainly on re-armament and A.R.P. orders.

*

Sheffield.—There is increasing activity in the iron and steel market, and consumers are much more willing to buy forward. The call for basic pig iron is increasing, and a heavier demand is developing for parcels of foundry. Forge inquiries are also on a better scale. Stocks of hematite at users' premises are falling, and heavier consumption is resulting in the placing of fresh contracts over the next two months, when official prices will come under review. Finished iron is making a slow revival, although crown bars continue very depressed.

Basic steel billets are a strong market, and there is a sharp increase in the demand for steel bars and strip. Stainless steel sheets and wire rods are good features. There are heavy inquiries for most classes of iron and steel scrap, and in some materials there is a definite shortage. Adequate supplies of heavy basic steel scrap are not easily obtainable, and steel manufacturers have to increase the use of pig iron, American

imports may ease the position in due course. Heavy cast iron for the foundries is in demand at around 80s. per ton, and steelworks heavy cast iron is active at 62s. 6d. per ton.

*

Middlesbrough.—The steel makers in this district are concerned mainly with increasing production to enable them to meet both commercial and Government requirements. The local output of steel was 249,000 tons in March, the highest figure for twelve months, and is still increasing.

Additional blast-furnaces are expected to be re-started in the near future for the production of basic iron, all of which is required in the local steelworks. The output of semi-finished steel is also being increased to meet demand. Heavy steel melting scrap is scarce and works are pressing for increased supplies at the fixed schedule prices. East Coast hematite pig iron continues to meet with better demand from local users and from the Midlands. Cleveland foundry pig iron is in rather better request as supplies of iron scrap are decreasing. Imports of foreign ore are about 25 per cent. above those of the previous month.

*

Glasgow.—Steel plants continue to work to capacity and steelmakers are finding it increasingly difficult to meet the demands of users. Makers are now very fully booked and buyers are finding it almost impossible to place business when prompt delivery is essential. There is great activity at the bar and sheet re-rolling mills and at the galvanising plants in this district. There, too, order books are well filled and, if supplies of raw material are satisfactorily maintained, work will be regular and constant for many months to come. Structural, marine and other engineers are all busy and there are many inquiries on the market. There is still considerable anxiety here in regard to future supplies of scrap.

*

News from Abroad.—The improved demand on international steel markets has been maintained. It appears that only a comparatively small part of the potential requirements for commercial purposes is being ordered, although in many cases buyers are not deterred from placing orders in view of the international tension. On the contrary, there is sometimes a tendency to speed up purchases so as to avoid difficulties in case steel producers should give preference to armament orders, and a general scramble for supplies should occur. But although inquiries are, thus, of a more serious character than formerly and are quite numerous, commercial orders have not yet attained a corresponding magnitude. In several cases, small tonnages are urgently required for immediate delivery.

Competition is less conspicuous than during the slack period, although Germany is trying further to promote her exports, and American offers have lately been disturbing particularly in South Africa and South America, with the result that the Cartel reduced its prices for thin sheets by several shillings per ton. On the whole, however, the price position on the various markets is stable, several products having benefited

OTARD'S EST. 1795
V.S.O.P.
LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

from a purely seasonal demand. Low-priced Australian sales to the Dutch East Indies have recently aroused some comment, but this competition is likely to abate in view of the placing of an order by Britain with the Broken Hill Company.

Active conditions prevail on the Scandinavian and South American markets. Argentina has sent out inquiries for a large quantity of sheets for locust protection. Demand from the Far East has also increased, and Egypt has shown interest for merchant bars and sheets. British purchases on the Continent have remained on a substantial scale so that the arrears under the supply agreement with the Continental Cartel are being speedily made up.

Textiles

Cotton (Manchester).—The tone of the market has continued unsettled. The report that President Roosevelt has approved the 2 cents per lb. subsidy on cotton exports in the United States has brought a sharp fall in prices in Liverpool. No definite decision, however, has been reached.

Business in the yarn market has been disorganised by the decline and wide fluctuations in raw material rates. Fair weights, however, have been booked in coarse American counts. Egyptian qualities have been purchased sparingly. Cloth buying has been very irregular. Some traders, however, believe that current prices for manufactured goods are on an attractive basis. Quite a number of useful orders have been secured for India, and a fair amount of business has been done for South America. Further Government contracts have been given out, especially in heavy materials. Employers are becoming concerned at the labour shortage which will be rendered more acute by conscription.

Wool (Bradford).—During the past two weeks activity has centred on crossbreds, due entirely to increasing orders for khaki cloths given out by the War Office. The result is that all wools suitable for khaki purposes have tended to rise in price. This means that trade is to some extent one-sided, crossbreds experiencing a demand far in excess of that at present existing for merinos, and this will be seen next Tuesday in Coleman Street Wool Exchange, when the third series of auctions commences. Undoubtedly crossbred wools are most suitable for fabrics for war purposes; they possess an excellent wearing capacity. Merino wools are still used in the production of officers' cloths, the men in the highest ranks in the Army being clothed in the very best fabrics made from the finest wool. There is now more machinery making army cloths than at any time since the end of the Great War. Apart from the activity in khaki production, mills are not running too well in the West Riding; the uncertain political outlook is seriously affecting the placing of orders for civilian attire.

THE COMMODITY MARKETS

The check noted last week to the decline in commodity prices has been fol-

lowed by a week of uncertainty; factors affecting individual markets have been more important than any general influence.

Wheat prices are slightly higher, as a result of Government purchases for stock, either actual or prospective. Sugar prices continued to rise and the prices of English refined have also been affected by the increase in the sugar duty. Copper among base metals, exceptionally, was unchanged; lead, spelter and tin were marked up during the week and the tin market benefited from large American purchases. The rubber market remained lifeless, cotton prices are affected by the uncertainty of American policy, and prices of vegetable oils, where changed, have tended downwards.

The news that the American Ambassador in London has started negotiations with the British Government with regard to the exchange of cotton and wheat for rubber and tin on a barter basis is discussed on page 246.

Moody's index of the prices of staple commodities in America, after small fluctuations during the week, stood on Wednesday at 139.3 (December, 1931 = 100), compared with 139.9 a week ago and 145.3 a year ago.

Metals

Copper.—The price of standard cash fluctuated within very narrow limits and closed unchanged at £41 15s. per ton. Earlier in the week the quotation had touched £41 1s. 3d., the lowest level of the year. In the United States the domestic price was further reduced to 10d. per lb. Compared with a month ago the price has thus been lowered by 1.25 cents, and this reduction has stimulated consumption, which is still improving, although large purchases are discouraged by the less promising business outlook.

Tin.—The London tin market was very strong throughout the week and standard cash closed on Wednesday £5 higher at £223 10s. per ton, the highest price since October, 1937. The decision of the I.T.C. is discussed on page 269.

Lead and Spelter.—The spot price of lead closed on Wednesday 1s. 3d. higher at £14 8s. 9d. per ton, while spelter gained 6s. 3d. to close at £13 13s. 9d. per ton. Both markets were very quiet and the turnover remained below normal. The more favourable building returns for March, however, proved an encouraging factor and created a better feeling.

Grains

DEMAND for wheat has improved in the last few days and more business has been transacted; the increase is largely due to the decision of the Belgian Government to create a reserve of wheat at Antwerp and to the publication last week of the British Government's scheme for an increase in the stocks of flour held by bakers, against a Government bonus of 2s. 6d. per sack. The existence of large stocks of wheat in Argentina and the United States has prevented any rise in price; shipments from the Plate are increasing in volume and some Australian wheat has also

been sold to the United Kingdom. Reports indicate that the American winter wheat is in good condition, but that spring sowings in the North-West have been handicapped by lack of moisture. The shortage of maize on passage has helped to lift prices by about 6d. per quarter, and last week's shipments from the Plate were taken up by Continental buyers, who have also taken a fair business in Argentine barley.

Other Foods

Provisions.—Bacon and egg prices both declined in the week ended last Saturday; larger supplies of Continental eggs, combined with the spring peak of home production, reversed the recent upward trend in the London market.

Colonial Produce.—After a sharp rise at the end of last week, the market for refined sugars was very firm. It is understood that retail prices will be affected to the full extent of the duty. The futures market for raws has also been firm and on the week the quotations for the nearest future on 96 degrees rose by 7½d. per cwt. The customs restrictions on the withdrawals of tea from bond have now been rescinded.

Miscellaneous Commodities

Oils and Oilseeds.—Markets have continued very quiet, in the adverse conditions of political tension and Budget uncertainty. Plate linseed is unchanged in price, but prices for Calcutta and Bombay have fallen by 2s. 6d. per ton. A further decline in linseed oil prices has occurred, and other vegetable oils are barely steady.

Rubber.—The market has been very idle during the past week and price fluctuations small. Standard sheet closed unchanged on the week at 7½d. per lb.

Furs.—On Monday the Hudson's Bay Company opened in London the general spring fur sales. The first days of the series showed a much better tendency than was expected. Prices of a number of furs like beaver, otter and musquash fully maintained or improved on their January levels. A major setback only occurred in the prices for the various kinds of foxes, which lost about 10 per cent. compared with January, but even here the fall was smaller than had been expected.

Milk.—The following table is compiled from statistics issued by the Milk Marketing Board:—

	Mar., 1938	Jan., 1939	Feb., 1939	Mar., 1939
Prices (per gall.)	d.	d.	d.	d.

SOCIÉTÉ FINANCIÈRE DE TRANSPORTS ET D'ENTREPRISES INDUSTRIELLES, S.A.

(SOFINA)

EXTRACTS FROM DIRECTORS' REPORT TO THE SHAREHOLDERS FOR PRESENTATION AT THE ORDINARY GENERAL MEETING OF APRIL 27, 1939

In last year's report we showed how governmental action aims at adjusting, though it frequently accentuates, disparities between the supply of and demand for goods and services. This time we propose to deal in particular with one of the main forms of this action, namely, fiscal policy. By levying and utilising part of the community's resources, the State modifies the production and distribution of wealth. No citizen, and above all no head of an undertaking, can afford to remain indifferent to the effects of taxation on the economic system.

Public revenue and expenditure influence the trend of business in the community in which the funds are raised and spent; their repercussions extend to all other communities, since complete self-sufficiency has so far been attained nowhere. As a rule the economic effects of a given financial system hardly conform to the intentions of those who have framed it; but, whether intentionally or not, the State modifies the production and distribution of goods and services in proportion to the share of the nation's resources which it applies to its own ends. Now in most countries this share has been growing rapidly as a result of vastly increased expenditure during the Great War, reparation of war damages, re-armament, efforts to remedy unemployment, and the continual extension of social services. The resources, the disposal of which is determined by public bodies, do not consist merely in domanial receipts—that is, receipts from State property or privilege—or in the proceeds of taxation and loans; government agencies similarly dispose of another portion of the collective wealth by requiring employers to contribute to insurance and welfare funds; by obliging consumers, through protectionist measures, to subsidise producers; and even by limiting working hours, specific branches of production, or prices.

ENCROACHMENT OF GOVERNMENT ACTIVITIES ON PRIVATE ENTERPRISE

Whether the levies thus made on the taxpayers' resources are distributed through the Treasury or not, those who pay them are prevented to that extent from applying their funds to other purposes. These levies, however, do not necessarily imply a dead loss for those who pay them, less still for the community; but it is practically impossible to weigh accurately against each other the value that publicly supplied goods and services may represent for the taxpayers or the community and the value of what might have been enjoyed if private initiative had had the free disposal of the means wherewith those public assets were produced.

Nevertheless, experience shows definitely that, unless the expansion of governmental activities is proportionate to the increase in aggregate resources, it will gradually encroach on the sphere of private enterprise; and economic progress will suffer from this substitution.

Over long periods in history there is a kind of recurrent evolution in methods of meeting public expenditure; at first, domanial receipts are sufficient to meet the Treasury's needs; then taxation is resorted to in order to cover part of the requirements, and the place taken by taxes in the total revenue tends to grow and later to decline; and when the disposal of the community's resources is once again concentrated in the hands of the ruler the cycle starts all over again. In the choice of taxes, alternating movements of shorter duration may be observed; taxes based on the possession or transfer of specific goods are superseded by personal contributions, and vice versa; while the fiscal system passes from complication to simplification and back again.

At present, most countries have reverted to the stage where progressive personal taxation is in fashion and fiscal legislation is highly intricate. However, there are signs of reaction in favour of consumption taxes and simpler fiscal regulations.

EVOLUTION OF ECONOMIC SYSTEM

In the evolution of the economic system, public enterprise is again tending to substitute itself for private initiative. The logical end of this tendency can be seen in the Soviet regime; other totalitarian states have advanced a long way on the same course; democratic nations are following it light-heartedly without realising where it leads.

The subtle distinctions between communism, socialism and state planning have been depicted as follows: communism takes the cow, kills it, and distributes the meat; socialism seizes the cow, feeds it, and milks it; state planning leaves it to the care of its owner, but tells him how to tend it and to whom to deliver the milk. All three methods lead to a decrease in milk production.

Two common features may be noted to-day in the financial systems of almost every country. In the first place, public expenditure and receipts are so arranged that their effects on production, distribution, and saving are often conflicting; some measures restrict the very activities that others aim at stimulating. Secondly, financial laws are enacted by men with only a vague recollection of the principles of taxation that guided their predecessors. These doctrines purported to achieve justice in taxation by distributing the tax burden either according to the benefits each taxpayer might be assumed to derive from public services, or strictly in proportion to his wealth or income, or again according to distinctions drawn between necessary, useful, and superfluous resources. As a survival of these theories we find an unreasoned conviction that taxes on incomes are the only really "just" form of taxation, though it may perhaps be expedient to keep an even balance between "direct" and "indirect" taxes. As a matter of fact, the safest criterion for judging the merits and defects of a given form of taxation must probably be sought in its economic and social effects.

SHRINKING OF TAXABLE RESOURCES

To-day the taxation of incomes and particularly of profits, has been carried to such a point that the taxable resources are themselves shrinking. Fiscal levies are destroying capital and wiping out group after group of taxpayers. The growth of unemployment is one consequence of the decline in private enterprise. As a result of this policy, the public revenue is diminishing, while public expenditure continues to increase. Higher rates of taxation would but widen the deficit.

The Treasury, in order to supplement its tax receipts, then turns to extraordinary expedients to cover even normal expenditure; it resorts to borrowing or to currency manipulation. But the economic effects of these measures are similar to those of taxation; consumption is encouraged at the expense of saving, public services are substituted for private undertakings, and the taxable capacity of the country continues to shrink.

OVERBURDENED MIDDLE CLASSES

Acting on humanitarian or political considerations, the State, in its attempts to spare the smaller incomes, throws the bulk of the fiscal burden on to the middle classes. Its declared policy may be mainly to tax large fortunes or undertakings; but in destroying accumulations of wealth it deprives the middle classes of the principal outlets for their goods and services. Soon there will remain only small incomes to tax (under the Soviet regime the State obtains more than three-quarters of its budgetary revenue by selling to the masses at high prices the goods it has bought from them at exceedingly low prices). While restricting private enterprise, the central government, in trying to husband the proceeds of taxation, reserves to itself an increasing share in the administration of public expenditure; consequently it narrows the powers of its subordinate public bodies.

If there is to be a reaction against this centralisation of authority and generally against the advance of governmental management—if our economic structure, based on voluntary exchanges, is not to be broken down—it is high time to recognise the necessity of reverting to a system of taxes that will enable entrepreneurs and savers to reap an adequate reward for their services to the community. The remuneration for their services has never totalled more than a fraction of the wealth the production of which they have encouraged to the advantage of the entire community; yet they are currently eyed with envy because the value of their services is not fully appreciated.

Without underestimating the benefits that governmental activities can contribute to the national welfare, or, in particular, the economic value of prudently selected public works carried out at a suitable time, it is manifest that in many countries public expenditure is to-day absorbing an excessive part of the aggregate resources. It has grown out of proportion to the national production, the more so since taxation is making it impossible to increase or even to maintain the output of goods and services. The time is approaching in those countries, if it has not already been reached, when the State will be forced to reduce its administrative departments, its social benefits, its pensions, its interest payments, and public works, after desperate resort to issues of monetary tokens and promissory notes, the value of which must inevitably and steadily diminish.

Advancement in general well-being presupposes an increasing volume of goods and services supplied at decreasing unit prices and yielding a growing total profit. At present, fiscal policy is hindering the fulfilment of each of these three conditions.

It may be argued that in former days nations enjoying moderate taxation also experienced business depressions and suffered from unemployment; that some of them saw their currency depreciated; and that few Governments have ever accepted lightly a steady expansion of their expenditure.

GROWTH OF PUBLIC EXPENDITURE

Who would contend that all was perfect in the economic system and financial practices that obtained before the Great War? Yet before it broke out there had been an almost uninterrupted improvement in public well-being, extending over more than fifty years, whereas to-day the general standard of living is declining to a disquieting extent despite the untiring progress of technical invention. True, the growth of public expenditure, which is one of the factors in this decline, is not attributable solely to deliberate planning: new threats of war are causing wild spending on armaments, and many of the State's encroachments on the field of private initiative purport merely to supplement inadequate private enterprise. But the burdens and restrictions placed on business are among the principal causes of the slump in domestic and international trade, and economic depression intensifies international misunderstandings.

By hampering production and trade, by accentuating and prolonging the cyclical fluctuations in business, ill-advised and excessive taxation is largely responsible for this depression, and consequently for the present tension in international relations.

No doubt it is very difficult to cut down public expenditure, or to reduce specific items below the figures they have attained. Yet the only hope of maintaining existing public services—to say nothing of extending them—without occasioning general misery, lies in an economic and fiscal policy that will favour, and not discourage, private saving and enterprise, that will stimulate, and not hinder, a more abundant production of wealth.

(Continued from page 260)

Norwich Union Fire Insurance.—Fire premium income increased from £1,744,000 to £1,789,000 last year, but underwriting results were less favourable than in 1937. In the accident branch, premium income increased by £49,000 to £1,556,000, and the underwriting results showed improvement on the satisfactory experience of 1937. Marine premiums also increased from £225,000 to £255,000; first year's claims fell from 44 per cent. to 33 per cent. of premium income, but second year's claims increased from 33 per cent. to 36 per cent. The year 1936, which has now been closed, shows a profit, but no transfer has been made to profit and loss, since 1937 was not a good year for marine insurers, and it is considered prudent to retain the profits in the account. The results of the last two years are given below:—

	1937	1938
Fire	169,295	90,699
Accident & general	87,862	105,409
Taxation, etc.	257,157	196,108
	136,230	137,437
	120,927	58,671

Total assets of the Society and its subsidiaries increased from £6,006,000 to £6,191,000. Mortgages, of which Nor-

wich Union Life has substantial holdings, amount only to £53,000 in the Fire Society. Debenture stocks account for £1,699,000, British Government securities for £797,000 and foreign Government securities (a large portion of which is doubtless held in connection with overseas insurance) for £689,000. Stock Exchange securities were valued in the aggregate below market values on December 31st last. The rate of exchange of \$4.86 to the £ has been used in connection with U.S.A. non-marine business, but current rates have been employed throughout for conversion of other overseas currencies. General reserve stands at £1 million. The ordinary share capital, which was acquired by Norwich Union Life in 1925, again receives 24 per cent. and interest earnings, after deducting debenture interest, are equal to about 75 per cent. of the cost of the dividend.

General Accident Fire and Life.—New life assurances, which are transacted by the General Life Assurance Company, fell from £2,844,000 to £2,611,000, and the net rate of interest was 4.7 per cent. smaller at £3 17s. 11d. per cent. Death claims amounted to £28,000, compared with £365,000 in

PROFIT AND LOSS ACCOUNT

While the items in the balance sheet submitted to you to-day hardly call for comment, it may be useful to give some explanation of the figures in the profit and loss account that differ substantially from those of a year ago:—

1. The item "Income" shows an increase of about 28,000,000 francs. More than one-half of this increase, however, is due to the fact that we have included this year, under that heading, the fixed amounts received by way of remuneration from associated companies, whereas our former practice was to deduct such receipts from "General and Administrative Charges."

The increase would have been even more marked were it not that this year Belgian income tax has been deducted at source from most of our earnings. As a result of this deduction we anticipate that it will be possible to discharge our remaining tax liabilities by resort to the balance of the provision made for taxes out of profits in previous years.

2. The increase of nearly 19,000,000 francs in the item "General and Administrative Charges" is mainly attributable to the change, mentioned above, in the treatment of remunerations from associated companies. To a minor extent it results from greater research expenditure, extensions to our office building, and a higher pay roll. Furthermore, as shown in the next item, the bonuses granted to the staff have been increased by 1,000,000 francs.

3. It is found possible to devote a larger sum to amortisation, while allowing for the same dividends as last year, and yet leave practically unchanged the balance to be carried forward. As already mentioned, the amount available for these purposes is not burdened this year with any provision for taxes.

The profits which it is proposed to distribute work out at 5.65 per cent. on the capital (including the premium on issue) provided by the shareholders when the company was formed, or 4.07 per cent. on the gold equivalent of this sum.

In several countries our undertakings still have to contend with the currency difficulties referred to in previous reports, and all of them continue to be affected by the unsettled conditions of world trade: the "Transport, Electricité & Gaz" has been compelled to sell its undertakings to the Turkish Government. Except in Spain and Mexico, however, the actual working of the companies in which we have an interest has been satisfactory during the past year, and is maintaining steady progress.

and

The Midland Bank Limited, Poultry, London, E.C.2.

1937. Fire premiums increased by £11,000 to £732,000, and as usual the underwriting profits were highly satisfactory. Premiums to the accident department, which includes motor insurance, showed a reduction of £133,000 to £8,612,000, but the underwriting results were better than those experienced for many years. Marine premiums amounted to £214,000 against £238,000, and results were again disappointing. The departmental reserves in the fire, accident and marine funds amount to 90 per cent., 92 per cent. and 90 per cent. respectively of the 1938 premium income. The result of the last two years are shown below:—

	1937	1938
Fire	183,213	254,176
Accident & gen'l.	345,583	405,295
Marine	Dr 46,219	Dr 66,387
Profit on investments	10,144	...
Charges to profit and loss	492,721	671,403
	353,933	455,301
	138,788	216,102

Total assets, including those of subsidiaries, increased from £19,667,000 to £20,555,000. The reserve for depreciation and investments and adjustment

COMPANY MEETINGS

RAND MINES, LIMITED

PROGRESS OF MINING INDUSTRY

STRONG POSITION OF THE GROUP

DIVIDENDS MAINTAINED

MR JOHN MARTIN'S SURVEY

Mr John Martin (the chairman) presided at the annual meeting of Rand Mines, Limited, held, on the 24th instant, in Johannesburg.

In moving the adoption of the report and accounts, Mr Martin reviewed the operations of the company and said the position was satisfactory in all respects, dividends distributed having been maintained at the same rate as in the two previous years and the company's already strong financial and investment basis having been further strengthened.

YEAR'S PROFIT

The profit earned had been £923,827, a decrease of £36,582 on the corresponding figure for the previous year. That profit was exclusive of profits derived from the sale of investments, which, in accordance with the established policy of the company, had not been utilised for dividend purposes, but were available for reinvestment in its undertaking.

During the year 25,000 reserve shares in the company had been sold to General Mining and Finance Corporation, Limited, at £8 6s. 1d. per share.

The proceeds of that sale had been devoted to the purchase from that Corporation of a large share of interest in West Rand Consolidated Mines, Limited.

The balance sheet showed that the premium on those reserve shares and the amount realised by the sale of investments, less their book value and the amount written off investments generally, together had totalled £193,356.

That sum had been added to the investment reserve account, which, on the other hand, had been depleted by retransfer to the appropriation account of £316,139, which was the excess of receipts from reserve shares and investments sold over the expenditure on new investments purchased.

Although the investment reserve account had consequently been decreased by £122,783, it had amounted at the year-end to the substantial total of £3,763,915.

The balance of the appropriation account had increased by £379,959 to £944,565, represented by cash and cash assets after allowing for all liabilities except contingent liabilities.

The company's contingent liabilities to guarantee and subscribe for shares in and to finance certain undertakings had been further reduced in total, and it had ample resources to meet all such commitments as and when they matured.

VALUE OF INVESTMENTS

Investments in shares and debentures had been brought into account at a book value of £4,239,779, a decrease of £107,795 compared with the total at the end of the previous year.

All investments for which share market quotations were available appeared in the books at or under cost, but in no case above the market price on December 31, 1938, and in instances where it had appeared to the board to be prudent holdings had been written down both below cost and below market value.

Unquoted securities had been entered in accordance with conservative values placed upon them by the directors and in no case at a valuation exceeding the cost.

It was evident from the schedule of investments appearing in the accounts that their market value had largely exceeded the book value stated in the balance sheet.

The market value of the company's gold-mining interests at the end of the year had represented 83.4 per cent. of the market value of all its investments and 90.4 per cent. of those gold-mining interests had been dividend-producing.

The gold-mining industry had maintained steady progress.

Three new mines had been brought to producing stage.

NATIVE LABOUR

The industry's requirements of native labour continued to increase. The supply of such labour from the Union and British protectorates had shown a welcome improvement during 1938, but, on the other hand, the Portuguese Government had withdrawn—temporarily, it was to be hoped—its permission for the mines to employ 10,000 Portuguese natives in addition to the 80,000 allowed under the terms of the Mozambique Convention.

Experimental employment of "tropical" natives from areas north of the latitude 22 degrees south was making good progress.

Results obtained as regards their health and mortality were gratifying and encouraged hope of the industry being permitted in the near future to obtain important additional supplies of native labour from those sources.

GOOD RELATIONS WITH TRADE UNIONS

The satisfactory relationship established between the industry and recognised trade unions had been maintained.

The "closed shop" agreement concluded in 1937 was working smoothly and to their mutual satisfaction. The maintenance of industrial peace had been greatly facilitated by important improvements which had been effected during recent years in conditions of employment, by concessions under holiday leave regulations, and by the granting of holiday leave allowances, by the payment of a medical benefit allowance, and particularly by the establishment in 1934 of the Witwatersrand Gold Mines Employees' Provident Fund and the inauguration a year ago of a savings branch of that fund.

The total cost of all benefits which had been introduced was at least £53 per annum for each European employee, equivalent to an increase of 20 per cent. or more on the standard wages of the lower-paid employees and representing an average increase of about 14 per cent. for all employees.

MINING OPERATIONS OF GROUP

The tonnage of ore milled by the Witwatersrand Mines of the group had increased during 1938 by 415,700 tons as compared with 1937 to a fresh record of 19,005,700 tons. The average yield of gold per ton milled at 4.019 dwts. had shown a further small reduction of .085 dwts.

Working revenue had increased by £324,723, but working costs had increased by £378,564, and on balance the total working profit had been slightly lower at £8,885,418.

The total amount distributed as dividends at £4,988,195 had been almost identical with the corresponding figure for 1937.

The average residue value for the past year had been reduced by .018 dwts. to a record low level of .186 dwts. per ton, an achievement which reflected great credit on the metallurgical staffs at the mines and at head office.

The development accomplished had totalled 654,427 ft., or 39,128 ft. less than the previous year's aggregate.

PAYABLE ORE RESERVES

The available payable ore reserves of the eleven mines totalled, according to latest recalculations, 76,396,900 tons, an increase of 1,743,320 tons compared with the preceding estimate.

Mining accident mortality rate had increased slightly from 1.97 per thousand in 1937 to 2.02 per thousand in 1938.

On the other hand, mortality rate from diseases among native employees of the group had decreased from 6.82 per thousand in 1937 to a new and gratifying low record of 5.57 per thousand.

Care of a labour force of over 100,000 natives, representing half a dozen different races and with an annual turnover of nearly 100 per cent., represented a major problem, and the group's chief medical officer and native labour adviser and the medical and compound staffs of individual mines were to be congratulated on the success that had been achieved in its solution.

HEALTH OF WORKERS

As an example of what had been accomplished, incident among native workers on the mines of the group of tuberculosis, the scourge of primitive races, had been progressively reduced from 11.78 per thousand in 1915 to 1.80 per thousand in 1938.

In 1911 the death rate from pneumonia among natives employed by the mines of the group had been over 12 per thousand, the death rate from tuberculosis of the lungs about 4 per thousand and the total death rate from all diseases over 30 per thousand. In 1938 those rates had been 2.28, 0.38 and 5.57 per thousand respectively.

The mines of the group had employed last year an average of approximately 5,700 "tropical" natives recruited from areas north of latitude 22 degrees south, and it was of interest to note that the mortality from pneumonia among those had been 2.99 per thousand and the total mortality from all diseases 5.99 per thousand.

Those rates corresponded very closely indeed with the ones already quoted for all natives employed on the group's mines.

The report and accounts were adopted unanimously.

CITY DEEP, LIMITED

RESULTS VERY SATISFACTORY

DR HANS PIROW'S REVIEW

Dr Hans Pirow (the Chairman) presided at the annual general meeting of City Deep, Limited, held in Johannesburg on the 21st instant.

Moving the adoption of the report and accounts, Dr Pirow recalled that the Central Mining and Investment Corporation, Limited, and Rand Mines, Limited, had during the year taken up the 20,000 reserve shares of £1 each, which had been under option to them at 30s. per share for two years from July 1, 1936.

ISSUED CAPITAL

The issued capital of the company was therefore £1,615,000, while the authorised capital remained unchanged at £1,695,000. Of the 80,000 shares still in reserve, 20,000 were under option at 35s. per share for three years from July 1, 1936, to the Central Mining and Investment Corporation, Limited, and the Rand Mines, Limited.

Continuing, the chairman said that the freehold property of the company was shown at a reduced figure owing to the sale of some 249 morgen referred to in the directors' report for 1937.

The purchase consideration, together with the proceeds of the sale of a few additional stands, was shown in the balance-sheet at £150,670.

The mining property of the company had undergone no change, but an application for the lease of some 260 claims along the southern boundary had been lodged with the Mining Leases Board.

The acquisition of those claims would extend their mining area to a vertical depth of approximately 9,000 ft. and should increase the life of the mine, although it was not possible to forecast what tonnage of payable ore could be worked at those great depths. It should also be borne in mind that the opening up of that area would require considerable capital. Expenditure and the cash resources of the company would therefore have to be maintained in a strong position.

MINING OPERATIONS

The tonnage milled had decreased by 16,000 tons when compared with the mill tonnage for the previous year. The reduction had been due mainly to a shortage of native labour, which had become more serious towards the end of the year. Working costs had shown a further increase of 8d. per ton milled, which was partly due to a reduction in tonnage and partly due to the effects of an underground fire; details of which had appeared in the Press at the time. These adverse factors had, however, been more than offset by an increase in revenue, amounting to 1s. 2d. per ton milled, so that the working profit for the year had improved by £31,266 to £271,924.

Capital expenditure had amounted to £164,265, while capital

funds in hand, which amounted to £159,696 at December 31, 1937, had been increased during the year by the proceeds from sales of freehold property amounting to £150,670 and by a sum of £30,000, being the sale price of 20,000 reserve shares taken up by the Central Mining and Investment Corporation, Limited, and the Rand Mines, Limited, in terms of their option.

The balance of working capital in hand on December 31, 1938, thus amounted to £176,101.

Proceeds of sales of small portions of freehold property, which were still outstanding, would in due course be shown as accruals to capital funds.

As foreshadowed at the last annual meeting allowances for accumulated tax losses had been extinguished in the second half of 1938 and the company had become liable for income tax on a basic rate of 3s. per pound sterling of taxable income. Together with sundry other taxation, payments had amounted to £15,755.

The new No. 5 vertical shaft had been sunk to its final depth of 5,850 ft. and was now being used for handling men and material. Through connections established were assisting ventilation to a considerable extent, but the full benefit of that shaft would not be obtained until the ore bins were completed and large ventilation fans had been installed. That work, which would take several months to complete, was proceeding steadily. The general ventilation of the mine had also been improved by the installation of a fan on the 22nd level at No. 2 shaft, which was now being used as a main upcast shaft.

ORE RESERVES

Re-estimation of available ore reserves gave a total of 3,820,400 tons and showed an increase of 288,200 tons compared with the previous year's estimate, the value remaining unchanged and the width being 1.1 in. less. In addition, 553,900 tons of an average value of 6.6 dwts. were contained in the shaft and safety pillars not at present available for stoping.

In general it might be said that the operations had given very satisfactory results despite the severe shortage of native labour from which the mine had suffered for the greater part of the year. Working conditions had been improved and there was every reason to believe that further improvement would result when No. 5 shaft had been brought into full commission. Owing to the great depth of the workings, which necessitated an extension of the resuing system of stoping, the cost per ton milled could not be lowered by any considerable amount, but it was expected that the average grade of ore mined during the current year would again show a slight increase when compared with that of the preceding year. Although a large expenditure on capital account had still to be faced for some years, a careful survey of requirements indicated that the working profits should not be called upon to bear an undue proportion of the burden.

The report and accounts were adopted unanimously.

CROWN MINES, LIMITED

SATISFACTORY DEVELOPMENT RESULTS

LARGER ORE RESERVES

MR JOHN MARTIN'S REVIEW

The annual meeting of Crown Mines, Limited, was held, on the 21st instant, in Johannesburg.

Mr John Martin, the chairman, moved the adoption of the report and accounts, and after reviewing operations and financial results for the year 1938, he said the consulting engineer reported that development results had shown no marked change and had been generally satisfactory.

A large proportion of footage on the main reef leader had again been accomplished in the Far Western section, where values disclosed, though still low, had shown a further slight improvement. Footage developed on the south reef had been less than in the preceding year, but values disclosed had shown little alteration.

Development work on the main reef had been continued, and the old No. 2 shaft was being reopened and re-equipped in order to facilitate exploration and exploitation of that reef in the upper levels of the eastern section.

ORE DEVELOPED ON MAIN REEF LEADER AND SOUTH REEF

Payable ore developed on the main reef leader and the south reef was estimated to total 3,995,900 tons of an average value of

IONIAN BANK, LIMITED

CENTENARY YEAR

SIR JOHN STAVRIDIS ADDRESS

The hundredth annual general meeting of the Ionian Bank, Ltd., was held, on the 26th instant, at the offices of the company, 25-31 Moorgate, London, E.C.

Sir John Stavridis, the chairman of the company, presided.

In the course of his speech, the chairman, in dealing with the history of the bank over the last hundred years, said that it was in the year 1839, when the Ionian Islands were under the exclusive protection of Great Britain, that their bank was formed in London on the proposal and under the aegis of the British Government. They were therefore this year celebrating the centenary of their existence. With the greatly increased activities of the bank they now had 25 branches and 11 sub-offices in Greece, a branch and nine agencies in Egypt, and a branch and four agencies in Cyprus.

AN IMPORTANT PURCHASE

There were two matters to which he would first refer as they were considered by the board of serious importance to the future welfare of their institution. The first was the purchase by their bank of just over two-thirds of the shares of the Banque Populaire de Grèce S.A., which with the National Bank, the Commercial Bank, the Bank of Athens, and themselves, formed the "Big Five" banks in Greece. The purchase, undertaken with the approval of the Greek Government and with the encouragement and support of the Bank of Greece, would put an end to the rivalry between the two institutions and, with the increase of nationalism in every country, they themselves would appreciate having at their side a strong purely Greek organisation.

IONIAN GENERAL INSURANCE COMPANY

The second matter which would also be of importance to the bank's activities in Greece was the formation by the bank of a Greek Insurance Company under the style of the Ionian General Insurance Company S.A. The directors had been prompted in their decision by the limitation of the activities of British insurance companies in Greece caused by the severe restriction of exchange and transfer of funds. They were convinced that they would be able to build up a business that would be useful to the bank and to its customers.

In dealing with the countries in which the bank was principally interested, the chairman said that during the year under review, with the exception of the month of September, when political disturbances in Europe had caused a temporary dislocation of economic life, the national economy of Greece had shown a remarkable power of resistance.

IMPROVED ECONOMIC CONDITIONS IN GREECE

The activities of the year on the whole had shown an expanding tendency, and the development of the exchange and monetary situation had been satisfactory. The budgets of the last two years only provided for the payment of 40 per cent. of the original interest on the foreign loans, but it was evident that the whole economy of the country, thanks to the prevailing internal political stability and to the Government's endeavours to increase the productive elements of the country, showed a steady improvement.

Egypt could not have been expected to escape from the international doubt and unrest, and those factors had borne particularly hardly on a country which was only just starting a new stage of its age-long existence. Economically the results for the year had been unfortunate, and for the first time since 1931-32 the foreign trade balance was against the country.

The strong competition which existed had made the year a not very profitable one for their bank, but in all directions their business had been well maintained.

In Cyprus the mining industry had continued to develop and the year had been quite satisfactory for agriculture as in many cases higher prices had compensated for lower production.

Turning to their own accounts, there was to be dealt with a balance of profit of £17,473, as compared with £16,639; the payment of the recommended dividend of 2s. 6d. per share would result in the further increase of the carry-forward from £9,462 to £11,935. As to the future, should there be a change for the better they were likely to see an improvement in the progress of their institution. Even as things were, however, he saw no ground to expect any serious setback.

The report was unanimously adopted.

5.0 pennyweights per ton. That was 39,380 tons more than in the previous year, and its average value was 0.2 pennyweight higher, due to the smaller proportion of ore developed on the lower valued south reef.

The re-estimated available ore reserve totalled 20,920,700 tons, averaging 4.9 pennyweights per ton over a stoping width of 47.3 in. In addition there were 5,139,500 tons of payable ore of an average value of 5.7 pennyweights per ton contained in the shaft and safety pillars which could not at present be stoped.

The available reserve showed an increase of 313,200 tons over the previous estimate, its average value and estimated stoping width being lower by 0.1 pennyweight per ton and 1.7 in. respectively.

The comprehensive programme of main vertical shaft sinking, which had been steadily pursued for many years, had now been completed, and the opening up of a reef at greater depths was being accomplished by the sinking of additional incline shafts. The average depth at which development and stoping operations had been conducted last year had been 5,000 feet.

PROVISION OF ADEQUATE VENTILATION

The problem of providing adequate ventilation demanded, and was receiving, constant attention. The installation of additional fan equipment at Nos. 14, 15, 16 and 17 downcast shafts and at Nos. 12 and 18 upcast shafts had increased the quantity of air passing down the first four shafts to 1,300,000 cubic feet per minute.

The mine workings were steadily extending both laterally and in depth, and it was consequently expected that that quantity of air would have to be increased in due course by the installation of further equipment and the construction of additional upcast airways.

In order to test another means of improving ventilation conditions at depth an experimental air-cooling plant had been erected on the 41st level at No. 14B shaft towards the end of 1936. It had operated successfully on the whole, and although there had been several stoppages due to minor defects they could be overcome in any new plant of similar type which might be required. It had furnished useful information which indicated that, as the workings approached operating limits of depth due to increased rock temperatures and adiabatic compression, further important tonnages of payable ore could, by air cooling, be brought within the workable zone.

AIR COOLING

Owing to the large quantities of air which could be passed through the mine workings the limit of mining depth due to temperature had not yet been reached in stoping operations, but the time was not far distant when cooling on a large scale would have to be resorted to. That question was now being considered, and it would probably be found advisable to erect a large cooling plant at one of the deep level shafts as soon as arrangements for its installation could be completed.

Every effort was being made, by extending the use of mechanical appliances and in other directions, to minimise the effects of any shortage of native labour that might be experienced from time to time.

Mechanical scraper truck-loading units had been installed in all haulage developing ends, and the use of mechanical scrapers in stopes which had given encouraging results was being steadily expanded. Mechanical shovel loaders had lately been used successfully in reef drives, and the number of those machines in operation would now be increased.

USE OF DETACHABLE BITS IN DRILLING

A labour-saving device which had been closely studied during the past two years was the use of detachable bits in drilling operations underground. The current practice of sharpening worn drills on the surface involved the transportation of about 22,000 drills of an average weight of 9 lb. each in and out of the mine daily, and a very considerable native labour force had to be employed for that purpose.

On the other hand, detachable bits could be transported to the surface for re-sharpening and back to the working places by the natives engaged in drilling. Preliminary work that had been done in the direction of obtaining detachable bits which would give a satisfactory drilling performance had furnished encouraging results, and the scope of the experiment was now being extended.

The report and accounts were adopted unanimously.

UNION-CASTLE MAIL STEAMSHIP COMPANY, LIMITED

RESULTS OF A DIFFICULT YEAR

MR ROBERTSON F. GIBB'S REVIEW

The annual ordinary general meeting of the Union-Castle Mail Steamship Company, Limited, was held, on the 25th instant, at Southern House, Cannon Street, E.C. Mr Robertson F. Gibb (chairman and joint managing director) presided.

The Chairman, in moving the adoption of the report and accounts, said: The accounts have been drawn up on similar lines to those for the preceding year, and accordingly there is no difficulty in making a comparison between the results for the two years. Such comparison reveals immediately a disappointing diminution in the profits from voyages during 1938. These profits amounted to £196,000, whereas the corresponding figure for 1937 was £510,000, a decrease of approximately £314,000. You will doubtless wish me to indicate at the outset of my speech the principal reasons for this serious fall in profits. They were: (i) a considerable reduction in revenue from outward cargo owing to the substantial falling off in exports to South Africa; (ii) the heavy drop in revenue from homeward freight due to a reduction in the rates of freight on fruit, and reduced shipments of wool and other commodities; (iii) the virtual cessation of gold shipments during the last half of the year; and (iv) increased expenditure, particularly as regards fuel, wages and insurance. I shall refer to these in detail later on.

THE NET PROFIT

As in 1937, the net profit was affected by substantial special outlays incidental to re-engining, amounting in 1938 to £110,000. This expenditure is, of course, of a non-recurrent character, but I ought to mention that, during the present year, in connection with the conversion of three steamers to oil-burning, part of the expenditure due to items such as renewals and upkeep will be chargeable against revenue and will probably amount to about £100,000.

To the figure of £196,000 has to be added about £81,500 in respect of income from investments and properties, which is some £28,500 less than that for 1937. This decrease is largely accounted for by the sale of our interest in the Durban Navigation Collieries, Limited, to which I referred last year, since, although the sale was effected before the end of 1937, that year's accounts received the benefit of a full year's dividend from that source.

To these two sources of profit the sum of about £105,500 has been added, being taxation reserve no longer required following the settlement with the Inland Revenue authorities of certain claims that were outstanding last year.

After various deductions there remains a balance of £171,889 which, with the balance of £150,892 brought forward from last year, gives a total available of £322,781. Of this sum the Preference dividends for the year absorbed £132,945, leaving a balance of £189,836, which we recommend should be carried forward. Your directors much regret that they are unable to recommend the payment of an ordinary dividend.

FINANCIAL POLICY

Having dealt with the balance sheet, the Chairman continued: I have drawn your attention on previous occasions to the fact that owing to the heavy losses which the company sustained years ago from its association with another group of companies, its reserves were completely exhausted.

The advances we have been able to secure for the purpose of financing our shipbuilding and re-engining programme have now reached their peak at 4½ millions, and unless and until we are able to refund these loans, or at any rate part of them, we shall have to continue to make large annual repayments in accordance with the terms arranged. Budgeting as far ahead as is practicable, we anticipate being able to meet these obligations, but nevertheless we must continue to keep a close watch upon our finances.

All the units of the company's fleet have been maintained at a high standard of efficiency during the year. At the same time, of course, as you are aware, the object in constructing our four fine new motor-vessels for the intermediate service was to replace five of our older vessels.

All the company's services were regularly maintained throughout

the year, and I am pleased to say that there was no serious accident in respect of any of our vessels.

The volume of our traffic last year may be regarded as satisfactory, bearing in mind the influence of the unsettled international situation during the last four months of the year.

CARGO TRAFFIC

As already indicated, it was in respect of our revenue from cargo carrying that our earnings last year received so serious a setback. As regards outward freight the most marked falling off was in respect of cargo carried in our mail vessels which consists very largely of high-class goods, and there is no doubt that the international situation was primarily responsible for this marked decrease. With regard to the homeward trade, all our services were adversely affected, but here again the principal decrease was in respect of cargo earnings by our mail service. The amount of baled cargo brought home in our vessels has been increasingly affected during recent years by the trade agreements between the Union of South Africa and Germany, under which the carriage of cargo to Germany from South Africa is effected primarily in German or Dutch vessels.

As regards gold shipments it would appear that in view of the disturbed state of international affairs buyers of South African gold, for the time being at any rate, adopted a policy of effecting such purchases in that country and of retaining such gold there pending future political developments. However, during the past two or three weeks there has been a resumption of shipments of refined gold from South Africa in the company's vessels.

FRUIT RATES

With regard to the reduction in the rates of freight on fruit the position of this company and of the other lines was a very difficult one. For some months preceding the last general election in South Africa, owing to unsatisfactory prices for fruit in the overseas markets and the withdrawal of the subsidy previously given by the Union Government, there had been considerable agitation on the part of growers and others interested in the trade against the level of the rates of freight charged by the Conference lines under the terms of their agreement with the South African Government. This agitation was directed primarily against the Union-Castle Company as the principal carrier of South African fruit. While there is no doubt that the growers were receiving lower prices for their fruit in this country than in the past, the cost to us of transporting the fruit from South Africa so far from decreasing has actually increased in the course of the past two or three years. As you are aware, we not only expended very large sums in fitting the regular mail and intermediate vessels with extensive modern refrigerated holds, but in addition have provided for this trade six costly fully refrigerated vessels which, at the contract rates of freight, we find it difficult to run at a profit throughout the year, particularly as it is not practicable to utilise them regularly outwards. Moreover, the contract rates of freight are lower than the rates charged for the carrying of fruit in other long-distance trades. Ultimately, this company, and the other lines engaged in the trade, agreed to the reduction I have mentioned of 7s. 6d. per ton for the one year 1938 only, in return for which the contract with the Government was extended for a corresponding period, it being understood that the fruit growers would endeavour to reorganise their industry with a view to effecting economies in their costs of production.

The result of the reduction the Conference lines made in the rates for 1938, which cost this company about £85,000, is reflected in the accounts submitted to you to-day. Yet during the past month or so there has been fresh agitation in the South African Press for further substantial concessions in the rates for the conveyance of fruit.

The Chairman, in conclusion, announced his intention of retiring from the duties of chairman and joint managing director. Sir F. Vernon Thomson, K.B.E. (deputy-chairman and joint managing director), seconded the motion, which was carried unanimously.

THE LONDON ASSURANCE

A YEAR OF FURTHER PROGRESS

MR R. OLAF HAMBRO'S REVIEW

The annual general Court of the London Assurance was held, on the 26th instant, at 1 King William Street, London, E.C.

Mr R. Olaf Hambro (the governor), in the course of his speech, said: The life department had a break in its long-continued yearly records in the figure of total sums assured during 1938. The break is entirely associated with the abnormalities of the period, and you will readily understand that life assurance had its own difficulties during the year of account, particularly in the production of new business. For all that, the department has an excellent record to show. The total net new sums assured amounted to £2,679,181, which shows a decrease over the previous year of £276,972. The total revenue of the department amounts to £1,331,806, made up as to premiums, £861,818; interest, dividends, and rents, less income tax, £377,501; and certain fees and consideration for annuities granted, £92,487. The fund during the year has made a very substantial move forward, the figure at the close of the account being £10,605,502, as compared with £9,985,741 at the close of the previous year, the consequent increase being all but £620,000.

FIRE AND ACCIDENT DEPARTMENTS

The fire and accident departments show excellent progressive development. Taking the two departments combined, the increase in premium income amounts to £217,820, the fire department contributing £121,803 and the accident department £96,017.

In regard to the fire revenue, a part of the substantial increase in premium income is accounted for by foreign exchange adjustment, but after allowing for the upward tendency created by this factor the volume of business actually transacted is also substantially increased.

Our claims paid and outstanding in the fire section show a slight increase at 43 per cent., as against 41.3 per cent. in the previous year, and this is really a very satisfactory figure.

Our accident premium income, for the first time in our history, exceeds a million and a half pounds, the exact figure being £1,501,315, which marks a definite forward movement.

MARINE BUSINESS

In the marine section of our operations we show a premium income of £819,876, which represents an increase over that of the previous year of £45,026. This increase is brought about in the main by two factors, the first being the improvement in hull rates, consequent upon what is familiarly known in the marine market as the "hullunderstandings," and in addition a certain volume of war risk premium. The losses paid show a percentage of 69.3, as against 65.3 in the previous year. Expenses of management show a very considerable fall, the relative percentages being 13.3 for the past year, as compared with 16.4 in the previous year. We have transferred to profit and loss account a sum of £50,000, which leaves the marine fund at £994,357.
