

# THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best preventive of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation be among the different States into which a great continent was divided."—ADAM SMITH.

## INDEX TO VOLUME CXXXVI

BEING FROM JULY TO SEPTEMBER, 1939, INCLUSIVE

LONDON:  
PUBLISHED AT THE ECONOMIST OFFICE,  
8 BOULVERIE STREET, FLEET STREET, LONDON, E.C.4

## Defence or Encirclement

THE manifest intention of the new British policy of the past three months—the construction of a viable Peace Front—is to keep the peace. But its immediate effect has been to give rise to an Anglo-German war of words. And, when words run high, blows may easily follow. Dr Goebbels is now telling his public that Great Britain to-day is making a fresh attempt to "encircle" Germany; that this is a repetition of something which she did once before, during the ten years ending in 1914; that this previous British "encirclement" of Germany was the main cause of the war of 1914-18; and that such a calamity is the natural consequence of such a policy. In Dr Goebbels' usage of the term, "encirclement" means a hostile, aggressive and wholly illegitimate manoeuvre. It means an attempt, on the part of one of the victim country's neighbours, to enlist as many other neighbours as possible in a common attempt to make life impossible for the victim-country by depriving it of that *Lebensraum* in the world—that elbow-room for moving and breathing—which is every country's natural right.

There are two reasons why this myth of encirclement must be removed. In the first place, it is being used by the German propaganda machine to make the German people ready to fight. If the lie could be exposed, the risk of war would be sensibly lessened. And, secondly, if it proves impossible to lighten the present dark-

ness of the German people, it is still necessary to prove our case before the conscience of the world. It is for these reasons that during the past few weeks Lord Halifax and Mr Chamberlain have been devoting the greater part of their public speeches to protestations that our designs are in no way aggressive against Germany or aimed at cramping her existence.

But there is a right way and a wrong way to make such protestations. The speeches made by the Foreign Secretary and the Prime Minister three weeks ago were in the wrong vein. By laying the greater stress on the efforts we would be prepared to make to reach our accommodation with Germany, if only she would show reason, they aroused fears among our allies (and hopes in the Wilhelmstrasse) that "appeasement" was being revived. That lesson has apparently been learned and in the two statements of British policy that have appeared this week the promise of generous treatment for a peaceful Germany has been admirably blended with the firmest resolve to resist aggression.

The earlier of these two statements was the Note sent to Berlin in reply to the denunciation of the Anglo-German Naval Treaty by Herr Hitler two months ago. That denunciation was justified by the Fuehrer on the ground that Britain was aiming at encirclement and had showed that she held the view "that, in whatever part of Europe

Germany might be involved in warlike conflict, Great Britain must always be hostile to Germany." The Note contradicts both these assertions flatly. To describe British policy as one of encirclement, it says, "is without any justification, and indicates a misunderstanding and misreading of British purposes which must be corrected." British policy is designed merely to allay the anxieties that Germany herself has created, and Britain's new engagements "could only become effective if the countries concerned were the victims of aggression." As for the German denunciation of the existing Naval Agreement and the offer to negotiate a new one, the spirit of the British answer is given in the final sentence of the Note. "His Majesty's Government desire to know how the German Government would propose to ensure that any action in the shape of denunciation or modification of the new Agreement during the term of its validity should carry the consent of both parties."

The shafts of this Note apparently went home, if one can judge by the volleys of abuse by which it was greeted in Dr Goebbels' Press. We are writing before the German reaction to Lord Halifax's speech on Thursday night has become apparent, but it is probable that the scream will be still shriller, for Lord Halifax gave an exposition of the British case so forceful and convincing that it is calculated to enrage those whose interest it is to muddy the waters of truth. His answers to the German charges were brief and to the point. As for encirclement, "Germany is isolating herself, and doing it most successfully and completely." And as for the demand for an adequate *Lebensraum*, the problem "is not solved simply by acquiring more territory. That may, indeed, only make the problem more acute. It can only be solved by wise ordering of the affairs of a country at home, and by adjusting and improving its relations with other countries abroad."

Lord Halifax made it perfectly clear that there would be no desire in England to monopolise the wealth of the British Empire. He offered an extension to other colonial territories of the mandatory principle, with its corollary of the open door. But these offers were followed by the comment without which they would merely raise the spectre of appeasement. "Unless all countries are at one in really wanting a settlement, discussions will not take

you very far, and they may easily do more harm than good. It is impossible to negotiate with a Government whose responsible spokesmen brand a friendly country as thieves and blackmailers and indulge in daily monstrous slanders on British policy in all parts of the world."

This is what has needed to be said by a British Foreign Secretary for many months past, and in spite of the inevitable burst of fury in Germany, it can do nothing but good. The more immediate need of the moment, increased by every fresh item of news from Germany, is not to promise generosity for good behaviour, but to make it clear beyond any doubt that aggression will be met with force. There is every sign that Herr Hitler is playing for another Munich and it is essential to show him that he cannot get it. Here again Lord Halifax's speech was beyond criticism. "It is idle," he said, "to cry peace where there is no peace, or to pretend to reach a settlement unless it can be guaranteed by the reduction of warlike preparations and by the assured recognition of every nation's right to the free enjoyment of its independence."

A recent German writer has expressed the opinion that Britain's greatest weakness is on the moral side—in her desperate anxiety to be sure that she is not laying herself open to attack on moral grounds. The events of 1938 showed how effectively a subtle propaganda could play upon this desire for fair play. But Germany herself has now solved the British moral problem. Britain has never been more peaceful, and never more ready to fight. "None of Britain's formidable array of strength," said Lord Halifax, "will be called into play except in defence against aggression. No blow will be struck, no shot fired. Of the truth of that, everyone in this country is convinced. I believe myself that most people in other countries really accept it in spite of the propaganda that dins into their ears the contrary. What is also now fully and universally accepted in this country, but what may not even yet be as well understood elsewhere, is that, in the event of further aggression, we are resolved to use at once the whole of our strength in fulfilment of our pledges to resist it." It has taken a very long time to bring the Government to this very necessary conclusion. It is their duty now to stand firmly on the position they have taken up.

## Laggard Recovery in America

THE course of American business activity never did run smooth. Nor has it ever run on orthodox lines. Erratic unpredictability is not a quality that the American conjuncture has assumed only since it came under the ministrations of the New Deal. But its fluctuations have certainly been more abrupt and less rational during the last few years. No completely satisfying explanation has ever been given, for instance, of the very sudden reversal of recovery in the autumn of 1937, long before it appeared to have reached its maturity. Until the last few months the most reasonable explanation of this 1937-38 "recession" was that it was a temporary interruption in the upward march of recovery; such interruptions are familiar (there was one in 1924 and another in 1927 in the great "New Era" boom), and it was only the severity of this recession that was remarkable. This theory appeared to be confirmed by the resumption of recovery twelve months ago. But since the beginning of 1939 this new recovery—the "re-recovery" as the Americans call it—has faltered and given ground, long before it had attained the peak levels of 1937, let alone those of 1929. It is true that in the last few weeks there have been signs of a new improvement—a re-re-recovery, as it were—but it is too early to say whether they are prophetic or deceptive. And in any case there is no assurance that 1939's improvement will

go much further than 1938's. There is *prima facie* evidence for the belief that each new peak is lower than the last.

In these circumstances it is hardly surprising that there should be a mood of discouragement in the United States. The mood will be familiar to those Englishmen who remember the years of the 1920's when Great Britain, alone of the nations of the world, seemed to be incapable of making progress; and the subsequent course of economic history in this country might serve as a cure for American pessimism. That pessimism is, for the moment, taking the shape of asserting that the United States, being a "mature economy," is incapable of finding sufficient outlet for its savings. The theory is familiar enough on this side of the water; indeed, it is of English origin. It is perfectly true that in a community whose standard of living (and, therefore, standard of saving) is high, but which is failing to expand in numbers as rapidly as before, there is a tendency for the volume of capital that is invested to fall short of the savings that the public would wish to make, with the result that the savings run to waste, purchasing power is limited and unemployment is created. It is also perfectly true that the pace of expansion of the United States is now very much smaller than it used to be. Out of these materials the theorists of the New Deal have constructed

the doctrine that it is the duty of the Government to repair the deficiency in the private investment of capital by sponsoring the public investment of capital. The advocacy of public works is, of course, nothing new. But the latest development, as exemplified in the President's proposals made public on Thursday of last week, has two novel features. In the first place, an attempt is made to silence the objections of those who are alarmed by the series of enormous Treasury deficits. It is intended that the new long-term programme of "investing" \$3,680 millions over a period of years shall be carried out by autonomous corporations on the analogy of the Reconstruction Finance Corporation and the Export-Import Bank; the Treasury will be liable only for a contingent guarantee of these corporations' obligations. And, secondly, in contradistinction to all the "emergency" programmes of the last six years, this one is designed for permanency.

The merits and demerits of public works as a temporary expedient have been argued many times, and this is not the place to add to the controversy. But the difficulties attending any large-scale programme of public works are such that they should not be regarded as anything but a substitute for private investment. The justification for a permanent programme of public works (over and above what would normally be required, or could normally pay for themselves) can only be established if there is a permanent deficiency of private investment. And though the reasoning of the "mature economy" doctrine is sound, the conclusions that America, in her present mood of economic defeatism, is drawing from it are woefully exaggerated. If America is a "mature" economy because the growth of population is slowing down, how much more "mature" is Great Britain, where the growth of population has almost stopped? And yet Great Britain has just emerged from a period of five years during which the rate of material progress was as high as, or higher than at any previous period.

The truth is that the volume of private investment of capital that will be undertaken is not an absolute figure. It depends, for one thing, on the rate of interest at which money can be borrowed. It also depends, more importantly, on the apparent profitability of investment. There is no difficulty on the first score in America: money is very cheap and very plentiful. But there is serious discouragement to investment under the head of profitability. There is an inadequate volume of investment, and therefore an excessive volume of unemployment, because it is not made worth while to sink money in fixed capital—in a word, because profits are too low.

It would be much easier to accept the defeatist doctrine of a permanent insufficiency of private investment in America if any convincing attempt had been made to investigate and remove the causes of its present unprofitability. It is true that the complaints of the business men themselves are of little assistance. Their chief grievance relates to taxation, and though the present system of taxation in America has many features that are injurious to business enterprise, it is very unlikely that they have had a major effect on the volume of new investment. Similarly, it is difficult to take very seriously the allegation that the "anti-business" attitude of the Administration has prevented much new enterprise, though it is possible that business is choking of its own bitterness. There was an impres-

sive volume of "confidence" in the early months of 1937, even though Mr Roosevelt had then just been returned to office with an enormous majority. And lastly (to cite the third main item in the current commination of the New Deal) though there are obvious dangers in a chronic deficit, the level of interest rates in the market would not seem to indicate that the size of the Treasury's borrowings has either cast doubts on the Government's credit or monopolised the supply of credit.

To the outside observer, in fact, it seems that the unprofitability of investment in America to-day is not mainly due to any of these causes (and still less, of course, to any politically-inspired "strike of capital"), but to a simple factor which, as our New York correspondent pointed out last week, receives amazingly little attention—namely, the extreme costliness of new investment. In American industry generally, and more especially in the construction industries, the cost of labour has been forced up to a very high level. This has been done in pursuance of what used to be called the Doctrine of High Wages and is now better known as the Purchasing Power theory. It is a wholly admirable endeavour to raise the purchasing power of the people, and though the wage-earners are only half the people, they are the economically dominant element. But it is questionable whether the best way of increasing the

purchasing power of the workers is always to raise their rates of wages. Between 1929 and 1938 the average hourly earnings of American workers (according to the figures of the National Industrial Conference Board) increased by 23 per cent. Relatively to the movement of average wholesale prices, the increase was no less than 49 per cent. But payrolls—the total amount of money paid out in wages—fell, according to the official index, by 18½ per cent. in the same period. To place two figures in juxtaposition is not to prove that the one is the cause of the other. But it is at least suggestive that, while wage-

rates in Great Britain rose over the same period by less than a third of the American increase, British payrolls (so far as they can be calculated) increased by 20 per cent. instead of the American fall of almost the same proportion—and this in the country which is the more "mature" of the two. These figures present, at the very least, a case for investigation. They suggest the possibility that, as a result of shorter hours and correspondingly increased hourly wage-rates (and it is the hourly rate of wages, not the daily or weekly earnings, that determines labour costs) the cost of capital goods has been pushed up so high that the payrolls of the working class as a whole are not sufficient to support them. It does not pay to provide houses, machines and other capital equipment for the working man because he has made them too expensive for his own means.

In the past six years most of the recipes in the economic cook-book have been tried at least once. We have had the depreciation of the dollar and the deliberate enhancement of the price of silver, the fostering of monopolies through the N.R.A. and their prosecution by the Department of Justice, fiscal economy and deficit financing, pump priming and yardstick building, public works and work relief. The only remedy that has not been tried is a sustained attempt to lower the costs and encourage the expansion of the capital goods industries whose coma is, by common consent, the root cause of the laggardness of recovery. It might be worth trying.

RECESSION AND RECOVERY IN AMERICA

The "Industrial Production" curve represents the Federal Reserve Board's index, corrected for seasonal fluctuations (1923-25 = 100). The "Business Activity" curve represents the *New York Times* weekly index (computed normal = 100).

## Telling the World

THE British Government's entry into the war of words with the decision to organise propaganda in answer to that of the Axis Powers is a step of far-reaching importance. If taken with resolution it will do much to strengthen the forces working against war; the means and method therefore merit the closest attention. Beyond the certainty that propaganda is special pleading the thing itself is not easy to define; extremists define propaganda in the wide Platonic sense necessary to their ends and see in it a training in attitudes, "that particular training in respect of pleasure and pain which leads you always to hate what you ought to hate, and to love what you ought to love"; while for liberal-minded people propaganda is an evil thing, at worst a pack of lies, at best a means of promising in the future what you have not done in the past and would rather not do in the present. Between these two viewpoints there exists a variety of more or less favourable opinion: the commonest, perhaps, that propaganda is a form of denigration practised only by your neighbours, or that, when practised by yourself, only a way of convincing your victim that the occasion of your blandishments hurt you as much as it hurt him, and that, come what may, you acted with the best of intentions. The latter view seems to have a wide currency in the Far East just now.

With the menace of German—and to some extent Italian—propaganda to the goodwill of our foreign friends and to the sanity of thought of the German people itself, it is academic to discuss the rights and wrongs of what the British Government has decided to call "foreign publicity"; and this was well expressed by Sir Kingsley Wood at last Monday's meeting of the Empire Press Union. The Government—and the public—regard it as imperative that misrepresentations shall be explained and lies refuted: specifically, that *Einkreisungspolitik* shall be shown to exist only in the minds of Dr Goebbels and his propaganda ministry. We are determined that our efforts at maintaining peace shall not go astray, if we can help it, for lack of understanding among those who would be our enemies in war; and, although we are late in the field, and have much ground to make up, we know that in affairs such as this it is sometimes well to speak second. Disinterestedness is at a premium these days.

Broadly speaking, there are two kinds of "foreign publicity": special and incidental. Except in times of war we have never had much of the first, never gone much out of our way to explain ourselves; but our incidental propaganda has always been active and widespread. It still is, only nowadays we are living on our capital. We are content to hope that other people will believe us to be what we ourselves would like to think we were, great, noble and peace-loving. There is a tendency for us to expect other nations to live up to our, and not their, idea of the past. We are doing, or were until lately, almost nothing to silence those insidious voices which say that Britain is the same as she always was, rapacious, small-minded, self-seeking, with the modern difference that her teeth are drawn or decaying. We have established a commonwealth which nears the status of a world-order, yet we allow the dictators to put forth unchallenged their myth that the whole world groans beneath the weight of the British Empire, that all stand to gain by its collapse. It is much to ask an impoverished Central European, for instance, to feel for the British Empire that same mixture of chivalrous awe and sound commercial respect which we experience. It is therefore high time that we told him more about ourselves.

In doing this we have one outstanding advantage; namely, that our (contrary to the dictators') version of the facts is probable, has the ring of truth about it. For in pro-

paganda it is safe to make one basic assumption, and that is that you will never convince a man against his own inclination, convince him, that is, so that he stays convinced. As Mr Aldous Huxley might say, you must have the right context; unless apt social and political conditions exist, propaganda as a means of suasion is useless. Building on the common knowledge, therefore, that Britain is a satisfied power wanting nothing but peace in which to magnify the blessings her rule has bestowed over a quarter of the globe (or, as some would say, to digest her ill-gotten plunder), British propaganda has a long start on that of less satisfied (or satiated) rivals. No matter how much the Germans spend in the Balkans they will never convince more than a tiny minority of Yugoslavs, or Bulgars, or Greeks, that Britain is an aggressive Power, just as nowadays they will never convince these hardheaded peoples that Germany herself is not a potential aggressor.

All we have to do, as Northcliffe remarked during the war, is to tell the truth: and we have to make it sound too good not to be true. On the whole, we shall find people disposed to believe us. As far as the evidence goes, and it is understood to be considerable, this is strikingly borne out by the success of the B.B.C. broadcasts in German, where complete objectivity has been the watchword.

The new Foreign Publicity Department, under the direction of Lord Perth, will co-ordinate and extend existing information and propaganda agencies. It will supersede the Vansittart Committee, which had advisory functions in the matter of propaganda, and it will include that section of the Foreign Office News Department which in the past has concerned itself with foreign publicity; further, it will co-ordinate with its own the activities of the British Council. Such matters as supervision of the B.B.C.'s foreign language broadcasts will come within its purview, together with any similar agencies which may exist or be in contemplation. Given intelligent direction, the Foreign Publicity Department should command both energy and opportunity, though at the beginning its main task will be one of co-ordination. At present most Government Departments employ one or more trained publicity experts (it is worth noting that nearly all of them came to Whitehall from Fleet Street) whose task goes little further than the issue of "hand-outs" and the staving-off of over-inquisitive newspapermen. In this respect the Foreign Office leads, with Downing Street and the Treasury close at its heels: each of these has a staff of experts who perform an invaluable daily task, and perform it very well.

In considering what the Foreign Publicity Department ought to do and where it should do it, the point of departure is strictly budgetary. There is no question yet of a full Ministry of Propaganda. The supplementary estimate to be presented to Parliament this month may be expected to show, compared with the sums being spent by other countries, a paltry total. The British Council, for instance, has an income of about £250,000, which is about a quarter of the sums being spent by Italy and France, and four per cent. of what Dr Goebbels is alleged to be spending. The first call must be for the Press, on making and using foreign press contacts, on bringing foreign journalists to London, on helping those who are actually *en poste* here. The British Council, formed in 1934 and enlarged in 1938, is doing excellent work within its limited means; parties of Norwegian, Danish, Turkish, and Roumanian editors have already been entertained here, and parties from Spain and Portugal are due to arrive within the next few weeks. Numbers of articles, photographs, and items of information are being circulated to the Press of foreign countries, mainly in Eastern and South-Eastern

Europe, in the Near East, and in Latin-America, and it is understood that a high percentage of these articles are accepted by the newspapers to which they are sent. Second in importance in the Council's activities is educative and visual propaganda, though here again we are spending hundreds where the Germans are spending thousands. Every year the Council sends out (the figure is rising) 170,000 newspapers and periodicals, and 33,000 books, to clubs, institutes, universities, libraries. In every direction it is significant that the demand far exceeds the supply. The scores of Anglophil societies, spontaneous and unaided from abroad, which cling to their premises in many parts of the world (there were 35 in Czecho-Slovakia and there are 22 in Yugoslavia) are at last receiving aid from England. Opportunities for learning English are being extended (there are 4,500 pupils of the new British Institute at Athens); lecturers, theatre shows, book exhibitions, and the like are some of the means of visual propaganda which are being used. There are at the moment 154 foreign students in the United Kingdom subsidised by the Council; and other schemes are also going ahead. Except in a few cases—such as that in which a distinguished English lady undertook to exhibit knitted textiles to Balkan audiences whose curiosity was less than their sense of sartorial tradition and a good deal more than their purchasing-power—the British Council has shown an admirable capacity for seeing the facts and then grappling with them. It remains for the Government to back up what is already being done by judicious expenditure on the display which impresses the common man with no special interest in Britain. Less modest diplomatic quarters, the setting up of tourist offices (during the summer on the Dalmatian Coast, for instance) which shall do something to rival those of the Axis countries, more generous provision of newspapers and infor-

mative literature, means to combat German and Italian subsidised news agencies; these are some of the ways in which money could usefully be spent.

There is, indeed, a scope limited only by the amount of money the Government means to spend. In deciding what that amount shall be the Government will presumably be guided by the consideration that the Foreign Publicity Department is not a Ministry of Propaganda, though it may be the "near-war" embryo of one; and that its task shall therefore be limited strictly to the passing-on, and not include the "creation," of news. This point is of vital importance. For it is obvious that as soon as war breaks out truth, served to-day in the search for objectivity, will, as usual, be the first casualty. By extension, the Foreign Publicity Department might be suspected of a tendency in that direction, and it will be one of Lord Perth's greatest responsibilities to see that this is not so. It is good that Mr Chamberlain has made it clear, once and for all, that there is to be no tampering with Press freedom. For although propaganda (or publicity) is not necessarily a distortion of the truth, you cannot tell the whole truth by it, even if you wish to, for propaganda is essentially a comparative affair, a watering down and a toning-up, an appeal for sympathy, or indignation, or connivance. From the point of view of the body politic as much as from that of the working journalist, propaganda organisations apart from their purely informative functions are a thorough-going nuisance and a standing discouragement to conscientious work. With the reservation that its functions will remain in strict accordance with those laid down by Mr Chamberlain, the new Department may be heartily welcomed. It can do no harm, after all, unless our foreign policy falls again on evil days: and it may do a very great deal of good.

## Social Services and the Family

BURKE'S famous lament that the future of English policy was about to be given over to "sophisters and calculators" was prophetic if unflattering. Now, a century and a half later, the calculators are in charge. Pre-eminently, this is an age of statistics. As the ambit of governmental control and supervision has expanded, the figures put out in Blue Books and White Papers have grown mightily in volume; and in Parliament itself the Latin tag and the Greek epigram have given place to the index number and the annual average. To an increasing degree the tests of political action have come to be, not the criteria set by social theories or philosophical arguments, but the yardsticks of facts and figures.

Nor has this trend been anything but clear gain. There can be no sounder basis for policy-making than fact-finding; and it would be very wide of the mark now to share Burke's alarm lest the process of government by statistics should prove inhuman or soulless. As the inimitable PEP reminded us early in June\* the foundation of the present English statistical tradition was laid by investigators seeking to find out the causes of poverty; and it would not be incorrect to claim that the entire structure of our public social services depends upon the continued flow of figures about the condition of the people, in the files and reports of Government departments and in the social and economic surveys made and published under the auspices of universities and other voluntary bodies. Indeed, it is the interpretation of data already disclosed, in order to answer various vital social questions still unsettled, that is immediately needed; and this is precisely the sort of task that Dr P. Ford, Secretary of the Economics Section of the

British Association, has set himself in a brief book just published.† He asks the question: what have been the repercussions of social services—that is of the State's assuming a high degree of responsibility for the maintenance of the poor and unfortunate as well as the aged and impotent—upon the family and the responsibilities of its members? The reply is not found in theories but in statistics: in the files of the Unemployment Assistance Board, in the Five Towns surveys made by Professor Bowley in 1913-14 and 1923-24, in the survey of Southampton made by Dr Ford himself eight years ago and in the New Survey of London Life and Labour carried out just before the depression.

The question posed is important in two ways. It is the kind of question which is important in a general sense because so far we know much less about the poor than we do about their poverty. We know, for instance, that, when an investigation was made in 1928, close upon a tenth of London's working-class families appeared to be living below a poverty-line set by a computed standard of their minimum needs; but we do not know, except for scattered inferences, what the consequence of this fact, and of the further fact that the State stepped in to help, was upon the families.

The query has a specific importance, too. Broadly, it has been the purpose, and to a large degree the successful achievement, of certain sorts of social services as well as of trade unions to protect working people against economic insecurity due to low earnings and unemployment. Indeed, they have set up a standard for workers' incomes quite different from the basis of wage-payments; their object is that these incomes should be sufficient to meet the needs of

\* "Planning," June 13, 1939. A Survey of Social and Economic Surveys.

† "Incomes, Means Tests, and Personal Responsibility." By P. Ford. P. S. King. 86 pages. 5s.

the recipients and their families. Yet, the operation of the capitalist industrial system still rests upon the premise that free movement of workpeople from place to place according to the current requirements of the economy is secured by changes in earnings; and it is important to inquire to what extent social services do tend to impair this flexibility by lessening the need for personal initiative and family responsibility—if only because this is the charge most commonly levelled against extensions of State aid.

It is with these points in mind that Dr Ford has gone to the figures of household income contained in samples of the civic surveys and of the U.A.B. case records of recent years. He contrasts the experience of the "normal" families of the civic surveys with the U.A.B. families; and, by examining the make-up of households, their incomes and needs, he tries to find out to what extent there is pooling of resources in families to support their members and to what degree social services (apart from insurance benefits and general services such as free education) have weakened mutual responsibility.

The findings are significant; and lend little backing to the view that the tendency of State aid to selected sections of the population is to debilitate family obligations. Had that been the result of social services, one could have expected to find that the number of families in which a contribution to the family income is made by the junior members was falling as social service expenditure rose. The father (or other head of the family) would be looking to the State for the help it was formerly the duty of the sons and daughters living at home to provide. But no such tendency is visible. Between a third and a half of the heads of normal families received some income from other earners' wages at all the different dates of the surveys' inquiries. And this proportion has actually increased appreciably over the period since 1914 although the families receiving some social service income rose from a tenth of the total in Northampton in 1914 to a seventh in 1924 and in London to a fifth in 1928. Between one-third and a half of the U.A.B. families examined (at scattered recent dates) were entirely dependent upon social service income, but even in depressed Consett nearly two-fifths of the unemployed heads of families had some income from supplementary earners; and in Reading, Warrington and Walsall about half of the heads (of U.A.B. families) were so helped. In London in 1928 a twelfth of the heads of normal working-class families were without wages and themselves dependants. Nor were the contributions from supplementary earners unimportant in amount: in 1914, for example, the income so received in the average working-class family in Northampton was not far short of half the head's own income and in Stanley it amounted to a quarter; in 1924 the proportion in Northampton was roughly the same as ten years before, and in Stanley it had risen to a third—even though the proportion of social service income had risen on the average from less than one per cent. of the household income to something like five per cent. Clearly the State has helped the family as a whole, without loosening its ties of mutual obligation.

There is a host of these illustrations, all relating either

to normal working-class families, increasingly aided by social services—at least by those varieties that are paid not in cash but in kind, such as school milk, meals and medical treatment, maternity and child welfare schemes, general health services and so on—or to families in receipt of actual unemployment assistance in cash. The social service income of the normal working-class family in London in 1928 was 4s. a week. But there are no facts to suggest that with the intervention of the State the obligation of members of the same household to help each other has waned. Indeed, the reverse is rather true: "pooled economic security" (as Dr Ford calls it) has grown in working-class households *pari passu* with State aid; and in the unemployed families examined between two-fifths and two-thirds of the heads of households were aided by members of their families, and over a tenth by persons in the house outside the actual family.

The picture painted by these scattered samples is one of abiding family ties, of tenacious self-help and mutual assistance. The truth is that the effect of social service assistance has been to strengthen this strong tradition—even to strain it to the uttermost—rather than noticeably to weaken it. Ever since Tudor times, two devices have been used to make collective aid consonant with individual responsibility. On the one hand, the aid given must not raise the recipient's income to the level of his earnings in normal work; on the other, help is only given on condition that the applicant has first used what savings or property he has for his current maintenance, and also that the members of his family or his household have contributed to the best of their ability to the support of him or his dependants. These twin principles of "less eligibility" and the "means test" have effectively prevented, and still prevent, social service contributions from sapping the enterprise and initiative that are reckoned morally and economically indispensable; and the much-criticised means tests for unemployment and public assistance—in themselves not in any way novel because they derive from sixteenth century poor law practice and are accompanied by similar tests for all sorts of medical services—carry this safeguard to the limit because they impose the obligation to contribute upon almost all members of the household, and not simply, as in earlier statements of legal liability, upon grandparents, parents and children. This is far-reaching when it is realised that in, say, Southampton in 1931, something like a quarter of normal working class households included more than natural families; and that in 1924 in Warrington, "with its array of nephews, nieces and relatives-in-law," over a third of the households were more than families. One striking fact which demonstrates the autonomous strength of family and household obligations is that attempts to evade the responsibilities imposed by the new means tests by moving to another household have been nearly negligible: samples show that in 10,000 applications for assistance at Swansea there were five such cases, 500 in 40,000 in Durham and 25 out of 50,000 in Birmingham. Nor is it without significance in this connection that 82 per cent. of the persons whose claims for unemployment assistance (transitional benefit) were disallowed in 1931 on technical grounds were supported by other than public means.

The truth is that social services like unemployment and public assistance, with their means tests and wage-stops, operate harshly rather than leniently upon the family. So long as a large fraction of normal wages and earnings remain below the level of minimum family needs this will continue to be the case; and, if individual initiative and enterprise are to be further stimulated in the future, it will not be by curtailing State aid, but by extending the range of insurance against economic security and devising means to meet essential family requirements directly. Capitalism is not yet in any real danger of losing its efficiency because of its humanitarianism.

## NOTES OF THE WEEK

**New Instructions to Moscow.**—Sir William Seeds and Mr Strang received, on Wednesday, fresh instructions on the way in which they were to approach M. Molotov after his refusal last week of the Anglo-French proposals then offered to him. These instructions were at the same time communicated to the French Government, and the French Ambassador in Moscow, M. Naggiar, is expected to receive from Paris his own instructions (that is, assent to the British proposals or a modification of them) early enough to enable another meeting with M. Molotov before the end of this week. The new instructions are understood to give the Russians the full "substance" of those guarantees against "indirect aggression" in the Baltic which they are known to require. It is the Russian thesis that British drafts of an agreement have never yet made it crystal clear that Russia is to be completely her own judge of when her security is threatened, directly or indirectly, in the Baltic as Britain and France are of their own interests in the West. The last British proposal, it is reported, left room for some doubt whether, in such an event, the Russians were offered immediate and automatic assistance or merely consultation. It is with this point that the new instructions are concerned: if it is now made clear that the commitment is automatic and specific, the chief obstacle to agreement (assuming the Soviet desire for one) will have been removed. The negotiations have now dragged along for over three months, they are a perfect example of the way in which the mere passage of time can take the bloom off an excellent idea, and unless speedy agreement is reached we may be approaching the point when the Soviet Government will cease to see decisive advantage in a pact. The Soviet object from the first, at least on their own showing, has been to enter their influence on European politics so as to avert war: we are now in the position that an alliance with Russia may no longer serve to secure the peace, as it would have done so easily in past years. The Nazis may be now beyond rational calculations, and the conclusion of an agreement between London and Moscow the mere hastening of the fateful blow. This, of course, is not to say that a pact should not be concluded, for if Hitler has decided for war, Britain, France and Russia will still need each other's aid. But it does mean that every delay in obtaining agreement, from now onwards, is more than ever to be regretted.

**The Preparations in Danzig.**—The news of German activity in Danzig is more and more disquieting. It was clear from the beginning that, if they meant to bring the Free City back into the Reich at whatever cost, the Nazis had two alternatives: to attempt the outright annexation of Danzig and its adjoining territory, or, less certain as a cause of war, to use the Danzig Senate and the local Nazis as means of provoking the Polish authorities into retaliatory police or military measures, and then to rely for eventual success upon Europe's reluctance to go to war. We now know, as we have long suspected, that the second course has been chosen: the Free City is loud with the noise of imported S.A. and S.S. men and their firing-practice, the barracks are full of those who are to form a *Freikorps* on the Sudeten model; and all this is against a background of rumour and anxiety. Economically the Danzig Nazis are doing what little they can (for without Poland they would soon be as destitute as the unfortunate Memellanders) to provoke Polish irritation; bank credits, for instance, are now subject to special regulations. The Poles, meanwhile, are keeping very calm: their only retort so far has been to hold a "Marine Week" at Gdynia with the slogan that "we shall never allow ourselves to be driven from the Baltic." From the military point of view they are in

a strong position to command the Danzig territory if disorders break out. They have a substantial body of troops at the border town of Tszew, the last bridgehead on the Vistula before the river reaches the sea (hence the rumours that the Germans are preparing pontoon bridges further downstream), and with their heavy guns on the Westerplatte peninsula and at Gdynia they can clear the port whenever they have a mind to. Against these dispositions the activities of a *Freikorps* would have a merely propagandist value.

**Warning Voices.**—Along with this tension in Danzig, and largely contingent upon it, must be set other and equally alarming news: that Herr Hitler has ordered the harvest in east and south-eastern Germany to be reaped earlier than usual; that in M. Daladier's opinion, expressed before the Chamber of Deputies on Tuesday, "we stand at the beginning of a troubled and tormented summer" and "the situation of Europe and of the world has never been so grave for the past twenty years"; that in the no less authoritative opinion of Mr. Churchill, during the next three months "tension in Europe would be most severe"; that summer mobilisations are already in preparation. If, despite the Peace Front and its determination to resist aggression, the Germans mean to go on with their plans for Danzig, then there can scarcely be any alternative to war. The German calculation may well be that the Poles will not immediately resist a *coup* in Danzig, that the Peace Front could not become effective as a military machine until German troops were across the Corridor and into Upper Silesia, and that the Western Powers would then prefer to negotiate rather than to continue battering away at Germany's western defences. It is needless to add that such a course of events would be no more disastrous to ourselves than that which might be anticipated thereafter for the breaking up of the British Empire. If we mean to defend the world order as it now stands, fighting for Danzig will be the symbol of our determination, and the starting point.

**The Motor Tax Retained.**—There is a limit to Sir John Simon's readiness to make concessions. Last week the Chancellor of the Exchequer withdrew his new duty on films, and gave way to strong pressure for the

retention of the present duty on patent medicines. It is not undesirable that a Chancellor should be thus willing to meet well-founded grievances; and there was hope in the motor industry that Sir John's complaisance would be extended this week to their objections to his proposal to raise the horse-power tax from 15s to 25s. In the event, however, he was adamant; he refused either to remit the increase or to amend its incidence; and his frank plea was that he needed the money. The proceeds of the increase in a full year will be £11,500,000, and it would take an increase of 3d. in the income-tax to cover its withdrawal. The trouble is that the horse-power tax is itself a bad tax, discriminating as it does against the types of large or medium-sized car suitable for export. Sir John admitted this, but his invitation to the industry to present proposals for a new formula for its assessment ignored the fact that it is the duty of the Chancellor himself to better the imposts he charges, as well as the further fact that all the capital equipment and tools of the industry are now designed exclusively to manufacture engines according to the present formula. The tax has been mishandled, too. Originally, its purpose was to furnish a fund for the improvement of roads, but ever since Mr Churchill's depredations of the fund in the 'twenties for other uses the implied bargain has been officially forgotten. All this is not to say that Sir John was wrong on Tuesday. The effects of the tax upon the motor industry will not be nearly so fatal as has been widely claimed. There will be an eventual shift among home purchasers to cars of smaller horse-power, and production for export will, in time, be somewhat checked. But it is very unlikely that the total activity of the industry will be appreciably checked. Indeed, it is far from assured that what might have been a secondary objective of the increase in duty in these days of national preparedness, namely, to damp down the manufacture of civil vehicles in order to assist production for military purposes, will be served in any noticeable degree at all. In any case, it is the production of new cars not the use of old ones that is germane to the need to absorb some part of the industry's plant and labour for arms work; and the point was well made by Sir John's Parliamentary critics that, for this reason, he might have exempted old cars from the increase. His answer was probably conclusive; to exempt cars more than two years old would cost the Exchequer £8 millions in a full financial year.

A.P.D.—The precise details of the Armament Profits Duty, the establishment of which was moved in the Commons on Monday by the Chancellor of the Exchequer, are still not clear. Its likely yield is unknown, which does not matter much since it is a political tax not primarily designed to raise revenue. More serious, its scope is still uncertain. It will embrace profits made on supplies for the armed forces, including clothing and equipment, and probably those earned on civil defence materials bought centrally as well. In principle a discriminatory tax, since it singles out arms profits from all other profits for special penalty, it is likely to discriminate still further in its detailed incidence: while military clothing and equipment are included, A.R.P. uniforms may very well be left out, and it is almost sure that food and fuel supplied to the forces will be exempt. Monday's significantly slender attendance in the Commons could summon up little enthusiasm for the tax in any respect. Sir John Simon said that this was only part of the plan to limit arms profits: costing control was already in operation in Air Ministry contracts; and the Minister of Supply would have wide power to fix prices. The House was not impressed, and there was a widespread feeling that the end might have been better served by a much more effective control of contracts than at present prevails, on the one hand, with a general tax on all excess profits, whether derived from arms contracts or not, on the other.

**Rubber into Cotton.**—In the course of the negotiation of the agreement between the United Kingdom and the United States Governments for the exchange of cotton and rubber, several of the objections of the commercial community to the original proposals have been met or countered. Tin and wheat have been excluded from the transaction, and stress has been placed on the fact that exchanged materials will be used exclusively for the building up of war reserves. The agreement itself includes a number of precautions for minimising the market disturbance which the transaction may cause. Thus delivery may be postponed if it is likely to restrict supplies to commercial markets; stocks acquired by the respective Governments may not be liquidated within seven years of the coming into force of the agreement, except in the case of a major war emergency; the amount of rubber which, for the purposes of the agreement, is permitted to be exported under the International Rubber Regulation Scheme, is to be additional to the amount released for normal needs; and in the event of an export subsidy on cotton being subsequently granted by the United States Government additional cotton proportional to the reduction of price below the agreed level will be delivered. In fact, the parties have done what can be done to minimise the dislocation which may be expected to ensue from the direct exchange by two Governments of 600,000 bales of cotton against 80,000 tons of rubber. The difficulties which remain are inherent in any such transaction and cannot be removed by anticipation, careful drafting or any other expedient short of the abandonment of the whole agreement. The highly specialised mechanism of the cotton and rubber markets will not be utilised and the dangers of waste and confusion through imperfect knowledge of the many technical factors involved are thereby increased, despite the promise of the Liverpool Cotton Association to support the plan and the probability that experts from Liverpool and Manchester will go to the United States to classify the material; countries outside the agreement who have disposable stocks of cotton and rubber will be adversely affected; and the predictability of prices will be reduced to the disadvantage of both producers and consumers. Against these disadvantages are to be set the considerable advantages of having emergency stocks of essential materials and the political gains which are presumably to accrue from the transaction.

**British-Japanese Talks at Tokyo.**—The outstanding event of this week in Far Eastern politics is the Japanese acceptance of a British proposal to discuss in the calmer atmosphere of Tokyo a settlement of the Tientsin blockade and the questions which the blockade has raised. This agreement to negotiate was announced after several anxious days in which it seemed that the Japanese, in following their landing at Swatow with further landings at the treaty ports of Wenchow and Foochow, meant to continue with their policy of ousting the British from those parts of China no longer under control of the Chinese. The gross indignities which British subjects have suffered at Tientsin, and the request (which was ignored) that British vessels should leave the threatened treaty ports, all pointed to the Japanese Army having received *carte blanche* from Tokyo. In these circumstances the Japanese Government's decision may seem to be surprising: but it is much less so than a facile reading of it would suggest. Aware of the immense effect of the Tientsin blockade on European and American opinion, the Tokyo authorities were probably of the mind that the affair had gone as far as was politic for the time being—and at the same time they were anxious to derive what bargaining advantage from it that they could. Their adventures in China are not so fortunately attended that they can afford to worsen their position for the pure *Schadenfreude* of damaging the British. They need support for their Federated Reserve Bank and its *parvenu*, the yuan; they need to weaken Chinese morale and strengthen that of their own people by representing that the British have agreed to recognise Japanese superiority in the Far

East. Accordingly they can reasonably conclude that it is worth their while to see how far they can push the British Government in that direction: a resumption of hostilities can always follow a failure to make progress. On the British side the urgent desire to put a stop to the sort of thing that has been happening in Tientsin, and the tense situation in Europe, were sufficient reasons for pressing negotiations on the Japanese. There is indeed a great advantage in moving the focal point from Tientsin to Tokyo and discussions unhurried by insults should much to help matters.

It is emphasised in Whitehall that the proposal of negotiations is in no sense a capitulation. That is doubtless true (although it would have been more manifestly true if the illegal blockade had been called off before the negotiations began) and the Government are presumably hopeful of avoiding appeasement on a continental scale affecting our whole position in the Far East. The Government cannot but realise that there can be no question of conniving at the "new order" in China, nor of withdrawing such support from the Chinese as has been expressed in help for the Chinese dollar and in the facilities provided by the Burma road into Yunnan. In this connection the speech made by Lord Elibank in the House of Lords on Wednesday should serve as a context for our policy, pointing out as it did the disastrous effects on our standing and our trade in the Far East which wholesale appeasement would have. It is certain, however, that the Tokyo authorities will do their utmost to bring up questions of a general nature, and to present the alternative of a long succession of incidents on Tientsin lines: already army representatives are reported to be demanding a minimum programme which includes "co-operation in the economic development of North China." The final agreement, if it comes, will inevitably represent a nice piece of diplomatic manoeuvring, with the British taking good care to counter Japanese insistence with the broad hint that general questions affecting British status must also affect the status of other Powers interested in the Far East. Putting up the umbrella in Japan would mean hauling down the flag in China, and there is no case for either.

**The Anglo-French Conference at Singapore.**—The Singapore conference of the British and French commanders in the Far East, on which we published an

anticipatory note last week, has now duly taken place. Inevitably the conclusions and decisions arrived at have been kept secret, but it is evident that the conference has

been a success, and two of the results of it have been unofficially reported in terms which there seems no reason to doubt. It is said that, in the event of war, the French and British naval forces in the Far East are to be united under a single British command, and that Singapore is to be the common Anglo-French base. These prudent Anglo-French arrangements in advance are not only valuable in themselves: they also provide a framework into which the defence of other threatened territories can be fitted. If war comes, both the Dutch empire in the East Indies and the American dependency in the Philippines will be exposed to the danger of Japanese attack, and for all these outposts of the Western World in the South-Western Pacific Singapore is the natural citadel. Considering the preponderance of the Japanese Navy in the Western Pacific—a preponderance partly due to the proximity of Japan's home bases and partly to the virtual certainty that there will be no war between Japan and the Western Powers in the Far East without a simultaneous outbreak of war in Europe—the best laid schemes of naval defence in the Far East can hardly save the Western Powers from sustaining serious losses in this quarter in the first phase of the hostilities. What is important is to secure that, in the final phase, Japan, even if she has begun by emulating Germany's successes during the first four years of the last general war, shall end by suffering the decisive defeat and overthrow with which Germany met between August and November, 1918. In working towards this strategic result the joint Anglo-French naval base at Singapore will no doubt play a rôle of capital importance.

**Irish Outrages.**—A series of bomb explosions in the West End last Saturday night did much damage to property and injured nineteen people. This was the latest phase of the bid of the Irish Republican Army to rid Ireland of the English, though on this occasion the outrages were associated with the banning of the I.R.A. in Eire itself. There were clashes between the police and I.R.A. sympathisers in Dublin on Sunday when processions were held to commemorate the Irish hero, Wolfe Tone, and it is a little hard for English observers to understand why English lives should be put in danger as the outcome of the I.R.A. minority's resentment against their own Irish Government. Actually, of course, this point was only incidental. The I.R.A.'s campaign is avowedly directed against the retention of the remnants of the British Ascendancy in Ireland, and their simple aim of a free and united native land is not without many friends in this country. Their methods, on the other hand, condemned by Cardinal Hinsley on Sunday as cowardly and criminal, are universally abhorred, even though precautions are seemingly taken by the fanatical saboteurs to minimise the danger to life and limb. Savage

penalties of imprisonment have, not unexpectedly, done nothing to deter these misguided devotees; but it would be well for them to realise two things. In the first place, dastardly bomb-throwings have no chance at all of winning from the British Government the concessions they are seeking; and, in the second, although the toleration of the English people is unlimited, as was shown when a Wolfe Tone procession marched unmolested to Hyde Park with banners about the release of I.R.A. prisoners only a few hours after Saturday's bombs had scattered Piccadilly and Oxford Circuses and Park Lane with glass and debris—their patience is not. The cries of "lynch him" which led to the manhandling of a guiltless onlooker on Saturday night came from only a small minority of the crowd, but they were a portent. The I.R.A. should reflect that, though their members may be immune by their faith against persecution, their compatriots in London are not so protected against the doubt, suspicion and difficulties that will be their lot if these outrages go on. Their cause is ostensibly the salvation of their people; sought in this way, it may prove to be the occasion for their further fettering.

**Civil Defence.**—Air raid precautions have not been left out of the general speed-up in defence preparations that has been noticeable in the last few weeks. But, if it is true that a grave emergency is not impossible in the very near future, a lot of ground has still to be gained with extreme speed. So much has been done in Sir John Anderson's brief but fruitful reign that what remains to do stands out in stark relief. The shortage of fighter airplanes and anti-aircraft guns has been made up by Sir John's colleagues. Over a million and a half recruits have been found for national service and most of them for A.R.P. Every part of the country has now something like a complete defence scheme. Within their limits, the Government's evacuation plans have been worked out to the finest detail; and in the great cities outstanding individuals like Mr Herbert Morrison, in London, have done striking work in organisation. But the edifice of civil defence is none the less still gravely incomplete. A large proportion of the shelters contemplated are still on paper or in production; there is no strongly protected shelter in target areas; the recent exercises in Chelsea underlined the complete barrenness of the land in the matter of street protection; and the vexed and vital question of voluntary evacuations remains unsettled. Most important of all, the majority of the population still do not know at all what to do in an air raid. It is this last lack that is most readily remediable; and the plans announced by Sir John Anderson for the distribution of 50 million leaflets, a series of wireless talks and the carrying out of large-scale black-outs and A.R.P. exercises all over the country only intensify the mystery why nothing even approaching adequate publicity has been given to civil defence duties during the years that A.R.P. has been the Government's responsibility. The people must be told exactly what to do; and they must be told at once.

\* \* \*

**The T.U.C. on Workmen's Compensation.**—The test of the effectiveness of any statutory scheme for compensation to workmen and their dependants for injuries sustained in connection with employment, is simply whether it in fact secures adequate compensation in all genuine cases. By this test the present legal provision in this country, which is principally contained in the consolidating Act of 1925, is inadequate. It is common knowledge that numerous cases of hardship occur, through the inadequacy of allowances and the complete evasion of obligation by means of legal technicalities; and the fact that the terms of reference of the Royal Commission now sitting include an instruction to "make such recommendations, whether by way of amendment of the Workmen's Compensation Acts or otherwise, as may appear desirable," is *prima facie* evidence that all is not well. A comprehensive memorandum submitted by the Trades Union

Congress to the Royal Commission last week points out in detail what is wrong. It enumerates such matters as the opportunities which the 1925 Act provides for the defeat of the intention of Parliament to confer a right to compensation, the present unduly narrow definition of "dependants," the pitfalls in the method of computing the amount of compensation, and the pernicious practice of granting lump-sum payments which are nearly always inadequate. The T.U.C. is well qualified to assess the working of the present legal machinery from the standpoint of the workman who is injured, and its judgment is emphatic. It concludes that "the whole system of compensation for industrial injuries is based upon principles which require fundamental revision," and that the necessary changes can only be brought about by the repeal of the Act of 1925. In its place it would substitute legislation based on quite different principles. A State Board to take over the functions at present discharged by private Insurance Companies and a liability on employers to contribute to a State Insurance Fund controlled by the Board are central features of the new proposals. The T.U.C. has in fact been preparing and promoting a measure embodying these points ever since 1925 and its proposals are worthy of detailed examination. The central principle which emerges from the present memorandum is that the injured workman should be enabled to present his case to an independent body in the first instance and not, as at present, forced to appeal to his employer, who is naturally concerned, directly or indirectly, to reduce the compensation to a minimum. Whether it would be necessary, in order to achieve this object, to throw over the whole existing system of insurance against employer's liability, is, however, a matter on which the Royal Commission will require further evidence.

\* \* \*

**The Franco-Turkish Pact.**—Last week we were able to report that the French and Turkish Governments had reached an agreement for the early cession to Turkey of a district, attached to Syria since the peace settlement after the war of 1914-18, which is known in modern Turkish parlance as Hatay and in the old-fashioned Ottoman Turkish terminology as "The Sanjak of Antioch and Alexandretta." This preliminary agreement has been duly followed, on June 23rd, by the signature, in Paris, of a Franco-Turkish pact for mutual assistance against aggression which closely conforms to the Anglo-Turkish precedent. In particular, the Franco-Turkish, like the Anglo-Turkish, instrument includes among its declared aims "the establishment of security in the Balkans," besides being applicable to any "act of aggression which might lead to war in the Mediterranean region." After the signatures had been affixed, the French Minister for Foreign Affairs made a verbal declaration that France had no intention of renouncing, in favour of a third party, the mission that she is carrying out in Syria and the Lebanon—thereby assuring the Turks that they shall not wake up one morning to find that their neighbour beyond the southern frontier of Hatay is neither France, in her capacity as a mandatory Power, nor yet an independent state of Syria, but, instead, one of the members of the Rome-Berlin Axis. The timeliness of this diplomatic transaction in Paris on June 23rd was demonstrated by the publication, on the same day, in an Italian newspaper, of an article on Italy's *Lebensraum*, by an Italian publicist, which had already appeared in a German periodical. Signor Ansaldo has here delimited Italy's "living room" as including the whole basin of the Mediterranean, as well as the Balkan Peninsula up to the right bank of the Danube. It will be seen that this precisely coincides with the area to which the Franco-Turkish and Anglo-Turkish mutual defence pacts apply. When any two countries find themselves alike included (without their leave having been asked) in the "living space" claimed for itself by some third party, this is naturally a strong inducement for the two threatened parties to join forces for their mutual security. The *rapprochement* between Turkey and Egypt which is now making rapid headway is another gift from the same Italian fairy godmother. The Rome-Berlin-Tokyo triangle may yet unite the world in a way that is the exact inverse of its intentions.

**A New Balkan Alignment.**—An illuminating footnote to the comments which have appeared on M. Gafencu's visits to Ankara and Athens is provided by the denials from Bucharest that the Roumanian Foreign Minister went with the intention of signing, or preparing, a military arrangement between Roumania, Turkey, and Greece, which would go beyond the scope of the obligations laid upon them by the Balkan Entente. That M. Gafencu did in fact have something of the sort in his mind seems very probable, and it is unlikely that the Roumanian Government would expect one to conclude that the visit did not mean an "amplification" of previous engagements. On the very face of things it is clear that the Balkan Entente has suffered a sea-change; on the one hand, Yugoslavia is almost encircled by the Axis Powers, and on the other hand Roumania and Greece are guaranteed by the Western Powers and Turkey is actually in alliance with them. "The Balkans for the Balkan peoples," the avowed object of the Entente when it was formed in 1934, can now be made possible only by a resolute forming-up of forces. Balkan references in the Franco-Turkish Pact are significant here. It is natural that they should coalesce round the alignment of Roumania with Turkey and Greece, which, if not an axis, is at least half a circumference. Up to that point M. Gafencu may be expected to have had close and detailed discussions with his Turkish and Greek colleagues: the Balkan problems which will face them in the future will be to appease Bulgaria and, more important still, to convince the Yugoslavs (and particularly the Serbs) that Balkan unity is still a possible objective. It is unlikely that M. Gafencu reached any firm conclusions. For, apart from the provocative interpretation such action might be given in Berlin, there is one excellent reason for not formally extending the obligations of the Balkan Entente to guarantee "external" as well as "internal" frontiers, and that is that Yugoslavia's co-operation cannot now be asked (and could scarcely be given), while at the same time it is important not to increase Yugoslavia's feeling of isolation and thereby drive her further into the Axis camp. But if by his visits to Ankara and Athens M. Gafencu has let it be known in Berlin and Rome that

Axis pressure will only stiffen the formation of a Roumanian-Turko-Greek alignment, he will have done much to help his own policy of neutrality. It may be true, as M. Calinescu said on Wednesday, that Roumania's foreign policy was concerned only "with the defence of our country's frontiers"; it is no less true that unilateral action in the Balkans has a long trail of sad mistakes behind it. When Reichsminister Frank can say in Sofia, as he did last Sunday, that the Germans "know well that the sufferings of the Bulgarian people are also their own," it is clear that Balkan neutrality is possible only by way of Balkan unity.

\* \* \*

**The I.C.C. at Copenhagen.**—The Tenth Congress of the International Chamber of Commerce, on the general subject of "The Necessity for an Economic Order," opened at Copenhagen on Monday of this week. Delegates to the number of 1,347, representing 41 countries, attended. The general tone has been one of optimism qualified by an earnestness which is no doubt ascribable to the clouded political horizon. Representation was sufficiently broad to permit of speeches both for and against economic nationalism, and the measure of irreconcilable disagreement was surprisingly small. Count Conti (Italy) actually turned aside to point out how a policy of autarky could be consistent with the maintenance of foreign trade at an already existing level, although its composition might be drastically altered. But the conclusions summarised by Mr R. P. Jeillett (Canada) and commanding widespread assent were hardly of a type which would commend itself to the main advocates of economic nationalism to-day. They were (1) recognition by creditor nations of the necessity for accepting goods and services from their debtors, (2) consideration of the establishment of trade agreements on broad international lines rather than through bilateral arrangements, (3) recognition of the fact that indiscriminate foreign lending no longer offers a solution to exchange problems and that loans should be solely for internationally productive purposes, and (4) the necessity for concentrated effort to raise world-wide standards of living.

## THE WORLD OVERSEAS

### Indian Railway Finance

FROM many points of view the current year may well prove a crucial period for the Indian railways. They are mostly State-owned, the State investment in them amounting to Rs. 7,600 millions, so that the state of their finances reacts directly and importantly upon the Central Government's budgetary position. The autonomous provinces, too, have under the new Constitution been given a definite interest in railway recovery, since (by Sir Otto Niemeyer's award) any increase in the allocation of income-tax receipts to the provinces is contingent upon the railways resuming their normal rate of contributions to the Central revenues.

The hopes that were held of a rapid recovery in railway receipts during the three years 1937-40 have unfortunately been falsified. Last year's results and the estimates for the current year show a worsening rather than an improvement compared with the position in the period 1937-38. The precise nature of the present difficulties is mainly the consequence of the financial policies pursued by the Indian railways after the advent of the depression in 1930. From that year onwards net receipts fell away sharply, and the railways adopted the practice of postponing their current liabilities and drawing on their reserves. Between 1931 and 1937 it was possible to meet interest charges only at the cost of wiping out the reserve fund, suspending contributions to the State and borrowing from the depreciation fund; and, according to the Convention of 1924, the drawings on the depreciation

fund and the suspended contributions to the State have to be redeemed out of future surpluses.

At the end of March, 1937, when railway revenues had improved sufficiently to remove the need for any further loans from the depreciation fund, unpaid contributions due to the State totalled Rs. 30.29 crores (one crore=10 million); and the small surpluses which began to appear from 1937-38 onwards were appropriated by the State under a three-year moratorium. But this has only enabled the payment of rather less than half the annual contribution; and the Rs. 30.74 crores owed to the depreciation fund has not been diminished. The moratorium expires on March 31, 1940, and the railways are definitely worse off now than they were even in 1937 itself. The accumulated obligations of the ten years from the commencement of the depression will, on April 1, 1940, reach the colossal figure of Rs. 67 crores, or 8.8 per cent. of the capital at charge of the State-owned railways.

The proximate cause of the railways' troubles is, of course, the continued low level of net receipts. During the last three years there has been a remarkable increase in goods traffic, which has brought in even larger gross receipts than before the depression. But passenger traffic has failed to respond to the stimulus of business recovery. Nor has there been any real opportunity to increase net receipts by further cutting down expenditure. During the first two or three years of the depression only were economy measures adopted in earnest.

Expenditure was curtailed, partly by means of genuine economies and, to a larger extent, by postponing essential maintenance, renewals and replacements. Essential expenditure clearly cannot be deferred indefinitely, and the need to overtake arrears of maintenance had already asserted itself by 1935. With the suspension of contributions to the State, the railways felt that they need only find the sums needed to meet interest on capital, which involved merely a book entry with the depreciation fund loan account, and this weakened considerably the incentive to real economy.

The standards of expenditure pushed up by the unbridled optimism of the pre-depression years have, therefore, been left much where they were; and Sir Otto Niemeyer in his detailed review of India's finances laid stress upon the imperative need for a "thoroughgoing overhaul of railway expenditure." Even during the present moratorium period there has been little evidence of any serious effort to meet the situation which will arise when the standstill ends. The trend of expenditure is upward, and on certain of the railways, despite the economies of ten years and attenuated traffic, operating expenses over the period 1938-40 will exceed the peak levels of prosperous years. Detailed estimates for the current year disclosed a deficiency on six out of the nine principal railway systems, even if only the liability to pay interest charges is reckoned in, that is, not counting the contributions due to the State.

Nor is this all. There is also the heritage of idle assets, the increased interest charges left by the extravagant capital expenditures of the pre-depression period and the effects of over-capitalisation since 1924. Indian railway finance, indeed, presents a dismal outlook. With the depreciation fund actually depleted to one-half of its nominal balances and the reserve fund exhausted completely, the railways are quite helpless to meet their financial obligations at the end of the current year.

### Ways Out of the Impasse

There are only two methods of dealing with the situation. One is to face the facts and their implications frankly; the other is to evade them again by continuing the present policy. The unpalatable truth, however, is that this policy has already piled up a liability of Rs. 67 crores. An attempt to cut the Gordian knot early in 1937 by a cancellation of the entire indebtedness had to be shelved as the Railway Member's enthusiasm for the measure was shared by no one outside his department. The Wedgwood Committee also declined to give it their blessings and a temporary escape had to be found in the moratorium plan.

The possibilities of the moratorium procedure have now been almost completely exploited, and further relief, short of radical reforms, can only be obtained by meddling with the depreciation accounting. Under the present system, which has stood the rigorous scrutiny of all Indian and British experts, the annual depreciation charges amount to about Rs. 12½ crores. The idea of dealing with the present *impasse* by accounting manipulation must be very tempting when the only alternative is the rather painful process of financial reorganisation and a vigorous pursuit of real economy. A recent statement of the Railway Board referred to their provisional view in favour of a combined depreciation and general reserve fund to be maintained at a "convenient" figure. It is to be hoped that the severe post-war experience of neglected maintenance and deferred renewals and repairs has not been forgotten and that the mistake of weakening the provision for depreciation will not be repeated.

If the course of drastic reform is favoured by the Government, it will not fail for want of support from the Opposition in the Legislative Assembly. But there is every reason to expect that a proposal for the cancellation of debt would once again be resisted. While the repudiation of the liabilities due to the depreciation loans would, for reasons of financial prudence and fidelity of accounting, be entirely wrong, the remission of the arrears of contributions to the State would not be unfair to the taxpayer or too liberal to the railways. As the needs of the Central Government were fully met from other sources during 1931-38, the taxpayer can afford to waive his claims upon the railways. But an Assembly chagrined at its impotence to exact conformity to its wishes on the part of the Executive, because of the Viceroy's power of certification, is not likely to make this course particularly easy for the Government. But good sense may yet prevail.

This is not to say that the urgency for improving net receipts and resuming the full contributions to the State will assume increased importance in the near future. It will. The majority of the provinces are anxious to implement the Congress programme, and they have embarked on measures like prohibition, which have driven them to find alternative

sources of revenue to make up for the allocations they have lost because of the railways' financial failures. It is but natural that the uncompromising critics of the *ancien regime* should, when in office themselves, hastily embark on measures of economic improvement and social amelioration. They have had to impose new taxes in the face of organised opposition, and their interest in the railway contributions, which indirectly affects their own finances, must remain acute. Even the Central Government itself is feeling the pinch and provision has had to be made this year against an anticipated decline in income.

These considerations invest Indian railway finances with a special social and political significance. Under the present constitutional practice, railway problems must come up for discussion not later than next February, when the Railway Budget debates take place. But plans for the introduction of Federation are still indefinite; and the vastly important railway problems may be obscured by broader issues.

June 4th.

## Preparedness and Public Opinion in France

[FROM OUR PARIS CORRESPONDENT]

It is a striking effort that France has made since M. Daladier took charge; and the increases in taxes and working hours have been well borne. There is no grumbling among the people, but there is a wide revulsion from the stupidity of the armaments race.

The alternative to the piling up of arms is negotiation for a settlement. There is frequent talk about a conference of Powers to revive the collaboration of the States of Europe, but French reactions to this proposal are many and varied. The Communists call for struggle to the bitter end; and, now that the Anglo-French alliance with Moscow is taking shape, they are losing their brief enthusiasm for the League of Nations. The Socialists are divided. The supporters of M. Blum march with the Communists. The followers of M. Paul Faure dream of a comprehensive agreement with all countries, including the dictatorships; and many Conservatives think with them.

But the Paulfaurists and the Conservatives reach the same conclusions from different premises. The Paulfaurists have reverted to the international pacifism of pre-war Socialists, or at least to the collective security idealism of post-war optimism: that is why they favour a conference. The Conservatives, on the other hand, have more practical reasons. They are alarmed about the likely effects of large-scale and continuing armament upon the wealth and social structure of France. Since a conference will have to be held sooner or later (they say), why not hold it now, before instead of after the war?

In brief, the battle between pro-Munich and anti-Munich opinion is still going on. But it is not so bitter and passionate as it was last September, because for the moment at least there is no call to choose at once between peace and war. It is notable, too, that the sense of inferiority that characterised the French people has gone. They feel strong and confident. But it must be admitted also that the current debate about foreign policy is scarcely disinterested; sectional interests and electoral calculations are intertwined with consideration for the national interest.

### A Conference of the Powers?

Nevertheless, the dilemma is a real one. There is no question about the need to arm; it is the readiness to confer that is at issue. It is a matter of conscience; and it is significant that, after having extolled the strength of France's defences, M. Daladier—several days before Lord Halifax first expounded the peaceful ends and open-minded attitude of British diplomacy—spoke of the need to redistribute the world's raw materials.

The Prime Minister's proposal met with a mixed reception. The Communists cried out against the possibility of what they called an economic Munich. The Moderates were sceptical, recalling the failure of the conferences at Genoa in 1921 and at London in 1933.

The truth is that the idea of a conference gets as poor a Press as the burdensome fact of re-armament. There is this difference, however. Re-armament is a tangible burden, and a heavy one, while a conference is no more than an idea, and, as such, it can do no one any harm.

It is interesting to watch the reactions of the main Ministers. M. Bonnet is off in pursuit of his dream of a

conference. M. Reynaud has clearly made ready to take all the measures of economic mobilisation that may be needed as the *tempo* of arms output rises, or in emergency. M. Daladier, deep-rooted Radical that he is, is watching with jealous care over the state of the nation's defences and the morale of the people.

There are domestic reasons for the Cabinet to take heart. Growingly day by day France is harder at work. The franc is steady. In four months 15,000 millions of francs have come back to France, and the influx has not ended. Tax receipts, too, including the new taxes on salaries and arms profits, are now running well above estimate.

The moment is near when, on top of all these other considerations, M. Daladier will have to decide whether to hold or postpone the autumn elections. He has to make up his mind to retain or terminate the system of government by decree. Many argue that, although at the best the regime of armed peace seems likely to last for a long time, the emergency that made government by decree inescapable has passed. The country has found its balance again, and the demand for arms is on the way to solving, for a time at least, the problems of industry.

There are two views. Some contend that to retain the decree procedure indefinitely might do untold harm to France's liberal institutions. Others agree so far, but contend that the task now is to reform those institutions so that the executive may be given greater power in their normal working. After having put France to work, it is necessary to refashion France, they say.

The outcome is M. Daladier's secret. Is he thinking of making the fundamental reform of the State the battle of his Parliamentary career? No one knows.

June 28th.

## Increased Confidence in Canada

[FROM OUR OTTAWA CORRESPONDENT]

WITH the advent of summer, Canadian business has been showing a distinct improvement, and an encouraging advance was recorded in May. According to the Bureau of Statistics, the index of the physical volume of business (base 1926 = 100) was 122.2 in May, compared with 116.7 in April, and was nearly 10 points above the level recorded in May, 1938.

|                          | BUSINESS INDICES |                |                |                 |
|--------------------------|------------------|----------------|----------------|-----------------|
|                          | Week ended       |                |                |                 |
|                          | June 11<br>1938  | May 27<br>1939 | June 3<br>1939 | June 10<br>1939 |
| Car loadings .....       | 68.5             | 76.7           | 74.2           | 69.7            |
| Wholesale prices ...     | 80.3             | 73.5           | 73.5           | 73.3            |
| Bank clearings .....     | 91.4             | 87.8           | 93.9           | 91.6            |
| <b>Total Index .....</b> | <b>107.1</b>     | <b>107.1</b>   | <b>108.4</b>   | <b>107.3</b>    |

For the business gains in May, chief credit is being given to the tour of Their Majesties through the Dominion. Apart from the abnormal spending for which it was responsible and the tourist business which is attracted from the United States, it created everywhere a spirit of confidence. The Royal Tour served to drive disturbing news about the international situation off the front pages of newspapers and to create an impression, perhaps not justified by the actual facts, that the diplomatic outlook had improved. The tour has also had the very beneficial effects of damping down sectional differences, and Their Majesties departed from Canada with the affectionate goodwill of all classes of Canadian citizens and the knowledge that they had done no small service to the Dominion.

### Good Wheat Prospects

Another factor which is cheering the business community is the continuance of optimistic reports about the prairie wheat crop. The latest crop report of the Bureau of Statistics says

Additional heavy rains across the prairie provinces during the past week have further improved crop prospects. The dry areas of North-western Manitoba and South-eastern Saskatchewan received fair benefit from the rains. Temperatures have continued low, holding grasshoppers in check. Cereal crop growth has been slow but favourable.

Only some unforeseen disaster on a major scale can prevent an average wheat crop for the three prairie provinces, and the prospect of the best crop of the present decade is

counted good. With the price of wheat guaranteed on the basis of 70 cents per bushel (No. 1 Northern), there should be a very substantial increase in the purchasing power of Western Canada after August, and this ought to invigorate business all over Canada. It will certainly help the earnings of the railways and elevator companies. Crops in Eastern Canada, too, after a late start, are making up for it, and are likely to be up to the average. Germany has resumed the purchase of large quantities of pulpwood from the maritime provinces, and this business is increasing employment in the woods there.

In the industrial field conditions remain spotty. The construction of airplanes for the British Government has been delayed for some unaccountable reason, but other armament orders are keeping many firms busy and helping the heavy industries which supply materials. The demand for machinery remains good, and the farm implement firms are increasing their scale of operations on the strength of the good crop prospects. But the flour-milling business is less active than it was, as are some of the clothing industries; while cotton manufacturers are operating at a lower level of activity than a year ago, and they complain bitterly of the severe incidence of foreign competition.

The mining industry is still experiencing profitable activity and the following tables show the general advance that has been made in Canada's trade and output:—

| EXPORTS       |            |            |              |            |  |
|---------------|------------|------------|--------------|------------|--|
|               |            | May, 1938. | April, 1939. | May, 1939. |  |
| Copper ...    | ... (cwt.) | 590,169    | 399,044      | 649,101    |  |
| Nickel ...    | ... (cwt.) | 169,086    | 187,541      | 227,643    |  |
| Zinc ...      | ... (cwt.) | 323,174    | 247,563      | 259,724    |  |
| Wood pulp ... | ... (cwt.) | 965,925    | 842,605      | 1,106,520  |  |
| WHEAT ...     | (bushels)  | 3,370,545  | —            | 13,655,266 |  |
| WHEAT ...     | (dollars)  | 3,713,697  | —            | 8,662,068  |  |

| PRODUCTION    |            |            |              |            |  |
|---------------|------------|------------|--------------|------------|--|
|               |            | May, 1938. | April, 1939. | May, 1939. |  |
| Gold ...      | ... (ozs.) | 354,965    | 347,839      | 407,846    |  |
| Silver ...    | ... (ozs.) | 585,160    | 737,686      | 2,053,912  |  |
| Newsprint ... | ... (tons) | 207,768    | 222,843      | 250,015    |  |
| Steel ...     | ... (tons) | 114,855    | 99,752       | 121,300    |  |

The increase in steel output in May was marked, but only 15,706 motor vehicles were produced, compared with 16,891 in April and 18,115 in May, 1938.

May also witnessed a very encouraging gain in Canada's exports. Their total value was \$94,886,852, compared with \$72,791,247 in May, 1938. The largest gains were in wheat, copper and nickel. For the first five months of 1939 the total value of exports has been \$372,763,133, as compared with \$337,371,813 in the first five months of last year.

June 20th.

## Some Portuguese Prospects

[FROM OUR LISBON CORRESPONDENT]

IN spite of hopes raised by the end of the war in Spain, Portugal's trade during the past two months has been almost stagnant. Retailers complain that sales are small and exporters say that foreign demand for Portuguese produce is patchy and exigent. Industrialists, for their part, would like to see the purchasing power of the public strengthened; it

suits them to forget that this is a peasant population, with roughly 60 per cent. of illiterates. But the solid foursquare growth of Portuguese wellbeing, from 1926 onwards, is directly attributable to the fact that Dr Salazar always bears in mind the mental as well as the material bearing of the peasantry towards economic legislation. The call to "support home industries" could in certain circumstances be perverted into implying the support of home industrialists, who are numerically few and harbour a monopolistic tendency which has to be watched by legislation.

### Cod and Rosin

Fishing off the Newfoundland banks is, after the wine-carrying trade, the oldest maritime industry of Portugal. Before 1930, in spite of this, the bulk of this staple food was imported from Scotland and Scandinavia; and made a heavy drain on sterling balances. To-day native cod fishers provide a full quarter of the nation's supply, so that imports fell from 44,300 tons in 1928 to 35,000 tons in 1937. True, the 1938 figures show an increased importation of 8,000 tons; but this is because of misfortunes to the fleet and poor catches combined with improved demand. More ships and better gear—three modern vessels were added to the fleet which left for the Banks last May—and an increase in hands from 1,169 in 1930 to 2,224 in 1938, have been made possible by corporative action and long-term financial aid. Though it must remain a hard trade, its modern expansion in Portugal has been accompanied by more adequate accommodation afloat and compensation for accident or death among the seamen. For though almost all the shapely schooners now have auxiliary power and even wireless, as well as the services of the Government tender "Gil Eanes," fogs and storms off the Banks still exact their toll in lives and gear, and, as with last season, in ships as well.

For the past five years Portugal's export of resinous products has shown steady expansion, but a sharp drop from the peak prices obtainable in 1937 has caused much discussion among producers. The bigger firms wish to limit production in 1939, pointing out that prices in 1938 were frankly unsatisfactory; the small men, renting or owning pinewoods and producing "medium pale" rosin by what is known as the direct fire process, see no reason to restrict tapping and say that such restriction would inevitably mean much hardship and unemployment, especially if the yield were limited to 50 per cent. of the 1938 figure, which was 85 million kilos gross.

Portugal has 1,200,000 hectares of pinewoods compared with 800,000 hectares in France and 500,000 hectares in Spain. Her woods are for the most part near the coast, and so convenient for shipping; but it is urged that by using old-fashioned methods she does not make the most of her opportunities. Quality, it is said, does not come up to that of the United States products, both as regards rosin and turpentine. This notwithstanding, her 1938 totals brought in an increase of £59,870 for turpentine and £70,890 for rosin, 75 per cent. of which went to Germany, which took 17,006,952 kilos of rosin and 6,795,369 kilos of turpentine, out of total exports of 35,372,375 kilos of rosin and 10,804,145 kilos of turpentine.

June 14th.

## Switzerland's Foreign Trade

[FROM OUR GENEVA CORRESPONDENT]

SWISS foreign trade returns for the first quarter of the year reflected an improved activity in trade and industry, the outstanding feature being the rise in exports of about 8 per cent. over the corresponding period of 1938. During the first three months imports amounted to 398,315,226 francs, compared with 399,920,657 francs in 1938. Exports, however, amounted to 329,818,392 francs, against 306,259,582 francs in the previous year; there has been an important rise in exports of textiles, aniline dyes, aluminium, chemicals, machines and vehicles.

Watchmaking, which had been slack since the beginning of the year, was more active in March, when its exports were 4 million francs higher than in February, but the total of the quarter was, all the same, about 13 millions lower than for

the same quarter of last year. Figures are as follows (in millions of francs):—

|                    | 1938  | 1939  |
|--------------------|-------|-------|
| Watchmaking .....  | 53.8  | 39.9  |
| Silk goods .....   | 21.7  | 24.2  |
| Cotton goods ..... | 28.6  | 32.6  |
| Machines .....     | 46.0  | 60.0  |
|                    | 150.1 | 156.7 |

Trade with Great Britain showed an active balance. British imports to Switzerland reached 25,051,020 francs, compared with 22,518,315 francs in 1938, and Swiss exports to Britain were as high as 43,950,815 francs, as against 34,214,101 francs for last year. Negotiations for a new trade agreement were recently resumed in London, and it is hoped that with their conclusion the trade balance between the two countries will improve. The policy of Switzerland is to develop her commercial exchanges with those countries whose currency is not undervalued and can be freely exported, instead of trading with countries with which it is necessary to conclude clearing arrangements which, in the long run, do not seem profitable.

Trade with the five principal countries was as follows (in millions of francs):—

| Imports from:—            | 1938 | 1939 |
|---------------------------|------|------|
| Germany (Old Reich) ..... | 87.8 | 91.1 |
| France .....              | 50.3 | 64.5 |
| Italy .....               | 25.5 | 28.5 |
| U.S.A. ....               | 36.3 | 26.1 |
| Great Britain .....       | 22.3 | 24.9 |
| Exports to:—              |      |      |
| Germany (Old Reich) ..... | 47.8 | 53.2 |
| Great Britain .....       | 34.1 | 43.8 |
| France .....              | 31.1 | 34.5 |
| U.S.A. ....               | 20.6 | 23.8 |
| Italy .....               | 22.1 | 20.6 |

It is not yet possible to say what influence the Nazi control of Czecho-Slovakia will have on the Swiss economy, but it is expected that our exports to that country will be much reduced.

June 5th.

## German Annexations and Reich Trade

[FROM A CORRESPONDENT]

SINCE March, 1938, the series of annexations—Austria, Sudetenland, Bohemia and Moravia, and Memel—has played havoc with the statistics of Germany's foreign trade. Before any attempt is made to interpret the most recent German trade figures it is desirable to explain the effect of these changes. In April, 1938, after the annexation of Austria, the returns showed separately both the total trade of the new Reich, including Austria, and that of the old Reich without Austria. Thus comparison with the statistics for earlier periods was partially preserved—only partially because trade between Austria and the old Reich, being no longer foreign, went unrecorded.

This method of presentation was continued in October, 1938, after the annexation of the Sudetenland, except that part of the foreign trade of the Sudetenland was included with that of the old Reich and part with that of Austria, and trade between the Sudetenland and the rest of Germany went unrecorded. Thus the balance of trade for the "old Reich only" shown by the continuous line in the chart below, takes account of part of the foreign trade of the Sudetenland from October, 1938, to March, 1939; while the balance for the new Reich represented by the dotted line is that of the total Reich area, as it was successively increased by the annexations of Austria and the Sudetenland.

After March this year a further change occurs: the trade of the "old Reich" is no longer published separately; and the returns now show the foreign trade of the whole of Greater Germany—except the Protectorate of Bohemia and Moravia—that is, the aggregate foreign trade of the old Reich, Sudetenland, Austria and Memel. The foreign trade of the Protectorate, however, though not included in the German returns, is not classified as foreign; and trade between the Protectorate and the rest of Germany is therefore not recorded in the figures; while Slovakia, on the other

hand, is treated as a foreign country in precisely the same way as Great Britain or France.

NOTE.—In the inset diagram the Austrian trade deficit with foreign countries from April, 1938 (plus that of part of the Sudetenland from October), is shown by a special shading.

The chart shows quite clearly the acuteness of Germany's shortage of foreign exchange last year, even when Austria's import surplus is left out of account.

### Improved Balance of Trade

In April this year an appreciable improvement was recorded. The question arises: is this merely the result of statistical juggling? The answer is: No. The export surplus for April, the last point but one on the dotted line, was Rm. 35 millions, while in March there was a deficit of Rm. 23½ millions, or, excluding trade with Czecho-Slovakia, Rm. 15½ millions. Thus between March and April there was a substantial improvement of Rm. 45 millions. This improvement was reached by a decline in imports greater than the decline in exports. Even imports of raw materials were down in April compared with March; imports declined mainly from Europe, while exports declined mainly to Asia and Africa. Taken in general, the improvement was the result of the balancing of a smaller trade with individual countries. Provisional figures for May show increases in both imports and exports compared with April and a further improvement in the favourable balance of trade to Rm. 47 millions, as shown in the chart.

Moreover, the surplus of Rm. 82 millions obtained in April and May is not the only egg in the German nest. There is another in Czecho-Slovakia, for the Protectorate of Bohemia and Moravia (not included in the returns) has a considerable export surplus in trade with foreign countries.

June 28th.

## Japan's Changing Economy

[FROM OUR TOKYO CORRESPONDENT]

PROMINENCE is being given to the plan of price control drawn up by the newly reorganised Price Committee. The chief points of the plan are the fixing of fair prices; the limiting of control to the three categories of munitions materials, raw materials for export industries, and necessities of life; and the fixing of wages and cost of services. In order to secure an effective administration, control will be concentrated in the hands of a Price Board under the presidency of the Minister of Commerce and Industry, and this Board will be given wide powers by the National Mobilisation Act.

The new plan has been conceived as a comprehensive whole, and will consolidate all partial measures which are to be taken in various sectors of activity. The forces which would otherwise work against the artificial control of prices will be reduced to a minimum; and the report of the Price Committee suggests the extension of control, for instance, to profit inflation and income inflation, the principal factors contributing to a rise in prices.

So far, so good, but the Committee has apparently been disinclined to recommend internal regimentation in its fullest form. It has copied rather freely the German methods of economic control, but without adopting the Nazis' weapon of compulsion. Price regulations have so far proved a success, although we are told much that they have been circumvented through illicit trafficking at higher prices. But it will become increasingly difficult to administer them without a complete industrial conscription after the manner of the Nazis.

The upward trend in commodity prices continues, if at a slower pace. The Bank of Japan's index of wholesale prices for April registered a rise of 0.5 per cent. during the month, a number of uncontrolled articles contributing to this advance. The cost of living is rising with undiminished severity. The Bank's index of retail prices for the middle of April advanced by 1.9 per cent. on that of a month ago.

### In Finance and Commerce

On the financial side expenditure continues to rise. In the Budget estimates for 1939-40, approved by the Diet, estimated expenditure totals 4,804.5 million yen, including supplementary defence and civil estimates of 1,109.8 million yen. Besides these ordinary estimates, war expenditure of 4,605 million yen was also voted. The total national expenditure for the fiscal year 1939-40 (excluding the overlapping items between the ordinary and war Budgets) amounts to no less than 8,870 million yen, of which 5,650 million yen is to be borrowed. This net total is over 1,000 million yen higher than the comparable figure for the fiscal year just closed.

Included in Bills passed by the Diet is the Bank Notes Act, authorising an increase in the fiduciary issue from 1,700 million yen to 2,200 million yen; the Capital Employment (Amendment) Act, which entails absolute control over the creation of any new enterprise by individuals and non-industrial corporations, even with their own funds; and the Rice Dealings (Control) Act, which aims at the suppression of speculative dealings in this staple foodstuff and the stabilisation of its price. A fourth Bill which has gone through the Diet is the Japan Airways Company Act, providing for compulsory merger of the air lines in the State-aided enterprise known as Japan Airways, Limited, a hundred million yen company with Government representation on the board. As with price control, each of these measures means a step further in State regimentation, now at an advanced and elaborate stage.

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese joint-stock industrial undertakings, the aggregate net earnings of 1,000 companies for the six months ended December last amounted to 657 million yen, an increase of 43.3 million yen on those earned by the same concerns in the preceding half-year.

Imports in March, valued at 281.9 million yen, increased by 21 million yen, or 8 per cent., compared with March, 1938; while exports, valued at 283.3 million yen, rose by 42.7 million yen, or 17.8 per cent. In the first three months of this year imports show an increase of 86.4 million yen, or 13 per cent., to 757.4 million yen, compared with the corresponding period of last year, and exports an expansion of 84.7 million yen, or 14 per cent., to 689.7 million yen.

A Japanese saying has it that there can never be bumper crops for three consecutive years, and this year may be a bad one for agrarian Japan. Apart from the vagaries of nature, a shortage of labour and fertilisers is being more acutely felt by the farming community, and the year's outlook is, in any case, not so promising. Here again the Government has intervened, this time by framing a scheme to encourage increased production of rice and other farm products by way of subsidy and other devices. The Government has also been forced to reverse its policy of the curtailment of cocoon output, for a rapid increase in demand for silk has far outstripped the supply of cocoon.

## Letters to the Editor

### Anglo-American Barter Proposals

TO THE EDITOR OF THE ECONOMIST

SIR,—There are probably few people who do not give general welcome to the accumulation of war stocks of rubber and cotton in the United States and this country, as this scheme should give some measure of extra protection against unpleasant eventualities. Such criticism of the rubber part of the scheme as has emerged is due to the fact that world stocks are apparently adequate to prevent a runaway price, and that an increase in such stocks may easily hold the price of the commodity down. Hence rubber producers will be facing some burden while the advantages of the scheme redound to the whole community.

There are certain things which do not seem to me to be open to dispute. First, the rubber-producing industry can obtain all the rubber that could possibly be required from its plantations in case of emergency. What is uncertain is whether the shipping facilities to move this rubber from the East would be available.

Second, stocks inside the regulated areas, i.e. in the East, are about 50,000 tons above normal at their current level of 120,000 tons, while stocks outside the regulated areas are small at 400,000 tons. The most important thing to consider, in my opinion, is the location of such stocks as do exist, and I feel that, in the first instance at least, the major part of the 80,000 tons which is to go to America should be drawn from stocks in the East. This rubber could be shipped now with ease, cheapness and speed. We all know that international events can move extremely rapidly, and speed may possibly be the essence of the problem. By shipping stocks in the first instance we should be assured of a more speedy return to satisfactory conditions for rubber producers; and we should be assured that the utility of the commodity would be greatly increased by virtue of its better location in the event of hostilities.

I do not think that there is a very strong case for increasing stocks in America by an increase in the production quota while we leave a heavy stock in the Far East which might be of relatively small value in the event of hostilities—except to the eastern end of the "Triangle."

I remain,

Yours faithfully,

HIGH WICK.

### Bulgarian Claims for Frontier Revision

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of May 6th you publish an article by a Correspondent in Sofia dealing with the position and territorial claims of Bulgaria. Your Correspondent states that Bulgarian claims on Yugoslav Macedonia are no longer considered "actual," and that Bulgaria claims at present only

Southern Dobrudja and a corridor to the Aegean through Western Thrace, pleading economic necessity for both claims. As regards particularly the Thracian corridor, the plea is that "under the existing dispensation, Bulgarian seaborne trade can reach the Mediterranean only with Turkey's tacit consent."

Concerning the claim for a corridor through Thrace to the Aegean Sea, it should be stated forthwith that the argument of economic necessity is—like so many similar arguments put forward in recent years—a mere disguise for an unjustified desire for territorial expansion at the expense of another country—Greece, in this case. Historic and actual data prove beyond any doubt the Greek character of Thrace. The Greek character of Thrace was fully recognised at the Peace Conference, and has never been questioned since, even by Bulgaria herself. The demand for a Thracian corridor is based on economic grounds.

But is the economic plea itself really tenable? It should be recalled that countries like Austria, Czecho-Slovakia, Hungary and Switzerland, with a greater economic activity than Bulgaria and without any direct outlet to the sea, have never claimed a corridor through foreign territory; they have been contented to carry on their trade through the normal facilities accorded to them by their neighbours. Bulgaria is actually much more favoured by nature than any of these States; she possesses two magnificent ports on the Black Sea, whereas Roumania, with a much larger trade, has only one port. Yet Roumania does not seem to suffer from the lack of a corridor to the Aegean. Bulgaria's seaborne trade "can reach the Mediterranean only with Turkey's tacit consent." But the same is true of Roumania and Russia, and yet these two countries do not seem to be anxious for free access for their trade to the Mediterranean through Turkish waters.

The Allied and Associated Powers after the War, with the prompt agreement of the Greek Government, wished to assure to Bulgaria an economic outlet to the Aegean. It was stipulated in the treaties of Neuilly and Sèvres that such an outlet should be given. If this provision has not yet been put into force, it is through no fault of Greece. Each successive Greek Government since the War has approached the Bulgarian Government of the time with proposals for putting into effect the Treaty provisions. The Government of the late M. Venizelos went even further. Realising that the construction by Bulgaria of a new port in Thrace, in accordance with the provisions of the Treaties, on a territory to be leased in perpetuity by Greece, would be a costly proposition, and of small, if any, help to Bulgarian trade, whose natural outlets, as regards Central and Eastern Bulgaria were the Bulgarian ports of Varna and Bourgas, and as regards Western Bulgaria was Salonica, he offered to the Bulgarian Government a free zone in Salonica (which possesses a large port, well equipped, and has important railway connections) on the same conditions as the Yugoslavian free zone in the same port. Unfortunately, the Bulgarians have each time eluded, by one pretext or the other, the generous terms and sincere offers of Greece. It was not an economic access to the Aegean Sea that they wanted, but territorial aggrandisement.—Yours faithfully,

Athens.

D. E. PROTECDICOS.

[We would point out that our correspondent in Sofia was merely reporting the view of the Bulgarian Government, with which we do not necessarily concur.—EDITOR.]

### Shorter Notices

"International Economics." By R. F. Harrod. Cambridge Economic Handbooks: Nisbet and Cambridge University Press. 5s. xii+208 pages.

This is a completely revised edition of a book which first appeared in 1933. The early part, dealing with the direction and scope of international trade, follows the same classical lines as in the first edition, and the only important revision deals with the change in the relative prices of the various factors of production when international trade takes place. The principal alterations are in the chapter on "The Balance of Trade," which has been wholly rewritten, and in two new chapters on "The Trade Cycle" and "A Reformed World," where the Keynesian theory of employment is introduced into international trade problems for the first time. Using the "multiplier" argument, Mr Harrod considers in turn (a) the current exchange of goods and services, (b) other current items such as interest and debt payments, and (c) the accumulation and movement of capital. Coming to the trade cycle, Mr Harrod argues that the volume of a country's exports is much more important in its effects on activity than its trade balance, and that efforts must be made to reduce fluctuations in capital outlay if the cyclical movement is to be combated. He concludes that "both employment and an even balance can only be seconded if the authorities (a) have freedom to allow the exchanges to move and (b) are prepared to regulate the volume of capital outlay by artificial means." A section on exchange equalisation funds has been added to the chapter on "Foreign Exchange" and the argument regarding "Tariffs" has been restated in terms of the newer theory.

"We Saw it Happen." By Thirteen Correspondents of the "New York Times." Harrap. 372 pages. 8s. 6d.

This book, whose topical and international flavour is apparent in its title, covers subjects ranging from the social life of Hollywood to polar exploration. Most illuminating of all is Mr Ferdinand Kuhn's "The British Way," which gives an American view of the British people preserving its complacency on the brink of economic collapse and international disaster.

"Broomhall's Corn Trade Year Book, 1939." By G. P. Broomhall. (London) "Corn Trade News," St. Mary's Chambers, St. Mary Axe, E.C. 164 pages. 10s. 6d.

The usual summaries of the statistics of output, shipments, stocks and prices of the important cereal crops have been brought up to date in this new issue of the valuable Corn Trade Year Book, which contains a chronology of the main events in the cereal year from April, 1938, to March, 1939.

## The Gold Reserve

THE latest semi-annual statement on the position of the Exchange Equalisation Account, showing that position with the usual three months' time lag, has just appeared. It reveals that at the end of last March the Exchange Account held gold to the amount of 49,490,000 ounces, or, taking the gold for the sake of convenience at the conservative valuation of £7 an ounce, to the value of £366.2 millions. A direct comparison of the latest figure with that shown in the previous statement would lead to the most erroneous conclusions, since in the interval the gold holding of the Account has been fortified by the transfer last January of 46 million ounces of gold from the Issue Department of the Bank of England. The effect of this transfer will, however, disappear if we base our comparison, not on the figures of the Exchange Account's holdings, but on those of the aggregate reserve of the Account and the Issue Department together. The full comparison of the statements so far published is given below:—

| (in million ounces or £ millions) |            |            |            |            |            |
|-----------------------------------|------------|------------|------------|------------|------------|
|                                   | March 1937 | Sept. 1937 | March 1938 | Sept. 1938 | March 1939 |
| Gold in Exchange Account          | 26.67      | 39.85      | 42.54      | 21.68      | 49.49      |
| Issue Department                  | 73.84      | 76.84      | 76.84      | 76.84      | 30.46      |
| Total                             | 100.51     | 116.69     | 119.38     | 98.52      | 79.95      |
| At £7 an ounce                    | £703.57    | £816.83    | £835.66    | £689.64    | £559.65    |

Allowing for the transfer of gold from the Bank to the Account early this year, it will be seen that the drain of gold from this country, apparent in these figures since March, 1938, continued—but at a much slower tempo—during the six months to March 30th last. The extent of the exodus during this period amounted to 18,570,000 ounces. Taking an average price of gold over this period of 148s. 6d. an ounce, this represents a net adverse balance on our total international payments account—whether on current trade or capital account—of about £138 millions. This figure, though rather larger than had been generally estimated, cannot be deemed surprising if we bear in mind the extent of the exodus of foreign short-term funds from London which occurred at the time of the Munich crisis and which reached its climax after the Munich agreement, i.e. in the early days of October. The previous half-yearly statement of the E.E.A. had provided ample demonstration of the effect on our gold reserves of the flight of hot money. That factor was to remain the dominant influence in the foreign exchange market for several weeks after the September storm had blown over, and was again to re-assert its dominance in the latter part of March with the sudden development of the Albanian crisis. The losses of gold suffered by the E.E.A. at the beginning and end of the half-yearly period covered by the latest statement probably account for the bulk of the £138 millions in question. Nor can there be much doubt that it was the movement of capital which took the paramount responsibility for this loss. One imperfect and far from complete measure of this capital factor is provided by the movements of clearing bank deposits over the period in question. These continued their decline in the closing months of 1938, falling from £2,268.8 millions in September to £2,248.6 millions in November. Again, the declining tendency made itself felt in the first quarter of this year—though in this instance the movement is partly explainable in terms of the usual encroachment on banking deposits caused by the seasonal surplus of Government income over expenditure and the corresponding fall in the floating debt.

Since the end of March the net changes in the gold holding of the E.E.A. cannot have been appreciable. At no

time during the past three months has the pressure on sterling been severe, and there have been weeks when the Account must have been a persistent though moderate buyer of gold on balance, its sales in the open market being smaller than its automatic purchases of newly mined metal. One may, therefore, take the latest figures of gold in the Account as an approximation of the position to-day.

It is interesting to view the reduction in the gold holding shown by the latest half-yearly statement in the light of two sets of criteria by which current changes in the gold position of the E.E.A. are often estimated, namely, the size of the tap issue of Treasury bills and the net inflow or outflow of gold revealed by the customs returns over the period in question. The application of the tap bill comparison is simplified in this instance by the fact that over the six months in question, i.e. from September 30th to March 30th last, the total of Treasury bills outstanding hardly changed on balance. At the beginning of this period it stood at £871.5 millions, and at the end at £868.2 millions. Within this stability, however, there was a considerable variation in the distribution of the bills as between the tap and the tender issues. The bills issued through the weekly tender fell over this period by £160 millions, namely, from £526 millions to £366 millions, while the tap issue rose by £156.7 millions, from £345.5 millions to £502.2 millions. This changed distribution accords, though it does not exactly tally, with the changes in the gold holding of the E.E.A. As gold was sold and sterling purchased by the Account to the amount of about £138 millions during this period (ignoring, of course, the Bank of England transfer) an equivalent amount of bills previously issued to the market was withdrawn and replaced by tap bills lying dormant in the E.E.A.

The fact that there is no exact correspondence between the two phenomena is explained by the intrusion of another and quite independent determinant of the variations in tap bills, namely, the operations of Government departments in the gilt-edged market. These were probably small during the six months in question. There is, however, a more important complication for which allowance must be made in the operations effected in the open discount market on behalf of the E.E.A. During recent months it has become increasingly apparent that the sterling resources gained by the E.E.A. as gold was being lost were not utilised to take up tap bills and thus reduce the weekly offerings of bills, but were immediately put into general credit circulation by open-market purchases of Treasury bills. This was done in order to circumvent the immobilisation of credit in public deposits at the Bank of England which would otherwise tend to occur when pressure on sterling was being offset by Exchange Account operations. The result was that, for a time at least, part of the bills held by the E.E.A. were bills which had been issued through the weekly tender and ranked as such. After a three months' lag at the most this discrepancy should be corrected. But within that period, and given the persistence with which the new technique is being utilised, it is quite possible for substantial discrepancies to occur between movements in the gold holding of the E.E.A. and the appropriate adjustments in the tap Treasury bill issue.

Even bigger discrepancies are found when comparing the changes in the E.E.A. gold holding in the six months to March 30th last and the net outflow of gold from this country in that period. During these six months we imported £61,898,000 and exported £235,655,000 of gold, leaving a net export surplus of £173,757,000. Of the total exports, as much as £218,476,000 went to the United States. The explanation of the discrepancy is readily found

in the departure from London of considerable amounts of gold previously held here on foreign account. Both in the September crisis and again last March the threat of war caused appreciable dishoarding of gold, the proceeds of such sales being for the most part transferred into dollars. The gold thus sold provided for long periods the bulk of the offerings in the open market and fed the arbitrage traffic with New York, which is reflected in the enormous exports to the United States during this period. The ban on forward gold dealings had the same effect, since between the beginning of this year and the end of March it led to a steady liquidation of the stock of gold held against forward sales—probably amounting to over £50 millions. Moreover, the transfer to New York of

Central Bank gold previously held in London, but sent across the Atlantic for greater security, also helped further to swell the gold export figures. Those losses during the half year to March 30th are, therefore, far smaller than the evidence of tap bills and of net gold exports might superficially suggest. When due allowance is made for the capital nature of the counterpart of this gold efflux, it will readily be admitted that the loss gives no ground for alarm or apprehension. At the end of March the gold remaining in the E.E.A. and the Bank of England was worth £594 millions at the current market price. Given the departure from London of the bulk of the "hot money" held here on foreign account, the present gold holding provides a most reassuring backing for the currency.

## Building Society Finance

THE survey of the building society movement, which is published with this issue of *The Economist*, has coincided with the closing Committee stages of the Building Societies (No. 2) Bill. New legislation for building societies is not so frequent that it should go unregarded by those who employ the societies as a repository for their savings or those many thousands who are now in the process of repaying advances made by the societies for the purchase of houses. Indeed, it is 65 years since any substantial legislation affecting building societies was passed. And Mr Justice Bennett's decision in the case of Bradford Third Equitable Benefit Building Society *versus* Borders (which was discussed in *The Economist* of February 18th) virtually declared that the most recent development of building society practice—the taking of collateral security in the form of the builders' pool—could be brought within the four corners of the Victorian statute. Friendly society leaders and the paternal liberalism of Parliament in the 'seventies laid sure foundations for the movement's enormous expansion more than fifty years later.

Yet the time had clearly come for a review of building society legislation in the light of modern conditions. For one thing, the law regarding collateral security, despite Mr Justice Bennett's *obiter dictum*, clearly needed to be stated. Other consequences of the Borders case—and indeed of building society development over the past decade—were due for revision. Perhaps if the movement itself had been able to conduct its affairs with the same degree of mutually-shared responsibility as, say, the joint-stock banks, some of these factors might not have arisen. But an important section of the movement found itself unable to accept self-imposed limitations designed to prevent reasonable competition from developing into an unbridled drive to obtain business. Large-scale estate development provided opportunities for a type of "tied-house" mortgage finance in which only one society might be interested. Estates came to be regarded as the prime responsibility of the particular building society concerned; the builder, with whom the society's relations under the collateral scheme had inevitably to be close, became a subsidiary quantity in the mortgagor's mind; and in some cases the limits of prudent lending practice were strained to the utmost.

Such disadvantages are the price of progress in an imperfect world, and it would be a bold man who would argue that the price was excessive. The great majority of mortgagors are satisfied with their property. Despite much justifiable criticism of building standards, the speculative builder has provided the benefits of light, air and modern plumbing at a price within the range of artisan incomes. The results are plain enough from the figures given in the survey. Within a decade the societies' assets and their joint liability to shareholders and depositors have each increased nearly two and a half times; their mortgage advances last year were little short of double those recorded in 1929.

In short, the responsibilities of the movement had become so great that no doubt could be permitted regard-

ing their legal power to use the device of collateral security in their advance business. At the same time, what the societies were unable to achieve through common agreement has been written into the Bill with legal force. Restrictions will be enforced on the conduct of business which is backed by the acceptance of collateral security—business which the legal draftsmen have preferred to describe as a "continuing arrangement" in the Bill. The question of agency and the payment of commissions is to be more strictly defined; the responsibilities of building society directors regarding the valuation of properties offered as security for mortgage advances are re-stated with emphasis; and in future every mortgagor will know if additional security is being taken by the society making the advance.

On such points few would disagree. But the progress of the Bill through Committee (which is reviewed in some detail in an important article in the survey) has revealed

What is your  
*Capitalised Value*  
to your family?

If you listed all your personal assets and converted them into cash what would be the total? Now assuming from a safe investment interest on this amount could be obtained at the rate of 3½% per annum tax free, what income would this produce?

This is the test which you should apply to your own resources, so that you will know exactly what the financial position of your wife and family would be in the event of your death—a contingency which it is unwise to ignore. Most men are disappointed and not a little perturbed after this self examination.

### THE "SAFEGUARD" POLICY

is specially designed to augment personal assets by providing an income (tax free and payable monthly) for your dependants in the event of death. If you survive the period of your family responsibilities the policy provides capital for your own retirement.

You are invited to make an enquiry for full details and for an illustration suited to your own circumstances. Rest assured you will incur no obligation by doing so.

**LEGAL & GENERAL ASSURANCE SOCIETY LIMITED**

Head Office: 10 FLEET STREET, LONDON, E.C.4.

General Manager: VERNON E. BOYS.

Established in 1836 Assets exceed £47,000,000  
Branches and Agencies throughout the World.

the conviction that something further should be done to protect the mortgagor against misconception regarding the value of his house, and against the risk of bad building. One amendment, carried against the Government's advice, which now stands part of the Bill, would require building societies to disclose, at least three days before a mortgage deed was signed, particulars regarding the society's valuation of a property, the purchase of which was contemplated by an intending borrower. A later Government amendment, evidently intended to replace the first, provides for the disclosure of similar information after the loan has been transacted. The societies have rebutted the suggestion that they should be made responsible for defects in housing construction, on the logical principle that a lender cannot be made responsible for the quality of the assets which the borrower offers to him as security. And this week, at a late stage of the Committee proceedings, the Minister of Health has introduced his proposals for certification of houses, with the object of improving building standards and of protecting house purchasers against loss caused by any defection from these standards.

Whether these proposals will assist the house purchaser depends on a number of considerations, involving problems of building costs, and the willingness of builders to encourage the scheme. But the position of building societies in relation to building standards does not really begin and end at the question of warranty, and in opposing any suggestion that they should be made responsible for building standards, the movement has run some risk of pursuing a negative attitude. Doubtless, this impression is wrong, for the societies could not really afford to stand aloof from the interests of those who borrow from them. Borrowers are usually members, and the roots of the movement are buried deep in the principles of mutuality. Although the house purchaser must take ultimate responsibility for his purchase, it would be idle to pretend that he is closely informed, as a principal, of the details of his transaction. Full property surveys would add considerably to the cost of acquiring his house, and the society's information can hardly be made available to each and every intending borrower. But is there no *via media*, by which the advisory services of the movement might be extended further in a genuine attempt to assist the borrowing members of a mutual society? The new scheme of certification may be a step in this direction.

Most of the emphasis during the past year has been on the problems of building societies and their borrowers. But political crisis has also affected the societies' creditors and shareholders. To-day, the societies are again inviting the subscription of new shares on a liberal scale; the restrictions of recent years are being removed fairly extensively. The movement once again has been reminded of the necessity for liquidity, for although building society investors are not easily frightened out of their shares and deposits, some increased volume of withdrawal

has been disclosed during recent months. Despite the increasing part which repayment of past mortgages now plays in building society finance, the movement must still increase its share and deposit capital in order to maintain its financial equilibrium. Yet, while an individual mortgage may be contracted for as long as twenty years, both classes of capital are subject to withdrawal at quite short notice. And while the societies have been engaged in rapidly expanding their mortgage commitments, some, at least, have not taken sufficient care to ensure that their margin of liquid assets was proportionately maintained. Although the absolute total of assets has grown from £412.6 millions to £657.9 millions, between 1932 and 1938 for the 108 societies included in our survey, their cash holdings have actually diminished from £16.8 millions, to £12.4 millions, or from 4.1 per cent. to 1.9 per cent. of the total. Including investments, liquid assets represent 9.5 per cent. of total assets for the leading societies.

These figures make no allowance for bank overdrafts, which can surely be regarded as the worst type of regular building society finance. For the societies included in our survey, the total of bank loans increased last year from £2,576,800 to £3,314,400. In fact, the time is overdue for fuller consideration of the societies' basic problem—which is to develop a new source of semi-permanent finance, and at the same time to improve average liquidity. Mr Walter Harvey, in his recent speech as chairman at the Building Societies Association conference has suggested that a society's mortgages are the correct counterpart of its shares—the equity security, in short—while investments and cash should be related directly to deposits for their special security. Granted this separation, Mr Harvey suggests that quickly realisable securities and cash covering 25 per cent. of the deposit liability would be ample.

Doubtless, this suggestion, if implemented, would increase the attractiveness of deposits as a form of prior security. But already deposits are favoured by opportunities for prior withdrawal, which acts as a counterpart to their lower interest, and a minimum ratio of liquid securities to deposit liabilities, though it would be advantageous, might not be sufficient in itself to encourage the provision of finance on longer term. The precise form of semi-permanent capital for the movement—whether in time deposits or non-withdrawable shares—must be left for expert consideration. Thus, there will remain problems in plenty even when the Bill has passed all its stages. The long-term problems of housing demand, interest rates, the trend of population, and broad questions of monetary policy—all these have an intimate bearing upon present decisions affecting building society finance. The leaders of the movement are thus charged with great responsibilities. The present Bill, coupled with the critical, but not unfriendly, attention of the general public towards building society affairs may encourage them in their task.

## Finance and Banking

**U.S. Senate and the Monetary Bill.**—The bill for extending the monetary powers vested in the President of the United States—powers which lapse on Friday of this week—has received severe manhandling by the Senate. The power to devalue the dollar, which by the proposed legislation was to be extended until 1941, has been repealed. In addition, the Monetary Bill during its passage through the Senate acquired two amendments relating to silver, one raising the price paid by the U.S. Treasury for domestic

### A. R. P.

City Financial Institution possessing range of underground Strong Rooms have surplus accommodation available—30 miles from London, suitable for storage of documents or valuables. Apply Box 17, THE ECONOMIST, 8 BOUVERIE STREET, LONDON, E.C.4

metal from 64.64 cents per ounce to 70½ cents and the other forbidding the Treasury to make further purchases of foreign silver after July 1st. These adverse votes were the result of a "deal." The Senators representing the silver States gave their support to the Republicans bent on curbing the special monetary powers of the President as the price for getting their own amendment increasing the official price paid for domestic metal. The Administration has of course refused to accept these amendments and the Monetary Bill as amended by the Senate has now gone back to a joint committee of the House and the Senate. It will require immense energy and hustle if some reasonable compromise is to be hammered out in time to be dovetailed into the special powers which are lapsing at this very moment. The refusal of the Senate to extend for another two years the powers of the President to change the gold parity of the dollar must obviously be interpreted in terms of political

prejudice and not of constructive monetary policy. If the Senators had their way it must be assumed that the dollar would once again be tied to a rigidly fixed gold parity. The reaction of operators in the foreign exchange markets to this particular vote was to sell dollars and buy gold on the theory that if he was going to be deprived of his devaluation powers President Roosevelt might exercise them while they were still his. The President has already set these fears at rest and the flurry in dollars—which was very well handled by the Exchange Equalisation Account—rapidly subsided.

**The Break in Silver.**—Of far greater immediate practical importance was the amendment decreeing the end of purchases of foreign silver as from July 1. The fear of such a development had been entertained by the silver market for some weeks past and was reflected in the discount on the American shipping parity at which silver has been quoted in London. That discount widened appreciably after the news of the amendment reached London. To add to the uncertainty and confusion of the market the U.S. Treasury then took it upon itself to decree three successive reductions in the price paid for imported silver from 43 to 38 cents. These reductions are perhaps an attempt on the part of the United States Administration to strengthen their case for continued purchases of imported silver, the arguments in favour presumably strengthening as the price paid for the silver falls. Or they may be the signal for a definite retreat from the Silver Purchase Act. That amazing piece of legislation was launched on the wave of inflationary fervour which swept the Administration after the devaluation of the dollar. The case for it has disappeared now that the U.S. banking system is glutted with excess reserves. If the policy embodied in the legislation has lasted as long as it has, it is due wholly to the terrifying vested interest in silver created by the absorption of the metal since the Act came into force. If the signal for the retreat has sounded, the silver market is plunging into a chaotic period of transition that will last until a price level has been found at which the demand in a free market will absorb all the silver on offer.

**External Reactions.**—The London silver market has reacted to these successive cuts in the U.S. import price by adjusting its quotation to a level at or below the shipping parity indicated by the lower dollar price. Despite the size of the fluctuations thus produced, there has been surprisingly little business. The slump has caused no appreciable concern or difficulty as operators have for some time past kept on the bear tack, given the prevailing and well-advertised uncertainties on the future of American silver policy. This absence of concern has not, however, extended to the producing countries, where the threat of a cessation of official American purchases must be viewed with some alarm. This is specially the case in

Mexico, a country which is not only the largest single producer of silver but for which the proceeds of silver exports have constituted an essential element in the balance of international payments. The United States has been taking about 5,000,000 ounces of Mexican silver a month, and the threat of a suspension of these purchases has already led to the abandonment of the peso-dollar peg of 5 pesos to the dollar maintained by the Bank of Mexico, and to a substantial depreciation of the peso in the free market. Canada, which by agreement with the United States has been selling 1,200,000 ounces of silver a month, is also an interested party. The position of the Chinese Government is also involved, since most of its credits hitherto raised in the United States have been secured by sales of silver to the Treasury. There are still ample stocks of demonetised silver in Chinese official reserves which were no doubt destined to swell the stocks of the U.S. Treasury as the need for raising dollar credits arose. Finally, Japan, with her eyes on the \$50 millions of Chinese silver held in the Tientsin concession, can hardly fail to feel some disappointment and apprehension at the sight of a steadily falling American price for the metal and at the fear that American purchases may be withdrawn altogether from the international silver market.

**New Zealand's Needs.**—No more candid or better balanced comment on the financial difficulties of New Zealand could be desired than that made by Lord Balfour of Burleigh, chairman of the National Bank of New Zealand, at the annual meeting of the bank held in London this week. The position of the London funds, having deteriorated to the point reached last November, obviously called for drastic remedial action. Control of the exchanges was one of the available alternatives and, far from condemning its utilisation, Lord Balfour suggests that it has not been used strictly enough. The result is that hopes of an immediate rebuilding of London balances have been frustrated and that the trading banks have been forced in self-defence to ration exchange to their clients. This being the case, it is evident that the immediate and urgent problem confronting New Zealand goes beyond the £17 millions maturity at the end of the year and the financing of the re-armament expenditure to be incurred in Great Britain. In addition to this a substantial amount of fresh credit must be made available if, in the words of Lord Balfour, "serious dislocation of trade, amounting indeed to a commercial default, is to be avoided." This is plain speaking by someone who is admirably placed and fitted to speak on this subject. Commercial default by New Zealand would only be at one remove less disastrous than default on the external debt. It is only by facing boldly up to this ugly reality that the immediate problem of New Zealand can be viewed in its true light. The New Zealand Government must play their part by tightening up the import control machinery and stopping every loophole for the export of capital. But whatever can be done in this direction cannot, in Lord Balfour's opinion, avoid the emergence of a very difficult trade position for the next six months.

## MONEY MARKET NOTES

### The Money Market

CONTRARY to custom, the last week of June has seen excitement chiefly centred in the foreign exchange and bullion markets, and business in Lombard Street has been very quiet. As had been expected the discount market syndicate concentrated all its applications at last week's Treasury Bill tender for bills to be taken up on July 1st. The chief surprise as regards the tender was the lack of outside demand, as bills dated July 1st will this year fall due for repayment on September 30th and might have been considered, therefore,

a very popular maturity. Political fears were probably mainly responsible for the big drop in applications to an

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

amount which gave a margin of only £10.7 millions over the amount on offer and allotted. The discount market, therefore, obtained a big allotment, amounting to 77 per cent. of its requirements, and the fact that it had such a big quota to pay for on July 1st explains the fairly substantial forward business in bills which has taken place with the clearing banks this week. For September bills, to be delivered on Saturday, the banks have quoted 2 per cent. and for Augusts 1½-1½ per cent. There is no indication as to the course of discount rates after the close of the half-year. In view of the political

**Markets Again Recede.**—The question posed here a month ago—how far recovery?—has been quickly answered in June. The markets were then basing a cautious advance on the prospects of an early agreement between Great Britain and Soviet Russia. As the negotiation has dragged on, so their confidence has weakened. And that

## BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

American: *Standard Statistics* Index of 50 Common Stocks.

weakening has been accompanied, towards the end of the month, by signs that the war of nerves is once more being prepared. As a result the *Financial News* ordinary share index is again well on the wrong side of 80, having reached 84.4 at the end of the first week in June. Wall Street, having attempted a mild independent rally has, within the past few days, felt the impact of political unsettlement in its customary decisive fashion. In London, on the other hand, there is no volume of business worthy

(Continued from page 21)

situation and the fact that the Treasury Bill offering is again £50 millions this week, it is not expected that there will be any marked recession.

Money continues to be in plentiful supply. For night advances against bonds the usual rate is  $\frac{1}{8}$  per cent. There has been some borrowing into July, and  $1\frac{1}{2}$  per cent. was paid on Thursday for loans till next Monday.

\*

## The Bullion Market

As pointed out in a Finance Note, rumours of a cut in the dollar before next month had repercussions in the bullion market where on Tuesday there was a rush from dollars into gold. The turnover at the fixing was twice as high as on the previous day at £676,000, and a similar amount is believed to have been sold for hoarding in subsequent dealings. On Wednesday, this tendency

to hedge against a fall in the dollar still apparent, and as the authorities were not disposed to release much gold, buyers obtained very much less than half of their requirements. Later in the day, however, with the change of sentiment in the foreign exchange market, the desire to hoard gold disappeared.

\*

## The Bank Return

CURRENCY requirements over the end of the month probably explain the rise in the note circulation, although it is a much bigger rise than that shown in the corresponding return of last year, which was dated June 29th. There has been no real attempt to offset the withdrawal of notes, for though Government securities are £1.3 millions higher,

other securities are down by £3.3 millions. Nevertheless, bankers' deposits are up by £4.2 millions as there has been a switch-over from public deposits which have suffered from the depletion of Government resources caused by the concentration of payments for last Friday's Treasury Bills on July 1st.

of the name, although a minor spate of trustee issues and electricity stocks towards the end of the month has met a satisfactory response. In the traditional phrase, there is no lack of money awaiting investment, but it is waiting with the apparent conviction that time is on its side. The markets are restless, but calm. Facing a period of possible political trial, they may claim credit even for their inactivity.

\* \* \*

**British General Fixed Trust.**—Rumours that the financial position of British General Fixed Trust, Ltd., had been impaired were confirmed on Wednesday this week by two official statements. The first, issued by the Unit Trusts Association, stated that this body was taking steps to ensure the maintenance of the service of the trusts hitherto managed by British General Fixed Trust, Ltd., and emphasised the trustees' statements that funds vested with them were absolutely safe and intact. The second announcement, from the board of British General Fixed Trust, Ltd., recorded the directors' decision, by reason of insufficient financial resources, to negotiate for the transfer of the management of the trusts to stronger hands. Certain trusts were closed as from June 26th, and the statement, after emphasising the security of the trust funds, anticipated a further early announcement regarding the result of the negotiations. Although, to judge from the volume of business recorded by other groups this week, this announcement has not caused any disturbance of mind on the part of certificate holders at large it raises some important questions. The precise nature of the financial problems of the management company has not been disclosed and it is impossible to say whether they are associated in any way with the absence during the past two weeks of the managing director of the group. So far as the unit holder is

## Foreign Exchanges

At the end of last week and on Monday the foreign exchange market continued to experience very inactive conditions. Very small movements occurred in rates, and turnovers were negligible. On Tuesday, however, after opening at 4.68½, the sterling-dollar rate moved upwards in the afternoon, when New York entered the market as a seller of dollars on a relatively large scale, owing to the confusion over monetary policy in the United States, and closed  $\frac{1}{8}$  c. cheaper on the day at 4.68½. The next day, however, pressure against the dollar soon subsided, and the rate gradually fell to Monday's closing level of 4.68½, at which it was maintained for most of Thursday. Swiss francs improved against the pound on Wednesday and, after touching 20.75 were finally 1 c. dearer on the day at 20.76½, but relapsed to 20.77½ on Thursday. The announcement that withdrawals of more than 500 dollars a week from the Chinese banks in Shanghai, except for meeting payrolls and official requirements, are to be paid in *Waiwah*, that is, cheques which can only circulate between local banks, was followed by a small appreciation in the Shanghai dollar. This was caused by re-sales of sterling exchange, in view of the shortage of local supplies of cash. The new restriction in Japan, reducing the sum allowed to be taken out of the country from 2,000 yen to 500 yen and imposing a licensing system for the return of Japanese bank notes, had no effect on the yen exchange, which is still officially quoted at 1s. 2d.

concerned, the point of prime importance is that the underlying securities for his certificates are intact, and that no loss (unless the levering down of certain of the trusts to a liquidation basis can be so regarded) will fall upon him. The Unit Trust Survey published with *The Economist* of May 13, 1939, showed that the company is directly responsible for the management of four trusts, British General "A," "B" and "C" and First Recovery. General Accident Fire and Life Assurance Corporation acts as trustees for the first three trusts and Martins Bank for the fourth. British General Fixed Trusts, Ltd., is also associated with two other management companies, Improving Securities Trust, Ltd. (which manages the Capital Securities, Commodity Share, and British and American Securities trusts), and also Specialised Unit Trusts, Ltd. (which is responsible for Trust of Rubber and Tin Shares and the Gold Share Trust). For these five trusts Martins Bank acts as trustee. It is understood that the difficulties of the parent company are not directly related to the associated companies and trusts. It may be recalled, in connection with the directors' reference to "insufficient financial resources," that, in October, 1935, the British General "B" Trust was closed owing to an unfortunate error in the Trust Deed, which referred to £170 of 5s. ordinary stock units of Ever Ready Company (Great Britain) instead of the intended 170 5s. units. The management company distributed, in effect, a bonus of three units for every one included in the portfolio at their expense, to the wholly unexpected profit of sub-unit holders. This praiseworthy action doubtless affected the financial position of the parent company, although it had presumably been able to repair some of the damage in the four years which have subsequently elapsed.

\* \* \*

**The Question of Escrow Funds.**—For the moment, the unit holder can content himself with the knowledge that the financial problems of the group involve the management company alone, and do not directly affect the trust funds. The company, at January 10, 1939, had an issued capital of £10,000 preference shares, £75 ordinary shares and £25 "A" ordinary shares. Of this, relatively large sums were held by nominee companies, as shown on page 32 of our recent Unit Trust Survey. A point of substance which affects certificate holders, however, arises in regard to the escrow funds of the group—to which no reference has been made in this week's statements. Our Unit Trust Surveys of the past three years have recorded that provision for future management has been made with the trustees in respect of British General "A" and "C" and First Recovery, and it is to be presumed that some provision has also been made for British General "B." Such escrow provisions are specifically intended to cover just the contingencies which have arisen in the British General case, and unit holders are entitled to assume that the trustees have been satisfied that the amounts set aside are sufficient to cover future management and trustee services for the full life of the trust. The trust deed relating to First Recovery Trust, in fact, requires a declaration by the trustees on each distribution warrant that escrow funds still in hand are adequate to cover the future remuneration of the trustees and managers, and although the trust deed relating to British General "A" is not apparently clear on this point—at the date of the creation of the trust, June 22, 1934, the problem of escrow funds was only just being tackled—it is to be presumed that satisfactory provision has been made. In this event, the problem of transferring the trusts managed by British General Fixed Trust into stronger hands should not present any material difficulty, and, in the last resort, it might well be that trustees of the standing of the two companies acting for the British General trusts would be prepared to undertake the administration of the funds, although such action might lie outside their formal responsibilities. If the transfer of management is completed satisfactorily, and within a short time, it is probable that the unit trust movement will escape any material harm. But the episode underlines the case that unit trust management should be in strong hands. Possibly a term

may now be set to the formation of *ad hoc* management companies of modest size, which lack strong financial connections.

\* \* \*

**Armament Profits Duty Provisions.**—The full clauses relating to A.P.D., and the discussion in Parliament on Monday have done something to clarify what is essentially a complicated tax, but clarification stops well short of the point at which the investor can make any more certain calculation of the incidence of the new tax than the necessarily approximate type of computation given for a few companies on page 724 of last week's issue of *The Economist*. A clearing office is to be set up under the Minister of Supply to ascertain the total business passing to a sub-contractor from a number of principal sources. The Finance Bill shows that contracts for the supply of foreign armed forces will be included in the computation of turnover. Considerable confusion still exists regarding the nature of the materials and commodities which will be excluded on the ground that they are commonly used for non-defence purposes. The impression is that coal and food will not be included. But the exemption might also extend to other materials which, although essential for the defence programme—such as cement and structural steel—are commonly required for other purposes. The allowance for exceptional depreciation is to be fixed at 10 per cent. for plant extensions carried out since January, 1937, pending the computation of the actual depreciation (that is, written down value, less scrap value) on the "restoration of normal conditions," when the 10 per cent. allowances will be suitably adjusted. Shadow factory fees will be included in the computation of armament contracts, although the capital construction costs will naturally not be eligible for exceptional depreciation.

\* \* \*

**Half-Year's New Capital.**—The tables which appear at the foot of page 24 give our usual analysis of capital market activity for the first six months of this year. They show very clearly the blight which has fallen upon the market this year, for even with the inclusion of the latest revival in trustee borrowing the totals are well below those of any comparable six months shown in the tables. Direct public offers amounted to £47.7 millions, compared with £136.3 millions for the first half of 1938—not itself one of the most active periods, although it included a second instalment of defence borrowing, which 1939 so far lacks. Nor are the figures made brighter by the inclusion of securities for which permission to deal was granted during the half-year, for our "new basis" total, set out in the second section of Table I, represents only 52 per cent. of the level recorded in the first six months of 1935, compared with 130 per cent. for 1938. Table II illustrates the

dwindling volume of new industrial issues; conversion operations have been negligible, as Table IV shows; and the detailed analysis of new issues for the half-year which appears in Table III indicates the complete sub-normality of new issue activity in most sections of the market.

**New Borrowing Tactics.**—Indeed, the market has shown signs of recovery only within the last week or two, and then its choice has been limited to Dominion, home corporation, and electric power issues, with a minimum number of industrial issues to lend diversity rather than substance to the new borrowing. An instalment of defence borrowing is still around the corner, and the action of the authorities in opening the gates fairly widely to new trustee borrowing suggests that they are not inclined, at present, to encourage the market's appetite by keeping it on short commons. More important, at present, are the dual problems of pricing and timing. A new technique has been adopted ever since the Treasury issued the second defence loan in June last year at a price significantly below the market level. That technique was evident from the terms of the South Africa, Australia and, particularly, the Hertfordshire loans. Indeed, the latter's 3½ per cent. stock, dated 1945-59, was identical with the Essex loan issued last February, except in the matter of price. The Hertfordshire loan was offered last week at 96½, when the Essex loan, originally issued at 97, already stood three points above the issue price. The authorities have indeed realised that the investor must now be persuaded to subscribe to new loans, whereas up to a year ago he could be largely compelled to take what was offered. But it is a policy which has dangers of its own. A stock at bargain price may appreciate to the

level of the market; or it may drag the rest of the market down to its own level. The magnificent response to the Hertfordshire loan—cash applications covered the issue 15 times—clearly invited the prospect of a substantial opening premium. The stock opened on Monday at ½ premium, but closed at ¼ premium, and although on Tuesday initial dealings saw the stock at ½ premium, the precipitate announcement of the L.C.C. issue, on the same terms as the Hertfordshire issue, sharply depressed the price to ¼ discount, before it closed at par, and also shook the gilt-edged market significantly.

There is nothing wrong with the price of either of the loans, unless it leans, possibly, on the side of generosity, but it was perhaps significant that, even before the announcement of the L.C.C. loan, the normal process of switching had not raised the Hertfordshire scrip to a comparable yield basis with other corporation stocks. The L.C.C. announcement has thus denied the market the results of a crucial experiment in yield adjustment. To be successful, the new technique has to ensure a premium for the subscriber. A few issues on which apparently generous terms fail to lever up the scrips may, however, encourage the opposite presumption by investors that the authorities are prepared to acquiesce in some increase in interest rates, although that would be contrary both to their declared policy, and also to their interest in a firm gilt-edged market for future defence borrowing. But if harm is possible through undue generosity, it is certain to occur if issues appear with undue haste. A period of digestion was inevitable under the previous technique of squeezing the last ounce from the market; but it should be avoided now.

TABLE I

† Price at which dealings commenced. (a) All for conversion purposes.  
(b) Partly for conversion purposes. (c) Dealings opened on June 29th at 1½ discount.

The contrast between the premium on the Essex loan—which was not affected this week by the surprising appearance of the L.C.C. issue—and the initial dealings in the Hertfordshire scrip (which fell to ½ discount on Thursday) is marked.

## Company Notes

**New Company Results.**—The investor learned in the new issue boom to distinguish between new companies formed with prospects but no earnings record and well-established concerns supplying new products and developing new techniques. Three companies in the latter class have issued satisfactory reports in the past week or two. British Plaster Board is linked mainly, though not entirely, with the construction industries; Metal Box manufactures containers; while Thomas de la Rue makes a variety of products and has lately branched into plastics. All three companies have profits records showing considerable evidence of recent progress, subject naturally to the superimposition of general trade conditions. In the past six years the profits of *British Plaster Board* have increased tenfold, and in order to bring capital more into line with assets, a capital bonus is now contemplated. For eleven months to March 31, 1939, total profits amounted to £564,810, against £534,121 for a full year, and the distribution of 45½ per cent. actual is at the same annual rate of 50 per cent. During the year, however, the ordinary capital was increased in connection with the acquisition of D. Anderson and Son, and the final dividend of 25½ per cent. is payable on the higher capital. Total profits of *Metal Box* last year were £486,542, against £516,077, owing to general trading difficulties, but this is the first interruption in a record of consistent progress. The distribution of 17½ per cent. is repeated, from equity earnings of 27.9 per cent., against 29.5 per cent. There is, however, no check to the company's policy of expansion and improvement, and to provide further working capital an issue of ordinary shares on bonus terms at the rate of one new for seven held, at 50s. a share, is proposed, and should provide half, at 50s. a share, is proposed, and should provide some £440,000 gross. At the current price of 73s. 9d., the rights are worth 3s. The trebling of *Thomas de la Rue's* total profits was one of the outstanding industrial results in 1937-38, and a further advance is shown from £223,523 to £289,991 in total profits for 1938-39. The plastics moulding branch, which is a recent development, does not seem to have contributed to these satis-

factory earnings, for results are described as disappointing owing to acute competition, though an adequate return is ultimately expected. Earnings for the equity are practically unchanged at 49.1 per cent., but their distribution is more generous, for 26 per cent. is being paid, against 12 per cent. and a 10 per cent. capital bonus.

**Amalgamated Anthracite Collieries.**—During the past year, Amalgamated Anthracite shareholders have been fully occupied in considering and rejecting the original reorganisation scheme and in passing the new scheme. In the same period the undertaking has achieved results for 1938 which scarcely differ from those of 1937. Combined trading profits are slightly higher at £299,808 against £296,319, and the parent company's proportion is £296,803 against £296,161. An improvement in the coal trade was apparently offset by higher labour costs, but compared, say, with the years 1929-34, the group still shows a substantial decline. Only in 1939 will the accounts be clear of all charges and adjustments arising from the recent scheme, and the latest report thus covers a transitional, rather than a new, accounting era. The scheme was approved by the Court only twelve days ago; but the balance sheet at December 31st has been adjusted to show the new assets position, by the inclusion of a £4,918,339 assets revaluation deficiency, which will be covered by the capital reduction. Excellent consolidated balance sheets and profits statements are also given in comparative form for three and five years respectively. Interest and redemption funds absorb £144,301 against £205,560, for £621,360 of second debentures was redeemed during the year. A charge of £40,000 is made for depreciation for the half year to December 31st, and £10,000 for expenses of the scheme, and after transferring £187,318 towards the assets deficiency, £63,588 is carried forward. The chairman has indicated the possibility of a small ordinary dividend on the new capital if profits should reach the 1937 level in future. In view of the 1938 results, this may suggest that the new equity capital may be regarded as being close to the earnings zone. But such possibilities evidently could be over-rated.

**Union Cinemas Position.**—The working results of Union Cinemas for 1938 show the expected improvement. Trading profit for the previous 12½ months period was, of course, affected by a legacy of difficulty, but the improvement in revenue from £145,484 to £203,524 appears satisfactory. Financially, however, it marks but a small step towards rehabilitation of the company's position. The net

## BANK OF LONDON & SOUTH AMERICA LIMITED

charge for interest (excluding payments from capital) is substantially higher at £110,446 against £65,326, for bank overdrafts have increased from £1,302,343 to £1,439,547 over the year. Taxation absorbs £1,500 less at £23,500, but unlike 1936-37, when the revaluation of subsidiaries' assets made a depreciation provision unnecessary, the latest accounts show a charge of £50,000 which was foreshadowed in the previous report. With heavy capital losses appearing in the balance sheet, there is, of course, no question of dividend payments, and the final result is an increase from £8,739 to £28,317 in the carry forward. The complexity of the balance sheet position is no less evident than at the end of 1937. A new loan to subsidiaries appears for £25,497, so that interests in subsidiaries stand at £407,524 gross against £315,171. The suspense account is unchanged at £3,192,629, of which £2,181,020 represents the "writing up" of properties on acquisition. On the liabilities side, debts to associated companies total £199,527 against £162,097, though there is a substantial reduction in creditors, from £529,800 to £372,193. In addition, contingent liabilities appear in respect of guarantees, and the company has entered into obligations involving a total of £105,000. Shareholders, however, must await the meeting to learn if it is intended to deal with the capital losses on a more permanent basis. It is some consolation that the normal working of the group's properties seems to be giving satisfactory results under the control of the Associated British group.

**London Tin Results.**—The improvement in tin prices which began in the latter part of 1938 came too late—especially in combination with heavily reduced quotas—to affect the producers whose accounts have been published this year. Hence the 40 per cent. reduction in London Tin Corporation's total profits from £344,083 to £206,326 (before crediting the special dividend of £62,069 from the accumulated profits of Anglo-Oriental and General Investment Trust) is drastic, but scarcely surprising. Shareholders, however, at least have the consolation of a report which includes detailed facts and comments concerning tin in general and the Corporation's interests in particular. Profits in the past three years are analysed below:—

|                                   | Years ended April 30 |         |            |

† Investigation expenses.

For such an unfavourable year the 4 per cent. dividend is satisfactory, but granted the inevitable cut in the distribution, the chief interest in the accounts lies in the balance sheet. Depreciation on the investment portfolio at April 30th was approximately £200,000 on book values exceeding £3½ millions—a reasonably healthy position in view of contemporary market difficulties. But the Corporation has taken a strict view on the need for keeping capital intact, and has made a special provision of £120,000 for writing down its interests, which reduces the depreciation to under £70,000. This special provision, moreover, is not entirely covered by Anglo-Oriental's special dividend and

consequently a considerable reduction in the carry-forward (which was, however, increased to an exceptional level in 1937-38) has occurred. The provision seems to have been applied chiefly to quoted investments in Eastern subsidiaries, whose book cost stands well below their market valuation, while other quoted securities showed a depreciation of about £208,000 below the book cost of £2,565,009. Considerable progress has been made in the financial rehabilitation of the group, but its current revenue prospects do not suggest any material increase in investment income for the current year. At the current price of 3s. 1½d., London Tin 4s. shares yield £5 8s. per cent.

**Anglo-Iranian Outlook.**—Though Anglo-Iranian Oil profits in 1938 were lower than in 1937, Lord Cadman was able to show at this week's meeting that the increased proportion of world oil sales which the company won in 1937 was maintained last year. International tension in 1937 had accelerated the demand for defence purposes, but, when these special orders ceased last year, the gap was not filled by industrial demand, and it was further accentuated by the depression in the United States, where stocks of fuel oil accumulated. Dealing with the company's productive activity, Lord Cadman referred to a reduced offtake from the ageing Masjid-i-Sulaiman field in the future, but the Gach Saran field is to be connected to the company's refinery at Abadan to expedite development, already in the early stages. Again, Anglo-Iranian last year concluded the survey of its future concessionary territory, involving some 100,000 square miles. This area has been delimited during the year in agreement with the Iranian Government. The company's refining capacity is being extended by the installation of a distillation unit and two cracking plants at Abadan and the erection of two new refineries. For the future, Lord Cadman was necessarily non-committal, and he stressed that the course of prices and sales must depend upon international trading conditions. Prices in 1939 so far are lower than last year, although rising petrol consumption and controlled production in the United States may lend some assistance to the market. Although the immediate economic outlook is clouded, it is evident that the company is fully protecting its technical future.

**Great Boulder Proprietary Controversy.**—It was a foregone conclusion that there would be a great deal of excitement at last Friday's meeting of Great Boulder Proprietary. In the event, the meeting lasted for no less than four and a half hours, with Mr Claude de Bernales, chairman and managing director, and Mr C. L. Nordon, representing Shareholders' Committee, occupying most attention. Much was heard, inevitably, that was irrelevant. But the meeting did at any rate serve to clear the air very considerably. On a show of hands the report was carried by an 81-56 majority but immediately a poll was demanded, as, of course, had been expected. And on ten other resolutions relating to the election or re-election of directors and appointment of auditors, further polls were demanded. It did not generally come as a surprise that the subsequent result of the voting went in favour of the company, but the margin was perhaps greater than most people had expected. The resolution that the report and accounts be adopted resulted in 1,145,858 votes for and 742,575 against, or a majority for the Board of 403,283. Voting in respect of the other ten resolutions resulted in similar substantial margins in the management's favour. What happens now? Has the whole controversy finally been brought to a conclusion? These are relevant questions to which it is difficult to give very categorical answers at the present stage. So far there has been no official announcement from the "Grundt" Committee on its future policy, although it has been strongly suggested in some quarters that the Committee will endeavour to continue its campaign. Meanwhile it is pertinent to note that the application which has been made to the Board of Trade for an inquiry into the company's affairs still stands.

**Commonwealth Mining and Finance Dealings.**—Commonwealth Mining, which is directed under the same auspices as Great Boulder, has also been a centre of discussion this week. The Stock Exchange Committee indicated on Wednesday that an application for permission to deal in 4,850,000 2s. 6d. shares in the company had been rejected, subject to the right of appeal until noon on Monday, July 10th. On June 21st, the Committee announced that it had decided again to postpone consideration of the application, and the line relating to the shares in the Supplementary List was ordered to be removed. The Committee's decision follows the reconstruction of the capital of the company, which was approved by the Court on May 22nd. As a result, the issued capital of £1,212,500 in 5s. shares was reduced to £606,250 in 2s. 6d. shares. The company was formed in 1934, and in 1935 the 5s. shares touched 17s. 10½d.; their highest level this year has been less than one-tenth of that price, and the quotations for shares of the associated mining companies are now nominal.

**De Beers' Prospects.**—About a month after Sir Ernest Oppenheimer's speech in Kimberley, De Beers' shareholders have received welcome news of the preference dividend payment for the half-year to December last. The current year began in better style than the latter part of 1938, and although business became quieter in the spring, Sir Ernest's opinion is that "short of some great disaster" the volume of trade in 1939 will be better than for 1938. It may be concluded from his speech, however, that the internal organisation of the diamond industry now affects De Beers' shareholders to a greater extent than before. The main stress of Sir Ernest's address, indeed, was upon the advantage to De Beers and its associates of their holding in the Diamond Corporation. The net effect of their purchase of a further 2,500,000 Diamond Corporation shares would be the additional investment of £750,000 in the diamond business, assuming that the vendors took—as was hoped—the balance of the purchase price in De Beers deferred shares. Sir Ernest did not enlarge on the reasons for adopting this particular method of finance (which was discussed on page 210 of *The Economist* of April 22nd), but he showed that, as a result of the priority given to the Diamond Corporation's sales, the return on De Beers' investment would assist the company to keep its mines in operation and to meet its preference charges even in bad times. In addition, there are advantages to be derived from quota adjustments between Diamond Corporation and other members of the Association. The demand for diamonds may be somewhat disappointing at present, but the payment of the balance of the 1938 preference dividend may be a hopeful portent for De Beers' shareholders.

**The Week's Company Profits.**—Our usual analysis of profit and loss accounts, appearing on page 50, contains 42 companies for which comparable figures are available, and whose net profits amount to £2,420,000, against £2,593,000, a decline of 6½ per cent. Aggregate net profits of 1,449 companies which have reported this year to date amount to £195,370,000, some 8½ per cent. less than £2,593,000, a decline of 6½ per cent. Aggregate net profits The week's results are discussed in preceding notes, and on page 30, under the heading "Shorter Comments."

**Company Meetings of the Week.**—Reports of company meetings will be found from page 36 of this issue. Lord Cadman's speech at the *Anglo-Iranian* meeting is discussed on page 26, while the proceedings at the *Great Boulder Proprietary* meeting are also reviewed on that page. At the meeting of *Globe, Telegraph and Trust*, the Earl of Middleton showed that any further improvement in the trust's Cable and Wireless holding would be available for the ordinary stockholders. Mr V. W. Yorke informed shareholders of *Mexican Railway Company* that the current half year's gross receipts had been exceptionally good. At standard exchange rates, a net profit of £19,000 against the previous half year's loss of £36,000 is anticipated. At the meeting of *Guest, Keen and Nettlefolds*, Mr R. S. Beale referred to an increase in orders for Guest, Keen, Baldwins and to the new G. K. and N. Ledloy Steel, which is now being developed at Scunthorpe and Cardiff. At the meeting of *Allied Ironfounders*, Mr A. W. Stevens declared that though exports had declined 15.37 per cent. last year, current efforts to retain and expand the company's overseas trade were meeting with success in certain specialised products. Lord Horne informed shareholders of *Zinc Corporation* that though the immediate objective of the mine development programme is 450,000 tons of ore per annum—which should be achieved this year—the scheme would allow a gradual increase to 750,000 tons. Mr H. W. Allard informed shareholders of *Marston Valley Brick* that turnover for the year to March, 1939, was greater than the previous year, but falling prices had more than offset the increase. Mr R. W. Townsend referred in his speech at the *African and European Investment* meeting to the valuable prospecting mineral options in the Orange Free State, which adjoin the Western Holdings property. At the meeting of the *National Bank of New Zealand*, Lord Balfour of Burleigh emphasised that a sympathetic attitude towards New Zealand's financial difficulties would provide security for the British investor in New Zealand. Lord Hirst informed *General Electric* shareholders that export business had developed with countries, such as Turkey, which received support from the Government. At the *Bank of British West Africa* meeting the Earl of Selborne discussed the stagnation in West African trade which had accounted for the year's disappointing results.

## THE STOCK EXCHANGES

### London SETTLING DAYS

|        |         |
|--------|---------|
| TICKET | ACCOUNT |
| JULY 4 | JULY 6  |

POLITICS have not relaxed their grip upon the stock markets, and once again conditions have remained subdued, with a growing tendency towards sagging prices. Dealers are willing to respond to better news, but recently they have received little encouragement. A disposition towards improvement on Tuesday was soon damped down in the gilt-edged market by the announcement of the L.C.C. loan, with a consequent adjustment of prices, and Thursday saw a further sharp reaction, though business remained small.

In gilt-edged stocks, there was a lack of public buying, so that prices tended to weaken on small sales. Hopes of a settlement of the Tientsin question brought an attempt at cheerfulness on

Tuesday, but it was quickly checked by the L.C.C. loan. In mid-week, conditions were dull, optimism concerning China being in part offset by the depressing effect of Mr Churchill's speech, so that on balance there was little change. War Loan was in the forefront of any movement in gilt-edged, and led in Thursday's sharp setback.

In the earlier part of the week, corporation issues were under the same influences as Government stocks. But later on they became weak on further consideration of the L.C.C. loan, though it was a question of adjustment rather than any selling pressure. As a result of these factors, and partly of stag selling, the Hertfordshire loan began the week at ½ premium, but was ½ discount on Thursday.

Dominion issues became a little steadier in mid-week, after showing an easier tendency at first. Among foreign bonds, European issues gave way on Monday, then stood their ground, and

finally turned dull again. Chinese issues received support after pronounced weakness. Movements in Japanese bonds were relatively small.

**Home rail** stocks became firmer, after slight initial weakness, in common with other markets, though there was some further recession in mid-week, despite the good traffics. Argentine issues were neglected, but fairly steady.

**Industrials** moved similarly to gilt-edged stocks. Prices drifted on Monday, made a mixed showing on Tuesday in an unsuccessful attempt at cheerfulness, and then resumed their slow downward movement. Iron and steel shares were dull at first, but became steadier towards mid-week, though business remained on a small scale throughout. Coal shares were varied, the movement one way or the other not being pronounced. In the engineering section, quotations moved within narrow limits.

In the *mining markets*, Kaffirs lost ground on Monday on Cape and local selling, Crowns and Sub-Nigels being particularly weak. On Tuesday, prices became firmer on Paris support and some bear-covering, but in mid-week Continental sales of Sub-Nigel and other leaders created an easier tone. Among the developing mines, East Rand issues were easier on Monday, and after sporadic improvements on Tuesday, were rather lower on the week, as were Venterspost, West Wits and Western Holdings. Finance shares followed the general trend, while West Africans under the lead of Ariston, recovered in mid-week. De Beers were a firm feature on Tuesday. Base metals were influenced by the lower price of silver.

| Group                     | Yields (%)       |                 |                  |

# Industry and Trade

**Supplies of Scrap.**—The present shortage of scrap which is restricting the production of steel is very largely the result of recent developments in the import and export trade. The following table shows monthly figures of trade in iron ore and scrap since January, 1938:—

| TRADE IN IRON ORE AND SCRAP (£'000) |         |       |         |      |
|-------------------------------------|---------|-------|---------|------|
|                                     | Imports |       | Exports |      |
|                                     | 1938    | 1939  | 1938    | 1939 |
| January .....                       | 1,862.2 | 393.0 | 10.8    | 75.8 |
| February .....                      | 1,620.5 | 483.3 | 23.1    | 85.9 |
| March .....                         | 1,586.9 | 518.4 | 20.9    | 34.9 |
| April .....                         | 1,126.4 | 627.2 | 41.4    | 31.1 |
| May .....                           | 917.0   | 807.9 | 20.1    | 26.5 |
| June .....                          | 751.0   | ...   | 8.5     | ...  |
| July .....                          | 710.3   | ...   | 30.9    | ...  |
| August .....                        | 582.5   | ...   | 77.3    | ...  |
| September .....                     | 463.0   | ...   | 67.7    | ...  |
| October .....                       | 421.3   | ...   | 61.9    | ...  |
| November .....                      | 337.2   | ...   | 117.7   | ...  |
| December .....                      | 381.2   | ...   | 112.4   | ...  |

It will be seen that until May there had been only a very small increase in overseas purchases. In the previous steel boom in 1937 imports had been increased much more rapidly and makers of steel not only had adequate supplies for their requirements but, owing to the recession last summer, also held large accumulated stocks. They do not seem to have realised that, with a re-armament programme on hand, these stocks were bound to be wanted before very long, and in August last year exports of iron ore and scrap began to increase substantially, partly as a result of the liquidation of these stocks. A large proportion of this increase was due to sales to Germany, whose purchases from this country rose from £14,500 in July to £57,700 in August and £71,400 in November. Towards the end of

last year when re-armament work was speeded-up stocks of scrap were known to be low, but imports were not increased at anything like the same rate as in 1937-38, while exports rose to their peak. Even in May imports had not reached the level of the corresponding month in 1937. It is becoming increasingly necessary that further supplies should be obtained. Most of our imports have come from the United States, Sweden and Algeria, but the British Iron and Steel Federation are reported to be trying to find additional sources of supplies in order to speed up production. The industry has, in fact, had a series of unlucky guesses. It was caught short in 1937 and, then, as a result of over-buying, had excessive stocks in 1938, which were sold abroad just when a new shortage was appearing over the horizon.

**Worsted Spinners Redundancy Proposals.**—At the mass meeting of worsted spinners held in Bradford in the middle of this month, the progress of the scheme for fighting the evils of redundant machinery and price cutting was reviewed. There was much discussion but few definite conclusions. A further call was made on the agreed levy to pay for the exploratory work that has been done, but the active attempts to produce a practicable scheme are apparently to lapse. It appears that owners of at least one-fifth of the spindles are in opposition, and about another 20 per cent. are sitting on the fence unwilling to bind themselves to the supporters of the plan unless that proves to be the winning side. A proposal that every firm should scrap or seal a proportion of its plant, whether busy or not, met with scarcely any support. Also the committee that has been investigating possibilities has been

(Continued from page 29)

## BY OFFER FOR SALE

**North Metropolitan Power Station Company.**—Offer for sale of £1,700,000 second mortgage debenture stock, 1965 at 91½. Ranks with other second mortgage debentures. Redeemable by 1965 by annual drawings at par from 1942, or from 1951 on notice. Stations leased to Northmet Power Company for rentals enough to cover debenture service. Northmet profits (before rentals of £129,202, £131,992 and £136,945, respectively): 1936, £564,919; 1937, £580,231; 1938, £626,360. Proceeds for Willesden and Brimsdown stations. Lists closed 9.45 a.m., June 28th.

**James Barnes, Ltd.**—Offer for sale of 50,000 7½ per cent. cumulative participating redeemable £1 preference shares at par, and 100,000 2s. ordinary shares at 3s. 6d. After 7½ per cent. on ordinary, preference rank *pari passu* with ordinary for further 2½ per cent. non-cumulative; they are redeemable at 25s. from June, 1943, on notice. Makers and merchants of overalls, etc. Net assets, £100,000 (of which £43,772 goodwill) purchased for 50,000 £1 preference and 500,000 2s. ordinary shares. Profits, before depreciation and controlling directors' commission, t.c., years to November 30: 1936, £24,999; 1937, £32,200; 1938, £36,231. Whitehead Industrial Trust like issue for £50,280 plus expenses, net cost of preference at par and ordinary at 3s. 1-87d. Lists closed 5 a.m., June 28th. Over-subscribed.

**Wessex Electricity Company.**—Offer for sale of £1,500,000 3½ per cent.

debenture stock at 96. Redeemable at par, August, 1959, or from 1954 on notice. Profit (before depreciation of £92,830, £65,000 and £100,000 respectively, and interest): 1936, £253,222; 1937, £251,881; 1938, £259,769. Assets available December, 1938, to cover existing mortgage debentures: £3,026,426. Lazard Bros. and Company take issue at 93½, or 95½ including expenses.

## BY STOCK EXCHANGE INTRODUCTION

**Denny (William) and Brothers.**—Issued capital 250,000 £1 ordinary and 250,000 6 per cent. cumulative £1 preference shares. Shipbuilders and marine engineers. Net assets, £646,266. Profits before amounts written off investments: 1936, £11,720; 1937, £115,258; 1938, £148,023.

**A. Lewis and Company (Westminster), Ltd.**—Issued capital, 150,000 £1 ordinary shares, and 100,000 5½ per cent. cumulative £1 preference shares (including 50,000 taken by Messrs Joseph Seabag and Company at 19s. 6d. net). Total net assets £269,337 (including £48,000 from preference share placing). Net profit: year to March 31, 1938, £14,372; 1939, £15,967.

## SHORTER COMMENTS

**Company Results of the Week.**—OHLSSON'S CAPE BREWERIES have fully maintained their net profits at £176,724. Net profits of STEPHENSON CLARKE AND ASSOCIATED COMPANIES have risen from £225,895 to £238,252. Part of the increase, however, is due to the receipt of a half-year's dividend from a new invest-

ment, Cambrian Wagon Works. ANGLO-CYLON AND GENERAL ESTATES are again paying 10 per cent., since the tea crop was higher than in 1937, while the fall in price was only 0.3d. a lb. Lower profits, however, continue to rule for most tea companies, and both BUDLA BETA and BUXA DOOARS are reducing their dividend. Among textile companies, COHEN AND WILKS have experienced a severe setback, and in 1938 made a trading loss of £24,014. It is possible to pay the preference dividend only by a transfer of £11,000 from reserve. Considerable recovery is shown by GROUT AND COMPANY, whose profits for 1938-39 total £24,259, against £16,825. There is a substantial rise in PATONS AND BALDWIN'S total surplus from £426,661 to £539,023; special allocations include £30,000 for A.R.P. expenditure. Total revenue of ATLAS ELECTRIC AND GENERAL TRUST has fallen moderately from £244,907 to £228,553. An analysis of investments shows that over 59 per cent. are held within the British Empire. General trading difficulties have resulted in a fall from £88,062 to £78,960 in the total profits of BRITISH GLUES AND CHEMICALS. In spite of some decline in net profits, SANGERS, LTD., are again paying 25 per cent., though for the latest year there is no special distribution from a capital profit as in 1937-38. Companies associated with the building trades frequently show decreased profits. Net profits of EASTWOODS FLETTONS are £46,105, against £57,422. Total profits of W. N. FROY AND SONS have fallen by nearly £20,000 to £8,824, and the preference dividend is paid entirely by means of a draft upon the carry forward. HOVIS, LTD., have again had a satisfactory year, and are repeating the 20 per cent. dividend from net profits of £166,241, against £155,319.

(Continued on page 46)

by no means unanimous as to the feasibility of any scheme yet suggested and one or two important resignations from this committee by representatives of large firms are spoken of. Another suggestion that appears to have little chance of success is that a section of the trade, such as the coloured spinners or the flyer spinners, should organise and by making their sectional scheme a success, tempt the bulk of the industry to follow suit. Such sectional schemes, however, have been tried in the past, unsuccessfully. It is also possible that some enthusiasm which certain cross-bred spinners showed for the plan when it was suggested a year ago has evaporated because those spinners are now better employed, due to Government orders for Service fabrics. The meeting has excited remarkably little comment in the West Riding where the scheme either for elimination of redundant plant, or standardisation of conversion costs, is generally regarded as dead.

**The Next Sugar Year.**—After informal discussions extending over almost one week, the International Sugar Council held a formal meeting in London on June 24 to discuss supply conditions in the third quota year commencing on September 1st next. As far as can be ascertained three countries were not represented at the meeting and some other delegations were not in a position to express the views of their respective governments until further consultation. Consequently the details of the arrangements made will not be made public for some time. If all governments accept the proposals no further meeting of the Sugar Council will be necessary to put them into effect. At present the export quotas under the scheme for the 1939-40 season amount to 3,695,000 metric tons including the reserve quota of 47,500 tons. At the middle of June the free market requirements for the next season were estimated by the Sugar Council's Statistical Committee at about 3,000,000 tons, but this estimate has since been revised in an upward direction. On the face of things, therefore, there will be an excess of supplies of not much less than 500,000 tons if the quotas remain unaltered and are used in full. The Council has no longer the right to reduce the quotas and all adjustments and concessions have now to be made voluntarily. In official circles, however, the new scheme for the third quota year, which seems to be more flexible than the regulation for the previous two seasons, is judged with considerable optimism. The prospects of a balance between supply and demand are considered sufficiently favourable for the more distant futures in the raw sugar market to have been pushed up by 6d. per cwt. in the last fortnight. But it is still not certain that the additional supplies authorised for the current season will be available before the end of August and quotations for the July future have risen by 1s. 6d. per cwt. to 8s. 9d. per cwt. since the middle of June.

**Lancashire Cotton Corporation.**—According to official announcements made this week, the progressive policy of the Lancashire Cotton Corporation, Ltd., is being maintained. The directors have completed negotiations for the purchase of the Manor Mill, Chadderton, Oldham, which contains 60,000 ring spindles, and is considered one of the most up-to-date and efficient mills in Lancashire. It is also understood that the directors have recently had under consideration the question of re-equipment of some of the mills, and it is reported that the mule spindles at the Hawk Mill, Shaw, and the Kent Mill, Chadderton, are being taken out and replaced by ring spindles. This development is partly due to the distinct shortage of piecers in the mule spinning mills, while mills with ring spindles can obtain a plentiful supply of female labour.

**Retail Trade in May.**—Compared with a year ago, the value of retail sales in the shops and stores included in the statistics published in this week's *Board of Trade Journal* increased in May by 9.1 per cent. This abrupt rise (the corresponding increase for last month was only 1.3

per cent.) is largely due to the combined effect of two statistical accidents. Firstly, as Whitsun and the pre-holiday shopping fell in June in 1938 and in May in the current year, it is probable that a large part of the rise will be counter-balanced by a fall in June. Secondly, the volume of retail trade in May, 1938, was exceptionally poor, so that the increase over this month of 9.1 per cent. gives an exaggerated picture of the improvement in trade during the current year. A more accurate indication of the trend in retail trade than the increase over the figures of a year earlier is given by the index numbers of the daily value of retail trade, with 1937 as base; the table below is taken from the *Board of Trade Journal*:—

INDICES OF DAILY VALUE OF RETAIL TRADE IN GREAT BRITAIN  
(Average Daily Sales in 1937=100)

|                  | Total | Food | Non-Food |         |           |

The influence of Whitsun shopping is revealed by the sharp rise in the May index of sales of apparel in 1937 and 1939, when Whitsun fell in that month. But excluding the effects of Bank Holidays, the trend in retail trade has been steadily upward in the last six months; rising employment and stationary prices for consumer's goods continue to expand the level of purchasing power.

**Co-operative Trading Results.**—The unsettled trade outlook at the beginning of the year has been reflected in the returns of the Co-operative Wholesale Society for the twelve weeks ended April 8th. Total sales amounted to £27,063,976, an increase of £377,482, or less than 1½ per cent., over the corresponding period last year. A decline of £200,273 in the output from the C.W.S. productive works reduced the total to £9,848,688; so that the Federation drew £17,215,288 of its supplies from sources outside the movement. Lessened values in some commodities are also apparent in the results. For instance, supplies from the nine flour mills decreased in value by 19½ per cent. to £1,888,919, while quantity increased by 2½ per cent. The trade of the C.W.S. in milk for the twelve weeks was £1,219,682, and in milk products £769,850. The slowing down of the improvement in the trade of retail distributive societies in practically all sections except food-stuffs has led the C.W.S. directors to suggest the introduction of bazaar trading to combat the competition from fixed-price stores which has affected many of the societies in the larger towns. The directors' proposals, which will require the consent of the local societies, will be presented to the business meetings held later in the year. They suggest the operation of bazaar stores with an upper price limit of five shillings. There will undoubtedly be keen discussion before any change takes place, particularly since many societies are equally anxious to maintain both their autonomy and their local prestige. The proposed bazaars will not give a dividend on purchases, and many of the managers feel that such an innovation will cut against the most attractive feature of present-day co-operative methods.

**Wool Supplies.**—The prospects for the new wool season, which opens on July 1st, are very much more cheerful than they were at this time last year. Then a carry-over in the main exporting countries of 165 million lb. weighed on the market, while demand, especially in the United States and in Britain, was steadily falling with the general level of business activity. But the revival in trade during

last winter, assisted by the growing demand for uniforms, has greatly increased the imports of wool into the main consuming countries. The following table is compiled from the "Wool Intelligence Notes" and the latest trade returns:—

| RETAINED IMPORTS OF RAW WOOL<br>(Million lb.) |               |       |  |
|-----------------------------------------------|---------------|-------|--|
|                                               | January-May   |       |  |
|                                               | 1938          | 1939  |  |
| U.K.....                                      | 326.9         | 424.8 |  |
|                                               | January-April |       |  |
| Japan .....                                   | 39.6          | 43.0  |  |
|                                               | January-March |       |  |
| France .....                                  | 99.2          | 169.9 |  |
| Germany .....                                 | 91.6          | 100.1 |  |
| Italy .....                                   | 19.4          | 20.1  |  |
| U.S.A. ....                                   | 11.7          | 64.0  |  |

As a result of this expansion in consumption, stocks of wool in producing countries at the end of the season are expected to be very small. The unsold surplus of Australian wool, for example, is not expected to exceed 60,000 bales (of 300 lb.) against 238,000 bales at the end of June, 1938. The new Australian clip is officially estimated at 3,096,500 bales, against 2,920,000 bales produced in 1938-39, but the reduction in the carry-over will more than offset this small increase. Wool prices have been very stable since the beginning of the year, but in recent weeks the demand for cross-bred wools, which are used in the manufacture of uniform cloths, has increased sufficiently to raise prices at the wool auctions. It seems probable that both civilian and military demand will continue to expand, and unless exchange difficulties restrict the purchases of the totalitarian countries, sales and prices in the new season are likely to favour the sheep farmers.

**Wheat in Excess.**—On Tuesday, the quotations for July wheat on the Liverpool futures markets fell to 3s. 9½d. per cental, the lowest price since the record low level reached in 1931. For the last twelve months wheat prices have been falling, due firstly to the expectations and secondly to the realisation of the record crop of 1938. The surplus of that crop, piled up in granaries in the Argentine, in Canada and in the United States, is estimated by the International Institute of Agriculture at some 776 million bushels, an amount which, without the 1939 crop, is greatly in excess of the annual world imports of wheat, which are likely in the current season to equal about 580 million bushels. Prospects for the harvest which is now being gathered in the Southern States of America and in some European countries are also favourable. The acreage sown to wheat in the main European countries shows a slight increase over the record acreage of 1938, and although it is not likely that yields will again be as high as last year, a harvest of normal or above normal size can be expected. In Canada, acreage is little changed from last year, while in the United States "intentions to plant" indicate a reduction of about 1 per cent. in the total area sown to spring and winter wheat. Whatever may be the size of the new crops in the Southern Hemisphere, therefore, it seems that production in the season beginning on August 1st will be sufficient to meet importers' requirements, and in addition there are stocks more than equal to a year's trade in wheat. As long as European countries, through fears of war, continue to expand their wheat production and to restrict consumption by high internal prices, and as long as producers in export countries are encouraged to maintain their wheat acreage by Government subsidies, there can be only temporary recovery in the low levels of wheat prices.

**Shorter Hours in the Shoe Trade.**—The history of improvement in wages and working conditions is almost entirely a history of small sectional measures of regulation which have been followed by large-scale modifications in the industrial structure. The restriction of the hours worked by women and children in textile factories, in the

last century, began a process which entailed the reduction in the effective working period of machinery and plant, and automatically curtailed the hours of an increasing number of adult male workers. A similar development has been followed in one section of industry after another, and a notable new advance was made last week with the conclusion of an agreement between the National Association of Wholesale Boot and Shoe Distributors and the Shop Assistants' Union. The agreement, which covers the employees of 37 wholesale boot and shoe distributing houses, provides for a normal working week of 45 hours. Overtime at the rate of time and a quarter will be paid for hours worked in excess of 48. Long hours are naturally not so prevalent in wholesale as in retail distribution, since there is less necessity to conform to the hours set by the shoppers themselves, but limitation of hours and guaranteed minimum wage rates are still the exception in wholesaling, and the necessity for improvement is in many cases urgent. Last week's agreement introduces an element of order and definition in a field where much remains to be done. Progress towards reasonable hours and wage rates for those employed in wholesale and retail distribution should be easier now that there is a substantial nucleus around which to build.

**Stable Wholesale Prices.**—During the last fortnight the increasing political uncertainty has overshadowed the markets and checked any general upward tendency. *The Economist* complete index of wholesale prices, for example, showed a small rise from 115.4 (September 18, 1931 = 100) to 115.6 in the fortnight ended last Wednesday:—

SEPTEMBER 18, 1931 = 100

| June 28          | 115.6                                      | 134.4                 | 122.3                | 175.0                       | 114.4*                       | 155.3*                             | ...                                       | 98.3*                                  |

\* These figures refer to June 24th.

† Monthly average.

In the United States, the index for prices of primary products has been depressed by the low level of grain and vegetable oil prices. Details of the component series of *The Economist's* complete index of British wholesale prices are given below:—

|                     | Sept. 18, 1931 | June 22, 1938 | June 14, 1939 | June 28, 1939 |
|---------------------|----------------|---------------|---------------|---------------|
| (1927=100)          |                |               |               |               |
| Cereals and meat... | 64.5           | 87.0          | 67.6          | 69.0          |
| Other foods .....   | 62.2           | 57.8          | 61.9          | 62.1          |
| Textiles .....      | 43.7           | 51.5          | 54.5          | 53.6          |
| Minerals .....      | 67.4           | 91.7          | 91.8          | 91.8          |
| Miscellaneous ..... | 65.8           | 75.0          | 75.8          | 75.7          |
| Complete index      | 60.4           | 72.0          | 69.7          | 69.8          |
| 1913 = 100 .....    | 83.1           | 99.1          | 96.0          | 96.1          |
| 1924 = 100 .....    | 52.2           | 62.2          | 60.3          | 60.4          |

The rise in the index for cereals and meat is due to the sharp advance in bacon prices, which more than offset the fall in wheat prices. Raw cotton and flax were again cheaper, and were largely responsible for the fall in the index for textiles.

## Team Valley Offers:

# ABUNDANT LABOUR

**7** Labour Training Centres and 14 Junior Instructional Centres are making your future labour worth its wage.

**12,146** women—hard workers, quick learners—are ready to give light industries a flying start.

**13,998** juveniles are waiting to take their place in modern industry.

**117,758** men—many skilled, all adaptable, all with a steady desire to keep in work—offer new industries the best labour in Britain.

**143,902** people—from whom you can hand-pick your labour force. In the North 19% await work—in London only 8.3%.

**120** firms representing 54 industries have rented premises on the Estate in the last 2½ years: 10 have since expanded their factories.

**Team Valley tenants say Northern labour is the best in Britain**

**TEAM VALLEY**

**TRADING ESTATE**

Team Valley is a 700 acre estate on the outskirts of Newcastle. The Estate Company is financed by Government grant, operating under commercial control without profit. Standard or special factories are rented, complete in every respect. The Estate is equipped with canteens and playing fields for workers, restaurants, club, committee rooms, etc., for employers and executives. Backed as it is by the

Government schemes for the Special Areas, Team Valley Estate can offer its tenants services otherwise unobtainable—from help in applying for capital onwards. For further information, or for arrangements to view the Estate, please write to: W. Irvine, North Eastern Trading Estates Limited, Kingsway, Team Valley Estate, Gateshead-on-Tyne, 11. Telephone: Low Fell 76071

## INDUSTRIAL REPORTS

THE upward trend in industrial activity continues. There are some reports of a shortage of business from coalfields dealing mainly in household supplies, but the high level of industrial demand more than compensates for this. The total output of saleable coal in the week ended June 17th was 4,771,200 tons, compared with 4,532,000 tons in the same week of last year. Supplies of steel scrap are still insufficient to meet the demand, although imports from the Continent and from America are now coming to hand more freely. The arrival of foreign scrap enabled tinplate production to reach 72.23 per cent. of capacity during the week ended June 17th.

The lighter trades also report satisfactory progress and the continued expansion of the consumption goods trades is reflected in the latest figures for retail sales, which are discussed in a note on page 31.

## Coal

**Sheffield.**—On the inland market there is a satisfactory demand for industrial fuels, and collieries are working fully up to quotas. There is a quieter demand from public utility undertakings, and household coal is in poor request. Coke is moving more freely, particularly blast-furnace quality. Export business is chiefly confined to early shipments. There is an improved demand for coke, and cobbles and washed trebles are well taken up.

★

**Newcastle-on-Tyne.**—The markets have an easier tendency due to less foreign inquiry, and the seasonal decline in domestic household requirements. In the Durham section, supplies of gas coals are more plentiful and unscreened bunkers are more easily obtained owing to the quietness in foreign coaling station business. Coking coal is firm, however, and there is a good demand for patent oven coke. Northumberland steam collieries are comfortably placed, large coal being well booked, but smalls continue to offer freely.

★

**Glasgow.**—Shipments from Scotland are maintaining their recent expansion and the total to date this year, at 5,400,000 tons, is nearly 500,000 tons ahead of the comparable figure for 1938. Contract orders are the mainstay for the time being, for new business is quiet. This is not causing anxiety, for supplies, notably in Fife, are well booked until after the "Fair" holidays in July. Lothian and Ayrshire producers, however, would welcome business in steam coal and the larger sizes of nuts. In Lanarkshire, the predominantly inland supply area, the slow demand for house coal is affecting round fuel in general despite some curtailment of output. There is some increase in the utility undertakings' demand for smalls, in view of the coming holidays and of the political uncertainties.

★

**Cardiff.**—Firm conditions continue on the market. No important new orders have been placed during the

week, although there has been an inquiry for 60,000 tons for the Greek railways. The contract commitments of the collieries are exceptionally heavy, and shipments at the South Wales docks of the Great Western Railway Company last week totalled 468,100 tons, compared with 416,187 tons in the same week of last year. Best large steams, dry sized grades and duffs are relatively scarce, but the current output of other classes is slightly in excess of demand. The improvement in the patent fuel trade is being maintained and the shortage of coke supplies has been accentuated.

★

**Workington.**—The coal industry is maintaining its winter output which finds a ready sale despite a slackness in local landsale which will persist until August. Demand for industrial fuel, especially from coking plants making for pig-iron smelters, is large, and shipments to Ireland and to the Scandinavian countries average between 8,000 and 9,000 tons weekly. Prices are firm.

## Iron and Steel

**Sheffield.**—The iron market remains rather quiet, in spite of a slightly improved call for foundry pig. Forge requirements are easily met; forward business is on a very limited scale. Pig-iron prices are expected to remain unchanged for the next three months, although no official announcement has yet been made. The strongest section of the iron market at present is basic pig, which is well bought. Heavier dealings in hematite are probable after the reduction in prices. There is little business in finished iron, the demand for common bars being the best feature.

Demand for heavy basic steel billets still exceeds the supply, and the position is not greatly eased by such imports as have become available. Trade in acid billets and small steel bars is active, and makers of wire rods have more business than for some time. There is heavy pressure for structural steel.

The steel scrap market is very firm, and users are unable to secure full supplies. Some American material has arrived, but not sufficient to make any great impression. Foundry heavy cast iron is well taken up, and cast iron borings are in good request. Uncontrolled prices are rather firmer.

★

**Middlesbrough.**—Steel makers are exceptionally busy. The increased number of blast furnaces producing basic pig iron has been insufficient to meet demands and further quantities of semi-manufactured steel are being imported from the Continent. In addition, two large cargoes of steel scrap of 6,000 to 7,000 tons each have arrived in the Tees during the past week from America. Government requirements for steel for A.R.P. and other purposes are being steadily fulfilled. At the same time commercial business is increasing so far as is possible under present conditions.

The pig iron position is practically unchanged. There is no increase in the demand for foundry pig iron, but makers of East Coast hematite pig iron are hoping that consumers will be in a position to place larger delivery orders

when the lower prices come into operation in July.

Although there is a good demand for export coke local requirements are easily met at the official quotations. Imports of foreign ore to June 26th are practically the same as during the corresponding period in May. Any heavy steel melting scrap which merchants can offer locally is readily taken up.

★

**Glasgow.**—Owing to the near approach of the Annual Fair Holiday in Glasgow and district, users of all sorts of steel material are pressing makers to give earlier deliveries. Raw steel, semis and finished material are all in great demand and output has already been speeded up and plants are never idle. Re-rollers are still finding it impossible to obtain adequate supplies from home producers but Continental material is now coming to hand and there is less anxiety regarding continuity of supply. Tube makers in the Lanarkshire area are particularly busy. Local manufacturing industries are working to capacity and both new business and inquiries are plentiful.

★

**Cardiff.**—All branches of the South Wales iron and steel industry are active, particularly the sheet and tinplate re-rolling branches. The output of tinplates in the week ended June 17th was 72.23 per cent. of capacity—the highest proportion touched since December, 1937—but last week sales were at the rate of 85 per cent. of capacity. This increase had been facilitated by the release of steel for tinplate manufacture in consequence of the arrivals of foreign scrap, which is more widely employed in the manufacture of steel in South Wales than in most of the other producing centres. But the shortage of scrap is likely to continue, and it has been arranged that South Wales furnaces are to receive hematite pig iron from other districts as from July 1st at 5s. per ton below the scheduled price. There is little abatement in the demand for sheets under the re-armament programme, and the available blast furnaces are all in operation.

★

**Workington.**—Inquiry in circulation in the North-West Coast hematite pig-iron market is so great that the resumption of large-scale business when the price reductions take effect is virtually assured. Orders are already held that will keep the six furnaces blowing between Workington and Barrow in full blast until October, and, probably, until the end of the year. The make is insufficient for local, Midlands, Scottish and South Wales needs, but considerable stocks still exist and it may be September before they are cleared. Steelmakers are assured of work for their mills until the winter. Workington is becoming increasingly active on billets, though rails are still being rolled. Barrow is busy on rails, billets and strip.

★

**News from Abroad.**—Demand on international steel markets has decreased slightly but trade has remained satisfactory and steel masters are still receiving orders. Semi-products are in

request, and the demand for castings, sheets and sections has also remained comparatively good, but hoops and galvanised sheets show a weaker tendency. Prices have nevertheless remained firm, and rebates on official prices are now granted only to a very limited extent on a few products. Efforts are still being made to advance prices on those markets where special reductions had to be made some time ago in view of outside competition.

The Joint Co-ordinating Committee of the Cartel will meet at Liège about the middle of July, when the redistribution of quotas in connection with the territorial changes will again be on the agenda. The question of the quota accounts will be reviewed, and—in the presence of the American representatives—the American competition will once more be discussed. Simultaneously, the International Rail Makers' Association will hold its quarterly conference and examine the possibility of price increases on certain markets.

## Textiles

**Cotton (Manchester).**—There has been rather more activity in certain sections of the market, though the improvement has not been general. Raw cotton prices have been slightly easier. A scheme for an export subsidy on United States cotton is still being evolved. It is uncertain whether the figure will be one cent or two cents and there are some rumours of a varying amount according to prices. The barter deal between the British and United States Governments, whereby this country will be supplied with about 600,000 bales of cotton in exchange for an equivalent amount of rubber, has caused much discussion, but this event is not likely to be a market factor. Weather advices from the American cotton belt have been more favourable.

During the week there has been heavy buying of coarse American yarns, sales of some mills being equal to three weeks' production and an increased turnover in coarse and medium Egyptian yarns. Some spinners are now fully sold for four to five months ahead. The chief support for piece-goods still comes from the home trade and Government contracts. Although export business has been of fair extent, there are complaints from makers of offers being on a low basis.

★

**Jute (Dundee).**—There has been a good deal of uncertainty in the raw jute market in the past fortnight. Despite favourable reports of the new crop sellers have been very reserved, making few offers. An abundant crop is expected in the coming season provided weather conditions continue as good as they are now. The committee of the Indian Jute Mills' Association has recommended that 20 per cent. of the hessian looms and 7½ per cent. of sacking looms should be sealed up from August 1st, in order to reduce the stocks of cloth in Calcutta, which have risen to enormous proportions, in spite of the 200 million sand bags which have been made. The announcement of restriction had little or no effect on the market and prices of Calcutta goods have failed to advance. Old crop jute prices have begun to decline because supplies of the new crop are now available. Hitherto there has been a very wide difference between old and new

## Grains

THE spell of cool wet weather in the United States and Canada continues to improve the prospects of the American wheat crop, although with the start of harvest operations in the southern States, sunshine will be welcomed shortly. The fear of a large outbreak of rust is receding, although there remains a possibility of considerable damage to the standing crop. This favourable crop news, combined with selling pressure from Canada, Argentina and Australia, caused wheat prices in Liverpool to drift downwards again, and July futures touched 3s. 9½d. per cwt. during the week. The maize market was affected by the resumption of American offers and by the lower level of wheat prices; the market in feeding barley also suffered from the competition of cheap wheat, while there were also liberal offers from North Africa.

## Other Foods

**Provisions.**—The demand for bacon has improved and in spite of somewhat larger supplies, prices rose by 5s. to 6s. per cwt. last week. Egg prices continue their seasonal rise from the low level of April and May.

★

**Colonial Produce.**—The rise in the raw sugar market continues, since it is still doubtful if the extra supplies authorised by the Sugar Council will be available to meet the increased demand of the current season. The quotations for the nearest future have risen by 1s. 6d. per cwt. in the last fortnight and refined prices have been correspondingly marked up. The cocoa market remains dull and prices of Accra fell below 20s. per cwt.

★

**Fruit and Vegetables.**—The trade in old crop potatoes has come to an end and demand is now concentrated in earlies. Strawberries continue to dominate the fruit market, but arrivals of English raspberries and cherries sold well. The trade in salads has been affected by the return of colder weather.

## Miscellaneous Commodities

**Oils and Oilseeds.**—Falling prices for grains continue to depress the market for these commodities, the demand for which is seasonably quiet. The exportable surplus of linseed in the Argentine is now estimated at 464,000 tons, against 488,000 tons on June 10th. Exports continue at a moderate level, and Indian shipments have again fallen in price. Prices of Egyptian cotton seed have further declined owing to pressure to sell heavy quantities afloat; less than £4 17s. 6d. per ton has been accepted for old seed on spot and near at hand. The market for refined cotton oil is dull and prices remain unchanged at £20 10s. per ton ex Hull.

★

**Rubber.**—Another idle week has passed and after minor fluctuations, the price of standard ribbed sheet was unchanged on Wednesday compared with a week ago. The interest of the market is centred on the rubber-cotton barter scheme, but it is not yet known how the rubber will be secured by the British Government.

## THE COMMODITY MARKETS

A GENERAL feeling of uncertainty over political developments continues to restrict the volume of business in many raw materials. Wheat prices at Liverpool continue to drift downwards and prices of the major non-ferrous metals also fell, with the exception of tin. In this market the restriction of supplies at last brought prices on Thursday to £230 per ton and the buffer pool has already sold some of its holdings. Sugar prices also rose sharply, on renewed fears of a shortage in the current season, but cotton prices were again lower. In the United States, the downward tendency in prices was counteracted last week by the rise in the sugar market and by the maintenance of internal grain prices; Moody's index of wholesale prices rose from 142.1 (December 31, 1931 = 100) to 143.3 in the week ended last Wednesday.

## Metals

**Copper.**—The market fluctuated slightly in the early part of the week, but closed on Wednesday at a price of £42 per ton, thus showing a net loss of 3s. 9d. on the week. Demand was very small chiefly owing to seasonal causes, but sellers remained reserved, so that the undertone was fairly strong.

★

**Tin.**—The price of standard cash tin gained another 15s. to close on Thursday at £230 per ton, the highest official level since October, 1937. For the first time since its formation, the pool sold some of its holdings this week. Despite these sales the backwardation has widened to £5 10s., and the premiums on high quality brands have expanded further. For Straits tin they are now £10 and for Banka Tin £20, compared with a reasonable level of £5 for both classes. The barter agreement between the United States and the United Kingdom, concluded last week, does not include tin as was expected. It is not known whether the discussions on tin will be continued later, although rumours to this effect circulated on the London Metal Exchange this week.

★

**Lead and Spelter.**—Lead lost 5s. to close on Wednesday at £14 10s. per ton, while spelter closed 2s. 6d. down at £13 17s. 6d. per ton. Both markets were featureless. At the annual meeting of Zinc Corporation, Lord Horne said that the 10 per cent. reduction in the lead output may not be necessary for much longer, as consumption is high. Statistics so far available do not indicate that the lead and spelter situation is as hopeful as this statement suggests, but there is no reason to doubt that the position has improved somewhat in the last few months and that the improvement is still making headway.

## COMPANY MEETINGS

## THE ZINC CORPORATION, LIMITED

RECORD TONNAGE MILLED

LOWER PRICES AND COSTS

PROTECTION FOR ZINC

LORD HORNE'S REVIEW

The twenty-eighth ordinary general meeting of The Zinc Corporation, Limited, was held, on the 27th ultimo, at the Chartered Insurance Institute, 20 Aldermanbury, London.

The Right Hon. Viscount Horne of Slamannan, P.C., G.B.E. (chairman of the company), said:—Ladies and Gentlemen—Our report, to which is attached those of the consulting engineers and mine manager, is presented in a form which gives a clear and comprehensive view of the operations of the Corporation over the past financial year.

## THE MINE AND THE MILL

The mine itself continues to develop in complete accordance with our expectations. As I predicted a year ago, there is a small decline in the published ore reserves. This is entirely due to the alteration we made some time ago in our methods of opening up new levels. The small decline in the tonnage of ore blocked out, I am able to assure you, is temporary only.

The tonnage of ore milled during the year was easily a record of 414,500 tons, while the grain again showed improvement, reflecting the care exercised by the underground management in preventing dilution. The mill recoveries were the best so far reported, exceeding even the excellent results of the previous year. The costs per ton of ore treated showed a welcome decline.

## PRICES

While the items reasonably under our control, viz., output and metallurgical and general efficiencies, showed marked improvement, the market for our products suffered a serious relapse. The price of lead on the London Metal Exchange for the year averaged nearly £8 per ton less than in 1937, a drop of over 34 per cent. The price of zinc fell by over £8 5s. per ton, a drop over 36 per cent. The effects of these serious declines in the value of our products are clearly visible to you in the accounts now before you. The total value of our production was nearly £441,000 less than in the previous year, while the net balance on our trading account decreased by nearly £384,000. In these figures you have the reason for the severe reduction in your dividends—the probability of which I pointed out to you at our last annual meeting.

## THE DIVIDEND

Subject to your confirmation to-day, a participating dividend of 1s. 6d. per share, absorbing £67,412, will be paid along with the half-year's payment of the dividend on the cumulative preference shares, the total distribution being £91,981. The total distributed in respect of the year 1938 is £247,180 less than in the previous year. In view of the extent of the contraction in our revenue due to the fall in metal prices, this result is not unsatisfactory.

Disbursements.—We referred in our report to the large disbursements in taxation and dividends and the heavy expenditure on capital account during the year, with their natural effect on our cash resources, as shown in our balance sheet. We paid out in 1938 in taxation, royalty, etc., £165,023; in dividends £362,908; on account of capital expenditure £231,821, and, in addition, we expended £97,690 on mine development, a total of £857,442. Our cash and advances as a consequence have been affected materially, and show a decline of approximately £435,000.

## DEVELOPMENT

I am glad to say that the programme of mine development and re-equipment at Broken Hill, which we commenced in 1936, is approaching completion, and all its major financial requirements have been satisfied. In the three years 1936, 1937 and 1938 we spent nearly £454,000 in plant and £192,000 on the new shaft and its equipment, or a total of approximately £646,000. Of this amount we have received a preliminary payment of £100,000 on account of the estimated participation of New Broken Hill Consolidated. Of

the total expenditure approximately £192,000 was appropriated from profits and the balance added to capital.

The reports of our technical manager and consulting engineers, Messrs Bewick Moreing and Company, and of the mine manager, Mr A. J. Keast, are fully illustrative of the twelve months' operations at Broken Hill. Of the mine itself, I repeat to you to-day what I said to you a year ago, that the ore body, gauged by extent and grade, never looked better.

## NEW MAIN SHAFT

I referred at our last meeting to the fact that in sinking the new main shaft—which, as you know, is the largest in size and capacity yet put down in Australia—we had encountered heavy ground at and below the 13th level. Notwithstanding this adverse development, it was officially expected that the new shaft would be completed and in operation by the middle of 1938. Unfortunately, the ground proved heavier than estimated, and while the shaft was completed in September last, and to some extent put into use, a more serious delay resulted in completing the ore pass system and new main shaft ore pocket. The effects of those unexpected difficulties are referred to in the technical reports already in your hands. The extra expense involved is considerable, while the delay in bringing this equipment into operation and obtaining the financial advantage of its use is a serious disappointment.

However, we are now advised that by the end of July the work necessary to meet the directors' demand for absolute safety will be completed, and all productive operations will then be centred on the new main shaft. When this takes place and the new sand pass system is in operation, we expect to benefit considerably in both costs and efficiencies.

While the delay in the completion of the new main shaft and ore pass system is a great disappointment, I can give you the assurance that the reorganisation and re-equipment of your property have been carried out in a manner which reflects the highest credit on the efforts of the mine manager and his staff. (Cheers.) The information given to the board by our colleague, Mr John Govett, on his return from Australia, and by the managing director in his reports to me, leave no doubt in my mind that you not only have a notable lead-zinc mine but that, with its present organisation, development and equipment, it ranks as one of the foremost in the world. Given reasonable prices for our products, we should have no fear of the future. (Hear, hear.)

## LEAD PRODUCERS' AGREEMENT

You will have noted from the press announcements that in the latter half of 1938 an arrangement was entered into by all the leading lead producers outside the United States to curtail production or sales by 10 per cent. This cut has now been in operation for about seven months, and has decidedly strengthened the statistical position of the lead market. Whether its continuance will be necessary in view of the present heavy consumption of lead remains to be seen.

As you know we hold nearly 30 per cent. of the issued capital of New Broken Hill Consolidated. By agreement with that company we are carrying out its exploration and providing the necessary equipment. While this property is still in the exploratory stage, the results of our work up to date add to our confidence that our interest in it will prove a valuable asset.

## ASSOCIATED COMPANIES

You are aware of the relations that exist between the companies operating at Broken Hill, viz., North Broken Hill, Limited, Broken Hill South, Limited, and ourselves. These three mines are operated quite independently, but through Western New South Wales Electric Power Proprietary, Limited, The Broken Hill Associated Smelters Proprietary, Limited, and the Electrolytic Refining and Smelting Company of Australia, Limited, the air and power requirements

for the three mines are dealt with collectively, as well as the smelting and refining operations at Port Pirie and Port Kembla. Under these arrangements all our power and compressed air at the mine is supplied by the Western New South Wales Electric Power Company, of the capital of which we own 32 per cent. Similarly, all the smelting and refining of our lead concentrates is carried out by Broken Hill Associated Smelters at Port Pirie, and of this company's capital we own over 25 per cent. In the Electrolytic Refining and Smelting Company of Australia, which handles much of the Broken Hill Associated Smelters by-products, we have nearly 27½ per cent. of the issued capital.

I draw attention to these facts for the reason that as our operations increase so do our power, air, smelting, refining and other requirements expand, and the finance of any necessary additions to the plant and equipment of these associated companies must be shared in by us. Our policy is to preserve, if possible, an interest in the power, smelting and refining industries associated with our mine at least equivalent to our output. In conjunction with our associates in Australia we are now reviewing this situation, and when this review is complete, we shall be in a position to determine whether any special steps will be necessary in order to maintain our interests in keeping with the services we require.

## PROTECTION FOR ZINC

Last year our production of zinc concentrates reached nearly 75,000 tons and was well ahead of any previous record. The whole of our production was delivered under contract to the Electrolytic Zinc Company in Australia and the Imperial Smelting Corporation in the United Kingdom. The latter—in which we have a substantial investment—has recently been granted additional protection by the British Government in fulfilment of its promise to safeguard adequately an industry essential to the defence of the country. (Hear, hear.) In conjunction with our associates in Australia, we have agreed to minor amendments in our contract with the Imperial Smelting Corporation—which will ensure that the objects of the British Government will be realised. We are confident that the best interests of the producers of zinc concentrates at Broken Hill lie in the maintenance of efficient treatment plants both in Australia and the United Kingdom. If to the new tariff scheme there should be added, as is hoped, a cartel of zinc producers providing for the reasonable regulation of imports into the United Kingdom, then I believe that the position of the zinc smelting industry, both here and for other countries will be greatly strengthened.

## THE PROSPECT

The changes and new adaptations in industry which are taking place as a result of the requirements of the present grave situation are obvious to all. So far as we are concerned, it is enough to say that all our efforts will be first directed towards meeting national necessities. (Cheers.)

Prosperity for us is governed by our production and the price we get for it. The programme of mine enlargement and re-equipment which we are just completing will enable us progressively to increase our output up to 750,000 tons of ore—or more—per annum, provided that markets can comfortably absorb the resulting metals. Our immediate objective in the matter of output, however, is still 450,000 tons, which, in the absence of untoward happenings, we hope to reach this year.

If the present demand continues I am hopeful that we shall see a higher level of prices for both metals. We are less interested in silver than the other mines at Broken Hill, owing to the lower content of silver in our ore. The outlook for this metal is obscure. Taking the three metals together, my opinion is that prices in the second half of the year will be definitely more profitable to us than those which we have realised up till June. (Hear, hear.) If we could but be sure of peace in the world I would not hesitate to predict a return to a wide prosperity in which our industry would share. (Cheers.)

It is a pleasant duty to record our deep appreciation of the valuable services of Mr A. J. Keast, the mine manager at Broken Hill, and his staff. I congratulate Mr Keast and his staff on the results of their efforts. In this connection it is not unfair that I should specially mention to you Mr George Fisher, the underground manager, and his assistants, Messrs Pitman, Hooper and Anderson, Mr Carey, the chief engineer, and Mr J. L. Mayson, his assistant, and Mr M. A. Mawby, who is in charge of our efficient mill, and also his assistant, Mr Thomas.

Our thanks are also due to the local directors in Melbourne for their devotion to the interest of the corporation, to Mr Victor Edquist, of Messrs Bewick Moreing and Company, and to Mr J. Fitzgerald, the active manager of the Melbourne office, and to Mr M. D. Hotchin, the local secretary.

The report and accounts were unanimously adopted.

## NATIONAL BANK OF NEW ZEALAND, LIMITED

## INCREASED PROFIT DESPITE DIFFICULTIES

The 67th ordinary general meeting of the National Bank of New Zealand, Limited, was held, on 29th ultimo, at 8 Moorgate, London, E.C.

The Rt. Hon. Lord Balfour of Burleigh (chairman of the Bank) said that the profit and loss account showed a net profit of £106,524, or £797 more than last year, which, in view of all the difficulties of the year and the heavy expenses to be met, especially by way of taxation, they considered satisfactory. As was foreshadowed at their annual meeting two years ago, they found it necessary to face a substantially increased salaries bill in New Zealand. They proposed to pay a final dividend of 2½ per cent., less British income tax, making 5 per cent. for the year.

When the present New Zealand Government came into power in 1935 the country had not yet emerged from the depression, and the Government decided to try to stimulate trade and business activity by a policy of monetary expansion. Whatever might be to blame for the big inroad made upon the sterling balances, the position by the end of November last had become so serious, especially in view of the Government £17 millions sterling loan maturing on January 1st next, that drastic measures were clearly necessary if default was to be avoided. The three most obvious courses open to the Government were exchange control, exchange depreciation, or a general reduction of expenditure, including salaries and wages.

## EXCHANGE CONTROL

The Government had decided upon exchange control, and when it was first introduced they hoped that it would lead to an alleviation of the position sufficient to enable the sterling balance to be so far built up as to leave no doubt of the successful conversion of the 1940 maturity. Unfortunately, their hopes had been disappointed.

When exchange control began it seemed a reasonable assumption that the granting of import licences by the Customs or of transfer permits by the Reserve Bank implied that sterling would be available as cover, and it was regrettable now to find that licences and permits had been granted substantially in excess of the funds likely to be available in the next few months.

He was not expressing any view as to whether it was desirable or not that a primary producing country like New Zealand should attempt to switch over a large part of its economy to secondary industries, but it was clear that we in this country could not deny New Zealand the right to try to do that which had been done in many other countries, including some parts of our own Empire. To the suggestion that such action by New Zealand should be met by a refusal to buy New Zealand products, he must point out that New Zealand was still, and was likely to remain, their best customer per head of population, and the import control was being deliberately administered in such a way that the United Kingdom proportion of New Zealand's imports could not decline and was almost certain to grow.

## MR NASH'S VISIT

As shareholders were aware, Mr Nash, the New Zealand Minister of Finance, was at present in London on a brief visit. He had announced in the Press that the objects of his visit had been concerned with defence, with trade relations, and with finance.

In the field of finance, one of the matters which was no doubt receiving the attention which it merited was the maturity on January 1, 1940, of the 3½ per cent. New Zealand Government Loan of £17,000,000. It seemed to him that in considering any request for fresh credit in London to finance essential trade which might be put forward by Mr Nash they must remember that there was no country more loyal to the Empire than New Zealand, and, moreover, the trade between New Zealand and the Mother Country was of incalculable importance to both countries. He therefore earnestly hoped that, whatever might have been the rights or wrongs, the wisdom or the folly, of the policy pursued by Mr Nash and his colleagues, and however difficult the present moment might be, those who were negotiating with him would remember that an attitude of sympathy and generosity now would do far more than rescue the New Zealand Government from difficulties which were largely of their own making; it would save further losses and unemployment in British firms which exported to the Dominion, it would provide the security of which the British investor in New Zealand was in need, and it would strengthen, in a way which every one of them desired, the ties that bound together the components of the Empire.

The report and accounts were unanimously adopted.

## BANK OF BRITISH WEST AFRICA, LIMITED

### DIFFICULT CONDITIONS

The forty-fifth annual general meeting of Bank of British West Africa, Limited, was held, on the 29th ultimo, in London.

The Earl of Selborne, K.G., G.C.M.G. (the chairman), said that the accounts showed a net profit of £42,878, as compared with £60,105 in the previous year, and the directors recommended a final dividend of 2 per cent., less tax, making 4 per cent. for the year. The results had been disappointing, but that disappointment had been caused by no failure of good management nor by the incidence of bad debts. It had been caused by the stagnation of trade in West Africa.

In 1937 there was a serious dispute between producers and purchasers of cocoa about price, and the whole cocoa crop of the 1937-38 season on the Gold Coast was for a long time held off the market. At last the Colonial Government succeeded in inducing the two sides to the dispute to make a temporary truce. That truce still continued, but the cocoa trade had never really recovered its former buoyancy. Moreover, the prices of all agricultural products of West Africa remained deplorably low, and the effect on trade was obvious. The stagnation in trade was also reflected in the finances of the Colonial Government of Nigeria. Revenue for the year 1938-39 was likely to fall short of the estimate by about £900,000, and reserve funds were expected to be drawn upon to the extent of £950,000. The Gold Coast Government was in a more fortunate position, but only because they had a healthy and expanding gold mining industry upon which to fall back. The agricultural depression in Sierra Leone was also to some extent mitigated by its mining activities in gold, diamonds and iron ore. On the other hand, the outlook for the Gambia, which lived by the export of groundnuts, was one of almost unrelieved gloom.

In March, 1938, the Colonial Office sent out a Commission to West Africa to examine and report on the conditions and prospects of the cocoa industry, and they were in expectation of knowing before long what action the Colonial Office decided to take. The bank would do all in its power to assist in the good work of bringing back prosperity to West African agriculture.

The report was unanimously adopted.

## GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED

### SATISFACTORY RESULT IN DIFFICULT YEAR

The sixty-sixth ordinary general meeting of this company was held, on the 26th ultimo, in London.

The Right Hon. the Earl of Middleton, P.C., K.P. (the chairman), said that in the profit and loss account expenses showed a slight decrease, mainly due to the amount required for N.D.C. being lower, and the proposed dividends, the same as last year, absorbed £255,793, and, after placing £20,000 to reserve, left a balance of £117,992 to be carried forward.

Interest and dividends on investments was lower, mainly due to increased income tax, and interest on deposit and dividends on general reserve investments was reduced by the loss of income on the funded income stock sold to provide the special bonus.

In view of the increased income tax and the difficulties experienced by companies during the year under review, he thought the reduction of only £7,300 compared with the preceding year was very satisfactory.

It had been a difficult year for the investor, and until world affairs were more settled it was difficult to visualise any great improvement, but their main holding—Cable and Wireless—appeared to be in a very sound position and they could look forward with confidence, in the absence of any catastrophe, to a continuance of a reasonably good income.

The wider powers of investment to which they had asked the consent of the stockholders some years ago had added to the stability of their receipts and had consequently been justified. One result had been that they had recently received offers of new issues from some of their electrical holdings at attractive prices, which they were taking up, thus adding to their portfolio of securities, the income from which was sufficient to meet the preference dividend and expenses, so that any further improvement in their main holding in Cable and Wireless would be available for the benefit of the ordinary stockholders.

In spite of the very adverse conditions, their capital investments showed an appreciation of over 25 per cent., while the depreciation on the general and special reserves was only just over 5 per cent.

The report was unanimously adopted.

## MEXICAN RAILWAY COMPANY, LIMITED

### BETTER PROSPECTS

The one hundred and forty-eighth ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 28th ultimo, at Winchester House, London, E.C.

Mr Vincent W. Yorke (the chairman) said that the steady deterioration in the business, on which he had dwelt at their last two meetings, would seem to have been checked and that the immediate prospects appeared to be, though only slightly, yet distinctly better. Every reason for anxiety for the future, however, still remained, and he felt that such encouraging features as existed might at any moment disappear.

Turning to the details of the half-year under review, passenger and express receipts showed little change. Of the serious decrease of P581,000 in goods traffic no less than P384,000 was in foreign or imported traffic.

Their expenses again made a most unsatisfactory showing at P7,725,000 as compared with P7,795,000, or only P70,000 less, in spite of much less work performed than in 1937. The comparison was also vitiated by the fact that in 1937 they had been charging 10 per cent. of gross receipts to special renewals and in 1938 only 6 per cent.

As regarded the current half-year, gross receipts—contrary to their expectations and those of their management in Mexico—had been exceptionally good and had almost, though not quite, exceeded previous records. Expenses for the first four months of this year had increased by only 1½ per cent., which under present conditions could be regarded as satisfactory. They ought, therefore, to be able to look forward to a net profit on operation of P350,000 for the current half-year. That, at the standard rate of exchange, was equivalent to only about £19,000 but was a very great improvement on the results of the half-year under review, which showed a loss on operation of £36,000.

### POSITION IN MEXICO

As regarded the general situation in Mexico, there were a great many unsatisfactory features. The most important problem was undoubtedly the oil question. While the Mexican Government were evidently impressed by the grave difficulties which their policy had created, and the wave of enthusiasm which had greeted the expropriation of the properties had subsided, it should be remembered that vested interests had been formed under the new management and it might be difficult to reconcile those to any reversal of policy.

Agriculture under the new system—following the conversion of the large estates into communal properties—instead of providing the whole country with wheat and maize, as it easily could, was compelling the Government to bring large quantities of those commodities from abroad, which entailed the expenditure of gold, the supply of which was barely sufficient to maintain exchange at its present low level. The cost of living had been rising for some time and was continuing to do so, leading to discontent among wage earners in factories and on railways. The weapon of the strike had been so long and so successfully used that employers had entirely lost confidence and were investing no more money in their businesses. The condition of the National Railways, which had been for some time under the management of the workmen, was arousing bitter complaints from the public. It was evident that a considerable body of public opinion in antagonism to the present policy of the Government was in process of formation.

The report was unanimously adopted.

## Our Information Service

The Intelligence Branch of *The Economist* has been enlarged to meet the growing demand for economic and statistical information. A special feature of the Department is the preparation of regular or occasional reports, on request, for business men and industrialists anxious to keep abreast of all developments which may affect their branch of activity. Fees are proportionate to the work involved.

Enquiries should be addressed to the Intelligence Branch, THE ECONOMIST, 8 Bouverie St., London, E.C.4

## ANGLO-IRANIAN OIL COMPANY, LIMITED

### SATISFACTORY RESULTS

The thirtieth ordinary general meeting of the Anglo-Iranian Oil Company, Limited, was held, on the 26th ultimo, at 20 Aldermanbury, London.

The Right Hon. Lord Cadman, G.C.M.G., D.Sc., LL.D. (the chairman), in the course of his speech, said: The profit for 1938 amounted to £6,109,477, a figure which has permitted us to recommend a final dividend of 15 per cent., making 20 per cent. for the year. In the circumstances of the period under review I think you will agree that this result is satisfactory.

With regard to our operations, net production of crude oil from our fields in Iran amounted to 10,195,000 tons. We received 1,229,000 tons of crude from the Iraq Petroleum Company and produced 132,000 tons from our own field at Naft Khaneh, in Iraq. Aggregate production and receipts amounted, therefore, to 11,556,000 tons. Haft Kel and Masjid-i-Sulaiman contributed to Iranian production in the proportion, approximately, of two to one.

The phases in the life of any individual oilfield—discovery, development, exploitation and decline—make it essential that further reserves in the form of new fields should be at hand. We are fortunately placed in this respect. Gach Saran, which I mentioned as a new discovery two years ago, is in the early stages of development. Drilling to define the extent of the field has continued actively throughout the year.

Two wells have been drilled at Lali, 20 miles north-west of Masjid-i-Sulaiman, and have produced large quantities of gas and a little oil. Drilling is continuing here and also on the Agha Jari/Pazanun structure where, in addition to high-pressure gas, crude oil was struck at 8,810 feet in the Agha Jari section.

### PROPOSED NEW REFINERY

Although the capacity of Abadan refinery is being increased—another large distillation unit and two cracking plants are now almost complete—a considerable part of the present large constructional programme has been concerned with the newer types of plant. Selection of these has to be made with particular consideration of the special characteristics of Iranian crude oil and has to be preceded by extensive research and development work.

I am glad to inform you that the surveys which I mentioned last year have been successful in finding a suitable site for a refinery and port near Bandar Mashur on the Khor Musa waterway. We have received permission from the Iranian Government to acquire the site, and plans for development are being prepared.

On the marketing side of the industry, prices of products were generally on a somewhat lower level than in 1937. A cause of this decline was to be found in the economic recession in the United States and in the accumulation of excessive stocks of motor spirit and fuel oil in that country. The effect of those factors, moreover, was aggravated by more widespread dislocations. It is common knowledge that, during 1937, all Governments were taking precautions against emergencies by creating stocks of petroleum products. These special purchases caused a temporary increase in offtake of crude and products, but the international uneasiness which gave rise to them was acting, meanwhile, as a brake on industrial activities throughout the world. In consequence, sales of oil products in commercial markets were diminishing. For a time this trading decline in the oil industry was concealed by special sales. When the latter ceased, however, the true trend became effective, and during 1938 world consumption of oil products fell below that of 1937.

### THE OUTLOOK

With regard to prospects for the future, the confidence which is essential to buoyant international trading conditions is absent. Moreover, large areas of the world are shut off from normal trade by policies of self-sufficiency, currency restriction, barter arrangements and other forms of economic manipulation. In common with all other concerns whose primary interest lies in freedom of international trade and stable conditions, we must hope that the remainder of 1939 and the years that follow will witness a return to tranquillity.

In the circumstances of to-day the possibility of maintaining the volume of our sales during the remainder of the current year, and at what prices, are questions on which no one can speak with certainty. So far this year prices are lower than they were for the same period of 1938. We all hope, however, that international and market conditions will improve. If they do we are fully equipped to meet increased demands and to derive whatever benefit the level of prices will allow.

The report was unanimously adopted.

## GENERAL ELECTRIC COMPANY, LIMITED

### FURTHER RECORDS ACHIEVED

The annual general meeting of the General Electric Company, Limited, was held, on the 29th ultimo, at Magnet House, Kingsway, London.

The Right Hon. Lord Hirst, of Witton (chairman and managing director), in the course of his speech, said: I honestly thought last year, when addressing you, that we had reached a peak that required some time to reach again. However, I am here once more submitting results beyond our expectations, and, in stating this, I would like you to realise that they are not due to continuous repetition of the work that was going on at the beginning of the year. I would like you to realise that the electrical industry, the country, and, indeed, the whole world, is in a state of evolution, in a state of fluid economics, and it is only due to the intense efforts of our research workers, our engineers, our staff and all workers, that new developments brought us fresh results, whilst some of the older departments showed recession due to change of fashion or change of general conditions. The net profit at £1,776,000 is just £4,000 more than last year and a new record in the company's history.

The home business has kept up remarkably well; we have, of course, benefited by Government orders, but they have still played a comparatively minor part in our total turnover. I would like to emphasise, as I did last year, that profits on Government work are not the extravagant figure that seems to exist in public imagination.

The actual output has been produced by nearly 40,000 workers, whose annual salary and wages amount to £5,600,000. If, in addition, you realise that the company pays—in taxation and local rates, in Unemployment and National Health Insurance, pension funds, in coal, electricity, gas and general communal services—in freights—nearly two million pounds, you will realise its importance in the national mosaic of industry; therefore, well worth support.

### OVERSEAS TRADE

We have again done well in export. We have exceeded last year's figure, which was a record. This achievement is not due to any particular country or to any large contract, but is spread over nearly all our overseas markets, and nearly all departments. Our overseas market is mainly within the British Empire, which absorbs more than 80 per cent. of our exports.

We are hammering away as best we can in other parts of the world, and in some cases where the Government have offered support to foreign countries, like Turkey, we have found a satisfactory opening for doing business. In this effort we are helped by the success which our research and development engineers have attained by their intense efforts. Progress and improvement have been achieved in almost every section of the company's works.

As regards our heavy engineering activities, it may interest you to know that at Fraser and Chalmers, our mechanical engineering works, we continue with the successful construction of an ever-increasing number of turbines; at the moment seven of those going through the works have capacities of 35,000 K.V.A. at a speed of 3,000 r.p.m. They find their way into all parts of the British Empire.

The financial and technical success, which has been achieved by the Central Electricity Board in its development of the British Grid, is a source of gratification to all connected with the electrical industry. British manufacturers have reason to be proud of the fact that, with less opportunities previously for the development of suitable apparatus than some foreign countries, nevertheless the designs they provided have stood the test of experience, and it is acknowledged the world over that, from all points of view, the British Grid is unsurpassed. In this work, the G.E.C. has played no unimportant rôle.

We are constantly endeavouring to improve the already excellent quality of our lamps, and have succeeded in continuing to hold, both in quantity and quality, our outstanding position in the lamp industry of the British Empire.

Given that there is not going to be an international flare-up, I feel the strong financial position of our country, the present good employment figures, which mean an increase in the purchasing power of our people, the contribution of the Government to our productive programme, and our improving export figures, all convince me that we can look forward with confidence to the future, provided our costs of production are not unduly further burdened by unreasonable demands on industry.

The report was adopted.

## GUEST, KEEN AND NETTLEFOLDS, LIMITED

### MR S. R. BEALE'S REVIEW OF A DIFFICULT YEAR

The annual general meeting of Guest, Keen and Nettlefolds, Limited, was held, on the 27th ultimo, in Birmingham.

Mr S. R. Beale (chairman of the company), who presided, in the course of his speech said: Taking into account the progressive nature of the recession in trade for some months after we met last year, the drop in prices announced last January, and the steadily increasing load of costs that all industry has had to bear, I feel I cannot emphasise too strongly that, in the opinion of the board, the greatest possible credit is due to all those concerned in the details of management for the promptitude and efficiency with which they met the conditions that persisted during so much of last year. The result of their good work is that we are able to present to you as satisfactory a balance at profit and loss as £985,785.

My reading of the international situation is that we are likely to experience a condition of recurring crises for some time. It seems to me that this means a persistence of uncertain conditions and that those responsible for the conduct of a great business such as this must do their best to ensure that they have available resources to meet any eventuality. For these reasons we recommend a dividend on the ordinary shares at the possibly conservative rate of 6 per cent., free of tax, believing that by so doing we are best serving your interests.

#### JOHN LYSAGHT, LTD.

A report of the business of our allied company John Lysaght, Ltd., involves a wide survey, as its activities extend to all the Dominions and these have become almost as important as those of the parent establishment at home.

Their works for the manufacture of their staple product sheet iron are in operation in Australia, Canada, and the Argentine, and their mercantile branches in New Zealand and South Africa and other overseas branches. Year by year their production abroad has expanded, but, with the exception of the export of galvanised sheets, this has meant no shrinkage in other departments of the sheet trade.

The loss to Great Britain of the export trade in galvanised iron owing to the falling off of the Indian demand (where in 1927 British exporters supplied 293,000 tons and in 1938 only 16,000 tons), the loss of the Japanese trade, and the extension of local manufacture abroad, has to some extent been balanced by the home requirements for sheets for general purposes, such as motor bodies, electrical appliances, steel furniture, and the Lysaght companies are, as always, striving to broaden the basis of this demand.

#### GUEST, KEEN, BALDWIN

The best report I can give you of the work of the past year as regards the steel-making plant of Messrs Guest, Keen, Baldwins, in which we have so large an interest, is to quote once again from the speech of Sir Charles Wright, chairman of that company. He said: "I am glad to be able to report that our Cardiff works have worked satisfactorily, but not as fully as in 1937. In 1938 we completed our programme of extensions, which comprised an addition to our coke-oven plant, a fourth blastfurnace stack, and two additional 250-ton open-hearth steel furnaces."

I may say their financial year closed on December 31st, and since that date orders have increased to such an extent that 1939 should be for the Guest, Keen, Baldwin company a better year than 1938, unless costs of production rise steeply.

The Exors. of James Mills at Bredbury, Stockport, had the same difficulty as many others in obtaining quite so many orders as they would have liked, but here again a better state of affairs is being experienced at the moment.

#### G. K. AND N. LEDLOY STEEL

This firm is one of the largest producers of bright drawn steel in the country, and for this reason has been chiefly concerned with the introduction to the British market of what we describe as G. K. and N. Ledloy steel, which is admittedly one of the most important improvements in steel-making introduced in recent years. G. K. and N. Ledloy steel is covered by patents for which Guest, Keen and Nettlefolds have a licence for the British Empire. Both the main steel-producing units in our group—Lysaghts at Scunthorpe and Guest, Keen, Baldwins at Cardiff—are developing the production of this new introduction, and terms of licence for other firms are under consideration. We hope that ample supplies will shortly be available to satisfy the demand throughout the territory in which we are interested—namely, the British Empire.

The report and accounts were unanimously adopted.

## ALLIED IRONFOUNDERS, LIMITED

### FAVOURABLE RESULTS

The tenth annual general meeting of Allied Ironfounders, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad Street, London, E.C.

Mr Alexander W. Steven (the chairman) in the course of his speech, said: When addressing you last year, I stated that we must be prepared for a considerable falling off in building operations. That, unfortunately, has turned out to have been an accurate forecast.

The decline in demand for our goods led to more acute competition with the result that prices deteriorated in some sections of our business. Another adverse factor was the continued increase in costs which affected raw materials and all purchased supplies.

Payment for holidays, a measure of great benefit to our employees and an expenditure of which I am confident shareholders will approve, involves a permanent inroad into profits amounting this year to £11,000.

To satisfy the requirements of the Factories Act which recently came into force, it has been necessary to incur considerable expenses in order to minimise risk of accidents and to improve condition in our works.

Export business in our industry was during the past year more difficult than ever. The value of our own exports declined by 15.37 per cent. on the year. The goods most affected by these conditions were those which usually represent the bulk of our exports. We continue our efforts unabated to retain and expand our oversea trade and in our more specialised types of products we are meeting with more success.

#### ADVERSE CONDITIONS

During the year we have, therefore, experienced a combination of circumstances detrimental to profits, reduced demand, increased costs and increased competition. In the absence of any mitigating features the effect on our earnings would have been much greater than it has, in fact, turned out to be. Our turnover has declined, but not to such an extent as seemed probable in the conditions which prevailed. We have secured a satisfactory share of the trade in face of keen competition, and have improved our products and services, thereby strengthening the good relations which exist between us and the merchant trade on which we depend for the sale and distribution of our goods.

We have also benefited by the higher degree of efficiency in manufacture resulting from internal developments carried out during a series of recent years. But for the additional charges on profits which our subsidiary companies have had to bear during the last two years—National Defence Contribution, increased rate of income tax, payment for holidays and expenses under the Factories Act—profits would have shown a comparatively small decline on our record figures of 1937. Having due regard to all the conditions which influenced our business during the year, the directors are of opinion that the results are distinctly favourable and they hope that shareholders will endorse that view.

Shareholders will doubtless desire to know the position of the company in relation to the re-armament programme. During the Great War many of our companies were very fully engaged on the production of munitions, mainly composed of high-duty cast-iron. We keep in close touch with the supply departments of the Government, but so far there has been no demand for munitions of this class. Should the need arise we will doubtless be given the opportunity to tender. On the other hand the great expansion in the defence forces of the nation necessitates the provision of suitable accommodation for men and machines. For this there is a growing demand for our ordinary products. Of the orders so far placed, we have reason to believe that we have secured a satisfactory share. Although this business represents by no means a large part of our output, it is a welcome addition to our order books in existing circumstances.

#### THE OUTLOOK

In the present unsettled state of international affairs no accurate forecast of the course of business in the current year is possible. The immediate conditions, however, seem to indicate that, apart altogether from work on armaments, ordinary civil trade is tending to improve. When armament work is included in the survey there seems to be little doubt that the demand for labour will continue to increase, augmenting spending power and bringing about a state of prosperity which admittedly will be to some extent a draft on the future. Should that be an accurate estimate of short-term conditions—if actual war is avoided—our business should benefit from the growth of expenditure—private and public.

The report and accounts were unanimously adopted.

## GREAT BOULDER PROPRIETARY GOLD MINES, LIMITED

### EXPANSION CONTINUED AND ACCELERATED

#### BOARD'S REPLY TO SHAREHOLDERS' COMMITTEE

The forty-fifth ordinary general meeting of the company was held on the 23rd ultimo in London.

Mr Claude A. de Bernales (chairman and managing director), in the course of his speech, said: I am pleased to report that after charging all relative expenditure and making adequate provision for depreciation, the net profit for the year was £172,481.

A total distribution has been made in respect of the year ended December 31, 1938, of 37½ per cent. compared with 25 per cent. for 1937. A first interim dividend of 12½ per cent. has, however, been declared on account of the current year, and will be paid on July 7th.

The average working cost per ton of the company's ore produced and treated in 1938 was 26s. 9.03d. per ton—a reduction of 2s. 9.6d. per ton on that of the previous year.

In 1933 the future of the mine was in jeopardy. The plant had become obsolete and the underground workings were in a most unsatisfactory condition. The rich ore was being gutted out by tributaries, the ore reserves were becoming depleted, and the future of the mine was, to put it mildly, obscure. At my instigation the board of that period asked Mr Ernest Williams to make a report on the property. As you know from the facts given to you during the past few weeks, Mr Ernest Williams made a full report which particularly condemned the tribute system on the property, and advocated in the strongest possible manner that an early move should be made to reduce tribute to a minimum. The board of that period, after careful consideration of the report, decided that the recommendations of Mr Ernest Williams were sound and that the policy advocated by him was one which should be adopted in the interests of the company. Shortly after this I was elected to the board, and I believe that it was from that date that the period commences which the committee is criticising.

#### ACHIEVEMENTS UNDER PRESENT ADMINISTRATION

We have striven to rescue the mine from tributaries, to push forward underground development, to discard obsolete plant and replace it with up-to-date machinery, and to continue to pay a minimum dividend of 25 per cent. during the mine's period of recovery and re-establishment. We have achieved all those objectives. Tributing has been reduced from 39 tributaries to four tributaries, underground development has been pushed forward, and the mine modernised. As a result we have exposed a considerable number of new ore bodies, the mine to-day is equipped with a plant which is up-to-date and unsurpassed in Australia, and during the whole period we have continued to pay the promised dividend of 25 per cent. Also, as you know, last year, as the result of our endeavours, the dividend was raised to 37½ per cent. and, without being unduly optimistic, I feel safe in saying to you now that you may expect a further increase in the payments to be made this year.

In the committee's circular of April 28, 1939, in respect of the years 1935, 1936, and 1937, the committee state that out of an agreed profit of £231,255 sterling, the Tributaries contributed £230,843. That statement and computation are entirely untrue, as the committee have omitted to charge to the Tributaries' return its share of overhead expenses and depreciation. The proper figures for shareholders' information are that for the three years 1935, 1936, and 1937, the Tributaries' net contribution to profits was £127,889 sterling, and not £230,843, as stated by the committee. In addition, the board point out that the Grundt Committee in this particular statement used Australian currency for stating the profit contributed by the Tributaries and used sterling when presenting the total net profit made by combined Tributer and Company contribution. The average annual contribution from Tributaries over the three years mentioned was £42,630, and not £76,947, as stated in the committee's circular.

It appears to me that every accusation made by the committee against the management of this company and its board has been proved untrue. Their last resort has been the centralising of their attack against the chairman. Their attack, therefore, on the company's policy and the board has failed.

The result of the polls was announced by the scrutineers, Messrs Whinney, Smith and Whinney, on the 26th instant and showed that the resolutions submitted by the board (the adoption of the report and accounts and the re-election of the retiring directors) were carried by a substantial majority and the auditors re-elected.

The resolutions submitted by the Grundt Committee were defeated.

## AFRICAN AND EUROPEAN INVESTMENT COMPANY

### EARNING CAPACITY OF THE ASSETS

The thirty-fourth annual general meeting of the African and European Investment Company, Limited, was held, on the 14th ult., in Johannesburg.

Mr R. W. Townsend, who presided, said that the gross profit for the year was £513,634, compared with £543,347 last year. Their annual investment income continued to show a progressive increase, particularly the receipts from dividends. After providing for the two dividends of 5 per cent. already paid, the balance carried forward was £109,134. Stocks, shares and debentures in other companies stood in the balance sheet at £2,454,199, and the market valuation of such of the investments as were quoted amounted to £3,488,387 at December 31st last, an appreciation of £1,102,000 over book cost.

During the last few years they had disposed of large areas of land, from which the income had been small, and had invested the proceeds in securities which offered a more remunerative return. As a rule, however, they retained the mineral rights, and their area to-day amounted to the substantial figure of nearly 3,500,000 acres distributed over the Transvaal and the Orange Free State, in addition to which they held valuable prospecting mineral options extending over 67,883 acres of ground in the Odendaalsrust district of the Orange Free State. The properties there adjoined those belonging to Western Holdings, Limited, where that company had recently made such important discoveries, the result of which, it was hoped, might ultimately establish the existence of an entirely new gold field.

With regard to their mining interests on the Witwatersrand and elsewhere, Grootvlei Proprietary Mines promised, in due course, to become one of the Rand's largest producers and had now reached the dividend-paying stage. Very much improved results had been obtained by the Palmietkuil Gold Mining Company.

The Amalgamated Collieries of South Africa, in which the company had a large holding, had again shown excellent results, and Vereeniging Estates had had another good year. The company's portfolio of stocks, shares and debentures in other companies now included a substantial number of shares in the leading South African gold mines.

The report was unanimously adopted.

## MARSTON VALLEY BRICK COMPANY, LIMITED

### INCREASED SALES

The tenth annual ordinary general meeting of the Marston Valley Brick Company, Limited, was held, on the 28th ultimo, in London.

Mr A. W. Allard, who presided, said that the business was commenced in 1929 by the present directors and had proceeded on private lines until 1933, and then was formed into a public company, during which time the programme had been one of continual expansion, the company going from strength to strength, the effect of which had been to put them in a formidable position in the Fletton brick industry, the company's works now being the second largest producer. During the last six years—that was since the company was made a public one—they had distributed by way of dividends a gross sum of no less than £462,415. The company's reserves totalled £388,393, or more than 50 per cent. of the issued capital. That was a record of which they could be justly proud.

The directors regretted that the trading results for the year showed a reduction as compared with the previous year. The sales of the company's bricks were higher than for the year to March, 1938, but unfortunately the prices realised were considerably lower, particularly since the autumn of 1938. The demand for common bricks for private building had undoubtedly fallen off and that had not been offset by Government requirements, as the officials appeared to prefer to build hutments with imported timber rather than with the home-produced Fletton bricks. In his opinion walls built with common Fletton bricks were as cheap, if not cheaper, than walls built in timber and were much more weatherproof and lasting.

One encouraging factor was that, notwithstanding the general reduction in the demand for common bricks, the sales of Fletton bricks, as produced by the company, had increased during the past year, while those of other common bricks had decreased.

In view of the uncertainty of the building trade owing to the political situation, the directors had felt it desirable to conserve resources, and recommended a final dividend of 5 per cent., making 10 per cent. for the year.

The report was unanimously adopted.

## OVERSEAS BANK RETURNS

NOTE—The latest returns of the Bank of Greece appeared in The Economist of May 6th; Denmark and International Settlements, of June 10th; Argentina, Bulgaria and Iran, of June 17th; Canada, Danzig, Egypt, Hungary, Japan, Java, Jugoslavia, Roumania and Sweden, of June 24th.

† Intermediate rates will be calculated on the basis of 2s. 6d. for every seven days.

(Continued from page 30)

**Philips' Incandescent Lamp Company.**—Profits for the year to April 30, Fl. 8,038,591 (Fl. 8,015,307). Dividend maintained at 11 per cent. Stocks Fl. 13,862,868 (Fl. 18,453,274). Cash Fl. 43,892,014, against Fl. 24,231,166.

**Wellman Smith Owen Engineering.**—Preliminary profit figures for year to March 31, 1939, £69,365 (£34,059). Tax and N.D.C. £6,566 (£4,985). Final dividend 5 plus 2<sup>1</sup>/<sub>2</sub> per cent. cash bonus, making 12<sup>1</sup>/<sub>2</sub> for year, against 10 per cent.

**Shell Union Oil.**—Dividend 25 cents per common share, against 35 cents in June and December, 1938. Proposed issue of \$85,000,000 refunding bonds due 1954 will carry 2<sup>1</sup>/<sub>2</sub> per cent. interest.

**Hovis.**—Preliminary statement shows profits for year to March 31st of £148,964

(£135,242) after depreciation, but before interest and staff funds. Final dividend 7<sup>1</sup>/<sub>2</sub> per cent. plus cash bonus of 5 per cent., repeating 20 per cent. for the year.

**Aveling-Barford, Ltd.**—Net profits for year to March 31st, £71,723 (£44,176). Final dividend 10 per cent., tax free, making tax free dividend for year, 15 against 8 per cent. Carry forward £33,216 (£31,818).

**Patons and Baldwins.**—Net profit for year to April 29, 1939, after depreciation, taxation and debenture interest, etc., £361,885 (£260,666). Preference dividend £64,761 (£68,156). To general reserve £75,000 (nil). A.R.P. reserve £30,000. Ordinary dividend repeated at 10 per cent., tax free. Carry forward £74,007 (£73,798).

**London Midland and Scottish Railway.**—The directors announce that the

dividend on the 5 per cent. redeemable preference stock for the half year to June 30, 1939, will be paid on July 1st. The 4 per cent. non-cumulative preference stock ranks *pari passu*. Last year the directors made no decision until the end of July on this stock, but eventually announced an interim dividend of 2 per cent.

**Lancashire Associated Collieries.**—Profits for year to March 31, 1939, compare with nine months to March 31, 1938. Gross profits £728,696 (£493,269). To depreciation £14,525 (£9,924). To preliminary expenses £5,184 (£5,649). Net profit £695,363 (£463,135). Interim distributions £640,437 (£366,426). Total assets £2,058,591 (£1,992,334).

**W. and T. Avery, Ltd.**—Net profit for year to March 31, 1939, £165,348 (£161,354). Ordinary dividend maintained at 15 per cent. (Continued on page 50)

services that have been created. "We must be prepared" is spelled in terms of men and women; and statistically the response in so brief a space as only a few months has been remarkable. "The call has been answered," said His Majesty on Sunday, "and the volunteers are already at work." It is a vast citizen army that has been made, in A.R.P. and fire-fighting no less than in striking power on land and sea and in the air; it has been done at a time when activity in factory and workshop has been rising to a new high pitch; and it remains to make sure that not an atom of the personal service that has been called forth will be wasted.

It is enough to say that 1,170,000 men are now enlisted in the regular, reserve and auxiliary ranks of the Army, Navy and Air Force, and 1,402,000 men and 658,000 women in the civilian defence services, to realise something of the magnitude of the effort that has already been made. A total of three and a quarter million citizens are at work on national defence for all or part of their time. Their distribution and respective rôles are shown in the following two tables—which can claim no final authority since recruits are still flowing in daily and certain of the items have necessarily been estimated.

TABLE I—THE ARMED FORCES

|                               | Army           | Navy           | Air Force      | Total            |
|-------------------------------|----------------|----------------|----------------|------------------|
| Regulars .....                | 204,000        | 133,000        | 118,000        | 455,000          |
| Reserve and Auxiliaries ..... | 584,000        | 27,500         | 104,000        | 715,000          |
| <b>Total .....</b>            | <b>788,000</b> | <b>160,500</b> | <b>222,000</b> | <b>1,170,000</b> |
| Women .....                   | 17,500         |                | 2,000          |                  |

TABLE II—CIVILIAN DEFENCE

| Services                          | Men              | Women          | Total            |
|-----------------------------------|------------------|----------------|------------------|
| A.R.P. ....                       | 893,000          | 541,000        | 1,434,000        |
| Auxiliary Fire .....              | 171,000          | 177,000        | 348,000          |
| Women's Voluntary Services .....  | 6,000            | 91,000         | 97,000           |
| Nurses .....                      | ...              | 11,000         | 11,000           |
| Midwives .....                    | ...              | 1,000          | 1,000            |
| Land Army .....                   | ...              | 8,000          | 8,000            |
| Regular Fire .....                | 20,000           | ...            | 20,000           |
| Regular Police .....              | 68,000           | ...            | 68,000           |
| Auxiliary Police .....            | 232,000          | ...            | 232,000          |
| Merchant Navy Reserve .....       | 10,000           | ...            | 10,000           |
| Auxiliary Coastguard .....        | 1,000            | ...            | 1,000            |
| National Wireless Register .....  | 2,000            | ...            | 2,000            |
| General Reserve .....             | 5,000            | ...            | 5,000            |
| <b>Total (May 31, 1939) .....</b> | <b>1,402,000</b> | <b>658,000</b> | <b>2,060,000</b> |

It is an impressive picture. The regular strength of the three armed forces of the Crown (excluding the Army in India and Burma) stands not far short of half a million; and their combined reserve and auxiliary strength is nearing three-quarters of a million—of whom about a tenth are to be called up this year for an extended period under the new Reserve and Auxiliary Forces Act. The Army itself is nearing the size needed for a satisfactory trained nucleus to give aid overseas in the event of war as well as to man home defences; behind the 204,000 Regulars there are 139,000 Regular Reserves, 35,000 Supplementary Reserves and 410,000 Territorials (making 584,000 reserves and auxiliaries who would be trained full-time soldiers in war); beside them, there are the 220,000 militiamen who are to be called up in batches of 20,000 for six months' training in the course of the next twelve months. The total is a million men for the Army, and it has lately grown with striking speed; 170,000 new Territorials have been recruited in only two and a half months. The potential Army for the next war has been almost doubled this year.

Indeed, it is the rapid uprising of the readiness to serve that is chiefly noticeable in all branches of defence work. On January 25th just on a million and a quarter men and women had volunteered for civilian defence; by May 31st, four months later, the total had passed two millions. And it is the speed of this inflow of personnel that presents the major difficulties of to-day and to-morrow. Efficiency for war and defence cannot be measured simply by counting

heads; and there are wide-flung problems of supply, training and equipment still to be smoothly and satisfactorily solved.

This is the *fons et origo* of the Ministry of Supply; and it is because the multiplication is most evident and necessary in the Army that Mr Burgin's initial tasks will be chiefly in relation to War Office supplies. But the problem of provisioning the armed and civilian defence services and their three and a half millions of personnel cannot be departmentalised. It represents many-sided demands upon the raw material and productive resources of the country and upon the fruits of the labour of a growing proportion of the nearly 13 millions of gainfully occupied insured workers that must sooner or later be marshalled under a single authority. There has been notable progress in the speed and scope of supply this year, in the provision of aeroplanes, anti-aircraft artillery, Bren guns and general Army supplies. But the pace of demand is still hot, and a fully ordered supply organisation is imperative.

Nor is this all. At present the swelling total of the gainfully occupied includes the 715,000 reserves and auxiliaries of the three fighting services and the 220,000 militiamen, as well as the two million-odd civil defenders. On the outbreak of war or the declaration of emergency, even before new classes of men were conscripted or recruited for the expanded war-time fighting forces, at least a million men would be called from civil life to the colours; and, although nothing very certain is yet known about the number of men in civilian defence whose duties would be whole-time in war, it is possible that over half a million (A.R.P. wardens, fire-fighters, nurses, police, merchant navy reserve, etc.) would be taken away from their ordinary work for practically full-time occupation. And of the 700,000 recruits who are still required for civilian defence, for the fire services, to drive ambulances and to train as nurses, etc., an appreciable number would be similarly called away. Indeed, the need to make of civilian defence a permanent service with the steady loyalty and application of the other services, instead of the fluctuating enthusiasm that comes in a flood in crises and ebbs away, already makes it likely that more civil defenders will be put to work full time, even in peace. The need for immediate planning of the country's labour supplies—bearing in mind equally the requirements of the forces and inescapable needs of essential industries—is seen to be imperative from the merest glance at these figures.

The truth is that preparedness is indivisible. It is needful to assess the magnitude of the man-power required for war and its desirable distribution; to set this against the labour available now and its current allocation; and quite frankly and firmly to prepare for all the processes of transfer and replacement that an emergency would at once call for—even to anticipate them by diverting people from one occupation to another now or in the near future if it seems expedient to do so. To train and mobilise these millions is not enough. To organise supplies for the services they are in, even fully, is not enough. It is the task of the Government, in consultation with employers and trade unions, to marshal the supply of men and women themselves; and there is small sign in the Schedule of Reserved Occupations, which is presumably the present yardstick of the Government's near-war labour policy, that this is effectively in train. The voluntary principle has done wonders, but the final process of fitting the pieces into the mosaic of national defence it cannot do. This is the Cabinet's task. It may be that in the Government's files there is a Census of Man-power, as well as a casting-up of man-power needs. If there is not, there should be, and it is these that should inform the nation's use of its man-power from this time forward. It is above all peace that is sought—but it is peace through strength. And the measure of that strength can only be the requirements of the war that it is sought to avert.

## England and Eastern Europe

THE European kaleidoscope has shifted sharply several times in a single week, but the pattern remains much as it was, one of uncertainty and danger, but not of crisis. Only a few days ago fears that the Danzig dispute might burst into flames on the instant were widespread. Even more recently, hopes that the higgling and haggling in Moscow might at last result in an immediate deal were freely expressed. Neither hopes nor fears have, in fact, been realised.

It is the view of the German Press, in familiar scornful vein, that the dangers of conflict over Danzig were no more than figments of democratic imaginations. Actually there were, and still are, good grounds for the apprehension that the stage was being set in the Free City for a coup to return it to the Reich; and it was solely the Germans themselves, by their exportation of men and war materials to Danzig, who were responsible for the fear that the expected crisis might be closely at hand. In flagrant contravention of the status of the Free City in international law a process of militarisation is going on there. It is not concealed, either in Berlin or in Danzig, that the near object of German policy now is to bring back the Free City to the Reich; and it is not imagined for a moment, in Poland and in the Western States, that this proximate ambition is anything less than the starting point of a plan to eat up the Corridor.

But the gage has not yet been definitely thrown down. The steps taken so far constitute a challenge, but it is a muted one. There is time, though only just, for the Powers that have resolved to resist further aggression in Europe to take stock of their strength and plans of action. It is because of this chance to eliminate all irresolution from the policy of the Peace Front Powers and to close the gaps in its ranks that the present breathing space is invaluable. The past week has indeed been notable for the firm and unmistakable words of warning to the aggressor that have come from the leading statesmen of the Western democracies, beginning with Lord Halifax's remarkable statement on Thursday of last week. There can be small doubt that the cautious progress of Herr Hitler's Danzig plans is due in an appreciable degree to this clear determination, as well as to the unquestioned readiness of the Poles to stand firm on the instant that their independence or national security is put in danger. There can be no doubt at all that it is the prevailing view now in all the countries that are pledged to collective resistance that any kind of coup in Danzig would in fact mean the widest menace to Poland; the status of Danzig cannot be written off as a local issue to be settled in terms of local self-determination; it is another Sudetenland in the march of Nazi policy and the trick that won Munich from the fearful and trusting statesmen of the West to the ultimate destruction of Czecho-Slovakia cannot be played again. The annexation of Danzig to the Reich would be a long step towards the establishment of a German protectorate over Poland; a German protectorate over Poland would in turn be a step towards a Nazi hegemony over Europe. This is, in brief, why under present conditions (i.e. in the present state of mind of the present rulers of Germany) any German attempt, whether direct or indirect, to annex Danzig to the Reich is a *casus belli* for Great Britain and France, as well as for Poland. The entire British Cabinet, inner and outer, must surely now know this without one atom of doubt; and, if they act otherwise than upon this certainty, it will be deliberately and with their eyes open.

So much has been gained in understanding in high places here and in France since the Ides of March. Yet it would be idle to deny that there are still steps to be taken if the Germans are to be held back from risking a coup in Danzig in the hope that the men in the French and British Govern-

ments who were lately wedded to appeasement would relapse again if they were confronted with a *fait accompli*. It is a singular fact that the resolute speeches of Lord Halifax and Mr Chamberlain have not stated in indisputable terms that Britain's unconditional determination to stand with Poland against the aggressor applies specifically to the case of an internal *putsch* in Danzig. There is no evidence that this omission does, in fact, represent an anxiety to retain a get-out clause; indeed, it is to be left to Poland to decide when the machinery of collective resistance must be set in motion to protect her independence; and it is said that the Polish Government is well satisfied with the assurances that have been privately given. But, if it is true that the one thing that will deter Herr Hitler from threatening war to gain his ends is the certainty that, if he does, he will get war—and this supposition is the foundation of the Peace Front policy—there can be no harm at all in restating again and again, in positive terms and words of one syllable, just how far in detail the determination to resist aggression goes.

It is owed to Poland that this should be done. It is a plausible interpretation of the latest Nazi manoeuvrings that their object is to strain Polish nerves and morale to the breaking point and to throw the onus of the trouble that may ensue upon the Poles themselves. Called upon to steer their course between the Scylla of premature and ill-timed action against German provocation and the Charybdis of over-tolerance in face of a vital threat, the Poles have so far behaved magnificently. But the burden upon them is heavy; it has been an act of courage and not of cowardice to permit the recent comings and goings in Danzig with no more than a formal protest, drafted but not yet handed over. It has been left to them and them alone, though it must most assuredly be done in consultation with her allies, to catch upon the right moment for tolerance to end and implacable resistance to begin. This responsibility for timing the moment which may decide the fate of Europe can only be borne if it is known in every capital, and not least in London and Berlin, where precisely Britain stands on the Danzig question. And it cannot be more than days before the activities in the Free City must be finally estopped.

The duties of the British Government in this grave hour do not end with this need to trumpet abroad, and at home, the determination that the status of Danzig must not be altered by force or threat. A speedy alliance with Russia would, more than any one thing, set the seal upon the proof that Britain was willing and able to resist aggression by force. Its deterrent value might be decisive for peace. But the pact, after three months, is still only a hope. The camel of a Russian alliance has been swallowed. The gnat of named guarantees to the Baltic States has at length been swallowed, too; but new and seemingly indigestible fauna have now been added to the repast in Moscow. Russia is unready to add specific guarantees to Holland and Switzerland as a *quid pro quo* for Britain's Baltic concessions; or, at least, not unless Poland and Turkey in their turn promise aid to Russia herself. It is desperately hard to see why the British negotiators chose to set up these new hurdles when the finishing-line was at last in sight. The argument that new commitments in the East must be balanced by fresh ones in the West has little more than doctrinaire validity.

The issue is a practical one. Assuming that both sides want to make a pact, and we cannot, unhappily, be sure even of this, agreement has now been reached on every necessary point. In the three months that have elapsed since an Anglo-Russian agreement first became practical politics, however, both its character and its place in the general

scheme of buttressing peace have considerably altered. Had it been concluded quickly in the last fortnight of March, it would have been a crushing rejoinder to the rape of Bohemia, which would have thrown the Nazis off their course and flustered their diplomacy. It would have put the initiative squarely back into the peaceful Powers' hands. Now, it is almost true to say that the chief importance of the negotiations lies not in the gain to be derived from their success but in the disaster that their failure would be.

The delay has not merely put a discount on the strategic value of the projected alliance. It has served to thrust Great Britain into a very weak, an almost humiliatingly weak, bargaining position. For this we cannot with justice put the blame on any shoulders but our own. British diplomacy has had very few striking successes in recent years. But in no direction has it made more elementary errors than in its relations with Soviet Russia. Great Britain has frequently, in the last few years, acquiesced in the ostentatious exclusion of Russia from the concert of Europe. The Stresa Conference was a minor (because ineffective) example; Munich, where the fate of one of Russia's allies was decided, was the supreme instance. If we had been determined to create in Moscow the maximum suspicion of our motives and our reliability we should hardly have needed to alter the Munich procedure. And, whatever the balance of blame between the parties for the delay since mid-March may actually prove to be, the British share is considerable. The Government has been feeling its way fearfully and reluctantly in a policy in which it had never previously believed and which it had never thought out.

## The Progress of Public Health

IT is deeply significant that in France, the home of logic, as well as the residence of the principles of liberty, equality and fraternity, two successive national polls to determine the country's most famous men have found Louis Pasteur at the head of the list. There can be little question that, on any assessment, the contribution made by doctors to the well-being of the world's peoples exceeds the gift given by any other class of public practitioners. It may be true that the finest flowers and the final fruits of civilisation are to be found in the spheres of intellect and the spirit; but it is beyond question, as Aristotle has pointed out to the countless generations, that these cannot be culled without the prior provision of a degree of material and physical well-being. The trouble is that the doctor is helpless to reap the rewards of his researches and labours without the aid of politicians and administrators, whose task it is to apply the discoveries of science to the needs of complex communities.

It is hard, for instance, to state the record of public health in this country, simply in terms of medical and surgical advance. It has necessarily been left to the administrators of parishes, boroughs and counties to conduct the campaign against the twin evils of disease and poverty; and the doctor's contribution to the betterment of the people's health has been conditional at every stage upon social, economic and personal considerations. This is pre-eminently true to-day. It is possible for Sir George Newman, in a remarkable account that he has just written of the lessons which twenty-seven years of official care for the health of the nation has given him,\* to call attention to the fact that the state of the nation's health is now better than it has ever been before; but, in his recommendations for the improvements that are still urgently needed in the

The net effect now is that if we want a Russian alliance we must take it on Russia's terms. That is an unpalatable fact, since Russia's terms are naturally drawn up in Russia's interests, and Russia has not hesitated to huckster to her own advantage. But even on Russia's own terms, we must have the pact. Soviet Russia, it is true, is an entirely unknown quantity; her military strength, her policies and her ulterior motives are all unknown. But those who are still in doubt can make up their minds about the desirability of the alliance by asking themselves one simple question: Would they like to see Soviet Russia, unknown quantity though she is, in the hostile camp?

Some sympathy is due to His Majesty's Government as they surrender their reservations, one by one. But sympathy, it may be hoped, will not further delay or impede the process. Now, as never before, an alliance with Russia is essential. It may no longer be the certain way to save the peace that it would have been not very long ago—though it is probably still the only way of doing so. It is not sure now, at this late hour, that the Nazis can be deterred, and if a successful pact were quickly to be plucked from the present confusion of reluctance, suspicion, half-heartedness and pique (on both sides) it might only bring on the attack before the agreement could be made good by military preparations. But the pact is more than ever vitally needed. As Mr Churchill remarked only a week ago, an Anglo-Russian Agreement presents the best chance of avoiding a war and the virtual certainty of winning it if it cannot be avoided. The price may be high, but it is less than the cost of the appalling alternative.

practice and administration of health services, he calls attention, not to the need for new discoveries by doctors, but rather to the urgent necessity for economic and administrative reforms, in addition to education of the public in the fundamentals of healthy living.

It was with a chorus of praise that the revelation that over 90 per cent. of the recruits for the new militia had been found physically fit for service was lately greeted. And, while there may be justified doubts about the absolute validity of the clinical tests that have been applied to militiamen, there can be no question at all that the achievements of the last two generations, in instituting health services, in creating the conditions for healthy living and in raising the standard of life, have brought about notable results. A hundred years ago, the expectation of life at birth for a boy was 40 years and for a girl two years longer. To-day, the expectation of life at birth for a boy is as long as 58 years; and for a girl it is 62. It is not easy to determine how far this striking change has been due to the improvement and spread of medical attention. It is certain that improvements in social and economic conditions have been at least as responsible. The fall in the death rate in England and Wales from over 21 per thousand living persons 68 years ago to under 12 to-day, the decline in infant mortality from 153 per thousand to 62 in the same period, and the steady diminution of deaths from tuberculosis and children's infective diseases, are all to be accounted for by the betterment of the earnings and environment of the people, as much as by the improvement in doctors' methods of treatment.

The truth is that it is in the organisation of society that the ability to conquer pestilence and ill-health is chiefly found. "The greatest of all the lessons taught by cholera," said Bishop Creighton several generations ago, "was the need of sanitary reform." It was the necessity of averting spreading sicknesses that caused communities, local and then national, to close their ranks by forthright action

against the impact of disease. The record of public health that Sir George Newman tells is a century-long story of communities empirically compelled by the onset of leprosy, sweating sickness, smallpox, plague, typhus fever and cholera to take thought for their own future protection, as well as for the cure of their stricken members. It was this need for new modes for communal organisation that produced, between the sixteenth and nineteenth centuries, provision for sanitation, hospitals, the isolation of infectious cases and clean and adequate water supplies. These items have their place even more in the story of government than in the record of medicine.

The outstanding issue now is that, as Sir George Newman tersely avers, "health is not really obtainable by Act of Parliament." The measures taken by parishes, boroughs and national Ministries, on the one hand, to supply conditions of sanitation, housing, and economic well-being conducive to good health; and, on the other hand, the care for and cure of sick citizens, in institutions or by the medical services which have been provided for the poor, the young, the aged and the insured, are not in themselves enough to render the nation's health consonant with the ability of medical and surgical sides to defeat disease. If the right conditions are provided—which has by no means been fully done yet—the burden rests upon the people to help themselves.

The fact is that the good health from which freedom and happiness flow can only be erected upon three broad foundations which are as old as recorded history. The first is the Mosaic law, which lays down that good health depends upon a regime of healthy living. The second is the dictate of Hippocrates that nature is itself the healer of disease. The third is the truth given out by the Greeks that without economic security and knowledge of the needs of the body there can be no assured well-being. Vast strides have been made, within the compass of a brief century, to write these ancient maxims into the practice of British social life. Better wages, better sanitation, better houses, healthier conditions of work and higher earnings have all but put an end to those dread diseases, like cholera, typhus, typhoid, plague and dysentery, that spring from an unhealthy and unsuitable environment; and it is well known that, among the physical afflictions that remain, environmental causes like overcrowding, low wages, unemployment and inadequate feeding are pre-eminently influential. It is well known, too, that in only the space of our own lifetime there has come upon the attitude towards disease and health a new character; it is no longer the cure of established illness that is the sole or chief objective; it is the prevention of these ills by regular care and favourable conditions of living that is to-day's objective.

The trouble is that the cause has been carried only half-way so far. Against the decline in epidemic diseases which has come from the immunisation of the population by medical treatment, and by better social and economic conditions, must be set two things: the growth of such scourges as influenza, cancer, diabetes and heart diseases; and the persistence among the distressed and impoverished sections of the people of old ills, due to lingering of social and economic distress. Three steps are needed if the wisdom of Moses, Hippocrates and Aristotle are to be successfully translated into achievements consonant with the miracles that have been wrought in the profession of medicine, since the craft of doctoring took on a scientific and organised guise. These are, first, a continued campaign to relieve and remove poverty; and, secondly, the full translation of the axiom that prevention is better than cure into practice. The proper rôle of the doctor is not simply to be called in when illness has begun, but rather to be constantly consulted, in good health or bad, to ensure that disease shall be averted. This is the lesson which is being taught in South-East London to-day by the Peckham Health Centre; and it is one which might with advantage be the principle

of reform and expansion in the development of the health services.

Thirdly, there is the reform of administration. At present we have a remarkable sequence of health services, either subsidised by the State or paid for by insurance or voluntary contributions. They are administered by a multitude of chaotic and overlapping authorities and committees; there are vast differences between the services and benefits given in one region of the country from those given in another; there are still gaps in the provision made for the protection and preservation of good health—children between infancy and school age are not cared for, young people between school leaving and fully-insured work are only partially protected, dependants who do not earn wages have no protective services at all.

It can plausibly be argued that, in spite of the economic, social, administrative and financial deficiencies that still exist, notable headway is being made towards the realisation of the proper conception, which goes back to Hippocrates, that the task of the doctor, the ruler and the patient is to preserve good health rather than to relieve sickness. It is a fact that attention to-day in public policy is directed towards adequate nutrition and physical training which, together with immunisation against disease by social and medical means, are the bases of preventive medicine in its practical application. There is no party in politics to-day which is not vastly alarmed by the fact that a substantial portion of the population, running in varying estimates to about half the total, is not so well nourished as it ought to be to maintain full health and resistance to disease; there is no group in the country that did not welcome the Physical Training and Recreation Act of two years ago which aimed to give five million children and an uncertain number of adolescents and adults the chance to make their own natural inclinations for personal well-being and health the safeguard against disease. "Sufficient and suitable food," says Sir George Newman, "is an answer to malnutrition." "Clean and healthy living," he adds "postpones death." The ground principles of public health in its truest sense are now fairly fully embodied in public policy; but the great deterrents to the successful achievement of that policy remain the persistence of poverty, the possibility of disease coming unawares and unforeseen upon people lacking either the resources to resist it or the constant expert supervision, without which good health in the conditions of modern life is impossible to guarantee, and the widespread ignorance of the public about health matters. We cannot but acknowledge, with praise and gratitude, the progress towards well-being and welfare in home and factory that has been made in the last two hundred years. But, if that advance is to be converted into a permanent and unique characteristic of our civilisation, it will only be by closing the gaps that persist in what we have already achieved and by steady and concrete progress in the establishment of the conditions, personal and educational no less than social, economic and medical, which are still needed to reach the goal which no society can ignore—a healthy mind and a healthy body for all citizens.

## Two Years of War in China

FRIDAY of this week is the second anniversary of the clash at Lukouchiao, south-west of Peiping, which was the occasion of the outbreak of the present war between Japan and China. For two years this great struggle, involving directly over 500 millions of people in the two warring States, has been going on—a conflict which would continually be absorbing the attention of the world were it not for the war of even wider scope which has been threatening to break out in Europe and drag all the Great Powers of the West into its vortex. As it is, it is only when a British concession in China is subjected to blockade that events in the Far East assume real importance. Such an Anglocentric view of the world is only natural for us, but it is possible that “the fate of China’s four hundred millions may seem to the historian of the future the most important event of the early twentieth century.”

Miss Freda Utley’s recently published book *China at War*,\* from which the above quotation is taken, gives a striking picture of the Chinese scene, in which a record of personal experience as a newspaper correspondent during the last year is combined with a searching analysis of the political factors at work in the Far Eastern cataclysm. On a journey to the front near Nanchang the author came to the town of Yangsin, one of China’s many Guernicas, where “at least a thousand civilians have perished in one day of intensive bombing.” The inhabitants had neither shelters nor anti-aircraft guns nor interceptor planes to defend them; they simply endured without any means of escape the assault from the sky.

It is hard to convey in words a picture of a town thus intensively, indiscriminately and systematically bombed. . . . We stumbled from street to street over a mass of rubble and stones, out of which protruded sometimes a cooking pot or fragment of furniture, and sometimes a human fragment.

The bomb-blasted and deserted town is terrible enough; but even worse is the horror of the green countryside, sweltering in the summer heat, after the warriors of the air have passed. For the Japanese airmen rake with machine guns every patch of cover where they suspect that Chinese are hiding from them.

Such is the war that the people of China sustain against the invaders of their country. For what purpose do they continue to resist and for what purpose do their enemies attack them? The answers must be given in another language from that which is appropriate to description of the ruins of Yangsin or the smell of corpses in bamboo thickets—in the language which belongs to the study of *raison d'état*. Japan’s basic aim,

is to establish a new *disorder* in Asia, to prevent the industrialisation and modernisation of China, and to destroy her newly won political unity.

The primary motive of Japan has been to prevent China from becoming a Great Power. In this respect Japan’s war on China differs fundamentally from Italy’s war on Abyssinia and even from Germany’s conquest of Czecho-Slovakia. Neither Abyssinia nor Czecho-Slovakia could have become Great Powers or rivalled in strength the nations which have subdued them. But China in 1937 was well on the way to attaining the rank for which her population and resources qualified her, but which her prolonged resistance to the civilisation of the West and the following period of civil strife and confusion had denied to her. The turning-point was the Leith-Ross mission to China in the winter of 1935-36; this, and the Chinese currency reform then successfully carried out with the co-operation of British banks, constituted in Japanese eyes the abandonment by Britain of her traditional pro-Japanese policy. The pros-

pect that China would soon be receiving large credits for a thorough-going industrialisation on the basis of her new financial stability “was most alarming to the rulers of Japan.”

This reminder of the importance of the Leith-Ross mission is very much to the point at a time when the war is turning more and more from a contest with guns into an ordeal of economic attrition, and when Japanese animosity is being increasingly diverted from the Chinese to the British. “We are not really fighting China but Britain,” declared an eminent Japanese recently, and this is no phrase, as the crisis at Tientsin has shown. It seems fantastic that the Japanese should be accusing Britain of preventing them from winning their predestined victory over China, when this country has so conspicuously failed to apply any kind of sanctions against Japan on account of the war, and shares with the U.S.A. the responsibility of supplying Japan with the greater part of her essential war material imports. Nevertheless it is a fact that British financial support has been a factor of vital importance in enabling China to withstand the Japanese invasion. That is why many Japanese now believe that the only way to win the war is to drive Britain by pressure and threats into withdrawing this support. It is only by intimidation and by bargaining with her freedom of choice between neutrality or enmity in a European war that Japan can hope to succeed in this aim. Japan must attempt to drive out foreign, and especially British, interests from China, if she is to derive profit from her conquests, because

so long as the door is open in China to the trade of other nations, Japan’s industrial and raw material weakness must leave her last in the race.

China’s independent industrialisation would produce a great market for all kinds of capital goods, but in this sphere Japan with her poorly developed heavy industry could not compete with Britain, the U.S.A. and Germany; her object therefore is to subject China’s economy to her own needs and close the open door.

That Japanese policy runs counter to the *economic* interests of Germany as well as to those of Britain is evident from the figures of German trade expansion in China before the war began. German industrialists have, in fact, little liking for Hitler’s policy of semi-alliance with Japan at the expense of Germany’s Far Eastern trade. It is open to question, on this ground at least, how long the German-Japanese alignment can last. It has lost much of its value for Germany because Japan is deterred by fear of the United States from converting it into a full alliance, and because Japan has exhausted herself in her war against China. There are indeed signs that Germany, without definitely breaking with Japan, is to-day reinsuring herself with China. Up to the end of 1937, Germany was supplying more arms to China than any other country; and, since the Sino-German barter agreement of March this year, it has been reported that over 50 per cent. of China’s munition imports are of German origin.

So the war goes on. Somewhere on a hillside in the heart of China one of Chiang Kai-shek’s peasant soldiers, bombarded by Japanese artillery made out of British scrap iron, is defending himself with a German machine-gun. As Miss Utley remarks in the closing sentences of her book:

China has long since realised that neither ideologies, nor principles, nor treaties, have anything to do with the treatment she receives at the hands of the European Powers. Whatever the future brings of friendship or enmity, she must rely, in the main, on her own strength and the determination of her people to fight against their enslavement.

In the end, it is the Chinese, and not the Japanese, the British or the Germans, who will decide the fate of China.

## NOTES OF THE WEEK

**A Cabinet of Confidence?**—It is evidence of the strange pass into which English politics has come that the Government should have been broadly pursuing for the last three months the programme that until March was anathema to them. The responsibility for this curious variation of the Box and Cox principle upon which Parliamentary government normally works must be laid at the door of the Opposition. Labour never came within sight of offering the men to win and maintain popular confidence and support at the moment when the annexation of Bohemia revealed how right their proposed measures had been and how wrong the Government’s. There was no alternative to Mr Chamberlain and his colleagues. This position has not been advantageous since. A certain ingrained reluctance to stray too far away from the path of appeasement has been accompanied by clear failure to grasp the full implications of the policies that have been so oddly taken over. The negotiations at Moscow have not been helped by this or by the suspicion which not unnaturally attaches in Kremlin circles to the makers of Munich. The Ministry of Supply and other items in preparedness might have been better contrived had their drafters not been the men who had formerly denied their necessity.

\* \* \*

Some sense of these anomalies has lately spread widely, even within the ranks of the Conservative Party; and it is not confined to Opposition circles to argue that a Government which is called upon to impose conscription and a host of heavy burdens upon the people should be so constituted as to inspire a deeper and broader confidence than mere pious loyalty can provide. It is not yet a question of substituting or bringing in the Opposition’s leaders. There are in the Conservative ranks themselves men who have stood out even more consistently and forcefully than the Opposition for the policies that the Government has been compelled to adopt. It may be as a man of vigour, experience and personality that Mr Churchill has lately been loudly chosen by members of his own party, as well as by the wider public, to make honest men of the Cabinet by his inclusion among them. But it is equally as a symbol of the only policy that can save England and peace that he has been singled out. The cry for his inclusion, and Mr Eden’s too, is growing. It is augmented by forward-looking Conservative concern for the next election. It is firmly rooted in the traditions and procedure of British political practice. The Prime Minister cannot safely hold out indefinitely.

**Retreat from Moscow?**—This week we have caught a more generous glimpse than usual into the maze of claim and counter-claim in which the negotiations at Moscow are entangled. Briefly stated, the position seems to be as follows. Mr William Strang either took with him to Moscow, or received when he was there, the Government’s agreement to British guarantees for the three Baltic States so that Russia might be insured against “indirect aggression.” There was, however, one condition attached to this agreement: that Russia, in return, should provide guarantees that she would support Britain in the event of a war arising out of a German attack on Holland and/or Switzerland. It is said that in the initial part of the discussions an understanding was reached, in substance if not in final form, whereby these “indirect aggression” guarantees (offspring of the Peace Front unwanted by the countries obliged to take them in) would be included in a separate document which would not be made public. By that arrangement Britain was providing guarantees for Poland, Roumania, Turkey, Greece, Finland, Estonia, Latvia and Belgium (her treaty with Portugal is not relevant); Russia, on her side, was providing guarantees for Poland, Roumania, the three Baltic States and Belgium. The balance of risk was clearly weighted heavily on Britain’s side. Accordingly the British Government raised the question of Soviet guarantees for Holland and Switzerland. At that point the London-Moscow express rumbled once more to a jolting halt. Two further obstacles to agreement have since appeared: first, that the Soviet definition of what shall constitute “indirect aggression” seems to go much further than was originally thought, and to comprehend changes of policy which are not necessarily the result of foreign pressure; secondly, that the Soviet Government is apparently ready to guarantee Holland and Switzerland only provided that Poland and Turkey improve upon geography and put their signatures to reciprocal guarantees to Russia. Clearly such a system would draw tight the bonds of European security, but at best it would take long to complete, and at worst it might stumble in a crucial moment and come to nothing. It is reported, therefore, that all three Governments are considering the advisability of concluding a partial agreement, possibly in the form of a three-Power mutual assistance pact; this would at least provide the Western Powers with the assurance of Russian goodwill and of whatever help that might be forthcoming from the U.S.S.R. In any case, the negotiations are far from ending. It may be noted that, as far as their bearing on the military situation is concerned, the commonly expressed German view that they would come to nothing is receiving dangerous support. Staff talks cannot now begin for some weeks; and how many weeks are there left?

**Danzig and Poland.**—The covert occupation of the Free City and its territory by military and para-military forces from Germany, has continued this week. It is reported that numbers of guns and tanks have been taken over the frontier from East Prussia in a more or less open way, that stocks of small arms and ammunition are being accumulated, chiefly on the small Holm Island situated in the Vistula delta, that a pontoon bridge across the Nogat River is nearing completion, and that the number of men in barracks is increasing. The game of provoking the Poles is being played with skill, at great expense, and in multifarious ways. The vital question now must be at what point this occupation will demand counter-measures on the part of Poland (it may be pointed out that the Danzigers have long since broken the provisions of the treaty statute). From a military standpoint the occupation is probably not of great importance, and represents little more than an extension, though a wide extension, of Nazi control over civil life that in large measure already existed. The number of "tourists" who have come from Germany may not be stated exactly, though it is unlikely to be many more than 4,000; to this number must be added the para-military organisations of the Free City itself. The total number of men enrolled in these organisations is again not available; according to the 1929 census figures there are in Danzig some 75,000 German-speaking males between the ages of 20 and 50. On a generous estimate, therefore, the total effectives available will be less than 30,000, and by no means all of these will be trained men. Of four railways entering Danzig, three come from Poland; and of ten roads, only three from East Prussia. If it comes to a localised fight the Polish army will have little trouble in dealing with them—though the chances would then be, of course, all against the fight remaining localised. On an immediate view, then, it would seem militarily possible for the Polish Government to allow the occupation to remain unchallenged up to the point of the Danzig Senate's proclaiming the Free City's union with the Third Reich, or of some similar *coup*. Whether it will be commercially possible is another matter. Deliberate interference has already taken place with private Polish business, and if matters continue as they are going at present the point of deliberate interference with Polish public property cannot be many days ahead. Polish public property in Danzig is not extensive, but it does include those sections of railway which connect the harbour with Polish territory, a number of post offices, a share in the harbour authority, operation of the Customs, and a number of other establishments and responsibilities. The economic ties of Danzig with Poland (and of Poland with Danzig) are described in a letter on page 63, and their importance is beyond dispute. The sign for Poland's counter-measures may be expected whenever the Germans seek to weaken the security of those ties.

**Money for Britain's Allies.**—Trade used to follow the flag; now, perforce, it follows political alliances and guarantees. Some of Britain's new friends have already

knocked on the door and obtained financial support, and if others have not yet gained admittance, it is not because their requests have not been heard. Under the Overseas Trade Guarantees Bill, published this week, a substantial part of their wants should be satisfied. The Bill empowers the Board of Trade to give guarantees for export transactions which might not commend themselves on strict business canons, but which are in the national interest. Thus, it extends existing powers under the Export Guarantees Act which, however, are limited to £10 millions total liability. The proposed limit under the new Bill is £60 millions, exclusive of interest; hence, the total liability which is now contemplated will probably be well in excess of £60 millions. Such guarantees will be available only for British manufacturers or traders, and credits in respect of goods not produced in this country (such, for example, as re-exports of raw materials) are restricted to £6 millions—a figure which may be rather low if adequate supplies of raw materials are to be ensured for those allies which need them. Works or services in connection with guaranteed exports will also be covered by the scheme, to the extent of one-third of the price of the goods concerned. This is a highly desirable provision, whose absence has limited the effectiveness of the existing guarantee powers in the past. Normally, the bills arising from guaranteed transactions will be marketed with the Board of Trade's endorsement, but powers will be taken by the Board of Trade to hold the bills with the assistance of Treasury advances in case difficulties arise in marketing owing to the granting of longer term credits. Thus, the overseas trade guarantees will be different in character from those covered by the Export Guarantees Act, which is limited to £75 millions, including interest liability. And that difference will also be marked by the separation of the transactions from the business of the Export Credits Department. The Advisory Council will, in fact, exercise no judgment regarding guarantees under the new Bill. The new powers should mark a satisfactory first step in providing the means to make the Peace Front fully effective. Few would argue that they are unnecessary; all will hope that they prove transitory.

**Food and Shipping.**—Great Britain's daily expenditure on imported food, not counting in the feeding stuffs and fertilisers that are vital for the maintenance of domestic food production itself, is £1 million; and it is as a shortage of shipping that the chances of underfeeding and famine in a future war present themselves. This is the point that Sir Arthur Salter and Mr Amery put trenchantly in a letter to *The Times* newspaper only this week; and it is the burden of yet another admirable bulletin by the Air Raid Defence League. It is not unwarrantedly pessimistic to claim, as they do, that, unless large-scale buying and shipping of reserves of food and materials from abroad is put in train at once, with a parallel programme of bulk storage, the next war, if it comes, may take on, for a time, the character of a losing struggle. It may be true that the Navy will have complete command of the seas, though it cannot be very much more complete than it was a quarter of a century ago. Even so, it would be unwise to ignore the power of the Third Reich's commerce raiders to do appreciable damage in the early stages of a war; and the ability of enemy airplanes to assail ships and ports is a new factor that cannot be easily discounted. In any case, it is not the enemy's power to strike so much as the certain strain of war itself that affords the key to provident policy. Our population is five millions more now than in the last war, and our shipping tonnage (omitting tankers) is 18 per cent. smaller. The ships themselves are, on the average, larger and faster; but, on the outbreak of war, many would be needed to tranship men and supplies overseas, to provision allies and to bring in war materials. Even if the Admiralty's apparent optimism about the small enemy menace to shipping were fully justified, the urgent need to take measures now to economise shipping in a future emergency would remain unaltered.

**Reserves for War.**—It is the need to save shipping that is the crux of near-war food planning. In the long run, something can be done to adapt domestic agriculture by lessening its own dependence upon imports, by concentrating its output upon import-saving products and by reserving a sufficiency of man-power for farming. But the net effect would even then be small; and, as it is, no long run can be assumed. The immediate task is to economise ton-miles in war by storing reserves now; and, although various Government departments have power between them to buy food, fodder, petroleum, agricultural machinery, fertilisers and other essential commodities, in relation to the magnitude of the need that power has been scarcely used. The equivalent of less than a fortnight's supply of food has been laid in—apart of course from normal commercial stocks which are, in any case, proportionately much smaller than they were in 1914. Germany has stocks for six months. What we need to do is to buy and store a reserve of food and raw materials equivalent to, say, a year's supply of wheat and "calculated to save at least three months' shipping normally required for food imports." This would involve raising from £80 to £100 millions by loan, at an annual charge of £5 to £6 millions; and the transhipment ought to begin at once. It is a convincing case that Sir Arthur Salter and the A.R.D.L. have made out. Their approach may be markedly pessimistic; but it is the only way in making ready for emergency to hope for the best and prepare for the worst. It is a sign of grace in the Government that, only this week, Mr Morrison has counselled the local storage of an iron ration of readily consumable foodstuffs by householders to simplify distribution and avert local shortages in war. This, too, is part of the pundits' plans for food safety, but it is a minor part; and it is the major need to press all available ships into service to bring in stores that is most urgent.

**Tientsin and Tokyo.**—There continues to be a wide discrepancy between the attitude of the Japanese Government in Tokyo and the attitude of the Army's representatives at Tientsin. If the British Government is to stick to its presumption that indignities to British citizens in the treaty ports will cease when negotiations are opened in Tokyo, then it will need a very narrow pair of blinkers. And to carry on the negotiations after they have begun the British Government will further need a determination to limit the scope of discussions, which can spring only from a proper and far-sighted appreciation of British Far Eastern interests. Fortunately, there is evidence that such a determination is not entirely lacking; Sir Robert Craigie, our Ambassador in Tokyo, on his own showing has received instructions to limit negotiations with the Japanese Government to the local issues at Tientsin; any attempt on the part of the Japanese will presumably be met (and must be met) by a retort that general questions, the co-operation of Britain in Japan's conquests, can be discussed only on a scale which would affect the whole position of non-Asiatics in the Far East. There must be no giving way over this. The best interests of the unlucky inhabitants of the British and French Concessions in Tientsin will be served, not by climbing down now and thereby permanently undermining their status, but by firm support of their rights to live and trade in North China without molestation. And, at the same time, it must be made clear that we do not intend to worsen the plight of our own interests by conniving at the destruction of the Chinese National Government. Perhaps, however, the Japanese will be feeling in a lenient mood. They are, if reports from Tokyo may be taken to be more than symbolic, phenomenally successful against the Russians. Fleets of Russian warplanes have gone down before a few Japanese aviators; for the Japanese it is like falling off a log, or dropping bombs on unprotected populations. Only the bombs, sadly, have really been dropped.

**The American Neutrality Bill.**—The outcome of the debate on the new Neutrality Bill in the House of Representatives in Washington at the end of last week illustrates one of the chief factors in the present uncertain and tragic state of world affairs. All countries are to-day so closely knit together that no nation can ignore the effects of its action on the fortunes of the world as a whole, without producing momentous world effects which may well recoil, with particular force, upon the very nation that thus mistakenly fancies itself able to go on living insulated and safe from danger. Yet this truth has hardly begun to be taken to heart on the American side of the Atlantic (just as it did not finally win recognition on the British side of the Channel until after March 15th last). When the Opposition in the United States House of Representatives succeeded, by a narrow majority, in inserting an arms embargo in the Administration's new Neutrality Bill, and in defeating a substitute Bill in which this amendment was again left out, they no doubt believed that they were voting to keep the United States out of another general war. It may be asked how Congressmen could lightly take this line, in face of the considered view of the Administration and the State Department that any American action threatening to prevent American supplies of arms and other sinews of war from reaching the States members of the European Peace Front will, in the first place, encourage Hitler to go to war, and, in the second place, increase the risk of his emerging victorious—thus exposing the United States to the risk of having eventually to fight for her own security against the Berlin-Rome-Tokyo Triangle. The truth seems to be that most Congressmen have not been thinking in international terms at all. They have seen in the Neutrality Bill an occasion for another round in the domestic political struggle between pro- and anti-Roosevelt political factions. The rebuff to the President's foreign policy in the House, if it is to be seen in its true perspective, must be looked at in the light of the rebuff to his monetary policy in the Senate. The foreign observer, conscious that his own fate is involved, is painfully reminded of the conflict between President Wilson and Congress in 1919, when the question of American membership of the League was likewise debated in domestic, and sometimes in sheerly personal, terms. In the present case the Administration is refusing to accept defeat, and we can only hope that at some later stage of procedure the tide in Congress may be turned by a wider appreciation of the great issues which the Administration has in mind.

**Pointers from Italy.**—It seems that the South Tyrol is at last to become, by language as well as by frontier, the Alto Adige. The German Government is understood

## The NATIONAL BANK of NEW ZEALAND, Limited

Also in Piccadilly, Bournemouth, Bristol, Liverpool and Manchester

to have agreed upon the emigration of the South Tyrolese, or at least a greater part of their 230,000, to Germany; and this, coming after twenty years of vain Italian effort to get the Tyrolese out of habits of thought as obviously German as their jaunty leather shorts and knapsacks, is no small gain to Signor Mussolini. Does he receive it as the price for co-operation in the past, or because the building of the Peace Front has increased that price for the future? The probable answer is the first, though there are repeated rumours from Rome that the German-Italian military alliance signed some weeks ago is not quite the automatic instrument of mutual assistance which it seems. On the face of it, Rome's willingness to lend aid to Germany in a war against Poland must remain in doubt even now; and it is worth noting that if Herr Hitler withdraws from his aggressive designs upon Danzig the balance of opinion will almost certainly award Signor Mussolini a strengthened position within the Axis. The silence he has kept during the past weeks points to a repetition of his policy of last September. Then, having refrained from precise statements of what Italy would do in the event of war, he was able to come in at the last moment in the unwonted but welcome character of mediating angel. The German Press campaign against Britain finds no counterpart, as it did some months ago, in an Italian campaign against France, though hostile comment against Britain in the Italian Press shows signs of growing this week. The army manoeuvres now taking place in the Po valley, believed to be engaging 1,250,000 men, and the naval occasions whenever the Italian fleet touches port on its Atlantic exercises, are providing plenty of material for those writers whose task it is to tell the Italians of their readiness to face any fate which may fall to them. Yet it seems that no special military preparations are in train; the Libyan garrisons do not appear to be above their normal strength, even though that strength may constitute a permanent threat to Egypt and Tunis; the civilian population can be scarcely more prepared against air raids than it was nine months ago; nor, most significant of all, is there taking place any tightening of morale by specially directed propaganda. It looks as if the Duce, like the rest of us, is waiting for something to happen at a few weeks' distance; in the meantime, he is preparing to sit tight upon the fence.

**Incomplete Plans for Transport.**—The fact that considerable modifications of the internal transport system of the country will be a necessary feature of a wartime economic organisation is well known and accepted. The Government has provided for road transport regulation in an emergency through the control and rationing of fuel supplies, and plans for the grouping and unified direction of road goods vehicles with a view to their most economical use in war time are well advanced. A further statement has been made by the Ministry of Transport about public service passenger vehicles. The majority of operators have already provided the Ministry with particulars of their fuel consumption in 1938, and the formulation of definite arrangements for the war-time re-arrangement and restriction of services, on the basis of a weekly allotment of fuel proportionate to each operators' normal consumption, is thus possible. All this is sound progress. But the best possible arrangement for the most economical use of vehicles and fuel cannot function adequately on a defective road system. There are certain essential road improvements which are desirable in any event and cannot safely be postponed, but Captain Euan Wallace's speech in support of the Ministry of Transport Vote on Wednesday contained no assurance at all that an attempt to carry out even a few of the most urgent of these improvements will in fact be made. He stated that plans for some 3,000 miles of trunk roads out of a total programme of 4,500 would be put into effect as quickly as financial circumstances permitted. But evidence of immediate progress was lacking. It is not possible now to devote labour and materials to the wholehearted adjustment of British roads to British transport needs. That should have been done long ago. But to postpone all improvements to the problematic date when

armament expenditure will have diminished is to ignore the vital importance in preparedness of an adequate road system.

**Germany's Struggle.**—The picture of Germany presented by the latest report of the Reichs-Kredit-Gesellschaft is one of prodigious efforts to maintain the present rate of increase in armament production and to call in all available resources. The efforts have had considerable success. Industrial production is now a third greater than it was in 1928 and it is even higher than last year. The Greater German Reich now accounts for 15 per cent. of the world's industrial production. But the progress has been predominantly, if not exclusively, in the production of arms and capital goods, and every advance intensifies the shortage of materials, capital and labour. The new entrants to industry are now mostly those who have never been employed before, and half of them are women and girls. The Government has failed to keep down wages in either skilled or unskilled occupations. The tax burden has grown. Income and corporation tax receipts have increased by 42 and 55 per cent., respectively, compared with the financial year 1937-38, while the tax taken from emigrants has increased more than threefold in the same period, amounting in the year 1938-39 to Rm. 343 millions. And yet, the demand for consumption goods has risen to a degree that it has not been possible to satisfy, either from domestic sources or by imports, while difficulties in the export trade have prevented the import of any but essential supplies from abroad. Agriculture, too, is being carried on under the most difficult conditions. Last year, Germany was able to meet four-fifths of her agricultural needs from home supplies and in addition, as a result of an excellent harvest, to increase stocks of wheat by nearly five million tons to 10.1 million tons on April 30th last. But the number of cattle has declined and milk production has fallen as a result of the ravages of foot-and-mouth disease and the lack of semi-skilled agricultural labour. First impressions of this authoritative survey are that it reveals a state of affairs in which appreciable achievement is closely intermixed with serious strain.

**French Preparedness.**—The week has passed in France with further demonstrations of preparedness. Both the President and the Prime Minister have now spoken in grave terms of the dangers of the hour, and many lesser voices have echoed what they have said. The contrast of to-day with the confusion of last summer received a decisive addition with the report that M. Bonnet, over last week-end, told the German Ambassador in Paris that France's undertakings to Poland were precise and unequivocal, and would be carried out to the letter; specifically, that the maintenance of the *status quo* in Danzig was part of the letter of those undertakings. This is a change from the attitude taken up by M. Bonnet last September, evinced at that time by ruthless pressure on the Czechoslovak Government; and it may be hoped that this change is as permanent as it is complete. It may be taken, too, as symptomatic of that anxiety for the immediate future which marks prevailing opinion in Paris. It is natural that this anxiety should sound a deeper note than it does in London, for the French are on the Continent of Europe, and see more sharply the day-to-day fluctuations in the balance of power. Their approval of the British re-armament effort is bound to be tempered with impatience at the British Government's slowness in coming to final terms with the U.S.S.R. And their assessment of those terms, if and when they are laid down, is bound to be made from a more strictly military standpoint than seems to be at present in the minds of Whitehall. It might be well for the British Government at this moment if it took a lesson in realism from across the Channel.

**The Cost of Defence.**—The tussle between revenue and expenditure is never determined by the results of the first quarter of the fiscal year. Hence the fact that ordinary revenue has increased by only £12,170,141 to £144,056,777, compared with the first quarter of 1938-39, while expenditure has increased by £46,188,667 to £281,137,248 lacks any special significance, even though the deficit has increased, compared with a year ago, from £103,061,945 to £137,080,471—without taking into account £14,750,000 provided from Defence Loan borrowing. But the return (reproduced on page 92) illustrates the growing magnitude of defence finance. Total defence expenditure rose to £123,850,000 for the quarter—this figure includes issues under the Defence Loans Acts, which appear "below the line"—compared with £66,350,000, met entirely from revenue, in the corresponding quarter a year ago. The first quarter's defence expenditure is invariably the smallest of the four, and the fact that the June quarter's total was this year within £4 millions of the record level of £127,500,000 reached in the previous quarter suggests the astronomical figures which will follow in succeeding quarters. The acceleration of defence costs since 1935 is shown below:—

|                   | DEFENCE EXPENDITURE, INCLUDING ISSUES UNDER DEFENCE LOANS ACTS |         |         |         |         |
|-------------------|----------------------------------------------------------------|---------|---------|---------|---------|
|                   | (£ millions)                                                   |         |         |         |         |
|                   | 1935-36                                                        | 1936-37 | 1937-38 | 1938-39 | 1939-40 |
| First quarter ... | 27.5                                                           | 37.5    | 46.3    | 65.8    | 123.9   |
| Second quarter... | 30.3                                                           | 41.2    | 58.3    | 86.4    | ...     |
| Third quarter ... | 37.3                                                           | 48.0    | 68.3    | 102.9   | ...     |
| Fourth quarter... | 41.8                                                           | 59.4    | 89.3    | 127.5   | ...     |

Our present spending rate is nearly double that of a year ago, and nearly treble that of the first quarter of 1937-38. Despite the increase in the volume of Treasury Bills from £850,980,000 at June 30, 1938, to £992,960,000 at the end of June last, there is probably room for a further expansion in the floating debt (which stood at a record level, since 1921, of £1,076,170,000 on June 30th) sufficient to

cover the bulk of defence expenditure in the second quarter of the year. That possibility and the present state of the new issue market may have some bearing on the timing of the next instalment of defence borrowing. The problem of defence finance leaves room for only slight consolation in the rise in Customs revenue over the quarter from £53,718,000 to £61,523,000, a rate of collection which is well in excess of that required to provide the anticipated Customs revenue of £232,560,000 for 1939-40.

**Labour's Appeal to the German People.**—The belief that the most effective antidote to the present trend of propaganda in Germany is the dissemination of the truth from other countries has received an adherent in the National Council of Labour of Great Britain. The appeal to the German people broadcast by this body last Saturday repudiated in forthright if familiar terms the contention that the democratic Powers wish to encircle Germany. It riveted the responsibility for the present British policy of defensive alliances on Herr Hitler and Signor Mussolini, and exhorted all Germans to insist on the settlement of differences by peaceful discussion. In Germany these ideas have retained a great deal of the essentially dynamic quality of doctrine that is at once reasonable and revolutionary, and it is vitally important that they should receive as wide publicity as possible. The agencies which have been utilised to that end in the case of Labour's appeal are a somewhat surprising combination—secret wireless stations on the Continent, underground organisations in Germany and the British Broadcasting Corporation. Moreover, the dedication of a B.B.C. Saturday night broadcast in five foreign languages to a pronouncement which was undoubtedly propagandist rather than completely objective is in itself significant; and there is at least a mild presumption that it was not condemned outright in Governmental circles. Its effective justification will depend upon the way in which it is received by the German people themselves.

## THE WORLD OVERSEAS

### The Commerce of Danzig

(From a Correspondent)

AN understanding of the economic position of Danzig is essential to any discussion of its political position. Danzig lives on Poland in the same way as Memel lived on Lithuania. The Free City's commercial relations with the Polish hinterland and the Polish port of Gdynia are therefore vital elements in its political administration. Berlin's conciliatory policy over the last few years (until very lately) in regard to Danzig proves how well the Germans know this. It will be instructive to examine Danzig's gains and losses since Gdynia became important. In 1938 both Danzig and Gdynia suffered severely from the depression of the first nine months, but with a considerable revival in Polish exports after the Munich Agreement their final turnovers—despite losses in Central European transit—showed comparatively little change.

TRAFFIC HANDLED BY DANZIG AND GDYNIA  
(In millions of tons)

|              | 1936 | 1937 | 1938 |
|--------------|------|------|------|
| Danzig ..... | 5.30 | 7.13 | 7.20 |
| Gdynia ..... | 7.74 | 9.01 | 9.17 |

The figures in the above table clearly are not unfavourable to Danzig. Even if Gdynia is now nearly two million tons ahead and can boast a turnover exceeded only by Rotterdam, Hamburg and Antwerp among Continental ports, Danzig's trade grew much faster during the boom and fell but little in the depression. Another good year and her peak figures of 1928, 8.6 millions, are well within reach.

But it would be wrong to think that the continual complaints from Danzig of Polish commercial policy and the serious effects of Gdynian competition are entirely un-

founded. The structure of trade differs widely between the two ports; the predominant part played in Danzig by bulk goods of great weight but relatively small value makes total figures deceptive. Thus in 1937 Danzig exports, other than coal, which amounted to no less than 3.56 millions against 2.38 millions in 1936, decreased by nearly 200,000 tons; while imports, other than metal ores, which jumped from 0.61 to 1.08 millions, rose by only 88,000 tons. At the same time Gdynia's exports other than coal rose by over 55,000 tons, and Gdynia's exports other than metal ores rose by nearly 1.27 millions. The disproportion was accentuated in 1938, Danzig registering a further increase in coal exports.

ESTABLISHED 1810

Grain and timber are also significant. Here Danzig has an established reputation, with long experience and handling facilities extensive enough to justify export monopolies on which she has largely relied. In 1937, when the Free City was badly hit by Polish export restrictions on rye, barley and fodder following the worst harvest in many years, it was hardly conducive to good feeling to find grain appearing in Gdynia, however modestly, as an export commodity. In 1938 a considerable rise in the Polish grain trade, particularly barley, brought scant revival in Danzig (301,000 tons); Gdynia, however, with the operation of modern elevators, forged ahead to 57,000 tons. It has been much the same story with timber. Danzig's exports fell from 1.18 million tons in 1937 to 813,000 tons in 1938, compared with a rise in Gdynia's exports from 237,000 tons to 383,000 tons.

These statistics, tiresome to the lay observer, are nevertheless crucial, for they largely account for the most significant factor of 1938: namely, the notable discrepancy between the slight rise in tonnage and the fall in average value, from 62 zlotys to 54 zlotys per ton, of Danzig's purely Polish exports. Danzig's imports in 1938 remained level in tonnage, but their value dropped from 125 zlotys to 117 zlotys per ton. In Gdynia, significantly enough, while imports rose by only 100,000 tons over 1937, their average value rose from 489 zlotys to 538 zlotys. The valuable goods are more and more being sent through the Polish port.

Danzig's losses are thus beyond dispute. The table printed below shows how strikingly the values of Poland's imports and exports through the two ports have changed.

But there is another side to the picture. If at the outset Danzigers had not blinded themselves to the material advantages of acting as Poland's *entrepreneurs*, if it were not for the active enmity of successive Danzig administrations, Poland might never have needed in the interests of her national security to go to the colossal expense and effort of constructing an alternative harbour. If latterly Gdynia has appropriated the lion's share, Danzig has only her Nazis to blame. Nor are the facilities she can offer entirely attractive. The generous scale on which the port was planned has proved not generous enough; the length of wharfage and the number of basins, the area of warehouses and the supply of cranes are already insufficient; the railway system is inadequate. This disproportion between volume and capacity means increased harbour dues, as well as a good deal of night work, which involves a greater outlay in wages and higher Customs expenses. Poland therefore has every interest in the size and efficiency of Danzig's harbour.

In any case, with the maximum capacity of either port a good 6 million tons short of their combined turnover, it would be absurd to suppose that Poland has not now the same vital interest in Danzig as she has always had.

Danzig business men and shippers, for their part, would certainly welcome co-operation with Poland: no propaganda can disguise their reliance on the only hinterland they possess. Poland's maritime commerce can secure prosperity for both ports; and if her vast industrial schemes were to materialise it might even be necessary for Tczew, further up river, to come into operation as a port of distribution. The men of Danzig have suffered enough already from Nazi policies. Apart from the Gdynia business, they also lost transit traffic after the Austrian Anschluss, and again after Munich; they have now lost their entire Czech hinterland, worth to them nearly 1.5 million tons. They know that absorption into the Reich would spell their own disaster. Tradeless, Danzig could only contribute to the further unbalancing of the German economy.

Specifically Danzig interests, of course, have long been lost to hearing in a welter of oratory. The Nazis of the administration, Reich Germans almost to a man and dependent

financially on Berlin, have nothing to lose by the successful accomplishment of their mission. And the Reich Government, for all its professed motives, is evidently thinking a good deal more of its own commercial ambitions in East Europe and, more immediately, of ways and means of breaking up the embryonic "Peace Front" by sterilising Poland as an anti-German military power. Towards both these ends it is quite obvious that a Danzig fortified by Germany and dominating the Polish coast would be of decisive importance.

July 3rd.

## Financing the United States Debt

[FROM OUR NEW YORK CORRESPONDENT]

ONE of the reasons commonly given for the depression of 1937-8 is that the setback was caused by an abrupt reduction in Federal spending. The cutting-down of the Federal deficit, like the reduction in the excess reserves of the banks, occurred in 1937, and coincided with, or just preceded, the slump in business. What are the facts?

The Federal deficit dates from the end of the 1930 fiscal year, i.e. from June 30, 1930. At that time, the public debt was approximately \$16,000 millions, of which approximately \$1,000 millions was held by Federal trust funds, etc., and about \$15,000 millions in the market, including almost \$600 millions held by the Reserve banks. At the end of 1935, the total interest-bearing debt had risen to just under \$30,000 millions, and virtually all the increase had taken the short term form. The combined figure of notes, certificates and bills had risen from \$3,000 millions to \$15,000 millions. The first five years of the deficit had increased the debt by about \$12,000 millions, of which almost \$8,000 millions had been taken by the Reserve banks and the member banks; \$500 millions to Federal funds; and the remainder by all other investors, including non-member banks. In short, not more than \$3,000 millions had been demanded of the national savings. This was the period of deflation; and the mechanism of deflation was the financing of the Federal deficit by the banking system.

In the course of the fiscal year 1936 (that is, the year ended June 30, 1936) further large demands were made on the Treasury. In addition to the deficit, there was an increase in debt by reason of the veterans' bonus of close to \$2,000 million. To finance this, both long- and short-term issues were employed, and the increase for the fiscal year was just under \$4,000 millions. Of this, the Federal reserve banks took none, and Federal trust funds only about \$300 millions; a substantial sum, however, was represented by uncashed bonus certificates.\* The member banks took approximately half of this financing, lifting their holdings from \$9,871 millions to \$11,721 millions.

\* The bonus certificates took the form of ten year bonds, of which the greater part were, of course, promptly cashed.

### A Turning Point

The end of the 1936 fiscal year is a turning point. The long awaited bonus was "out of the way." The circulating medium (currency and demand deposits) had been reflation as a consequence, not merely of deficit financing, but also of gold imports. The economy had realised a considerable revival of production, and was, if not at a prosperity level, at least in a prosperity zone. Bank loans were rising. Moreover (and this should be emphasised) the floating debt was relatively large—even though the actual ratio of short-term debt to long-term in June, 1936, was slightly lower than in June, 1935, owing to the fact that the major 1936 financing had been at long term. Two inferences could reasonably be made: (1) that the period of large deficits was past; and (2) that it was time to undertake the funding of the floating debt.

In addition, new features became important in debt financing in the fiscal year 1937. U.S. Savings bonds (ten-year, non-negotiable issues available in small denominations) had become popular, and the social security legislation increased the funds available for special issues. The result was that, although the "interest-bearing public debt" increased in that fiscal year by just under \$3,000 millions, the "public debt publicly offered" increased by only \$2,400 millions, and the increase in "market issues" was just above \$1,500 millions, of which the reserve banks took about \$100 millions. In comparison with recent previous years this increase in market issues was a comparatively small sum. Yet, in March, 1937, there was a severe flurry in the Government market, which served as a prelude to the ensuing economic debacle.

Several comments may be made on this period between June, 1936, and March, 1937. Total bonds, notes and bills were increased by roughly \$1,000 millions; at the same time the Treasury was funding shorts into longs; and the banks reduced their holdings of notes and bills by almost exactly the same amount as the Treasury retired them. Indeed, between June and December, the banks were virtually exchanging shorts for longs; but they were taking no part of the net new offerings. The net result of the nine months from June, 1936, to March, 1937, was that a market that had come to lean heavily on the banks had been obliged to absorb, not only the bulk of the new offerings, but also a great share of the funded issues.

### Recent Trends

This phase of credit liquidation lasted approximately until the spring of 1938. In the June quarter of 1937, Government financing again sought the short-term market, and this was the last major demand by the Treasury until the autumn of 1938. In the second quarter of 1938 the retirement of bills and the conversion of notes amounted to over \$2,000 millions and for the first time since the last half of 1936 the banks exchanged their maturities for approximately half of the funding bonds offered. The release of the inactive gold fund had given the banks excess reserves; the heavy liquidation of loans had reduced bank earnings; they were receptive to any offering; and the only suitable openings available were the funding bonds.

Since then until now the demands of the Treasury upon the market have been comparatively small. The total of "market issues" rose only from \$28,815 millions in February, 1938, to \$29,454 millions in March, 1939. But it was a period of enormous funding operations, of rapidly mounting excess reserves and the continued liquidation of bank loans. In the aggregate the holdings of the member banks at the end of March this year were almost what they had been on March 7, 1938. They had in that period taken almost none of the new financing, but had converted almost \$2,000 millions of shorts into longs.

The chronology is clear, though the moral is not. Until almost the end of 1935, deficit financing was (a) predominantly or almost exclusively by means of short-term securities; and they were (b) taken by banks. The second phase was a great funding operation, during which bank holdings were reduced. The third and current phase has been a continuation of the funding of short debt, with the banks maintaining their position. The consequences upon the credit system and

upon business of all this is debatable. But it is reasonable to suppose that these marked changes in the structure as well as the magnitude of the public debt and the method of its financing were appreciably influential upon the economy.

## The New French Imperialism

[FROM OUR PARIS CORRESPONDENT]

IN the past few months, and particularly since the first tumultuous expression of the Italian demand for French colonial territory and the Premier's tour of Tunisia, Imperial sentiment and governmental interest in the development of the colonies have acquired a remarkable impetus. Similar phenomena have been observed in France in the past—in the period immediately following a war. But on those occasions Imperial enthusiasm was a derivative of diplomatic policy, and was moreover encouraged by other continental Powers as a means of dividing France's attention. This time it is not a matter of military conquests, but of defensive organisation and colonial economic expansion proceeding side by side and both supporting the organisation of national defence on the Continent. French Imperial advance represents primarily a direct reply to the Axis Pact; but its advocates are careful to point out that it may also be used as a new means to European collaboration.

It is not difficult to discover what are the principal material objects of the new Imperialism. They are the immediate need to place larger numbers of colonial troops at the disposal of France in case of war; and the long term requirement of imported raw materials and markets for French manufactures. These are required to support the exchanges and lessen an import balance which may be aggravated by a prolonged programme of arms production.

This country is a large importer of raw materials and food-stuffs, but exports only a modest amount of manufactured goods. An excess of imports over exports is the normal situation. But the import balance tends to grow as a result of re-armament, while the declining birth rate tends to limit the country's capacity for economic and financial expansion. Some counterweight must be found, and the present tendency is to seek it in the Empire, which offers in return for increased military and civil liabilities an impressive field for economic expansion.

The following table indicates the importance of the colonial market to the French economy:—

|                                                                             | 1935 | 1937 | 1938 |
|-----------------------------------------------------------------------------|------|------|------|
| Percentage of imports from colonies in total external trade of France ..... | 25.8 | 24.4 | 27.1 |
| Percentage of exports to colonies in total external trade of France .....   | 31.5 | 28.3 | 27.4 |
| Percentage of imperial trade in total French trade .....                    | 28.2 | 27.2 | 27.2 |

The part played by North Africa, and notably by Algeria, is particularly important, and represents nearly three-fifths of the whole colonial trade of France.

### Developing the Colonies

The effort expended by France in the past five years to develop the territory of her overseas territories, and thereby to increase their importance both as producers and as markets, has been considerable. It has rapidly borne fruit in the reduction of the import balance in French trade with foreign countries, to the benefit both of the home country and the colonies.

It is interesting to note that this progress has been registered in a period of crisis both in the national finances and for capital in general. It has been supported less by appeals for credit than by "the policy of support" through minor taxes on consumption.

The lead has been given. Future advances will be even more decisive. They will be indispensable, for although France can now secure three-quarters of her imported food-stuffs from her colonies, she still purchases from foreign countries in each year 15 milliard francs' worth of raw materials—which is manifestly too much.

The intensification of the development of the overseas territories is limited by certain difficulties. First difficulties of

a financial character. The progress of the territories necessitates powerful financial aid at a time when the exigencies of re-armament absorb nearly all the resources of the capital market. Secondly, there are fiscal difficulties. It has been observed that while the excess of French imports over exports has been reduced from 14,800 million francs in 1937 to 11,329 millions in 1938, the import surplus of the colonies *vis-à-vis* foreign countries, which was 990 millions in 1935, rose to 1,600 millions in 1937 and 1,800 millions in 1938. This deficit is no doubt due to world conditions, but it is also due to the deficiencies of the policy of the home country and to international trading arrangements which place the colonies in a position where they are unable to offer much resistance to their powerful foreign competitors. This is why there is a demand in French colonial circles that the home country shall place her interests on a common level with those of her colonies in the forthcoming bilateral negotiations, and thus supply some return for the effort of organisation and discipline which has been demanded of the colonies in order to secure that their products should not compete with her own.

Greater France has attained her geographical outline and status. She possesses in a powerful navy the means of her defence. What she still lacks is an Imperial system, a will to cohesion, and an economic impetus which could complete in the wider sphere the local exploits of great individuals of the stature of Lyautey. The impoverishment which succeeded the war, and needs which have been resuscitated by the external menace, have provided a stimulus which may yet lead to the filling of the gaps.

July 6th.

## Reich Finance and the Reichsbank

[FROM OUR BERLIN CORRESPONDENT]

A STRIKING impression of Germany's difficult financial position is suggested by the new Reichsbank law and by the yearly report of the Reichsbank itself. The Reichsbank law was ostensibly intended to eliminate finally the influence of the Versailles Treaty and the Dawes and Young plans upon the Reichsbank, but it was really designed to reorganise the bank, for the earlier restrictions and foreign influence on the bank's policies had already been done away with. The point is that the old bank law allowed the Reichsbank directorate (especially when under the leadership of a personality like Dr Schacht) to stand in the way of the financial experiments of the National Socialist regime—although, even under Dr Schacht, the Reichsbank was extensively used for State financing.

It should be noted that the Reich debt amounted to only Rm. 11,690 millions at the end of March, 1933, of which Rm. 1,514 millions were in short-term debts. At the end of March, 1939, however, the funded Reich debt amounted approximately to Rm. 24,208 millions and the floating debt to Rm. 6,535 millions, giving a total of Rm. 30,743 millions. Thus the debts have nearly tripled under Nazi rule; and during the same period, the currency circulation has almost doubled, rising from Rm. 5,656 millions at the end of 1932 to Rm. 10,388 millions at the end of 1938.

It is common knowledge that the expansionist aims of the National Socialist regime have necessitated a huge armaments programme and a correspondingly high need for financing. Just how high the required sums have been is shown in the rise of the Reich debt, which has increased so heavily, despite the fact that Reich tax and Customs receipts rose from about Rm. 6,600 millions in the fiscal year 1932-33 to about Rm. 17,700 millions in the last fiscal year. And the armaments certificates still in circulation, amounting to many milliards of marks, are not included even in this total of the Reich debts.

### Arms and the Money

At the start of 1938, the earlier system of financing projects in advance through the use of armament certificates led to a financial crisis; full employment had been reached; and, with the existing scarcity of consumers' goods, any further extension of credit would have led straight to inflation. Dr Schacht attempted to stay the increase in the indebtedness by substituting the use of forward Treasury certificates for armament certificates; at the same time he hoped to attain

some control over State investments, and to avoid a further increase in the currency circulation by the fact that the Treasury certificates, being non-rediscountable, would flow back to the Reichsbank. For political reasons, however, the Schacht plan could not be retained, and the system of forward Treasury certificates now means, in practice, the continuation of a policy of incurring debts in order to pay for State projects. This resulted in an acute cash scarcity last winter; on the one hand, money was required to meet current demand; on the other, it was needed for the redemption of short-term obligations.

It was this crisis that led to a reorganisation of the Reichsbank board of chairmen, which was followed by a tax revision, the New Finance Plan, and later by the new Reichsbank law. (The tax revision and the New Finance Plan have already been discussed in previous letters from Berlin in the issues of *The Economist* dated March 4 and April 1, 1939.) The new Reichsbank law places the bank under the sole authority of the Reich and the Reich Chancellor, and the directorate will retain only an advisory capacity.

Characteristic of the intended increased use of the Reichsbank for State financing are the changes made in the conduct of the bank's business activities. The Reichsbank may buy or sell three-month Treasury bills of the Reich, to a total specified by Herr Hitler, and may grant to the Government loans for temporary working capital, the size of which is also to be determined by the Fuehrer. These two rules allow for a practically unrestricted use of the Reichsbank for State financing.

Similarly, the law specifies that Reichsbank notes and Reichsbank gold coins are the only unlimited legal currency. The currency circulation must be covered by bills, cheques, Reich Treasury bills, securities and demands falling due daily (collateral loans). These regulations, in view of the unlimited issuing of Treasury bills and Reich credits, permit of an unlimited extension of credit and an unlimited increase in the currency circulation.

### Signs of Inflation

The yearly report of the Reichsbank is little less significant. The increase in the currency circulation within the last year from Rm. 7,478 millions to Rm. 10,388 millions is attributed to the currency conversion in Austria and the Sudeten territory. But new Reichsmark means of payment were issued for this purpose only to the value of Rm. 1,125 millions. It is true that there was an increase of production in Germany and in the newly acquired territories, but the German currency circulation increased by only about Rm. 500 millions yearly during the years of the Reich's greatest productive activity in the past, and last year's total increase of about Rm. 2,900 millions in the circulation seems to indicate an undoubtedly inflationary tendency.

The Reichsbank further reports that its gold and foreign exchange holdings are unchanged and still unsatisfactorily low. The Austrian and Sudeten holdings of gold and foreign exchange, as well as their assets held abroad, are not mentioned at all. And there must have been an increased strain of the Greater Reich's total holdings since, against declining exports, there was an increased need for imports—and at the same time supplies were stored for defence reasons; it was through the acquisition of Austrian and Sudeten gold and foreign exchange holdings that this was possible.

### Australian Trade Policy

THE period of office of the late Mr Lyons's first two Ministries in Australia, from 1931 to 1937, was one of steady economic revival in the Dominion. It reached a peak of prosperity rivalled only by a few privileged countries like South Africa. Those years were also a time of fairly steady downward adjustment of the Australian customs tariff from its crisis levels, a policy interrupted only by an unfortunate interlude, in 1936, of experiment with the so-called "trade diversion policy." The moderate tariff policy was tested under very favourable conditions, and emerged from the test with honour, since at the end of the period unemployment in the manufacturing industry, where the degree of protection had been cut, was scarcely above minimal proportions.

This policy was not conducted without many criticisms, and these form a large part of the valuable collection of documents\* that has been edited by Professor Copland and Mr Janes. Much of the attack was on familiar protectionist lines, but it is interesting to note the recurrence of criticism, from various quarters, of Articles 9, 10, 11 and 12 of the Anglo-Australian Ottawa agreement. These were the so-called general clauses of the Ottawa pacts, undertaking that Australian protection would not be given to industries not assured of sound prospects of success, and that, when given, it would not exceed such a level as would afford British producers full opportunity of reasonable competition with the Australian manufacturers. The application of these clauses was to be entrusted to the Tariff Board, whose resultant recommendations the Government undertook to im-

\* "Australian Trade Policy": A Book of Documents 1932-1937. By D. B. Copland and C. V. Janes. Sydney. Angus and Robertson. 10s. 6d.

plement. The critics hotly maintained that this removed the tariff-making power from the hands of Parliament, where it belonged, and placed it in those of a non-elective expert body. The force of such criticism accounts for the successful insistence of the Australian Government, in their negotiations for a revision of the Ottawa pact, that their pledges under these articles should be suspended.

At the same time, the documents printed also reveal the strength of an exactly opposite line of criticism. The ill-fated "trade diversion" policy of Sir Henry Gullett, which aimed at greatly reducing Australia's purchases of Japanese manufactures (though she had a large credit balance of trade with Japan), and at correcting the debit balances of trade that she had with the United States and certain other countries, was vigorously attacked, not only on its merits, but also on the grounds that it meant completely discarding the skilled advice which the Government received from the Tariff Board, and which saved it from error or excess in its protective policy.

In practice, the Tariff Board interpreted their instructions under the Ottawa agreement with a light hand. The report in which they explained that the Ottawa general clauses did not mean what they said, but something much more common-sensible, is particularly interesting. British exporters were inclined to complain of this gloss, as continuing protection to inefficient Australian industries and as denying them rights of competition in Australia that they had been promised; but, in sum, they had cause to be grateful for the results of a less legalistic interpretation than that adopted, for instance, by the Canadian Tariff Board.

The Australian Board handed down one decision (fully documented in this book) of great value to British exporting interests. They held that the depreciation of the Australian pound afforded uncovenanted protection to local industries, and that the tariff should be adjusted accordingly. Within a few months the New Zealand Tariff Commission, faced by similar circumstances, reached precisely the opposite conclusion (a cross-reference that might incidentally have been recorded by editors who go so far afield as to include the resolution of the Indian Legislative Assembly in favour of terminating India's Ottawa agreement).

One necessary criticism of the book is that it is not up to date. Though only just published in England, it was prepared in 1937, with the result that it omits the last chapters of a continuous story, in the shape of the agreement to disagree reached by the United Kingdom and Australian Governments last year, in lieu of a revised trade pact to take the place of Ottawa, and an account of the part (positive and negative) played by Australia in the negotiations of the Anglo-American trade agreement. However, the editors fortunately assure us that they hope to continue in future volumes their series of documents on Australian economic affairs. Perhaps it is not too late to remind them that, in a collection largely concerned with the controversy over various aspects of the Ottawa agreement, it would have been useful to print at least the salient clauses of that agreement itself.

## THE BUSINESS WORLD

### United States Monetary Sabotage

IF we wish to view in its true perspective the tussle between the United States Senate and the Administration on the Monetary Powers Bill, it may be useful as a preliminary to set out the milestones in the dollar-gold policy and the silver policy of the United States since April, 1933, when the dollar was severed from its previous gold parity. Both policies were evolved out of the "reflationary" fervour which seized the President and his then advisers after the culmination of the banking crisis. They were based on the most simplified and crudest versions of the Quantity Theory of Money, and on the belief that appropriate tampering with the volume of currency and credit would have the desired effects on the level of prices and *ipso facto* on the business situation. By April 5, 1933, when the banking system was awakening from the coma of the moratorium, all private gold holdings in the United States had been nationalised and an embargo had been placed on the export of gold. On April 20th the former parity of the dollar was abandoned and the currency was left to find its own level in the foreign exchange market. In the following month Congress passed the Agricultural Adjustment Act which authorised the President to fix the gold contents of the dollar, with the proviso that this content should not be less than half the previous weight.

By October, 1933, the Reconstruction Finance Corporation had begun to quote a dollar price for gold which rose gradually from \$31.36 to \$34.45. The latter figure was reached in January, 1934, by which time the Gold Reserve Act was passing through Congress. This measure demanded by a special Presidential message to Congress gave the President the power to devalue the dollar between limits of 50 and 60 per cent. of the old parity. This power was conferred for a period of two years with an extension of a further year at the discretion of the President. At the end of January, 1934, the dollar price of gold was fixed in accordance with this measure at \$35 per ounce, equal to a devaluation ratio of 59.06 per cent. At the same time a Stabilisation Fund of \$2,000 millions was set up and endowed with part of the paper profit derived from the revaluation of the gold reserve. At the end of two years the President extended his powers for the additional twelve months provided for in the Act. This expired in January, 1937. Congress approved an extension of the monetary powers of the President until June 30, 1939, when its maturity provided the occasion for the recent trouble.

Before the struggle between the President and Senate is described the outline of American silver policy should also be traced since the Monetary Powers Bill in its passage through the Senate acquired some unexpected amendments dealing with silver.

The Agricultural Adjustment Act gave the President the power to fix and vary the weight of the silver as well as that of the gold dollar. In June, 1934, the Silver Purchase Act was passed, a measure providing the "rehabilitation" of silver by official purchases of this metal at prices limited only by the monetary price of \$1.2929 per ounce and proceeding until—at some unspecified date—the silver reserve of the Treasury represented one-third of the gold reserve. The price paid for domestic silver under the discretionary powers given to the President by the Agricultural Adjustment Act has always represented a substantial premium over the world price which in its turn has

anchored itself to the price for imported silver fixed by the United States Treasury. After various changes the domestic and import prices had remained at 64.64 cents and 43 cents respectively since early in 1938. The import price was that applied in a number of bilateral agreements for the purchase of silver entered into between the United States and silver producing countries such as Mexico and Canada.

This was the position when the Somers Bill, sponsored by the Administration, began its rough passage through Congress. This measure provided for the extension for another two years of the President's powers of determining the gold and silver value of the dollar and for the corresponding extension of the life of the Stabilisation Fund. The Bill passed through the House of Representatives, but on its first appearance before the Senate it was subjected to such buffeting as to render it quite unrecognisable on its emergence from that assembly. The majority which effected this maltreatment was made up of a group of Republican and conservative Democratic Senators on the one hand and of representatives of the silver-producing States on the other. The first saw in the lapsing of the President's special monetary powers an opportunity to make a rousing demonstration against the principle of dictatorship which they pretend to see enshrined in every measure endowing the President—and President Roosevelt in particular—with any discretionary powers. They therefore voted against the extension of the devaluation powers and the Stabilisation Fund. Their action was sabotage with a political motive in mind. The silver Senators for their part were prompted by altogether more practical and less ideological considerations. They merely wanted the assurance of a higher price for domestic silver. They therefore appended to the Bill an amendment raising the domestic price for silver from 64.64 cents to 77.50 cents. A further amendment specifically repealed the powers of the Treasury to buy foreign silver.

Thus dismembered, the Bill returned to a joint Committee of the House and the Senate on June 29th, less than 48 hours before the powers of the President lapsed. In this Committee the more fundamental amendments of the Senate were defeated, the devaluation powers were restored, the decree against all future purchases of imported silver was removed, but as a tactful and politic sop to the silver *bloc* the amendment fixing a higher price for domestic silver remained—though the figure was lowered from 77.50 to 70 cents. On June 30th the Senate resumed its attack on a measure thus restored to something like its original form. No vote was taken, but the Bill was "talked out," and at midnight on June 30th, the powers having lapsed, the debate was adjourned.

Consideration of the Bill was resumed on Wednesday of this week, and to the general surprise the Bill, as re-amended in Committee, passed—though by the narrow majority of 43 to 39. This last stage of the debate was not so much concerned with the merits of the various amendments as with the legalistic niceties of the Administration's attempt to extend powers which had actually lapsed and been in abeyance for five days. The vehement discussion on this point provide an indication of the seriousness with which the monetary conceptions underlying the Senate's previous amendments were to be judged. In its final form the Act extends the monetary powers of the

President for another two years, says nothing about imported silver, but fixes the price paid for domestic silver at 71.11 cents per ounce. This price is based on the monetary price of \$1.2929 per ounce less some stipulated seigniorage, which in this instance is placed at 45 per cent., compared with 50 per cent. charged since the beginning of 1938.

If this were all that had to be recorded as the result of this attempt at monetary sabotage by the U.S. Senate the incident would in retrospect have little more than mere curiosity value or interest. But while monetary affairs in the United States were seemingly being thrown back into the melting-pot, the U.S. Treasury saw and seized an excellent opportunity of lowering the price at which they buy imported silver. The reason for these changes has been stated by Mr Morgenthau to be the refusal of the United States, by paying a price higher than the world price for silver, to lend themselves to profitable operations by international speculators. This explanation will only have convinced the very gullible. The only reason why the world price for silver has fallen below the American parities has

been because very justifiable doubt existed on the score of future American silver policy. The disparities have provided no opportunity for "speculation" since the prevailing uncertainties have frozen the whole arbitrage traffic in silver into immobility. The truth is that everyone in the U.S. Treasury is now convinced of the expensive folly which the Silver Purchase Act perpetrated. It is no consolation to know that it helped reflation when to-day the Federal Reserve system is glutted with excess reserves. Far from "rehabilitating" silver it drove it out of circulation from the few countries that still adhered to this standard. It may not be possible completely to liquidate the Silver Purchase Act without doing grave damage, from which the United States themselves would be among the main sufferers. But at least there is a case for reducing the current cost of that legislation. This case has been forcibly put during the Congress debates on the Monetary Powers Act, and we may rest assured that the arguments in favour of further reductions in the price paid for imported silver will have found a most sympathetic echo within the Treasury at Washington.

## Home Rail Earnings

BY an irony of circumstance, the past half-year, which saw the recognition of the railways' Square Deal claims, has also provided an increase in gross receipts of £483,000, compared with the first twenty-six weeks of 1938. Sceptics who doubt the efficacy of the "multiplier" must find it hard to account for the transformation of the railway traffic trend during the past six months. The year opened, admittedly, with some credits; there were appreciable economies brought in from the second half of 1938, and sufficient was expected from the Square Deal negotiations to give the long-suffering stockholder hope, if not increased dividends. But at the beginning of the year, the traffic outlook was anything but good; few stockholders can have expected a recovery sufficiently dramatic to convert a cumulative deficit of £1,789,000 at the end of the twelfth week into a "plus" of £483,000 fourteen weeks later. In this short space, the net gain in railway receipts has amounted to £2,272,000—a sum equal to practically one-third of the total loss in traffic for the whole of 1938.

The incidence of the net gain for the half-year is uneven. Great Western has increased its takings by £309,000, L.M.S. by £110,000, Southern by £57,000, and L.N.E., thanks to a favourable traffic last week, has just managed to climb "out of the red" to the extent of £7,000. Such figures are the first—and most accurate—step towards an estimate of the possible outcome of the past half-year. A relatively small movement in receipts or expenditure produces a magnified result in net receipts. And during the past half-year the potential movement in operating costs is particularly difficult to express in precise figures. The estimates which appeared in *The Economist* of March 4th were based on the assumption that the volume of traffic would show no change compared with that of the second half of 1938. That assumption, as we know, has since been displaced by the striking recovery in gross receipts. This recovery, in turn, substantially modifies the expected "savings" which were realised in the second half of 1938 and were consequently available for the assistance of the first half-year's results of 1939, provided that the volume of traffic remained at the same level. The maximum potential savings can be put at £700,000 for L.M.S., £1,000,000 for L.N.E., and £500,000 for Great Western. To some extent, these savings were attributable to true economies of a permanent character—fuel economies, more efficient utilisation of labour supply, reduced superannuation liabilities and the like—in which L.M.S. has probably obtained the larger share. But possibly to a larger extent, they represented the mere absence of expenditure because traffic was not passing. As soon as the upward trend of traffic was

resumed, such economies would begin to slip away.

To determine to what extent they have been absorbed through the additional costs due to the increase in the volume of traffic handled during the past half-year is not a simple process. It involves the linking of economies attributable to the second half of last year with a volume of traffic for the first half of 1939 which is higher relatively, but lower absolutely, than the volume of the second half of 1938. In fact, the volume of traffic handled in the two halves of the year is not equal. In the three years 1936-38, for example, L.M.S. and L.N.E. obtained 48.3 per cent. of their total receipts in the first 26 weeks of the year, Great Western 47.7 per cent., and Southern 46.4 per cent. Hence if L.M.S. gross receipts in the second half of 1938 were £32,138,000 we can regard the comparable total for a first half-year's traffic on the same basis as equivalent to  $\frac{48.3}{51.7}$  of the traffic for the second half, or £30,000,000. Similar figures for L.N.E. and Great Western would amount to £22,000,000 and £12,500,000 respectively.

It would be on traffic of this magnitude that the "savings" brought in from the second half of 1938 would properly apply. In fact, the three lines concerned have obtained actual traffic of £31,241,000, £22,796,000 and £13,157,000 during the first 26 weeks of this year, and the additional volume of traffic handled will accordingly affect the retention of the savings. For purposes of estimation, it has been assumed that each company will retain only 40 per cent. of the increase, owing to the direct costs of handling the higher volume of traffic. The extra costs involved can thus be put at £750,000 for L.M.S., £475,000 for L.N.E. and £400,000 for Great Western.

At this point the results of the estimates may be summarised, and related to the marginal stocks. This is done in the following table:—

| (Amounts in £000's) |                                  |                          |                             |                           |                                  |                        |
|---------------------|----------------------------------|--------------------------|-----------------------------|---------------------------|----------------------------------|------------------------|
|                     | Marginal Stocks                  | Required for full divs.* | Traffic gain, 1st half 1939 | Maximum potential savings | Estimated additional expenditure | Net gain for half-year |

\* Compared with 1938. † Including £266,600 for new debenture interest, of which £116,600 falls in first half-year. ‡ Cost of 1 per cent. dividend on ordinary.

On our assumed basis, L.M.S. may retain none of its maximum potential savings, since traffic has made a marked improvement compared with the second half of

1938. L.N.E., with a smaller rate of gain, may retain something like half the expected savings, while four-fifths of the Great Western's savings may have been absorbed, as a result of the outstanding improvement in traffic. The net results suggest a gain of £60,000 in the net revenues of the L.M.S., £532,000 for L.N.E., £409,000 for Great Western, and perhaps £60,000 for Southern. The latter company, however, has to be treated as a case apart, for it appears to have brought forward no appreciable savings from the second half of last year—which is readily to be understood in view of the nature of its traffic—while its gross takings for the first half of this year appear to be relatively lower than those of the second half of 1938—the only case of the sort among the four main lines.

How far are these figures a trustworthy guide to dividend prospects? They are subject to a wider degree of error than most railway estimates, and that is saying a good deal. There is, secondly, the question of dividend policy; railway boards, no less than the directors of commercial undertakings, are hardly likely to commit themselves to the payment of generous interim dividends upon their marginal stocks in present circumstances. Yet, thirdly, at the present level of business activity, the companies' traffic during the second half of this year are bound to make a striking comparison with the depressed six months of 1938. Fourthly, the question of minimum wage claims is again being ventilated. Fifthly, there is the possibility of war itself. For these reasons, the manipulation of figures relating to a single half-year cannot be regarded as anything but a tentative experiment in probabilities. On the figures given above, L.M.S. 1923 preference might show a trace of earnings—say,  $\frac{1}{8}$ th per cent.—while L.N.E. first preference may be covered to the extent of 1 per cent. Something slightly below 1 per cent. is suggested for Great Western ordinary. For Southern preferred, the position is complicated by factors already referred to, and also by the debenture issue of January last, which will require an additional interest charge of £116,600 in the first half-year and £150,000 in the second half-year. Since the full preferred ordinary dividend was short-earned to the extent of £131,871 last year, a fairly considerable leeway has to be made up. But in this case the importance of ancillary traffic in the second half of the year is crucial. Moreover, the company will have the benefit of the 5 per cent. increase in London fares during the current half-year, though it is unlikely that half of the full year's estimate—£300,000—will be realised in the first six months of the operation of the increase.

If the gains of the past fourteen weeks were to be maintained at the same rate during the coming six months the railway stockholder could look hopefully towards gross receipts of £162½ millions for the full year—an increase of £5,000,000 over 1938, and little below 1937. In view of the depression of railway takings in the second half of last year, such an achievement would seem by no means impossible. There may, in fact, be a chance that the accelerated effect of defence expenditure may provide indirect assistance to railway receipts—already its direct effects in stimulating the heavy industries are plain from the fact that out of the £483,000 gross increase for the past 26 weeks, coal accounted for £674,000. Merchandise contributed only £47,000, and passengers showed a disappointing drop of £238,000. Hence the stimulation of secondary industries and the possibility of good holiday traffic may help the merchandise and passenger receipts in coming months. But even if the volume of traffic currently handled shows no improvement, the weekly traffic comparisons later this year will undoubtedly look impressive, though it will not follow that net receipts will jump to a corresponding degree. There may, indeed, be some danger that the market will not apply a sufficient rate of discount to gross traffic increases to take account of rising operating costs. If that should happen, the later months of this year may provide an opportunity for selling, rather than buying, marginal home rail stocks.

This interval of relative improvement does not mean, therefore, that the railway problem has been solved. But for the increase in coal, the traffic for the past six months would have looked very sorry, and but for the effect of defence expenditure on the heavy industries, coal traffic

would certainly have been lower than it was. With many branches of heavy industry operating virtually at capacity, a less striking rate of increase in the future might result in the heavier classes of traffic. As for the lighter grades, the immediate outlook may be determined by the effects of the "multiplier," but the long-term outlook rests upon the Square Deal arrangements. The Bill is promised as early as possible next session, but it could not possibly be enacted before the end of this year, and can have no effect, directly at least, on the revenues of the current year. The spirit which is animating the present discussions between rail and road interests is valuable, but it cannot assist this year's revenues.

Meanwhile, the present market quotations for the marginal stocks present some interesting comparisons for the short-term operator. L.M.S. 1923 preference now stands at 39, compared with 45 at the end of May, when the majority of home rail stocks touched the highest levels of the year. Its present earnings position, if the estimates opposite are any guide, is inferior to L.N.E. first preference, which stands 8 points lower at 31. Possibly this result is partly due to a defect in the L.M.S. estimates, for there is a strong chance in the case of this company that its effective retention of savings will be greater than that arbitrarily postulated in the estimates. But such an error would hardly explain the present price differential completely. Great Western ordinary at 32½ has, possibly, less impressive recovery prospects for the second half of the year than in the first half. Finally, the outlook for Southern preferred at 70½ is somewhat enigmatic. Unless a substantial increase in receipts accrues during the holiday season—they promise well, but are subject to the immediate impact of politics—something less than full earnings may be available for the stock at the end of the year. Both L.N.E. second guaranteed and L.M.S. first preference, at 63½ and 59 respectively, thus hold out alternative attractions, if the "heavy" lines continue to progress at their recent rate.

# Finance and Banking

**The Turn of the Half-year.**—The final day of the half-year brought no unpleasant surprises to Lombard Street. The market had based its preliminary arrangements for financing itself over the turn of June on the assumption that no serious stringency would be experienced on the final day of the month. Precautionary borrowing into July had, therefore, been of very modest proportions, and had there been any appreciable calling in of funds from the market on the last day of June recourse to the Bank of England would have been inevitable. Nothing of the kind happened and the market was able to sail over the turn of the month with the greatest ease. The anticipation of this ease had been based on the assumption that it would be left to the Treasury—owing to the incidence of Treasury bill payments and maturities—to raise the additional cash required by the customary window dressing and immobilisation of credit at the end of June. The Exchequer returns giving the position at the close of business on June 30 show how well the Treasury complied in this matter. The total of Ways and Means advances from the Bank of England on that day was £37,500,000, or rather more than the amount which the market would in the normal course be expected to borrow at the Bank at this period. The Government, having been deprived of any appreciable receipts from new Treasury bills by June 30—the bulk of the bills issued on the previous Friday being dated on Saturday, July 1—and having to pay out the whole of the £45,000,000 of bills maturing that week by June 30th, was forced to borrow at the Bank for this large amount and thus virtually carried the market over the turn of the half year.

The one factor which might have upset the calculations of the market lay in the dearth of June 30 maturities in the hands of the clearing banks. Special quarters had been heavy buyers of these bills in the difficult days of last April, and the market itself had subsequently been a most diffident seller of the balance of these maturities which remained in their portfolios. This might have led to rather heavier calling of loans by the banks on the final day of June than had been anticipated. That this did not occur was due largely to the expansion in the total "quick assets" of the banks over the previous two months. The bank balance sheets for June 30 already published reveal in most cases a cash ratio very near the 10 per cent. line. The expansion in bills and short loans had evidently obviated all necessity for window dressing the cash position. This expansion in bills has, however, served to maintain the discount rate at a higher level than the position in the short loan market would appear to warrant, and the discount market is continuing to earn an unusually high return on running its bills.

**Silver Market Activity.**—This silver market has during the past week been dominated by the tribulations of the Monetary Powers Bill in its passage through the U.S. Congress. Until Thursday, when the measure had become law, the silver market maintained a very bold front against the threat of a complete cessation in official U.S. Treasury purchases of imported silver. Indian oper-

ators have all along shown the greatest reluctance to believe in the prospects of further reductions in the American price, and though there are some highly vulnerable bull positions in Bombay, no distress selling from that quarter appeared until Thursday. In London, operators have made good use of the opportunities for switching provided by the emergence of an abnormal discount on the forward position, but they have given support to the spot rate, owing no doubt to Mr. Morgenthau's warning that he would reduce the U.S. import price whenever the world price fell below the dollar parity. The London price for spot fell to 17½d. on Tuesday, but this relapse could be made with impunity since the American markets were closed for Independence Day. On Wednesday, no price for domestic or imported silver was quoted in the United States pending the Senate vote on the Monetary Powers Bill. On Thursday, when the Bill, minus the amendment forbidding purchases of imported silver, had become law, some recovery in the price might have been looked for. Instead the spot price in London collapsed to 17½d., a fall of ½d., and the forward to 17d., a fall of ½d. The reasons for this slump were rumours that the Senate's approval of the Monetary Powers Bill was the result of a deal by which the Treasury for its part undertook gradually to lower the import price down to around 30 cents—or to an equivalent of 14½d. Thursday's slump took the London price well below the American parity and consequently the U.S. Treasury lowered its import price again, to 36.75 cents.

**"Black" Market in New Zealand Pounds.**—It was inevitable that the control of exchanges established in New Zealand would sooner or later result in the emergence of a free, or "black," market in New Zealand pounds. There has been some evidence over the past few weeks that such a market is developing, though it should be stressed that its turnover has been of the most exiguous proportions. Nevertheless, the phenomenon should receive the attention which, in principle, it merits. There are two features in the New Zealand exchange position from which the emergence of a "black" market may be said to derive. The first is that the control of the foreign exchange market is by no means all-embracing. For example, there is no compulsion on the New Zealand recipient of sterling interest on London investments to remit those receipts to New Zealand. Nor does the conversion of the proceeds of export trade into New Zealand currency appear to be altogether watertight. Secondly, the New Zealand Government have distributed import licences and permits for certain exports of capital with a liberality which has certainly not been justified by the state of the London funds. The result has been, in the first place, a small accumulation of sterling funds held by private interests in New Zealand, and, secondly, a demand for sterling from New Zealand which has exceeded the resources available to the trading banks. The banks have been forced, much against their will, to ration sterling to their customers, even though these have been armed with the necessary permits from the New Zealand authorities. Under these circumstances, what could be more natural than the development of direct dealings between the unofficial non-banking New Zealand holders of sterling and those whose urgent and duly sanctioned requirements cannot for the time being be satisfied in the official market? Such dealings have, of course, taken place at rates showing a greater discount on New Zealand currency than the official rates. As against the official rate of £NZ125 to £100 sterling, business in the unofficial market is reported to have been done between the range of £130 and £135.

**Half-year's Money Rates.**—The following table shows the average level of short loan and discount rates in the first half of 1939, compared with previous years:—

| AVERAGE MONEY RATES      |           |    |    |                             |    |     |                            |    |    |
|--------------------------|-----------|----|----|-----------------------------|----|-----|----------------------------|----|----|
| Year                     | Bank Rate |    |    | Market Rate 3 Months' Bills |    |     | London Deposit Rate, Banks |    |    |
|                          | £         | s. | d. | £                           | s. | d.  | £                          | s. | d. |
| 1929                     | 5         | 10 | 0  | 5                           | 5  | 4   | 3                          | 10 | 0  |

| 1939 (Jan. 1 to June 30) | 2         | 0  | 0  | 0                           | 14 | 11  | 0                          | 10 | 0  |

The table shows an interesting divergence between discount and short loan rates. In the first quarter of the year, when there was an acute shortage of bills, the market rate for the three months bank bill remained at just over ½ per cent.; but in the beginning of April it rose sharply under the stress of international events, and in spite of a drop in May the undertone has continued to be firmer. Credit conditions were also affected in April by the Albanian crisis, combined with the Easter currency withdrawals, but throughout May and June money was very comfortable, so that the average short loan rate for the half-year is very low. In view of the withdrawal of funds from London, the cheapness of bond money may be thought surprising; the

explanation probably lies in the preference of outside banks, under the present uncertain conditions, to lend money at call rather than to tie up their funds even in so short an instrument as a bill, while the general lack of interest in the gilt-edged market has restricted the demand for loans against bonds.

**Gold Deposits in Argentina.**—The London market has during the past week effected the first safe deposit of gold in the Argentine under the scheme recently devised between Messrs Samuel Montagu and Company in London and the Banco Central in Buenos Aires. The scheme under which such deposits can now be made is intended to meet the requirements of holders of gold who wish to keep their stocks at a safe distance from the European storm centres. Under these arrangements gold in bars or coin is deposited with the Banco Central in Buenos Aires in exchange for certificates granting the depositor the irrevocable right to withdraw and re-export such gold within a period of three years. These certificates are non-transferable, but by making them out in the name of the bank transacting the business on this side the resale of the gold they represent should present no difficulty whatsoever. The minimum quantity of gold which the Banco Central will receive under this arrangement is £15,000. These arrangements, which cut right across the previous legislation on gold in the Argentine Republic, provide another example of the ingenuity exercised in the search for ever safer "funk holes" for gold.

## MONEY MARKET NOTES

### The Money Market

THE international situation was the cause of the poor competition at last week's Treasury bill tender, which resulted in an average rate of allotment of 17s. per cent., compared with under 15s. in the previous week. There was an immediate rise in market discount rates, ½-¾ per cent. being quoted for the three

Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

months' draft, and on Monday the clearing banks raised their buying rates to ½ per cent. for the August bill and ⅞ per cent. for September. There has since been a slightly weaker tendency, as the clearing banks have been good buyers throughout the week, but the quotations are still at the higher levels.

### Foreign Exchanges

VERY little business has been done in the foreign exchange market. The dollar has been quietly bid, except on Tuesday, when premature reports of progress in the Anglo-Soviet talks caused a general selling of dollars and buying of sterling. The spot rate rose to 4.68½, but has since come back to 4.68½. Forward dollars were in demand last Saturday on fears of a coup in Danzig over the week-end, but bear covering operations on Monday brought about a sharp con-

traction. They were again bid later in the day, but have since moved in the pound's favour, partly as a result of official forward operations, and on Thursday afternoon were quoted at ½-¾c. for one month and 1½-1¾c. for three months. The reduction in the Belgian bank rate from 3 to 2½ per cent. had no immediate effect on the belga; but on Thursday afternoon it was rather offered at 27.544-½, although the three months' forward belga improved to a discount of 13c. from 14c. on Wednesday. The guilder was rather weaker on Thursday on rumours of more internal political difficulties. On Monday the Chinese Government announced that an import ban was being imposed on luxuries in order to reduce the unfavourable trade balance; henceforward, too, all foreign exchange arising from exports must be released to the two Government banks at places in the interior under the direct control of the Government, since much exchange has been lost through being surrendered at places where it quickly found its way into the hands of the Japanese. The nominal quotation of the Chinese dollar has not been affected by these restrictions.

### The Bullion Market

A CERTAIN amount of surprise was aroused by the extent of the arbitrage demand for gold, which on Wednesday accounted for the bulk of the relatively big turnover, despite a premium of 1d. in the price. Normally, it would not be possible for arbitrageurs to work at a profit when the premium is as high as that, and on the previous day, as is shown by the low turnover, they had been effectively discouraged. It is understood, however, that some arbitrageurs have engaged in gold shipments without covering the war risk at all, and as the premium is calculated on a basis that

\* Above or below American shipping parity. This week's calculations are based on a temporary parity, in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.

allows for war risk insurance, they have been able to ignore it.

### The Bank Return

THE big increase in the note circulation this week may be put down to currency requirements over the half-year. It has been practically offset by a rise of £4.8 millions in Government securities and a net rise of £1.6 millions in the other securities item; bankers' deposits, nevertheless, show a fall of nearly £5 millions as a result of a

## Investment

**Markets and Politics.**—Relief at the absence of any immediate disturbance in Danzig failed to stimulate the Stock Exchange on Monday, and throughout the week politics have played a magnified part in thin markets. Premature reports that a pact with Russia had virtually been completed produced a sharp recovery on Tuesday, and even the disillusionment which followed in mid-week was relatively short-lived. There is, in fact, no market trend at present. Price movements are skittish, and the relative motive force of a normal deal in sub-normal markets is capable of producing disconcertingly sharp movements in prices. Possibly the feature of greatest consolation to the market was the firmness of the new scrips in mid-week. Here is proof that even tactless timing of new issues cannot completely negative the influence of accumulating investment support. An impression of doubtful calm has succeeded a phase of active political disquiet at the end of last week. While it continues, business is bound to remain sub-normal, for if there is no immediate incentive to sell, there is hardly any to buy.

**The Incidence of A.P.D.**—Further committee proceedings on the Armament Profits Duty have provided greater clarification of the scope of the new tax. It is now clear that public utility companies avoid the definitions of the tax. It is also clear that contracts placed by local authorities will not be included, not apparently on grounds of principle so much as administrative impossibility. It is possible, however, that after a year's experience of the tax, the class of contracts may be re-examined with a view to including local authorities' expenditure—an important point, considering the substantial sums which are now being spent by local authorities on civil defence. Steel, copper, nickel, cement, clothing, and oil were specifically mentioned as being included in the scope of A.P.D. during the debate, but coal is excluded. It required considerable pressure upon the Government, however, to secure the inclusion of food contracts within the charge of duty. So far as the investor is concerned, there are few industries which will escape liability to the charge; the fortunate ones are to be found in the consumption trades, and include tobacco, brewing and retail trade. A new clause dealing with succession and amalgamation appears to cover the possibility of evasion by dissolving one company and starting another in its stead. But cases are conceivable where a business was commenced long before July 1, 1936, but was converted into a public company in 1937 in which the profits standard, as at present defined, would not apply. If the percentage on capital standard were adopted in such cases, the principle of succession would fail to be observed, and an unfair calculation of the rise of so-called armaments profits might result. Such a case would hardly be one which can be covered, as Mr Burgin appeared to suggest last week, by the "ordinary income-tax law."

**British General Fixed Trust, Limited.**—On Thursday, the Unit Trusts Association announced that the National Fixed Investment Trust has been appointed to undertake the management of "such of the trusts of the British General group as may be found necessary on behalf of the Association." This decision will be welcomed, for the National group is the largest unit trust organisation in this country, and should be able to manage the British General trusts with a minimum of inconvenience and a maximum of efficiency. For this conclusion to an unfortunate affair, the Unit Trusts Association deserves full credit. Two further points remain to be settled, however.

The first is the names of the trusts to be transferred to new management. It is understood, in this connection, that one of the associated management companies is fully capable of maintaining an independent existence, and that its trusts have not been covered by the published references to the trusts managed by British General Fixed Trusts, Ltd. The other associated management company, however, may be in a less favourable position. Such details, however, can be determined at a later stage; the important present fact for unit holders in the group is that management, in either case, will be in strong hands. The second point concerns the position of the escrow funds. No formal statement has been made regarding the adequacy of the provision for future management which is available for the British General trusts under their new management. It is known that provision has been made, but not its extent. In view of the importance of escrow funds in providing safeguard against the very contingencies which have arisen in the British General case, it seems desirable that the trustees should provide some indication of their extent, either publicly or, as is usually required in more recent trust deeds, with the half-yearly distribution warrants.

**Defaults of the Month.**—With the renewal of grave political fears, the modest recovery in foreign bond prices in May was reversed in June, and the index calculated by Municipal and General Securities Co. (January-June, 1934 = 100) fell by 4 points to a "low" of 53.8. Movements in the separate series are recorded below:—

| End of Month | AVERAGE JANUARY-JUNE, 1934=100 |                 |       |                           |            |       |                |                    |                  |

N.B.—Figures in brackets denote number of bonds included.

The general index, however, is the result of somewhat varied factors. For European bonds, the low point of the year occurred in April, and the decline of no more than 2.7 points between May and June suggests that the market had already discounted the main political dangers. The Chinese defaults (discussed on page 75) and events in China are responsible for the sharp drop in Eastern bond prices. It should be noted that the separate indices for defaulted and undefaulted loans will be adjusted for the latest Chinese defaults in July. In the South and Central American group, Brazilian bonds have weakened on the absence of any debt offer before July 1st, but the Brazilian Government has since expressed its willingness to receive a representative of the British bondholders to discuss scales of repayment with the Brazilian Finance Minister. Guatemala has defaulted on the June 30th coupons of her two 4 per cent. loans, on which sinking fund payments had been suspended from 1933. The pretext that Guatemala's resources suffice only to pay reduced interest can hardly be squared with her willingness to expend the balance on redemption. Finally, the Danzig Senate has declared its inability to meet its foreign debt service, which had already been

## Company Notes

generously reduced by her creditors as from March 1, 1938. Although no official intimation has yet been received, the technique of political default is evident in the decision, which cannot be justified by the current economic position of the Free City.

**Chinese Loan Problems.**—The decision of the Chinese Government to pass the half-year's coupons on the Reorganisation Gold Loan of 1913 and the 6 per cent. 1934 loan both due on July 1st was received philosophically by the market. Indeed, the 1913 loan rose 1½ points to 33, and other issues also improved. The statement adds nothing to that of January 16th, which was discussed in *The Economist* of January 21st. It may be recalled that the Chunking authorities after meeting the 1938 coupons out of sadly attenuated resources, then decided to make no further advances towards the payment of Customs loans service, but undertook to earmark amounts proportionate to the revenues collected in areas still in Chinese control in a special account. On March 27th, discussions for a settlement were opened between the Government and the foreign bondholders' committees, pending the results of which payment of coupons on the above loans will be withheld. So far this year, the coupon on the 4½ per cent. Gold Loan of 1898 (the senior Customs loan) has been met, but the two junior loans are in default, and payment on the 5 per cent. loan of 1925, which ranks after the 4½ per cent. of 1898, is due on July 15th. According to Japanese estimates, about 20 per cent. of the total Chinese Customs receipts for the first quarter this year was collected in Chinese controlled territory. This proportion (and it is hardly likely to increase) leaves no possibility of full payment of all Customs obligations. But the negotiations should at least ensure that priority rights, especially as between interest and sinking fund payments, receive due consideration.

**Industrial Profits in June.**—There is no significant change of trend, compared with recent months, in the profits of industrial companies reported in June. The 257 companies concerned show a fall of 8.33 per cent. in profits from £38,293,990 to £35,104,850. If oil, rubber and tea companies are omitted, the balance of £18,527,557 (consisting largely of the results of home industrial companies) shows a fall of 8.4 per cent. on the year. Though this figure includes £6,850,885 in respect of coal, iron and steel profits, which showed a fall of 10.7 per cent. on the year, it would appear that industrial profits have not yet shaken off the effects of the depressed conditions of last summer and autumn, and that costs are rising. The course of profits over the past two years is shown below:—

| INDUSTRIAL PROFITS 1937-39 |             |              |                    |                |             |              |                      |  |  |

\* After debenture interest.

Of the month's total profits, oil companies alone account for £15,691,285 (principally "Shell" Transport, Anglo-Iranian and Venezuelan Oil), and show a fall of 6.5 per cent., on the year. This group's influence on the total is largely counteracted, however, by the relatively heavy reduction in coal, iron and steel profits.

**Distillers Bonus and Profits.**—For many years past, the Distillers Company have consistently under-distributed profits to the extent of roughly 5 per cent. on the ordinary capital. It is, therefore, not surprising that the steady growth in the group's resources over a long period should be recognised by the issue of a capital bonus. The ordinary share bonus, announced at the end of last week, is at the relatively high rate of 40 per cent., and in the forthcoming report or at the annual meeting shareholders will look for some comment upon future distribution policy. To maintain dividends on the increased capital at the present rate of 22½ per cent., including a 2½ per cent. cash bonus (the distribution for 1938-39 is the same as for the previous two years) would require an increase in profits of over £300,000, assuming no reduction in allocations to various funds, and that profits were distributed in full. The company's financial record indicates solid strength rather than rapid growth in earning power, and the size of the scrip bonus leaves an open question whether some permanent increase in profits brought in from subsidiaries or an adjustment in the rate of dividend is to be expected. The preliminary statement for the year to May 15, 1939, gives no information regarding profits, but it shows that reserve and super-annuation and provident fund again receive £400,000 and £100,000 respectively, while the allocation to the fire insurance fund is raised from £50,000 to £150,000. By calculating dividend and other payments, it can be estimated that profits for 1938-39, after debenture interest and management expenses, are some £30,000 lower at £2,482,000, while earnings for the equity appear to be 27.6 per cent. against 28.9 per cent. This is a satisfactory result in a year of declining profits. In 1938-39 greater benefit may have been derived from the Booths Distilleries acquisition, while the new Cambus distillery has been in production for a full year. Until the meeting and the

full report have been considered, the future dividend outlook for the new capital (on which the latest earnings would be equivalent to nearly 20 per cent.) must remain matter for conjecture. The £1 stock units stand at 94s. 6d. ex dividend but cum rights.

\* \* \*

**Bank and Discount Interims.**—The conventional nature of bank and discount company interim dividends makes them an insensitive guide to the course of profits, for they are usually altered only in the event of some major change in earnings or in order to re-adjust the total distribution as between the two half-years. A year ago, the great majority of bank interim dividends were unchanged, though eventually profits in 1938 were somewhat lower than in 1937. This week's announcements, however, leave a satisfactory impression, for the only change, that of Martins Bank, is an increase to 7½ per cent. The latter distribution, being equal to last December's payment, suggests that the directors have decided to raise the dividend basis to 15 per cent. per annum. The following table compares the latest interim dividends and prices with those a year ago, and gives the current yield and 1938 dividends.

| Name and Shares                   | 1938    |              | 1939 Interim | Price        |              | Yield July 6, 1939 |

\* July 5 for discount cos.

† Assuming 15% dividend.

Bank advances and discount rates this year have shown a slight advance, and further expansion may be expected as the arms programme progresses. On the other hand, the fall in gilt-edged values has probably affected internal reserves against investment portfolios, and the bank's own civil defence measures have involved additional expense.

\* \* \*

**Powell Duffryn Results.**—Reduction in coal output, due to general trade conditions, has been the experience of most colliery companies whose reports have recently appeared. Trade recovery, which first became marked last spring, has not affected colliery results for 1938-39 which are so far available. Export markets have been the most sensitive, and as exports are particularly important for the Powell Duffryn group, a reduction from £846,838 to £761,567 in the total profits of the operating company, Powell Duffryn Associated Collieries, for the year to March 31st, is not surprising. Some diminution in home trade, a large decrease in export demand, and some decline in prices—especially in the export markets—are reported. This setback, however, has occurred in spite of a £10,000 rise in ordinary dividend receipts from Stephenson Clarke, who act as selling agents for the group. Shareholders of the latter company, moreover, were recently informed that total tonnage sold fell by 4 per cent. last year, while exports were 2 per cent. lower. One-third of the distribution on the Powell Duffryn Associated equity goes to Welsh Associated Collieries, whose entire income of £128,397 comes from this source. After the preferential

dividend of 4½ per cent. on the preferred ordinary, the Welsh Associated ordinary dividend is reduced from 1½ per cent. to ½ per cent. and requires £18,408, against £46,020. Even this reduced payment is short-earned by £2,065. The holding company, Powell Duffryn Steam Coal Co., receives half the Welsh ordinary dividend, and two-thirds (that is, £256,667) of the Powell Duffryn Associated distribution, so that its total income amounts to £266,340. The balance available for ordinary dividends is £229,203, against £298,519, equivalent to 6 per cent., against 7.7 per cent., and the distribution is cut from 7½ to 6 per cent. In the past few months the outlook for colliery companies has much improved. Output is at a higher rate than a year ago, and prices are hardening. The Powell Duffryn group, it is true, is closely concerned with the export trade, but here, too, prospects are brighter. At the current price of 16s. 4½d., the Powell Duffryn Steam Coal £1 ordinary stock units yield £7 6s. 8d. per cent.

\* \* \*

**African and Eastern Offer.**—Simplification and consolidation of the group's structure has recently been an important part of Lever Brothers and Unilever policy. The company has this week made an offer of exchange for all the share capital of African and Eastern, which is now only a holding company. Its irregular profits record, its close dependence on the profits of United Africa (20 per cent. of whose capital it owns), and the absence of any ordinary dividend in 1938-39, would make any exchange offer peculiarly difficult to devise, but shareholders cannot complain that they are being ungenerously treated. The terms of exchange are summarised below, the market values being those shown in the circular to shareholders:—

| LEVER BROS. & UNILEVER OFFER |                |              |           | AFRICAN AND EASTERN |               |                          |            |

| 6                            | £ 6/11/3       | Cum. Pref.   | 5         | 5                   | £ 5/9/4½      | 6% "A" Cum. Pref.        | 6          |

\* Based on average middle price in week to July 1. † Rate of dividend on African and Eastern holding, assuming Lever dividends are as in 1938.

There can be no dispute concerning the preference stock, for the dividend remains unchanged. The 9½ per cent. dividend which would be receivable by African and Eastern 12 per cent. non-cumulative preferred ordinary shareholders (assuming Lever's ordinary dividends remain at 10 per cent.) compares with distinctly variable payments in the past, while the advantage of the exchange to African and Eastern ordinary stockholders (whose only dividends in the past ten years have been 7½ per cent. in 1936-37 and 11 per cent. in 1937-38) is still more evident. On the basis of market values, however, the effective premium offered to African and Eastern preferred ordinary is greater than for the ordinary capital. An endeavour has apparently been made to strike a balance between market valuations and earnings prospects. The main impression is that the scheme exhibits great generosity to African and Eastern shareholders. Assuming full exchanges, Lever 5 per cent. preference capital will be increased by £360,000, or 18 per cent., and the ordinary capital by about £1,784,000, or 15 per cent. Since the offer, the market has naturally marked African and Eastern shares up and Lever shares down. Perhaps the terms will be the more acceptable to both parties in view of the intimation that Lever and Unilever profits for the year to date are higher than for the corresponding period of 1938.

\* \* \*

**Bleachers' Association Outlook.**—After the worst year in the company's experience, Bleachers' Association stockholders could hardly expect optimistic pronouncements from Sir Alan Sykes at last week's meeting. The

fall of 27 per cent. last year in the export of bleached piece goods to which Sir Alan referred, came as a heavy blow to a concern which is so largely dependent on the export market. The difficulty of obtaining a level of profitable operations has, indeed, compelled the postponement of any decision regarding the capital reorganisation scheme. Adequate revenues for the Association depend upon an improvement in international trade in those markets which still remain open. Meanwhile, the Cotton Industry (Reorganisation) Bill has introduced into the equation a further unknown, on the effects of which Sir Alan was necessarily non-committal. The directors recommend that the policy of eliminating redundant plant should be continued by a draft on general reserve. The concentration of work on the more efficient plant is also reflected in this year's transfer of £100,000 from reserve to writing down the share values in subsidiaries in cases where business has been transferred to other works. But stockholders, though appreciative of these efforts, will share Sir Alan's scepticism regarding their sufficiency. Increased co-operation within the cotton industry is inspiring a new degree of confidence, but government assistance is still necessary to regain those markets which have not passed completely beyond recall. For example, the recent tariff-quota agreement between Great Britain and India should increase exports to India. There may also be a further improvement in the African market. So far, at least, the Association's turnover shows a token improvement this year, but full recovery lies far distant.

\* \* \*

**Warner's Radio and Electric Questions.**—Warner's Radio and Electric, Limited, was formed in December, 1935, to take over a retail wireless business. Some 120,000 6 per cent. cumulative 10s. preference shares were issued at par, and 240,000 ordinary shares of 1s. at 100 per cent. premium, by a prospectus dated December 14, 1935. This showed an extremely rapid jump in profits of the vendor's business from £6,470 for approximately twelve months to September, 1933, and £8,268 for the following year, to £24,782 for the year to September, 1935. Subsequently the new company's published reports showed net profits of £45,847 for the year to September, 1936, and £52,910 for the following six months. A further £55,000 of ordinary capital was issued to ordinary shareholders at 100 per cent. premium in February, 1937. On March 16, 1938, a resolution for voluntary liquidation was passed, and a petition for compulsory winding-up failed a few days later. The report of the joint liquidators contains several unwelcome features. The approximate statement of affairs issued by the directors showed an amount due from subsidiaries estimated to produce £60,000; for the most part, however, a substantial deficiency will be shown. Further, a preferential claim of £15,500 due for income tax was discussed with the Inland Revenue, and the liquidators have reached agreement with the authorities that the company had, in fact, made no profits during the whole of its existence. Since dividends totalling £45,921 had been paid, the liquidators have entered into proceedings against the directors for the recovery of the amounts paid. These claims are now *sub judice*, and no comment can be offered upon the case. But although shareholders cannot hope for any return from the liquidation, they will doubtless derive satisfaction from the knowledge that the apparent difference between the results shown in the company's published reports and the contention of the liquidators is to be decided in Court.

**Anglo-Dutch Plantations.**—Last year's results of this large commodity producer conform broadly to what was expected in view of the impact of rapidly falling prices and increasing restriction of output. Although these fluctuations in prices and output have been cushioned to some extent by the relative stability of tea prices and quota releases, the company's gross and net profits are each approximately halved. The following table shows that the

proportionate fall in net profits has only been achieved by a striking cut in the depreciation provision:—

|                       | ANGLO-DUTCH PLANTATIONS   |         |         |
|-----------------------|---------------------------|---------|---------|
|                       | Years ended December 31st | 1936    | 1937    |
| Total receipts .....  | £                         | 562,817 | 674,342 |

| Paid (%) .....        |                           | 7       | 9       |
| General reserve ..... | £                         | 50,000  | 50,000  |
| Carry forward .....   | £                         | 57,565† | 66,856  |

† After crediting £2,035 profit on sale of an investment.

Tea accounted for 42 per cent. of total profits, but yielded 21 per cent. less than in 1937, since the increased quota did not suffice to offset a decline in the selling price of 0.72d. per lb., coupled with a modest rise in costs of production. Rubber profits, which accounted for 31 per cent. of the 1938 total, were equivalent to only 40 per cent. of the previous year's figure, and prospects for 1939 suggest no improvement, since the firmer price of the commodity is offset by the omission this year of a forward sale contract which assisted the 1938 results. Moreover, the rate of quota release for the first nine months of 1939 is slightly below the average of last year. The accounts also reflect a heavy decline in the profitability of sisal and tapioca. The reduction in the depreciation provision, upon which comment is made in the auditor's report, can only be judged in the light of the liberality of past appropriations and of the large annual replanting programmes. At 22s. 10½d. the shares appear fairly generously priced; at least the immediate return of £4 7s. 3d. per cent. is asking a good deal of recovery possibilities in primary commodities over the next eighteen months.

Unexcelled in the North Atlantic for Speed and Reliability as well as Luxury and Service, the French Line offers you a short "Continental" holiday afloat by way of a change.

**The Week's Company Profits.**—This week our usual analysis of profit and loss accounts, appearing on page 98, again contains 46 companies for which comparable figures are available. Net profits of these concerns are £2,388,000, against £2,604,000, a decrease of 8 per cent., while aggregate net profits of the 1,495 companies reporting in 1939 to date are 8½ per cent. lower, or £197,758,000 against £215,906,000. The week's results are discussed in preceding Notes and on page 79 under the heading "Shorter Comments."

\* \* \*

**Company Meetings of the Week.**—Reports of company meetings will be found from page 84 of this issue. The meeting of *Bleachers' Association* is discussed on page 76. At the meeting of *Imperial Bank of Iran*, Sir Henry McMahon declared that the fall in discounts and advances, due partly to completion of the Trans-Iranian Railway, left the bank with liquid assets which could be employed in the country's other internal activities.

Mr B. W. Bloomer informed shareholders of *Trust Company of London and Scotland* that the trust had recently increased its holdings in British industrial securities. At the meeting of *The Metal Box Company*, Mr F. N. Hepworth dealt with the year's factory extensions and re-equipment at Newcastle, Hull and Carlisle. Mr H. C. R. Williamson informed shareholders of *Lobitos Oilfields* that during the year eight producing wells at Lobitos and 38 at El Alto had been completed. At the meeting of *Anglo-Ceylon and General Estates*, Sir Edward Rosling pointed out that the company's policy in recent years had been to obtain the crop from the smallest possible area, to rest other areas and reduce cultivation costs accordingly. Mr G. Dent informed shareholders of *Ohlsson's Cape Breweries* that in the past year new markets had been found for the company's products. At the meeting of *Hovis, Ltd.*, Mr A. H. Dence made a plea for Government storage of flour rather than wheat for national defence purposes. Mr T. Walton informed shareholders of *British Glues and Chemicals* that the increased demand for the company's feeding stuffs and fertilisers has offset the fall in prices of its other products.

#### SETTLING DAYS

TICKET      ACCOUNT  
JULY 18      JULY 20

THIS week the market has passed through a variety of moods, all induced by political factors, but which on balance have resulted in only minor changes. Monday saw a fresh decline, which was heaviest in the gilt-edged section, followed by greater cheerfulness on Tuesday on reports of an Anglo-Soviet pact. Towards mid-week the market recovered its balance, for disillusionment over the agreement with Russia and belief that the Danzig question is less acute for the time being tended to counteract each other. Prices and turnover have thus ended up more or less where they began, with some return to dullness.

*Gilt-edged* throughout the week were more sensitive than industrials to changes in political sentiment. Monday began heavily under the influence of the failure of the L.C.C. loan. Slight falls were widespread, though they did not usually exceed ½. These losses were more than wiped out the next day in a wave of optimism following the report that an Anglo-Soviet agreement was near the point of being signed. This hope was soon damped down, but in the absence of further alarms from Danzig prices recovered, and during the rest of the week movements were within narrow

limits. Among home corporations the process of adjustment continued; the new scrips began badly under the lead of the new L.C.C. loan, but tended to improve as the week went on. Among Dominion stocks, New Zealand issues recovered after early weakness. Foreign bonds made a mixed showing, European issues improving after a bad start, though Danzig bonds, of course, remained depressed on threats of default. Far Eastern issues, on the other hand, began fairly steadily, and then lost ground. There was little of interest in South American bonds.

*Home rails* began in subdued fashion on consideration of Mr Marchbank's warning of a 50s. minimum wage demand, but there was soon some recovery on hopes of good traffics to conclude the half-year. In mid-week they again tended to be dull, and then revived on the satisfactory traffics. On the completion of the financial year, London Transport "C" was heavy. Foreign rails were featureless.

*Industrials* provided a pale reflection of the gilt-edged market. Business remained on a small scale, though the undertone became rather better towards mid-week. Price movements were unexciting, with a few individual exceptions. The tendency among iron and steel shares was uncertain. Slight losses on Monday were followed by some recovery, with a return to indefinite conditions in mid-week. Coal shares were

dull but quite steady, while engineering issues made a mixed showing. The same uncertainty was shown in the electrical equipment section, where movements were diverse and unimportant. Motor shares were sensitive to the week's changes in mood. Aircraft issues hardened after a poor start. Textiles were not typical of the rest of the market and showed few signs of improvement until mid-week. Breweries were somewhat erratic, for although they shared in Tuesday's recovery, their gains were not in all cases held. The tobacco leaders improved towards the middle of the week. Provision and catering issues were more cheerful once Monday's dullness had been shaken off, and stores shares also became steadier after a weak beginning. In the miscellaneous section, the chief movements were the adjustments between African and Eastern and Lever Brothers prices on the share offer.

*Oil* shares were easier on Monday, Anglo-Iranian and Canadian Eagles declined fractionally, while the United British Oilfields announcement adversely affected Trinidad issues. On Tuesday, Continental support and better political news imparted a firmer tone, "Shell," Anglo-Iranian and Trinidad issues being particularly favoured. In mid-week the market went ahead further. In the *rubber* share market, the political situation and absence of a lead from the commodity left the market devoid of interest, though in mid-week a harder tone developed on selective investment demand for the leaders. *Tea* shares were firm where tested.

In the *mining* market, political rumours adversely affected turnover on Monday. Prices were easier, and Crowns and Sub Nigels were particularly on offer. The general improvement on Tuesday was reflected in renewed interest in "Sallies" and other favourites, assisted by bear covering. Price movements in mid-week were narrow and irregular. Developing issues were sold from local and Continental sources on Monday, but Venterspost and Western Holdings led a rally later in the week. Finance shares went ahead on Tuesday led by Gold Fields, though movements later became irregular. In a

firm West African market, Ashanti were a bright feature. Among diamonds, De Beers deferred were in demand in mid-week, while the trend in silver and tin gave a firmer tendency to base metal issues.

### ACTUARIES' INVESTMENT INDEX

A fall of 1.6 points on the week to Tuesday, July 4, 1939, is shown by the Actuaries' price index of 160 industrial equities. At that date, the index stood at 60.2 compared with 61.8 a week before and 64.9 a month before. Thus the average yield has risen to 5.77, against 5.63 and 5.40 respectively. A selection of the separate indices is given below:—

| Group (and No. of Securities) | Prices (Dec. 31, 1928 = 100) |               |              | Price 1939 High |

### New York

AFTER the week-end's nervous tension, Wall Street opened quietly. Copper stocks, however came in for some attention, while steels were not affected by the lower percentage activity. In the bond market, gilt-edged tended to sag, but corporate issues were generally firm. Tuesday was a holiday. In mid-week, better political news and the trade report of the Department of Commerce imparted a more optimistic tone, the Dow Jones industrial average improving from 131.93 at the close on Monday to 133.68 on Wednesday. The *Iron Age* reports steel mill activity this week at 40 per cent. of capacity, compared with 54 per cent. last week. The decline is partially due to the holiday on Tuesday.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American

values calculated on closing prices (1926 = 100).

Redeemable at par by 1964 by drawings from 1940, or after 1944 on notice up to 1949 at 102, 1949-54 at 101, or thereafter at par. Acquired various collieries for £1,683,902 (£140,000 cash and 1,543,902 £1 ordinary shares). Total assets, £2,242,700. Profits before depreciation, years to March 31: 1937, £121,865; 1938, £135,065; 1939, £147,326. Leadenhall Securities take issue at 99, or £98 9s. 4d. net.

### SHORTER COMMENTS

**Company Results of the Week.**—SOUTH AFRICAN BREWERIES report a satisfactory increase in profits, by £47,173 to £676,815, though higher taxation provisions more than absorb this difference. The out-turn of tea by JOKAI (ASSAM) TEA for 1938 was 9,414,178 lbs. against 9,116,283 lbs., but the average price per lb. fell by nearly ½d., and the dividend is reduced from 12½ to 10 per cent. In common with most trusts, TRUSTEES CORPORATION report lower revenue for 1938-39. As the depreciation on the book value of

# Industry and Trade

**Still More Employment.**—The official employment and unemployment returns for June provide further evidence of the rapid expansion of industrial activity in this country. The estimated number of insured persons aged 16 to 64 in employment (exclusive of agriculture) reached the all-time record of 11,969,000 on June 12th, an increase of 131,000 on the month and of 600,000 on the year. On the same date the number of registered

trades on which defence expenditure is largely concentrated. But although the official figure of total unemployment is still 1,350,000, reports of local labour shortages are already coming to hand.

\* \* \*

**Conditions in the Furniture Trade.**—The British Furniture Trades Joint Committee is to be congratulated on its investigation into working conditions in its trade. Too little is known about the habits and trends of the industries working directly for the retail market and the report of this investigation provides an interesting account of some aspects of this section of industry. The London furniture trade is characterised by the extreme complexity of its structure and by the small size of most of the working units. A firm may make all classes of furniture, it may concentrate on certain types, it may make parts for sale to other firms, it may specialise on certain processes such as machining or turning; it may work direct for the retail purchaser, for one of the large retail stores or for a wholesaler, and it may combine a number of these alternatives. There are very few public companies in the industry; many of the firms are family or one-man concerns, depending largely on personal contacts for their supplies and sales. From the 1930 Census of Production it has been estimated that 32,000 operatives, one-quarter of the total, were employed by 7,987 firms with 10 or fewer employees, averaging 4 per firm; a further 90,000 were employed in firms with 11 to 50 workers per firm. The complexity of the industry has been increased by the recent intrusion of mass production methods into what was at one time exclusively a craft. Most of the older men in the trade have been trained in the old style through apprenticeship, but since the war this system has largely disappeared and a number of the younger workers are to-day unskilled and could not be called craftsmen. One consequence, both of the change in technique and of the small size of the representative firm has been the difficulty of enforcing standard conditions throughout the industry. The influence of trade unions is restricted mainly to the older craftsman and one of the most valuable parts of this report is that which gives statistics of wages and hours. It is there shown that while

| EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN |                                                            |                                         |                           |                                                                           |                                                         |                                         |

unemployed (inclusive of agriculture), at 1,350,000, was 142,000 less than in May and 453,000 less than in June, 1938. That the improvement cannot be attributed to seasonal influences is revealed by the movements of our adjusted indices of employment and unemployment. An examination of changes in unemployment between May and June by districts and industries shows that industrial production is advancing on a broad front and that the expansion is by no means confined to the

investments is stated to be more than covered by the carry forward, it is clearly of a satisfactorily small amount. ASSOCIATED WEAVERS report an excellent increase in net profits, from £28,884 to £42,907, as a result of larger turnover. The 20 per cent. dividend is unchanged. The first results of A. C. COSSOR, LTD., since the company became public, show total profits of £87,878 for 13 months to March 31st last. Profits of EASTWOODS CEMENT have been maintained, and the 12½ per cent. dividend is repeated. A satisfactory recovery in profits is shown by LOVELL AND CHRISTMAS, though no ordinary dividend is being paid. Another company to report some increase in earnings is THOMAS OWEN & CO., whose trading profits are some £22,000 higher. No ordinary dividend is being paid by UNITED BRITISH OILFIELDS OF TRINIDAD, since a large provision is required for exploration work. Total profits, however, are £1,664,761 against £1,233,443.

## MISCELLANEOUS

**United British Oilfields of Trinidad.**—Gross profits, 1938, £1,576,516 (£1,192,747). General expenses, £1,303,482 (£985,464). To depreciation, £172,601 (£116,390). To tax and N.D.C., £14,000 (£15,250). No ordinary dividend, against

8½ per cent., absorbing £35,820. Carry forward, £22,062 (after £50,000 to reserve for additional exploration). In May 1938, capital was increased by issue of 3,000,000 new ordinary 6s. 8d. shares at 12s. 6d. Cash has risen from £9,082 to £786,068 and debtors from £47,791 to £101,017.

**Singer Motors, Ltd.**—Trading profit for year to March 31, 1939, £33,906, against £51,264 for period December 18, 1936, to March 31, 1938. To plant maintenance, £24,343 (£27,126); £12,431 for depreciation. Written off jigs, etc., £18,962 (£22,768); development, £6,863 (£5,570). After debenture interest, net loss is £65,992, increasing debit forward to £118,890.

**Aircrow, Ltd.**—Net profit for year to March 31, 1939, £31,689 (£22,414). To reserves: Taxation, £14,000 (£7,000); general, £5,000 (nil). Carry forward, £19,770 (£23,665). Ordinary dividend increased from 20 to 22½ per cent., on an ordinary capital increased by a capital bonus of 25 per cent. a year ago.

**British Burmah Petroleum.**—Trading profit for the 18 months to January 31, 1939, £171,470 (against £75,765 for previous year). Expenses, £108,904 (£78,844). To sinking fund, £30,600 (£20,400). Carry forward, £49,766 (£1,574). Proposed capital reduction from £1,500,000 to £750,000 by writing off 4s. on the 8s. shares. Meeting July 24th.

**Nyasaland Railways.**—Gross receipts 1938, £170,265 (£161,466). Working expenses, £114,439 (£101,642). Net revenue, £55,826 (£59,824). Available balance, £105,330 (£110,017). After debenture interest, and £15,685 for taxation, carry forward is maintained at £863.

**A.W. Second Stock Trust.**—A second and final return of capital at the rate of £5 ls. per £100 stock is declared. A first distribution of £182 per £100 was made on October 13, 1938. Assets dealt with by the liquidator were £1,312,689, of which £35,351 is final distribution now announced.

**South African Breweries.**—Accounts for year to March 31, 1939, show profit, after South African income tax, of £728,129 (£686,823). To depreciation, £38,281 (£36,948). To special depreciation, £14,514 (£26,456). To U.K. income tax, £125,000 (£90,000); N.D.C., £37,500 (£35,000); income tax reserve, £50,000 (nil). Ordinary dividend and bonus 22½ per cent. tax free, as before. Carry forward raised from £105,166 to £118,633.

**Braithwaite and Co. Engineers.**—Trading profit year to March 31, 1939, before depreciation, £66,932 (£46,491). Total income, £79,661 (£59,328). To depreciation, £7,875 (£7,505); tax and N.D.C., £22,522 (£16,032); general reserve, £19,802 (£13,750). Ordinary dividend raised from 2½ to 5 per cent. Carry forward, £29,120 (£25,475).

a substantial proportion of juveniles earn slightly more than the standard rates (as laid down by the London Cabinet and Upholstery Trades Working Rules), the great majority of adult workers earn very considerably less, and the working hours are long and irregular. In spite of the rapid increase in the output of the trade, made possible by mass production, unemployment in London has been consistently above that of the average of other trades. The enforcement of some kind of standard piece rates and of working hours would, it seems, be of great advantage to the majority of workers and would help to limit that type of competition which results from sweated labour.

\* \* \*

**Centenary of the R.A.S.E. Show.**—In 1839 the Royal Agricultural Society of England held its first agricultural show in Windsor Park. Last week the Society staged its centenary show in the same place. In the intervening hundred years the application of the Society's motto—Practice with Science—has assisted in each case by economic depressions—those of 1874-95 and of 1929-34. Indeed, the progress and application of agricultural science has now become so important that much of the work with which the Society was originally concerned has been taken over by the State. Soil analyses, seed purity, research into diseases among farm animals and plants, the improvement of livestock, the testing of farm machinery—these tasks are now the concern of the Agricultural Research Council. But the functions of the Society have not thereby been superseded, for although the conduct of fundamental research has become part of the State machinery, there is still a lamentable gap between the practices of the few progressive agriculturists and those of the mass of farmers. The work of the Society is still needed in the interpretation of scientific knowledge into plain language and in hastening the spread of improved methods in British agriculture.

**More and More Rayon.**—The increase in the world production of rayon yarn and staple fibre has been uninterrupted since the industry's birth in the 1890's. The figures for 1938 given in the bulletin *Rayon Organon* (New York) show a still further advance.

| RAYON YARN AND STAPLE FIBRE |                       |                                       |
|-----------------------------|-----------------------|---------------------------------------|
|                             | Production (000 lbs.) | Per cent. increase over previous year |
| 1930 .....                  | 457,450               | ...                                   |
| 1931 .....                  | 507,650               | 11                                    |
| 1932 .....                  | 534,605               | 6                                     |
| 1933 .....                  | 691,290               | 29                                    |
| 1934 .....                  | 824,365               | 19                                    |
| 1935 .....                  | 1,080,120             | 31                                    |
| 1936 .....                  | 1,320,750             | 22                                    |
| 1937 .....                  | 1,818,075             | 38                                    |
| 1938 .....                  | 1,948,045             | 7                                     |

Causes contributing to the heavy fall in the rate of increase in 1938 were the necessity for working off accumulated stocks of filament yarn, reduced world consumption of textiles, and in the case of Japan, difficulties in obtaining supplies of wood pulp. The percentage of total production attributable to Japan and Germany continued to expand and there was a corresponding decline in the share of Great Britain and the United States. The figures for the six principal producing countries are as follows:—

| RAYON YARN AND STAPLE FIBRE |                 |     |           |     |           |
|-----------------------------|-----------------|-----|-----------|-----|-----------|
|                             | 1936 (000 lbs.) |     | 1937      |     | 1938      |
|                             | lbs.            | %   | lbs.      | %   | lbs.      |
| France .....                | 66,100          | 5   | 77,700    | 4   | 72,550    |
| Germany .....               | 193,435         | 15  | 334,200   | 19  | 471,000   |
| Great Britain ...           | 442,970         | 11  | 152,420   | 8   | 138,195   |

| Total World* ...            | 1,320,750       | 100 | 1,818,075 | 100 | 1,948,045 |

\* Including other countries

The continued increase in the combined shares of Germany, Italy and Japan now makes them responsible for 91 per cent. of the world production of staple fibre and 46 per cent. of the filament yarn. The balance is inclining increasingly in favour of staple fibre, and the output of filament yarn in fact declined from 1,198,760,000 in 1937 to 990,245,000 lbs. in 1938—the first fall recorded in 24 years. The decline was as heavy as 37 per cent. in Japan, and Germany was the only country to increase its production of yarn. The sectional decrease, however, was more than offset by a jump of 55 per cent. in the world production of staple fibre from 619,315,000 lbs. in 1937 to 957,800,000 in 1938. The effort to provide substitutes for cotton and wool undoubtedly underlies the increase in rayon production in Japan, Germany and Italy and the figures of consumption per head indicate the measure of their success. In Germany rayon production per head was 6.1 lbs., in Japan 4.8, in Italy 3.8, in Great Britain 2.4, and in U.S.A. 2.4 lbs. This expansion in production has been accompanied by a marked decrease in the world trade in rayon piece-goods, although overseas trade in rayon yarns has increased. To some extent this has resulted from Japanese and Italian shipments to China, but apart from this factor there remains a definite tendency towards the purchase of yarn in preference to piece-goods. Unfortunately, Britain has not shared in this improved trade for rayon yarns, which is concentrated on countries where prices are artificially supported or subsidised.

\* \* \*

**Revised Milk Bill.**—The Milk Industry (No. 2) Bill is an interim measure, which will continue until October, 1940, the subsidies for the cheap milk schemes, for the payment of premiums on quality milks and for ensuring to the Marketing Boards minimum prices for milk sold for manufacture into butter or cheese. In these respects the revised Bill follows closely the terms of its defunct predecessor, except that the guaranteed price for milk sold for manufacture into butter has been raised by 3s. in the summer half-year and by 5s. in the winter half-year; the guarantee will now come into force if the wholesale price of butter falls below 115s. per cwt. in the summer and 125s. per cwt. in the winter. The Bill contains no reference either to pasteurisation or to the reorganisation of the distributive side of the milk trade, but presumably it is hoped that these matters will be dealt with before the expiry of the eighteen months for which this Bill provides.

\* \* \*

**Redundant Cotton Looms.**—In anticipation of a safe passage through Parliament of the Cotton Industry (Reorganisation) Bill, the leaders of the Cotton Manufacturers' Association have been considering a draft scheme for eliminating surplus looms. It is estimated that at present there are approximately 480,000 looms in the weaving industry, of which 60,000 are considered to be redundant. The proposals are similar to those in the spinning branch of the industry. A Surplus Looms Board will be set up which will have power to purchase redundant machinery and buildings for a period of three years. The looms will be acquired by voluntary agreement. There will be an advisory committee, composed of six persons to be

**OTARD'S** EST. 1795  
V.S.O.P.  
**LIQUEUR BRANDY**

MATURED AND BOTTLED AT CHATEAU DE COGNAC

appointed by the Board of Trade, which will assist the Looms Board. The trade unions will have representation. The proposed annual levy will be 1d. per inch reed space for each loom. It is estimated that the average width of cotton looms is around 43 ins., so that on this basis the annual cost for a weaving shed of 1,000 looms would be approximately £180 a year. The scheme has already been considered by the Central Committee of the Manufacturers' Association and draft copies have been sent out to the nineteen affiliated local associations which are in membership with the official employers' organisation. The local committees will discuss the proposals without delay so that no time will be lost in submitting the scheme in its final form and receiving the trade's support. As soon as the Reorganisation Bill is placed on the Statute Book, application can be made to proceed with the redundancy scheme.

**Supplies of Tin.**—One year after the inception of the buffer pool, the London price of standard cash tin has reached £230 per ton, the higher limit set by the pool agreement. As a result the pool has begun to sell its holdings and the price has not so far exceeded this limit. The market is at present dependent on the pool for a considerable proportion of its requirements; shipments of tin in the first five months of this year totalled 54,000 tons, while absorption is estimated at 64,000 tons. The increase in the export quota from 40 per cent. to 45 per cent. of the basic tonnages will supply some of the deficiency, but at the present level of consumption supplies will still be some 1,750 tons per month short. Consumers' stocks are believed to be below normal, and visible stocks declined from 32,920 tons at the end of May to 28,851 tons at the end of June, according to the estimates of Messrs A. Strauss and Company, Ltd. Further, the Sino-Japanese War is diminishing the supplies of tin from China, the principal contributor outside the regulation scheme. A further increase in export quotas for the producers inside the scheme is therefore not unlikely in the last quarter of the year, and there is considerable pressure toward such an increase in production. The reduced output during the

last year has affected the profits of the mining companies and given rise to serious problems over the surplus of labour; further, there has been in recent weeks a substantial rise in the premiums for high quality tin, the supplies of which are uncomfortably small.

**Setback in Freight Rates.**—The improvement in freight rates noticeable in April and May has proved short-lived. As a result, partly, of the growing international tension, tramp shipping rates suffered a setback in June, reflected in the fall of *The Economist* indices shown below:—

The Economist INDEX OF FREIGHT RATES  
(1898 = 1913 = 100)

|                    | Average, 1913 | May, 1938 | June, 1938 | May, 1939 | June, 1939 |
|--------------------|---------------|-----------|------------|-----------|------------|
| European waters    | 110.0         | 109.2     | 107.3      | 106.4     | 113.8      |
| North America      | 113.1         | 111.0     | 108.0      | 111.3     | 113.2      |
| South America      | 123.4         | 132.3     | 127.0      | 104.7     | 97.2       |
| India              | 106.3         | 111.7     | 111.9      | 109.6     | 114.8      |
| Far East & Pacific | 117.4         | 106.2     | 104.7      | 94.6      | 97.0       |
| Australia          | 127.9         | 113.0     | 112.8      | 108.3     | 107.7      |
| Total              | 116.3         | 113.9     | 111.9      | 105.8     | 106.9      |
| 1913 = 100         | 100.0         | 97.8      | 96.1       | 91.0      | 91.8       |

As the next table shows, the downward movement in freight rates between May and June was fairly widespread.

|                | Index No. | Inc. or Dec. Points |                 | Index No. | Inc. or Dec. Points |
|----------------|-----------|---------------------|-----------------|-----------|---------------------|
| Home trade     | 106.3     | - 7.1               | South America—  | 66.5      | - 6.1               |
| Bay—outwards   | 132.0     | + 3.5               | Outwards        | 121.6     | - 12.1              |
| Bay—homewards  | 127.5     | - 1.5               | Homewards       | 99.0      | - 10.4              |
| Mediterranean— | 100.2     | - 6.7               | India—outwards  | 127.4     | - 7.5               |
| Outwards       | 130.6     | + 1.1               | India—homewards | 96.1      | - 9.6               |
| Homewards      | 114.0     | + 0.8               | Far East, etc.  | 107.5     | - 1.6               |
| North America  |           |                     | Australia       |           |                     |

The latest reports indicate that the freight markets remain depressed and that there is little hope for an early improvement.

## INDUSTRIAL REPORTS

**THE** latest reports from industrial centres point to a further expansion in the activity of numerous industries. The demand for iron and steel, if anything, is still increasing, but it appears to be becoming more difficult to obtain full deliveries. The production of tinplates was reduced towards the end of June, as a result of an industrial dispute. The coal-mining industry continues to show improvement compared with a year ago. The cotton and wool textile trades remain active and the latter has again been asked for substantial offers of tops by the Government.

### Coal

**Sheffield.**—The steady demand for all grades of industrial steams is maintained, and outputs are being readily absorbed. The requirements of public utility undertakings are at summer levels, and demands for slacks are easily met. Household coal is steady, and quota restrictions are keeping stocks within reasonable compass. There is a distinct improvement in the call for coke, particularly blast-furnace qualities.

Export business is fairly brisk. On prompt account it is not easy to obtain all trebles, doubles and singles needed for shipments. Supplies are largely going to the Continent. Continental inquiry for coke is on a substantial scale. Bunkers are a quiet market.

**Newcastle-on-Tyne.**—Demand from abroad for North-East coals is not so persistent as a few weeks ago, but the market is steady and collieries have booked substantial contract business. Durham unscreened steam and gas coal offers more freely but coking grades are firm, and apart from small parcels this class of fuel cannot be obtained from this area until the end of the year. Northumberland steam classes are fairly steady but prompt loading turns for large coal are now available. Patent oven coke remains a very firm market in both the home and foreign section.

**Glasgow.**—The improvement of the Scottish trade is fully maintained, and the only dull feature is the household trade. At the moment there is a lull in new export inquiry, but the majority of the collieries engaged in this trade have good contract orders in hand and in life in particular some pressure for supplies is now being experienced in advance of the holidays. The position in the Lothians is more comfortable from the buyers' standpoint. In all districts there is a strong industrial demand, reflecting the marked improvement in general trade conditions. The week's shipments again showed a good increase over the corresponding week of last year.

**Cardiff.**—The volume of trade at the South Wales docks continues substantially greater than in the corresponding period last year. Last week the shipments totalled 437,200 tons compared with 351,960 tons, and the effect of the improvement in recent weeks has been to bring the advancing total for the current year to within about 250,000 tons of that for the same period in 1938. A few small orders have been placed by Tunis and Algiers, and tenders have been submitted for the supply of between 200,000 and 300,000 tons of large and through steam coals to the French State Railways. Otherwise export inquiries are less active than they were a few weeks ago, and stocks of second-class large steam coals are accumulating. Best large steams, sized coals, and duffs are comparatively scarce and very firm. There are only limited supplies of metallurgical and foundry coke available and there is still a good demand for patent fuel. The Customs provisional clearances of cargoes for foreign destinations in June totalled 1,400,890 tons, compared with 1,230,105 tons in May, and with 1,185,202 tons in June, 1938; and for the first half of the year 6,479,393 tons, compared with 6,666,156 tons in the corresponding period last year. Trade has been better this year with Italy, South America, Portugal, the North Sea markets, the Coaling Depots, and

Canada and Newfoundland, and the decrease in the aggregate volume is due almost entirely to a drop of 580,000 tons in shipments to France.

### Iron and Steel

**Sheffield.**—The demand for steel is still increasing, and for certain classes of material deliveries are falling in arrears. Heavy basic billets are difficult to obtain, and reliance is being placed on imports to ease the position. Acid billets are fully taken up. Makers of strip and wire rods are heavily booked, and it is not easy to place full business in small steel bars.

The most active feature of the iron market is hematite; the reduction of 5s. per ton from July 1st has brought in a good volume of business. Special qualities continue in strong demand. Foundry pig is rather more freely dealt in, but forge remains a dull market. Finished iron shows little change for the better. Common bars continue to be the best feature.

The stabilisation of steel-making scrap prices until the end of October at their present figures is generally welcomed. Heavy basic scrap is in short supply, but more imported material is becoming available and should ease the position to some extent. All other classes of steel are in firm request. Supplies of iron scrap are fairly adequate, and prices are unchanged.

**Middlesbrough.**—Whilst the producers of iron and steel in this area are successfully coping with the demand for material for Government purposes, they have been able to increase the shipments of manufactured steel during June by approximately 10,000 tons. This increase is chiefly in the export trade; the total quantity shipped during June from the Tees was 36,162 tons, against 26,466 tons during the previous month. Pig iron shipments are down; the quantity shipped during June was 1,897 tons, against 4,384 tons during May. The imports of ore during June amounted to 179,000 tons, which is practically equivalent to the quantity imported during the previous month.

A feature is the large import of steel scrap; two large cargoes have arrived from America during June. In addition, there has been an increase in the quantity of semi-manufactured steel imported, chiefly from the Continent; the intake in June amounted to 14,838 tons. There is little change in the Cleveland foundry pig iron trade, although there is a slight expansion in the demand from local foundries. East Coast hematite is in slightly better request and a cargo of about 1,300 tons has been despatched from the Tees to South Wales. All the basic pig iron produced is reserved for the steelworks locally and there is no surplus for the market.

**Glasgow.**—Pressure on the steel-makers has become intensified, users of any description of material being anxious to get deliveries before the holiday closure. All plants are working at capacity and despite that are unable to satisfy users. Shipyards on the Clyde-side are now absorbing heavy tonnages, and heavy calls are being made on the steel makers by the many manufacturing industries in Glasgow and neighbourhood which are largely employed on work for the various Government departments. Supplies of semis are now

more readily available and scrap also is somewhat more plentiful, though still not sufficient for comfortable working conditions. Sheetmakers in this district are experiencing what is probably the busiest time since sheet rolling was first established in Glasgow—largely on account of the large number of sheets for air-raid shelters. Export business in G. and C. sheets is expanding and considerable tonnages have been booked for different overseas markets. Makers of plant and engineers generally in Glasgow, who have been very busy for months past, continue to receive important contracts and have work on hand which ensures employment for many months to come.

**Cardiff.**—Seasonal influences in the home market and international complications in the export trade have tended to reduce the volume of business in tinplates, but the commitments of manufacturers are large enough to keep works fully employed. In the week ended June 24th production under the pooling scheme equalled only 61.69 per cent. of capacity compared with 72.23 per cent. the previous week, but the drop is attributed to the temporary suspension of work at 25 mills owing to an industrial dispute. The unexecuted orders amount to approximately 4,600,000 boxes. The sheet trade is exceptionally active, and the recent increase in the production of pig iron and steel ingots is being maintained.

**News from Abroad.**—The demand on international steel markets has experienced another slight recession. The requirements of the peace industries in various countries are comparatively modest, whereas the armament industries have recently covered their needs for some time ahead, but they will have to enter the market again sooner or later. The Dutch and Scandinavian consumers, for instance, are at present rather reluctant to add to their commitments. The Far Eastern trade is under the influence of the political uneasiness, and certain far off countries which were some time ago anxious to place large orders so as to be covered in case of political complications are now saturated.

The decline in business has had a slightly depressing effect on prices which, however, will scarcely undergo a major reduction so long as steelworks are occupied for about four months ahead. Rebates on official prices are granted, although on limited quantities, for merchant bars, sections, hot and cold rolled strips and galvanised sheets to the extent of 4s. to 7s. per ton. This development is a little disturbing as the granting of rebates often undermines the confidence of consumers, who had recently become used to paying official prices. A more favourable situation has been maintained for semi-products, plates and castings. A further additional quota for the import of semis into Great Britain, which was expected for some time, has not yet been allocated.

It has now been suggested to the Steel Cartel that the accounts period should not be extended beyond June 30th as was originally intended in order to give certain partners of the Steel Cartel an opportunity of adapting their deliveries to the quotas. A peculiar situation has arisen mainly because Great Britain has on the one hand substantially increased her purchases from other Cartel groups, and has on the

other hand not utilised her export quotas, particularly for sheets. Consequently several Continental groups will have to pay substantial fines for having exceeded their quotas, but it is hoped that the attitude of the British group will facilitate a reasonable settlement.

### Textiles

**Cotton (Manchester).**—The general position of the market has shown little change. Trade expansion has been impeded by the political tension. The latest unemployment returns are encouraging, the decrease on the month for cotton operatives being 4,522, with a decrease on the year of 91,931. Only minor fluctuations have occurred in raw cotton prices. The uncertainty as to the export subsidy in the United States still causes confusion. The American Government's estimate of the area under cotton, due on Saturday, is expected to be about 25,500,000 acres.

A feature of the yarn market has been the decision of the Lancashire Cotton Corporation to advance all prices of American ring qualities by 4d. per lb. Considerable sales were arranged just before the advance took place. Satisfaction has been expressed at the renewal of the 42's American wet price agreement for three months. Irregular buying has occurred in Egyptian yarns. There has been more evidence of cloth buyers, especially in foreign outlets, resisting the recent advance in Manchester prices. The higher quotations are due to the increased costs of production. Export demand has been at a low ebb. Only occasional orders have been booked for India. The home mills are suffering from over-production and an attempt is being made to organise curtailment of output. Further Government contracts have been placed, but buying for the home trade has continued quieter.

**Wool (Bradford).**—The War Office, through the British Wool Federation in Bradford, has asked for new offers of tops from 46's to 54's quality, lower and slightly higher qualities being asked for than previously, due no doubt to the fact that the market in 50's quality has been largely exhausted. There is also proof of this fact in that the Committee is prepared to consider offers of tops made from English wool. Offers had to be in last Thursday, and deliveries have to be completed by August 31st.

In connection with the Whitsuntide order, the quality specified was 50's and 17½d. was the price at which contracts were accepted. So far as the latest order is concerned no mention is made of any price, although the Committee handling the business must be aware of what each quality is worth in the open market, as every topmaker offering supplies knows what is a fair market price.

The new orders mean great activity among commission spinners and weavers in the West Riding. The pressure to deliver is so great that many firms are bound to encounter considerable delay. Labour is very scarce; minders and piecers are only allowed to work 44 hours per week against 54 during the Great War, and this is restricting output. There is a marked improvement at the civilian end of the trade, and altogether the position in the wool textile world is very healthy.

## COMPANY MEETINGS

## BLEACHERS' ASSOCIATION, LIMITED

## VITAL IMPORTANCE OF COTTON EXPORTS TO COUNTRY

## GOVERNMENT AID NEEDED TO RECAPTURE TRADE

## SIR ALAN SYKES' REVIEW OF TRADE OUTLOOK

The fortieth ordinary general meeting of Bleachers' Association, Limited, was held at the registered office, Blackfriars House, Manchester, on Friday, the 30th ultimo.

Sir Alan Sykes, Bt. (the chairman) presided.

Before dealing with the accounts the chairman referred to the recent death of Mr Joseph Thwaites, who had been a director of the Association since 1927. Mr Thwaites had been associated with the company throughout the whole of his business career and had also taken an active part in the commercial life of his native town of Bolton. His experience and valued help would be missed very much by the directors.

In comparing the balance sheet with that for the previous year, the chairman referred to the reduction in the value of land, buildings, machinery, etc., which he explained to be due to the writing down of the value of assets which had ceased to be productive, and which had involved the transfer of £50,000 from the general reserve fund.

Shares in subsidiary companies showed a decrease against last year of £115,400, which was almost entirely accounted for by the transfer of £100,000 from the general reserve fund to be written off the value of shares in subsidiary companies, the business of which had been transferred to other works.

Advances to subsidiary companies were nearly £122,000 less than last year, a reduction due to the diminished requirements of the subsidiary companies for working capital in consequence of the serious diminution in trade and the concentrations which had been effected.

Turning to the profit and loss account, the amount brought forward from last year's accounts was £187,360. The trading profits available after deducting sundry charges and interest, and after charging £157,009 for repairs and maintenance and including a sum of £15,000 transferred from tax reserve account, amounted to £190,411.

Against this were charges for directors' fees, depreciation and debenture interest, a total of £243,599, so that the profits were £53,187 short of the sum required to pay the debenture interest. This reduced the balance of profit and loss account to £134,172, which balance it was proposed to carry forward to the next year's accounts.

The chairman continued:—

The results of the past year's trading are more unfavourable than any which the Association has hitherto experienced, but, when you realise from the facts which I shall place before you how much the volume of our trade has shrunk, I think you will be inclined to share the view held by your directors that, in the circumstances, the results might well have been worse than they are. Although I am not bold enough to venture on prophecy in these difficult times, I can, at least, express the confident hope that, if world peace can be assured, the future can hardly fail to produce better results than those which we are now considering.

## GOVERNED BY EXPORT TRADE

It must always be remembered that the Association was established on a trade of which fully four-fifths was for export and that our fortunes are inevitably governed, to a major extent, by the export trade. It is unfortunate in one way that the structure of the cotton industry, which has been on the lines of horizontal sectionalisation, although well adapted to conditions when we had little foreign competition to face, has not proved so readily adaptable to meet the fierce competition to which we are now exposed. It is unfortunate, also, that we who work only on commission for the merchant distributors, can do so little ourselves to influence the volume of trade upon which our well-being depends. The only contributions which we can make are to produce the highest quality of work at the lowest practicable price. The quality of our work is beyond ques-

tion and our balance sheet shows that our prices are as low as they can be, unless we are now to present to the foreign consumer a portion of our capital with each order that we undertake.

Before the war we used to sell abroad some two thousand million yards of bleached piece goods per annum. Even during the four years of the war our exports averaged more than 1,500 million yards per annum, and up to 1929 the quantity ranged from 1,200 to 1,500 millions. Since 1931 there has been an almost continuous decline in our export trade and, last year, the exports of bleached piece goods were only just over 400 million yards—a figure equivalent to one-fifth of our pre-war foreign trade and less than one-third of our post-war exports up to 1931. Compared with 1937, the decrease last year was more than 27 per cent.

The experience of the bleaching trade is not exceptional. Other sections of the cotton industry have suffered a similar decline in exports—some in greater and some in less degree—according to the extent and severity of the foreign competition they have had to meet or to the changes in public taste.

## SERIOUS DECLINE IN OUTPUT

The decline in output has been so serious that we have been compelled to take drastic measures to meet it. You will have learned, from time to time, from our reports that we have been gradually concentrating production in our most efficient plants. By thus eliminating redundant plant, we have contributed a great deal to the stability of the bleaching trade and, at the same time, we have always endeavoured to maintain a fair and reasonable price for the services which we render to our customers.

The policy which we have followed is that which the cotton industry has now decided to be the only policy upon which the trade can be reorganised—that is to say, the elimination of redundant plant and, thereafter, the establishment of a fair level of prices based on conditions of fuller employment for the plant in operation. Had we not pursued this policy ourselves, and had we allowed the bleaching trade to degenerate into the conditions of ruthless price cutting which have characterised other sections of the industry, I can confidently say that the results which we should have presented to you to-day would have been very much worse than they are. I do not believe that, if our prices had been reduced by uncontrolled competition to the point at which they resulted in an absolute loss of capital, our merchant customers would thereby have been enabled appreciably to increase the total volume of trade.

## ASSOCIATION'S CAPITAL STRUCTURE

As you will have seen from our balance sheets in past years, and in the balance sheet now before you, we have taken steps to write down the value of those assets which have become non-productive, but I am sure you all must have realised that, eventually, this serious decline in the volume of our trade must entail the capital structure of the Association being brought into line with its productive capacity and earning power. This is a subject to which your directors have given the most careful consideration, but they feel that it is still too soon to reach a decision on a question of such far-reaching importance.

It is not yet possible to assess the extent of the recovery in trade which we confidently anticipate would follow the removal of the existing state of international tension, nor is it possible to assess the advantages which may accrue to the industry from the Cotton Industry (Reorganisation) Bill which is now before Parliament. In such circumstances, it is impossible to reach any safe conclusions with respect to the future earning power of the Association and, in the absence of such knowledge, a rearrangement of capital at this juncture would involve serious risks. The opinion which your directors have formed in this matter is fully confirmed by the expert advice which they have obtained on the subject. In the meanwhile, I can only assure you that the matter will be kept constantly in view

and, for the time being, we must do what we can to achieve the best results with that portion of our trade which is left but the volume of which we can do so little ourselves to influence.

## NEED FOR GOVERNMENT AID

Now that the cotton industry is practically united in the recognition of the need for reorganisation, and now that the Government has realised the necessity of giving the industry the assistance it needs, we can look forward to the future with more confidence. But the loss of trade has been so severe that the industry will need more help than the grant of statutory authority to eliminate redundant plant and establish reasonable prices. We must have the active assistance of the Government in the effort to recapture the trade which we have lost, because the export trade in cotton manufactures is still of vital importance to the country.

The extent of its importance is shown by the fact that until last year, exports of cotton yarn and manufactures constituted the largest item in our exports of manufactured goods and, even last year, they were only relegated to second place by the exceptional decline in the cotton trade, coupled with a substantial increase in the exports of machinery.

Although we fully recognise that a very large part of the export trade which we have lost is irrecoverable, there are some markets in which we are justified in expecting an improvement.

## MARKET PROSPECTS

In the case of India, for example, our exports last year of cotton piece-goods of all kinds declined to less than three hundred million yards—about one-eighth of the pre-war volume. Of this total, bleached goods accounted for about 157 million yards—about one-fifth of the 1913 volume and less than one-third of the 1929 volume. The recently concluded agreement between the British and Indian Governments establishes a lower rate of duty upon imports of British cotton piece-goods in India until the total reaches 500 million yards. If the full advantage of this agreement can be secured, there should be room for a substantial increase in our exports of cotton piece-goods to India, and there is no reason why the bleaching trade should not share in such improvement. It must always be borne in mind, however, that these reductions in duty are conditional upon our continued use of Indian cotton in increasing volume. It is, therefore, incumbent upon all producers and exporters to do everything they can to encourage the use of Indian cotton so that we can secure the important benefits which this agreement offers to us.

In Morocco, Egypt and West Africa, as well as in South America, we should be able to improve our share of the import trade, and I feel sure that, if international confidence can be restored, we shall have no need to regard the trade of 1938 as representative of normal conditions for the cotton industry.

## BOLDER BID FOR RECOVERY

The industry should, before long, have in its hands the power to reorganise in a way which should enable it to make a bolder bid for recovery. In this, we are prepared to play our part, and I can assure you that your property and plant have been maintained in the highest state of efficiency, so that we are ready to take advantage of any improvement in trade that may occur.

Before concluding my speech, I feel that you would wish me to express to all those concerned in the management of the Association our cordial thanks for the hard work which they have put in under very difficult and very trying circumstances, and I may perhaps add that every one of them is continuing to make that voluntary sacrifice of part of his remuneration which was undertaken as a contribution to economy in these lean times.

We commence the year under rather more favourable conditions those those which obtained when I last addressed you, since the volume of trade, although still deplorably low, is higher than it was in the corresponding period last year. I hope that this slight improvement will be maintained and that, when I meet you next year, we shall have a somewhat brighter prospect before us.

The resolution approving the report and accounts was moved by the chairman, seconded by Sir William Clare Lees, Bt., and carried.

The retiring directors were re-elected, and Messrs Jones, Crewdson and Youatt and Messrs P. and J. Kevan were re-appointed joint auditors.

The meeting terminated with a vote of thanks to Sir Alan Sykes, Bt., for presiding, which was proposed by Mr. C. Russell Hall and seconded by Mr G. A. Barrow.

## IMPERIAL BANK OF IRAN

## JUBILEE YEAR

## SIR HENRY McMAHON'S ADDRESS

The fiftieth ordinary general meeting of the Imperial Bank of Iran was held, on the 5th instant, at 51 Gracechurch Street, London, E.C.

Col. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (the chairman), in the course of his speech said: Beginning with the balance sheet, you will notice that there is a small reduction of £87,000 in the total figures, and that in deposits there is a reduction of £385,000, as compared with last year's figures. This reduction is in deposits repayable on demand in Teheran, and it is accounted for by the withdrawal of certain Government balances and the release of funds lodged by applicants for foreign exchange. The current account and fixed deposit balances of private customers show very little change on the figures of a year ago. On the other side of the balance sheet there is a reduction of nearly £600,000 in discounts, loans, and advances. There has been in general less demand for credit in Iran, and in particular the completion of the Trans-Iranian Railway has been followed by a substantial reduction in the facilities which contractors required of us during its construction. The reduction in our discounts and advances in Iran, which is much larger than the reduction in our deposits there, has resulted in increased liquidity in Iran which covers the whole of the increase of £200,000 shown in the cash item. We are accordingly in a position to take full advantage of opportunities for sound business in the internal activities of that country. In addition to the increase in our cash you will notice an increase of £110,000 in our investments, on which, in these lean times, we have largely to rely for revenue.

## DIVIDEND RECORD

The figure of net profit was formerly shown after deduction of income tax on the dividend. As the dividend is now declared, subject to tax, the income tax payable by members on the dividend is not now deducted before arriving at the figure of net profit. The difference on the interim and final dividends this year amounts to £24,750, which is the tax on £90,000 at 5s. 6d. in the pound. If this amount is deducted from the profit of £92,921 you have a balance of £68,171, which is £2,200 more than last year.

We propose to pay a final dividend of 6 per cent., making 9 per cent., subject to tax, for the year. This will absorb £90,000, leaving £2,821 to be added to the carry-forward, which will then stand at £56,929. In effect, the net dividend received by members this year will be 13s. 3-5d. per share as against 13s. per share paid for the past nine years. I am sorry that for the past two years we have not been able to add anything to the reserve account, which therefore still stands at the substantial figure of £750,000.

As you know, our concession was granted on January 30, 1889, and we commenced business in Iran in the autumn of that year, so that this is the year of our fiftieth anniversary. Over the past 49½ years our members have received in dividends an average of 5½ per cent. per annum, subject to tax, on the paid-up capital of £10 per share. The shares, however, were issued at a premium of £2, and if we allow for that the return on the money averages a little over 4½ per cent. per annum.

## SHORTAGE OF FOREIGN EXCHANGE

When I addressed you last year I explained that owing to exchange restrictions in Iran our requirements for sterling expenditure and for remittance of profits were not being fully met. Since then we have received a part of our arrears for the year ending March 20, 1938, which has been brought into this year's figures, but we have not yet received the balance, nor have we received our requirements for the year ending March 20, 1939. The shortage of foreign exchange which has been apparent since before official control was instituted in March, 1936, is still acute, and we do not look for much relief from this situation in the immediate future.

Apart from the difficulties I have referred to, our position in Iran continues fairly satisfactory, and we are not without hope that our exchange difficulties may be resolved in time. In the interest of economy, however, we decided last year to close three small branches in Iran whose results for some years have not justified their maintenance.

The development of the Anglo-Iranian Oil Company continues to expand. The annual outturn of the company in Iran now exceeds 10 million tons.

In conclusion, the chairman reviewed the progress of Iran's industrial development and the position in Iraq.

The report and accounts were unanimously adopted.

## THE METAL BOX COMPANY, LIMITED

## DIVIDEND MAINTAINED

The annual general meeting of The Metal Box Company, Limited, was held, on the 30th ultimo, at Winchester House, E.C.2. Mr F. N. Hepworth (chairman) said that there had been a reduction in net profit last year of about £15,000, but having regard to the recession in the trade early in the year, followed by the international crisis, the final profit of £316,368 was satisfactory.

The directors recommended a repetition of last year's final ordinary dividend of 10 per cent. and the bonus of 2½ per cent. The total undivided profits and reserves of the company and its subsidiaries now amounted to £1,264,181.

The consolidated balance sheet showed an excess of current assets over current liabilities and provisions of £1,580,093, the ratio being over 3 to 1.

Since last year, extensions had been completed at the company's factories at Newcastle and Hull, and the company was now engaged in the re-equipment of its Carlisle Tin Printing Department; in extending its Hackney factory; and also in building a new factory at Bombay, where business was rapidly expanding.

The central organisation had again received continuous consideration and adjustment to changing circumstances. Opportunity had also been taken to strengthen the company's overseas associations through personal visits by directors.

The company's research department, which had its headquarters at Acton in one of the most modern laboratories, had in addition to long range investigations, proved of great service in connection with manufacturing problems. In conjunction with this phase of scientific work, the company also had a technical development department at Head Office, which reviewed new ideas and processes related to the company's wide interests. The company is thus thoroughly equipped to deal constructively with the constant flow of fresh thought that its reputation for progress attracts from widespread spheres.

## EMERGENCY MEASURES

Special consideration had been given to the problems arising out of present disturbed state of world affairs. The national effort towards preparedness had had great repercussions upon the company because war in the past had always meant a great increase in the use of tin containers.

Since 1918, British canning had been developed and now covered a wide range of food products. Undoubtedly, it could do much to safeguard supplies if given sufficient guidance by the authorities.

In addition Metal Box Company's products were varied and useful and its equipment could readily be turned to other purposes. The chairman urged the need to plan now for a continuation of production during war time. The directors took a serious view of their responsibility. Factories had been equipped for the protection of employees.

1,400 employees had been trained in first aid, fire fighting, and gas decontamination, etc. The chairman paid tribute to the ready way in which people had volunteered to do this work, often at personal inconvenience.

Plans had been made in the company's 21 factories to provide alternative sources of manufacture for main products so as to minimise the effects of dislocation.

The company had also been able to render advice and guidance on the storage of food reserves in individual homes. The importance of the British canning industry in the event of a national emergency could not be over-estimated.

For the past three years the company had encouraged employees to join the Territorial Army by allowing extra leave without prejudice to either holidays or pay. These facilities had been extended to cover the need for longer periods of training.

## PROVISION FOR FURTHER CAPITAL

To give further working capital to finance the purchase of additional trading stocks—which were reduced last year by nearly £200,000—and to provide for other developments in view, the company had decided to offer to ordinary stockholders one new ordinary share at a price of £2 10s. in respect of each £7 of stock held on June 15. It may, perhaps, be regarded as the directors' confidence in the business that they had taken this step at this time. A resolution was passed to increase the authorised capital of the company to £3,000,000 by the creation of an additional 300,000 ordinary shares of £1 each.

The report and accounts were unanimously adopted.

## ANGLO-CYLON AND GENERAL ESTATES COMPANY, LIMITED

## DIVIDEND OF 10 PER CENT.

## SIR EDWARD ROSLING'S SPEECH

The fifty-third annual general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 5th instant, at 117 Old Broad Street, London.

Sir Edward Rosling (the chairman and managing director), who presided, said:—The results of the past year's working are almost identical with those of the previous season, the net profit being £80,869, as compared with £80,015, which may be considered satisfactory under present-day conditions.

As regards Ceylon, the results have been satisfactory. The restricted tea crop shows a slight increase on the previous year, but the price realised was about one-third penny less. The cacao crop at 8,982 cwt. is some 200 cwt. in excess of the previous crop, but the price realised was appallingly low—namely, 17s. 7d. per cwt., as against 28s. 10d. a year ago. This price is, of course, below the cost of production.

Our interest in rubber is comparatively small, and our crop last year—although slightly less—realised a rather better price.

As regards Mauritius, the sugar crop at 38,000 tons was again good and this for the fourth year in succession. However, prices remained at a low level for the greater part of the season.

As a result of the International Sugar Agreement we were unable to export the whole of the crop, the reason being that up to the time of closing our books the necessary licences had not been received. Such stocks as we were left with have been carried forward to the current season at cost price.

## ESTATES IN GOOD CONDITION

Last autumn Mr Douse again visited our interests in Ceylon and Mauritius. I am glad to say he found the estates in good condition, producing economically, and in particular he was able to assure us that our system of working under restriction appeared to be satisfactory. The policy in recent years has been to obtain our crop off the smallest possible area, thus allowing other areas to rest and reducing cultivation costs accordingly.

After visiting Ceylon Mr Douse spent some five weeks in Mauritius, and during that time went into the affairs of our head office in Port Louis and reviewed all our other interests there. Mauritius differs from Ceylon in that it is so isolated (and as far as we are concerned has a much smaller personnel). It is no easy matter for the board to supervise the company's affairs there, and it is found that these periodic visits by a director enable very much closer co-operation to be maintained.

The opportunity to purchase Côte d'Or estate arose while Mr Douse was in Mauritius, and the negotiations resulted in our acquiring it. The lands adjoin those of the Highlands group, and should eventually form a very useful addition to that group.

Summing up, we now feel that our sugar estates are well managed; they are becoming less dependent on planters' canes and are ready to take full advantage of any improvement in conditions which we hope will eventually arise. New canes have been planted from time to time, giving better yields. Cultivation has been carefully studied, with the result that crops are becoming larger and costs cheaper.

## PROSPECTS

In regard to the prospects for the current season. With the world in its present state of turmoil, it is futile to attempt a long forecast; one can only deal with facts as they present themselves to-day.

In regard to tea, our crop estimates are based on 4,000,000 lb. Prices now are rather better than a year ago, but as our year only commenced on April 1st, sales to date are too small to afford a reliable guide.

Rubber does not affect us much, but prices are, however, better than last year.

It is too soon to estimate the cacao crop, as the blossom has not yet set.

In Mauritius a drought was experienced in the early months of the year, and this was followed by a mild hurricane. The estimate of the crop for the island is some 20 per cent. less than last year, but against this there has been the rise in the price of sugar to which have already referred. We therefore anticipate that the year's working should still show a reasonable profit.

The report was unanimously adopted, and a final dividend of 10 per cent., making 10 per cent. for the year, was approved.

## OHLSSON'S CAPE BREWERIES, LIMITED

## FURTHER SATISFACTORY PROGRESS

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 6th instant, in London.

Mr Geoffrey Dent, the chairman, said that it was satisfactory on this, the fiftieth annual general meeting, to be able once again to record an increased profit on trading and rentals of £3,921. During the first half of the year trading results had given promise of a very satisfactory increase, but the repercussions of the September crisis were bound to be felt in every country in the world, and it was always noticeable that Johannesburg was much more sensitive to outside conditions generally than were other parts of the Union.

The board were able to report an increase in sales auguring well for the future when the world returned to sanity. During the past year a number of fresh outlets had been obtained for the company's products which should bear fruit in the future.

In South Africa, a very high standard of comfort was demanded by the Licensing Authorities and to meet their demand very large sums had to be spent, and would no doubt continue to be spent on the company's properties. While some of that expenditure resulted in increased takings and rentals, much of it was of necessity unremunerative. Last year he had mentioned that so far as they could tell, the reduction in the number of licenses and the other restrictions on sales imposed by the provisions of the Liquor Act was not likely to cause very heavy reduction in their sales. As a result of further experience he was happy to confirm that opinion and to tell them of a satisfactory increase in sales.

During last winter he had visited South Africa and Rhodesia and had inspected all the company's premises and had found a very high standard of efficiency and cleanliness throughout; the rebuilt properties, particularly in Cape Town, were certainly a credit to the company. It might interest them to know that last year a total of £194,997 had been paid in taxation.

It was proposed to pay a final dividend of 7½ per cent., and a bonus of 5 per cent., making a total distribution of 12½ per cent. for the year, which, allowing for the reduced rate of tax at 3s. 4½d. in the pound, was equivalent to just over 20 per cent.

The report and accounts were unanimously adopted.

## HOVIS, LIMITED

## CONTINUED PROGRESS

The forty-first ordinary general meeting of Hovis, Limited, was held, on the 6th instant, at the Caxton Hall, London, S.W.

Mr A. H. Dence, J.P. (the Chairman), dealing with the accounts, said that it was proposed to place £20,000 to the reserve account, bringing it up to £520,000. The directors had also thought it prudent to place £20,000 to reserve for depreciation in Government securities. The profit on trading showed an increase of £14,000 as compared with the previous year's figure.

During the year there was a heavy decline in wheat prices, No. 1 Manitoba showing a fall of 30s. and other descriptions 15s. a quarter. The smaller harvests of the previous year were followed by big crops in the chief exporting countries and also in Europe, with the result that once more supplies became well in excess of demand.

Generally speaking, the outlook for the crops now being grown in the exporting countries was favourable, and there should be no anxiety as regarded supplies in the current year.

There were temporary sharp rises resulting from the September crisis and other periods of international tension, and conditions in the wheat market were further complicated by the Government purchases of wheat from Roumania and by the purchase and replacements of wheat for National Food Defence purposes.

With regard to this security stock, in their opinion it would surely be more prudent if, instead of being in the form of raw material, the wheat were manufactured into flour and well distributed in smaller quantities in depots and stores all over the country, especially inland.

In this way, instead of security stock being concentrated in a few large centres, all millers, large and small, would be participating in the food reserve scheme, and the manufactured article, flour, instead of the raw material, would be available for immediate distribution, with considerably less transport, in the event of national emergency.

Except for maintenance and replacement due to wear and tear, all the company's mills were now complete and up to date, and they were proud of them.

The report was unanimously adopted.

## TRUST COMPANY OF LONDON AND SCOTLAND, LIMITED

## MR B. W. BLOOMER ON THE OUTLOOK

The tenth annual general meeting of the Trust Company of London and Scotland, Limited, was held, on the 30th ultimo, at the company's offices, 25 Moorgate, E.C.

Mr B. W. Bloomer (chairman) said: This time last year I said that although the outlook was uncertain and even threatening, many powerful forces were hard at work to bring about a better state of things, but, unfortunately, conditions have not yet improved, and so far as our own business is concerned, economic factors have become a secondary consideration, while politics tend ever increasingly to dominate the situation.

Moreover, we are caught between the upper and nether political millstones of home and foreign uncertainties. As investors we have thought it prudent in recent times to increase our holdings of British industries, only to find that under the latest proposals companies whose foresight, initiative and courage have placed them in a position at long last of seeing their efforts rewarded are singled out for a new form of tax for which, in my opinion, there is no justification beyond a clamour for the prevention of profiteering.

Referring to the accounts, may I briefly compare the figures with those for the previous year? The gross revenue, including registration fees, for the year was £66,640 compared with £69,010, and after charging expenses, auditors' and trustees' fees, which were all slightly less, the balance carried down is £61,960. After deducting interest on debenture stocks, loans and income tax, the net revenue comes out at £30,004, which is £3,293 less than the previous year—a fall of approximately 10 per cent. As you know, we again recommend a dividend on the ordinary stock of 1½ per cent. and are able to increase the carry-forward by £4,099 to £28,402.

It is more difficult than ever to make an estimate of the revenue we may receive during the current financial year, but unless there is a major catastrophe, I trust and hope we shall be able to maintain the same rate of dividend again on the ordinary stock, although a decline in income appears inevitable.

The report and accounts were carried unanimously.

## LOBITOS OILFIELDS, LIMITED

## 15 PER CENT. DISTRIBUTION MAINTAINED

The thirty-first annual general meeting of Lobitos Oilfields, Limited, was held, on the 4th instant, in London.

Mr H. C. R. Williamson (the chairman) said that at December 31st last the value of the investments, apart from the shares in their subsidiary, considerably exceeded the book value, and this continued to be the case to-day, though to a lesser extent. After making adequate provision for taxation, there was a net profit of £252,231, and the directors recommended a final dividend of 5 per cent. (making 10 per cent. for the year), and a bonus of 5 per cent., both subject to income tax.

From the Peruvian subsidiary they had received a dividend of £92,000 net for 1937-38, as compared with a dividend of £138,000 net for 1936-37. The footage drilled was practically identical with that of the preceding year, while production at 358,525 tons showed an increase of 16,493 tons. During the financial year of the Peruvian Company there were two reductions in the price of crude oil, but as some set-off benefit had been derived from the course of sterling-dollar exchange. Producing-wells completed during the year numbered eight at Lobitos and 38 at El Alto, while at October 31st nine wells were drilling or unfinished at Lobitos and ten at El Alto.

Nineteen thirty-eight, after the fair promise of 1937, had proved a disappointing year. Consumption of oil, instead of continuing its steady upward trend, had remained practically unchanged and in some countries actually declined. Moreover, the consumption figures probably were not fair indices, since various nations were reported to have been increasing their secret stores of oil for military or other purposes. Taking a long view, however, the trend of consumption must be upward, and if only the world could return to a condition of sanity it was fairly safe to assume that the curve of the trend upwards would be a steady one.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

BRITISH GLUES AND CHEMICALS,  
LIMITED

STRONG POSITION

RESERVES AUGMENTED

The nineteenth ordinary general meeting of British Glues and Chemicals, Limited, was held, on the 6th instant, at the Connaught Rooms, London.

Mr T. Walton, F.C.A. (the chairman), in the course of his speech, said: Our profits are just a little less than in the preceding year, yet after full provision for every revenue charge affecting the year and for taxation, and providing £5,000 towards A.R.P. expenditure, your directors have been able again to augment general reserve by £10,000 and to recommend an additional 1 per cent. on the Participating Preference Stock and again 10 per cent. dividend on our Ordinary Stock. In face of continued world political and economical unrest, and especially depressed conditions in the fat and bone industry, I feel your opinion will accord with that of your directors that there are grounds for satisfaction.

Outside investments stand at a figure greater by £8,750 than their market value at April 30, 1939. Recent Stock Exchange fluctuations have been violent; indeed, at one time since the date of the balance sheet the difference was only £1,250; it is now £3,600. What the next change will be none can foretell, but our conservative record will serve us in good stead to meet what may come.

In my last speech I referred to the manufacture of grease having been unremunerative. Prices have deteriorated still further: the quotation for melted stuff in the London Market Letter, which forms the price basis for bone grease, has been from £3 10s. to £8 per ton lower than even in the previous year, and the lowest price during the year has persisted considerably longer than in the slump year of 1931. It may be of interest to record that the selling price of tallow is to-day lower than it has been since the battle of Waterloo, nearly 125 years ago, and the price of bone grease is much less than half what it was in July, 1914, prior to the last war. It has been imperative for us to carry out substantial price reduction movements in our raw material prices. The facts I have just mentioned will, I hope, reassure our raw material suppliers that the price reductions they are suffering are due to causes beyond our control.

Fortunately our company is not dependent for its profits on any one commodity nor even solely upon our main business, for our subsidiaries continue to serve us well. Our feeding-stuffs are favoured by an increasing demand, and we continue our scientific investigations in relation to the nutrition of livestock. We have had a good season for the sale of our fertilisers, and there are indications that the coming year will be equally satisfactory. We continue attention to research in every direction associated with our business and our manufactures are maintained at a very high standard. Our managing director has again been re-elected President of the Association of European glue manufacturers and both they and we gain from friendliness of relationships.

The report was unanimously adopted.

(Continued from page 83)

Another series of London sales begins next Tuesday, when there will be available 101,600 bales. Everything points to merinos being about 5 per cent., and crossbreds about 10 per cent., dearer.

THE COMMODITY  
MARKETS

MARKETS continue to be influenced more by changes in European sentiment and by developments in Washington than by purely business considerations. London prices of non-ferrous metals are slightly higher than a week ago, with the exception of tin, for which the market is now dependent on supplies from the buffer pool. Fears of war were mainly responsible both for the slight rise in wheat prices and the lack of business on the rubber market. Cotton prices were virtually unchanged on the week.

In the United States Moody's index of wholesale prices has fluctuated only slightly in the past week; it stood on Wednesday at 143.2 (December 31, 1931 = 100) compared with 143.3 a week earlier.

## Metals

**Copper.**—Standard cash gained 15s. to close on Wednesday at £42 15s. per ton. The market was encouraged by reports that the French Government bought about 20,000 tons of copper last week and would require a further 30,000 tons for war stock, but so far there is no confirmation of these reports. Sales in the United States have risen considerably in recent months; in June they totalled 66,350 short tons compared with 36,210 short tons on the average of the five preceding months, so that exports from that country may diminish before long.

★

**Tin.**—This was the first week for very many years in which the price of tin has remained completely stable. The quotation throughout the week was £229 15s. per ton. The only alteration occurred in the backwardation, which fluctuated between £6 and £5 5s. The

pool appears to be willing to meet the demand for cash at around £230 per ton, and as the market is now entirely dependent on pool releases the cash price is not likely to show major changes. The tin situation is discussed in a Note on page 82.

★

**Lead and Spelter.**—Spot lead closed on Wednesday 2s. 6d. up at £14 12s. 6d. per ton, while spelter advanced by 5s. to £14 2s. 6d. per ton. The building trade is still a slow buyer, while the demand from other quarters is fairly active. Home warehouse stocks of lead fell from 12,736 tons at the end of May to 12,209 tons at the end of June, and those of spelter declined from 22,673 tons to 21,560 tons. According to the Metallgesellschaft the world's lead smelter output advanced from 542,673 metric tons in the first four months of 1938 to 564,600 tons in the same period of 1939, the bulk of the rise occurring outside the United States; the world zinc smelter output fell in the same period from 549,286 metric tons to 546,173 metric tons, due mainly to Belgium, the Netherlands and Australia. There are no comparable consumption figures for the two metals, but it appears that new supplies exceeded requirements in both cases in the first four months of 1939.

## Grains

THE continuing favourable reports from Canada indicate that an exceptionally good harvest of wheat is to be expected from that country. Supplies of Argentine wheat are freely offered both from the Plate and from re-sellers. In spite, therefore, of the depressing political outlook, Liverpool prices of wheat remain at a very low level, but the market has been steady in the past week, with prices up to 6d. per quarter higher. A small advance in prices for Plate maize last week was checked by the low wheat prices and by signs of American competition; the market for feeding barley is also dull.

## Other Foods

**Provisions.**—Dominion butters continue in demand and their prices

## UNREMUNERATIVE PRICES

have risen relatively to those of European countries. There was also an improvement in bacon prices due to smaller supplies, but an additional import quota has now been arranged by the Board of Trade for immediate shipment.

★

**Colonial Produce.**—The sugar market remains firm but there has been no further advance in raw sugar prices. Prices for refined were marked up by 3d. per cwt. at the end of last week. Sales of cocoa continue slowly, but there is little interest in the market and prices for Accra remain round 20s. per cwt.

★

**Fruit and Vegetables.**—The large supplies of English soft fruits, for which there is still a good demand, has brought down the prices for imported fruits. Except in the Worcestershire districts, prospects for the apple crop are good and main crop potatoes are also making satisfactory progress.

Miscellaneous  
Commodities

**Oils and Oilseeds.**—The seasonal slackness in activity combined last week with political uncertainty to reduce business in oils to a very low level. New crop Plate linseed is quoted £10 17s. 6d. per ton for January-February shipment, and old crop is also cheaper; America is the chief purchaser of Argentine supplies. The new crop in America continues to make good progress and the total yield is expected to be higher than last year. Egyptian cottonseed has rallied after a considerable period of weakness, but there is little business in cottonseed oil. Linseed oil is also cheaper.

★

**Rubber.**—The market continues idle, with the changes in political sentiment the dominating factor. Malayan net shipments in June amounted to 21,974 tons, a considerable decline on the exports of previous months, and the fall will compensate for the heavy excess of exports carried over from last year.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

## The State of Preparedness

IT is unfortunate that boasts about Britain's strength and readiness should have something of a hollow ring in foreign ears. Only twelve months ago it was the fashion among British Ministers to proclaim the preparedness of their country for defence or attack. But when the call came in September we were not ready. That was the view most widely current in Germany to explain Mr Chamberlain's complaisance at Munich. It was also the view of the smaller States of Europe; now, when crisis is again in the air, they are urgently asking whether Britain is ready this time.

It is a pertinent question. Upon the answer to it probably depends the chances of preserving peace in the testing months that are before us. There is small suggestion in any quarter or country that an emergency would reveal the land so barren as it was shown to be ten months ago. The situation has vastly changed. It is true that last March, after five months of the uneasy yoking of appeasement and re-armament in British policy, the further progress of Nazi aggrandisement met with even fewer obstacles than it had done at Munich. But the destruction of Czecho-Slovakia was the last occasion on which it would plausibly be claimed that the strength of Germany in aggression arose from the actual weakness of the principal law-abiding States. If aggression were to succeed once more without effective resistance it would be because of a deliberate decision by the Western Powers to stand aside and not because of their inability to do anything else. France has

gone to work; and in Britain something like a revolution is well under way.

This is an appropriate time to make this point. Three pieces of legislation which embody a great part of the recent remarkable changes in social and economic organisation come this week into sight of the statute book. The Civil Defence Bill provides a code

April Estimates, though it is not possible yet to fix the total, and the projected loan expenditure has grown accordingly.

It is the expansion of the Army that gives the best indicator to the resolve of an insular and unmilitary-minded people to be ready. And a mere three months have seen the effective changes set in train. The establishment of the Regular Army itself has been raised and recruitment is running at record levels. It has been made possible to call up reserves and auxiliaries for active service in peacetime. The Territorial Army has been doubled. Most significant of all, in a country wedded to voluntary recruitment, conscription has been introduced to bring into training 220,000 young men in a single year. No friend or possible foe on the Continent can afford to undervalue the decision these measures represent.

Indeed, the speed with which the new policy of preparedness has lately developed is conspicuous. It would be quite untrue to say that nothing significant had been done before this year. It is because of the planning of several years, for instance, that aircraft output has leapt up in recent months. But something like a clear realisation of the magnitude of the task ahead only began with the giving of guarantees to Poland, Roumania and Greece in March. The need to be concretely able to implement our pledges then became painfully obvious. As recently as April 22nd *The Economist* sketched in outline the agenda of essential measures required for safety and strength in near-war conditions. Since then steps towards many of the most vital items in that list have already been firmly taken. The unfolding of the increase in our land forces needed to fulfil our diplomatic commitments is only one instance. The British output of aircraft is now in excess of the German. The dangerous shortage of anti-aircraft guns has gone, and the supply of Bren guns and other vital equipment for the Regular Army has reached a satisfactory level.

It is precisely this lesson, that readiness has been substantially achieved in the ways which stood out because of their weakness last September, that the swift new bombers of the R.A.F. are spreading abroad in their long-distance flights over France. Nor does the catalogue of achievement end with these items of direct defence. It is as important that our friends and allies should be able to preserve their commercial independence in peace as it is for Britain to defend their territorial independence in war. The economic aspect of collective resistance is essential to that policy's success. Now a sum of £60 millions is to be made available for the financial support of Britain's friends. It remains to round off the needed aid by taking stock of the goods of friendly countries that might be bought by Britain. The proposed purchase of Roumanian wheat is an apt beginning.

There is abundant room for praise here. It cannot of course be disguised that much more has been planned on paper than has been accomplished. It is admittedly a melancholy fact that almost all these steps were widely suggested long ago, and strenuously resisted by the Government, at a time when their weight in the scales of peace might very well have been decisive. Yet very marked headway is now being made, and it would be the height of unwisdom not to make this crystal clear to the world.

But there are two sides to the account. This is the credit side. There is a debit side. The job to be done is to apply all the resources of Britain, industrial, commercial, financial, organisational and intellectual to the many-sided but single object of national defence. It is a re-orientation of society itself that is needed, temporary but fundamental; and the trouble is that too much of the preparedness is still improvised and piecemeal. There are three major causes for the failure so far to work out a fully articulated but unified plan. The first is unfamiliarity. The technique and scale of near-war organisation in a world where war embraces every aspect of social and economic life are

unknown. The possibility that the changes needed may be as great as those which actual war requires is hard to grasp. The second cause is haste. Months and years have been wasted in policies at home and abroad that refused to face the facts of a world transformed by the rise of aggressive dictatorships. The machinery of post-war peace was permitted to rust and break. It is hard to make up in a few hurried weeks for the time lost in a negligent five years.

The third cause of the failure to plan with full efficiency is personal. Our present rulers have only reluctantly abandoned the policies which the swift strokes of German aggrandisement proved wrong. The Cabinet is not outstanding for the calibre of its members. Many are wearied by the rush of events; and their attempt to make their own a policy previously pressed unsuccessfully upon them by their political opponents is not aided by their leader's stubborn refusal to call in new blood. It is in an atmosphere of inhibitions and psychological distaste that preparedness is being pieced together. That is not to say that new men could work miracles, but rather that national defence in an hour of national need demands a truly National Government. The affairs of State have long since left the realm of merely partisan politics. The abnegation of constructive opposition might well be a disaster, but the broadening of the Cabinet to bring in the long-avowed sponsors of swift and singly-planned readiness might animate governmental policy with a new incisiveness. It would win that wide-flung confidence at home and abroad which the present Government, hampered by the memory of its own past, cannot claim to have.

The task of such a Cabinet would be clear. It would be to see straightly the indivisibility of preparedness: to grasp fully the fact, for instance, that a shipping policy, a food policy, a raw materials policy and an agricultural policy cannot be worked out in separate compartments, that they are parts of a single whole; to perceive that manpower and supplies, too, must be organised as single problems and not split up into the provinces of separate Government departments and civil bodies; to understand, that is, that the problem to be solved is the simple economic problem of making the best use of all the available resources for a many-sided but single purpose. The needed means may be distasteful and drastic, but the end is vital.

It would further be the merit expected of a National Government to take firm hold of the fact that it is the end that crowns the work. The code that has been given to civil defence, for instance, loses dangerously in virtue so long as its pivotal points of shelter and evacuation are both left obscure and incomplete. The expansion of the Army and the institution of a Ministry of Supply, again, do not establish their effect until it is unmistakably possible to set an Expeditionary Force of perhaps a million men, fully equipped, on foreign soil. The power of the Navy to keep open the seas, as well as to blockade the enemy, is robbed of influence so long as stores and warehouses are not swiftly filled with the foodstuffs and raw materials whose carriage before emergency begins would avoid the clogging of shipping transport when it came. It is not enough simply to man the fighting forces and the civil defences. It is needful to eke out and ration all the labour force of the country for industry and defence together. Only a Government with the whole country behind it in trust could deal comprehensively with the labour problem without friction.

There is every reason for gratitude for the progress lately made. There is every good ground to bruit it abroad. But there is urgent need to ensure the swift continuance of preparedness to a successful end, and it is hard to escape the view that the bold steps still required can only be taken, whole-heartedly and acceptably, by a bolder and broader-bottomed administration than Mr Chamberlain's can claim to be.

## Defending Neutrality

THOSE who have travelled over Europe during the past six months have found good reason to fear for the future. Perhaps none of the great manifestations of force, astounding in their size and substance though they were, can have been more sobering in its comment on the state of the world than a modest sight that may be seen any day in the Netherlands, that of a solitary soldier on guard over a bridge charged with dynamite. There he stands in that quiet countryside, out-of-place among the peasant wains and touring motor-cars, that bespatter him with dust as they pass. Placed there by a people who have lived in immunity from war for a hundred years, he represents one of Europe's most grave doubts of peace.

The Dutch and Belgian peoples, together fourteen millions strong, are assimilating the changed atmosphere of Europe in different ways, according to their past. Both their Governments have taken, and continue to take, whatever steps they can to ensure that if war breaks out it shall find them, and leave them, independent and strictly neutral. The background of the last few years has been closely similar for both countries. In October, 1936, King Leopold announced Belgium's wish to stand aside from the reciprocal obligations which British, French, and German guarantees, as well as recent history, had placed upon her. Since then, her Government has been at one with the Dutch Government in stating and re-stating a policy of neutrality; one by one they have loosened the possible bonds of entanglement, withdrawing early from the collective obligations of the League Covenant, refusing to admit to any foreign troops the right of passage across their territories or the right of military aircraft to fly overhead—Belgium going so far as to fortify her frontier with France, and Holland her coastline, lest Germany should think their sympathies tacitly surrendered to the Western Powers. They have even refused to enter into formal engagements between themselves. Holland has no external obligations of any kind; Belgium is guaranteed by Britain, France, and Germany, but has no reciprocal obligations. Neither would welcome an extension to themselves of the guarantee system operated by the Peace Front.

The effective strength of their defences, and the means which the two peoples have of resisting an invader, make less hopeful reading. What would suit them best would be to find themselves at liberty to call upon the Peace Front for aid in the event of their neutrality being threatened by the Axis, without their being compelled to give the Axis offence by accepting a guarantee from the Peace Front in advance. And in terms of realism it is common knowledge that a threat to the Low Countries is automatically a threat to Britain and France. The one danger that the Low Countries must therefore consider and provide against is that of a lightning attack which would kill their resistance before any hope of a counter-offensive. There must be no possibility of a swift German push through the Limburg salient (that appendix of the Netherlands) which would turn the Maginot Line and open the fields of Flanders once again, or of a sudden thrust at Flushing and the strategically invaluable islands and waterways of the Scheldt. It is the task of the Low Countries to eliminate the possibility of their being surprised.

The military defence measures which both countries initiated in the spring of 1936 were conceived to this end. The annexation of Bohemia-Moravia stilled the last protests of those who carped at re-armament. The Belgian Government, faced already with a badly-unbalanced

Budget, was persuaded to unlace a little more widely the strings of its purse. No one in Belgium was much surprised when last month's breaching of the new Albert Canal (which has a strategic as well as a commercial function) revealed, to the embarrassment of the authorities, the presence of strong posts constructed in concrete in the dykes.

For the general thesis of re-armament is not seriously contested anywhere in Belgium. What has been contested, by the Flemings, is the tendency to think of danger as coming only from the East. Moved more by a distrust of things French than by a love of things German, and with that heavy touch of unrealism that marks their activities in other political spheres, the Flemings as a rule have demanded fortifications towards France as well as towards Germany, and the controversy went rumbling on in the bosom of Belgian political life until last autumn's crisis sobered the logical zeal of the Flemings and softened the equally logical prejudice of the Walloons. It was then realised, and not over soon, that both parties must now stop bickering and unite their weight behind sternly practical measures of defence. It is a welcome change.

In Holland, too, there has been a change. Since 1935 the Budgets of the Netherlands Government have shown allocations for national defence increasing year by year. As early as 1936 it was decided to protect the Eastern frontier (and the sea-coast) with a series of concrete pill-boxes and similar fortifications. This is now well on its way to completion. Since Holland's frontier with Germany is not much shorter than that of France, and the Dutch were not prepared to spend freely on fortifications which might be interpreted as having a provocative as well as a protective value, the system is on a very modest scale. The uncertain conditions of 1939, however, have worked a widespread change in public opinion; the period of military service has been lengthened to twenty-one months, further recruitment of men is in progress, supplementary defence moneys have been voted, and an effort is being made to catch up with the long delay in taking civil defence precautions.

It is not easy to imagine the profoundly disturbing effect which these changes are having on Dutch life. To say that the Dutch have grown fat with good living and long immunity from war, is at best only a half-truth. They remain a people of intensely individualist ways of thought. Even to-day, with the chances of war as great as they are, Dutch municipal councils and even private firms are still buying their own anti-aircraft guns, training their own crews, defraying the cost with a reluctance which must be seen to be believed. It is not for nothing that the Cabinet of Dr Colijn was a coalition of three Christian parties, the "Confessional" coalition as it was called; not without significance that in Holland the theological issues of Calvinism are still alive and in full development: it was all the more shocking that a suggestion should be made that Holland might receive a guarantee from the U.S.S.R., a State which on moral grounds Holland has never recognised. To this people the threat of war has come with all the cold horror of a nightmare. That they must hold themselves ready, at need, to open the dykes from the the Zuyder Zee in a half-circle to the Scheldt, so as to protect the areas about The Hague and Amsterdam, seems to them more intimately evil and wasteful, more nearly touching their lives, than any purely military measures of defence.

What the blessings of a long peace have produced is a financial conservatism, a sheer unwillingness to spend money on the most necessary projects, which is far from being a blessing and must have seemed very wonderful to Herr Funk, explaining at The Hague last week the benefits of a managed economy. It may seem unrealistic to the point of folly, for instance, to possess an empire so rich and far-flung as Netherlands India without having more warships to defend it than half-a-dozen light cruisers. Yet the popular demand for three or four battle-cruisers, which has now been granted, was made into a burning political issue by those who said that Holland could not afford to pay for them. The realisation that Holland must either

abdicate her Empire or be ready to defend it, has not come any too soon.

The neutrality of the Low Countries rests finally on their own preparedness to resist invasion. Between the decision to defend their integrity, and the fact that neither country can withstand the onslaught of a Great Power, lies a narrow ground of neutrality which can be retained only by courage and clear thinking. The hope that they can retain it may go unfulfilled; but, in acting as if they could, the Belgians and the Dutch are taking the only course left open to them. And it is with the traditional interest of many centuries that their efforts will be watched in England.

## Profits and the Boom

OUR armaments-fed boom brings us daily nearer the state of full employment. The mainspring of industrial activity to-day is not the profit motive, beloved of the classical economists; it is free spending from the public purse to meet the dire necessities of preparedness. The inflationary formula has worked with a speed and directness unparalleled in any normal cyclical recovery. But it has produced odd incidental effects, some of which bear witness to the political origins of the boom. There is no progress to report in the equity investment market. And, so far, at least, the boom has not been reflected in the course of industrial profits.

It is the fate of profits figures to be late. Indeed, it is for this reason that the survey of industrial profits which appears in these columns in July each year takes on some of the characteristics of an annual review. Company reports published during any twelve months to June bear an average accounting date of October 31st in the previous year. They show, very broadly speaking, the trend of profits in the preceding calendar year, but only after six to nine months have elapsed. And the average date at which these profits were earned is itself projected back by a further six months. It is very clear, indeed, that the fall of 7.0 per cent. in the profits of 2,387 companies whose reports were received during the year to June 30th has no relation to the recent manifestations of the arms boom. The pivotal date to which their earnings of £286.6 millions may be said, statistically, to refer was in April last year, when industrial conditions were distinctly depressed, and armaments expenditure, though growing, had yet to establish a dominant influence upon the economic system.

Hence the profits figures for the twelve months to June last provide a measure of the effects of recession rather than recovery upon industrial earnings. In Table I they are related to the figures for similar periods since 1928-29. Last year's recession had less effect upon profits than upon industrial activity. The average level of *The Economist's* Index of Business Activity (1935=100) rose

from 106 in 1936 to 112 in 1937 and dropped fairly sharply to 104½ last year. But the chain index of profits (1928=100) given above was still 5 points higher last year than for 1936, despite its fall from 122 to 113. That conclusion is supported by the new index of profits (July, 1935-June, 1936=100), which is set out in Table II. The latest index figure is 122.9, compared with 131.7 for the twelve months to June, 1938, but it remains significantly higher than the figure of 118.3 recorded for 1936-37.

TABLE II.—*The Economist* PROFITS INDEX  
(July, 1935-June, 1936 = 100)

| Year | First Quarter | Second Quarter | Third Quarter | Fourth Quarter |
|------|---------------|----------------|---------------|----------------|
| 1929 | ...           | ...            | 113.0         | 113.1          |
| 1930 | 113.8         | 116.5          | 115.5         | 111.7          |
| 1931 | 107.4         | 101.3          | 93.6          | 87.2           |
| 1932 | 81.7          | 73.3           | 69.9          | 69.1           |
| 1933 | 66.3          | 67.6           | 66.8          | 68.5           |
| 1934 | 70.1          | 74.6           | 76.7          | 79.7           |
| 1935 | 83.8          | 88.9           | 90.2          | 92.4           |
| 1936 | 96.6          | 100.0          | 102.0         | 104.5          |
| 1937 | 108.6         | 118.3          | 120.9         | 125.2          |
| 1938 | 128.7         | 131.7          | 131.6         | 130.3          |
| 1939 | 127.1         | 122.9          | ...           | ...            |

The method of calculation of this index was explained in *The Economist* of January 14, 1939. Each figure refers to the profits earned by companies reporting in the four quarters ending with that against which the figure is recorded. Earnings are related to the base period by the chain method.

TABLE III.—PROFITS OF SECOND QUARTER COMPANIES, 1929-39

| Reports Issued during Second Quarter | No. of Companies | Total Profit (after deb. interest) | Change since preceding year (same companies) | Total Preference and Ordinary Capital | Ratio of Profits to Capital |
|--------------------------------------|------------------|------------------------------------|----------------------------------------------|---------------------------------------|-----------------------------|
|                                      |                  | £                                  | %                                            | £                                     | %                           |
| 1929                                 | 639              | 78,079,238                         | - 0.7                                        | 783,972,918                           | 9.9                         |
| 1930                                 | 578              | 79,717,393                         | + 8.6                                        | 751,909,913                           | 10.6                        |
| 1931                                 | 619              | 64,051,136                         | - 19.4                                       | 745,477,186                           | 8.6                         |

TABLE IV.—DIVISION OF PROFITS (SECOND QUARTER COMPANIES)

| Reports Issued during Second Quarter | Proportion of Profits after Debenture Interest |                   |                                     | Rate of Payment on Each Class of Capital |            |                     |                  |
|--------------------------------------|------------------------------------------------|-------------------|-------------------------------------|------------------------------------------|------------|---------------------|------------------|
|                                      | Paid in Pref. Div.                             | Paid in Ord. Div. | Put to Reserve or "Carried Forward" | Debenture                                | Preference | Earned for Ordinary | Paid on Ordinary |
|                                      | %                                              | %                 | %                                   | %                                        | %          | %                   | %                |
| 1929                                 | 23.1                                           | 60.4              | 16.5                                | 5.1                                      | 5.9        | 12.5                | 8.8              |
| 1930                                 | 24.9                                           | 56.5              | 18.6                                | 4.9                                      | 6.3        | 13.7                | 10.3             |
| 1931                                 | 27.3                                           | 57.9              | 14.8                                | 5.0                                      | 5.8        | 10.4                | 8.3              |
| 1932                                 | 32.6                                           | 56.3              | 11.1                                | 5.0                                      | 4.9        | 5.5                 | 4.6              |
| 1933                                 | 31.5                                           | 55.9              | 12.6                                | 4.7                                      | 5.7        | 6.1                 | 5.0              |
| 1934                                 | 27.8                                           | 51.6              | 20.6                                | 4.7                                      | 5.2        | 7.9                 | 5.7              |
| 1935                                 | 25.4                                           | 51.7              | 22.9                                | 4.7                                      | 5.6        | 11.1                | 7.3              |
| 1936                                 | 22.2                                           | 51.2              | 26.6                                | 4.6                                      | 5.6        | 11.1                | 7.3              |
| 1937                                 | 17.8                                           | 52.3              | 29.9                                | 4.5                                      | 5.4        | 13.3                | 8.5              |
| 1938                                 | 15.1                                           | 53.8              | 31.1                                | 4.5                                      | 5.5        | 15.1                | 9.4              |
| 1939                                 | 19.6                                           | 53.6              | 26.8                                | 4.5                                      | 5.8        | 13.2                | 8.9              |

That, however, is the consolation of past history. If we turn now to examine more recent trends, in the light of the second quarter's profits figures (which are set out in Tables III and IV opposite), it will be seen that the steepness of the fall in earnings, at 8.2 per cent., is hardly lower than the fall of 9.0 per cent. for the first-quarter companies. The movement, so far as it is perceptible, is in the right direction, but it cannot be said that the fall in profits has yet been checked, though the rate of fall almost certainly has been modified. Here again the question of timing is important. The average accounting date for April-to-June companies is February 8th. Scarcely less than the twelve months' figures, these are the profits of a recession year. The consequences of the armaments recovery have yet to be reflected in company reports.

In some further respects second-quarter profits are not entirely representative of the broadest aspects of British industry. As Table B on page 147 shows, it is the quarter for large oil companies' reports. Oil profits, indeed, account for 18.6 per cent. of the quarter's total, and they reflect world trade conditions rather than domestic industrial movements. Moreover, as many as 148 out of a year's total of 362 rubber companies issued their reports between April and June, and although their profits of £1,427,055 provided little over 1 per cent. of aggregate profits, their fall represented nearly one-fifth of their total decline. Shipping profits, which cannot be directly related to British industry, also fell by a very similar amount. By eliminating these three groups, and also tea profits, we are left with a reduction in the profits of British industry from £83,403,510 to £79,073,905—a matter of slightly over 5 per cent. This calculation, perhaps, provides a clearer indication of the limited nature of the fall in home industrial earnings.

Already, there are indications that, by the last quarter of this year—the third quarter sample of companies is small, and contains relatively few large industrial results—the trend of profits may show a positive change. The primary effect of the defence programme has so far been seen in the heavy industries. For this reason, the modest fall of 1.7 per cent. in the profits of 54 iron, coal and steel companies reporting during the past three months is not surprising. But by the end of the year, when reported profits will include the results of at least six active spring and summer months, "pluses" should extend well down the list. It will then be time for the "multiplier" to display its influence on profits, as it is now doing upon employment.

## Progress in Sweden

TO-DAY, when dictators rule over most of Europe and democracy is derided as loquacious and ineffective, it is pleasing to examine the solid progress of Sweden under democratic government. This pleasure is heightened because the Swedes are uncommonly modest in their claims and objective in their judgments, as two admirable volumes in the English language recently written by Swedes aptly show.\*

Sweden is an immense country three times the size of England and Wales; half of it is forest land. The population is little more than six millions and, though two-thirds live in the country, less than 40 per cent. are dependent

Possibly this thought is present in the minds of some boards of directors. Despite the general plea of company chairmen that the times demand a cautious reserve policy, the fact is that reserve provisions are being slightly relaxed. This relaxation, already evident in the first quarter of this year, has continued to such effect that only 26.8 per cent. of last quarter's profits was set aside to reserve, compared with 31.1 per cent. of a much larger volume of earnings for the corresponding period of 1938. This percentage is the lowest since 1936, and it reverses a trend which had been in operation since 1932. Table A on page 147 shows the effect of dividend policy of each industrial group, while Table IV opposite reveals that, while equity earnings have fallen by nearly 2 per cent., ordinary dividends on the average have been reduced only to the extent of one-half per cent.

But it may be doubted whether this moderate display of generosity towards shareholders is based explicitly on the prospects of a profits inflation. Concealed by the rapid march towards full employment of our industrial resources, industrial costs are also tending to rise. A hesitant recovery in the United States is not normally counted among our economic blessings, but in the present context of rapid re-armament and rising defence expenditure, the very laggardness of American revival is damping the rise in costs to the British taxpayer and the British industrialist. But this effect is limited largely to basic raw materials; it plays a much reduced part in determining the costs of semi-manufactured goods and labour. And these are categories which are likely to prove most sensitive to the emergence of active monetary inflation.

These considerations suggest that the consumption trades may share to a great extent in the future in a prospective rise in industrial profits. The industries of greatest outward activity, serving defence requirements, will continue to be controlled by Government contract fixing, and profits which escape this mesh will be caught in the A.P.D. net. Yet the moral for industry at large is not to congratulate itself on a specious immunity from special imposts. Despite its fiscal difficulties, a general excess profits duty can be supported by strong economic arguments as soon as the point of full employment is attained. At the present rate of progress, that date may not be much more than six months away; and nine months hence, when the accounts for the current financial year are balanced with a large debit, one of the few avenues of relief from a tremendous fiscal burden may be found in a rising trend of industrial profits.

"The Rise of Modern Industry in Sweden." By G. A. Montgomery. Stockholm Economic Studies No. 8. P. S. King and Son, Ltd. 287 pages. Price 10s. 6d.

'twenties, modern industrial Sweden had appeared. But

agriculture had not decayed. Owing to the lack of large landowners the small landowning farmer survived the enclosure movement, while in the political sphere, though full democracy was not achieved until after the war, the basis had been firmly laid by a long tradition of local self-government.

This favourable evolution carried with it an even balancing of social classes and an absence of powerful vested interests. When the drift from *laissez faire* gathered force, the Swedish State invaded the field of private enterprise to a greater extent than almost any other European State. Thus it was the extension of the social services and the reduction of unemployment, and not socialisation, which formed the platform on which the Social Democrats achieved their first election victory in 1932. Even their programme of public works was not wholly foreign to Swedish practice. In the crisis of the early 'twenties, the government of the day had organised relief works paid for at wage rates lower than the normal. The dole had always been anathema and Sweden still lacks compulsory unemployment insurance. The innovation of the Social Democrats was to pay standard rates of wages for relief work and enormously to expand capital expenditure, both productive and unproductive, out of the proceeds of loans.

It is hard to assess the Government's contribution to recovery. The krona had already been depreciated, and the first signs of recovery had already appeared, when the new policy was put into operation; and both in the 'twenties and in the 'thirties, Sweden's recovery from depression was due largely to the fact that Swedish exports consist mainly of essential materials, such as timber, wood pulp and iron, and specialised articles, like high-grade iron and the products of the engineering industry. But, whereas in the 'twenties the home market expanded on the average at about the same rate as exports, in the 'thirties it expanded more rapidly and increased its relative importance. In 1937 industrial production for the home market averaged 60-70 per cent. more than in 1929, while the volume of exports was only 20 per cent. above the 1929 level. Last year, while the volume of exports dropped back to the 1929 level, production for the home market continued to expand.

The Government's public works policy may be said to have given a considerable impulse to the expansion of home industry, though the circumstances were exceptionally favourable. The terms of trade were increasingly in Sweden's favour; the balance of payments showed an annual surplus on current account and Sweden was now a creditor country; savings were increasing rapidly; and the rate of interest was low. Agriculture, however, was less prosperous. Its purchasing power was only maintained by far-reaching measures of price-fixing, regulation and import control; and, on the whole, industrial Sweden has willingly paid the price, especially since the standard of living in the countryside is still very much lower than in the towns.

The Swedish policy of balancing the Budget only over long periods, underbalancing it in years of depression and overbalancing it in years of boom, has already attracted world-wide attention. Swedish ideas and practice can best be described by reference to the recent Budget reform. Sweden now has a working Budget and a capital Budget, and the object is to discriminate strictly between the current expenditure of the State and its expenditure on capital account. The capital Budget is invariably met from the proceeds of loans. The working Budget alone is balanced over the long period: on its revenue side are booked the proceeds of taxation and income from State investments; on the expenditure side are booked, not only current expenses in the most obvious sense, but also that part of the State's capital expenditure which ought to be immediately written off as unremunerative. Any difference between the expenditure so calculated and the total of taxes and State profits is covered by a draft on or contribution to the Budget Regulation Fund.

One criticism levelled against the Government's policy has been that the heavy taxation required both to pay for the expansion of social services and to overbalance the Budget in good years tends to retard the growth of savings. Taxation, which averaged 588 million kronor before the depression, reached the total of 1,130 millions in the estimates for 1938-39. Taxes on income and property have nearly doubled over the period, taxes on automobiles tripled and taxes on consumption increased by nearly a half. Nevertheless, savings have been increasing exceedingly rapidly and the rate of interest in Sweden is now the lowest in Europe. Nor have increased taxation and social charges proved more than industry can bear. Technical advances and rationalisation, aided by cheap capital, have reduced costs and, despite the increase in both the real and money earnings of industrial workers, labour costs per unit of product appear actually to have fallen. Fortunate is the country where the Cassandras are heard with respect but usually proved wrong.

Last year, a skeleton Budget of public works was prepared against the eventuality of a depression. It was not required and this year the state of employment shows distinct improvement. Of late the problems of neutrality and declining population have attracted as much interest as those of cyclical depression. In the event of war, Sweden would strive to maintain her neutrality and to trade with both sides. Defence expenditure has grown to 400 million kronor in the year 1939-40, between three and four times what it was in 1935-36. The population problem has been extensively investigated by a Royal Commission. As a result the Government has taken measures to remove the hindrances preventing people from marrying and having children. Marriage loans are granted, and taxation has been revised to benefit families with children, though there is a bias against family allowances and money payments; subsidies in kind are preferred because they are spent directly on the children. Special attention has been paid to nutrition and to the housing of large families.

It is a remarkable fact that the achievements of Sweden's Social Democrats have been less in the field of socialisation than in that of extending the social services and in using the powers of the State to smooth the workings of the existing economic order. It is true that the State plays an important rôle in the nation's economic life. It directly controls most of the public utilities—the Post Office, the telephone and telegraph system, the most important railways, most of the electric power and a large part of the timber resources. It controls indirectly the Riksbank, the radio, air transport, tobacco manufacture and the trade in liquor; and it holds a half share in the capital of the largest iron ore mining company, as well as exercising a licensing control over the armaments industry. But, outside these industries, important though they are, the direction of private enterprise is unfettered. Except in agriculture, Sweden has in the main avoided new restrictions on trade. The tariff remains one of the lowest in Europe. Many of the duties are specific, that is, on weight or quantity, not value; and their incidence is, consequently, diminished in times of boom. In addition, there have been reductions of duty following the trade agreements with Great Britain and the U.S.A.

The outstanding feature of Swedish industry is still its resilience and adaptability, and Sweden has avoided the bureaucratic control which re-armament has imposed or is imposing on the larger Powers. Despite the new "social policy" the Swedish economy must be one of the freest in Europe. The nation's achievement is not to be found in the field of spectacular political evolution; it is to have brought about a large increase in the standard of life and to have created widespread social services without undue interference with private enterprise and by the fullest use of democratic institutions. There is here a lesson in the greatness of small Powers.

## NOTES OF THE WEEK

**The Prime Minister on Danzig.**—The Prime Minister's statement about Danzig in the House of Commons on Monday had the double merit of accurately stating all the relevant facts and clearly re-affirming Great Britain's policy in all contingencies. The essential fact is that any attempt to settle the future status of Danzig by unilateral action, organised by surreptitious methods, thus presenting Poland and other Powers with a *fait accompli*, could not be considered as a purely local matter involving the rights and liberties of the Danzigers—which, incidentally, are in no way threatened—but would at once raise graver issues affecting Polish national existence and independence. We have guaranteed, Mr Chamberlain reminded the House and Herr Hitler, to give our assistance to Poland in case of any clear threat to her independence, which she considers it vital to resist with her national forces, and we are firmly resolved to carry out this undertaking. Herr Hitler is thus warned that, unless he desists from his present manoeuvres at Danzig, he will involve Germany in a general war. At the same time, the British Prime Minister very properly emphasised, in terms used not long ago by the Polish Foreign Minister himself, that, in a clearer atmosphere, there would be no obstacle to a free and reasonable discussion of possible improvements in the present settlement at Danzig—though there is nothing in the least unjust or illogical in an arrangement that secures to Poland an access to the sea which is vital to her independence, without placing under non-German rule the almost wholly German population of the Free City. Herr Hitler, as Mr Chamberlain pointed out, originally regarded the situation at Danzig as so little urgent or dangerous that he entered, on the basis of it, into a ten-year non-aggression pact with Poland. In March Herr Hitler suddenly demanded a revision of the status of Danzig and the Corridor; and that he has since repudiated his non-aggression treaty with Poland four years before its maturity. And why? Seemingly because, after the destruction of Czechoslovakia, Herr Hitler believes it possible to apply the same process of pressure to Poland. The question is: Can he be brought to see that he cannot carry out this next item on his agenda of aggression without putting Germany at war with the world? The official German comment on the Prime Minister's statement is that it only tells the Germans what they knew already. Can we take this to mean that at last they do, really and truly, understand? If they do, then discussion is possible. If not, there are anxious days ahead.

**Credits for Roumania and Greece.**—Final agreements with the Roumanian and Greek Governments, signed on Wednesday of this week, provide for export guarantees for United Kingdom goods to the total value of £7,500,000, of which £5,500,000 is for Roumania. The Roumanian agreement falls into two parts, respectively concerning guarantees and "trade and payments." So far as details are at present available, the Roumanian Government will issue bonds up to the total of £5,500,000; the principal and interest of these bonds will then be guaranteed by the Board of Trade, and the sums raised by the Roumanian Government from their sale used for the purchase of goods produced in the United Kingdom. The bonds will bear interest at 5 per cent., and will be repayable over twenty years; similar terms apply to the agreement with Greece. For bonds guaranteed by the Government, this may be considered a rather high rate of interest. The "trade and payments" part of the agreement provides for the purchase in the United Kingdom of cotton yarns, woollen and worsted yarns and carded wool to the value of £750,000. The purchases will be made through the ordinary trade channels and payment effected to the extent of £650,000 out of the credit guarantees, while the other £100,000 will be pro-

vided out of sterling already available in the Anglo-Roumanian Clearing. The official announcement states that various amendments have been made to the existing Payments Agreement, and mentions "the more rapid repayment of outstanding trade debts, the making of advance payments to the clearing and the transfer of passenger moneys and insurance balances." These will be as welcome to United Kingdom traders as the news that a Consultative Committee is to be established to "consider from time to time any difficulties which might arise in the working of the Agreement," and other relevant snags.

**The Cost of Defence.**—In budgeting for defence expenditure in 1939-40, Sir John Simon provided for £20 millions from revenue and some £37½ millions from loans, over and above requirements shown by the detailed estimates. But the supplementary defence estimates presented this week far exceed these sums, and, if they were not all to be provided out of loans, they would form a secondary Budget in themselves. Additional requirements for the Army, Air Force, and the Ministry of Supply together amount to £148,250,000, making the total cost for the armed forces in 1939-40 about £671 millions. In addition, a Supplementary Estimate for the Navy and its reserves is known to be pending. Until the scope of Civil Defence is finally known the additional costs involved in this group of services cannot be estimated. The Army supplementary is for £79,106,000, due partly to general acceleration of the arms programme, partly to formation of the militia and partly to increased establishments of the Regular Army, Reserves and Territorials. These three broad divisions require respectively increases of some £35,618,000, £27,962,000 and £22,959,000 gross. Additional provisions for the Air Force require a further £39,500,000 from loans. Of this, £14,100,000 is for aircraft and about £15 millions for buildings and land (including contractors' works), and the balance is due mainly to increased personnel. The new Ministry of Supply is provided for in a Civil Supplementary Estimate, which appears to require £29,644,000 from loans over and above the £15,768,000 which was to have been issued to the Ordnance factories, now about to be transferred to the Ministry. The Ministry's new gross total is over £144 millions (including £105 millions for munitions, general stores and raw materials) of which £81 millions is provided from Army funds, leaving transfers from the Ordnance votes and the increased allocation from loans to cover most of the balance.

### CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848

Paid-up Capital and Reserve Funds,  
**Kr.40.000.000—.**

Oldest Norwegian Private Joint Stock Bank.  
Direct correspondents throughout the country.  
Offering complete services to banks and firms  
doing business on Norway.

*Correspondence invited*

But the demands of near-war conditions are falling increasingly on civil services also. Civil supplementaries presented this week for £11,930,000 bring the total addition to the original civil estimates up to £15,280,000 whereas only £5,000,000 was provided in the Budget. Comparatively little of the additional sum is connected with peaceful or peace-time services. The earlier supplementary of £3,350,000 covered reserves of merchant ships and of agricultural machinery. Of the new provisions, £1,662,000 is required for camps, publicity services and other matters connected with defence, various defence measures in the colonies require £1,003,000 and Palestine and Spain call for £1,261,000. It is true that £7,928,000 is for agriculture, including £3,006,000 in respect of the Milk Bill and £3,395,000 for oats and barley. But even agricultural policy has a war orientation. Since the Navy supplementary and provision for shipping subsidies have still to come, it is early to judge how far Budget estimates will ultimately be exceeded, but these mounting millions are bringing the time of prospective real payment by the community nearer each day.

\* \* \*

**The War Risks Bill.**—The War Risks Insurance Bill published on Tuesday last is so elaborately phrased as to make it difficult to comprehend at a first reading. In a Bill which affects so directly and so urgently a vast number of people that is an unfortunate quality, and even the explanatory memorandum which prefaces the Bill leaves certain points obscure. The first part of the Bill deals with war risks at sea. First, it gives retrospective sanction to the Board of Trade's Pool and, secondly, it authorises the Board to carry on business as insurer of ships and cargoes *either* when other adequate facilities are not available *or* during actual warfare. It defines the words "war risks" and the words "King's Enemy risks" as "such risks as the Board may by order define"—a method of definition which does not greatly assist either insurer or insured. Part 2 of the Bill will attract most attention, because it sets up for the first time since the last war Government machinery for covering commodities on land against war risks. This "commodity insurance scheme" may be brought into operation in the event of war to cover the sellers of goods in Great Britain against King's Enemy risks. The details are difficult to grasp, but the essentials seem to be as follows:—

- (1) Before the outbreak of war sellers of goods may be registered with an authorised person as desiring to be insured for a stated sum, and as soon as the insurance becomes operative they will be deemed to have had a policy issued to them.
- (2) Registration fees will vary from £1 for cover up to £10,000 to £10 for cover above £250,000.
- (3) Premium at the rate appropriate to the goods and the situation will be due immediately cover starts.
- (4) The Board may when the insurance begins make it compulsory on all sellers of goods who hold stocks above a certain value to insure up to the value of the goods owned by them.
- (5) The insurance will be a Government monopoly and insurers will be forbidden to cover sellers of goods outside the Government scheme.
- (6) The Board of Trade may by order exclude any class of goods from the scheme, but owners of such goods already registered will continue to be covered.
- (7) The scheme will be operated through agents appointed by the Board of Trade, who will presumably be insurance companies, agents and brokers.
- (8) An agent for the sale of goods will be deemed to be a seller of goods.

The gist of the Bill seems to be that all sellers of goods should register directly the Bill becomes law. By doing so, they will obtain immediate cover against King's Enemy risks if war breaks out.

\* \* \*

**Overseas Airways.**—It can hardly be said that the British Overseas Airways Bill was given a tumultuous second reading on Monday. Sir Kingsley Wood dutifully conducted the House through its clauses, but seemed anxious to meet criticism more than half-way. And of criticism there is certainly no lack. Many of the Air Minister's points are sound and reasonable. Two British

operating companies might provide the outward sham of competition, but in fact the operating problems of the two existing "chosen instruments" are so diverse that competition would be more effective—as it has been in the past and will be in the future—from foreign air services. It is surely not suggested that all services should be duplicated on the Continental and Empire routes, and eventually on the North and South Atlantic routes. The combination of the two companies will provide a public corporation with borrowing powers up to £10 millions, of which £7 millions will probably be issued in the first instance, half being required for the purchase of the constituent companies. Controversy still rages over the purchase prices to be paid to existing shareholders, but it was surely somewhat disingenuous of the Air Minister to argue that the subsidies paid in the past merely covered payments for services rendered and at the same time to declare that in no country in the world is civil aviation within measurable distance of paying for itself. But such controversy is inseparable from the hybrid form which the constituent companies have hitherto preserved. That disadvantage, at least, will be removed by the formation of the new body. The danger—and it was voiced by Government supporters and Opposition speakers alike—is that the corporation may fall under departmental mortmain. The corporation may have full power over the exercise of its day-to-day business, but what does that power really mean if its board is answerable on every major question of policy—finance, services and aircraft—to the Air Ministry and to the Treasury? Since the new corporation is apparently to spend £3½ millions on new aircraft, it must be devoutly hoped that the Civil Aviation Development Committee will ensure the selection of the right types, and also their prompt manufacture. Delays in the production of new types are one of the regrettable features in the report on Civil Aviation in 1938, published this week. But is there any reason why Captain Balfour's estimate that it will take two to three years to make good our deficiencies in air transport should not be materially shortened?

\* \* \*

**Civil Defence.**—The campaign to tell citizens what to do in an air raid has been begun. A season of publicity leaflets, black-outs and exercises has started. But the first leaflet left the main outstanding doubts about Government policy unresolved. It is still quite unclear whether private evacuees will be able to get away after war begins. They may make their own arrangements, but official evacuation will have priority on the roads and railways. The private evacuees are rather vaguely advised to go before the need arises. If unofficial plans are to be permitted it would seem only sense to count up in some way the demand for road space or rail facilities which they represent and to issue co-ordinated advice accordingly. Nor is the official evacuation scheme itself faring well. Mothers still will not register themselves and their children because they do not know who is to care for their menfolk. Nor it seems does the Government itself know. The fact is that in the worst target areas there is now a dangerous *impasse*. Actual shelter is gravely inadequate. The light steel shelters provided for ordinary houses are still conspicuous by their absence in many places—the members of the public not entitled to free ones are appreciably to blame for this. There is no provision even on paper for large tenements. There are no street refuges. And there is no heavily protected shelter at all. The principle of protection is simple: shelter or exodus. In this situation there must be much more evacuation—of whole families, menfolk and all. And the present state of the limited scheme of evacuation does not promise well for the success of any extension.

\* \* \*

**The Claims of Conscience.**—The number of young men who have been required to register under the Military Training Act and who have described themselves as conscientious objectors is about 4,200—a remarkably small

proportion of the total of some 220,000. They will now be required to submit their applications for inclusion in the register of conscientious objectors to the consideration of local tribunals which will shortly commence their sessions. A considerable number will no doubt avail themselves of the opportunity to serve in non-combatant corps, which include the Royal Army Medical Corps, the Royal Army Veterinary Corps, the Royal Army Pay Corps and the Non-Combatant Labour Corps. If the tribunals interpret the Act in the spirit in which it was framed, and consistently with the very emphatic utterances of the Premier and the Secretary of State for War on the subject, objectors will be heard with every sympathy. The duty of the tribunals is to ascertain the genuineness of their objections, and to decide on the basis of proved facts only whether a particular individual shall be registered for military training or for other work of national importance. The task will be difficult, and no kind of prejudice must be allowed to interfere with its performance. The position before the law is that militiamen and conscientious objectors rank equally in their different ways in respect of the duties and safeguards which the Act provides. It is all-important that the spirit of the statute's administration should accord with the implications of its letter, and employers no less than Ministers and members of tribunals have the responsibility of seeing that this is so.

\* \* \*

**Helping Poland.**—Colonel Koc, the leader of the Polish economic mission now in this country, has returned from Warsaw. It is understood that negotiations for British financial assistance are now nearing a conclusion. It has been necessary to take into account not only the Polish Government's needs, but also the whole structure of Anglo-French financial help for East European countries. Since the negotiations began, for instance, Sir Frederick Leith-Ross has been in Paris, presumably to discuss the part which might be played by the French Treasury, and the British Government has brought out a Bill extending export credit facilities to friendly countries to the total sum of £60 millions. It has been realised on the Polish side that any delay there has been is no cause for alarm. Their business differs in several ways from that already done with the Roumanians and Greeks. To begin with, discussions have not been confined simply to the making of a block credit for supply of armaments and for the purpose of improving the two countries' trade balance. In Poland's case vital strategic factors have been in question. It has been necessary to decide precisely what arms, and raw materials for the manufacture of arms, must be made immediately available to the Polish high command. Not all of these can come from the United Kingdom: nickel and copper, for instance, must take the form at least of re-exports, and there are other raw materials which the Poles would like to have that are available only from outside the British Empire. In the second place, the Poles want help in defraying the cost of keeping under arms well over half-a-million men: (the present mobilisation cannot be costing much less than 2½ million zlotys per day, or about £100,000). Private business in Poland, too, has been suffering from the tightness of short-term funds; and there is also talk of devaluing the zloty. It becomes clear that the supply of British goods on credit, even including re-exports, will not cover every item in the bill which the Poles are paying, and which we must help them to pay, for the maintenance of an Eastern front.

\* \* \*

**Russia and Poland.**—A decisive factor in the defence of Poland must be the extent to which the U.S.S.R. is prepared to co-operate. Supplies to Poland in case of war could reach her from the West only through Murmansk on the White Sea, or possibly through the Black Sea ports. Even then, railway communications between Poland and the U.S.S.R. leave much to be desired. The number of railways capable of bearing heavy goods traffic can probably be counted on one hand, and only one, that from Moscow to Warsaw, is double-tracked.

A second aspect of possible Russian co-operation is the actual supply of goods. Here Poles will claim that the basis of co-operation already exists in the Polish-Soviet agreement of February, 1939, and that with good will that agreement might be indefinitely extended. While it may be doubtful to what extent the Soviet Union could supply, and would be willing to supply, Poland with raw materials for her war industries, or with actual armaments, guns, or bombing aircraft, Russian help in this direction would be exceedingly valuable to the Poles.

\* \* \*

**The Anglo-Russian Serial.**—Both parties at Moscow seem to have repented of their move towards an agreement limited to issues which are no longer controversial, and to be continuing with their efforts to reach a widely-inclusive pact of mutual assistance and guarantee. It seems even that the discussions of the last few days have made some little progress to that end. What evidence there is points to the ground of discussion having shifted from the actual nomination of countries to be included in a guarantee system, and to stand now upon the definition of what precisely shall be understood to constitute that "indirect aggression" which, the Soviet Government originally indicated, might take place in the Baltic Republics. It is perhaps natural that the negotiations are as slow as they are: their longevity can be excused only if it is an indirect means of engendering a little more confidence between the two Governments than now exists.

\* \* \*

**Tientsin, Tokyo and Outer Mongolia.**—The Anglo-Japanese negotiations at Tokyo about the situation at Tientsin have not yet started, and it would be idle to pretend that the omens for their success are favourable. The Government at Tokyo, who probably wish the negotiations to meet with some success, has made the opening of discussions possible by agreeing formally that the agenda shall be limited to questions affecting the British concession at Tientsin. In actual fact, however, the Japanese Government, under heavy pressure from the Army of North China, are writing into the margin of the agenda stipulations which entirely change the scope of the proposed talks, and which, if insisted upon, will make it impossible, after all, for the British representatives to talk at all. On the 6th of this month the Japanese Prime Minister himself declared that Japan would break off negotiations about Tientsin if Great Britain refused to accept Japan's claims to establish (by force of Japanese arms and in the teeth of Chinese resistance) a "new order" *à la japonaise* in Eastern Asia. In short, Japan will go on twisting Great Britain's tail at Tientsin unless and until Great Britain consents to become Japan's accomplice and coadjutor, to her own loss, in a Japanese attempt to coerce China.

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

In the meantime, the Japanese Army in Manchuria has invaded the Russian protectorate (for such it virtually is) of Outer Mongolia. If the *communiqués* from Tokyo and Moscow are to be taken at their face value, a war on the grand scale between Soviet and Japanese forces has been in full swing on those Mongol grazing-grounds from which Ghengis Khan once rode forth to conquer the world. If British and Russian statesmanship were not almost inhumanly patient, these two Japanese armies, between them, might by this time have involved their country in wars with two Great Powers—as a Japanese way of celebrating the second anniversary of the beginning of Japan's present unprovoked war on China.

\* \* \*

**American Neutrality.**—President Roosevelt met another reverse this week in his plans for amending the United States neutrality legislation. The Foreign Affairs Committee of the Senate, understood to be about equally divided on the key question of whether or not there shall be an arms embargo on the Statute Book, refused to recommend the Administration's Neutrality Bill to the Senate. In terms of American legislative procedure, this refusal means that it will be very difficult for the Administration to get the Bill discussed before the next session of Congress. What it does not mean, of course, is that the amendment of existing legislation, the removal of the arms embargo, is now out of the question: reports from Washington show that the President is unlikely to admit defeat. He has a number of different courses open to him; and there is a good deal of evidence to show that, if he decided to make neutrality an issue between the Administration and the American public, rather than leaving it the issue between the Administration and Congress which it now largely is, he might well carry the day. British observers must meanwhile hope that delay will not breed uncertainty, and that the appearance of uncertainty will not encourage the Axis Powers to believe that America is willing to abdicate her voice in world affairs.

\* \* \*

**Stocks for War.**—The need for the Government to lay up reserves of food and raw materials forthwith has been brought sharply to the fore in current discussion. On Wednesday Lord Templemore stated where the Government stood in the matter. It was not desirable, he said, to give details, but in the case of nearly all essential raw materials, trade stocks and Government reserves together amounted to three months' estimated war consumption. This is satisfactory so far, but it begs the question that is being widely asked. The danger in the next war will be a shortage of shipping, and to minimise that danger it would be wise to import now in quantity needed commodities, either foodstuffs or materials, whose presence in store would ease the strain on shipping in war-time. It is not primarily a question of three months' supply of this or that commodity, but rather of the total tonnage of shipping that can be saved by bulk storage of all kinds now.

\* \* \*

**Supply Powers.**—The chief issue raised on the final stages of the Ministry of Supply Bill has been the fear that the Minister's power to operate undertakings direct may be used to institute State enterprise permanently. On the face of it, it would seem as irrational to claim that no State activities instituted in near-war or war should be continued in peace as to argue that all such activities should *ipso facto* be perpetuated. Each case should be judged on its merits, and the good or expedient retained in the era of demobilisation while the bad or inexpedient is cast away. But there is a point of principle involved. It would be politically fatal if the suspicion were aroused that measures to meet emergency were likely to be used for the quite

different purpose of transforming society. It is explicitly of the essence of all the extraordinary devices lately adopted—compulsory military training, civil defence and Ministry of Supply alike—that they are temporary. In most cases this is laid down in terms, and Mr Burgin's chance of becoming the State capitalist should presumably be similarly restricted.

\* \* \*

**Germany and the Balkans.**—The report from Roumania that German agents are pressing the Government to sell them the whole of Roumania's reduced wheat surplus for this year need not be taken too seriously. The significance of the report lies in its indication of the changed conditions in Eastern Europe since Britain undertook to lend financial backing to the independence of South-Eastern countries. Six months ago the Roumanian authorities had little alternative but to fall in with suggestions from Germany, however undesirable those suggestions might seem to be. Now the British Government, in agreeing to help Roumania, has provided an alternative—though it may be remarked that the agreement to buy 200,000 tons of Roumanian wheat, as expressed in the protocol to the Anglo-Roumanian financial pact, will not be a very generous alternative if it is made conditional on the wheat being "available at world prices." The fact is that the political scene in the Balkans remains uncertain. The Bulgarian Prime Minister's visit to Berlin appears to have settled nothing; it is only further evidence that Herr Hitler is hoping to achieve the same kind of ascendancy in Sofia as he has already achieved in Budapest. If he can hold the councils of Bulgaria and Hungary, and at the same time align with his own those of Yugoslavia, then he will be in a strong position to edge Roumania into a position of less sterilised neutrality than she now occupies. If the *Drang nach Osten* means anything at all, it means at least Germany's commercial control of Roumania's oil and grain. Until Bulgaria is secure within the Axis camp (which also implies that Yugoslavia must be within it as well), that commercial control cannot hope to be established. Nor, with King Carol on the Roumanian throne, will it be easy to establish then.

\* \* \*

**France and Syria.**—On the 8th of this month the French High Commissioner for the mandated territories in the Levant suspended the constitution of Syria and provisionally transferred the task of government to a council, appointed and controlled by himself, to rule by decree. On the French side, it has been declared officially that this step implies no repudiation of the existing Franco-Syrian treaty of September 8, 1936, providing for the liquidation of the French mandate, and no postponement of the date for the coming into force of the treaty. This date, on which Syria is to attain her independence, is to be the day of her admission to membership of the League of Nations; and, by the terms of the treaty itself, this admission is to be secured within three years of the date of ratification. From the Syrian point of view, the trouble is that France so far has shown herself unwilling to ratify the Treaty of September, 1936, though nearly three years have now passed since it was signed. In full view of the spectacle of the British quandary in Palestine, it should need some effrontery to take our French neighbours and allies to task for the much less unhappy present situation in Syria. It is not out of place, however, to recall that the establishment of a treaty relation between Great Britain and an independent Iraq has proved a success; that the Franco-Syrian treaty was inspired by this Anglo-Iraqi precedent; and that there are now no serious drawbacks to weigh against the potent advantages of carrying the Franco-Syrian treaty to completion. Happily for Syria, she has no communal problem comparable to the Arab-Jewish *impasse* in Palestine; the protection of the non-Sunni religious minorities, Muslim and Christian, in Syria has been well provided for in the text of the treaty as it stands; and, finally, the thorny ques-

tion of the Sanjak of Antioch and Alexandretta has now been settled (albeit to Syria's dissatisfaction) by the cession of that territory to Turkey. In these otherwise propitious circumstances the hesitation of the French is reported to arise from a fear that a genuinely independent Syria might steer an anti-French course. The reply to this is that a prompt and full grant of Syrian independence, subject to the terms of the treaty, would almost certainly have the effect of erasing from Syrian minds all backward-looking anti-French sentiments.

\* \* \*

**Re-armament in Australia.**—The ship of Australian defence preparations, enlarged and fortified, is passing through a patch of troubled water. Last week the Council of Defence approved plans for spending £A32 millions in the current year, more than twice as much as in any previous year in peace-time. Only £A7 millions of the 1939-40 programme will be spent outside Australia, and most of this is already covered by loan provisions. The accounts for the year ended June 30 last show that a substantial portion of the estimated loan expenditure of £A4½ millions on defence has not yet been spent. The accounts provided a surplus of £A627,000, so the Treasurer begins the current year in a favourable position; but rising interest rates and intensified competition for loanable funds will set him severe problems. Mr Menzies, the Prime Minister, took occasion the other day to explain why his Government had turned down the suggestion that they should build or buy a capital ship: a new ship could not be built before 1943 and would cost £20 millions; to transfer a ship would only weaken the Royal Navy. This is a matter on which the Admiralty seem to have spoken with two voices, first advising Australia to adopt a capital-ship programme and then pouring cold water on the idea. Mr Menzies' chief difficulties over preparations against war come neither from technical critics nor from financial

\* \* \*

**Nutrition and Milk.**—The Lords had nothing new to say about health and nutrition on Wednesday, but they made the well-known points with force and authority. The need for an increased consumption of milk and dairy produce, fish, fruit and vegetables was underlined in two ways: on the one hand, it was rightly urged that this was to a great degree a question of education; on the other, it was generally agreed that for the large impoverished core of the population it was a matter of insufficient means. Family allowances were widely sponsored as the means to bridge the gap between poverty and adequate feeding; but powerful words were also spoken about the obstacle of unduly high prices. Milk was properly the target of criticism here; and the new Milk Bill shows no sign that any effort to alter a system of organisation for the milk industry which penalises the poor is envisaged. The Government claims credit for its free or cheap milk services for mothers and children, and credit is deserved. But older children, adolescents and adults need milk for nutrition, too, and the only way to ensure it for them is to cheapen milk for everybody.

\* \* \*

**Marshalling Man Power.**—A mistake occurred in the article under this title on page 53 of last week's *Economist* (July 8th). By an obvious printer's error, the number of women attached to the Army was allowed in some copies of the paper to read 176,500 instead of 17,500, the correct figure.

## THE WORLD OVERSEAS

### Turkey in the European Balance

(From a Correspondent in Ankara)

AFTER nineteen years Turkey has linked herself by an alliance to Great Britain and to France, the two countries which, had it not been for Kemal Atatürk, would have dismembered her in 1920. That such an alliance should be possible is due not so much to the subtlety of Western diplomacy as to the logic of events. Kemal Atatürk based the restoration of his country upon two broad principles: on the one hand, on a complete break with the West, not in the sphere of social life, where a forceful process of Westernisation was begun, but in the matter of political entanglements—the new Turkey taking one ally only, Soviet Russia her neighbour to the East; and, on the other hand, on the restoration of Anatolia to its forgotten place as homeland of the Turkish race, a policy requiring that region's intensive development. The Turks were to devote all their efforts to the reconstruction of Asia Minor and they would need years of peace for the task.

To-day Turkey is firmly knit into the Western alliance system. The change came about gradually. Turkey had either to sacrifice isolation or the *status quo*, and it was the rôle of Italy to force the choice upon her. The bombardment of Corfu in 1923 was a first warning of the new "dynamism" at large in the Mediterranean. Turkey took a first step away from isolation and concluded a ten-year pact of security with Great Britain in 1926; and Italy's reaction was a series of conciliatory moves culminating in a pact of friendship in 1930.

The next phase opened with the Abyssinian war. Turkey (now a League member) joined in sanctions and early in 1936 Turkey and Greece placed their harbours at the disposal

of the British Navy. More recently, Italy's intervention in Spain (a disquieting precedent) increased the Turk's distrust; and the Spanish war also brought the forging of the Axis. Now Turkey had grounds for fears on two fronts; in the Balkans from a predatory Germany; along her sea coasts from an expansive Italy. Finally, the successive annexations of Czechoslovakia and Albania showed Turkey what she might expect.

Turkey moved rapidly from the strict solitude of her earlier position. The appearance of the Nazis as a potential menace in the Danube basin led to the formation of the Balkan Entente in 1934. Three years later Turkey linked herself by treaty with the countries lying to the East, Iraq, Iran, and Afghanistan. Then in 1938 came a special treaty of mutual assistance with Greece and, finally, the pact with Great Britain followed by that with France.

Turkey's policy to-day has not changed fundamentally. She is still bent on the regeneration of Asia Minor, and she still desires a long period of peace. It is the West that has made the advances to Turkey in recent years and she has been in some degree able to impose her conditions. She has done so always with a view to strengthening her own position: Turkey's *quid pro quo* for supporting Great Britain during the sanctions period was the return of the Dardanelles to full Turkish sovereignty and their opening to the navies of the Black Sea Powers; the present treaty with Great Britain was preceded by a substantial credit of £16 millions and is to be followed by another and possibly larger one; and France has had to agree to the return of the Hatay (the old Sanjak of Alexandretta) to the Turkish State. Thus the Turks have

succeeded in combining their new political commitments with solid advantages for Anatolia.

The other principle, that of safeguarding peace and the *status quo*, has not been lost from sight. In the Eastern Mediterranean, Turkey is forwarding the work of consolidation by independent negotiations with Egypt, and the ancient bonds uniting the two countries are recalled, together with their common interest in a long period of peace to be devoted to the task of internal consolidation. Again, in the making of the Peace Front, Turkey's influence on Anglo-Soviet relations has probably been overrated—because of M. Potemkin's sudden visit to Ankara in the spring—but there is no doubt about the interest with which Turkey is following the negotiations between her newest and oldest allies. Nor should the anxiety pass unmentioned which certain circles feel here lest Turkey should have committed herself to a Peace Front in which a crucial link may yet be absent.

It is the Balkan problem that is exercising Turkey's diplomatic skill most painfully at present. The Hitlerian eruptions in Central Europe have, like all earthquakes, tended to prise open the political crust along the lines of maximum weakness. The Balkans are crisscrossed with such lines. The startling changes of last winter have encouraged smaller revisionist Powers to look for a violent redrawing of the Balkan map, and the process of consolidation which was going slowly forward has been brought abruptly to a standstill. Bulgaria, Germany's wartime ally, had never become a signatory of the Balkan Pact, but had obtained recognition of her right to re-arm. This intended prelude to her entry into the Balkan Entente has now been disappointed.

Turkey met the re-emergence in the Balkans of the revisionist-*status quo* clash in a spirit of constructive statesmanship. It is known that an attempt was made to reach an agreement with Bulgaria on the basis of a revision in her favour of the Dobruja frontier. Unfortunately, the moderation of King Boris of Bulgaria was overruled by extremists at home. Extravagant claims on Roumania were brought in and negotiations broke down. There are grounds to fear that this was the last opportunity. Rumours that the Turks are completing the fortifications on the Bulgarian frontier with feverish haste tends to confirm the belief that they have now little confidence in the possibility of a peaceful issue.

### Turkey's Worth as an Ally

In the event of a European war, the gain to ourselves from the Turkish alliance is in the first place negative in that Turkey is not co-operating with our enemies. A German break-through in Roumania to the Black Sea, or through Greece to the Aegean loses much of its danger when the Bosphorus, the Dardanelles and the whole of Asia Minor can be mobilised in our own plan of campaign. On the positive side, the gains are harder to assess. A Turkish Military Mission to England and a British Mission to Turkey are examining the possibilities of co-operation. The difficulties on the Turkish side are those of a young, unindustrialised country. There is no native armament industry (only assembling plants). Turkey's mineral reserves are vast, but they are hardly exploited yet and new industrial installations require years to become operative. The big iron works at Karabük are to open this autumn, but experts on the spot are still doubtful about the coking qualities of Turkish coal and her iron ore deposits are a thousand kilometres away along a single-track railway. Lack of communications is another serious difficulty; few roads are up to heavy military traffic, and the railways are mainly single track and often very vulnerable. But Anatolia would be practically impregnable.

From the naval point of view the chief advantage of the alliance is the fact that the British Navy can use the harbours of Asia Minor, participate in the defence of the Dardanelles, and operate from an assured base in the Aegean. The Turkish

Navy could do little more than patrol its own coasts, although the submarines which are—ironically enough—being delivered by Germany could do useful work in the closed waters round Turkey. The Turkish air force has a front line strength of about 250 machines of miscellaneous origin—German, Polish, French, British—but the British armament credit is enabling British suppliers to take the lead and the most recent order was for 36 Westland Lysanders.

Turkey's real strength lies in her army bred from an incomparable fighting stock. She could probably put into the field thirty to forty divisions well supplied with light equipment. To be really effective, however, the Turks need a big supply of larger equipment—tanks, anti-tank guns, heavy artillery. Current negotiations will probably determine how much Great Britain can place at their disposal. Re-equipped, the Turks could hold the Thracian front alone and immobilise in the Balkans a considerable proportion of the enemy's forces.

Turkey will not fight for this or that ideology. She has not joined the West for the good graces of Great Britain or for the imperishable tradition of democracy. She has made her alliance because the Dictators have created a solid basis of interest between Turkey and the West. For internal consolidation and reconstruction she needs the help of older industrialised countries, and she does not want to be absorbed into the *Lebensraum* of a predatory empire. Above all, she wants peace to devote herself to work and this need is the measure of her reliability.

July 10th.

## Germany Over Danzig

[FROM OUR BERLIN CORRESPONDENT]

THE British Government's part in the creation of a Peace Front against all possible aggressors, based as it was on their experiences during the Czech crisis, has only resulted here in an intensified propaganda campaign against Great Britain. In official circles it is believed that, although the opposition of the Western Powers to the aggressive aims of other States is stronger than it was a year ago—as indicated by their armament activity and the speeches made by their leading statesmen—a compromise similar to that reached at Munich can be forced upon Poland about Danzig even now with the use of sufficient pressure. The slow progress of the negotiations at Moscow lends support to this belief; and it is thought that the British Prime Minister will continue his peace policy—although the change in his attitude since Munich cannot be disregarded.

The "dynamic" Powers are impressed only by concrete measures; and it is certain that the intensified arming of Great Britain and France, their agreements with Turkey and the granting of credits to Eastern European States have certainly had an appreciable influence, but not a decisive one. The Government is unrelenting in its search for a solution of the Danzig question which will accord with its wishes; and military measures, which are to reach a peak in August, are being steadily continued. Meanwhile, the impression is given here than a strengthening of the British Cabinet would lead to a decisive turn in the German-Polish tension; while it is also admitted there, as it is in Russia, that this step would greatly ease the British-Soviet negotiations.

The economic and financial position of Danzig itself has seriously deteriorated under the influence of political agitation and Anschluss propaganda. The Bank of Danzig has, therefore, stopped the transfer of interest and payments for Danzig's foreign loans until further notice. Foreign exchange will no longer be given for any but essential or tourist traffic with foreign countries. No longer ago than the autumn of last year, the Gauleiter of the Nazi party in Danzig, Herr Forster, gave a glowing account of Danzig's economy. He said that unemployment had been entirely eliminated, and that the dockyards were employing about 8,000 men against only 2,000 in the years before 1933. The building trade had received contracts amounting to 8 million gulden (£ = 25 Danzig gulden) in a single year from the Nazi party alone. The wage income had increased from 50 to 92 million gulden, and the turnover of food stores from 90 to 173 million gulden. Tax receipts had risen from 47½ to 70 million gulden, and the savings banks and bank deposits from 205 to 244 million gulden, while about 60 million gulden had been set aside for public works and foreign indebtedness was reduced from 100 to 77 million gulden. (It should not be forgotten here, though, that in the autumn of 1937, the rate of interest on the majority of Danzig's foreign loans was reduced

by 2 per cent. by negotiation with the Free City's creditors, and that the redemption dates were extended by five years.)

If this view of Danzig's economic position is sound, the present ban on transfers abroad is due solely to political developments and their influence on the City's business. The official reason is that Danzig's foreign exchange holdings have decreased owing to the port's smaller turnover and reduced exports to Poland. Between 1928 and 1938 Danzig's port turnover fell from 1,476 to 375 million gulden, while Gdynia's port turnover rose from 133 to 1,183 million gulden. And the new ban on transfers abroad appears all the more astonishing in the light of the fact that the Bank of Danzig has gold holdings of 24.4 million gulden, and foreign exchange holdings of 1.7 million gulden. These reserves are described as being solely for the purpose of foreign trade and to cover imports needed for the modernisation of industry. Actually, foreign exchange is hardly necessary for the latter purpose, since the main orders go to Germany and are paid for in goods as part of the German-Polish trade agreement. In the quota year 1937-38 Germany sold to Danzig 22.1 million zlotys' worth of goods—more than any other nation; Great Britain and her colonies followed with 19.4 millions, Holland with 3.7 millions, Norway with 3.4 millions, and France with 2 millions. In the calendar year 1937 Germany's sales to Danzig were valued at 24.8 million zlotys or 40 per cent. of the Free City's imports. The transfer moratorium mainly affects British, Dutch and United States interests.

July 13th.

## The Copenhagen Congress

[FROM OUR DANISH CORRESPONDENT]

THE tenth Congress of the International Chamber of Commerce closed on July 1st in an atmosphere of remarkable cordiality, which was in pointed contrast to the cross-purposes and political tension of the outside world. The terms of the resolution sponsored by the President of the Chamber, Mr Thomas S. Watson, were agreed by the end of the second day. Broad and general as those terms were, they were not such as to be automatically accepted by the representatives of the more extreme Nationalistic States, and the securing of agreement bore witness to an unexpected spirit of conciliation and mutual understanding. The resolution reiterated that the I.C.C. seeks to contribute to world peace through trade; recognised that the world can produce enough raw materials and manufactured goods to supply all the people of all countries with the necessities and comforts of life; and expressed the belief that lasting political stability and the settlement of outstanding economic issues are necessarily interdependent. It concluded by recommending:—

That the Governments of France, Germany, Italy, Japan, the United Kingdom and the United States of America each collaborate, in so far as this is not the case already, with their own leading business men in a thorough study of the economic and fiscal conditions of their individual countries with respect to their national needs and their possible contribution to the world's economic development, and that when these countries shall have completed their surveys, their economic experts meet for the purpose of formulating a plan of adjustment which will give all countries of the world a fair opportunity to share in the resources of the world.

A second important resolution emphasised the need for sound monetary policies; for exchange stability based upon such policies; and for raising the standards of living in every country. It pointed out that the latter aim is dependent in large measure upon greater freedom in the exchange of goods and services across national frontiers; upon an increase in the flow of funds for economic purposes between the world's money markets; upon the encouragement of international investment in order that the surplus savings of some countries might aid in the development of others where capital is needed; upon integrity in the treatment of international investments, and of foreign capital generally; upon the full development of national resources; and, above all, upon the maintenance of economic and political peace within and among national communities.

In accepting the resolution the I.C.C. urged upon Governments the desirability, in the meantime, of maintaining the maximum degree of *de facto* exchange stability as a preliminary to the ultimate *de jure* stabilisation of exchange rates. It was repeated that the Tripartite Agreement of September, 1936, between France, the United Kingdom, and the United

States, subsequently extended by the adherence of Belgium, the Netherlands and Switzerland, offers a practical means of linking together the currencies of the major trading countries and their associates with a view to maintaining a stable relation between them. The hope was expressed that no currency depreciation would be undertaken in order to obtain unreasonable competitive exchange advantages; but that, if adjustment were found necessary, it should be made by international agreement rather than by unilateral action. The working of the Tripartite Agreement rests upon the willingness of certain countries to buy and sell gold freely. This arrangement should be continued and the use of gold for settlement of international balances retained as an important and desirable feature of international monetary co-operation.

The necessity of economic demobilisation was first proposed in a resolution by Dr F. H. Fentener van Vlissingen at one of the group meetings. This pointed out that the concentration of energy in all countries upon armaments brought with it many economic and social difficulties and prevented the normal expansion of international trade. Limitation of armaments was an essential preliminary condition for the development of trade on a sound basis. A thorough investigation should therefore be made at once of the immediate economic measures that would necessarily succeed any relaxation of the present political tension, with a view to drawing up concrete proposals for carrying out the transition from the present quasi-war economy to a peace economy. The Congress empowered the President and Officers of the I.C.C. to make the necessary arrangements for conducting this investigation with the utmost diligence. They were recommended to study, in particular, ways and means of meeting in every country the latent demand for higher standards of living.

The tangible results of the tenth Congress of the I.C.C. are the resolutions carried. But good results are also to be expected from the personal links established between influential business leaders from all over the world and their agreement on a common policy of world economy to be laid before their respective governments. It would be Utopian to expect the resolutions carried to effect an immediate change in world policies. Nevertheless, the fact that leaders of trade, banking and industry from forty-one different countries have met and agreed on the principles of an economic order to contribute to a lasting peace and a higher standard of living, provides a ray of hope in an anxious world. Economic co-operation between the peoples in producing and exchanging vital necessities is not an abstract creation of the mind. It is a truth which, however much it may be denied to-day, never ceases to exist. It now awaits recognition in statecraft.

July 3rd.

## The Shape of Things to Come in U.S. Finance

[FROM OUR NEW YORK CORRESPONDENT]

INTRIGUING glimpses of the scientific possibilities of the future are provided in a number of displays at The World of To-morrow Exhibition, but there are no exhibits foreshadowing the future of finance. Perhaps this is an omen.

The world of finance in the United States does indeed wear an extraordinary appearance. The Government has just passed another milestone in this province, having closed on June 30th its ninth successive year of deficits. The excess of expenditure over revenue was, on the basis of Treasury accounting, \$3,542 millions (excluding sinking fund) compared with the official estimate in January of \$3,972 millions. These figures do not, of course, really reveal either the

position of the Treasury or reflect the full scope of the Government's financial operations. To do so, they would have to include, on the one hand, the substantial amounts of tax revenue which the Treasury obtains as loans from trust funds and accounts and, on the other, to show the considerable outlays uncovered by revenue made by the agencies of the Government.

There is no really influential opposition to the present practice of spending out of deficits. Even the intense fight in Congress over the appropriation of relief during the new fiscal year dealt entirely with the *method* of expenditure: there was never any serious demand that the *amount* should be less than the President asked for, and proposals were numerous for an amount substantially larger, and the agricultural appropriation made was, in fact, much larger than that required by the original Budget.

The fact is that the practice of deficit spending has for the past year or so been extensively rationalised and popularised. Only a few years ago it was generally regarded as reprehensible procedure to be tolerated only briefly under conditions of extreme necessity. Now deficit spending is widely termed "investment," desirable to "offset saving" on a semi-permanent or permanent basis. Eliza has found not one Professor Higgins, as in Shaw's "Pygmalion," but many.

Thus, the first new fiscal year now opened will complete the Federal Government's first decade of deficits. The deficiency for the new fiscal year was estimated in January at about \$3,333 millions on the Treasury accounting basis, but the excess of actual appropriations over the Budget estimates suggests that the deficit may in the event exceed both this estimate and the realised figure for the year just closed. Moreover, the Treasury basis of accounting will probably cover the full results of the year even less adequately than in previous years. The new spending programme, forecast several weeks ago, proposes enlarged outlays by the agencies of the Government with funds borrowed on the credit of the Government. This proposal will probably be substantially enacted; if so, outlays outside the Budget will be even larger than has recently been the case. On the other hand, if the proposed revision of the Social Security Act is passed, as seems likely, the amounts which can be borrowed from the trust funds will be somewhat reduced after January 1, 1940. Thus any consideration of Budget figures alone is misleading.

### The Future Rôle of Government

The implications for The World of To-morrow of this state of affairs in Federal finance must be many. The possibilities for the future are not easy to disentangle, but certain facts do appear to be reasonably clear. First, the United States Government has gone a long way toward the establishment of a capital Budget, as distinct from an operating Budget. The agencies of the Government now have assets totalling about \$12,500 millions, and a very substantial proportion of their operations does not appear in the regular operating Budget. The step of complete segregation of all operations on capital account would not be a long one from present practice.

Secondly, the canalisation of national savings through the Federal Government has gone a long way. There is little to indicate any reversal of this trend, and some reason to suppose that a still larger proportion of savings may in the future pass under the directional influence of the Govern-

ment. Proposals to expand agency operations, the attractiveness of U.S. savings bonds in the present money market and the extent to which the notion of deficit spending has permeated the community, all point in this direction.

Thirdly, the financial structure of the country has taken on a new form during the decade of deficits. The assets of financial institutions are now mainly in Government securities or in those of concerns very largely influenced by official fiscal operations. The money market is essentially a market for Government securities.

Fourthly, there is a very widespread dependence on the Government, socially as well as financially. It is estimated that somewhere between a fourth and a fifth of the population of this country relies practically directly on Governmental outlays. And the operation of the Social Security Act may be expected to expand this proportion in coming years.

## Gains and Forebodings in France

[FROM OUR PARIS CORRESPONDENT]

THE returns of French overseas trade in June show that, compared with June, 1938, imports for the month are up by 246 million francs and exports by 904 millions francs. The excess of imports over exports has thus been reduced by 657 million francs, or 10 per cent. of a total trade turnover of between 6,000 and 7,000 million francs—an appreciable proportion.

The movements in total trade for the first six months of 1939 were as follows:—

|                              | Jan.-June<br>1938 | Jan.-June<br>1939<br>(Million fr.) | Difference    |
|------------------------------|-------------------|------------------------------------|---------------|
| IMPORTS—                     |                   |                                    |               |
| Foods .....                  | 6,097             | 6,818                              | + 720         |
| Industrial raw materials ... | 13,635            | 13,970                             | + 334         |
| Manufactured goods .....     | 3,530             | 3,977                              | + 446         |
| <b>Total .....</b>           | <b>23,264</b>     | <b>24,765</b>                      | <b>+1,501</b> |
| EXPORTS—                     |                   |                                    |               |
| Foods .....                  | 1,902             | 2,578                              | + 676         |
| Industrial raw materials ... | 4,531             | 5,464                              | + 933         |
| Manufactured goods .....     | 7,530             | 9,996                              | +2,466        |
| <b>Total .....</b>           | <b>13,963</b>     | <b>18,039</b>                      | <b>+4,076</b> |

These figures show two things. First, total trade has increased, exports more than imports; and, secondly, the import balance has been appreciably reduced. The general improvement is even more spectacular when trade with foreign countries, and excluding trade with the French colonies, is considered in isolation. Here, in the first six months of 1939 the excess of imports over exports has been reduced to 5,000 million francs, compared with 7,000 million francs in the corresponding period last year.

An exact appreciation of these figures requires some consideration of the behaviour of money and prices in the same period. The divergence between the movements of the figures for the value of trade and those of its quantity suggests that the rise in the price of imported goods in terms of depreciated francs has checked buying, while the rise in domestic prices has inflated exports in terms of value, the quantity of exports increasing hardly at all. In the case of manufactured goods the quantity exported has actually declined slightly.

Nevertheless, with the reduction of the annual import surplus to about 10,000 million francs, the French balance of indebtedness has again become active. Tourist receipts alone, estimated variously between 6,000 and 12,000 million francs, the latter figure, in your correspondent's opinion, being nearer the mark than the former, should suffice to cover the trade deficit. The existence of this new state of affairs explains the continuation of a small but constant stream of gold imports which, according to the Finance Minister, doubled in volume between May and June.

So, after eight months of financial reorganisation, M. Paul Reynaud is able to congratulate himself that he has re-established two essential equilibria; that of the balance of payments and that of the ordinary Budget. "After ten years of budgetary deficits averaging eight milliards," he declared a few days ago, "it is possible for us to say for the first time at the half-year that the ordinary Budget is balanced."

### An Uncertain Future

It is necessary to point out, without in any way detracting from the efforts made by the Government and the country, that the improvement has been assisted by a number of fortuitous factors. Such are the virtual abolition of the legislation supporting the 40-hour week, the bargaining strength in world markets conferred by monetary depreciation, and the financing of re-armament expenditure by new forms of borrowing and taxation. These advantages are not permanent.

The continued rise in prices indicates that M. Reynaud's formula, "Inflation, and not budgetary policy, is responsible for the rise in the cost of living," now requires correction or re-interpretation. In fact, increased living expenses are reducing the nation's purchasing power; it was necessary to raise wages earlier in the year. The vicious circle of rising wages and rising prices is not so much in evidence as it was in the days of the Popular Front, but it has not disappeared altogether.

Public opinion is disquieted when the advocates of a new drive to cut down civil expenditure come into conflict with the partisans of control of money and prices. The matter is debated in governmental quarters where the task of fixing the prices of the harvest of 1939 will soon have to be faced, and where there is a corresponding clash between those who wish to check the price rise by a reduction of customs barriers and those who are above all concerned with the attempt to maintain the activity of home industry.

So far there is no agreement about the right line to take. But the contrast between the activity of the military sector of the economy and stagnation in the civil sector is marked, and it will be even more marked in the autumn, when the combined effect of the financial policy of the Government and of the seasonal rise in prices will be felt. So far the junction between income and expenditure has been effected by means of borrowing. But, if the international tension is prolonged, the disequilibrium between the cost of re-armament and the national revenue will assume a more serious aspect. The Government will then have to face an economic and financial problem of a kind which is perfectly capable of introducing quite a different tone into French politics.

July 13th.

## Entrenched Neutrality

[FROM OUR GENEVA CORRESPONDENT]

NOT long ago the Swiss electorate adopted, by 444,200 votes to 195,000, an official proposal authorising the Federal Government to spend about 400 million francs (£ = 20.77 Swiss francs at current rates) on the strengthening of national defence and on important public works. Some 171 millions will go on defence and 157 millions on public works.

The necessary funds will be supplied, in the first place, by the "Crisis Tax," levied for a further period of three years; secondly, by a credit of 75 million francs supplied by the National Bank, which will use for this purpose a part of the profit of 658 million francs made on the devaluation of the Swiss currency; thirdly, by a new tax ranging from 1½ per cent. to 7½ per cent. levied on those commercial concerns which have numerous branches, and on big shops, on one-price shops and co-operative societies whose yearly sales exceed 200 million francs.

The ordinary military Budget rose from 91 million francs in 1933 to 132 millions in 1939. Extraordinary expenses for the same period totalled about 782 million francs; and to this should be added the 171 millions voted the other day. This makes a total of 953 millions. To the last man, the Swiss are resolved to maintain their neutrality and to defend their territory against any aggression.

This expenditure has made possible the reorganisation of the Army within a short period, development of the Air Corps, and supply of the various Army units with modern and powerful weapons. Several hundred million francs have also been spent on frontier fortifications; these forts, manned by 3,000 to 4,000 men, and powerfully armed, are capable of resisting for several days against any invading force, thus giving the Army time to mobilise. A second fortified line has been erected at some distance behind the frontier "Maginot" line.

As no referendum was demanded, the Bill extending from six to eight weeks the initial period of military service came into force six weeks ago; at the same time, the serving age is extended to include men between the ages of 18 and 60.

The Army now consists of three army corps, nine divisions and three mountain divisions with all auxiliary units, so that Switzerland can put about 400,000 soldiers into the field. In addition to this, Switzerland will soon possess some 400,000 auxiliaries, men and women, for A.R.P. defence, Red Cross, transport and industry.

July 6th.

## Jugoslavia's Uncertain Economic Prospects

[FROM OUR BELGRADE CORRESPONDENT]

RARELY has Yugoslavia presented such a queer pattern of economic possibilities as this year. Following European uncertainties, there appeared signs of a severe depression during March and April. Exports during the first quarter of this year dropped from 847,000 tons to 673,000 tons and from 1,194 million dinars to 1,082 millions in value—a drop compared with the same months of 1938 of 20.5 per cent. in volume and 7.8 per cent. in value. And the quarter finished with an import surplus of 174 million dinars. Coming, as this did, after a very moderate trade year in which 67 per cent. of exports passed through clearings, there set in a severe shortage of *devises*, which forced the Government to depress the dinar from 238 to 258 to the £ against sterling, and caused the sterling, dollar and Swiss franc rates to soar on the "black bourse."

Nor were adverse conditions confined to foreign trade. Uncertainty caused heavy withdrawals of savings deposits, which shrank from 11,809 million dinars in February to 11,505 millions in March and 11,243 millions in April (the lowest figure since Munich). That this money was withdrawn for hoarding is obvious from two facts: first, new capital in business during the quarter amounted to only 39,800,000 dinars, against 40,600,000 in 1938; and, secondly, that imports of plant and machinery during the quarter fell from 258 million dinars to 178 millions. Stagnation in business and the lack of liquid means were complete.

Since the second half of April conditions have somewhat improved. International tension eased and there was some improvement in foreign trade. Thus, in April exports were valued at 433.3 million dinars, against 395.7 millions in April, 1938. For the first time in 16 months the monthly figure exceeded the corresponding figure for the same month of the previous year; and there was even a small export balance of 14.5 million dinars—unusual during the first half of the year when the balance is generally adverse. The improvement was helped by the greater demand for mining products and also by the gradual placing of Yugoslav timber in Italy, Switzerland and Hungary, these countries having transferred their purchases of timber from the now closed Austrian market to Yugoslavia.

### Government Aid

Much was done by the Government also by spending increased sums on public works and defence. Thus, in March expenditure reached the record figure of 1,134 million dinars. It is thanks to this that mining and smelting actually showed an increase in activity in the month, mining activity advancing 6.9 per cent. and smelting 22.8 per cent. Even so this advance was considerably smaller than in the corresponding period of 1938. The Government is encouraging exports to cash-paying countries by means of special regulations and premiums, and has actually reduced the share of clearing

## South American Exchanges

BRITAIN'S economic interests in South America have suffered a considerable setback in recent years. Our exports to South American countries, taken as a whole, show a relative decline, since 1932, of nearly 25 per cent. The fall in investment income, over the same period, can be estimated roundly at 60 per cent., a figure which is probably indicative of the decline in the market value of South American securities traded on the London Stock Exchange. Such substantial losses in an old-established export market and a debtor area which has absorbed one-fifth of all British overseas investments have been accompanied by a deterioration of the exchange position of all South American countries which has compelled the application of stringent and complicated control.

Technically, exchange restrictions involve a jungle of regulations, widely differing in detail from country to country. When stripped of their technical complexity, however, the various systems of control can be reduced to a few patterns. Among South American exchange controls three fundamental features may be distinguished. First, exchange control is closely linked with restriction of imports—a feature inherent in any exchange control system. Secondly, special taxation of imports (in addition to tariffs) may be imposed, either by fixing a substantial margin between official buying and selling rates for foreign exchange, or by applying a direct tax on exchange sales. Finally, partial recognition is given to the *de facto* currency depreciation (in “official” or “controlled free” exchange markets) as a means of stimulating exports. In some cases a separate market is maintained for export and import exchange, at partly devalued rates, while another market for remittances reflects the full depreciation.

With these principles of control in mind, we may now examine the exchange position of South American countries individually, in the light of recent changes. Argentina, which holds the first place in Britain's South American interests, is in a much sounder currency position than her neighbours. Her agricultural production is more diversified and, unlike the majority of countries in South America, is not at the mercy of price fluctuations in a single commodity. Yet the balance of Argentine trade deteriorated considerably in 1938, owing mainly to a general drought in the crop season, and showed a surplus of only £3 millions, against £44 millions for the previous year. To improve the position a drastic curtailment of imports was enforced in December, 1938, and as a result the trade balance this year already shows a substantial improvement. Total exports for the period January to April, 1939, amounted to 510 million pesos, against 496 million pesos in 1938, but imports decreased from 531 million pesos to 416 million pesos. By this stringent policy a surplus of 94 million pesos has been obtained for the first four months of this year, compared with a deficit of 35 million pesos for the corresponding period of 1938.

These movements are clearly reflected in the rates ruling on the “free” exchange market, through which financial remittances may be effected. The free market selling rate, which averaged 19.00 pesos to the £ in June last year, declined to 20.50 last December, but has recovered to 20.25 for June, 1939. On the controlled exchange market, through which exports and authorised imports are financed, fixed rates are maintained—the buying, or export, rate being 15 pesos and the import rate 17 pesos to the £, compared with a parity of 11.46 pesos to the £. The margin between the two rates is credited to an Exchange Control Profits Fund, the bulk of which is retained as a

special reserve of the Central Bank. Argentina is, however, employing barter trade agreements in an attempt to make good her decline in normal trade. The recent agreement with Italy, involving an aggregate amount of 460 million lire, follows similar agreements, on a less extensive scale, with Germany, Belgium, Denmark and Brazil. Broadly, however, it may be said that, despite prevailing unfavourable trade conditions, the monetary situation in Argentina is well under control.

Brazil is more typical of South American countries, with her smaller range of primary exports. Despite the disastrous fall in coffee prices, and the strenuous, and apparently successful, efforts to extend the cultivation of cotton, coffee still accounts for 45 per cent. of total exports. The “new coffee policy,” instituted in November, 1937, resulted in an increase of exports, by volume, of nearly 50 per cent. last year, but the value of total exports declined by 10 per cent. At the same time, imports remained high, despite the quota system, owing to the Government's industrialisation policy. As a result, the active trade balance in 1938 amounted to no more than £30,000 (gold), compared with £2 millions in 1937 and £9 millions in 1936. It is not surprising that a marked scarcity of exchange developed. Hence on April 8, 1939, a new exchange system was instituted, under which 30 per cent. of the foreign exchange from exports must be surrendered to the Banco do Brasil at the official buying rate, while the balance of 70 per cent. can be sold to holders of import permits at the free market rate. Simultaneously, the tax on the sale of import exchange was raised from 3 to 5 per cent. The old and new exchange rates are compared below:—

| RIO DE JANEIRO AVERAGE SIGHT RATE ON LONDON |            |            |            |                                |
|---------------------------------------------|------------|------------|------------|--------------------------------|
|                                             | June, 1938 | Dec., 1938 | June, 1939 |                                |
|                                             | Old system |            | New system |                                |
|                                             | \$         | \$         | \$         |                                |
| Buying rate for export bills.....           | 85.500     | 80.500     | 77.250     | Official buying rate .....     |
| Selling rate for imports.....               | 87.000     | 82.500     | 88.800     | Free market buying rate .....  |
|                                             |            |            | 89.600     | Free market selling rate ..... |

It is expected that, with the free movement of rates under the new exchange system, exports will be stimulated.

Chile's official “export market” rate is pegged to the dollar at 25 pesos, equivalent at present to 117.10 pesos to the £. Export exchange, however, is obtainable only with difficulty, even for licensed imports. At the same time, compensation trade is conducted with several overseas countries, under bilateral agreements. By such means, exchange resulting from certain specified exports may be sold at free market rates in payment for imports from the countries concerned. Similar arrangements are also in existence with some free-exchange countries, like France, Belgium and Switzerland, and they provide a more favourable exchange rate for the Chilean exporter than exports to Britain. Higher rates, together with the shortage of official export exchange, tend to divert Chile's foreign trade to the “compensation countries.” Rates for compensation exchange, however, are subject to considerable fluctuations, seasonally and also between different countries. For example, the present rate for French francs is 0.85 pesos, which gives a cross-rate of 154 pesos to the £. But the Belgian rate is 0.97 pesos, corresponding to a cross-rate of 133.50 pesos to the £.

Three rates of exchange exist in Uruguay: official, “free controlled,” and free. The official rate is paid for exchange accruing from exports, and is fixed at 7.60 pesos to the £. The “free-controlled” rate is the selling rate for “necessary” imports and for certain privileged financial payments, and is in practice fixed at 9.50 pesos to the £. The free rate, which is available for imports of luxury goods, financial payments, and other transactions, declined sharply from an average of 11.75 pesos to the £ in June last year to 13.25 pesos in December, but the average of 13.30 pesos for June last indicates greater stability this year. Much of Uruguay's foreign trade is now distorted into bilateral channels, through compensation arrangements and through proportional import quotas.

So much for the exchange controls in the most important South American republics. The smaller States have not been slow to copy the examples set by their larger neighbours. Thus, Paraguay controls its foreign exchange in close accordance with the Argentine exchange—so closely, in fact, that all exchange transactions are actually made in the Argentine foreign exchange market. In Bolivia, three “official” exchange rates are in operation. A certain proportion of the exchange accruing from exports—the percentage varies with different commodities—must be surrendered to the Central Bank at the rate of 82 bolívares to the £. The balance can be sold to one of the three authorised banks, at Bs. 140 and is resold to importers who hold permits at Bs. 141.40. By a new decree all proceeds of shipments of minerals (the bulk of Bolivia's exports) are now liable to surrender to the Central Bank,

and new restrictions have been imposed on the transfer of profits of foreign-owned companies. Ecuador does not operate exchange control, and it is expected that the existing import control may be shortly removed. At the same time, the supply of exchange appears scarce. Ecuador's distinction is surpassed only by Peru, which is the only country in South America which has not imposed restriction either on imports or exchange operations. But in this case also the exchange situation is strained, and the average buying rate for 90-day sterling bills has deteriorated progressively.

Two exceptions to the general exchange position in South America are provided by Colombia and Venezuela. A considerable influx of foreign capital has recently been in progress, and the foreign trade and exchanges of each country are closely linked to the United States. Colombia's foreign exchange market is open, while in Venezuela import restrictions only are in operation. The Venezuelan exchange has, in fact, been “on gold,” with a rate fixed at Bs. 3.19 per dollar, since April, 1937.

Summing up, two points emerge clearly from this examination of South American exchanges. Firstly, exchange receipts are confined to exports, which are commonly limited to a narrow range of primary products; hence, the South American republics are largely forced to regulate their imports if they wish to pursue a positive currency policy. At the same time, a growing diversion of trade into bilateral channels is in progress. The wider implications of this second aspect, with particular reference to Germany's headway in South American trade, will be examined in a further article.

## Refrigeration

THE adjustment of temperatures to minister to the comfort and convenience of human beings is as old as the practice of making fires and building huts to keep warm and constructing dwellings with wide eaves and thick walls to keep cool. Nor did the ancients confine themselves to rough expedients to provide more comfortable shelter. Food, too, was subjected to primitive temperature control. There is evidence that snow and mixtures of snow and salt were used for food preservation by the Romans; there were mediæval towns and castles equipped with ice-houses; and from more modern times there are stories of exotic delicacies transported in swift sledges across Russia from the Caucasus to the court of the Czar at St. Petersburg.

But these were only rough-and-ready devices, uncertain of success and narrowly limited in scope. Refrigeration as practised to-day is a science. Its rôle can be simply stated: applied to food, it is to provide cool and preservative conditions for commodities from the place of their production to the place of consumption. The engineer insulates a given space; then he cools it; finally, he provides a chain of such refrigerated spaces, in warehouses, ships, ports, trains, road vehicles, shops and dwellings, to cover the interval between the arrival of an article at a place where it can first be refrigerated and its eventual appearance on the table.

The preservation of foodstuffs is by far the most important of the present uses of refrigeration. It is by no means the only one. Its applications to industry include the removal of wax from petroleum in the course of refining, the recovery of solvents, the de-greasing of wool, and in engineering to make possible the easy and rapid assembly of fully machined and polished parts without damage to the finish and without distortion. Nor is refrigeration only of use in the minutiae of industry. Air conditioning in factories, residences and places of entertainment is becoming increasingly widespread, and a refrigerating unit is an essential part of an air-conditioning plant.

As the uses of refrigeration multiply, the methods of providing it acquire a new importance. The three most important media are, first water ice; secondly refrigeration machinery; and thirdly dry ice. (Water ice, of course, requires refrigerating machinery for its production, but from the point of view of the consumer it is an entirely distinct means of obtaining refrigeration.) There are some

250 firms producing water ice in this country, with a total annual capacity of about 2.5 million tons. According to the Census of Production reports (which do not include production by firms employing ten or fewer persons or by

2 ST. JAMES'S SQUARE, LONDON, S.W.1

firms making ice for their own use) the output of water ice in 1924 amounted to 1,138,000 tons, valued at £1,368,000, in 1930 to 1,216,000 tons valued at £1,122,000, and in 1935 to 1,160,000 tons valued at £943,000. This decline is more than accounted for by the fall in the consumption of the fishing fleets, who take the major part of the output of water ice, from 872,000 tons in 1930 to 767,000 tons in 1935; consumption for retail and domestic purposes in the same period rose from 201,000 tons to 246,000 tons.

The second method of refrigeration is by mechanical means. Such statistics as are available suggest that, while the consumption of water ice is declining, the output of refrigerating machinery for all purposes is on the increase. The number of vessels holding Lloyd's refrigerating machinery certificate rose from 546 on June 30, 1935, to 620 on the same date in 1938, and their capacity from nearly 88 million cubic feet to close upon 94½ millions in the same period. The capacity of the land cold stores inspected by Lloyd's surveyors is probably about 36 million cubic feet, but many land stores are not surveyed, and Britain's total land cold storage capacity may be estimated at about 50 million cubic feet.

The third medium of refrigeration, dry ice, or solid carbon dioxide, was first introduced on a commercial scale in the U.S.A. about thirteen years ago. Its principal use in the United Kingdom at present is in the storage of ice cream during distribution; but it is increasingly employed in road and rail transport. The total production of compressed CO<sub>2</sub> in solid or liquid form is recorded in the Census of Production and Import Duties Act Inquiries as 9,700 tons in 1933, 11,040 tons in 1934 and 17,005 tons in 1935. (These figures include compressed liquid CO<sub>2</sub> for use in the production of aerated drinks, but it may be taken that a very large proportion consists of dry ice.)

The principal application of refrigeration in the past has been to the preservation of food, and it is likely to be the same in the future. This aspect is one of enormous importance in a country so dependent on imported foodstuffs as Great Britain. Meat and fish find a place in the diet of all but the very poorest, and almost the entire consumption of these makes use of refrigeration at some point. The problem of to-day and to-morrow is to extend the process cheaply to the preservation of more and more articles of general daily diet.

What are the chances of further progress in the technique and cheapness of food refrigeration? The part played by water ice is decreasing. Ice boxes have many inconveniences; and, although there has actually been an extension of the use of water ice in the United States since 1935, the growth of food refrigeration in the future depends mainly on an increase in the use of refrigeration machinery and dry ice.

As we have seen, the quantity of refrigerating machinery in use is growing rapidly. It is, indeed, this process that has made the most spectacular achievements in the preservation of food in the past. In addition to its use for the manufacture of water ice, refrigeration machinery is used to equip cold stores on land and for the refrigeration of cargo space on ships. The story of its development in sea-going vessels to bring more and more foodstuffs to English tables from far-off overseas begins sixty years ago with the pioneer voyages made by the "Frigorifique" from Rouen to Buenos Aires in 1877, when a cargo of meat was kept in good condition for 104 days under the supervision of the French engineer and inventor Tellier, and by the "Strathleven" from Sydney to London in 1879 with 40 tons of beef and mutton. Regular services bearing refrigerated meat between the Antipodes and London were established in 1884 and from the Argentine in about 1890. It was meat in the main which the new ships with refrigerated cargo space brought in; and the falling off in the trade in live cattle from North and South America after 1900 swelled the increase in the quantities of chilled and frozen meat imported into the United Kingdom.

The distinction between chilled and frozen meat is an important one in the record of refrigeration. Only frozen meat can be stored for any length of time, and chilled meat must be quickly marketed if deterioration and loss are to be avoided. This is important for any assessment of the future of land cold storage. In 1936 only about one-third

of the land storage capacity in this country was used throughout the year, and there was vacant space for some 300,000 tons of meat, or between twelve and fifteen weeks' supply for the population. If the trade in chilled meat continues to grow as it has done in late years, especially from Australia and New Zealand, the under-employment of home storage capacity will be accentuated. Moreover, chilled meat deteriorates rapidly when exposed to normal temperatures, which makes it imperative that the final links in the chain of refrigeration from producer to consumer should be speedily improved. Refrigeration in shops and homes, as well as in ships and ports, is now necessary on this count alone.

The future of mechanical refrigeration is thus promising, just as its past has been prosperous. In road and rail transport, vital links in the chain of refrigeration, much progress is likely to come also from the extended use of dry ice. Dry ice possesses greater refrigerating virtue, volume for volume, than water ice. Compared with mechanical refrigeration its use saves space, plant and the need for supervision. The only trouble is that it is still relatively costly. Dry ice has already effected a minor revolution in the soft fruit industry by making it possible to preserve fruit in first-class condition for twenty hours or more—thus increasing the distances which it can travel. And this is only the beginning.

The truth is that the whole process of preserving food by refrigeration is now in an important stage of transition; and there are sufficient new refinements to foreshadow great possibilities for the future. The development known as quick freezing, for instance, makes possible the preservation of foodstuffs without damage to their palatability; moreover, owing to the stunting of bacterial growth which this process brings about it is possible to keep quick frozen foodstuffs in a refrigerator for longer periods than fresh food itself—though they will keep for only a brief time after thawing. In July, 1938, it was stated that sales of frozen foods in the U.S.A. amounted to about 200 million lbs. per annum, valued at approximately £3 millions; and nearly sixty varieties of foodstuffs were treated in this way, including chicken and other poultry and game, peas, spinach, broccoli, asparagus, carrots, peaches, raspberries and strawberries. Indeed, there is room for speculation about the effect which this method of food preservation is likely to have on the canning industry. In some respects quick freezing and canning are directly competitive; and quick frozen foods resemble the fresh products much more closely than canned foods do. But, equally, they are in many ways complementary. Quick freezing can help to spread the activities of canning firms over the whole year, by providing fruit and vegetables for canning out of season. At present, quick freezing is much more expensive than canning and quick frozen foods must be kept in refrigerators. These are powerful limiting factors in its development. An interesting innovation which may help to bridge the gap between these two processes was announced in the U.S.A. at the end of 1938 with the formation of a new company to operate a process for continuous quick freezing in cans of fruits, juices, vegetables, milk, eggs and other products.

The weakest links in the refrigeration chain have up to the present been the ultimate ones—those which connect the ship or the land cold store with the consumer. The gaps are being filled by refrigeration on rail and road and in shops and houses, and devices like quick freezing and dry ice are playing their part. But the final link, represented by the domestic refrigerator, has yet to be forged in such a way as to reach the main mass of British families. It is still estimated by the bodies responsible for refrigerator sales that only the three million families with an annual income of over £250 can be regarded as potential customers. The barrier to extension is in fact the cost of the refrigerator itself, for operation expenses, by gas or electricity, are relatively low. In a few places refrigerators are already being supplied to working class tenants for all-in-rents as low as 1s. a week, and there is no doubt that bigger and rising refrigerator sales must lead to lower costs of production and cheaper refrigerators. The ingenuity of engineers has now created a cold corridor from places as far away as New Zealand and California to the shops and warehouses of English towns. The next extension must be into the homes of the people themselves.

## Finance and Banking

**The Note Circulation.**—On Wednesday of this week the Bank of England announced the purchase of £20,002,848 of gold. This gold, bought from the Exchange Equalisation Account, is intended to provide the additional notes required to meet the expansion in the demand for currency over the holiday weeks. That seasonal expansion has already begun in earnest, helped no doubt by the international tension, which is causing many people to hold in cash rather larger sums than is their wont. Over and above these seasonal influences there is undoubtedly an underlying secular trend towards expansion in the note circulation. The extent of this trend has been somewhat veiled by the return of sterling bank notes from hoards on the Continent. If we allow £20 millions for this particular factor over the past year and compare the latest circulation of £507.9 millions with the total of £488.1 millions at which it stood twelve months ago, we shall obtain a fairly clear indication of the steepness of that secular trend. The reasons for it are not difficult to find: the growth of 600,000 in the employed insured population over the past twelve months is the most obvious of them. Faced with this seasonal expansion in currency requirements superimposed on a more permanent upward movement, the authorities had the alternative of increasing the fiduciary circulation—the method normally used up to now to meet a seasonal increase in the circulation—or to transfer gold from the Exchange Account—a device now available since the Bank can, by the Currency and Bank Notes Act of 1939, pay the market price for the gold. That the second method was chosen may have been an illustration of the new freedom of action given by the new Act. It may, on the other hand, have been due to a recognition that provision was being made for the more lasting as well as for the temporary increase in the circulation. Its choice may also have been suggested by the understandable desire to do nothing at the present juncture that might savour of inflation and adversely affect foreign confidence in sterling. If there is any tendency towards inflation in our present economic situation, and if there exists a determination to defend the present exchange value of sterling, the choice made by the authorities may be the right one, since by reducing—however modestly—the amount of gold in the Exchange Equalisation Account it brings nearer the point at which corrective action will have to be taken through the usual channels.

**Silver Slumps.**—The London silver market has had to endure the most agonising week of the chequered era opened up by the United States Silver Purchase Act of 1934. Both on Saturday of last week and on Monday last the London market was hard put to it running away from selling orders happily subject to price limits. On each day the London quotation fell well below the American parity, even calculating that parity as the straight conversion of the U.S. price for imported silver into sterling at the rate of the day and not, as should be done, by taking the shipping parity and allowing for the costs of taking silver from here to New York. On Saturday London could allow the price to slump with impunity since no silver price is announced in Washington on that day. Monday's however was a more critical fixing. The sterling price fell by ½ to 16½d., a little Indian buying saving the market from even more serious collapse. Washington's reactions to this fresh slump in the London price were awaited here with considerable anxiety. The London price gave a straight dollar parity of 33½ cents compared with the U.S. price then at 36.75 cents. If the U.S. Treasury had carried its consistency to the point of reducing its import price to that parity on Monday evening, the silver market here on Tuesday would probably have been paralysed into complete inactivity. The fixing would have had to be postponed until such time as a cable to Washing-

ton or New York could have ascertained the price at which America would buy. This self-same situation occurred, it will be remembered, in July and December, 1935, when the American authorities began to show some hesitation in buying imported silver. The American authorities, aware no doubt of this situation, unwilling to have their hand forced and to have to buy silver, and unprepared to see the slump in the world price of silver gathering yet greater momentum, did the one thing which in the circumstances they could do—they reduced their import price but not to the London parity. The figure they chose was 35 cents, at which the price has remained during the rest of the week. The London price for its part has recovered to around the parity of this American import price and at 16½d. is finding a temporary equilibrium.

**And Recovers.**—The recovery is due largely to covering by bears who, needless to say, have found the market extremely profitable for their ventures over the past month. India is also a moderate but persistent buyer, and the up-country offtake in Bombay is reported to have risen recently from about 50 to about 80 bars a day. But both the genuine buying and the bear covering cannot be weighed as material factors in the present silver situation. The outlook is dominated by America. The retention of the power to buy foreign silver has been fought for by the Administration, partly because that power serves a useful purpose in international negotiations such as those proceeding with Mexico on the subject of expropriated oil properties. The fact remains that while there is the present uncertainty regarding the price at which America will buy, arbitrage business with the United States is practically impossible. If America can by this general uncertainty avoid buying foreign silver except such metal as may be covered by special bilateral agreements with other Governments, the world price of the metal is only too likely to fall further. The natural offtake, now that China is out of the picture, cannot absorb the production of new metal—so much of it by-product silver whose output is unresponsive to price fluctuations. Amid all this turmoil and uncertainty in the silver position one fact stands clear: the ill effects of the United States Government's uninvited intrusion in the international silver markets in the past five years.

**German Views on Gold.**—Two significantly dissonant views on the future of gold have recently emanated from authoritative German sources. One comes from the President of the Reichsbank, who recently addressed an audience of Dutch bankers in Amsterdam on the finer points of credit and monetary control. To his appropriately attentive audience Herr Funk propounded anew the thesis that a central bank regulated by the "Fuehrer Prinzip" hardly needs gold as an arbiter of credit policy and that as basis for a currency the volume of production (whether of productive or destructive goods) will always win the day against a precious metal. The second pronouncement is to be found in the latest half-yearly report of the Reichs-Kredit-Gesellschaft, as always, an admirably documented and balanced piece of work. The report points out that after the experience gained since 1931 "an exclusion of gold from the mechanism of international payments is unthinkable." The danger to gold is, in the view of this authority, due not to any inefficiency with which its functions are being performed, but to the one-way character of the international traffic in the metal. The gold stream to the United States, which has been flowing almost uninterruptedly since the artificial devaluation of the dollar, is the crux of the gold problem, which will only be solved by a rationally balanced trade and payments relation between the United States and Europe.

# Investment

**Mobilising Foreign Assets.**—Preparedness to-day takes many forms, covering "white war" and "red war" alike. For some time past it has been known that the authorities were considering the computation of the amount of foreign assets which could be marketed abroad in the event of hostilities. The mobilisation of American securities during the Great War was one of the most efficient financial achievements of those four fateful years, and although British investors no longer hold substantial amounts of American railway securities (which formed a large proportion of the assets then mobilised), holdings of foreign securities marketable abroad in British hands are still large. It is understood that the Treasury has invited members of the Association of Investment Trusts to make a return of the total value of their foreign securities as at June 30th this year. Detailed lists are not required at this stage, but totals are to be divided into four groups, comprising U.S. dollar securities, Canadian dollar securities, foreign securities, excluding the British Dominions and France, and other international securities which can be realised outside this country, the Dominions and France. The latter category would clearly include British securities marketable by deposit receipts or blank transfers in the United States, and such shares as Royal

Dutch and "Shell" Transport. To be complete, the survey would also need to cover insurance companies and other financial institutions with appreciable holdings of foreign investments, and it is understood that the insurance offices are preparing a similar investigation.

**London Transport Earnings.**—With the week's traffics to July 8th, London Transport enters upon a new financial period. By the accident of the calendar, it is necessary to make some slight adjustments to the reported figures for the fifty-two weeks to June 24, 1939, in order to estimate the potential earnings for the financial year to June 30th last. If the 52 weeks to July 1st are taken as a basis instead, the Board's gross contribution to the London Area Pool is £29,746,200. To obtain an approximate idea of gross receipts after pooling, an addition of 4 per cent. may be made to the gross contribution. This addition is somewhat lower than the actual relation between contributions and pooled receipts in 1936-37 and 1937-38, but it has the authority of estimates submitted by Sir William Wood to the Railway Rates Tribunal on the occasion of the application for the 5 per cent. increase in

London fares. On this basis, pooled receipts would amount to £30,925,000, excluding joint lines, and would show an increase of approximately £167,000 for the year. Since joint lines (which are shown net in the Board's accounts) will probably reveal little change, the first conclusion from the pooling estimate is that the increase in receipts falls £63,000 short of the special income tax credit of £230,000 which was brought into last year's revenue. Nor is this all. As we pointed out on April 1st, additional expenditure of the order of £100,000 was expected to fall within the year which has just closed. The Board's A.R.P. commitments are probably considerable, and although no information is available regarding the method by which they will be financed, it is pertinent that the maintenance reserve stood no higher than £386,638 at the end of June last year. Further, an increased amount of new capital has come into charge during the past year, although the corresponding works have not yet had time to reach fruition. No less than £215,292 was debited to capital in 1937-38 for interest on works in progress, and part at least of this sum would be charged to revenue last year. All told, the omens are not favourable for the payment of more than 4 per cent. on the "C" stock for 1938-39; indeed, it is conceivable that earnings may fail to reach this level by a significant margin. If that should happen, the Board's ability to earn standard dividends in future years with the assistance of £732,000 additional revenue from the 5 per cent. fares increase would become an open question.

panies, and the prospectus relating to a Commonwealth Mining and Finance issue referred to Mr Claude de Bernales as being governing director for life in Australian Machinery and Investment. It will be recalled that this concern has figured largely in the dispute between Great Boulder Proprietary shareholders' committee and the directors. Of the companies concerned in the prohibition of dealings, Commonwealth was outstanding in the great market activity at the end of 1934 and later, which developed in connection with the Yellowdine discoveries.

**The Reasons for the Decision.**—In matters such as this the Stock Exchange Committee acts as master in its own house. Some shareholders may feel aggrieved at the closing of dealings, but it is rare indeed for a case to appear before the committee three times before a decision is given, and even rarer for the shares of almost an entire group of companies to be removed at one stroke from the lists. It is not to be expected that the committee will depart from its long-established rule of silence, even in the present unprecedented case. The circumstances have been set out in a circular from the Commonwealth Mining and Finance Board, together with a copy of their memorandum setting out the grounds of appeal against the Committee's decision, issued as we go to press. It appears from these documents that the Commonwealth group is prepared to undergo a stringent scrutiny into its history and finances.

**Courtaulds' Higher Interim.**—The Courtaulds report and chairman's speech provided occasion for moderately encouraging references to the company's prospects in these columns last March, which have been justified by this week's decision of the board to pay an interim dividend of 2 per cent., compared with 1½ per cent.—which was not fully earned—a year ago. The response to this news was a rise in the price of Courtaulds ordinary stock from 26s. 1½d. to 28s. 3d. in a more active market on Thursday. The announcement is unaccompanied by any reference to trading conditions, but a recovery in rayon prospects is apparent in the consumption figures, while on the trading side the newly-forged relations between Courtaulds and British Celanese should be providing a stabilising influence, after a period of keenly competitive prices. These are not the only factors in the Courtaulds equation—there is less ground for encouragement, for instance, from the other side of the Atlantic. But after the company's bitter experience last year, 1939 should produce appreciably better results. And the £1 ordinary stock units, with a current yield of £2 16s. 6d. per cent., are evidently looking forward to them.

**Commonwealth Mining Dealings Ban.**—The Economist of July 1st recorded that the Stock Exchange Committee had rejected an application for permission to deal in 4,850,000 2s. 6d. shares of Commonwealth Mining and Finance, subject to right of appeal expiring on Monday this week. On Wednesday this week the Committee announced that the appeal had been disallowed. Even more sensational, however, was the accompanying announcement that permission to deal had been withdrawn for the shares of seven other companies in the group. These include Anglo-Australian Gold Development, Beryl Gold Corporation, Great Boulder Mining and Finance, Meekatharra Gold Mines, Murchison Gold Development, North Kalgurl United Gold Development and Southern Cross Gold Development. The only exception to the ban on dealings is Great Boulder Proprietary. Mr Claude de Bernales is chairman, or managing director, of all of the companies, whose market capitalisation has shrunk from a peak level of over £9 millions to less than £700,000. None of the companies has paid a dividend, and all of them were formed within a period between 1933 and 1935. Australian Machinery and Investment, a company domiciled in Perth, appeared frequently as vendor of properties to these com-

**United Dominions Trust.**—Further appreciable progress is recorded by United Dominions Trust during the year to June 30th. The report, which appears with customary promptitude, reveals that bills receivable and on hand have increased from £7,420,107 to £7,536,489 for the group as a whole, while a further item for bills and notes placed with bankers appears at £365,695. At the same time, loans against security have increased to £529,147, against £460,104, while cash is higher at £1,058,333, against £1,017,399. This increase in the business of the parent company and its five subsidiaries has been financed by an expansion in loans and acceptances from £2,210,749 to £3,621,119, although this rise is in part compensated by a reduction in current, deposit and other accounts from £3,902,789 to £3,112,704. The past year's progress is modestly reflected in an increase in profit, including gross dividends from subsidiaries, after making provision for rebate of interest, bad debts, and contingencies, from £213,248 to £217,496. Owing to an increase in tax requirements, equity earnings are slightly lower at £114,389, but the 17½ per cent. ordinary dividend is covered with a margin of 8.8 per cent. The transfer of £25,000 to reserve fund raises the total to £1,350,000, which is now £250,000 in excess of the preference and ordinary capital. The report comments favourably on the position of the individual subsidiaries, including United Dominions Corporation (South Africa), which has now completed its second year, and has paid a 5 per cent. dividend. A new subsidiary has recently commenced business in Southern Rhodesia. The £1 ordinary units are quoted at 75s. to yield £4 16s. per cent., and may be regarded as a sound "money" stock.

## MONEY MARKET NOTES

### The Bullion Market

CHIEF interest has again been centred this week on silver, and gold dealings have been featureless. The price and the premium have been unchanged throughout the week, and the bulk of the demand has come from arbitrageurs. Sterling has obtained a not inconsiderable

probability of a decline in the rate. A somewhat weaker tendency in discount rates was noticed after the result of the Treasury tender was known, but on Monday the banks maintained their buying rates for September bills at ½ per cent. and would not quote lower than ¾ per cent. for October bills. The market has been reluctant to sell at

wheat crop giving some assistance. From 4.69½ at the beginning of the week they have come down to 4.69, and are consequently at a discount of only ½c. over the London-New York rate. The weakness in the guilder at the end of last week has disappeared. On Thursday there was some buying from Amsterdam, and the spot rate fell to 8.80½-½ fl., compared with 8.81½ fl. at the beginning of the week; and the discount on the three months' forward guilder, which had been ½c., has come back to par to ¼c., showing that no pessimistic view is taken of the Dutch political situation.

### The Bank Return

THE purchase of £20 millions of gold from the Exchange Account is reflected in the holding of gold in the Issue Department, and also in the Banking Department, where Government securities show a fall of £18.3 millions. They would have fallen by the full £20 millions, as the Exchange Account used its proceeds from the sale of gold in the

purchase of Government securities, if the Bank had not offset the further rise of £2.2 millions in the note circulation by increasing its security items. The fall in bankers' deposits to a relatively low level may be explained by the incidence of Treasury bill payments and maturities, and also to tax payments, which have immobilised funds in public deposits.

### Foreign Exchanges

THE foreign exchange market has again passed a very inactive week. Sterling has been steady. There has been a certain amount of liquidation of bear positions in sterling which were opened a week or two ago when a clash over Danzig seemed imminent. This has been enough to maintain the rate at 4.68½-½, and official support has not been necessary. In fact, on Wednesday there was some official selling of sterling when the rate reached 4.68½. The premiums on the forward dollar have again been reduced and are now quoted at ½c. for one month and 1½c. for three months. Canadian dollars have shown small appreciations against the pound and the New York dollar, the prospects of a good

### The Money Market

THE market's allotment quota at last week's Treasury bill tender was the lowest for nearly two months, amounting to only 44 per cent., while the average rate of allotment also showed a fall from 17s. to 16s. 8.32d. per cent. The cause of both these results was the big reduction in the amount of bills allotted. The Treasury only allotted £37 millions of the £40 millions on offer, which was £10 millions less than the previous week's allotment. Total applications also showed a drop, from £66.6 millions to £63.3 millions, outside tenderers probably being deterred by the

LIVERPOOL      LONDON  
North John St.      Lombard St.

**Bristol Aeroplane Progress.**—Bristol Aeroplane's consistent progress since 1935 contrasts with the experience of some aircraft companies which had a less advantageous start than Bristol in the air expansion programme. Profits, after depreciation, have advanced by 28 per cent. to £687,817, while special profits of £57,597 on sales of manufacturing rights are added direct to general reserve. A further increase of £100,000 in the taxation provision to £285,000 leaves equity earnings only £34,158 higher at £356,237, and the final dividend of 7½ per cent. on the increased capital, together with the 7½ per cent. interim on the former capital, involves distribution on the same scale as in 1937. The balance sheet, no less than the profit and loss account, testifies to the company's appreciable expansion. Stocks and work in progress appear at £2,489,399 net, against £1,740,913; debtors have increased by more than £600,000 to £1,978,176; and the rise from £70,000 to £172,500 in interests in an associated company represents the further financing of Rotol Airscrews. A comparative analysis of profits for the past three years appears below:—

|                                 | Years ended December 31, |         |         |

† Of which 7½ per cent. interim on old capital of £1,200,000, and final on £3,300,000.

Having recorded satisfaction with the trading results, shareholders' interest in the accounts shifts to the company's finances. Increased capital requirements for aircraft companies are commonplace to-day. Additional resources were clearly necessary for Bristol Aeroplane to finance a total expenditure of £1,500,000 for new buildings and equipment, as contemplated last July. In November a 75 per cent. scrip bonus was distributed by capitalising £900,000 from premiums, and at the same time holders of £1,200,000 of the original capital were offered a further £1,200,000 of new shares at par. The 7½ per cent. final dividend for 1938 is payable on the whole of the new capital of £3,300,000. As a result of the share issue, the bank loan of £491,915 which appeared at the end of 1937 has been repaid, and cash holdings amount to £299,739, against a mere £1,637 a year ago. The new capital (which was paid up in December) had not yet had a chance to produce any revenue by the end of 1938. Hence, prospects for the current year should be correspondingly good, with the reservation that A.P.D. will take a fair toll from the company. The present price of the 10s. shares is 19s. 9d. On an assumed 15 per cent. dividend basis (which would be possible if 1939 earnings were only maintained) the yield would be £7 12s. 6d. per cent.

**Blackburn and Handley Page.**—In many cases, the published accounts of companies directly interested in the defence programme have not shown an expansion of profits on any comparable scale with output. It would seem that

the main factors controlling aircraft profits have been relatively high expenses incurred far in advance of full production, costs of adaptation to new types, and delays in fixing contract prices and costings with the Air Ministry. Since the impact of these factors is now waning, the latest Handley Page and Blackburn results may be regarded as marking the close of a period of preparation, rather than earnings comparable with peak production. Blackburn Aircraft total profits for the year to March 31st amount to £142,001 against £139,657, but after deducting a further £5,000 for taxation and the first 5½ per cent. sinking fund instalment for preference share redemption (which absorbs £23,000), earnings for the equity are reduced to £52,801 against £80,770. A 15 per cent. dividend is again to be paid on £408,406 capital. The capital was doubled in February last, but the £408,406 new capital only ranks for dividend in the current year. Since the proceeds were not available until the end of the financial year, interest charges on loans (which have been replaced by the share issue) were higher than in 1937-38. A year ago an increase in profits was foreshadowed by the chairman, and when the new issue was made in February, profits for 1938-39 were not expected to be lower. It appears that expectations of substantially higher profits have been postponed somewhat further; the growth of gross work in hand over the year from £1,234,268 to £2,745,735 may be a better guide to the company's expansion. The Handley Page preliminary results are also disappointing at first sight, though the full report and chairman's speech may throw more light on the figures. Net profits for 1938 amount to £190,695 after transferring £30,000 from tax reserve no longer required, compared with an unassisted net profit of £210,126 a year ago. The 10 per cent. interim less tax and the tax-free final of 20 per cent. make a gross distribution of £37 11s. 9d. per cent. on £373,395 ordinary stock. If this rate of return appears high, it must be recalled that the capitalisation of Handley Page has always shown exceptional features. Even after the 50 per cent. scrip bonus in July, 1938, and the 100 per cent. scrip bonus in December, 1937, the capital is of moderate size in relation to assets. Blackburn 10s. ordinary shares are quoted at 12s. 3d., to yield £12 5s. per cent., and Handley Page 5s. units, at 22s. 9d., to yield £8 16s. per cent. gross. These are high yields, but both concerns are exposed to the close control of Air Ministry contracts and to A.P.D. Investors are evidently looking ahead to the time when it may not be necessary to expand the air arm at the present enormous rate.

**International Tea Recovery.**—For the previous two years International Tea accounts provided the paradox of a sharp fall in profits during a period of expanding turnover. Increased wages and costs, coupled with lower profit margins arising from intense competition in a small range of important lines, explained the contrast. In the latest year to April 30th, however, the company has made welcome progress. Though total profits are still well below the level of more prosperous times, the 10 per cent. improvement in trading profits from £626,043 to £687,042 is a satisfactory result. Equity earnings have risen from £205,048 to £255,240, which suggests greater dividends for ordinary stockholders, but the conservative distribution is one of the features of the latest report. The 10 per cent. dividend is repeated, although in 1936-37, when percentage earnings for the equity were only slightly above those for 1938-39, as much as 16 per cent. was distributed. For many years past the company has regularly allocated £100,000 to reserve account, which stands at £1,858,814. This allocation has been made from revenue in the latest year—an encouraging point, since in each of the three years to April 30, 1938, the provision was only possible by drafts upon the dividend equalisation reserve, which is now exhausted. Profits for the past three years are analysed on the opposite page.

|                                   | Years ended April 30 |            |         |
|-----------------------------------|----------------------|------------|---------|

| Carry forward .....               | 108,506              | 108,554    | 108,794 |

The parent company's balance sheet contains no outstanding changes, but the accounts are presented in a somewhat improved form, and now include a consolidated balance sheet—a desirable addition, since £3,789,662 out of total assets of £8,159,361 consist of interests in subsidiaries. The consolidated statement shows total assets of £8,933,725, including £1,555,080 for goodwill, which arises from the difference between the cost of subsidiary interests and the book values of the assets. Properties account for £3,157,760 and stocks for £1,912,186. Consolidated profits are already indicated in the International Tea accounts, for subsidiaries' profits are apparently distributed in full. The 5s. units of ordinary stock yield £4 10s. per cent., at the current price of 11s. 1½d., compared with a "low" of 9s. 1½d. earlier this year. The company appears to be turning the corner, after a period of some adversity.

**Union Cold Storage Results.**—For the first time since 1933, this company's year's operations have failed to show an increase in profits. For 1938, profits amounted to £893,328 (after taxation and excluding a non-trading item of £83,184) compared with £984,632 for 1937, a fall of 9.3 per cent. excluding the special credit from revenue. No reason is offered for this decline, but the statement in recent annual reports that profits of subsidiaries exceed net dividends received by the parent company is modified in the latest directors' report to show that subsidiaries' net earnings and the parent company's net income from the group are approximately equal. Depreciation again accounts for £125,000 while interest absorbs £27,435 compared with £29,209. The dividend on the privately held ordinary shares is repeated at 10 per cent., but earnings are reduced from 11.1 to 1.9 per cent. Comparative figures for the last three years appear below:—

|                             | Years to December 31, |         |          |

† Direct transfers to depreciation reserve from special transactions: 1936, £197,595; 1937, £251,454; 1938, £226,151.  
‡ After crediting a non-trading item of £83,184.

The balance sheet shows mortgages and loans at £1,565,541 compared with £1,773,932, a fall of £208,391, while "creditors, loans, accrued charges and provision for contingencies" have fallen 27.9 per cent., from £991,775 to £714,675. A sum of £339,387 has been applied from the depreciation reserve to reducing assets, while debtors, the depreciation reserve and payments in advance have fallen from £711,913 to £417,248. The depreciation account has, however, been credited with £226,151 due to the sale of

surplus assets, and now stands some £11,764 higher on the year at £1,530,903. After so many years of sustained profitability, any hasty judgment of the company's earning capacity, based on a disappointing year, is to be avoided. But the light which the accounts throw on the group's financial circumstances is indeed dim. Substantial holdings in subsidiary companies, however, valued at £8,709,780, form over half of the parent company's total assets, and are again subject to the auditors' reservation. Without a consolidated balance sheet and profit and loss account for guidance, the group's internal position remains a closed book.

**Philip Hill and Partners.**—The latest report of Philip Hill and Partners covers a fifteen months' period to June 30th, for which net profits amounted to £643,530. This figure is slightly in advance of the earnings rate for the year to March, 1938, when profits totalled £502,456. In view of the difficulties of the new issue market during the period covered by the accounts, these results are commendable. The company has in fact raised over £16 millions by public offers, and has transacted private deals involving over £3,500,000. Income tax and national defence contribution absorb £191,221 for the period, and the dividend of 31½ per cent. actual is covered by earnings of over 50 per cent. The rate of distribution is thus maintained on the annual basis of 25 per cent. Quoted securities held by the company had a book value of £3,515,377 at the end of June, and a market value of £3,236,419. Including the subsidiary Quadrant Trust, and the subsidiary English Industrial Trust, the group's investment depreciation amounted to £269,826. This shortfall compared with book values must be reckoned moderate in view of the difficulties of the past year, and it has been fully provided for by the investment depreciation reserve, which has been set up with transfers of £215,434 from general reserve and £140,000 from undistributed profits. After these provisions, general reserve stands at £1,000,000 and dividend equalisation reserve at £200,000. Some shareholders might be inclined to ask for one further item of information: a statement of investments. But a reference in the report to the fact that "the directors are intimately acquainted with the businesses and affairs of many of the companies in which shares are held" makes it clear that the company's holdings are largely of a specialised character which fall within what may be called the Philip Hill group. The 5s. shares, quoted at 12s., provide the high yield of £10 8s. per cent.

**Montague Burton Profits.**—In relation to the satisfactory record of previous years, the fall in 1938-39 net profits of Montague Burton from £556,911 to £458,261, as shown

by the preliminary statement was at first sight disappointing. The full report, however, confirms the directors' view that, considering the abnormal conditions prevailing, the results are "not unsatisfactory." Total profits are only 4 per cent. lower, and the net effect of a number of changes in the expense items is a fall of £64,083 to £150,621 in earnings for the equity, which are fairly highly geared in relation to total profits. Although the 7 per cent. cash dividend is repeated, no recommendation is made for the repetition of the 3 per cent. scrip bonus payable in previous years. Details of the allocation of profits are shown below:—

† Also 3 per cent. capital bonus.

One of the principal changes is a provision of £31,952, for roughly 7 months' interest on £1,000,000 5 per cent. secured loan stock subscribed during 1938-39. This stock can scarcely have reached full earning capacity by the end of March. The net increase in other interest is £7,881, while the balance of 5 per cent. First Mortgage Debenture Stock was redeemed last January. In addition there is an increase of £24,897 in depreciation, but a saving of £11,656 in taxes, and on this occasion the £25,000 allocation to pension and benevolent fund is not repeated. The balance sheet reflects continued expansion of the business, and though the increase in stocks from £1,383,745 to £1,578,709 is quite substantial, such a movement is only to be expected with the company's growing turnover. No proposal, however, is contained in the report for writing off the £35,794 of issue expenses for the 5 per cent. Secured Loan stock which appears in the balance sheet. On a long view trading prospects appear satisfactory and at present the company is probably deriving benefit from defence expenditure for uniforms. Distribution policy, however, must be interpreted in the light of the growth of fixed charges. The 10s. ordinary shares stand at 11s. 10½d. to yield £5 18s. per cent.

**Earls Court and Olympia.**—The unhappy history of Earls Court, Limited, reached a critical stage on Friday last week, when a receiver and manager was appointed on the application of the Prudential Assurance Company. The Prudential is a large holder of the £636,941 4½ per cent. first debenture stock, on which the interest due on July 1 has not been paid. Martins Bank was also a party to the proceedings, as the holder of a £125,000 prior lien debenture issued to secure an overdraft, of which £73,850 was outstanding as at September 30th last year. Serious delays occurred in the construction of the exhibition building, and substantial increases and adjustments in the company's capital were required. As a result, it has a three-decker debenture capital, including £300,000 of 5 per cent. second debenture stock, and £400,000 of 6 per cent. third debenture stock. The latter originally ranked as a second charge, but its interest was increased from 5½ per cent. in consideration of its displacement by the new second debentures issued in November, 1937. In addition to these obligations, the company owed London Transport £189,250 on September 30th last year, payable by deferred instalments, under the lease of the property. In the course of the proceedings, the plaintiffs pleaded that the company was rapidly coming to the end of its resources. The history of the company affords a striking illustration of the vulnerability of prospectus profits estimates to unfore-

seeable events. Total profits of £233,775 were anticipated in a full year, and even last year the directors estimated that earnings after debenture and other interest, but before depreciation, would amount to £81,000 for 1939-40. Making all allowance for delays in building and for political factors, the conclusion which emerges is that London has not room for two exhibition buildings on the scale of Earls Court and Olympia. The incidental damage which Earls Court has done to the latter company may be measured in a fall in its profits from £150,090 for 1936 to £94,121 last year, and in the discontinuance of the regular 10 per cent. ordinary dividend from the end of 1936. The 5s. shares of Olympia, which commanded a price of 10s. 10½d. in 1935, are now quoted at 2s. It will need all the ability of the company's management to rectify this damage; but it should not be impossible, in the long run, provided that only one centre is employed for exhibition purposes.

**London Tin Outlook.**—Both from the report and from this week's meeting, London Tin shareholders have obtained informative comment upon the tin position, and in its consequences for the group. At last Monday's meeting, Captain Oliver Lyttelton laid stress on the future earnings outlook of specific companies. During 1938-39, an interest was purchased in British American Tin Mines, which control Siamese Tin Mines. In 1938, the latter company showed a profit of approximately £59,000, though none was distributed. Recoveries on this property are low, but ore reserves are extensive, and great improvement in recoveries is expected from a new process which should be in operation by the end of this year. Before April, 1940, again, the two dredges of Lower Perak Tin Dredging should be working, and a return on this important investment should then be brought within sight. Captain Lyttelton disclosed, in fact, that 82 per cent., or £2,839,864, out of the company's total investments is in companies earning revenue, and that interests representing £300,000 had come into this revenue-earning category during 1938-39. Of the non-revenue producing balance of £621,811, as much as £391,740 is invested in the Lower Perak company, which is expected to be operating during the current financial year, while a further £150,000 represents the holding in a management company whose cash is deposited with London Tin, and whose profit-earning capacity is therefore limited. Thus, the Corporation's long term prospects depend upon tin prices and consumption; but in the short term—a phrase which requires careful definition in view of the time lag between the earning of profits and their appearance in the Corporation's books—sources of additional revenue provide an important pointer to the prospects of the 4s. ordinary shares, which stand at 3s. 1½d. to yield £5 2s. 3d. per cent.

**Low Temperature Carbonisation.**—After a satisfactory record of progress, the heavy drop in Low Temperature Carbonisation total profits from £116,683 to £42,943 for the year to March 31st, coupled with the absence of an ordinary dividend, has come as a shock to shareholders. Some saving in expenses is recorded, but this is of small consequence compared with a fall of two-thirds in total profits. Since the balance available for ordinary shareholders is no higher than £815 against £67,737, which covered the 4 per cent. dividend for 1937-38 with a margin of 1.8 per cent. the absence of any distribution for the latest year is unavoidable. The report stresses that trading "was adversely affected by special circumstances, which are not expected to recur." Indeed, the latest report provides abundant comment on the year's working. The varied character of the company's difficulties may not, in itself, be welcome to stockholders, but they may agree, however, that future troubles are not likely to coincide in a spate. Mild weather in three out of the six winter months was the main trading difficulty last year. As a result, stocks piled up to large proportions, and though special selling measures were taken to dispose of them, the report leaves it to be inferred that the 46 per cent. increase in sales which resulted from these measures will apparently benefit

the current year's profits, while the exceptionally heavy selling expenditure involved has already been written off. The export trade was less profitable, and the colliery in South Wales worked at a loss owing partly to a reduction in orders from the steel trade and partly to technical difficulties. This loss, however, has been met out of the parent company's general reserve. Initial expenditure on plant which is not yet producing revenue has also played its part in the reduction of profits. Coal oil distillation resulted in a working loss (provided for out of the parent company's general reserve) owing to the number of new processes involved, and the South Wales "Coalite" plant, projected for completion by the end of 1938 has been held up by delayed delivery of materials. With the completion of the main programme of expansion, prospects depend on the maintenance of the increased sales recently reported. The 2s. ordinary units stand at 1s. 6d.

**The Week's Company Profits.**—A number of important miscellaneous industrial company results are contained in our usual list of profit and loss accounts, which appears on page 150. Excluding banks and companies for which comparable figures are not available, the table includes reports of some 54 companies whose net profits amount to £7,684,000 against £7,786,000, a decrease of only 1 per cent. Aggregate net profits of 1,549 companies reporting in 1939 to date are £205,442,000, or 8½ per cent. lower than the £223,692,000 earned by the same companies in the previous year. The week's results are discussed in preceding Notes, and on page 129 under the heading "Shorter Comments."

**Company Meetings of the Week.**—Reports of company meetings commence on page 135. Captain Oliver Lyttelton's speech at the *London Tin Corporation* meeting is discussed on page 126. Mr W. Sandford

Poole informed shareholders of *Trustees Corporation* that, while the margin on the valuation of the company's investments had disappeared during the year, the resultant depreciation represented only a small percentage of the balance-sheet figure for investments of £3,205,833. At the meeting of *Eastwoods Cement*, Mr Horace Boot discussed the company's productive capacity, now 265,000 tons, which was capable of interchange between works as required. At the meeting of *Powell Duffryn Associated Collieries*, Mr E. L. Hann informed shareholders that though coal exports to South America were higher last year, France had taken 2,710,000 tons less of British coal, while political considerations had frustrated the provisional cartel agreement with Germany. The company had to a substantial degree anticipated the objects of Part II of the Coal Act, 1938, and rumours of negotiations for further amalgamations were to be discounted. At the meeting of *Gold Mines of Kalgoorlie*, Mr P. E. Marmion declared that the increase in net profits this year was due to the full year's operation of the new mill, increased metallurgical efficiency and reduced working costs. Sir Godfrey B. H. Fell pointed out to *Thistle-Etna Gold Mines* shareholders that while most of last year's development work had been unproductive, though absolutely necessary, an increase in ore reserves was expected this year. At the meeting of *Nyasaland Railways* Mr W. M. Codrington informed shareholders that the company had agreed to take over the marine service of Lake Nyasa from the Government. The new assets are to be acquired by the issue of a maximum of £70,000 "C" debenture stock, which will be acquired by the Government. The consent of the "A" debenture holders would also be sought to increase the Bridge Debenture stock from £1,784,000 to £2,025,000. Mr W. H. Dukes dealt with future prospects at the *Anglo-Dutch Plantations of Java* meeting. Owing to the cut in the tea quota, production for nine months of the financial year would be lower than last year, though prices should be maintained. Average rubber selling prices are higher on the year, but this advantage has been offset by lower forward sales.

## THE STOCK EXCHANGES

## London

## SETTLING DAYS

TICKET JULY 18 ACCOUNT JULY 20

ONCE again the stock markets have lacked brilliance, but while business has remained on a small scale, the firmer undertone, which was apparent before the slowly sagging tendency of recent weeks, has begun to reappear. Large price movements have been virtually absent, though industrials and gilt-edged stocks have not always moved uniformly. It is characteristic of the predominance of politics that industrials are the more lethargic, and gilt-edged comparatively sensitive, to day-to-day changes in sentiment.

Without any special pointers one way or the other, *gilt-edged* were quiet on Monday, some bear-covering, however, bringing modest improvements here and there. The market was pleased with Mr Chamberlain's statement on Danzig, and a fresh advance occurred, War Loan and other undated stocks rising  $\frac{1}{2}$ . But towards mid-week there was no further encouragement in the political sphere, and the heavy Supplementary Estimates for arms left the market in chastened mood, so that there was a general but quite moderate reaction. Undated stocks were in the forefront of any movements.

Apart from the mid-week setback, home corporation issues were firm and the new scrips hardened. Changes in Dominion stocks were small and varied, New Zealand turning easier after a good beginning. In the foreign bond market there was lack of uniformity. Far Eastern bonds were consistently depressed, while Brazilians, which were the market favourites early in the week, lost ground on Wednesday. Among European issues, the main feature was a recovery in Czech bonds. There were no excitements among *home rails*, and good traffics left ordinary and preference stocks no better, and even a shade lower. A feature of the week was the steady demand for railway debentures. London Transport issues were supported.

Industrials were inactive, but a firmer tone than of late was apparent, and prices were a shade better for choice. A cheering factor in mid-week was the Courtaulds interim. Iron and steel shares attracted less attention than usual, and movements were diverse, but there was a fairly smart recovery in mid-week, Neepsend Steel particularly being in demand. Little interest was shown in coal shares, while the tendency in the engineering section was uncertain. Electrical equipment issues also were irregular. Motor shares were firm but uninteresting to start with, but showed some irregularity later. Gloucester Wagon were a firm feature on Tuesday. Changes in aircraft quotations were slight. Aircraft Components went ahead on the dividend, but reacted on profit-taking.

Textile shares were firmer on support from the Midlands, while rayon issues made a mixed showing, British Celanese failing to hold the gains of Tuesday, although Courtaulds responded to the interim dividend. Tobacco shares came in for attention on Wednesday, Galahar and Imperial Tobacco receiving support from the provinces. On Mon-

day, Watney deferred strengthened on final dividend hopes, and brewery shares remained generally firm. City of London deferred reacted on Thursday, however, following the dividend announcement. Among provision issues, International Tea responded to the higher profits, while Liebig's were a firm feature. Movements among store shares were at first small and irregular, but later in the week buying interest centred on Woolworth, while British Home Stores were outstanding among the falls. Shipping issues were irregular and usually easier, though buying support was forthcoming at the lower levels for Clan Line and Royal Mail Lines. In the miscellaneous group, movements early in the week were nominal. Tuesday saw a firmer tendency, however, in which British Oxygen, Associated Cement and Turner and Newall were outstanding, and though prices were hesitant later in the week, Associated Cement, London Brick and Birmid Industries continued their advance.

Oil shares were irregular on Monday. There was some investment demand for Burmah and Paris bought Royal Dutch and "Shell," but Mexican Eagle were on offer. On Tuesday the leaders were steady, while Trinidad and South American issues received some attention. In mid-week the leaders slipped back fractionally in very quiet trading. Rubber shares were featureless all the week, and prices were generally easier. Tea shares also lost ground, reflecting current problems in Mincing Lane.

A rather firmer tone was evident in the mining market on Monday. Among Kaffirs, Brakpan and Consolidated Main Reef led with fractional gains. Later, prices were held on Paris support for Sub Nigel and Crown's, with some tentative local support for the dividend-payers. Interest dwindled in mid-week, however, and quotations moved irregularly. Developing issues, especially Venterspost and Western Holdings, gained slight ground at first, but later in the week prices were irregular in sympathy with the producers. Finance shares followed the general trend, though "Johnnies" were consistently firm on the dividend announcement. Among West African issues, Marlu provided a diversion on Wednesday, but later slipped back in a quiet market. Copper shares have been more active than in recent weeks on the better metal price, but tin shares finished below the best, despite maintained tin prices.

We are officially informed that Mr Horace William Moon has been expelled from the Stock Exchange.

## ACTUARIES' INVESTMENT INDEX

A rise of half a point during the week to Tuesday, July 11, 1939, is shown by the Actuaries' index of 160 industrial equities. The index stood on that date at 60.7, compared with 60.2 the week before and 63.8 the month before. Hence the average yield has declined from 5.77 per cent. a week ago to 5.74 per cent., and compares with 5.48 per cent. a month ago. A selection of the individual indices is given below:—

| Group (and No. of Securities) | Prices (Dec. 31, 1928 = 100) |              |               |                  |

## New York

In the absence of disturbing political developments over the week-end, the undertone was firm on Wall Street on Monday. In quiet trading, A.T.T. and Chrysler were in demand, though news of labour difficulties imparted a hesitant tone later in the day. In the bond market, Government issues were a firm feature, other issues being affected by switches into higher yielding preference and high-grade common stocks. On Tuesday prices advanced further, but rail bonds moved against the general trend, under the lead of Baltimore and Ohio. Later, rumours of an early settlement of the General Motors strike and optimism concerning international and domestic developments generated a sudden upward movement in all sections of the market, the Dow Jones industrial average gaining 2.42 points to 136.98. Iron Age estimates this week's rate of steel ingot production at 50 per cent. of capacity, compared with 40 per cent. last week, which included a holiday.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

Lists to be closed when total reached.

## SHORTER COMMENTS

**Company Results of the Week.**—The full report of THE DISTILLERS COMPANY shows that total profits for the year to May 15, 1939, are £2,493,731. Out of the balance sheet total of £35,101,515, some £23,834,312 is represented by interests in subsidiaries. Good progress is recorded by VICTORIA FALLS POWER, who are paying 15 against 13½ per cent., from net profits of £652,036 against £612,629. COVENT GARDEN PROPERTIES report an increase of £49,780 to £333,647 in current revenue, but profits from the sale of property fell, and charges are heavier. It has been decided not to distribute profits on the sale of property, and for 1938-39, 6 per cent. against 7½ per cent. is being paid. FODENS, LTD., pay 2½ per cent. more at 7½ per cent., after making total profits of £54,623 in the year to May 31st, against £57,554 in the previous 11 months. Profits of PHOENIX OIL AND TRANSPORT have fallen owing to a drop in the group's production from 713,405 to 674,375 tons, lower prices, and the taxation borne by the oil industry in Roumania. Satisfactory stability is shown by AMALGAMATED ROADSTONE CORPORATION, whose total profits of £74,527 compare with £71,813; their dividend is ½ per cent. higher at 6½ per cent. FRANCOIS CEMENTATION are resuming dividends with a 15 per cent. payment, after making total profits of £91,788 against £64,782. WILLIAMS AND WILLIAMS repeat the 15 per cent. dividend, net profits being little changed at £53,660. Total profits of SPICERS, LTD., have fallen somewhat sharply from £108,853 to £86,283, but the 3½ per cent. dividend is maintained. Total profits of McDougalls, LTD. are £404,850 against £412,037, and profits of McDougalls TRUST are therefore practically unchanged. The Trust is again paying 10 per cent. Net profits of ALLIED

(Continued on page 130)

## DIVIDEND ANNOUNCEMENTS

Rates are actual, unless stated per annum or shown in cash per share. Rate for previous year refers to total dividend, unless marked by asterisk to indicate interim dividend.

# Industry and Trade

**Recovery in Shipbuilding.**—The accompanying diagram, based on the quarterly returns issued by Lloyd's, shows the tonnage of merchant ships on which work was commenced at home and abroad since 1928. Until the end of 1935, the two curves followed a roughly similar course, and the gross tonnage commenced in this country was not very different from that on which work was begun abroad. Since the beginning of 1936, however, there has been a growing divergency between the tonnage commenced at home and abroad. Between the third quarter of 1937 and the first quarter of 1939 the volume of new orders obtained by shipbuilders in this country showed a rapid decline, in striking contrast to the continued expansion abroad. Early this year it looked as though the merchant shipbuilding industry in this country was threatened by ruin. But when Mr Oliver Stanley

MERCHANT TONNAGE COMMENCED AT HOME AND ABROAD

announced the Government's plans for assisting the shipping and shipbuilding industries on March 28th, both industries took heart again, and shipowners placed a large number of contracts for new vessels. Thus, during the

(Continued from page 129)

**BAKERIES, LTD.** show a considerable rise from £154,186 to £249,782, though profits arising from the Weston Foods acquisition have not been included. On a comparable basis, net trading profits of Allied Bakeries are £384,820, and of Weston Foods, £265,614. Net profits of HECHT LEVIS & KAHN are £92,264 against £119,540. The dividend is 10 per cent., against 20 per cent. on a smaller capital, but a 10 per cent. scrip bonus is distributable in preference shares. Net revenue for the initial trading period of BEECHAM MACLEAN HOLDINGS is £275,471, or £13,555 over the annual revenue estimated in the offer for sale of July, 1938.

## MISCELLANEOUS

**Johannesburg Consolidated Investment Company.**—Profits for year to June 30, 1939, after depreciation and contingencies, £616,000 against £720,380. Dividend maintained at 15 per cent. To reserve, nil (£100,000). Carry-forward about £220,000 (£196,633).

**Fodens, Ltd.**—Profit on trading, after depreciation, £54,623 for year to May 31, 1939, against £57,554 for 11 months. Ordinary dividend raised from 5 to 7½ per cent. To reserve, £25,000 (£15,000). Carry-forward, £29,934 (£16,681). Stocks, etc., stand at £184,308 (£172,800). Debtors, £81,654 (£72,869). Cash £20,774 (£25,072). Creditors, £55,141 (£70,084).

**Covent Garden Properties.**—Net revenue for year to June 30, 1939, £333,456 (£283,668). Profit on sale of properties, £9,473 (£25,435). To: Income tax, £89,873 (£66,633); N.D.C., £9,000 (£8,300); debenture interest, £96,394 (£75,782). Net profit, £140,473 (£152,482). Preference dividend, £45,675 (£46,462).

Preferred ordinary dividend, £27,550 (£28,025). Ordinary dividend, 6 per cent. (£56,550) against 7½ per cent. (£71,662). Carry-forward, £93,238 (£82,540). Total assets, £6,532,656 (£5,821,178).

**British Celanese.**—The company will pay on July 31st to holders registered July 14th a half-year's dividend on the 7 per cent. 1st cumulative preference shares, bringing payments up to April 30, 1938. (In year to July 2, 1938, half-year's dividend to October 31, 1937, was paid.)

**Beecham Maclean Holdings.**—Report for 11½ months to June 30, 1939, shows net revenue £275,470. To income tax £74,866. Preference dividend £52,662. Ordinary dividend 16½ per cent. To preference redemption fund £54,000. Carry forward £944.

**Distillers Company, Ltd.**—The bonus and profits of this company were discussed in *The Economist* of July 8, 1939, page 75. The balance sheet dated May 15, 1939, shows total assets £35,101,515 (£34,270,966). Cash £3,239,713 (£1,780,539). Stocks £899,699 (£1,076,887). Debtors £234,355 (£202,031). Creditors £2,910,245 (£2,980,047). Reserve fund £5,200,000 (£4,800,000). Trading profit £2,492,719 (£2,522,204). Net profit £2,482,202 (£2,512,470).

**Anglo-Java Rubber.**—Profit year to March 31, 1939, £77,482 (£163,612), before debenture service, £35,000 (same). Ordinary dividend reduced from 3 to 2 per cent.; estates reserve £10,000 (last year £32,500 to tax reserve, £35,000 to cultivation reserve, and £5,000 to general reserve); buildings and machinery reserve, £5,000 (£10,000).

**British General Fixed Trust, Ltd.**—Mr H. J. Saunders, of Messrs Peat Marwick

second quarter of this year work was commenced in this country on 402,100 gross tons—the highest figure since the first quarter of 1930—compared with only 71,200 gross tons in January-March. Moreover, many orders have been held up pending the clarification of the Government's plans. The British shipbuilding industry has thus been set on the road to recovery, assisted by the increase in naval work. But although the tonnage commenced abroad fell from 656,800 gross in the first quarter to 480,700 gross in April-June, it still exceeded the volume on which work was begun in this country. Moreover, the tonnage on hand abroad at the end of June, at 2,067,800 gross, is still appreciably higher than the 791,500 gross tons then under construction in the United Kingdom.

**Steel Production Still Expanding.**—The slight decline in the output of crude steel between May and June was due to the smaller number of working days in the past month. Calculated on a daily basis, production rose from

Mitchell and Company, has been nominated liquidator with a committee of inspection, comprising representatives of Messrs Strutt and Parker, Crews and Company, and Specialised Unit Trusts, Ltd.

**Eastwoods Cement.**—At this week's meeting the chairman, Mr Horace Boot, discussed the company's capacity, which now totals 265,000 tons, and is capable of interchange between the three cement works as required. Though full costs had increased, prospects were good. Sales of Eastwoods Lewes Cement were satisfactory while Eastwoods Humber Cement was working to capacity and supplying the Admiralty requirements at Rosyth.

**Bank and Discount Dividends.**—Williams Deacon's Bank have maintained their interim dividend at the rate of 12½ per cent. per annum on the "A" and "B" shares. Midland Bank are paying an interim dividend of 8 per cent. actual, the same as a year ago. Lloyds Bank are paying interims of 6 per cent. actual on the "A" shares and 2½ per cent. actual on the "B" shares as before. District Bank is maintaining interim dividends at the previous year's rates as follows: 9½ per cent. actual on "A" and "C" shares and 5 per cent. actual on "B" shares. Union Discount interim remains at 3½ per cent.

**Canadian Eagle Oil Company.**—Balance at credit of profit and loss year 1938, £582,657 (£770,949); brought in, £379,494 (£108,062); dividend on 7 per cent. cumulative first preference shares, £121,011 (£137,361); fixed dividend of 23.88 Canadian cents per share on participating preference shares, £43,522 (£42,525); to holders of Mexican Eagle participating preference, £10,800 (£10,800); ordinary dividend 6d. per share as before, £303,207 (£303,207); Carry forward, £425,210.

45,115 tons per day in May to 45,215 tons in June; the number of steel furnaces in operation at the end of June was 356, against 335 at the end of May. In the case of pig iron, the increase in production was even more marked, though, in contrast to steel, output in June was still below the highest level reached in 1937. It is understood that the flow of raw materials to the steel furnaces is now fairly satisfactory and that the output of steel can be maintained at the present high level. Moreover, Mr R. S. Hudson announced in the House of Commons on Monday that arrangements had been made to supplement domestic steel production by additional imports. Apart from the normal annual imports of just over 500,000 tons of steel under its agreement with the Continental Steel Cartel, the British Iron and Steel Federation has recently made arrangements with the Cartel to import an additional 300,000 tons of semi-manufactured steel during the next few months. So far, therefore, the British Iron and Steel Federation appears to have the position well in hand.

**Cotton Agreement Breakdown.**—Some surprise was expressed in Lancashire cotton trade circles on Wednesday when it was announced that the price agreement for Egyptian carded yarns had broken down and that the Committee had been compelled to release members from the list prices. About fifty mills containing nearly 5,000,000 spindles had adhered to this price agreement for nearly three years. The pact was due for renewal at the end of August and according to the agreement, members who wished to resign had to give two months' notice. It has been known in market circles since the beginning of July that four or five firms had decided to withdraw. The real cause of the breakdown, however, is the fact that during the past six months the owners of several mills in the Oldham area have turned from American to Egyptian cotton and have produced carded yarns. This competition has been very severe for spinners in the price agreement, and it has therefore been decided to return to free market conditions. This decision must lead to some confusion and it is estimated that prices all round will decline from ½d. to 1d. per lb. It is realised, of course, that under the Cotton Industry (Reorganisation) Bill, which will soon reach the Statute Book, it should be possible to arrange a compulsory scheme of price control for all cotton yarns.

**The Government and the Wool Trade.**—When the need for increased supplies of Army clothing began in September of last year the Government gave out additional orders to its regular contractors by accustomed methods. Later it recognised a group of manufacturers for shirting, and to some extent allowed this group to apportion the Government's orders between its members, while Government accountants by periodical inspection satisfied the Director of Army Contracts that a reasonable price had been agreed to. In all these instances the Government bought cloth, leaving weavers and spinners to find their own raw material by private treaty. At the end of May a new method of buying was developed. The Government intimated to manufacturers' federations what yardage was required of certain specified fabrics. Working with the associations of spinners, dyers and wool importers, manufacturers arranged to supply the weight required. But instead of dealing direct with topmakers and spinners for the yarn, the Wool Federation arranged contracts for the tops with all firms in the trade which could supply suitable materials, the Slubbing Dyers' Association arranged the dyeing and re-gilling and the Worsted Spinners' Federation arranged the spinning. The federations of dyers and worsted spinners have restricted the work to their own members, and have been criticised for so doing on the grounds that this restriction has slowed down the output. The work of the Wool Federation appears to have been done most efficiently, but some muddle has occurred in regard to dyeing and the restricted output of re-gilling. By this method the Government has abandoned the system of

fixing a price for finished cloth; it has agreed to a figure for the raw material and then allowed reasonable conversion costs for the various manufacturing processes. To the industry the development is interesting, as it shows the Government's desire to deal with the federations rather than with individual firms, and it provides a test of the ability of the federations to supply large quantities efficiently. In addition, this new method provides confirmation that the Government is experimenting with plans for the control of the wool textile industry in the event of war. It is not a big step from the purchase of tops to the purchase of wool itself, but it should be emphasised that up to the present the Government has not actually bought the raw material. It has guaranteed the accounts as between topmaker and spinner, spinner and manufacturer, and the Worsted Spinners' Federation has provided a small amount of the finance required. It is agreed that the new method of buying causes less fluctuation in prices than that of buying through individual manufacturers, who would compete for the necessary raw materials. The order for 3,300,000 lbs. of 50-56's tops at the end of May raised the market price at most 1½d. per lb. Had a dozen separate manufacturers been competing for the material the rise would probably have been much greater.

**Rally in Copper.**—After having been dull throughout the second quarter of this year, the market in copper has shown a marked improvement since the beginning of this month. At £43 3s. 9d. per ton the London cash price early this week was the highest since the beginning of April and £1 higher than at the end of June. The rally was caused by reports that the French Government is purchasing copper in order to raise its war reserve by 50,000 tons, and by the marked improvement in demand in the United States. There is no official confirmation of the French purchases so far, but orders appear to have been placed in New York to be covered partly by Chilean and partly by U.S. copper. At the end of June stocks of copper outside the United States had fallen to 178,658 short tons, or only seven weeks' supply. Any further marked decline in these stocks would place the extra-U.S. copper market in a dangerously strong position, especially as consumption has exceeded production recently. Had it not been for the adverse conditions in the United States the price of copper in London would long have shown a marked advance. Since June, however, the U.S. position has been strengthened, and so far this month about 100,000 tons have been sold in that country. As consumers' stocks in the United States had fallen well below the safety level earlier this year the higher rate of U.S. sales may well be maintained for some time, although temporary recessions are quite conceivable. Under the influence of the expansion in sales the U.S. domestic price was raised by ¼ cent to 10½ cents per lb. last week and although further increases are not expected the better domestic demand may have a restricting influence on U.S. exports. Future London copper prices will be largely determined by the development of the buying movement across the Atlantic. If it makes headway the London price may reach £45 per ton before long, but if the buying wave ceases the present price is unlikely to be fully maintained despite the unusually strong statistical position of the market outside the United States.

**Difficulties on the Tea Market.**—During the past fortnight the tea market has been concerned with consistent rumours regarding the position of an important firm. These reports have now been confirmed. Messrs. Bunting and Co., produce brokers with a capital of £100,000, have been

faced with difficulties as a result of a dispute with one of their clients—the English and Scottish Joint Co-operative Wholesale Society. A writ on the Co-operative Society has been served by the broker's solicitors and a statement on the position will be made shortly. The amount of the transactions in question is stated to be £1,250,000 and the market believes that up to 25 million lbs. of tea are involved. The London Tea Brokers' Association has already discussed the position to avert serious repercussions of the difficulties both amongst Mincing Lane firms and on the tea market. Although strict secrecy regarding the affairs is being observed, it is hoped that an orderly settlement will be reached. The tea market is unlikely to suffer materially as a result of the dispute. In the 1938-39 season, for which the International Tea Committee has now published its statistics, world consumption of tea amounted to 893,833,000 lbs., against 859,362,000 lbs. in the previous year, and the trend of consumption is still upwards. Simultaneously world net exports of tea from producing countries advanced from 873,697,000 lbs., to 927,149,000 lbs., but as the export quota for the current season has been reduced from 92½ per cent. to 90 per cent. of the agreed standard (a reduction of slightly over 20 million lbs.), there are good prospects that supplies and requirements will show a fair equilibrium in 1939-40, especially as current warehouse stocks in Europe are by no means high.

\*       \*       \*

**American Cotton Acreage.**—The United States Government has estimated the area under cultivation for cotton as on July 1st last at 24,943,000 acres, which compares with the revised figure of 25,018,000 acres for last year's crop. This is the smallest acreage for forty years. The forecast was about equal to expectations and has not had any effect upon prices. The yield, however, will depend upon the weather in the cotton belt during the next two or three months. On the assumption that the yield per acre for the current season is the same as in 1938, the crop should be nearly 12,000,000 bales. This total exceeds the current rate of world consumption. Negotiations concerning the Anglo-American barter deal continue between the Board of Trade and trade interests in Lancashire. It is being urged that no time should be lost in importing the cotton and it is possible that some of the provisional arrangements relating to classification will be modified.

## INDUSTRIAL REPORTS

**INDUSTRIAL** activity is well maintained. The output of coal remains well above last year's level and, although export business has declined, the outlook remains good. The iron and steel industry continues to work at high pressure and the latest quarterly shipbuilding returns disclose a substantial increase in the tonnage of merchant shipping commenced during April-June. The majority of textile trades remain active, and the cotton and wool textile industries have a substantial volume of Government orders on hand.

### Coal

**Newcastle-on-Tyne.**—The market in this area remains steady. Durham screened steam and coking coals are scarce but unscreened bunkers and gas coals are available for prompt shipment. Northumberland steam collieries are comfortably placed; large coal is well contracted, but with the lack of seasonal trade prompt steams are available. Sized coals are well taken up but smalls continue to offer freely at the "controlled" minimum price. Patent oven coke is a firm market; inquiries

persist from the Scandinavian countries, where consumers are stocking against an emergency.

**Glasgow.**—The Scottish trade is fully maintaining its improvement. In addition to considerable activity in respect of industrial requirements the shipping trade is doing well. Last week's shipments showed quite a substantial increase, and the total for the year to date is now close on 600,000 tons up on last year. Some pressure is being experienced at present in respect of the holidays. The ascertainment figures for May show output at 2,741,911 tons, against 2,454,625 tons in May last year. Proceeds were £2,043,760, against £1,870,745, the profit balance being £119,069 compared with £118,887. The Danish Sugar Works are in the market for 20,000 tons of singles for shipment from July to September 10th.

**Cardiff.**—There has been little activity this week. No new orders have been placed and disappointment is felt at the delay in the conclusion of the negotiations for the purchase of between 200,000 and 300,000 tons by the French

**Wholesale Price Index Unchanged.**—During the past two weeks wholesale price movements have been irregular, but *The Economist* index of the general level of prices showed no change on the fortnight. The index of the prices of primary products in this country rose during this period, but that for the United States showed a marked decline partly due to the fall in linseed. The official indices for France and Germany are also slightly lower.

The fall in the prices of cereals and meat was offset by the rise in other foods, particularly butter, bacon and cocoa, while the advance in minerals was due to the firmer tendency of the non-ferrous metals.

**National Railways.** The Joint Consultative Committee appointed under the Anglo-French Trade Agreement of December 10, 1938, met in London last week, but apparently it dealt chiefly with prices and an intimation was given by the French representatives that in determining the direction of their demand for foreign coals they had to have regard primarily to immediate economic considerations affecting the French exchange and internal financial conditions.

Production has shown a slight tendency to contract, and shipments are lower than they were in June. In the week ended July 9th they totalled 404,100 tons, compared with 375,659 tons in the corresponding period last year. The available labour supply has fallen and an official return shows that between June 1, 1938, and June 20, 1939, 7,916 South Wales miners and officials migrated to other employments. Prices are nominally unchanged.

### Iron and Steel

**Sheffield.**—The iron and steel market has undergone little change. Pressure for all steel materials is intense,

## TEAM VALLEY OFFERS: Complete Communications

1 mile from the Estate are the great wharves of Tyne Port.

6 miles of Estate railway bring the L.N.E.R. main line on our East boundary to the very factory door.

16 miles of wide Estate roads join each factory with the Great North Road and other arteries.

389 haulage firms are available to deliver your goods to the national and local markets.

400 factories can thus be linked to main communications without confusion or congestion of traffic.

£392,000 have been spent to give Team Valley the best transport arrangements in the country.

120 firms representing 54 industries have rented premises on the Estate in the last 2½ years: 10 have since expanded their factories.

*London overnight by rail or road*

**TEAM VALLEY**

**TRADING ESTATE**

Team Valley is a 700 acre estate on the outskirts of Newcastle. The Estate Company is financed by Government grant, operating under commercial control without profit. Standard or special factories are rented, complete in every respect. The Estate is equipped with canteens and playing fields for workers, restaurants, club, committee rooms, etc., for employers and executives. Backed as it is by

the Government schemes for the Special Areas, Team Valley Estate can offer its tenants services otherwise unobtainable—from help in applying for capital on wards. For further information, or for arrangements to view the Estate, please write to: H. J. Whitehouse, North Eastern Trading Estates Limited, Kingsway, Team Valley Estate, Gateshead-on-Tyne, 11. Tel.: Low Fell 76071.

and producers find it difficult to meet demand in full. The call for basic and acid billets shows no signs of easing, and supplies from the Continent do little by way of filling the gap between supply and demand. Small bars, wire rods and strip are in very active request, and structural steel requirements show further expansion.

New business in forge and foundry iron is restricted, but for hematite there is a substantial revival of demand, and forward business shows distinct improvement following the price reduction. The market in finished iron remains disappointing, although a slightly better inquiry exists for marked bars.

The scrap market maintains its strength. Heavy iron-free basic steel is in very short supply, and users find it very difficult to satisfy their full needs. Imported material is instantly taken up. Foundry heavy cast iron at around 80s. per ton finds some buyers, and there is a good call for cast-iron borings at about 35s. per ton delivered.

★

**Middlesbrough.**—The outstanding feature is the import of semi-finished steel from the Continent and of scrap from America, a further large cargo of the latter having just arrived.

The production of basic pig iron is well maintained but is all reserved for use in the adjoining steelworks.

Steel makers continue to fulfil Government orders, but there is a slight expansion in general business both for semi-finished and manufactured steel. Local steel makers have booked a share of the orders for steel rails given out by South African railways.

The Cleveland foundry pig iron trade expands slowly but the price remains at the official figure of 99s. per ton delivered locally for No. 3 quality. East Coast hematite continues in rather better demand at the price which came into force on July 1st, namely, 115s. 6d. per ton for No. 1 grade delivered in the North-East area.

Good Durham blast-furnace coke is available at 24s. 3d. per ton at the ovens and, although there is no new business in foreign ore, imports under old contracts tend to increase.

★

**Glasgow.**—Activity at the steel plants is being intensified in an endeavour to dispatch as much material as possible before works close down for the holidays. The holiday commenced on Thursday night and operations will be resumed generally on Monday, July 24th. In some of the manufacturing industries, however, the holiday is being curtailed, and it appears that work will be resumed as early as Wednesday the 19th in some cases. At the Clydebridge Steelworks holidays are being staggered this year and plant will be operating continuously. Overhaul and repair of plant is being undertaken in practically every important shop in the district, and it is hoped to have plant running smoothly by the end of the holidays. An exceedingly busy period is expected to follow the resumption of work; order books in almost every branch are well filled and prospects for the autumn are particularly bright.

★

**Cardiff.**—Holiday influences are affecting production in the tinplate industry, and in the week ended July 1st the output under the pooling scheme

equalled 64.09 per cent. of capacity compared with 40.11 per cent. in the corresponding period last year. The sheet works, however, are exceptionally busy, and the latest weekly returns of steel production give a total for West Wales (Briton Ferry to Llanelli) of 29,452 tons, and for the whole of South Wales and Monmouthshire of over 60,000 tons. A cargo of 1,500 tons of Australian pig iron has been discharged at Port Talbot this week, and in the course of the next few months about 35,000 tons are expected from India. The rod and wire mills are also fully employed. Prices are nominally unchanged.

★

**News from Abroad.**—In spite of the decrease in turnover on international steel markets the order books of the producers who are largely dependent on export business are satisfactory and are regularly supplemented by new orders. There is a strong feeling among producers that purchases will soon regain their previous level, as current consumption is sufficient to absorb existing stocks and contracts of consumers in a reasonable period.

Semi-products have remained the backbone of the trade, and delivery times for these products are about 10 to 12 weeks, against only about six to eight weeks for finished steel, apart from certain special products which require longer delivery. Producers could, in fact, secure substantial additional orders for semis, particularly from Japan, if they were not anxious to maintain a certain equilibrium between their sales of semis and of finished products, and there is a tendency to restrict the output of semis pending a revival of the requirements for finished steel. Scandinavia and Holland have been in the market for fair quantities, and business with several South American countries, particularly Argentina and Chile, as well as with the Near East, has also been fairly satisfactory. Thick plates are in good demand but are subject to competition from America, and official prices for South Africa have been slightly reduced in order to meet this competition. Generally, rebates on Cartel prices have shown a further slight increase without disturbing the general price structure to a material extent.

The Thin Sheet Comptoir recently held a conference in London, and it was stated that the mills have orders for several months and that price concessions are very rare. The attempts to bring the Swedish tube makers into the International Cartel have been abandoned after prolonged negotiations, because the Swedes insist on a quota which is regarded as too high. The Belgian Cast-Iron Convention, comprising the Belgian, Luxemburg and French producers, has been established after the difficulties with outsiders had been overcome.

## Textiles

**Cotton (Manchester).**—Inquiry remains fairly extensive and in some quarters quite a useful business has been done. Only minor fluctuations have occurred in raw cotton prices. The United States Government has estimated the area under cultivation for the new season at 24,943,000 acres, against the revised figure for last year of 25,018,000 acres. The forecast has had practically no effect upon prices. It is understood

that before the end of the week, Mr Wallace, the Secretary of the Department of Agriculture, will make some announcement relating to the export subsidy. Opinion as to whether this will be variable or fixed is divided.

In the yarn market there has continued an active demand for coarse American ring qualities, but producers are heavily sold and early delivery is not easily arranged. On the other hand, mule yarns are in plentiful supply. An event of importance has been the breakdown of the price agreement for Egyptian carded yarns.

Manufacturers of cloth who cater for the export trade have again reported a limited demand and many buyers do not seem to be in a position to pay Manchester prices. A few more offers have been met with for India, with occasional sales. Only scattered transactions have been put through for Egypt and West Africa. A little more demand has been reported in finishing styles for South America and Scandinavia. Purchasing for the home trade has been on a fair scale. Government officials responsible for the purchase of clothing for the defence forces are pressing, to an increasing extent, for bigger deliveries. It is urged that the Government should lower the standard so that some of the idle machinery in Lancashire can be used for Government materials.

★

**Defence Orders.**—With the growing strength of the defence forces, the Government requires larger quantities of cotton fabrics, and already contracts for 24 million yards have been placed with Lancashire cotton manufacturers. There is, however, a serious shortage of denims, which is a heavy drill used for army clothing, and at a meeting in Manchester this week between manufacturers and Sir Frederick Marquis, the honorary adviser to the Government on clothing and textile supplies, the whole position was discussed and plans made for expediting delivery. The manufacturers claim that the Government specification for the cloth is far too rigid and unless it was altered the fabric could not be made by the time stipulated, which was November 30th. There were also complaints that the prices offered by the Government were not satisfactory and Sir Frederick promised he would go into the matter. There are thousands of looms idle which could manufacture the particular cloths if the specification were altered, and it is hoped that the War Office will decide in favour of this action. If this is not done the cloth cannot possibly be made by the end of the year.

★

**Jute (Dundee).**—The first forecast of the acreage under jute for the season 1939-40, completed on Saturday last, created little or no interest in the jute market. No one believes that the figures are any more correct on this occasion than they have been for many years past, especially as they indicate a reduction in the area of approximately 3 per cent. on last year, when all along a larger area has been looked for. Prices for raw jute have been so high that there has been more chance of growers increasing their area than otherwise. The area this year is given as 3,056,000 acres, compared with last year's newly revised figures of 3,164,500 acres. In September last year, the original figures

(Continued on page 141)

## COMPANY MEETINGS

# LONDON TIN CORPORATION, LIMITED

DIFFICULT YEAR FOR THE INDUSTRY

COMPANY'S POSITION STRENGTHENED

SUCCESS OF BUFFER POOL SCHEME

CAPTAIN OLIVER LYTTTELTON'S ADDRESS

The thirteenth ordinary general meeting of the London Tin Corporation, Limited, was held, on the 10th instant, at the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

Captain Oliver Lyttelton, D.S.O., M.C. (the chairman of the company), presided.

The Secretary (Mr S. J. Weedon) having read the report of the auditors,

The Chairman said:—Ladies and gentlemen,—With your permission I will take the report and accounts as read. (Agreed.) We have tried both in the report and the accounts to give you as full information as possible, but some explanations may usefully be added to them.

The contingent liabilities noted at the foot of the balance-sheet are liabilities to advance £150,000 to Lower Perak Tin Dredging—I will deal later with the affairs of this company—and £10,000 to Tongkah Harbour Tin Dredging. The liability for partly paid shares is that of 19s. per share on the 10,000 shares of A. O. Nigeria to which I referred last year.

On the assets side, the most important changes in the portfolio are due on the one hand to the purchase of shares and debentures in British American Tin Mines and on the other to the writing down of investments by £120,000 and to the sale of our holding in Consolidated Tin Smelters. This sale was made to assist Consolidated Tin Smelters in finding the necessary block of their shares with which to effect the exchange with the Dutch smelting company and is therefore evidence rather of a closer co-operation between us than of any divergence of interest. Incidentally, the link thus formed between the British and Dutch interests is a token of international co-operation in a world where such tokens are becoming rare.

## BRITISH AMERICAN TIN MINES

The report touches upon the interesting venture controlled by British American Tin Mines, but its results were not available for publication at the time when the report was issued to you. Siamese Tin Mines, Limited, the operating subsidiary, has an issued capital of £500,000, which is all owned by the parent, British American Tin Mines. It made a profit during the year 1938 of £59,000 in round figures, none of which was distributed. Its tin concentrates were won from the operation of an ordinary gravity plant from which recoveries were low—I might say very low; but a new process, generally called the Cavaet, has been developed and a plant has been designed, ordered, and partly erected. It is expected to begin work before the end of this year and should greatly improve the recoveries. The tailings from the present gravity mill have, of course, been stacked for retreatment by this plant. I would also remind you that the estimated ore reserves are no less than 60,000 tons of metallic tin and that further extensions of the orebody may be expected. In short, the enterprise appears to be full of promise and we have an important stake in it.

## LOWER PERAK

I must now give you some further account of Lower Perak Tin Dredging, the whole of the Ordinary share capital of which is owned by us. Last year we estimated the cost of the two dredges and of bringing them to the face, with, of course, the necessary buildings, stores, and spares, at £440,000. Rises in the price of material and labour have, however, made it necessary to add £60,000 to our original estimate, making it now £500,000. You will remember that this sum is being found by the issue of £300,000

of debentures, all of which have now been subscribed, and by a loan of £200,000 from this corporation; £50,000 has already been made available, leaving £150,000 as a contingent liability. The No. 1 dredge should start at the end of 1939, and it is hoped that the other, on the Pulau Attap area, will start digging before the end of our current financial year, that is, before April 30, 1940.

These will be events of great importance to this company and will mark the end of a long effort to bring this asset into bearing, though the effect on our distributable revenue will not be immediate.

You may remark that our investment in the company is lower by £8,244. This was the loss incurred during its last financial year, and it has accordingly been written off out of our own revenues.

## THE INVESTMENTS

I have referred at previous meetings to the percentage of our assets which produced no revenue. For various reasons a strict comparison, with last year's figure would be misleading, but no estimate of the potential earning capacity of this corporation can be made unless I go much more fully into the subject. The figures are striking, and, I believe, will reassure you about the future. I am going to ignore actual payment of dividends and make my first category that of companies which are themselves now earning revenue; this, I believe, will give you the true comparison; 82.04 per cent., or a sum of £2,839,864, is invested in such companies. This amount includes about £300,000 which we were able to place in this class for the first time during the last year. This leaves in the other category about 18 per cent., or £621,811. Of this sum no less than £391,740, or little short of two-thirds, is represented by our investment in Lower Perak Tin Dredging, and, as I have already told you, we expect this asset to become live during the current year. Furthermore, £150,000, or something under a quarter, represents our holding in Anglo-Oriental and General Investment Trust, a management company which has deposited all its cash with the London Tin Corporation and which cannot, therefore, be expected to trade at any substantial profit.

I promised you last year that we should spare no efforts to reduce the percentage of assets earning no revenue and from the above you can judge that great changes for the better in our potential earning capacity are taking place. Naturally, some part of your funds should be and will be locked up in developing assets, but with skilful management we should be able to be sufficiently enterprising without impairing our earnings or sacrificing our present dividends for the sake of our heirs.

I must also refer shortly to Berjuntai Tin Dredging. This company is now operating successfully, although it unfortunately began working at a period when quotas were at their lowest. Its first results confirm our belief in its future.

Our holdings in gold shares represent 6.1 per cent. of our total investments. The developments both in New Goldfields of Venezuela and Konongo have been exceptionally good. Both are now paying dividends and have a bright future. Improving returns have been made by Tano Gold Dredging.

## THE CASH POSITION

Lastly, our cash has fallen from £483,642 to £310,126, which is largely accounted for by the increase in loans to subsidiaries from £63,000 to £181,000.

The moneys disbursed in dividends are, of course, largely replaced

by incoming dividends, but it seems probable that we may have to borrow on a small scale during 1939-1940. This need cause you no misgivings, since we do not permit any subsidiary company to borrow from any third party, and therefore the total commitments of the corporation and all its contingent liabilities are brought to light in the balance-sheet.

The profit and loss account calls for little comment. Administrative expenses are up by about £2,500, which is chiefly due to the reduced income of the Anglo-Oriental and General Investment Trust. Dividends on investments have fallen by about £72,000; £120,000 has been written off investments and £44,000 of this has come out of the carry forward; £62,069 has been provided by the special dividend referred to in the report. This sum had been kept in the Anglo-Oriental and General Investment Trust, Limited, against just the contingency which has arisen this year.

To sum up, the year has not been a good one for the tin industry. Our own position has, however, strengthened; many hitherto unproductive assets are coming shortly into bearing and our portfolio is in a very excellent state.

I must, however, again warn you that companies such as this, which derive a large part of their income from holdings in operating companies, do not immediately feel to the full either a rise or a fall in the profits of the underlying companies. There is in fact a lag, which is to some extent shortened by the payment of interim dividends—the general practice in the tin mining industry.

I now turn to more general subjects.

#### NIGERIA

During last year the two Nigerian producers in which we are so largely interested, Associated Tin Mines of Nigeria and London Nigerian Tin Mines, were successfully amalgamated. I need not recapitulate the reasons which appeared to make this step desirable; reasons, I may say, which were endorsed without one dissentient voice by the shareholders of both companies. We have an immense stake in Nigeria and I had long planned to make a visit there in early October of last year and to gain a closer touch with conditions on the plateau. Unfortunately, the crisis of September intervened, but I am still hopeful of being able to make a short trip there this year. A. O. Nigeria, under the management of Major Boyes, has served the companies well, and our thanks are due to him and his staff for their unremitting efforts.

#### MALAYA

In Malaya, the re-equipment programme is nearing completion. During the year one new dredge and five reconstructed dredges came into operation. It is a great tribute to Anglo-Oriental Malaya that in every case they are operating successfully and with a truly remarkable absence of the mechanical and other troubles which usually attend the starting up of any new plant in any industry. When the programme is finally completed, the equipment of this group will be second to none. Whilst I wish once again to give unstinted praise to the staff of Anglo-Oriental Malaya for their work, I cannot let the occasion pass without telling you how much you owe to Mr Henggeler; his plans were laid with great foresight and pursued with energy—an energy with which he has imbued every member of the organisation. He is not only one of the foremost engineers in this industry but a great leader of men.

Anglo-Malayan Development has continued its prospecting campaign and has proved one excellent property, which will shortly be sold. The company will be in a strong financial position and has promising work in hand.

I wish next to refer to the activities of the central research department at Rawang. As I told you previously, its first task was to ascertain whether important losses were made in the recovery of tin concentrates and, if so, to segregate these losses to various points in the flow sheet. This has now been successfully done, and a mass of detailed information has been collected. This confirms the prediction that considerable losses of tin take place, and we are now able to say with some certainty what they are in various types of ground under present operating conditions. A few months ago the department entered on the second phase of its researches: it is now conducting experiments in various ways to improve the recovery and is designing apparatus which will be tested out on the spot. I am bold enough to say that I believe the results will eventually repay the cost of the research many times over.

Lastly, we are taking some trouble to train younger men so that they may take their place in the organisation. We have endowed two scholarships at the Royal School of Mines and we hope that

candidates can be found who after this general training will be prepared to devote themselves to alluvial mining.

#### THE TIN INDUSTRY

I propose to conclude this speech with a short review of the tin industry.

The expected revival in consumption has occurred, and, though its effect upon demand was delayed by drafts upon consumers' stocks, there is now little or no "gearing" between consumption and buying.

During the whole period since our last meeting the Buffer Stock was collecting the tin due to it under the scheme, and since November the price of tin has remained obstinately between the limits laid down. Now the initial stages of such a scheme are the most difficult: the only weapon in existence was that against a rise in prices above £230, and the Buffer Stock organisation had no cash with which to arrest a fall. It was therefore clearly impossible for the International Tin Committee to run great risks in the rate of quota which it permitted. The initial stages have now passed, the upper limit has been reached, and presumably the Buffer Stock has begun to liquidate its holding.

Later on it will be possible no doubt for the International Tin Committee to bring quotas closer to the statistical estimates of consumption, in the certainty that, if they have miscalculated—and miscalculate they must because they have to estimate the future—the price structure can be protected until the appropriate quota again secures an equilibrium.

It must be distressing to its critics to know that the scheme is so far successful, and that their gloomy prophecies have not come true.

Moreover, I make so bold as to say that the executive of the Buffer Stock has secured the goodwill and co-operation of the market, and it is easy to understate the value of the London Metal Exchange to the producers and smelters of tin. While we, as producers, must naturally aim at the control of our own affairs, and the conservation of our resources of ore, which are by no means unlimited, we must try at the same time to assist the market, to keep it as free as is consistent with these aims, and to see that its position as the arbiter of world prices is not impaired.

#### TWO POPULAR MISCONCEPTIONS

I will close by referring to two popular misconceptions which are sedulously propagated by the opponents of restriction. The first is that Malaya would be better without restriction at all, and is sacrificing her strong position as a low cost producer for the benefit of the less fortunate. Now whatever might be the short-term results of free competition, the long-term could only be disastrous. In jungle warfare, it is not enough to have only the weapon of low costs; it is also necessary to have much larger ore reserves than your competitor. Otherwise a country like Malaya would perhaps find itself one of the two or three surviving producers, but with reserves insufficient to exploit its Pyrrhic victory.

The other error is that, by producing slightly in excess of consumption, you can secure stability at a slightly lower price. In fact, no given price-level can be attained unless producers are willing to trim their production exactly to demand. To over-produce even 500 tons per month is to have prices at the mercy of others.

Before concluding my speech I must regretfully tell you that Mr de Trafford has retired from the board. We were anxious that he should undertake the chairmanship of Tavoy Tin Dredging Corporation, Limited, which was only temporarily held by Mr Spens, and Mr de Trafford accepted the position. He felt, however, that he could not devote so large a proportion of his time to the tin industry as would be involved by holding both directorships. I am sure it would be your wish to thank Mr de Trafford for his help during the difficult times through which we have passed. Mr Burgess has been nominated by the directors to the vacancy and you will be asked later on to confirm his appointment.

Our thanks are again due to the staff of the head office for the efficient way in which they have handled the business of the corporation during the past year.

The directors' report and accounts were unanimously adopted and the dividend of 4 per cent. was confirmed.

The retiring directors were re-elected.

The appointment of Mr G. F. A. Burgess was confirmed, and the auditors were reappointed.

The proceedings terminated with a vote of thanks to the chairman and directors.

## NYASALAND RAILWAYS, LIMITED

### MARINE SERVICE ON LAKE NYASA

### AGREEMENT WITH CROWN AGENTS

### SUGGESTED CO-OPERATION WITH THE RHODESIAS

### ROYAL COMMISSION'S REPORT

### MR W. M. CODRINGTON'S ADDRESS

The annual general meeting of Nyasaland Railways, Limited, was held, on the 13th instant, at the registered offices, 3 Thames House, Queen Street Place, E.C.

The chairman, Mr W. M. Codrington, M.C., presided. The statement by the chairman, from which the following is extracted, had been circulated to shareholders before the meeting:—Since our last general meeting we have had to mourn the loss of Mr Libert Oury, O.B.E., who died last May. Mr Oury had been a director of the company since its inception, and of the Shire Highlands Railway, Nyasaland, Limited, since January, 1913. The British possessions in East Africa owe much to his far-seeing enterprise, both in opening up the Port of Beira and in pursuing, in the face of every discouragement, the policy of improving communications with the interior, particularly by the construction of the Central Africa Railway, the Trans-Zambesia Railway and the Zambesi Bridge. Your company has lost an able administrator and your directors a colleague on whose wise judgment they had learned to rely. I am glad to be able to tell you that his son, Mr Vivian L. Oury, has succeeded him as London manager of the Moçambique Company and as chairman of the Trans-Zambesia Railway Company; and it is with very real pleasure that we have elected him to a seat on our board. Mr Vivian Oury has visited Nyasaland, where he has other interests, several times in recent years, and his knowledge of local conditions will be of great value to the company. In common with everyone else who knew him and appreciated his work for Nyasaland, we learned with very real regret of the death of Sir Harold Kittermaster, who had been Governor since 1934. The memory of his devotion, and his absolute sense of fairness, will long be treasured by all classes in the Protectorate. In his place we welcome Sir Donald Mackenzie-Kennedy, K.C.M.G., who was appointed Governor early this year. We wish him all success and happiness during his Governorship.

#### PURCHASE FROM GOVERNMENT

I am glad to be able to report to you that we have signed the agreement with the Crown Agents for the Colonies (acting on behalf of the Government of Nyasaland) under which we are to operate the marine service on Lake Nyasa. This provides that your company shall take over the craft and other assets previously operated by the Government, and shall provide a service to connect our lake terminus with all ports on the Lake, including those in Tanganyika. In order to finance the purchase by your company of Government assets, pay for the acquisition of the motor cargo boat "Mpasa," a motor tug, and for an additional passenger carrying vessel necessary to replace the 42-year-old s.s. "Guendolen," the Government agree to subscribe for a maximum of £70,000 of a new class of debenture, which we shall call "C" debentures, to be issued by your company. These debentures will have a first charge on all the assets of the Lake Service and its net earnings, and a charge ranking after the existing debenture stocks on the surplus earnings of the company.

To enable us to implement this part of the agreement we are calling a meeting of the "A" debenture holders in order to seek their consent to the issue of these "C" debentures. We shall at the same time ask their sanction for increasing from £1,784,000 to £2,025,000 the authorised amount of the Bridge Debenture stock which, as you know, is held by the Nyasaland Government and has a charge on the corresponding debentures issued by our subsidiary, the Central Africa Railway Company, Limited, and the income bonds of the Trans-Zambesia Railway Company, Limited.

#### SIR ROBERT BELL'S REPORT

During the year the Finance Commissioner, Sir Robert Bell, published his Report (a document, with appendices, of some 350 pages), which contained an admirable survey of the whole history and admini-

stration of the country. He made various recommendations, none of which, so far as I am aware, has yet been carried out, owing no doubt to the fact that a Royal Commission had meanwhile been appointed to inquire into the relations between Nyasaland and Northern and Southern Rhodesia.

It is of interest to note that he recommended that the liabilities of Nyasaland arising from the various improvements affecting its communications, such as, for instance, the Zambesi Bridge, should be taken over by the Imperial Government; and he also urged the advisability of converting the Government guaranteed 6 per cent. debentures of the Trans-Zambesia Railway Company, Limited, to debentures carrying a lower rate of interest. This measure, which has been urged on the Government by unofficial bodies for many years, would by itself save the Nyasaland Government a considerable sum of money.

#### ROYAL COMMISSION'S RECOMMENDATIONS

Meanwhile, the Royal Commission, presided over by Lord Bledisloe, was appointed to consider what form of closer co-operation or association between Southern Rhodesia, Northern Rhodesia and Nyasaland was desirable and feasible. The Commission made an extended tour of the territories concerned, in the course of which we were glad to have the privilege of carrying them over the whole of our system. They heard evidence from representatives of every possible interest, and they, too, have produced a report and appendices of some 280 pages, in which every aspect of life in the respective territories seems to have been reviewed. So far as our railways are concerned they confirm and extend the recommendations of Sir Robert Bell in regard to the transfer to the Imperial Government of the financial liabilities of the Nyasaland Government in respect of railway communications.

The Commission recommend that it might be advisable to re-define the functions of the existing Government directors or to adopt an arrangement similar to that which they have suggested elsewhere in the case of Rhodesia Railways, Limited, namely, that directors should be appointed to the board by a body "of an informed and impartial character." The Commission never consulted us on this matter and were doubtless ignorant of the fact that the composition of this board and the powers of its directors are strictly defined in the contracts between the Company and the Government which formed the basis of its constitution, and which cannot be altered except by mutual consent.

#### QUESTION OF AMALGAMATION

On the general questions submitted to them the Commission as a whole, while regarding the immediate amalgamation of the three territories as inadvisable, recommended, though without any apparent enthusiasm, that "the amalgamation of these two territories might well be effected without delay." Though it is possible that some economy, and perhaps some increase in efficiency, might be obtained from the amalgamation of some of the technical services of the Governments of Nyasaland and Northern Rhodesia, I cannot foresee that complete amalgamation of the two Governments and the termination of Nyasaland's separate existence would result in any appreciable benefit to any section of the community or in any intensification of its economic development, on which the welfare of all classes ultimately depends.

The Commission furnished no estimate of the amount of money which might be saved by the adoption of their recommendation; but I doubt very much whether it would in practice amount to a sum sufficiently great either to afford sensible relief in taxation or provide increased resources of any consequence for development or social services. Against this possible, but perhaps relatively unimportant, saving must be set two grave disadvantages; in the first place the task before the Government of Nyasaland is sufficiently complex to demand, in the opinion of many interested in the country,

the services of a Governor and an adequate staff able to receive direct from the Secretary of State for the Colonies instructions on matters of policy.

Elsewhere in their Report the Commissioners hint at the necessity for speeding up the machinery by which colonial policy is executed. So far as Nyasaland is concerned (and it is with this aspect alone that I am dealing) nothing but increased delay could result from its incorporation as a Province in Northern Rhodesia, under a Provincial Commissioner who could only obtain his instructions from the Colonial Office via Lusaka, even though authority at Lusaka were yielded by a super-governor endowed with higher powers and greater latitude than are now entrusted to the occupant of Zomba.

#### THE BRITISH COMMUNITY

Secondly, the Commission in their Report refer to the relatively small numbers of the British community in Nyasaland and to their lack of political experience. At the same time, they emphasise the importance of the functions which would be attributed to the Legislative Council of the combined territories. For many years members of the unofficial community in Nyasaland, all of whom are actively engaged in their own businesses, have given a great deal of their time and attention to assisting the Government, whether as members of the Legislative Council or of other bodies appointed to assist in the task of administration.

If amalgamation were carried out such services would have to be rendered hundreds of miles away at Lusaka, where the Nyasaland representatives would form but a small minority of any representative body. Moreover, even if Government were to give them free transport by air, the tax on their valuable time would, I am sure, strain the spirit of generous public service which has always been manifested in the past.

#### PREVIOUS INQUIRIES

What fate has ultimately in store for the territory which we serve is thus for the moment unknown. Since the war Nyasaland has formed the subject of inquiries by the Ormsby-Gore Commission, the Hilton Young Commission on Closer Union, General Hammond, Major Newcombe and Mr E. P. Carter, the Finance Commission of last year and now the Royal Commission. In addition, there have been local inquiries such as the Committee on Emigrant Labour and the Commission now investigating the tobacco industry. Their Reports constitute a complete bibliography. There can be no aspect of human activity which has not been reported on either by "experts" or by "independent minds"! The legislator in search of a policy cannot plead lack of information out of which to forge it.

It would seem, therefore, that the era of inquiry, which has now lasted some score of years, must soon give place to an era of decision, and that the Imperial Parliament must soon be called on to delineate a policy which shall govern the future of these possessions of the British Crown in Central Africa. They will do so in an atmosphere which has been changed by a greater realisation of the Imperial responsibilities of the Government at home; by an increasing knowledge of the achievements of some other Powers in the field of colonial administration in which this country used to consider itself without rival; and at a time when yet other nations are only too eager to obtain an opportunity to demonstrate their fitness to administer native territories.

#### RELATIONS WITH PARLIAMENT

Before seeking to change the administrative divisions of the British possessions, it is more important that the Imperial Government should concentrate on the fundamental relationship between Parliament at Westminster, on whom the ultimate responsibility must rest, and the Administration overseas. For some years now this country has asked only that each Crown Colony should balance its own Budget and not bother the Central Government.

Strictness of financial control does not, however, necessarily ensure enterprise or progress in local administrations; nor have the resultant economic and political conditions been such as to offer to British capital attractions superior to those offered in undeveloped lands under other flags. Though the present systems may have given us an Empire run on the cheap, there are many who think that the results, whether in Africa or in other parts of the world, leave much to be desired when considered in the light of present-day conceptions of the responsibilities of Empire. It is thus with a mixture of concern and hope that I look forward to the future of the territory which this company serves.

The report and accounts for the year ended December 31, 1938, were adopted unanimously.

Mr Norman B. Dickinson, O.B.E., M.I.C.E., and Mr Vivian L. Oury, the retiring directors, were re-elected, and Messrs Peat, Marwick, Mitchell and Company were re-appointed auditors of the company.

## POWELL DUFFRYN ASSOCIATED COLLIERIES, LIMITED

### POWELL DUFFRYN STEAM COAL COMPANY, LIMITED

#### WELSH ASSOCIATED COLLIERIES, LIMITED

The annual general meeting of Powell Duffryn Associated Collieries, Limited, was held, on the 11th inst., in London.

Mr Edmund L. Hann, the chairman, dealt in detail with the company's accounts, and stated that the profit showed a reduction of approximately £85,000. In view of the general state of the coal trade during the year, the profits spoke well for the ability of the company to withstand the vagaries of the trade.

The present improvement in the export position was not yet sufficient to ensure the regular working of the collieries. Much of the trouble would disappear if important buyers would place their orders regularly with this country.

French imports of British coal in 1938 were 2,710,000 tons less than in 1937. First Germany and now Belgium had been allowed to threaten Great Britain as the principal supplier, though strategic considerations alone might have suggested a different policy. The Polish share of the French market was also rapidly rising.

Coal exports to South America had been well maintained, and had improved recently.

#### INTERNATIONAL COAL CARTEL

It was to be regretted that political complications had nullified the advantageous provisional arrangement made between Great Britain and Germany in regard to an International Cartel Agreement.

While the cost of production per ton of coal disposable commercially for South Wales for the three months ending January, 1936, was 14s. 10.75d., in the three months ending January, 1939, it had risen to 18s. 8.16d. Further, the profit per ton in the South Wales coalfield in 1938 was 4.89d., compared with a profit per ton of 1s. 4.01d. for Great Britain as a whole. The prices obtainable in the export market were clearly not sufficient to enable the exporting districts to carry the additional burdens which were continually being thrust upon the industry as a whole.

The country must either restrict legislation or subsidise its export coal trade to offset the extra costs imposed by legislation. In the Bill now before Parliament, for example, it was proposed that damage done by subsidence should be chargeable, not only for the future but also retrospectively, to the colliery owner, even though by the terms of his lease he was absolved from such claims.

With reference to the "Square Deal" campaign, the Transport Advisory Committee proposed that a number of safeguards on which the coal trade had been built up should be removed. The country generally might be prepared to pay more for its transport but export coal must not be called upon to contribute.

The Chairman said that the Report of the Royal Commission on Safety in Mines recommended a simplification of the Mining Code, and it was hoped that Parliament would legislate on these lines.

The Commission also recommended a large increase in the number of Inspectors, but care must be taken to avoid the appointment of so many Inspectors that the colliery manager was unable to carry out the main duties of managing his pit. Real progress could best be made by a radical simplification of the Mining Code and a system of education of youths.

The installation of two new washeries at Naval and Lewis Merthyr Collieries had been completed, and a new screening plant and washery for Albion Colliery had been ordered.

The increased demand for PhenoD smokeless coal justified the confidence that it was the highest grade fuel for the heating appliances marketed to-day. Phurnacite, the new carbonised fuel, had become so rapidly popular that it had not been possible to meet the demand. A new plant was on order.

#### COAL COMMISSION MEMORANDUM ON AMALGAMATIONS

In connection with the memorandum recently issued by the Coal Commission on the subject of amalgamations, the Chairman stated that the history of the company showed that it had to a substantial extent anticipated the objects of Part Two of the Coal Act, 1938. The present time did not, however, appear to be in all respects suitable for the continuance of the policy of amalgamation, and, so far as the company was concerned, shareholders could discount any rumours they might have heard of negotiations in progress for further amalgamations.

The directors' report and the accounts were adopted, and the dividends recommended were duly declared.

The annual general meetings of the Powell Duffryn Steam Coal Company, Limited, and Welsh Associated Collieries, Limited, were subsequently held; the reports and accounts were adopted and dividends duly declared.

## ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

### POSITION OF TEA, RUBBER AND OTHER PRODUCTS

#### MR W. H. DAUKES'S REVIEW

The twenty-ninth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 14th instant, at 19 Fenchurch Street, London.

Mr W. H. Daukes (chairman and managing director), in the course of his speech, said:—Ladies and gentlemen, the results of the year 1938 have unfortunately proved to be much as I predicted in my speech at our last annual general meeting. The profit in our Java balance sheet, before providing depreciation, was F.3,173,000, which, at F.8.90 to the £, the average rate for the year, represents £356,592. This compares with £661,713 for 1937. In 1937 we set aside £194,746 for depreciation and writings-off; for 1938 the figure has been reduced to £118,046. Our appropriations for this purpose have been on such a generous scale in the past that your board consider that the smaller provision now made is ample.

After including interest received and deducting London expenditure, the balance of profit amounts to £198,622; adding the carry-forward from 1937, £66,855, there remains £265,477 to be dealt with. The directors have placed £33,000 to tax reserve, which will also cover the liability under N.D.C., have added £25,000 to general reserve and propose to pay a final dividend of 3 per cent., making 5 per cent. for the year, leaving, £57,477 to be carried forward to the next accounts. The consolidated balance sheet shows the strong liquid position of the company, gilt-edged investments and cash representing approximately £680,000.

#### TEA

The number of our tea estates remains at the same figure as last year, 21. The area at December 31st last was 26,867 acres, of which practically the whole were in production. The condition of the estates throughout the year has been satisfactory.

Our standard production for 1938 was 18,371,000 lbs., and our export allowance under restriction 11,239,400 lbs. Bought leaf amounting to 405,650 lbs. was manufactured in our factories and 686,488 lbs. of export licences were purchased. The standard production represents an average yield of 682 lbs. per acre for the mature area, and the production for the year, 12,732,258 lbs., represents an average yield of 474 lbs. The gross profit on tea fell from F.2,114,000 to F.1,675,000, which is accounted for by a slight increase in the cost of production from 6.43d. to 6.50d. per lb. and a reduction in the selling price from 10.79d. to 10.07d. per lb. net.

As far as it is possible to foresee the trend of the tea market during the current year, prices appear to be steady at about the same level as last year. To prevent too heavy a rise in stocks, the International Tea Committee reduced the export quota for the current regulation year by 2½ per cent., so that it now stands at 90 per cent. of standard. As a matter of fact, deliveries from bond have been on a very satisfactory scale in this country since the commencement of the year, and the statistical position at the present time is a strong one, though these deliveries do not necessarily connote consumption. At the end of January, when they were at their highest peak, United Kingdom stocks amounted to 252 million pounds, against 227 million pounds at the corresponding date in the previous year. At the end of May, however, according to the latest Board of Trade figures, the stock had fallen to 168,308,000 lbs., compared with 162,841,000 lbs. at the end of May last year.

#### RUBBER

Our 16 rubber estates at December 31st last had a total planted area of 36,378 acres, of which 25,468 acres were in production and 10,910 immature. In the eleven years since we commenced our rejuvenation programme, 14,600 acres have been uprooted and replanted. In 1938, 2,640 acres were thus dealt with and for the current year it is proposed to replant a further 1,750 acres. The capital cost of our rubber stands now in our books at £24 7s. 8d. per acre, a figure which I am sure you will agree is a highly satisfactory one when it is remembered that this includes a large area planted with modern clones and seedlings.

Our standard production for last year was 17,979,684 lbs., the amount exportable averaged 49 per cent., giving us a quota of 8,810,045 lbs., in addition to which we purchased 1,167,533 lbs. of licences so that we were able to ship a total of 9,977,578 lbs. The production from all our estates throughout the year was 9,308,353 lbs., so that we drew to some extent on our carry-forward from the

previous year, which meant that we had a somewhat reduced quantity in stock at the end of 1938. This was in accordance with the policy of the board, who considered the carry-forward at the end of 1937, although within the permissible amount, to be somewhat larger than desirable. As in the previous year, the carry-forward, which can only be shipped against the following year's licences, has been valued at prime cost, that is, the cost of tapping, manufacture and transport.

#### COFFEE AND CINCHONA

Once again coffee has proved a severe disappointment, the market throughout the year remaining practically lifeless. Not only did the price remain low but unfavourable weather during the blossoming period of 1937 was responsible for a reduced crop. The total crop amounted to 13,630 cwt., the net selling price was 19s. 10d., compared with 23s. 9d. per cwt. for 1937. The result was a loss of F.263,000, against a loss of just under F.200,000 for the previous year.

Rejuvenations in recent years have taken place to the extent of 359 acres in 1936, 125 acres in 1937 and 191 acres last year. The improving yields as a result of replanting should enable us in the future to bring costs down to an economic level at which we should be able to hold our own, even on depressed markets, and derive a satisfactory profit if and when the market takes the long-hoped-for upward turn.

The cinchona profit dropped from F.250,000 to F.153,000, which was not caused by any material fluctuation in cost and selling price but is mainly accounted for by the fact that the board decided to write down the valuation of the large stock which has accumulated in Java to a figure which represents the cost of harvesting, manufacture and transport.

During the year 1938, 403,257 kilos of kina bark were harvested, against which we were able to make deliveries amounting to 388,291 kilos. This brings our stock of bark in Java to approximately 850,000 kilos, against a stock ten years ago of 260,000 kilos, whilst at the same time the sulphate content of the bark has risen from just over 6½ per cent. to over 8½ per cent. There is, however, a hope now, that, if the demand for quinine keeps constant over the next few years, our deliveries may be heavier than our harvesting, so causing a welcome reduction on our stock.

#### CURRENT YEAR'S PROSPECTS

After dealing with rice, sisal, tapioca and other products, and stating that the engineering department had continued throughout 1938 to be as active as ever, he concluded by saying: As six months of the new year have always gone by the time our annual meeting is held, it makes it easier to review the prospects for the current year. As a matter of fact, it cannot be said that there is any marked indication of any substantial change.

As regards tea, with the 2½ per cent. cut in the international quota which will be effective for nine months of our financial year, production will be somewhat smaller than in the previous year; on the other hand, there is no indication that selling price will vary to any great extent. The average export quota for rubber is unlikely to be greater and may even be slightly less. The average monthly selling price so far this year has been substantially higher than that of last year, but this is offset by the fact that this year we have not the satisfactory forward sale of last year.

Unless, therefore, the price advances substantially during the latter half of this year, which, in my opinion, is unlikely, the results from rubber also look like being fairly similar to those of the previous year. The sisal market, if anything, has shown a slightly weaker tendency; on the other hand, after the early months of the year, tapioca has shown some recovery. Therefore, as regards our four main products, I do not at the moment see the likelihood of any material change from the conditions of last year.

For any real improvement it would be necessary to have an improved price and a much larger export quota of rubber, and an advance in the price both of sisal and tapioca. All these, in my opinion, depend firstly upon a period of settled political conditions which should in turn be followed by much increased commercial activity, bringing with it as its natural concomitant a general advance in commodity prices.

The report and accounts were adopted.

## GOLD MINES OF KALGOORLIE, LIMITED

### EXPANSION OF OPERATIONS

#### INCREASED DISTRIBUTION FOR THE YEAR

The fifth ordinary general meeting of Gold Mines of Kalgoorlie, Limited, was held on the 11th instant at 20, Aldermanbury, London.

Mr P. E. Marmion (the chairman) said: You will, I am sure, have been pleased to observe the large increase in revenue from gold proceeds, £221,473, compared with £139,513 for the previous year, an advance of 59 per cent. Net profit increased also by almost 60 per cent. from £56,210 to £89,663 and, if you approve the dividend of 6d. per share which we now recommend, the total distribution for the year will be 10½d. against 6d. for the previous year, an improvement of 75 per cent.

#### SATISFACTORY RESULTS FROM NEW MILL

These satisfactory results in a large measure reflect the benefits from the full year's operation of the new mill—a large increase in throughput, a welcome gain in metallurgical efficiency and a substantial reduction in working costs, all very material factors in the well-being of your company. As a result of improvements in our system of ore passes and locomotive haulage and of other savings, the cost of mining and raising ore was reduced by 2s. 11d. per ton, from 14s. 9d. to 11s. 10d., whilst the cost of treatment in the new mill averaged 11s. 1d. per ton, a reduction of 5d. below the corresponding figure for the last 5 months of the preceding year when the mill first came into operation. These reductions were effected in spite of statutory wage increases that added rather more than 7d. per ton to our costs, while, owing to a change in our costing system, the expenditure on stope preparation, amounting to approximately 1s. 2d. per ton, is now included in mining costs.

In the Iron Duke lease particular interest has centred on the development of the ore shoots in the lower levels in the vicinity of the boundary between our property and that of North Kalgoorlie (1912) whose valuable co-operation has been of great assistance to us. The important feature of these ore shoots is that they occur in a wide sedimentary and fragmental margin of the calc-schist closely associated with folding and subsequent fracturing, and this encourages the hope that similar types of ore bodies might occur in the extensive unexplored area of marginal calc-schist in our leases.

What is believed to be the upward continuation of the Lower Hinchcliffe shoot was intersected above No. 10 level in a drill hole, the core of which assayed 118 dwts. for a length of 91 inches.

#### ORE RESERVES

The principal work done in the Oroya South Group of leases was in connection with the valuation of the ore left in the Australia East lease between the surface and No. 3 level in the orebody which includes Nos. 1, 2, 3 and 4 lenses. A thorough investigation by diamond drilling, crosscutting and sampling has shown that there remains in the walls and pillars in the old workings a large quantity, estimated at 322,000 tons, of 4½ dwt. ore, together with some 80,000 tons of fill, principally tailings, with a value of approximately 2,000 dwts. per ton. Including the fill which must be mined with the ore, this represents an addition of 330,000 tons to our reserves, 72,000 tons having been included in former estimates. The bulk of this tonnage can be mined by open-cut methods at low cost, and with gold at its present price, and assuming that there is no material increase in the cost of labour and stores, it is estimated that a satisfactory profit can be made on a throughput of 12,000 tons a month, of which approximately one-third will consist of this lower grade material. The necessary plant has been ordered and we should be milling at the increased rate by about November next.

The estimate of proved and probable ore reserves at the close of the year under review is 670,000 tons averaging 5.2 dwt. per ton, including 66,000 tons of broken ore in the stopes. These figures compare with 338,100 tons averaging 6.6 dwts. per ton at the close of the previous year. I am pleased to advise a marked improvement in recovery from the mill since the early days of its operation.

Summing up the year's results very briefly, I would say that developments were fully up to our expectations in quantity and quality of ore revealed and that increased throughput, reduced operating costs and improved metallurgical efficiency each contributed to the material advance in profits and rate of dividend. The programme of expansion on which we have embarked promises still further to contribute to the economy of our operations and we are thus encouraged to regard the future with confidence.

The report was unanimously adopted and the conversion of the shares into stock approved.

## TRUSTEES CORPORATION, LIMITED

### DIVIDEND AGAIN 10 PER CENT.

The fifty-first annual general meeting of the Trustees Corporation, Limited, was held, on the 12th instant, at Winchester House.

Mr W. Sandford Poole (the chairman of the corporation), in the course of his speech, said:—It is not surprising, in view of the fall of some 5 per cent. during the twelve months in the market quotation of investments generally, that the slender margin of a year ago on valuation of our investments has entirely disappeared. The depreciation, however, is only marginal, and is considerably less than the balance of £72,808 proposed to be carried forward on the revenue account, and represents but a small percentage on the balance-sheet figure of £3,205,833. Moreover, on the basis of the balance sheet before you and the relevant valuation, our capital and our reserves of over £500,000 are shown to be intact.

On the basis of book figures, nearly 49 per cent. of our investments are at home, while nearly 17½ per cent. are in the British dominions and dependencies. Thus, two-thirds of our total portfolio is invested under the British flag.

Interest and dividends, after provision for income tax and N.D.C., amount to £149,395, compared with £162,923, a decrease of £13,528. Just over £3,000 of this decrease was due to additional taxation borne, or to be borne, by the corporation. Notwithstanding taxation deductions at a higher rate, our income from interest and dividends, at £149,395, was some £700 more than in 1937.

Your management were not slow in realising that air-raid precautions would entail heavy additional responsibilities, and have adapted part of the sub-ground floor premises at Winchester House as a permanent air-raid shelter, with fully equipped decontamination and first-aid stations.

With regard to the outlook, allowing for the time lag experienced by investment trusts incidental to the nature of their revenue, I am afraid we must reconcile ourselves to the prospect of some further diminution of total revenue from home investments.

We propose a final dividend of 7 per cent., less income tax, again making the dividend on the ordinary stock 10 per cent. for the year, which in all circumstances must be considered satisfactory.

The report and accounts were unanimously adopted.

## EASTWOODS CEMENT, LIMITED

### DIVIDEND MAINTAINED AT 12½ PER CENT.

The fourteenth ordinary general meeting of Eastwoods Cement, Limited, was held, on the 12th instant, at River Plate House, London, E.C.

Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (the chairman) said:—Investments in industrial concerns included their holdings in Eastwoods Humber Cement, whose works at South Ferryby were now in full production and supplied the whole of the Admiralty requirements for the reconstruction of the oil installation at Rosyth, with a preliminary order for 75,000 tons. Production and sales of Eastwoods Lewes Cement continued at a satisfactory level. The three cement works of the Eastwoods group now functioning in the North, the South and the Midlands had a total productive capacity of 265,000 tons, which was capable of interchange between works as required, thus providing a measure of elasticity greater than ever before. There was a net profit of £28,505, compared with £27,363 for 1938, and with net earnings at 14½ per cent. on the paid-up capital, the dividend was well earned, and the distribution maintained at 12½ per cent.

The most serious item on the production side was again the substantial rise in fuel costs, which applied to coal used for burning and power raising. The control imposed by the marketing schemes had considerably restricted the manufacturers' choice of supply, and they were glad to note the result of the recent appeal.

Referring to the quota scheme, the chairman said they had long advocated it, provided a satisfactory forward policy could be evolved, coupled with suitable safeguards for the interests of smaller makers. The alternative would again have been over-production and all the evils of price confusion should any recession in sales occur following the present international tension.

The future outlook continued to be favourable. The population of the country was becoming more and more cement-minded and fresh uses for the product were being found every day. Any falling off of the tonnage for defence works, A.R.P. and aerodrome construction should be replaced by immediate resumption of work on the roads and public schemes held in suspense ending completion of the re-armament.

The report and accounts were unanimously adopted.

## THISTLE - ETNA GOLD MINES, LIMITED

### DIVIDEND RAISED TO 8 PER CENT.

The fifth ordinary general meeting of the Thistle-Etna Gold Mines, Limited, was held on the 11th instant at Winchester House, London, E.C.

Sir Godfrey B. H. Fell, K.C.I.E., C.S.I. (the chairman), after expressing regret at the death of Mr E. B. Ridsdel in April last, said that the balance from mine working account was £21,380, after charging £16,000 for development. The balance carried down was £18,130 and they recommended a dividend of 8 per cent., less tax, leaving £9,668 to be carried forward.

The total footage of development completed during the year was 9,487, compared with 8,809 in the previous year. The payable footage, 1,523, compared unfavourably with the previous year's figure of 2,788, but the average value was higher at 13.5 dwt. over 19 in., as against 10.1 dwt. over 20 in. Development operations had been adversely affected by extensive dislocation of the reef due to the intrusion of unexpected dykes, the consequence being

that the greater part of the development work during the past year had been dead work, absolutely necessary, but immediately unproductive.

Considering the amount of dead work done, it was not altogether unsatisfactory that the ore reserves had increased from 66,100 tons to 73,350 tons, though the average value was rather lower. During the year the total recovery was 9,156 fine ounces of gold, as against 7,068, and silver recovered amounted to 7,161 oz., against 5,087. All-in working costs in Rhodesia were 14s. 3.589d., a reduction of just under 2s. per ton milled. Mr Prior, the resident engineer, called attention to the high percentage extraction in the plant and the satisfactory running time in the mill.

Although the past year had been in some respects disappointing, he thought that they might be reasonably confident that they had now surmounted the worst of the difficulties attributable to the extensive dislocation of the reef and might look forward in the coming year to a considerable increase in their ore reserves. They were only waiting for that result to proceed with the programme of installing five more stamps, for which the foundations were already complete.

The report was unanimously adopted.

(Continued from page 134)

issued in July of 3,156,000 acres were revised to 3,047,100 acres. Weather conditions for the jute crop have been very satisfactory and a good yield of excellent fibre is expected. Private estimates give the outturn at around 12 million bales.

The Indian jute mills are likely to curtail their production during this season from July 31st by sealing up 20 per cent. of their hessian looms and 7½ per cent. of their sacking looms, which will mean a reduction in consumption of raw jute from about 5,600,000 bales as at present to 5,000,000 bales, while exports will probably be round about 4,000,000 bales. The total needs of the world will therefore be about nine million bales, so that there should be a good surplus to replenish stocks which have been seriously depleted in recent seasons.

The market has ruled firm for a time, but has lately become easier again, with sellers of Daisee 2/3 at £21 per ton for October-November shipment, full group, and Tossa 2/3 at £22 10s., with fours at £21; Lightnings are quoted at from £24 per ton and Hearts at £22 5s., August-September.

Yarns are quiet at 2s. 8d. for common 8-lb. cops and 2s. 9d. for 8-lb. spools for near delivery and 2s. 5d. and 2s. 6d. for October-December. Cloth has improved a little, with prices quoted at 3½d. for 10-oz. and 2½d. for 8-oz., while Calcutta goods have fluctuated slightly.

## THE COMMODITY MARKETS

ON Thursday wheat prices in Liverpool dropped below 3s. 8d. per cental, thus breaking the low record of 3s. 8d. per cental reached during the financial crisis of 1931.

The general trend of the prices of primary products was slightly downwards both in this country and in the United States. Moody's index of the prices of sensitive commodities in the United States fell from 143.2 (December 31, 1931 = 100) to 141.3 during the week ended last Wednesday.

Apart from the fall in wheat, sugar prices also drifted downwards. The market in rubber was dull at slightly lower prices, but cotton prices are scarcely changed on the week. Copper

prices were firm early in the week, but declined on Wednesday. Other non-ferrous metals were steady.

## Metals

**Copper.**—After rising to £43 3s. 9d. per ton; standard cash reacted and closed 1s. 3d. lower on the week at £42 13s. 9d. per ton on Wednesday. The market was influenced by higher domestic sales in the United States where the price was raised to 10.25 cents per lb. last week. The outlook for the European market depends largely upon American developments.

★

**Tin.**—The cash price for tin at £229 15s. per ton and the backwardation at £5 5s. were unchanged on the week, though the latter had shown some fluctuation. The market is now largely dependent upon the Buffer Pool, which appears willing to sell at the present price. As the pool will probably be able to sell a substantial part of its stocks within the next two months, an increase in the export quota for the third quarter is expected in some circles.

★

**Lead and Spelter.**—Spelter closed unchanged at £14 2s. 6d. per ton, while lead advanced by 1s. 3d. to £14 13s. 9d. per ton. The demand for the two metals was very small this week, but sellers are not willing to liquidate freely at present prices and the markets are fairly strong. There has been no news of progress towards the formation of an international zinc cartel, which seems to have been postponed until the autumn.

## Grains

THE markets in wheat were again depressed and they derived no comfort from the official Canadian report of the condition of the spring crop in that country. On the basis of the official report, the spring crop is expected to be between 420-450 million bushels, compared with 330 million bushels harvested last year. The official estimates of the winter and spring crops of the United States were in line with expectations, the total yield being estimated at 716½ million bushels, a reduction of some 250 million bushels from last year's crop. There has been a decline in the prices of Plate and South African maize and the trend of barley prices has also been easier.

## Other Foods

**Provisions.**—Beef prices have shown a slight rise, but quotations for mutton and lamb showed little change. The market in butter was firm and prices higher, but there was little change in cheese. Following last week's improvement, bacon prices showed little change.

★

**Colonial Produce.**—The market in tea has been under the influence of reports that an important firm has encountered difficulties; their probable effect on the market is discussed on page 131. The prices of raw and refined sugar were marked down. The market in coffee was rather slow.

★

**Fruit and Vegetables.**—Business on the London markets was quite active and, considering the larger supplies now coming forward, prices have been well maintained. The rush of the strawberry season is now over and other soft fruits are attracting more attention. Among vegetables, heavy supplies of tomatoes, cucumbers and lettuce have tended to bring down prices.

## Miscellaneous Commodities

**Oils and Oilseeds.**—Shipments of Indian linseed to replenish stocks have been quite good and prices rallied slightly and are steady. Plate seed prices are lower in sympathy with wheat, but demand is small. New crop is now on the market at about £11 10s. per ton for January-February loading. Shipments from Argentina last week were large and the exportable surplus is expected to be further reduced before America's crop is available to crushers. The United States crop has suffered from blight, but a much larger supply than last season is still confidently expected. Egyptian cottonseed prices have declined again to a new low level. Trade in linseed oil is fair, though it is also cheaper than a week ago.

★

**Rubber.**—The market in rubber has been dull and featureless. The volume of business has been small and prices have shown a slightly easier tendency. There is still no information concerning the manner in which the Anglo-American rubber-cotton barter deal is to be carried out and the market is anxious for the position to be clarified.

## Finance

## GOVERNMENT RETURNS

For the eight days ended July 8, 1939, total ordinary revenue was £17,118,000, against ordinary expenditure of £17,558,000, issues of £6,750,000 under the Defence Loans Acts, and £262,000 issued to Sinking Funds. Thus, including sinking fund allocations but excluding issues from defence loans, the deficit accrued since April 1 last is £152,323,000, against £119,062,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On July 7th applications at £99 15s. 9d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday and Friday of following week were accepted as to about 44 per cent. of the amount applied for and applications at higher prices in full. Applications at £91 15s. 10d. for bills to be paid for on Saturday were accepted in full. £35.0 millions of Treasury bills are being offered on July 14th.

## LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable a certain date the yield includes any profit or loss on redemption: where stocks are not redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

## COMPANY NOTES—

Chancellor of the Exchequer should discuss with Parliament each successive stage of the vast and complicated defence borrowing to which he is now committed. But it remains the right of the people's representatives, in their turn, to judge decisions of policy before they take on the unalterable character of *faits accomplis*; and, if it be said that the Government has no intention, in any quarter of the globe, of deviating from the foreign policy that has lately won the acceptance of critics as well as of friends, then no harm at all could be done by an open-handed concession by the Prime Minister to the Opposition's request to be assured of consultation *coram populo* before any die is finally cast.

An assurance that this would be done would go a great distance to meet hostile criticism, and in itself it would not necessarily shorten Members' weeks of recuperation—the holidays of Ministers, by the very nature of the case, must in any event be short and precarious. But such a step would not meet the claim that there is still work to be done at Westminster. The current session began with a large legislative programme in the ordinary way, and *The Economist's* comforting comment made at the time that the vital question of defence called for little legislation has since been appreciably falsified. There is reasonable hope that August 4th will be reached with all the immediately urgent emergency measures for active and passive defence completed, but there will be a leeway of civil enactments, such as the Criminal Justice Bill, the Official Secrets Bill, and the Poultry Industry Bill, to say nothing of safety in mines and the railways' Square Deal to be made up. The Government's decision to reduce the number of Supply Days, or days of general discussion, from 20 to 16 is only intended to ensure the passage of the Bills that must willy-nilly become law before the recess, including the War Risks Insurance Bill, the Building Societies Bill, the Overseas Airways Bill and the Members' Fund Bill. Schemes to spread the burden of debate and legislation more evenly, in time and substance, between the Lords and the Commons, like cogent arguments for the introduction of functional committees into Commons procedure to economise time (which must surely be done sooner or later), are not feasible in the short run of the next few weeks. Only a curtailed vacation could help here.

It is not only because the sands of the present session are

running out that it is desirable that arrears of work should be made up. The present Parliament is coming to an end, too. A new one must by law be elected next year at the latest, and by precedent the election should occur this autumn. Parliament can extend its term of life; but the contention that a period of emergency like the present is no time for electioneering is not convincing. There is no final proof that the nations may not proceed as they are now, neither at war nor genuinely at peace, for a stretch of years yet, and it would be needlessly defeatist to act as if war had actually come, and suspend the workings of representative government.

There is another reason why the early election that is possible is also desirable. Strict party lines have lost their meaning since 1935. The Government's policy at home and abroad since March has been adapted from Opposition models; and such general support as Mr Chamberlain can claim in the country is provisional upon that policy being worked out on lines quite different from those he and his colleagues firmly favoured only a few months ago. The real authors of the present policy are not in office. An election with a reconstructed Ministry would put the issues squarely before the people—not confused as in recent by-elections by rigid party lines. War would kill the chances of an election, but it would raise to the *nth* the need for a new Government; and to make that Government, and to clear off under its auspices the worst arrears of vital legislation, needs more than the few paltry weeks that will still remain of this session if the full recess, or anything like the full recess, is taken.

This may be a hard saying, for Members of Parliament work hard. But other men in times of pressure and uncertainty are constrained to forgo or cut short their holidays; and there can be little doubt that any firm refusal by the Government to tamper with the recess in these circumstances would be widely taken to indicate a desire to be rid of the cut-and-thrust of Parliamentary criticism. It is in no carping spirit that this is said. The Cabinet have done well in recent months and Ministers have unmistakably spoken the mind of the people in their public utterances. But none the less the issues that hang upon Government policy now are so grave that assurance should be made doubly sure.

## France in the Levant

THERE is a wide realisation in Great Britain to-day that the present grave problems in Palestine have a long history. This is equally true of the French mandate for Syria and the Lebanon, both neighbours of Palestine as well as of each other. There too, the Mandatory Power is faced with a strong current of nationalism, and on July 8th the High Commissioner was impelled to suspend the Syrian Constitution and set up a council to govern under his direct supervision.

In a general way the histories of these French and British administrative enterprises in the Levant have run parallel during the past twenty years. This was to be expected. The mandated territories of Palestine (including Transjordan), the Greater Lebanon, and Syria (including the Jesirah or Mesopotamia) are not merely contiguous to one another; they are parts of a single country, popularly known as Syria since the dawn of history. This historic Syria has well-defined natural boundaries: the Mediterranean Sea on the West, and the desert on the South and East; and on the North the mountain rims of the Anatolian and Armenian plateaux. Greater Syria has often been under alien rule. In our own generation it has passed out of Turkish into French and

British hands; and the present mandated divisions are as arbitrarily mapped out as the Ottoman provinces which they superseded. Yet, through all these vicissitudes, Syria has managed to preserve an underlying national unity and character.

The special characteristic of Syria, in this wider sense, is unity in diversity. The ethnographical and religious map of Syria was already a coat of many colours before the mass immigration of the Jews into its Palestinian parts after the Great War. Any regime which had undertaken the duty of preparing Syria, or its several sections, for self-government, would have found itself confronted with what in India is called the "communal problem": the puzzle of how to induce two or more distinct, but geographically intermingled communities, to co-operate with one another in the government of their common country.

The majority of the population of Greater Syria (including Palestine) consists of Arabic-speaking Sunni Moslems; but, even apart from the Jews in Palestine, the Syrian minorities are legion. There are Sunni Moslems who are not of Arabic speech, like the Kurds along the Northern border of Syria and the Circassian immigrants

from the Caucasus on the desert border of Transjordan. There are Arabic-speaking communities that are not Sunni Moslems, like the sects of Christians, who together are a majority in the Lebanon, and a minority in every Syrian and Palestinian town. Finally, there are a number of mysterious sects that are neither Christian nor Mohammedan—the most conspicuous being the Druses in the Lebanon. It is not a mixture easy to handle.

When the French took over their Levantine mandate they did not find a *tabula rasa*. The Lebanon had been an autonomous province of the Ottoman Empire under a Christian governor since 1860; and the Arab national feeling of the Moslem Syrians, already aroused against their former Turkish masters, was now bitterly resentful at being given a mere change of foreign rule in place of national self-government. After General Allenby's crowning victory over the Turkish Army in Syria in the autumn of 1918, the British conqueror's Arab allies, led by the then Emir Feisal of the Hejaz, entered Damascus and Aleppo before the French could get there, and even succeeded in hoisting the Arab national flag for a few hours in Beirut. The interior of Syria was won from Feisal and his Arab Nationalists by Marshal Gouraud in 1920—an inauspicious start for the French mandatory regime; and, simultaneously, the policy of partition, which has lately been mooted for Palestine, was carried out by the French as between Syria and the Lebanon—the predominantly Christian Lebanon being enlarged by the addition of non-Christian Syrian districts.

This policy of "divide and rule" has borne evil fruit in an embitterment between Syrian Christians and Moslems. It has made the French task of introducing self-government more difficult than it need have been; and some cynical observers have even suggested that the French have deliberately accentuated "communal" divisions in order to find an excuse for postponing self-government. There may be an element of truth in this. While France holds a mandate for two territories only—namely, the Lebanon and Syria—the Syrian mandate has at times been partitioned into as many as four or five statelets. Yet it cannot be denied that "communal" divisions are a hard fact. One of the major responsibilities of the mandatory Power is to ensure that in Syria the Sunnis shall not oppress the Druses, Christians and Assyrians, and that in the Greater Lebanon the Christians shall not oppress the Moslems and Druses; and the proposed constitution for Syria, written into the

Franco-Syrian Treaty, does at least make effective provision for the protection of minorities—a provision unduly neglected in the Anglo-Iraqi Treaty on which the Franco-Syrian Treaty was modelled.

Yet, complicated as it is, the "communal" problem in the French mandated territories is not, even at its worst, so intolerable as the feud between Arabs and Jews in Palestine. It is true that the French have one difficulty from which their British neighbours are free. Whereas the Palestinian Arabs belong to the more rustic and backward stratum of the Syrian Arab people, the townsmen of Damascus, Aleppo and Beirut, both Christians and Moslems, not to speak of the Christian Lebanese, are among the most up-to-date and enterprising Arabs in the world. Syrian and Lebanese men of business and men of letters range far afield. In Egypt they are prominent in the Civil Service and in the Press; in Latin-America and West Africa they are prominent as traders and shopkeepers; and for these modern-minded Syrians and Lebanese it has been galling to see themselves held in leading-strings by a European Power—at a time when self-government has been attained, not only by the Arabs of Egypt and Iraq, but even by the primitive tribesmen of the Arabian Peninsula.

For all these reasons the history of the two French mandates in the Levant has been as stormy as that of the British mandate in Palestine. In 1925 a local quarrel between the French authorities and the Druses rankled into a general insurrection in Syria, in the course of which the heart of Damascus was bombarded and laid in ruins by French artillery. Ever since 1936, when the French began to realise that an independence which had now been won by Iraq and Egypt could not for ever be withheld from Syria, progress has been slow. The Franco-Syrian Treaty which was negotiated nearly three years ago still awaits ratification.

All the same, present omens are not inauspicious. It may now be taken as reasonably sure that, sooner or later, the story of Franco-Syrian relations is going to have an ending of the kind that has brought Anglo-Egyptian and Anglo-Iraqi relations to their present relatively happy state. That time is admittedly not yet, and the French record in their administration is strewn with mistakes and hesitations. But the goal of self-government cannot realistically be set aside, and the crux of future development in Syria and the Lebanon is not the ultimate fact of autonomy but, as in India, the timing of its granting.

## Tapping Labour Reserves

AS early as the beginning of this year, in a time of general lack of enthusiasm about trade prospects, it was forecast, as a consequence of the Government's loan expenditure for re-armament, that by next spring, or even by the coming winter, all the readily available supplies of labour would be used up. The country would be face to face, it was predicted, with an acute labour shortage. It was not, of course, anticipated that registered unemployment would vanish. It was, in fact, pointed out that many of the present million and a half of unemployed persons were between jobs or unemployed for seasonal reasons, and that some of them were really by now outside the industrial system. There is a certain residuum of unemployment, estimated variously at about three-quarters of a million, which it will be hard to reduce without special and drastic measures. It is as unemployment approaches this figure that the real strain of re-armament may be expected to begin.

The growth of employment in the last six months has borne out such predictions, and the lately-announced in-

crease in Government spending has intensified the problem. The rise in the number of insured employed between April and May was one of the biggest there has ever been, even taking into account the fact that May is one of the two seasonal peaks of the year. The improvement was even greater in June. With the armament stimulus to trade, private investment can hardly fail to revive, and the consequent increase in the general demand will hasten the attainment of full employment. The danger is that, as labour supplies run down, bottlenecks due to labour shortage will hold up the re-armament programme, bringing with them price rises and extra costs to the taxpayer, and necessitating either State-controlled rationing or delay. It is already imperative to take careful stock of the labour position and to consider ways of utilising the existing reserves to the best advantage.

The Ministry of Labour monthly statistics cover an unequal incidence of unemployment. This point is important. For each industry the returns give a simple per-

### DISTRIBUTION OF UNEMPLOYMENT IN INSURED INDUSTRIES APRIL 1939

centage of unemployed covering the whole country. They do not show in what manner this unemployed percentage is spread over the ten employment regions of the United Kingdom. In actual fact the geographical distribution of unemployment within the separate industries is often very uneven. In a given month in any individual industry the unemployment percentage in the region with the highest unemployment rate for that industry may be eight or ten times as great as in the region with the lowest rate. (In the analysis which follows cases where an industry in a district is very small are omitted.) Recently available regional figures, which are based on unpublished material provided through the courtesy of the Ministry of Labour, show, for example, that in one particular industry there are roughly equal numbers insured—seven or eight thousand in each case—in contiguous areas, the South-East and the North-East. Yet unemployment in the South-East in this industry was 0.6 per cent. of the insured, and in the North-East it was 13.2 per cent. In one prosperous armament industry the best area had 2 per cent. unemployment, whereas the worst had 22.7 per cent. In one depressed industry, again, the discrepancy between the best and the worst region was between 12.7 per cent. and 66.7 per cent. For the country as a whole, the average difference, industry by industry, between the region with the highest unemployment percentage and that with the lowest was 20 points.

The tables below illustrate this general position. They pick out the number of industries in which the difference in percentage between areas where the rate of unemployment was lowest and where it was highest was under five points, between five and ten, between ten and fifteen, and so on. It can be seen that only in under 2 per cent. of the industries was the difference in the rate of unemployment between best and worst regions five points or less. The figures show that, in nearly 26 per cent. of the industries, the difference was between 10 and 15 points; just over 20 per cent. of the industries had differences between the rate of unemployment in the best and worst areas of between 15 and 20 points; and over 40 per cent. had differences between worst and best of over 20 points. The number of industries where the difference between best and worst was ten points or under was small—only about 14 per cent. of all industries.

TABLE A.—ALL INDUSTRIES IN UNEMPLOYMENT INSURANCE SCHEME

| Regional Spread of Unemployment Rates* Per cent. | Percentage of all Industries |
|--------------------------------------------------|------------------------------|
| 0-5                                              | 1.9                          |
| 5-10                                             | 12.0                         |
| 10-15                                            | 25.9                         |
| 15-20                                            | 20.4                         |
| 20-25                                            | 16.7                         |
| 25-30                                            | 11.1                         |
| 30-35                                            | 6.5                          |
| 35-40                                            | 1.9                          |
| Over 40                                          | 3.7                          |

TABLE B.—INDUSTRIES WITH NATIONAL UNEMPLOYMENT OF 8 PER CENT. OR LESS†

| Regional Spread of Unemployment Rates* Per cent. | Percentage of these Industries |
|--------------------------------------------------|--------------------------------|
| 0-5                                              | 2.9                            |
| 5-10                                             | 20.6                           |
| 10-15                                            | 41.2                           |
| 15-20                                            | 17.6                           |
| 20-25                                            | 8.8                            |
| 25-30                                            | 5.9                            |
| 30-35                                            | 2.9                            |
| 35-40                                            | ...                            |
| Over 40                                          | ...                            |

\* Difference within industries between percentage of unemployment in region where unemployment is lowest and percentage of unemployment in region where unemployment is highest.  
† About one-third of all British industries.

This analysis shows that the range of unemployment rates between different regions in the same industries is enormous. The fact is that somewhere in the different regions for practically every type of industry we have hidden reserves of labour; and often these reserves occur in those industries which are feeling the pinch of labour shortage in some of the districts in which they operate. Take the case of the busiest third of our industries, i.e. those having a rate of unemployment up to and including 8 per cent. In these industries the spread between the highest regional rate of unemployment and the lowest is not so great as in industry as a whole; but, even so, over 75 per cent. of them show a difference of over 10

points between the unemployment percentages in their best regions and the rate in their worst, and nearly 35 per cent. have a difference of over 15 points. Even the busiest of our industries have some hidden regional reserve.

These facts provide at least a *prima facie* case for a full investigation of the best utilisation of available labour reserves. As least, it is useful to consider in what regions the reserves of labour are. The accompanying ten block diagrams represent the position in each of the ten employment regions into which the Ministry of Labour divides the United Kingdom. Each diagram represents, first, the percentage of all the industries in that area in which the rate of unemployment is 5 per cent. or less, then the proportion of industries in the area where it is between 5 and 10 per cent., then the proportion where it is between 10 and 15 per cent., and so on. It is very noticeable, though scarcely surprising, that in the South the majority of industries are concentrated among the low unemployment percentages; in the North the proportion of industries falling within the higher unemployment percentage groups grows. In the South-West, the South-East and in London the bulk of the industries are in the two groups with less than 10 per cent. unemployment. In the Midlands, the North-East and the North-West, the two largest groups of industries are those where unemployment is between 5 and 15 per cent. In the Northern region, in Scotland and in Wales the largest groups of industries are those with 10 to 20 per cent. unemployment; and in Northern Ireland, the most depressed area of all, most industries have from 15 to 25 per cent. unemployment.

The problem of the optimum use of our labour force emerges clearly from the stages of this analysis. Labour stringency is already noticeable in the South. In almost every industry there are reserves of labour, but the reserves are mainly in the North. It therefore appears that wherever possible the Northern districts should be given a priority in Government contracts in order to avoid labour stringency. Always remembering that when the performance of those contracts requires specialised skilled labour, it must first be ascertained that supplies of the right type of labour are available on the spot. Unemployed miners cannot build battleships. A judicious allocation of contracts will be made all the more necessary as the growth of private activity follows the Government-generated boom. This is an opportunity that may not occur again to tackle the problem of the depressed areas. It is important to realise that the high percentage unemployment in the Special Areas and the North is by no means entirely due to certain depressed industries such as cotton and coal. When an area ceases to be prosperous all local trades largely dependent on it for a market develop high unemployment. These areas contain, awaiting employment, reserves of all sorts of labour, in consumers' trades, building and services.

It is impossible in a short survey to work out the principles and technique of distributing work regionally so as to absorb the local reserves of labour. Clearly the alternative to taking work to the idle labour is to transfer the labour to the places where there is already a shortage; and, in the case of areas where local shortages are already acute, or likely soon to become so, assisted and planned transference is probably the best remedy. But there are strong general grounds for taking the contracts to the labour reserves; the problem is urgent and almost upon us; in most of the districts where labour is available there already exist accommodation and services for the workers and their trades; and very many of the areas are reasonably immune from air attack. Against labour transference as a policy there is the hardship and dislocation involved. Against the alternative of placing contracts in areas of high unemployment there is the risk of creating new and even more distressed areas in the future when arms demand falls off. It needs nice calculation to make the wisest use of these reserves. But they do exist, and they must be used.

### DISTRIBUTION OF UNEMPLOYMENT IN INSURED INDUSTRIES APRIL 1939

## Juvenile Needs

IT was Mr J. B. Priestley who once said "there is something about Youth with a capital Y which leaves me cold and suspicious." He was justified. We may complain sometimes in England about the rule of the unduly aged, but it is the exaltation of hot and empty heads at the expense of experience that has been largely characteristic of the degeneration of Europe since the war.

Yet, rightly regarded, young people are immensely important on any reckoning to any country. For one thing they are the citizens of to-morrow. For another—and this has just become the case in this country—they are usually destined to be the conscript soldiers of to-morrow, too. More important, they are the workers of to-morrow as well.

Equally, they are the school-children of yesterday. This is important in England. The evolution of a national system of education has meant that the State has assumed all sorts of responsibilities, for all children up to 14 or 15 years of age, but for only a few afterwards. Young people between 14 and 18 years of age live in a partial gap in the social services, and it is only very lately that this has been seen seriously.

The importance of the problem can be measured. There are 3½ million boys and girls between 14 and 18 in Britain, and just over 2,900,000 in England and Wales alone. There may never be so many young people in the country again. If present population trends continue, there will be only half as many boys and girls between these ages in 1968.

These are three reasons why an outstanding feature of recent new trends in social policy has been a growing concern for young people. They are the raw material of democracy; they have been allowed to fall too far outside the structure of social provision; and although depression and the peak their numbers reached two years ago have combined to make an idle worklessness their frequent lot in many places, they are likely to have a scarcity value in the near future. There is a fourth reason. Written deep into the social history of the last hundred years are the successive steps taken to abolish the evils arising from the exploitation of cheap juvenile labour. They began with the emancipation of child sweeps and with the freeing of boy and girl workers in mines and factories; they went on with the taking of children from workplaces into schools; they proceed still in the campaigns to raise the school-leaving age, to furnish part-time education for young workers and to better the lot of errand boys, messengers and pages.

The list of recent measures to carry on this good work is impressive. Within the last five years a Shops Act, a Factories Act and a Young Persons (Employment) Act have cut down the hours of work for young people over practically the whole of business and industry to no more than 48 a week; and it has further been arranged that those under 16 shall work no more than 44. Set against the 50, 60, 70, 80 or even 90 hours worked by many juveniles within the last decade—and in some cases outside the legal network even now—this is genuine progress. But it is only the obverse side of the picture of reform; it is the negative aspect. The story of reforms in juvenile employment in the past has been told in two ways: on the one hand, work has been cut down or forbidden altogether; on the other, education has been provided in place of premature labour. It is on the positive side that the latest progress has been most sketchy.

This is the burden of a notable review of the whole problem just made for King George's Jubilee Trust by the ex-Vice Chancellor of McGill University, Montreal.\* It reaches two conclusions: first, that the time has come for

the voluntary system, which cares at present for young people through a host of clubs and associations, to be stoutly strengthened by public services and from public funds; and, secondly, that, because it is wasteful and mischievous for boys and girls to be thrown into the world of work at 14 or 15, the educational process should continue on a compulsory part-time basis until the age of 18.

This is no mere sentimental appeal. The chief feature of the work done by juveniles is their misemployment. "The heart of the question of juvenile welfare is the amount of unprogressive work into which boys and girls drift." They run up against dead ends, and finish at 18 less fitted to serve society than when they left school four years before. It is the community that is the loser. In the past it was the industry itself that trained the apprentice to be a craftsman. Mechanical industry has all but destroyed apprenticeship, and there is only technical education to bring out the skill that industry needs.

There are organised efforts to defeat misemployment and the loss of training. The Ministry of Labour and local authorities assist in the placing of school-leavers at work; the Board of Education and local education committees control and plan a system of technical education—and in trades like printing, engineering and building there is the closest co-operation between employers and trade unions in training schemes. But the background is hostile. It is to the advantage of individual employers in the short-term to employ young people at low wages and to sack them when they require more. Some sections of the catering and distributive trades, over a fifth of whose workers are under 18, depend for their profitable operation on the employment of boys and girls at wages too low to keep them. They are built around blind alleys. Even in highly organised and most reputable retail trading organisations, juvenile recruitment is often completely haphazard and juvenile training scarcely more than nominal. Wastage is sadly and needlessly high. On the side of the young people's families, too, there is economic pressure. The children's wages in dead-end jobs are needed as much as the factory children's few pence were a century ago. Without them the malnutrition that goes with widespread poverty and hits the youngest hardest is worsened. It is for these reasons of pounds, shillings and pence that juvenile employment is a sad and haphazard "clutching at the first chance."

This is also why technical education has still so small a rôle. Of the 2,917,000 boys and girls in England and Wales between 14 and 18 years of age, only 879,000, or less than a third, participate in any form of education—386,000 full time and 493,000 part time. Of the 1,508,000 who fall between 16 and 18 just over a fifth are being educated in any way. To stay at school costs money; it is also to lose possible earnings. To go to part-time classes in spare hours means working late and often travelling far in the very uncertain hope that it will be worth while in terms of a better job. Juvenile education like juvenile employment is a process of trial and error and hit and miss.

The economic lion in the path of reform has full recognition from the Government itself. On September 1st next, under a statute of three years ago, the school-leaving age will go up to 15—some local authorities have raised it already. But there will be exceptions. The boys and girls who can get "beneficial employment" before they are 15 will leave. It would not be fair, the reasoning runs, to deprive them and their families of the economic gain involved.

The point is that practically no juvenile employment is really "beneficial." It is no more so, in the light of contemporary standards, than the child labour that Shaftes-

bury and Oastler condemned. Coupled with technical education for all in shortened working hours it might more nearly fit the phrase. Rounded off by an extension of the recent Insurance Act that aimed to give medical benefits to young people before 18; reinforced by the already begun provision of State-subsidised and nationally-organised facilities for games, physical recreation, hobbies and pastimes for all young people; and humanised by the clauses of the pending Criminal Justice Bill which, by its scheme of probation, remand homes, attendance centres and hostels, in place of prison and the birch, recognises that "the essence of the successful handling of the young delinquent is to realise that it is an educational process";

## NOTES OF THE WEEK

**The Nation's Burden.**—In a leading article on page 169 the transformation that has come over the national accounts as a consequence of the Supplementary Estimates issued in the past two weeks is discussed in detail. The dangers and difficulties of borrowing more than £500 millions in a single fiscal year, and the unpleasing prospect that, mismanaged, this gigantic effort may engender a process of inflation capable of upsetting the country's social and industrial stability seriously, are especially underlined. As long ago as February 25th last it was argued in these columns that to borrow only £350 millions in the coming twelvemonth was "borrowing up to the hilt," and the admission that so much might be done by loans rested mainly upon the existence then of large reserves of unemployed labour and materials. Now, when prospective borrowing has been increased by 43 per cent., unemployment has fallen by a third (largely, it is true, as a result of Government defence spending) and the public-works-in-recession argument for large-scale borrowing has lost something of its cogency. It cannot be gainsaid at all that the major part of the burden of defence must be borne by borrowing, but no attempt has been made by the Chancellor, either in April or this month, to provide a precise justification for the actual sums he has proposed to borrow. It was difficult to escape the view as early as three months ago that more of the cost might have been drawn from taxation, for social and political as well as soundly economic reasons. The size of the latest Supplementary measures the added strength that this view has now acquired.

\* \* \*

**The Chancellor's Responsibility.**—By education and cajoling, by propaganda and subtle fore-handed planning it will probably be possible to raise the £500 millions now needed from bills and loans. But the risks involved are not inconsiderable, and it is pertinent to ask whether, now the scale of the financial problem has been so widely extended, the shape of economic and fiscal policy might not be somewhat altered. Sir John Simon has shown no realisation at all in his Parliamentary pronouncements of the wide economic aspects of his financial programme; and this seeming indifference to the heavy impact of massive borrowing upon the whole economy has aided and abetted the widespread popular fallacy that loans represent a painless means of making posterity pay for our present security. It was this hiatus in Sir John's Budget speech which caused *The Economist* to claim that "we have not yet had a Budget Day in 1939." Logically there is a case for having one even now, and it is indisputable that, by any normal standards of wise finance, more than £245 out of £747 millions of defence expenditure should have come from taxes. If it is not possible, for political and other reasons, to go back on our tracks in this matter, as may well be the case, then it is all-important that the controls of trade and industry which may be needed to avert inflation should be sharpened ready for use.

given a proper context in these ways, juvenile employment might become less of a social blot than it now is. At present, like the child labour of past generations, it is exploitation. In essence it may remain so. But at least the young workers might be made capable of serving the community and kept reasonably healthy and happy. Too often at present they are on the scrap-heap at 20. From the classroom and the courthouse to the playing field and the glass of milk this will cost money. But it is the logical end of the system of education and social services that has already grown up. It is the tripartite planning of wage work, wide choices of leisure and continued education that is called for. We cannot afford not to do it.

**President, Senate and Neutrality.**—In the United States the policy of the President and the State Department in the matter of the Neutrality Act is to safeguard the United States from the danger of being drawn into a general war by doing their utmost to ensure that the dictators shall not break the peace. On July 14th, at Washington, the Administration's case was impressively argued by Mr Cordell Hull. He began by recalling that it was a neutral's traditional right to sell arms to any belligerent that was able to take delivery of them, subject only to an effective blockade and to the rights of belligerents to treat any such commodities as contraband. He went on to point out that, in departing from traditional practice by imposing an arms embargo, the United States was encouraging a general state of war in both Europe and Asia. This was given out to the Press; it was also read to both Houses of Congress as part of a message from the President himself. During the early days of this week there were moments when the omens looked almost favourable; but on Wednesday it was announced that, after a three-hour conference with Republican as well as Democratic leaders of the Senate, the President and the Secretary of State had given up hope of getting the present Neutrality Act reconsidered by Congress during the present session. It is admittedly disappointing that a mainly partisan opposition should have succeeded in an anti-Administration manoeuvre, the success of which may give heart to the aggressor in Europe. But there is no reason at all for despair. Herr Hitler will be vastly mistaken if he assumes that the latest United States decision ensures the aloofness of that nation in a war which he may precipitate in Europe. It is as true now as it has been for many months that the lately-awakened public opinion in the United States will not in the event allow the European democracies to be damaged or destroyed unaided.

**The Tokyo Talks.**—Down to the eve of the discussions at Tokyo between the Japanese Foreign Minister and the British Ambassador, an atmosphere of menace was maintained in the Japanese Press and in public meetings, which, both in Japan and occupied China, was translated into violent anti-British demonstration. The Japanese Navy has announced its intention to attack three more Chinese ports—this time, on the coast of the province of Fukien—and, as usual, has warned foreigners to leave. Mr Arita invited Sir Robert Craigie to meet him last Saturday morning to have a preliminary talk. The agreed *communiqué* at this meeting stated that the discussion was concerned with "certain general questions forming the background of the situation that has arisen at Tientsin." In the House of Commons on Monday the Prime Minister made a statement. Referring to Japanese and British Press reports that Japan would require a fundamental reversal of Great Britain's Far Eastern policy as a condition of the opening of the negotiations, Mr Chamberlain declared once again that this country would not and could not so act at the demand of another Power, and he added that the Government had not received any such demand from the Japanese Government. But, when Mr Eden asked him whether they were to understand that the Japanese Government had not asked that the conversations should be extended beyond the local issue at Tientsin, the Prime Minister replied, in effect, that the discussions had ranged over the general background against which the Japanese Government considered that the Tientsin issue should be set, but that they had not suggested that discussion or settlement of the general question should actually be a condition for the opening of the formal negotiations. Upon receipt of further instructions from London, Sir Robert Craigie had an all-day conversation with Mr Arita on Wednesday. It looks as though the Japanese Foreign Office had persuaded the Army, at any rate for the moment, to refrain from forcing a head-on collision, but if the general issues which Japan wants to raise and settle can be inserted into the preliminary talks grain by grain, the British negotiator may find himself in the end with a peck of trouble.

**Guarantees and Trade.**—The introduction of the Overseas Trade Guarantees Bill has been greeted in Germany and Italy with the accusation that the £60 millions made available by Britain to friendly countries to establish or encourage overseas trade have really been provided for political purposes. Actually, the political purpose of these guarantees has never at any time been concealed or denied. The Bill has been promoted, and supported by all parties, as a means of strengthening the bonds between Britain and those countries on whose behalf she has undertaken obligations; and it can hardly be expected that the transactions guaranteed will necessarily be of equal soundness with ordinary trade transactions. Indeed, this is implicitly admitted in the provision that sanction for the guarantees is to be placed outside the purview of the independent body of business men whose function it is to assess commercial risk in the case of grants made by the Export Credits Guarantee Department. It is plainly anticipated that the bulk of the guaranteed amounts will be spent on the essentially unproductive purchase of armaments; and the Secretary of the Overseas Trade Department stated in the course of last week's debate on the second reading of the Bill that the allocation of the new loans between countries would be made on the advice of the Imperial Defence Committee. The present emphasis is certainly not on any permanent gains to British trade. On the other hand, it would be a mistake to assume that such gains are quite out of the question. An increase of trade with Eastern Europe need not be regarded merely as, say, a temporary windfall for armament manufacturers. If it is supplemented by more and better organised buying of the products of the countries who will principally benefit by the guarantees, it may in fact lay the foundation of a not unimportant new trade. It is, in fact, wise buying by Britain that can prevent these guarantees of sales from becoming millstones round the necks of Poles, Roumanians and Turks in the future. The fact

is that guarantees with primarily political ends are not welcome as permanent features of international trade. But if lasting economic gains as well as temporary political advantages can in fact be secured by their agency, then every effort should be made to secure them.

**Credits for Poland.**—It appears that the financial agreement between the British and Polish Governments, so nearly signed on Friday of last week, allows for credits to the value of £8,000,000 for war and raw materials, and for a further credit of £5,000,000 to support Polish currency—and it is understood that the French Government will contribute to this support a further credit of £3,500,000. The reason why the agreement was not signed would seem to have been the vehement desire of the Polish mission to obtain a credit which would be in cash—that is, in terms of "free" and not of "blocked" sterling. The Polish need for raw materials outside the scope of the British export and re-export trade has been commented on in *The Economist* during the past two months; the need becomes all the more apparent now that the total credit is to be so much less than the Poles have hoped. There can be in principle no objection to cash credits, other than due consideration for the strength of sterling, for the principle of our help to Poland is that she shall be made strong to face an emergency: if cash credits are needed to this end, then they cannot be considered as standing on a different footing from goods credits. In stating to the House on Wednesday that "the negotiations now proceeding with the Polish financial mission might result in an agreement which would require statutory authority," Mr Chamberlain may have, in fact, had in mind the provision of facilities not hitherto available to any other Government under the Peace Front policy. The delay in decision is no doubt largely caused by the Treasury's retarding effect on expenditure, especially the disbursement to a foreign Government of actual cash; in part it may also be caused by the Government's wish to see General Ironside's report on the Polish military position before the measure of our help is finally determined. But the delay is becoming oppressive. In its tendency to create the impression that the British Government is half-hearted, and that the Treasury's attitude is one of ill-will rather than, as it probably is, of caution, this delay may lose us valuable reserves of enthusiasm among those who are our friends and allies.

**Buildings and War Risks.**—In introducing the new War Risks Bill last Monday the President of the Board of Trade and those who followed him devoted a great part of their time to the insurance of buildings for which the Bill does not provide. There is a wide and very natural demand for such cover and the Government believes the danger and the potential damage to be too great for a scheme of insurance which carries a promise of full indemnity. The Chancellor of the Exchequer said so months ago, and Mr Stanley repeated the point on Monday. Some of his arguments ring strange to insurance ears, notably the argument that because buildings in this country are worth £10,000 millions and commodities only £2,000 millions a higher rate of premium would necessarily be chargeable on the buildings. The main part of his argument, however, is strategic rather than commercial and turns on the inability of anybody to estimate the amount of damage that would be done to buildings in wartime and the possibility that it might exceed the power of any Government to meet in full. What he does propose is that four men of recognised ability shall be asked to examine the possibility of a mutual scheme which might pay for part or (if losses are light) for the whole of the damage with some assistance from the Government. After many months of agitation, discussion and consideration, a decision to appoint a committee of inquiry to consider the possibility of protection from the consequences of an emergency which might descend

upon us at any time is no advertisement for the Government's leadership. Plainly, there is no need for further examination. If any scheme worth having is to be produced it must be compulsory; it must cover the whole country; and it must work on a uniform rate. The provision of indemnity cannot be unconditional, because the Government believes that to be impossible. Let it then be conditional, but let the liability for premiums be universal. And produce the scheme at once.

**Aid for Shipping and Shipbuilding.**—On Wednesday the British Shipping (Assistance) Bill came up for second reading in the House of Commons. The Bill gives formal shape to the proposals outlined by Mr Oliver Stanley on March 28th and summarised in *The Economist* on April 1st (on page 10). The tramp shipping industry is to receive a subsidy not exceeding £2,750,000 per annum for five years from January 1, 1940. As under a previous scheme, actual payments will vary according to the movements of an index of freight rates; but, whereas the full subsidy was formerly payable when the index stood at 92 (1929=100) or below and ceased to be payable when it reached 100, the maximum subsidy will now be paid with the index at 95 or below and payments will only be discontinued when it reaches 105. The terms have been thus unified to allow for the recent increase in the cost of running tramps. The liner defence fund, intended to assist liner services suffering from subsidised foreign competition, has been fixed at £10 millions. The Advisory Committee is to investigate applications for assistance, but the final decision will rest with the Board of Trade. Further, in order to provide an incentive for the construction of new ships the Board of Trade is empowered to make loans up to £10 millions, repayable within a period not exceeding twenty years. Provision is also made for grants totalling £2,500,000 towards the cost of cargo vessels ordered after March 28, 1939. Finally, the Bill empowers the Board of Trade to spend £2 millions in the purchase of old ships for the purpose of creating a reserve against an emergency. Mr Oliver Stanley pointed out that, whereas the diminution or disappearance of other industries might be a catastrophe which we could survive, the disappearance of the United Kingdom's shipping would be fatal. The case for some assistance to shipping is beyond question, especially in present near-war circumstances. But the shipping and shipbuilding industries cannot be absolved from doing everything in their power to reduce their costs. They must make themselves worthy of public aid on so strikingly generous a scale.

**The Prevention of Violence.**—Harsh punishments have failed to deter members of the Irish Republican Army in England from the pursuit of their futile and outrageous campaign of bomb-throwing. The Government is now seeking to stop this terrorism at the source by means of extraordinary powers to deport or forbid the entry of suspected persons. The Bill to give this power was put before Parliament this week, and it is a startling document. Suspects may be arrested without warrant, and in some circumstances search warrants may be issued by police officers without resort to magistrates. The effect of the Bill, which is to last for only two years, is to classify persons suspected of "acts of violence designed to influence Government policy with respect to Irish affairs," as undesirable aliens. It is implicit in its title and explicit in official explanations that its drastic provisions will be confined to the I.R.A.; and it would be dangerous and quite unjustified if any loophole were left for its extension, say, in an emergency, to other people. As it is, it will call for more restraint on the part of officials than has commonly been shown in such dealings between the English and the Irish if these powers are not to be used as an instrument of persecution. The I.R.A. have asked for it—but only they should suffer.

**The State of Trade.**—Commenting on the general business situation the Bulletin of the London and Cambridge Economic Service for June states "government expenditure has been at a rate which more than accounts for the increase in employment, so that there is evidence of reduction in new private enterprise and private consumption." It is a pity that the evidence on which this is based is not elaborated. If it is correct, then the frequent prediction that we shall have something like full employment in the winter may require serious modification; for if the trend of private activity is downwards, full pressure on the labour supply may never materialise. On the surface, the assertion that there is no increase in private consumption or in new private enterprise when employment and, therefore, wage incomes are increasing as rapidly as at any time for which we possess information runs contrary to all reasonable expectation. And there is no evidence of such a rise in prices or in the cost of living as would restrict the demand for consumption goods. In fact, all available information suggests that consumption has in fact been expanding. Total retail sales have risen noticeably since the beginning of the year (if seasonal movements are allowed for); so have retail sales of food and apparel. Sales of all merchandise other than food, although erratic, are on an upward trend, and even sales of household goods which have been falling since early 1937 have ceased to fall. As an indication of consumption of durable goods we have new registrations of private cars: when corrected for seasonal movements, these, too, have shown a remarkable increase since Christmas, and are now back to the levels of the 1937 boom.

Although the Board of Trade Index of Production and *The Economist* Index of Business Activity do not directly include Government contracts, they do in part include the materials from which these are executed at lower stages of production; but both are rising sharply. The latest figures of the volume of British exports (seasonally adjusted) showed increases both in the last quarter of 1938 and the first of 1939. As regards private investment activity, where present conditions may in fact have engendered hesitations, merchant shipbuilding under construction, excluding naval shipbuilding, shows an increase of about 25 per cent. in the second quarter of this year over the first, and new merchant tonnage commenced has quadrupled—under the stimulus of State assistance, it is true. It is admittedly impossible to distinguish between factories to be erected on private account for arms contracts from other factories, but it must be noted that plans for buildings other than dwellings are at boom levels. It seems therefore that when private activity can be separately distinguished in the statistics it is increasing, except in the case of house building. As might be expected consumption is going rapidly ahead, and even in investment goods there is small sign of a falling-away likely to ease the anticipated strain on the nation's resources appreciably.

**The First Thirty Thousand.**—The arrival at training depôts and camps throughout the country of the first contingent of militiamen called up for duty has been made the occasion of a remarkable demonstration of confidence in their enthusiasm to serve and satisfaction with the conditions in which they will live. Some have been welcomed by a member of the Royal Family; others by the

Secretary of State for War; and most by highly-placed Army officials. The young men have been reminded, not only of the many special privileges which have been granted them, but also of the honour conferred upon them by the fact that they are the first members of a new British Army. Several pinches of salt are clearly indicated. The best judges of conditions, privileges, honour and so on will be the militiamen themselves—and that only after they have completed their training. The best judges of the morale and effectiveness of the militia will be the military strategists who have their eyes on a bloody and heart-breaking business. The laudable efforts of the War Office to please militiamen and to reassure the public, and the campaign of the Press to prove that everyone is happy, cannot disguise certain hard and (if it dare be said) distasteful facts. A conscript army is no more and no less than an unwelcome necessity; military life and discipline are essentially arduous and exacting; and, for these very reasons, the much-maligned sergeant not only cannot, but must not, change his spots. The need to give the new recruits pleasant and healthy working conditions, and to insure them against the economic and other losses likely to arise from their ruthless plucking from civil life, is inescapable. But it is just silly to pretend that the first need is not to make them efficient fighters.

\* \* \*

**The Railways' War Preparations.**—The unobtrusively efficient manner in which the British railways dealt with the exceptional demands made upon them in the last war supports a presumption that they will not be found wanting in a future emergency. An announcement made this week about plans already in existence provides concrete evidence of this. In the event of war the railways would be placed under the direct control of the Minister of Transport, working through a Railway Executive Committee. Detailed preparations have been made for the protection of railway staff in air raids, the modification of station and signal lights, the provision of alternative railway telephone circuits, the all-important accumulation of stocks of essential materials and the equipment of emergency breakdown trains. Arrangements have been made for the conversion of vehicles for use as ambulance trains, the diversion of traffic from certain routes, the transport, de-training and subsequent provisioning of 4,000,000 persons evacuated from vulnerable areas, the transfer of headquarters to points outside London, and the movement of troops; and the necessary timetables have been printed and stored. If the railways can meet an emergency with flexible working as well as with intelligent anticipation, and if they can play their part in the modification of the West coast ports between Southampton and Liverpool, which will undoubtedly be called upon to deal with a vastly augmented traffic in wartime, the public will have the assurance that in at least one vital department preparedness has been almost fully achieved.

\* \* \*

**Britain's Backward Roads.**—The plainest condemnation of the defects of British roads and road policy is provided by the figures. The ably-arranged, though scarcely disinterested, annual publication, *Basic Road Statistics*, put out by the British Road Federation, shows that Great Britain has more motor vehicles per mile of road than any other country—14.6 per mile, against 10.5 in Belgium, the country with the next greatest density. Moreover, an increase in the use made of each vehicle is reflected in a 36.6 per cent. rise in the number of vehicles passing census points in 1931 and 1935, compared with an increase of only 16.8 per cent. in the number of vehicles registered. These facts are reflected in the road accident figures for 1938—6,648 killed, and 226,711 injured, giving a combined casualty figure that has not been exceeded in any previous year. The lesson is driven

home by comparison with other countries. In 1938 deaths in motor accidents in the U.S.A. amounted to 13.4 per 10,000 vehicles (excluding motor cycles), and 2.2 per million gallons of fuel used. For Great Britain the corresponding figures were 27.2 and 4.4. In themselves, these facts establish at least a *prima facie* case for more and better roads. The probable wartime needs of the country strengthen it. The taxation figures make it unanswerable: motor taxation produced £79,049,000 in 1937-8 and £87,223,000 or over 9 per cent. of the national revenue in 1938-9. Total road expenditure in the former year amounted to £64,700,000—and about two-thirds of this came, not from taxes, but from local rates. The balance of revenue from motor taxation diverted to the National Exchequer is therefore enormous; in the current year it will be in the neighbourhood of £60 millions. The fact that very good and vital uses for the money can be found elsewhere does not justify the Government's failure to make appreciable progress with road improvements.

\* \* \*

**Italy and the Hatay.**—The Italian Government's protest against the cession to Turkey of the Hatay (formerly known as the Sanjak of Alexandretta) is an interesting footnote to the Franco-Turkish *rapprochement*. The Fascist Government has always been jealous of French influence in the Mediterranean; and now that France and Turkey are to be allies it cannot contain its displeasure. In registering its protest to Paris, it stated that

Italy, as a mandatory Power (of the decision of April 25, 1920, of the Supreme Council of the Allied and Associated Powers, in conference at San Remo) must make every reservation

to any agreement concluded without its knowledge and in obvious contrast with the aims of the mandate and the wishes of the affected population. The French Government has not yet replied, but the French and Turkish Press have pointed out that the decisions of San Remo were rendered invalid by the Treaty of Lausanne, signed in 1923 after Turkey had won her war of independence against the Allied Powers. There is, in fact, no one in the Near East, except a small number of Syrians (and some of those after contact with Axis propaganda) who questions the wisdom of France's action. On any realistic principle peace in the Near East is best assured through the agency of a Turkish Government which holds no grievance against the mandatory Powers. It is not without significance that a Turkish newspaper, last week-end, should have entered afresh the Turkish claim on the Italian Dodecanese, for those who support a policy of "dynamism" must sooner or later expect to be answered in the same coin.

\* \* \*

**Holland without a Government.**—The Dutch have now been without a Minister of Finance for nearly nine weeks and without a Government for over three. This is a striking parallel with the Belgian Government crisis of last March, for in both cases the deadlock was caused by differences over financial policy. Here are two small peoples, each bound to a policy of neutrality in a violently partisan world—each, therefore, bound to re-armament—facing the unpalatable fact that the drain on their funds for defence has meant shortage in other directions. The Government of Dr Colijn resigned because Dr Colijn would not consent to the plans of the four Ministers, members of the Catholic Party, who wished to spend more money on unemployment relief. The actual sum in question was finally reduced to less than £2,000,000, but for Dr Colijn the sum is of less importance than the principle it represents. The Minister of Finance, a member of the same party as Dr Colijn, had resigned for the same reason, yet the Catholic Ministers, undaunted by this sign of disapproval, continued to probe at the Prime Minister's staunch financial conservatism until he, too, was forced to resign. Dr Koolen, an elderly Catholic politician, then tried

to form a Government. He failed, and the duty fell back upon Dr Colijn, who enjoys a higher reputation in Holland than any other politician. He is now trying to find a compromise that will offend neither his own principle of rigid financial orthodoxy (he is wholeheartedly against all "pump-priming" experiments, and holds that they have been proved a failure in the United States) nor the social zeal of the Catholic Party. Although they are not indispensable to a Government, the Catholics are the strongest single party and could make a formidable opposition, and Dr Colijn, thinking of national unity in times of international unrest, would scarcely try to form a Government without them.

\* \* \*

**The Princes and Federation.**—The tide seems to be setting towards Federation in India. In British India, the dissensions within the Congress, though not yet fatal to its outward unity, have destroyed for the time being the conditions under which it could have organised a frontal attack on the Federal Constitution by means of civil disobedience. In the Indian States, there have been signs that those observers were right who attributed the rejection of the Instruments of Accession by the Bombay Conference of Princes early this year to an attempt merely to get better terms, not to throw Federation overboard. It soon became apparent that, so far from the terms of Federation being amended in favour of the Princes' privileges, further delay could only mean an increase of power of the British Indian democracy over the affairs of India as a whole, including the princely States. Lord Zetland's speech at Liverpool last March, followed by the Viceroy's address to the Chamber of Princes on the duties of rulers to their subjects, showed all but the most obtuse of the Princes that Paramountcy was not likely to be interpreted to mean indefinite defence of hereditary autocracy against the rising forces of democracy. Once the Princes recognise that their only permanent future is as constitutional monarchies within a self-governing member-nation of the British Commonwealth, they will accede to Federation, though they may be expected to bargain about terms up to the last minute. Indeed, a number of Princes have very recently expressed their dissent from the Bombay resolution; and of equal importance is the promulgation of a new constitution in the largest of the States, Hyderabad. Though it is not a liberal constitution by the standards of British India, it gives the people of the State far more say in its government than they ever had before. The example of the Nizam—one of the most conservative of the Princes—is likely to be followed by other rulers, and the road to greater internal democracy is also the road towards Federation.

\* \* \*

**Solicitors and Clients.**—In July last year Sir Francis Smith, president of the Law Society, reminded members that during the previous decade more than two hundred solicitors had been struck off the roll. In the majority of cases the reason was misappropriation of clients' moneys, and while the average number of defaulting solicitors each year is a small proportion of the seventeen thousand solicitors who are in practice, the Council of the Society has rightly decided that further efforts must be made to check the evil. Since the new rules came into force in January, 1935, requiring the separation of clients' money from solicitors' capital and for inspection of solicitors' accounts to ascertain whether the rules were being observed, there have been one hundred and thirty-three instances of inspection of accounts; in a number of these—though it is not publicly known whether any specific charges of misappropriation were subsequently brought—the solicitors concerned were ordered to produce, within a specified time, properly audited accounts. By such action it is possible that future defalcations may have been avoided. It is now proposed to introduce new and far more drastic regulations—which, incidentally, were regarded by the Council in July last year

as likely to be ineffective. As now recommended by the Council, they provide, first, for the compulsory audit of solicitors' accounts and the periodical delivery to the Law Society of a certificate by a qualified accountant that the Accounts Rules are being observed; and, secondly, the establishment of an indemnity fund out of the stamp duties annually paid by practising solicitors and articulated clerks. These stamp duties must amount to something more than £150,000 annually, and it seems fair that the profession should be helped to form the fund in this way. It is known that this feature of the proposals is warmly welcomed in the profession, at least in London, and it would doubtless go a long way towards correcting public misgivings. Possibly a recent and particularly flagrant case in which a City firm bearing a respected name was found to have been in default for many thousands of pounds extending over a number of years, has encouraged the Council to take these steps. It may also have felt that publicity given to defaults might cause more business to be diverted from solicitors into the trustee departments of the banks and insurance companies. Whatever the reasons, the changes are necessary and desirable. The production of a satisfactory accountant's report to the Society will apparently be a condition precedent to the issue of the annual practising certificate, and should go far to avoid incipient default. For the good standing of the profession it must be hoped that the objections raised to similar proposals in former years by the Provincial Law Societies will not be maintained, and that the new rules will be put into effect with all speed.

\* \* \*

**Civil Defence Expenditure.**—A week ago, Sir John Simon explained that, as a result of heavy Supplementary estimates, defence expenditure in 1939-40 would be raised from £580 millions, originally contemplated in February's White Paper, to £730 millions. But the arms bill is being presented in instalments and no figure is final. This week, a further civil Supplementary estimate has been issued, for £19,401,000 from votes together with £11,680,000 from loans. A formal vote of £2,500,000 to the Czecho-Slovak Refugee Trust Fund (ultimately recoverable out of the £4 millions gift in 1938-39) is included, but otherwise the increased provisions are almost entirely for civil defence. The A.R.P. total of £17½ millions gross includes £7 millions each for public utility protection and shelters in factories, etc., £2 millions for obscuring glare and camouflage, and £1½ millions for fire-fighting equipment and emergency water supplies. No less than £10,330,000 is required for hospital and evacuation services. The different services are allocated according to departments and votes rather than according to purpose, but it seems that roughly £34 millions gross out of £46 millions of civil Supplementaries so far presented could (in the absence of official indications) properly be classed as civil defence. Of this total, say £28 millions is probably already included in Sir John Simon's figure of £730 millions, and it is hoped to achieve savings in unemployment and other genuine civil votes. The hard fact is that out of all Budget and supplementary estimates for all purposes requiring a gross expenditure of £1,454 millions in 1939-40, some £512 millions will have to be met by defence borrowing and deficit financing, without taking into account Supplementary estimates still to come, or temporary liabilities on export credits to our allies.

## South America: The Political Scene

SOUTH AMERICA was colonised by Spain and Portugal, and the view that South Americans, or those who count there, are simply colonial Spaniards or Portuguese, is a European legend which takes a very long time to die. It is only now that Europeans generally are coming to realise that the population of South America represents one of mankind's most interesting experiments. The efforts of this people, racially united despite its many and varied elements, to find South American answers to South American problems, are now entering on a phase of perceptible development. They should therefore command attention.

The early days of revolt and independence, more than a century ago, were filled with hope of a great and enlightened future. The principles of '89 had flooded over the South Atlantic and spread rapidly across the Continent along tenuous lines of communication from community to community, breeding a host of political idealists. Their thought was wildly impractical; and the instruments of democracy were forged from human metal that was not so much unwilling as uncomprehending. It need surprise no one that those instruments turned in the hands of the men who sought to use them. By temperament the South American is wont to conceive of government in terms of leadership and obedience (though his ideas on this are quite distinct from the hierarchical principles of *Fuehrer und Gefolgschaft*); by force of circumstances he has always been a rebel. It is certain, for instance, that the idea of *personalismo*, so deep-rooted in South America, by which one man becomes representative of a type and therefore fit to lead, cannot be reconciled with European democracy any more than it can be reconciled with European dictatorship. *Personalismo* is acutely South American.

The geography of a vast continent (Brazil alone is larger than the United States) and the lack of communications have helped to emphasise regional characteristics. While the inhabitant of the Atlantic Coast or of Chile has been open to transoceanic influences, the Northern Republics, more nearly Indian, have retained much from the pre-conquest period; and lately this, which was formerly a badge of inferiority, has become rather a warrant of virility, of long tradition, which is a matter for pride. *Indonesmo* has taken its place alongside Spanish-Americanism and Ibero-Americanism. It is a valuable sign of approaching maturity.

There are other signs, too, of that maturity. With their growing sense of solidarity since the war the ten Republics have each shown a wish to free themselves from foreign influence. This has come out in attempts to reach industrial self-sufficiency, in social legislation aimed to counter the advantages of European management, in a wide criticism of European affairs, in a new Pan-Americanism. The formal links with Europe were finally snapped in 1889, when Dom Pedro the Second at last resigned his weary splendour; in fact, the cultural links had given way many years before. From the early days of independence a suspicion and an impatience of Spain and her fumbling Monarchy had impelled young South Americans to seek their education in France

and Germany. The United States of Brazil had long since laughed away Portugal's voice in their affairs. And from the union of the North American States came a new tide of influences, more brilliantly impressive for being American, challenging competition, urging imitation. The rich Carioca from Rio may go to Savile Row for his clothes and to Montmartre for his culture: for his idea of everyday life he takes a lesson from New York. And with him to New York, in spirit, go the multitude of his fellow-countrymen who cannot afford to travel.

Yet it would be a mistake to see in this superficial modernity of outlook a final approach to political maturity. Someone has well said that

the revolutions which occurred in many (South American) countries between 1930 and 1932 showed that the social structure and the political methods of the republics had been little altered by the prosperity of the twentieth century.

Those who would question this statement might remember the case of Venezuela. In that State there have been but three years of comparative freedom since before the days of Cipriano Castro, who began his dictatorship in 1899 and was followed in a career of graft and violent crime by Gomez—and Gomez died only in 1935—three years in which to suck the sweets of twentieth century civilisation.

Venezuela is an unlucky example. Yet parallels can be found elsewhere among the smaller Republics. Bolivia and Paraguay are still recovering from the murderous effects of the Chaco War. Colombia and Ecuador are only now beginning to emerge from long struggles with the Church.

In Peru, alongside and dominating the new ideas of the *Aprista* movement, runs a strong current of reaction. But here again is the sign of maturity. For Aprismo provides a most apt example

of a South American application of European ideas; founded by Haya de la Torre as a means of bringing about working-class solidarity in all South America, the *Apra* (*Alianza Popular Revolucionaria Americana*) took its mainspring from Marx, but, what was new and remarkable, self-consciously went beyond Marx to formulate a specifically American doctrine of what a Workers' International might be. Its leaders are now in exile or concealment, but its ideas have taken root and are alive.

The ABC States (as Argentina, Brazil and Chile are commonly known) stand on a rather different footing. They are further developed and number among their problems those of federalism. But in each case the cardinal problem is one of more evenly balancing the power of the Executive with the popular will, of more justly expressing that will, of educating it and of encouraging its growth. In Brazil the domination of the three leading provinces, Rio de Janeiro, San Paulo and Minas Geraes (with Rio Grande do Sul slowly catching them up), the only areas to any extent populated, has meant a long story of internecine feud not yet ended.

The growth of a responsible political sense may also be seen in the conduct of foreign policy. Here the ten Republics have felt the pull of a common defence against encroachment from the North. The Monroe Doctrine was proclaimed in

1823 at a moment when the Southern colonists were more than glad to have it; but the emergence of separate States after independence coincided with a gradually increasing pressure from the North. The early years of the twentieth century saw the carving out of Panama under the shadow of Theodore Roosevelt's big stick; President Coolidge and the Caribbean policy caused vehement alarm throughout Latin America and led directly to the conciliatory policy introduced by Mr Hoover and most ably pursued by Franklin Roosevelt.

In broad view, it remains true that the political development of South America is still in the stage of adolescence. The changing nature of economic and social life, the hard times since the war, successive failures to find a political formula more nearly fitting to the South American temperament, have each hampered progress towards a less conscious political discipline.

Signs are not wanting, however, that the people of South America are about to make a forward "leap." They are waiting for a lead. Meanwhile they rest uneasy; and their uneasiness comes out in occasional violence and in chronic dissatisfaction with insufficient systems of government. Their next decisions, when they come, will not be disregarded by the rest of the world.

## Germany Comes to Trieste

[FROM A CORRESPONDENT]

ONCE the chief port of the Austrian Empire, busy with the traffic of a vast hinterland and helped by the famous "Adriatic Tariff," Trieste has lately fallen on bad days. Although it is true that the maritime traffic of Trieste amounted to 3,380,000 tons in 1938 compared with 3,444,000 in 1913, an analysis of these figures shows that in 1938 only about 40 per cent. of this trade was represented by goods which would yield a profit to local entrepreneurs. In 1913 practically every ton of merchandise passing through the port was bought and sold by Triestine traders or handled by Triestine brokers, and warehousing in bond further increased their profits. In recent years it is estimated that only 10 per cent. of the transit traffic (or about 3.5 per cent. of the total turnover) was handled with profit by local firms.

The German *Anschluss* with Austria and the later annexation of Bohemia-Moravia have made Trieste more than ever dependent on the Third Reich. Seventy per cent. of the port's trade is now under German control, not counting a further 8 per cent. from Slovakia. The table below shows how the incidence of traffic over frontier stations connected with Trieste, has changed in recent years. Little of the traffic passing over the Brenner Pass comes to and from Trieste.

For some time after March, 1938, the effect of the *Anschluss* on Trieste was catastrophic. In the first weeks Austrian traffic was cut off almost entirely, and from the Italian point of view the future looked black indeed. The final figures for 1938 show that Austrian overseas exports via Trieste fell by 55 per cent compared with the previous year, i.e. from 355,742 tons in 1937 to 160,146 tons in 1938. The Germans made it clear that this fall would be permanent, for it was caused by their absorption of Austrian exports of timber, cellulose, iron, magnesite, and paper goods. At the same time, the whole trading mechanism was disorganised by the forcible removal of Viennese Jews (and later of Triestine Jews) from their command of the entrepôt trade. Overnight the tradition of decades was destroyed.

The position of Trieste's trade with Czecho-Slovak imports and exports is equally uncertain. In a normal post-War year the port has handled over half-a-million tons of Czecho-Slovak exports. It remains to be seen whether Germany's needs will allow Czech merchants to continue shipping to the Near East their annual orders of machinery, wrought iron, tools, beer, and so forth.

This week's news, that the Italian Government has arranged for the German Government to operate a "free zone" in the port of Trieste, is therefore of urgent interest to Triestines. If it is true that the Germans have promised in return that Trieste shall be guaranteed a transit trade of 1,500,000 tons, or about 40 per cent. of Trieste's total trade in 1938, then there will be no particular cause for rejoicing. For, as has been pointed out above, Germany actually controlled seventy per cent. of Trieste's trade in 1938. But, if this guaranteed amount is in fact to be a minimum and not an average, then Trieste may still breathe a sigh of relief.

RAILWAY TRAFFIC OVER ITALIAN FRONTIERS CONNECTING WITH TRIESTE

Figures in '000 metric tons

|                      | Tarvisio | Piedicolle | Postumia | Total of preceding | Brenner |
|----------------------|----------|------------|----------|--------------------|---------|
| Traffic out of Italy |          |            |          |                    |         |
| 1928-29 .....        | 304      | 240        | 872      | 1,416              | 414     |
| 1936-37 .....        | 308      | 159        | 408      | 875                | 403     |
| 1937-38 .....        | 382      | 155        | 617      | 1,154              | 416     |
| Traffic into Italy   |          |            |          |                    |         |
| 1928-29 .....        | 814      | 275        | 1,533    | 2,622              | 185     |
| 1936-37 .....        | 1,190    | 187        | 661      | 2,038              | 74      |
| 1937-38 .....        | 1,470    | 183        | 699      | 2,352              | 73      |

For it will mean that the German Government does not intend that Bremen and Hamburg shall have the whole cake: a reasonably large slice will remain for Trieste.

Fear of the North Sea ports' competition has been a real one. Only a few weeks after the *Anschluss* the Schuldt-Orient Line of Hamburg announced its intention as soon as it could get the necessary convention from Rome, of starting a fortnightly cargo service between Trieste and the Levant. Agents were appointed and it was even said that the Hamburg-America Line had plans to connect Trieste with the Far East.

It may be assumed that more will be heard of these plans now that the Germans are to have a "free zone" on the Adriatic. Without precise details it is unwise to speculate on the future of this zone, for to a very great extent Trieste is already a free port for transit trade: it does appear, however, as though freight rates and harbour tariffs were being further revised in Germany's favour.

This revision marks one further step in the Italian Government's oft-repeated efforts to help the port. During the last twenty years over 200 million lire (about £2 millions) have been spent on harbour improvement works. Continuous attempts have been made to render Trieste less dependent on its maritime trade. The city's engineering works, shipyards, and chemical factories, employ 40,000 workers. One quarter of Italy's total output of cast iron is produced in Trieste, and half of Italy's linseed comes from Triestine crushers. Large oil refineries have been built, and at least one of Italy's new

## YOUR CAPITAL

## The American Railroad Deadlock

[FROM OUR NEW YORK CORRESPONDENT]

THE recently growing belief that another Congressional session was to pass without any remedial action for America's railroads had substantial confirmation this week. Senator Wheeler, who dominates the field of railroad legislation, announced doubt whether any action of consequence would be taken this year; and, while it is still too early to forecast, the prospect for action next year is not very promising, since in Presidential campaign years Congress tends to adjourn early and to avoid, if possible, controversial issues.

The passage of some relatively minor railroad legislation, however, is not ruled out. The so-called Chandler Bill, which authorises the voluntary reduction of interest charges without recourse to bankruptcy, under certain limited conditions, may yet emerge; and pressure will be exerted to secure that part of the President's new spending programme which would authorise outlay on rail equipment. The House of Representatives may even pass its version of a Bill to overhaul railroad regulations. But, since the Senate has already passed a substantially different Bill with the same object, this would only mean that the two measures would lie before the Conference Committee of the two Houses until next year.

This absence of significant legislation does not indicate any real improvement in the railroad situation. Informed estimates suggest that the Class I railroads will earn this year an aggregate amount approximately equal to their fixed charges, compared with a deficit of \$125 millions in 1938, very modest earnings in 1937 and 1936, a break-even in 1935 and deficits in 1934, 1933 and 1932. A third of the country's railroad mileage remains in bankruptcy. Another third is operated by companies in a financial condition that is weak to precarious. There is no sign of a change in the trend of diversion of traffic to road competitors, which now carry about 25 per cent. of the country's total volume of traffic. And various moratorium arrangements still exist whereby various types of financial institutions do not recognise in their accounting the depreciation in their railroad investments.

Nor, again, does the lack of legislation denote any paucity of ideas for action or absence of study. Extensively documented plans are abundant, providing for a wide variety of measures, including consolidations, subsidies, loans, guarantees, mileage abandonment, the pooling of facilities, rate changes, wage cuts, the revision of union rules, the regulation of competitors, and the revision of the already twice-revised Bankruptcy Act, among others.

### Obstructive Interests

What the likely legislative inactivity does show is the existence of an *impasse*. Every interest involved wants a "free ride" solution, one that would not entail the painful disadvantage of making some concrete contribution to setting the railroads on their feet. Labour wants continued employment without reduced pay. Executives want no diminution in the number of executive posts. Security holders want their contracts met to the full. Bankers want their positions unimpaired. Shippers and local communities want services available at every possible point without regard to cost or profit. Suppliers want a high volume of orders with present prices maintained. All want a most elaborate national transportation system—but without subsidy; and competitors want relaxed, not enhanced restrictions.

The problem is to determine the proper place and function of the railroads in the American economy. First, are the railroads so tied up with the public interest that wages, employment and service must be maintained undiminished regardless of the financial results of operations? Secondly, have the technology and economics of transport so changed that the railroads are in a completely different position to that occupied in the past? And if so, how are their financial structure and regulatory devices to be reoriented?

This *impasse* is, of course, not new. It has existed ever since the deterioration in the railroad position (which actually began in about 1920) came to be sensed during the

last decade. The fact is that, despite really marked increases in efficiency, railroad plant has been steadily deteriorating for some years. Total serviceable equipment has been greatly reduced, and capital outlays do not come up to reasonable estimates of depreciation.

A business boom would keep the basic problems of the railroads in abeyance during its duration. In a period of prolonged prosperity, traffic diversion and the other ravages of recent years could be temporarily faced with equanimity. But a serious depression, especially if prolonged, would probably complete the financial wreck of the railroad system. In a sense, such a depression would solve the railroad problem: definite decisions of a far-reaching character would have to be taken. A continuation of the erratic trend of business which has prevailed in recent years would probably continue the *impasse*—and the deterioration. Whatever the course of business, one probability is distinct. Prices of railroad securities will continue to fluctuate violently. So long as so many of the railroad companies hover between damnation and salvation, even tiny zephyrs of hope or despair in the market place can turn quotations sharply.

July 12th.

## Increased Production and Rising Prices in France

[FROM OUR PARIS CORRESPONDENT]

THE index of industrial production of the *Statistique Générale de la France* has now been revised throughout for 1928 and subsequent years. The results for May, 1938, are as follows:—

|                            | May, 1938 | March, 1939 | April, 1939 | May, 1939 |
|----------------------------|-----------|-------------|-------------|-----------|
| <b>General index</b> ..... | <b>82</b> | <b>95</b>   | <b>95</b>   | <b>97</b> |
| Mines .....                | 91        | 98          | 98          | 101       |
| Chemical industries .....  | 98        | 111         | 113         | 115       |
| Paper .....                | 153       | 175         | 173         | 175       |
| Textiles .....             | 83        | 100         | 97          | 101       |
| Leather .....              | 71        | 77          | 77          | 77        |
| Iron and steel .....       | 65        | 81          | 82          | 87        |
| Engineering .....          | 76        | 90          | 92          | 93        |
| Automobile .....           | 88        | 110         | 104         | 101       |
| Building .....             | 61        | 73          | 77          | 78        |
| Gas and electricity .....  | 131       | 144         | 141         | 141       |
| Miscellaneous .....        | 112       | 110         | 109         | 110       |

These figures indicate a revival of production after the partial setback in April resulting from the international tension. Progress since October last, when M. Reynaud took office as Finance Minister, is measured by a 17 per cent. rise in production. The index now stands at 97 for the first time since April, 1931, and this figure has only been exceeded in the prosperous period from April, 1928, to April, 1931.

The report of the Comité des Forges for the year 1938 emphasises, nevertheless, that re-armament is only a modest palliative to the stagnation of the internal market, particularly in building and automobile production, and the difficulties of export abroad. Re-armament, the recent rise in prices of metallurgical products and the Reynaud decrees favouring new investment for improvements to plant, are likely to produce in the near future important schemes for reorganisation in the industry and a reduction of production costs. Recent figures of private issues indicate that the capital market is ready to second this effort.

The return of France to order, social peace and work, coupled with the effects of the military public works programme, is thus bringing about a restoration of essential equilibrium both in currency and the ordinary budget, and, given stable prices, a revival of private initiative is highly probable. Experts are agreed that even if the present rhythm of rising prices is maintained, French prices will not catch up with the world level for two or three years.

The principal unknown factors are the forthcoming Government decisions about agricultural prices and public expenditure. The prices of wheat for 1939 will soon have to be fixed, and the interests concerned will inevitably claim some allowance for the rise of all the indices normally taken into account at the fixing—cost of living, wages, selling prices of agricultural produce, etc. But the present wheat production is already too high and first estimates of the 1939 crop show that it will at least cover consumption needs, while a large surplus from 1938 is still on hand.

In the matter of public spending it appears that the salaries of many civil servants are now inadequate, while

the Minister of Finance is being urged to introduce measures to encourage an increase in the birth rate and to institute old age pensions. The realisation of such a programme would undoubtedly help to maintain national unity by an extension of social services at a time when a strong effort is being required of the working classes for the promotion of re-armament. Moreover, success would become highly probable if the new social measures could be coupled with a large-scale plan of administrative reorganisation aimed at checking the prodigality of civil and military expenditure.

The results achieved by M. Reynaud's famous Economy Committee have not, however, been very encouraging, and there is also a widespread feeling that the people of France have already suffered too much in the cause of re-armament—particularly since it has been paid for by an increase in short-term debt. Moreover, the popular argument that the totalitarian States are now nonplussed is not favourable to further sacrifices.

All of which helps to explain why no decisions were taken after the last Council of Ministers, when a new programme of reforms sponsored by the Minister of Finance seems to have met with a cold reception by his colleagues. It explains also the conclusion reached by many observers that the Prime Minister will be constrained to decide on the postponement of the general election due in the autumn.

July 20th.

## Finland's Government Returned

[FROM OUR HELSINKI CORRESPONDENT]

THE general election to the Finnish Diet was held on July 1st and 3rd, three years after the previous general election. The total electorate numbered about two millions, of whom slightly over 1,300,000 voted, the polling thus being rather livelier than at the election in 1936. The votes were divided among the different parties, according to unofficial figures, as follows (in order of electoral importance):—

|                                         | 1939    | Increase (+) or decrease (−) since 1936 |       |
|-----------------------------------------|---------|-----------------------------------------|-------|
|                                         | Votes   | Votes                                   | %     |
| Social-Democratic party .....           | 515,528 | + 62,777                                | +13.9 |
| Agrarian party .....                    | 296,340 | + 33,423                                | +12.7 |
| Unionist party .....                    | 176,039 | + 54,420                                | +44.7 |
| Swedish party .....                     | 117,555 |                                         |       |
| Swedish Left party .....                | 5,474   |                                         |       |
| Aland electoral union .....             | 7,707   |                                         |       |
| Patriotic National Movement party ..... | 86,168  | − 11,723                                | −12.0 |
| Progressive party .....                 | 62,092  | − 11,562                                | −15.7 |
| Small Farmers' party .....              | 27,804  | − 2,804                                 | − 9.2 |

There is no great difference over the results of 1936, for the distribution of the parties in the country has remained on the whole unchanged. The principal parties of the present Coalition Government, the Socialists and Agrarians, obtained a fairly considerable increase in votes, while the third group in the Coalition, the Progressive Party, lost a number of votes. Altogether the Coalition Government secured 873,960 votes, or 67.5 per cent. of the approved votes. This represents an increase of 84,638 votes. The other parties secured 420,747 votes, representing an increase of 39,189 over the 1936 election.

As the country is divided into 15 electoral districts with a varying number of seats, the number of representatives of the different parties finally elected to the Diet does not exactly correspond to the votes recorded in their favour. The division into electoral districts constitutes in practice an advantage to the large parties at the expense of the small ones. To avoid this drawback the two centre parties, the Agrarians and Progressives, had established a joint electoral union in most of the electoral districts, while the other parties had their own separate electoral unions.

The seats in the new Diet are divided among the parties as follows:—

|                                                       | 1939 | Gain (+) or loss (−) |  |
|-------------------------------------------------------|------|----------------------|--|
| Social-Democratic party .....                         | 85   | + 2                  |  |
| Agrarian party .....                                  | 56   | + 3                  |  |
| Progressive party .....                               | 6    | − 1                  |  |
| Unionist party .....                                  | 25   | + 5                  |  |
| Swedish party (including Aland electoral union) ..... | 18   | − 3                  |  |
| Patriotic National Movement party ...                 | 8    | − 6                  |  |
| Small Farmers' party .....                            | 2    | ...                  |  |
| Total .....                                           | 200  | ...                  |  |

According to this the Left, i.e. the Social-Democrats, gained two seats. Seeing that a strong leftward swing had been feared in some quarters, this moderate success has been accepted with calm. The Centre parties also gained two seats in all. In this way the Coalition Government has 147 supporters in the new Diet, against 143 in the old. No change in policy need therefore be expected.

The Patriotic National Movement Party suffered a particularly heavy loss. This party is inclined towards National-Socialism, and in spite of its patriotic platform its methods of propaganda and other activities have aroused bad blood, so that the Minister of the Interior has felt bound to institute proceedings against it. Its losses must be regarded as implying a more settled political situation.

The platforms of the Finnish parties differ widely on questions of domestic policy. But in the attitude of the parties towards the foreign policy no differences exist. From the extreme left to the extreme right the Finnish nation has unanimously espoused the cause of Northern collaboration, and has decided firmly to maintain an attitude of strict neutrality towards Great Power groupings. If necessary, the Finnish people is determined to maintain this attitude even by force of arms. The energetic measures that have lately been adopted to hasten the strengthening of national defences must be viewed against the background of this determination. The fortification of the Aland Islands forms an important link in this work of maintaining a neutral North against a possible conflict between the Great Powers.

This strictly neutral policy also explains why the Finnish Government has declined the various proposals submitted to it by those Powers. Guarantees given to Finland without Finland's co-operation and approval are not in accordance with her independence and sovereignty. Mr Erkkö, the Foreign Minister, has made it clear in the Diet that such guarantees cannot be accepted, and that any State which means to assist Finland on the strength of such a self-imposed guarantee, must be regarded as an aggressor and be treated accordingly. This view is supported in unanimity by the whole Finnish nation.

### Poland: To-day and To-morrow

THE visitor to Warsaw, driving in his cramped and complaining Fiat taxi and observing that his neighbour's is no better if not worse—in fact, that all Warsaw's taxis are cramped and complaining—may be forgiven for pondering on the Slavonic aberration that gives Warsaw such new and splendid horse-carriages. It might even seem to him, in that bitter moment, that all Poland's troubles were symbolised in this appearance of new droshkies alongside of super-annuated taxi-cabs. Let him seek comfort with Dr Buell.\* For it is typical of this author's well-contrived record of Poland's development that the details of this small but dis-comforting phenomenon are statistically explained as one of the steps in the story of industrial development. The aberration has an economic motive.

The post-1920 Poland of 35 million people, the fifth largest State in Europe, with its natural increase of population the highest and therefore its people the youngest, is full of these economic growing pains. They mark the capital malnutrition from which young countries suffer: and this country, if old in history, is very young in development. It may be true that Poland has a large economic potential but the fact remains, as Dr Buell says, that "the productivity of the country is not increasing as rapidly as the population." Those who wish to estimate how far this lag in development is inevitable, and how far it is the fault of Polish administration, will find much useful guidance in this book, although it is a pity that in some directions, such as that of financial policy, the author

\* "Poland: Key to Europe." By R. L. Buell. Jonathan Cape. 358 pages, with map. Price 10s. 6d.

The French Line is at your service when business or pleasure takes you to New York. A modern fleet, unexcelled for speed and reliability, offers you extreme luxury and faultless service—the best of France afloat in all things.

From Southampton

could not find more space for discussion. He has some interesting remarks to make on the trend towards cartels and monopolies; his judgments on their efficiency are temperate and interesting; and few will question his conclusion that

until the European situation becomes stabilised, the State will have to maintain a predominant authority over economic life, doing little more than combat the pressure of a rapidly increasing population on an already extremely low standard of living.

There may be small objection to this on economic grounds; but, at the same time, now that the British Government is about to make a loan to Poland, thought might profitably be directed towards improving the efficiency of Polish State management and of Polish financial policy.

When the immediate issues have been set aside, however, Poland's needs are more and more seen to demand a satisfaction far fuller than can be given by short-term palliatives. There is a danger, exemplified in the financial situation, that Western opinion will continue to underestimate, not only Poland's needs, but also the Poles' determination that these needs, in some way or other seldom clearly seen, shall be satisfied. The danger is the more apparent for the reason that Poland to-day, in the news for the first time for many years, is under a political obligation to make as little of her troubles as she publicly can. Guaranteed by Britain and France, and menaced by Germany, Poland is in no position to put forward claims for overseas living-space, for colonies in which her surplus peasants may live a little further from the starvation line than they can at home. Poland is in no condition to claim the right to deport Jews wholesale in the manner of Nazi Germany. Even if she judges herself to be of their number, she cannot now join the ranks of the Have-not Powers. But that is for the present: it is virtually certain, defeat in a future war aside, that her claims will come later.

Not least important in the factors which may decide our sympathy with Poland in a more normal and less tense situation is the composition of the Polish Government. Poland to-day is united under a system which differs from the military dictatorships of Germany and Italy only in that it has—the difference is fundamental—the voluntary consent of the Opposition parties. But this is not normal or lasting. Until lately the parties which form the mass of public opinion were critical and dissatisfied just as now they are silent because the Government's policy in this emergency is positive and unequivocal. The Opposition parties none the less exist for all their acquiescence, as the municipal elections of last December showed beyond any doubt; with a return to peaceful conditions their claims, too, will become vocal. It will be Poland's test of political maturity that the Government of to-day has the wisdom to pave the way for the Government which the people will ask for to-morrow. In the meantime, every effort at mutual understanding between Britain and Poland is to be welcomed—on our side of both the national effort which the Poles are making and the difficulties in the face of which they are making it. Dr Buell has contributed notably to the literature by which that understanding may be had.

## THE BUSINESS WORLD

### Defence Loans Policy

AFTER Sir John Simon's statement last week, no investor can harbour any illusion about the magnitude of the defence burden. Our energies towards preparedness come daily nearer fruition; it is now time for a financial effort as serious and determined as the industrial and administrative efforts of recent months. The scope of the problem is indeed enormous. Within three months of the Budget speech, the estimated cost of defence has been increased from £590.3 millions to £747.1 millions, a figure which is more than half the revised total of national expenditure, including loans, of £1,454 millions. In addition, a Supplementary Estimate for the Navy has still to be presented, and other Supplementaries will doubtless be required next spring.

In fact, Sir John Simon's statement last week is itself already old history, for with this week's Civil Supplementary, the amount to be borrowed for defence purposes will exceed £500 millions—the precise figure, on information so far published, is £502.4 millions—compared with a contemplated expenditure from loans of £342½ millions, when the Budget was framed. A financial task of such dimensions may stagger the market, or dumbfound it; and the response of the gilt-edged market during the past week suggests that investors have yet to come to grips with the problem of raising the money. War Loan, it is true, has fallen from 93½ at the time of the Chancellor's announcement last Thursday week to 92½, but 2½ per cent. National Defence Bonds, typical among the "shorts," have declined by only three-eighths of a point to 97½. The market is sensitive, but it is not dismayed.

How can these prodigious defence requirements be raised? Sir John Simon last week suggested that possibly £150 millions may be raised by the issue of Treasury Bills. This is a somewhat lower figure than certain private estimates, including that of *The Economist*, which on April 8th, this year, suggested the possibility of Treasury Bill borrowing up to £175 millions. But at that time, the tender bill issue was £136 millions lower than a year ago; to-day, the difference has been reduced to £74 millions. Nor is there any arbitrary standard by which borrowing by Bills may be regulated. But there is already scope, as we show on page 172, for an expansion of the bank's holdings of bills practically equivalent to the Chancellor's suggested total, and with suitable central bank policy, a greater volume of bills could, if necessary, be accommodated.

This point, and the ancillary point that borrowing by bills should precede any operation in the long-term market, have been plain for several months. The new problem, which the surprisingly high Supplementary Estimates of the past fortnight present to the market, is the scope of long-term borrowing. A total of £350 millions is plainly outside the ambit of any single operation. Indeed, the Chancellor's reference to support from "investors, large and small," shows that a widely-based appeal will be made to all sections of the public. Apart from securities specially designed to meet the needs of the small investor, suggested by the Chancellor's reference, there is scope for considerable ingenuity in tapping the various segments of the investment market itself. The presumption is that the Treasury will borrow "short," but there are degrees of shortness, each with an appeal to different financial needs. They may, perhaps, be typified by 2½ per cent. National Defence Bonds, with an average life of seven years, and a

gross redemption yield of £2 19s. 3d. per cent.; 2½ per cent. Conversion, which must, at present, be regarded as a ten-year stock, with a yield of £3 1s. per cent. to redemption; and 3 per cent. National Defence, with a minimum life of 15 and a maximum life of 19 years, which yields £3 10s. per cent. to redemption.

These are the broad classifications of choice, but the method of filling them raises a new set of problems. Will the loans be made for fixed amounts or marketed through a "tap"? There are certain objections to the latter course, though its advantages may be secured by using the public departments to assist the subscription of new loans. This was the principal means by which the Treasury obtained success for issues on stiff terms from 1932 onwards, until it revised its technique with the second Defence Loan in June last year. In this connection, it is fortunate that the Unemployment Assistance Fund, to quote only one example, is now obtaining income from a larger volume of employed persons than in 1937, while its liabilities are

rapidly declining each month. Yet the rôle which the public departments could play to-day is more restricted than it was, and the success of the process by which the Government acted, in effect, as its own underwriter, was really associated with falling interest rates. To-day the Treasury is in no condition to wait, once it has decided to raise defence money; and this fact suggests that nice calculations of the terms of defence borrowing are likely to be subordinate to the need for the successful raising of funds, even if, in the process, some tendency towards higher interest rates becomes evident.

The next problem concerns the timing of the defence issues. The controversy whether the Treasury must pay traditional respect to the holiday season is hardly worth pursuing, though there is no valid reason why the authorities, if they decide that the moment is propitious, should not undertake the first part of their task before the end of this month, particularly if they were to spread the calls on any new loan well over the holiday season. But, clearly, the major part of the borrowing must, and should, wait until the early autumn. A rough calculation of financial needs for defence suggests that the second quarter of the fiscal year may call for about £165 millions, the third quarter for £200 millions and the fourth quarter for £258 millions. The current quarter is normally a low revenue quarter, and it is conceivable that an additional sum of the order of £130 millions may need to be borrowed on Treasury bills for this reason. This figure makes allowance for a normal movement of revenue and of consolidated fund and civil expenditure during the quarter. But it would leave a very small margin in hand for the authorities if they were to adhere to the suggested maximum of £150 millions for increased bill borrowing.

The conclusion, therefore, is that, even if the authorities hold their hand before August, they will have to act promptly immediately after the holiday month. And it would be idle to pretend that success will depend wholly on the normal calculus of interest rates. Persuasion, propaganda and informal control are the only available democratic equivalents of authoritarian methods of forced saving and capital market regulation. So far, official opinion has been curiously slow to grasp the broader economic im-

plications of our defence programme. Regard for the susceptibilities of industrial confidence, which provided a keynote in the Budget, only three months ago, seems almost irrelevant in the present armaments boom. The general level of investment activity is already determined by arms expenditure, and its effects are rapidly spreading through the entire range of consumption goods trades.

"Inflation" is a word which means all things to all men. But there are clear symptoms of an inflationary process now at work. Taking maximum employment as a measure, the critical point is probably less than six months away. Using the alternative criterion of national savings—which, even allowing for the effects of the "multiplier," can hardly exceed £500 millions, and may be £25 millions below that figure—defence borrowing will absorb the whole total, without any allowance for the needs of industry, net building society repayments and other items which do not flow back, more or less directly, to the gilt-edged market. Including capital outlay on civil defence not undertaken by the Government, and for credits exceeding £60 millions to our allies, it becomes evident that the normal equation between savings and investment will have to be assisted by some expansionist tendency, in the absence of thorough-going capital market control.

The authorities thus have a task which will need all their finesse in maintaining comfortable credit conditions for the banking system and at the same time obtaining their long-term needs. The former task will certainly assist the latter, but over-hasty long-term borrowing would almost certainly reduce the part which the banks can play in supporting the necessary volume of bills. This point has been so frequently emphasised that it may be taken as self-evident to the authorities. On the other hand, if the traditional holiday gap is conceded, the actual financial requirements of the Treasury will compel action immediately afterwards. It is on this argument that the possibility of a special short-dated issue this month, designed primarily for the money market, seems plausible. Its success would have a useful psychological effect for the later stages of public borrowing. And steps to build up a favourable atmosphere for defence loans have become an essential factor in financial preparedness.

## Stocks for War

THE Government, assisted by a willing public, is now busily marshalling our resources in preparation for an emergency. The aim underlying all these efforts is to bring both our striking and staying powers to the highest possible pitch. As we pointed out in *The Economist* of July 15th (pages 101-102), much has already been done; but a good deal remains undone. For example, the accumulation of substantial reserves of commodities which we must normally import should be high up on the agenda for preparedness. A substantial reserve of goods and raw materials, besides saving shipping space, would appreciably reduce the risk of a breakdown during the early months of an emergency; they can be acquired fairly quickly now and much more cheaply than in war. Both Germany and Italy have been importing and stocking raw materials to the limit of their financial capacity. What have we done?

The machinery for accumulating stocks has been set up. The Essential Commodities Reserves Act of June, 1938, gave to the Board of Trade powers to buy reserves of food, fodder for animals, fertilisers and petroleum, and these powers were considerably extended by the Ministry of Supply Act. In addition, the Service Departments have powers to acquire stores for their own requirements. At present the Food (Defence Plans) Department under Mr W. S. Morrison can buy food and fodder; the Mines Department of the Board of Trade can buy petroleum; the Ministry of Supply can buy fertilisers and any other commodities which would be vital to the nation's war effort.

Our total imports of food, drink and tobacco, raw materials, and non-ferrous metals and oils classified as manufactures were £849 millions in 1937 and £764

millions in 1938. Against this the Government has spent £7½ millions on wheat, sugar and whale oil and about £1 million on petroleum and fertilisers during the year ended March, 1939, and it has budgeted for a further outlay of £5 millions in the current financial year. In addition, the Service Departments have bought stores for their own requirements, while manufacturers and consumers have been exhorted to increase their stocks. Clearly, the accumulation of reserves against an emergency has not yet been taken very seriously, despite the fact that Sir Arthur Salter and other authorities have repeatedly drawn the Government's attention to their importance.

While complete information concerning the size of the stocks of individual commodities is not available, such data as are at our disposal show that the state of Britain's larder is far from reassuring. In the tables at the foot of page 171 are assembled such data as are available on some of the more important commodities which we have to import in large quantities. They show the consumption of individual commodities in 1934-36 as well as in the past two years, together with imports in recent years and changes in stocks. In the case of the majority of commodities, consumption had to be calculated on the basis of home production plus imports, without taking into account changes in stocks. Again, the figures for stocks are not claimed to be complete; they exclude supplies in the hands of consumers and relate, in most cases, to stocks in public warehouses, at ports or in bond. But on the probably reasonable assumption that the proportion of stocks held in public warehouses and by consumers has not undergone any significant change in the past year, the figures should

give a fair indication of the trend. The stock figures, moreover, should be read in conjunction with changes in imports, which provide an additional, if rough, guide to variations in our reserves.

The results of such a survey do not show an encouraging position. In the case of most commodities, stocks are very small compared with annual consumption, though it must be remembered that they exclude supplies in the hands of consumers. The stocks of many commodities, moreover, have shown a decline in the past year, and there

\* Imports of all wood and timber in 1937 were 10,067,000 tons.

is no evidence that those reductions have been offset by a corresponding increase of supplies in the hands of consumers.

Port stocks of wheat have been substantially increased since 1937, for this cereal is one of the commodities of which the Government has purchased substantial quantities. Further purchases were announced by Mr W. S. Morrison in the House of Commons on July 19th. Nevertheless, as the import figures show, the intake of wheat in 1938 was no greater than in 1936 and, in the first half of the current year, was only slightly bigger than in the corresponding period in 1938. For maize we are entirely dependent on supplies from abroad; yet imports were sharply reduced between 1937 and 1938 and again in the first half of this year, while present port stocks are actually smaller than two years ago. On the other hand, our imports of oilseeds and

molasses have been increased, and as consumption has probably not risen proportionately our reserves of these commodities must be bigger than a year ago. Stocks of bonded sugar are substantially smaller than two years ago, though imports have shown a rising trend. The intake of butter, as the stocks in cold storage show, on the other hand, has remained stationary, but reserves of tea appear to be ample.

Both imports and stocks of wool have shown an increase; those of cotton are appreciably smaller. Imports of iron ore have been reduced, and, in view of the expansion of activity in the iron and steel industry, stocks cannot be very substantial. Imports of petroleum and products rose between 1937 and 1938, but there was no further increase in the first half of this year, though consumption has probably tended to expand owing to the increase in business activity and the number of motor vehicles in use. The official import figures, it should be noted, do not, however, include the oil brought to this country in the Admiralty's own tankers. Rubber stocks are substantially down compared with a year ago, and imports in the first six months of this year were not much more than one-half of what they were in the corresponding period in 1938. So far as non-ferrous metals are concerned, stocks of tin and lead are heavier than a year ago, but those of copper and spelter are slightly smaller. In timber, imports were reduced sharply between 1937 and 1938, but the intake in January-June this year showed an increase, and stocks of soft wood are estimated at 2½ to 3 million tons, or about six months' consumption.

The impression left by an examination of available statistics confirms the suspicion that the task of accumulating reserves of foodstuffs and raw materials has not yet been completed. While it is impossible, in the absence of complete data, to calculate how many months' consumption existing stocks represent, the evidence suggests that in many cases reserves have actually dwindled. Mr W. S. Morrison's statement in the House of Commons on July 12th that trade stocks and Government reserves of nearly all essential raw materials are more than adequate for three months' consumption on the basis of estimated war requirements, shows that the Government is still not fully alive to the importance of large reserves as a deterrent against attack and as a source of strength in war. It is impossible to say certainly whether the wastage of shipping in war would be greater or smaller than in 1914-18. It would be the height of folly to assume that it will be smaller or even the same. It is to be hoped that the Government will lose no time in filling what appears to be a wide gap in our defences. Moreover, in contrast to armaments, raw materials can serve civil as well as military needs, and, as present prices are comparatively low, the Government would do well to consider investing a considerable sum—Sir Arthur Salter's figure is £100-£150 millions—on strengthening our resources.

### CONSUMPTION AND STOCKS IN U.K. (In thousands of tons.)

# Finance and Banking

**Re-armament and Treasury Bills.**—The prospect of having to find a home for some £150,000,000 of additional Treasury bills is causing no qualms in discount market and banking circles. On the contrary, the reaction to the Chancellor's announcement has been one of disappointment at the "modest" proportion of the total borrowing which is to be found by increasing the floating debt. The best indication of this reception of the news was provided by the fall in the Treasury bill rate from 16s. 8d. to 15s. 8d. per cent. on the morrow of the Chancellor's statement and by the weak undertone of discount rates over the past week. The losses of gold by the Exchange Equalisation Account, and the corresponding reduction in the available volume of Treasury Bills, had created a deficiency of liquid assets which must be made good by further short-term borrowing before the banking system can be expected to take the active part required of it in making the issue of longer-term stock a success. In the twelve months to March, 1939, the Exchange Account lost 39,430,000 ounces of gold or, say, £285,000,000. Over the same period clearing bank deposits fell by £113,100,000 and their bills discounted and short loans by £69,100,000. To complete the statistical picture for this period of twelve months it should be added that the issue of Treasury bills issued by tender had fallen by £125,000,000, while the tap bills had risen by £205,900,000. By April of this year, therefore, the banking system, owing to this exodus of foreign funds and the corresponding contraction of Treasury bills, was suffering from a genuine dearth of liquid assets, and the clearing banks' ratio of such assets to deposits had fallen to under 29 per cent. That position has, however, been largely corrected—not by a return of gold into the Exchange Account, but by financing the much increased current deficit by Treasury bill borrowing. Since April the clearing bank deposits have risen by £64,000,000 and their combined holding of bills and short loans by £68,900,000, while their liquidity ratio has now recovered to 31.7 per cent. Over the same period tender Treasury bills have risen by £107,000,000 and tap bills by £52,000,000.

**Scope for Expansion.**—On this evidence it is clear that the liquidity position of the clearing banks has already returned to normal. But this does not mean that the scope for absorption of additional bills by the banking system has been exhausted. The June clearing bank returns showed a cash ratio of 10.6 per cent. Assuming the banks to be prepared to let this ratio fall to 10 per cent.—and given the increase in other liquid assets they might well be ready to see it fall even below this conventional figure—there should on the basis of the volume of bank cash of £235,213,000 be room for a further expansion of £133 millions in Treasury bills and/or short loans and a corresponding increase in deposits. As the Exchequer returns show that £25½ millions of expenditure for the current financial year has already been allocated to loan account, this leaves the balance of approximately £125 millions of Treasury bill borrowing within the scope of the present credit structure. One should, however, beware of these direct calculations. It is evident that loan expenditure on the proposed scale cannot be isolated in its effect on the banking structure to the item of bills discounted or the related total of short loans. Even without the "multiplier" bank advances would feel some impact from the defence expenditure. Even if the net expansion in the Treasury bill indebtedness—after the funding has been completed—is to be limited this year to £150 millions, it looks as though some expansion in bank cash and in the total of bank deposits will have to occur. And it is more than questionable whether the expansion in the floating debt can be limited to this figure. The Supplementaries introduced after the Chancellor's statement have already carried the

projected loan expenditure to well over the £500 million mark, and in addition there are the credits for £60 millions, excluding interest, to our allies to be financed ultimately by further expansion of the floating debt in this country. The prospect, therefore, favours some general expansion of the credit structure. In judging the size of this expansion and its inflationary potential we must beware of making unconditional comparisons with the totals of twelve or eighteen months ago. Since then we have lost the best part of £300 millions of foreign funds. If the deflationary effect of that efflux on bank deposits and banking assets is countered, as at present, by uncovered Government expenditure the process can hardly be regarded as one of normal reflation.

**June Clearing Bank Averages.**—Special interest attaches to the clearing bank figures this month in view of the prospect of an expansion in the tender issue of Treasury bills. The rise in discounts has already been referred to. Of the other items, the small fall in advances is disappointing, for the industrial recovery ought by this time

(In £ millions)

to be making itself felt in the demand for bank credit; advances, however, are only £7.3 millions higher than a year ago.

**Chinese Dollar in Retreat.**—Within the space of little more than a month the Anglo-Chinese Stabilisation Fund has, for the second time, been obliged to unpeg the Chinese dollar rate and let the exchange find a lower level. After its break from 8½d. in the first week of June the dollar remained stable at 6½d. until Tuesday this week, when the authorities in charge of the Fund were again forced to let it slide to around 5d., followed by a further setback to 4½d. on Thursday. This sudden withdrawal of the Fund from the market followed immediately and significantly on the application of the new exchange regulations in Northern China, by which the whole of the foreign exchange proceeds of export trade from this area now flows into Japanese-controlled channels. Shanghai's trade balance has been going from bad to worse this year owing largely to this diversion of the proceeds of export trade into the accounts of one or other of the puppet central banks, and for the first five months of the year the deficit had reached the equivalent of over £11 millions. The move in Northern China promises an accentuation of this tendency. Moreover, the export of capital from China has been proceeding on a moderate but persistent scale, despite the "wei-wah" currency regulations which severely restricted withdrawals of funds from Chinese banks. The exodus of funds may well have derived some stimulus from the opening of the Tokyo talks and the fears among many Chinese that they may lead to British concessions on

issues far beyond those immediately raised by the Tientsin blockade. Whatever the explanation, it is evident that pressure on the Stabilisation Fund compelled another downward adjustment of the exchange rate. It is interesting to note that the "H.H." dollar circulated by the Japanese-controlled authorities in the Yangtse basin, and which on its recent introduction was pegged to the National dollar, has now abandoned that link and is being pegged—rather nominally it is true—at 6d. Whether the Chinese dollar is to depreciate further must largely depend on the willingness of the United States and Great Britain to reinforce the Stabilisation Fund or other reserves of the Chinese Government by the grant of further credits. The dislocation of Chinese export trade is likely to increase and not diminish in the immediate future, while China's needs of imported materials must increase. Under such circumstances, the careful control of the local paper currency and the confidence and purchasing power which that currency continues to command have ceased to be fundamental determinants of the Chinese dollar's exchange value.

**Silver's Precarious Balance.**—After its recent tribulations, the silver market has found temporary equilibrium at about 16½d., which was the spot price every day until Thursday of this week. This balance, however, has every appearance of extreme precariousness. The American export price admittedly remains steady at 35 cents, and well-informed advices from the United States suggest that the quotation will probably remain at this level unless the United States Treasury is provoked into making a further downward change by the behaviour of the sterling price for the metal. At 16½d., the sterling price is at a premium not only on the shipping parity to the United States but on the straight dollar parity. This is due to the persistence of Indian buying, which has been stimulated to an extraordinary degree by the recent fall in the price of the metal. The Indian ryot judges the value of silver not in terms of American silver policy, of which he has never heard and which in any case he would fail to understand, but by an instinctive appreciation which comes to him as part of India's long traditional use of silver. At the present price, silver seems cheap to him and consequently the up-country offtake from Bombay which should be dwindling to negligible proportions with the advent of the monsoon season has been running during the past week at the unusually high average of 250 to 300 bars a day. That offtake cannot last much longer, and when it disappears the main prop sustaining the sterling silver price over the dollar parity will have been withdrawn. Another factor, which is acting in the same direction, but from the supply side, is the attraction to London of some Mexican silver which is being sold here rather than in New York, owing to the premium included in the sterling price. The prospects, therefore, seem to favour some downward reaction in the sterling quotation,

following its recent recovery. The steadiness of the American price and the existence of a substantial bear account in silver on this side are, however, two factors which should prevent this reaction from developing into another rout.

**Credits for New Zealand.**—The unexpectedly protracted negotiations for the grant of additional credits to New Zealand have this week reached partial success. The United Kingdom Government has agreed in principle that the facilities of the Exports Credits Guarantee Department will be made available to finance imports of U.K. goods into New Zealand. Credits up to £5,000,000 will be available for purchase by the New Zealand Government for defence purposes, and a further £4,000,000 of short term credit facilities will be available for approved exports from this country to New Zealand importers other than the Government. It will be very important for the New Zealand exchange position to know whether the £4,000,000 of private credits will be available for the financing of goods already ordered or whether they will only apply to transactions still to be initiated. If the latter is the case, the next few weeks may see the development of an uncomfortably tight situation in the New Zealand exchange position. The negotiations connected with the maturity of £17,000,000 New Zealand stock on January 1st next are proceeding satisfactorily and may be said to have virtually reached a successful conclusion.

**New York Bank Statements.**—The intensification of the flow of refugee money to the United States since last summer is well illustrated in the June 30th statements of the Chase National Bank and the National City Bank. As may be seen from the table, which gives the chief items of the statements, the deposits of both banks show a further big increase; and since their advances have fallen

| As at June 30          | Chase National 1938 | National City 1938 | Chase National 1939 | National City 1939 |
|------------------------|---------------------|--------------------|---------------------|--------------------|
|                        | (\$ millions)       |                    |                     |                    |
| Cash, etc.             | 801                 | 1,208              | 610                 | 825                |
| Government securities  | 627                 | 835                | 529                 | 626                |
| Loans, discounts, etc. | 654                 | 575                | 525                 | 488                |
| Deposits               | 2,152               | 2,696              | 1,761               | 2,063              |

off, they have been hard put to it to find any outlet for their funds. As a result, their holdings of Government securities, which last year were approximately equal to loans and discounts, have now well outstripped them. The banks' cash, too, shows a big increase; the cash items of the Chase National are equal to about 44 per cent. of the deposits, while for the National City the percentage is 40. Both banks remain, therefore, in an abnormally liquid position.

### The Money Market

\* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

finance re-armament. Total applications were again smaller at £63.3 millions, and the market syndicate, which raised its bid by 3d. to £99 16s., secured an allotment quota of 51 per cent. against 44 per cent. There was no immediate fall in other discount rates, but a somewhat easier tendency set in when the result of the tenders for the four months' Northern Ireland Treasury Bills became known. The amount on offer was £600,000 and the applications totalled £4.5 millions. The minimum price accepted was £99 15s. 2d., equivalent to a discount rate of 14s. 8.42d., which, all things considered, is held to be a very fine rate. Special purchases of bills to relieve any possible stringency resulting from the fall in bankers' deposits last week have pro-

vided the main feature of the discount market. As a consequence, although bond money has been in good demand, it is still available at ¾-¾ per cent.

### Foreign Exchanges

APART from the Chinese dollar, which is discussed in a Finance Note, chief interest this week has been centred in the guilder. The improvement noted at the end of last week has been maintained, and, except for a reaction on Wednesday, when at one time selling from Amsterdam raised the rate to 8.78½ fl., the quotation has moved in favour of the guilder. On Thursday afternoon the

# Investment

**Markets and Defence Borrowing.**—The time-table for defence borrowing has formed the staple of market discussion this week. As we show in a leading article on page 169, the reaction of the gilt-edged market to the disclosure that defence borrowing will absorb more than £500 millions this year has been relatively moderate. In fact, the market's preoccupation seems mainly to be whether a loan is imminent, rather than the global burden of the borrowing programme upon the capital market and its repercussions on Britain's economic position. The Sudan Government issue this week has at least suggested that, since the authorities are still prepared to admit outside trustee borrowers, the probabilities are rather against a public issue before the holiday season. Yet it would be premature to dismiss the possibility (discussed on page 170) that a special issue designed to appeal to the money market might be offered within the next fortnight. For a brief space this week it seemed that the equity markets, at long last, had drawn the obvious moral from the prodigious level of loan expenditure. Wall Street, admittedly, had pointed the way for London with a startling five-point rise on Monday, accompanied by a turnover of 1½ million shares. But London's response was not merely automatic, although it made due provision for the factor which had so greatly impressed Wall Street—the prospect for a negotiated settlement of the Danzig question. Yet the rise, which was not assisted by any cordial expansion in business, lost its impetus in mid-week, partly on President Roosevelt's inability to carry Congress with him on the revision of neutrality legislation. Basically, however, the instinct of the market this week has been sound; it has reduced quotations for gilt-edged stocks more nearly to fit the magnitude of defence borrowing; and it has been more inclined than for many weeks past to consider the claims of equities. Even granted the present relaxation of political tension, that is a risk-laden enterprise; but it is one which finds reasonable economic justification at present.

**Czech Assets and Bond Movements.**—It was announced in the House of Commons last week that after the Parliamentary recess a scheme would be drawn up for the disposal of Czecho-Slovakian assets in this country which

are estopped under the Czecho-Slovakia (Restriction on Banking Accounts) Act of last autumn. In addition to claims of British holders, the scheme is apparently to provide for repayment to the Treasury of the £6 millions advanced to the former Czech government, and for assistance to refugees from the unexpended part of this country's £4 millions gift. The important question whether the Government's claims will rank *pari passu* with other creditors, or in priority, has not been explicitly answered, despite a further request for information in the House. If the British Government makes a first claim for £6 millions and for further sums paid to refugees (of which £2½ millions is covered in a Supplementary estimate this week) out of £10 millions which were originally believed to comprise a free gift, the outlook for other creditors is considerably affected. The net total of Czech assets in London published early in June was about £16 millions, from which claims on bank balances totalled £3½ millions, and on bonds (face value) £2½ millions. Czech 8 per cent. bonds rose by 13 points to 64 at the end of last week, on the somewhat premature assumption that repayment might be effected under the scheme. Second thoughts, however, have been more cautious, and in mid-week the bonds lost 9 points at 58. Prague 7½ per cent. bonds, which also enjoyed an initial jump of 9 points to 48, have advanced further to 50, on the payment of the May coupon. These movements, however, flatter the volume of business passing in either direction.

**Roumanian and Brazilian Bonds.**—The coming into force last Monday of the new Anglo-Roumanian payments agreement raises again the question of service on Roumanian bonds. The allocation of part of the clearing funds to the service of the bonds is to be determined "in accordance with detailed arrangements made or to be made between the Roumanian Government and the Council of Foreign Bondholders." While the agreement does not itself deal with coupon payments, it re-defines the class of holders which the detailed scheme will affect. Hitherto, bond service through the clearing has been made available only on holdings in British hands as at May 4, 1936. The new agreement, however, brings within this definition, and thus within the scope of the clearing, not only U.K.

rate was quoted at 8.74½ fl., compared with 8.79½ fl. last Saturday. The forward guilder has also improved. The discount on the three months' rate has given way to a small premium of ½ c. The sterling-dollar rate moved strongly in favour of the pound on Tuesday, on rumours of a settlement of the Danzig question, and closed at 4.68½, a rise of ½ c. on the day. There was a reaction the following day, however, and on Thursday afternoon the rate was back to 4.68½. The forward premiums were then quoted at ½-¾ c. for one month and 1½-2 c. for three months.

## The Bullion Market

THERE has been a revival of gold hoarding this week, orders from the Continent accounting for the greater part of the turnover each day. As the Exchange Account has been an unwilling seller, and very little other gold has been offered, buyers have been fairly severely rationed. The Customs returns

show the export of nearly £8½ millions of gold to the U.S.A. this week, but by far the greater part of this is official gold as arbitrage business has been very small.

## The Bank Return

THE note circulation shows an expected small contraction this week, but again

funds are immobilised in public deposits. Government arms expenditure at the moment seems to be proceeding slowly, while tax moneys are coming in.

fast. It is expected, however, that the position will be rectified in a week or so. In the meantime, the special purchases of September and October bills, which have provided the main feature of the money market this week, have relieved the situation; and bankers' deposits, though still low, are £8.4 millions higher on the week, the counterpart of the special bill purchases being reflected in the increases in Government and other securities.

residents, but any holder of the following sterling issues: 4½ per cent. Consolidation (Funding) Loan 1934 issued in London by the Council of Foreign Bondholders; 4 per cent. External Loan, 1922; 7 per cent. Monopolies Loan, 1929 (sterling issue); and sterling bonds of the 4½ per cent. Loan of 1913. It is to be presumed that a statement will be made regarding the possible effect of the new agreement on the Roumanian debt service. Steps towards a Brazilian debt arrangement are indicated in the announcement that the Brazilian Government would welcome a representative of British bondholders to discuss the position with the Minister of Finance. Similar invitations, it is believed, were extended to American and French holders, and the Council of Foreign Bondholders have announced their acceptance of the Brazilian Government's invitation.

**Unit Trust Escrow Funds.**—The question of the adequacy of the escrow funds which was raised by *The Economist* (though not answered publicly) in connection with the transfer of certain trusts of the British General group to new management, has been raised in the House of Commons this week. Sir Joseph Leech asked whether, in view of recent disclosures concerning the affairs of British General Fixed Trust, regulations under the Prevention of Fraud (Investments) Act would be framed so that a unit trust would not be recognised unless the escrow fund was adequate for the future service of the trust and was retained in the hands of the trustees. Mr Oliver Stanley's reply makes it clear that under Section 16 of the Act the Board will have to be satisfied, before authorising any unit trust scheme, that the trust deed provides for the establishment of a fund to meet administration expenses and for regulating the application of that fund. Consequently the Board would need to be satisfied that the service of the trust was safeguarded in the manner suggested by Sir Joseph Leech. The minimum limits of safe provision are now fully established in unit trust practice; hence the warning implicit in Mr Stanley's answer should be heeded by any unit trust to which it might apply, and it will be welcomed by unit holders at large.

## Company Notes

**Stewarts and Lloyds-Stanton Merger Proposals.**—The announcement of a provisional offer from Stewarts and Lloyds to Stanton Ironworks stockholders on Wednesday this week was completely unexpected. Without doubt, it heralds one of the most far-reaching changes in the British iron and steel industry for many years. Briefly, the terms provide, first, for the exchange of £1 6 per cent. first preference stock of Stewarts and Lloyds for £1 of 6 per cent. preference stock of Stanton Ironworks. To this there can be no possible exception. Secondly, ordinary stockholders will be offered £1 deferred stock of Stewarts and Lloyds, together with 12s. 6d. to be satisfied partly in 5 per cent. third preference stock, taken at 22s. per £1 unit, compared with a market price of 22s. 6d., and partly in cash. These terms were naturally regarded as distinctly generous for Stanton Ironworks ordinary stock, which, after having advanced significantly before the announcement, jumped by 5s. 9d. to 52s. 6d. on Wednesday. Stewarts and Lloyds deferred, on the other hand, declined by 2s. 3d. to 42s. 3d., leaving a margin of 10s. 3d. between current prices, compared with a maximum differential of slightly less than 12s. 6d., allowing for expenses of exchange. On the eve of the offer, Stanton ordinary stock provided a yield of £4 5s. 7d. per cent., compared with £5 12s. 5d. per cent. for Stewarts and Lloyds deferred. That difference in return is attributable to the manifest earnings and dividend stability of Stanton Ironworks through good years and bad (coupled, perhaps, with a reasonable expectation of some further capital bonus in future years) and to the view that Stewarts and Lloyds profit record in recent years suggests greater liability of earnings

to cyclical fluctuations. The latter is, to some extent, a valid point, but it should not be overstressed in view of the power of Corby to put the company on an unprecedented earnings plane during the past two years. Stanton Ironworks ordinary stockholders will, therefore, be exchanging a stable holding, which has paid 10 per cent. for some years (with a margin of 16.6 per cent. for 1938-39) for a progressive equity which paid 12½ per cent. for 1937 and 1938, covered with earnings margins of 15.1 per cent. and 13.5 per cent. respectively. In addition, they may count on a yield of approximately 4½ per cent. from the Stewarts and Lloyds third preference stock, and, say, a similar return upon the cash portion of the consideration. Compared with their dividend yield before the offer, of 4.28 per cent. for Stanton, the terms are equivalent roughly to a return of 6.55 per cent.

**The Basis of the Merger.**—Such a relatively favourable offer suggests that Stewarts and Lloyds are anxious to encourage acceptance of their proposals. It is readily to be understood that the directors of Stanton Ironworks should have insisted on satisfactory payment; but the essential fact is that such insistence has been satisfied by a board whose financial acumen is widely appreciated. It would seem that competition between the two groups has been growing. Stanton are the leading producers of spun iron pipes, which compete at many points with the steel tube products of Stewarts and Lloyds. If the merger is approved, therefore, the home market in tubes and pipes will be almost completely integrated, apart from non-competitive concrete pipes. It is, perhaps, doubtful if collaboration between the two groups will proceed to the point of Stanton's supplying pig-iron to the Corby plants, owing to technical difficulties which are involved. But substantial fruits would result from the merger without such technical integration. Stanton Ironworks stockholders may perhaps feel that some advance indication of the negotiations might reasonably have been given, and the sharp rise in the ordinary stock from 43s. 9d. to 46s. 9d. during the week before the announcement was made has attracted some comment. But, in general, the scheme should commend itself without reservation.

**Commonwealth Group Inquiries.**—One of the principal points in the circular to Commonwealth Mining and Finance shareholders, issued at the end of last week, was the decision of the directors of eight companies in the group (Commonwealth Mining and Finance, Anglo-Australian Gold Development, Beryl Gold, Great Boulder Mining and Finance, Meekatharra Gold Mines, Murchison, North Kalgurl United and Southern Cross) to apply to the Board of Trade for an investigation of the companies' affairs under Section 135 of the Companies Act. Certain applications have already been filed this week, and it is understood, in addition, that the board of Great Boulder Proprietary has decided not to oppose the application of the "Grundt Committee" for the appointment of a Board of Trade inspector. Whether this procedure is ideally suited to the circumstances of the controversy—which is technically limited to the withdrawal of facilities for dealing in these shares on the Stock Exchange—is open to argument. For if the anxiety of the directors of the companies concerned is to satisfy shareholders regarding rumours and incorrect statements, the majestic progress of a Board of Trade investigation is hardly the most expeditious method, even granted the assurances of Mr de Bernales that all information which is required will be provided regarding any transaction in which the companies in London or Australia, in which Mr de Bernales or any of his family have been, or are, shareholders, have been interested. The difficulty, however, is that any shareholders' or private investigation might come to grief on personal issues, which an official investigation would at least avoid.

**The "Family" Companies.**—The fact that the memorandum circulated to Commonwealth Mining and Finance shareholders last week included copies of correspondence between the Stock Exchange Committee and the company's brokers, which raised questions regarding the interests of Mr de Bernales and his family in Australian Machinery and Investment Company (the principal vendor company for the majority of the issues) and referred to other companies, has directed attention to the cluster of "family" companies associated with the group. Australian Machinery and Investment was formed on December 19, 1924, with an issued share capital of £194,780. The latest list of shareholdings, as at June 22, 1939, shows that Mr de Bernales holds 500 shares of £1, Mrs D. I. Faye 38,947 shares, Mrs B. M. Trethowan 23,890 shares, while four companies, London Arcade, Ltd., Ascot Estates, Ltd., Kook-a-Burra Investments and Austmac Investments, together hold 131,436 shares. These holdings apparently correspond to transfers of shares from members of Mr de Bernales' family. The shares of Kook-a-Burra Investments are now held by Australian Machinery and Investment. Austmac Investments has an issued capital of £837,717, largely held by Mrs Helen F. de Bernales and Mrs E. M. Trethowan. According to inquiries made by *The Financial News* in Perth, London Arcade has an issued capital of £A165,070, of which Australian Machinery and Investment holds £A165,066, while the latter concern also holds £A490,196 of a total issued capital of £A490,200 of Ascot Estates. The memorandum issued last week included a statement by Mr de Bernales regarding the formation of Australian Machinery and Investment as a family investment company, declaring that, while he was entitled to two-thirds of any dividend declared, no payments had been made in the history of the company. Moreover, Mr de Bernales' directors' remuneration had always been waived. The statement indicated that neither Mr de Bernales nor Australian Machinery and Investment had ever been a shareholder in Mercer's Trust. Control, in fact, appears to reside in Austmac Investments.

**Bristol Aeroplane Activity.**—Capacity production in the aircraft industry has not brought massive increases in earnings and dividends for shareholders. Mr W. G. Verdon Smith's speech at the Bristol Aeroplane meeting this week explained some of the reasons, which have, in fact, been apparent to long-sighted investors for some months. The authorities' control over contract prices is close—witness the new agreement for fixing the prices of aircraft and engines which has replaced the McIntock agreement, and takes account of the enormous expansion in orders, the extension of sub-contracting, and provision of capital by the Government. In addition, depreciation is necessarily heavy; N.D.C. and A.P.D. have increased the incidence of taxation; and the aircraft companies must necessarily anticipate the day when the present scale of demand subsides. Perhaps this latter anticipation puts less than due stress on the replacement demand for military aircraft, for reasons of obsolescence alone. But the combination of all the factors together does not suggest a rapidly increasing return for aircraft shareholders. The present yield basis of Bristol Aeroplane, assuming a 15 per cent. dividend, is £7 17s. per cent. It is a satisfactory return, in view of the chairman's expectation that the current year's profits should not be less than in 1938, but it does not suggest great scope for any considerable appreciation in the shares.

**Furness, Withy and Shipping Prospects.**—In the past twelve months, shipping companies have experienced

a severe fall in profits. The trend of freight rates has varied considerably between different routes, but they have fluctuated, generally, around a low level. The reduction of over £115,000 from £620,681 to £505,121 in the total profits of Furness, Withy and Co.—whose functions combine those of a holding and an operating company—is not surprising, though some disappointment may be felt that the latest total is lower than that of 1936-37. In spite of a reduction of £50,000 in depreciation provision to £300,000, the lower dividend of 4 per cent., against 5 per cent., is short-earned by one-half per cent., equivalent to nearly £25,000, which is met by a draft on the carry-forward. Shareholders, who are already acquainted with the difficulties of the shipping industry last year, will find no extended comment in the Furness, Withy report, beyond a reference to political unrest and unsettled conditions of international trade. The information that can be obtained from the profit and loss accounts of the past three years is set out below:—

|                            | Years ended April 30, |          |          |
|----------------------------|-----------------------|----------|----------|
|                            | 1937                  | 1938     | 1939     |
| Profit .....               | £544,744              | £620,681 | £505,121 |
| Depreciation .....         | 350,000               | 350,000  | 300,000  |
| Preference dividends ..... | 56,719                | 55,312   | 54,375   |
| Ordinary stock—            |                       |          |          |
| Earned .....               | 138,025               | 215,369  | 150,746  |
| Paid .....                 | 135,000               | 217,500  | 174,000  |
| Earned % .....             | 3.1                   | 5.0      | 3.5      |
| Paid % .....               | 3                     | 5        | 4        |
| Carry forward .....        | 213,812               | 211,682  | 188,428  |

The balance sheet shows few substantial changes, apart from an apparent transfer of £500,000 from general to investment reserve. Investments in shipping and other subsidiaries are little changed at £5,637,671, and comprise nearly half the balance sheet total. Freight rates and cargoes are still sub-normal, but the company should derive some benefit from the Government's shipping assistance measures. At the current price of 16s. 7½d., however, Furness, Withy £1 ordinary shares must be reckoned well priced, in view of their yield of £4 16s. 2d. per cent.

**W. and T. Avery Progress.**—This company's profits record over the last cycle amply illustrates the virtues of steady expansion of a well-established trade. Profits, after taxation, for the year ended March 31st show an increase from £212,745 to £221,367, equivalent to 4.1 per cent. Depreciation absorbs £46,019 against £41,392, but other allocations for fees, pension fund and reserve are unchanged on the year. The dividend on the ordinary shares is maintained at the traditional rate of 15 per cent., and £70,891 is carried forward compared with £65,149 brought in. An analysis of the accounts for the last three years is given below:—

|                             | Years to March 31, |          |          |
|-----------------------------|--------------------|----------|----------|
|                             | 1937               | 1938     | 1939     |
| Profits and dividends ..... | £209,195           | £212,745 | £221,367 |
| Depreciation .....          | 32,550             | 41,392   | 46,019   |
| Directors' fees, etc. ....  | 10,000             | 10,000   | 10,000   |
| Pensions fund .....         | 10,000             | 10,000   | 10,000   |
| Preference dividends .....  | 11,349             | 11,257   | 10,825   |
| Ordinary shares:—           |                    |          |          |
| Earned .....                | 145,296            | 140,096  | 144,523  |
| Paid .....                  | 97,608             | 95,027   | 93,782   |
| Earned % .....              | 22.3               | 22.1     | 23.1     |
| Paid % .....                | 15                 | 15       | 15       |
| To reserve .....            | 45,000             | 45,000   | 45,000   |
| Carry forward .....         | 65,080             | 65,149   | 70,891   |

The balance sheet reveals an entirely satisfactory position. Reserves for taxation and liability for creditors have increased from £521,496 to £575,102 while the general reserve will become £320,000. Freehold and leasehold properties now stand at £151,513 as compared with

£142,868. Shares in subsidiary and associate companies are virtually unchanged at £308,974, but advances have increased from £404,816 to £437,431. Cash holdings (excluding funds earmarked in the pensions fund) have increased from £65,617 to £149,533 while investments now stand at £392,604 due to a further £15,000 invested in municipal mortgages redeemable at par. The interests of the company and its subsidiaries in the capital equipment and general engineering industries are widely varied. While the company is probably not excluded from the indirect benefits of re-armament, it is one of the few in its class regarding which the defence aspect has not been stressed. Anticipations of continued progress on a solid civil basis are reflected in the yield of £4 5s. 9d. for the £1 ordinary shares, which now stand at 70s.

**Canadian Eagle Oil.**—Carrying the burden of a full year's payment under its guarantees to Mexican Eagle, Canadian Eagle has yet been able to maintain the 1938 rate of ordinary dividend at 6d. per share. The margin of earnings over distribution has been reduced, however, to under 1d. per ordinary share, but the main factor which has reduced the available balance (after paying 23.88 Canadian cents on each participating preference share) from £574,639 to £338,923 is general trading difficulties and not the Mexican Eagle guarantees. Eagle Oil and Shipping Company, the shipping and marketing subsidiary, suffered a reduction in trading profits to £782,655 against £1,050,307 (since prices of motor spirit fell more than costs), and distributed only 10 per cent. against 14 per cent. But sales volume was apparently slightly lower, for although purchases of oil

products rose from 24,586,010 barrels to 25,310,400 barrels in 1938, stocks increased by 1,500,000 barrels and the company borrowed some £750,000 from the parent company to finance higher refined stocks. The course of Canadian Eagle profits in the past three years is shown below:—

|                                 | Years ended December 31, |            |            |

| Paid (d. per share) .....       | 11                       | 6          | 6          |
| Carry forward .....             | 108,062                  | 379,494    | 425,210    |

Losses on oil trading are smaller than in 1937, but the Mexican Eagle guarantees absorbed £10,800, as before, for the participating preference shares and £58,401 for the first preference shares, against £5,624 in respect of two months in the preceding year. But for these Mexican Eagle payments, Canadian Eagle ordinary shares would have shown earnings of 11.7d. in 1937 and 8.3d. last year. In the balance sheet, the main change is a reduction from £3,679,913 to £676,088 in net floating assets which is offset by a rise from £8,356,229 to £10,258,782 in subsidiary interests and from £570,622 to £1,446,547 in exploration

outlays. The company suffers the dual disadvantage of a diversion of its trading activities from Mexico, and of guarantee payments to Mexican Eagle. But it has been relatively successful in finding a temporary solution of its trading problems, and prospects for 1939 appear somewhat brighter. At the current price of 7s. 7½d., Canadian Eagle yield £6 11s. per cent.

\* \* \*

**Scribbans Setback.**—The 6½ per cent. reduction in Scribbans and Company's profits for 1938-39 is not in itself an unsatisfactory result in view of the effect of the crisis last September upon the company's Christmas trade. Up to that point sales had been well maintained. Thus for the second year in succession, ordinary and deferred shareholders receive no dividends, for in 1937-38 increased production and selling costs were responsible for a substantial reduction in profits. The following table shows the company's results in the past three years:—

|                                      | Years ended April 30, |          |           |

\* Of which 75% for ordinary and 25% for deferred shares.  
† After £12,500 for Special Reserve (Civil Defence).

An increase of £7,184 is recorded in depreciation, interest, and taxation charges, but the directors have decided to transfer to a special reserve £12,500 to cover the estimated cost of civil defence work. Without this extra burden, earnings for the equity would represent £28,368, or 1.7 per cent. for the ordinary and 4.9 per cent. for the deferred shares. In recent years, substantial allocations were made from revenue to special development reserve (which will remain at £150,000), but for the past year no net addition is made, though the balance carried forward is further increased from £74,482 to £90,350. The balance sheet illustrates further the somewhat static position of the company's finances, and, out of total assets of

£2,340,614, goodwill still accounts for £1,117,549. The company's difficulties hardly appear to be of a purely cyclical character and it is difficult to define its prospects for the current year. It is equally difficult, therefore, to assess the comparative merits of the £1 ordinary shares, at 6s. 1½d., and of the 5s. deferred shares at 3s. 6d.

\* \* \*

**The Week's Company Profits.**—Rubber companies account for 20 out of the 62 concerns whose profits are totalled in our usual table on page 195. Net profits of these 62 companies amount to £3,073,000, compared with £3,546,000 for their preceding years—a fall of 13½ per cent. Aggregate net profits of 1,611 companies reporting in 1939 to date amount to £208,515,000, and show a reduction of 8 per cent., compared with earnings of £227,238,000 for the same companies a year earlier. The week's results are discussed in preceding Notes and on page 180 under the heading "Shorter Comments."

\* \* \*

**Company Meetings of the Week.**—Reports of company meetings will be found from page 185 of this issue. The chairman's speech at the *Bristol Aeroplane* meeting is discussed in a note on page 176. At the meeting of *United Dominions Trust*, Mr J. Gibson Jarvie declared there was no reason why progress should not be maintained. The company's position had been proved liquid and its organisation elastic over a year of political tension. Mr P. E. Hill informed shareholders of *Philip Hill and Partners* that the increased earning capacity (£363,215) of the company's holdings provided over half the total revenue. In the latest financial period, £20,000,000 was raised in the new issue market, and benefit should be reaped in due course from recent preparatory work. At the meeting of *Amalgamated Dental Company*, the chairman declared that the company's fundamental policy was to supply materials for the dental profession of the highest possible quality. The Rt. Hon. L. S. Amery, at the *Gold Exploration and Finance* meeting, dealt with the position of the Central Norseman Gold Corporation. Recent technical difficulties have been overcome and operations at greater depth, it is hoped, will justify the company's financial assistance. In his address to *Allied Bakeries* members, Mr W. Garfield Weston pointed out that the figure for goodwill represented less than three years' earnings. At the *McDougalls Trust* meeting, Mr Kenneth A. E. Moore reported that profit margins had been reduced, but that the quantity of flour sold had increased substantially.

## THE STOCK EXCHANGES

### London

#### SETTLING DAYS

TICKET      ACCOUNT  
AUGUST 1      AUGUST 3

AGAIN this week the behaviour of gilt-edged and industrial stocks have been in contrast. Gilt-edged are perhaps unduly sensitive to day-to-day sentiment, while industrials are inclined to harden. Changes, however, remain on a small scale, and the slow downward drift of fixed-interest securities has not been accompanied by selling pressure.

In the *gilt-edged market*, prices were subdued as the week started by further consideration of additional defence expenditure and the extent of borrowing as suggested by Sir John Simon. Perpetual stocks lost most, War Loan declining by ½, while dated stocks

were more resistant and did not in general shed more than ¼. On Tuesday better sentiment was apparent at first. News of the Sudan loan checked the improvement but in late dealings there was a rally, so that net changes on the day were small. Towards mid-week quotations were depressed afresh by the abandonment for the time being of neutrality legislation in the U.S.A., and by the further supplementary estimate for civil defence. One of the heaviest losers was Defence 3 per cent. Home corporations were dull and slightly lower to start with, but were better in mid-week. In the *Dominions group*, New Zealand stocks lost ground on Monday, and then rallied on the better progress of the loan discussions. Australian issues were weaker. Among European bonds, Czech bonds continued to be supported after the sharp rise at the end of the previous week, but

reacted sharply on profit-taking and on some switching into Prague 7½ per cent. bonds. The new payments agreement helped Roumanian issues. Brazilian stocks were irregular, while Chilean bonds rose on sinking fund purchases.

\*

In anticipation of the half-yearly dividend announcements *home rails* improved at first, with preference stocks in the lead. But there was a general reaction in mid-week on profit-taking, and the satisfactory increase in traffics was ignored. Argentine rails were firmer after an unpromising start.

The trend among *industrials* was rather similar to that of the previous week, with a tendency to better prices, but occasional irregularity and a certain amount of divergence as between different issues. The best day both for prices and the volume of business was

Tuesday, under the stimulus of Wall Street. Conditions otherwise were quiet. Moderate gains were general in the iron and steel section, despite a less confident tone in mid-week. Stanton Iron were well supported on the merger proposals and ended as much as 5s. 9d. up on Wednesday, but Stewarts and Lloyds receded. Earlier in the week, Stanton had advanced on provincial support, and then reacted on profit-taking. Coal shares gained on Tuesday. Electrical equipment issues remained firm but uninteresting. Motor shares were representative of the markets as a whole, and aircraft issues tended to harden.

Breweries went ahead on Tuesday under provincial support, while Guinness was particularly favoured on Wednesday in anticipation of the final dividend. Tobacco shares responded to the improved sentiment on Tuesday, but could not hold their gains later in the week. Rayon issues were in demand, Courtaulds being particularly strong on Tuesday and Thursday. Stores showed scattered modest gains on Tuesday, but later ruled dull with some selling by short-term operators in mid-week. Scribbans were well favoured in the provisions group. Among shipping shares, Clan Line led a rally on Tuesday, but quotations were scarcely tested later in the week. The miscellaneous group made a mixed showing on Monday but later responded to the improved sentiment elsewhere. Lever and Unilever, Dunlop, and Turner and Newall were well placed in the upward movement, though they lost ground on Wednesday.

\*

Oil shares, after marking time on Monday, went ahead on Wall Street's advance. Anglo-Iranian and "Shell" were in demand in a market short of supplies, while Trinidad issues were firmer, and interest developed in the speculative counters. The improvement was not held, however, for in mid-week the tone became uncertain and small losses resulted on balance. Rubber shares were also affected by the generally improved sentiment on Tuesday, but despite maintained interest in outside issues, leading shares came on offer in mid-week. Tea shares were quietly steady all the week, though current difficulties in Mincing Lane and the uncertain future of tea prices was a restraining influence.

In the *mining market*, Kaffirs opened with small movements on Monday, but on Tuesday Crowns, East Geduld and Sub Nigel led a general advance which was assisted by a shortage of shares and bear covering. Turnover dwindled on Wednesday and Thursday and prices became easier for choice. Developing mines were early adversely affected by the latest news from Klerksdorp Consolidated. Later, however, restraint was discarded and West Wits and Western Holdings led a general advance. In mid-week some of the gains were reduced, though East Daggafonteins went ahead against the general trend. Finance issues moved in sympathy with producing mines. Among West Africans, Ariston was a firm feature all the week, but other issues showed little changes. Under the lead of Rhodesian coppers, base metals showed some buoyancy on Monday and Tuesday, but failed to hold their gains in mid-week. Tin shares, however, maintained a firm appearance.

### ACTUARIES' INVESTMENT INDEX

Another moderate rise is shown by the Actuaries' index of 160 industrial equity prices, which stood at 61.1 on Tuesday, July 18, 1939, against 60.7 a week ago and 62.2 a month ago. The corresponding average yields are 5.66, 5.74 and 5.58 per cent. We give below a selection of the component indices:—

| Group (and No. of Securities) | Prices (Dec. 31, 1928 = 100) |               |               | Prices 1939 High |
|-------------------------------|------------------------------|---------------|---------------|------------------|
|                               | June 20, 1939                | July 11, 1939 | July 18, 1939 |                  |

### New York

ON Monday, Wall Street experienced its first boomlet for many a day. The Dow Jones industrial average rose almost five points to 142.58. Higher steel mill activity, higher company earnings in the June quarter, and rumours of improved business, especially in textiles,

generated the upswing which quickly became general under the lead of U.S. Steel, General Motors and Du Pont. Bonds were firm and active with speculative issues among the rails in demand. On Tuesday, the advance continued for a time, steel shares being particularly firm, but other issues were affected by mild profit-taking. In mid-week, the Administration's pronouncements on the international situation had an early depressing effect, but further good domestic news provided support for steel and aircraft shares. The rally spread to other sections of the market, and prices finished within a point of Tuesday's close. *Iron Age* estimates steel mill activity this week at 56.5 per cent. of capacity, compared with 50 per cent. last week.

## Capital Issues

THE relevance of this week's only issue—of £2,000,000 Sudan Government 3½ per cent. stock, 1954-59 at 97—to the defence borrowing time-table is examined on page 174. The stock offers a redemption yield (based on an average life of approximately 11 years allowing for the operation of the sinking fund) of £3 11s. 8d. per cent. against £3 6s. per cent. for Conversion 3 per cent. 1948-53. The differential, however, is not unreasonable, since the stock carries a Treasury guarantee and is not a full British Government obligation. It will be noted, incidentally, that the guarantee refers only to interest, and does not cover capital. The Sudan Government may be complimented on its achievement in repaying all but £2,000,000 of the £5,220,900 of 5½ per cent. guaranteed bonds, due on November 1st, from its accumulated funds.

## PUBLIC OFFER

**Sudan Government.**—Issue of £2,000,000 3½ per cent. guaranteed stock at 97. Interest guaranteed by U.K. Government. Redeemable at par by May, 1959, by drawings from 1940, or from 1954 on notice. Proceeds towards repayment of £5,220,900 5½ per cent. guaranteed bonds in November, 1939. Net liquid assets of Sudan Government, end 1938: £9,453,236. In 1938: Imports, £6,444,000; exports, £5,630,000.

## BY TENDER

**Northern Ireland Treasury Bills.**—The Government of Northern Ireland have accepted tenders for £600,000 Treasury Bills, dated July 20, 1939, repayable on November 17, 1939. Total tendered was £4,525,000, and minimum price accepted was £99 15s. 2d. (a discount rate of 14s. 8½d.).

## ISSUE TO SHAREHOLDERS ONLY

**East African Power and Lighting.**—Issue of 211,250 new 20s. ordinary shares at 21s. (one new share for four preference and/or ordinary shares held on June 30th). The new ordinary shares rank for any ordinary dividend for 1939.

## SHORTER COMMENTS

**Company Results of the Week.**—A moderate fall in profits is shown by CITY OF LONDON BREWERY AND INVESTMENT, whose dividend is reduced from 8 to 7 per cent. Satisfactory progress has been made by DAVY AND UNITED ENGINEERING, whose net profits total £92,578, against £63,457. HEAD, WRIGHTSON AND COMPANY show a considerable advance in total profits from £112,983 to £159,428, but owing to a heavy taxation provision, net profits and dividend remain unchanged. CROSSLEY BROTHERS total profits are a little lower, at £68,546, against £71,335. The balance sheet, however, indicates satisfactory progress in the business. The full report of HANDLEY PAGE, LTD., throws no additional light on the cause of reduced profits; total profits amount to £489,941, while general expenditure is £296,273, after deducting £30,000 income tax reserve no longer required. Satisfactory progress is shown by the latest accounts of W. BARRATT AND COMPANY, whose dividend is raised from 11 to 12 per cent. Reduced turnover, mainly in the foreign section of the business, is responsible for the fall in BURBERRYS, LTD., total profits from £102,302 to £65,464. Net profits of BRITISH STEAMSHIP INVESTMENT TRUST (68 per cent. of whose securities are in commercial and industrial companies) have fallen from £123,909 to £101,770, while the 6½ per cent. dividend is repeated. A somewhat severe setback is recorded by FALK, STADELMANN AND COMPANY, whose distribution is reduced from 10 per cent. to 6 per cent. As a result of general trade recession, particularly in the latter part of 1938-39, net profits of THOMAS BOLTON AND SONS are reduced to £125,608, compared with £166,847. One of the most remarkable improvements in recent weeks is the rise in GLOUCESTER RAILWAY CARRIAGE AND WAGON net profits

from £17,862 to £162,964, and the dividend is raised from 3 per cent. to 15 per cent. In varying degrees, rubber companies continue to show sharp falls in profits. The BERTAM CONSOLIDATED RUBBER report shows that proceeds of rubber amounted to £63,038, against £100,302; BUKIT MERTAJAM RUBBER pay 4 per cent. against 6 per cent.; EAST ASIATIC RUBBER net profits are halved at £37,210, and MERLIMAU PEGOH are reducing their dividend from 12½ per cent. to 7½ per cent.

**Beecham-Maclean Holdings.**—This Company is to acquire County Perfumery Company (makers of Brylcreem), in connection with which Philip Hill and Partners will offer to shareholders of Beecham group, 600,000 £1 5½ per cent. redeemable cumulative preference shares at par in Beecham-Maclean Holdings. New shares to rank after 1,500,000 £1 5 per cent. redeemable cumulative preference shares, but guaranteed by Beechams Pills, the controlling company.

**Gloucester Railway Carriage and Wagon.**—Gross profit year to May 31, 1939, £211,661 (£47,561). For depreciation, £27,073 (£7,178). Net profit, £162,964 (£17,862). Ordinary dividend raised from 3 to 15 per cent. To: General reserve, £100,000; staff fund, £5,000. Carry-forward, £4,340 (£3,469). In previous year, £10,000 placed to wagon depreciation. Bank loan reduced from £178,867 to £146,169.

**Gold Fields Rhodesian Development.**—Income for year to May 31, 1939, £145,225, a decrease of £9,906. Net profit, £127,277 (£139,963). Ordinary dividend maintained at 5 per cent. Total investments stand in balance sheet at £1,088,372.

**Tankers, Ltd.**—Revenue for year to March 31, 1939, £33,457, a decrease of £23,843. Net balance, after £10,081 for expenses, £23,376 (£33,796). Preference arrears of 4 per cent. to March 31, 1933, are to be paid on September 1, taking £22,678. Last September also 4 per cent. was paid. Carry-forward, £5,330 (£4,633).

**Burberrys, Ltd.**—Trading profit for year to March 31, 1939, after exchange provision, £61,526 (£96,983). Net profit £47,111 (£74,602). Fixed dividend on 7½ per cent. Preference to September 30, 1936, £75,000. Carry forward reduced from £70,762 to £42,873.

**Handley Page, Ltd.**—The results of this company for 1938 were discussed on page 124 of *The Economist* of July 15, 1939. Balance sheet shows total assets of £1,554,065, against £1,042,020. Cash, £795 (£150,492). Government securities remain at £285,499. Debtors, £175,339 (£80,639). Stocks and work in progress, £853,714 (£307,397). Creditors, £614,222 (£338,849). Secured loan, £105,000 (nil).

**Falk, Stadelmann and Company.**—Profits for year to March 31, 1939, are £82,803, a decrease of £46,244. Ordinary dividend reduced from 10 to 6 per cent. To staff pensions, £5,757 (£3,000); taxation, £9,219 (£16,684); depreciation of securities, £282 (£1,400); general reserve, nil (£15,000). Carry forward, £28,715 (£27,320).

**Chinese 5% Gold Loan of 1925.**—The Inspector General of the Chinese Maritime Customs has not paid to the Banque Franco-Chinoise pour le Commerce et l'Industrie at Shanghai the sum necessary for paying Coupon No. 29 due July 15, 1939.

**Davy and United Engineering Company.**—Profits rose from £53,232 in 1937-38 to £83,435 for year to March 31, 1939. Ordinary dividend unchanged at 7½ per cent. Carry forward, £73,693 (£37,930). Arrangements have been made to acquire all the share capital of Duncan Stewart and Company, Ltd., of Glasgow.

(Continued on page 200)

## Industry and Trade

**Coal in Emergency.**—An answer to a question in the House of Commons on Monday revealed that the Mines Department has made comprehensive arrangements concerning the production, distribution and sale of coal in an emergency. The control of supplies at the point of production will be exercised by means of the statutory coal-marketing schemes, to be amended to meet war-time conditions. In each coalfield there will be an officer of the Mines Department (drawn from the industry) charged with the duty to ensure, in collaboration with the mining industry, that the quantities and qualities of coal required for inland use or for export are produced. Steps have already been taken, in drawing up the Schedule of Reserved Occupations for example, to ensure so far as possible the maintenance of output in war. The interests of consumers will be looked after more directly by divisional coal officers, stationed in the various regions under the Civil Defence Emergency Scheme. A number of advisory committees of distributors will be set up in each region as it is hoped that, with their co-operation, it will be possible to overcome many local difficulties. Further, a scheme for regulating supplies by means of a rationing scheme on the basis of a proportion of consumption in a past period of coal, gas and electricity, by domestic and other small consumers has been prepared. This scheme will be administered through local authorities; these have been asked to appoint local fuel overseers who will be assisted by local advisory councillors representing the coal distributors (including co-operative societies) and the suppliers of gas and electricity. Supplies to larger industrial consumers are to be regulated by a priority system to ensure that in the event of a shortage available supplies are directed to those works whose continuance in war is of greatest importance to the nation. The prices of coal at the pithead will be controlled through the machinery of the statutory coal-marketing schemes. As corresponding machinery for controlling distributors' and export prices is not available, control will be exercised under statutory orders. Exports are to be prohibited, save with the permission of the Government. Applications for permission to export coal will have to be made to the coal export officers who are to be stationed in the principal shipping areas. The organisation necessary to give effect to this scheme is stated to be in being and the regional officers have been appointed and instructed in their duties. Coal-mining will be a key industry in war and it will be necessary to export considerable quantities, to supplement France's inadequate resources for example, as well as to provide us with foreign exchange. It is to be hoped, moreover, that the Government will exercise stringent control over the operation of the coal-marketing schemes in order to prevent an inordinate rise in prices.

**Anglo-Roumanian Payments.**—Details are now available of the agreement reached on July 12th for the payment of Anglo-Roumanian trade debts. The new agreement, which supersedes that of September 2, 1938, introduces a number of new features into the already complex structure of the Clearing. Briefly, these are four in number. First, there is provision for advance payment in respect of Roumanian goods imported into the United Kingdom. Secondly, a miscellaneous account is to be established with the funds amounting to one-half of the percentage of the sterling exchange from compensation trade formerly paid into the Roumanian National Bank. The maximum funds which will become available in this way are to be £70,000; they will be used for the transfer of ship passenger fares collected in Roumania on behalf of United Kingdom shipping companies, and also for the transfer of insurance premiums from Roumania to the United Kingdom. The transfers will be calculated at the Roumanian official rate of exchange. Thirdly, the payment of Roumanian trade

debts is to be speeded up. Debts on goods imported into Roumania before September 2, 1938, have been in course of liquidation by the payment of £38,500 per month; this sum is now to be augmented by a further allocation of £25,000 per month from August 1st of this year until March 31, 1940, as well as by payments from Sub-Account A. Finally, an alteration has been made in the Compensation Transactions Account, the effect of which will be to allow Roumanians to purchase proportionally more of the United Kingdom's re-exports. Under the previous agreement the proportions were 50-50, for the purchase of United Kingdom goods and for the purchase of goods purchased through the United Kingdom. The proportions are now to be 30-70, with the proviso that the 70 per cent. of sterling available under the compensation trading account is to be spent as far as possible on Empire produce. As was recorded in *The Economist* of last week, a Consultative Committee is to be set up whose task it will be to consider difficulties as and when they may arise. The Anglo-Roumanian Clearing thus enters upon a further stage of development; if the new stage proves as successful as those which have preceded it, then the negotiators must be sincerely congratulated. The arrangement for augmented payment of debts owing to United Kingdom exporters should reassure the latter on the profitability of the Roumanian market; and, on the Roumanian side, the change in the compensation trading proportions will be welcomed. It remains to be seen, however, to what extent Anglo-Roumanian trade will be able to leap the hurdle set up by successive discounts on the leu.

**Employment in Coal Mining.**—Between the first five months of 1938 and 1939 the production of coal in the United Kingdom decreased by 942,000 tons, or less than 1 per cent., while the average number of wage earners on colliery books fell by 17,782, or 2 per cent. The average number of days worked, however, was 5.33, compared with 5.23 per week last year; the average number of persons wholly unemployed was 81,191, compared with 82,242, and those temporarily unemployed numbered 28,003, against 32,510. Industrial relations have been more satisfactory; the aggregate duration, in working days, of all disputes in progress between January and May was only 152,000, against 383,000 in the same period of 1938. These factors seem to account for the slightly more favourable trend of production than that of employment. What is significant is that the drift of labour from the mining industry continues in spite of the recent improvement in demand, and a sample investigation of the number and classes of miners who have taken up employment elsewhere during the period extending from June 1, 1938, to June 20, 1939, carried out by one of the leading coalfields of the country, is of particular interest. The returns cover 7,916 persons, and they show that this total includes 1,860 colliers (chiefly piece-workers), 3,310 day wagemen, 2,671 boys under twenty-one years of age, and seventy-five colliery officials. There is little information concerning the new employment to which these miners have been transferred. The nature of the new employment taken up by 6,790 is described as “unknown”; the details given of the remaining 1,126

show that 244 entered the Defence Forces, 368 munition and other Government works, 110 the iron and steel and tinplate trades, 167 factories, and 237 other industrial, agricultural and commercial employments.

\* \* \*

**Lowest Wheat Prices.**—During the past week wheat prices in Liverpool reached the lowest level officially recorded on that market. On Thursday the price for July futures was as low as 3s. 5½d. per cwt.; in September, 1931, the previous low record, the price dropped at one time to 3s. 8d. per cwt. In July, 1929, the price of July futures reached 10s. 4½d. per cwt., and in July, 1937, 10s. 1½d. per cwt. The intervals between the lowest and highest levels recorded during the past ten years were thus exactly eight years. The persistent downward movement in prices is scarcely surprising; the world's area sown to wheat has been considerably extended in recent years, largely as a result of the tendency towards self-sufficiency in importing countries. But the average yield per acre during 1933-37 was only 13.3 bushels; in 1938 it rose to 15.6 bushels. The world's carry-over of wheat at the end of the season, after falling from 1,187 million bushels in 1934 to 503 millions in 1937, rose to 579 million bushels in 1938 and is expected to reach 1,180 millions this year. This year's crops are by no means garnered and the weather may still play tricks with forecasts. But the latest crop reports suggest that this year's world wheat harvest, if somewhat smaller than last year's, may again be substantial. A major improvement in prices seems therefore unlikely in the absence of an international agreement to control exports. Tentative discussions are now taking place, but it is doubtful whether they will yield an effective agreement in the near future.

\* \* \*

**Overseas Trade in June.**—The value of both imports and exports last month was appreciably higher than a year ago; imports rose by 7.4 per cent. and domestic exports by 8.1 per cent. But as re-exports declined sharply, by 13.6 per cent., total exports showed an increase of only 5.5 per cent. Consequently, the excess of imports over exports last month, at £37,972,000, was £3,313,000 higher than a year ago, though, for the first half of the current year, the unfavourable balance of trade is still £20,150,000, or 9.8 per cent., smaller than for the corresponding period last

index of the volume of retained imports of raw materials, for example, rose from 111 (1935 = 100) in June, 1938, to 130 in the past month, while our index of the volume of exports of domestic manufactures advanced only from 101½ to 106.

\* \* \*

**Trade by Commodities.**—The accompanying tables show quantitative changes in the imports and exports of important commodities. The increase in imports between June, 1938, and the past month, as will be seen, has been far from general. In food, an increase in the intake of wheat and beef was accompanied by decreases in mutton and sugar. The increase in the imports of textile raw materials reflects the expansion of activity in the textile

trades; the growing demand for steel is revealed by the sharp growth in the purchases of iron ore and scrap and of iron and steel manufactures. Imports of machinery also show a substantial increase, but those of crude oil, rubber and non-ferrous metals were appreciably smaller. So far as exports are concerned, a feature is the widespread and marked improvement in the exports of textile manufactures. Shipments of coal are well up on the figure for June last year, and there has been an improvement in the exports of iron and steel, locomotives and motor vehicles. But exports of machinery, in contrast to imports, fell sharply between June, 1938, and the past month.

\* \* \*

**Conditions in the Furniture Trade.**—Prolonged discussions on wages and working conditions between the Ministry of Labour and the British Furniture Trades Joint Committee have resulted in a decision of the Minister to apply the Trade Boards Act to furniture manufacturing. An excellent incidental result of the negotiations has been the publication of the report of the joint committee's independent investigations into working conditions. Too little is known about the habits and trends of the industries working directly for the retail market and the report therefore helps to fill an important gap. The London furniture trade is characterised by the extreme complexity of its

structure and by the small size of most of the working units. A firm may make all classes of furniture, it may concentrate on certain types, it may make parts for sale to other firms, it may specialise on certain processes such as machinery or turning; it may work direct for the retail purchaser, for one of the large retail stores or for a wholesaler, and it may contrive a number of these alternatives. There are very few public companies in the industry; many of the firms are family or one-man concerns, depending largely on personal contacts for their supplies and sales. From the 1930 Census of Production it has been estimated that 32,000 operatives, one-quarter of the total, were employed by 7,987 firms with 10 or fewer employees, averaging 4 per firm; a further 90,000 were employed in firms with 11 to 50 workers per firm. The complexity of the industry has been increased by the recent intrusion of mass production methods into what was at one time exclusively a craft. An outstanding consequence, both of the change in technique and of the small size of the representative firm has been the difficulty of enforcing standard conditions throughout the industry. The influence of trade unions is restricted mainly to the older craftsman and one of the most valuable parts of the report is that which gives statistics of wages and hours. It is there shown that while a substantial proportion of juveniles earn slightly more than the standard rates (as laid down by the London Cabinet and Upholstery Trades Working Rules) the great majority of adult workers earn very considerably less; and the working hours are long and irregular. In spite of the rapid increase in the output of the trade, made possible by mass production, unemployment in London has been considerably higher than on the average of other trades. The enforcement of some kind of standard piece rates and of working hours will undoubtedly be of great advantage to the majority of workers and will help to limit that type of competition which results from sweated labour.

\* \* \*

**Larger Sugar Supplies.**—Sugar prices have again turned easier this week. Raw sugar now changes hands at only slightly more than 7s. per cwt. compared with 7s. 8d. a week ago and 8s. 3d. at the beginning of this month. The decline is due to an announcement by the International Sugar Council late last week that following new representations by the British Government, it has released another 100,000 tons of sugar. This is the third batch of releases within the past two months. On May 20, 239,000 tons were allotted to seven of the restricting countries. Another 153,265 tons were released from the British Empire on June 14 (of which, however, only 142,265 tons are at present available for shipment) and an additional quota of 7,000 tons was granted to Haiti. The new release, therefore, brings the total of the additional quotas to 488,265 tons. It will be remembered that the Executive Committee of the International Sugar Council at its meeting of May 10 to 12, had estimated that the deficiency of supplies in the season ending on August 31st next, at 480,000 tons. Theoretically, therefore, supplies and requirements appear to be in equilibrium after the new release. Actually, however, a certain shortage is likely to persist for some time. At any rate some countries which share in the new quotas to a considerable extent will hardly make use of them before the end of this season. Russia, for example, which received a quota of 65,956 tons in the May release, has so far not even made use of her original quota for 1938-39 of about 160,000 tons; Java, which received a new quota of 62,606 tons in May and one of 20,000 tons last week, has virtually sold out its supplies for immediate or nearby shipment; also the new quotas of the Dominican Republic (more than 40,000 tons) appear to be rather high. In these circumstances it is not surprising that the buyers' and sellers' prices on the market still show fairly wide margins and that the premiums of nearby supplies over more distant deliveries are still much above normal.

**Revival in Wood-Pulp.**—After an eighteen months' depression, which followed the boom and rapid price increase of 1937, the wood-pulp market has recently experienced a revival. Consumers have bought sulphite-pulp supplies for next year on a larger scale, and although their pulp stocks are in many cases still very high, current consumption has improved to such an extent as to warrant the increase in stocks. Frequently the consideration in building up special stocks for an emergency is guiding the buying policy of paper makers. But the Scandinavian pulp mills, which are in a strong financial position and therefore need not hurry to sell, are bent on securing as big an improvement in prices as possible. Actually, prices of sulphite grades have advanced by about 15s. per ton, i.e. not quite 10 per cent., compared with the lowest level reached last year. A larger price increase would doubtless have occurred were it not for the political uneasiness and for the fact that Central European pulp has recently been offered on the English market at low prices. The reason for this is that the Government of the United States is considering the imposition of an anti-dumping duty against German and Slovak pulp. Meanwhile, the International Sulphite Pulp Cartel, comprising the producers of Scandinavia and Greater Germany, which expired at the end of June, has been extended for an unstated period, and a curtailment of output for the second half of 1939 by 20 per cent., to be carried through by a five weeks' output stoppage during July to December, 1939, has been enforced. In contrast to sulphite, the market in kraft pulp has remained unsatisfactory owing to the increased output of this material in the Southern States of the United States, as a result of which the Scandinavian producers have lost an important export field. Attempts are being made to bring about an understanding on the kraft market, but as an agreement excluding the American producers could scarcely be effective, the prospect is not very bright.

\* \* \*

**Brazil's Coffee Trade.**—Figures for the 1938-39 coffee season showed a considerable expansion in world trade in the year ended June 30. World deliveries reached 26,696,000 bags of 60 kilos each, compared with 25,609,000 bags a year before, while supplies advanced from 24,928,000 bags to 27,444,000 bags. Brazil was responsible for both the higher supplies and higher deliveries. The change in the country's coffee policy and the reduction in its coffee export tax from 45 to 12 milreis per bag in November, 1937, has thus proved beneficial to Brazil's position on the international coffee market. But the proceeds from Brazil's coffee trade are still lower than before the change in policy, owing to the fall in prices. Santos Superior, for example, is now quoted at 29s. per cwt., against 51s. in October, 1937. It may take years before the higher Brazilian coffee sales will be reflected in the total proceeds. Nevertheless, the Brazilian Government has been wise in deciding to maintain the new policy. It has prolonged the supply regulation almost unchanged for the next two seasons, and in order to lessen the dependence on the current coffee proceeds, the Brazilian Minister of Finance is trying to reach an arrangement with foreign bondholders which would ensure new credits for Brazil. The recent official estimate of the new crop was 21,861,000 bags, against 21,873,000 and 25,462,000 bags respectively in the two preceding seasons. The harvest will probably be even lower, but even so will be in excess of the 1939-40 requirements. There is little prospect of an early rise in price.

MATURED AND BOTTLED AT CHATEAU DE COGNAC

## INDUSTRIAL REPORTS

THE flow of new business to industry is still small but activity remains at a high level on existing contracts. Steel makers are working very near capacity and there is now some improvement in the iron section. The demand for coal is well maintained and the output of saleable coal during June, at 19.3 million tons, was again higher than in the corresponding month in the previous year. The textile trades are still busy on Government orders and the demand for raw wool has been good at the fourth series of London wool sales.

## Coal

**Sheffield.**—The inland market is generally active, all grades of industrial steams being in good demand. There is an increasing call for best locomotive hards. Household fuel is rather more active than is usual at this period of the year. Utility undertakings are receiving regular supplies. Blast-furnace coke is well taken up as a result of the increased output of pig iron.

New export business is small and the market rather quiet. Shippers are anxious to secure an increase in the Coke Cartel export quota. There is little call for bunkers.

**Newcastle-on-Tyne.**—The market in this area remains steady. Northumberland screened steams are well booked, collieries having good prospects of full-time working up to the end of the year. In Durham, with the exception of certain classes of unscreened steam, all grades of fuel are well booked. Ordinary bunkers, however, are a slower trade and supplies offer readily. Patent oven coke is a strong market with a good inquiry from abroad and active conditions in the home market.

**Glasgow.**—Owing to the holidays little business has been passing in the coal market. The majority of the Lanarkshire and Fife collieries and some of those in Ayrshire have been closed this week. The Lothians will be closed next week, but the main Ayrshire holidays are not until September. Business is chiefly concerned with the completion of earlier orders when this can be done. In general there is a lull in trade, but in most districts order books remain satisfactory, and prospects favourable.

**Cardiff.**—The volume of traffic at the South Wales docks is well maintained, but current inquiries are few. The Portuguese Railways, however, have applied for alternative tenders covering the supply of 110,000 tons of small and 100,000 tons of through between October, 1939, and April, 1940, and 233,000 tons of small and 212,000 tons of through between October, 1939, and August, 1940. During the past two or three years this contract has gone to Germany. Controlled prices have not been appreciably affected and contract commitments are keeping the collieries well employed. The price of French pitwood for the September quarter under the coal-pitwood barter agreement has been increased from 21s. 9d. to 22s. 9d. per ton ex ship South Wales ports, partly to meet the seasonal rise in f.o.b. costs, and partly owing to the rise in

the freight rate from French ports. Sized and duff coals are scarce, but in practically all other classes stocks are increasing. Coke continues very strong and patent fuel shipments are still active.

## Iron and Steel

**Sheffield.**—Trading is quiet in the iron market, buying of forge and foundry pig being in limited parcels for early delivery. Derbyshire makers have good stocks of material, and so far there is no call for a further expansion of output. Business in hematites is on a good scale, and a number of contracts to cover the remainder of the year are being arranged. Finished iron business is still unsatisfactory, except for common bars, which are in very fair request.

The pressure for basic steel billets has not eased, and producers are booked to capacity. Small bars, stainless steel sheets and wire rods are also very active.

**Middlesbrough.**—The market continues steady, but while the present demand for steel for A.R.P. and other Government purposes continues there is little opportunity for expanding the ordinary commercial trade. The heavy steel scrap position is easier on account of the imports from America, while local merchants are fully sold and have no parcels to offer. Sheet makers are running plant to capacity and this week a cargo of 8,250 tons of crude sheet bars has arrived from Australia and further quantities are expected. The demand for structural steel is strong and good specifications are being received for ship-building material.

There are now twenty-nine blast-furnaces in operation in this area, of which twenty are producing basic pig iron, eight hematite pig iron and one ferro-manganese. Foundry pig iron prices are unaltered and local foundries are receiving supplies of pig iron from other areas. The East Coast hematite trade shows no marked expansion, but rather better deliveries are being made under existing contracts.

Imports of foreign ore into the Tees during the first seventeen days of July totalled 116,000 tons, against 65,000 tons during the same period of the previous month. Good Durham blast-furnace coke is in ample supply, with prices unchanged.

**Glasgow.**—With the exception of Colville's Clydebridge steel works all the big establishments in Glasgow and the Clydeside area are now closed for the Fair Holidays and operations will not be resumed until the beginning of next week. At the Clydebridge works there has been great activity and heavy output. All the steelmakers in this district have well-filled order books and will be fully employed for many months to come, provided supplies of raw material are readily available. Plant engineers are having a particularly busy time while ordinary work is stopped. A large amount of repair work and alterations is being undertaken with a view to increasing output and ensuring regular working of plant when operations are resumed.

**Cardiff.**—Recent heavy arrivals of foreign steel bars and scrap have helped

the production of tinplates in South Wales, and in the week ended July 8th the output was 70.93 per cent. of capacity compared with only 43.60 per cent. in the corresponding week last year. Business is more active in the inland than in the export trade, but even for the foreign markets deliveries are considerably better than they were a year ago. The sheet works continue to be fully employed under A.R.P. orders, and re-armament commitments are keeping other re-rolling sections as well as the heavier branches of the industry exceptionally busy.

**News from Abroad.**—Business on international steel markets has been maintained at the recent level, in spite of the approaching holiday season. Demand for some products has improved slightly, but generally the tonnage ordered is smaller than that required some time ago. Some prices have tended to weaken a little. Rebates on official prices for sections, merchant bars and galvanised sheets, for instance, have increased slightly, but quotations for some products for the Scandinavian markets are higher.

The demand for semi-products from Great Britain has remained on a high level, and orders are placed for delivery as far ahead as October. Several other countries are also in the market for semis. Merchant bars, too, are in good demand, so that the Continental exporters, especially the Belgian steel works, will be kept busy over the holiday period. South America has been regularly in the market for sheets and bars. American competition has been felt to some extent in these markets, but on the whole American offers have been less disturbing recently. Some American steel mills have stopped quoting low prices for export, and wherever outside offers appear the Cartel is speedily taking counter-measures.

The Joint Co-ordinating Committee of the Steel Cartel met at Liège this week to discuss questions relating to the quota accounts and other current business. No fundamental price alterations are expected in the next few months.

## Textiles

**Cotton (Manchester).**—Business has been adversely affected by the further downward movement in raw cotton prices, and most buyers of yarn and cloth have restricted their commitments. The raw cotton markets have been influenced by the forthcoming export subsidy, and the better advices of the progress of the American crop. The Lancashire Cotton Corporation has decided to advance prices for all ring yarns by 1d. per lb., following a similar rise a fortnight ago. Producers in this section, especially those engaged on coarse counts, are busy, and for some time margins have been relatively poor. The Egyptian branch has been unsettled owing to the de-control of prices for carded qualities, and buyers have held aloof. The area under cotton in Egypt has been officially estimated at 1,624,817 feddans against 1,783,911 feddans last year. This is the smallest total for over ten years, but prices are

(Continued on page 188)

## COMPANY MEETINGS

## BRISTOL AEROPLANE COMPANY, LIMITED

A YEAR OF IMMENSE ACTIVITY

INCREASED TURNOVER AND PROFIT

RESOURCES EMPLOYED TO MAXIMUM CAPACITY

FURTHER TECHNICAL PROGRESS

The twenty-ninth ordinary general meeting of the Bristol Aeroplane Company, Limited, was held at Filton House, Bristol, on the 20th instant.

Mr W. G. Verdon Smith, C.B.E., the Chairman, who presided, said that it was common knowledge that the year 1938 saw immense activity in the aircraft industry. In the case of their company, its organisation was greatly enlarged and had worked to maximum capacity. Shareholders might therefore expect the financial results to show improvement over those of the previous year. The accounts submitted that day might fairly be regarded as fulfilling such expectations.

The interim dividend of 7½ per cent. and the final of 7½ per cent. should not be regarded as 15 per cent. for the whole year, since the interim of 7½ per cent. was paid on the old ordinary capital of £1,200,000, before it was increased to £3,300,000 towards the end of 1938. If the interim of 7½ per cent. on the old capital were related to the new capital on which a final of 7½ per cent. was to be paid, the total distribution proposed for the year would, in relation to the present capital, be equivalent to approximately 10 per cent.

## RAPID GROWTH OF THE COMPANY'S BUSINESS

The net profits for the year of the company would have shown an increase more closely related to the larger turnover during the year, but for certain factors special to the circumstances of the present time. The requirements of taxation, including National Defence Contribution, had become considerably heavier. The rapid growth in the company's business within a comparatively short time and the consequent large additions to fixed assets had compelled careful consideration being given to the sums necessary to meet depreciation, and shareholders might rest assured that full provision under this heading had been made.

A scheme to provide on a contributory basis pensions, life assurance, and other benefits for the whole of the administrative, technical and clerical staff, numbering over 2,000, had recently been inaugurated and should prove of great benefit to the participants.

## BALANCE SHEET ITEMS

Turning to the balance sheet, the chairman said that fixed assets, which included lands, buildings, machinery, plant and equipment, showed, after allowing for depreciation, an increase of £152,561. With the present volume of turnover very considerable sums were necessarily outstanding pending the conclusion of contracts and the settlement of prices.

The general reserve fund had been raised to £470,000 by the addition of £112,403 taken from the year's revenue for that purpose and £57,597 net proceeds of the sale of manufacturing rights in foreign countries.

It would be remembered that, in connection with the increase of capital in November last, the directors had expressed a hope that it would be possible in respect of the year 1938 to distribute at least the same amount of money by way of dividend on the ordinary share capital as was distributed in the previous year, but that in relation to the total capital as increased, this would result in a reduction in the rate of the final dividend.

## DIVIDEND PROSPECTS

It would be noted that in the result the earnings for the year permitted the distribution to the ordinary shareholders of a sum larger by approximately £25,000 in respect of the past year. There was also good reason to anticipate that profits of not less amount

would be earned in the current year. In seeking, however, to estimate the dividends likely to be paid in the future, shareholders must bear in mind the necessity for making provision for all eventualities when the present abnormal requirements for aircraft production came to an end. It must also be borne in mind that in the placing of large Government orders every possible step was taken by the authorities to obtain their requirements at the lowest possible cost.

Again, their company in common with other manufacturers would come within the scope of the Armament Profits Duty and while no objection might be taken on general grounds to such limitation of profits, all relevant considerations ought to be taken into account in settling the liability of individual undertakings so as not to cripple the future usefulness of such concerns to the community. The aircraft industry only desire a fair and reasonable profit basis, but in the fixing of prices and incidence of taxation, account should be taken of the position in which contractors would find themselves as the present large scale demands were reduced.

## STEADILY INCREASING OUTPUT

The company's manufacturing resources had been employed to their maximum capacity upon an increasing scale. In the aircraft factory a steadily increasing output was built up and deliveries were accomplished earlier than programme dates. The company's "Blenheim" aeroplane has been produced in large quantities and has deservedly established a high reputation for its outstanding performance. A new type of fast bombing and general reconnaissance aircraft known as the "Beaufort" has been developed and has already flown with conspicuous success. Production of this type of aircraft was already under way and the machine as a type promised to make a valuable contribution to the national resources.

With regard to aero engines large numbers of "Pegasus" and "Mercury" engines of the poppet valve type have been produced, while production of engines of the sleeve valve type has been steadily increasing in volume without reducing the total output. These sleeve valve engines were known respectively as the "Perseus," "Taurus" and "Hercules." A considerable sale of engines had taken place for use in civil aircraft.

## ORDERS FROM DOMINIONS AND ABROAD

The expansion of the company's business during the year had been due in no small measure to considerable orders for the company's products from the Dominions, and from friendly foreign countries and the company had been able to achieve delivery of such engines and aircraft without interfering with the requirements of our own Government. In addition agreements had been entered into for the construction abroad, under licence, of both engines and aircraft. It was satisfactory that following the recent visit of the British Mission to Australia a decision was reached that the company's "Beaufort" aircraft should be selected for manufacture in that Dominion. In this connection a member of the Board, Colonel Smith, also visited Australia and was able to render considerable assistance both to the British Mission and the Commonwealth Government.

"Bristol" engines and aircraft were also being made in large quantities by Government owned "shadow" factories. The company's products were being manufactured in the Dominions and in foreign countries. Technical progress in design and development, the essential foundation of future success, was receiving constant and close attention and the world-wide reputation achieved by the company had been fully maintained during the past year.

The report and accounts were unanimously adopted and a vote of thanks to the chairman and directors concluded the proceedings.

## UNITED DOMINIONS TRUST, LIMITED

## ANOTHER RECORD YEAR

The seventeenth annual general meeting of the United Dominions Trust, Limited, was held, on the 19th instant, in London.

Mr J. Gibson Jarvie (the chairman) said that it gave the board satisfaction to submit accounts establishing a new record for a year which could only be described as the most difficult in their history. Less than three months of the financial year had elapsed when the September crisis overtook the nation, and since then there had been, as they were all painfully aware, recurring crises and a state of tension such as Great Britain had never before experienced in time of peace. September, however, had found the company already in a state of partial preparedness for eventualities, and in the event of disaster befalling this office they could reconstruct the company's affairs and identify their debtors from those duplicate records.

## CAREFUL SELECTION OF CREDIT RISKS

The consolidated balance sheet showed that the volume of trade financed by the group was substantially greater than last year. It was interesting to note that although they had, as a matter of policy, deliberately restricted certain types of business, and while some individual accounts had declined in volume because of a temporary falling off in trade in particular industries, a large accretion of new accounts had materially increased their turnover.

The improvement in the company's position was all the more satisfactory when it was realised that because of the general uncertainty even more care than usual had been exercised in considering transactions submitted to them. They saw little likelihood of loans due to them or bills discounted going into default because of any fall in value of the relative goods. Transactions were spread over many different industries; they covered the whole of the United Kingdom, and now their activities also extended to South Africa and the Rhodesias.

The business on their books was as clean as at any time in their history, perhaps cleaner. Transactions were being liquidated well up to their usual standard, and so far as they could see there was no reason to fear any change in that respect. He made that statement because it had been suggested in an important financial journal that the increase in bills receivable and notes on hand might have been brought about by "slow repayments in a year of trade recession." That was not the case. The increase was entirely due to the larger amount of business transacted.

## FINANCIAL FACILITIES IMPROVED

With regard to their financial arrangements, there also their position had been greatly strengthened and improved. They could satisfy a very much greater demand for financial facilities from the many trades to which they offered their highly specialised banking services. They had, moreover, revised the terms on which they borrowed from other banks and they accepted money on deposit on a more permanent basis. They were borrowing practically no money at all to-day in the form of loans from other banks or deposits from individuals and companies, except on fixed terms and at fixed dates so arranged as to allow ample time for adjustment in the event of any new and serious crisis arising.

They had certainly proved that their position was as liquid as they believed it to be and that the organisation was as elastic as they had hoped. They had also proved through a period of almost constant tension the capacity of their companies to command credit in the money market. With regard to the future, while the unhappy international situation precluded all hope of a reliable forecast, their policy was to see as far ahead as might be possible and shape their course accordingly.

Trade on the whole was not only growing, but was in an essentially healthy condition. He could see no reason why progress should not be maintained for a long time. There was one industry which still lagged behind—agriculture.

Long before the international situation had degenerated it had been their intention to operate in the Dominions. They believed that there was a need in other parts of the Empire for their services, and United Dominions Corporation (South Africa), Limited, had fully confirmed them in that belief. They had now established United Dominions Corporation (Rhodesia), Limited. In establishing subsidiaries abroad it was not their wish to develop too rapidly, but rather to continue on a conservative basis, consolidating their position as they progressed and keeping pace with the growth of the countries.

The report was unanimously adopted.

## McDOUGALLS TRUST, LIMITED

## FACTORS AFFECTING PROFITS

The sixth annual general meeting of McDougalls Trust, Limited, was held, on the 20th instant, at the registered office, 3, Thames House, Queen Street Place, London, E.C.

Mr Kenneth A. E. Moore (chairman of the company) said:—Ladies and gentlemen,—I will deal firstly with the affairs of the operating company, McDougalls, Limited. The past year's trading resulted in a profit of £229,267, compared with £241,036 in the preceding year and an average over the eight years ended March 31, 1938, of £199,000 per annum. I need hardly say that the year was not without its anxieties from a managerial point of view owing to occasional crisis conditions superimposed upon a substantially falling trend in wheat prices. By the end of the year wheat prices were some 40 per cent. below those ruling at the commencement, and in the meantime the wheat quota payment had risen from 1s. 6d. per sack of flour milled to 6s. 6d. per sack. Both these factors operated in reduction of our margin of profit, but I am glad to say that the quantity of flour sold increased substantially and in fact constituted a record in the trading history of the business extending over half a century.

## TREND OF SALES

It is a curious but consoling fact, apparent on studying graphs of our sales over many years, that they tend to show an increase in times of depression or crisis. Our theory, rightly or wrongly, is that in such times people go out less to places of entertainment and home cooking therefore comes into its own. In addition, in recent times there has been, for obvious reasons, a tendency for people to keep more food in the house.

In this connection it does not even now seem to be fully realised that so far from being unpatriotic it is highly desirable from the national point of view that all of us should, within reason, stock up our homes with suitable articles of food, so as to tide over the initial dislocation of transport and distribution inevitable in the event of war.

It is essential that such purchases should be made not at the eleventh hour but in good time. Such home stocks would augment the bulk reserves held by the Government and traders, would avoid panic buying, and would relieve the initial strain on transport.

To assist in this direction we have put ourselves in a position to supply a portion of our output of flour in hermetically sealed gas-proof tins of 4 lb. each. McDougalls' flour so packed will remain in perfect condition for at least two years and so is eminently suitable for the reserve stocks of private households, schools, hospitals, reception organisation, etc. I hope our shareholders, numbering upwards of 4,000, will see to it that they themselves secure supplies through their ordinary grocer and also mention the matter to their friends.

To return to financial matters the profit of £229,267 has been dealt with as follows: £202,000 has been paid to McDougalls Trust, Limited, by way of dividend, £4,000 has been distributed as staff bonus, £17,437 is absorbed by income tax and N.D.C., and the balance of £5,830 has been retained in the business in augmentation of the carry-forward.

The financial position of McDougalls, Ltd., remains, as always, strong. The free reserves and carry-forward exceed £280,000, and of this over £230,000 is invested outside the business in trustee securities of the highest class.

The company's mills and packing plants have been maintained in the highest state of efficiency, and this fact, coupled with the wealth of experience behind the organisation, enables us to claim with truth in our advertisements that McDougalls' flour is of the highest and unvarying quality.

## DIVIDEND AND BONUS

Turning now to the affairs of McDougalls Trust, Limited, the same dividend as last year has been received from the operating company and therefore, apart from the fact that £2,500 has been placed to reserve for depreciation of trustee investments, the figures differ but little from those of the previous year.

Your directors therefore recommend the payment on the ordinary shares of a final dividend of 4 per cent. and a bonus of 2 per cent., making a total of 10 per cent. for the year, as before, which will leave a balance of £38,637 to be carried forward.

In the times in which we are now living, any comment from me as to the prospects for the current trading year would be valueless. I will, therefore, confine myself to telling you that in the quarter already elapsed both the trade and profits of McDougalls, Limited, have been slightly in excess of those for the same quarter of 1938.

The report and accounts were unanimously adopted.

GOLD EXPLORATION AND FINANCE  
COMPANY OF AUSTRALIA, LIMITED

## IMPROVED POSITION

The fifth ordinary general meeting of this company was held, on the 18th instant, in London.

The Right Hon. L. S. Amery, P.C., M.P. (chairman of the company), in the course of his speech, said: I am sure you will have been gratified to see that the credit to revenue from dividends and interest at £71,936 is almost three times as great as it was in the year before, and that in addition we were able to realise a profit of £59,903 from the disposal of a portion of our holding in Victoria Gold Dredging Company. The balance transferred to appropriation account is £124,063 as compared with £15,775 for the previous year. The amount standing at the debit of profit and loss account is reduced by £21,744 to £310,744.

We have been able to make a considerable reduction in the liability in respect of six-year registered convertible notes. These notes are repayable on June 30, 1942, at a premium of 30 per cent., and by purchasing an amount of the nominal value of £94,080 during the year, over £28,000 has been saved in premium calculated to maturity. Moreover, as the average price at which these notes were acquired was some 17 per cent. below the nominal value, there is a difference of £15,916 in the company's favour which has been transferred to investments reserve. Since the end of the financial year further notes have been purchased at market prices to the nominal value of about £37,000.

Since the early days of the operation of the dredge, nearly twelve months ago, Victoria Gold Dredging shares have commanded a substantial premium in the market. Your board decided to take advantage of this by realising a portion of our shareholding and so make possible the profitable acquisition of notes without encroaching upon the company's cash resources, which it is essential to maintain at such a level as will enable us to continue to finance our existing interests, and to participate in other projects as and when occasion arises.

## CENTRAL NORSEMAN

Our largest investment in Western Australia is represented by our loan to Central Norseman Gold Corporation, and our indirect interest in that company through Western Mining Corporation, which holds 1,300,000, or approximately 81 per cent. of the issued shares. As part consideration for our loan we hold options on 2,000,000 5s. (A.) shares at par. Since our last meeting a decision of considerable importance has been taken in connection with the operations at Norseman, namely, to sink a new main vertical shaft to facilitate opening up the southern continuation of the Mararoa reef at depth and to enable the mine to be worked on a scale commensurate with what we believe to be its potentialities. Meanwhile, the development of the Mararoa reef from the Phoenix shaft has been actively carried on.

While No. 16 level drive was in progress, stoping was retarded and a considerable proportion of the reduced mill throughput consisted of low-grade development ore. The returns for the last three months indicate that this unfavourable position has been corrected, and it is not unreasonable to hope that the work already done and that which is still in progress will result in the maintenance of output at the full capacity of the mill. As the proportion of development ore is reduced so the overall millhead grade improves. The financial position will thus be assisted both by decreasing costs owing to the greater throughput, and also a marked improvement in yield.

If, as we have reason to hope, the mine at depth lives up to the promise of the results in the upper levels in the property of our company and the adjoining Norseman Gold Mines, our large investment will prove to have been fully justified and the directors' faith and the shareholders' patience should be amply rewarded.

Referring now to Victoria Gold Dredging at the date of our last meeting the dredge was just beginning operations. It is a source of considerable satisfaction that this company has within a year of the commencement of operations returned in dividends an amount almost equal to half its paid-up capital.

I think I may fairly say, in summing up the results of the past year, that our operations have been attended by a considerable measure of success. I believe we are justified in looking forward to a continuance of this progress, and I have every hope that in twelve months' time my review of the current year will be no less satisfactory.

We have not, up to the present, considered any proposals for capital adjustment. The work already done and the prospects of further development are evidence that we are making appreciable progress in the direction of the payment of regular dividends.

The report was adopted.

PHILIP HILL AND PARTNERS,  
LIMITED

## INCREASED INCOME

The seventh ordinary general meeting of Philip Hill and Partners, Limited, was held, on the 18th instant, in London.

Mr Philip E. Hill (chairman and managing director) said that their profit for the fifteen months under review amounted to £638,357, compared with £498,456 for the previous year. If, for comparison, they reduced their present figure by one-fifth to cover the extra three months, they found that their annual income had increased by some £12,000. Following their conservative dividend policy, they recommended a final dividend of 6½ per cent., making 3½ per cent., less tax, for the fifteen months, which was at the rate of 25 per cent. per annum. Actually their revenue for the period was equivalent to 54 per cent. on their ordinary share capital.

The earning capacity of their holdings had increased, revenue from that source for the period totalling £363,215, being over half their total revenue. He estimated that they should receive from that source in the current year sufficient, after paying all expenses and the preference dividend, to allow the payment of a satisfactory dividend on the ordinary shares. As to the new issue side of the business, the fact that they had raised over £20,000,000 during a period of such extreme difficulty called for no comment.

As to their prospects for the present year, the unknown quantity was the revenue they would derive from their financial and new issue business. Increased industrial prosperity, coupled with a much larger interest by the public in the country's wealth, undoubtedly afforded great possibilities for suitable industrial and general business issues.

It was imperative that the business of this country should be given every possibility of expansion, and they would hope to play their part in that, and they intended making their first issue of the new financial year during the course of next week. They had never allowed their efforts to be reduced on account of world conditions; and he was hopeful that, in due course, they would reap the benefit from much of the preparatory work on which they had been engaged of late, so that when he faced the shareholders next year he would again have a satisfactory position to place before them.

The report was unanimously adopted.

## ALLIED BAKERIES, LIMITED

## INCREASE OF CAPITAL APPROVED

The fourth annual general meeting of Allied Bakeries, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London.

Mr W. Garfield Weston, the Chairman, said that their company had been built up by the acquisition of strong independent businesses throughout the country. At the beginning of the last financial year eighteen operating bakery companies were controlled.

The directors at that stage had decided to consolidate within the existing framework and to extend and speed up the programme of modernisation and re-equipment of bakeries. Over £170,000 had been spent during the past year, and there were contracts in hand to the value of approximately £272,000.

When the operating companies ended their year on April 1st the directors had been able to report an increase in profits of over £100,000, and were satisfied that they were again in a position to extend the activities of the company. Negotiations for the acquisition of the entire ordinary share capital of Weston Foods, Limited, were successfully completed, and their company had thereby acquired the controlling interest in a group of four modern biscuit factories and six other companies operating in the bread and confectionery business. The scope of the company's operations had thereby been widened. It was his experience that the industry as a whole was inherently stable, and he had never yet encountered a period during which both the bread and biscuit industries had been severely depressed at one and the same time. Though the figure of goodwill might appear to be high, it represented less than three years' earnings.

The Government Department responsible for food supply in the event of war had welcomed the co-operation of their company in the preparation of plans for the maintenance of bread supplies should a national emergency arise. The geographical layout of the company's organisation did, he believed, make it practically invulnerable, and, in the event of hostilities, it should be a great national asset.

The report and accounts were unanimously adopted, and at the subsequent extraordinary general meeting the proposed increase in the capital of the company was unanimously approved.

## AMALGAMATED DENTAL COMPANY, LIMITED

### SATISFACTORY RESULTS

The thirty-fourth annual general meeting of the Amalgamated Dental Company, Limited, formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited, was held, on the 17th instant, in London.

Mr E. Russell Polden (the chairman) said that having regard to the continued unsettled conditions the result of the company's efforts during the past year might be considered satisfactory. The profit for the year was £201,818 against £197,186, an increase of £4,632. The essential preliminary requirements to successful international trading—confidence, stability and reasonably free monetary exchange—were still far from being assured, but the home

business had again been well maintained. The directors recommended a dividend of 5 per cent. on the deferred ordinary stock, the same as for the past three years.

The activities of the dental professional bodies, of Government departments, of municipal and industrial undertakings, in the promotion of more effective and efficient dental services for the people falling within the scope of their activities, had reached a stage of development far beyond any anticipation of the past few years, and there still remained scope for greater activity. He had on previous occasions referred to the responsibility of the dental industry to produce and provide materials and appliances for the use of the dental profession of the highest possible standard of quality and had informed stockholders that a fundamental part of the policy of the company was to concentrate upon the production and sale of merchandise falling within that category.

The report was adopted.

(Continued from page 184)

unlikely to be much affected owing to the large supplies of other qualities.

Foreign sales have again been disappointing, though there has been some price-testing for piece goods. Orders from India, South America and the Continent have been small. Some contracts have been secured for the Dominions, and necessary buying has taken place for the home trade. Further Government contracts have been placed and it is reported that a reduction in the standard of certain cloths will enable makers to use yarns which in the past have not been suitable.

★

**Wool (Bradford).**—The outstanding feature of the fourth series of London sales has been a strong continuous demand for every class of raw material. Prices show little change since the opening, though greasy crossbreds have eased slightly. Competition for merinos has been good, and a well-sustained demand has been forthcoming from both home and Continental buyers. No doubt merino's relative cheapness is stimulating demand, although overseas producers still maintain that current prices do not meet costs of production. The outlook is certainly more encouraging than has been the case for several months, and civilian trade shows some improvement, which should encourage the consumption of merino wool.

There is great activity on War Office account, not only in the production of khaki cloths, but also hosiery fabrics. New orders are not likely to be given out until the present ones are nearer completion, which will not be for some months. Many mills could employ more labour if it were available. Prices for partly and fully manufactured fabrics have been advanced slightly.

## THE COMMODITY MARKETS

WHEAT prices have continued to fall and have reached all-time record low levels during the week; other grain prices have fallen in sympathy. Sugar prices are lower on the announcement that the International Sugar Council has released an additional 100,000 tons for this season. The general trend of the prices of primary products in this country has been downwards but Moody's index of the prices of staple commodities in the United States (December 31, 1931 = 100) rose from 141.3 to 142.2 during the week ended last Wednesday.

## Metals

**Copper.**—Standard cash copper closed 3s. 9d. up on the week at £42 17s. 6d. per ton on Wednesday. Towards the end of the week demand reached the highest level for some time. The improvement was due to better trade news from America and the expectation that United States domestic sales will reach 200,000 tons this month.

★

**Tin.**—The standard cash price has been stable at £229 17s. 6d. per ton for the last week and the backwardation closed at £4 15s. compared with £5 5s. a week earlier. The turnover on Tuesday, at 950 tons, was the highest this year. The buffer pool is selling freely at the present spot price.

★

**Lead and Spelter.**—Lead closed 2s. 6d. higher on the week at £14 16s. 3d. per ton, while spelter was unchanged at £14 2s. 6d. per ton after reaching the year's highest level, £14 6s. 3d., earlier in the week. Reports of increased consumption outside the United States have stimulated both these markets.

## Grains

THE decline in wheat prices continues and during the week the quotation for July delivery reached a new low level at 3s. 5½d. per cwt., the lowest price since futures trading was established in 1883. There has been increasing selling pressure for Australian and new crop American Winter Wheat and the Canadian crop reports are still excellent. Shipments from Argentina last week were nearly 100,000 quarters smaller than in the previous week. The downward movement of maize prices was accelerated as selling pressure has developed when demand both from the United Kingdom and the Continent is small. There has been a slight improvement in the demand for barley.

## Other Foods

**Provisions.**—Meat prices show little change on the week. Quotations for butter and cheese were lower, while those for bacon were unchanged. English egg prices remained the same, but Danish were a little dearer.

★

**Colonial Produce.**—Sales of tea during the week ended July 13th were higher than in the previous week, though prices were generally lower. Sugar prices were easier owing to the fact that larger supplies are to be made available. Coffee prices show little change and the market has been quiet.

**Fruit and Vegetables.**—Business in seasonal lines has been quite good this week, according to the report of *The Fruit-Grower*. Prices have been maintained at a fairly high level. All kinds of soft fruits are selling well and a few early plums and English apples are becoming available. In the vegetable section demand for green peas was good and prices firm. Tomato prices were lower, but sales of these and of cucumbers were fairly good.

★

**Milk.**—The following table is compiled from statistics issued by the Milk Marketing Board:—

|                                      | June, 1938 | Apr., 1939 | May, 1939 | June, 1939 |
|--------------------------------------|------------|------------|-----------|------------|
| Prices (per gall.)                   | d.         | d.         | d.        | d.         |
| Liquid .....                         | 13-0       | 16-0       | 13-5      | 13-5       |
| Av. manufacturing ..                 | 6-699      | 6-572      | 6-366     | 6-132      |

## Miscellaneous Commodities

**Oils and Oilseeds.**—Both Plate and Indian linseed were easier, largely in sympathy with the decline in wheat, and very little trade was reported. Crushers are able to obtain their immediate requirements from the substantial quantities afloat. The Argentine Ministry of Agriculture reported on July 15th that the exportable surplus was 353,000 tons, against 464,000 tons on June 24th and 574,000 tons in July last year. North America continues to take substantial quantities of Plate seed. The Washington Bureau estimates the domestic crop at 385,000 tons, against 204,000 tons actually harvested last season. Egyptian cottonseed is still weak and linseed oil is lower.

★

**Rubber.**—Business has not been on a large scale, but it has been more active than in recent weeks. The International Rubber Regulation Committee is to meet on Tuesday when the quota for the fourth quarter is expected to be fixed, but it is not known if arrangements will also be made for the barter deal requirements. The price of standard sheet spot closed ½d. higher on Wednesday at 8½d. per lb.

## GOVERNMENT RETURNS

For the week ended July 15, 1939, total ordinary revenue was £16,384,000, against ordinary expenditure of £14,776,000, issues of £4,000,000 under the Defence Loans Acts, and £245,000 issued to Sinking Funds. Thus, including sinking fund allocations but excluding issues from defence loans, the deficit accrued since April 1 last is £150,959,000, against £118,012,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On July 14th applications at £99 16s. 0d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday and Friday of following week were accepted at about 51 per cent. of the amount applied for and applications at higher prices in full. Applications at £99 16s. 1d. for bills to be paid for on Saturday were accepted in full. £35.0 millions of Treasury bills are being offered on July 21st.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in £N.Z. (e) Allowing for exchange. (f) Flat yield. (g) Yield worked on 4% basis (h) Yield on 4½% basis. (i) Yield worked on 12% basis. (j) Yield worked to average redemption—end 1959. (k) Based on redemption at par in 1946. (l) Based on payment of 2½%. (m) To redemption at par, in year shown. (n) Yield worked at 5½% of face value. (o) Yield worked on 22½% basis. (p) Yield worked on a 5½% basis. (q) Yield worked on a 14% basis. (r) Yield on 2-0925% basis. (s) 1% paid free of income tax. (t) Free of income tax. (u) Yield based on 40% of coupon.

\* Bid and offered prices are free of Commission and Stamp Duty.  
 (m) Including bonus of 5% free of tax. (p) Annas per share.  
 (d) Yield on 18.95% basis. (g) Assuming 15% on increased capital. (h) Yield on 12½% basis. (e) Allowing for rate of exchange. (w) Yield on 30% basis.

## Drifting Towards Inflation

FOR the fifth month in succession the monthly survey of the state of business contained in *The Economist* Trade Supplement bears evidence of a rapid and widespread rise in the tempo of economic activity in Great Britain. *The Economist* Index of Business Activity, the most comprehensive of all the measures of general activity, is within two points of the highest figure it ever recorded. Activity is especially great in those industries which are large employers of labour, with the result that the total of employment is higher than at any previous time. This general rise in activity is not by any means limited to the armament industries (widely though their net is now spread); it is affecting the majority of industries and most of the regions of the country. The incidence is, of course, uneven. The stimulus comes from industry, not from commerce or finance; and this has the effect, as a by-product, that London, which for most of the post-war years has been the leader of the country, is now in many ways falling behind. It is the provinces that are busy; the West End is still under a cloud, while the City is downright depressed. But the fact that there are exceptions, or even that the usual leaders are now the laggards, does not alter the fact that we are well over the threshold of a boom.

The cause of this very rapid increase in industrial activity is, of course, the gigantic defence programme, which is now estimated to cost £730 millions in the current year. The total expenditure of the Exchequer this year will be at least £1,425 millions; six years ago it was only £690 millions. In short, Government expenditure, which was

already approaching one-fifth of the whole national income, has been doubled in six years, most of the increase being concentrated in a very small period. A change of this magnitude, however it had been financed, would inevitably have had enormous effects upon the economic structure of the country. But as it is, only about two-thirds of the State's expenditure is to be met from taxation. At least £500 millions (that is, nearly three-quarters of the whole expenditure six years ago) is to be borrowed. Moreover, none of these figures includes the large sums to be lent to foreign countries.

secured only by a restriction of all other activities. That restriction can be brought about by an increase in taxation, which would reduce consumption. But there is no sign that additional taxation will be even considered before next April. Or the restriction can be brought about by the direct requisitioning of supplies. The Ministry of Supply, it is true, has the power to impose priorities, and to the extent that it exercises its powers it compels other would-be consumers to wait. But any effect produced by this means is likely to be outweighed by the increased spending of armament wages. Or, finally, the restriction of consumption other than that of the Government can be achieved by a rise of prices—in a word, by inflation. There are thus a number of different ways in which the necessity to make room for a doubling or trebling of Government expenditure can be met. But the point that seems to be hardly yet appreciated is that one method or the other must be pursued once full employment is reached. It was because of his urging of this painful truth in precisely similar circumstances in Germany that Dr Schacht was dismissed. And though his stand was widely applauded in England, there is a singular unwillingness to apply the lesson to our own conditions. The situation has this danger: that any of the alternatives to inflation involves forethought, organisation and painful decisions. Only inflation can come uninvited.

The problem can easily be put into figures. The direct borrowing of the State is to be at least £500 millions in the current year. Foreign countries and the Dominions are to be allowed to raise sums in this market that may well add up to £100 millions in twelve months. Local authorities, with their heavy new commitments, cannot be refused access to the market; nor can private industry, at least that part of it that is engaged in defence work. The grand total of unavoidable borrowing can hardly be less than £800 millions and may well be £1,000 millions. But the present net savings of the nation, even after they have been inflated by the increased earnings of a boom period, will fall several hundred millions below the amount required.

It may be that those who are responsible to the nation for its financial guidance have deeply pondered the matter and have decided that inflation—that is the restriction of civil purchases by a rise in the cost of living—is not only the easiest way of solving the problem, but the best way. Such a decision would, it is true, run counter both to theoretical teaching and to the experience of the last war,

but it is conceivable that it has nevertheless been reached. There is no sign, however, in either the words or the deeds of the authorities to suggest that they have deliberately reached such a decision, or even that they have deliberated at all. An example of the off-hand way in which the problem is being dismissed can be drawn from the latest pronouncement of Authority, the speech by the Chancellor of the Exchequer on the third reading of the Finance Bill. In his Budget speech, it will be remembered, when he found himself faced with the necessity of finding for defence £50 millions more than was included in the Estimates, Sir John Simon devoted a considerable part of his attention to the proper allocation between revenue and borrowing. But when, three months later, a still further sum, not of £50 millions, but of £100 millions, is wanted, there is no discussion at all, either by the Chancellor or by anyone else. There is public debate on the proper rate of interest at which to borrow; but none at all on the proper amount to be borrowed. Even the keenest brains appear to be concentrating on incidentals and ignoring the main issue. But if there were disadvantages, sufficient to justify an increase of taxation, in borrowing an additional £50 millions in April, are there not disadvantages, sufficient to warrant at least a few words of explanation, in borrowing another £100 millions in July? We are three months nearer full employment, three months nearer inflation—and three months nearer the General Election. Does financial policy wait upon political advantage?

Nobody would wish to pretend that the gigantic problems of wartime finance can be solved by any simple formula. But what can be stressed with all possible urgency is that the problem, if left alone, will not stand still; it will solve itself by the method of inflation, which has always hitherto been considered the worst way. It has been the custom in this country, ever since the end of the War, to congratulate ourselves on the self-restraint and wisdom we showed, in greater measure than any other European country, in our war finance. Germany has been pointed out as proof that the aftermath of social disturbance produced by unsuccessful war finance can be worse than that of unsuccessful war itself. But it would now appear that the Germans, with or without Schacht, have learnt the lesson better than we have ourselves. They are mobilised for war finance; we are still drifting without any visible objective, plan or leadership.

## The War of Nerves

THE battle for the future of Europe which was joined on March 18th is still in progress and still undecided. Whether the "white war" will pass over into "red war" will, in all probability, be decided within the next few weeks. Nearly every day brings news of some fresh encounter in the war of nerves, and hopes correspondingly rise and fall.

The past week has brought its victories as well as its defeats. Let us first of all recount the successes. Hopes are once again high that a firm alliance between Britain, France and the Soviet Union will be concluded soon. As an earnest both of good intentions and of the nearness of agreement, London and Paris have, it appears, agreed to send military missions to Moscow. If the pact can be signed it will, even now, more than offset the slight depression produced a fortnight ago by the persistence of the American Congress in playing domestic politics with the world's peace. The postponement by Congress of a revision of the neutrality legislation does not in any respect change the real balance of forces; it does not alter the very strong probability that the economic resources of

America would be at the disposal of the Peace Front in time of war; but it does alter the temporary semblance of things and provide excuses for any wishful thinkers in Berlin who choose to deceive themselves with surface aspects. A Russian pact, however, will be a change not merely in appearances but in the real balance of forces. It will be a major victory.

The continued demonstrations of the new might of British arms can also be counted as a victory. The joint flights of the British and French air forces are the most emphatic evidence that has been on parade. But there is reason to believe that the new ability of Great Britain to supply first-class war material to some of the smaller nations of Europe is also having its effect beneath the surface of diplomacy. The success of the British military mission to Poland has also to be taken into account, for its psychological, even more than its practical, importance. Disappointment has, it is true, been caused in Warsaw by the very incomplete success of the negotiations in London for financial assistance (on which some comments are made on page 209). But on balance Poland has been encouraged

to believe that her new friends in the West are in earnest; and conviction in Warsaw will affect Berlin.

The biggest victory of the week, however, has lain not in any actions of the Peace Front powers but in their lack of response to the latest "peace" kite flown from Berlin. The statement made to the foreign Press by a "high official" of the German Government last Friday gave no substantial grounds for believing that Herr Hitler had abandoned his plans to use force. On the contrary, it reaffirmed that Danzig must be "unconditionally" reincorporated in the Reich in the near future. But kites as insubstantial as this have in the past been kept in the air by blasts of "appeasement" in London and Paris. This time there was no such reaction at all. The kite was no sooner launched than it fell to earth and its net effect (for the first time in the history of such episodes) was to suggest that there was more irresolution in Berlin than in Paris or London.

These have been the victories of the week. But there have been other events about which it is impossible to feel very happy. One of these is the nature of the form of words agreed upon by the British and Japanese Governments as a preliminary to the talks on the Tientsin situation. The wording of the formula is given on page 207. If its words are meant to bear their normal English meanings, it can, perhaps, be dismissed as harmless. Even so, it comes very close to according belligerent rights to the aggressor on the territory of his victim, which condemns it on moral grounds; and it makes no mention of any save Japanese rights and interests, which is a practical disadvantage. But if this were the end of the matter it might be concluded that we had extricated ourselves from a difficult position at comparatively small cost.

It is all too evident, however, that the Japanese Army (whatever may be the attitude of its Government) will certainly not be content with the ordinary meanings of the words. In view of the detailed and far-reaching concessions to themselves that they have shown the ability to read into the one word "sincerity," there would seem to be no limit to what they will be able to make of a recognition of their "special requirements." It is as certain as anything can be that the new formula will be used by the Army as justification for making specific and detailed demands in a variety of individual cases which will go far beyond anything that the British Government now have in mind. It is only when we know what attitude is to be adopted by the British authorities to these demands that it will be possible to pronounce an opinion on the formula. If we accept the Japanese interpretations, then the formula is a surrender. If, on the other hand, the British Government sticks to its viewpoint that nothing in its policy has been changed, then the formula is not a settlement.

Far more serious than the Tokyo formula, however, was the appearance at the end of last week of what seemed at first sight to be a prime piece of attempted "appeasement" towards Germany. The full and bizarre history of the *affaire* Hudson is not yet known. It appears, however, that the Secretary of the Department of Overseas Trade had some conversations last week with Herr Wohltat of the German Ministry of Economics. In the course of these talks Mr Hudson appears to have sketched the outlines of a possible basis for peaceful agreement between Great Britain and Germany. The details vary from one account to another, but the substance of them all is that Germany was to abandon the use and threat of force and initiate a substantial measure of disarmament. To assist her in the adjustments that such a change of course would involve Great Britain would join in making a loan to Germany of an amount variously reported at £100 and £1,000 millions. Mr Hudson is not a member of the Cabinet and he made it clear, according to the Prime Minister, that he was speaking for himself alone. But Herr Wohltat or his superiors were either genuinely convinced,

or else found it convenient to believe, that they were being sounded on a British "peace plan." They saw to it that the scheme was published.

The idea that there was a British peace plan of this variety under discussion was promptly and properly denied by the Prime Minister. He also took occasion, however, to remark that the holding of such conversations did no harm. To that opinion the most emphatic dissent must be registered. Mr Hudson's conversation with Herr Wohltat did very great harm, as can be seen by the use made of it by German propaganda. The Americans, the Poles, the Russians and—most important of all—those in Berlin itself who are dubious of the wisdom of a military adventure, were all offered another proof that Britain has no stomach for fighting. The denial that the Government has any such plan in mind will never quite efface the painful impression created by the realisation that such plans can be discussed at this time by persons who are on the very threshold of the Cabinet. No member of the German Government has any excuse for not knowing that, if Germany once gives proof of peaceful intentions, Great Britain will be ready to make very large concessions. To harp on this well-known point tells the leading Nazis nothing with which they are not already familiar and makes it harder for them to grasp what it is essential that they should grasp—that if they do not renounce force Britain will fight.

To put forward at this moment even the most reasonable peace plan is, therefore, a profound error. But since this particular peace plan has seen the light of day, it is as well to go a step further and establish that it is in fact based on hopelessly muddled thinking. A disarming Germany would be in no need of loans from foreign countries. It is true that the process of adjustment from the production of armaments to peace-time occupations would present difficulties. But they are difficulties (which would incidentally be shared by other countries) of the transfer of labour and capital. How does £100 millions or even £1,000 millions in foreign exchange help to find an unemployed gunsmith a peace-time job? It is true that Germany is now desperately short of foreign exchange. But that shortage would be cured automatically by disarmament. Germany's imports are not inadequate in total volume—on the contrary, they are higher than almost ever before—the difficulties come from the excessive importation of war materials. Furthermore, a disarmed Germany, with her disciplined industry, her exchange controls and her disregard of normal costs would be admirably placed to begin a gigantic export drive. Indeed, if peace were now suddenly to break out, it would be Germany rather than France and England that would best be able to lend large sums of money.

It is not very often that *The Economist* finds itself in agreement with the Nazi press. But Dr Goebbels' minions are quite right in saying that the Hudson plan is based on a complete misunderstanding of the German position. The Weimar Republic needed foreign loans because its problem was that of meeting heavy liabilities in foreign currencies. The problem of a disarming Nazi regime would be the entirely different one of finding work for the men released from the defence industries.

The moral of the Hudson episode would therefore seem to be twofold. In the first place it is all too evident that a lot of hard thinking about the possible bases of accommodation between the democratic and the Nazi systems needs to be done since the only idea of the highest quarters seems to be to pay danegeld. But it demonstrates even more forcibly the necessity of not doing that thinking aloud. As a nation, we have only one task in the next few weeks—that of proving that we are not too proud or too soft to fight. Only by being utterly uncompromising now shall we earn the chance to contribute to a useful compromise in the future.

## Power in Emergency

IN a statement in the House of Commons last week the Minister of Mines disclosed the broad outlines of official plans for the control in war-time of coal, a commodity not hitherto covered by any scheme for emergency reserves or distribution. There can, of course, be no anxiety concerning the physical reserves of unmined coal in this country, but ready availability is a different question, and the existence of a scheme which can be put in hand at short notice is thus to be welcomed. Production is being safeguarded by retaining coal-mining as a reserved occupation, nor has the supply of materials and machinery been left out of account. Supplies of coal and pithead prices are to be regulated through existing selling schemes, each coalfield will have a coal supplies officer, and distribution will be controlled on the basis of Civil Defence regions, while exports are to be permitted only under licence. In the event of insufficiency, the supply of coal to large industrial consumers is to be regulated by a system of priorities, and to domestic users by rationing (based on a proportion of previous consumption), subject to the unrationed purchase in any one year of two tons of coal and 100 therms of gas or 200 units of electricity.

But these are schemes to be put into effect if war starts. What has been or is being done in actual fact to equip suppliers of power to meet the difficulties of war conditions? The Civil Defence Act is concerning mainly with the safety of personnel, but for public utilities there is a further emphasis: upon "measures to ensure due functioning." Discussions have been taking place well in advance of the Act, whose importance for public utility undertakers lies more in the legal sanction given to work already put in hand than in the fresh requirements it contains.

The actual physical protection of employees and equipment is not essentially different from the same problem for industry generally, and as far as remedies against dislocation are concerned, the electricity industry has already progressed a long way. One enormous advantage is available, war or no war. The mere existence of the Grid is a great safeguard against prolonged or serious interruptions of supply, and for 1938-39 the capacity of the stations of authorised undertakers was 1,268,000 kilowatts in excess of maximum demand. With an inter-transmission system there is normally no need for very large reserves of capacity, and owing to exceptional factors in 1938-39 the 16 per cent. margin in that year is considered to understate the real spare capacity. This reserve, however, appears less adequate for increased industrial production required by war or near-war conditions, or for any destruction once hostilities had broken out. Thus, in addition to the normal orders placed annually by the Central Electricity Board—the 1938 programme required a net addition of 824,500 kilowatts—plans have recently been authorised for fifteen new generating stations, of which thirteen are to provide a capacity of 1,200,000 kilowatts within ten years. This is a very substantial addition, though, of course, the placing of such orders cannot make much difference to the immediate future.

The advantages afforded by the Grid in war-time are naturally dependent on reducing the chances of any long breakdown in transmission to a minimum. Thus, during last winter the Central Electricity Board arranged for the placing of orders to a total value of £3 millions for transmission equipment—transformers and switchgear—and it is understood that satisfactory progress is being made with the execution of these orders. Powers to take this step are confirmed retrospectively by the Civil Defence Act, which also provides that the Central Electricity Board shall be the instrument for paying capital expenses of works to

ensure "due functioning" by the separate undertakings. The Central Electricity Board is to control a fund for meeting the necessary expenses. This fund will receive Government grants up to 50 per cent., and powers are given to raise loans up to a total of £1,500,000. The security for any such loan, and the source of annual charges and of any remaining expenses, would be a levy on the industry made by the Electricity Commissioners.

So far as equipment is concerned, the main steps seem to be well in hand, and it would appear that in the matter of fuel supplies also, gas and electricity companies have not been behindhand. The main feature of the public supply of power is its overwhelming dependence on a single fuel—coal. Gas companies use some 18½ million tons of coal annually, and over 95 per cent. of electricity output by authorised undertakers is generated by steam turbine. The whole power industry is therefore in normal times highly dependent on the smooth working of the transport system. It has been recognised for some little time that it is essential that suppliers of power should have sufficient stocks on hand to enable them to tide over any period of transport dislocation that might arise at the beginning or even during a war, when facilities for rail, and more particularly coastwise, traffic are needed for more urgent work, or at best require reorganisation. Unfortunately, the size of coal stocks held by industry as a whole is not known. But a very rough guide can be obtained from the accounts of two important users. At the end of 1938 the Gas Light and Coke Company had 556,424 tons of coal in stock, representing about eight average weeks' supply, again 499,664 tons at the end of 1937. So far as can be judged from the stock values disclosed in the balance sheet, London Power Company had about two average months' fuel supplies on hand at the end of 1937, but some 3½ months' at the end of 1938. Utility and industrial companies have been encouraged to lay in additional stocks of fuel and to keep them as high as possible, and the recommendations of the Mines Department were reinforced last week, when the coal rationing scheme was outlined, by a more general request by the Government for all users of coal to acquire further supplies. The precise extent of response to earlier appeals is unknown, but there are broad indications that many undertakings have been fully alive to their responsibilities. It is probable that in some quarters the stocking-up process has been going on quietly for some time, and in April and May particularly it was reported that heavy orders were coming in from electricity companies, from gas companies in the South of England, and from large industrial users. Since the latter part of April, weekly coal output has exceeded that for the corresponding weeks in 1938, and though increasing evidence of industrial revival and better exports makes it unnecessary to assume that orders for emergency stocks are responsible to any major extent for this situation, reports in the spring from mining districts pointed to a certain amount of stocking-up. And some companies have even bought land to make room for their additional supplies.

But any action taken by utility companies by no means represents all that needs to be done. The relative importance of different industrial groups as users of fuel can be judged roughly from available information on coal consumption. In 1937 electricity and gas companies between them took no more than about 33 million tons of coal, or 18 per cent. of the amount available annually for home consumption. And taking electric power alone, the 1935 Census of Production showed that 26 per cent. of total electricity output was generated by industrial plants themselves. Nearly 100 million tons of coal were used in 1937

by factory industries, domestic consumers and institutions (that is, the residual consumption of coal after deducting that of utility companies and large users such as the iron and steel trade, railways and the coal mines themselves). If domestic and institutional consumption is put at 35 million tons, power-raising in factories takes 65 million tons, or considerably more than gas and electricity companies together. Thus, while public suppliers of power have the added responsibility that others are dependent on their functioning, stocking-up by factories large and small is scarcely less important.

Is any action required other than mere exhortation to keep higher stocks? Expenditure of public money need not be asked for—nor indeed is it proposed. If the annual consumption of coal for all purposes in this country is put at 190 million tons, a month's supply would cost, say, £16 millions, and 5 per cent. interest on this, £800,000. The interest charge on funds so locked up is a burden which could readily be borne by users, industrial and domestic. For businesses whose coal bill is a high proportion of total costs, however, to find additional working capital would be an inconvenience—but no more than an inconvenience, even if money had to be borrowed or cash assets reduced. It is after all not unproductive expenditure like work on A.R.P., and, apart from the interest charge, does not represent an absolute loss. Limitations should be considered not so much financial as physical: the availability under normal conditions of production of the appropriate types of coal and users' storage space. In May it was estimated that as a result of abandoning old or unremunerative mines, certain

coalfields were operating within 5 per cent. or 7 per cent. of their normal limit. But there are no signs of any general strain, and complaints—frequent in the earlier days of the selling schemes—of difficulties in obtaining the right qualities of coal are more rarely heard.

The financial aspect of the problem is not such as to justify any assistance from public funds, nor does there appear to be any need for large centralised stocks of coal unless there is a possibility of labour shortage. The aim of emergency stocks, in fact, is to save transport, not to guard against any eventual shortage of coal, and the solution lies in a dispersal of supplies to the places where they will be used.

The most that seems required is that industry should be reminded as often as need be that it must help itself. It would hardly be practicable to prescribe rigidly what stocks of coal separate factories should keep, though it has been suggested that in all some six or eight average weeks' supply should be kept in hand. The Civil Defence Act, however, requires industrial undertakings to report to their factory inspectors what measures are being taken to ensure the safety of employees, and it would be equally appropriate for them to report, if and when they are required to do so, what steps have been taken to acquire extra stocks of coal or other fuel. It would seem that in the matter of the generation of power in war-time this country's state of preparedness is reasonably satisfactory in principle, but nothing absolves industrial users of coal who have not already taken action from acquiring as large additional stocks as their resources permit.

## Italy in the Mediterranean

IN 1926, in the first years of his supreme power, Mussolini confirmed the fundamentals of his foreign policy by saying of the Italians that: "We are a Mediterranean people; and our destiny, without imitating anyone, has been and will always be upon the sea." Ten years later his policy had not changed and his text was the same. "Little by little the Italians must gain an insular mentality," he said in November, 1936, "for that is the only way of conceiving the nation's problems of naval defence. Italy is an island plunged in the Mediterranean. If for others the Mediterranean is a thoroughfare, for us it is life."

Upon this text the propagandists of Fascism have erected a claim to Italian domination in the Mediterranean which, among its more enthusiastic promoters, is directly associated with the Imperialism of ancient Rome. The doctrine of *mare nostrum*, Italy's living-space, has become the Fascist equivalent to Hindenburg's *Was Deutsch war muss wieder Deutsch werden*. An attempt is made in this article to examine these "vital interests" which Italy claims to have in the Mediterranean from an economic and also from an ethnographic standpoint.

The first question to be asked is whether Italy's commerce with the Mediterranean countries is so vital that her economic life cannot continue without the markets and raw materials which they provide. Table I on page 206 is an answer to this question. A study of it shows that only about 14 per cent. of Italy's total foreign trade is done with the countries that fringe the Mediterranean. And it may be pointed out that the share of the Mediterranean countries in the trade (average of import and export) of the United Kingdom itself amounts to 12 per cent. With a volume of total trade far greater than Italy's it seems that Britain would be at least as justified as Italy in proclaiming the Mediterranean to be part of her *Lebensraum*.

The comparatively small proportions of Italy's trade that are done with Mediterranean countries, 15 per cent.

compared with 25 per cent. with Germany, 11 per cent. with the United States, and 7 per cent. with Argentina, Brazil, Chile and Uruguay, may be explained by the fact that economic conditions are much the same throughout the Mediterranean. No one part of its littoral is really the economic complement of another. This explanation is made evident in Tables II and III. If France, which in this context cannot be thought of as a wholly Mediterranean country, is left out, the tables show how, apart from import of edible oils and fats and export of textiles, Italy's vital imports and important exports come from and go to countries which are beyond the shores of the Mediterranean. On the basis of the trade figures, in fact, Italy's *Lebensraum* lies not in the Mediterranean but rather in Germany and in the Americas. Yet it may be doubted whether the *Lebensraum* theory, when thus pinned down to facts, would find much response in those parts.

But there is another basis for the view that the Mediterranean is Italy's vital living space. Lately it has become the totalitarian fashion to construct a title to property from the number of *Volksgeossen* resident abroad. The number of Italians living in the various Mediterranean countries, and their proportion to the total population of those countries, is calculated, according to official figures, in Table IV. It will be seen that the only places where the ratio of Italians to total residents is at all important are Tunis and France. There the proportion of Italians is 3.6 per cent. and 2.8 per cent., respectively. On the Italian side, it is argued that these two figures would be far higher if they included those Italians who have been forced to adopt French citizenship; but, apart from the doubtful value to be placed here on the word "forced," this argument ceased to count for much after the Tunis-Corsica-Nice claims spurred Italians, both in Tunis and in France, to demonstrate fervently for the land of their adoption. Millions of Italians inhabit the Americas, at least five or six times as

many as all the Italians in the non-Italian Mediterranean; yet Signor Mussolini would appear more than unrealistic if on such grounds he made a claim to *Lebensraum*.

A third basis for the claim to living space around the Mediterranean is that an expanding population must find room to occupy abroad. The soundness of this argument, however, is weakened by the manifest fact that the Italian Government is doing much, by its restrictions on emigration, its calling home of emigrants, and its emphasis on the need for a higher birth rate, to aggravate the over-population from which it is claimed that Italy is suffering. The Italian claim for more living space based on the argument of over-population may indeed be stronger than the similar German contention, for Italy's net reproduction rate is higher, and Germany is employing in her fields this year 113,000 foreign labourers. Yet it is still not strong enough to bear critical examination.

There remains the question of Italy's actual stake in the borderlands of the Mediterranean. What capital interests has she to protect and further? No figures are available of Italy's investments in Mediterranean countries, but they are in no way comparable to those of Britain and France. Their largest concentration is in Egypt, especially in the cotton and onion trade, where, through the Banco Italo-Egiziano and the Banca Commerciale Italiana, they run second to those of Britain; for Alexandria's connections with Venice and Trieste have always been close. Italians settled in the South of France must also control a considerable amount of business. In Spain, Italian interests were never of leading importance, and it may well be that, even after the changes effected by the civil war, they still fall short of those of Britain, France or Germany. For the future, the prospects of expansion in Spain seem to point rather in Germany's than in Italy's direction. It is under-

stood, for instance, that the branches of the Banca Nazionale del Lavoro established in Spain have failed of their purpose of recovering Italy's expenditure on the war by arranging Spanish exports to Italy. In other Mediterranean countries Italian investors are scantily represented, and the State scarcely at all. In Yugoslavia Italians have money in the lumber trade; in Turkey they have undertaken public works; and only in the "dominion" of Albania have they a leading place. The Levant Fair that illuminates the Adriatic town of Bari once every year stands on propagandist rather than economic grounds, though Italians may claim with increasing truth that their shipping lines and air services are indispensable to the passage of the Mediterranean.

The fact of the matter is that Italy's claim for the Mediterranean as her exclusive living space springs not from economic or ethnographic circumstances but from the psychology of a Mediterranean people whose Government is set upon a policy of expansion. When Signor Mussolini proclaims that the future of Italy is with the Mediterranean he can appeal to a deep sense of tradition. If he were content to claim that no one Power should dominate the Mediterranean, he would have as much justification as British statesmen who demand, and have demanded, the independence of the Low Countries. But, in claiming that domination for himself, he trenches hard upon the rights and the security of other nations. If he wishes Italy to expand without meeting the armed opposition of those nations, he would do well to remember that their policy is exactly that which was proclaimed by San Giuliano, the Italian Foreign Minister in 1913, when he said: "No one has the right to call the Mediterranean *mare nostrum*; it must remain a free road for all nations."

## NOTES OF THE WEEK

**Irish Terrorists.**—It was largely as a measure of preparedness against an emergency that the drastic Prevention of Violence Bill, made law this week, was drawn up. It is true that 127 bomb outrages by the Irish Republican Army since the New Year had done much damage to property and caused some alarm. But, until this week's savage outbreaks at King's Cross and Victoria, the explosions had been deliberately contrived to avoid harm to personal life and limb; and it was by no means sure that, in themselves, they gave a completely convincing argument in favour of the extremely drastic powers of search, arrest and deportation which the Bill proposes to give to the Home Secretary and the police. Actually, it is the known plans of the I.R.A. for the future and the possibility of a "more ruthless" campaign (now, it would seem, already set out on its despicable way) coinciding with a European crisis as well as with winter darkness that have evoked this Bill. No one this week in the Commons was prepared to contest the Home Secretary's statement—without the evidence, which must be secret—that such a campaign was contemplated and that it was being "closely watched and actively stimulated" by a foreign Power. Only seventeen Members voted against the Bill's second reading; and the grim urgency of the distasteful measure was underlined by events while the House was still deliberating it. But there remained, and still remains, ground for disagreement about the details of the Government's proposals. In the first place, it is never wise to give to the executive the blanket powers that this Bill accords to the Home Secretary; and remembrance of past clashes with the Irish does not weaken (to say the least) the suggestion that it is a member of the judiciary rather than a Minister who should be required to decide when these extraordinary powers should be exercised. In the second place, it has still to be proved that it is needful to go so far in departing from the accepted principles of English justice as to leave out entirely any machinery of appeal whereby innocent people might prove their guiltlessness. Admittedly the whole purpose of the Bill is to deal with *suspects* summarily; and such steps are without doubt needed. But it should still be possible for suspected persons, at some stage, to appeal and clear their names; and the Home Secretary's concession that an independent examiner with legal qualifications would be appointed to go into cases of objections against expulsion orders was generally welcomed.

**Danzig Waits.**—The Danzig situation shows no change. There is still the substance there of a major European crisis. There is still no reason at all why such a crisis should ever occur, as the League High Commissioner in Danzig emphasised on Wednesday. Not even in the most partisan utterances of Nazi spokesmen or German newspapers has any evidence been given to disprove the fact that the present status of the Free City is eminently workable and fair to both parties. Yet the creation of a crisis continues. A week ago a Berlin statement rejected a settlement by war, but claimed that the incorporation of Danzig in the Reich must be allowed unconditionally; and a *riposte* from Poland, while similarly discounting the need for any conflict, once more refused to contemplate such a transfer. Meanwhile the militarisation of the Free City by the Nazis goes on, though Mr Butler in the Commons has discounted its importance. A trained and armed band of 15-20,000 men has been openly admitted by the irredentists themselves; and frontier incidents and shootings splutter up sporadically. Herr Foerster, Danzig's Gauleiter, has stated in a speech and in an article in the German Press that, pending the return of the city to the Reich (which must, in his view, inevitably come "very soon"), Danzig is ready for any eventuality. This is mere coat-trailing and the Poles are unmoved. The Nazis of the Free City should know—and so,

too, should their Fuehrer from whom their orders come direct—that any attempt to take Danzig by force would mean a general war with Britain and France on Poland's side. No manœuvre can localise this dispute, because the aggressor's aims are not local. No cloak of conciliation on either side of the diplomatic fence can conceal the fact that the Reich's only reasons for requiring the return of Danzig are strategic; and they look far beyond the Free City itself. The annexation of Memel last March opened a new stage in Nazi foreign policy, for Memel was the first of the old lands of the pre-war German Empire itself to be won back by threat of force. Danzig is seemingly earmarked to be the next; if it is, it is not likely to be the last.

**Japan and the Powers.**—Within a week the two Great Powers whose interests are most affected by the war in China have each taken a fresh step towards defining their attitude towards Japan's advance. On Monday Mr Chamberlain was able to announce in the Commons that a formula had been found in Tokyo for agreement between the British and Japanese Governments preliminary to discussion of the specific question of public order in Tientsin. His Majesty's Government, according to this formula, fully recognises that the Japanese forces in China have special requirements to maintain public order in the regions under their control. This recognition, the Prime Minister claims, is a statement of fact and not of policy; large-scale hostilities are going on in China, and there are wide areas where the invading forces have the responsibility of keeping the peace as well as of ensuring their own security. It will not actually be known whether the British Government has weakened in the determination not to alter its foreign policy under pressure until this general agreement is tested in detail. In Tokyo, Berlin and Rome the agreement has been hailed as a British surrender; in China and in some parts of the United States it has been denounced as a betrayal. But neither in Italy nor in Germany has the inspired Press found it possible to conceal some disappointment that an agreement of any kind was so swiftly secured; and General Chiang Kai-shek has put the true position quite clearly in a statement pointing out that, in law, Great Britain can only make such concessions to Japan as will not conflict with the Nine Power Pact.

As it is, Japan can claim a victory and Great Britain a dignified adherence to principle, and neither can be confuted until specific issues arise to be settled. Not until the results of such talks as are now going on in Tokyo about the actual situation in Tientsin are known will it be possible to say whether, in fact, belligerent rights have been given to the aggressor. The choice between resistance and surrender has still to be made in detail; and it can be reckoned at least as a gain for expediency that the way to continue talks in Tokyo has been found in this manner. Meanwhile, the Americans are not only sceptical about what the British Government is doing; they are also acutely exasperated by the rough treatment meted out to United States citizens in occupied China. On Wednesday, on the initiative of the President and Mr Cordell Hull, and after the Foreign Relations Committee of the Senate had postponed the question, notice was given to denounce the Japanese-American Commercial Treaty of 1911, lock, stock and barrel. This may be the prelude to positive economic action against the Japanese. At any rate, it is a clear indication of the Administration's attitude to certain of the "special requirements" of the Japanese forces in the occupied areas of China; and it may well be intended to assist the British Government in making their latest statement the prelude to firmness rather than feebleness in actual policy.

TABLE I

ITALY'S TRADE WITH MEDITERRANEAN COUNTRIES

|                                   | 1938             |                           |                  |                           |                  |                         |
|-----------------------------------|------------------|---------------------------|------------------|---------------------------|------------------|-------------------------|
|                                   | Imports          |                           | Exports          |                           | Total Trade      |                         |

**The Pensions Vote.**—The present Government has never attempted to argue that the Old Age Pensions scale of 10s. per week to persons of 65 years of age and over is generous. It has, indeed, been urged in extenuation that the cost of living has fallen considerably since the present scale was fixed in 1919; but on the other hand there has been no attempt to justify the fact that about 10 per cent. of the pensioners are dependent on supplementary amounts provided by poor relief. The remaining 90 per cent. who manage to avoid recourse to assistance from local rates obviously rely to a greater or less extent on sources of income extraneous to their pensions. The fact that they are able in this manner to achieve a sufficient income for ordinary living purposes is no doubt a tribute to their thrift and to the filial piety of their younger relations; but it does not indicate a state of the social services which can be accepted by any government which aims at a standard at least equal to that achieved in other democratic countries. The desirability of a further extension of existing pensions schemes was, in fact, recognised by Parliament in November last, but the possibility of an immediate improvement was at that time ruled out in view of the financial strain already imposed by defence needs. Since that time the strain has been increased. But at the same time the agitation for more and bigger pensions has also grown steadily. Thursday's censure motion on the subject crowned a series of petitions which undoubtedly expressed a genuine dissatisfaction with the present scales. This feeling was not confined to the actual sufferers, nor only to the members of the Opposition. Indeed, the prospect of a General Election has endowed the subject with unwonted interest to the Conservative benches.

The Financial Statement for 1939-40 estimates the cost to the Exchequer of Old Age Pensions in that year at £49,097,000. To this must be added a payment to Widows', Orphans' and Old Age Contributory Pensions Accounts of £19,950,000, giving a total Exchequer contribution of £69,047,000. In future years, if present population tendencies persist, an increasing proportion will come within the age groups above 65 years. The following table makes use of an estimate by Dr. Enid Charles of future age structure based on the assumption that fertility and mortality rates will continue as in 1933.

|            | Percentage of<br>Population in<br>Age Group<br>60 + | Government<br>Expenditure on<br>Old Age, etc.<br>Pensions at<br>present rates<br>(£ mn.) | Total additional<br>cost of Labour<br>Party's<br>Scheme<br>(approx.) |
|------------|-----------------------------------------------------|------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 1940 ..... | 13.72                                               | 69                                                                                       | 80                                                                   |
| 1950 ..... | 15.81                                               | 79.5                                                                                     | 90                                                                   |

The Labour party's proposal is for pensions at 65 of £1 per week and 35s. for married couples, together with the reduction of the pensionable age limit to 60. It will be noted that the figures in the third column of the table are for total cost. The Exchequer contribution would be substantially less. Its probable magnitude was, nevertheless, sufficiently great to provide the principal reason for the Government's refusal to do more at the moment than institute an immediate inquiry into ways and means of extending the present pensions scheme.

**Pensions for M.P.s.**—The question of pensions for M.P.s was first raised two years ago when members' salaries were increased from £400 to £600 per annum; and the Bill which was read a third time last week, is based on the findings of the Departmental Committee then set up to consider the matter. Now that membership of Parliament is becoming more and more a whole-time

occupation, so that members have little or no opportunity for providing for their old age out of non-parliamentary work, there might, indeed, be a good case for introducing a full pension scheme; but, in order to avoid public controversy over what is essentially a matter affecting the Commons alone, the Government has wisely gone no further than the recommendations of the Committee, and the House of Commons Members Fund Bill provides, not a pensions scheme for all, but a provident scheme for the few. It is proposed that £1 a month should be compulsorily deducted from Members' salaries, and that the sum of roughly £7,000 a year thereby raised should be placed in the hands of trustees who would give pensions to ex-members who can prove to be in want. It is stipulated that recipients must be at least sixty years of age and have been Members of Parliament for ten years. The maximum amount payable is £150 per annum for an ex-Member and £75 for his widow and children, and assistance will only be given so long as the recipient's total income, including this grant, does not exceed, in the first case £225, and in the second £125, a year. Opposition to the Bill has mainly centred on two points: first, that the pensions would be an indirect charge on public funds; and, secondly, that it is inexpedient for Members to vote themselves pensions at a time when they are refusing an increase in old-age pensions. Both these criticisms arise, as the Prime Minister pointed out, from muddled thinking. The £12 a year is part of the Member's own income which he is free to use as he likes, and he will not even be allowed to set off the deduction against his liability to income tax. Moreover, to confuse a provident scheme of this nature with old-age pensions is merely absurd. Intended as a non-party measure, the Bill should command the support of all parties. But so far the Opposition, who, *prima facie*, will be the chief beneficiaries, have been silent in debate, presumably lest they be accused of self-interest; and it was left to the Tories, one night last week, to wrangle till breakfast time over the details.

**Nearing a Pact?**—It is with a jaundiced eye that rumours of impending agreement in Moscow are read nowadays. There have been too many sharp disappointments since the talks between Russian and British representatives began, close on four months ago, for optimism to be easily aroused; and, while the reminder that it took as long as fifteen months of negotiation to make the Anglo-Russian Agreement of a generation ago may help to dispel the notion that delay necessarily means failure, it offers no earnest from history of that speedy end to the present discussions which the state of Europe and its peace so urgently require. But the latest ray of hope is brighter than most. There is some real evidence to back it. The Prime Minister avowedly hopes to be able to make a statement about the negotiations next week; and it seems certain that, as the Russians have wished for many weeks now, an Anglo-French military, naval and air mission is very shortly to leave for Moscow to supplement the political talks with strategic ones. The fear that, by now, both sides were not really anxious to reach an agreement is accordingly diminished; and the likelihood that some more or less final agreement about the nature and scope of the Pact is now envisaged by the negotiators themselves is equally augmented. Yet, by all reports, the obstacle still to be overcome is the most difficult one—the definition of the kind of "indirect aggression" that would justify the intervention of the Peace Front in the affairs of other States—most difficult because the concept is not clear-cut and because the attempt to define it tends to bring out the worst suspicions that the British Government may have about the Soviet's intentions and *vice versa*. Still, optimism is abroad and, even though pessimism may reappear next week, this week is very justifiably one of high hopes. Nor can it be said, in view of the steady menace of the European scene, that the Pact, if it does come now, will have come a moment too soon.

**Loans to Poland.**—Only the first of the two questions under review in the financial discussions between the British and Polish Governments has after all been settled: export credits up to £8 millions to enable Poland to buy defence materials in this country have already been guaranteed by the British Government and only the technical details have still to be worked out. But the Prime Minister's hope, expressed last week, that it would be possible to introduce legislation before the recess to settle the second question, that of financial aid in cash, has not been realised. As regards the amount of this cash credit, the Treasury, as in all the negotiations to give the Peace Front a sound financial footing, has probably been unduly parsimonious, in view of the tremendous issues that hang upon this new departure in British diplomacy. But there have been two problems other than the amount of the loan: to what extent the cash could be spent in countries other than Britain; and whether any part of the loan could be withdrawn in gold. The former problem was apparently solved in a commonsense way. There are clearly many items of defence equipment that Poland could not readily obtain in Britain or France at the present time, and Sir John Simon stated on Tuesday that the British and French Governments had shown themselves quite willing for Poland to make purchases elsewhere. It is the second problem, that of the form of the cash credit, which has so far defied solution. The Poles have, it seems, asked for some part at least of the cash in gold, on the ground that, by the statutes of their bank of issue, they need gold to back the expansion of their silver currency which is now imperative because of peasant hoarding and the volume of mobilisation expenditure. On the facts as they are known, this request seems scarcely reasonable, and certainly affords no good ground for a deadlock in these vitally important arrangements. It would be a retrograde step to scatter the gold reserve of the Peace Front in small parcels over Eastern Europe; and, even if the Polish proposal was merely to earmark gold in London, the disadvantages of dissipating the Peace Front's ultimate reserves are only slightly lessened. The alteration in their banking statutes to permit the use of foreign exchange in place of gold should not surely present any insuperable obstacles. For the greater part of these negotiations it has been the undue rigidity of the British attitude that has probably been responsible for their slow progress. But on most matters the British representatives have now very sensibly given way; and it is apparently the Poles themselves, despite their claim that they have been rebuffed, who are to blame for the present untimely impasse.

**The Debate on Palestine.**—The Government's announcement of its intention to suspend the immigration quota into Palestine, for the six months running from the beginning of next October, gave rise to a lively but not very conclusive debate in the House of Commons on Thursday of last week. The ground for the Government's decision is the present volume of illegal immigration, and the figures of this are certainly as startling as the consequent decision is drastic. Some 1,300 illegal immigrants are known to have entered Palestine between the 1st April and the 24th May. Since the latter date 3,507 illegal immigrants have been intercepted by the Palestine Government's patrols at sea and on land. During the same period, between 500 and 1,000 are believed to have successfully made their way in through the cordon. And about 4,000 intending illegal immigrants are now in ships on the sea approaching the coast of Palestine in order to force their way into the country. In fact, something like 8,000 illegal immigrants have either entered Palestine already, or set out to make their way in, since the beginning of the present six months' period—compared with the current half-year's quota of 9,050 and the approximately equal figure which it had been hoped to authorise as the quota for the six months running from October, 1939, to March, 1940. Most of Mr MacDonald's critics in the House had no positive alternative to offer to the Government's present policy. But Mr Duff Cooper frankly

proposed that we should denounce our past promises and "say now that it was our policy first and foremost to make a real home for the Jews in Palestine. . . . and to make there an autonomous State where the Jews shall control their own immigrants." Presumably Mr Duff Cooper wanted the whole of Palestine to be embraced in his Jewish State. On the other hand, Captain Cazalet proposed a return to the Royal Commission's policy of partition, while Sir Arnold Wilson suggested the re-union of Palestine with the Lebanon and Syria into a federation of three States, of which one would be Jewish, one Christian, and one Arab. Sir Arnold Wilson did not specify whether his Jewish State was to be of Captain Cazalet's or of Mr Duff Cooper's dimensions. In short, though the Government's policy holds the field, it finds no assured support in public opinion, here or elsewhere.

**An Empire on the Cheap.**—An Empire, like a garden, is a costly amenity. When too little labour and money is spent on a garden in proportion to its size, the weeds spring up and the flower-beds grow shabby and the best plants run to seed. There is danger that a similar degeneration may overtake the British Colonial Empire, if the British Parliament, representing the British taxpayer, is unready to spend more on its needy areas. In 1938-39, according to the latest report of the Advisory Committee to the Colonial Development Fund, grants of £625,000 were recommended to be advanced from the fund. The richer colonies are self-supporting financially and never smell money from the Imperial Exchequer; the Colonial Development Fund acts as a kind of Queen Anne's Bounty for the poor parishes of the Empire. It is not used, however, to subsidise their general budgets, but to promote special schemes of medical or economic research and development which could not otherwise be undertaken. The principle is sound; the trouble is that the fund is not large enough. And the proof of that is the sub-standard economic condition of many colonial peoples. The report of the Committee of the Economic Advisory Council on nutrition in the Colonial Empire, also published this week, reveals a serious state of malnutrition in many communities, resulting in economic inefficiency, prevalence of deficiency diseases, and proneness to general ill-health and early mortality. This undernourishment is partly due to barbarian ignorance and superstitious custom, partly to wasteful and inefficient traditional forms of husbandry from which it is hard to shift native peoples; but one cannot but believe that a more comprehensive and vigorous—and necessarily more costly—campaign of scientific development would do much to remedy the scandal of the Empire's slum parishes, and would be repaid a hundredfold in economic prosperity and human welfare.

**Obscurities of Civil Aviation.**—The British Overseas Airways Bill was read a third time on Wednesday. Its unpopularity was not lessened by the answers given to some searching questions in the Select Committee. Inquiries as to the basis of valuation of the assets of the two constituent companies met with replies which, although accepted, did not remove the impression that the expectation of continued subsidies has in fact been allowed to inflate the purchase price. An impression which has unfortunately overhung the entire negotiations for a merger has been that the information on which a judgment of its merits may be based has been provided through the persistence of inquirers rather than by the free volition of its promoters. It is still necessary to repeat that a scheme involving so considerable an expenditure of public money must not be framed in obscurity. But there is still no evidence of willingness to enlighten the public. The sudden announcement on Tuesday of a scheme for joint services and the pooling of receipts between Imperial Airways and Air France aroused new misgivings. It has hitherto been possible to rebut the assertion that the formation of the British Overseas Airways Corporation will lead to a reduction of healthy competition by pointing to the continued stimulus of rivalry with foreign lines. But the formation of so close an association between the two undertakings working the Paris route removes that stimulus in a very important section of the field. At the moment Imperial Airways and Air France provide equally efficient services. The new agreement has made it dangerously possible for both of them to be equally inefficient in a few years' time. When so little is being done to clear the atmosphere of suspicion, the announcement of the formation of a London Civil Airports Joint Committee to plan the allocation of air traffic between Croydon, Heston and the new airports at Fairlop and Lullingstone comes as welcome news. The new committee, which is representative of the Air Ministry and the Corporation of London, will advise the Minister on matters affecting terminal airport administration and organisation in the London area. It is evidence of a willingness on the part of the Government to take a positive part in one section of the civil aviation field. Such a willingness would be welcome in other sections.

**Europe, America, and the Refugees.**—A further meeting of the Inter-Governmental Committee on Refugees which was first convened at Evian was held at the Foreign Office last week, and this time there has been some progress to report—though there is still a tragic gap between the openings for the re-settlement of refugees and the number who are in desperate need of help. As regards the openings, the report on British Guiana had been published before the Committee reassembled, and steps have already been taken, thanks to American aid, to arrange for the experimental settlements which the report recommends. Last week the Inter-Governmental Committee had before them further reports on possibilities in Northern Rhodesia, San Domingo and the Philippines; and reports on Dutch Guiana and New Caledonia are also expected. It is estimated—but not certain—that these possibilities in themselves may provide for as many as 100,000 refugees. The average cost per family will be high, for these territories are necessarily all of them on the margin of suitability. Otherwise, it may be presumed, they would have been occupied already. Governmental aid is therefore indispensable, and it is good news that the British Government have been converted to this view, and intend to give direct financial assistance for the permanent re-settlement of refugees. It is even better news that President Roosevelt has invited the officers of the Committee to confer with him at Washington early in September. Settlement will, no doubt, take different forms in different areas and the non-Jewish refugees—both "Aryans" and "non-Aryan" Christians—will perhaps most easily be provided for by being absorbed into one or other of the existing nations of European origin in the overseas world (e.g. the British overseas Dominions and the Latin-American Republics). On the other hand, for Jewish refugees who have not adopted any other religion in

exchange for their ancestral Judaism, it is to be hoped that it may be found possible to arrange for the establishment of new, compact and homogeneous Jewish communities overseas which might rank as annexes to the Jewish National Home in Palestine and might incidentally help to relieve the pressure of Jewish immigration upon Palestinian politics. Such overseas branches of the Jewish National Home might conceivably be established both in the Guianas and in Northern Rhodesia.

**Doctors in War.**—The critical importance of thoroughly organised hospital services in war time is obvious. Both the doctors and the Ministry of Health have now given evidence of their willingness to deal with the problem. It was announced in the course of the week at the annual meeting of the British Medical Association that 96 per cent. of the profession had co-operated in the preparation of a voluntary register of doctors. Local emergency committees have also been set up, whose duty it will be to see that the local civilian services are maintained; and it has been provided that doctors may only be allocated to special duties through the central committees. The scheme has been evolved in consultation with the Ministry of Health, which has also announced the scales of remuneration for hospital medical officers on war work. A scale of charges for doctors employed on a sessional basis has also been fixed. Progress towards the completion of a shadow scheme for dealing with war casualties is now possible. Preliminary arrangements are already being made for expanding the casualty staffs of hospitals and bringing the new machinery into operation immediately on the outbreak of war. The local emergency committees of the B.M.A. are also dealing with the problem of maintaining the private practices of doctors who are allocated to war time duties. War needs are the origin of the scheme, and plans are quite rightly focused on that point alone. But each forward step that is made must strengthen an increasingly widespread opinion that if efficient hospital services can be achieved for war purposes it should be possible to provide them for the less exacting demands of peace time. Every advance towards co-ordination and a rational scheme of finance is a demonstration that the existing chaos is unnecessary.

**Spain Divided.**—It is no less true of civil wars than of wider conflicts that they settle nothing. The differences, ideological, regional, economic, political, social and religious, which rent Republican Spain, remain to vex the victorious Franco, and it does not need the brutal terror and purge reported from Catalonia to underline this fact. There the object of the present repression is to root out Republicanism, Socialism, trade unionism and separatism with equal force. But in high quarters elsewhere, much nearer to the direction of national policy, there are acute divisions. In the space of only a few days one general has been dismissed his command, another has been reported imprisoned and two others have reputedly fallen into disfavour. In each case the alleged offence seems to have been outspoken hostility to any firmer adherence by Spain to the Rome-Berlin Axis; General Queipo de Llano criticised Germany and Italy in a speech at Seville; General Aranda insisted in an interview given to a Lisbon paper upon the need for a neutral policy of no commitments; and the other two generals have seemingly been similarly uncompromising in their opposition to the desire of the Falangists and Señor Suñer to link Spain more closely to the Fascist Powers. The disfavour of the generals need not, perhaps, be given too much weight. Many of the details rest upon rumour, and General Queipo de Llano has been appointed Ambassador in Buenos Aires. But it is not without significance that these comings and goings followed the recent visit to Spain of Count Ciano, reputedly alarmed about the independent attitude being assumed by the Spanish Monarchists; and it is noteworthy, too, that a number of editors and journalists, also

supposed to be against dependence on the Axis, have been dismissed. It is probable that the position now is precisely what it has always been in modern Spain. All the various parties and groups believe in "Spain for the Spaniards," national independence and the neutrality in war that the country's interests and its geography alike advise. But, in their struggle with each other, they look to their affiliations abroad, and a great deal now depends upon two things. Where will Franco Spain finally look for the financial aid urgently needed for the sweeping economic reconstruction that has not yet been begun? And what will be the policy adopted by the victors in the present struggle for control in Spain. Probability, despite the recent tightening of the screw from Rome, is still on the side of Spain's neutrality—although the strongest party organisation at the moment is the pro-Italian directed Falange.

**The New Cabinet in Holland.**—Dr Colijn has at last succeeded in forming a new Government at the Hague. This is good news both for Holland and for Europe. No country would care to find itself without a government during the next two months, and in July, 1939, Holland is in as perilously exposed a position as Belgium was in July, 1914. Dr Colijn is therefore to be congratulated, but it does not look as though he would have a much easier passage with his new Ministry than he had with his last. The new Ministry is a "business cabinet," which is a euphemistic way of saying that it rests on an uncomfortably narrow parliamentary basis. The Catholics and Socialists find themselves bedfellows in opposition—solely on account of their mutual unwillingness to become partners in office, which they could have assumed jointly if they had been willing to go into coalition with one another. No less than five members of the new Ministry have risen to eminence in Netherlands India; and, at a time when Japan is on the warpath in Eastern Asia and in the Western Pacific, it is natural that the Dutch Colonial empire should be strongly represented in the Government at the Hague. Holland is building three battle cruisers for the defence of her possessions in the Far East; but more immediate menace to her security may arise on her eastern frontier in Europe. Jonkheer O. C. A. van Lidth de Geude, who is Minister for Waterways in Dr Colijn's new Ministry, as he was in the one before the last, may yet turn out to be the key member; for a minister whose normal function is to keep the water from invading the dry land may be called upon one day tragically to reverse his normal efforts by letting loose the waters in order to keep at arm's length the even greater scourge of a human invader.

**Local Reserves of Labour.**—The latest regional unemployment percentages for June reveal a striking variation between different parts of the country. In London, the Midlands, the South-East and the South-West the general unemployment percentages were less than 7, in the South-West alone 4.8. But in Northern Ireland the percentage was as high as 20.7, in Wales 16.5 and in the Northern region 14.7. In a leading article in last week's *Economist*, it was shown that, even in industries where the national unemployment percentage was very low, the percentages unemployed in the North of England and in Scotland and Wales were often high. The conclusion was reached that, while full employment was being rapidly attained in the South and Midlands, there were still labour reserves elsewhere. Now, a Ministry of Labour inquiry into the distribution of the registered unemployed by age and duration of unemployment at the beginning of May provides new information about the actual make-up of these reserves. From the results of this inquiry it is possible to calculate the numbers of men who would have been unemployed in each of the five least prosperous regions of Great Britain, if the rate of unemployment and the distribution of the unemployed by age and period of unemployment had been the same there as in the South-Western region; and then to show

the differences between these figures and the numbers actually unemployed and so get some idea, not only of the size, but also of the composition of the "local" reserves of labour available in the regions enumerated. The results of these calculations are shown in the table below:—

"LOCAL" LABOUR RESERVES AT BEGINNING OF MAY, 1939.  
NUMBERS OF MEN IN THOUSANDS

|                                            | Divisions where the percentage of men unemployed exceeded 8 |          |               |          |       | Total |
|--------------------------------------------|-------------------------------------------------------------|----------|---------------|----------|-------|-------|
