Nor is this all that the Allies gain, whatever happens in the field. Belgium and especially Holland are great trading and financial nations, and the basis of their trade is shipping. Their accumulated gold and foreign exchange assets, most of which the Allies will control (perhaps £25 millions of Dutch gold may have been taken), exceed £350 millions, a remarkable addition to the buying-power of the defenders of democracy. Holland's investments in the United States amount to perhaps £250 millions, of which some £200 millions may be negotiable; Belgium's United States investments may be £35 millions. Holland's total tonnage of shipping (of 100 tons or over) is nearly 3 millions; her efficient ocean-going tonnage, 1½ millions; her efficient ocean-going tonnage; her is a seventh of our own efficient ocean-going tonnage; her tanker fleet (1,000 tons and over) exceeds half a million tons. Belgium's total tonnage is some 400,000. The greater part of these ships, as well as the German vessels lying in the Dutch East Indies and captured, will be available for Allied use. They will ease the pressure on Allied shipping space, and their services will earn foreign exchange.

These are clear gains to the Allies. They appreciably increase the grave disadvantage in trade and finance, and therefore in vital supplies, that Germany has suffered since the Nazi swoop upon Europe was first resisted last September. But it would be idle to deny that there are large gains to the Germans as well. Mostly it is mere loot that cannot be replenished, large stocks of vegetable oils (Holland's oilseed crushing industry is considerable), of rubber and oil (which the defeated Dutch forces may have destroyed in Holland), of margarine and whale oil. There are stocks of tin in Holland and of copper in Belgium.

Indeed, it is a common view that the tightening of the Allied blockade drove Hitler to his latest attack. Faced by short supplies, with the inability to last a long war, he has struck out westward, to end the war before Germany's economic weaknesses were tested; and, *en passant*, to seize the precious booty of the Netherlands stocks. In doing so he has closed the neutral corridor for transit trade that was Germany's only mainstay in the last war. In 1918, 60 per cent. of the Reich's imports came from or through Holland. This time, when, admittedly, Germany has an area of supply in the East and South-East that hostilities robbed her of in 1914-18, the Allied blockade has already been severe in the West. Germany's transit trade through Holland in 1938 was 50 million metric tons; in the first quarter of 1939 it was 11.9 million tons; in the first quarter of this year it was only 1.4 million tons. Rotterdam's position as Germany's chief trading inlet was destroyed before the Nazi bombers raided the city; and trade through Antwerp, too, which carried 2.3 million tons of goods of Belgian and foreign origin to Germany in each of the pre-war years, had been sharply cut away. Trade into Germany was blockaded, but trade into the Netherlands was not. Dutch imports in the period September, 1938, to March, 1939, were valued at 810 million guilders; in September, 1939, to March, 1940 (when, admittedly, import prices had risen), the value was 941 million guilders; and there were obvious stocks to tempt the invader.

These stocks are short-term gains, though the edible oils, vegetable oils, margarine and whale oil meet an urgent German need. The question is: What are Germany's gains from the agriculture and industry of the conquered Low Countries likely to be? In Holland farming is a major industry, and from her 2½ million head of cattle, her 650,000 sheep and her half a million pigs the Germans will again get needed supplies. But Dutch agriculture has no indigenous base. Its annual export surpluses of 200,000 tons of milk products, 120,000 tons of butter and cheese, 80,000 tons of meat products and 30,000 tons of meat (a large part of all of which already goes to Germany) is

dependent upon imported feeding stuffs, cereals and oil-seeds. Sixty per cent. of Holland's cereal requirements have normally to be imported, as well as very considerable quantities of fertilisers. The immediate gain to Germany in foodstuffs and agricultural produce should not be minimised; there are stocks of feeding stuffs and fertilisers, too. But it cannot last: neither pastoral, dairy nor arable farming can be carried on in Holland on a scale likely to aid Germany in face of a complete blockade of essential supplies by the Allies; and industrial Belgium is never able to feed herself by a very wide margin.

The position is not fundamentally dissimilar in industry, though here the German gains are perhaps more evident. Both Holland and Belgium are leading industrial countries. Both are normally self-sufficient in coal (Germany's need for which is steadily growing); Holland produced 13½ million metric tons in 1938 and Belgium 29½ million metric tons. Holland's coalfield in the Limburg district around Maastricht is now German. Belgium's coalfields around Liège and Charleroi are now in the main battle zone. Some chemicals, too, are produced by both countries. But, in the main, the industries of the Low Countries carry on by converting imported materials into manufactured goods. Their important metal industries depend upon foreign ores, nearly a sixth of Belgian imports being materials for metal manufacture. Belgium refines imported copper and zinc. Her iron and steel industry (Belgium is the sixth steel producer in the world)—situated near Liège and Charleroi and in the province (not the Grand Duchy) of Luxembourg, with an annual capacity of some 4 million tons of crude steel—is dependent on ore supplies from France and Algeria as well as from the Grand Duchy. Germany has seized the Grand Duchy, but she has not yet won the Belgian industrial areas which are now being devastated; and she herself is short of iron ore supplies. Luxembourg will give Germany over 7 million tons a year of iron ore, but it is low-grade ore like Germany's own, and the Belgian iron and steel industry, even if it were captured, could not be sufficiently fed. So, too, with textiles—a fifth of Belgium's normal imports are textile goods, but her mills and factories are dependent upon overseas supplies.

The position is the same in occupied Holland. Iron and steel, shipbuilding, engineering and electrical trades, all are dependent on imported materials. Tin smelting needs tin from the East Indies. The great Dutch oilseed refining industry must fall idle when stocks of important oilseeds are done. The industrial capacity of both Belgium and Holland, the factories, plant, mines and shipyards (Holland's 35-40 well-equipped yards are well suited to U-boat building) are undoubtedly a gain to Germany—but only if they can be used. For a time they may be fairly fully used with the raw material stocks already accumulated; but, in the long run, if the war is not ended earlier by a sudden stroke, they will fall more and more idle for lack of materials.

Economically, therefore, the Low Countries can only represent a gain to the Germans for the next few months. The Allies, on the other hand, have lasting gains—in colonial co-operation, in raw materials, in shipping and foreign exchange and in negotiable securities. But they have immediate losses as well—coal, machinery and dairy produce from Holland, coal, iron and steel, metal products and flax from Belgium, and iron and steel from Luxembourg; the French Government had agreed to take 5 million tons of coal from Belgium this year and between 1 and 1½ million tons from Holland, but it should not unduly strain Britain's coal resources to replace these. A seventh of Belgium's exports came to Britain in 1938 and over a fifth of Holland's exports. In 1938, a tenth of Britain's imports of tomatoes, a fifth of our egg imports, nearly half our imported onions and four-fifths of our tin ensure the milk came from the Netherlands.

But the foodstuffs, iron and steel and the lower grades mally bought from the Low Countries, to bring in a Germany's eventual losses from non-essential trades. wins the war very quickly, will distribute the invaluable would be tempting the gods in the most effective way while the battle is still on; two needs must be met at that the latest German resistance to disaster is to be fed economically, a sign and aircraft without which it must strength.

Gains and Losses

THE invader has overrun Luxemburg. All Holland outside of island Zeeland has fallen to his forces; and, as the battle rages, no one can tell how much of the kingdom of the Belgians will be saved from the wreckage. The occupation of all or most of the Low Countries must improve Germany's strategic position greatly. The assault upon Allied trade and shipping from the air and under water, upon ports and centres of production, will have nearer bases. Economically, in terms of essential supplies, the position is not so clear. Away from the battleground, it is the Allies, not Germany, who have gained. Holland and Belgium are Imperial Powers, with possessions rich in oil, tin, rubber, copper, sugar, oilseeds, tea,

Italy's Preparations

IS Italy ready to go to war? Her basic weaknesses, her lack of raw materials, such as oil, coal, iron ore, rubber and tin, and her dependence on imports from beyond Gibraltar and Suez, have already been demonstrated in *The Economist* (January 20th, page 99, and April 27th, page 761). They cannot be removed by policies of a purely domestic order, but only by changes abroad; yet they may incline Mussolini to war and great risks rather than peace and a stabilisation of Italy's present military-economic inferiority. A significant guide to Italy's war readiness would be the size of her stocks of imported materials.

At the outbreak of war the Italian Government imposed an almost complete black-out of statistical information. But in foreign trade there are two nations concerned, the exporter and the importer; and the trend of nearly a third of Italy's foreign trade can be followed in the publications of clients and customers; and earlier this year it was announced that production in 1939 was 14 per cent. higher than in the previous year.

Last year's great expansion of Italy's war industries has not stopped. The recently published reports of the three great concerns, Breda, Fiat and Montecatini, emphasise this. Breda are building yet another armaments factory near Rome in Italy's new industrial zone, lying roughly between Naples and Florence. Fiat are building a new factory near Florence, which can replace their dangerously situated Turin establishment in time of war; and, although their production of motor cars has fallen off, armament and aeroplane production have more than offset the decline. Montecatini report advances in almost every branch of mineral and chemical production, in which this company plays a predominant rôle. Plans are being put into execution for the hydrogenation of lignite and for new oil refineries; and under the latest plan steel production is to be raised to 4 million tons, compared with just over 2½ million tons in 1938.

As in Germany, autarky does not mean any reduction in Italy's imports of raw materials or in her need for foreign exchange to buy them. This high level of activity compels an increase in both domestic and imported supplies. Purchases from the Balkans have greatly expanded in recent months far in excess of sales. Switzerland and the Balkans have become more dependent on Italy's transit facilities and shipping. Italy has clearing agreements with nearly all European countries, and the amount of free exchange that can be gained from European trade is limited. The only extra-European countries with which Italy has clearing agreements are Japan and Manchoukuo. But Italy's trade deficit with extra-European countries has almost certainly increased since September, either as a result of bigger imports, as from the United States and the Dutch East Indies, or as a result of smaller exports, as to Egypt, Malaya and India. So far as free exchange is concerned, Italy's trade position has not improved. Even the increased balances from transit traffic and shipping cannot appreciably alter this fact; and against these favourable items on invisible account must be set the almost complete standstill of the tourist industry.

The fact is that Italy, in the throes of intense industrial activity and in need of more and more overseas materials, is suffering from an acute shortage of free exchange, and particularly of dollars. So acute has this shortage been that Italy has been compelled to draw on her published gold reserves. At the end of 1937 these amounted to 3,996 million lire. During 1938, when the year's trade deficit was 2,960 million lire, the gold reserve was depleted to the extent of 322 millions. Last year, when the trade deficit had been reduced to 1,500 million lire, this was covered by a sale of gold amounting to 974 million lire, of which nearly a third was sent to the United States in the last three months of the year. Moreover, this export of gold to the United States is still continuing, as Italian imports from the United States reach new high levels.

The increased Italian purchases from the United States

have consisted largely of cotton. Shipments of cotton to Italy from her three principal suppliers, the United States, India and Egypt, amounted to 68,655 tons in the first four months of the war, compared with 57,745 tons in the same period of 1938, and 19,745 tons in January, 1940, compared with only 7,930 tons in January, 1939. The value of petroleum products imported from the United States has been little more than it was before the war; imports of crude petroleum have, in fact, fallen off; but imports of lubricating oil, destined perhaps in part for Germany, have greatly increased. In February of this year total imports from the United States amounted to more than \$9½ millions, leaving a trade deficit of \$7 millions, of which \$5 millions was covered by the export of gold.

Total Italian imports of petroleum and petroleum products amounted, according to Italian returns, to 2,648 thousand tons in 1938 and 1,133 thousand tons in the first seven months of 1939. In the remaining months of last year the United States sent Italy 350 thousand tons, Roumania 260 thousand and Mexico, according to a private estimate, some 450 thousand tons. Thus, for these three countries alone, the five months' total was 1,060 thousand tons which, added to the Italian figures for the first seven months of the year, gives a figure of 2,780 thousand tons for the whole of 1939, and total imports from all countries must necessarily have been much greater. Moreover, the Italian figure for 1938 is an underestimate, as it is believed to exclude petroleum used by the Navy or Air Force, and therefore actual imports in 1938 may well have reached 3 million tons; in 1939 they probably exceeded 3 millions. In view of rationing and sharp increases in the price of petroleum products, Italy must have built up formidable reserves.

The coal position, crucial to Italy, is particularly hard to gauge. In 1938, 8.9 million tons came from Germany, Austria, Poland and Czecho-Slovakia, over 6 millions by sea. The Italians claim to be importing at the rate of 12 million tons a year, but even 12 million tons, about the average of annual imports in recent years, is hardly adequate to meet the requirements of industry at the present high level of activity; and it is hard to believe that, with the Allied ban on sea-borne German coal exports, this rate can be kept up for long (in 1938 10 out of 12½ million tons came by sea). The domestic output of coal was just over 3 million tons last year and is scheduled to reach 5½ million tons this year. Every effort is being made to encourage the consumption of the inferior domestic product, but technical considerations often make this impossible. The electrification of the railways has succeeded up to the point where they require directly little more than a million tons of coal a year; but it must be remembered that, at certain seasons of the year, electric power has itself to be obtained from coal. It is estimated that an irreducible minimum of 7½ million tons of foreign coal is required for electric power stations, for gas works and for certain industries that could only use domestic coal with the greatest difficulty. Stringent rationing of coal was introduced on March 1st.

Imports of tin and rubber dropped off in the general uncertainty just after the outbreak of war, but have since revived. Deliveries of rubber from the Dutch East Indies during the first four months of the war were higher than in the previous year, but not sufficiently high to compensate for the reduction of shipments from Malaya. But, already in December, Malayan shipments were reviving, and in January and February shipments from the Dutch East Indies were 3½ times what they were a year ago. Shipments of tin from the Dutch East Indies in the first six months of the war were 1,235 metric tons, compared with only 143 in the corresponding period of the previous year—more than enough to compensate for a small decline in Malayan deliveries up to last December.

In sum, so far as can be seen, during the last eight months Italy has been pressing on with her war preparations as rapidly as though she had been at war and without

the hindrance of blockade or hostilities. Unnecessary consumption and imports have been cut down. The import of essential materials from overseas has been proceeding at a great pace and in apparent disregard of the willingness of the overseas countries to take Italian goods in exchange. Gold from the reserves of the Bank of Italy

is being exported without compunction. Considerable stocks have been accumulated. It is not easy to avoid the conclusion that Italy has been hurrying to import all she can against the closing of the entrances to the Mediterranean by the British Navy in the event of her lining up with Germany.

Training War Workers

"COME, then, let us go forward together with our united strength." Mr Ernest Bevin has been made Minister of Labour, Mr Herbert Morrison, Minister of Supply. Labour's leaders have been called to carry the new Prime Minister's summons into every factory and workshop in the land, and Mr Bevin himself has described their task: "I will ask my people to work like hell to save the lives of our lads."

The hard path of production upon whose swift traversing the battle in the end may turn is not simply to break down every resistance of every kind to the full employment of men and women and plant; not simply to destroy every hesitation and barring interest; not simply to requisition or conscript (the word is used advisedly) the nation's industry and its industrial personnel. The new industrial army must be trained. It is not only numbers that are needed, but skill, capacity and trained intelligence as well.

We know that there is a shortage of skilled and experienced workers in many essential industries. We know that even highly trained industrial recruits are few. We know that the training schemes so far launched are sadly small by contrast with our large scale requirements. What can be done? What sort of training can be given in engineering and metal manufacture to very large numbers of recruits in a brief month or so? Can the demand for really skilled workers, for foremen, charge-hands, supervisors and under managers, be satisfied by any method of intensive training; or must we rely here on the slower processes of promotion and judicious up-grading and on culling out the short supply by dilution and the infusion of less skilled workers? How far can we tap reserves of skill for war work by the full mobilisation of this class of manpower and its allocation, according to an infrangible schedule of priorities, exclusively to war and export manufacture? Who is to be trained and how?

Unemployment in the metal and engineering trades is not more than 2 per cent., and a grave bottleneck in the supply of labour is imminent. The training of hundreds of thousands of semi-skilled men and women to operate single-purpose machines is imperative. In the last war, to train these was easier than now; shells and ammunition were produced on very simple machines, dividing the process into many stages, each of which could be attended by girls and women with little or no experience; workshop sense and deftness were learned on the job, and the organised training was not often needed. This time the machines are more complicated; they perform several actions simultaneously and turn out much more material than in 1914-18 with much less labour. Definite courses of instruction and learning periods cannot be dispensed with, and an added need to embark now upon large-scale training without delay springs from this. The time needed to train this semi-skill is still only short, but it cannot be missed.

In Germany, four weeks' training is given to all unskilled recruits to the metal trades—almost wholly in the actual works and on machines being used in production. The local Labour Front aids in the drafting of training schemes, and defaulting employers are denied additional skilled labour until semi-skilled workers (in this lesser sense of mere machine operators) are being adequately turned out. The slogan is "We must abolish the unskilled worker"; and it should not be hard for British industry to follow suit on a massive scale. It needs only Government leadership and command; not simply the Government's readiness (announced ten days ago) to pay the fares of unemployed men going to employers for training, valuable though that is; but its decision to pay for the maintenance and cost of training as well as for the transfer

of hundreds of thousands of workers not now in war work, whether idle or not; and its determination to enforce quite ruthlessly the maximum training of machine operators in the nation's factories.

It is possible to provide deliberate short-period training for a great force of machine operators, and the appreciable work already being done by individual employers up and down the country reinforces this confidence. The rest is up to Mr Bevin. But this is only the first task. The second and hardest is to find a sufficient supply of men with more skill than these machine operators—skilled and semi-skilled craftsmen. In Britain, promotion among industrial craftsmen is mainly by an elastic system of up-grading. A man proves his ability on the spot by "earning the rate for the job" and by showing his capacity to take responsibility in handling costly materials or in organising other workers. It is a system of trial and error, and there is extraordinarily little formal apprenticeship. The worker builds up his skill by varied practical experience, and little can be done in the really short run to increase the actual numbers of skilled and responsible workers.

The Government training centres afford an excellent example of this limitation. They provide unemployed men with "a background for craftsmanship." They could not turn out large numbers of machine operators simply because they have not got, and cannot have, the requisite range of expensive and bulky machines to train them on; that can only be done, in the main, in industry, where the machines are actually in use. What the centres do is to train semi-skilled workers in the higher sense, men who are "half a craftsman." If they are turners, they have had experience of several sorts of lathes and can read diagrams. If they are sheet-metal workers, they know something of geometry and the nature of malleable metals. If they are precision fitters, they have worked on a series of benches, learning to be familiar with diagrams and to work in different metals. They have gained generalised craftsmanship of the kind that comes in industry with the widening of experience. But it takes time. It cannot be hurried, and it is by no means certain that the recent shortening of the training period at the centres from six months to three will prove worth while. It is only the training of semi-skilled machine operators, not these semi-skilled craftsmen, that can be done *en masse* and rapidly, and this cannot be done at the centres.

Thus there is no simple and sovereign way to increase the numbers of more or less skilled craftsmen. A crucially needed step is to make the most effective use of those that there are: to use them exclusively on essential work; to comb the labour field for men ripe for speedier up-grading; and to reinforce these key men by vast numbers of swiftly trained operatives. At present the Schedule of Reserved Occupations protects from calling up men in selected occupations and the entire personnel of enterprises doing essential work. But this is useless unless the men not mobilised for war are fully mobilised and organised for work; and unless apprenticeship and the technical training of juveniles are maintained and extended to ensure the forthcoming of industry's essential labour.

The first need is training: to multiply the lower grades of workers by intensive mass instruction, to bring in a regiment of women and workers from non-essential trades. The second need is distribution; to distribute the invaluable skilled personnel of industry in the most effective way humanly possible. And these two needs must be met at once, if the free countries' resistance to disaster is to be fed with the shot and shell and aircraft without which it must crack and crumble.

NOTES OF THE WEEK

Holland Surrenders

The collapse of Dutch resistance after five days came as a surprise only to those who had under-estimated the striking force of the German war machine. An army of 400,000 men, however gallant and resolute (and the Dutch show magnificent courage) can hardly resist, virtually unaided, the invasion of the mechanised columns of a Reich 80 millions strong. And Germany used every device of violence and treachery to secure her rapid advance. The dropping of thousands of parachutists in the rear so that at the height of the attack Dutch troops had to be withdrawn from the main positions to defend the interior, helped to confuse the military situation and the organised treachery of Dutch Nazis and resident Germans created almost unbelievable conditions of suspicion and suspense behind the lines. Treachery, too, probably left the key bridges at Arnhem and Moerdijk intact so that the German motorised columns could sweep in unimpeded. But the chief factor in the Dutch Commander-in-Chief's decision to surrender appears to have been the appalling extent of the damage due to aerial bombardment and the even more appalling slaughter which every mile of the German advance entailed. In five days Holland had already lost 100,000 men, a quarter of her army. Civilian figures were probably not much less, and with the German army approaching the densely inhabited provinces round Utrecht, the Commander-in-Chief concluded that no military consideration could justify the carnage which would ensue. Thus, with a good part of their main defensive positions still intact and their greatest cities still unoccupied, the Dutch gave up the struggle and their capitulation is a striking testimony to the terrorising powers of the bomber and yet another proof of the absolutely over-riding importance of air power in modern war. The country remains at war with Germany and in the province of Zeeland resistance continues. The Dutch Navy succeeded in escaping from the Dutch ports and has joined the Allies. A certain proportion of the Dutch Army crossed the Belgian frontier and is being reorganised on Belgian soil. In the Zeeland area, the Dutch troops have been placed under the command of Rear-Admiral van der Stad and are in contact with Allied forces. They appear to form one end of the long defensive line which is developing from Antwerp to Sedan, but in the rest of Holland, Germany's occupation is proceeding rapidly and troops have entered Amsterdam and the Hague.

The Dutch East Indies Carry On

Independent Holland continues in full sovereignty in the Dutch East Indies. Many big Dutch banks and business houses are removing their offices to Batavia—among them the Netherlands Trading Society and the Rotterdam-Lloyd. The loyalty of the native populations is absolute, and the islands appear to be bracing themselves for a great effort to keep the Dutch flag flying and to assist as actively as they can in the prosecution of the war. Their contribution will, of course, be mainly economic, and here certain difficulties with Japan arise. Japan relies to a considerable extent on supplies from the Dutch East Indies. If the Indies devote all their resources to forwarding the Allied cause and in this way reduce the volume of trade with Japan, then the Japanese Government may well decide that the *status quo* which they demand, under threat of intervention, to see maintained, has in fact been violated. The extremist elements in Japan are already pressing for intervention without waiting for the excuse, and the extremist press is making great play with the Allied landing in Dutch West Indies. A similar procedure will, they declare, be adopted in the Dutch East Indies, and Japan should consider whether such a move ought not, on Nazi lines, to be "forestalled." However, the presence of the United States fleet at Hawaii and Japan's great economic dependence upon American supplies have a calming effect. Provided the Dutch East Indies' help to the Allied cause does not materially interfere with Japanese trade, we can hope for the maintenance of the *status quo*. One immediate gain to us is the fact that, together with the United States, the Dutch East Indies has been the principal supplier of the goods reaching Germany via Vladivostok; with the United States' moral embargo increasing in effect and Dutch East Indian shipments suspended, one of the most serious leaks in our blockade will have been at least partially closed without the necessity of upsetting Russian sensibilities.

A Week of Pre-Belligerency

All through the week, Italian students and schoolchildren have been marched from their classrooms to fixed points on the streets and public squares of Rome to give "spontaneous" vent to their fierce hatred of France and Britain and to their pride and delight in the exploits of their magnificent allies who have crushed out the independence of yet another small State and are attacking the mother country of the Italian Crown Princess. Signor Mussolini has given his official blessing to the demonstrations by appearing on the balcony at the Palazzo Venezia, and the demonstrators are ably seconded by the activities of the police. Anti-Allied posters plaster the town and attacks on English visitors have taken place; women and old men appear to be the favourite targets of attack—Fascist virility must have its way—and even diplomatic immunity has not shielded the Swiss Minister and his wife from gross insult. The Italian Press is jubilant over Allied defeats and German invincibility and assures the people of Italy that the Allied contraband control is at the root of Italy's (admittedly stringent) economic difficulties. The *Osservatore Romano*, whose testimony to the truth has continued unshaken throughout the crisis, is now virtually banned, and violent incidents took place where copies of the paper were still displayed. Some readers were even thrown into the public fountains. The *Osservatore's* general crime was, of course, its publication of impartial news, but the new onslaught was undoubtedly designed to prevent the Pope's message of sympathy to the sovereigns of Holland, Belgium and Luxembourg from reaching the Italian public. Yet, in spite of this frantic ebullience, it is still uncertain whether Italy has braced herself to take the plunge. Diplomatically, it would appear impossible for the Duce to withdraw from his extreme position without damaging loss of prestige. From the military standpoint, intervention now, when the Allies face the greatest crisis of their national existence, would almost certainly have considerable effect. Germany, too, may have decided that the time has come. Military missions are in Rome, the country is flooded with "tourists," German troops are massed on the Yugoslav and Swiss frontiers, the bombing by German aeroplanes of Italian ships has started again. It looks very much as though Berlin were forcing the issue.

Yet there are certain anomalies in the situation. In spite of the "strengthening of the Western fortifications" and the calling up of more classes, Italy is not fully mobilised and there is no evidence that her air force has taken up its battle station. True, her citizens are being advised to leave Turkey and Egypt and anti-Yugoslav demonstrations have started again, but Italian ships—save for the *Adriatica* line to Turkey—are sailing normally. The propaganda campaign appears to have missed fire to such an extent that in the north of Italy many arrests have been made on the grounds of insufficient Axis enthusiasm. The steady hostility of the Church to armed association with the Reich has a certain effect, and the United States continues to do what it can by diplomatic pressure to prevent the spread of the conflict. It has been suggested that the fierce anti-Allied propaganda and the insulting and molestation of Allied citizens are designed to provoke the Allies into making a hostile gesture which the Duce could "sell" to his unwilling people as a threat of attack. Alternatively, the intensification of the campaign may be aimed at giving Germany the maximum diplomatic support and at immobilising in the Mediterranean and Near East an important part of the Allies' naval and air strength. Finally, the blackmail may be designed to secure sufficient modifications of the Allied contraband control to enable Italy to compensate Germany for her loss of leaks through the Low Countries. If the two short of actual war. Nevertheless, the Allies are taking their precautions. Egypt is at the alert, towns in the Libyan frontier are being evacuated, the fleet has sailed from Alexandria on manoeuvres. We are also keeping a wary eye on Spain. No one doubts the Caudillo's sincere desire to keep war from his devastated country, but there are strong forces moving against him, not least the disguised and open German and Italian "residents" inherited from the Civil War. The Mediterranean situation is obviously critical and, in spite of the few favourable omens, we must count on the possibility of war there from day to day.

The War Within

There can be no standing on ceremony when the nation is in daily peril, and the Government's new powers to intern all enemy aliens and restrict the movement of other foreigners will be opposed by none. So far they have only been applied to 3,000 enemy aliens and 10,000 others in eastern and southern coastal counties, but there is no sound reason at all for not applying them at once to the entire country; sabotage and sedition know no local government boundaries, and among the 27,000 or so Germans and Austrians still free there must in fact be a cadre of enemies—if the bitter experience of other lands is any guide. There is no question of persecution or the setting up of penal camps on Nazi lines. It is still true that a distinguishing mark between us and the Germans is in our treatment of minorities. Probably the very large majority of the Germans and Austrians in this country are our friends and Hitler's savagest foes. If so, they will show their friendship by going willingly into restraint, comfortable but complete. We can take no chances at all now, and wholesale internment will be protective custody for the genuine refugees themselves as well as for us. Far more difficult is the problem of our own nationals. In Norway and Holland the cruellest blows were struck by Norwegians and Dutchmen. Here the worst Quislings will have British names and British ancestry, and it should not be hard to pick out the most likely saboteurs. The hardest task is to mark down the silent traitors, though enough is known about Fifth-Column publicity and enemy associations before the war to provide the material for ruthless surveillance and a large-scale combing-out. Power now exists to detain British subjects with little or no proven British association. The new Treachery Bill reinforces the age-old power to sentence traitors to death. To smell out the traitors is the next step—as always, in this country, with the use of known and established rules of law and the need for proof before a court to nail the guilt. Not until the worst happens will the drumhead come into its own.

The First Invaders

It is not only the refugees from the Reich that have now to be considered in the defence of the realm. Hundreds of thousands of refugees from the stricken Low Countries will seek succour here, and arrangements are already in train to house them. Among them are more fugitive Germans and Austrians caught in their places of exile by Hitler's advance, and all of them come from countries that have been stabbed in the back by traitors. Every sympathy is due to the latest victims of the violent and many-sided Nazi terror. Every effort to feed and clothe and shelter them is due. But here, as in the case of the refugee aliens we already have, we must frankly confess that we have carried confidence too far in the past. These new immigrants, with possible assailants hidden in their ranks, must not lightly be scattered to move freely in our towns and countryside. The generous rule that aliens should go largely unrestricted unless their *bona fides* can be questioned has been out-dated by events abroad. In self-defence they must be restricted unless they can prove their *bona fides*. It is our duty to treat them well and to make whatever restraint may seem desirable as tolerable as possible. But the duty to safeguard ourselves is greater still.

Conscience and the War

The demand for new measures to curb "propaganda deliberately designed to impede" the war effort has multiplied. It is not confined to any political section. The President of the National Union of Distributive and Allied Workers has called upon his fellow-workers to resist "stop the war" treason. The recent case in which a Communist paper was mulcted in damages for indicting the war policy of certain trade union leaders revealed the conviction with which trade unionists have refused the cry that this is an "Imperialist" war; the Labour Party Conference has overwhelmingly endorsed this. There has been no public outcry on grounds of civil liberty against the prosecution last week of several officers of the Peace Pledge Union, and no doubt exists that the vast majority of citizens are anxious to put a stop to all agitation, Communist, Fascist or Pacifist, intended to sap the nation's resolution. Events abroad have shown it to be a matter of life and death. This is not the same as saying that there is a determination to stop people with honestly-held opinions hostile to war from acting according to their convictions. In the midst of its most crucial debate for a decade the House of Commons found time to pay unanimous tribute to the late Mr George Lansbury. It was as an honest Christian Pacifist that in recent years Mr Lansbury was best known. He was always free to speak and always

listened to with respect—and he never attempted to use his faith to undermine the loyalties and activities upon which the nation's safety rests. So it should be with all honest pacifists. It is equally for us and all conscientious objectors to realise that it is in their conscience and not in their objection that their rights and duties reside. New Defence Regulations have made propaganda to impede the war effort or reduce the Forces' allegiance heavily punishable if persisted in and if proven in Court. We can do no less for the safety of the people and the liberties that still allow pacifists to speak.

The Effect in America

The direction of the reaction in the United States to Hitler's latest aggression is clear beyond mistaking; but the extent to which it has gone is much more obscure. The combined effect of the new Government in London with the brutal onslaught on two more inoffensive neutrals has been to remove at a blow the emotional foundation for the growth of isolationist sentiment in the past eight months: it is no longer possible either to tar the Allies and Hitler with the same brush or to believe that a defeat of the Allies would not affect America's own interests or safety. As a result, all that body of opinion which was, in greater or less degree, interventionist last September, but has since become discouraged, has recovered its original position at a single bound. There has been an outpouring of opinions to the general effect that the United States is endangered and that, however gigantic the re-armament programme that is now to be adopted, much the simplest, and the only rapid, way in which American safety can be served is by giving every possible help to the Allies except the sending of troops. What is not known, and will only gradually emerge, is the extent to which that great mass of American opinion which held the opposite view last September has had its convictions shaken. Only a few weeks ago, Mr Dewey, campaigning for the Republican nomination for the Presidency, was finding that his strongest argument was pure isolationism. If that sentiment has now changed in the great stretches between the Alleghenies and the Rockies, Mr Dewey is left out on a limb and Mr Roosevelt's renomination and re-election are certain. But if the Middle West still has its head in the sand, the issue will have to be fought out at the presidential election. The next few weeks will show how strongly the wind of intervention is blowing—and its strength will be measured in Congress, not in the editorial views of Atlantic Coast newspapers.

The reaction in Latin America seems to have gone somewhat further than the official policy of the United States. Uruguay has proposed a joint protest to Berlin against breaches of neutrality, and this proposal has been accepted in Washington. An Argentine proposal that the whole Pan-American Union should collectively move from neutrality to "non-belligerency" clearly went further, and its pro-Ally intention was as manifest as its precise substance was obscure. This was rejected in Washington as being contrary to the letter and spirit of the Neutrality Act. But non-belligerency would not be an inaccurate description of the attitude of both Americas, North and South. It is even possible that the pre-belligerent stage has been reached.

Towards a Swiss Offensive?

Switzerland's mobilisation is complete. Stringent measures have been taken to control the movements of foreigners. Roads are patrolled, cars are stopped, the houses of aliens are being searched for concealed arms. Switzerland's precautions are understandable. The fate of Holland and Belgium has warned the Swiss that scrupulous neutrality is less than no guarantee against attack; on the contrary, it encourages attack, since it makes certain beforehand that the small neutral State—in the interests of its neutrality—will have taken no steps to associate other Powers with the defence of its independence. Since the Swiss share frontiers with both Germany and Italy, they feel that they are an obvious prey for Hitler and his satellite, while the strategic importance to Germany of turning the Maginot Line also suggests a break through Switzerland to the French frontier in order to make possible a pincer movement, in the north from Sedan, in the south from Basle. Germany appears to be taking a number of steps calculated to increase Switzerland's anxiety. Manœuvres in the flat-bottomed boats which figured in Germany's Dutch operations have taken place on Lake Constance, all railway traffic with Germany has been cut off save for those travelling with diplomatic passports, and 25 German divisions are said to be concentrated in the Black Forest, possibly for a frontal attack on the Maginot Line, but more probably for a flanking movement through Swiss territory. The Swiss are awaiting their fate with fortitude. If and when the time comes they will fight with courage. If they fall, another blow will have been struck at the essentials of good neighbourhood and decent living.

* * *

The Balkan Front

The news of the invasion of Belgium and Holland was received with mixed feelings in the Balkans. Disgust predominated, but there was also fear—bred of the extraordinary virulence of the Nazi onslaught—and a certain relief. The optimists argued that perhaps the issue would be settled in the West after all. The pessimists could at least look forward to a few days' respite. This does not mean that vigilance has been relaxed. On the internal front, the watch on Quislings and aliens continues, and various measures against parachutists are announced. Roumania has been disturbed by rumours of barges full of German soldiers moving down the Danube. Yugoslavia has called up air force and anti-aircraft personnel. There are, however, no signs of a joint effort to meet the possibility of attack. Although Bulgaria has given a Greek trade delegation a very cordial reception and refuses to allow German propaganda to disturb her with reports of Turkish military movements directed against her, she has once again, through the mouthpiece of the Foreign Minister, declared her intention of preserving the strictest neutrality and of holding aloof from anything resembling a united Balkan front. Hungary's attitude is even more unhelpful. This week has seen important mobilisations of Hungarian troops, and an attack on Germany's puppet, Slovakia, appears to be imminent. Since Germany would hardly permit an invasion without some *quid pro quo*, the Yugoslavs and Roumanians are wondering ruefully whether the Hungarians are about to accede to a German request for the passage of troops across Hungarian territory. Germany's attitude is frankly threatening. The Balkans are being warned of Allied manœuvres just as the Low Countries were warned. May 20th is the day put about by the Nazi propagandists as the Allied zero hour, which suggests that a Nazi invasion "to forestall" the Allies will take place rather sooner. No doubt the Balkan States would like to look westwards in confident expectation of immediate help, but the fall of Norway and Holland, both accessible to the British Navy, is not encouraging.

*

They cannot look to Italy, for a German invasion would be the signal for a concerted Italian move, even if only to stake out some sort of claim to the Adriatic seaboard. There is only one other direction in which to look: towards Russia; and there are signs that the idea of calling in the greatest Slav Power to underpin the unstable security of the Balkans has crossed the minds of politicians in Sofia and Belgrade. Bulgaria made a great show of friendship last autumn, sending a trade mission and a parliamentary delegation to Moscow. The outcome of the visits was not startling, and Germany continued to account for over 60 per cent. of Bulgaria's foreign trade; but the Bulgarians could argue that Russia at that time was too pre-occupied in Finland to consider the Balkan front. Now it is the turn of Yugoslavia to look towards Moscow. The announcement of the open-

ing of trade talks coincided with the height of Germany's "tourist" invasion, and the negotiations have been conducted with such dispatch that three conventions have already been signed in Moscow. Details of the agreements have not yet been published, but the German authorities take the threat to their commercial predominance sufficiently seriously to warn their traders in Yugoslavia to increase their activity and to carry on a brisk counter campaign of purchases. The Germans are even more perturbed by the news of the proposed political mission to Moscow to discuss the setting up of diplomatic relations, the encouragement of cultural co-operation and even, it is rumoured, the need of some sort of military guarantee. Yugoslavia's interests are obvious enough. Any port—even a Soviet port—is better than running before the Nazi storm. Russia's motives are more obscure, but the Allies' difficulties in the West and the crucial nature of the struggle engaged in are giving the Kremlin food for uneasy thought. It is not in Russia's interests to see Germany triumphant throughout Europe, and there are signs that Russia's attitude towards her German friends is growing cooler. A trade mission has arrived from Sweden, the Yugoslav question is under consideration, there are rumours of Russian complaints to Germany over delays in the arrival of German supplies and an overture at least has been made to the West to open trade talks. Russia's game is, of course, essentially opportunistic; but with Germany's successes the balance of interest is shifting to our side.

* * *

Labour's Return

For nearly a decade the Labour Party has wandered in the wilderness, despite the steady electoral support of some 7 to 8 million voters. Now its leaders fill two places in the War Cabinet and hold an impressive array of other offices, notably the Admiralty, the Ministry of Supply and the Ministry of Labour. It was the failure of Mr Chamberlain's administration to inspire confidence in its conduct of the war that opened the door to Labour's return as of right. It was Hitler's attack on the Low Countries that made that return imperative, and the Labour movement responded very swiftly and with a full voice. On Friday a week ago the executive of the Parliamentary Labour Party agreed to serve as a partner under a new Prime Minister. On Sunday the Grand Council of the Trades Union Congress, the National Council of the Labour Party and the Parliamentary Party's executive, representing between them the length and breadth of the Labour movement, framed a resolution sanctioning a full share for Labour in Mr Churchill's Government; and on Monday, by a majority greater even than any recorded for the Government at any by-election during the political truce, the Labour Party's annual conference accepted the resolution. The leaders of the party have come back to govern as partners—though their followers in the Commons are still to fulfil their parliamentary function of question and criticism—and they have been given the posts that specially affect the interests of industrial workers, the Ministries of Labour, Supply and Mines. The keynote of their contribution has already been set by the appeal of Mr Bevin to "work like hell," and there can be no doubt that very large reserves of goodwill, ability, determination and hard toil have been called up by the enlistment of political and industrial Labour. If their vested interests and sectional creed can make way for the wider national interest, then there is a powerful example for every group in the community.

Controlling Prices

In June the provisions of the Prices of Goods Act, applied on January 1st to the cheaper kinds of clothing and household goods, will be extended to all clothing, boots and shoes, ironmongery, cutlery, domestic furniture, wireless sets and gramophones, bicycles, perambulators, clocks and watches, soap, candles and matches. It has long been the view that, to be effective, the machinery of price regulation should be extended to cover all articles entering into the essential equipment of individuals and households, and this frontier has now, with only small exceptions, been reached. Indeed, it might even be feared that the control looks like going too far. The paramount aim of war economic policy is to cut down consumption drastically, and there is no case on this count for making it easier for people to buy goods that are not essential. On the other hand, the fact that to permit the price of luxuries to rise unchecked might, in certain circumstances, simply discriminate in favour of luxury manufacturers' profits underlines the point that price regulation alone is not,

and cannot be, enough. Undue profits can, indeed, be taxed away. There is an excess profits tax and dividends are limited; but the direct path is to prevent luxury consumption by rationing luxury production even to the point of prohibition—at least where the materials used are imported or of war importance—as well as by curtailing civilian purchasing power. It is a mark of effectiveness in the working of the Act that the most important materials used in making the goods regulated are to be controlled in price, but as a corollary the use of important materials for the manufacture of what can only be called luxury goods must be ruthlessly limited and the retail margins fixed very carefully scrutinised. And it is the cause for some apprehension that, among the branded goods to be price-regulated in June, there are some the control of which will simply stabilise very lucrative retail margins, when the aim should rather be to restrict output and consumption very sharply. The proper scope of the Act should be a comprehensive control over the prices of a basic ration of cheap durable articles, durability being as important to poorer people as cheapness; and, outside the ration, it should be made certain by material restrictions that rising prices will be accompanied by a steep fall in purchases.

* * *

From the Skies

Parachute troops of the sort dropped in Holland clearly offer a considerable threat to a country like Britain, where few open spaces or stretches of coast are far from points of key importance—military, industrial or transport. A rough system of precautions has been devised. In some places mobile motor units on the model of the police flying squads are to patrol with arms; and in small towns and rural districts unpaid and spare-time Local Defence Volunteers, between the ages of 17 and 65, reasonably fit and with a knowledge of firearms, are to keep watch in the hours of dusk and darkness. It is true that the parachutists' inability to make contact with bodies of their own troops—unless indeed these could be successfully landed by airplane or submarine—might make their use less likely to be effective here than across the North Sea. But that they will be tried, if only for isolated acts of sabotage and to link up with Fifth Columnists, is fairly certain, and it is a little puzzling that the War Office has not accepted the British Legion's offer to put their experience and discipline at the nation's disposal. There are dangers in amateur zeal, and it is to be hoped that safe measures will be taken to avoid misguided injury to British flyers forced to land by parachute or to ordinary peaceful passers-by. It is also to be hoped that congested urban districts will be given more special defence against the floating fighters than seems, from public statements at least, to be intended so far. Swift armed and motorised patrols constantly on the move are essential, and individual men with rifles will need to act warily against well-armed raiders.

* * *

Shorter Notes

The Ministry of Food has suspended the wheat quota payments, by means of which the Wheat Commission raised funds for the subsidy to farmers. The price of flour to millers has been raised by the amount of the suspended quota. The wheat subsidy will now be provided by the Ministry of Food.

*

In view of the disappearance of Danish and Dutch eggs from the British market, egg prices have again been controlled; the maximum price for first-grade English eggs is now 2s. 6d. per dozen. Price control has also been extended to new potatoes, oranges and lard.

*

The Central Agricultural Wages Board has sent to the County Boards for their consideration a proposal that the national minimum wage for general agricultural labourers should be 42s. per week.

*

Cuts in the sugar and butter rations have been announced. With effect from May 27th, the domestic sugar ration will be reduced from 12 ounces to 8 ounces a head a week, and supplies to catering establishments will also be curtailed. The allocation of sugar for manufacturing uses will be reduced from July 1st. The partial failure of the British West Indies sugar crop and the necessity of conserving currency resources are the reasons given for these reductions. The German invasion of Denmark had already foreshadowed a reduction in the butter ration, and the invasion of Holland made it a

certainty. Lord Woolton has now announced that it will be back to its original level of 4 ounces a person a week from June 3rd. He has also prophesied an early reduction in the bacon ration.

*

No time has been lost in including Belgium in the monetary alliance which has existed since last December between Great Britain and France. It is announced that a tripartite financial agreement has been concluded, which grants reciprocal financial facilities for the settlement of their expenditure as between Belgium and France on the one hand and Belgium and the United Kingdom on the other.

*

The Allied merchant fleets will be reinforced not only by the greater part of the Belgian and Dutch fleets, but also by the 26 German ships, totalling some 145,000 tons, which have been sheltering since last September in Dutch colonial ports, and have now been seized, despite the efforts of the crews to scuttle them. In addition, another 28,000 tons of German shipping was sunk off Scandinavia between May 6th and 11th, which means that total German losses since the beginning of the war are approaching 800,000 tons and are not far below the total Allied losses of about 830,000 tons.

*

The fighting in Norway continues. Guerilla warfare in the region of Roeros has inflicted severe losses on the Germans, and they appear to have made little progress in the advance from Namsos. At Narvik parachute troops have been sent to reinforce the beleaguered garrison, but the Allies, attacking from north and south, seem to be closing in on the town. It is essential that our advantage in this region should be pressed home. Nazi control of the Swedish iron fields can be hampered and jeopardised once we have strong forces entrenched across the frontier.

*

The first step in the Government's new evacuation plan is being carried out with the medical examination of the schoolchildren in evacuation areas, where schools had to remain open for the purpose on Whit Monday. In London there are between 450,000 and 500,000 schoolchildren; but only 50,000 have been registered for evacuation under the new scheme, and the L.C.C. has decided to keep the register open in case any of the parents of 320,000 children, who did not reply, are now giving more serious consideration to the dangers of air-raids. It is, in fact, unlikely that any children will be refused, whether registered or not, so that the transport authorities will not be able to decide in advance whether to cater for tens of thousands or hundreds of thousands.

*

New billeting allowances for householders have been announced. They will be 10s. 6d. a week for each child between 10 and 14 years of age, 12s. 6d. a week for each child between 14 and 16, and 15s. a week for children of over 16. At present the allowances are 10s. 6d. a week for one child of under 14 and 8s. 6d. for each child where more than one are billeted, and 10s. 6d. a week for each child of over 14 years of age.

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

of the total of £14,409,077 net new sums assured during 1939, £13,671,288, were life insurance contracts. The *Guardian Assurance*, as Col. Lionel H. Hanbury pointed out at the meeting, had suffered by the loss of its holdings in the Albingia Insurance Company of Hamburg, which have been completely written off, and by the discontinuance of other German business. Lt.-Col. J. Beaumont Neilson congratulated the shareholders of the *Midland Employers' Mutual Assurance* on the moderate increase in claims during a year of rising employment, but he warned his audience that proposed legislation might add as much as 20 per cent. to the cost of workmen's compensation claims. Sir Auckland Geddes's review at the *Rio Tinto* meeting is discussed on page 869. Sir Malcolm A. Robertson assured shareholders of *Spillers* that the appropriate relations between the company and Government Departments under war conditions were being effected with all possible zeal. Mr. Henry Gardner disclosed that the *Amalgamated Metal Corporation's* metal stocks were handed to the Ministry of

Supply practically at pre-war prices. Hence, the company now held a far higher proportion of cash and short-dated Government securities than before the war. The chairman of *London Asiatic Rubber*, Mr. H. J. Welch, reported that the price obtained for rubber last year was the highest since 1928, but rising costs left the company with a profit of less than 1d. per lb. Mr. John Ismay at the meeting of *F. Francis and Sons* reported that the company had secured a large increase in turnover in the first four months of 1940 compared with the previous year. Mr. W. J. Terry, at the meeting of the *London Electric Wire Company and Smiths*, emphasised the value of securing stocks of non-ferrous raw materials to assist war production and exports. The replanting of a considerable area of old rubber was announced by Mr. H. Eric Miller to shareholders of *Pataling Rubber Estates*. Addressing *North British and Mercantile Insurance* shareholders, the Hon. Robert H. Brand reported that a decline in life department business in the first four months of the war had been more than compensated by excellent results early in the year.

THE STOCK EXCHANGES

London

Note: all dealings are for cash

The gilt-edged market this week has shown an almost magnificent disregard of the political crisis. This has been due rather to the operation of modest re-investment buying in a closed market short of stock, from which direct political factors have been insulated. The rise in prices has been spectacular in relation to the volume of business and even on Thursday, when the market opened under the shadow of the previous day's pungent debate, with losses of up to half a point, the market nevertheless managed to close higher on the day.

The opening gains in *gilt-edged* were led by Local Loans, with other long-dated issues, like Old Consols and War Loan, closely in company. Anticipations of the debate on Norway did not affect this progress and Local Loans and Old Consols on Tuesday rose $\frac{3}{4}$ of a point while a smaller gain in Old War Loan raised the price to 101 $\frac{1}{4}$, a new wartime record, which was temporarily supplanted on Wednesday when War Loan rose at one time to 101 $\frac{1}{4}$. Other investment stocks were strong in sympathy with these movements and the scarcity of home corporation and Dominion Government issues was reflected in useful rises in prices.

In the *foreign bond market*, Japanese issues have fallen throughout the week. They opened with falls of up to two points and stocks fell further on Wednesday and Thursday on nervous selling owing to fears regarding the Dutch East Indies situation.

Home rail marginal stocks have been consistently weak. Great Western being no better than 44 $\frac{1}{2}$ in midweek, while other equity issues were similarly depressed. The guaranteed and debenture stocks were, however, supported by the movement in *gilt-edged*. Some minor losses were recorded among Argentine debentures but Canadian Pacific preference rose rather smartly.

The influence of dividend limitation has been generally discounted in the equity market, but *industrial shares*, unlike *gilt-edged*, were exposed throughout the week to political factors and falls have been steady and general. Brewery and tobacco shares continued to fall. Losses were recorded by Guinness, Mitchells and Butlers and Ind Coope and Allsopp. Imperial Tobacco, Godfrey Phillips, Carreras and other leading issues. Heavy industrials were dull and the gains recorded early in the week by Harland and Wolff and Tube Investments were not maintained. Renewed declines were recorded in the stores group. Among textiles J. and P. Coats held up against the trend.

Oil shares have remained weak and Mexican Eagles lost ground on the news

of Mexico's refusal to accept arbitration. Little support was forthcoming for *rubber shares*. Interest in *Kaffirs* revived on Wednesday, when a number of dividend-paying shares rallied slightly. Tin shares improved on Thursday.

ACTUARIES' INVESTMENT INDEX

The fixed interest and ordinary share indices and yields comprised in Actuaries' Index fully reflected the influence of the Budget on *gilt-edged* and equity securities last month. The *gilt-edged* and debenture indices show a general upward movement compared with the end-March figures. In the ordinary share market, almost every section lost ground. The combined index of 158 industrials fell from 59.3 to 58.0. The biggest setback was recorded in coal shares, where the upward trend of the past few months was sharply reversed with a fall from 100.2 to 94.5. Home Rails lost three points to 56.9 and the Stores and Catering Section touched 42.5, the lowest level since the beginning of the year, on a combination of factors such as restricted supplies, limited dividends, and the new Purchase Tax.

New York

TRADING on Wall Street, which opened dull and irregular at the beginning of the week under the influence of political events in Europe, received a further setback from the news of the Supreme Court's decision to uphold the Government in the oil anti-trust case. Later the market reacted favourably to reports of reduced crude oil output and fractional gains were general. The *Iron Age* estimate of steel mill activity shows an increase from 63 per cent. of capacity a week ago to 66.5 per cent.

Foreign Bond Movements

THE German invasion of Denmark and Norway caused depression throughout the foreign bond market. The "Municipal and General" index of foreign bonds showed a fall compared with March in every section except South American provincial bonds. The European index slumped by nearly six points from 46.5 to 40.9, a new low level since the outbreak of war which compares with 46.3 for September, 1939. The complete index of 106 bonds fell from 60.6 in March to 57.9. That this figure is still higher than the levels of the first three months of the war is due to the substantial recovery in South American issues.

Shorter Comments

Company Results of the Week.—An impressive rise in the total profits of **PRESSED STEEL COMPANY** is reported from £387,780 to £653,427, but net profits are actually slightly lower and the dividend is unchanged at 27½ per cent. A further batch of rubber company reports shows consistent improvement in estate profits, distributable earnings and dividends. In the tea group, **NUWARA ELIYA**, which is one of the highest grade growers, shows an increase in total profits from £52,731 to £57,673. Net profits after depreciation are slightly lower, but the dividend has been maintained at 11 per cent. Among industrial companies **BRITISH MATCH CORPORATION** reports rather lower net profits at £341,269, though trading profits and the 7½ per cent. dividend have been maintained. **J. COMPTON AND WEBB**, the military uniform makers, report a slight increase in net profits at £91,345, and the dividend is maintained. **COURT LINE** enjoyed a more prosperous year, net profits rising from £61,902 to £83,482 after providing £40,000 for depreciation, and the dividend has been raised from 10 to 15 per cent. A substantial improvement in the **EVER READY COMPANY'S** profits from £450,556 to £620,392 covers the increased dividend of 40 per cent. (against

The Plight of Indian Jute

[FROM OUR CALCUTTA CORRESPONDENT]

THE fact that the Indian jute mills have had to resort to short working time in the seventh month of the war is an index of the fundamentally unstable position of the industry, in spite of the larger accretion of orders that has come to it as a result of the British defence programme.

In the first place the number of mills has increased enormously since 1918. The construction of new mills reached its height in the latter half of the 1930's; they were almost entirely the fruits of Indian enterprise, and in the majority of cases medium and small-sized manufacturing units were preferred. The addition of some thousands of looms to the industry's total manufacturing potential has brought in its train a number of knotty problems which have proved the harder of solution because of the industry's previously compact and conservative character. The older and larger mills, with substantial reserves, have been able to hold their own. The smaller and less economic units, both British and Indian, have felt the strain.

Speculative Market

A further difficulty with which the industry has to contend is the growth of highly speculative markets both in raw and manufactured jute. The outbreak of war caused prices of raw jute to rise rapidly, the average monthly prices for jute goods and raw jute rising to their maxima in November and December, respectively. The average prices during the first five months of the war exceeded the average 1914 prices by 5 per cent. for raw jute and 47 per cent. for manufactured jute.

The Government of Bengal stands for the retention of the futures markets as well as for a minimum price for raw jute, a prospect which the manufacturing end of the trade views with undisguised dismay. It seems likely that the wishes of the Provincial Government will prevail. So far as they have indicated their policy they have expressed a preference for the regulation rather than the abolition of the futures market in raw jute, while deferring a verdict on the hessian futures market, whose continued existence would appear to be very difficult to justify.

Growing use of Substitutes

On a long view, however, neither the question of the futures markets nor that of minimum prices is insoluble. The intrusion of substitutes into the markets hitherto exclusively served by jute manufacturers is the industry's most pressing and difficult problem. In the grain trade bulk elevators have long been reducing the demand for sacks and it seems probable that in big centres they will continue to do so. More recently, competition has been coming forward from cotton, sisal and paper interests, though the manufacture of paper bags has been largely curtailed as a result of the war. The extension of cotton substitutes has recently been noticed both in France and Italy and more persistently so in the Argentine.

Every description of Banking Business transacted. Payment of Travellers' Cheques and of Letters of Credit.

From the United States, India's greatest market for jute goods, comes news more serious because it shows that official encouragement is being given to the displacement of jute by cotton. The U.S.A. Department of Agriculture have, since last year, been subsidising the manufacture of cotton bagging for the purpose of covering raw cotton bales. It is estimated that about 70 million yards of bagging are required to cover the average annual cotton crop, and it is expected that there will be not less than about 4½ million yards of cotton fabric manufactured for the purpose this year. While it is true that this menace comes as a result of the subsidy provided by the Government, the price factor is also important, and with cotton and jute at practically the same level of price as they have recently been, there is a definite tendency to prefer cotton. It appears also there is a tendency to substitute paper and cotton whenever possible for burlap.

April 15th.

The Czech Crown under Nazi Rule

[FROM A CORRESPONDENT]

THE gradual deterioration of the Czech currency can be clearly deduced from the returns of the National Bank of Bohemia-Moravia, now controlled by the Germans.

The most striking item is the "other assets" of 5,191 million crowns on April 15, 1940, as compared with 2,672 millions before the war, on August 15, 1939. This steadily rising figure represents for the most part claims of the National Bank against the German Reichsbank. These claims already, by the middle of August, 1939, amounted to 1,000 million crowns, and had increased to about 3,900 millions by April 15, 1940. This development is bringing about radical changes in the structure of the cover which are very unfavourable for the Czech currency.

The credit items are steadily decreasing. The discounted bills and securities amounted before the war, on August 15, 1939, to 1,610 million crowns, and on April 15, 1940, to only 171 millions. This decline reflects the small requirements of business.

The Lost Gold

The gold and foreign exchange, representing the gold cover and a part of the commercial cover, were given as 1,602 million crowns in gold and 715 million crowns in foreign exchange on April 15, 1940. These figures, however, are fictitious, because almost two-thirds of the gold and nearly all the foreign exchange are blocked abroad, mainly in England. After Munich the National Bank had to deliver 480 million crowns in gold to the Reichsbank, covering 38.45 per cent. of the 1,250 million Czecho-Slovakian notes secured in the territory ceded to Germany. After March 15, 1939, the National Bank was compelled by the Germans to transfer all its gold abroad to the Reichsbank.

Up to the middle of November, 1939, about 400 million crowns were used out of the resulting gold claim against the Reichsbank for the payment of indispensable current imports and of old import obligations. From the middle of November until April 15, 1940, no more than 8 million crowns in gold and 56 million crowns in exchange were used to pay off additional old import obligations and perhaps some new ones which, however, have fallen to inconsiderable proportions because of the Allied blockade of overseas imports. The only Czech gold at the disposal of the Germans is the unused remainder of the gold claim and another 215 million crowns of effective gold which are or should be in the vaults of the National Bank.

Small Circulation

The cheque account balances are out of proportion to the requirements of trade in the Protectorate. This item of 1,054 million crowns on December 31, 1939, was nearly the same as before the war, but increased to 1,576 millions on April 15, 1940. This high figure is the more significant of the small demand for money, as free means of payments are invested more and more in cash vouchers of the National Bank. The circulation is steadily decreasing (5,280 millions on April 15th, against 6,305 millions on August 15, 1939), but it should be considerably less if it is to correspond to the changes in the credit business of the National Bank. The

principal reason why it is not is the extraordinarily high mark claim against the Reichsbank.

Against the sight liabilities of the National Bank on April 15, 1940, consisting of 5,280 million crowns of circulating bank notes, 1,576 millions of cheque account balances and 1,394 millions of cash vouchers, totalling 8,250 million crowns, there are on the assets side: gold and exchange, 2,317 millions, of which, however, about 1,750 million crowns are blocked abroad; 171 million crowns of commercial credits and 5,762 million crowns of State debt, consisting of 536 millions advances on collateral securities, 2,442 millions of State notes and coins and 2,784 million crowns out of the claim against the Reichsbank.

May 5th.

United States Exports

[FROM OUR NEW YORK CORRESPONDENT]

It is now becoming evident that our economy is being shaped by the war. Evidence of this is to be found in the merchandise trade figures, especially of exports:—

MERCHANDISE EXPORTS OF THE U.S.
(\$'000,000)

	1939	1940		1939	1940		1939	1940
Jan.	210	359	May ...	246	...	Sept. ...	284	...
Feb.	216	339	June.....	233	...	Oct. ...	323	...
March ...	265	344	July.....	227	...	Nov. ...	287	...
April.....	228	...	August...	248	...	Dec.....	357	...

In 1937 and 1938 these figures averaged \$275 and \$255 respectively. For the four months December-March the exports have been averaging about \$100 millions above the corresponding months of the previous year.

The following table is a re-arrangement of one compiled by the Federal Reserve Bank of New York in its monthly review for May:—

DOMESTIC MERCHANDISE EXPORTS OF THE U.S.

	Sep. 1939- Mar., 1940 (\$'000,000)	Percentage change com- pared with Sep. 1938- Mar. 1939	Percentage change com- pared with 1st quarter, 1939
United Kingdom	371	+ 17	+ 45
Canada	339	+ 48	+ 54
Australia	50	+ 44	+106
Union of South Africa	43	+ 2	+ 11
France	193	+134	+249
Sweden	71	+ 63	+ 34
Netherlands.....	71	+ 35	+ 24
Russia	59	+ 81	+131
Italy	53	+ 60	+104
Belgium	40	- 4	+ 3
Latin America.....	468	+ 45	+ 48
Japan	156	+ 7	+ 4
Philippine Islands	66	+ 19	+ 14
Total above countries	1,980	+ 38	+ 55
Total—all countries	2,341	+ 34	+ 51

The countries enumerated cover about 85 per cent. of our exports for the period. From the figures for trade with the belligerents it appears that exports to the United Kingdom were slow in increasing, and have increased slightly less than the average. Exports to France, ordinarily small, have increased far more than the average.

Among European neutrals the rate of increase (except for Belgium) has averaged high, but the figures are normally rather small. Three common interpretations are put on their increases: (1) That they represent a stocking programme analogous to our own hurried accumulations of last autumn, but more protracted; (2) a shift of demand by reason of inaccessibility of previous source of supply; (3) a "leak" in the Allied blockade.

The increase to Latin America approximates the average. This can be attributed largely (perhaps almost entirely) to a shift by reason of inaccessibility or anticipated inaccessibility of usual sources of supply, with our "drive" to capture the Latin-American market through the active participation of the Export-Import Bank and increased shipping services.

a secondary factor. Our exports to the Asiatic areas show much less than the average increase.

One way and another, war has brought an increase in our export trade of one-third if we base on the seven-month period and of one-half if we base on the first quarter of the year. Perhaps not all this should be attributed to war; but certainly it is the predominant influence. Ordinarily our export trade does not figure heavily in interpretations of our economy; but so sudden an increase, even if it only represents a small percentage of the national income, is notable if it is at all protracted.

The interpretation of these figures is uncertain. They include a large and concentrated non-recurring movement of cotton under the export subsidy, but the bulk of the increase was in non-agricultural commodities. There are two divergent opinions in New York—one that these large exports are temporary, the other that exports will continue large or even become larger. Two inferences, however, seem justified: first, that the appearance of a large export movement, just when an abrupt and rather severe domestic recession was in progress, did afford a partial compensating factor; second, that the export movement has neither been large enough nor protracted enough to have become a major influence on the general level of production and trade. It has, however, strongly affected specific items—machine tools, aeroplanes, pulp and paper, and steel. In fact, steel production in April has averaged about 60 per cent. of capacity; and it is said that about one-sixth of this goes abroad, a proportion well above the average. The war, in fact, has influenced the shape rather than the level of our economy.

May 2nd.

Irish Banks' Returns

[FROM OUR DUBLIN CORRESPONDENT]

THE returns for the banks operating in Eire for the March quarter, published by the Currency Commission, are as follows:—

	(£'000)				
	March Quarter, 1939	Dec. Quarter, 1939	March Quarter, 1940		
			In Eire	Else- where	Total
Liabilities:—					
Capital, reserves, etc.	17,513	17,562	10,364	7,179	17,543
Notes in circulation	8,939	9,742	5,182	4,803	9,985
Current deposit and other accounts	159,084	162,028	122,371	43,798	166,169
Other liabilities	5,353	5,693	3,196	1,769	4,847
Total	190,889	194,990	141,114	57,783	198,897
Assets:—					
Cash and balances with Lon- don agent and other banks	13,686	19,346	5,730	11,190	16,920
Money at call & short notice	8,297	8,658	2	9,177	9,179
Bills	8,221	8,274	4,569	1,096	5,665
Loans and advances	73,111	72,341	49,500	24,317	73,817
Investments:—					
(a) Government.....	69,740	68,180	5,915	68,921	74,836
(b) Other	9,837	10,071	4,337	5,987	10,324
Other assets	7,992	8,117	3,572	4,582	8,154
Total	190,889	194,990	73,625	125,272	198,897
Excess of assets outside Eire over liabilities outside Eire	63,492	65,422	...	...	6"

The figures reveal an increase in deposits whhade of the the rising trend of agricultural prices. Although the increase in the December quarter, it continues to rise. This now than in pre-war times, and the liquidity position is further strengthened by additional short notice.

No Government bills are included in the returns. The practice of the Irish 'not the practice of the Irish' but substantial quantities of Government securities are shown in other returns. The amount of Government securities held by the banks is increasing. **ROYAL INSURANCE COMPANY LIMITED** **NEEDS**

THE BUSINESS WORLD

Imperial Chemical Industries

IN peacetime, wise investors did not include Imperial Chemical Industries among the obvious armament equities. The group's range of output was designed to serve a large number of essentially pacific uses, and its direct Government orders formed a relatively low proportion of its total turnover. In wartime, however, there is hardly a single branch of the company's activities which is not essential, directly or indirectly, to the nation's economic effort. And the annual report for 1939 is a discreet record of the adaptation of the group's colossal productive resources to further the war effort.

The company's preliminary statement (discussed in *The Economist* of April 6th) showed that profits, after taxation and before providing for central obsolescence fund, had reached a new record of £9,313,485. This figure, as was then suggested, is overshadowed by the trading results of the group as a whole, which are presented in the consolidated income statement. Total trading profits increased last year from £9,023,292 to £13,701,248. This most striking comparison is rivalled only by the taxation provision, which has jumped from £514,438 to £3,653,883, and must, in fact, be supplemented by tax deducted from stockholders' dividend warrants. Higher profits have also provided means for a substantial increase in obsolescence and depreciation provision, of which the central fund receives £2,000,000 against £1,500,000 in 1938.

The "break down" of the consolidated figures to the parent company's own profits is shown in the following table:—

	Years to December 31st		
	1937	1938	1939
	£	£	£
Consolidated Income:—			
Trading profits	9,023,292	13,701,248	
Total income	10,463,573	15,343,038	
Deb. interest (net)	203,321	181,238	
Taxation	514,438	3,653,883	
Obsolescence and deprn.*	2,083,682	2,733,412	
Net consol. income	7,281,742	7,678,413	
Outside interests and undist. profits	220,451	364,928	
Imperial Chemical Industries:—			
Net income	7,510,707	7,061,291	7,313,485
Preference divs.	1,663,512	1,666,081	1,666,104
Ordinary stock:—			
Earned	5,847,195	5,395,210	5,647,381
Paid	4,284,158	4,032,149	4,032,149
Earned %	12.5	11.6	12.9
Paid %	8½	8	8
General reserve	1,500,000	1,125,000	1,375,000
Dividends	172,000	172,995	180,049
Forward	556,179	621,245	681,428

* Obsolescence: £1,500,000, 1937 and 1938; £1,000,000 to war contingencies.

Business should not be accepted merely at face value. It is important to discover, for example, the true position of the company. The report, however, is on this point, but Budapest IV is most of the groups, Deák Ferenc-utca 7, Budapest. Cable Address: MOKTAR. Foreign Department: Phone: 342-518. ESTABLISHED 1872

Every description of Banking Business transacted. Payment of Travellers' Cheques and of Letters of Credit.

showed considerable advances, not infrequently to record levels of output. This recital of the company's business last year clearly shows that war has, on balance, provided increased trade—a natural conclusion since Imperial Chemical Industries, quite apart from its direct armament and explosives interests, bestrides a number of important industries and supplies essential industrial materials on the grand scale. Hence, the company has been able to switch from a civil to a wartime production basis, and substantially to increase its trading results at the same time.

But opportunities are not being ignored in the export markets, whose importance is emphasised throughout the directors' report. For two reasons, Imperial Chemical Industries is specially favoured in the export drive. It enjoys already close contacts with important overseas markets, partly by export trade and partly by local factories. Secondly, much of its output has competed with German supplies in the past, and interference with German exports has reacted to I.C.I.'s advantage. Again, the outbreak of war was a signal for intensified research and development work and by the end of last year alternative makes had been devised to replace dyestuffs and other organic chemicals previously imported from Germany. Capital expenditure last year amounted to approximately £2,484,000 compared with £3,014,000 in the previous year. Together, these two sums give an indication of the steps which I.C.I. has taken to extend its manufacturing capacity and to safeguard its supplies of raw materials in wartime.

The accounts of Britain's largest industrial undertaking are to-day among the most informative of company reports. The consolidated statements for 1938 and 1939 (which are summarised in the second table) show a steady strengthening of the group's financial position, since the steps were taken to rectify weaknesses on the investments side in 1937:

IMPERIAL CHEMICAL INDUSTRIES AND 113 SUBSIDIARIES			
Consolidated Balance Sheet

* The excess of share considerations over net tangible assets of subsidiary cos.

The reduction in the group's marketable investments during 1939 from £5,753,616 to £2,963,528 (disregarding the relatively small unquoted investments) follows the same policy as in 1938, when the parent company reduced its general investments by over £1½ millions. The wisdom of strengthening the group's cash resources in a period of expanding output and rising prices needs no emphasis. Moreover, the investment position, even at the end of last year, was fully protected since marketable investments appeared at less than their current values. The rise in stocks, debtors and current liabilities sets out in financial terms what is evident from the directors' report—that the company's turnover in all major branches showed a substantial increase last year. But the group's net current assets still comfortably exceed £20 millions, and cash resources have again improved.

The first phase of war has confirmed that Imperial Chemical Industries' earnings have preserved a relative stability not unlike that of pre-war depression and recovery years. Since 1934, earnings for the ordinary stock have varied from 10 per cent. in that year to 12.9 per cent. last

year and, except in 1937, the dividend has remained constant at 8 per cent. The 1937 distribution of 8½ per cent. leaves an opportunity, under the dividend limitation rules, for a ½ per cent. increase in the distribution. But this will not whet the interest of the equity hunter. Nor is there any evidence, in fact, that Imperial Chemical Industries' ordinary stock will be other than a stable dividend equity for the duration of the war. It is surely significant that the directors decided to maintain the dividend at 8 per cent. from record earnings, before the limitation rules were announced. In any well-spread list of equities, however, Imperial Chemical Industries inevitably claims a place. Its yield of £5 7s. 9d. per cent. at the current price of 29s. 9d. places it in the 5-5½ per cent. stable equity class, and its earnings position in wartime is assured. From such information as is available from the first wartime report, the transition back to normal peacetime activity should be appreciably less difficult for I.C.I. than for certain companies whose plant has been turned over to specialised war production. It is the feature of I.C.I. that it may be better placed to make the best of both war and peacetime worlds.

Finance and Banking

Sterling Stands the Strain

The events of the past week have put a considerable strain on sterling in the free markets. These have to all intents and purposes been reduced to one, namely, New York. On Friday of last week the sterling rate in New York momentarily slumped to 3.03, but it recovered rapidly from this level, and after fluctuations which have followed the fortunes of the battle in the Low Countries, it is settling down at over 3.20. The free market remains narrow. With the closing of the Dutch financial markets and the temporary blocking of Dutch sterling assets that contracting tendency will be emphasised. The guilder and belga must for the time be written off the list of "hard currencies." This has reduced their number to two: United States dollars and Swiss francs—and the latter is softening rapidly. This means that the free market in sterling is now to be regarded solely from the dollar angle—which should help in limiting the range of fluctuations, and should also make it much easier to deal with the whole problem. Other currencies—such as lire and yen—continue to follow the free rate, but during the past week the absurdly high rates quoted for them have mercifully been called "nominal." Towards the end of last week there was issued a Treasury Order adding diamonds to the list of goods which may only be exported if paid for in the specified foreign currencies or official sterling. This does not seriously restrict the demand for sterling in the free market, as such arrangements were already in operation as a result of an informal arrangement between the Treasury and the Diamond Corporation.

Immobile Bill Rates

It has been left to the London discount market to provide the perfect exhibition of British phlegm in the face of the shattering events of the past week. The open market rate of discount has not batted an eyelid. It remains firmly held at 1½ per cent., underpinned there both by an abundance of short loan money available at 1 per cent. and by the continued readiness of the clearing banks to take bills from the market also at 1 per cent. Last Friday's Treasury bill tender took place just after the receipt of the news of Germany's invasion of the Low Countries. There may have been a few doubts as to the advisability of acknowledging this development by dropping very slightly the price tendered for the bills—especially as there were £65 millions on offer as against £55 millions maturing; but these doubts quickly vanished and the bills were duly taken at the now time-honoured price of £99 14s. 10d. per £100. The position of Dutch and Belgian acceptances held by the market is causing no concern whatsoever. The amounts involved are comparatively small, the parties to the bills are in nearly all cases world institutions with large assets in this country, the Dutch and Belgian colonies, and in neutral centres. The banks and discount market hold more Dutch and Belgian money than they have commitments in the Low Countries. That also appears to be the position regarding Italian acceptances. The attitude of Italy in the recent past has necessarily

caused a drastic revision of commitments in that direction. The scrutiny has proved most reassuring, as the short-term assets of Italian banks and firms in this country would seem to be rather larger than the corresponding liabilities.

The Low Country Currencies

The German invasion of the Low Countries immediately paralysed the international markets in guilders and belgas. In the case of Holland that paralysis continues, and will do so during the German occupation of the country. The market for the guilder—all that seemed solid and assured in the world of currencies—will for a time be restricted to the clearing arrangements between the German occupier of the country and his new vassal. The market in Dutch East Indies guilders will function again normally as soon as the political and financial position in the islands has been clarified. There was a short-lived arrangement for the acceptance of sterling and French currency in Holland, the rate of exchange chosen being 7.40 guilders to the £, and the corresponding rate for francs. This arrangement will still apply to the area of Zeeland and Southern Holland in which fighting may continue. In the case of the belga, important developments took place immediately after the invasion. In the first place, the convertibility of the currency into gold was suspended. Thus departed the last definite link tying the currency to gold. The Belgian authorities decided immediately to continue dealings in sterling and dollars at the rates prevailing on the eve of the invasion. Arrangements were made for the acceptance of British and French currency in Belgium at these pre-invasion rates, and conversely Belgian refugees entering Great Britain have been given the facility of exchanging belga notes into sterling at the rate of 24.00 to the £ up to a limit of £20.

Meanwhile, an official announcement has been made of the adhesion of Belgium to the currency agreement which already links the British and French currencies. This now

becomes a tripartite agreement "whereby reciprocal financial facilities for the settlement of their expenditure are granted as between Belgium and France on the one hand and Belgium and the United Kingdom on the other hand." The agreement will in the near future be supplemented by the announcement of fixed rates of exchange between the belga, the pound and the French franc. The problem of bringing the Dutch East Indies guilders within this fold of mutually stable Allied currencies is being considered. It offers obvious difficulties in view of the German occupation of Holland. But since the Dutch Government will continue to function from London, since Dutch shipping and colonial trade will still flourish and since the bulk of the Dutch gold reserve and the impressive holding of foreign assets are safe, there should be no insuperable difficulty in maintaining a guilder exchange—distinct from that appertaining to the German-controlled currency—which will form a valuable part of the Allied group of currencies.

★ ★ ★

Bank Holiday Cancellation

The cancellation of the Whitsun Bank Holiday created only one problem for the discount market, namely, the maturity date to apply to bills falling due on the day in question. By law the maturity of bills falling due on a Bank Holiday would be postponed to the following working day. It was decided that, despite the cancellation of the Bank Holiday, this postponement of bill maturities would be adhered to, and thus there were no maturities on Monday. This did not, of course, apply to sight drafts and cheques which were duly honoured if presented on Whit-Monday. As all houses in the market had arranged their position for the week-end on the assumption that Monday would be a Bank Holiday, the amount of work actually transacted in the market on that day was negligible.

★ ★ ★

United States and Silver

The past week has been a momentous one for the silver market, though the pressure of other events has distracted interest from this comparatively minor subject. On Friday of last week it was announced that the United States Senate had passed the Townsend Bill cancelling the authority of the United States Treasury to buy imported silver. This decision accorded with the majority findings of the Banking Committee of the Senate, but it was arrived at much more precipitately than any observers in the market expected. Before the measure becomes law it must admittedly go through the House of Representatives. But as the silver interests are much less powerfully represented in that House than in the Senate, it may be taken almost for granted that the Townsend Bill will reach the Statute book—unless more important matters monopolise the attention of Congress in the near future. The news reached London on the day of the German invasion of Belgium and Holland, and its effect on the silver market was neutralised by the inevitable Eastern buying of silver which accompanies an extension of the theatre of war. Subsequently, the price of silver, instead of falling in accordance with the imminent threat of a suspension of American purchases abroad, climbed steadily from the figure of 21d. quoted on Friday of last week to 23½d. These violent movements have taken place in an extremely narrow market, but though on Thursday the price reached the level at which the Indian Government is pre-

pared to sell from its London stocks, no such sales were necessary. It will be interesting to see if they will be made in the event of the price going any higher. Part of this rise in silver must be due to the depreciation in free sterling which has appreciably raised the theoretical export parity from London to New York. India has also been buying on rumours that the official sterling-dollar rate is about to be adjusted downward, i.e. against sterling. Any speculation opened up on this theory is likely to go sadly astray.

★ ★ ★

Building Societies in Wartime

Mr T. R. Chandler's address to the Building Societies' Association recently was naturally concerned with the two major problems which confronted the movement in 1939—the new Building Societies Act and the outbreak of war. Owing to the restrictions on new mortgage business in wartime, the provisions of the Act had naturally fallen into the background. The more cogent problem of the societies has been rather to adapt themselves to war conditions both on the mortgage and investment sides. It is satisfactory that abnormal withdrawals of shares and deposits at the outbreak of war soon reverted to normal, but Mr Chandler did not claim that repayment of mortgages has been restored to normal. Borrowing members, however, are meeting their commitments to the best of their ability and the societies have in suitable cases lightened or suspended repayments of principal. This interruption in the normal flow of "return" money has evidently presented a problem to certain societies and their need to maintain adequate total funds may explain a certain divergence of view in the movement regarding interest policy, on the mortgage and investment sides. For his part, Mr Chandler doubted whether over-all increases in mortgage rates was the proper policy, even where societies had such powers, and he suggested, alternatively, that 3½ per cent. tax free, which many societies are still paying on shares, was out of alignment with current interest rates. Such views would doubtless be echoed by many members of the Association, though building society opinion seems by no means unanimous on the advisability of maintaining mortgage rates and reducing investment rates. A lead in the latter direction has already been given by the Halifax Building Society and also by the Yorkshire Association. But some societies may still find difficulty in obtaining all the money they require even at prevailing rates for shares and deposits, and assuming an improvement in the re-flow of mortgage money, this difficulty, which now affects only a handful of societies, might conceivably be extended to others. Meanwhile, the societies are awaiting with some anxiety the announcement of the new income tax composition which was originally fixed at 1s. 8d. in the £ when the standard rate was 4s. 6d. and has been increased proportionately for the subsequent advances in the standard rate. The figure of 2s. 9½d., corresponding to a 7s. 6d. standard rate, would already be uncomfortably high, but the new arrangements will almost certainly be harder for the movement. If the societies are to operate at a profit, they must widen the margin between investment and mortgage interest rates. Individual societies, however, are left to define their policy, for the Association has no disciplinary powers and has not made any official recommendation. Possibly the readmission of many of the member societies of the National Federation of Building Societies, which is expected shortly, may assist in the formulation of a uniform policy on interest rates throughout the movement. It is certainly overdue.

INSURANCE NOTES

Equity and Law.—In recent years Equity and Law has achieved an extremely rapid expansion in its funds, which in 1933 were only one-half of the 1939 total of £27 millions. This expansion was aided by a large annual volume of annuity and single premium business. Unfortunately, these types of contracts, since they involve heavy initial investments, have hardly been the most satisfactory type with interest rates at low levels. The difficulty has been partially counteracted by an active investment policy, and the Society has placed a substantial part of its assets in ordinary stocks and in properties. In 1938 this policy was presumably largely responsible for the earned rate of interest of £4 8s. per cent., which was considerably

higher than the average for the offices. In 1939, however, the rate fell to £3 16s. 3d. per cent.—a larger fall than could be explained by higher taxation alone. The gross rate, in fact, was reduced, partly owing to the omission of certain interest due at the end of the year but not paid. The securities showed a depreciation on book values of nearly £1,900,000 at the end of 1939, compared with one of £1,150,000 a year earlier. War conditions hardly favour property investments, and mortgages, which represent 28 per cent. of total assets, would to some extent be similarly affected. Large holdings of these two types of assets also have the disadvantage, from the shareholders' and policyholders' points of view, that they lack an organised and ready market, compared

with securities, so that an element of "conventionality" is bound to enter into their valuation. Last year the Society transacted new life assurances of £2,175,608 net against £5,136,958 in 1938, while annuities (per annum) were £72,315, against £140,387. The fall is to be welcomed, in view of the investment problems created by a large inflow of new money. Hence the chairman's stress at the recent meeting on the development of two new types of policy does not, it will be hoped, mean that a substantial volume of new business is to be sought. The chairman frankly stated that, for the current quinquennium which ends this year, bonuses may suffer and that dividends for 1940 may be reduced. This (Continued on page 916)

Investment

The Stern Test

The investment markets, like the Allied Armies, are now on the defensive against the full assault of modern war. The threat is plainly at our threshold, but the market's power of resistance after a week of testing news is in no way broken, despite the cessation of Dutch resistance and fears of Italian belligerency. Dealing conditions have not been easy, but the market has continued to function smoothly, and although gilt-edged have fallen back to defensive positions, these are generally in advance of minimum prices. After a week's hammering, only a few of the shorter-dated issues, like Conversion 5 per cent. and Funding 2½ per cent., were based on minimum prices on Thursday. New War Loan improved slightly above its minimum of 98, and the long-dated issues, despite the severity of their falls, preserved an effective margin over their minimum prices. In the equity markets the reaction has brought the leaders to the lowest levels since

* Minimum prices for gilt-edged are shown in brackets.

October last year. But the most profound shocks have been felt in the home railway market, for reasons described in a later Note. For the moment, the defensive mechanism of the market is functioning well, though further shocks—which are plainly probable—might conceivably bring the gilt-edged market to a standstill on the basis of minimum prices, and cause further heavy losses in equities. Such possibilities, however, are no argument for the suggestion that the "House" might be temporarily closed. The object of minimum prices is to buttress the dealing basis in gilt-edged, and they will not be made effective by closing the market. It is reassuring to know that such suggestions find no support among the authorities.

★ ★ ★

Blitzkrieg over Wall Street

The sudden outburst of war has proved too much for Wall Street, which slumped badly on Monday and broke again on Tuesday, when the Dow Jones industrial average dropped nearly 9½ points in a turnover of 3,680,000 shares. Wall Street operators, in fact, appear to fear that the war may be sharp and short, and that the wartime profits which the market had been discounting may melt away overnight. Whoever loses the war in Europe, however, it is plain that Wall Street is not fighting very bravely in its private war of nerves. The following table gives record of some of the outstanding losses during the past week:—

	May 9	May 10	May 11	May 13	May 14	May 15	Change since May 9
N.Y. Central	155½	143½	143½	123½	111½	111½	-41½

Average							

† Ex dividend.

Such falls are justifiable only on the assumption that the course of war threatens to imperil American security, and

Wall Street cannot reach that conclusion soberly at this stage. At a time when the President is approaching Congress for record defence appropriations, the market might reflect that armament expenditure is the most potent form of public works. If war profits are Wall Street's only support, they should not long be forthcoming.

★ ★ ★

New Dealing Regulations

The new dealing orders, which came into force on May 13th, are complex, but their main intention is clear. By making the disposal of securities in which non-residents have an interest subject to licence, the rules should frustrate any further attempts on behalf of enemy interests to sell securities in the British market. Secondly, the transfer of securities to non-residents is to be more closely regulated, particularly with the object of safeguarding our foreign exchange resources. Thirdly, restrictions are imposed upon the issue of bearer securities and the conversion of registered securities into bearer form, which appear to rob bearer bonds of their chief attribute—immediate delivery. Finally, the payment to non-residents of interest, dividends and funds arising from the sale or redemption of securities will require approval on Form E.1, like commercial payments. Transfers of registered securities by residents—a resident being defined as a person in the United Kingdom or British Dominions (except Canada, Newfoundland and Hongkong) and other British possessions—must in future be accompanied by declarations (on Form D) of non-enemy interest and residency and these declarations must be supported by the seller's and buyer's agents, being bankers or members of stock exchanges, before the transfer can be registered. For bearer securities, similar declarations are required in duplicate and before a bearer security is good delivery to the purchaser Form B, signed on behalf of the Treasury that all parties to the transaction are residents, must be attached to the security. Transfers of registered securities to non-residents will require a banker's declaration that the securities have been paid for out of monies belonging to a non-resident. For sales by non-residents a new system of licensing has been introduced. Before any sale of securities in which a non-resident has an interest is effected, a licence must first be obtained from the Bank of England or from the Share and Loan Department. The application for such a licence (Form L) must be accompanied by the registered stock certificate, or by the bearer security or by banker's certificate in the United Kingdom showing that the bond is physically held in this country or the Isle of Man. An enemy holder will obviously think twice before parting with the actual security. Further evidence that the security has been continuously in the holder's hands since September 2, 1939, is also desirable. The seller's agent, having obtained the licence, must also obtain permission to make payment to the non-resident seller on Form E.1 before passing the licence and Form D to the purchaser.

★

Such is the very broad outline of the new dealing system. In addition, the approval of the Bank of England is now required for the issue of "any security transferable by delivery" except where it has been lost, mutilated or destroyed. Bonds may not be exchanged for others of different denominations, nor will conversion of registered securities into bearer form be allowed. These restrictions, coupled with the inevitable delays for the transfer of bearer securities, even between residents, may well mean the supersession of the bearer security for the duration of the war. Dealers are, in fact, making transactions in bearer stocks only as special bargains. And Victory Bonds, hitherto dealt in in bearer form, are being transferred by deed. Such a consequence would be important for banks and money houses whose holdings of gilt-edged securities have hitherto been in bearer form. Already, however, the market's gilt-edged holdings have been largely converted to registered form, and bank nominee registrations assist their delivery. The position of certain unit trusts, some of which issue only bearer certificates, while others have bearer and registered certificates, is far from clear. The definition of residency, again, appears to cut across the definitions under the earlier Defence (Finance) Regulations, which prohibit British residents from acquiring securities in certain currencies without official sanction. Residents in Eire, for example, may acquire such securities, though in the new

regulations they are treated as residents within the sterling area. From a footnote in the explanatory notice (though not from the text of the notice itself) it would seem that members of Associated Stock Exchanges in Eire will not be entitled to support declarations of residency and non-enemy interest for Eirean investors. This responsibility, presumably, will fall at second hand on a London broker, for dealings carried out in the London market.

* * *

Dutch and Belgian Investments

The surrender of Holland and the continued fighting in Belgium directly concern many British investors with interests in these countries. Substantial British holdings in the Dutch plantations industry and the fate of the rubber and tin control schemes are involved. Lever Brothers and Unilever, Limited, is linked with the Dutch company under a dividend equalisation arrangement, which last year had the effect of reducing the dividend payable to "N.V." shareholders. If the dividend link holds good in wartime, and "N.V." earnings are cut, shareholders in the British company would suffer. But if it is held that the link has been broken by *force majeure*, British holders in Lever Brothers and Unilever, Limited, might regard their well-covered 10 per cent. dividend with assurance. The link between "Shell" Transport and the Royal Dutch Company through Bataafsche Petroleum (which controls Shell Union) and Anglo-Saxon Petroleum is of somewhat analogous character, since Royal Dutch holds 60 per cent. of the capital of these two companies, while the remainder is held by "Shell." Whether the invasion of Holland itself will jeopardise the world-wide interests of the Royal Dutch and Bataafsche companies has yet to be seen. At least, these interests are widely spread and the group's physical properties are largely on the American continent. One of the leading concerns with Belgian interests known to the British investor is Imperial Continental Gas. In recent years the company has shown great ability in realising interests in vulnerable areas of the Continent and increasing its home investments. It is possible that some steps had been taken in anticipation of the Belgian invasion. In March last year, however, the Belgian and French interests accounted for 73 per cent. of the company's assets, and the Belgian holdings yielded £315,000 towards a total revenue of £610,000.

* * *

Dividend Limitation Bill

There appear to be no surprises in the Limitation of Dividends Bill, whose terms have been clarified by parliamentary explanations on the instalment plan and by the experience of companies who have approached the authorities regarding dividend decisions. The Bill does not apply to private companies nor to any company "not having a share capital." This is a remarkably loose phrase, for many companies, Courtaulds for example, have converted their share capital into stock, though presumably they are not intended to be immune from the limitation rules. Again, it has been understood that the railways would be subject to the rules, but they have no share capital. The maximum distribution for any war dividend period after June 30, 1939, will be the highest gross amount distributed in any accounting period ending after June 30, 1936, and before July 1, 1939. For new companies formed in the war period, the maximum dividend will be 5 per cent. on the ordinary capital, and the maximum for companies in depressed circumstances in the standard years remains at 4 per cent., subject to appeal to the Treasury. Bonus shares issued since the year of maximum dividend will not be allowed as additional paid-up capital, nor will they be included in the calculation of the distribution made in the standard years. Adjustments in standard dividends will be allowed for other increases in capital. Despite occasional complexity of drafting, the Bill is a straightforward measure, and there is no obvious reason why confusion should have been created by publishing its terms piece-meal.

* * *

The Railway Market and London Fares

Home railway stocks this week have been the most detected of all sections of the market, and Great Western Ordinary and L.N.E.R. first preference have each fallen by approximately 10 points. With the threat of air bombing, the market has become exercised over the question of war damage. The financial agreement provides that such damage up to £10 millions in any year shall be chargeable to the pool. Hence, if the pool's net revenues were running at the

guaranteed minimum of £40 millions and war damage to the extent of £10 millions occurred, the minimum revenue would be made good. Assuming, however, that earnings were running at Stage 2 (£43½ millions) and war damage to the extent of £10 millions occurred, the Government would be called upon to make good £6½ millions to restore earnings to the guaranteed minimum. Any increased charge for war damage or any supplementary provision which the companies decided to make would upset the dividend basis represented by the guaranteed minimum. This possibility, which the market was inclined to ignore during the period of "twilight war," has now assumed a more lively character. Meanwhile, it is probable that the companies' costs are still increasing, and a further application to the Ministry of Transport for additional charges may be under contemplation. In the London Transport area short-distance railway and road fares have yet to be adjusted for the 10 per cent. increase recently granted by the Minister of Transport. The Railway Executive Committee proposes an increase in ordinary road or rail fares from 1d. to 1½d., while fares of 2d. or over are to be shortened by one stage, with corresponding adjustments for railway fares between 2d. and 6d. The proposals are to be considered at the public inquiry on Wednesday next. They will represent no light burden on the ordinary London traveller, but in terms of revenue it may be doubted whether they will provide an effective 10 per cent. increase, which the Minister of Transport has sanctioned.

Company Notes

Cable and Wireless

A substantial improvement in net message receipts of Cable and Wireless, Limited, from £4,318,851 to £5,344,969 is responsible, indirectly, for the maintenance of the holding company's 4 per cent. dividend. The operating company earned for dividend £1,610,369 against £1,001,205, and the 4 per cent. distribution to the old cable companies was covered with a margin of £410,369. Thus, the second year of the new agreement appears to find the operating company at the standard revenue stage, but the profit figures are, in fact, subject to provision for Excess Profits Tax, the liability for which is at present undecided. The holding company's dividend receipts from the cable companies amounted to £1,106,899 against £971,584, but an appreciable reduction in the distribution from Marconi's Wireless Telegraph resulted in a slight fall in the holding company's total revenue from £1,397,280 to £1,376,662. The 4 per cent. dividend, requiring £275,324, was covered by earnings of £296,265, as the following table shows:—

	Years to December 31,		
	1937	1938	1939
Operating Co. :—			
Net message receipts	4,745,050	4,318,851	5,344,969

Ordinary stock :—			
Earned	299,485	351,950	296,265
Paid	275,324	275,324	275,324
Paid per cent.	4	4	4
Carried forward	199,097*	205,282*	226,223

* After £13,401 capital reduction expenses in 1937, and in 1938 £70,446 extra income stock sinking fund provision. † After £300,000 to general reserve.

It is evident that the Empire Flat Rate Scheme has stimulated traffic, but despite the restrictions on the use of codes, which may have resulted in longer messages, the normal volume of commercial traffic has suffered by the co-ordination of industries under wartime Ministries. The group's financial position, as set out in the consolidated balance sheet, is one of most impressive strength. The holding company's ordinary stock, now quoted at 51, is limited under

the dividend rules to a 4 per cent. payment, and since earnings of the operating company above the standard revenue of £1,200,000 are equally divided between employees, cable users and the company, its equity prospects were in any case limited. The current yield basis of £7 16s. 10d. per cent. is, however, satisfactory.

* * *

Marks and Spencer

Shareholders of Marks and Spencer may now complete the comparisons between the latest results of the company and those of F. W. Woolworth, which were given in last week's issue of *The Economist*. The dividend, since the issue of the report itself, has been amended, and the final dividend of 23½ per cent. makes a total of 38½ per cent. compared with 42½ per cent. as previously recommended. This reduction was not unexpected, for under the dividend limitation rules it was evident that the company would be restricted to the maximum gross sum paid out within the three specified years—which was £816,865 for 1938-39. The former amount, payable on the increased capital which resulted after the 1938-39 10 per cent. share bonus, is approximately equivalent to 38½ per cent., or 1s. 11d. per share. The balance carried forward is shown in the accounts at £269,996, but this sum will now be increased to £325,089, after transferring an additional sum of £33,000 to income tax reserve. Marks and Spencer shareholders may justifiably complain of the unnecessarily confused way in which the dividend limitation rules have become known. They have no reason, however, for complaining of the company's latest results, which show a profit before taxation, but after depreciation and stock reserves, of £2,378,954, against £1,781,958. The detailed profits figures (subject to the alteration required by the amended dividend) confirm those which were published in *The Economist* of May 4th. Certain important movements are shown in the balance-sheet figures. The rise in stocks from £1,642,629 to £2,234,043 may be partly explained by the wider range of merchandise carried in the company's stores, but it is probable that measures to safeguard supplies and rising prices account for much of the advance. The company's cash holding, also, reveals a substantial jump from £935,341 to £1,759,897, which is evidently due in part to the increase in the 4 per cent. loan from £500,000 to £1,000,000. The shares have fallen to 38s. on the amended dividend, at which the yield is £5 1s. per cent.

* * *

Reckitt and Colman

The second year's trading of Reckitt and Colman, Ltd., the operating company of the Reckitt-Colman merger, has provided a very satisfactory increase in trading profits from £1,580,149 for 1938 to £1,917,540 for 1939, after provision for depreciation and war contingencies. This advance, however, is due in the main to exceptional sales of certain of the company's products during the first four months of the war. Its effects are damped by a rise in the taxation provision from £451,609 to £770,000. Hence the net balance available for distribution to the constituent companies is slightly reduced to £1,068,060, compared with £1,084,835 for 1938. The total dividend distribution for 1939 is £817,500, of which Reckitt and Sons receive £535,422 and J. and J. Colman £282,078. Both constituent companies have maintained their dividends—Reckitt and Sons at 22½ and J. and J. Colman at 16 per cent. In 1939, 45½ per cent. of the company's business was in overseas markets, and, of the happily small proportion which was located in Europe, earning capacity has been severely prejudiced by the German occupation of Denmark and Norway; now of Holland and Belgium; and by labour shortage in the French factory. In these circumstances the directors have wisely increased the cash holdings from £190,200 in 1938 to £564,275 at December 31st last. The spread of hostilities lends point to the directors' warning that little hope exists of maintaining sales in the current year at the 1939 level, but export trade and war business should reach a satisfactory level.

* * *

Union Castle Report

The best that can be said of Union Castle earnings in 1939 is that they showed an improvement on the 1938 figures. That is the only consolation for the absence of a dividend on ordinary shares. On the outbreak of war the company suffered a sharp fall in passenger receipts, which had been well maintained in the first eight months of the year. This consideration has, however, little bearing on

DEFENCE BONDS

The Investment that cannot depreciate

- Defence Bonds are issued at £5 each and begin to earn interest at 3% from the date of purchase. Income Tax is not deducted at source. There are no stamp duties or other investment expenses—you simply apply for them at any Post Office or Bank.
- If you hold the Bonds for 7 years you will receive back the full capital value plus a premium at the rate of £1 on every £100.
- Defence Bonds can also be cashed meantime at six months' notice and full par value plus interest to date will be paid.
- Arrangements can always be made for immediate repayment in case of necessity.

SAFETY FOR YOUR SAVINGS

Because Defence Bonds are thus redeemable at par they are not subject to fluctuations in value. They are always worth their full face value. There is no finer security for those who wish to invest small and medium sums simply and safely—particu-

larly those who already hold the maximum 500 National Savings Certificates. The Nation needs the help of every investor. Lend all you can and keep on lending. Help to wield the powerful financial weapon which is vitally necessary for speedy and decisive victory.

There has for most items been a reduction in quantity, with the notable exceptions of towels and napkins, whose exports have shown a considerable increase. Unfortunately, the trade is at present hampered by a shortage of flax, which has been accentuated by the invasion of the Low Countries. Out of total flax imports in 1938 of 40,700 tons, 13,800 tons came from Russia and the Baltic countries and 21,700 tons from Belgium and Holland. Production in Ireland was less than 5,000 tons. This will probably be more than doubled in the coming season, but, even so, the shortage of flax will be acute.

* * *

Woollen Exports

During the seven months from September to March, British exports of woollen and worsted tissues amounted to 54.10 million square yards, compared with 54.65 million square yards in the corresponding months of the previous

season. But this relatively satisfactory development has been seriously checked by the extension of the war to Scandinavia and to the Low Countries. About 30 per cent. (by value) of British exports of woollen yarns and tissues went to these countries and to Poland and Germany, and it will not be easy to dispose of goods already in manufacture for the former neutral markets. Most of the goods produced for the North European markets are of too heavy a type to be sold in North or South America or in the Near East, and they may have to be allocated to the home trade, which can easily absorb them. The shortage of wool for civilian orders is such that some manufacturers are paying 10d. per lb. above the domestic price for fine yarns imported from France outside the rationing scheme. The shortage has been deliberately created by the Wool Control, under its wool bonus scheme, which gives priority in supplies to Government and export orders. Exporters of yarns have been promised supplies in excess of their current ration to enable them to fulfil new orders from abroad, provided the work is put in hand before the end of June.

tribute this bonus, which was approved by the Treasury in February, 1940, the company is capitalising £511,000 of contingency reserve, £168,329 of general reserve, £96,246 of balance standing to credit of profit and loss at June 30, 1940, and £40,425 out of current profits.

Shorter Comments

Company Results of the Week.—**BUCHANAN-DEWAR**, the Distillers subsidiary, reports some decline in net profits, but the dividend is increased from 30 to 32 per cent. **FORESTAL LAND** had a profitable year and the directors' report states that sales of tanning extracts remained satisfactory during the last four months of 1939. Net profits increased from £443,228 to £618,483, and the ordinary dividend has been raised from 7 to 9 per cent. A substantial recovery has occurred in the fortunes of the **NIGER COMPANY**, whose net profits amount to £1,076,784. Dividends are resumed with a 6 per cent. tax free payment. Of the many improved rubber results, **GRAND CENTRAL (CEYLON)** is outstanding with a recovery from £43,182 to £64,414, the dividend being raised from 3 to 5 per cent. **BRITISH COTTON AND WOOL DYERS** show an appreciable recovery in net profits from £25,223 to £63,591, and the dividend is doubled at 6½ per cent. Other substantial improvements in the textile section include **HIELD BROTHERS** (net profits £56,256 against £20,535) and **JOHN BRIGHT AND BROTHERS**. Investment trust revenues show a general decline, although dividends are not greatly affected. **INDUSTRIAL AND GENERAL**, however, report a fall in net revenues from £280,828 to £255,001, and the ordinary rate is cut from 14 to 12 per cent. In the industrial group, **TIMOTHY WHITES AND TAYLORS'** trading profits increased, but net profits showed a fall from £204,476 to £185,524. The 30 per cent. dividend, however, has been maintained. Little change is reported in **ODHAMS PRESS** trading profits, but the net figures, after provision for tied reserves, are reduced from £237,380 to £173,555. A dividend of 6 per cent. against 10 per cent. is payable. **SMITH'S POTATO CRISPS** profits are approximately £30,000 down at £96,060, but the dividend is maintained at 32½ per cent. and is still well covered.

MISCELLANEOUS

Odhams Press, Ltd.—Trading profit, 1939, £378,745 (£379,884). Net profit, £258,169 (£260,067). Ordinary dividend 6 per cent. (10 per cent.). General reserve, £48,351 (£29,436). Development reserve, £7,565 (£22,687). Carry forward, £86,047 (£82,103).

British Cotton and Wool Dyers.—Trading profit, March 31, 1940, £149,823 (£100,805). Ordinary dividend 6½ against 3½ per cent. Employees' fund, £5,000 (£5,000). Obsolescence, £5,000 (nil). Carry forward, £64,157 (£54,177).

Timothy Whites and Taylors.—Trading profit, 1939, £373,541 (£347,945). Taxation, £101,696 (£74,112). Net profit, £185,524 (£204,476). Ordinary dividend, 30 per cent. (same). Carry forward, £66,525 (£56,274).

Antofagasta Railway.—Net revenue balance carried forward, 1939, £176,500 (£128,780). Interest paid on debentures. No payment on 5 per cent. preference stock (arrears now 22½ per cent.).

Nitrate Railways.—Net revenue credit balance £26,506 after transfer £7,500 to contingencies. Dividend 1½ per cent. on ordinary and preferred ordinary stocks as before. Credit balance forward, £175,615.

Australian Mutual Provident Society.—Total sums assured, December 31, 1939, £375,087,711. Assets, £122,495,076 (£117,009,258). New business, £29,407,675. Income £15,450,256 (£14,641,499). Death and maturity claims, £3,223,250 and £2,832,994, respectively.

Forestal Land Timber and Railways.—Total consolidated assets, December 31, 1939, £11,352,552 (£10,437,855). Fixed assets, £5,080,601 (£5,244,442). Stocks, £2,985,840 (£2,663,934). Cash, £1,600,567 (£1,136,052). General investments, £658,774 (£387,500). Debtors, £714,196 (£738,256). Creditors, £1,068,294 (£749,781). Reserves, £3,232,741 (£2,808,552).

United Sua Betong Rubber.—Net profit, 1939, £180,343 (£152,577). To N.D.C., £6,500 (£5,000). To depreciation, £15,000 (£10,000). To estates reserve, £30,000 (£30,000). Carry forward, £51,554 (£54,710). Ordinary dividend, 12½ per cent. against 12 per cent.

British Controlled Oilfields.—Gross profit, 1939, £45,197 (£66,145). Depreciation, £106,860 (£95,750). Net loss, £61,663 (£30,605). To reserve, subsidiary companies, £4,970. Debit forward, £65,325.

Goodyear Tyre and Rubber (Great Britain).—Profit, 1939, £207,234 (£238,191). Dividend, 25 per cent. tax free against 22½ per cent. tax free. Carry forward, £273,018 (£283,785).

British Electrical Engineering Company.—Trading profit, 1939, £67,765 (£17,397). Net profit, £31,705 (£1,983), including tax credit, £1,067. Writing down patents and goodwill £11,538. Written off A.R.P. expenditure, £2,820. Carry forward, £10,888 (£691).

King Line, Ltd.—Profit, 1939, £76,692 (£205,208). Dividend, 12½ against 13 per cent. To reserve, £25,000. Carry forward, £78,927 (£71,471).

Western Telegraph Company, Ltd.—Total income, 1939, £283,100 (£242,775). Net profit, £241,848 (£204,786). Ordinary dividend, 7½ per cent. (7 per cent.).

Pease and Partners, Ltd.—Profit year to March 31, 1940, £586,227 (£469,331). Ordinary dividend, 10 per cent. (10 per cent. plus cash bonus 2½ per cent.).

COMPANY MEETINGS

IONIAN BANK, LIMITED

WAR DIFFICULTIES SUCCESSFULLY SURMOUNTED

SIR JOHN STAVRIDIS ADDRESS

The annual general meeting of the Ionian Bank, Limited, was held, on the 15th instant, in London.

Sir John Stavridi (the chairman) said that so far as their institution was concerned, the initial difficulties caused by the war had been successfully surmounted and an improvement had been shown in all the fields of their activity.

ECONOMIC CONDITIONS IN GREECE

During the past year, notwithstanding the war, the economic conditions in Greece were fairly satisfactory. Owing to the war the export of tobacco had fallen, but the fall in price was even greater than the fall in quantity. It was to be hoped for the sake of the Greek national economy that the purchases of tobacco now being made by both England and France would compensate the national events and the supervening war materially influenced the foreign trade of the country; but the balance of trade had again shown an appreciable improvement. The public finances of the country had borne without disturbance the strain caused by the abnormal international situation.

INTEREST ON THE FOREIGN DEBTS

Two matters of serious import to both England and Greece had taken place within the last few months. The one was the agreement come to between Greece and the Foreign Bondholders and League Loans Committees for the temporary settlement of the interest payable on the foreign debts. The increase in the rate from 40 per cent. to 43 per cent. of the original interest had been accepted by the bondholders in this country as an earnest that Greece would, when in a position to do so, agree to an improved second was the formation in England under Government auspices and with Government support of the United Kingdom Commercial Corporation which was to purchase for cash Greek products. Greece was now hoping that this new corporation would succeed in increasing the sale in England of Greek products.

EGYPT

The drastic reduction for the season 1938-39 in the acreage permitted under cotton resulted, as anticipated, in a considerable fall in the crop. The average price, already at an uneconomic level, showed a further slight fall, but the low price enabled exports to be well maintained. As far as their own business was concerned, they handled in all 1,345,475 cantars of cotton, or 12.21 per cent. of the 1938-39 crop, and they had more than maintained their position as regards the current crop.

As to Cyprus, the unhesitating response of the Cypriots to the dangers threatening Great Britain and her Allies was the outstanding feature of the year.

The composition of the bank's accounts was better than might have been anticipated, having regard to the upheaval in all their centres caused by the war, and showed surprisingly little change. The nervousness shown throughout the Near East both in April, 1939, and again in August-September had resulted, as could but be expected, in substantial withdrawals of deposits at all their centres and in a drastic curtailment of business. All the requirements of depositors at their establishments in Egypt and Cyprus were met without the slightest difficulty out of the company's resources in London, and the requirements of their Greek depositors could also have been met in the same way, but the Bank of Greece, under the instructions of the Government, placed freely at the disposal of all banks any sums which were temporarily withdrawn by depositors, so that there was no occasion for their branches there to have recourse to London. The policy of the Government had been proved to be not only theoretically correct, but also practical in the highest degree. The comparatively speaking large sums which were withdrawn by depositors who were forbidden to export capital had long before December 31st been returned by the hoarders to the banks.

The net profits had risen from £17,473 to £19,110, and the directors felt justified in recommending a dividend of 3 per cent.

The report was unanimously adopted.

ALLIANCE ASSURANCE

GRATIFYING RESULTS

The annual general court of the Alliance Assurance Company, Limited, was held, on the 15th instant, in London.

Mr Lionel N. de Rothschild, O.B.E., the chairman, said that the war had inevitably created many new problems in their business, and the year under review had consequently been an exceptionally difficult one. In the life department there had been, as was only to be expected, a material decline in new business for the year under review. The new life business completed amounted to £2,794,227. In the year previous—1938—they had had a record year of new business, but he had pointed out last year that that had been brought about by the introduction of a very large endowment assurance pension scheme. The unsettled political outlook throughout the year had militated against the acquisition of new business, and he could not hold out hopes of any material revival during the war period.

The Life Offices Association had come to the wise decision that it would not be prudent any longer to include the war risk without the payment of an extra premium. The directors of this company had accepted that recommendation, and appropriate rates had been fixed for cases where it was desired to have the restrictive war clause deleted. The premium income in the active Alliance life account was £1,435,984, and the Alliance life and annuity funds now amounted to £22,787,036, being an addition of £278,292 for the year.

FIRE AND ACCIDENT BUSINESS

In the fire department the net premiums amounted to £2,196,409, being £14,843 less than those of the previous year, accounted for entirely by the cessation of business in Germany, Poland and Danzig as from the outbreak of war and the loss of certain fire connections in Canada following on their decision to cease writing accident business in that country. It was gratifying to be able to report that their home premium income had increased. The claims amounted to £740,048, being £29,100 less than those of 1938. The result of the year, after adjustment of reserves for unexpired risks and the inclusion of interest, less tax, amounting to £128,436 and after increasing the additional reserve once again by £100,000, was a balance of £454,199 carried to profit and loss.

In the accident department there had been a considerable fall in the premium income from £1,491,872 to £1,371,640, or £120,000 down on the previous year. The two chief causes were the laying up of motor cars and cycles owing to petrol rationing and the cessation of accident business in Canada, to which he had referred last year. The result of workmen's compensation business had been satisfactory in both Great Britain and Eire, and the premium income had been maintained. Owing to increased employment they might look for increased premiums in that section, but he was not over-sanguine that the results would improve, as the employment in trade of semi-skilled hands, which was bound to be the case in these days, tended to increase the number of accidents.

The surplus in the combined accident account for the year amounted to £108,252, to which had to be added interest, making a total of £168,082, which had been transferred to profit and loss.

MARINE UNDERWRITING

The marine premium income had increased by £176,861. To some extent that was due to higher rates on hulls, but in the main it was accounted for by war risk premium. Agreement had been come to among underwriters to increase further the rates on hulls as from the beginning of the year. The underwriting account for 1937 had now been closed, and £47,120 had been carried to profit-and-loss account, a result which they regarded as satisfactory.

The trustee department was progressing on an even keel and becoming more and more appreciated.

He hoped it would be agreed that the results of the past year, having regard to the unavoidable loss of business and the special expenditure that had had to be incurred, were very gratifying. As to the current year, owing to the calling up of many of their staff and petrol rationing, it was going to be difficult to maintain their field force, and he did not anticipate any increase in premium income, but rather the reverse. It was true that values were bound to increase, and that would partly offset lack of new business in the fire department. There would probably be a further decrease in motor-car premiums, and it was difficult to see in what other directions the accident premium income was likely to increase, save in workmen's compensation.

The report was unanimously adopted.

BONUS SHARES

London Express Newspaper.—Ordinary shareholders of this company have approved the distribution of a capital bonus of two new ordinary £1 shares for every ordinary share held on May 6. To dis-

THE CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED

EFFECTS OF THE WAR

MR F. R. PHILLIPS ON SHARE VALUES

The thirty-fifth ordinary general meeting of The Central Mining and Investment Corporation, Limited, was held at 1 London Wall Buildings, E.C.2, on the 16th instant.

Mr F. R. Phillips, M.C., who presided, said in the course of his speech:—

The year which we have under review falls into two periods—the first, lasting eight months, of tension and growing deterioration in international relations, and the second, extending over four months, of open and declared warfare. Under such circumstances, it is not surprising that business conditions correspondingly suffered and that severe falls occurred in the market value of many classes of securities.

The profit and loss account shows a gross credit of £587,964. This represents, in the main, our revenue from dividends and interest as, in the conditions mentioned, we have been able to bring into this account only a relatively small sum from profits on share dealings. On the debit side of the profit and loss account, general expenses of £50,480 and national defence contribution of £23,200 have been charged, leaving £514,284 to be carried to appropriation account.

As mentioned in the directors' report, the credit of £587,964 is not comparable with the amount of £506,538 at the credit of the profit and loss account for the previous year, in that it does not provide, as has been our practice in past years, for the amounts required to write down stock prices, where necessary, to market prices ruling at the end of the year. At December 31st last, I regret to say, we had suffered depreciation to an extent which made it necessary to draw on our reserves. These reserves have been built up over a period of years to provide for unforeseen contingencies and for the risks inherent in our mining business, and they were therefore fortunately available to meet the situation with which we were faced at the end of the year. The amount that we have written off, totalling £853,085, is shown in the appropriation account, and the sum taken from reserves, namely, £600,000, being £500,000 from reserve fund and £100,000 from depreciation reserve account, is shown on the credit side of the account. The remaining £253,085 represents the amount of the depreciation which has been borne by the year's profits.

DEVELOPING GOLD MINES

A large part of the amount written off is in respect of our investments in gold mines in the development stage, viz. Hoffontein, Welgedacht, Palmietkuil and Rietfontein on the Far Eastern Rand and Blyvooruitzicht on the Far West Rand. Each of the four Far Eastern Rand companies which I have just mentioned was coming to the end of its financial resources during the year 1939. In circumstances of growing international tension, culminating in the outbreak of war, it was impossible to secure further funds for these enterprises. The property of the Rietfontein Company was acquired by its western neighbour, East Daggafontein Mines, in exchange for shares of that company.

Operations on the three other properties had to be discontinued, and they have been placed on a caretaking basis, and in these circumstances your board has felt that it is sound policy to write down the Corporation's holdings not only to market price but to a nominal value. In doing so, we are not expressing any opinion as to the eventual value of these shares, but are following a desirably prudent policy in regard to investments, the value of which will be determined by the course of future events which we cannot predict. The shares of the Blyvooruitzicht Company have been written down to market price. This company, of course, has funds which will enable it to carry on shaft sinking operations, and it can finance itself on the modified programme recently decided upon for some considerable time ahead. The general fall in other securities has caused us to write down certain stocks, such as base metals, while we have carefully considered the book value of our unquoted investments, and in two cases have written down these also.

We recommend a dividend for the year on the ordinary shares of 8s. per share, absorbing £170,000. After providing for the dividend on the preference shares and £50,000 for income tax there

remains a balance to be carried forward of £170,318, against £179,119 last year.

CONSERVATIVE BOOK VALUES

Turning to the balance sheet, shares, investments and interests stand at £6,012,362, as against £6,650,910, which reflects the writing off for depreciation which I have just explained. A new item on the credit side, £80,055, under the heading "Advances to Associated Companies," is mainly in respect of our proportion of loans to the Palmietkuil and Vlakfontein mining companies. The other items in the balance sheet show only normal variations from those of the year 1938, which are printed in red. You will have observed that a high degree of liquidity has been maintained and that our reserve fund still amounts to the substantial total of £1,175,000.

We are of the opinion, as we view the situation to-day, that the book value of the Corporation's portfolio is conservative. We feel, however, that this remark must be qualified, because it is impossible to envisage in these uncertain times the conditions under which we may be carrying on our business even in the near future. But with a return later to more normal trading conditions, and barring any unforeseen development, we can reasonably anticipate that we shall recover some of the depreciation for which we have now made provision. I am glad to tell you that our inner reserves, represented by the difference between book value and market value of the Corporation's holdings at December 31st last, remains very substantial.

RECORD GOLD PRODUCTION

The production of gold from the mines of the Transvaal in the year 1939 reached the highest figure in its history, and this record was attained without any departure from the method of working which has been in operation since South Africa abandoned the gold standard at the end of the year 1932. We feel sure that the true interests of the country, and of the companies' shareholders, lie in the continuation of the present mining practice, that is to say, that within narrow limits the scale of operations and the grade of ore to be mined is determined for each individual mine as best suited for that particular property.

I will now briefly review the main features of interest in the work of the gold mining industry during 1939. (In my statistics I shall not give exact figures, but shall round them off for convenience.) In the matter of the ore milled by the mines of the Witwatersrand, including Heidelberg, no less than 58,300,000 tons were treated, thus exceeding the previous year's record figure by 4,500,000 tons. The number of ounces of fine gold produced was 12,495,000, an increase of approximately 656,000 ounces. The profits of the industry totalled £35,600,000, or £3,700,000 more than in 1938. The currency value of the gold produced was £97,000,000, and was £12,600,000 greater than the previous year's record figure. The average grade of ore milled at 4.23 dwts. showed a reduction of .115 dwt. per ton and working costs increased by approximately 2d. per ton. The footage of development accomplished at 2,500,000 feet was greater by 115,000 feet. An examination of the number of employees, white and native, reveals that in December, 1939, the former numbered 43,800 and the latter 308,100, while at the same time in the previous year the figures were 41,800 and 313,400.

The recently published report of Rand Mines, Limited, in which we retain our large interest, disclosed a most satisfactory position. Increased profits were earned and the dividend was maintained at the previous level of 160 per cent., or 8s. per share.

RESULTS OF THE GROUP

I am pleased to say that the producing companies of our own group again made satisfactory progress in all directions, increasing the tonnage milled by 565,000 tons to the record figure of just over 20,000,000 tons. The grade of ore treated fell by .134 dwt. to 3.881 dwt. Working costs at 19s. 6d. per ton milled were higher by 1d. The total working profit amounted to £9,480,000, or almost half a million pounds more than in the previous year. Dividends aggregated £5,346,000, or £303,000 higher than in 1938. Consequently upon the increase in profits, taxation absorbed a larger sum, and at £3,362,000 was £201,000 greater.

The report and accounts were unanimously adopted.

THE LONDON AND MANCHESTER ASSURANCE COMPANY, LIMITED

RESULTS OF A DIFFICULT YEAR

MR A. H. DAWES'S REVIEW

The seventy-first ordinary general meeting of this company was held, on the 15th instant, in London, Mr A. H. Dawes (the chairman) presiding.

The Chairman, in the course of his speech, said:—For the first five months of the year, that is, up to the end of August, our new business figures were encouraging, and there seemed every likelihood of the year's results being at least as good as those of the preceding one. But when war broke out we shared the common experience of a marked decline in the volume of new ordinary branch business. Yet despite the obvious difficulties of the period, our combined premium income increased by £42,441 to £3,494,977, and our assets increased by £1,089,664 to £21,471,397.

Death claims due to the war up to the end of the year were, I am happy to state, relatively few. A matter of greater financial importance, however, arising out of the war was the increase in the rate of income tax. The gross interest yield was £4 15s. 8d. per cent. reckoned on the mean life funds, but income tax diminished the yield to £3 13s. 5d. net.

ORDINARY BRANCH

Turning now to the accounts in the ordinary branch, the net new sums assured amounted to £2,650,140, which represents three-quarters of the corresponding figure of the previous year. Premiums received during the year amounted to £1,471,182, an increase of £10,864. Claims by death were £200,907. Matured endowments amounted to £653,865, which is £124,902 more than in the previous year, and is the highest sum we have paid away in any year under this heading. Surrenders were lower, and annuities sold almost the same compared with the previous year.

The ordinary branch life fund increased by £609,883, and at the end of the year stood at £12,506,338.

INDUSTRIAL BRANCH

The premium income in the industrial branch amounted to £1,931,116, showing an increase of £40,154. Claims by death were higher at £810,553. Both maturities and surrenders were lower.

Again I am able to announce a further reduction in the expense ratio of this branch which, for the year under review, fell to 35.67 per cent. of the premium income.

At the end of the year the industrial branch life fund stood at £7,728,608—an increase of £376,162.

The annual valuation was again made on the same bases as a year ago, and the gross surpluses, before making any increase in the additional reserves for contingencies and before strengthening the investments reserve fund, were: Ordinary branch, £729,225; industrial branch, £395,292, including £361,868 and £143,227, respectively, brought forward from the previous year.

In the ordinary branch it has been decided to pay on participating policies which become claims by death (except policies less than one year in force) or survivorship during the year ending March 24, 1941, an interim bonus at the rate of 30s. per cent. on the sum assured in respect of the year ending March 24, 1940, postponing consideration of a vesting bonus until a later valuation. The sum of £454,225 has been carried forward in the life fund. This evidence of strength and caution should give satisfaction to all concerned.

In the industrial branch it has been decided to grant an interim bonus by applying to policies which become claims by death or survivorship before May 21, 1941, the same scales of bonus as granted a year ago.

FIRE AND GENERAL BRANCH

Up to the outbreak of war our premium income in this branch was well in advance of that for the corresponding period of the previous year, but wartime restrictions resulted in a considerable falling off in motor premiums particularly. The premium income in the branch for the year was in consequence lower by £8,496 to £89,165.

I am pleased to be able to tell you that at the close of our year the aggregate market value of our holdings of Stock Exchange securities (taken at middle market prices, less secured interest) was in excess of the value at which they appear in the balance sheet.

The report and accounts were unanimously adopted.

ENGLISH AND CALEDONIAN INVESTMENT COMPANY, LIMITED

INCREASED EMPIRE HOLDINGS

The thirteenth annual general meeting of this company was held, on the 14th instant, in London.

Mr Henry S. Loeb (the chairman), in the course of his speech, said:—It will be seen from the balance sheet that our main asset—investments—stood in at £1,010,138, or some £3,000 higher than at the end of the previous financial year. The market value of the company's investments at March 31st last was £815,110. Expressed as a percentage, the depreciation on the balance-sheet figure was 19.31 per cent., which compares with 19.20 per cent. a year ago. In view of all that has happened during the past year, I think the fact that the deterioration in the value of your investments was so slight must be regarded as being satisfactory.

The company's investments continue to be distributed on the same generous lines as in previous years. Classified denominationally, the distribution, based on book values, was as follows:—

	Per Cent.
Corporation loans, bonds, and debentures	2.62
Preference shares and unsecured notes	16.73
Ordinary and deferred shares	58.09
	77.44
Outside the Empire:—	
Loans, bonds, and debentures	7.33
Preference shares	5.61
Ordinary and deferred shares	9.62
	22.56

Geographically we have now a somewhat larger proportion of our funds invested in the Empire—namely, 77.44 per cent., against 74.23 per cent. In the early days of the war we took advantage of the premium on the dollar and sold certain of our investments in the U.S.A. and re-invested the proceeds in high-grade British equities which stood at that time at relatively low prices.

REVENUE ACCOUNT

Turning to the revenue account it will be noted that our income for the past year was £50,190, being some £3,000 less than the figure for the previous year. This reduction, you may recall, I foreshadowed in my remarks at our last meeting, and in the circumstances of the past year, which included seven months of war, was not unexpected.

On the question of taxation, it is gratifying to note from the Chancellor's recent pronouncements that some modifications of the method of computing E.P.T. are in contemplation. Although at the moment we have no details of the changes proposed, it is hoped that as regards industrial and trading companies some form of relief will be given in those cases where, after many lean years, prosperity has come at last, quite independently of trade fostered by the impetus of war, but as the result of much spade work, planning, and careful reorganisation. Coming nearer home, we are hoping that the dues of investment companies will not be overlooked, and that of the several points which call for consideration some form of relief will be given in the case of income of investment companies which has already been subjected to E.P.T. Relief in such cases is allowed in the computation of profit for the purposes of N.D.C., and it seems but elementary justice that some concession should be made in connection with E.P.T.

To return to the revenue account, the charges are much the same as before, except for bank and loan interest, which is approximately £500 higher, due to our having borrowed more from our bankers on overdraft than in the previous year. After deducting the several charges, including debenture interest, the net revenue for the year was £28,807.

An interim dividend of 1½ per cent., less tax, has already been paid on the ordinary stock, so that the amount remaining available for the ordinary stockholders, including the amount brought forward, is £13,407. Of this sum £5,000 has been transferred to general reserve, leaving £8,407, out of which it is proposed to pay a final dividend of 3½ per cent., less tax, requiring £4,593, leaving the sum of £3,814 to be carried forward.

The report was adopted.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED

SATISFACTORY INCREASE IN PROFITS

WARTIME PROBLEMS

MR H. J. WELCH'S ADDRESS

The annual general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Limited, was held, on the 16th instant, at 19 Fechurch Street, London, E.C., Mr H. J. Welch (the chairman) presiding.

Mr J. E. Ritchie, representing the agents and secretaries (Messrs Harrison and Crosfield, Limited), having read the auditors' report,

The Chairman said:—Gentlemen,—During 1939 tea gave an increased profit of £2 1s. 7d., rubber £1 14s. 3d. and copra 14s. 9d. per acre as compared with 1938. The improved results from tea were achieved in spite of a smaller crop, an increase in the net selling price of 1d. per lb. more than compensating for the smaller crop and for the increased costs of labour, manufacture and materials.

Less rubber was produced than in 1938, but it was sold at a higher price than that obtained in any year since 1929. The cost showed a small increase but the net profit per lb. was over 2d. higher than in the previous year. The increased profit per acre I quoted includes profit derived from the sale of rubber export rights.

ESTATES AND STAFF

Our visiting agents report that on each of the company's properties estate works were carried out efficiently and economically and that agriculturally they are all in first-class order.

After paying the dividend to be declared to-day and making the other appropriations the company's net surplus liquid assets will amount to over £212,000. If these are deducted from the issued capital the balance represents a net cost of under £40 per acre planted. The company's valuable buildings, machinery and plant still stand in the balance sheet at the nominal figure of £1.

The war has brought new problems to our visiting agents and superintendents, but we are fortunate in the possession of an extremely competent and loyal staff and you doubtless will cordially approve of the increased vote of £2,500 as a special contribution this year to the staff retirement fund. The war also has given our agents and secretaries in London and Colombo much additional work, and I am glad of this opportunity of expressing the board's appreciation of the manner in which they have looked after the company's interests.

PROFITS AND DIVIDEND

The company's net earnings for 1939 amounted to £138,101. Notwithstanding that the sum charged against the profits for Ceylon taxation and N.D.C. was £48,100, or £21,150 more than in the previous year, the profits show an increase of £12,235 over the 1938 figure.

After allowing for the sum brought forward from 1938 and deducting the interim dividend of 4 per cent. paid in November last, the sum to be dealt with to-day is £193,094. The directors' proposals are set out in the report and I will now deal with them seriatim.

The transfer to taxation reserve of £43,000 provides for British income tax at 7s. 6d. in the £ on all profits earned up to December 31, 1939. The amount reserved last year was inadequate owing to the increase in the rate of tax after the issue of the accounts, but the deficiency has been made good in the sum now appropriated.

I have explained the board's policy in the matter of transfers to general reserve on previous occasions and need not go over the ground again to-day. An appropriation of £20,000 (a figure which in my opinion is not excessive for a company of this size) will increase the general reserve to £155,000. The creation of a dividend equalisation reserve is one which will, I trust, also commend itself to you. Its name explains its object and the board will not hesitate to use this reserve when need arises for the purpose for

which it is created. Maintenance of as steady a return to shareholders as is practicable is our objective and the uncertainties of the times through which we are passing emphasise the prudence of this reserve.

The final dividend recommended is 6 per cent., making 10 per cent. for the year. The average rate of tax deduction over the full 10 per cent. amounts to 4s. 4.6d. in the £, so that the dividend paid is equal to 12½ per cent., subject to tax at 7s. 6d. in the £.

PROSPECTS FOR 1940

I dealt with the general position and prospects of the tea and rubber producing industries in my recent address to the shareholders of the Rubber Plantations Investment Trust, and it has been arranged that a copy of that address shall be forwarded to you with the report of to-day's proceedings.

With regard to domestic affairs, you were informed in the directors' report that the whole of the exportable tea crop had been sold to the Ministry of Food. The selling price is one which, in the absence of a serious rise in production costs, should ensure a reasonable return. You were also informed that 907,200 lb. of rubber (which is more than the total rubber crop harvested by the company for 1939) had been sold forward for delivery in 1940 at an average net price of 9.08d. per lb., or 10.20d. London equivalent. Since the accounts were issued we have also sold forward 403,200 lb. of rubber for delivery during 1941 at a net price of 8.75d. per lb., or 9.96d. per lb. London equivalent.

STRONG FINANCIAL POSITION

It would appear probable that for 1940 the company will account for about the same tea crop and a larger rubber crop and that as far as we can at present see the company's profits this year should be greater than for 1939. There are, however, so many unpredictable factors under war conditions that this forecast must be expressed with reserve. Under the recent Budget proposals the maximum dividend which this company will be permitted to pay during the war appears to be 12 per cent. gross. This was paid for 1937 less income tax at the rate of 3s. 3d. in the £, equivalent to a cash dividend of 13.86 per cent. less tax at the then current rate of 5s. 6d. in the £, but until the Act is passed we shall not know exactly the company's position in the matter.

Our financial position is a strong one and all concerned have done what lies in their power to ensure the continued prosperity of the company. We must now wait on events, but it is gratifying to know that this company's products are all of assistance in maintaining the national and Allied war effort and that by its substantial contributions to the revenues of this country and Ceylon it should help to bring nearer an Allied victory and a just and lasting peace.

I now beg to move: "That the statement of accounts for the year ended December 31, 1939, and the directors' report and the appropriation therein mentioned be approved and adopted, and that a final dividend for that year of 6 per cent., less income tax at the rate of 4s. 7d. in the £, on the issued capital of the company be paid on May 31, 1940."

Mr H. W. Horner (vice-chairman) seconded the resolution and it was carried unanimously.

The retiring director, Mr H. W. Horner, was re-elected; and the auditors, Messrs Turquand, Youngs, McAuliffe and Company, were re-appointed, and the proceedings terminated with a vote of thanks to the agents, visiting agents and staff in the East.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes. Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, 8 Boulevard des Capucines, E.C.4.

LANADRON RUBBER ESTATES, LIMITED

IMPROVED RESULTS

The thirty-second ordinary general meeting of the Lanadron Rubber Estates, Limited, was held, on the 15th instant, at 1-4 Great Tower Street, E.C.

Mr Eric Macfadyen (the chairman) said that the accounts presented a much better picture than those for the previous twelve months, profits having risen from £11,299 to £19,512. They had been allowed to account for 144,000 lbs. more rubber, which had helped towards the improved results, and in addition the average sale price had come out at fully 1½d. per lb. higher. They recommended a dividend of 5 per cent., less tax.

A lower release from the current rate of 80 per cent. seemed not unlikely in the second half of the current year, but, unless it was lower than he anticipated, they would be entitled to export more than in 1939. Wages of labour had risen, but their unit costs for the larger crop which he looked for should not be any higher. They had made sales for delivery spread over the year totalling 327 tons. Those were mostly godown or c.i.f., but they could be equated to a London equivalent of, say, 10.45d. per lb. If nothing occurred to upset their calculations, he would expect to see their profits for 1940 reach their excess profits tax standard, which he estimated with the necessary reservations at approximately £21,000.

On Lanadron, of a total of 2,997 acres planted they had replanted 348 acres since 1937, and that would be brought up to 538 acres this year and further added to in the following years. He knew no estate of its age in Malaya in a generally sounder condition or able to produce more cheaply.

Dealing with the general position of the industry, he said that rubber was important in war, but the chief value of the industry to the Empire was as the producer of a commodity in demand for peace uses and a source of foreign exchange. Trade stocks, judged by the price level, seemed to be comfortable. They had good reason to be thankful for the international control regime, and in particular in that it had been long enough in existence to have had the industry well in hand when the testing time came.

The report was unanimously adopted.

LEDBURY RUBBER ESTATES, LIMITED

DIVIDEND OF 5 PER CENT.

The thirty-first ordinary general meeting of Ledbury Rubber Estates, Limited, was held, on the 15th instant, at 1-4 Great Tower Street, E.C.

Mr Eric Macfadyen (the chairman) said that the results from rubber production last year compared favourably with those for 1938, the respective profits being £6,013, as against £3,521. They had been allowed to account for a crop of 482,000 lbs., an increase of over 42,000 lbs., and, while costs per lb. were substantially the same, the sale price showed an improvement of nearly 1½d. per lb. They proposed to pay a dividend of 5 per cent. Tin receipts totalled £827.

A recent report by Mr Jenkins, the visiting agent, disclosed that the estates had received proper care, that labour was satisfactory and health excellent. A small area at Ledbury of 5 acres which had previously contained a few coconut trees was planted with rubber in terms of the planting rights granted to the company under the Regulation Scheme, and the balance of such rights was being used at Sungei Sabaling Estate, the young property in which they had a third share interest. At Kinrara the replanting programme was continued, a further 147 acres having been dealt with in 1939. Re-plantings to date were now 289 acres, and, subject to financial considerations, they proposed taking in hand about 150 acres this year and 175 acres in 1941. When that stage had been reached, roughly one-third of the Kinrara and Ledbury Estates would have been replanted with the best material available. The company had been fortunate in having the proceeds from tin mining available to meet the cost of that very necessary work. Their original estates had passed their best and a good deal of their rubber had come to be unprofitable.

They had sold forward for delivery in 1940, 181,440 lbs. at an average equivalent London landed price of approximately 10½d. per lb., and had continued the policy into 1941 by contracting to deliver over the whole of that year 80,640 lbs. at the equivalent of just over 10d. per lb.

The report was adopted.

FORD MOTOR COMPANY LIMITED ANNUAL MEETING

At the eleventh ordinary general meeting of Ford Motor Company, Limited, held, on the 16th instant, in London, the Rt. Hon. Lord Perry of Stock Harvard, K.B.E., LL.D., in the course of his speech, said:—I am glad to be able to tell you that our company has played, is playing and hopes to continue to contribute its full share in the national effort. I am particularly pleased to report that one of our extended activities, namely, the manufacture of agricultural tractors, relates to the most peaceful of all enterprises, the production of food. While our contribution in this field has been considerable, I am convinced that it will be still greater. In the principle of power farming our company has been the great pioneer in this country. Our production of Fordson Tractors from July 1, 1939, to April 30th last was practically 15,000 sold for use here at home, whilst in addition a considerable number have been exported to various countries throughout the world.

NEW AGRICULTURAL TRACTOR

A new tractor has recently been introduced to this market in very limited numbers. It was perfected last year by Mr Henry Ford in association with Mr Harry Ferguson of Belfast, and will be sold under the name "Ford Tractor-Ferguson System." As soon as the Government authorises supplies and can see its way to approve expenditure upon machine tools, jigs, etc., for its manufacture, and a satisfactory agreement with Mr Ferguson is concluded, the company will commence production. It is a lighter tractor, easy to operate, and is designed for haulage as well as for ploughing and the usual cultivating processes. I believe the eventual sales possibilities of these products, both for home and export trade, are considerable.

The production of cars and trucks for the home market has been severely affected. There is one aspect of the position, however, that I would like to mention. The service facilities which we have laboriously built up over many years, combined with the inherent good quality materials used in construction, will enable Ford vehicles to be kept in commission for an extended period.

CONTRIBUTION TO NATIONAL EFFORT

Our activities in other directions have been and are of a varied nature. Suffice it to say that all of the company's vast resources have been and are engaged in assisting the national effort. We are doing everything we can to maintain and increase exports which are so vital to the country at the present time.

The net profit for the year amounted to £1,310,787 as against £400,985 in 1938. These profits were only to a limited degree occasioned by Government contracts. Our normal business activities to the end of August were better than formerly and by the end of that month the profits earned were much greater than for the whole of the preceding year. The results were the outcome of careful previous planning and sound management.

Our revised 8-h.p. model—the "ANGLIA"—was ready for production when war commenced. Purchasers have expressed great satisfaction with it, and I am convinced that this car would have enjoyed exceptionally large sales in peace conditions.

Our export trade last year was better in all regards than in 1938. Our investments and organisation in overseas trade connections are greater than those of any other British manufacturer of products like those of our company.

DIVIDEND PAYMENT

As to the question of dividend, after careful consideration and obtaining the best advice available, the board decided on April 24th, the day after the Budget speech, to recommend a dividend of 7½ per cent. There was certain ambiguity at the time as to the Government's policy relating to dividends. The Chancellor defined his new policy in clearer terms in the House of Commons on the following day, and your directors felt it was incumbent upon them to reconsider their decision. It was therefore decided to make a recommendation of 6 per cent., which rate represented the highest dividend paid in the years 1936, 1937 and 1938.

The report was unanimously adopted.

Copies of the Chairman's Speech in full may be obtained from
FORD MOTOR COMPANY LTD.
88 REGENT STREET, LONDON, W.1, and
DAGENHAM, ESSEX

BRITISH MATCH CORPORATION, LIMITED

INCREASED DEMAND

The thirteenth ordinary general meeting of this company was held, on the 15th instant, in London.

Sir Clarence E. Bartholomew, O.B.E. (chairman and managing director), presided and said:—The outbreak of war brought an increased demand for matches, and the output of our subsidiary and associated concerns at home and abroad attained record proportions. The greatly increased duties on matches—both Excise and Customs—imposed by last month's Budget have given us considerable anxiety, and involved extensive changes in some popular lines—notably Swan Vestas and book matches. It is too early to speak with confidence of the full effect of these changes, especially in view of the possible interference during wartime with supplies from abroad.

It had been our wish to propose a small increase in the rate of dividend this year, but the ex-Chancellor has forestalled us, so we must conserve our funds in the national interest. You will observe

that we have already more than £1,000,000 invested in British Government securities. The proposal to transfer £110,000 from profits towards the writing off of our only intangible asset—goodwill rights, etc.—will, I am sure, appeal to you.

We propose, also, to transfer £150,000 from reserve account, which has been augmented by £200,000 by a special allocation from Bryant and May, Limited, this year in order to extinguish the goodwill item altogether. This does not mean that our goodwill has no real value. I believe it is more valuable than ever, but it does mean that our assets will be represented by actual investments in the industry in several parts of the world and the British Government securities above mentioned.

Wartime restrictions, heavy taxation—both here and overseas—and difficulties in obtaining some essential supplies are likely to have some effect upon our profits while wartime conditions last. It would be foolish to make prophecies or promises, but I may assure you that we look forward hopefully.

The chairman concluded by moving the adoption of the report and the payment of a final dividend of 5 per cent. on the ordinary stock, which was unanimously approved.

INSURANCE NOTES—continued from page 904

is a welcome sign of caution, which may enable the Society to add appreciably to the mortgage and investment reserve, which last year received the sum of £400,000, bringing it up to £500,000.

★

London and Lancashire.—Marine premiums were much larger last year, and a moderate increase was shown by the fire department. Hence the decline in accident premiums still left a considerably larger premium income in the three departments combined. Total underwriting balances were also larger; though fire profits did not rise with premiums, the accident margin was considerably increased, and the marine account released more to profit and loss. The figures below include those of the allied companies, notably the Law Union and Rock (which transacts life business):—

	Earned Premiums	Underwriting Balances to Profit and Loss
	1938	1939
Fire	2,762,297	2,808,735
Accid. and General	2,544,051	2,504,339
Marine	1,438,392	1,672,007
	6,744,740	6,985,081
Life	780,362	758,827
Annuities	67,071	59,652
Cap. Red.	18,697	19,100
	7,610,870	7,822,660
Interest (ex. life, annuities and cap. red.)	481,363	439,095
Fees	149	131
	934,182	961,129

* One-fifth shareholders' profits at 1934 valuation (1938) and 1939 valuation (1939).

A total of £961,129 (against £934,182) was credited to profit and loss, making, with £2,880,128 brought forward, a total of £3,841,257. After deducting the 1939 dividend, 20s. per £5 share, as for 1938, taxation provision and transfers for staff pensions and widows, the balance carried forward was £3,127,938 (against £2,880,128).

Life premiums declined slightly, and new business was down from £2,811,470 to £2,055,440 net. The Law Union and Rock valuation produced a surplus of £645,158, including interim bonuses already paid, but only a special interim bonus of £1 per cent. per annum has so far been declared for the current series. Consolidated assets totalled £30.4 millions. The chairman has stated that market values exceeded book values by a larger margin than a year ago.

Equitable.—The equitable funds increased from £12,034,776 to £12,785,815, a rather larger advance than was recorded for 1938. The decline in new business from £2,028,917 to £1,769,257 was less than the average of the offices. Interest of 3.81 per cent. net was earned on the funds compared with 4.04 per cent. in the previous year. The office is one of the few that do not pay commission; its expense ratio was in consequence only 6.8 per cent. of premiums. The Equitable has withdrawn for the duration its unique minor-profits scheme, so that all new policyholders are full profit-sharing members under the major-profits plan. Moreover, under all new policies the sum payable in the event of death during war (even if not due to hostilities) will be only a part of the total sum assured. The book value of the assets was £12.9 millions; the book values of the securities were more than the market values, but the chairman stated at the meeting that the difference, which amounted only to £83,970 and was covered by appreciation elsewhere, had since been made good. The next valuation is due at the end of this year.

Sun Insurance Office.—The conspicuous feature of the 1939 Sun Insurance accounts is the increase in both total premiums and total underwriting profits. The advance in earned premiums was shared by each of the three departments, but was most marked in marine business. The marine account also contributed £50,000 to profit and loss against nil in 1938. Fire profits rose to the extremely satisfactory level—even for the excellent Sun portfolio—of 11.9 per cent. The accident underwriting margin was rather lower than in 1938, but was still high for this class of insurance.

	Earned Premiums	Underwriting Balance to Profit and Loss
	1938	1939
Fire	2,266,241	2,282,216
Accident	1,865,305	1,915,265
Marine	586,432	652,465
	4,717,978	4,849,946
Interest	260,007	238,094
Fees and miscellaneous	3,373	1,181
	678,028	687,302

The balance brought forward was £1,502,457, making with the year's profit of £687,302 a total of £2,189,759. After deducting the 1938 dividend (paid in 1939), providing for taxation, and writing £50,000 each off investments and house property, the balance carried forward was £1,530,790. From this sum £214,125 will be deducted to meet the 1939 dividend of 2s. 9d. per £1 share, less tax (un-

changed), leaving unappropriated £1,316,665. The assets total £11.9 millions, aggregate market values being at least as high as book values.

★

Car and General; Motor Union; Provincial; World Auxiliary.—The following table summarises the underwriting results of these four companies:

Company and Year	Accid. and Fire	General	P. & L. (inc. interest)
Car and General	1938 19,673	88,273	Dr. £500,127,039
Motor Union	1938 30,377	139,170	143,979
Provincial	1938 35,524	126,647	257,014
World Auxiliary	1938 39,593	57,093	246,445
	1938 36,806	73,556	Dr. £1,000,131,680
	1938 6,540	6,646	5,865 46,113
	1938 4,878	5,100	5,906 40,118

Car and General and Motor Union are affiliated to the Royal Exchange Assurance, but their figures are not included in those of the parent corporation. Underwriting experience of the **Car and General** improved in 1939, but the **Motor Union** showed a slightly lower underwriting balance in the aggregate. The fire profits of both companies were very satisfactory, in relation to the relatively small premium incomes. On the much more important accident business (consisting largely of motor insurance) **Car and General** earned premiums were £1,570,495, and those of the **Motor Union** £1,495,507, the underwriting balance being 3.6 per cent. and 8.5 per cent., respectively. The **Car and General** carried forward £47,453 from profit and loss (against £43,711) and the **Motor Union** £134,503 (against £151,752).

The **Provincial** figures include those of the subsidiaries, the **Drapers and General** and the **Hull Underwriters' Association**. Results were not quite so good last year, largely because the marine account involved a draft upon profit and loss, but marine premiums advanced from £184,571 to £216,434. The dividend for 1939 was 2s. per 4s. ordinary share (unchanged). Against £41,480 brought in from the previous year, £23,783 is carried forward.

The **World Auxiliary** results compare favourably with those of 1938, considering the conditions obtaining. The Chairman reported at the annual general meeting that underwriting experience on 1938 account would be favourable. Owing to the time lag in marine settlements, this is not reflected in the 1939 figures above. The dividend is 12 per cent. on the £1 shares (less tax) compared with 7½ per cent. (free of tax) in 1938, the gross distribution thus being unchanged.

CURRENT STATISTICS

Finance

GOVERNMENT RETURNS

For the week to May 11, 1940, total ordinary revenue was £12,305,000, against ordinary expenditure of £44,444,000. Thus, including all sinking fund allocations, the deficit accrued since April 1st is £192,952,000, against £59,402,000 for the corresponding period a year ago.

Transvaal Gold Output, April.—Witwatersrand, 1,140,632 fine ounces; other districts, 30,131 fine ounces; total, 1,170,763 fine ounces. March total, 1,147,382 fine ounces. Native labour employment at April 30th: Gold mines, 354,775; coal mines, 17,900; total, 372,675.

Canadian Pacific Railway.—Net receipts, April, '\$1,502,000 (\$774,000); aggregate net receipts, January to April, 1940, \$5,303,000 (\$1,468,000).

Eastern Telegraph Company, Ltd.—Total income, 1939, £735,156 (£631,989). Net profit, £645,303 (£544,927). Ordinary dividend, 11½ per cent. (9½ per cent.).

+ Net operating income

(a) Interim dividend.	(b) Final dividend.	(c) Last two yearly dividends.	(d) Worked on 9% basis.	(e) Allowed for exchange.	(f) Flat yield
(g) Worked on 22½% basis.	(h) Yield on 4½% basis.	(i) Annas per share.	(j) Yield worked to average redemption—end 1960.	(k) Based on redemption in 1939.	(l) Free of income tax
in 1946.	(l) Yield based on 78½% of coupon.	(m) Including bonus of 5% tree of tax.	(n) Yield on 1-52½ basis.	(o) For 15 months to December 31, 1939.	Also car
dividend 10 per cent. out of capital reserve.	(p) Yield based on 43% of coupon.	(q) Yield worked on a 15% basis.	(r) Yield on 2½% basis.	† Free of income tax	

TENDERS FOR LIVERPOOL CORPORATION BILLS

1. THE CORPORATION OF LIVERPOOL hereby give notice that Tenders will be received at the Chief Cashier's Office, at the Bank of England, London, on Monday, the 20th May, at One o'clock, for Liverpool Corporation Bills to be issued under the Liverpool Corporation Act, 1927, to the amount of £1,000,000 (one million pounds).
2. The Bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated the 23rd day of May, 1940, and will be payable on the 23rd August, 1940.
3. The Tenders must specify the net amount per cent. (being an even multiple of one penny) which will be given for the amounts applied for; and the Tenders of private individuals must be made through a London Banker.
4. The Bills will be issued and paid at the Bank of England, London.
5. The persons whose Tenders are accepted will be informed of the same on Tuesday, the 21st May, and payment in full of the amounts of the accepted Tenders must be made to the Bank of England in London not later than 1.30 p.m. on Thursday, the 23rd May.
6. The Corporation of Liverpool reserve the right of rejecting any Tender.
7. Tenders must be made on the printed forms which can be obtained at the Town Clerk's Office, Municipal Offices, Liverpool; at the Chief Cashier's Office, Bank of England, London; and at any of the Branches of the Bank.
8. Consent of the Treasury has been obtained to this issue under Regulation 6 of the Defence (Finance) Regulations, 1939. It must be distinctly understood that in giving this consent the Treasury does not take any responsibility for the issue.

W. H. BAINES, Town Clerk.

Municipal Offices,
Dale Street, Liverpool, 2.
11th May, 1940.IMPERIAL JAPANESE GOVERNMENT
FOUR PER CENT STERLING LOAN OF 1910

NOTICE IS HEREBY GIVEN that the COUPONS due 1st June, 1940, will be PAID on that date between the hours of 11 and 12 and subsequently (Saturdays excepted) between the hours of 11 and 2 at the Yokohama Specie Bank, Limited, where lists may be obtained. Coupons must be left three clear days for examination prior to payment.

For the YOKOHAMA SPECIE BANK, Limited,

H. KANO, Manager.

7 Bishopsgate, London, E.C.2.
17th May, 1940.

UNIVERSITY OF LONDON

Applications are invited for the Leon Fellowship for Research (preferably in the fields of Economics or Education) of the value of £400 for one year for the Session 1940-41. It is not essential that candidates should be members of a University. Further particulars should be obtained from the Secretary to the Academic Registrar, University of London, 42 Gyles Park, Stanmore, Middlesex. The last day of application is 1st June, 1940.

ECONOMIST
BINDING CASES

Attractive binders to hold three months' issues of *The Economist* are still available.

These binders have no wires, clips or metal contrivances so that each issue can be bound in an instant for permanent reference.

Reading Cases to hold two issues, and made on similar lines, are also available.

Both are bound in full cloth (blue) and lettered in gilt.

The price of the Binder is 5s. 6d. post free (Overseas 6s. 6d.) and of the Reading Case 4s. post free (Overseas 4s. 6d.)

A Real Bargain
— ALL THIS ONLY 4s.

- (a) 4 issues of FINANCIAL WORLD OF AMERICA, each containing 32 pages of essential information every internationally-minded investor needs today.
- (b) Latest issue of 48-page investor's handbook, featuring our individual ratings and vital data on 1,600 American listed stocks.
- (c) "10-Year Dividend Honor Roll"—a year by year dividend record of every New York Stock Exchange common stock that paid dividends each year since 1929.
- (d) A "Low-Priced Stock Guide" gives a vast amount of information on stocks under \$15 and points out notable values.
- (e) "Outstanding Business Cycle Stocks."

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, Economist Newspaper Ltd.,
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Lucidity and Daring

IT is useless to disguise the extreme gravity of our situation. The advance guard of the German army is in Boulogne. Unless our counter-attacks can restore the Arras-Bapaume-St. Quentin line and prevent the consolidation of this advance whose spearhead has so far consisted of machines, not men, then the British and French armies are separated, France loses one of her most important industrial areas, and the Channel ports pass into the hands of an enemy who for the first time in the history of man is perhaps in a position to risk the invasion of an island whose navy controls the seas. The Prime Minister has warned the country. After the attack on France must come the attack on Britain, with every weapon available in the Nazis' terrifying armoury.

In a time of such tension and jeopardy it is distasteful to go back over the tale of disaster and recall our mistakes; yet it is primarily from them that we shall learn how to do better. From the very frank account given by M. Reynaud to the Senate we have the immediate causes of the débâcle on the Meuse—over-confidence in the difficulty of the terrain, maldistribution of second-class troops, incredible incompetence in the matter of destroying key bridges, confusion and panic when the unexpected happened and the German armoured columns burst through—but these immediate causes spring from something deeper than defective foresight and temporary loss of morale. To-day both Britain and France are suffering the consequences of their former misapprehension of the nature of total war. The Allied outlook was curiously compounded of complacency and timidity. We in Britain provided the complacency. We allowed ourselves to win this war by every expedient save that of accepting the sacrifices and the effort necessary to do so. First we were to win because "Germany would be torn by internal revolution," later because our blockade would bring her to her knees, even later when the fighting really began

because campaigning was using up her stocks. Now at last we face the reality of things, that Germany cannot be defeated until we meet her tank for tank and 'plane for 'plane. At last, with the Nazi armies hammering at the Channel ports, we mobilise for total war.

France did not err by complacency. Her sacrifices for the war were "total" from the first. The fault here lay in excessive reliance upon defensive strategy, an excessive belief in the fortified line. France had prepared herself for siege warfare. In a few days, Germany forced upon her the war of mobility and surprise, designed with daring and originality, organised to the last item, conducted with incredible skill. In the first clash between the two conceptions France had only a few hours in which to learn that defences could be pierced and warfare carried into the open.

Britain and France are learning their lesson. At last we are mobilised for a maximum effort, at last we have a Government capable of taking from the community the sacrifices it only asks to make. In France, radical reorganisation has given the command of the armies to General Weygand, a tried soldier and remarkable strategist, has brought Marshal Pétain, the veteran of Verdun, into the War Cabinet, transferred to M. Reynaud the responsibility of controlling the war machine and brought the vigorous personality of M. Mandel to the Ministry of the Interior. These changes are a pledge that the French are "forging themselves new hearts." It is the spirit of offence and victory which will dominate their armies, not that of security and defence.

The time is desperately short, the crisis graver than any we have yet faced. But at last we know our weakness. We have allowed complacency to fog our judgment and timidity to sap our fighting spirit. There are two qualities which we must now cultivate above all the rest—"lucidity and daring."

Mobilisation at Last

NEVER can a more far-reaching Act of Parliament have contained fewer words or been enacted so quickly as the Emergency Powers (Defence) Act which was passed through all its stages in both Houses of Parliament in less than three hours on Wednesday. Its operative clause confers upon the King in Council the power "to make such Defence Regulations making provision for requiring persons to place themselves, their services and their property at the disposal of His Majesty, as appear to him to be necessary or expedient for securing the public safety, the defence of the Realm, the maintenance of public order, or the efficient prosecution of any war in which His Majesty may be engaged, or for maintaining supplies or services essential to the life of the community." In short, the Government takes control of everybody and everything. It is the complete conscription of persons, labour and capital.

The passage of an Act which at last makes possible the complete mobilisation of all the national resources should be a proud moment for *The Economist*. Before and after the outbreak of war, in and out of season, this journal has argued, pleaded, begged and cajoled for action of this nature. Over and over again the demonstration of the Allies' overwhelming superiority in potential resources has been coupled with the warning that they must be mobilised on a scale far beyond anything hitherto contemplated if the potential is to be converted into the actual. Complacency, we venture to claim, has never crept into these columns; rather there has been a steady refusal to be content with a war effort which went only as far as it could be carried without inconvenience to anybody. But when at long last these ideas are accepted and carried into law by acclamation, pride is overlaid with anxiety lest it be too late.

This is not, however, a time for vain regrets about the past—or even for those indictments of betrayal that are now amply justified. Those who have seen this hour coming may perhaps be allowed a passing expression of astonishment that the men who have done the country such harm by their obstinate blindness can still find the courage to hold public office. But there is no time now for the pointing of obvious morals. It is a time for action, and nothing that the Government could have done would have put the country into better heart than their demonstration that they mean to act without delay, without respect for persons or institutions, without any object other than the salvation of the community. Let them continue. The only criticism they need fear is for not being drastic and ruthless enough. The powers contained in the Act are mere instrumentalities; as Mr Attlee said in the Commons, "the real force behind the Government to-day is the will and determination of a free people."

What, then, is to be done? The first task, obviously, is to speed up production, for in modern war even a *levée en masse* is helpless without its supplies. Everything necessarily waits upon the promptness with which the equipment and munitions of war can be turned out. This in turn has three aspects—plant, materials and labour—and rapid advances will have to be made in each of the three directions at once. So far as plant is concerned, the problem is one of bringing into use at once every factory and every piece of machinery that can be used to produce any form of war equipment. It is, of course, not an easy task to find work for a miscellaneous collection of varying capacities to produce; but it could be done if it were tackled on a regional basis, with the fullest use of local sub-contracting. The Government's new powers should make it possible to cut out all the delaying technicalities of contracts. When the plant and the work can be fitted together, production should begin at once, for the Government's account. The owner is assured fair compensation; the haggling can come afterwards, and the increase in the Excess Profits Tax to 100 per cent. should serve to kill most of the incentive to haggle. A business, like an individual, must henceforth be content for the duration with enough money to keep it alive. In the search for industrial plant, it goes without saying that no tenderness whatever need be shown to civi-

lian orders. It would be far better at this stage to overshoot the mark and cut down civil production further than can be permanently tolerated rather than to run the risk of hampering the war effort.

In the case of materials, the difficulty of looking for plant capacity hardly arises. Those materials that are produced in this country—chiefly coal and steel—must be forthcoming in whatever quantities are required, but the problem is more one of using existing plant more intensively than of adapting similar plant hitherto used for other purposes. There is nothing that can be converted into a coal mine or a steel furnace at a moment's notice. And the great mass of raw materials are, in any case, imported. The chief necessity under this head is to ensure that the needs of the munition industries are met promptly, and in full; they must be given an absolute priority over civil needs. The use of steel for civil buildings, or even for tube railways, can no longer be justified. Here again, it will be wise for a time to overshoot the mark, so that large stocks of materials can be built up, allocated to the essential industries and intended to ensure that production shall not have to stop for a moment because of any temporary or local shortage of materials. As sweeping an assertion of priority as this will not be easy to secure, but we can no longer do without it. To secure it, it may be necessary to control the controls. The weakness of the system of appointing controllers from the trades they control, so often emphasised by *The Economist*, will begin to show itself in a period like the present, when it is necessary for the controllers to forget about their peacetime customers and their peacetime customs, and start in dead earnest to do what they have never done before.

Labour is the most urgent problem of the three, and it is in this direction that the most rapid action is to be taken. Mr Ernest Bevin has apparently succeeded in convincing the Ministry of Labour that we are at war. There is to be a Director of Labour Supply and local organisations to assist him, and there is also to be "a bold and comprehensive scheme of training." The Government is taking powers to determine wage rates, and though Mr Attlee gave assurances that collective agreements would be fully observed and that payment would be on the basis of "the rate for the job," it is to be assumed that the auctions for skilled labour that are going on all over the country will be stopped. Labour must henceforth be found according to a logical plan. The Government's new powers must be used to take it from where it is and place it where it is needed. The scandal of men kept out of the Army by the Schedule of Reserved Occupations and yet not used on work of national importance must be ended. Lord Beaverbrook's call for volunteers among garage mechanics is an example of what is needed; but the policy should go much further. Every able man and woman must be found a job either in the armed forces or in the industrial effort of war. For this purpose intensive training will be needed. Mr Attlee mentioned the facilities for training that exist in the Ministry's training centres and in technical schools. But much more than this will be needed. Every firm should be put under an obligation to train a given proportion of men and women, and the Government should itself assume the responsibility of finding the unskilled workers to be trained. Training, however, will necessarily take time, and in the meantime we must depend on the skilled labour force already in existence. They have been called upon to work a seven-day week, and it is the most literal truth to say that these men and women will be held to be lucky above their fellows in the opportunity they have to give their toil and their sweat at once.

All this represents a terrific task for the central organisation. The result of so much effort throughout the country will merely be chaos unless it is firmly, wisely and rapidly controlled from the centre. Here is the problem which most requires the attention of Ministers, since it is under their own direct control. What is needed is nothing less than a complete change in the whole attitude of the Civil Service.

For twenty years since the last war, two insidious tendencies have been at work: on the one hand, a concentration of authority in the hands of a very small group of senior officials; on the other, the deliberate inculcation among these senior officials of a spirit of small-minded timidity. Almost any argument will be accepted in the higher ranks of the Civil Service for *not* doing anything. As a result of this spirit and the bottlenecks created by the concentration of authority and by the dominance of the Treasury (which has been allowed to extend over policy as well as over expenditure, over the appointment of persons to do tasks as well as over the creation of the positions they hold), the sluggishness of Government departments has become a national danger. Decisions that should require days take months, and then they are half-hearted. Some of the things that happen are almost unbelievable. Before the war broke out a recommendation was made by the most competent military authorities that certain essential munitions materials should be accumulated in reserve; it was not carried out because a certain high Civil Servant gave his personal assurance that there would be no war.

This state of affairs must now be altered. Civil servants who have assumed responsibility by obstructing plans for

action must pay the penalty by removing themselves to spheres where they can do no harm. In France, the Civil Servants have been instructed to settle matters by direct contact rather than by the composition of minutes and memoranda, and the same principle might well be followed here. The chief necessity is for speed in decision and action, and that can only be secured by a far-ranging devolution of the power to decide. There are plenty of able younger men both in the Civil Service and outside who are both able and willing to take the responsibility. Not the least of the sources of our wealth in the past and of our potential power to-day is our ability to breed men who can take responsibility; it can be as valuable in a governmental machine as in a fighting army, but it must be released from the chains that now bind it. The assumption of full powers by the Government is meaningless without the power to decide.

The temper of this great people is now fully roused. If the miserable betrayals of the past have left us with the means to resist the onslaught during the coming months, then we shall build, with this new spirit and the new leadership, a military machine so enormous that there will be no power on earth to stop us.

America's Awakening

NOWHERE have the events of the last two weeks had a more profound effect in opening men's minds to unpleasant truths than in the United States. Seven months of static war had misled the American people into believing that they neither wanted nor needed to become involved in Europe's war; isolationism in March was far stronger than in September. But the treble blows of April and May—first the invasion of Denmark and Norway, then the assault on Holland and Belgium and finally the realisation that the Allies are in military peril—have brought American opinion back with a jump to a position far nearer intervention than isolation.

It was suggested in *The Economist* last week that while the *direction* of the change in American sentiment was obvious, its *extent* was more doubtful. A further week has shown that the extent of the change is very considerable indeed—not quite so large as was suggested over last week-end by one or two cables which spoke of a coalition and an agreed election for the Presidency, but nevertheless almost revolutionary in its implications. The movement of American opinion has now suddenly resumed the course which was predicted by the majority of observers before the war broke out last September, a course from which it had been deflected by the unrealities of the winter. It has always been apparent that American isolationism rested on two props, of which the unwillingness to become involved in Europe's quarrels has always been less important than the belief that involvement was unnecessary since America's security was adequately protected by the European democracies. Knock away the second prop, as it has been rudely knocked away in the past fortnight, and the unwillingness to intervene disappears beneath the sudden realisation of America's own national interest. In the last few days it has been propounded from a thousand platforms, with the air of a new discovery, that the cheapest and most effective way in which America can protect her own security is by assisting the Allies.

This doctrine is now carrying all before it. In one authoritative metropolitan newspaper it has already been carried to its logical conclusion in the advocacy of a declaration of war against Germany. This is still the voice of a tiny minority, but the desire to do everything short of war to help the Allies is so nearly unanimous that Colonel Lindbergh's restatement of pure isolationism has done more harm to the Colonel's reputation than good to the cause he has sponsored. Eminent citizens in all parts of the country are forming and joining organisations whose purpose is to assist the Allies. Congress, as is inevitable, moves more slowly and its overt concern is more with the defences of the United States than with the course of the war in Europe. But it is sufficiently stirred to accept without a murmur President Roosevelt's request for a

further defence appropriation of \$1,182 millions (strangely described as "tremendous"; related to the respective National Incomes it is the rough equivalent of only about £100 millions in Great Britain), and one of the passages in his address which received the warmest applause was that in which he asked that no obstructions should be put in the way of supplies for the Allies, even for the purpose of building up America's own defences.

The total effect of these manifestations of public and Congressional sentiment is to transform the United States from a neutral into a "non-belligerent." The Neutrality Act and the Johnson Act still remain, and there is no open move to change them; indeed, if Congress adjourns for the summer without altering them, an awkward situation may develop. But such details apart, it is clear that nothing that can be shown to be necessary for the Allies' survival is likely henceforward to be refused.

This is, of course, an immense stride forward. But unfortunately changes of heart take a long time to be translated into material terms. America clearly wants to help; but it is not very easy to see how she could help in the immediate future. A resolution which was introduced into the Senate permitting the sale to the Allies of any aircraft now in the possession of the American Army and Navy was, of course, promptly rejected; but it is the only action that the United States could take that would stand a chance of affecting the issue of the battle now raging in France. The present battle will, however, be succeeded by others, and the prospect is that an immense struggle will continue all summer, yet even in a period of months there is comparatively little that America can do to help that is not already being done. The simplest gesture would, of course, be to withdraw the restrictions of "cash and carry," though the Allies are not at the moment badly short either of dollars or of shipping space for war material. The removal of the "cash" restriction might encourage the Purchasing Commissions to place orders on a more generous scale and to carry their long-range planning further. If American shipping were made available, it would be possible to increase the import into Britain and France of certain less necessary goods which will now have to give way to essential war commodities. But neither concession would make a vital difference to the events of the summer of 1940.

Perhaps the chief immediate assistance that the United States can render is in the delivery of machinery, and especially of machine tools. The American industry is already working to capacity, partly on Allied orders. Deliveries of these vital necessities to Europe could be speeded up if it were possible to give Allied orders any sort of effective priority over other exports, or even over certain classes of domestic demand. Steel, particularly

semi-finished steel, is another material that will be urgently needed, together with scrap for steelmaking in this country, and priority rights, if America is willing to grant them, might also be of assistance here. Whether any immediate increase in the supply of aircraft could be secured by the same means is more doubtful, since the American aircraft industry is already working to capacity, and Allied orders already enjoy a substantial preference.

It is in the more distant future—from 1941 onwards—that American assistance can be greatest—and its dimensions at that time are almost unlimited. But, in order to translate potential capacity into actual capacity, plans will have to be made immediately for the expansion of production in such things as special steels, machinery (especially machine tools), scientific instruments, aircraft and mechanised weapons. It is in this sphere that decisions of

policy by the American Government are needed now. The extension of plant capacity requires the investment of very large sums of capital, which may be beyond the means either of private industry or of the Allied Governments. Will the United States Government assist in the erection of munition plants, which cannot be anything but an asset to America's own defence potential, if the Allies undertake to pay for the output? What possibilities are there of agreements on specifications, so that the same factories could produce simultaneously for the Allies and for America's own needs, or change over rapidly from the one to the other? These are the questions that Americans should be asking themselves if they are in earnest in their desire to give every assistance "short of war" to a cause which they now at last recognise to be their own.

Education at a Price

EDUCATION costs money. It is the chief means by which young people can climb out of their social class to a higher one and the way in which others maintain their higher status. Both promotion and privilege are only bought at a price by parents.

State schools and State aid have not removed this. The education that promises the highest returns is still the most expensive; and, even with grants and scholarships, a majority of parents cannot afford to lose the earning power of their children by keeping them on at school after 14 years of age. Under a fifth of secondary school pupils stay on to sit for Higher Certificate. Less than a fourteenth pass on to universities, colleges and training establishments.

The vast majority of children are quite excluded from the educational establishments that claim the bulk of the well-paid and dignified offices in the land for their *alumni*. In 1927, out of 56 bishops 52 came from the handful of "public" schools; 19 out of 24 deans; 17 out of 25 judges of appeal or the High Court; 152 out of 210 home civil servants earning over £1,000 a year; 33 out of 41 English civil servants in India; 62 out of 82 directors of five banks; and 37 out of 40 directors of four railways. And "hardly less than £200 a year is required on the average to keep a boy at a 'public' boarding school from 13 to 18, and perhaps as much at a preparatory school from 8 to 13."* The inner circle, with incomes to purchase their children's future so dearly, is small; in 1935 only 4 per cent. of all personal incomes exceeded £500 a year and only 1½ per cent. were over £1,000.

There is a bottleneck. By scholarships and other financial aids some children can climb the so-called ladder from elementary school to secondary school and university. About a quarter of the undergraduates at Oxford in recent years started in elementary schools and over half those in Britain's other university institutions. But few are chosen: 40,000 in universities compares with 560,000 in secondary and 5,000,000 in elementary schools. In London an inquiry revealed one in five of elementary school pupils to be of "high" ability. One in eight was of "exceptional" ability. But only one in ten had a chance to go on to a secondary school. Over half a million children a year sit for special places in council secondary schools all over the country. One in eight gets in with reduced or remitted fees. One in 20 gets in as an ordinary fee-paying pupil.

The better the prospects afforded by any branch of education the more costly it is. This is true even of State spending. The average annual cost per child of elementary school buildings is about £35-£36; in council secondary schools it is £103. Senior schools and central schools, the only alternatives to secondary schools for children whose parents cannot afford the expensive private establishments or "public" schools, are relatively neglected. The average annual expenditure per child on school maintenance is

£30 in secondary schools, £20 in central and £15 in senior schools.

It is truer still outside the State system. The "independent" schools, day and boarding, put a high price on their goodwill. Parents pay anything from £78 to £245 for residence and tuition fees alone, with "extras" running from £30 to £70, to "purchase for their children something of the future they covet." It is a fact that the more expensive a school is the "better" it is, in the sense that its pupils are given a better chance in later life.

The cost of buying futures is heavy. To educate a child between the ages of 5 and 17 in the "independent" schools may cost anything from £450 to £750, £1,500 or even £2,500. Two extra years from 17 to 19 may add on £70, £200, £400 or £550. Then the university follows, Oxford or Cambridge, costing £250 to £350 a year. Finally, there may be further training for a profession. Including fees and maintenance while at a university or while training to qualify (but *excluding* keep at home and general expenses) a doctor will cost £770 to £1,245 in all; a barrister £670 to £1,100; an architect £520 to £630; an engineer £223 to £710; an accountant £415 to £730, and so on.†

Only a minute fraction of the population can even contemplate paying out ransom on this scale. The great bulk, with working-class or lower-middle-class incomes, find it struggle enough to secure the best advantage for their children from the cheap State facilities. After 11 the alternatives for a child are four; a secondary school with the chance of a School Certificate and entry to white-collared work; a central school with similar but much more slender chances of paper qualifications; a senior school leading largely to dead-end jobs; and immediate work. In addition, there are technical institutions, junior, senior and part-time, to aid in the struggle to rise above the unskilled and low-paid; but no effective combination of daytime technical instruction with training in actual work.

All these institutions are cheap. A senior school involves no fees and only an extra annual outlay of 10s. to £1. But to follow up with a junior technical school means forgoing perhaps £30 odd in wages and paying in fees and expenses from £4 to £9 a year. A central school and a secondary school both mean £30 odd a year forgone in wages and anything from £4 to £20 a year spent in fees and expenses.

True, winners of special places in secondary schools can get remission of all fees and maintenance of £7 a year in England up to 15 and £13 a year afterwards. But only a select few have a chance of slipping through the bottleneck—and many fewer of slipping further to university and professional training on grants and scholarships. And it is not simply merit that enables the narrow ladder to be climbed. It is conditioned always by cost. At 14 a boy can earn £30 in wages; at 15 £40; after 15 £50. Unskilled juveniles at 14 may get 16s. 4d. a week in some

† These calculations are taken, as indeed are most of the facts in this article, from *Education and the Birth Rate*, op. cit.

engineering districts or 18s. 4d. at some motor works. At 16, a navy may get 16s. more than a "learner"—which means that the "pull of wages" is not just an obstacle to higher education, but an obstacle to apprenticeship, with little or no wages, as well.

What does all this mean? To Leybourne and White, in their very noteworthy survey, it means the habit of small families among aspirant families in all classes. It means fewer children, economy in food and comforts. It means that careers are only open to the few talents that can, for one reason or another, survive in a financial struggle. And because the struggle is worth winning, because victory means the income and the decencies of "civilised" life, hosts of families are in the thick of it.

These writers probably overstate the effect of educational costs on population trends. But the likely impact of population trends upon education are more evident. If it is true (as some experts have suggested on the basis of present trends) that, by 1965, the elementary school population may have fallen from 5 to 3 millions, the secondary school population from 470,000 to 340,000 or even 280,000 and the university population from 35,000 to 29,000 or 26,000; then, unless new groups of families can be enlisted, unless the bottlenecks can be widened, the overhead burden of education's capital equipment will grow markedly.

The clearest example is the "public" boarding schools—whose demise has recently been forecast by some

even of their own pundits. Already taxation and the heavy costs are deterring parents, and without an extension of their field of recruitment their numbers may fall by a third or even a half in a generation—from 54,000 to 25,000 or 21,000.

Time is bringing in its revenges, and in war there is no time to set up new systems. But the way out for the "public" schools is clearly more cheapness—and more children. Already one in grave straits has come down to £90 a year for tuition and residence fees. More cheapness by reduced fees and by State aid (after the universities' example); more children more widely drawn; at least a partially open door if the State is to help; and the breaking down of a key social barrier—this is the road.

It is not for everyone in any scheme to obtain a formal academic education. But so long as formal academic education of a special expensive kind is the passport to social up-grading, so long will education be distorted in the struggle for success and finance remain the ruler. Schools of equal status, though differentiated in function, for everyone at equal cost; merit or ability alone to be the criterion of recruitment after the elementary stages—it will not be easy to capture and fix these aspirations. But, until we can, democratic education will remain undemocratic. And in the testing fires of war which allow no distinction between citizen and citizen this stands out more starkly than ever.

NOTES OF THE WEEK

The Nation's Government

The new Ministry is less of a compromise between the old order and the new than was expected—or feared. That Mr Chamberlain should remain leader of the Conservative Party at the request of his new Conservative chief, Mr Churchill, was inevitable in the nature of parties; though it is none the less an anomaly. That old faithfuls should be rewarded at the Exchequer and the Dominions Office was probably inevitable, too. But the compromise that was most expected, Mr Chamberlain's appointment to lead the House of Commons, did not happen. Mr Churchill himself is Leader of the House, and, fittingly enough, it was to Mr Attlee, as Deputy Leader of the House, that the introduction of the Bill mobilising all property as well as persons fell. Mr Churchill's Government is a non-party one, and its talents are drawn widely; but the key men during this eleventh hour, apart from the overriding importance of the Prime Minister himself and the quick decisiveness of Lord Beaverbrook, are Labour men. Their long-delayed chance has come at a very fateful time. It is upon Mr Morrison, the Minister of Supply, and Mr Bevin, the Minister of Labour, that the task of enlisting the nation's plant and labour in a few brief days has fallen. Mr Arthur Greenwood, Minister without Portfolio and another Labour leader, heads the new War Production Council. Labour's obligation as the Opposition to be ready to govern at the nation's call has come up suddenly for payment, and it is the measure of Mr Churchill's breadth of vision that, in an administration still based predominantly upon Conservative support, he has let nothing prevent him from calling in the freshest reserves.

★

Despite Messrs Maxton and Gallacher, there is no Opposition. The office of Leader of the Opposition has been suspended. But the formula for parliamentary vigilance has not been abandoned. Saving only that no Ministerial time at all can reasonably be wasted, question and answer will go on; and, another anomaly in view of Labour's incorporation in the Government, Mr Lees-Smith, as acting chairman of the second largest party in the House, is apparently to take over the Opposition Leader's function of arranging Commons business with the Government. In the last war it was the senior Privy Councillor who did this, and there has been some demur on the Conservative benches. Actually, the point is unimportant. Unless critical events prevent Parliament from sitting regularly, as indeed they may, the House as a whole will continue to review the Government's work. In tune with the entire people they will oppose nothing, and the Government now has full power to act. But constructive criticism, advice, helpful suggestions and information freely given will still distinguish Parliament from the Reichstag.

The Treachery Bill

Treason is not only the earliest crime to have been recognised in this country. It was also the worst; anyone guilty of it was beyond mercy, and, unlike other crimes, it was never compoundable for money. By the Statute of Treasons of 1351 it was made an act of treason to adhere to the King's enemies, aiding or comforting them, in the realm or elsewhere; and nothing is made an offence under the new Treachery Bill, which passed through all its stages in the House of Commons on Wednesday, that was not already an offence under the old Treason Acts. But, owing to their very antiquity, the Treason Laws were loosely drawn, and throughout the centuries the scope of treason has been narrowed or enlarged by the judges in interpreting the various statutes. The object of the new Bill is, therefore, to close up any legal loophole which might be found—for instance, it is not clear to whom the old Acts could be extended and whether they applied to all aliens or only those normally living within the King's jurisdiction. They might, in consequence, be held to be inapplicable to aliens coming into this country under the guise of refugees for the sole purpose of espionage or sabotage. Secondly, the crime of treason, because of its gravity, was accorded a special form of trial, and it is in order to avoid a cumbersome procedure that the new Bill is necessary, so that persons accused of treachery under Clause I can be tried in accordance with the ordinary procedure of the Courts. The third reason why new legislation was thought desirable is to make provision whereby enemy aliens can be tried in suitable cases by court-martial, though any British subject or neutral alien will retain the right to be tried by jury. Finally, in accordance with the old Treason Laws, the Treachery Bill imposes the death penalty for persons found guilty under it; and there will be few indeed, even among the great number to whom capital punishment is anathema, who will not feel

from the experience of Norway and Holland that *salus populi* justifies this drastic measure.

* * *

Pre-belligerency Continues

Italy's capacity for not entering the war grows daily more surprising. At the week-end, with Count Ciano's speech declaring that "Italy cannot remain absent from the present terrible struggle which will forge the destinies of the world" and Signor Ansaldi's harangue to the troops stressing the imminence of the "hour of decision," Italian intervention seemed a matter of days, or even hours. Military movements pointed in the same direction. The schools were closed early, more men were called to the colours; then followed rumours of the movement of troops to Albania and the Italo-Slovene frontier and the passage of German war material across the Brenner into Italy. Yet factors suggesting the continuance of non-belligerency are not lacking. Official comments tended to tone down Count Ciano's speech, Yugoslavia and Greece have received assurances of Italy's peaceful intentions, the liner *Conte Grandi* has left for South America. Count Ciano's sudden departure to Albania can be variously interpreted. He has the reputation of certain pro-Allied sympathies, and there are, perhaps, some decisions with which he is not anxious to associate himself. On the other hand, our waiving of our rights of search when the *Rex* and the *Conte di Savoia* passed through Gibraltar last week, and the arrival of Sir Wilfred Greene in Rome to continue trade talks, suggest that the British Government, at least, refuse to believe the situation irretrievable, and are still ready to make concessions in the interests of peace.

*

The situation is, however, rather beyond the control of British diplomacy, skilful or otherwise. The two main factors are Italy's ambitions and Germany's needs. The Duce would prefer to realise his ambitions, which probably include Tunis, Corsica, Nice and a number of other acquisitions, by peaceful means. The risk of a long war is a nightmare to Italy. The possibility that the United States might become involved has been at least one of the factors in her present hesitation. Intervention is, therefore, most likely at the point at which Germany can say, "Allied resistance is cracking. Join me now and count as a belligerent or wait a week and see the war finish without you." A disaster of appalling dimensions in Northern France and the British Isles might, thus, be a signal for Italy's entry into the war. On the other hand, if Germany suffers a setback, if her drive slackens and the front in France is stabilised, then Germany's needs rather than Italy's ambitions may become the decisive factor. One of Italy's chief weaknesses is her vulnerability *vis-à-vis* Germany; she has grown politically and economically dependent upon her more powerful ally, and from the military standpoint her frontiers are no more impregnable than those of any other state. If the word to intervene comes from Berlin, it is difficult to see how Italy can retain her pre-belligerent perch. Italian intervention is therefore 90 per cent. likely. The 10 per cent. chance is that the Duce means to use the utmost pressure short of war. Even so, the point at which the utmost pressure is still compatible with avoidance of war is so delicate that even the 10 per cent. chance may be wrecked by a miscalculation.

* * *

The Balkans and Russia

Italy may just possibly reckon that an invasion of Yugoslavia on the lines of Russia's share in Poland would still be compatible with non-belligerency. The recent direction of her troop movements suggests that the idea of an invasion is at least being thoroughly explored. Moreover, it is in Yugoslavia that Germany can most easily force Italy's hand by launching an attack, in which Italy must join in order to safeguard her Dalmatian interests. There is, however, a number of reasons to suppose that Germany is seeking a general conflagration in the Balkans. Rumours that Hungary has acquiesced in the passage of German troops in return for Slovakia have increased in recent days, and that Roumania's oilfields and the Black Sea ports would be the objective of the German drive can hardly be in doubt. At this point the extraordinary complication of the Balkan situation becomes apparent. If Roumania were attacked, would Turkey go to her assistance? The present signs are that she would, and that, in doing so, she would have full Allied backing. General Chakmak, the Turkish Chief of Staff, spent last week-end in Beirut to continue Allied staff talks, and it is hard to believe that the question of the

passage of warships through the Dardanelles was not brought up. Here, however, a fresh difficulty arises in the shape of Russia's attitude. Russia has not forgotten her *terra irredenta* in Bessarabia, and she has made it abundantly clear that she regards the closing of the Dardanelles to extra-Black Sea Powers as a cardinal point in her system of security. The Treaty of Ankara leaves Turkey freedom of decision in a war in which Russia might be involved, and it is impossible to say whether Turkey is sufficiently impressed with the Allies' staying power to risk a conflict with her vast neighbour. Since the Finnish war, Turkey's confidence has undoubtedly increased. The war in the West may not be having such a heartening effect.

*

The Balkan puzzle cannot be solved without a preliminary resolution of the Russian problem. In the last weeks some people in this country have talked of Russia's change of policy, of her desire for a *rapprochement* with the West, of her fear of German hegemony, and so forth. It is probably true that, in so far as Russia has no particular sympathy for either side and is admirably placed for pursuing the policy of a balance of power, a sudden collapse in the West would disturb her security and bring her up forcibly against the problem of her vast undefended frontiers with the Reich. But there is little sign that this uncomfortable preoccupation is leading her to carry out another somersault in her diplomacy and to adopt an attitude of non-belligerency favourable to the Allies. Rather desultory attempts at trade talks continue, but since Russia resents elementary questions of security as an insult to her equality of status, there is not likely to be much progress, unless Britain is prepared to go much further to meet the Russian point of view—which is roughly that we should conclude a trade agreement as though we were not at war. In the Balkan zone, Allied and Russian interests appear even more difficult to reconcile. If Germany strikes for the oilfields, a "preventive" Russian occupation of Bessarabia and even of certain Roumanian river mouths will almost certainly take place; Russian troops are even said to be moving on the Roumanian frontier. In the event, should we accept the occupation as we did that of Eastern Poland? We are heavily engaged in the West. Turkey's intervention may depend upon Russia's exclusion from the conflict. Yet even if we accepted the *fait accompli*, it is unlikely that we should find ourselves much nearer to an understanding with Russia. She is seeking her own security, and so long as we continue to fight Germany we are making our best conceivable contribution towards that security. Since we have nothing more to offer, Russia has nothing to give.

* * *

Quislings Everywhere

In the last fortnight the question of national security has had to be reviewed in an entirely new light, the light of the German campaign in the Low Countries and Northern France. From a great variety of lessons in defence and strategy, two points emerge before all—the extent and the effectiveness of treachery, and the readiness of the Germans to land anything anywhere provided there is a reasonable chance of creating confusion in the rear, destroying military objectives, disorganising supply, or terrifying the civilian population. These lessons are being learnt. In Eire, for example, where the undefended state of the country and the existence of a fierce, armed and comparatively disciplined anti-British minority in the shape of the I.R.A. creates favourable conditions for a landing from aircraft followed by co-operation with local dissidents, the watch on the coasts has been increased and reservists are being recalled to the colours. Mr De Valera's relentless drive against the I.R.A. continues, and a recent round-up accounted for fifty or sixty armed men. Yet a danger in Southern Ireland undoubtedly exists, and it is difficult to believe that Hitler would neglect so promising a feature of his encirclement policy as an attack launched on Britain's undefended rear. Further afield, although the danger of invasion is less, the activities of Fifth Columnists are causing grave anxiety. In the United States the proposal to transfer the Bureau of Immigration and Nationalisation from the Department of Labour to the Department of Justice is only a preface to a much greater stringency in the control on foreign elements. In South America, there is hardly a State that has not to deal in one way or another with local groups favourable to the German cause. In Colombia, where German residents have increased from 500 to 2,000 since 1933, there are grave fears for the safety of the oilfields and pipe lines, which largely supply the Allies. Uruguay has arranged for a parliamentary enquiry, Mexico is endeavouring to close down secret Nazi

wireless stations, pro-German or German officials have been dismissed in Brazil, Chile and Costa Rica. The vanguard of the German advance is, in fact, already operating upon American soil. There are more ways of violating the Monroe doctrine than by a declaration of war.

* * *

Home Defence

The probability of severe attacks on this country in all elements has been faced. Evacuation plans for children have been put at the ready. More extensive schemes for evacuation in air raids are not unlikely. Nearly 500,000 men have volunteered to serve as Local Defence Volunteers. They will be enrolled as soldiers without pay and, when the initial disorder of their local organisation has been straightened out, they will watch for parachutists and sky invaders on spare-time patrols. In addition, important public buildings, utility undertakings, factories and road and rail approaches to vital centres have been placed under heavy police and military guard. London's arterial roads and the Thames are now constantly patrolled. All firearms in gunsmiths' shops have been seized, and every resident must now carry his or her identity card. It is a good beginning, and it seems certain that, under the cloak of necessary secrecy, a well-equipped system of fully military defence is being organised. As Mr Hore-Belisha said in the Commons on Wednesday, protection against invasion and the deadly Fifth Column needs far stouter defences than lightly-armed riflemen. Only soldiers and heavy arms can counter the ruthless and treacherous tactics of Nazi attack. The new vigilantes, like the police and the A.R.P. wardens, will carry out invaluable watch and ward. But the onus of stemming invasion and grave sabotage will be the Army's. Its task will be easier when sterner steps have been taken to immobilise our own British Quislings, and Thursday's police raid on the headquarters of the British Fascists and the detention of several suspects, including a Member of Parliament, made a welcome start. The Home Secretary now has powers to deal with all organisations and individuals with recorded enemy associations, and he is using them.

* * *

Aliens and Enemies

Male Germans and Austrians, aged 16-60 and not given a completely clean bill on inquiry when the war started, have been temporarily interned, in inland as well as in eastern and southern coastal areas. Enemy aliens hitherto freed from restrictions have now to report regularly, limit their movements and observe a curfew. In selected areas, all aliens have been put under similar supervision. No aliens are to possess firearms or ammunition without special permission. Certain Italian Fascists are being closely watched. Refugees from the Low Countries are to be as closely restricted as the more favoured classes of Germans and Austrians; some Belgians and Dutchmen have actually been interned on special information. The danger of alien sabotage has been quickly realised. But, even now, there is a long way to go to safety. German and Austrian women are still free, though, individually, they are being rescrutinised. There are many German and Austrian males still uninterned; and, even after the grim stories of refugees' treachery in Northern France, Belgian and Dutch immigrants are being scattered about the country. The only safe way is to put every enemy alien or refugee, male or female, who cannot prove innocence to the hilt, under close and continuous restraint. There would be no need for their durance to be vile. Most are guiltless. Most have suffered. They might be put to work of national importance, which the majority would welcome. But not a particle of risk can be taken any longer.

* * *

Unity of Empire

The new spirit aroused throughout the United Kingdom by the new Government and the presence of actual danger has spread through the Empire. In Australia, it is seen in the settlement of the coal strike, in the announcement of measures immediately accelerating the war programme, including the raising of a third division for service abroad and the appointment of a Director-General of Munitions and Supply who will be empowered to press into service civil factories in the reorganisation of munitions supply; and it has been happily marked by the arrival of a second contingent of the Australian Imperial Force in the Near East. The Prime Minister of New Zealand has announced the determination of New Zealand to speed up her war

effort and has appealed for greater production and for volunteers to work on the land. In South Africa, where the invasion of Holland has rallied many dissidents to the Government's side, General Smuts has given a stern warning to Quislings and to a section of the Press which is undermining national morale under the guise of politics. Kenya has prepared herself against Italy's entry into the war by calling out the Kenya Defence Force and by instituting a complete survey of the Colony's resources in man-power. Like Australia, Canada is to raise a third division for service overseas, and the dispatch of her second division and reinforcements for the first division will be advanced. The Ministry of Supply is to be given a separate Minister armed with special powers to speed up the output of munitions; a separate Minister for Air will be appointed; and the Government is considering sweeping measures, similar to those taken this week in Great Britain, to conscript man-power and property. These are but a few examples of the new determination which the Empire as a whole is putting into its war effort. Quite clearly does it recognise that its very existence is at stake.

* * *

The New Colonial System

No apology is needed for the fact that a Parliamentary day was given up on Tuesday to the second reading of the Colonial Development and Welfare Bill at a time when the whole Empire is facing what may prove to be the gravest crisis in its history. For though the Bill is essentially a peace-time measure, conceived long before war broke out, it serves to remind us of the 60 million people, dependent upon us, who have made our cause their own and whose fate is bound up with ours; and, as Mr MacDonald pointed out, it will give the world a sign of our faith in ultimate victory. The objects of the new Colonial Development Fund were fully set out in the White Paper published on February 20, 1940, and were discussed in *The Economist* at the time (February 24, 1940, page 328). In Tuesday's debate, therefore, Mr MacDonald added little to what was already known. But he revealed that the chairmen of the two advisory committees which will be set up—one on colonial development and welfare and the other on colonial research—will be Lord Moyne and Lord Hailey respectively, both of whom have recently had an opportunity of studying colonial problems at first hand. And he emphasised that the plans to be financed out of the new Fund will be initiated by the local governments concerned and then examined by the advisory committee, which will assist and guide but not dictate. Clearly, a committee which will review development schemes from fifty different territories will have a useful function to fulfil in advising one territory from the experience of another—though it must guard against assuming that needs are identical or that identical needs can be met by identical schemes—and in determining whether the money is being appropriately allocated between them all. But in the majority of cases the final decision will be left to the local governments, and the committee will not delay them from executing the schemes by haggling over details. In fact, the exigencies of war will be the delaying factor to begin with, for Mr MacDonald stated with regret that the maximum sum of £5 millions a year will not be reached in wartime. Meanwhile the decks are being cleared by the remission of colonial debt to a

total of some £11 millions, the legacy, chiefly, of the pioneering days and the building of railways. For the rest, we must be content for the present with the realisation that the old colonial system, with its rigid principle that every colony must be a self-supporting unit, has at last been abandoned.

* * *

The Exchange Position

The financial consequences of the invasion of Holland and Belgium are strongly in our favour: not only is the Allies' war chest strongly reinforced with good dollar assets, but two large colonial empires are transferred from the list of "hard" currencies, in which we have difficulty in paying, to that of "soft" currencies, where the only difficulties are of accountancy. Nevertheless, the impact effect of the invasion was to drive the rate for free sterling to hitherto unplumbed depths, though the shocks of this week have not driven it much lower. Thus, while the need for doing something to clear up the position of free sterling has been accentuated, the possibility of doing so has simultaneously improved. There are to-day only two currencies of real 22-carat hardness, the United States dollar and the Swiss franc, and it is impossible to say how long one of the two will remain in the category. More and more, the problem of free sterling is becoming the problem of financial relations with the United States. It would be a great advantage to treat it as such; then matters which are now debated as generalities could be handled as specific problems. Would American owners of sterling balances prefer to take them out at a heavy loss or to agree to a standstill? Can Allied-American trade be financed at the official rate, irrespective of what rate applies to capital withdrawals? This would have the additional advantage of leaving us entirely free to arrange our financial affairs with the whole range of soft and semi-soft countries on rational lines, without being compelled to forgo advantages in these countries because of considerations that are applicable only to America. But if so, the greatest care will have to be seen that our creditors from "soft" countries do not register under the American flag.

* * *

Feeding Britain

It is fortunate for the public that the Select Committee on National Expenditure has construed its terms of reference to include not only detailed expenditure, but "anything which has a bearing on the efficiency or cost with which the Government policies are being pursued." In its report on the Ministry of Food*, the Committee pays tribute to the speed with which the Ministry started up and the efficiency shown in the details of its work. But the Committee makes some pertinent remarks on the financial results of the lack of a unified policy dealing with food as a whole. The method of fixing meat prices is given as an example of the sectional approach to these problems. The prices paid for British livestock were settled in agreement with the Ministry of Agriculture at the level which the latter thought would give a fair return to British farmers; the selling prices of imported meat were fixed so as to enable the Ministry to cover its costs on this transaction; the selling prices of home-killed meat were fixed so as to bring them into the normal relation with those of imported meat. The difference between the two sets of prices for British meat, representing some £16 millions a year, is a subsidy to British farmers, additional to the pre-war £4½ millions. Similarly, the loss incurred on bacon was due to the fact that the public would not buy the amount supplied by the Ministry at a price which would cover the cost; consequently, the price was reduced and the subsidy is used mainly to increase consumption among the middle classes, since the poor still cannot afford much bacon. Is it, in fact, desirable to increase the consumption of bacon, which is an expensive commodity to produce and to import, or to bribe British farmers to grow beef, when other and cheaper forms of fats and proteins might be available? The Committee also commented on the amount of time which the Ministry's officials had to spend in bargaining over trade margins. It has so far been the Ministry's aim to keep the existing peacetime structure of food distribution largely intact. Economies in transport and handling could undoubtedly be realised if the existing facilities were adapted to suit the new conditions of State control, but the process would involve the destruction of many private businesses. How far is such a disturbance justified in the national interest of cheap food? It is to these matters of food policy, rather than to details of prices and administration, that the Minister of Food must devote his energy.

* Fourth Report from the Select Committee on National Expenditure.

Women's Wages

In 1914-18 disputes about the wages to be paid to women on men's war work went on for four years. This time the same squabble has dragged on behind the scenes for several months, gravely impeding the large-scale recruitment and training of women machine operators and artisans. Now, under the stimulus of peril, the knot has been cut. By an agreement between the engineering unions and employers women temporarily brought into the engineering industry will be gradually graded up to men's pay. For eight weeks they will get the women's national schedule time rate and bonus. For the next twelve weeks they will get, in addition, a third of the difference between this and the corresponding rate and bonus for men. For the last twelve weeks of the training period their basic rate will be 75 per cent. of the men's rate and bonus. Finally, if they can then do men's work without extra supervision, they will get both the men's rate and the men's bonus. Whether the real core of the 1914-18 controversy has been cut out is not quite certain. Mr Lloyd George's judgment that "if women turn out the same quantity of work as men they should receive the same pay," was then generally reckoned to apply only to "normal" 1914 rates and not to war advances and war bonuses. This evasion should not be possible again; and the interests of the considerable numbers of women already employed in engineering should not be lost sight of in the concern for new recruits.

* * *

Shorter Notes

Australia's Budget for 1940-41 estimates her war expenditure at £79 millions, or £110 millions including expenditure overseas, compared with £46 millions in 1939-40. New taxation to be imposed includes a profits tax on companies, starting at 4 per cent. on the first 1 per cent. profit in excess of 8 per cent. on capital employed, and increasing by 4 per cent. for each excess profit of 1 per cent. until a maximum rate of tax of 60 per cent. is reached; an undistributed profits tax of 1s. in the £ on 75 per cent. of undistributed taxable income; and increases in income tax, the sales tax, the land tax, estate duty, and customs and excise. Altogether these charges will bring in £20 millions in 1940-41, leaving £50 millions of the required additional revenue to be borrowed.

*

The Germans are digging in on the Swedish frontier behind Narvik, and though the strength of the Allied Expeditionary Force has been increased, the German forces outnumber the Allies and are receiving reinforcements from aircraft troop-carriers and by parachute. They appear to have established a seaplane base somewhere on the coast, and aeroplanes are repeatedly attacking our positions and troop movements. Narvik has not yet fallen, though it may be surrounded. Rumours that Germany is pressing Sweden to allow military material to pass up from Lulea to the Norwegian frontier are officially denied and unofficially confirmed.

*

The disinterest of the world in the Dutch East Indies is phenomenal. Now Germany has joined the States who disclaim any intentions on the Dutch islands. The Japanese Foreign Minister has been informed that Germany is "not interested in the Netherland East Indies problem"; but the extremist Japanese Press interpret this as an offer of a free hand to Japan.

*

In the Middleton and Prestwich by-election the Fascist candidate only obtained 418 votes out of 32,454 votes cast and a total electorate of 60,000.

*

Under a new regulation issued under the Emergency Powers (Defence) Act, power is given to detain any person who has been a member of an organisation which, in the opinion of the Home Secretary, is subject to foreign influence or is controlled by persons in sympathy with the system of government of an enemy Power.

*

On page 891 of *The Economist* last week it was stated that Holland possessed half a million pigs. The correct figure is one and a half million. On page 909 the export of steel from Belgium and Luxemburg to France appeared in some copies as 52½ million tons. This should have been 52½ thousand tons.

THE WORLD OVERSEAS

Russian Poland

(By a Correspondent)

It is only eight months since the Russian troops marched into Poland and "freed" the peoples of Western Ukraine and Western Belorussia, including some districts in the Vholynia and Bialystok Voyevodships, inhabited entirely by a Polish population. During that short period of time a full sovietisation and adaptation of the country to the economic and social system of Communist Russia has taken place.

In a period of six months the people have twice had the opportunity of voting for representatives to the local soviets, and also to the Soviet Supreme Council. In both cases over 90 per cent. of the electorate cast their votes and elected the official candidates appointed by the only existing Communist Party.

The Polish territories occupied by Soviet Russia consisted mainly of agricultural and forest regions; some industries were, however, developed in the South-East round Lwow, Przemyśl and Stanisławów, and some in the North-East round Grodno and the Bialystok. The industries were mainly based on the rich forests and oil wells of the Western Ukraine and also on the leather and textile factories in the North.

The process of nationalisation started with the banking system and large industrial enterprises. All factories were taken over by workers' committees. In many cases the previous owners were allowed to carry on and work in the factories, provided they could produce some technical degrees and could be useful as specialists on the technical staff. The workers' committees were, after a short period of time, supplemented by officials and managers from Central Russia, and these imported supervisors became the decisive factor in each factory.

The earnings of the workers in different industries have been kept on the same low level as in pre-war years; wages, at 150-200 roubles per month, are in many cases even smaller than before. The number of workers employed has, however, greatly increased, unemployment has diminished, and all the welfare institutions established in Russia are being gradually introduced into the newly occupied country.

Land Redistributed

The nationalisation of land has also been carried out with great speed. A decree was published in November nationalising all arable land and forests, except the possessions of small farms which could be worked by the peasants and their families themselves. The peasants are for the time being pleased with the change; they have at last received access to the land for which they have longed for centuries.

The future will show how far the farmer's dreams have been realised. The value of the land which the peasants received free depends on the amount of tax the Government will require from the "independent individual" farmers. There exists a general belief that the authorities will put special heavy taxes on the independent farmers and in that way "attract" them to the formation of co-operatives and collectives.

Industrial Reorganisation

The reorganisation of trade and industry was also carried out promptly and thoroughly. The big business concerns and co-operatives were taken over immediately by specially appointed committees. The staff, except for politically unacceptable managers, remained on their jobs, key positions were taken over by officials from Central Russia and the co-operatives became the basis of the distribution of every possible commodity.

The small traders were allowed to carry on and in many cases even forced to keep their shops open and offer for sale all goods in stock. No trader, however, was allowed to replace his stocks, and when the shops were practically emptied a law was suddenly introduced substituting the rouble for the zloty as the only legal tender. Thus tradesmen who had accumulated money—mostly in zlotys—for their goods sold

to the public and to members of the Red Army discovered that they had actually been deprived of everything. The only shops open now are the co-operatives, and they sell everything; but their number is rather small and there is a scarcity of many necessities.

Disappearance of the Craftsman

Skilled workmen are now organised in "cartels." Their production is supervised by specialists who came over from Russia and are trying to speed up output. Production has been standardised and the type of artisan who relied on the skill and knowledge he acquired in his work has disappeared. Reports show that the craftsmen are not happy with the change; the new system of production has deprived them of the independence and individuality of which they were always proud.

There have been very few cases of confiscation of private belongings; people were allowed to remain in their former flats and houses and retain their furniture. In the bigger cities the housing problem became very acute because of the large number of homeless refugees. In Lwow, Bialystok and other larger towns, laws were introduced allowing a limited amount of square feet of living space per family, and many large flats were divided up and handed over to refugees and other newcomers from different parts of Russia.

All civil servants were allowed to remain in their posts, and only people who were known from their political activities to be anti-Communist were removed from their jobs. All responsible posts in the civil administration were, however, as a rule filled with people from Central Russia, and this has created dissatisfaction amongst the local population.

The special police, G.P.U., is very active in the freed Polish territories. All leaders of political parties were arrested and the parties dissolved and banned; the former Polish, Ukrainian and Jewish labour leaders were arrested and sent to prisons and concentration camps in Central Russia, though in some cases they were freed on condition that they remain in Central Russia.

Religion has not been formally banned and people are allowed to worship and to practise their religion. All property of the churches and religious organisations has, however, been confiscated and the revenue of the different religious institutions limited to voluntary subscriptions. Everything is done to discourage religion and to alienate the people from the church and clergy.

War News and U.S. Markets

[FROM OUR NEW YORK CORRESPONDENT]

THE first impact of the extension of hostilities into Holland and Belgium was expressed in the Executive Order "freezing" the holdings of the nationals of the invaded countries. This appears to have followed the provisions previously covering the holdings of Danes and Norwegians, and it was announced before the opening of business on May 10th.

The second impact was reflected in the security and commodity markets. The share market opened strong and active. For this response two almost opposite reasons have been suggested: that the public expected a low, startled opening and put in buying orders "for the turn," and that the fact of an extension and intensification of active warfare was taken as promising an increased activation of the war influence.

The remainder of the session was a complete reversal of the opening opinion. Heavy selling appeared, and the share market broke badly. This was accompanied by weakness in the bond market. In the commodity market, those directly under war influence were strong, as would be expected.

It is hardly too much to say that the exchange market was demoralised. Free sterling had closed the night before a little above \$3.30; but on the morning of the tenth there seemed to be no opening bids in the market. Eventually transactions took place at \$3.00 and \$2.90, but toward the close the rate firmed to about \$3.15.

Steady Deterioration

These events of May 10th must be considered in the light of earlier developments. In the first three weeks of September, 1939, the share market rallied violently to a level slightly higher than the one from which it had fallen earlier in 1939. After the middle of September, it moved in an unusually narrow zone, in spite of a relatively satisfactory state of business and comparatively good corporate earnings. During this period, it was evident that there were shares "for sale on strength," but the selling was not pursued on weakness. But dating from the day of the invasion of Norway, more or less persistent but not strong liquidation appeared, and the market turned heavy, although contemporary business news had become more promising. Viewed in that setting, the aggressive liquidation of May 10th appears as part of a tendency that had been perceptible for a month. The extent to which this movement might be attributed to foreign liquidation is highly problematical.

Decline in Free Sterling

While May 10th was the first time one could call the market in free sterling demoralised, the events of that day likewise are but a sequence in a tendency which has been in existence for two months. In the early autumn of 1939, free sterling followed a somewhat erratic course, dropping to \$3.73 in mid-September, rallying well above \$4.00 in early October, and dropping to about \$3.77 in November. After this, it rallied and steadied. For three months it fluctuated only in the \$3.90-\$4.00 bracket. In the second week of March it broke, and since that time has moved erratically downward, until yesterday it dipped below \$3.00. While the weakness of the last two or three days has been acute, it is but an exaggeration of the tendencies accumulating over the previous two months. The official reasons for the decline in early March, that they were caused by prohibiting the use of free sterling for the purchase of six major Empire exports, seem inadequate. Our own regulations, requiring that for purposes of customs appraisal only the official rate be recognised, may have had a depressing influence, since as far as the importer was concerned they had the effect of an increase in the tariff schedule, on all merchandise not bought at the official rate. Yet, according to exchange circles, the market in free sterling is not large; and the supply of free sterling in the market quite small—merely larger than the demand, although certainly a large proportion of actual or potential British exports may be bought with free sterling. The result is that the free sterling market remains a good deal of a mystery; and its erratic gyrations have been reminiscent of the "dance of the dollar" in the early twenties.

May 11th.

Prices and Wages in Italy

[BY A CORRESPONDENT]

DURING the few years preceding the outbreak of war the Italian price level was slowly but steadily rising. This was primarily due to autarky, but strained finances and new taxation added to the upward pressure. The slump in international prices, which lasted until the end of 1938, helped to retard but could not prevent the rising level of domestic prices. The State had to resort to price and wage control of a far-reaching nature. The task was entrusted to the corporations, and the system worked best in those industries where wages were fixed by corporative contract.

In some fields the corporations were fairly successful in checking the tendency towards higher prices. The prices of a constantly increasing number of agricultural commodities were fixed, and in conjunction with the price control provision was made for additional storage. Rents have been restricted up to the end of 1940. Transport and public utility undertakings run by the State and local authorities were forced to limit their charges. Regulations were issued to control retail prices. Occasionally an increase in prices was officially ordered, but the amount was usually small and inappropriate.

Over a wide area, however, control by the corporations was a failure. This was especially so in the export trade. In practice exporters were able to recoup that part of their losses which was not covered by subsidies by raising prices to the domestic consumer. And as the State subsidies were themselves paid by the domestic consumers, Italian export commodities became particularly dear in the home market. Even more marked price rises were found among imported goods. Even when international prices were falling the endless manipulation, decrees, quotas, clearing formalities and other impediments which are inevitable when foreign trade and exchange are closely controlled exerted tremendous pressure on the domestic price level. Importers who succeeded in overcoming all obstacles had an abundance of opportunity to make clandestine sales at excessive prices.

In many parts of the industrial field it would have been impossible to stop all price rises without destroying the last remnants of private enterprise. The ever-increasing number of concerns set up under the policy of autarky were not under the control of the corporations. They receive their orders from the Supreme Autarky Council, and this body, in which the military element is strong, disregards small questions of cost when the big issue of economic independence is at stake.

From the middle of 1938 Italy, with her dependence on the import of essential supplies and with her feverish "autarkic" investment, was severely hit by the rise in international prices consequent on world-wide re-armament. For the first time since the depreciation of the lira in 1936 it became necessary at the beginning of 1939 to order a general advance of wages, and the increase varied from five to ten per cent. But this increase in wages was small compensation for the rise in prices. The cost of living index number, based on 1928, rose from 74.4 in 1934 to 103.9 at the outbreak of war, that is more than 30 per cent. The entire price level had probably risen by as much as 50 per cent., so that the record figures of the 1928 trade boom were nearly everywhere reached or surpassed. A general price increase of 20 per cent. since the outbreak of war may be considered as a not inaccurate estimate for the whole of Italy.

A New Committee

As a result of these developments, a new committee was appointed at the beginning of the year, and attached to the Ministry of Corporations under the chairmanship of the Minister. Other members are the heads of all the economic ministries, the general commissioner for war economy, and the Presidents of all employers' and workers' unions in industry, agriculture and commerce. This committee has far-reaching powers to intervene in the fixing of prices and wages. But the primary task is to watch over the hitherto decentralised control of the individual corporations and co-ordinate their intervention in the field of wage and price fixing.

The addition of representatives of other departments as well as the presidents of the unions proves that the task of wage and price fixing is no longer left to the Ministry of Corporations. The Ministry of Finance is the only economic department not represented on this new committee, although the recent large and sudden increase in prices must be attributed mainly to the new 2 per cent. turnover tax. As this tax is paid at each stage of manufacture, the consequent

increase in the retail price may average at least 8 or 10 per cent.

The preparatory work of this board of control had its first general result, when the Central Council of the Corporations met on March 9th last. At this meeting many controlled prices for industrial goods as well as wages were raised, the latter being increased as from March 25th. State transport rates were not touched by the general increase on this occasion, but local charges were raised by 15 per cent. The charges of public utility undertakings for water and power were not changed. Price limitation for a small number of important foodstuffs will be maintained at least until July 31st. At a later meeting the salaries of officials were also raised by from 10 to 20 per cent.

The speeches delivered by Signor Mussolini and by the Minister of Corporations at this meeting clearly indicated that the work so far done was only a beginning. But since price limitation necessarily involves a charge upon the State, it must ultimately result in higher taxation, and the wage earner is no better off. The finding of a way out of this vicious circle is the most important of Italy's present internal economic problems.

May 10th.

Egyptian Banking and Finance

[FROM OUR ALEXANDRIA CORRESPONDENT]

EVEN if war had not broken out the past twelve months would have gone down as one of the most eventful periods in Egyptian banking history. The outcome has been a tightening of State control over a hitherto loosely organised system.

On June 28, 1939, an extraordinary meeting approved the modification of the statutes of the National Bank of Egypt in conformity with the Government's wishes. The main innovations consisted in an Egyptian majority on the Board of

Directors; the future recruiting of personnel exclusively from Egyptians; the option of transforming bearer shares into nominative; closer co-operation with the State, including advances to the Treasury. This enabled the Government subsequently to obtain from Parliament the renewal for another forty years of the issuing privilege which was due to expire at the end of 1948. The ultimate aim of the Government is to set up a central bank.

Shortly after the outbreak of hostilities, Talaat Harb Pasha, founder and leading spirit of the Banque Misr, resigned. On March 28th, both the Chamber of Deputies and the Senate held an *in camera* session, after which the Cabinet passed resolutions to guarantee present and future deposits of the bank; and to take the necessary steps to strengthen the position of this national institution and to ensure its success.

A passage of the annual report of the Governor of the National Bank explains one of the principal causes of difficulty for the Banque Misr: "For the deposit banks to assist in the creation of industries or in the development of existing ones would, I need hardly say, lay the seeds of trouble." It is with good reason, therefore, that the Government is studying a plan for the creation of an industrial bank.

As in most agricultural countries, succeeding governments have found it necessary, since 1931, to intervene to enforce some sort of composition between creditors and land debtors. Interventions, however, have been following one another for the past ten years, and even to-day creditors are prevented from carrying out expropriations. The result is that mortgage banks are less free with their loans, to the detriment of agriculturists and of prices of agricultural produce.

The Impact of the War

Owing to the country's geographical position, the Egyptian financial world had been on its guard ever since the sanctions period, and as war came at a time of severe economic depression, its effects were not violent. No moratorium was proclaimed, neither did the markets close for a single day. Withdrawals were not excessive, reaching 20 per cent. in the case of Post Office Savings Banks.

More serious trouble threatened to develop with the financing of the cotton crop, but the difficulty was met by the

COFFEE AND TURKS

establishment of an exchange control; this incidentally helped to check the flight of local capital which had been a feature of the Egyptian economy during the year or two that preceded the war. Despite the growing cost of the defence services, the State has succeeded up to now in avoiding borrowing.

In normal years the note circulation is closely related to cotton movements, swiftly increasing in the autumn and decreasing slowly after winter. This time, despite lower cotton prices early in the season and a smaller crop than last year, the war naturally caused a much larger expansion than usual. After the turn of the year, however, quite a substantial contraction was recorded. The physical amount of gold held by the National Bank has remained unchanged for several years and the steady outflow which has been going on for a number of years has originated from sales by private holders.

May 11th.

Swiss Trade

[FROM A CORRESPONDENT]

SWISS trade continues very active in spite of the war. Exports, during the first three months of 1940, at 331 mil-

lion francs, were a million francs higher than during the corresponding period of last year. Imports amounted to 613.5 million francs.

Since August, 1939, severe measures have been taken to prevent unjustifiable price increases, but some rise is inevitable in the present international conditions, and the cost of living is $5\frac{1}{2}$ points above the pre-war level. Imported fuel, in particular, has advanced sharply in price, and the wholesale price index for March, 1940, is 25 per cent. above that for March, 1939. The currency situation is, however, unchanged.

Mobilisation Expenditure

The chief preoccupation of the authorities recently has been the finance of mobilisation. For many years the Swiss have devoted great attention to the question of national defence, in the conviction that a strong army is necessary for the maintenance of their independence. At present, the mobilisation of the army is costing several million francs a day, and to meet this cost, a loan of 200 million francs was floated in March. Further funds for the same purpose were secured in April, by means of an income tax, a capital tax, a war profit tax, a turnover tax, and a levy on the Exchange Equalisation Fund.

May 18th.

Germany at War

(An objective account of economic trends in the Reich compiled weekly by the editorial staff of The Economist from German and neutral sources.)

THE wartime control and direction of different industries rests with the Reich Departments (*Reichsstellen*), which in each industry replaced the peacetime Reich Control Boards. The latter exerted their influence on individual industries principally by controlling the imports and exports of raw materials and manufactured articles; the Reich Departments regulate production, and may prohibit production or capital expenditure. They also impose levies intended to build up funds for capital expenditure, to maintain prices, or to subsidise exports.

They employ different methods in each industry, according to the tradition and type of the self-governing economic organisation in that industry. Their decrees regarding production may be enforced either by a cartel or by a self-governing "economic group" akin to the former industrial federations. In the textile industry, for instance, the "economic group" is used by the Reich Department for the distribution of raw materials as well as for the execution of orders closing down factories. In the coal industry the Reich Department has established distribution centres of its own. In the paper industry the cartels and syndicates have been formed into an entirely new organisation, the so-called "committee for collaboration" (*Gemeinschaft*). In other industries, i.e. the brick, building stone, and glass-jar industries, the Reich Department has established compulsory cartels. In some cases existing cartels have been developed or extended.

These examples show a great variety of organisation, always with the same purpose—direct State control over production. In general, the system of State control uses the traditional economic organisations with a view to maintaining a degree of initiative necessary for the prosecution of the industrial war programme. Actually the individual industrialist is completely regimented. Yet the decentralisation within a very rigid centralisation leaves the industrialist a certain initiative and has greatly reduced the direct bureaucratic interference by Government Departments.

Statistics.—A year ago the German Government set up a Central Statistical Committee to reorganise the existing economic statistics. The economic controls introduced by the Nazi system had produced what may be called a statistical craze. For years all the economic organisations had been engaged in compiling statistics, frequently compelling managers to employ additional staffs. The Central Committee has now rationalised statistics; and any organisation wishing to prepare new statistics needs special permission. During the first year of the Committee's existence 1,200 applications for new statistics were received; 135 were rejected, 237 were modified, and only 194 were given permission in the original form. The intention is to simplify

processes and to save employers from too much clerical work.

State Borrowing.—The Government is still borrowing on a large scale, as shown by the development of the State debts. The latest figures are as follows:—

	(In million Reichsmarks)		
	January, 1939	December, 1939	January, 1940
Long-term debts.....	22,835.0	26,895.2	27,190.0
Short-term debts.....	5,274.8	14,140.0	15,767.1
Total	28,109.8	41,035.2	42,957.1
Tax certificates	Nil	4,670.5	4,497.8
Grand total	28,109.8	45,705.7	47,454.9

The increase in January amounted to Rm. 1,749 millions, some Rm. 100 millions less than in December, 1939. During the first five months of the war the average monthly increase in the total debt has amounted to Rm. 2,040 millions. At the rate of Rm. 16 to the £1 the average monthly increase would work out at £128 millions. Assuming an average monthly revenue during these five months of Rm. 2,000 millions, it can be calculated that the Government may have had at its disposal a monthly average of Rm. 4,040 millions (£253 millions) from revenue and borrowing alone.

Economy in Packing.—The value of wrapping and packing material has been estimated at 5 per cent. of the total value of the Reich's industrial output. For many years Germany has been economising in wrapping material, but since the outbreak of war more stringent economising has begun. The prohibition of openers for sardine tins has saved 2,000 tons of steel. By prohibiting handles on metal marmalade containers another 3,000 tons will be saved. Timber is now being generally replaced by a special cardboard manufactured from waste paper. Where wooden cases cannot be replaced a hiring system for the repeated use of cases has been introduced. Leather usually packed in jute tissues must now be packed in paper.

In the tin canning industry tinplate has been replaced by sheet iron which is treated with a special lacquer. At the same time, the use of glass jars for preserving vegetables and fruit is being developed. The standardisation of cans and glass jars is another method of saving material. Four hundred different types of cans for meat have now been reduced to only 36. Motor oil is being sold in paper bottles, and petrol barrels are no longer galvanised but treated with a coating of special lacquer. The reduction in the use of paper has been carried very far indeed.

Shorter Notices

"The Road and Rail Transport Problem." By Brig.-Gen. Sir H. Osborne Mance. 161 pages. Sir Isaac Pitman and Sons. 7s. 6d.

Sir Osborne Mance is to be congratulated upon having produced a brief survey of the internal transport situation which is both readable and comprehensive. Moreover, in the short space of 161 pages, he outlines a solution which, if it involves certain practical difficulties, is certainly free from bias and loose thinking. It may be summarised as an attempt to reconcile the "value" and the "cost" bases of charging by pooling the fixed costs of both road and rail. Transport charges would then comprise two parts: a toll, based on the "value of service" principle and representing a contribution to the road-rail pool; and a haulage charge, based on the prime cost of the service provided. Traders would thus retain their liberty to consign by alternative routes, but the rates would reflect changes in the prime cost of transport and the tendency would be for traffic to pass by the most efficient, i.e. the cheapest, route. Competition would be robbed of its more erratic and devastating effects, but it would be unnecessary to reconstitute a monopoly of inland transport in which the railways would inevitably become the dominant partner. The scheme is attractive, but obviously many administrative difficulties would have to be faced. Sir Osborne Mance proposes that "C" licence vehicles engaged in distributive work should be excluded from the scheme; and, clearly, far-reaching changes in the organisation of "A" and "B" licence haulage would be necessary, together with drastic revision of railway costing accounts. However, it is sincerely to be hoped that, if and when further State control of transport is meditated, this plan will receive the attention it deserves.

"The Prevention of Fraud (Investments) Act 1939." By L. J. Morris Smith, B.A., LL.B., B.C.L. of Gray's Inn, Barrister-at-Law. Jordan and Sons Limited. 168 pages. 10s. 6d.

The war has so far prevented the coming into force of a substantial part of the "Sharepushing" Act, though certain sections are already in operation. This book discusses the legal implications of the Act, which is included as an appendix, together with relevant sections of the Companies Act and the Licensing regulations issued after the passing of the Act last year. It will be of the greatest service to all those businesses—the majority of which are conducted straightforwardly—which fall within the provisions of the Act.

"The Stock Exchange Official Year Book." Thomas Skinner and Company. 3,877 pages. £3 10s.

There are few volumes which exceed in length the 3,877 pages of the "Year Book." There is none which is less dispensable to the stockbroker's office and the large investor's records. The compilers have recognised war conditions by the inclusion of a synopsis of the Trading with the Enemy Act (which has been the subject of reminders to members of the "House" recently) and of a useful list of emergency addresses. The "Year Book" is, as always, an unrivalled compendium of investment information and a triumph of bookbinding.

"The Shipping World Year Book and Port Directory of the World, 1940." 25s. net.

The 54th annual issue, which has now been published, is an indispensable work of reference for those associated with ships. This reference book consists of four main sections, dealing with ports, the ownership of British ocean-going tonnage, biographical details and the business careers of all the foremost men associated with shipping, and a directory of ship repairers.

"The Directory of Directors, 1940." Thomas Skinner & Co. (Publishers) Ltd. 30s. net.

The 1940 edition of this invaluable reference book for all engaged in any form of company work has now been issued. Some 32,000 names are included in it.

THE BUSINESS WORLD

The Course of Profits

CHANGES in a statistical series which stretches back for more than three decades should not be made lightly. The improvements in *The Economist's* profit computations (which were described in the issue of January 6, 1940) were dictated by one motive only—to make the figures represent more accurately the true course of profits. Two major changes were involved. The first was to take account of income tax; the second to define free reserves more strictly. With income tax at such a high level as 7s. 6d. in the £, comparability of the profits of different companies is seriously affected by the method which they adopt in their accounts for charging income tax. Technically, the difference is between expressing profits on a "gross" basis and on a "net" basis—or more simply, after charging only the company's share of tax, or the whole liability, including the contribution from shareholders' dividends. The choice of method is quite fortuitous, but it greatly affects the size of published profits in times of high taxation. An attempt to put the figures on a uniform basis, and to eliminate arbitrary changes due to taxation, had plainly become necessary.

Hardly less important, however, were other changes introduced this year, by which, for the first time, a double record of trading profits and also of true net profits has been kept. This has, incidentally, involved a redefinition of reserves. In former years this item in our figures was a repository for a mixture: reserves provided against specific assets, and other items properly chargeable against profits were combined with "free reserves" which were, in effect, merely undivided profits. Now the line is more tightly drawn to include the latter and exclude the former. These changes involve a break in continuity with certain figures of previous years, though this can be surmounted by the device of a chain index number.

The following table summarises the results of 552 companies whose reports were received during the first quarter of this year:—

PROFITS OF FIRST QUARTER COMPANIES

552 Companies	Previous Financial Year	Latest Financial Year	Latest net figures re-calculated before charging taxation
Total Profits**	120,227,409	125,316,354	...
Depreciation	9,514,858*	...	...
Debt interest	7,883,177	...	...
Other charges and taxation	38,729,408	...	...
Net Profits	72,138,507	69,188,911	86,642,000
Prof. Divs.	...	13,801,224	15,197,000
Ord. Divs.	...	45,971,180	62,029,000
Add to free reserves	...	9,416,507	9,416,000

** After depreciation where not separately stated.
* Where separately stated.

The figures in the first two columns are as reported by the companies, without adjustment for income tax. They show that reported trading profits rose by 4.2 per cent. during the quarter, but that net profits declined by 4.1 per cent. This difference in trend was due largely to higher taxation charges, following the increase in the standard rate to 7s. for 1939-40, while certain companies also made supplementary provisions for the preceding year. The third column gives a recalculation of reported net profits and dividends as they would appear before charging any income tax. These figures, of course, are substantially higher than those of the second column, and they show the extent to which distributable profits have previously been understated, by the purely technical incidence of income tax. By re-expressing distributable net profits as they would be before charging income tax, the amount available for distribution is raised from the reported total of £69,188,911, as shown in column two of the table, to the estimated total of £86,642,000, as in column

three. The depreciation total applies only to those companies which stated the charge in their accounts. Over the course of time, however, the depreciation figures will provide much-needed material for a study of depreciation policy.

To link the new results with those of earlier years, the following table may be of assistance:—

PROFITS OF FIRST QUARTER COMPANIES—1935-1940

Reports issued in 1st Quarter	No. of Cos.	Profits (£'000's)	Chain Index No. 1937 = 100	Prof. and Ord. Cap.	Ratio of Profits to Cap.
1935	592	67,137a	78.9	754,002	8.9c
1936	569	75,732a	89.4	757,046	10.0c
1937	628	94,733a	100	852,038	11.1c
1938	646	100,355a	109.4	836,937	11.9c
1939	656	89,651a	99.5	835,801	10.7c
1940	552	125,316b	103.8	748,454	11.6d

(a) Total profits after debenture interest. (b) Trading profits before debenture interest, depreciation and taxation. (c) Without tax adjustment. (d) Ratio of net profits, as recalculated on a before-tax basis.

Changes in comparability in the past quarter are explained in footnotes. In particular, the ratio of profits to share capital has been calculated, not from total profits less debenture interest, as in previous years, but from profits available for dividends, recalculated before tax. These recalculated figures indicate that the return on preference and ordinary share capital for companies reporting in the first quarter of the year amounted to 11.6 per cent. This return is not, at first sight, markedly superior to the ratio of 10.7 per cent. for first-quarter companies in 1939, despite the correction for income tax in the latest year. The explanation is that while income tax has caused an understatement of available profits hitherto, certain reserve provisions which should strictly be charged before striking net profits have been treated as an allocation from profits. The new closer definition of reserve provisions thus now tends to reduce available profits, and has evidently offset the increase due to tax adjustments to some extent.

An accurate statement of distribution policy can be based on the adjusted figures shown in column three of our first table. The latest figures given below are not strictly comparable with those of earlier years:—

DIVISION OF PROFITS (1st QUARTER COMPANIES)

Reports Issued during 1st Quarter	1935-39 : Proportion of Total Profits, 1940 : Proportion of adjusted Net Profits.			Rates of Payment (1935-39, without adjustment for tax)			
	Prof. div.	Ord. div.	To reserve	Deb.	Prof.	Earned ord.	Paid ord.
1935	20.8	59.8	19.4	4.64	5.1	11.0	8.3
1936	19.1	58.7	22.2	4.51	5.3	12.6	9.2
1937	19.8	56.6	23.6	4.39	5.8	14.4	10.1
1938	17.0	53.3	29.7	4.22	5.5	15.8	10.2
1939	18.4	53.9	27.7	4.20	5.2	15.9	9.2
1940(a) ...	17.5	71.6	10.9	4.24	5.5	15.1	13.1

(a) Figures based throughout on adjusted net profits.

The ever increasing standard rate of tax has masked the true return on ordinary shares in recent years. Even the first quarter's figures under the new method confirm this point, for the known increases in ordinary dividends during the period were few—and certainly not of an order to raise the average from 9.2 per cent. (for first quarter companies in 1939) to 13.1 per cent. Further, the stricter definition of free reserves is almost entirely responsible for the fall in the proportion of profits allocated under this head from 27.7 per cent. to 10.9 per cent. The figures in former years included charges against profits for the broad purpose of

keeping capital assets intact, although no outside observer could tell whether a depreciation provision was adequate or abundant. But the figures suggest that companies look to reserves for a source of net new capital to a smaller extent than has sometimes been supposed.

No remarkable features in the profits of individual groups were revealed during the first quarter of this year. These figures are shown on page 963, but without particulars of the division of profits and rates of dividend for each group, which have hitherto been published. Accurate figures under

both headings involve complicated readjustments for taxation, which may be possible in more leisurely days. But the problem of compiling accurate statistics of profits would be immensely simplified if all company accounts treated taxation charges in the same way, and the professional accountants' bodies might enter this question on their post-war agenda. Meanwhile, our new method of compiling profits figures will throw light on the true course of industrial profits, which would otherwise be obscured by any further and substantial rise in taxation which may be required before the war is won.

Shipping in War—I

THE last war left on every British mind an impress of the vital necessity not merely of a Navy to keep the freedom of the seas, but of a merchant marine to use it. The front on which we came nearest to defeat was the shipping front—and it was also the front on which we won our first decisive victory. We have not, in general, been as prompt as we should have been in beginning this war where we left off in the last. But the lessons of the submarine campaign of 1917 did not have to be learnt twice; the principles of the convoy and of anti-submarine warfare, which proved so successful last time, were applied from the start of this war and have been equally successful. So successful have they been that the seriousness of the shipping problem has not been fully realised by the public. It is true that the primary object is to prevent our merchant shipping from being sunk, and to a very substantial degree that has been achieved. But the very measures that are taken to foil the submarine add to the difficulties of the fundamental shipping problem, which is to find enough ships to bring into the country the tonnage of goods necessary for the conduct of the war. Even if there were no submarines and no mines, there would be a scarcity of shipping, for the war not only directly absorbs a number of ships in supplying the armed forces overseas, it also greatly increases the quantities of some bulky raw materials that are required. When, in addition, the annual carrying capacity of shipping is reduced by the delays inevitably associated with the convoy system, the problem is still further increased. If the last war had continued through the winter of 1918-19, it would have been necessary to make further cuts in the British food rations, not because the submarine was still a serious menace, but because the transport of material for the American Army required a very large amount of shipping.

There is thus, in any case, a shipping problem in war, however successful the measures taken against the mine and the submarine. It has two facets: the maximum use must be made of the carrying capacity available; and the limited tonnage of goods brought in must be restricted to those most needed for the prosecution of the war. The latter—the establishment of an appropriate order of priority—involves decisions covering the whole range of economic policy, and for the purpose of this article it must be left aside. The shipping problem proper—the best use of the ships available—presents a number of points on which controversy has been joined both within the shipping industry and between it and the Ministry of Shipping.

The chief of these rages over the Ministry's policy of requisitioning ships and operating them under its orders and for its account, albeit through the agency of the shipowners. The owners were led to believe, before the outbreak of the war, that the system to be adopted would be one of licensing, by which ships would still be chartered in the various freight markets and operated on a competitive basis, subject only to Government licensing. The abandonment of licensing after a few months' trial and the adoption of the much more stringent system of requisitioning is a natural subject of grievance; but it does not necessarily prove that the first decision was wrong, and still less that the change was unjustified.

The difference between licensing and requisitioning is the difference between negative and positive control. Under licensing the owner can be told what he may not do with his ship; under requisitioning he is told what he shall do. In peacetime the delicate mechanism of the freight markets ensures the smooth adjustment of the supply of shipping to the demand for it, and no other system is easily conceivable in a world where the chief stimulus to economic action is what people want and what they are prepared to pay. In peacetime it is a positive advantage that the system works without it being the duty of anybody to survey the demand for shipping as a whole. In an incomplete war economy, where Government trading co-existed with a reduced, but still substantial,

body of private trade, undertaken on private initiative for profit, it might be possible to solve the shipping problem by a modification of the peacetime system rather than its supersession. The Government would requisition shipping for its own needs, and attempt to equate supply and demand in the rest of the market by a joint policy of limiting imports and licensing ships. This was the system in force in the early months of the war.

It very quickly proved to have serious disadvantages. There are certain trades which must be carried on in wartime even though they may be extremely unpopular with shipowners, either because of unprofitability or of special danger. If it is left to the initiative of shipowners to apply for licences for these voyages, the freights offered may have to be very high, and even then the response may be inadequate. The licensing system has to be strained by making the grant of a licence for a profitable voyage dependent on the offer to undertake these unpopular services. But even so, the power to refuse permission is much inferior to requisitioning as a means of ensuring that the best possible use is made of the shipping available. Moreover, licensing has other disadvantages. Neither in the last war nor in this has it proved possible to cut down the bulk of private imports by direct import prohibition to a

COMMERCIAL SERVICE

The Bank has over 380 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

figure anything near the tonnage of shipping available. It is very difficult to prevent over-demand resulting in the bidding up of freight rates, and this in turn leads to a differentiation between different commodities solely according to the increase in price they can bear, which has further undesirable repercussions on the whole economic structure. Partly for this reason, the Ministries of Food and Supply extended their control over a very wide range of commodities. At the present time, probably more than three-quarters of the imports into this country are either directly purchased or at least controlled by these two Ministries, and as the supply programme develops, the proportion will reach 100 per cent. In these circumstances, to preserve a purely negative control of shipping

would be mere time-wasting. Licences could be given for Government cargoes and refused for others; but the initiative in applying for a licence would still lie with the shipowner and all forward planning of shipping movements would be impossible. Moreover, so long as there is any private importing, licences to shipowners to accept private charters would be documents of considerable value and there would be endless problems to solve in distributing them equitably.

In these circumstances, full requisitioning is the only rational policy. Nevertheless, it is one to which strong exception has been raised in shipping circles. These objections will be examined in a second article.

Finance and Banking

Free Sterling Steadies

Despite the gravity of the week's military news the behaviour of sterling in what remains of the free foreign exchange markets has been most commendable. The rate in New York, which closed last week at about 3.24, has since fluctuated between 3.17 and 3.25 and closes this week with very little net change. This resistance to unfavourable military news must be partly explained in terms of the disappearance of the Dutch and Belgian financial markets. They no longer provide the facilities for speculation in sterling which, particularly in the case of Amsterdam, were formerly a potent factor in the free market. Moreover, with Dutch and Belgian sterling assets virtually blocked for the time being, a more specific potential factor of weakness in the exchange position has been temporarily immobilised. The concern of the authorities in dealing with the free market is now largely concentrated on the United States dollar and this eases the problem considerably. None the less, it would be surprising if the surge of vigour and awakened awareness of our task which is sweeping the whole country so rapidly towards a real war economy were to leave the exchange market unaffected. It is here that the compromise between control and freedom has been most apparent and in some ways most damaging—both materially and psychologically. Whether through Orders issued under the Emergency Powers (Defence) Act or by further Defence Regulations, there are several directions in which more rigorous and effective control of our foreign exchange market could be achieved. One point on which greater severity should be exercised is the import of notes—sterling and foreign—into this country. At present, this traffic is free. Foreign banks buying sterling notes abroad may remit them to this country and have their free sterling accounts credited. There is special urgency in placing greater control on this import of bank notes given the considerable quantities of such paper which the Germans must have seized in Dutch and Belgian banks and safe deposits.

Emergency Powers Act and the Banks

Banks were specifically mentioned by Mr Attlee as coming within the scope of the Orders by which the permissive powers vested in the Government by the Emergency Powers (Defence) Act will be exercised. "There will have to be control of the finances of the country and of the banks," he said; adding, "it may be done centrally; but if conditions require it, it will have to be done through regional commissioners." The banks may face this prospect of control with complete equanimity. In their loans policy, in the contribution they have brought to the new exchange market mechanism, indeed over the whole range of their activities, they form part of the effective machinery which controls the capital market. At no time has the co-operation between the banks and the Bank of England been as complete and harmonious as it is at present. The substitution of a more statutory form of control for the informal devices which have hitherto been largely responsible for enlisting the co-operation of the banks in the economic war effort can have little practical effect in the near future. It may, however, be used to supplement Section 8 of the Defence Regulations in extracting from the banks information required to check evasion of exchange restrictions, and to push the banks further into the gilt-edged market. But it seems highly probable that, in the main, the permissive powers of control over banks will be kept in reserve for use in serious emergencies. The need for them might arise if, for example, material destruction in the British Isles reached a point at which the normal mechanism of banking organisations were to break down.

Discount Rates Unmoved

Once more it falls to the discount market to provide the completest illustration of economic isolation from the breath-taking military developments of the past week. The discount rate remains unmoved at 1½ to 1⅙ per cent. The clearing banks have perhaps been slightly less aggressive in their purchase of bills, but this is largely due to the fact that most of these institutions have during the past week been making up for their May balance sheets. The market has at the same time been a rather keener seller of bills given the larger proportions of its quota which it has recently been obtaining at the weekly Treasury bill tenders. The banks, however, continue to buy at 1 per cent. The Bank of England return showing bankers' deposits at the comparatively high level of £103 millions partly explains this resistance of discount rates to military developments. Another explanation is the growing scarcity of commercial paper in the market. The closing of the Scandinavian market is only now making its full effect felt on the London market, which for so many years has handled a steady flow of acceptances representing Scandinavian trade with the whole world.

The Guilder Position

There is still no precise news as to the ultimate fate of the guilder exchange. Dutch refugees entering this country are being allowed to exchange guilder into sterling notes at the rate of 7.68 guilders to the £ and up to a total of 155 guilders per person. This rate is that which obtained for the conversion of notes on the eve of the German invasion of Holland. But the ultimate fate of the unit-of-account guilder which will be used by the Dutch Government in regulating its financial transactions with the other Allied Powers still remains to be settled. It seems likely that the Dutch currency will sooner or later find itself in the solid bloc which already includes the French, British and Belgian currencies. The news announced this week that the Dutch East Indies guilder had for the time being been linked to the United States dollar at the pre-invasion rate need not preclude an alignment with the Allied currencies. Now that Holland and her colonies are at war against Germany one may expect the trade between these colonies and the Allied Powers to be conducted on the basis of new agreements which would have as their natural corollary the establishment of stable official rates of exchange. Provided the official sterling-dollar rate remains at its present level—and there are no indications whatsoever of a change—this stability of the N.E.I. guilder with sterling and French francs could be readily reconciled with the decision to maintain the link between the N.E.I. guilder and the United States dollar.

Belga Stabilised

The belga has joined the monetary alliance at the rate of 24 belgas, or 120 Belgian francs, to the £. For the time being this rate is nominal. The only transactions occurring in Belgian francs are the exchange of notes taken out of Belgium by refugees. Genuine refugees arriving in Great Britain may exchange such notes into sterling up to a total of £20 per person. A record of such transactions is inscribed on the identity cards which the refugees are given on entering this country. For the rest the market in belgas is in suspense. Forward contracts outstanding at the time of the invasion of the Low Countries are being left in abeyance pending receipt of the appropriate instructions from the Bank of England.

These are expected in the near future. The National Bank of Belgium has transferred its head office from Brussels to Le Havre, as it did in the last war, and as no issuing authority is left in Belgium the currency requirements of the country will presumably be satisfied, also as in the last war, by German notes. This position will at least facilitate the problem of dealing with the belga exchange, which will not be complicated—as presumably it will be in the case of the Netherlands—by the presence of a domestic currency issued by the central bank but under enemy control. When dealings in belgas are resumed the market is likely to see very little of them. With Belgium largely in German occupation, private trade with that country will be virtually at a standstill, and the official conversion rate between belgas and the other Allied currencies will be mainly concerned with inter-Governmental transactions.

Licence for Silver Exports

A Board of Trade Order issued at the end of last week made some additions to the list of commodities which may only be exported from the United Kingdom under licence. To the complete surprise of the market, silver was included among them. The readiness of the authorities to grant export licences for silver has not yet been tested. But it is generally assumed that if such permission is given it will only be on condition that the metal is paid for in dollars or in sterling obtained in the official market. This development obviously revolutionises the whole silver position in London. The recent rise in the price, which had occurred despite increasing evidence of an early revision in the United States silver purchasing programme, had been based largely on the depreciation of the free sterling rate in New York and on the consequent rise of the export parity from London. As long as the United States Treasury was prepared to buy imported silver on the basis of 35 cents an ounce, and as long as American interests could buy silver in London with sterling obtained in the free market, the London price was bound to follow broadly the range of free sterling fluctuations. If the possibility of such arbitrage operations has been withdrawn, the sterling silver price should tend to revert to the parity indicated by the official sterling-dollar rate. This parity may at present be calculated at 18½d. Other influences are, however, acting on the market, particularly the Indian demand, which, in accordance with tradition, increases in intensity with every extension of the theatres of war. Moreover, the scarcity of supplies in the London market contributes a persistent check to the fall of the price which should logically follow official

moves in London and Washington. Thus the price, which at the end of last week touched 23½d., the price at which the Indian Government is still prepared to sell, has since fallen to 21½d., which is well above the theoretical export point to New York. The Indian Government found it necessary to sell a small amount on Friday of last week to prevent the price from crossing the 23½d. limit.

Pan-American Banking

One of the projects sponsored by the United States Government to increase trade between the United States of America and Central and South America is the proposed creation of an Inter-American Bank, the preliminary draft statutes for which have been drawn up by the Inter-American Economic and Financial Advisory Committee set up at the Panama Conference. The proposed capital of this institution is 100 million United States dollars, to be subscribed by the United States Government, and the other twenty American Republics, in proportion to the volume of their trade with the United States during the year 1938. It appears to be a kind of American "Bank for International Settlements," to act as a clearing house for international payments between the American Republics. So far, only the requisite minimum number of five nations appear ready to sign the Convention; but even these require the ratification of their own legislatures, and include Mexico, Colombia and Nicaragua, whose economy is directly dependent upon the United States market. The attitude of such important countries as Argentina and Chile is undefined. For one thing, there is political opposition, particularly in Argentina, to the hegemony of Washington; but apart from this the banking requirements of Latin America are already adequately met—indeed, there is sometimes too much competition. Moreover, the leading South American banking systems appear far from needing any of the rediscount or other financial facilities envisaged for the new institution. Central banks, with complete control of credit, now exist in most South American countries and enable them to face the existing conditions with far greater equanimity than in 1914-18. For example, the report of the Central Bank of Argentina for 1939 is a model of its kind, the reserve position being exceptionally strong. Another factor is the wartime expansion in British purchases, which is extending the influence of the sterling bloc not only to the River Plate countries but also in an increasing degree to Chile, Peru and Brazil. In all the circumstances, therefore, the outcome of the scheme for an Inter-American Bank appears, to say the least, problematical.

INSURANCE NOTES

	Earned	Premiums	Underwriting	Profit and Loss
	1938	1939	1938	1939

		2,292,559	2,309,462	

* One-fifth of shareholders' profits at 1934 valuation (1938 account) and 1939 valuation (1939 account).

£2,005,770 is unappropriated, leaving £230,000 allocated to shareholders and £2,066,326 for with-profits policyholders. The reversionary bonus is 36s. per cent. per annum, against 45s. last time.

The total credited to profit and loss, as shown in the table, was £2,309,462, which, added to the amount brought forward, gave a total of £4,416,310. After transferring £750,000 to the reserve fund (making £1,500,000) and providing for the 1939 final dividend and other outgoings, £2,003,804 is carried forward (against £2,106,848). The dividend of 6s. 6d. less tax per £1 share is unchanged. The book value of the assets (£61.8 millions) was less than the actual value.

Phoenix.—The large fire and accident portfolios of the Phoenix yielded profits

at a very satisfactory level. The combined underwriting balance was only slightly less than in 1938. Premiums of the three non-life departments, helped by an emphatic expansion in marine income, totalled almost £7½ millions, and the combined underwriting profit of these accounts exceeded the £½ million mark. Including the shareholders' portion of life and capital redemption profits and interest on general funds, the total credit to profit and loss was £992,129, giving a total credit of £2,401,263, with the sum of £1,479,134 brought forward. After provision for dividend (12s. per share, less tax, as for 1938), debenture interest, taxation and other outgoings, the carry-forward was £1,473,676. The figures include those of the subsidiaries:

	Earned	Premiums	Underwriting	Profit and Loss
	1938	1939	1938	1939
Fire	2,737,475	2,753,159	239,138	201,780

The Market's Rearguard Action

The grave military news last week-end has found the London market, like the British Forces, fighting a stubborn rearguard action. But if proof were needed that its spirit remained unbroken Thursday's spectacular recovery surely supplied it. At no time was any general freezing of the gilt-edged market evident, and in the big stocks dealings have remained relatively free. In this first assault minimum prices have fulfilled their main task—that of providing an assured dealing basis. Even on Monday, when dealings were under the heavy shadow of week-end war news, although many gilt-edged stocks touched official minimum levels, these usually provided a "bid" basis for *dealings*, and *business* still remained practicable. Since the week-end the gilt-edged market has certainly made the best of the news. Tuesday's rally certainly looked odd by comparison with the serious disclosures of M. Reynaud, published after the market had closed. It was, in fact, largely of a technical character, due in part to the absence of any significant volume of sales. On Wednesday, early dealings were naturally affected by M. Reynaud's overnight speech, but the recapture of Arras

came at a psychological moment, and in the rally which followed leading stocks almost regained their position at Tuesday's close. The Emergency Powers Act had an inspiring effect on gilt-edged. Old War Loan jumped from 97 to 98½, and the other long-dated issues were similarly strong. For equities, the story has been markedly different. Industrials experienced little selling pressure, but lower and wider prices have had full effect. Even in Tuesday's rally the recovery was small and the fate of the market is fitly illustrated in the decline of *The Financial News* industrial share index from 70.3 on Friday last week to 68.6 on Monday, followed by a recovery of 0.2 on Tuesday and a resumed fall of 1.3 to 67.5 on Wednesday. But even equities responded to the Emergency Powers Act, and the index closed at 67.9 on Thursday. The measure is generally welcomed in the market to show that Britain means business, and though it may also mean the end of equity investment business, by any normal standards, for the duration, ordinary shareholders in general are not likely to complain of measures which have become inescapable if the maximum war effort is to be put forward in the shortest time.

The Home Rail Retreat

Despite substantial losses last week, home rail stocks have staged a further confused retreat this week, which until Thursday spared no section of the market, from the most vulnerable equity to the most soundly secured debenture. Since May 10th Southern preferred has fallen from 67½ to 56 and Great Western ordinary from 43 to 36, but L.N.E.R. 4 per cent. debentures have also fallen nearly 8 points to 86, while the senior debentures of the other lines show losses ranging up to 5 points. Their experience is shown in the table in the adjoining column. The war damage argument (to which reference was made in last week's issue) is still the major market factor, and the sharp falls in the marginal stocks may be justified from this point of view. Obviously, discrimination between the various issues is hardly possible when the extent of potential damage to individual lines, and the size of any extra pro-

visions from profits which it may entail are unknown quantities. Southern preferred and Great Western ordinary have shown the most spectacular absolute losses, but the relative falls of L.M.S. ordinary and L.N.E.R. second preference, not unreasonably, have been at least as great. The weakness of the debentures, though due in part to the reaction of gilt-edged stocks, has been the more emphatic because they lack any minimum price protection. Their nominal amount is approximately equal to that of the 3 per cent. War Loan—£300 millions—and they represent an important sector of the

fixed interest market which must not be breached if the general basis of interest rates is to be maintained in relation with minimum prices for trustee stocks. Meanwhile, hearings have been opened this week by the Consultative Committee of the Railway Rates Tribunal, whose task is to advise the Minister of Transport how to secure the 10 per cent. increase in London road fares. On behalf of the Railway Executive Committee it was estimated that London Transport receipts from road services (which amounted to £23,123,000 for the year to June last) would be £20,528,000 for the year to March next, and it was agreed that there appears to be no escape from the increase of 1d. road fares to 1½d. The proposed increases would produce £1,524,000 from road services and £692,500 from rail services.

Changes in E.P.T.

The 1940 Finance Bill runs to 105 pages. Many of its clauses merely give technical expression to tax changes already authorised. The principal new provisions relate to changes in Excess Profits Tax as promised in Sir John Simon's Budget speech. These provide mainly for more equitable treatment of companies in depressed circumstances in the standard years, and the notorious sub-section 7 of section 13 of last year's Finance (No. 2) Act is repealed. A company which earned no profits in the standard period or whose profits were so low that they could not justifiably be used as a standard may be given a standard by the Commissioners, not exceeding an amount sufficient to pay fixed dividends on preference capital and 6 per cent. on ordinary shares of public companies, or 8 per cent. for companies whose directors have a controlling interest. An appeal will lie from any determination of the Commissioners under this sub-section to the Board of Referees. If the Board is satisfied that profits were non-existent or too low in the standard period, and also that the company's paid-up share capital did not fully represent the net value of assets employed in the business, they may fix standard profits at 6 per cent., or 8 per cent. as the case may be, on the value of assets (on a going-concern basis) employed in the business immediately before the commencement of the standard period, after deducting borrowed money and making any adjustment for changes in the average amount of capital actually employed in the standard period itself. Further, the Board may issue a similar direction even if a company's paid-up capital is fully represented by assets, if it shows that it belongs to an industry which in the standard period was a depressed industry. The concessions to these various special cases are to be strictly limited to a basis of 6 per cent. on capital and, unlike the E.P.D. rules, there is no provision for special capital allowances for industries which have to undertake substantial trade risks. The concessions at least remove the more obvious shortcomings of section 13 of

last year's Finance (No. 2) Act. New and necessarily complicated provisions have also been produced to provide for the aggregation of profits for inter-connected companies, which occupy a schedule of 18 pages. Clause 28 of the Bill appears to afford immunity to a parent company from double excess profits taxation on income arising from investments in controlled companies, provided that it exists wholly or mainly for the purpose of co-ordinating the administration of the group. This clause, however, does not appear to cover a case where a company's assets consist wholly of shares in a second company, but which happen to represent less than a controlling interest. By the Emergency Powers Act, passed on Wednesday, the rate of Excess Profits Tax is raised from 60 per cent. to 100 per cent. The Dividend Limitation Bill left shareholders with some equity in net retained profits after paying E.P.T., even where they could not be wholly distributed. The exigencies of war have demanded that even that deferred equity must be surrendered.

Edmundsons Electricity Results

Shareholders of Edmundsons Electricity Corporation have every reason for satisfaction with the company's record for the year to March 31st. Trading profits, after charging net administrative expenses, rose from £155,313 in 1939 to £156,679 in 1940. The marked increase in income from dividends from subsidiary companies and other sources from £585,872 in 1938 to £741,818 continued further to £748,474 for 1939-40. Thus, total income since 1938 has shown an increase of nearly £30,000 to £905,153. While rising costs have reduced the total amount earned for ordinary stock from £469,977 to £459,969, this sum is still considerably above the earnings of 1937-38. The main items of rising costs have been an increase in the allocation for taxation and N.D.C. from £50,000 to £60,000 and in the interest on temporary loans. This item of expenditure has maintained a steady upward trend in the last three years from £38,048 in 1938 to £46,603 in 1939 and £54,529 in 1940. Profits for the past three years are analysed below:—

public purchasing habits, and difficulties in securing supplies of textile goods—though Marks and Spencer has sought to offset them by placing bulk orders ahead of current needs. Both Lord McGowan at the I.C.I. meeting and Sir Edward Wilshaw at the Cable and Wireless meeting stressed the increasing amount of Government work for which both companies have become responsible. I.C.I. is devoting particular effort to provide a surplus of production for export both in order to meet the demand of markets abandoned by Germany and in order to replenish British stocks of *devisen*. Increased Government traffic has not proved wholly profitable to Cable and Wireless. The absorption of much private business under Ministerial control and the prohibition of the use of codes has actually caused certain falls in revenue. Cable and Wireless, however, was able to report record profit figures. The Empire “flat rate” is proving remunerative, and special rates are now available for members of the fighting forces. The calling-up of labour is a common problem, which must grow increasingly acute, despite the vigorous plans for retraining and employment of women. But the conclusion from these three leading industrial concerns is that adaptation to war conditions is being energetically pursued.

Richard Thomas Chairman

Sir William Firth, whose removal from the board of Richard Thomas and Company was announced recently, is to be replaced by Mr E. H. Lever, Joint Secretary of the Prudential Assurance Company, who has accepted the unanimous invitation of the board to become Chairman as from August 1st next. Mr Lever has been a member of the Control Committee as nominee of the trustees for the first mortgage debenture stock, and his appointment will entail his resignation from the Prudential Assurance Company in order to devote full time to the interests of the company as Chairman and Finance Director.

Hudson's Bay Report

Despite the outbreak of war, Hudson's Bay Company earned higher profits before making provision for taxation, both in the trading and land departments. Total revenue rose from £378,949 in 1939 to £458,155 in 1940. The reduction in net profit from £110,503 to £72,269 is essentially due to the increase in income tax provision from £111,096 to £228,493. A rise in agricultural prices following on the outbreak of war was responsible for an increase in land sales from 40,649 acres to 51,596 acres at an increased price of £1 11s. 6d. per acre. Hence the land department has been able to raise its ordinary dividend from 1 to 1½ per cent., tax free. The reduction in the dividend of the trading department from 2½ to 1 per cent. accordingly provides a gross yield on the £1 ordinary shares of £3 13s. 6d. at the current price of 18s. 6d. Profits in the trading department suffered from depression in the European fur market after the outbreak of war, a factor which will presumably continue to operate as long as hostilities last. There is, however, good reason to expect that the general trading of the company will benefit further from the prosperity in the prairies following last year's bumper harvest, though it is still too early to predict the yield of this year's crop. Internal prosperity may thus be capable of offsetting fur trade losses and rising taxation in wartime. The company's balance sheet shows a rise in cash holdings from £412,030 to £623,737 and a rise in stocks of merchandise from £1,228,841 to £1,455,514. The increase in surplus current assets from £1,908,000 in 1939 to £2,016,000 in 1940 represents a useful strengthening of the company's financial position in the present emergency.

Newspaper Earnings

The latest reports of Allied Newspapers and Odhams Press disclose only a slight fall in trading profit during 1939. Allied Newspapers report trading profits of £880,112,

	Years to March 31st		
	1938	1939	1940
	£	£	£

Carried forward	98,184	133,161	158,130
Issued ordinary capital ...	4,500,000	6,750,000	6,750,000

* Not including direct transfers of capital profits. † After net administrative expenses. § And capital bonus of 50 per cent.

Consolidated fixed assets of the group amounted to £28,279,658 at March last compared with £23,262,206 at March, 1937. Meanwhile, the policy of consolidating interests which effected a reduction in the number of subsidiary companies in the Edmundsons group from 49 in 1937 to 23 in 1939 has been continued. The total is now 17, but the group's interests remain well distributed geographically—a vulnerable quality, perhaps, when peacetime utility legislation was contemplated, but a useful attribute in wartime. The declaration of a final dividend of 3½ per cent. by the holding company, making a total of 6 per cent. on the year as before, gives a yield of £5 4s. per cent. on the £1 ordinary stock at the current price of 23s.

"The Chairman Said"

The speeches of the chairmen at the general meetings of Marks and Spencer, Cable and Wireless, and Imperial Chemical Industries have all revealed the influence of war conditions on earning capacity in three branches of industry, production, distribution and communications. All three chairmen were able to report that the exercise of foresight in the post-Munich period had permitted the transition from peace to war conditions with a minimum of dislocation. All showed that earning capacity in the first phase of the war had been remarkably well maintained. Mr Simon Marks summarised the inconveniences which the war has brought to the distributive trade, caused by disturbance to

FAMOUS SINCE 1795
OTARD'S
COGNAC BRANDY

compared with £869,552. Odhams Press reports a decline from £379,884 to £378,745. In both cases profits are some distance below the peacetime levels of over £1,000,000 established by the Allied Group, and of over £400,000 for Odhams in the years 1934-37. Thanks to a fall in debenture charges, the Allied report does, however, reveal an increase in net profit from £779,329 to £781,453. As suggested in *The Economist* of February 3, 1940, the increasing cost of production and the fall in advertising revenue in wartime has been more or less offset by the cut in expenses for canvassing and free insurance. But the best that can be said of the results of these two companies is that in the first year of partial war they were not noticeably worse than in the last year of partial peace. It remains to be seen how earnings will react to the more stringent conditions of the blitzkrieg period. Meanwhile the inevitable rise in holdings of newsprint is indicated in the Allied balance sheet by a striking increase in the figure for stock-in-trade from £24,098 to £101,877, accompanied by a reduction in cash from £435,237 to £235,191. Both companies have declared a reduced dividend on their ordinary shares. Allied Newspapers' dividend is further reduced from 6 per cent. to 5 per cent., and Odhams Press dividend from 10 per cent. to 6 per cent. Thus, with a yield of £12 per cent. on the 4s. ordinary shares, now standing at 2s., Odhams Press satisfy the criterion of a 10 per cent. yield recently suggested in these columns as the minimum safe return on newspaper equities in time of war. Allied Newspapers, with a yield of £9 10s. 6d. per cent. on the £1 ordinary stock, now quoted at 9s. 6d., is little distant from it.

* * *

Beechams Pills Record Profit

Trading profits of Beechams Pills for the year to March last have set up a new record exceeding £1,000,000. The company's total income amounts to £1,055,615 compared with £723,663 in 1939 and £600,908 in 1938. It is impossible to make any direct comparison between earnings in recent years on account of the far-reaching extensions which the group has achieved through the acquisition of control of Eno Proprietaries, Beecham Maclean Holdings and County Perfumery. Beecham's earnings for 1940 include a dividend from the latter company in respect of the nine months beginning July 1, 1939. After provision for fees and taxation, net profit amounted to £583,597 compared with £516,255. Earnings for ordinary shares totalled £443,847 compared with £375,650 for the previous year. The ordinary dividend of 28½ per cent., less tax, for the year—the maximum under the dividend limitation rules—is covered by an earnings percentage of 46.1 per cent. The allocation for income tax has risen from £190,792 to £329,018, and in addition the company has provided £140,000 for E.P.T. The sum charged to development reserve shows a slight increase from £72,919 to £79,124. Increased sales, which the directors report since the outbreak of war, have presumably offset whatever increase in costs the company has incurred through its policy of maintaining stable prices. It is not clear, however, from the company's statement, to what extent retail margins as well as prices have been stabilised. The balance sheet reveals an increase in surplus liquid assets from £88,000 to £350,000 mainly due to a reduction in the sums owing to subsidiary companies. At the present market price of 7s., the 2s. 6d. deferred shares offer a yield of £10 4s. per cent.

THE STOCK EXCHANGES

London

Note: all dealings are for cash

At the opening on Monday the market was overshadowed by the rapid German thrust for the Channel ports. Quotations were marked down all round, and dealing margins widened. The subsequent story has been encouraging for gilt-edged, but not for equities. Business throughout the week has been small, and there was never any extreme pressure to sell. On Thursday, gilt-edged staged a remarkable recovery, assisted by good turnover on the mobilisation of British resources to win the war, but there was only mild sympathetic response from the depressed sections, like home rails and industrials.

The change of sentiment in the *gilt-edged market* between Wednesday morning and Thursday afternoon is illustrated by the range of markings in Old War

Loan from the minimum of 95 on Wednesday to par on Thursday. Other long-dated gilt-edged stocks shared fully in this spectacular recovery. Old Consols closing on Thursday at 73½ compared with 71½ on Monday, while Conversion 3½ closed at 98½ on Thursday compared with 97 at the beginning of the week. The general effect of the spectacular recovery in gilt-edged has been to reduce the losses which occurred since the invasion of Belgium and Holland to not more than one point.

Only a sympathetic response occurred in the *home rail market* to the recovery in gilt-edged, and it was largely confined to the senior debentures, which recovered about one point of their previous losses. There was no improvement among marginal stocks; Southern preferred, which recovered from its slump of 6½ points to

52½ on Monday, recovered to 56½ on Tuesday, but has since recorded no net advance. Great Western ordinary, however, showed a one-point improvement on Thursday and L.M.S. ordinary also closed better.

Small business was recorded in the foreign bond market. There was an early improvement in Japanese issues, which was not maintained, and French railway bonds were rather heavily affected by the war news.

Despite the unfavourable military developments, *industrial shares* have experienced little selling pressure this week. Prices, however, have in general been heavily marked down, though turnover has been slight. Iron, steel and coal shares have experienced the heaviest losses, including Wm. Cory, John Brown,

(Continued on page 958)

Rand Quarterly Reports

The following table summarises the results of last quarter's development for the leading Union Corporation, Central Mining and Gold Fields companies:—

Mine	January-March		Change on previous	
	Payability	Inch dwts.	Payability	Inch dwts.
<i>Union Corporation</i>				
East Geduld	64	510	— 1	+102
Grootvlei	48	380	+ 2	+ 57
Marievale	44	251	+ 3	— 20
Van Dyk Consolidated ...	25	225	— 19	— 31
<i>Central Mining</i>				
City Deep	44	242	— 16	— 60
Consolidated Main Reef...	55	227	+ 7	— 8
Crown Mines	67	246	+ 1	Nil
Durban Deep	57	273	+ 4	+ 15
East Rand Proprietary ...	35	279	+ 10	— 1
Modderfontein East	18.5	212	— 6	— 21
Rose Deep	38.5	423	Nil	+ 76
<i>Gold Fields Group</i>				
Rietfontein Consols.	52	384	+ 5	+ 68
Robinson Deep	53	271	+ 2	—100
Simmer and Jack	58	300	+ 6	+ 43
Spaarwater	27	201	— 4	— 4
Sub Nigel	47.3	525	— 3	+110
Venterspost	60.7	374	+ 7	+ 85
Vlakfontein	32.9	438	+ 6	+134
Vogelstruisbult	43.1	297	+ 1	— 20
Luipaards Vlei	74.4	344	— 2	— 32

East Geduld showed another excellent quarter's development, and an improvement also occurred in Grootvlei. Van Dyk's results were disappointing, with a substantial fall in the percentage of payability, but this should only be a passing phase. Durban Deep, Consolidated Main Reef, Crown Mines, Rose Deep and East Rand Proprietary all showed satisfactory figures. A lower development footage in City Deep was accomplished, and results compared unfavourably with the previous quarter. Development results, however, have fluctuated in the past, and undue weight should not be given to results of any individual quarter. Percentage of payability in Modderfontein East has been regularly declining since the end of 1938 and has now reached the low figure of 18.5 per cent. In the Consolidated Gold Fields group Simmer and Jack had an excellent quarter. Owing to the higher gold price, ore reserves have automatically increased by 760,000 tons to 4,483,000 tons, averaging 4.2 dwts. April milling rose to 140,000 tons, and the monthly objective of 180,000 tons should be reached by the end of the year. Sub Nigel, Luipaards Vlei and Venterspost showed satisfactory results, while Vlakfontein again revealed substantially higher values, with an increased development footage. Spaarwater and Vogelstruisbult continue normal development, and Robinson Deep's somewhat poor results will no doubt be adjusted in future. The immediate effect of the higher gold price increases the ore reserves by 670,000 tons to approximately 7,515,000 tons, averaging 4.35 dwts. At the annual meeting, it was stated that the present shaft layout will allow mining to 9,000 feet, but that a new deep level shaft system would enable operations to be carried down to 12,500 feet. The great expenditure involved, however, would not be justified unless the Union Government modified mining taxation for such deep mining.

Industry and Trade

The Vital Need for Aircraft

The importance of the air arm in the present war of movement has been further demonstrated by Germany's offensive; the success of her attacks, indeed, has been due, in no small measure, to the quantitative superiority of her air power. The Allies have retaliated as best they could; but the superior quality of British machines has been more than offset by the numerical ascendancy of the enemy. They have not been able either to stem the advancing enemy columns or to cut their lines of communications. The extent of Germany's numerical superiority in the air has been rather unexpected in view of recent statements by Government spokesmen. As long as a year ago widely quoted reports suggested that British production had reached about 1,000 machines per month and that the rate of output was then as big as in Germany. Within a short time Germany was to be overtaken. Yet, according to a statement by President Roosevelt, the combined weekly output of the Allies is still smaller than Germany's. President Roosevelt's statement, if correct, is a grave indictment of our former Government. With our superior resources we could easily have won the race of production long ago; there is not the slightest excuse for our continuous inferiority in numbers. The need for increased supplies is now a matter of life and death, for if we do not reach superiority fairly soon our position may grow steadily worse. The loss of additional air bases in France, for example, would render it much more difficult effectively to counter heavy air attacks on our communications and industrial centres. Fortunately, Lord Beaverbrook is wasting no time. He had hardly been in office as Minister of Aircraft Production, when he announced that the Nuffield Aircraft Factory and the Vickers Supermarine organisation had been brought together under the management and control of the Vickers Armstrong Company. And, in order to relieve the scarcity of labour, he immediately issued an appeal to workers engaged in the repair of motor cars in garages to volunteer as fitters in aircraft factories. Moreover, the new powers taken by the Government on Wednesday should enable it to transfer substantial numbers of workers from comparatively unessential tasks to the production and repair of aircraft. But only a stupendous effort will enable us to gain superiority in the air in the reasonably near future, even if American deliveries arrive as expected.

* * *

Distribution of Unemployment

The Government's decision to direct the country's labour forces into the channels where man-power is most urgently required has come none too soon. The accompanying analysis of the distribution of unemployment on April 15th, published in the current issue of the *Ministry of Labour Gazette*,

UNEMPLOYMENT IN AUGUST, 1939, AND IN APRIL, 1940
(Principal Industries)

	No. Unemployed		Unemployment in April as % of Total No. Insured
	August, 1939	April, 1940	
Agriculture	28,110	31,408	4.4
Coal mining	103,247	44,311	5.3
Pottery, earthenware	12,217	8,614	11.8
Chemicals	11,975	3,488	3.0
Metal manufacture	26,487	20,752	6.0
Engineering	41,796	21,406	2.4
Vehicles and aircraft	18,035	12,882	2.5
Shipbuilding	32,732	11,901	6.8
Other metal industries ...	44,707	30,442	4.0
Textiles	119,586	62,271	5.6
Clothing	57,782	28,871	4.6
Food, drink, tobacco	41,105	39,741	6.6
Woodworking	22,985	19,887	8.0
Paper, publishing	22,871	31,171	6.9
Building, contracting ...	221,878	171,993	12.2
Transport	95,130	72,825	8.2
Distributive trades	150,493	129,322	6.2
Entertainments	20,764	21,278	13.6
Hotels, public-houses, etc.	56,282	71,570	14.1
All industries in U.K. ...	1,310,528	1,000,800	6.7

shows that in all the key industries the proportion of insured persons without work has been reduced to a minimum. And, if allowance is made for the fact that some workers are always between two jobs on the day of the count, while others are temporarily unemployed through bad weather or owing to a seasonal decline in production, the reserve of unemployed available for transfer from the less essential trades to the key industries is now also limited and quite inadequate. It may therefore soon become necessary to transfer workers already in employment from one industry to another. And in order to bring about a swift redistribution, the Emergency Powers (Defence) Act was essential.

* * *

More Wool for Export Trade

The Joint Rationing Committee of the Wool Control has this week announced a change in the rationing scheme as it affects export trade in fabrics. The new scheme came into force immediately; it enables manufacturers of fabrics to secure additional wool rations for export trade until all their machinery available for civil trade is fully employed. Every manufacturer will continue to receive a ration at the beginning of each four-monthly rationing period, but for new export business he may apply for three-quarters of the wool needed as an extra allowance, leaving only 25 per cent. to be found from his basic ration. The new scheme is further evidence of the keenness of the authorities to encourage export trade in manufactured goods.

* * *

Dearer Petrol

On May 22nd the prices of motor spirit and other mineral oil products were raised, in some cases quite appreciably. The current wholesale prices (inclusive of tax) of the chief products, together with the extent of the increase, are listed below:—

WHOLESALE PRICES OF MINERAL OIL PRODUCTS†
(per gallon)

	Current Price d.	Increase d.
Motor spirit	20	1½
White spirit	18	½
Kerosene, burning oil.....	10½	1½
Kerosene, vaporising oil.....	10½	1½
Automotive diesel oil	17½	1½
Diesel oil	7½	1
Fuel oil	8	1

† Slightly higher prices are charged in remote parts of the country.

In view of the recent fall of prices on the world market, the upward revision has caused surprise; thus the reduction in the Gulf export price of motor spirit is equivalent to a decline of ½d. per gallon in the British import price. In the circumstances, the public is surely entitled to an explanation of the reasons for the increase. As a result of the advance in wholesale prices, the retail charge for motor spirit was raised by ½d. to 1s. 11½d. per gallon; the price of pool petrol, originally fixed at 1s. 6d. per gallon, has therefore been raised by 30 per cent. since the outbreak of the war.

* * *

Liverpool Cotton Market Closed

At the end of last week there was such persistent selling on the Liverpool cotton market that the price of American cotton fell on three consecutive days by the maximum amount of 25 points. During the week the fall amounted to

REDUCE PRODUCTION COSTS
—USE ELECTRICAL POWER FOR ALL INDUSTRIAL PURPOSES

NORTH-EASTERN ELECTRIC SUPPLY CO. Ltd.
Carlisle House, NEWCASTLE-UPON-TYNE
Apply to above address for particulars of Sites for Works

about 1d. per lb., and prices for other growths, notably Egyptian, were similarly affected, though not to such an extent. At the week-end, prices on the New York market also declined, and early on Monday morning the directors of the Liverpool Cotton Association decided to close the market for three days. On Thursday it was decided that the futures market should remain closed until further notice. Arrangements have been made for member firms to sell cotton at a fixed price and to make "on call" contracts. The New York cotton market strengthened during the week, but there were large fluctuations in prices, and the action of the directors of the Liverpool Cotton Association has been generally approved.

* * *

Diamonds in Flight

It is believed that the greater part of the trading stocks of diamonds held in Holland and Belgium were safely moved to London from those countries before the German army occupied Antwerp and Amsterdam, the world's chief centres of the diamond cutting and polishing industry. In the last few years Amsterdam and Antwerp annually imported diamonds to the value of between £1,000,000 and £2,000,000 and exported prepared stones valued at about £10 millions. Of a total of about 40,000 skilled diamond workers, some 25,000 were in Belgium and about 6,000 in Holland; the remainder is scattered over a number of countries, such as France, the United Kingdom, the United States and South Africa. Although a few Belgian and Dutch workers may have succeeded in leaving before the invasion, it is unlikely that sufficient skilled workers will be available to re-establish the trade on a large scale elsewhere. An eventual shortage of polished diamonds and a further substantial advance in prices are therefore quite possible, especially as purchases for investment have recently tended to increase in this and other countries. One minor advantage of the invasion is the complete stoppage of German imports of industrial diamonds through the Low Countries, a trade which had been checked but not altogether abolished by the licences and stock registration enforced by the Allied contraband control. The Allies also gain from the resources of the Belgian Congo, which produced over 7 million carats of diamonds in 1938 out of a world output of 11½ million carats.

* * *

Pyrites in War

Pyrites are sulphide minerals found mainly in combination with copper and iron which possess a sulphur content of over 25 per cent. In normal years world production amounts to some 8 million tons; Spain supplies between 2 and 2½ million tons, Japan (including Korea) about 1½

million tons and Norway slightly over 1 million tons. All these regions are or have been involved in war. Spanish production is still far from the level reached before the civil war; the Norwegian exports, coming chiefly from the central and northern coastal regions, are also now at a standstill. British imports in a time of active business conditions amount to some 400,000 tons annually, which can be supplied partly from Spain and from minor producing countries such as Greece and Cyprus. An alternative source of sulphur and sulphur compounds has recently been developed by metal smelters, so that the suspension of Norwegian exports should not lead to more than a moderate rise in pyrites prices on the open market.

* * *

Slump in Wheat Prices

The fall in wheat prices on North American markets was unexpectedly severe. Some reaction was to be expected on the invasion of Belgium and Holland, who are both considerable importers of cereals, as is shown in the table below:—

	IMPORTS OF CEREALS			
	Belgium		Holland	
	1937	1938	1937	1938
Wheat ('000 quarters)	5,612	4,772	2,613	2,965
Maize "	4,206	2,831	4,425	4,208
Barley "	2,546	2,321	1,310	1,269
Linseed ('000 tons) ...	103	84	314	293

But the extension of the war to the Low Countries has been likely at any time in the last six months and should not have taken the wheat markets by surprise to the extent it did. May futures at Chicago fell from 105½ cents per bushel on May 13th to 77 cents on May 18th; at Winnipeg the same futures quotation fell from 85 cents to 60 cents per bushel within these five days. Even at this low level, however, prices were 5 to 10 cents per bushel above the corresponding futures ruling in mid-August of last year. But there has been a considerable rally during the past week, which took Chicago May futures to 85 cents per bushel on Wednesday. The prices of other grains—maize, barley and oats—were less affected than those of wheat; with the possible exception of maize, the United States is not likely to be a large exporter of these products in the coming season, so that the loss of the trade with the Low Countries is small. The Argentine is probably most affected among the major cereal exporters, and she is now more than ever dependent on the British market for the sale of her huge stocks of maize and of her new crop of linseed.

* * *

Fruit for Jam

Jam in wartime is usually regarded as a function of sugar supplies. If the sugar is available, then presumably the jam will be made, either by manufacturers or housewives. In spite of the impending reduction in the domestic sugar ration, the Ministry of Food has been able to give a fairly liberal allowance of sugar to housewives who intend to jam their own fruit, but none has yet been provided for those who may wish to make jam from bought or wild fruit. Jam manufacturers have, up till now, been allowed 70 per cent. of their normal sugar consumption, but it is possible that their output will also be restricted by the scarcity of fruit. Imports of fruit pulp, used mainly by jam manufacturers, amounted to nearly 1 million cwt. in 1938, supplying probably about half of the fruit used for this purpose:—

Imports of Fruit and Fruit Pulp* ('000 cwt.)			
	1935	1936	1937
Total	993.8	997.3	
from			
Canada	75.7	140.7	
Italy	262.2	238.2	
Netherlands	265.2	249.7	
United States	122.6	83.8	

* Preserved without sugar.

Supplies from Holland and Italy were about half of the total imports, and of these the Dutch production will not be available this year. Canadian shipments have been steadily increasing in recent years, and larger supplies could also be drawn from the United States; it might, however, save greater shipping space to import the jam, if extra supplies are needed, rather than to import both the fruit and the sugar for manufacture here.

To Overseas Readers

Overseas readers may find that, in the disturbed conditions of wartime, *The Economist* does not reach them quickly enough, or that they require more detailed information on individual markets or special topics than can be compressed within the limited space permitted by the necessity to economise paper.

The attention of our readers is therefore drawn to *The Economist's* Intelligence Branch, which is prepared to meet the need for a rapid and objective appraisal of commodity markets, industrial prospects, political factors and other topics of vital concern to the business man. These special services consist of regular cables or mail reports, or both. They are designed to meet individual requirements and are confidential and exclusive to each client.

Enquiries should be addressed to the

Intelligence Branch, THE ECONOMIST

8 Bouverie Street, London, E.C.4

COMMODITY AND INDUSTRY NEWS

AFTER the collapse of prices on some of the North American markets last week, the general tone has been steadier. Grain prices have made some recovery from the low levels reached a week ago and the cotton market is also firmer. The Liverpool futures market in cotton has been closed indefinitely. Metal prices have been little affected by the fluctuations of the past fortnight; that of tin has registered a steady rise since the invasion of the Low Countries.

*

Cotton.—The closing of the Liverpool futures market is discussed in a Note on page 943. Only a limited business has been done in yarn and piece-goods. The removal of the embargo on home sales on May 17th was welcomed and a number of contracts for the home trade were being negotiated before the closing of the market. The export trade remains stagnant. Current production is at a high level, but new orders are not being booked in sufficient volume to maintain this rate of output.

*

Metals.—In the United States spot prices were unchanged this week, but terminal prices were slightly easier, although American demand is likely to rise with the speeding up of re-armament.

*

Tin.—The price of standard cash tin rose by no less than £9 2s. 6d. this week to £270 7s. 6d. per ton. The turnover was smaller in the last few days, but sellers are very reserved. Fears of shipping difficulties, the expectation of higher freight rates and hopes that the United States will buy substantial quantities of tin in the immediate future were mainly responsible for the strength of the market; there have also been some purchases by foreign holders of free sterling as a hedge against currency losses. The International Tin Committee will meet early next week, but no cut in the quota is likely.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

May 4	64.55	66.78
" 11	65.32	70.66

*

Grains.—The fall in grain prices on the North American markets is discussed in a Note on page 944. Among the factors which assisted in the fall was the publication of the Department of Agriculture's forecast of the new spring and winter wheat crops. At 675 million bushels, the forecast indicates that the conditions of the crop have much improved and that the reserves accumulated from last year's harvest need not be drawn upon for home

consumption. Shipment from Argentina continues on a large scale. Grain prices on the Buenos Aires market have also fallen, but there was some recovery in the last few days.

Source: The Corn Trade News.

Oils and Oilseeds.—The reduction in the butter ration will increase the demand for margarine and arrangements are being made to increase the supply of soft oils to the margarine factories. Exports of linseed from the Argentine have been well maintained, but may now slacken, with the elimination of trade with Belgium and Holland. Large quantities are also on passage.

*

Rubber.—The decision of the Rubber Regulation Committee to leave the export quota unchanged for the third quarter of this year was generally expected. In spite of the admitted excess of supplies over current industrial consumption, the need for larger and widely distributed stocks in the consuming centres is recognised. The Ministry of Supply has invited offers of rubber at the current price, presumably for reserves. The decision of the Committee had little effect on the London market; there was a fall of about 3 cents per lb. in the New York prices for spot and near rubber during the week.

*

Export Groups.—The following export groups have recently been formed:

- Accumulators.

ARGENTINE REPUBLIC

Extracts from the Message to Congress read by the President of the Republic, His Excellency Dr Roberto M. Ortiz. May 15th, 1940.

The economic and financial activities of the Argentine have necessarily been affected by the declaration of war, which called for the adoption of various measures.

It was not possible at first to form any clear idea of the effects of the war. After seven months the position is somewhat different, and although developments do not permit an optimistic view of the situation, the country is now in a position to face the new state of affairs so long as it keeps a close watch on all changes and can adapt itself immediately to them.

Prominence should above all be given to the calmness with which the country reacted to the first effects of the war. Let us not forget that in 1914, at the outbreak of the European war, our banks were so affected that disastrous consequences were avoided only by declaring a bank holiday and making use of the Conversion Fund to meet the claims of depositors; that on the exchange market it became necessary to declare a moratorium on external payments; and that on the Stock Exchange quotations fell rapidly by as much as 20 points. This time, however, the effects of the present conflict serve to confirm the stability of our institutions and the efficiency of the prompt emergency measures taken by the Government from September, 1938, to give greater elasticity to the monetary and banking systems.

Experience has shown the efficiency of our financial and banking organisation. Thanks to the measures taken by the Central Bank, there was no uneasiness in the market and operations followed their normal course. The Government's timely intervention on the Stock Exchange ensured the maintenance of complete confidence in Government securities; through the Central Bank the authorities were prepared to purchase any amount offered. This policy prevented any possible initial nervousness from becoming serious.

Active intervention on the Stock Exchange during the decisive days from August 24th to September 6th had the effect of normalising the market. With funds which had been set aside for such an emergency the Government acquired altogether securities up to \$33 millions. When the market settled down these securities were again sold at rising prices, and confidence in State securities became evident with the outstanding success of the second \$150 million loan emission during last December.

The situation of the country at the close of the financial year for 1939 is more favourable than was foreseen at the beginning of the year. The efforts made by the executive to cut down expenditure and the improvement in revenue have made it possible to reduce the deficit in the Budget to \$60.5 millions, which had been voted with an unfavourable balance of \$194.5 millions between revenue and expenditure. When dealing with expenditure for the current year the executive informed Congress fully on the subject of its financial measures. After the first shock of the war, without being able to foresee the effects it might have on our finances, a deficit of 125 million pesos was envisaged. This sum has been reduced to \$64.5 millions.

EXPENDITURE TO BE MET OUT OF REVENUE

	Expenditure	Revenue	Deficit
	(In million paper pesos)		
From revenue	1,010.8	950.3	60.5
From special accounts	63.5	63.5	...
Total	1,074.3	1,013.8	60.5

As regards expenditure, the executive has carried out most of the economies approved by Congress and has also taken care not to affect the working of the Administration. Although the Government have achieved a reduction of \$60 millions in the credits established in the Budget, unavoidable circumstances have made it necessary to authorise expenditure by Government decree for \$16.7 millions, so that the net economy for the financial year amounts to \$43.3 millions. One should realise, however, that there are special requirements which are constantly increasing and which must be attended to. For example, education, which calls for yearly unavoidable increases in the Budget, without taking into account essential expenditure for the needs of the War Office, Admiralty and Home Office. As far as social welfare is concerned, we are still far from being able to deal with all their requirements, which are becoming ever more pressing.

The deficit mentioned—which is the first of this importance for many years and has to be met out of revenue—has not brought about undue difficulties to the Treasury, which has been able to finance this deficit by means of credit and the provisional use of the profits of the Exchange Fund.

The financing of the Budget and extraordinary expenditure has been met without much difficulty. Proceeds from revenue amounted to \$950.3 millions, that is to say \$96 millions more than was estimated, and \$15.6 millions more than was collected in 1938.

REVENUE COLLECTED DURING THE FINANCIAL YEARS 1938 AND 1939 AND ESTIMATE FOR 1939

(In millions of Argentine paper pesos)					
Item	1938 Collected	1939 Estimated revenue	1939 Collected	Difference between

Miscellaneous income ...	66.4	51.9	113.2	+ 46.8	+ 61.3
Total	934.7	854.3	950.3	+ 15.6	+ 96.0

The decrease in imports as a result of the difficulty in selling our produce abroad resulted in a sharp decline in

Customs and port dues, even more marked than was anticipated. In 1939 the decrease in the collection of these dues amounted to \$56.2 millions and to \$9.5 millions less than the estimated revenue.

On the other hand, revenue derived from other sources has been favourable. Income tax exceeded the estimate by \$11.9 millions, and inland and land taxes showed an increase of \$11 and \$3.7 millions respectively. The proceeds from other sources showed an increase over the financial year of 1938 and over the estimated revenue.

In the case of income tax the increases are mainly due to our ever-widening policy of taxation and in other cases to the adjustment and gradual improvement of the methods of collection and the modernisation of the administrative departments. The work of these departments tends to assist the taxpayer in fulfilling his obligations and to tighten the control on tax evasion and fraud.

The fund of margin exchange yielded \$113.9 millions in 1939. After deduction of the expenses covered by this fund (\$24 millions exchange differences in payments abroad to the diplomatic and consular services as well as public debt services, and \$40 millions for the various Government Commissions, exclusive of losses on wheat transactions) the fund was increased by \$49 millions. The exchange profits fund is therefore in a position to meet the losses resulting from the financing of the minimum price of wheat, which will become known once the negotiations are completed. Meanwhile, part of these funds has been advanced to the National Treasury to meet the deficit on the financial year, and another part has been invested in Treasury bills, the proceeds of which are destined for the Wine Industry Board, which is gradually paying off the amount expended.

The expenses to be covered by credit have fortunately been financed without any difficulty. The total of bonds negotiated has covered not only the financial year's investments, but also a part of those of the previous period which had not until then been finally settled.

The internal bond market has shown healthy development. The co-ordination among the various issues started in previous years has been consolidated. The co-operation between the principal banks and financial concerns which deal in the market and in the provinces as a syndicate under the direction of the Central Bank, has been highly efficient. The timely intervention of the Treasury in the market at the beginning of the war prevented panic, and was instrumental in protecting the small saver, who is usually the most affected at such times.

Public securities of all kinds (including municipal and provincial bonds and mortgage stock) placed on the home market rose to approximately \$500 millions, \$310 millions of which are for national requirements, while the balance corresponds in about equal parts to local emissions and mortgage stock.

Two transactions were carried out on the foreign market. In order to complete the purchase of the Central Cordoba and Argentine Transandine Railways, bonds authorised by Laws No. 12572 and 12573 were issued in London for £9,500,000 (\$143,200,000). The Province of Santa Fé offered in the United States the conversion of various dollar issues. In order to assist this operation the National Government, at the request of the province, took over the service of the new bonds. The offer still remains open. Up to the end of last year the new bonds amounted approximately to \$7,800,000.

Direct allocations to various State institutions must be added to sales on the market. The total net increase in the national debt, after deducting fundings of more than \$70 millions, therefore, amounts to approximately \$461.3 millions, in accordance with the preliminary returns of the General Accounts Department. Of this total \$17.5 millions represent bonds issued on account of the Municipality of Buenos Aires to cover its quota of payment for the expropriation of the Saavedra Estate, and \$7.8 millions transferred

from the Province of Santa Fé. The services of these \$25.3 millions are to be repaid to the nation by these institutions; \$152.4 millions represents the total issued in the country and abroad for the purchase of the above-mentioned railways. The balance, as already stated, exceeded the needs of the financial year as set forth in the scheme of public works and armaments and other expenses to be paid out of credit, and has made it possible to devote an appreciable amount towards the settlement of expenses of this kind for 1938, which had been temporarily met with other Treasury funds.

In my message last year I had the opportunity of explaining to Congress the reasons which existed for continuing the system of Exchange Control. Events during 1939 have but confirmed them.

The development of our external trade up to the beginning of the European war and, more especially, the tendency towards expansion of our imports, foreshadowed a new deficit in the balance of payments during the year, which would oblige us to use part of the reserves of the former "Caja de Conversión." It was necessary, therefore, to take the necessary measures in order to avoid the repetition of this in 1940 without resorting to devaluation. In August last, after consultation with the Exchange Committee created by Congress, it was decided to intensify the application of quantitative restrictions.

A few days later the outbreak of war created a new state of affairs. On the one hand, many important markets which supplied us with essential materials were cut off, which made it necessary to revise the restrictions put into force a few days previously, many of them being withdrawn, and, on the other, the system of payments by compensation was extended considerably. Important sums obtained from our exports are now placed in an account and are cancelled in due course by the purchases we make from those countries which buy from us. Likewise, for the reason just given, we must purchase a good part of the merchandise we require from countries with which we usually have an adverse trade balance and this balance is settled by means of free currencies. Consequently, the amount of free exchange which we receive for our exports has been reduced, while an increase has taken place in the amount of the purchases which we have to pay for by these means.

As Congress will realise, this situation demands a firm policy in dealing with our imports, a policy which can only be realised by means of an organised system. Fortunately, the working of the Exchange Control, with its long experience in this delicate matter, has shown, in the difficult times which followed the outbreak of war, its ability to adapt itself quickly to the changing conditions.

It has been said that in 1939 an adverse balance was foreseen which would necessitate using part of the gold in the former "Caja de Conversión." The course of events up to August confirmed this, but circumstances attending the outbreak of war modified the outlook. During September and October a decrease was noticed in imports owing to the dislocation of markets and sea transportation. Nevertheless, there was an increase in exports and a slight arrival of capital, all of which contributed at the close of the financial year towards a small favourable balance. This result must not, however, be taken as an indication of what is likely to happen in 1940. Imports have already shown a big increase, all the more significant by reason of the larger increase shown in import prices in comparison with export prices, which obliges us to deliver a greater quantity of our produce in order to acquire the same amount of manufactured goods. To this must be added the drawbacks which the new system of payments in force may bring about with regard to an important part of our exports, and the effects of an extension of the war to countries which are excellent markets for our products.

There are, therefore, innumerable reasons why we should adopt a watchful attitude. The war has dislocated transport, commerce and international prices. The greater part of our

Presidential Message to Argentine Congress—continued.

foreign trade, especially our exports, is destined for countries at war or on a war footing, and is increasingly carried out on a bilateral basis. To be brief, the system of exchange and payments under which our country achieved its present development threatens to disappear.

It will be necessary to administer carefully the reserves at the disposal of this country and follow events closely in order to adapt our policy to the needs imposed by the international events themselves.

The serious turn which the European political situation assumed had its immediate effect on currencies. As a result of the attitude adopted by the Exchange Equalisation Fund of Great Britain sterling showed at the end of August an appreciable decline, which made it necessary to take the appropriate measures until the situation became clearer.

As you are aware, sterling has for some years past been taken as a "point of reference" for the quotation of our money, although this does not in any way signify that there is any link or agreement which affects the freedom of our monetary movements. The sharp depreciation of the pound sterling at the end of August suddenly created a problem, with the consequences of which we were immediately able to cope as a result of the flexibility of our system of exchange. In fact, that "point of reference" can easily be set aside or modified at any moment as our monetary reserves have been, and still are, in gold, and are not affected in any way by the fluctuations of foreign exchanges.

There was not, therefore, any difficulty whatever in temporarily abandoning that "point of reference" while the pound sterling fluctuated during the first days of uncertainty after the outbreak of war. But as soon as a definite connection was established between the pound and the dollar by the British Exchange Control, we went back again to sterling as a point of reference for our quotations, but at a buying rate of 13.50 pesos to the pound, 10 per cent. less than before, to enable us to reduce the rates for sale and check as far as possible a rising tendency in the prices for imports. The rate was therefore fixed at \$15 to the pound for the payment of those imports which had a direct influence on articles of

popular consumption and on industry, and at \$17 to the pound for other imports.

The noticeable rise in the price of imports, as well as the difficulty which the export markets find in fulfilling orders and the delays in sea transport, have given rise to a demand for increased national production. This encourages one of the main objects of our Government's policy, namely, that our country should find in its own industries whatever is unobtainable abroad. This also simplifies the problem created by the new system of international payments. At the same time increased production has imposed on some industries an active demand for more labour which is helping us to solve the unemployment problem in others.

Owing to the foresight of having accumulated reserves in the "Banco de la Nación," it was possible in 1938-39 to fix a minimum price for wheat. The uncertain situation of the world market reduced exports to a very low figure in relation to the very large quantity of grain produced, in consequence of which such reserves were entirely used up and the debt of the "Grain Regulation Board" gradually decreased during the year.

The credits granted for this purpose amounted in 1939 to \$602.4 millions and the grain produced amounted to 8,125,567 tons. The debt to the Banco Nacional reached a maximum of \$367.9 millions in August, a figure which was reduced to \$277.5 millions by the end of December. Notwithstanding the volume of these operations, the bank met the different demands for credit which were presented, and endeavoured at the same time to help agricultural production.

The diminished crop of wheat for the last season enabled the Control Board to hasten the disposal of its stocks and to refund large sums of money to the "Banco de la Nación." The refundings will serve to finance loans to farmers which the executive consider necessary in order to assist the harvesting of the maize crop and to prevent it from being offered at any price. The grant of such loans, therefore, which may altogether exceed 200 million pesos, will not result in an expansion of bank credits inadvisable at a time when the economic outlook is uncertain.

INSURANCE NOTES—continued from page 939

contingency reserves. The total book value of securities was less than market prices.

*

North British and Mercantile.—The total underwriting profit of the North British and Mercantile group was £516,390 in 1939. This figure, though rather less than in 1938 (£614,653), was satisfactory, for fire profits represented 9.1 per cent. of premiums, accident profits were even better (10.9 per cent. of premiums) and the marine transfer to profit and loss was increased by £10,000. The group figures are shown below:—

	Earned Premiums		Underwriting Profits to Profit and Loss account	
	1938	1939	1938	1939
Fire	3,442,317	3,313,831	354,352	303,208
Accdt.	1,380,139	1,387,971	171,117	150,853
Marine	298,045	397,574	30,000	40,000
"Fine Art & Gen."	360,470	358,287	59,184	22,329
Life	5,580,971	5,457,663	614,653	516,390
Annuities ..	2,560,445	2,560,289	*67,460	*67,460
Cap. Red.	44,036	17,798	...	...
	8,406,226	8,298,240		
Interest (ex life, annuities and cap. red.) ..			558,848	497,367
Profits on investments realised			51,267	18,754
Fees			299	286
			1,292,527	1,100,257

* One-fifth of shareholders' profits from 1935 valuation.

The moderate decline in underwriting profits and lower non-life interest receipts, due to increased taxation, reduced the total credited to profit and loss to £1,270,257 in 1939, compared with £1,462,527 in 1938. The carry-forward from the consolidated profit and loss account was £7,102,811, against £6,979,067 brought in, and the dividend is unchanged at 6s. 3d. per share.

The North British and Mercantile was practically alone in writing larger new business in 1939—£5,889,172 against £5,326,927. This was due to a few large contracts early in the year, and since new net premiums were £156,823, compared with £240,655, these contracts appear to have been of a low-rated type, possibly group assurances. Net interest earned was 3.26 per cent. against 3.57 per cent. The valuation which normally would have taken place at the end of 1940 was advanced to cover the four years 1936-39. A surplus of £2,372,697 was shown (including interim bonuses already paid), liabilities being stringently valued. A compound reversionary bonus of £1 per cent. was declared (£1 16s. last time) and £616,991 was carried forward. The shareholders are credited with £209,419. The group's total assets are £57.6 millions, and securities entered at or under cost were exceeded by market values.

*

Norwich Union Fire.—There was an all-round expansion in premiums and

underwriting profits last year and the fire and accident departments yielded the satisfactory profit balances of 7.6 per cent. and 8.6 per cent., respectively.

	Earned Premiums		Underwriting Balances to Profit and Loss	
	1938	1939	1938	1939
Fire	1,771,085	1,795,285	90,699	136,008
Accident	1,528,436	1,592,659	105,409	136,766
Marine	254,746	333,778	...	...
	3,554,267	3,721,722		
Interest and fees			155,116	142,252
			351,224	415,026

The balance brought forward in the profit and loss account was £411,033, which with the credit of £415,026 gives a total of £826,059. Payment of the dividend and debenture interest for 1938 absorbed £195,627; directors' fees, taxes and bad debts, £121,321; the pension fund transfer, £75,000; while £61,828 was applied to writing down securities and to losses on realisation. This left £372,283 to be carried forward. The dividend on the £25 shares was repeated at 24 per cent. less tax. The shares are owned by the Norwich Union Life. The book value of the assets, £6.4 millions, was less than actual values; securities were taken at or under the market prices at the end of the year.

COMPANY MEETINGS

IMPERIAL CHEMICAL INDUSTRIES, LIMITED

INCREASED VOLUME OF BUSINESS

DEVELOPMENT OF EXPORTS

LORD MCGOWAN'S ADDRESS

The thirteenth annual general meeting of Imperial Chemical Industries, Limited, was held, on the 23rd instant, at Queen's Hall, London, W.

The Right Hon. Lord McGowan, K.B.E., D.C.L., LL.D. (the chairman), in the course of his speech, said: When the Germans marched into Czecho-Slovakia in March, 1939, we became more acutely apprehensive of the future, and shortly afterwards appointed an emergency committee to review the incidence of war on our productive resources, sources and stocks of raw materials, links with other manufacturers, the effects on our export trade, and so forth. Large additions were made to stocks which enabled us to increase production for national purposes immediately war was declared. We asked our principal associated and subsidiary companies overseas also to direct their attention to the problems which would arise and co-operated with them in arrangements for meeting war conditions. The committee also reviewed the methods and effects of the official controls which would be inevitable.

These plans were rapidly put into force in the closing days of August, when certainty was overtaking apprehension. They proved of the greatest possible service to us during the months which followed the actual outbreak of war. The factories were enabled to continue operations without serious interruption. Evacuation of our staff at the head office at Millbank was effected without a hitch. A number of staff were transferred to the various operating groups and the remainder to offices outside London.

PRICE POLICY

We were aware before the war began of the heavy additional cost that its shadow had already caused and after September this expenditure mounted rapidly. Most of the increases in the prices of raw materials have been attributable, directly or indirectly, to higher freight rates and war risk insurance. Generally speaking, overseas producers of our raw materials did not exploit the situation in any undue degree, but they had no control over transport or exchange and increases in cost were substantial.

It so happened, also, that we had agreed with the Trade Unions for a general advance in wages which was to come into effect half in October, 1939, and half in April, 1940. These conditions, coupled with the heavy burden of premiums for war risks insurance, specially concentrated our attention on our price policy. We determined that we would maintain existing price levels as long as possible. There was immediate evidence that the factories would be hard pressed for deliveries and we therefore decided to rely on the counterbalancing effect on costs of this increase in volume.

It is our practice, under standing contracts with our customers, to fix towards the close of each year the prices of many of our main products for the following calendar year. When we had to come to a decision in this matter in November last, we made such forecasts as were possible, and determined that the price policy we had adopted should be adhered to, subject to the modification that, where returns had been unremunerative, prices should be altered to correct that position. But because it was impossible to forecast with any certainty the trend of volume, or costs generally, we took steps to announce standard advances in price, not to become effective until circumstances demanded it. As a result, industry has enjoyed a continuation of the prices of our principal chemical products which were in force at the outbreak of war. I am glad to say that so far no general increase has been made. Our customers have expressed great appreciation of this policy.

IMPORTANCE OF EXPORTS

There is one considerable exception, namely, the export trade. Not only has it been our duty to maintain and expand, wherever possible, the volume of our exports, but it has been consistent with the national interest to adjust prices to a reasonable extent, without prejudicing volume. Every additional pound of foreign exchange

that can be secured in this way serves to enlarge the volume of imports for war purposes which H.M. Government can obtain. I may say that our larger gross profits this year spring in some considerable measure from more profitable export business.

As a concern which trades in most of the markets of the world, and one which for certain products in this country is the major if not the sole manufacturer, it has long been the practice of the company and its predecessors to maintain spare productive capacity. It is our rule that we can never afford to let our customers down. That has often necessitated capital expenditure in anticipation of demand, with the possibility and sometimes the actuality that forecasts of demand ran ahead of subsequent events, so that the capital invested in these plants has lain unemployed for a time. In the chemical industry units of plant are often so large that they involve not only heavy capital expenditure, but require a considerable period of time for construction. This time element forbids us to wait. We must act in advance. But in exceptional circumstances, when demand takes an abrupt upward turn, this course brings its own reward. At the present time all such spare capacity is in full production and in almost every plant the pressure has been continual for more and more supplies. It brings with it, of course, much greater mental and nervous strain on the staff and workers who are responsible for operations. I would pay a high tribute to their loyal efforts.

HOME AFFAIRS

Our relations with H.M. Government have grown steadily closer throughout the year. We have been entrusted with a very considerable volume of work in erecting factories, which has set us numerous problems. It has meant heavy calls upon our staff, many of whom we have had to detach entirely for national purposes. We have also undertaken to operate a substantial number of agency factories for the Government. We have endeavoured—I think with success—to give every possible assistance that we could to the various Government Departments. The work that we have undertaken has, on the whole, progressed very smoothly. Our officers have worked in the most friendly co-operation with those of H.M. Government.

Perhaps you would permit me here to refer to the advantage that flows to-day from the formation of this company, as well as from our continued efforts over the past thirteen years to mould its huge organisation into a form best to fit it, not only successfully to carry on in times of peace a great essential industry, but also to be a vital national instrument in time of war. Without that, your company's organisation could not contribute what to-day it is able to offer to the national need.

OVERSEAS AFFAIRS

In my remarks last year on our export business I referred to the many difficulties met with in the overseas markets and to the importance of these being overcome in order to find a continuing outlet for British goods abroad. The vital necessity for expanding exports at that time rested mainly on the increasingly unfavourable balance of trade of this country and the danger of its repercussions on unemployment and the standard of living.

These considerations still exist, and, under war conditions, they are reinforced by two other factors. In the first place the war potential of this country can only be brought to its maximum pitch by importations of both raw materials and industrial products on a vast scale which to a large extent have to be paid for at the time of importation. The need for increased exports to pay for these imports, therefore, is greatly accentuated.

In the second place, the conditions under which this war is being fought have resulted in Germany, one of the largest producers and exporters of industrial products, being cut off more or less completely from her former overseas markets. On the one hand, this situation lays on Great Britain a responsibility to ensure that

essential supplies are forthcoming for those markets, while, on the other hand, it opens up an opportunity for the establishment of new export business which may be of the utmost value in the after-war years.

EXPORT TRADE EXPANSION

The experience of the company during 1939 in export business was satisfactory. Up to the beginning of September the volume of sales was larger than the previous year, while values in many directions tended to improve. The outbreak of war produced a brief period of somewhat violent readjustment during which the resources and needs of the country had to be assessed before export trade could be freely resumed. Well before the end of the year, however, the worst difficulties of this period had been overcome. Provision was being made for Government and other home needs, and production was being stepped up in many directions in order still to provide an adequate surplus for export.

I consider that, in a country which has always prided itself on leaving as much as possible to individual enterprise and planning, both the Government and industry can be congratulated on the comparative smoothness and speed with which the transition to a partially controlled economy has been effected.

FUNCTION OF EXPORT GROUPS

There are naturally many defects still to be set right, but these are in hand. First among them is the necessity so to organise the industry and trade of the country as to ensure the maximum export effort. This is now widely recognised by the public as well as by official and trade interests, and I welcome the establishment of the Export Council by my friend and recent colleague, the President of the Board of Trade. The Export Groups being set up in individual industries under the Export Council will permit concerted action by industries and will enable the Government to give the greatest possible assistance where it is most needed. In a number of cases your company has undertaken, in co-operation with the Board of Trade, the preliminary work of establishing these Export Groups, and will itself act as strong and loyal supporters of them. One interesting function which they should be able to perform will be to ensure that products, such as many of those made by your company, which can either be exported themselves or enter into the manufacture of other products of greater value, shall be so allocated as to bring back the maximum benefit to the nation.

The progress of export trade during the current year will be largely governed by the factors I have already mentioned. In some directions home demand for war purposes will absorb the bulk of our output. In others, by intensive and expanding production, we shall be able to benefit, I hope on a very considerable scale, in the markets left short of supply by the arrest of German exports. This trend is already visible in our sales during the first part of this year, and I can assure you that every effort is being made to strengthen it in the interests both of your company and of the country.

Our associated enterprises in the British Commonwealth—Australia, Canada, India and South Africa—continue to prosper. In each country close co-operation is being maintained with the Governments, and the general relations which exist are very gratifying to us. The new alkali works of the Australian company and the electrolytic plant of the Indian company have just commenced production.

RESEARCH AND DEVELOPMENT

The outbreak of war has wrought many changes in our research activities by altering the emphasis on the various problems we had in hand, but it has not in any way reduced the necessity for maintaining our total volume of research but rather the contrary.

In the first place, the call to produce materials for the direct use of the fighting services, materials which may in some cases be new, or in others be old but needed in greatly increased quantities, has presented us with many technical problems of the highest urgency. It is fortunate that we have a large and efficient research organisation in being, which is capable of dealing quickly and effectively with such problems as they arise.

In the second place, we have had to devise processes and start the manufacture of a very considerable number of essential chemicals which, up to the outbreak of war, were mainly imported. I look forward to considerable developments in this field.

Thirdly, we are concerned in a number of investigations which are calculated to increase the national reserves and to fortify the resistance of the nation to war conditions. Your board have decided to give every support possible to research of this character.

We have given our cordial support to the War Savings campaign. A National Savings Group has been formed to embrace all the work and offices of our organisation throughout the United Kingdom, in connection with which arrangements have been made for instalment payments by deduction from weekly and monthly remuneration. A large number of our employees have already become members. When so many who are near and dear to us are staking their lives in the colossal battle which is still raging in France and Belgium, the least we who are working on the home front can do is to curb our own expenditure to the minimum and put every remaining penny into the national finance.

FINANCIAL POSITION

The consolidated accounts combine the assets and liabilities of Imperial Chemical Industries, Limited, and 118 subsidiary companies. The total gross income amounts to £15,343,000, compared with £10,463,000 in 1938, or an increase of nearly 50 per cent. Practically the whole of this gain arises from the first item, manufacturing and trading profits less losses, which has risen from £9,023,000 to £13,701,000. The substantial growth is to be attributed entirely to the great development in the volume of our business and more profitable export trade. The net consolidated income for the year amounted to £7,678,000, as against £7,282,000, or an increase of £396,000. You will, therefore, see that an increase in the gross income of £4,880,000 is reduced in terms of net income to £396,000. Practically all that we have gained has disappeared. The chief explanation is to be found in the three items of taxation, miscellaneous expenditure, and obsolescence and depreciation.

In the consolidated balance sheet the figures are largely self-explanatory and there are few changes of any moment. The important aspects of this statement are, I think, to be found in a comparison of our current assets with our current liabilities and in the amount of the surplus of assets over liabilities and share capital. This year our current assets are just over £43 millions, as against our current liabilities of £22½ millions. There is a surplus of over £20 millions. Our stocks have risen substantially. Rising values of stocks have an element of danger in them, for there can be few who remember the Great War who will not be conscious of the heavy slump in the value of stocks that took place following its termination. We are watching this item carefully, and it may be that if prices of materials continue their present upward trend we shall have to make appropriate reserve provisions against the possibility of a repetition of events.

Turning now to the surplus of assets over liabilities and share capital—an item which excludes the interest of external shareholders in subsidiary companies—you will see that it has risen in the year from £13,281,000 to £14,666,000. In the main the increase of £1,385,000 represents our reserve allocations. We shall hope to see progress in this item from year to year.

The profit and loss account shows you that, bringing in the balance brought forward from 1938 of £621,000, the total amount disposable was £7,934,000. After providing for the Workers' Pension Fund, which this year calls for £180,000, as compared with £173,000 last year, the board appropriated £375,000 to the general reserve and £1,000,000 to a war contingency reserve. This left a balance of £6,379,000. After payment of the preference dividend of £1,666,000 and an interim dividend of 3 per cent. paid on December 1st last of £1,512,000, your board recommend a final dividend of 5 per cent. on the ordinary stock which, with the 3 per cent. interim dividend already paid, makes a total dividend for the year of 8 per cent. on that stock. The final dividend, which will be paid on July 1, 1940, requires a sum of £2,520,000, which will leave to be carried forward to 1940 £681,000, or £60,000 more than the amount brought in.

PROSPECTS FOR 1940

The few sentences on the prospects for 1940 with which I had intended to conclude this address have been outdated by the passage into law yesterday of the new Emergency Powers (Defence) Act. It gives power by Order in Council to make regulations requiring all persons to place themselves, their services and their property at the disposal of the Crown. All of us will welcome these powers, but it will be as clear to you as to me that their effect on the company cannot be foreseen. You will gather from what I have already said that since last September the whole strength of our organisation has been ungrudgingly devoted to whatever services we could render His Majesty's Government. What further may now be required of the company will be most willingly given, and in this we know we shall have your fullest and most loyal support. (Applause.)

The report and accounts were unanimously adopted.

COMMERCIAL UNION ASSURANCE COMPANY, LIMITED

SOUND POSITION

SIR BERTRAM HORNSBY'S ADDRESS

The seventy-eighth annual general meeting of the Commercial Union Assurance Company, Limited, was held, on the 21st instant, in the registered office of the company, 24 Cornhill, London.

The Secretary (Mr R. K. Lochhead, F.I.A.), having read the notice convening the meeting and the report of the auditors,

Sir Bertram Hornsby, C.B.E. (the chairman), said that he would like to give some indication of the probable effect of the war upon their business, but the forces set in motion were such that it would be rash to make any forecast.

Their business was very widespread, there were few countries in the world where they had no interests. However, more than 90 per cent. of their total premium income—other than from life business, which was almost entirely confined to the United Kingdom—was derived from this country, the Dominions, the United States, and countries in which they might reasonably expect to continue their operations.

As shareholders would have noticed from the figures before them, the direct effect of the war to the end of 1939 had been relatively small, but our difficulties must of necessity increase, and unceasing thought and vigilance would be required to deal with them. The occupation of Denmark and Holland and the invasion of Norway and Belgium had already brought their problems.

FIRE INCOME

The fire department premium income had been well maintained at £5,369,373, the decrease compared with 1938 being only some £10,000. The net underwriting profit was £362,613, of which £325,000 was transferred to profit and loss account, the balance being added to the additional reserve, bringing the fire fund to £7,055,200, or 131.4 per cent. of the premium income.

MARINE FUND

The net premiums in the marine department amounted to £896,228, and showed an increase of £212,268. Claims paid and outstanding amounted to £484,483, and £75,000 had been transferred to profit and loss account. The marine fund now stood at £1,411,827, or 157.53 per cent. of the premium income.

ACCIDENT INCREASE

The premium income in the accident department of £8,182,396 showed an increase of £25,196, and the claims experience had again been good, the ratio being 53.48 per cent., which was slightly better than in the preceding year. The underwriting profit was £451,054, of which £400,000 was transferred to profit and loss account, the balance being added to the accident fund, which now stood at £5,990,029.

LIFE BUSINESS

As to the life department, the amount of new business had fallen away in the latter part of the year, but had nevertheless reached the satisfactory total of £4,719,022 as against £5,991,320 in the previous year. The net rate of interest was £3 11s. 3d. per cent. as against £3 14s. 3d. in the previous year, the decrease being due to the higher rate of income tax. In dealing with the problem of war risks they had been influenced and guided by previous experience. New policies now excluded war cover, but the exclusion could be removed on payment of an appropriation extra premium, and it was therefore possible to provide definite and certain cover for dependants, thus enabling the primary object of life assurance to be maintained.

PROFIT AND LOSS ACCOUNT

Referring to the profit and loss account, the chairman said that he would draw their attention to the fact that the item of interest, dividends and rents was shown at the gross figure of £1,011,404 before deduction of United Kingdom income tax. That was an increase of £14,003 compared with the corresponding amount last year.

After giving effect to transfers and appropriations there was

a balance remaining on profit and loss account of £480,109, out of which the directors recommended that a final dividend for the year 1939 of 3s. 6d. per £1 of stock, less income tax, be declared. That would absorb £397,512, leaving to be carried forward the sum of £82,597, an increase of £22,741.

A final dividend of 3s. 6d., together with the interim dividend of 3s. declared in November last, made a total dividend for 1939 of 6s. 6d., compared with 8s. for 1938.

A reduction in dividend must always be something of a disappointment to stockholders, but it was satisfactory to know that the primary reason was not a material fall in the profit-earning power of their business. It would have been possible to pay a higher dividend on that occasion by decreasing the allocation to general reserve, but that course did not commend itself to the board, as they considered that under conditions now prevailing a conservative policy was called for.

BALANCE SHEET

Passing now to the consolidated balance sheet, the general reserve fund, after transferring £225,000 from profit and loss account, stood at £4,561,234, an increase of £156,504 over last year. In the year under review it had been charged with £144,576 to cover depreciation in the values of certain investments at December 31st. He was happy to say that on that date the aggregate market value of the Stock Exchange securities was considerably in excess of the book values.

The departmental funds increased during the year by £282,831, and now amounted to £14,457,055, a figure very largely in excess of the normal reserves for unexpired risks.

He would also draw shareholders' attention to the fact that the total of the balance sheet, for the first time in the company's history, exceeds seventy millions.

In conclusion, he begged to acknowledge the assistance the directors had received from the boards of the allied companies and from the various local boards at home and abroad, and he wished to make special reference to the local board at New York which undertakes the responsibility of supervising their investments in the United States.

The report and accounts were unanimously adopted.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED

A SUCCESSFUL YEAR

The 104th annual general meeting of The Liverpool and London and Globe Insurance Company, Limited, was held in Liverpool on the 22nd instant.

Mr A. Kentish Barnes, the chairman, referred to the valuable contribution (of which this company produced its fair share) made by British insurance offices, through their overseas trading surpluses, towards "invisible exports," so important a factor in strengthening Britain's economic position. The company, with its vast world-wide operations, was transacting business in more than fifty different foreign currencies.

The company's new life business figures, at £2,444,900 net, were amongst its best. Fire experience, at home and overseas, had been favourable, net premiums totalling £3,802,967. Progress had been well maintained in the accident department with premiums of £4,694,164. Marine premiums were £545,782.

The underwriting profits totalled £782,352. Interest to profit and loss account was £399,584, and the balance carried forward was £1,338,888.

The report and accounts were adopted, and a final dividend of 13s. 6d. per share was declared, making 27s. per share, less tax, for 1939.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes. Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, 8 Bouverie Street, E.C.4.

SUN INSURANCE OFFICE

EXCELLENT RESULTS OF 230th YEAR

The annual general meeting of the Sun Insurance Office, Limited, was held on the 21st instant, at its head office in London.

Sir William H. Goschen (the chairman), in presenting the accounts for adoption, referred with regret to the death of Mr C. W. Tomkinson, a director since 1909. He pointed out that, by fair and honourable trading, British insurers had won for themselves a world-wide pre-eminence and had built up an immense volume of business in countries overseas. The national importance of maintaining this business was fully recognised by the Government, who had accordingly made arrangements whereby British insurers were permitted to use their funds to the fullest extent in discharge of their liabilities to allied, neutral or British claimants abroad.

SATISFACTORY ACCOUNTS

As regards the Sun accounts for 1939, he expressed the view that they gave much cause for satisfaction. The aggregate net premium income at £4,870,688 was the highest in the history of the company and reflected expansion in all three branches of the business.

The fire account showed an advance of £27,793 to £2,286,549. The profit upon the business at home was higher notwithstanding the large number of claims for damage by burst water pipes following the wintry conditions at the end of 1938. The severe frost early this year had been the cause of a further serious increase in the number of claims for such damage. He wished to emphasise the duty of policyholders to take every possible precaution to prevent damage of this character, particularly when buildings were left unoccupied. Business abroad had also contributed its share to the total fire profit of £270,733, equivalent to 11.86 per cent. of the earned premiums.

In the accident branch, premium income had increased by £46,404 to £1,931,673. A slight falling away of income at home had been more than compensated for by increases in various directions abroad, including the United States of America and Canada. The account showed a margin of profit of 6.65 per cent., which could not be regarded as unsatisfactory.

The outbreak of war had created considerable disturbance of motor business, new proposals falling off almost completely. A substantial decrease in income in 1940 from this source must be expected. The effect of the "black-out" had been to increase the number of claims for personal injury. These would have been more serious but for the diminution in the number of cars on the road. On the whole our results were not unsatisfactory.

Whilst there had been a reduction in the number of workmen's compensation claims at home, the reserves for outstanding claims had called for some strengthening, particularly those at common law. The passing by the Government of an Act, under which they assumed responsibility for war injuries, had relieved employers in this country of a serious potential liability.

Marine premiums at £652,465 showed some advance over the year 1938, and it had been possible to transfer £83,893 from the account to profit and loss, whilst leaving in the marine fund £1,068,077, equal to 163 per cent. of the premium income.

Transfers from the three revenue accounts to profit and loss aggregated £611,732. From this account £100,000 had been transferred to the pension fund, as in 1938.

THE INVESTMENTS

As regards the investments of the office, their market value at December 31st last substantially exceeded the figure shown in the balance sheet. The directors had, however, felt that in the light of the present world situation it would be prudent to adopt a conservative policy. They had accordingly decided to write down the book value of stocks and shares by £50,000 and the value of house by a similar amount.

The measures taken in 1939 for securing the safety of the staff in London and the provinces and ensuring the proper functioning of the office in wartime had been carried out without any loss of efficiency, and the cost had been charged almost entirely in the revenue accounts.

The board recommended a final dividend of 1s. 6d. per share, less income tax, the same as for 1938. In conclusion, the chairman, after pointing out that the total dividend cost for the year was well within the interest income, stated that, after payment of the forthcoming dividend, the funds of the office would stand at £8,206,814. The report was adopted.

UNION INSURANCE SOCIETY OF CANTON, LIMITED

REVIEW OF YEAR'S OPERATIONS

MR G. MISKIN'S SPEECH

The ordinary yearly meeting of the Union Insurance Society of Canton, Limited, was held, on the 3rd instant, at the Society's head office, Union Building, Hongkong.

Mr G. Miskin (chairman) presided, and in moving the adoption of the report, revenue accounts and balance sheet, said:—

Since our last meeting you will have learned of the death of our late general manager, Mr Paul Lauder.

Mr Paul Lauder rendered invaluable service to the Society from the time he joined its staff in 1906 until his retirement as general manager in 1934. As he was intimately known to so many here to-day, I am sure you will join me in an expression of deepest regret at his passing.

UNDERWRITING RESULTS

The report, revenue accounts and balance sheet for 1939 were issued on April 17th, and you will have had time to consider the figures. I propose, therefore, to follow the usual custom and take these, as well as the auditors' report, as read.

Marine premium at £1,099,237 was substantially higher than in 1938, due in a large measure to war risk income. Claims paid on account of 1939 were £330,948, or some £22,000 higher than in 1938, which was to be expected in view of the larger income. In closing off the 1938 account we have been able to reserve £100,190 to meet subsequent losses on that year and to transfer £50,000 to profit and loss account.

The general experience in the fire field was reasonably good. In the United Kingdom and the United States the fire wastage reached higher figures than in recent years, but claims ratios in other countries were satisfactory. Our own fire income was slightly less than last year, and the claims ratio at 45.21 per cent. was higher, but the transfer of £50,000 to profit and loss account is satisfactory.

The amount transferred from the accident and general account to profit and loss, at £5,000, was less than last year. We are still seeking improvement in the unprofitable sections and are hopeful of eventual success.

In the profit and loss account, after making provision for dividend requirements and transferring £30,000 to underwriting suspense account, there is a balance carried forward of £302,045.

DIVIDEND POLICY

In authorising an interim dividend of 12s. 6d. per share in November, your directors were influenced largely by the contingency guarantee claims to which reference has been made at previous meetings, and the uncertainty of the effect the war would have on our affairs. The recommendation now before you of a final dividend of 12s. 6d. per share is governed largely by the same factors, plus the desirability of keeping the distribution within an amount approximating the interest earned.

So far as the contingency guarantee claims are concerned, I am able to state that the losses in which we were involved have been adjusted and payment made. This unfortunate loss was severe and heavier than could reasonably have been anticipated. It is, however, now finally disposed of with the exception of certain amounts to be received as salvages and recoveries.

Development plans for our recently acquired subsidiary, the British Oak Insurance Company, Limited, have been interfered with by the war. Encouraging progress was being made up to September, but the general dislocation since that date, plus heavy expenses incurred in transferring the business and staff from London to the country, has retarded the hoped-for expansion. Our Canadian subsidiary, the Beaver Fire Insurance Company, is still a small company, and the distractions of the year have prevented concentration upon its development. Attention will be given to this matter as soon as circumstances permit.

I cannot close without expressing the keen appreciation felt by your directors for the devoted work of the staff during the recent months of stress and difficulty. I am sure you will join in the board's appreciation of their good work.

The report, revenue accounts and balance sheet were unanimously adopted.

NORWICH UNION LIFE INSURANCE SOCIETY

SOUND POSITION

The 132nd annual general meeting of the Norwich Union Life Insurance Society was held, on the 21st instant, at Norwich.

Mr Ernest Hicks (the president) said that when war was declared last September immediate consideration had to be given to many problems affecting their business. There was one important matter which, fortunately, gave them no concern, namely, the general basis on which they valued their liabilities. This Society had for nearly forty years maintained its reserves on a 2½ per cent. net interest-earning basis, although when rates of interest in the open market were high if they had taken the short view they might have weakened their reserves and would certainly be regretting that action to-day.

For the first time for many years they had to record a decrease in their new business figures, but he thought it would be agreed that a total of over £10,300,000, representing a decrease of only 12 per cent. on their record figure for 1938, was extremely satisfactory in the special circumstances. The mortality experience had again been very favourable, and the expense ratio was only 13.6 per cent. against 14.3 per cent. for 1938.

Although the market values of Stock Exchange securities were very low as on December 31st last he was able to assure members that with their internal reserves the assets as a whole were fully of the value shown in the balance sheet. Also, at the end of last month the depreciation in their Stock Exchange securities had been more than recovered. All these features in connection with the accounts were extremely satisfactory.

The gross rate of interest over the whole of the assets was £4 14s. 1d. per cent., a reduction of only 1s. 5d. per cent. on the 1938 figure. The net rate of interest, £3 18s. 1d. per cent., showed a reduction of 4s. 6d. per cent. on the figure of the previous year, due entirely to the large increase in the rate of income tax. Even now, however, they were able to show a margin of no less than £1 8s. 1d. per cent. over the 2½ per cent. rate which was used in the valuation of their liabilities.

The report was unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED

IMPROVED UNDERWRITING RESULTS

The annual general meeting of the Norwich Union Fire Insurance Society, Limited, was held, on the 20th instant, at Norwich.

Mr Ernest Hicks (the chairman) said that the underwriting results of the fire and accident departments were good. In the fire account they had a modest increase of £19,429 in premium income, a favourable loss ratio, and a profit of £136,008, being 7.52 per cent. of the premiums totalling £1,808,699. This compared with a profit of 5.07 per cent. last year, and was a gratifying result, to which both the home and foreign fields had contributed. The home business was still a very good contributor to their profits. Abroad also the fire business had increased and the losses were lighter than in the previous year.

In the accident account they had improved upon the good results of 1938. The premium income was increased by £51,643 to £1,607,674. The profit ratio was 8.51 per cent. against 6.78 per cent., and £136,766 was contributed to the profits for the year. Their home accident business had for a long series of years been satisfactory, and it improved on its good record in the period under review, while there was also a marked improvement in the foreign section.

The marine account showed the largest increase in premiums, which now amounted to £333,778, or £79,032 greater than last year, but they would be unwise to anticipate any larger profit from this source. The marine fund of £307,364 had a substantial surplus, after fully covering the liabilities, but they were not transferring any of this to the credit of the profit and loss account.

The profit and loss account was credited with £411,033 brought forward, to which were added the trading profits, totalling £272,774, the largest contribution which they had had for 20 years, and the net interest of £142,246. The balance to be carried forward was £372,283, which approximated to the net dividend at the present rate for two years. The total assets of the Society amounted to £6,411,005, an increase of £219,682 over last year.

The report was unanimously adopted.

CABLE AND WIRELESS, LIMITED
(THE OPERATING COMPANY)

A RECORD YEAR

The eleventh ordinary general meeting of Cable and Wireless, Limited (the operating company), was held in London on the 21st instant.

Sir Edward Wilshaw, K.C.M.G. (chairman and managing director), in the course of his speech, said:—This is a record year. The profits are up by £600,000. The dividend a few years ago was only one-quarter per cent. The 4 per cent. gross dividend payable for the year 1939, which just reaches the Chancellor of the Exchequer's limit, amounts to no less a sum than £1,200,000, or £225,000 more than the previous year, and experience of the first four months of this year gives confidence not only in its maintenance but, if continued, even better results.

As to the Colonial wireless telegraph and telephone installations, the sets went out from England in the early days of the war. I can say that the sets have far exceeded our expectations. Long before we meet next year we may be able to report that every cable station in the Colonies is equipped with wireless. There will then be a complete dual system of cable and wireless chains throughout the system, and this augmentation of services supplementary and complementary to each other will have been accomplished in under twenty months.

INTRODUCTION OF 2s. 6d. TELEGRAM FOR FORCES

I come now to the question of war conditions and I may mention first two steps taken to meet particular and special requirements. The flat rate for Empire Press traffic was a recognition of the need for the exchange of news, but in wartime there are many occasions when an urgent service is vital, not only to the Press, but to its readers. We therefore reduced the urgent Press rate to half. We had also to consider those serving in the Forces, so many of whom have come to our aid from distant Dominions and Colonies, while others, from home, are themselves serving in distant parts of the Empire.

To meet their case, and to enable them to keep in touch with their families and their kinsfolk with them, we have introduced the Expeditionary Force message or EFM service, at 2s. 6d., or half the Empire social telegram charge, with the further advantage that no charge is made for the address. This service is available both ways for the Army and Air Force, and for all ranks of the Royal Navy when in the United Kingdom, but I regret that it has not yet been found possible to include Canada.

Your company is the only British-owned and operated overseas telegraph company in this country, and while we have cordial and reciprocal arrangements with the foreign telegraph companies in this country we cannot but feel that in many respects they are specially privileged. Some of them, to the best of our knowledge, are, or have been, operating in this country for some years without such licences as those we have to obtain and whose terms we must observe. Then again, quite apart from the restriction recently imposed by the Chancellor of the Exchequer on dividends generally, we have a special and permanent dividend restriction of a meagre 4 per cent. above which one-half of the profits have to be applied to further reduction of rates.

No such restriction is imposed on foreign companies working in this country. Neither do they come under the jurisdiction of the Imperial Communications Advisory Committee, and though that body has been most helpful to your company it has no control over our foreign competitors here.

It must also be remembered that His Majesty's Government now has a substantial holding of shares in this undertaking and would participate in any savings this company was able to obtain as a result of concentration. Until, however, this is found to be possible, we think we have the right to appeal to the British users of overseas telegraphs to support the British company, owned and operated by British capital and labour. The more use that is made of this system the larger will be the portion of profits which have to be set aside for further reductions in rates for their benefit while at such a time as this that money should be kept in our country.

We were the pioneers of overseas communications, and it was British vision, imagination and enterprise that made British communications predominant throughout the world. That is a position we cannot maintain if we give facilities to the foreigner in this country which they will not give to us in theirs. Failure to appreciate the realities of this situation is bound to have its serious effect upon British communications.

The report and accounts were unanimously adopted.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY, LIMITED

YEAR OF EXPANSION AND DEVELOPMENT

SIR A. HENRY McMAHON'S ADDRESS

The forty-sixth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held, on the 21st instant, at the Great Eastern Hotel, E.C.

Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (chairman of the company), presided, and in the course of his speech said:—

The net profit of £113,881 shows a reduction of some £4,000 on last year's figure, but when you consider that we had to pay nearly £16,000 more in taxation, you will agree that we have good reason to be satisfied with the results of the year's working. I expect that you were disappointed by the reduction of the final dividend on the ordinary shares from 8 to 7½ per cent., free of tax. So were the directors. We have explained the reason for our action in our report, and I am confident that you will agree that in the present crisis we had no option but to conform to the policy laid down by his Majesty's Government.

We have given some information about the progress of our subsidiary and associated companies in our report. Without exception, this year has been one of expansion and development for them, and they are all pursuing with success a policy of attracting new business by reduction of rates or other concessions.

I have left to the last the most important thing I have to say. You are no doubt aware that under the terms of the licences under which the Indian companies operate the Government of India have the option to take over the undertakings of those companies on March 31, 1943. They are not required by the licences to give more than one year's notice. A telephone company, as you know, must take long views and must plan for some years ahead, and the shortness of the period of notice places the Indian companies in a difficult dilemma. On the one hand, it is most important in the interests of the public that development should go on uninterruptedly. On the other hand, a telephone company cannot reasonably be expected to embark on large schemes of capital expenditure if there is a probability, or even a possibility, that the benefit of that capital expenditure will accrue not to itself but to a successor in title.

ATTITUDE OF INDIAN GOVERNMENT

We have foreseen this difficulty for some years past and have been in correspondence regarding it with the boards of our Indian companies. They, in their turn, addressed the Government of India on the subject in 1937. They did not ask the Government of India at once to declare whether or not they proposed to take over the undertakings in 1943, but they suggested that the contingency of acquisition in that year should be provided for by a provisional arrangement regarding capital expenditure, so as to ensure that development should proceed without interruption. The Government appreciate this difficulty, and last year they suggested that probably the best solution would be for them to take over the systems this year, compensating the companies, of course, for the loss of the profits they would have earned up to March 31, 1943.

They inquired whether the companies would be prepared to consider an offer on these lines if it were made, and, after consulting us, they signified their willingness to do so. Every facility has been afforded to the Government, and their officials have been allowed to examine the books and plant of the companies in order that the Government may decide what offer they are prepared to make. No offer, however, has yet been received, but we are daily expecting it. All this, I should explain, refers to the Indian companies. As regards the Rangoon Telephone Company, the Government of Burma have recently given formal notice of their intention to take over the undertaking on March 31, 1943, and the question of capital expenditure during the intervening period is now being actively considered.

That is all I can tell you at present, but you will, of course, realise the implications of what I have said. If an offer is made by the Government of India, and if the Indian companies do decide to accept it, the future of our company will require careful consideration.

The report and accounts were unanimously adopted.

MARKS AND SPENCER LIMITED

MR SIMON MARKS' REVIEW

The fourteenth annual general meeting of Marks and Spencer Limited, was held, on the 21st instant, in London.

Mr Simon Marks (chairman and managing director) presided. The Chairman, in the course of his speech, said:—One of your directors, the Rt. Hon. L. S. Amery, P.C., M.P., has had the signal honour to be invited to join Mr Churchill's Cabinet as Secretary of State for India. His acceptance of Cabinet Office involves his resignation from the board. We regret the loss of his collaboration, which has been much valued by his colleagues, and we wish him every success in the great task which he has undertaken.

In November last the board appointed as a director Mr J. Edward Sieff, who has occupied a responsible position with the company for a number of years. This appointment will prove of advantage to the company.

GOVERNMENT LIMITATION OF DIVIDENDS

The Chancellor of the Exchequer introduced in the Budget certain limitations upon the amount which companies will during the war be entitled to distribute by way of dividend on ordinary share capital. It has, therefore, become necessary for the board to modify its original recommendation so that the total distribution your board now propose for the year is 38½ per cent., or 1s. 11d. per share, absorbing a gross sum of £493,322 instead of £581,416 referred to in the report.

ALLOCATION OF PROFITS

The profit for the past year amounted to £2,379,000. There has to be deducted, on account of income tax and E.P.T., a total of £1,166,000, leaving a balance of £1,213,000. Adding the balance brought forward from last year of £98,000, makes a total of £1,311,000.

After the payment of dividends on preference shares, and the interim dividend on the ordinary and "A" ordinary shares, there is left a balance of £889,000. In lieu of the recommendations in their printed report, the directors now recommend the following appropriations:—

	£
Staff benevolent and pensions fund ...	25,000
Debenture redemption fund ...	13,000
Final dividend on the ordinary and "A" ordinary shares ...	493,000
Transfer to income tax account ...	33,000
The carrying forward of ...	325,000

RESERVES

We have built up a general reserve of £2,150,000, a freehold properties depreciation reserve of £376,802, whilst the properties contingency reserve stands at £238,375. We do not propose, this year, to add to these reserves.

DEPRECIATION AND REPAIRS TO PROPERTIES

Depreciation and repairs to properties this year absorbs £481,203, as against £431,045. We have written off the whole of the capital cost of air raid shelters, amounting to a net figure of £86,000.

BALANCE SHEET

Trade creditors have risen to £648,000, as against £473,000, due to the stock in trade we are carrying, which amounts to £2,234,000, an increase on last year of £591,000.

Cash in hand stands at £1,760,000 compared with £935,000 a year ago.

SUPPLIES

During the last few years we have given special attention to the development of our food departments. The large expansion of volume of sales of foodstuffs has proved that the public welcomes this development, and has confidence in our quality and value.

STAFF

Our staff have responded with loyalty and devotion to additional tasks and responsibilities. I would like to express our thanks to them for the manner in which they have discharged their duty. Out of a total of 2,000 men, 550 are serving in H.M. Forces, and a further 400 have registered, or will register before the end of the month. We recognise that with the return of peace it will be our

duty, as it is our desire, to take back into our service those who have joined the Forces. We wish them all good fortune and a safe return. We are supplementing the pay of our men serving in the Forces, to enable them to make provision for their dependants.

WELFARE

Our welfare services continue to expand, and their success is proved by the smallness of our labour turnover. Over 5,000 members of our staff have been trained in the Civil Defence Services.

A National Savings Group has been formed through which our staff is subscribing over £1,000 per week, and they are giving generous support to the Red Cross Penny-a-Week Fund.

The resolution for the adoption of the accounts and the amended report was carried unanimously.

Resolutions were passed re-electing the directors retiring in accordance with the provisions of the articles, and also re-electing the auditors.

It was announced that dividend warrants will be posted on June 18th (in lieu of June 7th as previously proposed) to shareholders whose names were on the register of members on May 6, 1940.

INCORPORATED ACCOUNTANTS

THE PRESIDENT'S ADDRESS

The fifty-fifth annual general meeting of the Society of Incorporated Accountants and Auditors was held, on the 23rd instant, at Incorporated Accountants' Hall, Victoria Embankment, W.C. Mr Percy Toothill, F.S.A.A., the president, occupied the chair.

The Chairman, in the course of his address, said:—Before the outbreak of war the Society was asked to co-operate with the other principal bodies in helping to form an accountancy section of the Central Register. A very large number of members of the profession intimated their willingness to consider the offer of whole-time or part-time Government work in their professional capacity. So far the Register has not been used for part-time appointments—in many ways that is, I consider, a pity—but a considerable number of full-time appointments have been made. The Society has supplied its quota of members for these appointments. My own view is that it would have been desirable if firms also could have been appointed for accountancy work through an appropriate advisory committee, but that method has not been generally adopted.

No one should attempt to minimise the heavy burden of taxation which the community is already bearing. But I think it is as well that attention be drawn to two things. In the first place, the real burden of taxation can be lightened only by a progressive increase in industrial production. In the second case, higher taxation should be thought of not in isolation, but in relation to the alternative methods of finance. These alternatives, in brief, are inflation and saving—and saving may be either forced or voluntary. I think inflation should be avoided, and while I would wish to encourage voluntary saving as much as possible, I do not think the voluntary effort alone can possibly be sufficient for the enormous drive which it is necessary to make.

So far as the income tax on private incomes is concerned, our present system appears to me to mislead in a serious fashion. I therefore suggest that the Chancellor could with advantage reformulate the basis of income tax on personal incomes, so that the stress would be placed upon effective rates and not the standard rate. This would be a change in form only, but I consider it would have important psychological advantages.

The Excess Profits Tax is involving accountants in a vast amount of work—work which is, I am afraid, unduly increased by the ambiguities and anomalies of the tax as it was enacted last September. It is plain from the Budget Speech and resolutions that the new Finance Bill will remove some at least of the unsatisfactory accounting features of the tax.

The limitation of dividends by legislation applies only to public companies. Nevertheless, wherever possible, the directors of private companies should bear in mind that the national interest is best served by a smaller rather than a larger distribution of profits. Mention of private companies suggests an important truth which is coming increasingly to light in present conditions. I refer to the great part which in normal times is played by the small firm in our industrial and trading life. Contrary to the general misconception, the small unit is not on the whole uneconomic, for it has over many years without encouragement or favour from above gained a pre-dominant place in many different industries. In our war effort, when

the normal working of industry is changed by official direction, the small unit should be utilised to the full, and I hope a greater effort will be made to that end, particularly by the Ministry of Supply.

Accountancy circles during the past year have continually stressed the extreme need of avoiding waste. One particular direction in which this thesis can still bear further emphasis concerns the pricing of Government contracts. I am convinced that control at the source of profit-making, that is, in the initial contract prices, is preferable to extremely high taxation after the profits have been made. But for such control to be completely efficient, I am also convinced that the accountancy profession must be drawn into wholehearted co-operation with the Government.

ANGLO-AMERICAN DEBENTURE CORPORATION LIMITED

DIVIDEND MAINTAINED AT 12 PER CENT.

The fifteenth ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Owen H. Smith (a director) presided and read the speech prepared by the chairman, Mr Richard S. Guinness, who was unable to be present. In the course of the speech it was stated that the steady growth of their revenue account over the previous five years had been arrested, but as the fall this year in their gross revenue had been limited to under 3½ per cent. compared with last year, they were able to recommend the maintenance of the dividend on the ordinary stock at the same level of 12 per cent. The value of their investments had been maintained. Indeed, a small improvement was shown over last year, and their capital therefore remained intact, with a substantial surplus.

The book cost of their investments amounted to £2,496,639. The value, based upon Stock Exchange quotations, and in a few cases on figures fixed by the board where no quotation was available, amounted to £2,404,974, a depreciation of £91,665. The reserve account of £365,000 and the carry-forward of £70,451 together amounted to £435,451, and if they set the depreciation of £91,665 against this they arrived at a surplus of £343,786 over and above the par value of their debenture debt and preference and ordinary capital. The indicated value of the £450,000 ordinary stock was therefore £793,786, or 176½ per £100 of stock ex dividend.

They had built up a substantial carry-forward on revenue account, so that they should hope to meet shareholders next year with the declaration of a satisfactory gross dividend at any rate; what the net yield might be was out of their hands.

The report was unanimously adopted.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED

The seventy-eighth ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 22nd instant, in London.

Mr Frederick R. S. Balfour, who presided in the absence of the chairman, Major Francis Glyn, on military service, said that they proposed to pay 3¼ per cent., free of tax, which was within a fraction of a farthing the highest figure permitted to them.

British taxation was a large figure. They were taxed on the gross sum earned, out of which general depreciation and reserve against their extinction in 1947 had to be found before the profit-and-loss figure of £191,259 was reached. Taxation in Brazil was yearly becoming more burdensome and they had to reserve an adequate sum against its incidence.

Owing to exchange restrictions the sum of money in Rio awaiting remittance had by the end of the year reached the formidable figure of £565,981 6s. 3d., and in addition they held Brazilian Government bonds for £63,724 12s. 8d. Arrangements had been concluded with the Government of Brazil in the last few weeks by which £30,000 of it was payable in cash and £350,000 by remittances in the form of sterling promissory notes drawn monthly by the Bank of Brazil on a London bank over a period of forty-four months. The cash and promissory notes had now been received.

It might be remembered that the agreement as to drainage rents, reached with the Government in 1937, was subject to review every third year; the first period for review had been reached. Their relations with the Government were of a cordial nature, and they had no reason to expect anything but fair and just treatment in respect of the continuance of their agreement.

The report and accounts were unanimously adopted.

TIMOTHY WHITES AND TAYLORS,
LIMITED

THOROUGHLY SOUND POSITION

The eleventh ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Philip E. Hill, the chairman, said: For the second time in 25 years we find the Empire engaged in a war for its very existence. The present conflict differs from its predecessors inasmuch as for the first time in history what is called economic warfare is being waged with equal intensity as that warfare for which the fighting services are responsible. This economic warfare affects either directly or indirectly practically every form of industrial activity throughout the country, and in this respect your company is no exception. Difficulties have been and will be experienced in obtaining supplies. I do not wish to over-emphasise these difficulties, as I feel confident that with the loyal support of our staff we will be able to maintain the excellent service which has been enjoyed by our customers during the difficult months since the outbreak of war.

ASSISTING THE NATIONAL SAVINGS EFFORT

Many members of the staff have been called up for duty with the Services, and we are confident that they will acquit themselves in a worthy manner. In view of the primary importance of financing a large portion of the country's war expenditure out of savings, we are materially assisting the National Savings Movement among our 10,000 employees. With the object of encouraging the purchase of National Savings Certificates we have agreed to give the last two 6d. stamps on all our employees' war savings cards, that is to say, when an employee has saved 14s. towards the purchase of a 15s. certificate, we pay the last 1s. for him, leaving him free to start saving for his next certificate. We are doing this up to five certificates to each member of the staff. I am happy to say that the scheme has so far had most encouraging results.

The trading profit for the year ended December 31, 1939, amounted to the sum of £373,339, which compares with £347,700. This increase during such difficult times is satisfactory, particularly when it is realised that special expenditure incurred in the development of new branches has on the present occasion been met out of revenue, whereas during the previous year this cost was provided from development account.

During recent years many new branches have been opened and many old ones have been modernised, and our results show the wisdom of this policy, which should have progressively favourable results during the coming years. Six new dual shops—chemist and hardware—one new single drug shop and four single hardware shops have been opened.

THE DIVIDEND

Your directors have decided to recommend the payment of a final dividend of 22½ per cent., less tax, on the ordinary shares—making with the interim dividend already paid a total of 30 per cent. for the year—increasing the carry forward from £56,274 to £66,525. The issue of £500,000 of 5 per cent. debenture stock was an outstanding success and although limited to existing stock and shareholders was largely oversubscribed.

As a result of this issue our bank loan and overdraft, which stood in our last balance sheet at £256,053, has been paid off while our cash in hand and at the bank has increased from £16,648 to £196,862.

In view of present conditions I am not going to attempt to prophesy as to results. All I feel justified in saying is that your business is in a thoroughly sound position and is showing the results of much good work done in the past.

The obligations of a business such as this are not limited to its shareholders. They also extend to its staff and to its customers—the general public. We in Timothy Whites and Taylors are fortunate in our staff. Our thanks are due to all from Mr Espley—our managing director—and Mr Wilson and Mr Rushton, his assistants, who are achieving such excellent results these difficult days, down to the assistant in the smallest branch. We realise our responsibility to them, and we are in many cases assisting the dependants of those who have temporarily left us to join the fighting services.

As regards our customers, we feel that businesses such as yours can play an important part in preventing an unjustified increase in the cost of living, and constant attention to this point is being paid by your directors.

The report and accounts were unanimously adopted.

INDUSTRIAL AND GENERAL TRUST,
LIMITED

INVESTMENT MARKET AND THE WAR

The fifty-second ordinary general meeting of the Industrial and General Trust, Limited, was held, on the 23rd instant, in London.

Mr W. Sandford Poole (the chairman) said that the investment market, which had been an uneasy and difficult one for trust company managements during the past few years, had naturally become more uneasy and difficult since the war broke out. The transition to war conditions had dislocated world trade and the prospects of some investments, which a few years ago had looked quite good, had been completely upset. In all the circumstances he felt sure shareholders would have received with satisfaction the accounts laid before them that day. At £493,520, the drop in gross income was only £11,973, which might be regarded as not unsatisfactory in view of the times.

The 4 per cent. interim dividend paid on the ordinary stock in November last took £45,500, and the final distribution of 8 per cent., less tax, now recommended, required £91,729, and made 12 per cent. per annum for the third successive year. Their investments stood in the balance sheet at £7,934,854, and it was gratifying that at the date of the balance sheet they were, on the basis of quotations, represented by value. Last year the surplus had been quite small. This year it was still unsubstantial, but exceeded that shown in either of the two previous years. It indicated that their capital was intact, as were also their reserves and the carry-forward.

Of their investments, nearly 68 per cent. were in Great Britain and the Dominions and Dependencies. The proposals in the recent Budget for the limitation of dividends would undoubtedly prevent the normal operation of the law of average, and that measure, in his view, was entirely uncalled for. No legislation should be introduced at this time unless it was going to help the country win the war, and that Bill would assuredly not do that. It meddled with business but did not assist the country's finances and he appealed to the Government to withdraw it as they did the original N.D.C. after objections to it had been voiced in various quarters. The Emergency Powers (Defence) Bill presented an even stronger case for the withdrawal of the Dividends Limitation Bill.

The report was unanimously adopted.

JAMES W. COOK AND COMPANY,
LIMITED

DISTRIBUTION MAINTAINED

The forty-third annual general meeting of James W. Cook and Company, Limited, was held, on the 17th instant, at the offices of the company, 130-138 Minories, London, Mr W. J. Clarke (chairman and managing director) presiding.

The Chairman, in the course of his speech, said:—The year was continuing satisfactorily and normally until the outbreak of war, when a very violent interruption in our activities occurred. In some branches business shrank very much for the time being, and in others our activities increased. Our ships and some of our craft were taken by the authorities and I find myself in somewhat of a difficulty under the Defence of the Realm Regulations to say more in detail of what took place. Suffice it to say that by the end of the year the result of our efforts is seen in the balance of the profit-and-loss account, carried to appropriation after rent, etc., repairs, depreciation, etc., amounting to £36,907 17s. 4d., compared with £43,728 8s. 11d. the previous year, which considering the abnormal conditions of the last four months of 1939 can be accounted as very good and once again justifying the developments of our additional branches.

After dealing at some length with various items in the balance sheet, the Chairman said:—That brings me to the position we are in to-day, and because of present events you will agree that it is quite impossible for me to give you any sort of forecast of the future, and it can only be that we must hope for the best and continue with stout hearts to carry on to the utmost, whatever difficulties there are or may be in front of us.

With regard to the disposal of our profits earned, you will see that the directors recommend the same dividend as last year and to transfer to reserve for contingencies another £5,000, making that figure £125,000, and to taxation reserve £12,000, which should be sufficient to cover any liability under this heading, and to carry forward to 1940 £46,440 10s. 8d., against £46,157 13s. 4d. that was brought in.

The report and accounts were unanimously adopted.

HARLAND AND WOLFF, LIMITED

FIGURES SHOW FURTHER IMPROVEMENT

MR F. E. REBBECK'S SPEECH

The annual general meeting of this company was held, on the 22nd instant, in London.

Mr F. E. Rebbeck, D.L., J.P. (chairman and managing director), in the course of his speech, said:—In common with your directors you will no doubt feel gratified that the results for 1939 show a further improvement over the figures of the previous year.

This is the more satisfactory because the greater part of the earnings in the year under review have been derived from the company's ordinary commercial activities—shipbuilding, ship-repairing, engineering, etc.

I would like to stress this, for I noticed from various Press comments following the publication of the directors' report and statement of accounts it was assumed that the increased earnings for the year are entirely the result of work carried out in connection with the country's defence programme.

During the current year, however, most of the work in hand is on Government account, and you will, I am sure, realise that all such work is subject to profit limitation, and some of the assumptions that have been made in the Press might be very misleading.

LIBERAL PROVISION FOR DEPRECIATION

With such a simple and straightforward balance sheet before you there is little need for amplification, but I would specially mention that your directors have thought it advisable to provide adequately for depreciation in view of the continuous heavy wear and tear that is taking place under the conditions of to-day.

It is proposed that £100,000 should be transferred to reserve, making the total £200,000; and this will require to be further strengthened at every opportunity in order to ensure that the company will have the necessary reserves for carrying on the business when normal conditions return.

The dividend policy proposed, viz., 6 per cent. to the "A" ordinary shareholders and 4 per cent. to the "B" ordinary stockholders, less income tax, will require £239,902.

In recommending this dividend your directors were naturally influenced by the appeal of the Chancellor of the Exchequer in his Budget speech.

There is little that I can add to what has already been said in the directors' report on the subject of Excess Profits Tax.

It must be recognised that the standard years are very unfair to this company. It therefore becomes necessary for a special application to be made to the Board of Referees to arrive at what we hope will prove to be an equitable standard. This is a matter which is very much before your board at the present time.

You will see from the balance sheet the extent to which the fixed assets of the company have been augmented during the year. This represents expenditure necessitated by the special needs of the programme of work on which we are now engaged and calls for exceptional depreciation.

A GREAT NATIONAL ASSET

In view of the conditions under which we are working to-day, it is not desirable that I should further amplify my remarks, and, therefore, my speech has to be brief. But while for obvious reasons I cannot go into details of all the work in hand, I can assure shareholders that the different works of the company, which are proving a great national asset, are employed to full capacity as far as is possible with the labour at our disposal, and they will be still further utilised directly more labour becomes available.

I now beg to move that the report and accounts to December 31, 1939, together with the directors' recommendations contained therein as follows:—

(a) Transfer to reserve;

(b) Payment of dividends on May 31st on the "A" ordinary shares and "B" ordinary stock;

(c) Payment of directors' remuneration, be and they are hereby approved and adopted, and I will call upon Mr Craig to second the motion.

Mr John Craig, C.B.E., D.L., J.P., seconded the resolution, which was carried unanimously.

THE
FOURTEENTH
ANNUAL
GENERAL MEETING
OF
MORRIS
MOTORS LIMITED

★

The Fourteenth Annual General Meeting of Morris Motors Ltd. was held at Cowley, Oxford, on Friday, 24th May, 1940.

Viscount Nuffield, Chairman of the Company, presided.

It was revealed that the Gross Profit for the year 1939 was £2,385,122 and that substantial reserves against contingencies have been made.

The Chairman's speech reviewed the activities of Morris Motors, Ltd. and associated Companies, comprising:—

MORRIS COMMERCIAL CARS LTD.
WOLSELEY MOTORS LTD.
M.G. CAR CO. LTD.
MORRIS-OXFORD PRESS LTD.
RILEY (COVENTRY) LTD.
THE S.U. CARBURETTER CO. LTD.
MORRIS INDUSTRIES EXPORTS LTD.
MECHANIZATIONS & AERO LTD.

Because of the need for economy in all things imposed by the War, the full text of the Chairman's speech—which necessarily was of considerable length—is not being published in the Press.

Full verbatim reports are, as usual, being posted to all Stockholders.

Copies thereof will gladly be sent post free to any interested applicants, who should address themselves to:

The Secretary,
MORRIS MOTORS LTD.,
Cowley, Oxford.

BRITISH-BORNEO PETROLEUM SYNDICATE, LIMITED

DISTRIBUTION OF 15 PER CENT.

The twenty-sixth ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Walter MacLachlan (chairman and managing director), who presided, said: The directors recommend the payment of a final dividend of 5 per cent. and a bonus of 5 per cent., both less tax, making a total distribution of 15 per cent. for the year. The final dividend and the bonus will be paid on June 15th and the income tax deducted will be at the rate of 6s. 11.964d. in the £, the reduction from the standard rate of 7s. 6d. resulting from Dominion income tax relief.

You will no doubt desire that I examine the effect that wartime conditions are likely to have upon our business, and it is obvious that opportunities for new business will be restricted and that profits from the realisation of shares are likely to be few and far between. On the other hand, I am pleased to report that in recent years our revenue has to an increasing extent been derived from what we regard as our "stable sources," viz., investments and royalty in-

terest. It is true that we must look for some restriction in revenue from investments, since dividends may be limited both by taxation and by statute, but on the whole we have every reason to believe that the revenue which we derive from the sources I have mentioned will continue at the present satisfactory figure.

We continue to hold a substantial interest in Apex (Trinidad) Oilfields, Limited, and it is satisfactory to report that the operations of that company continue to be successful, and last year resulted in the production of 526,810 tons of oil.

The production last year from the Seria Oilfield in Brunei was again in excess of previous records, and we continue to derive substantial revenue from the royalty we receive on this production. We also have a shareholding in the Ultramar Company, Limited, which has valuable oil interests in Venezuela.

In addition to our interests in the oil industry we hold other general investments. The market value of these investments at March 31st was in excess of the amount at which they are included in the balance sheet.

I think you will agree that this reflects a very satisfactory position, which should enable us to stand up with confidence to the difficult conditions which lie before us.

The report and accounts were unanimously adopted.

(Continued from page 942)

Pressed Steel and other leading issues. Electrical equipment shares have been depressed. Banking and insurance shares were dull in sympathy with gilt-edged. A rally in Courtaulds at last week's close was not maintained, and Carreras fell sharply on the declaration of a reduced interim dividend.

Kaffirs experienced heavy falls on Monday. Later in the week interest was slight, but fractional losses were general. In oil shares the position was improved on Tuesday by bargain hunters, but subsequently news from France exercised a depressing effect. Dealings in rubber shares were negligible, despite the maintenance of the quota.

New York

TRADING has been dominated throughout the week by news of the military situation in Europe. Markets on Monday showed firmness, encouraged by news of the establishment of minimum prices for grain and by reports of Allied resistance. On Tuesday prices, led by steels and aircrafts, collapsed badly, due to a combination of profit taking and information concerning the extent of the German break-through. As a result, the Dow Jones industrial index slumped 8.3 points to 114.13 on the day. Later in the week the markets steadied and steels were again in demand. The American Iron and Steel Institute estimates steel mill activity at 73 per cent. of capacity compared with 70 per cent. in the previous week.

Shorter Comments

Company Results of the Week.

THE IMPERIAL CONTINENTAL GAS report shows a sharp fall in net revenue from £415,786 to £213,064, which calls for a cut in the ordinary dividend from 10 to 6 per cent. These results, to March 31st, followed decreases in profits for the Belgian and French companies as a result of the war, coupled with the strengthening of reserves by several of the operating companies. Of the substantial balance of £526,155 brought in, £300,000 is transferred to general and specific reserves. Investments stand at £9,860,068 and in recent years the directors have, of course, reduced their European holdings and increased their British investments, particularly in Edmundsons Electricity Corporation. GOODLASS WALL net profit shows a decrease from £175,040 to £157,439 but the 7 per cent. dividend is maintained. BARRY AND STAINES' trading and net profits show a slight improvement to £180,065 and £161,329 respectively and the 12 1/2 per cent. dividend is maintained with a satisfactory margin. BRITISH TIMKEN have acquired the German interest in the Fischer Bearings Company, Ltd., from the Custodian of Enemy Property, and is to increase its capital. Net profit for the latest year is slightly lower at £60,619, despite a substantial increase in trading profit, but the dividend is maintained at 15 per cent. The latest batch of investment trust reports show comparatively small movements in total revenues, though the incidence of special provisions has in some cases reduced distributable profits. ANGLO-AMERICAN DEBENTURE and LONDON TRUST have maintained their dividends, but BANKERS' INVESTMENT TRUST dividend is reduced from 6 to 5 1/2 per cent. Further rubber company reports include ALLIED SUMATRA (net profit £59,370 and 4 per cent. dividend maintained) and KEPONG (MALAY), whose net profits have jumped from £43,647 to £100,969, while the dividend is raised from 4 1/2 to 11 1/2 per cent. YORKSHIRE AMALGAMATED COLLIERIES' profits for the year to March 31st are somewhat lower at £221,237, but the dividend is maintained at 7 1/2 per cent.

MISCELLANEOUS

Pease and Partners.—Profits for year ending March 31, 1940, at £586,227 have more than recovered the fall from £514,656 to £469,331 reported in previous year. Improvement is due largely to war conditions. Dividend of 10 per cent. on the ordinary shares, against 10 per cent. plus 2 1/2 per cent. cash bonus for 1938-39. "Shell" Transport and Trading.—Delay resulting from enemy action will occur in presenting 1939 accounts, issued last year on June 10th.

ECONOMIST BINDING CASES

Attractive binders to hold three months' issues of *The Economist* are still available.

These binders have no wires, clips or metal contrivances so that each issue can be bound in an instant for permanent reference. Reading Cases to hold two issues, and made on similar lines, are also available.

Both are bound in full cloth (blue) and lettered in gilt. The price of the Binder is 5s. 6d. post free (Overseas 6s. 6d.) and of the Reading Case 4s. 6d. post free (Overseas 5s. 6d.).

After Flanders

EVER since Adolf Hitler slouched out of the post-war murk twenty years ago, his plan of action has never varied. Within the Nazi party, in German politics, in the counsels of the Reich, in diplomacy and now in war, he has worked to defeat his enemies in detail; the German Left, the German Right, the Nazi "plotters" of June 30, 1934, Austria, Czecho-Slovakia, Denmark, Norway and the Netherlands fell one by one. At every stage his chief use of ill-faith and treachery, by fair words, foul deeds and the Fifth Column. Dividing his enemies, he has reached out to rule all Europe.

In the small hours of Tuesday morning he won his latest victory. By the order of their King the Belgian Army, the greater half of the Allied Forces in Flanders and Artois, the men who stood masking the Allies' lifelines through Dunkirk and Ostend, gave up the fight. Most of the B.E.F., with some French divisions, were deserted and seemingly trapped.

The Prime Minister has refused to pass judgment on King Leopold's action, though the Belgian Government have repudiated it bitterly and called upon Belgium to fight on; and, rightly, the Minister of Information has warned us against useless recriminations. But this much at least can be said. It was by King Leopold's urgent invitation three weeks ago that Allied forces left their defence lines in France to assist his country; and it was because of his unwillingness before the war and before the invasion that no three-Power plans for the defence of Belgium were made. The King's wish to spare his soldiers and his people from further destruction at German hands can be understood; but his sudden surrender, without any warning to his comrades-in-arms or any margin of time for them to redispense themselves, cannot. The B.E.F. and the

French in Belgium, like the Belgian troops themselves, had been fighting with the utmost bravery and discipline. They still are as they move in good order and indescribable bravery towards the shattered and assailed coast behind them; and their sudden plunge into greater peril by the Belgian capitulation was tragically ill-deserved.

It is not possible to speculate on the B.E.F.'s chances of cutting their losses. Details of their plans and new dispositions have been withheld for obvious reasons. Mere guesses could only be mischievous. Hemmed in, heavily bombarded and under-equipped by contrast with the German forces, they have no free routes of supply or escape; and Mr Churchill has prepared us for "hard and heavy tidings." Their line is unbroken; they are in good heart; and all the assistance that the R.A.F. and the Navy can render is being given to their manœuvring. The enemy has pressed forward around them to Ostend, Dixmude, Cassel and Armentières. That is all we know.

The Belgian surrender was unexpected, but defeat in the Belgian battlefield was not. The German break-through between Arras and Peronne; the extension of their advance northward to Boulogne and Calais; the inability of the Allies to close the gap in the region of Bapaume; and the mounting pressure of the enemy's northerly thrust across the Scheldt to the Lys—all plainly placed the Allied forces in the North in the gravest peril. The possibility of a new defence line based on the English Channel, the Somme, the Aisne and the Maginot Line had already been generally forecast before the Belgian desertion threatened to substitute the loss of an Army for its withdrawal. The first instalment of General Weygand's task, after combing out the high French officers who had failed in the German onrush, was to mass his troops effectively and in sufficient force on the Somme and the Aisne. The rôle of the R.A.F. for many days and the rôle of the B.E.F. as they fight

coolly and courageously on is to give the Allies' new Generalissimo time to rebuild his lines and focus his striking power.

Thus the Allies are defending two fortresses: the British Isles and the greater part of France. In the East the Maginot Line proper is still unbreached. In the West the British Navy is still in command of its element. The aim now is to hold these fortresses against the full and furious onslaught that will be levelled against either or both of them—the Germans shout threats against Britain and thrust heavily against France; to make sure that no gap can be broken again in France's new defence system; and, behind the fighting forces, to forge in the factories an indisputable superiority in material on land and in the air that will allow defence to be turned into attack and victory.

Never in their history have the French and British peoples been called to a greater or harder task. Even if their lines are wholly held, if the Weygand defences resist and Britain is kept secure against all inroads, they may be subjected, in their homes and workplaces, as well as in their military zones, to massive attacks by bombing and to the menace of air-borne guerrillas. Every trick of terror and surprise will be enlisted to aid the enemy's main military effort, and there may be new surprises even more sinister than those that have hideously mottled the German advance so far. Work will go on under constant fire, and there will be no breathing space.

The call for toil and endurance will be fully answered. The grim facts of the present peril are known and the new political and military leaders of the Allies have their peoples' confidence. The power of surprises wanes quickly when they are looked for and prepared against.

Yet complacency, for nine months the Allies' bane, would now be fatal. The weight of their joint resources and the clear rightness of their cause will not, of themselves, bring victory—as some publicists have seemed to suggest again in recent days. The big battalions only belong to the wealthiest nations if they dedicate their wealth to war. Righteousness can, and must, steel resolve, but the contest will be won by deeds. The B.E.F. are not fighting in the last ditch because they are inferior soldiers—far from it—but because they lack tanks, artillery and aircraft in sufficient numbers. Men without machines, however brave and inspired, however well led and disciplined, are helpless.

The need to mobilise the entire nation's manpower, plant and material to make machines has at last been seen. The enlistment and training of millions for war or work have begun. A determined attack on the crippling leeway that has been allowed to pile up is under way. But a sure shield is needed for our island fortress if, within its gates, the sinews of war are to be forged into the instruments of victory.

Home defence has a new and unexampled importance. Along the Somme and the Aisne and down the Rhine General Weygand has the great French Army intact. Around our coasts is the Navy. But more is needed. It is the back areas that are vulnerable now. They can be bombed and they can be raided by invaders from the air. They can be filled with rumours by traitors and enemy agents and dislocated by sabotage. Every district needs fortification

as well as fortitude. In France virtually a *levée en masse* has been decreed. In England, where a network of regular troops and part-time vigilantes is being devised, while a quarter of a million A.R.P. workers stand on guard, a similar call cannot be long delayed.

To General Sir Edmund Ironside, superseded as Chief of the Imperial General Staff by General Sir John Dill, has fallen the duty of commanding the Home Forces. His task is unprecedented. Germany has no navy as she had in 1914-18, but by weight of numbers her Air Force is on a flood tide of success. She is entrenched on the Channel as no foe since Napoleon has been. The North French coast, Belgium, Holland, Denmark and Norway south of Narvik (now in Allied hands) are garrisoned from Berlin. It is a perilous arc.

Invasion may or may not be practicable to attempt. The Navy still bars the way. Bombardment of the Channel route to London, however, from the land as well as from the air is feasible. Raids in swift vessels as well as airplanes are possible. The fullest co-operation of land, sea and air forces in home defence is imperative, and a unified command over all defenders—naval, air, military and civil—can hardly be dispensed with. Nor is it merely a matter of looking to our moat. Every factory, every power station, every nodal point and every routeway is a target for bombs or guerrillas, and the defence of Britain must go far back in depth beyond the coasts. The one thing that might promise success for German sorties would be our failure to guard against them everywhere; even invasion is only impossible if it is prevented.

Supply channels must be ready in the West to take what may not pass to the East Coast or London. There must be no chink in our coastal defences or any unprotected points inland. Above all, it must be seen, by civilians as well as commanders, by the public as well as their leaders, that the aim of home defence is to enable the nation's essential business to be carried on whatever the onslaught. It is not in the first place to save lives and limbs; it is to make tanks and airplanes and shells without interruption. The civilian's duty is to work on without trace of panic; and all non-workers, mothers and adult dependants as well as children, while being prepared for compulsory evacuation from danger, must know by now, from experience in France and Flanders, that spontaneous streams of refugees are their own soldiers' greatest hindrance. A single, comprehensive and far-sighted command, with every man, woman and child under orders; these are the conditions of security, for us and our Allies in France. They are the foundations of victory, too.

There is no need for the smallest discouragement. It is possible to resist every attack, just as it is to transform superior resources into superior striking power. It is not the Nazi hordes, but the years that the locust hath eaten, that are our most formidable enemy. It is a Carnot, "organiser of victories," that we need. When last a conqueror stood on the cliffs at Boulogne pondering invasion, news was brought of the failure of his manœuvre to draw off the British Navy from the Channel, and Napoleon swept eastward with his armies even before the actual engagement at Trafalgar endorsed his failure. Hitler has won Austerlitz first, but Waterloo will still be ours.

Rome and Moscow

BOTH Rome and Moscow are following the crisis with profound attention. Their reactions to it are, however, diametrically opposed. With every fresh confirmation of Germany's victory the jubilation in Rome increases, while in Moscow anxiety grows deeper. The Moscow papers seek to prove that the Allies' resources are inexhaustible and their main forces intact; Rome stresses the inadequacy of our equipment; our cowardice, our inability to stand up to the German fire, our present impotence and our imminent surrender. Whereas in Moscow our stock has risen recently and there have even been words of praise for the Churchill administration, the Roman

Press has outdone all previous excursions into scurrility and used any lie, however vile, to calumniate France and Britain.

Italy's reactions are perfectly understandable. Her policy is dominated by two factors: the precariousness of her military position and the extent of her ambitions. There is no need at this point to repeat the chronicle of Italy's disabilities, her dependence upon foreign supplies, her "enclosure" within a sea whose outlets are commanded by other Powers, her long exposed coast line; but it is perhaps worth noting that the comparative failure of the present anti-Allied campaign to stir the Italians to

resentment and warlike zeal offers a new and striking confirmation of the troublesome fact (from the Duce's standpoint) that the Italian people as a whole excrete the thought of war and would give away ten empires in order to be left in peace. The far more open condemnation of Nazi aggression expressed by the Pope since the invasion of the Low Countries is another awkward factor. A Vatican veto would not prevent war, but it might strike a shrewd blow at national unity and civilian morale.

Now, as at any other time in her history, Italy must therefore approach the problem of actual intervention with the greatest caution. The ideal solution would be the achieving of her objectives without any resort to war. The idea of a "Mediterranean Munich" which has haunted Italian wishful thinking for some two years might, perhaps, be revived, should Hitler call a halt after the occupation of the Channel ports and endeavour to spare himself the cost of a hazardous onslaught on the Somme line or this country by offering negotiations. Italy could then return to her September rôle of honest broker and offer her mediation—at a price, backing the proposal with a threat of immediate intervention should the Allies refuse.

It is, however, most unlikely that the German war machine will check its present terrific momentum. Further and possibly vaster offensives are yet to come; and as Germany hurls herself upon the French positions, or risks, in the face of the Allied navies, an invasion of these islands, then the passive support of merely immobilising French troops and Allied air and naval units—"the solid silent help which Italy has given Germany during these eight months of war" to which Signor Gayda recently referred—may cease to satisfy the German High Command. Germany may demand intervention, however willing or unwilling Italy may be to take the step at this juncture.

There is reason to suppose that, in spite of some misgivings, the Italian leaders are anxious to engage battle. Their hopes of a re-division of the Mediterranean spoils without resort to war have faded, and they may well feel that the next best policy to not fighting at all, that of fighting a very rapid war with complete assurance of victory, is within measurable distance of realisation. Germany's victories in Northern France crown two years of steady campaigning and steady success. The legend of German invincibility is being propagated by every device at Goebbels's disposal. The Italians are told that the West is finished and that all Italy need do now is to join in and give the *coup de grâce*. The historic moment has arrived. Italy either enters the war immediately and shares the victory or remains aloof to be later excluded from the peace.

We must therefore be prepared for Italian intervention. Civilian mobilisation, the Duce's conferences with his military leaders, the cancelling of sailings, the calling of more men to the colours are obvious preliminaries. Further measures of preparation will follow, but since the Italian air arm and navy are especially constructed for rapidity of manœuvre, there is nothing in the present distribution of Italy's armed forces to suggest in which direction the blow will fall.

It is unlikely that she has limited intervention in Yugoslavia in mind. The stakes are too high. Since her war aim is complete control of the Mediterranean, a concerted attack on Suez and Gibraltar, coupled with landings from 'plane and parachute on some of the Mediterranean islands and a fierce land attack westwards from Libya, appears a more likely strategy and one in accordance with Italy's ambition, to reduce the riverain states of the Mediterranean to an impotent acceptance of Italian hegemony and to drive once and for all the extra-Mediterranean states out of *mare nostrum*. In such a scheme, an invasion of Yugoslavia and possibly Greece would only be part of the major strategy. Domination of the Balkans' Mediterranean states is not a separate ambition but subordinate to the general notion of hegemony.

Italy's scheme may be compatible with Germany's far more all-embracing ambitions, since Italy has voluntarily accepted the status of a subordinate. It is not compatible with the outlook of Germany's other "ally," Russia. One of the permanent directives of Russian foreign policy, be it conducted by Tsar or Commissar, is the desire to secure safe outlets to the outside world. The Baltic and the

Dardanelles are points of first-class strategic importance and have been since Peter the Great. Russia has always fought Balkan hegemony, if achieved by another Power. She has always sought to bring the Dardanelles under her own control in order to ensure that, while she could get out, no one else could get in. With all the more reason, she must oppose any attempt to transform the Mediterranean into the private preserve of any one State. Whether Italy strikes at Yugoslavia or launches a general offensive in the Mediterranean, she is running counter to Russia's interests.

It is therefore hardly surprising that the tone of Moscow's broadcasts and comments on Italy has grown increasingly unfriendly in the last weeks. On May 20th the Moscow wireless even sent out a "final warning" to Italy that "the people of the Balkans are determined to resist any attempt to destroy their independence," adding that "they are not without allies capable and ready to assist them." This warning was followed by rumours of important troop concentrations along the whole of Russia's Balkan frontiers from Slovakia to the Black Sea.

Observers on both sides of the Atlantic have coupled these rumours with the fact of Moscow's obvious anxiety over the battle in the West to draw the conclusion that Russia is rapidly moving away from the German connection and may even be seeking a *rapprochement* with the Allies. Such a conclusion is based on a misreading of Russia's policy. Moscow is interested in the fate of the West only in so far as the continuance of French and British resistance is Russia's best guarantee of security. An ultimate Allied victory is, on the whole, no more welcome than an ultimate German victory, since Russia distrusts both sides with all her traditional xenophobia. Her main concern has been and is to use the period of the war during which all her potential "capitalist-imperialist" enemies are immobilising each other in order to increase her own security against the day of a victory on one or the other side. The occupation of Poland, the treaties with the Baltic States, the invasion of Finland are all different facets of this policy of security. Russia is securing her outposts while she can.

For some time after the Finnish war, her activities were curtailed. Now, however, under the stimulus of German successes and Italian threats a new period of active diplomacy has opened. In the north, Russia appears to be underpinning Swedish independence and there is even talk of non-aggression pacts with Sweden and Finland and a joint defence scheme for the Aaland Isles. In the South, Hungary has been warned to keep out of Slovakia, trade relations have been established with Yugoslavia, troopships are reported to lie in Odessa, divisions are gathering along the Carpathians and the Dniester.

We may argue that nothing could help us more and that Russia is beginning to do the work of an unofficial ally. We have only to recall Poland to see that the view is false. Russia may have checked Germany's advance beyond Brest-Litovsk, but Poland was enslaved none the less. The kind of "protection" the Balkan States can expect may well be on similar lines. An Axis move would be the signal for a "preventive" occupation of Ruthenia, Bessarabia and possibly Roumania's Black Sea coast. It is true that Germany under those conditions would not reach the Black Sea, but Roumanian independence would have disappeared all the same.

It is just possible that Russia, seriously perturbed by Germany's advance, may be prepared to weight the scales a little on our side. It is a possibility we should not neglect, and the dispatch of Sir Stafford Cripps to Moscow to find a *modus vivendi* for our trade talks is obviously a sound and statesmanlike move. But we must not allow "a change in Russian opinion" to become another intangible element in our "certainty of victory," which at this point depends upon ourselves alone. Similarly, it is just possible that Italy may still feel war too hazardous and prefer the game of waiting and pressure. It is therefore sound sense to continue to negotiate with her and to make our contraband control as frictionless as possible. But, here again, Italian intervention is a possibility for which we must be fully prepared. It is a sense of reality and not wish fulfilment which will save us in our present predicament.

Arms and the Men

“EVERY minute spent on production now is vital to the defence of the country and your homes.” The first task of the new Government, when it came to office in a situation of gathering gravity, was to secure the fullest possible flood of finished weapons of war at once. For a fortnight every effort has been bent and every device used to speed up output at the finishing end of manufacture. In aircraft factories, at the order of Lord Beaverbrook, new Minister for Aircraft Production, work has been focused on nearly completed machines. In factories producing tanks, armoured vehicles, guns, shells and ammunition, the same drive will maximise the production of the next few days and weeks. Across the Atlantic actual deliveries of airplanes and materials have been accelerated.

The main burden of this spurt for safety has fallen on labour. On vital work a seven-day week is in operation indefinitely. Factories are working continuously day and night. Holidays for all grades of workers in essential industries have been suspended until new recruits come.

Every ounce is being required of the existing industrial army as the immediate flood of arms is swollen. But this is only the beginning. It is a steady and sufficient flow of airplanes, tanks and shells in the future that is wanted, month in and month out until disaster is retrieved and victory won. This is the Government's second task: to expand the arms sector of industry; to transfer for the duration every available industrial asset from civil to war work; to enlist new regiments of workers.

Labour is the key to this lasting effort as well as to the short-term intensive campaign for more arms. The Minister of Labour has been given plenary powers to act. It is his duty now to see that men and women are ready and trained to produce whatever the Government may call for. He has authority to direct any person to perform any services. He can require persons of any class or description to register any particulars about themselves that may be necessary. He can enter and inspect premises to see that all available labour is being used to the best end. The Ministry of Labour has ceased to be the passive, irresponsible registry of fact that it was under Mr Ernest Brown. It has become a Ministry of Labour Supply.

The functions of the Ministry can be simply summed up: to recruit, transfer and train men and women, so that the processes of production ordered by the supply departments are never halted. So far, Mr Bevin's main aim has been to get more work from those on the job. But more workers is the enduring need. A blanket appeal has been put out for all workers, especially skilled workers, to offer their services for war work, whether they are in employment or not. The Government's training centres have been expanded, their courses intensified and their shifts multiplied to pass through 100,000 trainees in a year instead of 40,000. Their field of recruitment has been widened to bring in employed as well as unemployed persons, men in reserved occupations if they have been out of work for two months and “black-coated” workers. Trainees must be ready to serve anywhere.

Even so, the great and overdue call-up of new divisions for the war factories has still not begun, though it appears to be imminent. Mr Bevin has the power and, it would seem, the will to take hundreds of thousands of citizens of all grades from the work they are doing now to train on the spot for war work; to beckon into industry the women whose only work is in the home; to denude the community of the domestic servants, shop assistants, service workers and luxury producers they can do without. It is imperative that he should not flinch from any detail of this duty. To waste manpower—as we have done, prodigally, for nine unhappy months—is to court defeat. The first and obvious step, to call for harder work, has been taken. The second step, to train a vast new labour force, is being prepared. The third and critical step is to eke out the nation's limited supplies of industrial skill and experience to the fullest possible degree. Lord Beaverbrook has called fitters from garages to work on airplanes.

Mr Bevin has asked skilled workers not on war jobs to come forward as volunteers.

The need now is haste if the country's urgent need for arms is to be continuously met. Scarce skilled labour must be “diluted” to the limit by the inter-mixture of less skilled workers to take over the simpler jobs on which even craftsmen commonly spend a part of their time. The process of transfer and training must go rapidly beyond the stage of mere registration. The volunteers must be taken on at once. The rest must be mobilised as conscripts. No suitable arms factory must lack its quota of machine operators in training, men and women.

The Ministry of Labour has a new organisation for its new task. At the head is the Labour Supply Board, which, under the chairmanship of Mr Bevin and working in close collaboration with the trade unions and the employers' organisations, will advise on general policy. It includes four official members—Sir T. W. Phillips, permanent secretary of the Ministry; Mr F. N. Tribe, deputy secretary; Mr G. H. Ince, under-secretary; and Mr F. W. Leggett, chief industrial commissioner, and an equal number of unofficial members—Messrs R. Coppock and J. C. Little as workers' representatives; Mr A. P. Young and Major-General K. C. Appleyard as industrialists. This Board is to be aided by a provincial organisation to implement Ministerial decisions. The eleven divisional controllers who have hitherto directed the employment exchange service will be the Ministry's principal representatives in each area, and in future they will be chairmen of the Area Boards which were originally set up by the Ministry of Supply. In addition, representative Labour Supply Committees are to be set up in the principal industrial towns. The duty of inspecting firms to see that skilled labour is being used to the best advantage and that all necessary training facilities are provided will be entrusted to an inspectorate working with the Area Boards and the Local Committees; its members are to be paid industrialists.

With this machinery Mr Bevin can, and must, dispose all the citizens of this country where their work is wanted. Beside him is Mr Morrison, Minister of Supply, with power to take over and control production. The duties of these two Ministers are two facets of the same task; the organisation of labour and the organisation of output are inseparable; and it is urgent that their work should dovetail completely and never clash. The pivot of this drive to marshal the nation's resources at last is apparently to be the newly-created Production Council, with Mr Arthur Greenwood, Minister without Portfolio, at its head. The Council's rôle is “to balance the supply of material and of the plant available, and have knowledge of the strategy of the war, together with the labour supply, so that the whole national effort may move in a cohesive and disciplined way.” The battle for production has at last been given a central command. No longer should it be possible for the competing orders and rival claims of the supply departments of the Defence Ministries to clash and obstruct. Little precise is known about how the Council will work. Most important of all, it is not known what ramification of control, if any, it will have over the crucial question of allocating the nation's resources between war, export and civilian needs. The Council is to be composed of representatives (presumably, and certainly preferably, the heads of Departments) of the Admiralty, the Ministry of Aircraft Production, the Ministry of Supply, the Ministry of Labour, the Ministry of Agriculture and the Ministry of Mines.

The Council will be in a position to plan the broad categories of production with regard to strategic needs and available resources. It can fill one of the greatest single gaps in the War Cabinet system, and its invaluable henchmen will be Mr Bevin and Mr Morrison. It is for the Council to lay down what must be produced. The supply departments of the Army, Navy and Air Force will draw up their programmes. Mr Morrison will use his powers to find and second the firms and plant needed. Mr Bevin will find the labour.

If the new Council were to be no more than a co-ordinating committee it would be nearly useless and certainly dangerously delaying. It must be directive, with power to act. It must be a driving force, and its strength will depend enormously on the personality and initiative

Britain's Population

THE future course of the population of these islands is a problem which has an air of remoteness in these days of life and death struggle for survival. There would be no future at all for us if we were to lose the war. Nevertheless, it is possible and germane to re-examine the present population position in the light of the war itself and to arrive at conclusions that are not without interest.

The cancer which (quite apart from the perils of war) is eating at the future of our population can be described very simply. The women of to-day are not bearing enough girl children to replace themselves. A population of which this remains true is doomed to decline. For some years the fall may be delayed; for a time its chief symptom will be that children and young persons will decline. But, unless the average number of children born to each woman is raised (a mere reduction in mortality would not be enough), the population must diminish.

This is now the familiar statement of the position, not only in Great Britain, but also to a greater or less degree among all peoples of Western European origin. The cancer is the decline in fertility, and nobody has successfully located its causes. Since the cause has not been located, nobody can say with assurance under what circumstances the decline in fertility would cease.

It might be hypothesised that there is an inverse relation between insecurity and war, on the one hand, and fertility, on the other. Parents may, this argument suggests, be loth to bring children into a dangerous world. Sociologists of the future may attribute the decline of the peoples of Western Europe to the destructive wars in which they have engaged, not to the direct loss of life (though this may be greater than in 1914-18), but to the effects of wars on their fertility—on their willingness to breed. An era of peace and security might swiftly bring about the birth of more children and enable the population to maintain itself.

There is a ring of verisimilitude in this hypothesis. At least, it suggests that the present is not the time to concern ourselves with the long-term trend and the distant future. What we can do to greater advantage is to reconsider the numbers and structure of the population in the near future, for the structure of the population in 1950 will be hardly at all affected by post-war influences.

POPULATION OF GREAT BRITAIN

	Children under 15	Men 15-44	Women 15-44	Persons 45-64	Working population 15-64	Old people 65 and over	Total
1938	10,079	10,601	11,151	10,398	32,150	3,979	46,208
'000's							
% of Nos. in 1911	80	113	110	158	123	187	113
1950	7,324	10,475	10,534	11,772	32,781	5,163	45,268
'000's							
% of Nos. in 1911	58	111	104	179	126	242	111

These estimates for 1950 derive, with one proviso, from those made by Dr Enid Charles on the assumption of a continuation of the present declining trend of fertility and mortality. The proviso is that account has been taken of the rise in the number of births in the few years preceding the outbreak of war. The estimates do not, of course, include any allowance for the effects of the war.

On this basis of reckoning, the decline in the number of children between 1938 and 1950 will exceed the increase in the numbers of men and women over 45. The population will therefore decline. But, while the number of men of military age is now at about its maximum, the total working population will be greater in 1950 than now.

The effects of the war itself can be prophesied in nature

of Mr Greenwood. It, or some other single authority within the Cabinet system, must fit all our economic war effort, trade and finance as well as output, into a firm frame of priorities. It will be a crucial test of the new order in our leadership to see whether this is done.

but not in extent. The annual number of births is almost certain to fall, and the number of children in 1950 is likely to be even less than 7,324,000. The number of men aged 15-44 will be less than 10,475,000. If there are large numbers of civilian casualties, then the working population will be depleted, but short of catastrophe it should still be considerably larger in 1950 than it was in 1931.

In considering the economic implications of such changes in the population, it is as well to distinguish sharply between problems of organisation and problems posed by the underlying social facts. Both sets of problems were examined with care by Mr W. B. Reddaway in a brilliant book written just before the war.*

Problems of organisation, that is, the reshaping of industry, employment and so on to meet the changing situation, cannot be very usefully discussed at present. The organisation of industry will in any case be very different after the war from what it is now. Changes in the structure of the population, for instance, which might have been expected to increase unemployment under the pre-war economic system, may have the opposite effect under the post-war system.

It is more useful to consider the general position. Thus it is comforting to note that the national labour force is likely to be well maintained, though its average age will be higher. What is less well appreciated is that the proportion of the working population to the total is likely to rise (ignoring the effects of the war) from 70 per cent. in 1938 to 72½ per cent. in 1950. From the social, though not necessarily from the budgetary aspect, the burden of maintaining the aged should not be unbearable, because there will be a compensating reduction in the number of children. The number of dependent persons under 15 and over 65, young and old, was 14,058,000 in 1938 and, apart from the effects of the war, would be likely to be only 12,487,000 in 1950. It may, of course, be objected that the cost of maintaining old people is greater than the cost of maintaining children. But, even if children are only half as expensive to maintain as the aged, the burden of maintenance on the rest of the community would, on the same assumptions, fall by 2 per cent. between 1938 and 1950. Unless civilians are massacred on a scale unknown in the last war, when the military and naval losses of the United Kingdom fell short of three-quarters of a million, the process of post-war reconstruction is not likely to be seriously impeded by changes in the numbers and age constitution of the population.

The most alarming feature of the present position is the declining number of children. Even if there is a rise in fertility after the re-establishment of peace, its effects will not be felt until some time has elapsed; and, if the declining trend of fertility continues, the diminution in the numbers of the population, hastened by the fall in the birth rate during the war, might become dangerously swift.

Clearly the care of our children is an urgent necessity, second only to victory in the order of immediate priorities. Children are our most vital reserve. In Germany, every effort is being made to prevent a decline in the birth rate or at any rate to moderate its steepness. Children, according to a statement of Herr Hess, are “valuable national assets.” Unmarried unions are officially blessed, provided that children are the outcome. To those children whom we already have must be given the best we can afford in safety, education, food and medical care. If the children of the future are going to be weak in numbers, then we shall require them to be correspondingly more healthy and better educated.

NOTES OF THE WEEK

Invasion?

It is not possible for any layman to answer the question which is heard more often nowadays than any other, namely, can Hitler invade this country? In a broadcast on Wednesday, Mr Harold Nicolson said that Hitler could. By this he meant that it would be possible for the Germans to land in this country from the air, by parachutes or troop-carriers, some thousands of guerrillas or saboteurs, and he expressed the conviction that it would not be hard for the people of this country to deal swiftly and drastically with such raiders. It is probable that, with air bases stretching from Central Norway to the French Channel ports fronting our own South Coast, the Germans will attempt what Mr Nicolson foresees, and likely that they may succeed. Nor is it impossible that they might land similar small contingents on these shores from fast motor vessels dashing across the Channel, or even from the submarines that have been strangely inactive during the past few weeks. If it is added that the landing of such troops in Eire is freely forecast and, on the face of it, practicable, then it can be realised that the first answer to to-day's great question is the state of the defences of all the ports of the British Isles against the damage, dislocation and alarm that such sorties might cause; and it would never do for either the authorities or civilians to take this menace too lightly. The larger question—could Hitler occupy any part of these islands in force?—is very different. The English Channel is an infinitely greater obstacle than the River Meuse. Even the parallel of Norway is not exact; there the Germans seized the ports through treachery before they landed, and it is scarcely conceivable that Dover or Newhaven or Southampton or Harwich or Yarmouth could fall into enemy hands in this way. The real answer is the British Navy; and there is no reason to suppose, despite the power of the German Air Force, that the Navy would not be able to prevent any large-scale transportation of invaders to our shores. Moreover, Allied experience overseas suggests the probability that the Royal Air Force itself would be able to prevent any large-scale disembarkations which may (though improbably) slip through the naval net. In brief, the issue will only be decided in the event; but it is as near certain as can be that, if British defences in the air, on land, and on sea are as sufficient as they certainly could be made on the instant, then invasion in the full sense of the word is as impracticable as it was when France was our enemy.

* * *

Towards a Financial Policy

The unanimity with which the Press—including *The Economist*—misinterpreted Mr Attlee's reference to 100 per cent. Excess Profits Tax when he introduced the Emergency Powers (Defence) Act last week at least revealed its eagerness to welcome a forthright financial measure. The mistake has proved prophetic. At first it was intended to apply 100 per cent. E.P.T. only to the profits of Government-controlled undertakings—which, if properly controlled, should surely not have been allowed to earn excess profits. The full rate, however, is, in fact, to be applied to the excess profits of all businesses from April 1st. This promise to take all profits, without distinction, out of the war is plainly justified, for the war sector of industry is now expanding at such a rate that any prosperity enjoyed by the civil sector can only be due to war conditions, and should in equity be taxed no less hard than the earnings of the munitions trades. But we must take care that the technical control of excess profits is adequate to fulfil the promise. At present there is insufficient provision in the rules governing E.P.T. against wasteful or even unnecessary expenditure; the only protection is against artificial transactions to reduce profits. When such expenditure can be charged, in effect, to the State in full, it requires the most detailed supervision. The nation would be ill-served in its present crisis by any development of the squandermania which accompanied E.P.D. in the years after the last war, and it should not be beyond the competence of the revenue authorities, armed with that experience, to prevent its repetition. To meet this point, new sections are obviously needed in the Finance Bill, which was given a second reading on Wednesday. The debate suggested that Sir Kingsley Wood has at least grasped the elementary financial needs of the hour. He warned the nation that even heavier tax burdens were near at hand. Yet, in his plea for a short period of

adjustment to the tax burdens already imposed, he seemed to betray the quite unnecessary fear that the nation might not be prepared to receive additional imposts. As the reception of Sir John Simon's Budget and 100 per cent. E.P.T. has shown, public opinion has for months been at least abreast of Ministerial policy on the financial front. The new Chancellor might consider the merits of an Excess Income Tax, to match E.P.T., on the lines mentioned in this journal, and echoed in the debate by Mr Graham White. Meanwhile, the Chancellor is now considering the best shape for future war loans. There will, in his words, be abundant opportunities for lending to the State. They must be designed to evoke the maximum response, at the minimum cost to the Exchequer.

* * *

The Cripps Mission

Sir Stafford Cripps is already well on his way to Moscow but his exact status is still obscure. The Kremlin appears to be ready in principle to discuss trade relations with him, but they still cavil at his rank of Special Ambassador. Behind the objection lies the Russians' desire to have the question of our diplomatic representation cleared up. The permanent British Ambassador has been absent from Moscow since January, and Russia wishes to see the position regularised; and the British claim that Sir Stafford Cripps cannot be made Ambassador in the full sense because he has not given up his seat in the Commons seems to them hardly material. It is to be hoped that questions of diplomatic usage will not interfere with the main purpose of Sir Stafford's mission, to set the trade relations of Britain and the U.S.S.R. on a more satisfactory basis. It is true that Russia's Treaty of Friendship with Germany and her Economic Agreement, which the Nazis claimed to be the dawn of a new era of the closest economic collaboration, are obstacles to the restoration of normal trade relations, but Russia had until the dispatch of Sir Stafford some cause to suspect the sincerity of our desire for an agreement. The Russian Government was prepared to guarantee that none of our exports should be passed on to Germany and were also willing to make some kind of limitation on supplies from third parties. The demand which roused resentment was our request that some guarantee should also be given to cover Russian goods exported to Germany. Moscow pointed out that Roumania sent millions of tons more oil to Germany than Russia had ever done, and that even the figure fixed in the most recent agreement with Germany was well below Italy's trade with her Axis partner. Yet neither in the case of Italy nor of Roumania did we consider these facts an obstacle to the conclusion of trade agreements. Here there is an obvious grievance which must be cleared up and the best way to do so is to abandon the formality of Notes for a more hopeful approach through direct contact. If it is an Ambassador in the more formal sense that the Kremlin wishes to receive, then, provided our Government feels that good can come out of talks in Moscow, such an Ambassador should be sent.

* * *

The Allied Kingdoms

It is good news that Narvik is in our hands and that the Germans are hemmed in at the head of Rombak Fjord. The fighting is not over in this area, and Germany will bring up reinforcements and continue her harrying from the air; but, at least, an important town on Norwegian soil is in the hands of King Haakon and his Allies, and the work of consolidating our position there and of making it a base for attacks to the south can begin. If the geographical configuration allows it, existing facilities for aerodromes and airfields must be extended, the supply system rendered completely secure, and the place fully prepared to become a rallying ground for the thousands of Norwegians who by one means or another will try to slip through the German lines to rejoin their king. We must not forget the psychological significance of Narvik; and reports of large troop movements to South Norway suggest that it may even be useful as an advance post to check and harry raids against the Faroes, Orkneys, Shetlands or even Scotland. Certainly it must not be relegated to the position of a beleaguered outpost. It must be one

of the chief bases from which the reconquest of Norway will be carried out.

*

Holland is less fortunate than Norway in that the whole of the mother country has passed under the invader's control. But the Dutch have their overseas empire, whose entire resources are now diverted to the Allied cause. Queen Wilhelmina has established her Government in London, the Dutch navy has joined the Allied fleets, and a Netherlands legion is to be formed on French soil. Meanwhile in the unhappy mother country, the Austrian traitor, Seyss-Inquart, has seen fit to take over office on the very day—*Prinsjesdag*—on which the Dutch people were accustomed to celebrate their loyalty to their sovereign, and to read his speech in the Hall of Knights, where Queen Wilhelmina used to open each new session of Parliament. His statements contained nothing unexpected. The "co-operation" of the Dutch will be secured and "all interests" are "to be subordinated to the vital struggle of the German people," a euphemism to express the reduction of the Dutch to the slavery of the Poles and Czechs. Certain leading elements among the Dutch will no doubt be courted and bribed into traitorous submission. For the mass of the people there is nothing in their immediate future save the forced service of a hated oppressor and the attentions of Himmler and his beasts of prey. Of our three most recent Allies, Belgium's lot is the most unhappy, for here not even the king held faith. Leopold's capitulation does not alter the fate of his unhappy people under the German yoke, but it seriously affects his own. He appears to have accepted German hospitality in one of his own castles; meanwhile the Belgian Government have unanimously denounced his action as unconstitutional, and the Belgian Parliament is to meet to declare whether or no he shall be deposed. Belgians outside the country are everywhere pledging their support of the Government and, under its leadership, Belgium will fight on.

* * *

America Faces Total War

With each new disaster on the Western Front the problem of total war is thrust more and more forcibly upon the attention of the United States. Leopold's capitulation and the desperate straits of the Allied forces in Flanders have been received with consternation. The European seaboard from Namsos to Boulogne is virtually in German hands, and Germany becomes an Atlantic Power. The American people can no longer blind themselves to the extent of Hitler's ambitions, and their unanimous desire is to get their country into a proper state of defence. There will be no quarrel with the President's decision to revive the old wartime Defence Council or with his request that the statutory limit for borrowing should be raised to \$48,000,000,000 and all taxation increased 10 per cent. to help cover an outlay on armaments estimated at some \$1,250,000,000. Unanimity is harder to secure on the vital question whether the Allies are not already America's front-line defences and whether the easiest and cheapest way to safeguard American security would not be to assure and hasten an Allied victory. This at least is the opinion of Mr Wendell Wilkie, a possible Republican candidate for the Presidency. His view, coming from a noted anti-New Dealer, is a sign that readiness to help the Allies in any way short of actual intervention is gaining ground. Unfortunately, the prerequisite of a firm national policy, general acceptance of strong leadership, seems as far away as ever. Mr Landon has warned Republicans that acceptance of office under Mr Roosevelt would mean their participation in a manoeuvre to disrupt the Republican party and has declared that the best contribution to national unity Mr Roosevelt could make would be a guarantee that he will not seek office a third time. In these circumstances the President, whatever the measure of agreement he can secure in his defence plans, remains a party, not a national, leader—through no fault of his own—and as such is condemned to the compromises and half-measures which are the bane of party government in times of crisis.

* * *

Mussolini Calls the Tune

Although the world's attention is fixed on the battle-fields of Northern France, the situation in the Mediterranean arouses interest and alarm. Italy, for reasons discussed on another page, is—or seems to be—on the verge of intervention, which, judging by her preparations in Southern Italy and Libya, is to take the form of a general offensive throughout the Mediterranean basin. Egypt and Turkey remain calm. Egypt's black-out, local defence and evacuation

schemes are being carried out methodically, and the problem of fifth columnists has at least been tackled, although the difficulty of eliminating the danger completely in a community which includes some 60,000 Italians cannot be disguised. Turkey's steadiness is, in part, due to Italy's present frank admission of her aims in the Mediterranean. Fear of Italian domination and distrust of Italy are inbred in Turkey's national consciousness, and whatever the fortunes of battle in Northern France, Turkey knows that her chances of survival stand or fall with those of the Allies. Germany's threat to Turkish independence was always to some extent indirect, even if not remote. Italy is at the door, and if she fights, the Turks will fight back with all the savage tenacity of a warlike race. Fresh staff talks have taken place between the Turkish and Allied High Commands, and Italy's weeks of "pre-belligerency" have at least ensured that no attack can take the Allies by surprise.

*

The situation is more obscure in the western basin of the Mediterranean. Spain has declared her uncompromising neutrality. There are strong influences in the country at work to support General Franco in his decision, not least the Catholic Church, whose Primate, Cardinal Goma, chose the Feast of Corpus Christi to address a pastoral to his people, in which he roundly said that "the manhood of France and Great Britain, joined by the legions of Poland, Czechoslovakia, Norway, Holland and Belgium, are fighting not for territorial gain, but . . . to vindicate the Christian spirit of morality invoked by Pius XII in his Encyclical." These are strong words and are bound to strengthen General Franco in his struggle with his own extremists, anxious to drag Spain into a conflict from which, like Italy, they hope to secure territorial gains without risk of defeat or even of very serious loss. There are some 40,000 Germans still resident in Spain. Italians are scattered throughout the country, and there are groups in the Balearic Islands. If Italy enters the war, these elements, together with the Falangist extremists, will bring the greatest possible pressure to bear on the Caudillo to launch an attack on Gibraltar and, while recovering this *terra irredenta*, close the Mediterranean to the Allied navies. That the British Government realises the urgency of the Spanish problem is illustrated by the despatch of Sir Samuel Hoare as a Special Envoy to Madrid. To what extent his presence will strengthen General Franco's position it is impossible to say. At least, it is a guarantee of Britain's genuine goodwill and of her firm intention "to respect Spanish neutrality—provided others do the same."

* * *

British Export Policy

It is not yet clear from published statements how the export industries and those concerned with the production of the requirements of the civil population are to be fitted into the machinery for speeding up output and for allocating the country's human and material resources. Hitherto the needs of the export trades have been met largely by the various priority committees which were set up after the outbreak of war. But if the Production Council, which is discussed in a leading article on page 968, is to be concerned chiefly with munitions, then some organisation may be required to look after the export and domestic civil industries, while both might be co-ordinated by a central committee charged with formulating general economic policy. There must be no relaxation in the attempt to raise exports in order to reduce the enormous adverse balance of trade. Temporarily, however, the claims of the

export trades must be subordinated to the need for the highest possible output of munitions. It may be necessary, for example, to reduce still further our exports of iron and steel, machinery, motor vehicles and other metal products in order to strengthen the resources available to the aircraft and munition industries. The output of aircraft and tanks, in particular, must be speeded up at all costs, even if this involves the withdrawal of skilled labour from the export industries.

* * *

Distribution of France's Industries

The accompanying map of France shows the geographical distribution of her industries. The heavy industries (coal-mining and iron and steel manufacture) are largely concentrated in the north-east, along the Belgian frontier and south of Luxemburg. The industrial district in the north-eastern corner of France, comprising the two administrative areas of the Pas-de-Calais and the Nord, has been cut off from the rest of the country by the retreat of the army behind the line formed by the Somme and the upper Aisne. This district furnished some 60 per cent. of France's output of coal, totalling about 45 million tons per annum. It also contains important metal industries and is

one of France's chief textile manufacturing centres. The centre of the iron and steel industry located to the south of Luxemburg in the Moselle and Meurthe-et-Moselle administrative areas, on the other hand, remains in French hands. This district is the source of about 95 per cent. of France's iron ore output, amounting to more than 30 million tons per annum, and of some three-quarters of her production of pig iron and steel. In contrast to the heavy industries, the engineering, armaments and lighter industries are widely dispersed; the important centres of metal manufacture in the Le Creusot, Clermont-Ferrand and St. Etienne districts are in the mountainous area to the west of the River Rhone, which is far from the present battle zone. The loss of the coalfields in the Pas-de-Calais and Nord administrative areas is unlikely to impair France's capacity to supply her army, provided that it can be made good by this country. The loss of the iron and steel centre to the south of Luxemburg, however, would be much more serious.

* * *

Rising Wages

At present the grievous lack of an economic war plan is seen most sharply in the field of production where the need for more tanks and aircraft is being tragically driven home. But there are other sectors where the immediate redress of past failures is imperative. One is budgetary policy, which measures the scale of the war effort as a whole. There the new Chancellor of the Exchequer has promised to extend the Budget left him by his predecessor nearer to the nation's life and death needs. Another is wages. An inquiry by the National Institute of Economic and Social Research into

wages paid by large firms in different industries in March, 1939, September, 1939, and March, 1940, reveals a large-scale ragged advance all along the line. At the start of the last war, between August, 1914, and March, 1915, wage rates hardly rose at all. This time, between September, 1939, and March, 1940, wage rates rose 8 per cent. and earnings per head by 10.7 per cent. Between March, 1939, and March, 1940, average earnings in the firms investigated rose 18 per cent.; at least two-fifths of the rise in earnings was due to bonuses, more piece-work and overtime; and the earnings of girls under twenty-one rose 22.4 per cent. It is true that the cost of living (as measured by the out-dated official index) rose 14.5 per cent. between March, 1939, and March, 1940, and 13.5 per cent. between September, 1939, and March, 1940. Even so, the fact is that a great volume of fresh civilian spending power has been struggling against attempts to cut down civilian consumption and keep prices down; and there has been neither national wisdom nor individual equity in prices. Workers with high bargaining power have made gains. Other workers, low paid to start with, have been driven into difficulties by rising prices. There has been no common policy among the trade unions and no wages plan from the Government. Now, when Mr Bevin is Minister of Labour with plenary powers, the whole effects of piece-meal wage increases on the national war effort may be cut short. There should, admittedly, be a minimum below which no one should be allowed to fall; and hard-pressed war workers must be paid for their over-work. Above that, wages should be fixed; or any increases in earnings taxed away or compulsorily saved. The path of justice for all classes is clear; 100 per cent. tax on excess war profits; 100 per cent. levy by tax or forced loan on excess war incomes within the income tax assessment ranges; and 100 per cent. levy on excess war wages too would be logical but almost impossible to administer quickly.

* * *

Rounding Up Quislings

Fears expressed in the early months of the war lest the Defence Regulations were being too strictly drawn have now given way to fears lest the Government has been too lenient in its treatment of aliens, pacifists, Fascists and others whose activities may impede the vital war effort. There is still no persecution of opinion. Last week Regulation 18B was amended in a way which by its reference to "sympathies with the system of Government . . . of any Power with which his Majesty is at war" showed that it was directly aimed at the British Union of Fascists; and it was under this amended Regulation that Sir Oswald Mosley and other leading members of the organisation were arrested. On the same day seventy-six members of the I.R.A. were arrested in Ulster under the Civil Authorities Special Powers Act. And the internment of aliens continues. All German and Austrian women placed in Category B have this week been rounded up and will be interned in the Isle of Man; and next Monday a new Order comes into operation which will cover aliens over 16 years of age of every nationality and stateless persons throughout the United Kingdom. They will have to observe a curfew between the hours of 10.30 p.m. and 6 a.m. (midnight to 6 a.m. in London), and will not be allowed possession or control of bicycles, cars, ships or aircraft, or to be away from their place of residence for a night or nights, except by special police permit. Most enemy aliens of either sex are, therefore, now interned; the rest, together with all other aliens, will in future have their freedom of movement strictly limited. These measures are drastic and distasteful. But the occasion demands them; and it is still true that no innocent person of any creed, opinion or race will suffer more than protective custody, well-housed and in reasonable comfort.

* * *

Informing the People

In the course of only one month the British people have received a crescendo of bad news—the withdrawal from Southern Norway, the enemy's break-through on the Meuse and his penetration to the Channel ports, and, finally, the surrender of the Belgian Army. But though each blow has been worse than the preceding one, and though it is known, from Mr Churchill's statement in the House of Commons, that "hard and heavy tidings" are still to come, the news has been received without the slightest sign of panic. That danger of which Mr Duff Cooper spoke in the debate on the Ministry of Information has not yet reached our shores. And so long as the truth is given out promptly there is no fear that it ever will. At a time like this the people want

facts without embroidery, as they have never wanted them before, and Mr Duff Cooper, in the short time he has been in charge of the Ministry, has already done both it and the country a real service by pointing out in his broadcasts exactly what are the facts which can be ascertained from the maze of military information. For the first time since the war began the people are being treated as adults. It is also reassuring to learn that the Ministry is being better equipped for its task at home by the centralising of the control of all the sources of information under itself—though it is not clear how far this control is to go—and by the attendance in future of the Minister at meetings of the War Cabinet. There will be far less satisfaction with the suggestion that the Ministry's propaganda in neutral States should be based upon the enormous resources of the Allied Empires. It is, of course, right that they should know the true facts of the relative strength of the belligerents, but the complacency, which has hitherto allowed us to think that our material resources would win the war for us, has robbed this propaganda weapon of its effectiveness. The neutrals have realised all along what the people of Great Britain are only realising now—that resources without works are dead; and the exploits of the R.A.F. and the recapture of Narvik will carry far more weight among the non- and pre-belligerents than statistics of production. Mr Duff Cooper need not fear the danger of panic on the home front. It is the danger of complacency, with which his Ministry itself has been tainted, that he must combat with all his might. Meanwhile the plans which were in existence at the outset of the war for decentralising the sources of official news and guidance in the event of a breakdown of communications due to enemy attack, are being refurbished. In each of the eleven head-quarter towns of the regional civil defence system staffs are being put on the alert. In the London area local committees will be set up in each borough and urban district, representative committees made up of persons of influence, integrity and discretion. Similar work will be done elsewhere by similar bodies. This machinery is a new and important defence arm, which may have a crucial rôle in the later stages of a war in which rumour and misrepresentation have already proved to be chief weapons of the enemy.

* * *

The Dominions' Support

The tempo of the Dominions' war effort is increasing day by day. To New Zealand falls the honour of being the first to introduce emergency powers, giving the Government control over persons and property, similar to those given to the British Government. And discussions, which for the moment have proved abortive, have taken place with the Opposition over setting up a War Council of a truly national character. In Canada, too, there is a growing demand for a National Government, and, even more significant, many leading newspapers are now openly advocating military conscription. The infantry battalions of a fourth division are to be raised immediately, and 5,000 men on the waiting list for training under the Empire air scheme will be called up at once for preliminary training. Australia has abolished the limit on recruiting and now aims at enlisting the maximum available man-power. At an extraordinarily enthusiastic "win the war" rally it was announced that over £4,000,000 had been subscribed towards the new war loan of £420 millions before the lists had opened, and it is also proposed to issue a loan of £45,000,000 free of interest. In aircraft and munition factories two twelve-hour shifts are being worked daily; trained personnel of the R.A.A.F. will probably be sent for service abroad; and, in view of the urgent need of the Allies for planes on the Western Front, the Australian Government has transferred to the British Government their claims upon a large aircraft order now being completed in the United States. It would be futile to suggest that this quickening determination within the Dominions can make any difference to the outcome of the desperate struggle in which the B.E.F. is now engaged in Flanders; and we have only ourselves to blame for not having set them the example of full mobilisation at the very beginning of the war. But it shows what a long way Hitler still has to go before he can hope for ultimate victory.

* * *

Shorter Notes

The news from the battlefield, together with Mr Amery's conciliatory speech in Parliament, are working a change in Indian opinion. Extremist circles still maintain that the new Government's attitude is no improvement on that of the last,

but the general line along which opinion appears to be developing is summed up by Mr Gandhi: "When Great Britain is up against an aggressor who is definitely pursuing barbarous methods, should we not make a human and timely gesture?" It is important that any such gesture should be met halfway. The occasion is obviously premature for a renewed attempt by the Viceroy to bring Congress and the Moslem League together.

*

Eire is awake to the danger of invasion. Within the last week reserves have been called to the Colours, Mr de Valera has announced a new defence scheme which is to be put into practice with all possible speed and, a sign that the country is united in the face of danger, a National Defence Council has been set up on which Mr Cosgrave, the Opposition Leader, and Mr Norton, Leader of the Labour Party, have consented to serve. "We are within the war zone," is Mr de Valera's comment. Other neutrals have made this discovery too late. Eire, at least, is mounting guard.

*

Sir Walter Layton has been appointed by the Minister of Supply to be Director-General of Programmes in the Ministry of Supply and a member of the Supply Council. He was a member of the Munitions Council in the Ministry of Munitions in the last war.

*

In three minutes on Wednesday the Commons passed the National Loans Bill through all its stages. The Bill gives the Treasury power to raise money for supply for the year to March 31st next plus a margin of up to £250 millions. These terms are the same as for last year's National Loans Act, but the Treasury is now under no contractual obligation to issue bearer bonds, whose issue is now prohibited under the recent security dealing regulations.

*

The United States is already preparing against air raids. A new detector has been devised, claimed to be "far in advance of any similar equipment available for belligerents abroad," which can find aeroplanes over 50 miles away, thus giving the defenders a quarter of an hour's grace, and it is planned to instal one in look-out stations along the Atlantic, Pacific and the Gulf coasts, and in Hawaii, Alaska, Puerto Rica and the Canal Zone.

*

The supplementary payments to old-age pensions, which under this year's Act have been taken over by the State from the local authorities, will come under the Assistance Board in August, and draft Regulations have now been laid before Parliament. For a single pensioner living alone, with no resources beyond the old-age pension of 10s. a week, the standard income proposed is 19s. 6d. a week. This means a supplementary payment of 9s. 6d., which may be increased in winter. For a married couple under similar circumstances, the supplementary payment will be 12s. a week—6s. a head—subject to an adjustment for rent.

*

Of the total of 631,464 wholly unemployed males in the middle of March, as many as 266,154, or 42.1 per cent., were over fifty years old, and 110,012, or 17.4 per cent., were between forty and fifty. All those aged twenty-one to thirty-nine inclusive, that is, those of military age, only accounted for 224,532, or 35.6 per cent. of the total.

THE WORLD OVERSEAS

France Stands Firm

(From our Paris Correspondent)

IT would be worse than useless to speculate on the issue of a battle on which all essential information is being carefully withheld. One may perhaps more profitably discuss some of the most urgent administrative problems with which the French Government, profoundly changed in personnel and spirit since the terrific shock of invasion, is now called on to face.

Power in France in this time of emergency is largely in the hands of three men: M. Reynaud, in his double capacity as Premier and Minister of Defence; General Weygand, as Commander-in-Chief; and M. Georges Mandel, who, as Minister of the Interior, has the very important charge of maintaining internal order and security. So long as the present Cabinet is in office there will be no question of weak will or wavering. There have been rumours recently, both here and in Berlin, that Hitler might take advantage of a favourable military position to offer a separate peace, on ostensibly moderate terms, to France, with a view to concentrating the full weight of the German striking power against England. One may confidently predict that such a manoeuvre, should it be made, would have no effect on M. Reynaud and his associates. They are convinced that, for France and Great Britain, it is very definitely a case of hanging together or of hanging separately, and they are resolved to continue resistance, regardless of past or possible future reverses. One may go further and say that there will be no very ceremonious choice of means in blotting out any symptoms of defeatism that may make their appearance.

The Refugees

One of the most colossal problems which confronts France at the present time is that of the refugees who have been flooding into the country from Belgium, the Netherlands, Luxemburg and North-eastern France. Advance evacuation plans have proved almost useless because of the immense scope of the present-day flight. The present situation overtaxes the resources of every state and private relief agency in France. The authorities do not wish to have a great congregation of refugees in Paris, so they are given nothing here except emergency food and shelter. Those who are not able bodied and cannot work are promised an allowance of ten francs a day when they are settled in the provinces.

It is impossible to overstate the urgency of this refugee problem, even from the purely military viewpoint. The choking up of roads by these fugitives is a serious military problem. And the influx of millions of refugees, with their stories of bombing and tank raids, and the many pitiful cases of mothers who have lost their children, of separated families, of cases when older refugees have lost their reason from the horrors which they have experienced, have their inevitable effect on the morale of the rear.

While trying to care for the refugees in as orderly and humane fashion as circumstances permit, the Government finds it necessary to issue severe warnings against premature and unauthorised evacuations which increase the general confusion and panic. German Fifth Column agents have undoubtedly been promoting such evacuations; more frequently they have been the result of over-hasty action by local officials. M. Mandel is carrying out an extensive house-cleaning among the prefects and mayors in the districts behind the front with a view to leaving authority only in the firmest hands.

The Government is also setting an example by remaining in Paris. There has been, and there will be, no repetition of the over-hasty flight to Bordeaux in 1914. There has been

a stern tightening of labour discipline. Communists who refuse to work on Sundays are promptly clapped into prison. Workers and employees who have been mobilised and assigned to work in factories and offices have been reminded that if they refuse to obey orders or desert their posts they will be liable to the same penalties as soldiers who commit similar offences. A campaign is also being waged against "bobards," or false rumours.

In the main, the French capital remains amazingly calm. Considerable numbers of people have left the city for the relatively safe regions of the South and the West; but the everyday life of the shop, the market, the café goes on much as usual, and has a wonderful effect in maintaining morale.

May 25th.

New Zealand War Finance

[FROM OUR CHRISTCHURCH CORRESPONDENT]

THOUGH the war is far away, its influence on New Zealand is very real. Local effects are seen in a steady stream of volunteers recruited and trained for service abroad, in the scarcity of some imported goods, in increased Government regulation and closer control of trade and exchange, in reduced road transport and increased taxation and prices.

Shortly after the outbreak of war the Minister of Finance estimated special war expenditure for the remaining seven months of the financial year 1939-40 at £9.75 millions, about £2.41 millions, or half of the existing defence vote of £3.21 millions was expected to be available, and the remainder was to be got from loans.

Now the Prime Minister has given estimates for 1940-41. He expects the year's expenditure on war to be £33 millions: £25 millions for the Army, £6.5 millions for the Air Force and £1.5 millions for the Navy. Of this total, £20 millions is required overseas and, under arrangements already made, this amount will be made available by the British Government. The remaining £13 millions are required—and must be raised—in New Zealand. £3.5 millions are already provided by special war taxation, and extra taxes and loans will be used to raise the remainder.

It appears that the way is being prepared for interest-free loans. The continuance of credit expansion in 1939, after imports and exchange had been brought under control, made money abundant in the Dominion. The slight rise in export prices and the earlier payments made under the war agreement for the purchase of exports by Britain, combined with the curtailment of imports, stimulated further expansion. As a result, bank deposits are at record high levels, bank advances are relatively low, and money is exceptionally plentiful. Meanwhile, restriction of trade and insecurity have contracted the avenues of local investment, and the Government has recently issued regulations designed to close the unofficial exchange market, which has been fairly active at about 10 per cent. premium over official rates since exchange control was imposed in December, 1938. The results are seen

in rising prices and falling yields of Government and other securities, and in the creation of conditions favourable to borrowing at low rates for war purposes.

Working of Exchange Control

Local arrangements for the marketing of the chief exports sold to Britain are working fairly smoothly, and under these arrangements payments are received about two months earlier than has been the rule in the past. Meanwhile, the usual arrangements are maintained regarding payments for imports. In consequence, it is estimated that exchange funds held abroad showed a windfall gain of about £8 millions by December, and an earlier decline is expected towards the end of the season.

For the year ended March 31, 1940, exports amounted to £59.64 millions, or nearly £2 millions more than for the preceding year, while imports totalled £45.57 millions, or nearly £9 millions less. The export balance on trade account for the year was £14.07 millions, and the exchange funds held by all the banks amounted to £23 millions at the end of March, compared with £9.72 millions in March and £8.57 millions in September, 1939.

Though the amount of sterling exchange held is now ample for normal needs, this does not mean that all exchange difficulties are solved. While a credit balance of payments increases sterling exchange and the Reserve Bank's liquid assets, it also increases the Reserve Bank's liabilities, mainly in the form of deposits payable on demand to the trading banks, and it is not practicable to free exchange from control while the trading bank deposits at the Reserve Bank substantially exceed the latter's sterling exchange, as they have done since exchange control was imposed. The difficulty could be overcome if the Government were to get money from the trading bank deposits at the Reserve Bank, that is, from the public, and use it to repay its advances from the Reserve Bank. This process would reduce both the frozen assets and the demand liabilities of the Reserve Bank, but it seems unlikely while the war provides a reason for continuing exchange control and while the demand for money for war purposes is given priority.

Upward Wage Movement

Since the Labour Government took office in 1935 the cost of living index in New Zealand has risen by 21 per cent., compared with a rise of 11 per cent. in Australia. Since the outbreak of war, the rise has been about 5 per cent., and this steady increase is being advanced as a reason for war increases in wage rates. There is little recognition of the fact that unless production increases the war can be paid for only by reduction of living standards, and as yet the Government has given no expression of its opinion.

Slight changes in the constitution of the Cabinet have followed the death of Labour's first Prime Minister, the Right Hon. M. J. Savage, and the appointment of the Hon. P. Fraser as his successor. Though no changes of policy have been announced, there is some evidence of an attempt to moderate public works expenditure and the credit expansion which has financed most of it in the recent past.

Italians in Albania

[BY A CORRESPONDENT]

THOUGH the Italian occupation of Albania was, first and foremost, a strategic move—aiming at full command over the Straits of Otranto, and establishing Italy as "a Balkan Power"—Albanian economic resources have since proved to be of great value for Italian supplies. The Ministry for Albanian Affairs in Rome has followed a well-considered plan concentrated on raw material production and transport.

The Albanian Budget is well balanced. Civil Government is run on Italian lines. Industrial activity is on a large scale—mainly no doubt for military purposes. The output of crude oil, iron ore and metals is gathering momentum. A pipe-line is being constructed between the oilfields on the Devoli River and Valona.

Great attention is devoted to mining. The *Società Italiana di Esplorazione e Sfruttamento Minerario* is busy mining copper in the Scutari district; and there is copper in North Albania, the Krabi Mountains, and in Southern Albania as well. It is believed that an annual output of 6,000 tons can be achieved.

This is the Vauxhall twelve-four — a roomy family car which does 35 m.p.g. Vauxhalls are confirmed petrol-savers — The Ten does 40 m.p.g., the Fourteen-six 30 m.p.g.

VAUXHALLS

"Rationed"?

YES, we must admit it. Much as we should like you to buy a new Vauxhall, the fact remains that present-day demand exceeds the controlled wartime production.

Next best thing to a new Vauxhall is a *used* Vauxhall. For by all ordinary standards every Vauxhall built during the last five years is a modern car. Since 1935 every new Vauxhall model has had independent front wheel springing and every Vauxhall from mid-1937 onwards has the famous six-phase economy carburation which gives

something like 20% more miles per gallon, adds 1/4th to your ration.

Go to your local Vauxhall Dealer — ask him to show you his range of specialist-re-conditioned cars. You cannot find better value anywhere, or more economical wartime motoring.

To Vauxhall Owners

'SERVICE AS USUAL'

is the wartime slogan of the network of authorised Vauxhall Dealers. They are carrying on cheerfully with their job of helping Britain's road transport to run efficiently. At your local Vauxhall Dealer's you can rely on skilful attention by trained mechanics backed by specialised equipment; with reasonable charges on a low flat rate basis.

VAUXHALL

10 h.p. £182 • 12 h.p. £198 • 14 h.p. £235

VAUXHALL MOTORS LTD., LUTON, BEDS.

Extensive iron ore deposits exist near Lake Okhrida. Albanian hematite, containing 60 per cent. of iron, is of value for steel production, and steel works are in the process of erection.

The main companies in charge of manufacturing and mining are the *Ferralba* and the *Ammi*. Chromium ore, also found near Lake Okhrida, is claimed to contain 25,000 tons of chromium, sufficient (they say) to satisfy Italian requirements for a period of 10 years. Albanian nickel, manganese and timber will be of use as soon as transport facilities will be available. Albanian olive oil is already replacing imports from Greece, Turkey and Spain.

The extension of air, rail and road communications will serve economic and military purposes equally. The *Alfa Romeo* opened recently a branch in Tirana to run express coaches from Durazzo and Valona to the interior. The air service has been greatly improved, five main air lines flying from Tirana to Scutari, Korça, Valona, Pechkopija and Kukës respectively.

Roughly 1,250 miles of highways have been reconstructed or newly built by 30,000 Italian engineers and workers, assisted by units of the Albanian army—now fully incorporated in the Italian forces. The most important road will lead from Durazzo via Tirana to Koritsa, near the Greek border. A new railway (from Durazzo to Elbasan and Labiotti), involving an expenditure of 200 million lira, is to represent the first part of a trans-Balkan railway—connecting the Adriatic via Sofia with the Black Sea—and joining the Greek railway at Florina.

May 28th.

Egypt Faces Facts

[FROM OUR ALEXANDRIA CORRESPONDENT]

THE boom in cotton and security prices that marked the last two months of 1939 had already passed its peak by the end of the year. The reaction that set in early in 1940 gradually gathered momentum, until it assumed the proportions of a regular depression and finally culminated with the threat of an extension of hostilities to the Mediterranean, in the closing *sine die* of the Alexandria cotton and cottonseed futures market. Transactions in securities were almost brought to a standstill at officially pegged rates.

The fact that a severer slump did not develop and wipe out all the gains made since the start of the war is due to the substantial advance in minimum prices effected since last autumn for securities and, especially, for cotton. The tactics of successively raising the peg for cotton futures, which might have worked smoothly right up to the end of the season had the war remained localised, actually ended by creating a very embarrassing situation for the Government. From the beginning of May there were growing indications that a vast amount of cotton and cottonseed would be tendered to the Government in the course of the following weeks, an operation entailing the immobilisation of large public funds, at a time when national defence needs are putting an increasing strain on the Treasury. By closing the futures market and ordering the liquidation of all outstanding positions, the Government will avoid receiving actual cotton at the minimum prices which, incidentally, had been fixed also for the next crop.

The spot cotton market remains open, but without any hedge protection, and heavy losses are being sustained by holders as the forced uncovering of their cotton has coincided with a world slump in cotton values.

Up to last month the war had borne very lightly on Egypt. Economic gains accruing from hostilities by far exceeded inconveniences deriving therefrom. Most domestic produce, especially foodstuffs, was but moderately higher in price than before September, 1939; rationing was (and still is) unknown; labour was very peaceful; defence measures scarcely interfered with civilian activities.

With its easy-going nature the nation tended to lose sight of the wider issues and increasingly to indulge in political squabbles. The present dramatic turn of events has, therefore, come as a shock, and the inherent perils of the situation have been brought home to the mass of the city population by the swift tightening of control in many walks of life.

May 20th.

The Exploitation of Czecho-Slovakia

[BY A CORRESPONDENT]

THE Berlin Government has issued a decree which establishes that the Reich Protector in Bohemia and Moravia has the right of objection in all matters of civil law. The right of objection applies to all decisions of non-German regular, special or arbitration courts, whether these decisions were made before or after the establishment of the Protectorate. These decisions become invalid as soon as the Reich Protector issues his objection.

Germany is short of lead, which she needs in her new industries for the manufacture of synthetic products, especially petrol. In Germany and Czecho-Slovakia all lead pipes for which substitutes can possibly be found are being collected. The breweries, for example, have been ordered to give up all lead and tin piping to the German authorities and to replace them by others. Accumulators must also be surrendered, at a fraction of their market value.

The Flight from Money

The population is losing its confidence in money. In all banking institutions the deposits have decreased; those of one of the largest Prague savings banks are 12.6 per cent. lower than in 1939. The building of new houses has increased to an extraordinary extent, although this was slowed down recently by a decision of the German authorities forbidding the allocation of iron for building purposes. There is a great boom in all objects of art. Portraits, even bad ones, are being bought in large numbers. German propaganda attributes this to the Nazi stimulus given to Czech culture. In reality it is a desperate defence against the inflationary devaluation of the currency.

Industrial Compulsion

The League of Czech Industry is, it is true, apparently autonomous, but in reality it is completely in the hands of the Germans. It is organised on authoritarian principles. The real power is in the hands of the so-called *Beauftragter des Reichsprotektors*, Dr Adolf. His decision is binding for all members of the League, and obedience can be extorted by all possible methods of pressure.

Deterioration of Transport

From April 1st all railway dues, both for goods and passenger traffic, were increased from 15 to 20 per cent. The price of workers' tickets has been raised by 10 per cent. For goods ordered from Germany the Slovak State Railways have to send special trucks to Germany, which come back only after six to eight weeks, or sometimes do not return at all. Those which do return are considerably damaged because the Germans use them for their own purposes. There is an extreme shortage of locomotives and of spare parts, and the life of stock is shortened by the inferior quality of the lubricating oil. In the engine shops there is a shortage of copper, tin, lead and malleable iron. Owing to the bad condition of the roads the motor-buses belonging to the railway company suffer severe wear and tear.

May 24th.

Industrial Progress in Palestine

[FROM OUR JERUSALEM CORRESPONDENT]

IN Palestine circumstances are fundamentally different from other countries of the Near East. Jewish immigration has brought with it new industries, whose extent, before the present war, may be gauged from the figures given by the Jewish Agency in its census for 1937. It enumerated a total of 14,000 undertakings in industry, commerce, transport and handicraft, with 55,000 persons engaged and a yearly output of £P.33 millions.

The Arab industrial enterprises, such as a number of flour milling concerns, the old-established soap industry of Nablus and various other small undertakings, have a yearly output of about 15 per cent. of the Jewish output. The war seems to have stimulated Arab enterprise less than it has Jewish, to a large extent because of the special conditions prevailing in this country.

Refugee Capital

The growth of Palestine industry during the last two decades cannot be treated as due either to the support given by the Government or a Government-controlled bank, as, for example, by the Bank Misr in Egypt, or to the influx of European surplus capital, as in North and South America during the nineteenth century. Two factors were decisive: Jews, especially from Eastern and Central Europe, sent their capital here to escape, as they hoped, the political dangers of their own countries. For this reason they were often content with a rate of profit below the ordinary.

The other factor is even more important. Immigration from Central Europe during recent years has consisted in the main of persons with specialised skill and knowledge, who nevertheless did not aspire to such big incomes as European specialists normally obtain in undeveloped countries. Often such persons brought with them special knowledge and commercial connections which in normal circumstances would never have been available here. For example, our manufacture of aluminium goods has been founded in this manner, our domestic machinery industry has been enriched by the counsel of a leading German engineer from one of the biggest plants of its kind in Europe.

In this way, stimulated also by the war, there are being built up in this country many light industries in metal products, pharmaceutical goods, fashion goods (as Viennese knitwear), haberdashery and diamond cutting. They have taken the place of goods formerly imported, especially from Germany, Austria and Czecho-Slovakia, and many of the products of these industries are already finding markets in other countries of the Near East.

Raw Material Prospects

Possibly even certain raw materials will eventually be produced here. The tremendous magnesium deposits of the Dead Sea ought to be convertible into metal, just as the magnesium salts are extracted and converted from other deposits of potash, and the geological formation of the country points at least to the possibility of finding deposits of usable aluminium clays and of oil. The last would be especially valuable, as the pipe-line to Haifa and the new refinery there have not yet lowered the price of power to a level comparable with cheap water power in other countries.

The investment that cannot depreciate

Defence Bonds are issued at £5 each and begin to earn interest at 3% from the date of purchase. Income Tax is not deducted at source. There are no stamp duties or other investment expenses—you simply apply for them at any Post Office or Bank.

If you hold the Bonds for 7 years you will receive back the full capital value plus a premium at the rate of £1 on every £100.

Defence Bonds can also be cashed meantime at six months' notice and full par value plus interest to date will be paid.

Arrangements can always be made for immediate repayment in case of necessity.

The Nation needs the help of every investor. Lend all you can and keep on lending. Help to wield the powerful financial weapon which is vitally necessary for speedy and decisive victory.

THE BUSINESS WORLD

Shipping in War—II

THE previous article, which appeared in *The Economist* last week, set out the reasons of public policy that led the Ministry of Shipping to change negative control of shipping by licensing into positive control by requisitioning. Requisitioning is not, however, a policy that is ever likely to be popular with shipowners and still less with the freight markets. There is obviously no service for an intermediary between owner and charterer to perform when all imports are for the account of the Government and all ships are requisitioned. Some shipowners have found employment with the Ministry of Shipping and the services of the market are still used for exports. But the main part of the business of the Baltic and other freight exchanges has inevitably disappeared. It would be wrong to treat this problem in isolation from the other cases of vanished livelihood, and it is already apparent that one of the widest gaps in our economic preparation for war was a carefully thought-out policy of compensation for trades which performed a useful service before the war and will do so again after the war, but have no rôle to play in war itself. But it is obvious that whatever should be done about compensation, there is no case for going through useless motions, multiplying formalities and employing office staffs merely to maintain a business in being. There are more economic means of achieving that end.

The shipowners, unlike the shipbrokers, are not put out of business. On the contrary, they retain control of their ships in all that concerns the manning and running of them and are compensated not only for the current costs of management but for interest on capital and depreciation as well. Nevertheless, it is only natural that they should feel aggrieved at being deprived of their freedom to seek the most profitable business just at a time when, for the first time since the last war, there is an insatiable demand for shipping. Shipowners are among the most determined adherents of the principles of *laissez faire*, and the annual reports of the Liverpool Steam Ship Owners' Association are almost classical latter-day statements of that doctrine. The latest report even goes so far as to attempt to prove that the requisitioning of shipping in the last war brought no benefit to the community. One of the arguments adduced to make this point is the remarkable one that, if shipowners had been trading for their own account in 1916 they would have refused to leave port and thus compelled the earlier adoption of the convoy system. Some of the statistical arguments are equally remarkable. The fact that the total weight of imports brought into the United Kingdom declined after 1916 (when requisitioning was introduced) by 25 per cent., is apparently thought to prove a point against requisitioning, although the report itself admits that the total amount of shipping employed decreased by an even larger proportion. But the effect of requisitioning can best be seen by observing its effect on the carrying capacity of British ships, which were the ones affected. An authoritative calculation, made at the time, estimated that while the tonnage of British ships available was 20 per cent. less in 1917 than in 1916, the tonnage of goods brought in by these ships was only 2 per cent. less. The Liverpool Steam Ship Owners' Association will have difficulty in proving from the experience of the last war that central control of British shipping did not increase its effective carrying capacity.

Misconceptions also surround the familiar charge that the experts of the shipping industry are being overruled by inexperienced civil servants. The detailed running of ships is still entirely in the hands of their owners and a formidable company of expert shipping men has been recruited for the Ministry. But what the trade seems to have difficulty in appreciating is that the problems of shipping management in wartime are of a kind that never occur in peace. In peace

the problem is one of marrying an adequate or superabundant supply of shipping to a demand for it that emerges from thousands of individual decisions and preferences. In war, it is one of squeezing a planned import programme into an inadequate supply of shipping. "When the freight system was broken by the pressure of the war," says Sir Arthur Salter in his book on "Allied Shipping Control" in the last war, "it became necessary to allot transport on a deliberate judgment of the relative importance of different supplies, and the problem could not be simply solved by turning it over to experts—for such work there were no experts." To-day, the only people who can lay claim to expertise are those, whether civil servants or shipowners, who had experience in the shipping and supply departments of the Government in the last war. Similarly, complaints have been made that the "civil servants" exhibit their incapacity by bringing ships in with substantial proportions of their cargo space unused. Ships are of varying designs: some are built for carrying commodities that are bulky in proportion to their weight, others for heavy goods. In wartime it is necessary at times to use whatever ships are available, and a "measurement" ship may have to be allocated for a "deadweight" cargo. The effect of war is, in general, to increase the deadweight cargoes and diminish the measurement cargoes (i.e. to increase imports of raw materials and diminish those of manufactured goods) and ships must inevitably be used for purposes other than those for which they were designed. The real test is weight, and if a ship is brought in not loaded down to her Plimsoll line, then there is *prima facie* evidence of uneconomic use of shipping; but the utilisation of space is necessarily a secondary consideration.

No outside observer would feel disposed to hold the Ministry of Shipping up as an example of administrative perfection. But there is an overwhelming weight of evidence to show that requisitioning is the right policy—indeed, the only possible policy—for wartime. Criticism, to be useful, should be directed to the success or failure of the Ministry in executing that policy in detail, not to their choice of it as a principle.

The question of the financial compensation to be paid owners for the compulsory time-charter of their ships stands somewhat apart from the technical problems of allocation. The payment made to owners has three elements. The first is the current cost of running the ships, on which agreement is easy in principle, however difficult it may be in practice. The second is a payment of interest on capital invested, and the only point to be made here is that it is, of course, the pre-war value of the ships that is alone relevant. There would be no case in equity for paying interest on capital values that were inflated by the war, especially since such inflation could only come about because of increased profits, which again come out of the Government's pocket. The real difficulty arises in respect of the third item—payments in respect of depreciation, replacement and obsolescence. It will be impossible during the war for shipowners generally to replace obsolete or lost ships. The Government will, of course, be building ships and these will doubtless be assigned for management to the different owners. But it is doubtful whether public opinion would accept the suggestion made by Sir Philip Haldin at the recent meeting of Court Line, Limited, that these ships should actually be sold to private owners; the attraction of such a suggestion to the owners themselves is obvious, but it would run counter to the whole trend of policy that is being dictated by events. In default of such a scheme, the replacement of tonnage lost or grown obsolete during the war must wait until after the war, and the question arises: What monetary payment can now be made that will put owners in the position to undertake these

replacements at that time? The answer is, of course, that it is impossible to calculate any figure. A ratio of 5 per cent. on current value is quite irrelevant. Neither the pre-war monetary value of ships, nor the figures to which their value may be inflated during the war, have more than the remotest connection with the cost of shipbuilding after the war, which is what will decide the matter when the time comes. The problem cannot be solved on a financial basis; the only method that promises equity both to the shipowner and to the community is to handle replacement on a ton-for-ton basis. Depreciation payments should be made and insurance claims for losses paid, not in pounds sterling but in claims for so-and-so-many tons out of the post-war shipping pro-

gramme. This would, of course, involve the Government in what is in monetary terms an unlimited commitment; but it is unlimited in real terms only if the cost of shipbuilding after the war is excessively high relatively to the value of money in general—an expectation for which there is no apparent warrant.

Both in its technical and in its financial aspects, shipping provides an admirable example of the fundamental differences between a war and a peace economy. Contrary to the general rule, the differences seem in this case to be more clearly appreciated by the Government than by the trading interests affected. The greater is the importance of keeping the general public informed of the principles involved.

Finance and Banking

War Loan Dividend Preparations

The position in the money market has during the past week shown all the characteristics that are normally to be seen in the last week of May, when preparations are being made to pay the June 1st War Loan dividend. It might have been thought that this year the vast scale of Government expenditure would have swamped this normal rhythm of seasonal fluctuations in short-loan conditions, but it has none the less been quite marked. The clearing banks have been very diffident buyers of bills. With the market continuing to obtain fair-sized allotments of bills at the weekly tenders, any appreciable diminution in the flow of bank purchases of bills is immediately reflected in the demand for short loans. This week, therefore, money has been in good demand, though a sufficient quantity of it has always been available at 1 per cent. The official outlet for bills has been ready to accommodate any urgent need to sell which could not be satisfied with the clearing banks, but if any recourse to such open market help has been needed, it has been quite negligible. The attitude of the banks towards the bill market is adequately explained by the Bank return, which shows bankers' deposits to have fallen to the comparatively low level of £94,908,000. The diminution of £8,143,000 on the previous week has in part gone to public deposits, which have risen to £36,115,000, an appropriately high figure on the eve of the War Loan dividend disbursements. The Bank return, however, reveals another factor at work, namely, the expansion in the note circulation to an all-time record. This expansion has amounted during the past week to £10,366,000, and is partly to be explained by normal end of month requirements. It is clear, however, that this does not represent the whole of the explanation for the substantial increase in the circulation. The military news, the consequent revival in movements of population from evacuation areas and the natural desire of many people to hold a little more cash than usual in such uncertain times must between them account for a considerable part of the increased circulation. Beyond these special factors there is, of course, the fact that an upward secular trend in the demand for currency is now under way. Given the considerable increase in employment, this trend will continue for some time to come. The authorities have taken the appropriate steps to neutralise this expansion in the circulation as a factor in the bank cash position, and the Bank's holding of Government securities consequently shows an increase of £11,025,000.

Loan Rates Talk

The clearing banks in tiding themselves over these few days of stringency have for the most part not been forced to pay excessive regard to day-to-day orthodox requirements of liquidity. Some of them effected their monthly making-up last week and could this week allow their cash resources to run well below the accepted norm. They must have been encouraged in this by the knowledge that after the turn of the month the money position promises to ease considerably. Apart from the percolation to the money market of War Loan dividend moneys, the banks appear to be abundantly supplied with early June maturities, and whatever signs of greater stringency may have been apparent during the past week will completely vanish during the next few days. Paradoxically, the few days of rather tighter money conditions have been chosen for a revival of market discussion of a lowering of the banks' short loan rates. The point of departure of most of these discussions seems to have been the passage of the Emergency Powers Act and the specification of the banks as coming within its scope. In view of the assiduity with which some Labour Members of Parliament

have during the past few months questioned the Chancellor of the Exchequer on the subject of short loan and discount rates, it was assumed that the new Labour wing in the Administration would quickly lend its influence in the direction of a general lowering of these rates. This reasoning seems, for all its plausibility, to be at least premature. There is no question at the moment of altering the structure of interest rates which as at present constituted "hangs together" very effectively. But plainly, if it is desired in the public interest to have the short loan rate brought down to $\frac{1}{2}$ per cent. and to lower by this amount the average rate paid on Treasury bills, that adjustment can—and should—be made without requiring recourse to compulsory rule under the Emergency Powers Act.

Belgian Assets Blocked

The capitulation of the Belgian army was immediately followed by official instructions from the Treasury to block Belgian balances and securities in this country. These instructions would seem to have made their appearance tardily seeing that almost the whole of Belgium and all the important towns had been in German occupation for about a week previously. The delay cannot, however, have caused any damage in view of the complete severance in communications between Belgium and the rest of the world during that period. In any case, banks in this country would certainly have refused to obey instructions as to the disposal of sterling assets coming from Belgian clients who were not in this country. The blocking does not affect the assets of Belgian refugees, who, within certain limitations, are free to draw on their accounts and who also continue to have the right to convert Belgian notes into sterling currency. The whole position of the Belgian currency, its alignment with the Allied moneys, and the status of the Congo currency have been brought into question by the constitutional problems set by the King's action. That uncertainty, however, is clearing rapidly. The real Government of Belgium will continue to function from France; the country will, in fact, remain at war with Germany; and the available resources of the country and its colony will go to swell the financial strength of the Allied Powers.

East Indies Guilder Rate

As from Monday last the East Indies guilder was re-instituted in the list of exchange rates officially quoted in London. The quotation has been fixed at 7.58 to 7.62 guilders to the £, the middle rate of 7.60 being approximately that which obtained on the eve of Germany's invasion of Holland. The reinstatement of the Dutch East Indies guilder to the list of quoted exchanges followed the formal adhesion of this currency to the Allied monetary bloc. As was surmised last week, the temporary linking up of the Dutch East Indies guilder with the United States dollar at the pre-invasion rate could be reconciled with the subsequent inclusion of the guilder in the Allied currency group. In fact, the Batavia-New York rate is to remain at the middle price of 1.885 guilder to the dollar, which corresponds to the new sterling rate of 7.60 guilders on the basis of a dollar-sterling conversion rate of 4.03. The Dutch East Indies thus enter into the area within which official rates for sterling and French francs hold undisputed sway. The market in "free" sterling in the Dutch colonies has been abolished. The Foreign Bills Regulations, which now govern the exchange market in the Dutch colonies, also ensure that the proceeds of their exports to such countries as Japan or the United States are made available to the monetary authorities in yen or dollars, even though the goods in question are exported via Singapore or some other sterling area *entrepôt*. Thus the Dutch East Indies have at one bound brought their fullest support to the membership of the monetary alliance.

The Unexpected in Silver

The silver market has again provided surprises during the past week. The Townsend Bill, which was to alter the whole character of United States silver policy and which had received the vote of the Senate, has apparently been sent back to that body by the House of Representatives. It is expected that this gesture will safely stifle Mr Townsend's proposals for the present session, and possibly after, in view of the elections. This development has, however, been offset by the effects of the new silver export licensing system. As far as can be seen, licences for the export of silver from this country will be granted with the greatest reluctance by the authorities. This may be due to the fact that stocks of silver in Great Britain have in recent months fallen to very small proportions. The London market has thus suddenly been deprived of one of its main sources of support. Indeed, some silver bought for shipment has been resold on the market, although the principle laid down has been to grant licences for export of "pre-zero" silver to Bombay. The Bombay price, though declining in the latter part of the week, continues well above the sterling parity, the latest quotation giving a London equivalent of about 24d. The higher rupee price has dragged up the commercial quotation for silver in New York, which is now at a premium of 8c. over the Treasury's buying price of 35c. One other explanation of the rise in the New York price may be the diversion to that market of certain South American coinage orders which would have been placed in London but for the export ban.

Investment

Gilt-Edged Stand Fast

The blackest news—and it was black indeed on Tuesday—cannot shake the foundations of the Funds. The gilt-edged market is as empty of stock as the industrial market is empty of buyers, and it is canalising every stream of investment support. It displays all the strength of a closed

FIXED-INTEREST AND EQUITY SECURITY MOVEMENTS (July 1, 1935 = 100)

Financial News indices of 20 fixed-interest securities (converted to new base) and 30 ordinary shares.

market, but it is vital strength in the war financial effort. On Thursday, War Loan marked at par, as it had done a week earlier, in defiance of Tuesday's break to 96, and the record of the entire market over the past month is one of tough strength to meet the most bitter tidings. By contrast, home rail stocks and industrial shares are completely resigned and offer no resistance. On Thursday, the *Financial News* ordinary share index continued its fall into new low ground by touching 62.6, compared with 74.2 before the invasion of the Low Countries. The lot of equity investors is indeed

hard, for E.P.T. is now raised to 100 per cent. for all businesses, and dividends are limited. But the paramount needs of war demand this temporary eclipse of the ordinary share. There is no suggestion of selling pressure in equities, for ordinary investors, like the rest of the community, have displayed a commendable degree of fortitude. They may have to continue their rearguard defence for a considerable period to come, while gilt-edged maintain their front.

Stock Exchange Emergency Plans

Further details have been published by the Stock Exchange Committee of the plan to maintain business in securities in the event of an evacuation of London. An Emergency Clearing Department is to be set up at Denham to which all bargains will be reported. Buying brokers would send a ticket, together with a cheque or other form of payment, to cover the transaction. When the cheque had been cleared, or banker's authority confirmed, the Department would stamp the ticket and pass it to the selling broker for the preparation of the transfer, and the selling broker would then deliver the securities to the Clearing Department and receive payment. Membership of the Clearing Department would be compulsory on all members, though members may contract out in respect of bargains where both parties mutually agree to settle between themselves as principals. It is emphasised that the Stock Exchange Committee would not order a move so long as banking facilities were available in the City, and they have related the preparation of emergency dealing arrangements to conditions in which London might be evacuated, the powers of government dispersed in the hands of regional commissioners, and communications disorganised. The function of the Clearing Department would be to retain the confidence of the public—amidst such general disturbance—by handing over securities only against money and money against securities.

Hard Cases Under E.P.T.

Further study of Section 26 of the Finance Bill has clarified some of the complexities of the special treatment to be given to companies whose profits were low in the standard years. Since, however, the most expert tax consultants cannot yet be sure of the application of the section, shareholders in companies with a claim to special treatment should not begin to discount its benefits. Appeal will lie to the Commissioners in cases where profits in the standard period were "so low" that they would not provide a just

standard. When profits are "so low," companies will be allowed a standard to cover their preference dividends, and 6 per cent. on the ordinary capital (or 8 per cent. for director-controlled companies). It is, however, for the Commissioners to decide exactly what "so low" means. Secondly, to avoid penalising a company whose share capital does not fully represent the "net value of assets employed" in the business, the Board of Referees may allow such a company to take a standard of 6 per cent. of the value of assets employed, on a "going concern" basis, before the commencement of the standard period, adjusted for changes in capital employed during the standard period. Thirdly, if the Board of Referees are satisfied that the trade or business "belongs to a class of industry which during . . . the standard period . . . was a depressed industry" they need not be bound by the fact that its capital is fully represented by the net value of assets employed nor by the limitation of the standard to 6 per cent. of the assets valued on a going concern basis. From this clause it appears that a company whose capital may have been low in relation to the long-term valuation of its assets, but whose profits were so depressed that the going concern value of its assets in the standard period would provide an unfair basis, may be allotted yet another profits standard. This standard would be limited by the general rule—which applies to all special cases agreed by either the Commissioners or the Board of Referees—that profits in the standard period shall not exceed 6 per cent. (or 8 per cent. as the case may be) of the "average amount of the capital employed in the trade." This concept was defined in the E.P.T. provisions of the Finance (No. 2) Act last year. If, however, the amount of capital employed in the standard period was wholly or partly represented by assets the value of which, for the purposes of the trade or business, had been "permanently lost," they must be deducted from the average amount of capital employed.

Relief from Double E.P.T.

Section 28 of the Finance Bill, as noted in last week's issue, avoids double taxation of profits earned by subsidiary companies and paid in dividends to their controlling company. The criteria are two. The controlling company must exist wholly or mainly to co-ordinate the administration of the group and the subsidiaries must each be under the control of the parent concern. The latter, however, need not be subsidiary companies as defined for E.P.T. purposes—that is, controlled as to 90 per cent. or more. Thus, it would cover cases such as Rhodesian Selection Trust, which holds 64 per cent. of the capital of Mufulira Copper Mines, and also Lewis's Investment Trust. Two of the controlled companies in the latter group declared no ordinary dividend for the year to February 28th last solely in order that the parent company should avoid double E.P.T. payment. Under sub-section 2 of Section 28, it appears to be intended that other groups of companies which do not fulfil the two conditions referred to above may avoid double taxation in a similar manner if the Commissioners so direct, but the meaning of this sub-section and the qualifications which attach to it are far from clear. As the clause is drafted, however, it seems clear that outside shareholders in controlled companies will receive dividends after E.P.T. has been deducted, and that if they happen to be non-controlling companies their net dividend receipts will be subject to a further E.P.T. charge.

London Fares

The public inquiry on the increase of London Transport road fares ended last week. The Charges Consultative Committee has the task of advising the Minister of Transport on the best means of increasing London Transport road fares to obtain a 10 per cent. increase in receipts. The Committee's recommendation has not yet been announced, but, in the meantime, it is important both for railway and London Transport stockholders and for London Transport road service users clearly to understand the case which the Board put before the Committee last week. This shows that on the basis of traffic experience since January 1st the Board is faced with a 10 per cent. reduction in passenger takings from £30,168,000 for 1938-39 to £27,151,000 for the current year. This reduction is the measure of the Board's financial predicament, which has been emphasised on past occasions. Of this total, road services are expected to provide £20,528,000, a decrease of 11.3 per cent. below 1938-39. Hence, to achieve the contemplated increase in road receipts, a sum of rather over £2 millions would be required. The Board estimates that 59.9 per cent. of total bus, tram and trolleybus passengers by number and 35.9 per cent. of receipts from those services are represented by ordinary 1d. fares and that it is

impossible to increase higher fares unless 1d. fares are first increased. The Board rejects the revision of stage points, since many of these points are natural traffic objectives, while passengers could avoid paying any increase in fares by walking a short distance to the new stopping places. Hence, it argues that an increase of all 1d. road fares to 1½d. is inescapable, though it is prepared to contemplate a loss of 20 per cent. of such short-distance traffic as a result of the increase. For higher fares, it is suggested that the 2d. fare which now covers three or four stages would be increased to 3d. for four stages, remaining at 2d. for three, while the 3d. fare would be increased to 4d. for six stages but remain at 3d. for five. Together with consequent alterations in workmen's fares, the estimated net gain in takings would be £3,142,000. Consequent changes in the Board's rail fares (apart from those which have already been introduced in conformity with the main line alterations) are estimated at £692,500. The Board thus submitted a basis of revision for all fares which goes well beyond the terms of the Remit from the Minister of Transport to the Consultative Committee, to avoid anomalies in the fare structure and to expose the implications of any partial change in the level of fares. Of these suggested revisions in fares, therefore, it is suggested that changes should at first be limited to an increase in 1d. fares to 1½d. and to certain consequent changes in workmen's and miscellaneous fares estimated to provide a net increase of £1,524,000, while the increase in the initial 1d. fare on the railways to 1½d. would produce a net gain of £44,500—though it would create serious anomalies in higher railway fares. The estimated benefits, it will be seen, are almost 25 per cent. below those covered by the Remit, and, within the context of the railways' financial agreement, they would obviously not provide a final solution.

Fine Cotton Spinners' Recovery

Fine Cotton Spinners' report for the year ended March 31, 1940, shows the most successful year's trading since 1930. The profit for the year, including interest from subsidiary companies, but excluding the results of the French subsidiary companies which are not yet known, amounts to £614,761, against £247,141 for the previous year and £349,445 for the year ended March 31, 1938. After raising the allocation for depreciation from £100,000 to £120,000, and charging fees and debenture interest, the sum earned for dividends amounted to £380,264, against only £32,381 in the preceding year. For the first time since 1931 the directors have declared one year's dividend on the 5 per cent. cumulative preference stock, and after providing £180,157 against the debit balance brought in from the previous year, a credit balance of £106,357 is carried forward—the first credit since 1931. Preference dividend arrears still outstanding from March, 1932, amount to £1,200,000, and preferred ordinary dividends, from March, 1931, to £423,000. Hence there are no true earnings for the ordinary stock, though, on the basis of normal preference and preferred dividends, the balance would be equivalent to 9.3 per cent. The most notable changes in the balance sheet are a rise in debtors from £895,473 to £1,190,425, a figure which includes £98,215 of enemy debts, and a corresponding rise in creditors from £413,976 to £750,488. Net current assets, however, showed a slight increase from £2,714,000 to £2,913,000. The Association's substantial improvement in trading during the past year is undoubtedly mainly due to Government and other war orders, which should be well maintained during the present year. The directors point out, however, that trading has not yet reached a condition of sufficient stability to warrant the introduction of the long-awaited capital reorganisation. The Association will find refuge from the worst burden of E.P.T. in Section 26 of the Finance Bill, which provides for a special standard for companies belonging to depressed industries. The £1 ordinary stock is quoted at 3s. 4½d., and is subject at best to a limited dividend of 4 per cent. The first preference stock stands at 12s. ex dividend, including 8s. gross arrears.

J. Lyons' Reduced Dividend

The declaration of a final 15 per cent. dividend on the ordinary and "A" ordinary shares, making 20 per cent. for the year, has removed J. Lyons from the group of "fixed-interest industrials" to which it belonged by virtue of the distribution, for many years past, of 22½ per cent. on the ordinary capital. Trading profit, at £1,011,452, is, however, only slightly below the record of £1,011,980 earned in 1938-39, and for the seventh year in succession has exceeded £1,000,000. The break with tradition thus appears to be due to the directors' appreciation of the burden which the war effort may impose on the company's business and its future earning power. The £1 ordinary shares have reacted from a high level of 87s. 6d. this year to 85s., at which they yield £4 14s. per cent.

* * *

Wiggins, Teape

Despite the outbreak of war, Wiggins, Teape made good last year the fall in trading profit experienced in 1938. Gross trading profit for the parent company and its subsidiaries rose from £1,134,049 to £1,385,647. The parent company's profit, after provision for taxation payable by the subsidiaries and for outside interests, amounted to £513,724, a figure which exceeds the 1938 profit by £65,216 and continues the rising trend which was broken in 1937. The parent company's provision for taxation and other charges is raised from £64,195 to £137,650 (including a transfer to income tax equalisation reserve of £36,000 against £10,000), and after payment of debenture interest and preference dividends, the sum earned for distribution on ordinary stock amounted to £214,119. Profits for the past three years are analysed below:—

	Years ended December 31		
	1937	1938	1939
<i>Consolidated figures:—</i>			
Gross profit on trading	1,226,481	1,134,049	1,385,647
Aggregate profits	623,682	523,377	708,319
Subsidiary charges	98,885	74,869	194,595
<i>Parent Company:—</i>			
Profits	524,797*	448,508*	513,724*
Taxation, etc.†	81,106	64,195	137,650
Obsolescence	15,000		
Debt interest	67,144	66,364	65,545
Preference dividend	96,410	96,410	96,410
<i>Ordinary stock:—</i>			
Earnings	265,137	221,539	214,119
Paid	168,500	168,500	134,800
Earnings %	17.2	14.0	15.5
Paid %	10½	10½	8
Reserve	96,322	53,000	80,000
Carried forward	52,666	52,705	52,024

* Profits including amount of provision for share of loss in a subsidiary company no longer required: 1937, £22,187; 1938, £1,561; 1939, £21,223. † Income tax, E.P.T. and N.D.C., income tax equalisation reserve, transfers to reserve against trade investments and against shares in subsidiary company. ‡ Being 8 per cent. dividend plus 2 per cent. cash bonus.

The decision of the directors to forego the payment of the cash bonus of 2 per cent., which has been distributed in the last two years, is dictated solely by financial prudence. The 8 per cent. distribution is the lowest since 1934, but it was very comfortably covered by earnings of 15.5 per cent. At the current price of 22s. 6d. the ordinary stock offers the satisfactory yield of £7 2s. Wartime earning capacity will be largely determined by the policy which the Ministry of Supply may pursue in the distribution and pricing of paper supplies and products, but it must be affected to some extent by the cutting off of Scandinavian supplies. Happily, none of the leading subsidiary companies appears to be located on the Continent. The consolidated balance sheet shows only a small increase in holdings of stores, from £1,453,163 to £1,479,962, and stocks of paper have actually declined from £894,703 to £847,937.

THE STOCK EXCHANGES

London

Note: all dealings are for cash

The shock of King Leopold's surrender of the Belgian forces was the dominant market factor this week. The Stock Exchange fully appreciated the grave predicament in which the B.E.F. had been placed by the withdrawal of Belgian arms, but the gilt-edged market certainly made more than the best of heavy news. Home

rails have continued weak and business in industrials has been entirely sub-normal, even compared with recent depressed standards.

*

The gilt-edged market opened with a series of further rises, particularly in the long-dated stocks, and witnessed the start of dealings in the new Conversion 2's, which closed on Monday at 98½. After

Boots Pure Drug Accounts

The accounts of Boots Pure Drug for the year to March 31, 1940, show that, after provision for taxation, fees and contributions to the staff pension fund, the company earned a record trading profit of £975,120, a figure which exceeds the previous record, in 1936-37, by £14,179. The fact that the net profit figure does not also exceed the 1937 level is due mainly to an increase in allocations to repairs, renewals and depreciation from £168,276 to £194,364. After payment of preference dividends, the sum earned for the ordinary shares amounted to £685,717, compared with £679,542 for 1938-39, and the maintained gross distribution of 30.9 per cent. (discussed on page 868 of *The Economist* of May 11, 1940) on the ordinary capital was covered by earnings equivalent to 42.8 per cent. After bringing in £248,724 from the previous year and placing £281,765 to special reserves, the balance carried forward amounts to £199,711. The current price of 36s. 3d. for the 5s. ordinary shares provides a yield of £4 5s. 3d. per cent. This must be reckoned a low return, even for so meritorious a share, and the market is still inclined to lament the absence of the long-awaited scrip bonus, now postponed for the duration. The consolidated position of the group may be discovered with some slight pains by reference to the subsidiaries' accounts, and for that very reason the directors might provide consolidated figures. The steadily rising earning power which the parent company has achieved throughout the last decade is actually enhanced by reference to the subsidiaries' record.

Dividend Limitation Appeals

So far three companies at least have announced their intention of appealing to the Capital Issues Committee of the Treasury for permission to distribute dividends in excess of the limit laid down under the Limitation of Dividends Bill. The appellant companies includes William Denny and Brothers, the Scottish firm of shipbuilders and marine engineers, whose announcement last June (when its shares were marketed) of an intention to pay a dividend of 10 per cent. on the ordinary capital proves to be well supported by the earnings of 1939. The company is, however, limited to a payment of 6½ per cent. gross under the terms of the new legislation. The firm of Thomas Hardman and Sons, formed on December 13, 1938, for the manufacture of textile machinery, is restricted to a total distribution for the period to March 30, 1940, of 6½ per cent. in order to conform with the ruling which limits the payments of new companies to 5 per cent. in one financial year. The third company, British Electric Traction, announces that the sum available for distribution on the deferred ordinary stock for the year ending March 31, 1940, would be sufficient to pay a dividend of 50 per cent. less tax on the deferred ordinary stock. The maximum distribution during the standard years has been only 5 per cent. plus a 10 per cent. capital bonus. It is clear that these appeals raise important points of principle—on what grounds exception may be permitted to the dividend limitation legislation. It is expected that the Capital Issues Committee will soon formulate these general principles. But obviously there can be no guarantee of open-handed treatment, nor is there any appeal from the Committee's decisions. Indeed, since the primary aim of dividend limitation is to restrict the volume of purchasing power which finds its way into the hands of the public, mere evidence of ability to pay dividends greatly in excess of the standard would hardly appear to provide grounds for making an exception. But there is clearly a good case for some concession to British Electric Traction, in view of its exceptional distribution policy of small cash dividends and regular capital bonuses.

Foreign bonds were depressed throughout the week. French railway issues registered fresh falls each day. After the news of the surrender of the Belgian army, Belgian Fours were held at 35 nominal. On Wednesday Japanese bonds displayed firmness due to buying from the East.

*

Lack of interest in home rail marginal stocks at the beginning of the week was translated into further losses influenced by the serious war news. By the middle of the week some relief was found for Great Westerns and Southern preferred, which had suffered most heavily, in the attentions of bargain hunters. Losses among debenture stocks continued. The depression was shared by the overseas market, where Argentine debentures slumped.

The industrial market opened dull on Monday. Pending the arrival of more decisive military news from France, difficulty was experienced in dealing. Declines were small, but general in heavy industrials, electrical equipment and tobaccos. Breweries were irregular. In the stores group Harrods and Lyons displayed firmness. The shock of the Belgian surrender brought business almost to a standstill on Tuesday. Markets became nominal. John Brown, Imps. and J. and P. Coats slumped heavily. Further marking down on Wednesday was reinforced on Thursday on the announcement of the extension of 100 per cent. E.P.T. to all classes of industry. Iron and steel shares were again weak, but gains were recorded by Boots, Lever and Unilever and London Brick. The Kaffir market remained dull throughout the week, but substantial losses were suffered by Geduld, Sub-Nigel and "Sallies." Among oil shares, only the market leaders received any attention, but on Wednesday Anglo-Iranians, V.O.C. and Shell Transport showed small gains. Rubber shares were dull, the market being dominated by political and military factors.

New York

WALL STREET opened strong on Monday despite a certain amount of profit-taking at the close. Steel, aircraft, chemical and copper issues were all well supported and the Dow Jones industrial index registered a gain from 114.75 to 116.35. On Tuesday news of the Belgian surrender caused general selling. Heavy industrials slumped, although a late rally followed Mr. Churchill's statement. Later in the week the tone of the market became firmer. Armament shares were again in demand. Steel issues were encouraged by French and Italian purchases. The Iron Age reports the level of steel mill activity at 78 per cent. compared with 74 per cent. last week.

Foreign Bourses

Paris.—The Paris Bourse, like the London market, has displayed remarkable powers of resistance during the past month. The firm note on which dealings opened in all sections at the beginning of May was quickly undermined by the news of the Allied evacuation of Southern Norway, and fresh falls followed the further shocks of the Dutch and Belgian surrenders. While prices in all sections were marked down, however, turnover remained small. The market did not give way, and sales have always been fully absorbed. *Rentes* remained relatively firm, and the heaviest losses were experienced by internationals and by those French industrials geographically affected by the German advance. Bank of France shares at 7,455 on May 29th were still considerably above the level of 6,550 on September 1, 1939. Losses in the past month have, in general, done no more than cancel the progress realised since the declaration of war.

BY TENDER

Southend Waterworks Company.—Sale by tender on June 7th £50,000 5 per cent. perpetual preference stock. Minimum price £122 per £100.

SHORTER COMMENTS

Company Results of the Week.—Trading profits of CEREBOS, LTD., have advanced from £455,619 to £581,377, but the net figure is only slightly higher at £323,377 and the dividend has been main-

tained at 40 per cent. JAMES FINLAY AND COMPANY also show a useful increase in trading profits, but net profits are slightly lower at £225,403 against £228,323 and the dividend is maintained at 12½ per cent. SIEMENS BROTHERS net profits total £306,234 compared with £251,733 and a dividend of 7½ per cent. is again paid. METAL TRADERS net profits show a substantial increase from £65,075 to £95,931. In this case the dividend is raised from 21½ per cent. to 30 per cent. UNITED PREMIER OIL net profits advanced from £77,184 to £91,473, but the dividend is maintained at 12½ per cent. DENNY, MOTT AND DICKSON'S net profits are slightly lower at £69,701, but the same distribution of 6 per cent. is payable. In the shipping group HOULDER BROTHERS report a fall in net profits from £51,307 to £40,748 though the dividend is maintained at 5 per cent. tax free. INDO-CHINA STEAM NAVIGATION net profits are severely reduced from £95,361 to £34,572 and no ordinary distribution is made. Trading profits of SMETHWICK DROP FORGINGS were approximately maintained last year, but net profits showed a fall of just over £5,000 to £34,486, which covers the 32½ per cent. dividend with a satisfactory margin. Among rubber companies the outstanding report is that of UNITED SIA BETONG, whose net profits figure of £112,343 is remarkably close to that of the previous year. The ordinary dividend is slightly increased from 12 to 12½ per cent.

Standard Bank of South Africa.—Final dividend 7 per cent. plus bonus 2 per cent. making 14 per cent. for year to March 31, 1940, as before. Writing down premises £75,000, officers' pension fund £150,000. Carry forward £157,932.

Olympia, Ltd.—Debenture stockholders' committee satisfied half-year's interest due June 1, 1940, or December 1, 1939, cannot be paid. Negotiations regarding compensation for Government use of Olympia buildings still proceeding.

Houlder Brothers and Company.—In 1939 this company earned a profit of £67,493 (£72,959). Ordinary dividend is maintained at 5 per cent., tax free. To taxation reserve, £20,000 (£10,000). Carry forward, £30,895 (£35,636).

Philip Hill and Partners.—Preliminary statement shows profit, £183,015, for nine months ending March 31, 1940 (15 months to June 30, 1939, £643,530). Including income tax recoverable and taxation reserve not required, total income £229,175. Ordinary dividend for 9 months, 10 per cent., equivalent 13.3 per cent. per annum (against 15 months' dividend of 31½ per cent. or 25 per cent. per annum). Investment depreciation, £200,000 (£140,000) bringing total reserve to £555,434. Carry forward, £57,913 (£59,769). General reserve maintained at £1,000,000. Quoted investments in balance sheet, £3,487,176; market value, March 31st, £2,948,132.

Canadian Pacific Railway Earnings.—April, 1940: Gross, \$12,044,000 (\$10,114,000); net, \$1,946,000 (\$913,000). January to April: Gross, \$47,682,000 (\$39,459,000); net, \$7,248,000 (\$2,381,000).

Armstrong Whitworth Securities.—Net income, 1939, £1,828 (£16,494). Credit forward, £19,527. Capital deficiency account reduced by £14,410 to £2,341,073.

Consolidated Trust, Ltd.—Gross revenue, year to April 15, 1940, £78,515 (£77,978). Net revenue, £39,869 (£39,722). Deferred stock dividend, 8 per cent. as before. £147 put to revenue reserve, now totalling £68,954.

Siemens Brothers and Company, Ltd.—Trading profit, 1939, £306,234 (£301,733). Ordinary dividend maintained at 7½ per cent. General reserve, £60,000 (nil). Special A.R.P. reserve, nil (£50,000). Carry forward, £373,111 (£365,627).

(Continued on page 991)

Industry and Trade

Speeding-up Production in Metal Trades

One of the most urgent problems of the reorganised Ministry of Labour is to provide for the speedy training of the many thousands of additional workers required in the engineering, aircraft and other metal industries. On April 15th only 32,500, or 2.4 per cent., of the 1,351,000 persons insured against unemployment in the engineering and in the motor vehicle and aircraft trades were without work. The reserve of labour in these trades has thus been exhausted. But as training takes time, the only means of speeding-up output immediately is to distribute the available labour resources as efficiently as possible and to increase working hours; this is now being done with the full approval of the trade unions. In the engineering industry the majority of concerns are now working two shifts, while others have instituted the three-shift system. Something like three-quarters of the industry's active capacity is already employed on work for the Government; the remaining quarter is engaged on export and on domestic civil orders. In view of the urgency of the need for an increase in armament production, it may be necessary, at least temporarily, to concentrate an even bigger proportion of the industry's capacity on armaments. Further, a still greater effort is required to keep the engineering and other metal trades supplied with raw materials, especially steel. A number of rolling mills, particularly in the West of Scotland, have in the past been largely dependent on semi-finished steel from the Continent. Unless the loss of Belgian and other supplies can be made good, some of the finishing plant in the steel industry will become idle. The need for a further intensification of the scrap collecting campaign by a change of methods, which has been repeatedly advocated by *The Economist*, is now imperative. Lastly, everything possible should now be done—in the case of aircraft and tanks, for example—to standardise specifications and to reduce the number of types; simplification of methods should pave the way to a considerable expansion in output with the existing labour force.

Coal Production in Wales

Production in the South Wales coalfield during May suffered from absenteeism at Whitsuntide; the month's output shows little change compared with the corresponding period last year. Inland consumption continued to expand, but exports suffered from restricted supplies, and the total volume for the month was less than in May, 1939. During the first four and a-half months of this year the total output of South Wales showed an increase of just over 3 per cent. over that of the corresponding period in 1939. Prices were raised from the beginning of the month by 8d. per ton in the home trade and by 1s. per ton in the export trade for steam and bituminous coals, and by 1s. 8d. to 2s. per ton for anthracite classes. Export trade has been dislocated by the successive occupations of Norway, Denmark, Holland, Belgium and Northern France by Germany; the closing of these and of the Baltic markets has cut off between 14

and 15 million tons of the exports of the United Kingdom. The South Wales coalfield has been less affected by this loss of trade than any of the other leading export districts of the country; the bulk of its exports is being absorbed by France, whose requirements of British coal are now about 2 million tons per month, and may increase further. No definite measures have yet been taken to increase production, but it has been jointly ascertained by the employers and workmen, with the co-operation of the Ministry of Labour, that hardly 10 per cent. of the unemployed are fit for work underground.

Overtime in the Cotton Industry

There has been a gratifying response on the part of the spinning and weaving sections of the cotton industry to the appeal made by the Cotton Controller for overtime on the production of urgent Government requirements. All firms concerned were asked to work an extra 7½ hours weekly for the next four weeks, reverting, in fact, to the old 55½-hour week. In the section of the yarn trade spinning American cotton, virtually all mills are engaged on at least some Government work, and reports have been received in Manchester indicating that employers and workers have responded very fully to the appeal. Only about a quarter of the mills in the Egyptian spinning branch are affected, but this proportion is expected to increase. Many manufacturers of cloth, however, are hampered by the shortage of suitable yarns, and although many weaving sheds have arranged to work longer hours this week, others are waiting until they have a better stock of yarn before they begin their four weeks of overtime.

Wool Prices and Exports

The Wool Control has eased the path of the would-be exporter by fixing prices well in advance. It has now been announced that the issue prices of wool and tops for the next rationing period (July-October) will be unchanged; prices of materials required for yarn export will remain at this level until the end of 1940, and those for cloth export until the end of February, 1941. As the present price schedule came into force on March 1, 1940, the prices of materials required for the export trade in cloth will have been stabilised for at least a year. The problem of supplies of wool for export orders, however, remains acute. The enormous consumption of crossbred wools in the manufacture of service cloths has left very little surplus for export or for the home trade. There is a plentiful supply of merinos, but these do not give the firm, crisp cloth that is essential for many types of men's clothing and many export markets are not interested in merino yarns and cloths. It is understood that the Wool Control has recently advised the use of a small proportion of merino yarns in the production of certain army cloths in order to release some cross-bred wool for the export trade. The supply of crossbred wool and yarns for the home civilian trade is likely to be extremely small for some time to come.

Economies in Paper

The Ministry of Supply has issued further orders restricting the use of paper. For the first time, the manufacture of various paper articles is prohibited except for the export trade; the Ministry has also prohibited the issue of new periodicals and of certain types of posters, including newspaper bills. Hence the disappearance from the streets of London of the contents bill which has become so customary. The use of wrapping paper in shops has also been prohibited except where this protection is really needed. The prices of certain classes of paper have again been increased, and those of waste paper were also raised in order to encourage the collecting and grading of certain grades of waste paper.

Tin Supplies

At its meeting on Monday the International Tin Committee decided to raise the export quota for the third quarter of this year from 80 per cent. to 100 per cent. of the standard tonnages. Until the invasion of Holland and Belgium a

reduction in the quota was more likely than an increase, but the necessity to augment stocks in Allied countries at short notice and the probability that the United States will make large purchases for strategic reasons has altered the situation. Consequently, it was not surprising that the I.T.C. supplemented its quota decision by a request to the restricting countries to issue quota permits as soon as possible and to permit exports against these permits before the beginning of the quarter. A 100 per cent. quota theoretically allows exports from the restricting countries at a rate of 208,970 tons per annum; actually, however, only two or three of the seven countries adhering to the control scheme are likely to be able to produce at the rate of 100 per cent. Including those of non-restricting countries, estimated at about 30,000 tons per annum, world exports of tin in the third quarter of this year will probably be at the rate of about 205,000 tons per annum; as world absorption recently has been at an annual rate of about 180,000 tons, large amounts should be available as emergency stocks. It is possible also that a barter deal over tin may be included in any Anglo-Russian trade agreement that results from the present negotiations. Since the announcement of the quota decision on Monday, London as well as American tin prices have risen, a reflection of the growing seriousness of the military situation in France and Belgium.

Cheese Supplies

The Ministry of Food fixed last week maximum retail prices for different types of cheese. The Ministry was in-

directly controlling the prices of cheese before the publication of this Order, since it controls the import of Empire cheese. In 1938, the Empire supplied over 85 per cent. of our imports, as the table below shows:—

BRITISH SUPPLIES OF CHEESE (1938)			
Imports :	'000 cwt.		%
New Zealand	1,639	56.0	
Canada	678	23.2	
Australia	238	8.1	
Netherlands	202	6.9	
Other	170	5.8	
Total	2,928	100.0	
Home Produced :			
Creamery	605		
Farm	269		

The loss of the Dutch supplies is not, therefore, serious; but if the Dominions are being asked to expand their exports of butter to make good the deficiency caused by the temporary disappearance of Denmark and Holland as independent units, it may not be easy for them also to increase their exports of cheese. So far, however, the Ministry is not contemplating the rationing of cheese, and, indeed, the wide variations in the amount consumed between different classes of the population would make rationing unequal in its incidence. An allowance of, say, ¼ lb. per head per week would provide the richer households with their second course, while it would be quite inadequate for the working-class man, who takes out bread and cheese for his lunch on most working days.

COMMODITY AND INDUSTRY NEWS

MARKETS in the United States have been steadier this week, and prices are little changed. Raw cotton was dearer; in this country the Liverpool futures market has been closed indefinitely. Grain prices are about the same as a week ago; in London the price of standard cash tin fell early in the week but recovered on Tuesday, while in New York there was a steady upward movement.

Cotton (Manchester).—The Liverpool market remained closed until Tuesday, when trading was allowed on very restricted lines at fixed prices. Only a few transactions have taken place. Exports of cotton from the United States to Great Britain continue to fall off, the total for the last four weeks being only 64,000 bales. Since the limited reopening of the Liverpool market, rather more business has been done in yarns than might have been expected. Many more spinning mills have been requested by the Controller to produce counts suitable for Government requirements, and mills engaged wholly or partially on orders for the Government have agreed to the Controller's suggestion that their working hours should be increased from 48 to 55½ per week for a period of four weeks. In piece-goods, most of the trade done has been on Government account and some substantial orders have been placed. Only scattered sales have been reported for export.

Source: Liverpool Cotton Association's Weekly Circular.

Metals.—The United States spelter price has been raised by ½ cent to 6 cents per lb., at which level it is still ½ cent lower than in the early weeks of the war. In the first four months of this year, American production of spelter amounted to 223,911 short tons, while deliveries reached only 208,672 tons. Producers' stocks, which had fallen to 61,522 tons at the end of November last, had risen to

81,234 tons at the end of April. Obviously the American armament programme and the loss of the Belgian smelters is causing a greater home and export demand, but as increasingly large supplies of foreign zinc ore are being diverted to the United States for treatment no shortage is expected.

Tin.—After falling to £266 15s. on Monday the standard cash price of tin advanced to £270, a net loss of only 5s. on the week. The backwardation has narrowed to £2. The I.T.C.'s decision to raise the quota for the third quarter of this year from 80 per cent. to 100 per cent. and the basic quotas is discussed in a Note above.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

Week ending	1939	1940
April 13	56.71	73.62
" 20	56.96	72.93
" 27	53.97	63.17
May 4	64.55	66.78
" 11	65.32	70.66
" 18	67.90	65.96

Grains.—North American markets have been steadier in the past week, with Chicago nearest wheat futures at 83.84 cents. Shipments remain large, and this has helped to balance the effect on prices of good weather in the United States and an increase in the estimated Argentine wheat surplus. Plate shipments of maize are small, a disconcerting feature in view of the large crop.

Oils and Oilseeds.—The official price list is due for revision at the end of this week. The Argentine Ministry of Agriculture estimated that the exportable surplus of linseed had fallen to 236,000 tons at the end of last week; the yield of the new crop is now put at 1,014,000 tons, compared with 1,127,000 tons of the second estimate. The disappearance of Dutch and Danish trade, however, more than balances the smaller return, and linseed prices on world market fell sharply, though there has recently been a rally.

Rubber.—American consumption in April continued at the high daily level reached in March; stocks were higher but the increase was balanced by a fall in the amount of rubber afloat. Prices have been steady in the past week in both London and New York.

COMPANY MEETINGS

ROYAL INSURANCE COMPANY LIMITED

NINETY-FIFTH ANNUAL MEETING

QUINQUENNIAL VALUATION

STRONG FINANCIAL POSITION

GOOD UNDERWRITING RESULTS

MR A. KENTISH BARNES' REVIEW

The ninety-fifth annual general meeting of the shareholders of the Royal Insurance Company, Limited, was held, on the 29th ultimo, in Liverpool.

Mr A. Kentish Barnes, the chairman, presided, and said:—Before turning to the various departmental results, I think you would wish me to indicate briefly how the war has affected our business.

At home, the impact of war conditions has caused many inevitable adjustments, not only in the industrial and commercial world, but also, and to a very large extent, in the private life of the community, and insurance has naturally been sensitive to these influences. Despite all difficulties, our business, however, has been well maintained and our organisation has readily adapted itself to the changed conditions.

Our interests in the United States of America, of course, provide a welcome element of stability in our accounts, and it is gratifying to know that our prestige there stands as high as ever. In Canada, in Australia and New Zealand, in South Africa, and in India, we enjoy the advantage of conditions less acutely disturbed than at home.

On the Continent of Europe there has been an inevitable loss of old-established business connections with the resultant interruption and, in some cases, total loss of valuable agency business. There has also been some loss on investments, but fortunately in the countries affected our investments have been relatively small.

Elsewhere in the foreign field, every effort is being made to overcome the difficulties inherent in war-time conditions, and in this connection we appreciate the sympathetic assistance given to insurance business by the British Government. The importance of insurance as an invisible export has been fully recognised, and the authorities have been very ready to co-operate in minimising the restrictive effect of wartime measures and in assisting to maintain overseas markets.

SUMMARY OF RESULTS

Premiums and losses in the fire and accident departments show little change; the premium incomes amount to £5,440,000 and £6,042,000 respectively, and losses to £2,298,000 and £2,893,000. After adjusting the unearned premium reserves on the usual 40 per cent. basis, there has been transferred to the profit and loss account a profit of £502,000 or 9.2 per cent. from the fire account, and £558,000 or 9.2 per cent. from the accident account. In the marine department, the premiums of the 1939 account, at £1,241,000, were substantially higher than for the previous year and, after the deduction of claims and expenses, a balance of £758,000 is carried forward. Our 1938 account has been closed with a profit of £83,000, which represents 8.1 per cent. of the premiums for that year. Thus the total profit of all three departments is £1,143,000 against £1,032,000 for the previous year.

In common with the general experience of life offices in this country, the flow of our new life business was checked immediately on the outbreak of war, although showing up well beforehand. Even so, we finished the year with net new sums assured of £4,474,000, as compared with £5,176,000 in the previous year.

FIRE DEPARTMENT

In the home field, our premium income shows a slight advance, and the loss ratio compares favourably with the previous year's. We must be prepared, of course, in war conditions, to face some deterioration in our experience, since the concentration of values, the acceleration of output, and the employment of unskilled operatives, may well tend to losses being both heavier and more frequent. Our results in the United States of America were again gratifying.

Premium income was slightly higher, notwithstanding the continued downward trend of rates; and there was a reduction in expenses. Losses have shown an upward tendency in line with the general experience throughout the United States, but, after a period of low loss incidence, an increase was not unexpected in the normal course.

In Canada, premiums again showed some decline, attributable to rate reductions and keen competition. Fortunately, losses also showed an appreciable reduction, which enabled us to return a satisfactory profit.

Good results are again reported from Australia, despite the serious bush fires which occurred during the early part of the year, and our New Zealand results were also satisfactory.

Our fire business in the general foreign field has again shown a satisfactory margin of profit. The deepening international tension had, in some degree, a depressing effect upon overseas commerce, and, in these adverse circumstances, our results reflect credit on our underwriting methods, and provide proof of the confidence with which our organisation is regarded.

LIFE DEPARTMENT

This year the life department calls for a more extended reference, because the quinquennial valuation fell due to be made on December 31st last. The actuary's report is in your hands, and you will see that on this occasion, following the downward trend of interest rates, and the substantial increase in the rate of income tax, it was thought desirable to base the valuation on a rate of interest of 2½ per cent., instead of the rate of 3 per cent. previously assumed. After thus increasing the stringency of the valuation and setting aside substantially larger reserves, the position disclosed is eminently satisfactory, as the surplus over liabilities amounts to the sum of £4,302,000—the highest yet recorded in the history of the company.

In considering the rate of bonus to be declared, we have recognised the vital need, in present conditions, of conserving the resources of the life fund, in order that it may face with confidence the unforeseen contingencies which may arise out of the war.

Though the surplus would have been sufficient to permit us to declare the same reversionary bonus as five years ago, we have decided, on the advice of our actuary, Mr Sturgeon, to declare a bonus of 36s. per cent. per annum, and to carry forward, unappropriated, the large sum of £2,005,000. I think we may claim to have declared a liberal bonus in prevailing conditions, and at the same time to have strengthened the fund in a way which gives impressive evidence of the security behind our policies. Policy-holders will be receiving their bonus notices in the course of the next few days.

For the year 1940, the interim bonus will also be 36s. per cent.

ACCIDENT AND GENERAL DEPARTMENTS

In the accident and general departments, motor insurance forms the largest section of our home business, and we have to record a small reduction in premium income and in profit ratio. In view of the present restrictions on motoring, however, we could hardly look for any other result.

Our workmen's compensation premiums show a small increase, and the other sections of our home business are in healthy condition and have contributed to the profits. Our general foreign business continues to make steady progress.

MARINE DEPARTMENT

The profit of £83,000 with which our marine account for 1938 has been closed compares with a loss of £46,000 on the 1937 account.

Our business for the year 1939 had been running quite normally

up to the beginning of September, but since that time much has happened to affect the position, the winter season and the difficulties of navigation in wartime bringing numerous casualties.

Wartime conditions are necessarily of particular importance in their effect on marine insurance, and many new arrangements have had to be made in the ways in which the business is handled. It is, I think, a tribute to the marine insurance market that they have so readily adapted themselves to the changed conditions and have continued to be able to supply service and protection to the public in this country and throughout the world.

PROFIT AND LOSS ACCOUNT AND DIVIDEND

The balance of the profit and loss account, after providing for the dividend for the year 1938, was £2,106,000, to which has been added net interest and dividends of £1,120,000, and the profits transferred from the fire, accident and marine accounts, together with one-fifth of the shareholders' proportion of the life profits for the past quinquennium, amounting in all to £1,189,000. An amount of £214,000 has been transferred to the trustees of the staff superannuation funds, £225,000 provided for British taxation on profits, and £50,000 written off freehold property.

In connection with the segregation of the assets of the life and annuity business, an amount of £750,000 has been allocated from the reserve fund of the company to the life and annuity funds, and an equivalent amount is now transferred from profit and loss account, thus maintaining the reserve fund at the figure of £1,500,000.

The directors propose the payment of a final dividend of 3s. 3d. per share, which, with the interim dividend paid in November last, makes a total of 6s. 6d. for the year 1939, and after making provision for this final dividend, the balance of the profit and loss account carried forward amounts to £2,003,000.

INVESTMENTS

Despite the difficulties of the past year, the valuation of our assets discloses a reassuring position. Some depreciation in values has necessarily taken place, but, nevertheless, there was a substantial excess of market values over book values at the year end.

We are now within five years of our centenary, and in that long period the company has successfully passed through many times of crisis and storm. It is too early to speak of the particular problems the war will lay on us, or indeed of those which the welcome return of peace will bring. Whatever these will be, I am convinced that the mission of insurance to provide protection and security to industry, commerce and the individual, will continue to expand, and our company is well equipped to take its full share in that form of public service to which we are devoted, and for which we are organised.

Before I conclude, I should like to express, on behalf of the board of directors and myself, our appreciation of the services rendered to the company by the general managers, Mr Williams and Mr Simpson. They have had a most difficult year, all kinds of unusual problems presenting themselves, but I think the accounts just put before you show how problems and difficulties were surmounted. (Applause.)

The report and accounts were adopted, and a final dividend of 3s. 3d. per share was declared, making 6s. 6d. per share, less income tax, for 1939.

LICENSES & GENERAL INSURANCE COMPANY, LIMITED

The fiftieth ordinary general meeting of this company was held, on the 30th ultimo, in London.

The Hon. Reginald Parker, the chairman, said that this year they met under war conditions and the problems arising were many and various. The company had had a very satisfactory year, with an increase over all and of total assets. The life department had increased and there was no doubt that had hostilities not intervened the position would have been even brighter. At the end of their fourth year, with an increasing fund, they found their original excursion into that business fully justified.

An excellent profit had come from the fire department, and they had sound hopes of improvement during the current year despite the war conditions. The marine outlook had improved. The company was participating in that department, as well as in the fire section, in the insurances placed by the Government and in war risks. The Government were making certain changes in the compensation payable to injured workmen. It was anticipated this

would throw additional burden on insurance companies and the board had, therefore, made such provision to meet the contingency as they thought necessary. Accordingly, it should be observed that with the additional provision of £7,784, and with the extra unexpired risk reserve required of £3,089, a sum of over £11,000 was left in the account before the profit was transferred.

In the troublesome times in which they lived, no one could attempt to pierce the future, but if and when those dark days were overpast, he was confident that British insurance companies, their own amongst them, would be found ready to give that security and service, the reputation for which had been built up over so many years.

The report and accounts were unanimously adopted.

CABLE AND WIRELESS (HOLDING), LIMITED

VITAL EMPIRE SERVICE

LORD PENDER'S ADDRESS

The eleventh ordinary general meeting of Cable and Wireless (Holding), Limited, was held, on the 24th ultimo, in London.

The Right Hon. Lord Pender (the governor), in the course of his speech, said: I would like to refer at the outset to the honour which since we last met has been conferred by His Majesty the King on the chairman of Cable and Wireless, Limited, whom we now know as Sir Edward Wilshaw, K.C.M.G. This recognition of the distinguished services rendered by Sir Edward to the British Empire was hailed universally as a fitting tribute to the outstanding manner in which he has so unsparingly devoted himself to the direction and development of Imperial telegraph communications.

Turning first to the operating company, Cable and Wireless, Limited, I am sure you all read with the greatest interest the comprehensive review made by Sir Edward Wilshaw on the occasion of the annual general meeting of that company, held on Tuesday of this week. The further progress which has been made by the operating company during 1939 and the very satisfactory financial outcome has resulted in the company's earnings exceeding the standard revenue. You will not have failed to observe that 1939 was the first year that Cable and Wireless, Limited, was able to reach—and, in fact, exceed—this standard revenue of £1,200,000. The company was thus able to pay in respect of that year a dividend of 4 per cent. as compared with 3½ per cent. for the preceding year. This substantial improvement demonstrates the increasing success which has been achieved by the Empire flat-rate scheme and the social telegram service.

It is, of course, very satisfactory to us all to realise that the great British cable and wireless system is rendering so vital a service to-day to the Allied cause and is thus playing its part towards ultimate victory in the great struggle on which we are engaged.

COMPETITION FROM FOREIGN COMPANIES

I should like to emphasise the reference made this week by Sir Edward to the competition to which Cable and Wireless, Limited, is exposed from certain foreign cable companies. It cannot be too generally known that Cable and Wireless, Limited, is the only British owned and operated overseas telegraph company in this country. The system not only serves every part of the British Empire but almost every other part of the civilised world, and I think the company can rightly claim the exclusive support of all patriotic citizens.

You will no doubt be surprised to learn that these foreign companies are actually allowed to continue to work in this country, and it seems a strange anomaly that this position should exist and that the British organisation should have to meet the strenuous competition of these concerns, which lose no opportunity of endeavouring to attract business from the "Via Imperial" system. I stress the position because I am sure that the more these facts are known the more certainly will the British public insist that their telegraph business is exclusively handled by the British company.

To sum up the financial results, the company's profit for the year at £1,218,427 is some £15,000 higher than for 1938. After paying the dividend on the 5½ per cent. cumulative preference stock, your directors are again able to recommend a dividend of 4 per cent. on the ordinary stock. The balance of £226,000 carried forward to 1940 is some £21,000 higher than the amount brought in.

The report was unanimously adopted.

RAND MINES, LIMITED

DIVIDEND AT SAME RATE

POSSIBILITY OF NEW LABOUR QUOTAS

MR JOHN MARTIN'S SPEECH

Mr John Martin, the chairman, presided at the annual meeting of Rand Mines, Limited, in Johannesburg, on the 27th ultimo.

In moving the adoption of the report and accounts, the chairman said the position disclosed was satisfactory. The dividend distribution had been maintained at the same rate as in the three previous years, and the financial and investment basis of the company remained sound, strong and well spread.

The profit earned had been £1,041,501—an increase of £117,674 compared with the corresponding figure for 1938. That profit had been derived exclusively from dividends, interest and sundry revenue. The investment reserve account now stood at £3,635,476—a decrease of £128,439 compared with the previous year.

The balance of the appropriation account showed an increase of £7,724 at £952,289, represented by cash and cash assets after allowing for all liabilities except those of a contingent nature. Contingent and optional liabilities of the company to subscribe for shares in and to finance certain undertakings had been further reduced in total during the year, and ample cash resources were available to meet all such commitments as and when they matured.

INVESTMENTS DOWN

Investments and shares and debentures had been brought into the account at the book value of £4,135,397—a decrease of £104,382 compared with the total at the end of the previous year. All investments for which share market quotations were available appeared in the books at or under cost, but in no case above the market price.

The market value of the company's gold mining interests at the end of the year had represented 83.6 per cent. of the market value of all investments and of the gold mining interests 96 per cent. had been dividend-producing.

During the last nine months there had been important changes of Government policy affecting gold mines. At the end of August the Treasury, acting through the South African Reserve Bank, had become purchaser at 150 shillings per ounce fine of the gold output of mines in the Union.

Although the present Government had undertaken subsequently to deal with the problem of increased working costs when it arose, the position thus created had been uncertain and inherently unsound.

It had taken some time before that fact had become generally realised, but in his Budget statement to Parliament the Minister of Finance had abandoned the principle of an arbitrary levy and had announced that as from January 1, 1940, producers of gold would be entitled to the full official price for gold subject to their bearing increased realisation charges—at present 37s. per cent.

INCREASED TAXATION

These charges were estimated to amount to some £2,000,000 per annum, which would accrue to the Treasury, by whom it would be placed as a contribution to the loan account.

Taxation had been further increased by the imposition of a flat rate of 9 per cent. of the taxable income before deduction of the redemption allowance and the loss brought forward from a previous year.

The total direct revenue derived by the Government from the gold mines would be much the same as the amount calculated to accrue under the earlier scheme, but the change was welcomed by the industry as the replacement of a harmful arrangement by one that was logical and sound.

The excellent relations between employers and employees in industry had been maintained throughout the year. The Savings Fund allowance of 10d. per shift, established in 1937, had been increased by 3d. per shift, to 1s. 1d., and the Provident Fund rules had been amended so as to entitle an employee on leaving a mine after fifteen years' service to receive benefit from that fund on reaching the pensionable age.

NATIVE LABOUR POSITION

The native labour requirements of the industry had continued to rise, and during the whole of 1939 they had been much in excess

of actual supplies. Since the beginning of the present year the position had greatly improved.

Labour for the gold mines of the Witwatersrand was now recruited from an area ranging from the Cape to Barotseland and the northern shores of Lake Nyasa and from Mozambique in the east to Bechuanaland in the west.

The employment of tropical natives from areas north of latitude 22 degrees south had continued to give satisfactory results, and there was reason to hope that it might be possible in the near future to obtain increases in the quotas granted by the Governments of the territories concerned.

The supply of east coast labour was governed by the Mozambique Convention. Early this month an agreement had been concluded between the Union and the Portuguese Governments, under which an increase from 80,000 to 100,000 natives would be allowed in the maximum number of Portuguese natives to be employed on mines.

GROUP'S INCREASED TONNAGE

The tonnage of ore milled by the Witwatersrand mines of the Central Mining-Rand Mines group had been increasing during 1939 by 557,700 tons to a fresh record of 19,563,400 tons. The average yield of gold per ton milled at 3.88 dwt. had shown a further reduction of 0.139 dwt., or 3.46 per cent. The total working profit had risen by £477,772 to £9,363,190. The total amount distributed as dividends at £5,291,434 had been £303,239 more than in 1938.

On the metallurgical side the average residue value for the past year had been reduced by 0.011 dwt. to a record low level of 0.175 dwt. per ton, which reflected great credit on the staffs at the mines and at head office.

In the Witwatersrand Gold Mines of the group, the mortality rate from disease had fallen from 5.57 per 1,000 in 1938 to 3.23 per 1,000 in 1939, which was the lowest in the group's experience. Deaths from mining accidents also had shown a slight decrease—from 2.02 to 1.99 per 1,000.

MAXIMUM WAR EFFORT

It goes without saying that the policy of the mining industry is to make a maximum contribution to the war effort.

Gold production, the foundation of our national economy, must, if possible, be maintained, but the spirit animating employers and employees alike is a determination to do, with full strength and loyalty, whatever tasks they may be called upon to undertake.

Many of our men have transferred from mining to military activities—our good wishes are with them all—and large numbers are undergoing training.

A liberal policy in granting allowances to those serving with the Forces is being followed by this company and the mining companies generally.

Those who are required to carry on the essential business of keeping the mining industry going will have heavier burdens of work and responsibility to carry. But the predominant anxiety of the men of the mines in every sphere of service is, and will be, that they shall do their duty.

The report and accounts were adopted.

CITY DEEP LIMITED

NEW PLANT BEING INSTALLED

MINING AT GREATER DEPTH

DR HANS PIROW'S SPEECH

Dr Hans Pirow, the chairman, presided at the annual meeting of City Deep, Limited, in Johannesburg, on the 23rd ultimo.

Moving the adoption of the report and accounts, Dr Pirow said that during the year the application which the company had lodged with the Mining Leases Board in respect of some 257 claims on the southern boundary had been granted.

An area of freehold land sold to the South African Railways and Harbours Administration in connection with the construction of a new railway goods yard on the site of a prospect township had been finally settled during 1939, and the company's freehold property had been reduced by some 23 morgen.

After reviewing the financial position, the chairman went on to state that net capital expenditure had amounted to £48,915, the

principal items being additional houses for European employees, underground pumping and ventilation plant, and expenditure in connection with the sinking and equipment of No. 5 vertical shaft.

That shaft had been completed during the year and had been in operation for some months for the purpose of handling men and material.

The available ore reserve, as re-estimated at December 31, 1939, had totalled 3,977,200 tons, of an average value of 5.1 pennyweight over a stoping width of 44.9 inches.

MORE NATIVE LABOUR

A serious shortage of native labour had been experienced during the latter part of the year, but conditions had since improved considerably.

It had been decided to install a new hoist in order to complete the winding equipment at No. 5 shaft and an air cooling plant at No. 4 shaft, where bottom levels had reached what was virtually the working limit on account of heat.

It was expected that the new plant would effect a considerable improvement in conditions in the western section of the mine and that it would enable operations to be carried to a much greater depth than would otherwise be possible.

Those two items of capital expenditure, which were essential to the opening up of the whole of the company's area to the southern boundary, would together amount to approximately £200,000, and would have to be met during the next two years.

TOTAL CAPITAL EXPENDITURE

The total capital expenditure to be faced during that period would amount to more than a quarter of a million pounds, of which £100,000 would have to be met out of current profits and the comparatively large balance of unappropriated profits.

From September 1st until the end of the year the company received only 150 shillings per ounce fine for its gold as a result of a levy introduced by the late government. After a full investigation of the matter by the present government, it was decided to abolish the levy and as from January 1st last the mines would receive the full market price for their gold, less the cost of additional realisation charges—at present 37 shillings per cent.

In addition a new nine per cent. surtax on gross profits had been introduced.

Under existing conditions those changes in the system of taxation would not affect the dividend position.

The report and accounts were adopted.

CROWN MINES, LIMITED

INCREASED ORE RESERVES

MR JOHN MARTIN ON TAXATION

Mr John Martin presided at the annual meeting of Crown Mines, Limited, in Johannesburg, on the 23rd ultimo. After reviewing operations and the financial results, the chairman said that the payable ore developed on the main reef leader and the south reef had been estimated at 4,025,700 tons of an average value of 4.9 dwt. per ton.

There had been an increase of 419,300 tons in the available ore reserve, which had been re-estimated as at December 31, 1939, at 21,340,000 tons of an average value of 5 dwt. per ton over a stoping width of 44.6 inches.

COOLING PLANT FOR MINING AT DEPTH

The constantly increasing depth at which mining operations were being conducted and the consequent increase in rock and the air temperatures of the working places, presented one of the most serious problems which the gold mining industry had to face. In order to help to combat high temperatures which were encountered at great depth, arrangements would be made to install an air-cooling plant on the surface at number 17 shaft. Experience gained from the operation of similar plants had shown that the cooling effects underground would be sufficient to bring within workable limits considerable quantities of ore which would otherwise be lost.

LABOUR SUPPLY

Another important question was that of native labour supply. During the year under review the shortage of native labour had been acute and had been responsible for a substantial portion of the increase in working costs which had taken place. Systematic work

on a large and increasing scale was being done by the mining industry in its collective capacity to ensure that adequate supplies of native labour would be forthcoming. On the mines themselves close attention was paid to the working conditions, provision of amenities and the question of diet. At Crown Mines native compounds and locations were spacious and attractive. There had been further improvement in the morbidity and mortality rates during the year. Out of the average total of 22,422 natives employed throughout the year, only 59 had died from disease—a record low figure of 2.63 per thousand. The death rate from mining accidents had been 2.23 per thousand.

LEVY AND CONTRIBUTION

At the end of August the Government of the day had promulgated a regulation under which, through the Reserve Bank, the Treasury had become the purchaser at 150s. a fine ounce of all gold produced in the Union. The present Government had since abandoned the principle of a levy on the price above that figure and had allowed producers of gold to obtain for their product the full official market price, subject to their bearing the increased realisation charges—at present 37s. per cent. In addition, however, to taxation and the operation of the lease formula, a special contribution, estimated to produce £3,500,000, was to be collected from the industry by means of a flat rate percentage of 9 per cent. taxable income before the deduction of redemption allowance and the loss brought forward from the previous year.

RESULT OF NEW ARRANGEMENT

The net result of the new arrangement, which took effect from January 1, 1940, would be to produce for the Treasury an amount little different in total from what would have accrued under the plan which it replaced. In the case of the Crown Mines, the system of taxation would be to leave the position very much as it was before.

The report and accounts were then adopted.

GOLD FIELDS AUSTRALIAN DEVELOPMENT COMPANY, LIMITED

FEATURES OF YEAR'S OPERATIONS

The seventh ordinary general meeting of Gold Fields Australian Development Company, Limited, was held, on the 29th ultimo, in London.

Mr W. H. Geikie, M.Inst.M.M. (chairman of the company), at the opening referred with regret to the death of the late chairman, Mr John A. Agnew. He then dealt with the accounts, which showed that, including the dividend of 20 per cent. from Moonlight Wiluna Gold Mines, equal to £48,000, and dividends totalling 93.3 per cent. from Yellowdine Investments, Limited, equal to £27,040 on their holding in that company, the total revenue was £76,690. A dividend of 7½ per cent. was being paid and £9,288 carried forward, against £7,916 brought in.

Continuing, the chairman said:—I propose now to deal very briefly with the chief results of the year's work in regard to the properties in Western Australia in which this company is interested. At the Moonlight mine the main features have been the deepening of the Adelaide shaft to 1,251 ft., the acceleration of development work between the 1,030 and 1,230 ft. horizons and the further extension of the south-west exploratory drive at the 630 ft. level. It is mainly due to these causes that the total development footage during the year amounted to 8,187 ft., or 1,958 ft. more than last year.

On the main ore-body further sub-level development above the 830 ft. level fully confirmed the values and widths which had been exposed at that horizon, and equally satisfactory results were attained by the development between the 830 and 1,030 ft. levels.

It was pointed out, however, last year that driving on the 1,030 ft. level itself had exposed 540 ft. of ore, which averaged 3.7 dwts.—a grade considerably lower than the average of the mine—and it was hoped that this indicated that the level had been driven in one of the poorer zones that have occurred from time to time throughout the sulphide zone. The driving during the year of the sub-level 30 ft. above, which exposed 467 ft. of ore, averaging 5.2 dwts., with a further 115 ft. at the southern end, averaging 3.5 dwts., gave additional encouragement to this hope.

Unfortunately, the further development that has been carried out below the 1,030 ft. level has been very disappointing. It is, I can assure you, very disappointing to all concerned that the ore-body

has proved to be so comparatively shallow, more especially after the gold values and very great widths of ore that occurred in the upper levels.

The ore reserve position at 353,800 tons, averaging 5.33 dwts., reflects the drop in tonnage below the 1,030 ft. level. Last year the reserve was 433,900 tons, and during the year 107,435 tons were milled, thus leaving the reserve, without additions, at 326,465 tons. As this is now 353,800 tons, actual new ore brought in during the year was 27,335 tons, so that roughly only one-quarter of what was withdrawn was replaced. Of this amount, 13,000 tons represents the tonnage proved on the 630 ft. level extension at the end of the year. At the present rate of crushing, our reserve is equivalent to three years' supply, taking no account of what further tonnage may be developed in the south-west area.

Turning now to treatment operations, we have crushed and selectively floated 106,699 tons of ore, averaging 5.71 dwts. per ton, and the total recovery from the gold-bearing arsenical and antimonial concentrates thus produced amounted to 24,488 oz. of fine gold. In addition, 2,725 oz. were recovered from gold remaining in process at December 31, 1938.

The report and accounts were unanimously adopted.

UNITED SUMATRA RUBBER ESTATES, LIMITED

STRONG FINANCIAL POSITION

The thirty-first annual ordinary general meeting of this company was held, on the 29th ultimo, in London.

Mr H. A. Barrett (chairman) who presided, said: The net result of the year's working is a profit of £7,771, and your directors recommend a dividend for the year of 5 per cent. The dividend recommended and the allocations to special reserve accounts together amount to less than the profit for the year and, as the financial position of the company is so strong, I think you will all agree that the proposed dividend distribution is fully justified.

As to our prospects for the current year, our standard of production is 760,708 lb., and on the basis of the international export quota of 80 per cent. our exportable allowance for the year will be 556,838 lb., a substantial increase compared with 1939.

Our sales to date total 165,760 lb., at an average of 11.18d. per lb. London landed terms, and we have sold forward a further 179,200 lb., the average over all being 11.1d. per lb. London landed. These are satisfactory prices, but you must bear in mind that working expenses will be higher with increased taxation, including excess profits tax both in this country and in Sumatra. Referring to copra, although the out-turn so far has been satisfactory, prices have been at an unremunerative level.

I have mentioned our forward sales of rubber for 1940, and it will be of interest to you to know also that we have sold forward a further 67,200 lb. for shipment during the first six months of 1941 at an average price equivalent to 10.52d. per lb. London landed terms.

The report was unanimously adopted.

KEPONG (MALAY) RUBBER ESTATES, LIMITED

FAVOURABLE FORWARD SALES

The thirty-fifth annual general meeting of this company was held, on the 28th ultimo, in London.

Sir Francis Voules, C.B.E. (chairman and managing director), presided, and in the course of his address said: Our restricted crop for the year was 7,350,886 lb. all grades, which represented 59 per cent. of our standard production. The gross average price London landed terms received for the sale of our exportable rubber was 10.26d. per lb., which represents an increase of over 2½d. per lb. over that of 7.70d. per lb. realised for our 1938 sales.

For the year 1939 we have earned a net profit of £100,968, as compared with £43,646 in 1938. Your directors propose transferring £15,000 to reserve (against £10,000 previously), to pay a final dividend of 7½ per cent., making 11½ per cent. for the year against 4½ per cent. previously.

The company's standard production for 1940 has been agreed at 12,760,284 lb., an increase of about 313,000 lb. over last year. A release of 80 per cent. has been fixed up to the end of the year, allowing us to export about 10,200,000 lb., subject to a domestic cut of 2½ per cent. for the last three-quarters of the year. Including forward sales, the directors have sold out of this year's exportable

rubber 5,300,000 lb. at an average gross price of 11.74d. per lb. London landed terms.

The company's planted acreage has been increased during the year, as explained in the report, and now stands at 28,222 acres, representing a capitalisation at par of just over £26 per acre, and after deduction of surplus liquid assets, say £22 per acre.

The report was unanimously adopted.

BRITISH TIMKEN, LIMITED

A GREAT WAR EFFORT

MR MICHAEL DEWAR'S SPEECH

The twentieth annual general meeting of British Timken, Limited, was held, on the 30th ultimo, in Birmingham.

Mr Michael Dewar, chairman, said: The profit at £115,000 is some £24,000 higher than that for 1938 and about £17,000 lower than 1937. There has been a transfer of £23,427 6s. 2d. to general reserve, and, after paying the same dividend as last year, the carry-forward will be increased from £22,868 10s. 2d. to £26,310 7s. 10d. The special reserve has been transferred to general reserve, which now stands at £130,000. We had in mind the question of establishing some reserve to meet any special loss in the change-back from war production. In the directors' opinion, however, it is preferable, wherever possible, to show all reserves under one heading, "General Reserve." As such it can be drawn upon to meet any contingency.

PRODUCTION FOR FIGHTING SERVICES

During the latter part of the year your company was very largely engaged upon production for the Fighting Services. An appreciable part of your plant is normally engaged on bearings for motor cars. Production of heavy vehicles for the Fighting Services has taken the place of motor cars, and this altered demand meant a considerable change in the functioning of your factory. The directors feel that all concerned have every reason to be pleased with the rapidity with which this change was made.

LARGE INCREASE IN PLANT

Your directors realised that, if war came, the demands upon the company were likely to be very high. On the outbreak of war they conceived it to be their duty to use a large portion of their accumulated cash resources in the immediate purchase of additional plant. Some of this plant may be redundant after the war, but we feel, and hope the shareholders will agree, that it was the only thing we could do, bearing in mind the country's needs. Practically all this plant is now at work. The company's output is now greatly in excess of anything we have achieved before. It should give you cause for congratulation that the company's war effort is not only running at a high rate, but increasing almost daily.

I have in the past referred to the strides your company has made in the development of anti-friction bearings for railway purposes, large rolling mills and, indeed, in almost every type of engineering. We have played a very considerable part in developing the heavy manufacturing capacity of this country, now required for war purposes. You will feel satisfaction that we were, at the outbreak of war, so well equipped to deal with these heavy demands.

ACQUISITION OF FISCHER BEARINGS COMPANY

Since the close of the financial year we have contracted to purchase the Fischer Bearings Company, Limited, at Wolverhampton. We shall concentrate the manufacture of all ball and parallel roller bearings at that plant and so obtain much-needed room for increased development in Birmingham. We propose to increase our capital, the new shares to be at the disposal of the directors. In present circumstances we cannot say how these shares will be disposed of.

Mr Dewar added that the directors heartily welcomed the Government's steps to increase the war effort, and the shareholders would welcome the 100 per cent. Excess Profits Tax as removing any possibility of increased profits being made out of the country's hour of need. The spirit of the workers was excellent. In making a great effort the company found Government departments giving all the assistance in their power.

The report and accounts were adopted unanimously. Mr A. J. M. Duncan, the retiring director, was re-elected.

At an extraordinary general meeting held afterwards it was unanimously resolved to increase the share capital of the company to £400,000 by the creation of 40,000 new shares of £1 each.

BEECHAMS PILLS, LIMITED

DEVELOPING EXPORT SALES

The twelfth ordinary general meeting of Beechams Pills, Limited, was held, on the 29th ultimo, in London, Mr Philip E. Hill (chairman of the company) presiding.

The chairman, in the course of his speech, said: We have every reason to be gratified with the progress made by our business since I met you a little less than a year ago. The forecasts then made have been fully justified. The profits of £1,055,615 again constitute a record for the eighth consecutive year, clearly indicating the progressive strength of the business. Our export trade provides an encouraging and satisfactory feature. During the year we have acquired the business of the County Perfumery Company which, together with our other recent acquisitions, has shown results above our expectations. We have contributed no less than £661,307 17s. 10d. to the country's exchequer by way of taxation.

Our total profit figure of £1,055,000 has been arrived at after providing £84,496 for the redemption of preference shares in subsidiary companies and without increasing our selling prices to the public. We recommend the transfer of £79,124 to the development fund, £70,000 to the reserve for merger and reorganisation, and an increase in the carry-forward of some £20,000.

We are recommending a final payment of 14.81 per cent., less tax, on the deferred capital, making a total of 28½ per cent., less tax, for the year—which is within the limit imposed by the Chancellor.

Notwithstanding the prevailing conditions, our sales at home and abroad continue to show considerable improvement. In view of the fact that export markets are of paramount importance to the nation at the moment, we are intensifying our efforts in this direction and the success we have recently met with encourages us to hope for still greater success in the future.

No forecast of the future is expected and neither will it be attempted. No man can say what lies in front of us—but that we shall face it with that dogged perseverance which has been characteristic of our country in the past is beyond question.

The report and accounts were unanimously adopted.

BARRY & STAINES LINOLEUM, LIMITED

SIR JOHN BARRAN'S SPEECH

The annual meeting of Barry and Staines Linoleum, Limited, was held, on the 30th ultimo, in London.

Sir John N. Barran, Bt., the chairman, said that the financial year began with seven months of uneasy peace. Precautions against air raid damage continued actively, and had now amounted to a total collective cost from the start to date of some £22,400. Increasing numbers of the staffs had gone out to National Service in all its forms, and the total of those now serving was approximately 200.

Trade at home and abroad had been well maintained, in spite of political anxieties, till war broke out. The special Government production referred to a year ago had grown in volume, and both their factories had other heavy Government orders on hand. Their engineering department had also been adapted to help with urgent special work. Continental trade had been extremely active till

SHORTER COMMENTS

(Continued from page 983.)

Telephone Manufacturing Company, Ltd.—Gross profits, 1939, £126,450 (£93,262). Depreciation, £15,782 (£13,012). Net profit, £51,572 (£40,542). Income tax, £11,359 (£10,351). N.D.C. and E.P.T., £3,000 (£2,000). Reserve, £13,078 (£9,307). Ordinary dividend, 9 per cent. as before. Carry forward, £8,569 (£6,331).

United Sua Betong Rubber Estates.—Profit, 1939, £180,343 (£152,577). N.D.C., £6,500 (£5,000). Depreciation, £15,000 (£10,000). Eastern staff commissions, £6,500 (£5,500). Tax reserve, £10,000 (nil). Estates reserve, £30,000 (£30,000). Ordinary dividend, 12½ per cent. against 12 per cent., payable on a

capital increased by £91,553. Carry forward, £51,554 (£54,710).

Cerebos, Ltd.—Profit, 1939, £587,428 (£454,395). Taxation, etc., £264,051 (£132,000). Ordinary dividend maintained at 40 per cent. General reserve, £50,000 (£50,000). Carry forward £117,325 (£96,448).

Denny, Mott and Dickson.—Trading profit, year to March 31, 1940, £274,863 (£66,151). Provision for taxation, £100,000 (nil). Advances to Norwegian subsidiary written off, £79,844 (nil). Amount written off investment in Canadian subsidiary, £18,032 (nil). Ordinary dividend, 6 per cent. as before. Carry forward, £33,714 (£37,213).

W. T. Henley's Telegraph Works.—Net profit, 1939, £343,853 (£374,042).

successive markets were closed by hostilities, and that called for special bad debt provision. The Canadian investment had yielded a dividend of about £20,000. At the French factory the mobilisation of the bulk of the employees and a further trade shrinkage had led again to a loss.

Manufacturing operations had been acutely difficult since last September. Under Government control of certain raw materials forward contracts were abruptly and arbitrarily cancelled. Raw material prices were violently advanced, and onerous insurance and shipping rates imposed. Incalculable fluctuations in volume and cost of supplies, together with wage and war bonus advances, had led inevitably to a rise in cost of the company's products.

Their ability to carry the extra tax and other burdens of the year and still maintain the dividend was due to the strong hold on markets which their goods commanded and to the steady development of important plant and manufacturing technique for some years past. The new Kirkcaldy power house was now beginning to bear the full fruit of the heavy expenditure on it.

The report and accounts were adopted.

ODHAMS PRESS, LIMITED

SATISFACTORY RESULT OF DIFFICULT YEAR

The twentieth annual general meeting of Odhams Press, Limited, was held, on the 24th ultimo, in London.

The Rt. Hon. Lord Southwood of Fernhurst, chairman and managing director, who presided, said: The net profit for the year amounted to £258,168, as compared with £260,067.

General reserve of £510,563 shows an increase of £1,084 after writing off the expenditure during the year in respect of buildings in the course of construction and capital charges. It is proposed to transfer to general reserve £48,351. The general reserve will then stand at the substantial sum of £560,000.

The directors have recommended a dividend on the ordinary shares at the rate of 6 per cent. per annum.

Throughout the first eight months of the year the country was subject to a series of crises, culminating in September with the outbreak of war. In these circumstances the trading results are satisfactory.

Owing to the German invasion of Norway, the country which was one of the chief sources for the world's supply of pulp and manufactured paper, the position of supplies is extremely difficult. Practically the only sources of paper available to-day are Canada and Newfoundland and a large part of the world is looking to those two countries for their supplies. The consequence is that not only is there a shortage of this important commodity, but its price has risen to considerably more than double pre-war cost, and is still increasing.

In this connection Great Britain not only has to consider its own requirements, but also those of our Allies across the Channel. Your directors are, of course, making every possible effort to secure supplies, but in common with all other newspapers and periodicals throughout the country, the sizes of publications have had to be reduced very considerably and further reductions may still be necessary. At the same time we believe that notwithstanding this severe handicap we shall be able to maintain the values of our important copyrights.

It is obviously impossible to forecast the future, but it is a source of satisfaction to be able to say that fundamentally the business is in a sound position.

The report and accounts were unanimously adopted.

Reserve, £100,000 (£100,000). Carry forward, £384,331 (£411,894). Ordinary dividend, 15 per cent. plus bonus 5 per cent., making 20 per cent. for year as before.

United Kingdom Gas Corporation.—Total revenue, 1939, £259,265 (£244,726). Income tax, £71,789 (£60,773). Loans and overdrafts, £500,441 (£265,298). Net profit, £122,443 (£128,937). Ordinary dividend maintained at 5 per cent. Carry forward, £14,150 (£13,276).

City of London Real Property.—Net revenue year to April 12, 1940, £278,967 (£302,901). Repairs reserve, £20,000 (nil). N.D.C. reserve, £12,000 (£6,000). Ordinary dividend, 4 per cent., as before. Carry forward, £235,686 (£230,156).

Finance

Revenue returns show repayment of principal amounting to £14,050,000 in the 26 weeks to May 21, 1940.

EXCHANGE RATES (Monthly Tables)

CENTRAL AND SOUTH AMERICA

Following rates, issued by Bank of London and South America, are related to U.S. \$, except for Bolivia and Paraguay; approximate sterling rates can be calculated from \$-£ rate.

<i>from 8-1 rate.</i>	
<i>Bolivia.*</i>	Sight selling rate 136 3/4 bolivianos per L., March 28, 1940.
<i>Colombia.*</i>	Sight selling rate 175-50 pesos per 100 U.S. \$, April 30, 1940, for holders of permits buying in the "open" market.
<i>Ecuador.</i>	Sight selling rate 15 60 sucres per U.S. \$, April 26, 1940.
<i>Guatemala.</i>	Sight selling rate maintained at one quetzal per U.S. \$, less commission of 1 per cent. to Central Bank.
<i>Nicaragua.*</i>	Sight selling rate for payment of imports fixed at 5 52 1/2 cordobas per U.S. \$ (incl. 10 per cent. tax and 1/2 per cent. comm.), June 9, 1938.
<i>Paraguay.</i>	Sight selling rate 71 70 Paraguayan pesos per Argentine "free" paper peso, April 18, 1940.
<i>El Salvador.</i>	Sight selling rate New York was 2 50 3/4 colones per \$, April 26, 1940.
<i>Venezuela.</i>	Sight selling rate New York 3 19 bolivares per U.S. \$ since April 27, 1937.
	* Exchange controls are operative in these countries.

Lesson of Disaster

THE tidings which Mr Churchill brought to a crowded House of Commons on Tuesday last were less hard and heavy than even the most optimistic of us would have dared to hope a week before, when Germany was claiming the complete encirclement of the Allied forces in Flanders, and King Leopold's act of treachery, by exposing the left flank of our armies, had opened a direct way for the Germans to Dunkirk and the sea. At the time, Mr Churchill believed it might be possible to rescue some 30,000 but that the main body of the Allied armies "would be broken up in the open fields or else would have to capitulate for lack of food and ammunition." In the event, total disaster was evaded and a victory of annihilation snatched from the German High Command by one of the most extraordinary feats in military history. Down a small wedge of territory, submitted to constant bombardment from the air and an ever-increasing pressure from overwhelmingly superior German forces, the British and the French fought their way to Dunkirk, the only port still in Allied hands. There they waited in good order while their comrades fought a brilliant and desperate rearguard action, and an armada of motley craft swept out from England in the wake of the Allied navies to begin the task of evacuation.

It is hard to apportion praise in an action whose success depended from first to last upon the co-operation and discipline of all those who were engaged upon it. There must be praise for the brilliant staff work in Flanders which made it possible for the German drive to be stayed and for the troops to reach the shore; for the admirable courage of the men while they fought and their equally admirable patience while they waited; for the superb gallantry and skill of the R.A.F. which, outnumbered but not outclassed, held at bay and drove back the German 'planes, inflicting fourfold punishment for every loss; for the work of the navies in carrying out under intensive aerial bombardment a most difficult operation with comparatively light losses; for the hundreds of small craft, tugs, trawlers, lifeboats, motor boats, and private yachts, manned by

volunteers, who ferried troops across for days on end under gruelling attacks from the air; for the superlative organisation of the Southern Railway, whose troop trains ran smoothly backwards and forwards from ports to termini with the unruffled efficiency bred of innumerable Bank Holidays. But it is not praise that is the real reward for all this work of quiet heroism and self-forgetting efficiency. It is the incredible fact that not 30,000 but 335,000 men have been brought home from Flanders to reconquer their own arm and fight another day.

So staggering is the scale of the German advance that we are in real need of Mr Churchill's warning that "wars are not won by evacuations." The Allies have sustained a catastrophic defeat in northern France and Flanders. In three weeks the Germans have done what they were never able to do in the four years of the last war. They have reached the Channel ports. France's front line defences have in part been shattered, she has been thrust back on to new defensive positions and the French economy is poorer by an important industrial region. The Atlantic seaboard from Bodö to Boulogne is in German hands. The Low Countries are lost, and Hitler has gained the submarine bases and airfields without which he could not even contemplate an invasion of this country.

These territorial and strategic losses are accompanied by a devastating loss of arms and equipment. The B.E.F. have brought home their rifles, but their heavy equipment, the first fruits of Britain's industrial war effort, has been left behind. Even had we vast reserves of armaments, we should have felt the loss. Since we have not, an added strain is placed upon our overburdened industry to replace the abandoned material while fulfilling the schedule of the general re-armament programmes. France's losses, too, have been enormous, and the Germans are reaping a rich harvest of weapons, ammunition and transports. It is true that they have paid very dearly for their victory, but we have paid dearly too and have not won.

We have not been left long in doubt over the next

phase of the war. Within a day of their occupation of Dunkirk, the Germans have launched their offensive along the Somme. Hitler is determined to make full use of the momentum of victory and to leave the French only the shortest margin of time to consolidate and deepen their defences. The new line must be held at all costs, and if the Germans suppose that threats of invasion will induce Britain to keep her troops at home, they are already answered by the presence of the B.E.F. in the front line and by Mr Churchill's assurance that our divisions will be re-equipped and despatched to France with all possible speed.

Nevertheless, we must recognise that for the next weeks the full brunt of Hitler's attack is likely to be borne by France. Germany has lost her advantage of surprise and some of the edge has been taken off her mechanised attack by the campaigns of May, but we must not in any way underestimate the desperate and critical nature of the struggle engaged. In General Weygand the Allied armies have a great leader and a superb strategist, and the fighting qualities shown by General Prioux's army in the north prove the superiority, man for man, of the French infantry. But Germany has not yet shot her mechanised bolt, and over France's southern frontiers hangs the threat of Italian intervention. The weeks ahead will be dark and savage. We do ourselves no service by blinking that fact.

What is our rôle in this critical time? First and most obviously to assist our ally with every means at our disposal, but especially in the air, where the numerical superiority of the German air force is so severe a menace not only to the armies in the front line, where the Germans are using their aircraft primarily as artillery in close co-operation with their land forces, but in the crowded cities and busy industrial centres behind the lines. Paris, Le Havre, Lyons, and Marseilles have already been bombed. If the Italian air force were to join in the work of destruction, France's assailants would be increased to the tune of over 1,800 front-line aircraft. Thus our help to France must be immediate; but it must also be obvious. Goebbels is using every device of his propaganda machine to persuade the French that they have been dragged into war at Britain's heels and that now they are being left to bear the brunt while the British dig in behind the Channel. Every bomber we send to France is not only an engine of war, but a tangible proof of our determination to fight France's battle just as she is fighting ours.

On the home front, we must hasten on the work of setting our country in a state of the fullest preparedness. The fact that the next blow has not fallen immediately upon us guarantees us at most a temporary immunity which we must utilise in the most energetic and imaginative

fashion of which we are capable. If an invasion is attempted, it will be launched with utter ruthlessness, consummate timing and a minute attention to detail. We have perhaps only a few weeks, perhaps only a few days, in which to equip and prepare ourselves for the warfare to which Mr Churchill looked forward "on beaches . . . on the landing grounds . . . in the fields and in the streets" of Britain.

This equipment and this preparation, however, must make increasing demands on our armament industry. It is in the factories and workshops where the men are surrendering their holidays without complaint and setting to on their seven-day week, that not only the Allies' planes, tanks and guns, but their very destinies are being forged. We have evidence on every side of the drive and energy and sense of responsibility with which we are at least grappling with the problem of supply. But the country is also beginning to realise the leeway which must be made up and the catastrophic scale of the deficiencies which have to be remedied.

It is not merely a question of making good the losses inflicted by the evacuation of Flanders. Even before the retreat began, the B.E.F. had not the equipment to enable it to meet the German army on anything like an equal footing. Every soldier home from the front brings back the same incredible tale of inadequacy. Although our troops were never outclassed, they were outbuilt in almost every category. The tragedy is all the greater when we remember what marvels they have performed in spite of their relative lack of weapons. We may well ask what these men would have achieved had they been given anything approaching the weight of armament they required.

It is certainly true that at a time when every ounce of the nation's energy must be devoted to the task of repairing the errors and deficiencies of the past, complaints, recriminations and regrets are a useless toll on our vitality. But it is equally true that the continued presence in office of men who by negligence or stupidity or worse have brought about our present predicament is at the very least an insult to the soldiers whose lives have been squandered through their neglect, at the most, a guarantee that similar mistakes and similar hesitations will continue to clog our war effort. Parliament will have its opportunity in next week's secret session to express its condemnation. But the condemnation is already echoing in every home to which the heroes of Dunkirk have returned.

The country as a whole asks nothing better than "to ride out the storm of war and outlive the menace of tyranny, if necessary for years, if necessary alone." But it will fight all the better if every vestige of a cowardly and complacent past has first been swept away.

Men, Machines and Money

IN almost every sphere of the national life the new Government, combined with the manifest demonstration of the defects of the old, has brought about a change of attitude and of tempo. All manner of things which seemed to be impossibilities a month ago are now being accomplished; precedent, etiquette and convenience are being forced to bow before efficiency; the only test of methods is coming to be their effectiveness, and the machinery of the War Cabinet, most of whose members are free from departmental duties, has been revised accordingly. Mr Attlee explained the new machinery in the answer to a question in the House of Commons on Tuesday. Defence is the particular province of the Prime Minister, assisted by the three service Ministers. For foreign affairs, Lord Halifax reports direct to the War Cabinet. Other matters are handled by five committees. Mr Greenwood presides over the Production Council and the Economic Policy Committee, Mr Attlee over the Food Policy and Home Policy Committees and Sir John Anderson (who is not a member of the War Cabinet) over a civil defence committee. Finally, Mr Greenwood, Mr Attlee and Sir Kingsley Wood, with Mr Chamberlain in the chair, form a co-ordinating committee. By this arrangement, Mr Arthur Greenwood becomes, in effect, the grand

economic co-ordinator for whom the critics have been calling. Lord Stamp's organisation remains in being and is attached to the Economic Policy Committee, and its functions have been enlarged to cover the review of progress achieved by the Departments in giving effect to decisions.

As a piece of machinery, this is a great improvement; it is an immense advantage to have carried the point that economic policy and planning should not be subject to the Treasury or restricted by the departmental preoccupations and personal limitations of the former or present Chancellor of the Exchequer. But without further information it is impossible to say whether the improvement goes far enough, or whether a change in machinery carries with it a change in substance. Much will depend on the degree to which Mr Greenwood regards his function as one of arbitrating and co-ordinating or of leading and planning. Many of the most important issues of economic policy are of much wider than departmental scope; they are not even inter-departmental, but supra-departmental. They can only be thought out by a central staff, working with an energetic Minister and imposed by him on the various departments, just as a Commander-in-Chief imposes on his army commanders the plans worked out by his staff. This

is the crucial question: is the new organism, consisting of Mr Greenwood, the Production Council, the Economic Policy Committee and the central staff of economists, to be an initiating and directive body, or is it to be merely co-ordinating, advisory, supplicative? Until this question has been answered by experience, it is impossible to pass a judgment on the new arrangements.

There is no lack of problems for the two economic committees to concern themselves with. The new Government has not been shy in taking decisions of policy which the old Government could never bring itself to face. They can be seen on every hand—most noticeably in the control of labour and production. But there are plenty of decisions still to be taken and whole areas where the first vague sketching of policy has still to be undertaken. The most urgent need, as the whole country is now vividly aware, is for a rapid increase in production. It is gratifying to learn that the general speed-up and the virtual abolition of holidays have already resulted in increased production. But harder work by those already engaged in munitions production is only the first beginning of what needs to be done. The existing capacity must not only be worked to the limit, it must be expanded and supplemented by every conceivable means. This again is not merely a matter of hunting round for any suitable machines that are now idle, or used for less than 24 hours a day, seven days a week. It means a definite policy of taking machinery away from its present employment and putting it to work making munitions. Every machine that could possibly be used for any sort of war work and is actually being used for civil requirements that could possibly be done without must be regarded as a deserter from the ranks. This implies, of course, a more and more stringent restriction of all forms of civil expenditure, and the new regulations announced by the President of the Board of Trade on Thursday, though they were framed with materials rather than plant capacity in mind, are doubly welcome on that account. It is possible and desirable, however, to go further than mere restriction of manufacture, sale and consumption. Large economies both of labour and of plant capacity could be reaped if, in addition to a quantitative restriction of civil consumption, the permitted production for the home population were standardised and concentrated. There are many industries—bicycles and clothing are two examples—where a very large degree of pooling could be carried out and a correspondingly high proportion of labour and plant released for war work.

Any proposals of this sort will, however, immediately bring up the question of a fair treatment of the firms and individuals whose interests would be damaged by them. It is obviously in the national interest that only a limited number of standard bicycles should be made, in one plant, for the civil population; but any number of private interests, present and future, would be injured. The same problem comes up when the restriction of retail sales is pushed to any considerable length. Some commodities must be restricted more than others; but the authorities will hang back if they are allowed to be troubled by the thought that their regulations will ruin certain classes of unoffending and arbitrarily selected traders. The only way of escape from these problems is by a policy of compensation for disturbance of livelihood on a vastly larger scale than has hitherto been contemplated. It may even be necessary, by a combination of compensation and taxes, to approach the position in which everybody's income is frozen at the pre-war level. Only so will the way be cleared for that drastic redistribution of resources of labour and capital which will enable us to develop our full war potential. This is, perhaps, the most important question of general economic policy for an Economic General Staff to study at the moment.

Supply has its twin in labour. Plant capacity is useless without men to work it. Mr Bevin's latest orders are discussed elsewhere, and all that need be said of them here is that an excellent beginning has been made with the new policy of distributing labour by orderly planning instead of by competitive chaos. But it is still only a beginning. We have not yet heard very much about training on the vast scale that has been promised and will be necessary. And it is still not realised by the general public that

the provision of labour for the war effort does not merely mean the absorption of those who are voluntarily or involuntarily idle; it means taking men and women out of their present jobs. A correspondent in the public press, replying the other day to suggestions that horse-racing and other activities of the sort should be closed down, remarked, with the air of one making a justified complaint, that all suggestions of economy amount to little more than taking away someone's job. Of course they do; that is their purpose. One of our very greatest advantages over Germany lies in the fact that we supply ourselves with food and the other necessities of life with a smaller proportion of our total labour force. But the surplus of man-power is not standing idle; it is at work in unessential tasks. There are to-day about 3,000,000 more workers in shopkeeping, finance, insurance, entertainments, personal service and clerical work than there were in 1921. We can surely get along with the standard of shopping facilities, finance, sport and clerking that we had in 1921; but if these 3,000,000 are to be available for anything else they will have to be weeded out. A schedule of reserved occupations is not enough, even when qualified by varying age-limits. What is needed is some quantitative redistribution of man-power. That a skilled metal-worker should be prevented from joining the Army is obvious common sense. But are we content to leave him in the employment of, say, a confectionery firm?

In one respect, but in one respect only, the change from Mr Ernest Brown to Mr Ernest Bevin has brought no improvement. This is in wages policy. True, the new control of employment in the crucial industries should serve to prevent the bidding up of individual payments in the effort to secure labour. But so far as standard rates are concerned, the personal predisposition of the new Minister is to remove any limits, and if the new agricultural policy is followed by a rise in food prices, there will certainly be a crop of wage applications. If it comes to a rigid choice between winning the war with an inflationary spiral and losing it without there should be no hesitation over the choice. But it would be a very great pity if we slipped into price chaos simply because of an inability to see the difference between money wages and real wages.

The third great division of economic policy, after supply and labour, is finance. This is certainly no time for financial orthodoxies; but that does not mean that it is no time for thinking about financial problems. On the contrary, a considerable effort seems to be necessary to secure a general acceptance of the fairly obvious proposition that finance, in wartime, must necessarily be a camp follower and that its main duty is to avoid obstruction. We already have, in the agreement with the railways, an outstanding example of real economic factors being subordinated to the desire to have a few million pounds on the right side of the Exchequer returns. A sensible and realistic settlement of the problem of compensating shipowners for lost tonnage is held up, if report is to be believed, by an unwillingness to accept a liability which, though fairly precise in real terms, might be unlimited in money terms. Any attempt to devise a complete scheme of compensation for disturbance on the lines already mentioned would raise the same problem; the financial cost would be very heavy while the real economic cost to the community might be much smaller. To think consistently in real terms involves a very considerable mental effort, and one which neither could nor should be made by the Treasury. But the more is the need for overriding decisions of policy.

Thinking in real terms does not, of course, mean that monetary considerations can be forgotten. Pounds sterling in wartime become little more than accounting symbols; but the need for a sound Budgetary policy is increased rather than diminished. Sir Kingsley Wood has decided to proceed with his predecessor's Finance Bill. It might have been better to forget about that lamentable Budget altogether; but in any case, there is no longer any dissent from the view that a further Budget will be needed very soon. Perhaps it will be politically possible in this sphere also to think realistically from now onwards and to leave behind the frame of mind in which the imposition on a given range of incomes of a 3½ per cent. cut in consumption can be called a "striking increase" in taxation. The problem

is simple enough in outline: the public's consumption has got to be cut down by rather over a third. But there is plenty of scope for an Economic General Staff in working out the ways and means.

Finally, some very hard thinking needs to be done on the general subject of exchange control. The emergency of the last few weeks has rightly led to the decision that our reserves of foreign assets must be drawn upon without stint in order to get quick delivery of the munitions we need. But the need to avoid wastage is obviously all the greater, and the market in "free" sterling is still a source of waste. As has been pointed out in *The Economist*, there are ways in which the disadvantages of the present situa-

tion can be largely removed without abandoning the principle (or is it only a fetish?) of financial freedom. But those steps have not been taken. Mr Greenwood would do well to satisfy himself that the whole conduct of our exchange control is in accordance with the principles of war economics.

These are the problems that face the new machinery for economic planning. They are not a distraction from the main business of fighting and winning the war, but an essential part of it. At the moment the new arrangements inspire more hope than confidence; but there is a great opportunity for Mr Greenwood and his collaborators to justify the one and to earn the other.

The New Farming Policy

THE speech of the new Minister of Agriculture last Sunday was a refreshing contrast to that of his predecessor in the early autumn. Mr Hudson was not afraid to warn farmers of difficulties ahead or to propose drastic changes in farming routine to meet them. He began with the warning that the supply of imported feeding stuffs is likely to be even smaller next winter than it was six months ago. Such feeding stuffs as there are will be used, first to maintain the milk supply and secondly to provide winter feed for beef cattle and sheep, who feed themselves off grass for most of the year. Pigs and poultry will have only what is left, and specialist farms entirely dependent on bought foods were advised to reduce the number of their livestock by the autumn to one-third of the present level. That warning will be a grave one to the many small farmers whose main source of income has been from pigs or poultry and who have not sufficient area, let alone the equipment and the knowledge, to grow crops for their stock. But they have at least been warned well in advance; they can now make suitable arrangements for the orderly reduction in their stock and possibly find themselves additional work on neighbouring farms.

The warning that Mr Hudson gave to specialist pig and poultry keepers serves also to warn housewives of impending changes in the supply of eggs, bacon and pork. Home production of these foods will not necessarily be cut so drastically as the supply of imported cereals; more home-grown feeding stuffs will be available and general farmers may be in a position to maintain or even to increase their output. But there will be some fall in total home production, and when this is combined with the loss of imports from Scandinavia and Holland, the supply of bacon and eggs may well be barely half the normal by next winter. As long as other types of meat are available, the loss of bacon supplies will have little nutritional effect, even if it hastens the disappearance of the traditional British breakfast dish; but the shortage of eggs will be a more serious matter. It is true that the very poorest eat hardly any eggs even in peace time, but for the bulk of the working and middle classes, eggs are a valuable source of proteins and minerals. Hens should certainly be given precedence over pigs in the matter of feeding stuffs, and the keeping of hens on all general farms and in all back gardens where there is feed for them should be officially encouraged. The new advisory committee to be set up by Mr Hudson to deal with the allocation of food-stuffs will no doubt bear this in mind.

A reduction in the output of eggs, bacon and pork is, of course, to be matched by a great increase in other forms of agricultural production that are not so dependent on imported feeding stuffs. Mr Hudson proposed drastic methods of dealing with the problem of labour shortage. Men already engaged in farm work are not to be accepted for employment in other trades; those who have been agricultural workers are to return to the land if they become unemployed. This measure of labour conscription may eventually bring back some of the men who have recently left farm work for camps and aerodromes, but its principal effect will be in stopping any further drift. Conscientious objectors are also to be recruited for farm work and Mr

Hudson appealed for more volunteers for the Women's Land Army. County councils have also been asked to release roadmen with agricultural experience.

If labour is to be conscripted for farm work, farm wages must be raised to a level more nearly equal to that of urban jobs. That is generally agreed and, in spite of the steady rise in agricultural wages in the past three years, the Central Agricultural Wages Board recently proposed a national minimum wage of 42s. per week, which is about the wage now in force in the higher paid districts. Mr Hudson has gone one better; he has chosen a national minimum of 48s. per week and has promised farmers that prices of the things they sell will be raised to correspond. A minimum wage of 48s. a week means a rise of 10s. to 12s. a week in wages in some counties, and it is difficult to see why the new figure has been placed quite so high. It is bound to upset both the balance of farm production and of farm prices. The labour used in growing sugar beet, for example, provides a far higher proportion of total costs than that engaged in milk production and a rise in labour costs of this magnitude will mean large shifts in the relative profitability of growing different commodities. Nor has the Minister explained how the necessarily higher prices are to be paid. If the increase is met entirely by higher prices to the consumer, there will be tremendous pressure to raise urban wages still further; if the increase is to be met by subsidies, the Government have made a very large addition to the amount which has to be raised by loans or taxes.

The closing of the agricultural colleges and schools also seems an overdrastic measure. Centres of skilled workers and technical advice are needed more than ever, now that dairymen are driving the plough and arable farmers are growing new crops with unskilled labour. The session is very nearly over, and the staff of these institutes could surely be reassembled in the autumn when they have helped to complete the farm-to-farm survey of what has been done and what further can be done to increase food production.

The overrunning of Flanders and North France by the German army, the feeding of millions of homeless refugees, the probability of a renewed attack on ports and shipping make imperative an immediate increase in the output of food in this country. Farmers will answer with renewed energy to the call for increased food supplies. Fewer animals, but more of them fed from British soil, more potatoes, vegetables and cereals are needed; the industrial population must pay for its urgent needs, either by higher taxes or by higher prices. But the more urgent the need, and the further agricultural production is raised to meet the immediate demands of the moment, and the larger the subsidies and the higher the prices, the more critical will be the position of farming at the end of the war. There are few things so uneconomic and so useless as a huge munitions factory the day after the Armistice. The dangers of an inflated agriculture in a post-war world must not, indeed, deter us from growing that extra food without which the war may not be won, but farmers and munition workers alike should realise that high wages, high prices and unlimited output are only "for the duration."

NOTES OF THE WEEK

Italy Waits Another Week

A week ago it seemed certain that Italy would be in the war within a very few days. At the week-end, the day and the hour were banded about. On June 4th twenty-four hours seemed a not unreasonable time limit. Yet on Thursday evening Italy was still out of the war. The week has brought her several steps nearer the abyss (in itself a *tour de force* since she seemed on the brink already), but she still clings to the edge and the fateful Cabinet meeting of June 4th has passed apparently without a final decision. It is difficult to know what we may now call Italy's actual status. Is she still pre-belligerent? Is there another nuance of non-belligerency which can be inserted between pre-belligerency and belligerency itself? If there is, Italy has achieved it, for, except for the fact that she has so far made no aggressive act, she is all but at war with France and Britain. The whole country is now on a war basis; the evacuation of Italian nationals from Mediterranean countries is almost complete; all direct negotiations with the Allies over contraband control and commercial questions have been broken off. Moreover, on the German side there seem obvious reasons for demanding Italian intervention. The new offensive on the Somme has been launched and Germany appears to be concentrating the full fury of her attack upon France. Italian intervention on France's southern frontiers and the addition to Germany's air offensive of Italy's frontline aircraft would obviously increase France's jeopardy, and offer a greater chance of securing the immediate and sweeping success Germany seems determined to achieve.

And yet a certain scepticism over Italy's intentions has crept back since the uneventful passing of June 4th. Italy "doth protest too much." A real intention to intervene would surely have been expressed in less flamboyant terms. It is after all possible to interpret her threats and gestures either as the greatest possible nuisance value she can offer Germany or else as an attempt to force up the price of continued non-belligerency should the Allies still be prepared to consider a deal. M. Reynaud has once again expressed France's willingness to reach "an equitable settlement of all questions outstanding between the two countries." The Duce is believed to be still in contact with President Roosevelt, in spite of a courteous refusal to consent to the President's earlier demand that Italy should abstain from the war. Reports from Washington hint at concrete proposals from the White House, and it is just conceivable that France and Britain have some kind of understanding with the Americans. The Allies' willingness to consider reasonable grievances has in fact been made perfectly plain. Italy's attitude is harder to assess. The ideal for her remains a Mediterranean "Munich"; she may hope that the United States will play the rôle of Chamberlain and enable her to secure Mediterranean hegemony without having to fight for it. But there are insuperable difficulties. France is prepared for reasonable concessions only, and there is nothing reasonable in the demand for Nice, Corsica and Tunis—if indeed the Duce is insisting on his publicised claims. And Germany would surely permit the Axis partner to "sell out" only on terms which seriously crippled France. Thus we are left with the riddle of Italy's continued inactivity. Perhaps President Roosevelt has warned the Duce that intervention would bring in the United States. This would also explain Germany's preference for a non-belligerent ally. Perhaps the evacuation of Dunkirk has convinced Italy that Hitler's greatest offensive is yet to be, and she still prefers to wait. If so, her warlike attitude is likely to degenerate into a very tedious comedy.

Marking Time in the Balkans

Germany is making full use in South-Eastern Europe of her military successes. German propagandists din home the claim that the war will be over by August, and leave their listeners to draw the conclusion that any attempt to resist the demands of the Reich will merely bring down the vengeance of a State which in a few weeks' time will be master of Europe. It is useless to pretend that this propaganda, based as it is on Germany's indisputable military successes, is not having considerable effect. The Balkan States may regret our apparent weakness and realise how greatly the independence of every small European State has

depended, and still depends, upon our strength, but they can argue that there is nothing that they can do to help the Allies to victory which would not immediately lay them open to the risk of destruction at Germany's hands, and that therefore they must preserve their independence as best they may, until the issue is decided. Hungary is sufficiently confident of Germany's success to switch part of her armament industry over to ordinary industrial production, and Count Teleki has expressed his opinion that the war will be short. In Roumania, King Carol is apparently recasting his administration in the direction of greater subservience to Germany's demands. The new Foreign Minister, M. Gigurtu, is a noted pro-Nazi, while the outgoing Minister, M. Gafencu, was well known for his Allied sympathies.

Only in Turkey is opinion firm and confident. Staff talks are proceeding between the Turkish Generalissimo and General Mittelhauser, General Weygand's successor. Turkey, however, still does not envisage the spread of war to the Balkans and the Eastern Mediterranean. While the Nazis are hammering away in the West, it is unlikely that they will take any step to divide their war effort by opening hostilities on their Eastern flank. Italy the Turks believe to have been put in a position of stalemate by Russia and the United States, and although they would loyally fulfil their obligations under the Treaty of Ankara were Italy to launch an attack, for the time being neither Italy's busy military preparations nor the concentration of Italian troops in the Dodecanese cause them undue alarm. Turkey lays particular stress on Russia's contribution to Balkan stability and welcomes any sign of improving relations between Russia and the West. The Turks believe that Stalin cannot afford a decisive German victory, and some hopeful observers even canvass a possible intervention. There is, however, no likelihood that Russia will take any active part in the war. The appointment of Sir Stafford Cripps and M. Labonne as the Allies' envoys in Moscow may take the extreme edge off Stalin's distrust and resentment. It is most unlikely to transform him into an active or even a non-belligerent ally.

America Debates

The ferment of opinion in the United States continues, but it is still too soon to say how far the manifest change of mind will go or how quickly the great mass of the public will be stirred. Among the articulate classes whose opinions are reflected in the press and in other public pronouncements, the desire to help the Allies is uppermost. The number who would declare war now is still very small, but growing; the number who want to assist the Allies by every possible means is very large indeed, but most of them still find it both possible and necessary to draw a distinction between this and engaging in actual war. The movement of opinion has crystallised round a proposal that the surplus stores of the American Army, especially rifles, field guns and ammunition, should be sold to the Allies forthwith, and a ruling by the Attorney-General has made this legally possible. But despite all this activity, Congress, with its ear, in an election year, close to the ground and listening for murmurs from the inarticulate millions, is very slow to move and has committed itself to nothing more than a resolution saying that the United States would recognise no transfers of territory in the Western Hemisphere from one European country to another. On American re-armament, as distinct from help to the Allies, there is more willingness to move, and the President has felt able to ask for a further \$1,000 millions. He has also appointed a very strong board to administer his powers and organise the campaign of preparedness. The board consists of the executive heads of the United States Steel and General Motors Corporations, as well as of an outstanding railwayman and one of the leading trade unionists. The whole situation is, however, shot through with domestic politics. Mr Roosevelt is now certain of the Democratic nomination, and his chances of re-election are enhanced. But this very fact is driving the Republicans into angry non-acquiescence—the angrier because they realise that they cannot oppose the President's foreign policy. They may be driven to nominate an interventionist, and there is increasing talk of Mr Wendell Willkie, a progressive and independent-minded business man. But the prospects of a coalition are dim, and the American

Constitution, which is perhaps as responsible as any other single factor for the outbreak of the war nine months ago, will continue to exert its baneful influence through the summer.

* * *

France Faces the New Offensive

It is still too early to say in which direction the new German offensive will develop. Paris is almost certainly the objective, but the Germans may prefer an encircling movement along the coast to a direct attack down the valley of the Oise. There is reason to believe that earlier attempts to break through in the Rethel area met with such stubborn resistance that the Germans may well be seeking another way through. The element of surprise has presumably been eliminated from their methods of attack. France is ready to receive the onslaught of the tanks on a line which is constructed in depth to allow for piercing of its forward defences. The Germans will not find behind the front lines open and undefended countryside over which their mechanised columns can run riot. Instead, a system of strong points supported by mobile reserves offers a fluidity of defence more adapted to the mobility and speed of Germany's attack than the old conception of a heavily defended static line. The launching of the new German offensive coincided with a fresh reshuffle of M. Reynaud's Cabinet. M. Reynaud takes over the Foreign Office, assisted by M. Paul Baudoin (previously Secretary of the Inner Cabinet), M. Jean Prouvost, owner of the *Paris Soir*, becomes Minister of Information, M. Bouthillier Minister of Finance, M. Pernot Minister of French Families. The most interesting change is the disappearance of M. Daladier. Possibly the feeling is running as high in France as in this country that the Ministers responsible for the Allies' present predicament have no right to further political responsibility. It is also possible that the continued occupation of the Foreign Office by M. Daladier, whose firm stand against Italy in the winter of 1938 still rankles in Rome, offers an insuperable obstacle to any serious attempt to negotiate with Italy. Whatever the reason, the changes strengthen M. Reynaud's hand. He is now completely surrounded with men of his own choosing.

* * *

Home Defence

The danger to Britain from the enemy's near footholds in Western Europe is great and unexampled; but the front line is still in France. Tanks, artillery and trained troops, as well as fighter aircraft, will be first needed there, to repel the fresh German drive against the Somme and the Aisne. The need to attain maximum efficiency in home defence is correspondingly acute, and it is no longer possible to rely simply on the Royal Navy or the R.A.F., backed by the civil defence services. The danger now is a military one as well, requiring military means to ward it off, and a novel system of internal protection is being quickly improvised. It has three parts. First, important and vulnerable sites are being fortified; military centres, airfields and factories are heavily guarded by men and guns; open spaces, including race-courses and golf links, are being scarred with trenches or pitted with obstructions to prevent the landing of aircraft; main roads are being blocked and barred; and coastal areas, with strong garrisons and reinforced batteries, are being prepared for action. Secondly, a new "observer corps" of Local Defence Volunteers, to the number of nearly half a million, has been enrolled. In too many districts equipment, arms and instructions for these "parashots" are still somewhat lacking, and almost everywhere their duties are popularly misconstrued. Actually their job will chiefly be to watch and warn; and then, until troops arrive, to delay the parachutists and prevent their concentration.

*

The real defenders of our soil against military attack are our soldiers; and the third, and crucial, section of these new land defences will be the small, heavily armed and extremely mobile groups of regulars whose formation has been announced this week. The secret of recent German successes is twofold: the ably synchronised co-ordination of all arms; and sudden forays against "back" areas. The secret of successful defence must be similar. Protection must go back in depth to every important point, however far inland. Military defenders must be in a position to move quickly in any direction. And land, sea and air forces must dovetail in a single plan under a common command. So far there is no unified command; but, although it is plainly impossible to cast the whole of A.R.P. into a military mould in an instant, it is good news to learn that, if military necessity required it, area military authorities could and would assume control of their local civil defenders.

Men and Machines

"We shall fight in France"—Mr Churchill made no disguise in his statement on Tuesday of the fact that our military commitments overseas had been increased and not cut down by the loss of Flanders. The southern units of the B.E.F. are in contact with the enemy on the Somme. The need for men to fight and the need for men to do war work are at their peak together, and to waste manpower now will be fatal. The first stages of a nation-wide call for war workers have been carried through, and this month the intake of men for military training is to be double the normal number called up, small and disappointing as that has been up to now. Immediate steps are imperative to comb out skilled men whose skill is being wasted either in industry or in the Forces. At the recent conference of the Amalgamated Engineering Union it was claimed that many skilled engineers were either serving in non-technical units of the Army or, if in technical units, were not doing mechanics' work. There should be no suspicion of waste like this; and the survey of workers, which is now to be extended from engineering, motor, aircraft and shipbuilding firms, to include chemicals, explosives, oil and paint, vehicles, metal goods manufacture and instruments, should serve as the basis to prevent similar waste in industry itself. Side by side with this enlarged census a survey of machine tools is taking place. In the factory as on the battlefield even trained men are helpless without machines; and the co-ordination of skill and engineering, to produce the maximum of arms from the factories and the maximum of striking power at the front, must be the keynote of the nation's rallying.

* * *

Labour Control

To bring together men, machines and materials at the places where they are really wanted, and there only; and to make sure of non-stop production—these are the immediate aims of labour and supply policy. Two steps this week mark progress. On Thursday further sharp restrictions (discussed in a Note on page 1003) on the use of materials for civil purposes were published. On Wednesday Mr Bevin announced a drastic new labour policy, to be implemented by the Ministry of Labour and the Labour Supply Board. First, the dwindling personnel of farming and coal-mining is to be protected; no man normally employed in agriculture or coal-mining can be engaged for work in other trades. Secondly, no workers can be taken on in engineering, building or civil engineering except through employment exchanges or by an arrangement agreed between employers and trade unions. This is to prevent employers bidding one against the other for scarce labour, "poaching" by offering bribes and inducements and so causing a constant movement among skilled men that is wasteful and detrimental to war output. Finally, wages and conditions of work, though they will still be regulated by collective bargaining, will be subject to compulsory arbitration in the event of a dispute; strikes and lock-outs are to be made impossible. Mr Bevin has made great strides towards the control of employment that is indispensable in wartime. Administratively, he has undone the mistakes of a generation by insisting that the employment exchanges, as originally intended, should serve as the major clearing houses of work.

*

But it is still uncertain whether he is willing to exercise his new powers of control far enough. What is needed now is not simply the re-allocation of agricultural workers, coal-miners and engineers. Workers in other and non-essential trades have got to be transferred to war work; and, sooner rather than later, authority to transfer them has got to be taken. Mr Bevin said he hoped his work would not be judged by the course of the unemployment figures. As Mr Keynes has already pointed out, it should be so judged. The more men and women he can throw out of work in jobs we do not need the better; and then it is Mr Morrison's duty, as Minister of Supply, and Mr Greenwood's, as Economic Minister, to see that they are quickly taken into war industries. For the present, Mr Bevin is too pre-occupied with wages—with his fear that control might mean "monkeying about with the workers' pennies." It is shot and shell to re-equip the B.E.F. that are wanted, not formal justice; and it is symptomatic of the timidity that still seems to linger in high places that the nettle of longer hours for coal-miners, the only way in which the vital needs of both Britain and France can be met, has not yet been firmly grasped—despite eloquent appeals to munitions workers to work all out seven days a week.

Limitation of Home Consumption

The imperative need for an expansion in the production of military equipment and the necessity of increasing exports have rendered unavoidable a further limitation of the resources devoted to the civil population. And as the export of iron and steel, machinery and other capital goods will have to be curtailed, at least temporarily, in order to augment the supplies available to the munition factories, an effort must be made to increase exports of consumption goods. Last April, sales of cotton and rayon piece-goods to retailers during the 5½ months from April 16th to September 30th were restricted to 75 per cent. of those made during the six months ended September 30, 1939, and those of linen piece-goods to 25 per cent. By an Order of the Board of Trade, issued on Thursday, the list of non-food consumption goods whose sales to retailers are limited has been considerably extended to include a wide range of clothing, household goods, ornaments and objects widely held to enhance feminine beauty, toys, cameras, musical instruments and office appliances. Even umbrellas have been included in the list, though whether it is changes in politics or in climate that render them less necessary is not revealed. During the period from June 6th to November 30th, supplies of these goods to retailers are to be restricted in value to two-thirds of those made to them during the six months ended November 30, 1939. It is estimated that the value in 1939 of the retail sales of the goods now to be controlled was about £250 millions, while that of the cotton, rayon and linen piece-goods included in the first Order was about £100 millions. The extent of the restriction can hardly be called drastic. But every step in this direction is to be welcomed.

Mr Churchill's Aides

Last week the Allied Supreme War Council met again in Paris to review the position after Hitler's sweeping gains in the North. The new Prime Minister, who is also Minister of Defence, is clearly not going to be guided simply by precedence, and the British delegation at this meeting was no merely *ex officio* gathering. Mr Churchill himself was there, for the first time as Prime Minister; Mr Attlee, Deputy Leader of the Commons, made his first appearance; Sir Ronald Campbell, British Ambassador in Paris, attended; and the new Chief of the Imperial General Staff, Sir John Dill, was, of course, present. The remaining two were hand-picked: Major-General H. L. Ismay, of Mr Churchill's Chiefs of Staff Committee; and General E. L. Spears, chairman of the Anglo-French Parliamentary Committee, chairman of the British Military Mission to Paris in 1917-20 and historian of the last war. When Mr Churchill came to power, party stress compelled the appointment of more than one man not of the first choice. But the Prime Minister has since worked mainly through the men he himself wanted, on each tier of wartime administration. As Defence Minister as well as Prime Minister, he is something like a War Cabinet in himself, and he loses no chance to call in, from whatever field, the aid of men who can help in work, advice or discussion.

Latin America Considers Invasion

Germany's new technique of invasion has thrown a lurid and disconcerting light upon her intrigues in Latin America. In most of the South American republics national defences are on a very small scale, and even the greater States would find it difficult to withstand an invasion from the air carefully designed to paralyse the country's lines of communication and centres of administration. The distances which Germany would have to traverse would still be a safeguard, but only on condition that the Allies' command of the sea remained unbroken. And Germany is already in possession of certain strategic positions. German infiltration in the civil aviation of South America is considerable. Certain States are largely served by the subsidiaries of *Lufthansa*. Until a few weeks ago, the airlines of Colombia, a State with both a Pacific and an Atlantic seaboard and within comfortable bombing distance of the Panama Canal, were under German control. Germany, too, has colonies of potential fighting men already resident on South American soil, and the Parliamentary inquiry in Uruguay has revealed the extent to which German colonists have become a drilled and disciplined vanguard of the Nazi invasion. The United States' preoccupation with the growing menace of Nazi imperialism is well illustrated in the report made by the United States Chief of Staff to a committee of Congress, in which he asked

that the National Guard should be available for service with the regular army. General Marshall's reasons were largely based on evidence received of German activities south of Panama. Another sign of the United States' alarm is the resolution before Congress declaring that the United States would not acquiesce in any attempt to transfer any part of the Western Hemisphere from one to another non-American Power. Whether the United States is alive to the obvious deduction, that Britain's command of the seas is Latin America's first line of defence, is more questionable; but the new gravity of the risk may prove a wise counsellor.

800 Years of Portugal

The Iberian peninsula has been the scene of some curious contrasts during the past week. While the Spanish Falangists have greeted the arrival of Sir Samuel Hoare with loud demands for Gibraltar, press insults and student demonstrations, Portugal is peacefully celebrating the 800th centenary of her existence as an independent State and has warmly welcomed the decision to send the Duke of Kent as Britain's representative to the official celebrations later in the month. For 800 years Portugal has enjoyed—practically unbrokenly—the status of an independent nation State. In spite of her modest territory and small population, she has preserved not only her independence and her free, untrammelled national existence, but also a great colonial empire overseas linked to her geographically only by her imperial sea routes. How is it that so small a State, controlling possessions which, militarily speaking, she could not hope to defend, has for so long enjoyed peace at home and security abroad? Because the British have for centuries fought the domination of Europe by a single Power from whatever side the threat might come, and within the system of security established by their relentless war on tyranny, Portugal has escaped servitude at the hands first of Spain and later of France; because Britain's control of the seas has never been used to stifle the legitimate rights of other nations, however small; finally, because Portugal is Britain's oldest ally. There is thus a lesson in Portugal's eighth centenary which might be taken to heart across Portugal's land frontiers. Once more a Power is seeking to dominate Europe. Once more Britain

has taken up the challenge. Does Spain, impoverished and weakened by civil war, hope to gain more from the establishment of German hegemony than from the continuance of a European system under which even the smallest States have the right to "life, liberty and the pursuit of happiness"?

Food Control

The last six months have seen the transformation of the functions of Government from social administration to a supply business of incredible size and complexity. The last fortnight has seen the legal scope of that undertaking extended to include, if need be, the labour of every person and the use of every piece of property in the country. The Civil Service has necessarily been expanded by the inclusion of many traders and industrialists without whose expert knowledge this enterprise could not have been started or kept in operation. But, as *The Economist* has often pointed out, the inclusion of expert advisers carries with it the danger of entrenching business monopolies under the aegis of State control. In war, military or financial exigencies may demand the destruction of some private firms in the national interest, the abolition of some functions such as, say, wheat or wool broking, and even, maybe, the total disappearance of certain industries and trades concerned with non-essential luxury articles. To leave these decisions to men whose lives have been spent in the threatened trade, and who naturally hope to return to it after the war, is to run the risk that decisions will be weighted in favour of sectional rather than national interests. The Fourth Report of the Select Committee on National Expenditure emphasises this danger in connection with the Ministry of Food. Out of 28 controllers of various foods under the Ministry, no fewer than 20 were formerly engaged in trading in the commodity they now control. In at least one case, an important official, while performing his duties at the Ministry, was also engaged as a representative of his trade in negotiating the operating margins to be allowed. Such a situation must produce a difficult clash of loyalties. The solution and safeguard, the Report rightly suggests, is to secure a strict separation between policy and execution.

Policy and the general plans for achieving it should be clearly settled by the Minister and his Civil Servants. Once that has been done, full value can be made of the services of the Trade Directors by allowing them discretion in executing the Minister's plans.

*

It is rather disquieting, in this connection, to find in how many cases the prices paid to producers or the operating margins allowed to distributors have been settled by reference to "cost of production." It is an article of faith among business men that prices should be fixed to cover their current "cost of production" and to leave them a reasonable profit. But, apart from the fact that costs of production vary to an almost unbelievable extent between firms in the same trade, this view ignores the fact that costs can within limits be adjusted to prices. In the last twenty years, the costs of distributing our staple foods have been inflated by elaborate packings, by the provision of convenient though not necessary services, by the multiplication of brands, qualities and types. In wartime, these unnecessary frills must be cut away. Probably the easiest way to eliminate them is bluntly to reduce the distributive margin allowed, and then to appeal to the housewives to simplify both their range of purchases and their demand for expensive packings and services.

* * *

The New Dispersal

The latest turn of the war has caused the old distinction between the vulnerable and safe areas of England to be examined afresh. Three weeks ago, children evacuated to certain east coast towns were transferred to Wales; and on Sunday the 8,000 children who were evacuated to any districts, whether rural or urban, within approximately ten miles of the coasts of Suffolk, Essex, Kent and part of Norfolk were moved. In addition, a number of towns on the south-east coast have been declared by the Government to be evacuation areas in the light of the enemy's occupation of the Low Countries and Northern France; and parents living in them had the chance last Sunday of sending their children away to Wales and the Midlands. Unfortunately, the number who went, some 40,000, was only about 60 per cent. of the total number of children, though in some towns a better result—75 per cent. or over—was achieved. In the other evacuation areas, where under the Government's second scheme evacuation would take place only in the event of serious air-raids,

registration has so far been even more disappointing. In the London area 117,000 children have been registered out of 450,000; in Birmingham, 7,700 out of 55,000; in Manchester, 17,500 out of 70,000; and altogether about one child in five. Since the stories of the deaths of children in air raids in Belgium and France—20 children were killed in the first raid on Paris—have not made evacuation more popular, nothing will—short of air raids themselves, when it may be too late. In view of the clear and shocking warnings they have received, it is difficult to understand how parents can be so stupid or so selfish; and the time has surely come when the Government should exercise its powers to enforce evacuation, even if the compulsion is restricted to school-children. Parents are compelled to send their children to school. As the schools will henceforward be closed in the new evacuation areas and presumably in the old ones if air raids are serious, ought it not to be compulsory for children to be sent where they can continue their education in comparative safety?

* * *

Training Women Workers

The multiplication of war output has two stages. The first, which has dragged on for nine months and is now at last moving towards a peak, is to concentrate all available labour and all existing plant capacity on war work; it is the stage of reorganisation. The second is the stage of expansion, vital for victory, when capacity must be increased and the labour available expanded *pari passu* in numbers; and, so far, the really large scale measures, to use the country's entire labour supply, potential as well as actual, to the best advantage and to organise a programme of mass training of machine operators, mostly women, are still in their preliminary information-gathering phase. Women and other unskilled people will be needed in vast numbers for training, not so much to replace or eke out existing war workers at the present scale of output as to aid and make possible the utmost expansion of arms production. After the immediate difficult task of changing over to war work inside the metal and engineering industries has been largely carried through, the next stage (which will be ushered in by the opening of all the 37 ordnance factories) will be wholly expansory in character, and these industries will require hundreds of thousands of new workers, of whom the bulk will have to be women and girls. The job to be done now is to start their training at once so that they will be ready in sufficient numbers when they are wanted.

*

The most easily trainable will be women and girls drawn, not from "idleness," but from factories in non-essential trades and the women between 30 and 50 years of age who, as girls, have had factory experience, especially in the Midlands. It is a source of strength compared with 1914-18 that many more women are working or have worked in factories. After them come housewives without industrial experience, domestic servants, shop assistants and the sedentary female workers in commerce. These millions make up a reserve, not only to "man" the expanding war industries, but also to replace and release men in those civilian occupations, distribution, transport, food, drink and tobacco, textiles, and Government service, that are allowed to remain alive. Time is short. Every factory with machines for arms production and machine tools should now be obliged to take on a quota of supernumerary women and girls for training, recruited by the employment exchanges and allocated by the Area Supply Boards. The trainees would fetch and carry for the workers on the job, and by contact with them, mainly without any formal whole-time instructors, learn in a month or so familiarity with factory conditions, some workshop sense, broad knowledge of single-purpose machines and discipline. Labour managers (many more of whom will have to be women), acting as a link between employment exchanges and factories, would supervise this process of instruction by example, and at the end of their training the women would be at the disposal of the Ministry of Labour for employment wherever their services were required. If some such scheme is not got under way immediately, the large-scale expansion of our power to produce will prove very nearly impossible.

Dividend Limitation Withdrawn

Having announced the raising of the Excess Profits Tax to 100 per cent. last week, the Chancellor of the Exchequer on Tuesday decided to abandon the Dividend Limitation Bill, which received its second reading a fortnight ago. The

Chancellor argues that the raising of E.P.T. to 100 per cent. for all businesses substantially replaces the dividend limitation proposals, whose main object was to prevent increased purchasing power reaching the hands of shareholders, and he relies on the fact that the companies which, with a 100 per cent. E.P.T., would be most affected by dividend limitation are those which have distributed less than their full profits in the past. This argument is not entirely convincing. Indeed, the Chancellor coupled the withdrawal of the Bill with an appeal to all companies to act in accordance with its general principles, since the national interest required reduced consumption by individuals and the greatest measure of support for new Government loans. But the areas covered by the dividend limitation proposals and by E.P.T. at 100 per cent. are not contiguous. Many companies who have followed a conservative distribution policy in the past have maintained their profits at a steady high level. Their liability to E.P.T. will be relatively small, and it will leave a significant margin of profits available for increasing their ordinary share dividends, if they chose to disregard the Chancellor's moral suasion. Doubtless the majority of companies will follow his precept. But there seems no fundamental reason why this should lack statutory force. There was no general disagreement with the principles of the Bill, and although some hard cases were inevitable, they were to have the right of appeal. A tax on wartime increases in profits to prevent their passage to the consumption goods market, where they would compete for resources with the munitions industries, is essential. But the restriction, as far as possible, of the expenditure of any profits on such unessential purposes is also necessary. Dividend limitation imposed control at the source, and to replace it by voluntary abstention on the part of company directors and their shareholders seems quite gratuitous.

* * *

E.P.T. Without Excesses

Sir Kingsley Wood on Wednesday moved the expected resolution raising the tax on excess profits arising after March last to 100 per cent. The Chancellor announced new powers to control improper expenditure, which was experienced during and after the last war, when the maximum rate of Excess Profits Duty never exceeded 80 per cent. The only experience of a total tax on excess profits in British fiscal history is provided by the Munitions Duty, which was merged with the Excess Profits Duty at the end of 1916. Under rules issued in 1915 determining the scope and collection of the Munitions Duty, two are of particular relevance to-day. It was provided that appropriate adjustments should be made to disallow any increase in salaries or other payments to managers or directors of controlled establishments and to disallow any steps taken since the end of the standard period which might operate to reduce net profits subject to Munitions Duty. Secondly, if the Minister concluded that a substantial sum would be payable as an excess on munitions profits, he could require a provisional payment on account, even though the precise amount of the excess had not been finally determined. Both provisions are relevant to the total levy of excess profits on all businesses. Moreover, all accounts and financial statements were to be subject to examination by an accountant nominated by the Minister, and proper facilities for inspecting books and records had to be afforded to such accountants by munitions undertakings. Some similar provisions might surely be considered for E.P.T. It is true, as the Chancellor pointed out, that the combination of control of expenditure by directors with the several checks which the Inland Revenue authorities can apply should limit wasteful spending. The main danger in a war economy is unnecessary new capital expenditure, but this is safeguarded by the control of resources for war production, and also by the strict principles applied by the Inland Revenue authorities in disallowing new capital expenditure, and elaborate repairs or renewals charged against profits. Hence any wasteful expenditure would be limited largely to undue increases in salaries and other payments to staff and to expenditure of a goodwill character. For director-controlled companies, payments to directors will be strictly limited under the general E.P.T. provisions, though the same tightness of control may not be so simple for large public undertakings. The safeguards for controlling salaries paid in family businesses are also to be strengthened by a new clause, giving the Inland Revenue Commissioners power to disallow any item of expenditure which is not reasonably necessary for the business. Further retrospective powers will be obtained, if necessary, to protect the tax from avoidance. But the most complete safeguard would be a comprehensive tax on all wartime increases in individual incomes. An Excess Income Tax thus becomes almost a necessity as well as desirable on general grounds.

Shorter Notes

From July 1st rationing of newsprint will come into force in Australia. Daily papers which have more than 72 pages in a week, weeklies exceeding 28 pages, and Sunday newspapers exceeding 38 pages, will have their supplies of newsprint reduced by 35 per cent. of the tonnage used in 1938-39. Smaller papers will suffer reductions of 25 to 30 per cent. This rationing will save Australia about £800,000 (sterling) in foreign exchange in a year.

*

The disposal of this season's West African cocoa crop has been seriously affected by the loss of important pre-war markets—Germany, Holland and Scandinavia, which took roughly a third of the Gold Coast's crop. The Under Secretary of State for the Colonies has said that the consequent accumulation of stocks has created serious pressure on storage space and that the Government, after consultation with the local Governments, has decided that the mid-crop must be destroyed as it is purchased. The policy of Government purchase has, therefore, prevented the loss of markets from touching the native grower, but it is a pity that efforts to increase sales elsewhere have not met with more success.

*

The New Zealand House of Representatives has passed the Emergency Regulations Bill; and the Government is now empowered to require that all persons should place themselves, their services and their property at the disposal of the State for the purposes of the war.

*

There is a danger lest the newly recognised needs of home defence should obscure the old, but even more vital, ones of civil defence. The fact that in April it was decided to dispense with the services of some 35,000 paid whole-time A.R.P. workers did not mean that A.R.P. as a whole was overstaffed; and, at the time the economies were made, it was announced that at least 250,000 more unpaid volunteers were wanted. To-day, some areas—and the most vulnerable ones—are still crying out for A.R.P. and A.F.S. workers. Air-raids will precede invasion; and the transfer of wardens and other civil defence workers to become Ironsides and parashooters, which is taking place in some districts, should be stopped immediately.

*

The enormous cost of workmen's compensation is revealed in the Home Office return for 1938. The total paid out in compensation for accidents and industrial diseases, in the seven big groups of industries alone, amounted to £6,765,067. But this figure only includes the payments to workers and their dependents, and taking into account charges and expenses, the total would be about £8,500,000. The total cost for all industry is estimated at £13,500,000.

Small Accounts

By tradition as well as by deliberate policy, the Westminster Bank has always aimed at fostering the 'small' account. Moreover, there is no sharper line of demarcation between 'big' and 'small' than between 'white' and 'black'; there are many greys between, and it has always been good business for the Bank to encourage the smaller account, with confidence in its growth later on.

Those, therefore, who may have felt that their means hardly warrant a banking account are invited to consult the Manager of any branch and to find that their hesitation may have been groundless.

THE WORLD OVERSEAS

The New Lithuania

(By a Correspondent)

DURING the last year Lithuania has passed through an unusual period of economic and social changes. The boundaries of that small country have changed twice during eight months. In March of last year Hitler marched into Memel and incorporated Memel and its district into the German Reich. This reduced the territory of Lithuania by 5 per cent. and its population by 6 per cent. The economic loss was, however, much greater; communication with the sea was interfered with, and a large part of the cellulose, fertiliser, plywood, timber and textile industries was left beyond the new borders.

Before the country managed to adapt herself to the new conditions and resume normal work in the new setting, a further change took place, which resulted in a greater dislocation of the country's economic, social and political life. In October last the Russians handed over to Lithuania the district of Vilna which they had taken from Poland, and received in exchange several military strategic bases along the Lithuanian Baltic coast and in the country. This increased Lithuania by 6,650 square kilometres and 460,000 people, which amounts to 13 per cent. of the country's total territory and 19 per cent. of the population, respectively.

The town and district of Vilna had, however, undergone two months of war, and their economic life was therefore completely destroyed. The retreating Polish and invading Russian armies had used up all the stores of food, and the Soviet authorities have also dismantled all works and removed as much factory equipment as possible to Russia. The population was deprived of all financial resources and, in addition, large numbers of refugees from German and Russian occupied Poland swarmed over the country.

The Lithuanian Government and population have done their best to supply food and necessities for the newly acquired territories. The Lietuvos Bankas has provided financial resources and made arrangements for the exchange of a large part of zlotys into litas, fixing the rate of exchange of one zloty to 0.50 litas. The Allies and the United States of America organised large-scale relief for the refugees and all the voluntary organisations have done their best to co-operate with the Lithuanian authorities.

Economic Revival

The restoration of the economic life of the new territories is making good progress, and the timber, plywood, paper, cardboard and flax industries show good prospects. Negotiations are now going on with the Russian authorities about the supply of timber from the Russian forests to the Vilna sawmills, and also about shipping arrangements for the output of the sawmills via Odessa and the White Sea ports to Great Britain, Palestine and the Near East.

The plywood factory in Vilna, with a production capacity of about 10,000 to 12,000 cubic metres per annum, is also starting work very shortly. This factory will take the place of the Memel plywood factory which is in the hands of the Germans. The plywood produced will cover the demand of the Lithuanian market and a large part of the output could be exported via Russia to different countries.

There are also four cardboard and three paper factories in the neighbourhood of Vilna with a productive capacity of about 10,000 tons of cardboard and 30,000 tons of paper. Before the war the Vilna factories used to supply about 50 per cent. of the cardboard demand of the Polish market and exported about 25 per cent. of their output to Great Britain. About 85 per cent. of the output is now available for export. The production and export of cardboard has hitherto been hampered by the abnormal war conditions and by transport difficulties, but the industry pins great hopes on the outcome of the British negotiations with Russia, as indeed does the whole Lithuanian business world. Meanwhile, representatives of both industries are collaborating with the Government in finding export markets.

Flax Industry Reorganisation

The flax industry has also suffered because of the war. It has been decided that the flax co-operative union "Linat" should complete this year the equipment of the large flax processing factory which is now being erected, and that two new factories should be built in the Mazaikai and Plunge districts respectively. Steps were also decided upon to ensure regular supplies for the proposed new flax processing concerns. A large part of the flax produced and processed in Lithuania would find its way to the English market.

June 1st.

The War and Chinese Trade

[FROM OUR SHANGHAI CORRESPONDENT]

EUROPE'S share in China's imports declined during the first seven months of the European war from 17 to below 10 per cent. The German invasion of Scandinavia, the Netherlands and Belgium further reduced this share to slightly less than 8 per cent.

Of the former neutral countries attacked by Germany, Belgium played the most important part in China's foreign trade. Shipments from Belgium, in the past few months, accounted for over 10 per cent. of all Chinese imports from Europe. In some categories of steel sheets and plates, steel bars, and electrical materials, Belgian merchandise dominated the China market. There seems to be no prospect of a continuation of these Belgian exports to the Far East, and they will probably be replaced by American products. Chinese imports from the Netherlands were and are insignificant.

Britain Supplants Germany

Great Britain now accounts for one-third of China's imports from Europe, but her share in China's total imports is less than 3 per cent. Chinese imports from the United Kingdom dropped heavily after the outbreak of the European war, and in the first quarter of this year their value was 25 per cent. lower than in the corresponding months of 1939. This decline was especially heavy in iron and steel, flax, hemp and jute goods, and woollen textiles. On the other hand, Great Britain managed to increase her exports to China of paper and paperware and also, by seizing some former German markets, of chemicals and dyes. Since March, 1940, she ranks ahead of Germany in Chinese imports.

Germany early in May still ranked second in Chinese purchases from Europe. Though in Shanghai and Free China the imports from Germany amount to less than half the value of imports from the United Kingdom, Germany sells more than Britain to the Japanese-occupied areas. The value of imports from Germany in all China is but slightly below that of imports from Great Britain. German goods, up to this spring, continued to arrive here in fairly large quantities. Bulky German goods were shipped here in Japanese, Italian and other neutral bottoms, while commodities of high value but small bulk such as pharmaceutical goods arrived via Siberia. China's imports of German chemicals have dropped 80 per cent., and of German dyes 40 per cent. since the beginning of the European war, but imports of German iron and steel, rails and motor vehicles have actually increased according to Chinese Maritime Customs figures. The

maritime section of this trade, however, now appears to have been stopped by the entry into the Allied ranks of Norway, the Netherlands and Belgium.

U.S.A. and Japan Supplant Both

Like the war of twenty-five years ago, the present European war is tending to accelerate the decline of Europe's China trade, and to increase instead China's economic intercourse with other Eastern countries and with America. The principal benefits from the recent decline of Chinese imports from Europe were reaped by Japan and the United States. The trade abandoned by Europe in the Japanese-occupied areas has been taken over chiefly by Japan, while in the open Shanghai market and in Free China the United States is replacing Germany, Britain and other European countries. Japan now supplies almost half of the chemicals and approximately one-third of the dyes imported by China, followed by the United States with shares of 20 and 25 per cent. respectively. Japan to-day accounts for 70 per cent. of the occupied areas' total imports, while the United States has first place with a share of 40 per cent. in the imports of Shanghai, which form more than two-fifths of China's total imports.

Not only the American Chambers of Commerce in China, but also the official trade representatives of Australia and Canada at Shanghai, are flooded by importers with inquiries for goods formerly imported here from Europe. While Australian and Canadian manufacturers show but little response to those inquiries, numerous United States industries formerly not interested in the China trade are now eager to secure suitable agents in China. Careful consideration, however, is being given to the selection of such agents, with a view to entrusting United States industrial agencies only to firms likely to continue business relations with the United States after the termination of the present wars in China and Europe.

Effect on Shipping

These changes in the distribution of China's trade are not yet fully reflected in the distribution of the China ports' foreign shipping, as far as the United States is concerned; but that country's tonnage in the China ports, in the first quarter of this year, was double that of the corresponding period of the previous year, and its share in the China ports' total foreign shipping rose from 2 to 5 per cent. There are now four American shipping lines regularly calling at Shanghai against two before the war.

British shipping in the China ports suffered a huge decrease, owing largely to the withdrawal of large British passenger boats and the requisitioning of a series of British freighters and other small vessels. The tonnage of British ships entered and cleared in China ports in January-March, 1940, was 1,160,000 tons only, half the tonnage registered during the first quarter of the past year. Japanese China shipping, on the other hand, in the same periods, increased by 600,000 to 3,103,000 tons, accounting for half the carrying trade in China ports and outdistancing the British shipping volume by almost 200 per cent.

May 15th.

The Next Move in France

[FROM OUR PARIS CORRESPONDENT]

EVERY week since the launching of the German offensive through the Low Countries and Luxemburg has brought its special shock to French public opinion. First was the German success in piercing the French line of fortifications along the Meuse. Then came the sweep to the Channel, dramatically announced in M. Reynaud's "La patrie est en danger" speech.

The major shock of the past week was the surrender of King Leopold, "le roi felon," as the French newspapers bitterly call him. Some of the despair, which was mingled with rage when the first news of this capitulation became known, has been relieved by the heroic quality of the fighting in Flanders and by the fact that the encircled British and French forces have fought their way to the sea and to embarkation.

Severe as these shocks have been, public opinion is braced to meet other, still greater blows in the near future. Italy never seemed so close to intervention; that issue may have been decided before these lines can be printed. And what may prove to be the decisive battle of the war, so far as France is concerned, will scarcely be postponed very long after the end

of the fighting around Dunkirk. General Weygand has taken advantage of the absence of severe pressure on other parts of the front to clear the left bank of the Somme of small German forces which had crossed the river and to establish the best possible front along the continuous water line of the Somme, the Oise-Aisne canal and the Aisne. Farther to the east is the still intact Maginot Line and then the Rhine.

Military Experience Gained

In the light of the experiences of the last few weeks, however, few military experts are inclined to place much dependence on the success of merely holding a line, however strong. The mass use of the tank has restored to war the element of mobility which it lost on the western front during the World War. In order to win, it is now obviously necessary to give blows as well as to parry them, and there is general confidence that Weygand, the disciple of Foch, will lose no opportunity to put this doctrine into practice.

A brief visit to the Aisne Front two or three days ago conveyed a few at least negatively reassuring impressions. There were no signs of panic or demoralisation among soldiers or civilians. The roads between Paris and Verdun were remarkably free from refugees, so that intensive military traffic could proceed unhindered.

Officers at the front were convinced that, severe as the German blow had been, it had taught certain useful lessons for the future. A machine gun capable of quick adjustments has been found efficacious against the low-flying aeroplane. The huge German tanks, impervious to the fire of ordinary anti-tank guns, can be smashed by the famous quick-firing French 75's and also by cannon of smaller calibre. And, of course, there has been an element of hardening under pressure, of becoming accustomed to offensive methods which, at the outset, possessed the quality of surprise which was attached to the use of gas and tanks in the World War.

Severe Economic Losses

No one has been thinking much of the economic losses entailed by the German invasion, just as a person whose life was in danger during a fire or an earthquake would not be likely to make an inventory of his property damages. But these economic losses have been heavy. The regions now under German occupation account for 70 per cent. of France's output of coal, for 90 per cent. of its textiles, apart from silk, for 65 per cent. of its sugar and the same percentage of industrial alcohol, for 12 per cent. of its iron and 16 per cent. of its steel.

The serious character of this picture is enhanced by the fact that 77 per cent. of France's iron and 70 per cent. of its steel come from the two Departments of Moselle and Meurthe et Moselle. While these latter Departments, covered by the Maginot Line, have not been penetrated except on the extreme outer fringes, the closeness of the front has caused the evacuation and stoppage of a number of their industries.

It has sometimes been said, in relation to the Sino-Japanese War, that China has sacrificed space to gain time. The French hope that the same principle may hold good in regard to their own struggle, that the vastly superior resources of the British and French Empires and of the United States will come into play after the first violence of the German onset has been checked. But France, with its modern network of railways and good roads and its comparatively small area, is not China, and there is a definite limit beyond which retreat could not be carried out with much prospect of ultimate victory. The supreme test, which seemed so unreal and far away during the eight months of shadow-war, may well now be a matter of a very few months, perhaps even of a very few weeks.

ESTABLISHED 1810

United States Defence

[FROM OUR NEW YORK CORRESPONDENT]

ON May 16th the President asked Congress for appropriations approximating \$1,200 millions, nearly evenly divided between the Army and the Navy. The greatest emphasis was upon the proposed increase of the air force to a figure of ten times its present strength, but the other elements of the programme are capable of more rapid realisation. This appropriation is to be supplementary to the authorisation of about \$2,000 millions already outlined in the Budget, and brings the total allocated to national defence in the coming fiscal year to above \$3,000 millions.

On May 10th (the day of the invasion of the Netherlands)

BUSINESS INDICES (1923-5 = 100 (Unadjusted))

* Preliminary.

the share market developed acute weakness; since that date it has experienced one of the most severe declines ever recorded in an equal period of time. This weakness was communicated to the bond market (except Government securities and the highest grade corporates), and to a lesser extent to the commodity market; the break in wheat was so severe

that it was considered advisable to establish minimum prices. This decline has carried the averages back to about the level of April, 1939, and has more than erased the entire rise that took place last September in the "war market." There was no margin position to be liquidated; consequently it is argued that the deflationary consequences which have been the invariable sequel of comparable declines in the past will be avoided.

The actual business developments during April were not unfavourable. There was a small decline in the index of production, but much less than in any recent month; and during May it appears that the April level has been maintained or slightly improved.

Though the April figures are a little below those of March, they are about 10 per cent. above those of April last year. The increase is mostly accounted for by automobiles and steel. Automobile production was very high in April, but by the end of the month there was some evidence of over-stocking and price concessions appeared, with the intent of moving the market.

New York and Beyond

New York City has been almost continuously depressed since 1929, while in some parts of the country there is strong evidence that conditions are more prosperous than in the gala days of the New Era. This disparity is rather clearly marked in the data on debits:—

DEBITS TO INDIVIDUAL ACCOUNTS

(\$'000,000,000)

New York City

	\$		\$		\$
Nov., 1938	12,425	Mar., 1939	16,274	Jan., 1940	14,739
Dec., "	18,879	Apr., "	13,311	Feb., "	12,138
Jan., 1939	14,533	Nov., "	13,041	Mar., "	15,201
Feb., "	12,380	Dec., "	17,633	Apr., "	15,519

The rather strongly marked quarterly increases are partly tax rates and partly interest and dividend payments. But comparing recent months with the same months a year earlier, there is no evidence of any such upturn in production as was shown in the business indices. Even the strong Christmas trade did not raise the 1939 figures above the low level of a year earlier.

140 Cities Outside New York

	\$		\$		\$
Nov. 1938	17,039	Mar., 1939	18,211	Jan., 1940	19,978
Dec., "	21,087	Apr., "	16,832	Feb., "	17,344
Jan., 1939	17,860	Nov., "	18,636	Mar., "	19,537
Feb., "	15,201	Dec., "	22,386	Apr., "	19,250

Here, again, the figures do not show any such exaggeration as the production index last autumn; but there is also nothing indicative of the severe slump in the first quarter. After making allowance for the quarter dates and for Christmas, one still has the impression of a progressive movement, neither violent nor erratic, but well sustained. The dissimilarity in the combined New York and outside debits was formerly attributed to the consequences of the stock market, but over the period listed above only September, 1939, had any considerable stock market activity. It is difficult to reject the conclusion that the economy of New York City no longer runs parallel to that of the rest of the United States; and a pretty strong case can be made for the argument that the debits outside New York are a clearer, more consistent picture of the economy than the production index.

May 22nd.

Italy's Record Expenditure

[BY A CORRESPONDENT]

ON May 17th Signor Thaon di Revel, the Italian Finance Minister, made his annual review before the Senate. He gave revised estimates of revenue and expenditure during the current financial year ending on June 30th, putting revenue at 29,740 million lire and expenditure, ordinary and extraordinary, at the record figure of 56,140 million lire. If his estimate of the national income of 115,000 million lire is accepted, then even in a state of non-belligerency the Central Government alone, excluding local authorities, has been spending close on half the national income.

Draconian measures have already been taken to increase the yield of taxation. Tax collectors have not hesitated to use

unorthodox methods of extracting the maximum amount of money from private individuals. Loopholes through which taxation was being legally evaded have been closed. A tax is being imposed on incomes of over 12,000 lire which have benefited from war expenditure.

Nevertheless, the Finance Minister hinted at the possibility that new sacrifices might be required, and in the event of active participation in the present war they would certainly be necessary. It is, however, hard to see how the burden of taxation can be much further increased. Italy reached the stage of full employment some time ago. Measures to stop the rise in prices have been less successful than in Germany. Distrust of the currency is widespread. After five years of intermittent warfare, first in East Africa and then in Spain, few reserves are left. War with the Allies, unless it were a swift and victorious war, would bring the day of uncontrolled inflation very near.

May 24th.

Swiss Fears of Invasion

[FROM OUR GENEVA CORRESPONDENT]

SWITZERLAND experienced anxious days when important German concentrations along her border and other signs suggested that Germany intended breaking through. Though many inhabitants of the frontier districts hurriedly left their homes on their own initiative, the population remained calm and resolved. A few days before, the whole Army had been remobilised and, within twenty-four hours, the troops were all at their fighting stations. That mobilisation concerned about one-third of the Army which was on leave, as nearly 300,000 men were permanently guarding the frontiers.

The invasion of Holland and Belgium was a lesson for the Swiss, who at once took drastic measures with a view to coping with the fifth column and parachutists. Local guards were formed of men no longer liable to military service, of young men who already had some musketry training, and of members of the rifle clubs. Nearly 500,000 volunteers were thus recruited, who are patrolling the country day and night

with the police and special anti-parachutist army units. Switzerland has thus over one million armed men at her disposal, a splendid effort when one remembers that the population barely exceeds four millions.

At the same time, all foreign residents were ordered to hand over to the police any firearms and ammunition they possessed, and almost all willingly complied with the Government order. Though travelling by train and motor car remains unrestricted, the police and soldiers are stopping all passers-by on the roads and even in the towns, and foreigners are not allowed to move their residence from one Canton to another without a special permit. These measures have already made possible the discovery and arrest of a number of people who had so far escaped the control of the police or had no passports. Special measures have also been taken with a view to preventing foreign seaplanes from landing on the lakes.

Effect on Banks

The invasion menace resulted in heavy withdrawals from the banks, but there was no limitation on withdrawals, and the run did not last long. The report of the National Bank of May 15th shows that banknote circulation increased by Frs.162 millions and reached Frs.2,169 millions. That amount is less than that recorded at the time of the Sudeten crisis or in August, 1939. On the other hand, the gold reserve decreased by Frs.70 millions and stood at Frs.2,054 millions, so that it represented 73.76 per cent. of the banknote circulation, and, together with foreign currencies, it represented 98.79 per cent. of the engagements of the Bank. Since then banknote circulation has risen by a further Frs.56 millions, while the gold reserve showed a new drop of Frs.72 millions.

The threat to Switzerland has now somewhat abated, but precautionary measures have not been relaxed, and the Swiss people are more than ever unanimously resolved to defend their country and their liberties to the last drop of their blood. That is further proved by a manifesto issued by the Swiss Socialist Party, which says that all Swiss workers are ready to sacrifice themselves for the defence of the country and of freedom.

Difficulties in Egypt

[FROM OUR ALEXANDRIA CORRESPONDENT]

THE boom in cotton and securities which marked the last two months of 1939 had already passed its peak by the end of the year. The reaction that set in early in 1940 gradually gathered momentum until it assumed the proportions of a regular depression and finally culminated, with the threat of an extension of hostilities to the Mediterranean, in the closing *sine die* of the Alexandria cotton and cottonseed futures market. As to transactions in securities, they were almost brought to a standstill at the officially pegged prices.

The fact that there did not develop a severer slump which would have wiped out all the gains since the start of the war is due to the substantial advance in minimum prices effected since last autumn for securities and especially cotton. The tactics of successively raising the peg for cotton futures, which might have worked smoothly right up to the end of the season had the war remained localised, ended by creating a very embarrassing situation for the Government. Since the beginning of May there were growing indications that a vast amount of cotton and cottonseed would be tendered to the Government in the course of the following weeks, an operation entailing the immobilisation of large public funds at a time when national defence needs are putting an increasing strain on the Treasury.

By closing the futures market and ordering the liquidation of all outstanding positions, the Government will avoid receiving actual cotton at the minimum prices which, incidentally, had been fixed also for the next crop. The spot cotton market remains open, but without any hedge protection, and heavy losses are being sustained by holders as the forced uncovering of their cotton has coincided with a world

slump in cotton values. Normally, however, very little cotton should remain unsold by the end of this season.

With the decline in price of cotton, hopes of a substantial export balance in 1940 have receded. Although cotton is still higher than a year ago, the gain is offset by the rise in price of imported goods. Foreign trade figures read as follows:—

	First three months	
	1939	1940
	£E	£E
Exports	9,804,080	10,841,935
Imports	8,097,065	10,739,268

Great Britain's share in Egyptian imports compares as follows with that of her principal competitors:—

	First three months	
	1939	1940
	£E	£E
Great Britain	2,013,142	3,183,053
Italy	562,918	754,406
Japan	207,170	331,283
U.S.A.	543,390	1,040,507

Up to last month the war had borne very lightly on Egypt. Economic gains accruing from hostilities by far exceeded inconveniences. Most domestic produce, especially foodstuffs, was only slightly dearer than before September, 1939; rationing was, and still is, unknown; labour was very peaceful. Defence measures scarcely interfered with civilian activities. With its easy-going nature, the nation tended to lose sight of the wider issues and increasingly to indulge in political squabbles. The present dramatic turn of events has, therefore, come as a shock, and the inherent perils of the situation have been brought home to the mass of the city population by the swift tightening of control in many walks of life.

Shorter Notice

"Feeding the Nation in Peace and War." By George Walworth. London. Allen and Unwin. 546 pages. 18s. net.

The experience gained by the co-operative societies in the marketing of staple foodstuffs gives their managers a most wholesome respect for the wishes and purchasing power of the consumer. In support of his criticism of the marketing boards, with their emphasis on profits plus costs of production, and of the delay in introducing food rationing at the outbreak of war, Mr Walworth marshals an imposing array of facts and statistics, not always entirely relevant. His constructive proposals for reform also lack definition and detail, though the principles on which they are based are only too often ignored both in Whitehall and in the distributive trade itself.

THE BUSINESS WORLD

Life Assurance Problems

IT has been said that life assurance is an amalgam of the law of averages with compound interest. The analogy is useful even if it ignores such factors as security values and expenses which have a subsidiary place in the equation—because it underlines the two main ingredients which are most affected by war. The destructiveness of total war upsets calculations based on the law of averages as applied to vital statistics, and its enormous cost means that assumptions regarding interest earnings may be falsified.

Two main problems confront the life offices to-day. They must face the possibility of large claims through war deaths, against which premiums until recently have made no specific provision. Secondly, they must adapt themselves to a net rate of interest lower than any previously recorded.

Of these twin problems, the second has received more actuarial discussion. Possibly actuaries, like other people, have been disarmed by the first quiet eight months of war, when war mortality was slight. They may have drawn comfort from experience "last time," for claims arising from war deaths in the last war were much less serious than, for example, difficulties caused by the depreciation on securities. If, however, present mortality expectations were based, in any significant degree, on such analogies they might well prove misleading. But in fact actuaries could advance more solid reasons for relegating the problem of war mortality below that of wartime interest rates—reasons which may explain their gratuitous undertaking of the war risk on all new policies underwritten up to September, 1939. They might stress the relatively small volume of assurances on the lives of men in the twenties who would form the bulk of combatant casualties. They may argue that estimates of civilian mortality are likely to be excessive, and that those involved would comprise a fair proportion of men in the older age groups, who have paid premiums for a considerable time and on whose account, therefore, the offices hold substantial reserves. They could show that with-profits contracts allow the offices to pass a part of the burden to the assured themselves. Finally, they would point out that, on new policies at least, the majority of life offices now demand extra premiums to cover the war risk.

The future will reveal the force of these various arguments. The fact remains that extensive war mortality affecting the life offices has fortunately not yet occurred. But the reduction in the rate of interest is not merely contingent—it has been operative since 1929. In 1938, the rate of interest earned on life funds was barely 3.95 per cent. after deduction of income tax. In 1939, it was in the region of 3.6 per cent. net. Already the yield on insurance investments has approached dangerously near the net rate of 3 per cent. still assumed by some offices for premium and valuation purposes. If a further increase in income tax is envisaged, the margin will become even more exiguous. The offices' tax liability is approximately equivalent to three-quarters of the standard rate. If income tax were raised to 10s. in the £ and gross interest rates remained unchanged, the net earned rate on the total funds could hardly exceed 3.1 per cent. The margin over assumed rates of 2½ per cent. and even 2½ per cent. would be smaller than a cautious office would like to contemplate. But even that tells only part of the story. The rate could be kept at 3.1 per cent., or thereabouts, only by virtue of the large funds invested on remunerative terms in the past. Present and future investments can expect no such return. Even the gross rate of 3 per cent. on gilt-edged is not, according to the Financial Secretary to the Treasury, to be regarded as "sacrosanct." And a gross rate of 3 per cent. on new investments means a net rate to the offices of only 2.2 per cent. at the present rate of tax and only 1.9 per cent. if tax is at 10s. in the £. Nor can far-

reaching relief be obtained by investment in other directions. The offices have at least a moral obligation to place funds in gilt-edged securities, and alternative outlets for funds which avoid undue risk are in any case extremely restricted.

In such circumstances the offices can do only two things: they can charge higher rates on new policies; and they can reduce the bonuses on existing with-profits policies, though holders of without-profits policies must continue to receive their fixed return. Increased premium rates for new policies were, in fact, well in evidence early in 1939. They applied at that date mainly to without-profits assurances, since for with-profits policies the offices could rely largely upon their power to vary bonuses. But the movement has now gone further. There is hardly a life office whose non-participating rates have not been increased since early 1939, and many have raised their with-profits rates also, though to a smaller degree.

The following table gives the rates of a number of representative offices on typical without-profits policies on May 1st in each of the years 1938 to 1940:—

LIFE ASSURANCE RATES PER CENT. OF SUM ASSURED FOR MAN AGED 30 YEARS (WITHOUT-PROFITS POLICY FOR £500)

Standard.....						
Percentage increases on 1938	...	2.5	7.2	...	1.0	3.3

(a) Rates not quoted in prospectus.

Over the first year from May, 1938, the average increase in rates on the whole-life policy selected for this example was 2.5 per cent. Over the two years, the increase was 7.2 per cent. The corresponding figures for the 15-year endowment, where compound interest accumulates for a shorter period, were 1.0 per cent. and 3.3 per cent. respectively. For some other types of whole-life policies increases in premiums are much more pronounced. Thus, on a limited payments whole-life policy, where an assured pays only a fixed number of annual premiums, say twenty, and the sum assured usually becomes payable a considerable time after the last payment, the average increase in rates for a man aged thirty amounts to 11.8 per cent. over the two years 1938-40. Further, certain policies, such as family income insurances, are not encouraged, and many offices will not quote a rate for very short term policies. On new with-profits policies, rates have also risen, though a few offices have not yet followed the majority in adjusting their premiums on this class of business.

This rise in premium rates cannot be regarded as extreme, for the most usual net rate of interest assumed by the offices in their premium calculations is probably 2½ per cent., and when this rate is compared with the net rates now obtainable on new investments, it would seem that the upper limit of premiums has not been reached. The offices naturally cannot

—and do not—expect to transact new business in 1940 of even last year's reduced volume, but at least they are not

Courtaulds and British Celanese

AMONG "blue chip" British industrials, Courtaulds has many unique features. Their origins date from the company's dramatic discovery, when its research resources were almost exhausted, of the process which founded a new world-wide industry and made its own fortune. Vigorous use was made of its pre-eminence to foster a geometric increase in rayon consumption, by drastic price reduction, when numerous competitors were tempted to enter its field in the late 'twenties. It has subsequently pioneered new "derived" products like staple fibre, "Cellophane" and nylon. These features explain the hold which Courtaulds has gained on even the most conservative of British investors.

By contrast, the shares of British Celanese, preference and ordinary, have drawn their clientele from more speculative quarters, and critics—including *The Economist*—have said hard things of the way in which fortune has consistently remained beyond the company's grasp. Times change, however, and companies with them; and the working arrangement reached in February, 1939, after years of fierce competition between the viscose and acetate sections of the industry (represented chiefly by Courtaulds and British Celanese), invited a revision of traditional investment standards before the war broke out. The following table gives the background for that all-important agreement.

"Prosperity Index" (e)	100	67	99	107	111	99	114

* Sixteen months to June 30, 1930, reduced to equivalent twelve months' rate. † Estimated. (a) After depreciation; calendar years for Courtaulds, twelve months to June 30 (approx.) for British Celanese. (b) Comparability of figures is affected by change in accounting practice. (c) Profit up to 1935 is shown before, subsequent figures after, deduction of excise duty. (d) After deduction of general expenses, etc. (e) Prices of representative quantities. (f) Index of rayon yarn production % viscose price index, with adjustment, 1935 onwards, for production of staple fibre (rising from 11,520 thous. lbs. in 1935 to 60,000 thous. lbs. estimated in 1939, at average selling price of 10d.-11d.).

Between 1929 and 1935 rayon yarn output was doubled, but average selling prices were halved. Subsequently, prices have been steadier, but the sharp rise in production has been checked. From the "prosperity" index for the industry it appears that during the last decade the trend of net returns in the industry has been much less progressive than has been generally supposed. The profits of the leading companies have fluctuated widely, but in fact British Celanese profits have shown greater stability, and have come nearer to maintaining the "prosperity" level of 1929 than have those of Courtaulds, though comparison is, unfortunately, largely vitiated by the deduction, from 1935 onwards, of an undisclosed amount for excise duty from Courtaulds' profits.

unduly deterring it by current premiums. A further advance in premiums can hardly be avoided, at least by some offices.

For with-profits policies, assured persons who have shared in the fortunes of the life offices when times were good must now bear an equitable part of the burden when times are bad. The bonus declarations of the offices whose valuations fell at the end of 1939 show how this principle has been applied. These are given opposite.

A few offices have been able to maintain surprisingly large bonuses, considering, firstly, that many of them reduced the rate of interest assumed in their calculations (this is the equivalent of increasing their reserves), but, secondly, that the offices have also had to write off, in many cases, some depreciation on investments. But if there is one saving feature in the present situation, it is that the Government's war borrowing policy should strictly limit, if it may not avoid altogether, any depreciation on gilt-edged securities. To holders of life policies—especially of the with-profits type—and to shareholders in life companies, this is an extremely important factor, which may partially compensate them for the other adverse features of the life assurance situation.

If past results for British Celanese have been criticised as "disappointing," the explanation, it would seem, is twofold. First, investors have been encouraged to expect a higher return than the company has been able to secure. Secondly, the company's capital, unlike that of Courtaulds, includes prior charges and preference shares to a total which can only be regarded as disproportionately heavy in relation to the level of earnings actually achieved. The effect of the respective capitalisations of the two companies, in determining the market's attitude, may be surmised from the figures below:—

COURTAULDS AND BRITISH CELANESE: THREE YEARS' FIGURES (Amounts in £ thousands)

	Courtaulds (Dec. 31)			British Celanese (June 30 approx.)

Note.—Earnings (in £'000) are shown after income tax. * Less depreciation and specific reserves; including, for British Celanese, goodwill and patents valued at £1,913,000 in each year.

Even in 1938, when Courtaulds' profits fell to an abnormally low figure, preference dividend requirements were covered with something to spare, while in 1937 they were covered over seven times, and in 1939 about six times. In the case of British Celanese, however, little was earned for either class of preference capital in the unfavourable year 1938, while only 67 per cent. and 23 per cent. of total cumulative preference dividend requirements were covered in 1937 and 1939 respectively. Neither company has recently been short of working capital, though British Celanese has nothing comparable to the handsome gilt-edged portfolio of Courtaulds. But the profits return, expressed as a percentage of the written-down book value of fixed assets, is not so very much lower in the case of British Celanese than of Courtaulds, and the comparison would be still less unfavourable if nearly £2,000,000 of goodwill, now included among British Celanese assets, were omitted. The latter's balance sheet, in fact, is over-weighted on both sides. Its ordinary capital has never received a return, while its cumulative preference capital has hung a heavy millstone of arrears on the company's neck. On the other side, about £3,000,000 of "assets"—goodwill, commutation of royalties, advertising and research expenditure—have been unrepresented by earning power and might have been eliminated many years ago.

The effect upon a true investment comparison between the securities of the two companies of differences in their nominal capitalisation is evident from the next table:—

SHARE PRICES AND YIELDS

Security	Amount Outstanding	Denomination	Price	Yield	Arrears of Dividend
Courtaulds:—					
5% cum. pref. stk. ...	8,000,000	£1	22s. 6d.	4.4	None
Ordinary stock	24,000,000	£1	26s.	5.4*	...
British Celanese:—					
7% 1st. mort. deb. stk.	191,694	£100	109½	6.4	...
5½% mort. deb. stk.	2,754,243	£100	102½	5.3	...
7% cum. 1st. pref. sh.	2,500,000	£1	17s. 6d.	8.0	All paid
7½% part. 2nd cum. pref. sh.	4,250,000	£1	11s. 10½d.	...	9 years = 13s. 6d. gross
Ordinary sh.	2,211,333	10/-	3s. 0d.	...	...

* 6.3 per cent. on earnings.

The market values Courtaulds' ordinary stock at little more than a 5 per cent. basis, which in these times testifies to the investors' faith in the management. In the case of British Celanese, however, the 5½ per cent. debenture stock, which now has virtually a first charge on earnings, is a high-yielding industrial debenture, while the 7 per cent. first preference shares are still below par, despite the laborious over-taking of accumulated arrears. The 7½ per cent. participating second preference shares—the real equity security at the present level of earnings—are valued at less than the gross total of their nine years' arrears of dividends, which the management intends to fund as soon as conditions allow. The ordinary shares, which in their time have been over £6, are a

gambler's counter—at a price for which even a specious mathematical basis can hardly be found.

So far as it is possible to make any prophecy, it would seem that a thorough-going "clean-up" of the British Celanese balance sheet, writing off merely historical assets, and transforming preference capital on a graduated scale into one written-down class of ordinary capital (with some solatium for the existing ordinary shareholders) might give the company a representative investment position. Other companies in different trades, whose shares now enjoy established rank, have gone through the same mill. Its book-keeping character would not affect the company's earning power by one iota.

Both Courtaulds and British Celanese have a reasonable prospect of emerging from the war in a good position. Their plant capacity, since the period immediately preceding hostilities, has been well employed; the price level is firm; and wartime demand for their products (both for home demand and as part of an export drive) is likely to be well maintained. Their difficulties are likely to lie rather on the side of labour and—particularly—of raw materials, though a shortage of wood pulp would affect Courtaulds more than British Celanese. Courtaulds could, apparently, substantially increase both its profits and dividends above last year's level without becoming liable for Excess Profits Tax. If British Celanese secured an E.P.T. standard of anything like 6 per cent. on its paid-up ordinary capital it would be in clover. But war is hardly the time for carrying through major capital reconstructions. For the present, the first—and still more the second—preference shares of British Celanese are of interest chiefly to the speculative investor, with the tide running in their favour. But a price of 3s. seems distinctly high "option money" for the 10s. ordinary.

Finance and Banking

Circulation Record

The easier conditions experienced in the money market are fully reflected in the latest Bank return. Bankers' deposits have risen by £23,882,000 over the week to the ample total of £118,790,000. War loan dividend disbursements are in the main responsible for this movement, whose principal counterpart is thus to be seen in a reduction of public deposits. These are down by £22,503,000 on the week. The outstanding movement revealed by the Bank return is, however, the continued expansion in the note circulation, which over the week to last Wednesday rose by £12,398,000 to the new high record of £569,262,000. This movement may in part reflect the customary end-of-month influences, but in the main it must be attributed to the increased demand for currency, both by the public and by the banks, owing to the prevailing uncertainty. It may be assumed that the appointment of Regional Banking Commissioners, of whom Mr Atlee spoke in his remarks on the inclusion of the banks within the scope of the Emergency Powers Act, would imply a potential division of the banking structure, which, in turn, would involve a greater immobilisation of currency than obtains when the whole system of issue is centralised. One of the main problems to be considered in the event of an emergency that would necessitate government by district commissioners would be the provision of currency to each of the areas concerned. The banks have, no doubt, begun to make preparations for such an eventuality by strengthening considerably their holdings of till money in selected branches. The expansion in the circulation has almost obliterated the reserve of notes in the banking department. Last Wednesday these had fallen to £10,974,000, so that another week's expansion at the latest rate would clean out the reserve. In the circumstances another increase in the fiduciary circulation seems to be imminent. The big increase in the circulation would have had a pronounced effect on the monetary situation had it not been almost exactly offset by an increase in the Bank's holding of Government securities.

Towards Tighter Exchange Control

Free sterling continues to hold up well in the face of the rapid sequence of critical developments in the military situation. The rate in New York hovers around 3.20. With the Continental markets virtually closed and with little or no American capital remaining invested in sterling, the flow of sterling to the free market is almost exclusively restricted to the operations sanctioned through Form E.1, a flow over which the authorities have complete control. The main exception to this is the business in free sterling which

is of speculative character. New York and Far Eastern centres such as Shanghai continue to provide modest facilities for such speculation which must ultimately be based on overdraft facilities in London. The volume of such business is small, but none the less the infringement in the Defence regulations which its existence implies deserves the closest scrutiny of our authorities. The size of the free market is almost certain to suffer still further curtailment by an early extension of the list of commodities of which the export from the sterling area can only be made against payment in hard currencies—i.e. in United States dollars. With the rapid swing of opinion in the United States it should be possible to tackle with great hope of success the problem of concluding a commercial *cum* payments agreement between the sterling-franc countries and the United States. If that could be achieved the free market in sterling would have virtually disappeared and the whole problem of effective exchange control in this country would have been immeasurably facilitated.

Keen Bidding for Treasury Bills

With the promise of much easier conditions in the money market following the War Loan dividend disbursements, the applications for Treasury bills at last week's

tender suddenly jumped to record proportions. For the £65 millions of bills on offer the total applications amounted to £131,305,000, and the discount market syndicate had to be content with an allotment of 30 per cent. of its quota. As far as may be gauged from the outcome of Treasury bill tenders at quarterly intervals from this period there should be no special concentration of semi-official applications for bills at the present time. The factor which more than any other helped to swell the volume of applications at the latest tender was the hope that a reduction in short money and discount rates was imminent. On the expectation of a quick ½ per cent. turn on bills, there was probably a considerable volume of outside applications for the bills. The successful application price for the Treasury bills is now stereotyped at £99 14s. 10d., giving an average rate of discount of about 1½ per cent. There it will stay until there is a change in the basis of money rates, and this looks highly improbable over the near future. With the weekly offerings of Treasury bills now running at £15 millions in excess of maturities, the outstanding total of bills offered through the tender is rapidly climbing back towards the high levels of over £800 millions touched in the earlier weeks of this year. More interesting, however, is the rapid expansion which has in recent weeks been taking place in the total of tap bills. From a figure of £636,500,000 on April 20th last the total of these bills had by the end of last week jumped to £787,500,000—easily the highest level ever reached by them. This movement could be explained in three possible ways. The first is that the Exchange Equalisation Account may have been selling gold at a fair rate over recent weeks. The second is that the intervention of various public departments in the last issue of War Loan cannot have been considerable or that, if it was, there have been opportunities of unloading a fair amount of the stock in the market. The third is that funds may have been accumulating in extra-budgetary accounts at a rapid pace in recent weeks. Between them these three in-

fluences provide an adequate explanation of the considerable expansion in tap Treasury bills over the past six weeks.

Gold Exodus from Europe

The most massive international gold movement of all times has been proceeding during the past fortnight. It involves the transfer to Canada and the United States of the bulk of the gold reserves of Great Britain and France as well as the gold held here for Dutch, Belgian and Swiss official account. Most of the gold is, according to the United States reports, being sent direct to Canada. Since the shipments are made on Government account the problem of insurance does not enter into the operation, and the movement of the metal can therefore be concentrated to a degree which would be unattainable if the saturation point of the insurance market were its limiting factor. Thus in two days including Monday last, the amount of gold which arrived at the Federal Reserve Bank of New York totalled about \$500 millions. It need hardly be pointed out that this gold is being sent to Canada and the United States for earmark and safe custody and is not being sold to the United States Treasury against dollars. Such sales will continue to be made as in the past when the dollar balances of the Allies require replenishment. They constitute a far more modest current than that indicated by the size of recent shipments. When the movement is completed, the United States, to which most of the metal must be sent, given its possession of the requisite safe-keeping facilities, will hold virtually the whole of the world's monetary stocks of gold either as owner or as custodian. Out of these results of *force majeure* one may begin to discern the outlines of a new gold clearing machinery operated from the United States, which may well form part of the international monetary system of the post-war period.

INSURANCE NOTES

Norwich Union Life.—Reckoned by premium income, the Norwich Union Life is the sixth largest life office in the country. Aided by a large inflow of new business—new sums assured were £10,301,048, against £11,755,700, a fall less than that shown by most offices—premiums rose in 1939 from £4,317,315 to £4,542,717. Claims by death compared satisfactorily with expectations. The rise of nearly £300,000 in maturities was due to the earlier growth of endowment assurances now expiring. On the side of revenue, interest earnings fell from 4.13 per cent. net to 3.90 per cent. net, as a result of higher taxation. Total expenses remained almost unchanged, a saving of first year's commission being nearly offset by a rise in other expenses, but owing to higher premiums the expense ratio declined from 14.8 per cent. to 14.1 per cent. These changes produced a rise in the life fund from £43.6 millions to the high figure of £45.4 millions. Total assets were given in the balance sheet as £50.5 millions. Investments are valued as follows: securities at or under market price; other investments at or under the figures taken at the last valuation in 1935; subsequent investments at cost or under.

Commercial Union.—The Commercial Union group transacts the second largest non-life business in the country. Its important accident portfolio brought in premiums of more than £8 millions last year, of which the Ocean, the largest subsidiary, accounted for nearly £5 millions. Premiums in the fire department totalled nearly £5.4 millions and in the marine department nearly £0.9 million. Including life and capital redemption business, the total premium income was almost £17.2 millions. Profits on accident account were helped by a satisfactory experience in American casualty insurance and the balance was rather larger than in 1938. Though the fire profit was in itself satisfactory, it was not quite so large as in the previous year. Thus, given the justifiably cautious decision of the directors to transfer from the marine account no more to profit and loss than

in the previous year (owing to the uncertainties of marine underwriting), the profit transfers from the three accounts totalled £800,000 against £900,000. New life business was reduced, but in no larger measure than for the offices as a whole. The net rate of interest earnings also fell, in common with the general experience, to 3.11s. 3d. per cent., against 3.14s. 3d. per cent. in 1938. The results are summarised below:—

	Earned Premiums 1938	Earned Premiums 1939	Profit Balances* 1938	Profit Balances* 1939
Fire ...	5,407,894	5,373,380	454,119	362,613
Accdt. ...	8,163,610	8,172,318	414,212	451,054
Marine ...	683,961	896,228	75,000	75,000
	14,255,465	14,441,926	943,331	888,667
Life and annuities	2,707,376	2,643,244	99,451	99,451
Cap. red. ...	73,844	72,232	4,000	4,000
	17,036,685	17,157,402		
Interest (ex. life, annuities and cap. red.) and fees			736,281	688,548
			1,783,063	1,680,666
Less added to addl. reserves from fire and accdt. underwriting balances			43,331	88,667
Transfers to profit and loss			1,739,732	1,591,999

* The profit balances are shown before transfers to additional reserves.

Of the amount credited to the profit and loss account, £225,000 was transferred to the general reserve fund, raising it to £4,561,234. This is in addition to the departmental reserves of £14,457,055, which are much larger than required for unexpired risks. After other outgoings, including taxation, had been allowed for, £480,109 was carried forward (compared with £580,524 last time). The dividend for 1939 is 6s. 6d., against 8s. for 1938 (per £1 share). The directors decided to limit the distribution to the amount of the non-life interest plus life profits, thus releasing the general underwriting profits to swell the reserves. This is a prudent decision, dictated by the desire to conserve the group's resources against the uncertain future. It is also in accord with the reduction effected in the interim bonus on policies becoming claims.

Liverpool and London and Globe.

—This company and the Royal, with their subsidiaries, form a group transacting the largest non-life business of any combination in the United Kingdom. Last year the group's premium income on fire, accident and marine insurance was more than £24 millions. Over £9 millions of this total was contributed by the Liverpool and London and Globe and its associated companies. They also produced a fire profit of 7.8 per cent. and an accident balance of 9.6 per cent.; the latter result, though lower than the corresponding 1938 figure, was especially satisfactory, in view of the difficulties confronting casualty insurance in the United States.

	Earned Premiums 1938	Earned Premiums 1939	Underwriting Profits 1938	Underwriting Profits 1939
Fire ...	3,871,423	3,815,835	332,251	297,248
Accident ...	4,878,727	4,762,710	536,911	457,104
Marine ...	345,658	545,782	3,138	...
	9,095,808	9,124,327	872,300	754,352
Life ...	1,006,732	1,018,071	28,000	28,000
Annuities ...	30,975	49,007	...	...
Cap. red. ...	29,658	11,021	...	...
	10,163,173	10,202,426		
Interest (ex. life, annuities, and cap. red.)			407,981	399,584
			1,308,281	1,181,936

Life premiums expanded slightly, but new sums assured, at £2,444,917, were lower than in 1938 (£2,851,415), as with other offices. Interest was 3.44 per cent. net, against 3.78 per cent.

The amount carried to profit and loss, as shown above, added to the sum brought forward, gave a total of £2,088,142. After meeting dividends for 1939 at the rate of 27s. less tax per share (unchanged) and debenture interest, providing for taxation, pension fund and writing off £50,000 of house property, £1,338,888 was carried forward, against £906,205. The total assets were valued at £33.9 millions, which after taking into account the contingency reserve, was less than actual values; securities were entered at or below cost.

Investment

Check for Gilt-edged

Gilt-edged, which had previously maintained their progress while the Battle of the Ports was raging, have this week failed to pursue the same confident course. The market has watched Italy hovering on the brink of war. And it has seen the resumption of the battle in France within a few days of the withdrawal of the B.E.F. Moreover, the first concerted air attack on England has reminded investors of the shape of things to come in the near future. The best description of this week's dealings is "difficult." Except in equities, which fell to their lowest level since the most acute stage of the 1932 depression, prices have not shown any serious downward movement. Old War Loan, which stood at 99½ on Friday last week, closed at 98½ on Thursday, but this fall mainly reflected a weak display on Wednesday, when the crucial battle on the Somme began, and the first reports of its progress were attended by some recovery in the Funds from Thursday's lowest levels. In the industrial market, the threat of bombing on industrial plants is apparently being taken more seriously, and a partial recovery in ordinary shares on the withdrawal of the Dividend Limitation Bill was not sustained. Sir Kingsley Wood's appeal to directors to observe the principle of the Bill, coupled with their natural prudence at this juncture, suggest that its withdrawal may not affect the dividend prospects of more than a handful of companies. In equities, however, it is proving difficult to deal in either direction. The market is soft and unresistant, but there is only the most limited volume of shares on offer. A marked change in war news could obviously transform the temper of the equity market, but for the moment its part is still to stand uneasily and wait. For gilt-edged, there is no reason why the present check should be anything but temporary, except on days when the news is markedly adverse.

Dividend Limitation Abandoned

The hard-hit industrial shareholder may be forgiven any complaint against the tergiversations of official financial policy, of which the fate of dividend limitation is even more remarkable than N.D.C. Mark I. Six weeks, to the day, elapsed between the first vague outline of the dividend limitation rules in Lord Simon's Budget and the withdrawal of the Bill by the new Chancellor on Tuesday. By the middle of May, when the Bill was published, its scope had become fairly certain, and except for inevitable cases of hardship (for which redress was promised) there was no general disagreement with its principles. Companies such as Ford Motor, British United Shoe Machinery and Marks and Spencer had already complied with its provisions, by altering previously announced dividends to conform with the proposed rules. Shareholders in Lever and Unilever N.V. had to content themselves with a lower payment than was intended, because the British company's dividend was restricted. Among the hard cases, William Denny and British Electric Traction were perhaps outstanding, and these companies had already announced their intention of appeal. But the Bill did at least provide a specific maximum basis for dividend payments. Its withdrawal has been accompanied by the expression of hope by the Chancellor of the Exchequer that the great majority of undertakings will follow out the "underlying principles" of the Bill. Only a fortnight ago, he argued that the measure would assist to counter inflation, to provide savings for the support of war loans, and to strengthen the finances of companies against post-war difficulties. These arguments still hold good, and doubtless most industrial companies will frame their dividend policy on the principle of the Bill. For the investor, however, there is little ground for expecting significant increases in cash dividends—bonus issues are to be banned for the duration—save in a limited number of special cases. Among the latter, British Electric Traction deferred, which was restricted to a 5 per cent. cash payment (subject to appeal) is an obvious example. But what new standard will the directors feel justified in adopting? Perhaps this question was partly responsible for the failure of the stock to maintain its rise from 520 to 610 on Wednesday. Similarly, the jump in Lancashire Cotton ordinary stock to 17s. 6d. was followed by a reaction to 15s., and the rise in West African gold shares suffered a similar fate.

What Basis for Equities?

In the four weeks since Hitler invaded the Low Countries, leading industrial shares have fallen to the lowest level recorded since June, 1932. Gilt-edged, on the other hand, have conceded only a small fraction of their wartime gains. The margin between the yield basis on gilt-edged stocks and that of representative industrial ordinary shares now shows a wild disparity compared with any normal standards. The Actuaries' Investment Index, from which the accompanying figures have been extracted, shows that the margin between the yield on Old Consols and representative industrials, which was little more than 1 per cent. in June, 1937, and no more than 2½ per cent. even at the end of last September, widened by the end of last month to well over 3½ per cent. In view of the Government's repeated assurances that wartime borrowing is to be carried out as cheaply as possible—even a 3 per cent. basis is not regarded as sacrosanct—gilt-edged yields provide the only safe measuring-rod, despite the reaction caused by the military news of the past month. The yield on Old Consols suggests

that the Government could still finance its longest-term requirements at 3½ per cent. or less. Low interest rates have been diffused through home corporation stocks, industrial debentures and preference shares. But there is no indication that ordinary shares as a whole are beginning to find similar support from low interest rates, though there is plenty of past evidence to show that they are capable of doing so. The explanation of unduly high equity yields—oddly enough they are highest for shares in the aircraft, iron and steel, and oil industries, which are of vital importance in the war effort—lies partly in E.P.T. and dividend limitation. Yet the equity market was not sorely afflicted by the announcement of 100 per cent. Excess Profits Tax nor, on the contrary, has it been greatly cheered by the withdrawal of dividend limitation. Does this mean that the equity market's troubles are based on uncertainty regarding future profits and dividends as a whole rather than their partial reduction by increased taxation? Possibly the Stock Exchange, by refusing to observe the customary yield differentials between equities and gilt-edged, is showing a more profound insight into the investment prospects of civil industry now that total warfare has opened, and industrial mobilisation is being developed.

New Zealand Conversion Offer

Conversion terms have been offered to holders of New Zealand 3½ per cent. conversion stock 1939-45 in accord-

A REASONABLE PRECAUTION

is for every responsible citizen to protect his dependants by securing Life Assurance now. Obtain advice on a suitable Policy from the

NATIONAL PROVIDENT INSTITUTION

for
MUTUAL LIFE ASSURANCE

ESTABLISHED 1835

48 Gracechurch Street, London, E.C.3

ance with the prospectus provisions of July 26th last year. During the periods June 5th-20th and December 5th-20th in each year commencing with 1940 holders have the right to convert one-half of their stock into 3½ per cent. stock 1949-54 and one-half into 3½ per cent. stock 1955-60, at rates announced at the time. For the first exchange period, these are £52 10s. of 3½ per cent. stock 1949-54 (*ex interest* due August 1st next) and £52 10s. of 3½ per cent. stock 1955-60 (*cum* six months' interest due October 15th) per £100 Conversion stock. The former stock is now quoted at 92-95 and the latter at 91-94, while the current quotation for the conversion stock 1939-45 is 98-101. Taking middle prices in each case, the holder of £100 of conversion stock valued at 99½ would be entitled to two holdings worth approximately £97 14s. (without adjustment for the relatively small amount of interest accruing on the 1955-60 stock). Thus the authorities would not appear to have framed the terms of the offer to attract any large volume of conversions. They may perhaps argue that future offers in December next and twice yearly until December, 1944, may provide more favourable opportunities. The signal improvement in New Zealand's credit during the past year and the strengthening of her exchange resources in London offer support for this view.

Municipal Conversions Ban

The Treasury is not disposed to relax its ban on the conversion of municipal loans. The Financial Secretary to the Treasury, making this statement last week, repeated many of the familiar arguments against lifting the ban. They are, at first sight, fairly convincing. Most of the loans are trustee issues, and, if they were converted, the underwriting machinery which must now be reserved for Government issues would be brought into play. Moreover, the loans appeal to the same section of the investing public as Government loans. Neither of these arguments is entirely convincing. If corporation loans compete with Government issues, as to some extent they plainly do, their competition must be all the more effective when they carry 6 per cent. interest than if they were reduced to a contemporary trustee investment return. And since the bulk of municipal loans is held by trustees and long-term investors, holders would be hard put to it to find alternative investments, save perhaps in the gilt-edged market itself, if high interest-bearing loans were converted to a lower rate. The danger that conversion offers might make inroads on the net new investment funds which are steadily mounting up for subscription to new War Loans is more apparent than real in our closed new issue market. If the problem, however, is one of fitting municipal conversion operations to the Treasury's convenience, there is more to be said for the prolongation of the ban. For it so happens that although nearly £13 millions nominal of 6 per cent. stocks are optionally callable for the first time this year, while there is a large issue of £13,707,446 of L.C.C. 5 per cent. consolidated stock callable from October 31st, some of these issues are not finally redeemable until 1950 and the majority not until 1960. In these cases conversion facilities are not vitally urgent, but until the loans are converted they must continue to offer a yield entirely out of relation to the prevailing level of interest rates in the rest of the trustee market. Meanwhile, Bradford Corporation intends to redeem one-fifth of its outstanding £2 millions 4½ per cent. stock 1940-60 on September 1st. Bradford is more fortunate than other authorities, since it has free cash available and also has the option, under the original prospectus, to repay only part of the loan and not the whole. Edinburgh has recently called the whole of its £2 millions 4½ per cent. stock 1940-60, and the bulk of the 6 per cent. issues can be repaid or converted only in their entirety. It would obviously be impossible for most of the authorities, faced in some cases with additional capital requirements owing to the war, to find sufficient surplus funds to repay in whole their optional maturities this year.

Discouraging Bearer Bonds

The convenience of the bearer security in peacetime is lost in war. Further action has been taken this week to reduce the volume of bearer securities now in issue. Under the recent security dealing regulations, no further issue of bearer securities may be made, nor may they be split into smaller denominations. In a request to the Stock Exchange Committee, the Bank of England has urged that the volume of bearer securities held by private investors might be reduced by persuading them to exchange into registered or inscribed stock. The request was published simultaneously with the news of the first comprehensive bombing attacks on England. Investors should, therefore, need little further reminder of the difficulty of replacing lost bearer bonds in wartime. They

should be ready to exchange any bearer issues for registered or inscribed securities if only for their own protection. Meanwhile, the Bank of England has given notice that bearer bonds for 3 per cent. War Loan, 1955-59, and 2 per cent. Conversion Loan, 1943-45, will not be issued. The prospectuses of these loans, which provided for the issue of bearer bonds, have, of course, been overruled by the National Loans (No. 2) Act. This Act passed all its stages last week, and gave the Treasury power to disregard any contractual obligation to issue bearer bonds.

John Brown Profits

For the year ended March 31, 1940, John Brown and Company announce a fall in net earnings to the lowest figure recorded since 1936. Net profit, after charging fees, depreciation, taxation and debenture payments, amounts to £411,337, against £550,682 for the previous year. The ordinary dividend for the year, tax free, is reduced from 17½ per cent., which has been paid for the last two years, to 15 per cent. These rates, grossed up at the appropriate rates of tax, are approximately equivalent, but the latest year's dividend is covered by an earnings percentage of no more than 16.8 per cent., compared with 23.3 per cent. At a current price of 21s. 6d., the 10s. ordinary shares yield nearly £7 per cent. tax free. The company is engaged on a large number of Government contracts which should adequately maintain its earning capacity in the immediate future. Shareholders who are perplexed by the fall in net profits over the past year may expect to find in the full report evidence of rising costs and of increased tax provisions.

Higher Rubber Earnings

Further rubber company reports have confirmed the improvement in earnings last year, to which attention was drawn in *The Economist* of May 4, 1940. The five leading companies in the accompanying table show earnings substantially above those realised in 1938, although they were still below those of 1937. Among the Malayan companies whose results are summarised in the table the most striking improvement is shown by Kepong, whose estate profit of £118,129 was more than double that of £53,245 in 1938. The consequent rise in ordinary earnings from £43,646 to £100,968 fully justifies the substantial increase in the ordinary dividend from 4½ to 11½ per cent. At the current price of 2s. 1½d. the 2s. ordinary shares offer the satisfactory yield of £10 16s. per cent. Linggi Plantations has utilised a rise in equity earnings from £25,321 to £42,834 to resume dividends at the rate of 5 per cent. as paid in 1937. Drastic reductions in the book value of assets have resulted

* £1 shares except Kepong (Malay) 2s. shares and Allied Sumatra £1,400,000 stock. † Earnings and dividends on £560,000 ordinary capital 1937-38, and on £336,000 in 1939.

from the capital reduction. This provided £224,000, which has been applied to write down the book cost of the rubber estates to £419,103, while general and contingencies reserves have been used to reduce the book cost of the investment in Oil Palms of Malaya from £330,293 to £250,000. Estate profits of United Sua Betong showed a less striking increase from £333,740 to £359,893, but the company replanted 1,074 acres, compared with 925 acres in 1938, and newly planted 1,890 acres, the first new planting undertaken since 1936. Thus the total planted area under rubber at the end

of 1939 amounted to 36,517 acres, compared with 34,859 acres at the end of the previous year. Allied Sumatra received in interest and in dividends from the two Dutch operating companies a total of £94,475, compared with £69,136 in 1938. The relatively small increase in the sum available for distribution on ordinary shares from £56,221 to £59,370 is due to the increase in taxation reserve from £5,000 to £26,000 to meet the heavy burden of double taxation. The management of Grand Central (Ceylon) has exchanged 1,016 acres of old estate for 950 acres of jungle land from which a considerably increased yield may be expected. The company has remained relatively unaffected by labour difficulties due to the decision of the Indian Government to restrict the emigration of Tamils to Ceylon. The rise in the amount earned for ordinary distribution from £43,182 to £84,414 has enabled the directors to declare a dividend of 5 per cent., against 3 per cent. in 1938. Thus at the current price of 7s. 6d. the £1 ordinary shares offer a yield of £13 6s. per cent. Rising costs of production, transport and insurance, the elimination of markets in countries now in German occupation, and double taxation for Dutch companies are adverse features in the rubber situation. But the maintenance of the quota and the extent of forward sales—in some cases based on the present price of over 1s. per lb.—should provide some compensation for the negative factors.

Burmah Oil

The reorganisation of the Burmah Oil Company from January 1, 1939, in the form of a group of subsidiaries, entirely controlled by the parent company, was a development with more formal than real importance. It has separated, on a functional and geographical basis, the main activities of production, pipe line transport, refining, shipping and marketing, and its convenience was dictated by the political and fiscal separation of Burmah and India. By the publication of a consolidated balance sheet, shareholders are provided with the same full information concerning operations as in earlier years. Profits for the past three years are analysed below:—

	Years ended December 31,		
	1937	1938	1939

THE STOCK EXCHANGES

London

Note: all dealings are for cash

MARKET movements in the past week have been determined by the reactions of dealers to the Chancellor of the Exchequer's announcement of the decision to abandon the Limitation of Dividends Bill, and by the overshadowing influence of political and military developments. On Monday and Tuesday, buying was discouraged by uncertainty regarding the future of Italian policy. A short-lived rally in the middle of the week following the Chancellor's statement gave way to fresh selling in most sections on news of the new German offensive launched against the Weygand Line. The gilt-edged market, which opened firm, lost some support when the decision not to limit dividends became known, but no sustained rise in equity prices took place. Turnover in the industrial market remained slight and further considerable losses were experienced by home rails.

The gilt-edged market was supported at the beginning of the week by reinvestment of the June 1st interest payments on Government stocks. On Tuesday, the upward trend of the market was reversed as fears of aerial damage became more acute. In midweek falls again prevailed, on the renewed battle in France. Three and a half per cent. War Loan closed at 99 and 3½ per cent. Conversion at 99½, compared with 99½ and 99½, respectively, on Monday last. Although the market was in soft condition on Thursday morning, the limited effects of German bombing on England and the holding of French positions ensured a good close.

Political events naturally depressed the foreign bond market. Brazilian issues displayed some early firmness, but Far Eastern bonds were offered and losses were general. Weakness was exhibited by all securities directly affected by the war. After losses of 2½ points all round on

Trading profit of the wholly-owned subsidiaries, before charging depreciation, amounted to £2,298,328, the lowest figure since 1935. Income from dividends also fell from £2,657,080 to £2,384,997 and total profit, at £4,684,361 before depreciation, showed a fall of £494,072 compared with 1938. The taxation provision fell from £731,813 to £673,051, and the amount earned for ordinary stock was reduced to £3,133,915 compared with £3,579,943 in 1938 and the record figure of £3,697,931 in 1937. The ordinary stock distribution was maintained at 21 per cent., including a cash bonus of 6 per cent., and was covered with a smaller earnings margin. The consolidated balance sheet shows a fall in stocks of plant and stores from £1,147,692 to £1,026,801 and of stocks of crude oil and products at refineries from £1,134,976 to £1,093,252. Cash holdings and trade debtors both show striking increases from £330,798 to £631,132 and from £561,491 to £1,280,799 respectively. Obligations to current creditors rose only slightly from £1,176,876 to £1,340,453, leaving surplus liquid assets rather higher at £19,317,000 against £18,961,000. War has at least alleviated the pressure of competition in the company's important Indian market, but Burmah Oil has voluntarily agreed to limit for the duration of the war the prices of kerosene and petrol to the "normal peacetime economic level." The £1 ordinary stock units stand at 51s. 10½d. to yield £8 2s. per cent.

Selection Trust

The total income of Selection Trust from dividends and interest, less amounts written off or reserved, shows a fall of more than £80,000 for the year ended March 31, 1940, to £218,465. Net profit, after charging fees, administrative expenses and debenture service, amounted to £125,044, against £202,511. The sum earned for ordinary stock, after charging £36,000 to taxation reserve and before crediting £32,000 placed to reserve last year but not now required, totals £89,044—equivalent to a rate of 6.3 per cent., from which a dividend of 6½ per cent. is declared. Last year the trust paid an ordinary dividend of 7½ per cent. from earnings of 8.4 per cent. During 1939-40, Selection Trust suffered from falling profits on the part of various mining concerns in which it is interested. Of the main companies from which Selection Trust draws its income, two, the American Metal Company and Mufulira Copper, show slight increases in net profit, but three companies, Roan Antelope, Consolidated African Selection Trust and Trepca Mines, suffered heavy falls. The net profit of Trepca Mines declined from £202,139 to £40,091, owing to disputes and political factors, which were also responsible for the considerable depreciation in the value of Selection Trust investments in this company. This interest is the most vulnerable part of the Trust's assets, but happily not the most important. On March 31, 1940, the total market value of quoted shares and investments was above the book value of £2,206,264 (after writing off £807,799 from profits and reserve). A new subsidiary, Seltrust Investments, Limited, has been formed, to which has been sold the majority of holdings in American Metal and Consolidated African Trust. The 10s. stock units are quoted at 6s. 6d. to yield £9 12s. per cent.

Monday, French railway issues became idle. Italian bonds lost 5 points on both Monday and Tuesday, but recovered 2½ points in mid-week.

Losses in home rails followed slight but steady selling coupled with absence of demand. The hint of a rally on Wednesday was not maintained. Losses were particularly marked among the debenture and preference issues of the L.N.E.R. and the G.W.R. There were few dealings in marginal stocks. Argentine issues were weak.

In the industrial market, some relief from the heaviness of the beginning of the week was offered by the market reaction to the dropping of dividend limitation. Net gains were, however, confined for the most part to companies standing to gain directly by the change, such as B.E.T., Dunlop, Carreras and Lancashire Cotton. The behaviour of the market as a whole, is reflected by the *Financial News* in-

dustrial share index, which recovered on Wednesday to 61.9 from 61.2 on Tuesday, but fell to a new low of 60.8 on Thursday. Coal, iron and steel issues were depressed early in the week in sympathy with the Manchester Collieries' dividend decision. Electrical equipment shares were again marked out for selling and breweries remained depressed. The withdrawal of dividend limitation brought no relief to the shipping section. The stores group was irregular and turnover was slight.

Kaffirs remained dull and losses were sustained by many leading counters, including Daggafontein, East Geduld and Consolidated Main Reef. The Chancellor of the Exchequer's statement had, however, a tonic effect on West Africans where a recovery was led by Ariston and Bibiani. The news was also well received by the oil market, but gains were not fully maintained. Anglo-Iranian preference issues showed net gains on Wednesday, but Burmah Oil lost ground and Shell preference issues showed no change. Rubber companies derived some benefit from the strong commodity position. Kepong (Malay) and United Sua Betong were in demand, but the market as a whole remained dull and irregular.

ACTUARIES' INVESTMENT INDEX

The movements of the Actuaries' Investment Index in May throw into high relief the distrust with which the market has come to regard equities, and the extent to which it has retained confidence in gilt-edged during a critical month. The index of 2½ per cent. Consols fell by less than three points to 129.3 between the end of April and May 28, and the yield rose only from 3.37 per cent. to 3.45 per

Home rails	0.34	5.21	8.68
Breweries	5.49	6.30	7.05

cent. and was still lower than 3.60 per cent. at the end of May last year. Among equities, falls of ten points or more are commonplace. Aircraft and coal groups each lost approximately twelve points, reaching 43.4 and 82.6 respectively. The index of thirteen electrical shares fell from 118.6 to 105.8. Home rails were marked out for heavy selling, and the fall exceeded twenty points, from 56.9 to 34.1. None of the ordinary share indices stood as high as they did a year ago. The increases in yields, which are implied in these losses, appear to have lost relation with earnings prospects. The yield on aircraft shares rose by over 3 per cent. to 13.81 per cent. For all classes of industrial shares, the combined price index fell from 58.0 to 49.5, while the yield rose from 5.98 to 7.03 per cent.

New York

TRADING on Wall Street has been difficult and irregular throughout the week. Turnover has been slight with a downward trend. Despite a display of firmness on Tuesday, the uncertainty of news regarding the progress of the new battle on the Western Front, and of the intentions of the Italian Government, caused a break on Wednesday in steel, aircraft, copper and chemical issues. The Dow Jones industrial index slumped to 113.25 against 115.79 on Tuesday. *Iron Age* reports that the level of steel mill activity has reached 80.5 per cent. of capacity against 78 per cent. last week, and it is expected that the level will reach 90 per cent. during June.

CONVERSIONS AND REPAYMENTS

Bradford Corporation.—Twenty per cent. of £2,000,000 4½ per cent. stock 1940-60 to be repaid at par, September 1, 1940.

Shorter Comments

The Week's Company Results.—Shipping profits, represented by ANCHOR LINE and CLAN LINE, show a significant fall. The former company's previous net profit of £37,764 has been converted into a loss of £26,376, while the latter's net profits are approximately halved at £171,090, although the dividend is maintained at 20 per cent. ASSOCIATED NEWSPAPERS net profits declined from £445,266 to £401,018. BRIGGS MOTOR BODIES dividend is maintained at 7 per cent. and profits have fallen significantly from £101,231 to £87,431. A substantial rise in net profits of SMITHFIELD AND ARGENTINE MEAT from £34,240 to £64,676 is not accompanied by any change in the dividend, which is maintained at 2½ per cent. An appreciable increase in trading profits of CONSETT IRON from £669,717 to £1,061,188 finds only a slight reflection in the net profits figure, which has risen from £220,168 to £264,341, and the dividend is maintained at 7½ per cent. There is little change in RUSTON AND HORNSBY profits at £221,310, which cover the repeated 12½ per cent. dividend with a satisfactory margin. No dividend is recommended by AMALGAMATED PRESS, though the fall in profits was of a moderate order, from £408,271 to £397,928. LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES have experienced a decline in net revenue from £340,794 to £294,156, and the dividend is reduced from 11 per cent. to 8 per cent.

Ruston and Hornsby, Ltd.—Profit year to March 31, 1940, £345,517 (£318,695). For E.P.T., £70,000. Net profit, £258,583 (£301,406). Contingencies reserves, £30,000 (£50,000). General reserve, £25,000 (£50,000). Charge for income tax against balance of profits, £7,273. Carry forward, £75,016.

London County Freehold and Leasehold Properties.—Total income year to March 31, 1940, £583,459 (£626,489). Net revenue, £319,156 (£374,794). N.D.C., £10,000 (£14,000). General reserve, £30,000 (£30,000). Repairs and renewals reserve, £15,000 (£20,000). Carry forward, £171,223 (£134,042). Ordinary distribution 8 per cent. (11 per cent.).

Industry and Trade

A Census of Machine Tools

In a Note on page 639 of *The Economist* of April 6th it was pointed out that the scarcity of machine tools could be considerably alleviated by a redistribution and fuller utilisation of existing machines. What was urgent two months ago is absolutely imperative to-day, for it still cannot be said that every lathe, every press, every boring mill and every grinding, milling, planing and shaping machine is now being used as efficiently as possible and is doing duty for twenty-four hours a day. Measures are, however, now being taken to reduce the wastage of precious capacity. As a first step, a census of machine tools has been ordered in the engineering and allied industries. Information has been asked not only in respect of types and of the purposes for which existing tools are being used, but also on the number of hours per day during which they are in operation. On the basis of this survey it will at last be possible to make fuller use for essential purposes of the tools owned by the engineering and allied industries. Welcome though this measure is, it does not go far enough. It may have been expedient to limit the census to the engineering and allied industries as a first step. But a substantial proportion of the existing stock of machine tools is to be found in the maintenance shops of other industries; and the use of tools in maintenance shops is certainly much less intensive than in the engineering industry proper. It is to be hoped, therefore, that the census will be extended to maintenance and repair shops without delay. Steps will also be taken to co-ordinate purchases of machine tools in the United States with the object of concentrating them on the types most urgently required and of speeding up delivery. From June 17th, all purchases in that country will be made by the British Purchasing Commission on behalf of the British Supply Board. In view of the fact that the machine tool industry in the United States is operating at capacity, central purchasing has become quite essential. If, as has been reported, the American motor industry is willing to abstain from changing its models in 1942, the substantial section of the machine tool trade normally employed by that industry will be free to undertake other work when the machinery for the production of the 1941 models is completed towards the end of the summer.

Increasing Coal Production in Wales

A determined effort is to be made in South Wales to increase the output of coal. Representatives of the colliery owners and of the miners, in collaboration with Lord Portal, Chairman of the Coal Production Council, have provisionally agreed on the chief measures to be taken in order to attain the desired results. In the main, they follow the proposals outlined on pages 816-817 of *The Economist* of May 4th. While maximum working hours below ground are to remain unchanged at 7½, the operation of six afternoon and night shifts instead of five is to be adopted where the multiple shift system is now in force, and the Sunday night preparatory shift is to be made the rule. The available labour supply is to be better distributed and light work is to be provided for those who cannot be employed on the more strenuous tasks, while facilities for the transport of miners are to be improved. Working places and pits closed at present are to be reopened. The agreed measures also include the reduction of avoidable absenteeism, the abolition of all practices restricting output and the prevention of stoppages through industrial disputes. Further, the miners' representatives have agreed to the suspension of the consideration of the observance of the week's holiday with pay until August 1st. It is estimated that these and other changes in the methods and organisation of the industry will add about 7½ million tons to the annual output of South Wales, which amounted to 40.1 million tons in 1937 and 38.1 million tons in 1938. This substantial increase shows the size of the margin between the actual and potential output of the available labour force. It is also believed that a further 2½ million tons can be added to the annual output by the assistance of the Government in securing regular and adequate supplies of stores and materials and of railway and shipping facilities, as well as in facilitating the return of coal-mining of miners who took up other employment and the recruitment of men and boys at collieries where

immediate development is possible. It is expected that the details of the scheme, which is intended to remain in operation for the duration of the war, will be completed at a joint meeting between owners' and miners' representatives early next week. In view of the need for an expansion in coal production—which has been made even more urgent by France's loss of her chief coal-mining centre in the North—it is to be hoped that similar measures will be adopted in the other coalfields of this country without delay.

A Calcium Carbide Factory for Britain

None of the schemes put up in recent years for starting the production of calcium carbide in this country has been adopted, partly owing to opposition from groups with vested interests in the Scandinavian industry, Britain's chief source of supplies. Calcium carbide is manufactured by melting lime, the source of calcium, and coke or anthracite, the source of carbon, in electric furnaces at high temperatures; the resulting compound runs off and is then cooled and prepared for the market. While electric power is an important element in the cost, the quality of the raw materials also plays an important part in the location of the industry. The Dominion and Scandinavian concerns obtain electric current very cheaply, at about one-tenth of a penny per unit. But although electric power is more expensive in this country, the other raw materials are very readily available in South Wales. Calcium carbide is the source of acetylene gas, which is widely used in the metal cutting and welding industries and, to some extent, in portable lighting. It is also the root of an important chemical tree, whose branches spread into the chemical, explosives, fertiliser and rayon industries. In view of the importance of this product to the metal industries, a Canadian concern with experience in the electric power, chemical and carbide industries is now co-operating with a big domestic company in the erection of a plant in this country. It is proposed to instal a furnace with a capacity of 20,000 kw. to yield about 150 tons of carbide a day or some 55,000 tons per annum by continuous operation, and the plant is expected to come into production early next year. The output of the factory will more than bridge the gap caused by the loss of Norwegian supplies, which reached 42,500 tons in 1938. Pending the completion of the plant adequate supplies are assured from other sources.

The Course of Retail Trade

The average daily value of retail turnover, as calculated by the Bank of England, remains above last year's level. Thus, in March and April sales were 12.8 per cent. and 2.3 per cent. higher than in the corresponding months last year. The abrupt fall between March and April does not reflect a sudden deterioration, for the Easter holiday, which normally causes a spurt in sales, fell in March this year and in April in 1939. Taking the two months together, the increase over the corresponding period last year is 7.6 per cent., compared with 3.8 per cent. in January and 4.2 per cent. in February. In Central and West End London the value of sales in March and April was about 10 per cent. smaller than last year, while in Suburban London they showed a slight increase. In the other districts turnover was generally higher; the average rate of increase amounted to about 10 per cent. So far as the financial position of the trade is concerned, it is the value rather than the volume of

FAMOUS SINCE 1795

OTARD'S
COGNAC BRANDY

turnover which must be taken into consideration; the shops outside London have therefore probably suffered very little from the war. But while the value of sales remains above last year's level, its volume must have shown an appreciable decline, for retail prices are now substantially higher than a year ago. In the absence of a satisfactory price index, the decline in the volume of non-food merchandise is difficult to measure. In the case of food, however, changes in the volume of sales can be roughly calculated from their value by taking account of the variations in the official index of retail prices. On this basis, the volume of food sales in March and April was about 10 per cent. smaller than in the corresponding period last year, although their value was 5.6 per cent. higher. The fall in the volume of turnover in non-food merchandise may have been even more marked. Broadly, however, civil consumption remains at a high level; the volume of retail food sales in March-April, for example, though lower than in the corresponding periods of the four preceding years, was substantially higher than in the same months in 1932-35. Indeed, a substantial proportion of the resources at present devoted to the import, manufacture and distribution of consumption goods could be used for war purposes without causing any hardship to the civil population.

World Sugar Markets

In the past few years, the steady increase in the European sugar production from beet and the restriction of consumption by tariffs and high retail prices has led to an excess of world production of sugar. The cane-producing countries have suffered most, and even under the International Sugar Agreement countries such as Cuba and Dominica obtained the right only to a share in that part of the British market (the one remaining large importer of world sugar) which the Dominions and Colonies could not supply. The shortage of shipping and the introduction of sugar rationing have now still further reduced this market. Total sugar consumption in this country is not expected to exceed 1½ million tons, against a normal intake of about 2½ million tons. Of this amount, the British Empire will supply about 1¼ million tons, as well as smaller amounts to the non-sugar producing Dominions such as Canada and New Zealand. Consequently, if the British beet harvest can again provide some 500,000 tons of sugar, as it has in the current season, there will be no need for imports from foreign countries, which normally send about 1 million tons. This is a serious outlook for Cuba, who usually sends some 600,000 tons of sugar to this country. So far her exports have been well maintained by purchases made by the Ministry of Food over

the winter to build up reserves, but once this has been accomplished the British market may be virtually closed to foreign sugar.

South American Wool Exports

The contracts made by the Ministry of Supply to take all the surplus wool of New Zealand and Australia have necessarily affected British purchases from other wool exporting countries. The blockade has also deprived these countries of German purchases, which have been fairly considerable, particularly from South America. The following table (taken from *The Wool Record and Textile World*) shows wool exports from Argentina and Uruguay, in the season 1938-39 and in the six months to March:—

To:—	EXPORTS OF WOOL ('000 bales)			
	Argentina		Uruguay	
	Season 1938-39	Oct. to March 1938-39	Season 1938-39	Oct. to March 1938-39
U.K.	135	72	2	11
France ..	64	40	20	6
Germany ..	47	31	...	36
Poland ..	21	12	...	8
Italy ..	7	3	11	16
Belgium ..	25	17	4	18
Holland ..	8	5	10	8
Scandinavia }	66	44	100	5
U.S.A./Canada }	2	1	13	1
Japan ..	13	8	12	1
Other ..	...	...	...	...
Total	389	232	180	126

These two countries managed to export very considerable quantities of wool to neutral countries in Europe, such as Scandinavia and Holland. Now that these markets are also fenced off by the blockade, the United States, Canada and Japan remain the only important buyers of South American wool. A certain amount of competition with Dominion wools still remains in these markets, since arrangements have already been made for the usual re-export trade from London to be maintained, though the huge requirements of the Allies will probably diminish the amount available for this trade. But the outlook for the wool trade of South America is not very encouraging, unless a marked trade revival in the United States should lead to the rapid absorption of the wool stocks accumulated since last autumn.

COMMODITY AND INDUSTRY NEWS

The North American grain markets are now operating against minimum prices, and fixed prices continue for Liverpool cotton futures. The New York cotton market remains weak, but prices of tin, spelter and rubber were marked up.

Metals.—British maximum prices for copper, lead and spelter remained unaltered this week, but in the United States the price for spelter was advanced by another 0.25 cents to 6.25 cents per lb. In the past fortnight the quotation has thus been raised by 0.50 cents, due to the stronger demand for home and export deliveries. Imports into the United States of foreign zinc ore, formerly sent to Europe, are increasing, and no shortage of supplies is likely. Demand for copper and lead in the United States has also improved of late, and if it continues to do so for another few days an increase in prices may be expected. One feature on the United States copper market this week was the British demand for 25,000 tons of copper to increase emergency stocks. The present price of 11.50 cents per lb. corresponds to about £65 5s. per long ton f.o.b., while the current British price is £62 delivered consumer's stores. It is unlikely, however, that this difference will result in an increase of the British maximum price for the present, as the huge supplies of Empire copper, which cover our whole requirements, have been bought well below the maximum price.

Cotton (Manchester).—Futures trading in Liverpool continues at fixed prices. The raw cotton situation remains uncertain. Plentiful supplies are still available on this side, but imports at the moment are less than the consumption, which has been increased by the longer working hours in the mills. In the spinning section there has been a stronger call than ever for bigger supplies of yarn to meet the requirements of the Government. The Controller has instructed more spinners to put an increased amount of machinery on particular counts and qualities. Some spinners are now fully sold for six months ahead on Government work. Very little business has been done in cloth apart from the needs of the government, and orders for export have been few and far between.

Variety ('000 bales)	RAW COTTON delivered to Spinners

Source: Liverpool Cotton Association's Weekly Circular.

Tin.—The price of standard cash advanced by another £5 10s. to close at £275 10s. per ton after having touched £277 earlier in the week. There was again some American inquiry and in addition British consumers showed greater interest. World stocks with the exception of European smelter stocks (for which no figures are available) rose by 449 tons in May to 28,109 tons. New supplies, at 15,873 tons, exceeded deliveries by just over 2,500 tons.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

Week ending	1939	1940
April 20	56.96	72.93
May 27	53.97	63.17

" 25	64.93	72.49

Grains.—Minimum prices for wheat and maize have now been fixed for the Buenos Aires market, at prices prevailing at the close of May 27th. As minimum wheat prices are also in operation at Chicago and Winnipeg, the international grain market is now well under control. Crop reports from the Danube continue unfavourable, and exports are likely to be much smaller than normal, so that competition from these countries will be very limited. The warning of the Minister of

(Continued on page 1024)

COMPANY MEETINGS

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

INTERIM BONUS POLICY

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 5th instant, at 7, Leadenhall Street, E.C.

Mr Hugh E. Seebohm, J.P. (the chairman), said: Before dealing with the business part of our agenda, I must refer to the loss of our chairman, Mr Harold Morland. He became a director in 1914 and was elected chairman in 1927. His death on October 9th last year came upon us suddenly.

The new life assurances were £2,010,356, annuity premiums £595,546 and sinking fund assurances £360,264. The annual premium income was increased by £8,724. The ratio of life expenses was moderately increased at 17.18 per cent. The gross rate of interest was £4 16s. per cent., which compares with £4 16s. 7d. per cent. for 1935, the first year of the quinquennium now closed. The increase of the standard rate of income tax in the autumn Budget of 1939 resulted in a fall in the net rate of 5s. 4d. to £3 11s. 5d.

In the past five years the development of the office has been progressive and profitable, and normally there would have been a declaration of bonus at a satisfactory rate. Under the conditions of a modern war, it is plainly unjustifiable to add to existing capital liabilities. Your directors have adopted the principle of restricting their action to the payment of interim bonuses under with-profit policies at the rate of £1 per cent. for each year's premium due and paid from January 1, 1935, to December 31, 1939, and 15s. per cent. for each premium due and paid from January 1, 1940, such interim bonus being calculated on the sum assured and existing declared bonuses.

CENTURY GENERAL ACCOUNTS AND DIVIDEND

All accounts earned profits. The marine profit was retained in the account, and in the profit and loss account; the underwriting profit from the fire and accident departments (including interest) was £37,922, while net interest was £34,554; £25,000 was transferred to investment and general reserve; £2,500 to the additional reserve in the accident department; a dividend of 20 per cent. costing £58,500 was declared and £98,262 carried forward.

We usually review the progress of the Century at the end of each five years' period. It is satisfactory to find that in the five years 1935-1939 the Century has earned for the shareholders £356,670 clear of taxation, of which £268,625 has been paid in dividends, yielding the Friends' Provident an average of £6 3s. 4d. per cent. per annum, and £88,045 has been added to reserves. At the end of 1939 there was a substantial surplus on valuation of the assets.

Much thought has been given to the recasting of the terms of our life assurance policies in order to make them more appropriate for the new circumstances arising from the war. At the outbreak of war all offices agreed to insert a stringent war clause in all new policies issued, the effect of which was to restrict payment in the event of death of the life assured by reason, directly or indirectly, of the war, to the amount of premiums paid, while the full sum assured would be disbursed in the ordinary way should death arise from normal causes. It is our desire that the benefits given shall be as liberal as due regard to the interests of the whole body of our members will permit, and we have now decided that, while continuing a war clause, we may suitably include war risks within the United Kingdom and Eire to persons who at the time of making the proposal are civilians, and have no present intention of joining the Forces in the near future, still excluding death from warlike operations abroad or in the Armed Forces. This liberalisation of the cover offered in respect of new assurances has been accompanied by a readjustment of our premium rates for without-profit policies, in order to make some small contribution towards the additional hazards incurred, and for the lower rates of interest which are likely to be obtained on our funds in the future.

In the with-profit section of our operations, rates of premium have not been generally increased, but it is provided that during the war no bonus will be distributed to new members, the benefits of the with-profit contract becoming operative so soon as peace returns.

The chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr Robert H. Marsh, F.C.A. (deputy-chairman), and carried unanimously.

Net Trading Profit for year to 31st

March, 1940	£632,105
Total Reserves and Carry Forward	£992,564
Dividends on Ordinary Stock	35% plus 5% Bonus

POINTS from the Speech of MR MAGNUS GOOD-FELLOW (Chairman) at the Annual General Meeting of THE EVER READY COMPANY (GREAT BRITAIN) LIMITED ON June 3rd, 1940.

ABNORMAL TRADING CONDITIONS

At the outbreak of war the "black-out" caused so great a public demand for our goods that, in spite of the preparations we had made, it was not until February that we were able to fill the demand. All requirements for the Services were, of course, always met. To-day, with trifling exceptions, we are in sufficient supply and, subject to the operations of war, we expect to be able to maintain this position during the present year.

During the period of shortage we found it necessary to ration rigidly the distributing trades of the country, and we attempted and, I believe, succeeded in doing this with fairness. I pay a warm tribute to the patience, reasonableness and helpfulness of our distributing friends in assisting us to grapple with a situation that at times grew almost impossible.

INCREASED PRODUCTION COSTS

The cost of production of our goods has risen steadily since September last. Apart from a few unimportant increases in our prices, such increases in cost have been borne by the margins on the greater volume of business done. It is our policy to keep the prices of our goods at the lowest possible level, and we do not at present contemplate any alteration, indeed we hope that the much larger business we continue to do will make unnecessary any increase for some time to come.

STRONG FINANCIAL POSITION

Turning to the accounts, there are one or two comments I think I should make. While our nominal Issued Capital is £1,210,402, the Capital really invested in the business is in excess of £4,500,000, for our Reserves total approximately £1,000,000, and we have written off over the past few years the cost of all Goodwill, Patents and Trade Marks—the cost of the Continental businesses—and large sums from our various Plants amounting in all to £2,354,000. The Reserve Account shows that we have removed the Special Trading Reserve of £100,000. No expenditure was incurred under this head during the year and, under present conditions, we have decided that this Reserve is unnecessary.

The liquid Asset position of the Company has been much improved in spite of the necessary provision of large sums for taxation and the increase in the proposed dividend for the year. You will observe that the surplus of liquid Assets over Current Liabilities has risen from £350,000 a year ago to £566,000 to-day.

You will, I know, join with me in expressing thanks to our Managers, Executive Staff and workpeople for their achievements during the past year.

SUEZ CANAL COMPANY

EFFECTS OF THE WAR ON TRAFFICS

EXTRACTS FROM DIRECTORS' REPORT

The following are extracts from the report of the directors of the Suez Canal Company, submitted at the annual meeting held, on the 3rd instant, in Paris:—The tragic events which have been taking place in Europe since last autumn have had on the traffic of the Suez Canal and on our results a direct and important repercussion.

During the eight months which, in 1939, preceded the opening of hostilities, the traffic of the Canal had only shown a very slight reduction as compared with that of the previous year. It has, on the contrary, since the beginning of the war, suffered a serious contraction. The fall was both sudden and acute; for September it exceeded 50 per cent.; then a revival took place, a revival which continued progressively until the end of the year.

During the whole of 1939 the traffic of the Suez Canal was 29,573,000 net tons, with 5,277 transits; it is a reduction of 4,845,000 tons, or 14 per cent., as compared with the tonnage of 1938. The net profit shows a reduction of 36 per cent.

The present financial year is more seriously affected by the war than was the previous one. At the middle of May transit receipts were only 73 per cent. of those for the corresponding period of 1939, and it is not at all certain that this proportion can be maintained during the coming months.

WORKING EXPENSES

Although our receipts have diminished, the same is not the case, unfortunately, with our expenses. We are doing out utmost to restrict these as far as possible. Our desire for economy is countered by the general rise in prices, particularly as regards fuel, which has seriously increased our working expenses.

Furthermore, the Egyptian Courts have recently decided that the payment of our debentures must be based upon the gold franc. The decision of the Courts will come into force as soon as notice of it has been served upon us and the methods of application have been finally determined. Our capital charges have always been calculated upon a gold basis, and therefore in principle nothing has been changed, but these charges would be liable to increase should the Egyptian gold rate rise.

These considerations are obviously such as to urge you to prudence in fixing your dividend. Therefore we do not hesitate to propose that you should deduct from the profits available for distribution the same amounts as last year for allocation to our various sinking and insurance funds. This having been done, the profits available for distribution will allow you to fix your dividend at 492.63f. which, with the addition of 87.37f. statutory interest, would bring the total revenue of the "Action de Capital" to 580f.

The full report may be obtained upon application at the company's inquiry office, 6 Bishopsgate, London, E.C.2.

BATANG CONSOLIDATED RUBBER
ESTATES, LIMITED

BIG FORWARD SALES

The annual meeting of this company was held, on the 5th instant, in London.

Mr E. F. Slade, J.P. (the chairman), who presided, said that for the actual rubber exported an average gross price of 9.95d. per pound had been realised compared with 7.679d. The net profit was £5,103, as compared with £3,297. Their standard assessment for 1940 remained unchanged at 921,100 pounds, but they would be able to export a far larger proportion than in 1939. Another favourable factor was that forward sales for 1940 had been effected to the extent of 324,800 pounds at the equivalent of 10.96d. per pound landed London.

Their visiting agent, Mr Jack Murray, had specially commented on the improvement shown in the mature rubber which had been

manured, and, as to the 181 acres replanted, reported that the growth was uniformly healthy and vigorous. With regard to the assessment for 1940, their manager and Eastern agents had expressed the view that it was not as high as it should be. An appeal not having produced any increase, the board had applied for an inspection of the estate, which was about to be made, and could only hopefully await the result.

The board had felt justified in recommending a dividend of 7½ per cent.; the dividend, if passed, would be paid as set forth in the report.

The report and accounts were unanimously adopted.

HUDSON'S BAY COMPANY

WARTIME TRADING PROSPECTS

The 271st annual general Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 31st ultimo, at the Leathersellers' Hall, London.

Mr Patrick Ashley Cooper (the Governor of the Company), in reviewing the operations of the company, said: Taking first the retail stores department, as it is on this department that the company now mainly depends for regular profits, the accounts for the year to January 31, 1937, showed that the profit earned in this department was the largest it had ever made. The accounts of the following year showed a further increase, and, although the figures of the year to January 31, 1939, did not come up to expectation, you will be pleased to know that the profit for last year sets up a fresh record for the retail stores.

FUR TRADE DEPARTMENT

The fur trade department reaped the benefit of advancing prices until 1937, when the effect of the business recession in the U.S.A. was felt in this market, where prices continued to fall until towards the end of 1938, entailing a corresponding sharp decline in the profits of the fur trade department. Meantime, we were building up a consignment business which makes a valuable contribution to the results of this department, chiefly from shipments of silver fox from Canada and Scandinavia and of Persian lambs from South-west Africa and Afghanistan, consigned for sale on commission in the company's auctions at Beaver House.

Exchange controls and import restrictions in various foreign countries and recurring crises on the Continent put obstacles in the way of our international trade in furs, and the outbreak of war has added greatly to these difficulties.

The war has seriously affected the operations of C. M. Lampson and Company, Limited. Owing to the U.S.A. Neutrality Act and the extension of hostilities to Norway, we have come to the conclusion, after careful consideration, that it is no longer a practical proposition to operate the Lampson business as a separate entity. It has, therefore, been decided to amalgamate this business with that of the Hudson's Bay Company, and steps are now being taken to effect this in a way that will enable the amalgamated business to offer the same efficient service and to maintain as far as possible the good name which has been so long maintained by C. M. Lampson and Company.

CURRENT YEAR

As to the current year, the prospects of the fur trade are uncertain. We have been able to continue business nearer normal than we had expected, but what the future will bring in the way of restrictions it is impossible to indicate. Conditions in Canada at the moment appear to be promising, though agricultural prospects, which still remain to a large degree the basis of our prosperity, depend on weather conditions, which have not been altogether satisfactory. The war, however, has given a stimulus to many branches of business activity in Canada, and there is a widespread belief that this will lead to a further improvement in conditions, in which the company should benefit. On the other hand, just as taxation this year has taken away a great part of our earnings, we must face the fact that taxes are likely to increase and to bear heavily upon us. The proprietors may rest assured, however, that all our problems are being watched with constant attention, and that while we may be carrying on with somewhat depleted staff those who continue at work are well equipped to safeguard the interests of the company.

The report and accounts were adopted.

TELEPHONE MANUFACTURING
COMPANY, LIMITED

WORKING TO CAPACITY

The tenth annual general meeting of Telephone Manufacturing Company, Limited, was held, on the 3rd instant, in London.

Mr Fred T. Jackson (chairman and managing director) said that the net profit, after charging all expenses, including depreciation, but before charging any form of national taxation, amounted to £51,572, as against £40,542 for 1938. The sum of £14,359 had been provided for taxation, and, after transferring £13,078 to the general reserve, the directors recommended a final dividend of 6½ per cent., making 9 per cent. for the year. The balance of the general reserve account at December, 1938, was £92,000, while they had transferred to the reserve the amount received by way of premium on the issue during the year of a further 100,000 shares, less the costs of issue. The accounts showed a satisfactory position, especially when it was remembered that two departments of the main factory in full production had had to be transferred to their new factory outside London.

Most of the development and research work carried on over the past few years had proved to be of great value at the present time, and he believed that when the war was over all of it would prove to be a great asset to the company and enable them to consolidate the position still further. All their departments were working to capacity on important work. The company had five factories working under the general direction from their head office.

During the year they had had to face very considerable A.R.P. expenditure. The whole of this expenditure had been written off, but a further amount would be incurred during the current year.

The company had organised a National Savings Group among their staff and employees, which continued to be supported in a very satisfactory manner, and, as far as he could judge, this group was likely to grow considerably.

In conclusion, the chairman paid a tribute to the employees and the staff of the company.

The report and accounts were unanimously adopted.

CALCUTTA TRAMWAYS COMPANY,
LIMITEDCAREFUL MANAGEMENT UNDER DIFFICULT
CONDITIONS

The ordinary general meeting of The Calcutta Tramways Company, Limited, was held, on the 4th instant, in London.

Sir Geoffrey R. Clarke, C.S.I., O.B.E., the chairman of the company, who presided, said that the profit for the year was £103,298, or £8,815 less than in the previous year.

Expenses were £9,995 higher and takings increased by only £1,180. The increase in expenses had been chiefly due to the improved scale of pay to the company's employees to which he had referred at the last shareholders' meeting, and the full effect of which had been felt during the year. During the current year they had found it necessary to grant employees a further increase as a war bonus and they would also have to meet the increased cost of stores and materials.

To meet further increase in expenses they had found it necessary to make small increases in the cost of monthly tickets and to raise slightly the low mid-day fares. There was an increased income tax charge of £6,414, and reduction in interest received owing to realisation of investments. The final result was a balance available of £62,892, compared with £78,032, allowing payment of 5½ per cent. on the ordinary shares for the year.

The takings in the current year showed a substantial increase, but were more than offset by increased expenses, so that publication of traffic receipts had been discontinued as likely to be misleading. Considerable expenditure had been incurred in remodelling the Nonapuker shops and on new extensions.

The conduct of public utility undertakings was not easy under existing conditions, and only by careful management could profit be earned. The excellent work done by Mr Pursell and the staff, both European and Indian, had earned the good will and support of the public, which was an important aid to their success. The company continued to have very satisfactory relations with the municipal authorities, who recognised the value of their transport system and had given careful consideration to their requests.

The report was unanimously adopted.

HOLYROOD RUBBER, LIMITED

PROFIT DOUBLED

The twenty-seventh annual general meeting of Holyrood Rubber, Limited, was held, on May 30th, in London.

Mr W. Arthur Addinsell, the chairman, said in the course of his speech: The profit for the past year was approximately double that of the previous year. There was practically no difference in the quantity of rubber harvested, and the larger profit was the result of a higher average net price of about 2d. per lb. Another factor in the successful year's working was the gratifyingly low cost of production, which reflects credit on the management. The directors recommend a dividend of 10 per cent.

The company's standard production for this year has been provisionally assessed at the same quantity as for the previous year, and an appeal has been lodged for a higher standard. We are advised that our tapping records provide ample evidence in support of our claim for a higher average rate. The assessment committee has arranged to send a representative to inspect the estate, and any increase that may result will be retrospective to January 1st last.

In November a contract was entered into to deliver 8 tons per month into godown in Malaya during January-June, 1940, inclusive. The sale price was 10d. per lb., equivalent to approximately 11½d. per lb. delivered in warehouse in London. The quantity contracted for represents about one-quarter of the exportable allowance.

Having regard to the strong financial position of the company I do not propose to detain you longer. We cannot foresee what the future has in store both as regards our national life and the prospects for the rubber industry. I fervently trust that we shall meet again twelve months hence with peace restored and with a favourable outlook.

The report and accounts were unanimously adopted.

WIGGINS, TEAPE AND COMPANY
(1919), LIMITED

CONDITIONS IN THE PAPER TRADE

The twenty-first annual general meeting of Wiggins, Teape and Company (1919), Limited, was held, on the 31st ultimo, at Winchester House, Old Broad Street, London, E.C.

Mr F. L. T. Barlow (deputy chairman), presiding in the absence of Lord Portal, the chairman of the company, read his speech, as follows:—Ladies and gentlemen, the report and accounts have been in your hands for the requisite period, and I propose, with your permission, to take them as read. (Agreed.)

On the occasion of our last annual meeting I was able to report that the aggregate sales for the first few months of 1939 were in excess of those for the corresponding period of 1938. Our paper mills continued to be exceedingly busy up to the outbreak of war, when the Government set up the Paper Control as a department of the Ministry of Supply. As from September 2, 1939, maximum prices for the sale of paper were fixed, and the demand for paper of all kinds exceeded the supply. Your mills therefore continued to run full time for the rest of the year.

You are probably aware that the greater part of the woodpulp used in the past in this country has been imported from Scandinavia. With the cessation of shipping from that country the paper trade lost the most important source of its supply of woodpulp, with the result that there must be a great curtailment of productive activity on the part of mills manufacturing papers from woodpulp. Your group of companies are fortunate in having an important part of their output produced from rags which are collected in this country, and certain of your mills should in future therefore be able to run a high proportion of normal full time.

It is in view of the uncertainty of the supplies of raw material as a whole and the necessity for conserving the finances of your group of companies that your directors have decided to pay no cash bonus for the year 1939.

I am pleased to inform you that, following the appeal of His Majesty's Government, a National Savings Association was commenced in every unit of our organisation, and I am pleased to state that this has met with the enthusiastic support of our employees. In many of the units up to 100 per cent. of the employees are contributors.

CURRENT YEAR'S OUTLOOK

As I have already stated, the volume of trade of your company for the current year is bound to show a reduction compared with that of the year 1939 in view of the scarcity of raw material and the paper-rationing scheme which has been operating as from the beginning of March this year. I am sure you will appreciate the impossibility of making any forecast of the trading results for the whole year, but I am able to state that they have been quite satisfactory to date.

You will see that we recommend the payment of a final dividend on the ordinary stock of 5 per cent., less income tax, which brings the dividend for the year 1939 up to 8 per cent. As I have already mentioned, we do not propose to recommend the payment this year of a bonus on the ordinary stock. Then we propose that £36,000 be transferred to the income-tax equalisation account. We also propose the transfer of £80,000 to general reserve, bringing that account up to £793,000.

The Chairman then moved the adoption of the report and accounts.

Mr F. D. Pirie seconded the motion, which was unanimously passed.

The dividend as proposed was approved, the retiring directors were re-elected, and the auditors were re-appointed.

THE MINING TRUST, LIMITED

EARL CASTLE STEWART'S REVIEW

The annual general meeting of The Mining Trust, Limited, was held, on the 6th instant, at Winchester House, Old Broad Street, London, E.C.

The Earl Castle Stewart, M.C., chairman of the company, in the course of his speech, said: Revenue for the year amounted to £124,648, which is practically the same as in the previous year. The balance of income over expenditure totalled £74,713 and has been applied to reducing the debit balance on income and expenditure account.

Our most important single investment is still represented by our interest in Mount Isa Mines, Limited. We own roughly £1,000,000 worth of first debentures and 80 per cent. of the ordinary share capital of this company. During the twelve months ended June 30, 1939, the price of lead was roughly £15 per ton and of zinc £14 per ton. This represents a considerable fall in prices as compared with the previous year—1938—when the average

for lead was £17 10s. and for zinc £16 15s. However, in the case of this heavy fall in prices of its products, Mount Isa not only was able to meet all debenture and loan interest, but showed a small profit of £18,000 before charging depreciation. At the present time practically all the lead and the zinc concentrates produced by this company are required for Government account. The prices for our products have been fixed by the Metal Controller and are virtually the same as those which are being given to all other Empire producers of these metals. It is not possible at the moment to forecast what the result of these arrangements may be, but it is expected that Mount Isa should not fare worse during the period of hostilities than it did last year.

We own 843,147 shares in New Guinea Goldfields, Limited, approximately 18 per cent. of the issued capital. You will have observed in the speech of the chairman of that company that profits were somewhat greater this year by £16,744, but that the directors considered it wise to limit their dividend to 5 per cent., which is the same as that declared for the previous year.

The Big Bell Mines, Limited, Western Australia, in which we have a share holding, milled 447,322 long tons last year, from which 59,727 ounces of gold were recovered. Four quarterly dividends aggregating 8s. 6d. Australian were paid during 1939, representing £170,000 Australian, of which the share accruing to Mining Trust was £6,720 sterling.

Our interest in the Saudi Arabian Mining Syndicate, Limited, was increased by a further 692 shares of £1 each at a cost of £19,192 11s. During the period from June to December, 1939, this company milled 43,060 tons of ore and produced 15,984 ounces of fine gold, 17,876 ounces of fine silver and 8,837 pounds of copper. Based on mine weights and assays and conservatively estimated prices to be realised for silver and copper, the estimated operating profit for the year 1939 is approximately £52,600 before deduction of depreciation but after deducting 5 per cent. of the gross value of the precipitates and concentrates as royalty payable to Saudi Arabian Government.

Last year I was obliged to inform shareholders that I did not think at that time that it would be practicable to carry out a scheme of capital reconstruction. I am afraid that any such reconstruction is quite out of the question until after the conclusion of the war. We can comfort ourselves with this thought—that never in the years since I had the honour to become your chairman have we been in such a strong financial position to meet any misfortune which might befall us.

The report was adopted.

partly as a result of the fixing of minimum prices on the Buenos Aires market. Within a few weeks, the price of Plate linseed fell by £3 per ton and that of Calcutta by £2 per ton. This fall has been reflected in the new schedule of oil prices; raw linseed oil is cheaper by 30s. per ton, while other prices are unchanged. Trade in Egyptian cotton seed is hindered by the difficulties of shipping through the Mediterranean. The Ministry of Food has restricted the manufacture of compound feeding stuffs to two-thirds of that produced in the same quarter of last year.

Rubber.—The news that the Ministry of Supply was prepared to buy rubber f.o.b. for this country brought a firmer tone in the markets both in London and New York, although prices were little affected.

GOVERNMENT RETURNS

For the week to June 1, 1940, total ordinary revenue was £9,541,000, against ordinary expenditure of £71,088,000 and issues to sinking funds of £250,000. Thus, including all sinking fund allocations, the deficit accrued since April 1st is £298,559,000, against £110,281,000 for the corresponding period a year ago.

THE JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LTD., GROUP DECLARATION OF DIVIDENDS

NOTICE IS HEREBY GIVEN that Dividends have been declared payable to Shareholders registered in the books of the undermentioned Companies at the close of business on 30th June, 1940, and to persons presenting the respective Coupons, detailed below, detached from Share Warrants.

The Dividends are declared in the currency of the Union of South Africa and become due on 1st July, 1940, but, unless prevented by irregularity in the mail service, warrants in payment will be posted both from Head and London Offices on or about 7th August, 1940, this interval being necessary for the balancing of the books and preparation of the warrants. Dividends payable from the London Office will be paid in British currency at par provided there is no material difference between South African and British currencies on 1st July, 1940. Should there be any material difference between the two currencies, the London Office will pay on the basis of the equivalent British currency calculated at the rate of exchange ruling on that date. Amounts payable to persons presenting Coupons will be on the same basis irrespective of the date of presentation of Coupons.

Warrants despatched from the London Office to persons resident in Great Britain or Northern Ireland will be subject to a deduction of United Kingdom Income Tax at rates to be arrived at after allowing for relief (if any) in respect of Dominion Taxes.

Shareholders with registered addresses outside South Africa who desire to have their dividends paid to an address therein, or *vice versa*, must give notice to the Companies to that effect on or before 30th June, 1940.

The Transfer Books and Register of Members will be closed in each case from 1st July to 6th July, 1940, both days inclusive.

The Dividends on the shares included in Share Warrants will be payable to the persons presenting the relative Coupons at the London Office, 10 and 11 Austin Friars, E.C.2, on or after 8th August, 1940, in accordance with a Notice to be issued by the London Office.

Coupons must be deposited FOUR CLEAR DAYS before being paid and, unless accompanied by Inland Revenue Declarations, will be subject to a deduction of United Kingdom Income Tax, as above.

NAME OF COMPANY (Each of which is incorporated in the Union of South Africa)	Dividend No.	Coupon No.	Rate of Dividend

7th June, 1940.

TERRITORY OF SOUTHERN RHODESIA SALISBURY MUNICIPAL LOAN

ISSUE OF £100,000 FOUR AND A HALF PER CENT. BONDS TO BEARER OF £100 EACH

NOTICE IS HEREBY GIVEN that, in accordance with the conditions on which the above Loan was issued, the following BONDS were on the 4th June, 1940, DRAWN for redemption at par in 1st July, 1940:—

Bonds numbered 41, 118, 128, 194, 226, 233, 275, 421, 454, 609, 658, 674, 881, 935, 956, viz.:—15 Bonds of £100 each.
Present, Josh. D. Watts, Notary Public, of the firm of Cheeswright, Casey, Duff, Watts and Company, Notaries, St. Dunstan's Buildings, London, E.C.3.

The Bonds and all Interest Coupons not then due must be left at the office of the Standard Bank of South Africa, Limited, 10 Clement's Lane, E.C.4, three clear days for examination. Payment of principal will be made on and after the 1st July, 1940, from which date the Bonds will cease to bear interest.

In addition to the above, Bonds amounting to £87,700 have previously been purchased and drawn.

For the Standard Bank of South Africa, Limited,

RALPH GIBSON, Manager.

10 Clement's Lane, London, E.C.4.
4th June, 1940.

OTTOMAN BANK

(Incorporated in Turkey with Limited Liability)

NOTICE IS HEREBY GIVEN that, in accordance with Article 29 of the Statutes, the ANNUAL GENERAL MEETING OF SHAREHOLDERS will be held on Tuesday, the 25th June, 1940, at Winchester House, Old Broad Street, London, E.C.2, at 12.30 p.m., to receive a Report from the Committee, with the Accounts for the year ending 31st December, 1939, to propose a Dividend and to replace the retiring Members of the General Committee.

By the 27th Article of the Statutes, the General Meeting is composed of Shareholders possessing at least thirty shares, who, to be entitled to form part of the Meeting, must deposit their shares at the Chief Office of the Company, Istanbul, or at either of the several Branches or Agencies abroad (in London at 26 Throgmorton Street, E.C.2, and in Paris at 7 rue Meyerbeer, 9me), ten days at least before the day fixed for the Meeting.

W. STEWART MCKIM, Secretary to the Committee.

London, 3rd June, 1940.

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION LIMITED

NOTICE IS HEREBY GIVEN that the TRANSFER BOOKS of the 31 per cent. First Mortgage Debenture Stock, 1965-73, of the Company will be CLOSED from the 17th to 29th June, 1940, both dates inclusive, for the preparation of Interest Warrants.

Warrants will be posted on the 28th June.

By Order of the Board,

G. G. HEATHCOCK, Secretary.

Toll End Road,
Tipton, Staffs.
1st June, 1940.

THE CUNARD STEAM SHIP COMPANY LIMITED

The Directors of The Cunard Steam Ship Company, Limited, have resolved to defer payment of the Dividends on the 5 per cent. Cumulative Preference Stock and 6 per cent. Second Cumulative Preference Stock of the Company due to be made on the 1st July next for the half-year ending 30th June, 1940.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, Economist Newspaper Ltd.,
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

The Battle of France

THE Germans have reached the gates of Paris. The French Army, fighting the most magnificent battle of any in its long history of tremendous military engagements, has been forced back yard by yard from the original Weygand Line under the pressure of Germany's overwhelming superiority in numbers and machines. Every inch gained has cost Germany a holocaust of human life and mechanical destruction. One hundred and twenty German divisions are reported to be deployed in this engagement. The figure represents practically all the man power Germany has available at the present time. The material wastage, too, is tremendous. Training tanks sent post-haste from instructional centres have appeared among the relics of the battlefield. Hitler is using every ounce of man power and machine power to crush France's resistance and force a decision before the end of June.

But if France has taken a deadly toll of her enemy, she too is bearing the brunt of the most savage and desperate attack to which any nation has ever been submitted. To our deep distress she is facing this attack almost alone. No words can do justice to the courage and tenacity of the French Army and we, who for the time being must stand by and follow the fortunes of their struggle almost as on-lookers, can only vow to send every reinforcement of which we are capable now, and, when our time comes, to fight as doggedly and bitterly for France's independence as she is fighting for ours to-day.

There is little prospect of a slackening in the German onrush. The encirclement of Paris appears to be the immediate objective of the German advance and units on the right flank have crossed the Lower Seine. The developments in Champagne, however, suggest that the Germans are also trying to drive a wedge between the Maginot Line and the main body of the French Army.

Germany might not be able to keep up the intensity of this offensive were it not for a new military factor which emerged on the afternoon of June 10th, when Italy staged her entry into the war to coincide with the hour of France's greatest embarrassment. It is hardly worth while

to waste words of censure on Italy's despicable conduct. Mussolini, after all, has long since ceased to be a free agent. The decision of June 10th was taken not by the Fascist regime, but by the German General Staff. Those who accuse the Duce of playing the jackal to Hitler's beast of prey forget that the jackal, however despicable his activities, at least acts under no external compulsion. Germany has cast Italy for the rôle of a performing monkey.

Italy's offensive has yet to be launched. It may be delayed until the German army feels more confident of its ability to turn the Maginot Line; but even before it is launched, the jeopardy in which France, and therefore the Allies, stand to-day is clear enough. Our pressing danger has sounded like a trumpet across the Atlantic. In a revolution of opinion as spectacular and rapid as the *Blitzkrieg* itself, the American people is at last alive to the fact that their cause as well as ours is being decided on the battlefields of Northern France. President Roosevelt in his speech delivered on the night of June 10th echoed the opinion of a vast majority of the Americans when he said that the United States as "a lone island in a world dominated by the philosophy of force" was "a helpless nightmare of a people without freedom" and drew the conclusion that America's immediate task was to "extend to the opponents of force the material resources" of the American nation.

The help must come soon, for our plight is desperate. The plea made by M. André Maurois to England can be passed on by both Allies to the United States. Help sent now is infinitely more effective than help sent later, even though it might then be ten times more technically efficient. It is not a matter of months, but of weeks. Determined as we are to continue the war in Europe, on the seas, if necessary in our dependencies in the New World, the struggle can be resolved with an infinitely less costly outlay of life and goods if with the help of America's resources we can build up without delay a decisive superiority in material strength.

Belligerency At Last

MUSSOLINI'S declaration of war was from the immediate standpoint no surprise. Few Powers have so ludicrously paraded their bellicose intentions before bracing themselves for the decision to fight. Nevertheless, an element of surprise has not been completely banished. What, after all, has Italy to gain by sealing her enslavement to Germany with her own blood? Why has she disregarded the hand of genuine friendship, of patient conciliation stretched out to her by the Allied Governments? This way lay the possibility of expansion achieved by peaceful means and completed by a bond of co-operation and friendship. Yet Italy has chosen the way of treachery, cowardice and servitude.

The reasons for her choice lie deep in her historical development. We tend to forget that once Italian national unity had been achieved, it was not Germany but France and Britain that stood in the path of Italian aggrandisement. We forget, too, that Italy emerged from the Great War a frustrated and disappointed Power. While the Allies increased their colonial possessions at the expense of Germany and Turkey and added to their Mediterranean coastline, Italy came away from Paris almost empty handed. The fury of disappointment which followed Versailles gave Mussolini his opportunity and swept the Fascist Party to power.

There were two elements in the Fascist revolution: a stable conservative element which survived the first ebullience and was strong enough during the early years of the Fascist regime to influence Mussolini's foreign policy in the direction of moderation and co-operation; the nationalist ferment remained, however, and extreme Fascist circles never once abandoned the dream of imperial aggrandisement and Mediterranean hegemony.

The world economic crisis played into the hands of these extremists. The old bulwarks of Conservatism, business, the landowners, the peasants, the better-paid workers, felt the economic blight. The Fascist regime was faced with a revolutionary situation which could only be met by revolutionary expedients. But apart from nationalist ambition and imperial aggrandisement the Fascist Party had no particular programme. Hitherto Fascism had meant little more than the erection of Mussolini's personal dictatorship on the basis of the *status quo*. Now it had to find a programme and crusade. It sought them in the tradition of the extremists, in imperialism and aggrandisement. The decision was no doubt hastened by the emergence at about the same time of a similar though more virulent dictatorship in Germany.

The Abyssinian War and Sanctions are a turning point in post-war European history. Fascist extremists had always suspected France and Britain; sanctions confirmed their distrust. The action was sufficiently hostile to increase resentment, its result so ineffectual that Italy for the first time felt she could risk the hostility of the "decadent" West and even hope to oust France and Britain from the Mediterranean. Within a month of victory she was campaigning in Spain.

Here the bitter lesson of Guadalajara drove Italy into the Axis partnership as a junior member. The Spanish adventure taught her that she could not establish Mediterranean hegemony unaided. Her economic weakness was—and is—remarkable. Although in a good year she is all but self-sufficient in grain (her imports for 1938 were only 4 million quintals, against a home production of 127 millions), she depends upon outside supplies for a wide range of foodstuffs, including meat and sugar, while her position in the sphere of industrial raw materials is one of complete dependence. She can produce about half a million tons of iron a year, and needs some four millions. She cannot cover one-tenth of her oil requirements. She has no copper, no tin and none of the component metals of steel alloys; her minimum import figure for coal is 7½ million tons a year. Almost the only raw material that Italy has in plenty is marble, which can be used for triumphal arches but is more often used for tombstones. No Power, given

such economic handicaps, could face alone the grim struggle of totalitarian warfare. Italy had of necessity to seek an ally, and since the Democracies blocked her path of expansion in the Mediterranean, that ally could only be Germany.

The Axis alliance, by binding Italy to Germany in a species of *Niebelungentreu*, encouraged every aspect of Italian extremism. Under the influence of the German connection, some of the worst features of the Nazi revolution were transplanted onto Italian soil and Germany began an infiltration of the Fascist bureaucracy and officialdom which boded ill for the country's future independence.

Nowhere was the change more apparent than in the foreign sphere. Italy was soon playing the rôle of "brilliant second." She could not break with Germany, for Hitler was doing what the Duce would have greatly desired to do: he had driven the West into retreat and each new aggression was accomplished without resort to war. The new methods received a final vindication at Munich, where Italy acted as "honest broker" in a negotiation which betrayed the independence of Central Europe. The whole transaction was nicely calculated to excite Italy's envy and appetite. Hitler obtained all he desired without striking a blow simply by threatening the "decadent" West with war. It was a method which exactly squared with Italy's military and economic weakness and her Mediterranean ambitions. The plea for a "Mediterranean Munich" filled the Italian Press, and in November, 1938, the jackal cries of "Corsica, Tunis and Nice" were raised.

The year 1939 proved a cruel disappointment. The Nazis brushed aside Italy's reminders that her turn for territorial redistribution had come and swept forward on their path of aggrandisement. Czecho-Slovakia disappeared, Memel was seized and German pressure on Poland began. Italy signed a full offensive and defensive alliance with Germany at Milan in May, 1939, but she regarded this treaty as a pressure instrument against the craven pluto-democracies. They, however, were to provide Italy's second disappointment. In September, 1939, when Germany invaded Poland, they declared war.

From the hour in which war was declared Italy's policy towards the European struggle has been dictated by two different orders of fact. On the one hand, there are Germany's needs; on the other, the limitations and the ambitions of Italy. Of the two, Germany's needs have proved to be decisive. The war, by increasing Italy's isolation, has accentuated the process whereby the more powerful Nazi revolution has come to absorb the weaker Fascist experiment as the greater grain of mercury absorbs the lesser. Even had German and Italian interests clashed in September, 1939, it is extremely unlikely that Italy would have been able to assert her independence.

These interests did, in fact, coincide. The Nazis still believed that the Western Democracies would not fight over Poland. They hoped to round off a lightning victory in Poland by a shameful peace in the West. They were thus anxious to prevent at all costs a spread of hostilities and to keep Italy out of the conflict so that she might act as "honest broker" once the peace offensive was launched. The scheme broke on the reef of the Allies' decision to continue hostilities. Even so, Hitler still preferred a non-belligerent Italy. The war degenerated during the first eight months into an economic siege. The Allies' blockade was the only weapon of which they were making effective use, and in this static state of economic warfare Italy was an important gap in the Allied line.

Non-belligerency also fulfilled the necessities of Italy's economic and political situation. In September, 1939, she was in no position to fight. When Count Ciano divulged in his speech of December 16th that Italy had qualified the "Pact of Steel" with the proviso that Italy would need three years to be fully prepared, he was speaking the bare truth. War reserves were negligible, the army was in process of reorganisation, aircraft production had fallen, while in the vital sphere of public opinion the Polish campaign

had proved to be bitterly unpopular both with the conservative and with the people.

The eight months of siege warfare modified this position. The substitution of Signor Riccardi for Signor Guarnari was a signal for new activity in the sphere of supply. At fantastic cost to herself, Italy succeeded in building up considerable reserves of war materials, probably sufficient to last her through three or four months of war. The price entailed by these purchases caused a steep rise in the cost of living. Rationing was introduced and the Italian people began to feel the effect of a war in which they had hitherto felt themselves to have no share. Skillful propaganda attributed the new economic stringency to the Allies' contraband control. They were repeating Sanctions. Once more Italy's whole economic life was threatened by the wealthy West. Thus the war began to acquire a more popular appeal.

This period of non-war was brought to an abrupt close by the Allies' decision to close the leaks in the blockade and by Germany's violent reaction to the decision. Within six weeks Germany was at the gates of Paris and the war was transformed overnight from one of siege to one of the utmost mobility. Obviously both Germany's needs and Italy's reactions have also been modified.

Germany must force a decision at once. The titanic onslaught on the West cannot be maintained through another winter. Everything, therefore, depends upon complete

military victory now and Italy, the non-belligerent leak in the Allied blockade, must give place to a belligerent Italy throwing every ounce of her military strength into the scales on Germany's side.

On the Italian side, too, the desirability of intervention has taken on a new aspect. The series of smashing German victories has persuaded the Italian leaders that the possibility of a "Mediterranean Munich" is at last in sight. The Fascists can argue that Germany has so demonstrated the decadence and military inefficiency of the West that even should Italy have to fight for Mediterranean hegemony, the fighting would be so negligible that it could be concluded almost without cost.

Yet it is really Germany that has determined Italian intervention. Italy no longer enjoys effective freedom of action. Her country is flooded with Germans, "tourists" and otherwise, military, technical and economic missions swarm her Ministries, her police are "assisted" by German units, her foreign policy is dictated from the Wilhelmstrasse, and the Italian declaration of war, for all Italy's own ambition and cupidity, is essentially a decision of the German General Staff.

Should Hitler win, Italy's servitude will be the more complete. Should he lose, Italy will share in his degradation. In either case, the decision taken by the Duce on June 10th is an irreparable disaster for the patient, impotent and tragically irresponsible Italian people.

A Check on Production

RECRIMINATION about the past, we are told (and by none more earnestly than by those who have reason to fear it), is an unworthy dissipation of energy in a great national emergency. The doctrine is dangerous, since it would allow those whose essential frivolity and incompetence is now abundantly proved to remain in offices of trust and power. But whatever may be done about persons who have inadequately served the State in the recent past, there is not, and should not be, any protective ordinance for false and misleading ideas. Our safety now depends on a merciless impeachment of doctrines, if not of men. Many very dearly cherished notions have been swept aside by a month of *Blitzkrieg*. We no longer believe that we have only to sit tight to win; that Germany's effort of production has been no greater than our own; that the war can be fought without the utmost sacrifice of blood and treasure; that a single scrap of virtue resides in caution. In these and in many other ways we have awakened and are now, at last and at length, setting ourselves with all our strength to the task of production.

But there is another set of ideas, just as false and as enervating, which has not been abandoned, partly because its roots lie deeper in self-interest, partly because the proofs of its failure, though decisive, are not publicly apparent. This is the set of ideas that has been the dominant economic philosophy of the Conservative Party in the past nine years, the set of notions that sees its ideal of an economic system in an orderly organisation of industries, each ruled feudally from above by the business firms already established in it, linked in associations and confederations and, at the top, meeting on terms of sovereign equality such other Estates of the Realm as the Bank of England and the Government. Each British industry, faithful to the prescription, has spent the past decade in delimiting its fief, in organising its baronial courts, in securing and entrenching its holdings and in administering the legal powers of self-government conferred on it by a tolerant State. This is the order of ideas that has transformed the trade association from a body of doubtful legality, a conspiracy in restraint of trade, into a favoured instrumentality of the State, until membership in such a body has become as necessary to the business man who wishes to be successful as an old school tie has been to the ambitious Conservative politician. It is the order of ideas that led to the Import Duties Act being drafted in such a way as to put a premium on self-seeking monopolies and a discount on the public interest; that turned "high profits and low turnover" into the dominant slogan of British business;

that raised the level of British costs to the highest in the world. It is a set of ideas that is admirable for obtaining security, "orderly development" and remunerative profits for those already established in the industry—at the cost of an irreducible body of general unemployment. It is emphatically not a set of ideas that can be expected to yield the maximum of production, or to give the country wealth in peace and strength in war.

Nevertheless, when the war broke out and it became obvious to all but the purblind that maximum production had become the one object that superseded all others, this anti-productive system was carried to its highest point. The noble army of controllers was recruited from organised industry; the rings, from being tolerated, became endowed with all the power of the State. The result has been what could have been, and was, predicted—not so much an unfair advantage to certain private pockets as a sluggish tempo of advance and a low limit to what was considered possible. British industry, by and large, has, until recent weeks, been making the maximum effort compatible with no disturbance to its customs now or to its profit-making capacity hereafter. There is no accusation of unpatriotism in this; on the contrary, business men, placed in an impossible position of divided loyalties and contradictory intentions, have done their best. But the result has been what we see—a startling inadequacy of production. What was formerly prophecy is now fact: the men who run the existing organisations of their industries have not been the best men to organise their industries for war. The best of them have been only partial successes; the worst have been failures. Both in tanks and in aircraft (to take only the two outstanding cases) the existing rings have failed to produce the goods and, nine months too late, outsiders have had to be brought in.

What needs to be realised, however, is that this is not a case of individual failures but of a system that is wrong. It could not be expected to work satisfactorily. In really totalitarian war, every industry must change its shape and size. If it is unnecessary, it must disappear; if it is essential, it must vastly increase its capacity. Every industry, that is to say, must either suppress its present profits or run the risk of finishing the war with that business man's bugbear, excess capacity. What is more, industries that continue to be active in wartime must make different things for different purchasers; the more they disappoint their regular clients and disturb their normal channels of trade, the more, in most cases, they are serving the State. Every industry, in short, must jump through some hoop or

other. How could it have been imagined that the best method was to leave each to whip himself on? The system, as a method of control, was only compatible with the general attitude of mind that looked on the war as a spare-time hobby. We have abandoned that disastrous attitude; cannot we get rid of its no less disastrous offshoot?

Let it not be thought that this is an attack on the business man as such. On the contrary, it was the energetic, open-minded, efficient business man who rescued England in the last war and will do it again. There are few things more urgent than to find a supply of first-class business men and to put them to work. What is here being argued is that it is a waste of talent to use a business man where his experience prevents him from being open-minded, and where his inescapable self-interest is a drag on that energy in ruthlessness that is so often needed. Still less is the present argument an advocacy of *laissez faire*. Far from it; the need of the hour is for more organisation and more control—but inspired by the paramount needs of the pub-

lic safety, without any of the hindrances imposed (subconsciously more often than deliberately) by habit of mind or instinct of self-preservation.

A great effort of mind and will is needed to rid ourselves of these disastrous doctrines. What distinguishes a democracy from a dictatorship is the voluntary effort of its citizens. But that does not mean that we leave the paying of taxes or the giving of military service to the voluntary decision of those whom they affect; freedom is combined with efficiency when each man obeys the orders of an authority which he voluntarily accepts. It is time we applied the doctrine of democratic efficiency to our industry and appointed impartial authorities to give orders instead of issue appeals. There will be as little diminution in loyal co-operation and as much increase in effectiveness as when taxes are substituted for conscience money or conscription for volunteering. Only so shall we raise our production of the materials of war with that rapidity which is now our sole salvation.

Wages and the Workers

THE outlines of the Government's wages policy can now be seen. Wages are to go up. Both the Amalgamated Engineering Union and the National Federation of Building Trade Operatives are applying for an increase of 3d. an hour. In cotton weaving, a new minimum wage is being sought. The disparity between the wages of building and civil engineering workers on similar jobs is to be solved by raising the lower paid. In fact, in nearly all the major industries negotiations for higher pay have either been concluded recently or are likely to start soon; agricultural wages have been fixed at the startlingly high national minimum of 48s. a week; and Mr Bevin, it is understood, has not discouraged the unions from going ahead with further claims.

Mr Bevin is a trade unionist himself. He is actually leader of the largest trade union in the world and, at the Ministry of Labour, he looks at wages from the trade union point of view, the point of view of the most highly organised independent working class in the world. That is not to say that his attitude is necessarily sectional or contrary to the national interest. Over two-thirds of Britain's adult population are manual wage earners; and it is they who must mainly man our armies as well as our munitions works. Among insured workers about one in three belongs to a trade union.

The union view on wages is simple. They should be settled by collective bargaining. The argument is that, so long as industry is run by private people free to make what profits they can, the workers should be free in turn to squeeze out what wages they can by the pressure of their organised bargaining power. So long as there are private profits, the claim runs, there must be bargaining; and a system in which profits continue without collective bargaining is regarded as the framework of Fascism.

War has not altered this view. On the one hand, it is argued, the workers must make sacrifices in terms of toil, long hours, speeding-up, physical exhaustion and the loss of individual liberty. They do that willingly; and, by reason of their numbers, they must do most of the fighting at the front as well as most of the war work at home. On the other hand, the rich must hand over their wealth. That is the division of sacrifice in the unions' analysis; money from the rich, blood and sweat from the poor. That is where Mr Bevin stands when he says that there is to be "no mucking about with the workers' pennies." They must be paid for their extra labour.

The argument is natural as well as naïve. It is naïve because it hardly comprehends the difference between money wages and real wages, between the size of the pay envelope and what in fact its contents will buy. All-round increases in wages and earnings may undo the wage-earners themselves, for their added purchasing power, bidding for scarcening civilian goods and competing with military claims for materials, may simply drive up prices and costs.

Their power to buy may be less, not more, and they will want more wages still—to repeat the same fruitless process. This is the notorious "vicious spiral."

In the months of *Sitzkrieg* after September the unions refused to believe in the "vicious spiral." The warning of inflation seemed a trick to hold down wages while incomes and profits were rising. Sir John Simon's dictum that wages should not move on a sliding scale with the cost of living was greeted with deep suspicion; and, despite the greater perception of Labour economists like Mr G. D. H. Cole, Mr Keynes's plan to avoid inflation, by forcing extra earnings to be saved, was widely damned. The only argument from the economists that was palatable was the claim by some that, so long as there was unemployment, there could not be inflationary dangers.

The scene has changed. A desperate shortage of war workers is more weighty than the unemployment figures; and the war has become a life and death battle. It is still the unions' view, and Mr Bevin's, that collective bargaining should determine wage rates. It is still their view that the labourer is worthy of extra pay for extra work. But the broader economic context is better appreciated. The urgent need to cut down civilian consumption sharply, in order to release resources for the war, is seen, and with it the impossibility of increasing real wages. The pay envelope may swell. They think it should, and they know the psychology of the working millions. But actual consumption must shrink.

That is the brutal point. The nation, as a whole and class by class, has not got to consume more, but less. There are two roads to this end. One is to fix wages. The other is to let wage rates and earnings rise as the volume of work and the level of prices go up, and then to fix consumption; price rises will limit it, rationing will restrict it, the control and prohibition of raw materials for civilian use will hold it down.

The second is the path Labour has chosen. By it they retain their crucial right to bargain for their remuneration. And it will be the duty of the Government, in which Labour itself holds key commands, so to plan the distribution of materials and the output of industry in real terms that civilian consumption is in fact cut down to the level required to make sure of an efficient flow of economic resources into war production.

By this choice consumption and not wages would be controlled. Its basis may be fallacious, for it is real wages, the power to buy, that count, not money wages; but its roots lie deep in history; trade unions have always put money wages first. Moreover, there is rough justice in it. The machinery of wage negotiation is kept running. The function of the individual union to look after its members' interests is preserved. The doctrine that wages can be fixed from outside is rejected. And there may be some good sense in it, too. In Germany, when war started, wages

were cut and fixed. Then, to lessen popular discontent, overtime increases, bonuses, etc., were restored, while comprehensive rationing and restrictions prevented the increases from pushing up consumption.

At any rate, there is a wages policy here, where there had been none for nine months. Born in the gravest of emergencies, when unprecedented calls are being made upon the workers, and willingly answered, it is naturally not the same as the considered programme (probably on Keynesian lines) that might have been worked out in the earlier, quieter months. And if the controls are made rigid, ruthless and embracing enough, the danger in monetary terms is hardly vital, certainly not great enough to justify delay and wrangling now.

The trade unions have their way. Whatever work they are asked to do they are doing; their members and fellow-workers are filling the factories and the Forces. In return they bargain freely for higher pay—with one crucial prohibition, essential for non-stop output. They must not strike in disputes, but must accept arbitration; and they are no longer at liberty to change their jobs at will. Consumption (the real crux) is to be held down by other means. War profits are to be taxed away; and the incomes of middle- and upper-class people, people whose standard of living will in any circumstances be higher than that of the mass of wage-earners, will be steeply shorn by direct

taxes. It is a compromise; but in the unions' eyes it is a fair bargain.

It has obvious weaknesses. It will become increasingly hard to hold down the prices of necessities, of food and clothing. There is no comprehensive labour front, no nation-wide machinery or policy: bargaining is always on a craft, industrial, sectional or local basis; and a host of workers, unorganised or in weak unions, and generally ill-paid, will tend to fall behind. The task of making sure that no one falls into hardship below the minimum standard that allows reasonable health and nutrition will be made very much harder. Schemes to subsidise food prices or, as in the new milk proposals, to furnish cheapened foods for specially necessitous categories of consumers will be both much more necessary and much more difficult.

In short, the compromise has all the defects of traditional trade union policy, the policy that, in the cause of collective bargaining and money wages, has always opposed family allowances or fostered savings. Economically, it is second or third best. But it is practicable, and if its result is to key labour up to the gigantic efforts that can alone save the Allies from defeat now, the gains will exceed the losses. The danger of runaway inflation if wages rise beyond quite narrow bounds persists; the unions have opted to risk it with open eyes. But it can be averted; and, meanwhile, it is work that will win the day.

NOTES OF THE WEEK

The Fate of Paris

With Germany's advance columns at the gates of Paris it seemed likely for a time that the French would decide to defend their city street by street and transform their capital into a field of battle. Now the decision has been reached to declare it an open city. The French army will defend the outskirts and, if too severely pressed, will retire behind the town and establish a new line to the rear. The decision is obviously sound. The total destruction of one of the world's most beautiful and historic cities would have been a loss not only to France but to all those countries which can still call themselves civilised. This, however, was not the reason for the decision. Had there been any military purpose to be served in contesting every yard of the city, the French would have sacrificed their capital without hesitation. But such was not the case. The German mechanised columns, if not held along the Seine, will sweep not through but round Paris, leaving the city behind them as they left Liège and Namur. Paris would have been submitted to the horrors of bombardment and blockade, and the German advance would not on that account have been checked. The Government have left the city and have established their seat elsewhere. There is no thought of capitulation. In M. Reynaud's words, "We shall fight in front of Paris, we shall fight behind Paris. We will shut ourselves into one of our provinces, and if we are driven out, we will go to North Africa and if necessary to our possessions in America."

* * *

The Mediterranean War Zone

The initiative in the Mediterranean fighting has been left to the Allies. Within the first forty-eight hours Italy's only contribution was a few air raids on Malta and a certain amount of confused fighting in the Somaliland area. The Allies, on the other hand, had bombed the north of Italy and carried out extensive raids on Libya, bombing air bases and harbours with some success. In Abyssinia and Italian Somaliland, bombing raids were carried out by South African squadrons. It is still too early to comment on the military situation. Neither Italy nor the Allies have yet shown their hand. It is possible that Italy's rôle, for the time being, is still to be a passive one. She has experimented in so many kinds of belligerencies that a full but non-fighting belligerency should not be beyond her powers, provided she is not attacked. Germany may prefer to use Italian troops for garrison duty, thus setting free fresh German divisions for the onslaught on France. The Allies' aerial activity suggests, however, that Italy will not be left in a state of passive belligerency. Not only the Mother Country, but large and

vulnerable areas in Africa are now legitimate targets of attack. Libya's armies depend entirely upon provisioning from Italy. Even water has to be imported. The seizure of Tobruk would break one of Italy's most important offensive lines. Abyssinia is still largely unpacified. Here, surely, we have an opportunity of making good an injustice which we helped to bring about. There are also the Dodecanese Islands, inhabited entirely by Turks and Greeks. We must surely avoid the military disadvantage of allowing Italy to choose the place and hour for her blow. In the Mediterranean, at least, we can force the pace.

*

Any hesitations we may show spring, no doubt, from the need to consider interests other than our own. Mussolini has disclaimed his intention of making war on any Power save the Allies. The independent Mediterranean States have to make up their minds what attitude they will adopt towards a war which, however much it passes them by, will still be waged along their frontiers and round their coasts. Egypt has already taken her decision and has broken off diplomatic relations with Italy. Consultations are continuing in Turkey, but commercial relations are already severed, Turkish ships have been advised to make for the nearest ports and the Turkish fleet is at the Dardanelles. The Turks are staunch friends, fearless fighters and bitter opponents of the Italians,

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

whose amalgam of individual military incapacity and general expansiveness and bombast they have long despised. There remains the problem of Spain. Sir Samuel Hoare received a very cordial official reception. Yet the Government has proclaimed Spain's "non-belligerency," and the street cries for Gibraltar do not abate. Italian influence is strong in the Spanish Army, and some 60,000 German "residents" still survive from the Civil War. No one doubts the Caudillo's genuine desire for peace, but the Nazis have developed the technique of infiltration to such a pitch that he may not be able to restrain his own extremists. The situation is obviously delicate and will become more so as France's jeopardy increases.

Non-Belligerent America

Mussolini's declaration of war completed the process of converting the United States from a neutral into a non-belligerent, anxious to give her utmost aid to one side in the struggle. The change was recorded in President Roosevelt's speech at Charlottesville on Monday evening, when he not only pledged American assistance to the Allies and identified their cause with America's own, but used language about Mussolini of a bitterness that can rarely before have been used, in conditions of formal peace, by the head of one Government of the head of another. But the flow of practical help had started several days earlier. The American Government have discovered a way by which their "surplus" stocks of aircraft, guns, rifles, ammunition and even naval vessels can in effect be sold to the Allies. Formally, they are sold to American firms as advance payments for new equipment; but the re-sale to the Allies follows at once and the word "surplus" is being elastically interpreted. By this means several hundred aircraft have already gone to Canada, and much more is to follow. There can no longer be any question that action of this nature is approved by the vast majority of the American people, even though, with that curious time-lag that is so characteristic of American statecraft, it is apparently still impossible to persuade Congress to change the legal formula of neutrality, though it will vote large sums for America's own re-armament. This is, of course, a reflection of the critical state of domestic politics. Within the next month both the nominating conventions are to be held, and the sudden boiling-over of Europe's pot has upset a number of calculations. The Republicans will hardly dare, in the country's present mood, to nominate an isolationist like Mr Dewey. They may find themselves, as in 1936, trying to defeat Mr Roosevelt with a pale imitation of his own policy. After the conventions, however, there will be the long hiatus until the election in November, and though neutrality is already dead we may have to wait until then for the funeral.

Narvik Evacuated

The decision to evacuate Norway was inevitable in view of the desperate situation on the Western Front and of the Allies' need to make immediate use of all their available military resources at the focal point of the struggle. The task of supplying Narvik would have immobilised certain vitally important naval units and, since we have frankly to admit our deficiencies in the sphere of armaments, the despatch of war material to the Arctic Circle represented a diminution of our effort in other theatres of war which we could not afford. Yet it is hard not to regret the necessity. The Narvik area was the only part of Norway's soil still unconquered. It symbolised the tenacity of the Norwegians' desire for independence and the heroic courage of their King. It might have proved an effective base against German aerodromes on the Norwegian coasts. It might have hampered Germany in her manoeuvres to secure a monopoly of Sweden's iron ore. As it is, the area has, within a fortnight of its capture, been abandoned, the Norwegian Government has transferred its seat to British soil, and the struggle for Norwegian independence is merged militarily and geographically with the struggle on the Western Front. An incidental tragedy of the evacuation is the heavy loss which it entailed. An aircraft carrier, two destroyers, a troop transport and a supply ship are all reported lost, and as yet there is no indication that the Navy were able to inflict commensurate damage on the enemy.

More Evacuation

On Thursday evacuation began of the 120,000 London children who were registered under the Government's second scheme. One of the original features of the scheme was that evacuation would not take place until serious air raids had

actually begun; but though this may have been a reasonable condition in so far as it abolished many parents' reluctance, it is very doubtful whether it would have been possible to effect an orderly exodus while bombing was in progress. As it is, the transfer of the 120,000 children will take six days to complete. No decision to move the children of the other big towns, such as Manchester, has yet been taken; but three more South and East Coast towns have been declared evacuation areas, and registration of the children is now taking place. In addition, parents in the other towns along those coasts are being given another chance to change their minds about sending their children away. Meanwhile, the demand for compulsory evacuation is growing, if only because of the extent to which private and disorderly evacuation in the middle of raids will hamper defence operations. But it should be made quite clear that compulsion would not apply to emigration to the Dominions, which, by the publicity it has received in the last few days, has bred confusion in the minds of many parents. An Inter-Departmental Committee has now been formed to consider the offers which have been received from the Dominions to look after children from this country for the duration of the war. The Government is confident that a practicable scheme can be devised, although there are many obvious difficulties. One question to be decided will be whether parents who can make their private arrangements to send their children abroad will be able to use the official transport arrangements, and whether those who wish to will be allowed to contribute to their children's support.

The Balkans on a Knife Edge

The Balkan countries still hope to keep out of the war. While a decision is being forced on the Western Front, there is a respite from German pressure. The concentrations of German troops in Carinthia or Slovakia are reported to have dispersed for the time being and the situation along the Yugoslav frontier is definitely easier. A new menace, however, has arisen in the shape of Italy's declaration of war on Britain and France. A new zone of hostilities has been opened up which fringes the Balkan peninsula and threatens at any moment to expand and engulf it. Italy's plan of campaign is still obscure, but her present passivity and the Duce's speech suggest that she has no immediate intention of launching an offensive to the East. Mussolini solemnly declared that "Italy does not intend to drag other peoples who are her neighbours by sea and by land into the struggle." And Greece and Yugoslavia were among the Powers warned that their continued neutrality would depend on their continued good behaviour. Neither State is at all likely to take any provocative step, and Greece at least is relieved by reports that Italian effectives in Albania are being reduced. Yugoslavia still regards with understandable anxiety the presence of something like a quarter of a million Italian soldiers along her frontiers, but at least the manner of Italy's entry into the war, an open declaration to France and Britain, makes it less likely that she contemplates a lightning stroke against Yugoslavia, a manoeuvre whose only real advantage lay in the chance that Italy could have achieved a quick or spectacular success without the risk of war with the Allies.

The Balkan States, however, do not put any faith in Italy's assurances. Too many small neutrals have undergone similar assurances with notorious results. The Balkans' hope of keeping clear of the conflict lies more and more in the attitude of Russia. The Soviet appears to have made it clear that an Italian move would be immediately countered by Russian intervention and the Red Army has some 40 divisions posted along the Hungarian and Roumanian frontiers. Italy's only chance of Balkan aggrandisement thus seems to depend upon achieving a division of spheres of influence between Russia and the Axis Powers, a possibility which has been more or less continuously under discussion since the Brenner meeting. The despatch of Signor Rosso as Italy's Envoy to Moscow is doubtless a new move in the diplomatic game. It is impossible to say what the Kremlin makes of the manoeuvring. The arrival of new British and French Ambassadors has coincided with that of the Italian Ambassador. All three received a cordial if Soviet reception. Only one thing is clear. Stalin is in a highly favourable strategic position. He is wooed by both belligerents. He is extraordinarily well placed to play his own hand and he has a number of the trumps. The Balkans are thus likely to remain peaceful just so long as Russia's interests dictate, but there is no saying how long that will be.

Far Eastern Moves

Thailand has signed non-aggression pacts with France and Britain and a treaty of "friendly relations and mutual respect for each other's territorial integrity" with Japan. The facts are an interesting reminder that it is not only in Europe that small States must worry over their status and try as best they can by complete impartiality to preserve an independence they are physically unable to defend. No one at present has any hostile intentions towards Thailand. The Allies' concept of stable world order precludes any violation of the rights of weaker peoples, and while the Allies' imperial strength remains unimpaired, Singapore defends Thailand's integrity as much as that of any Allied dependency. If, on the other hand, the stability based on our peaceful might is disturbed, then Thailand's security goes with it. The new expansive militarisms know no national boundaries, and whether their symbol is *Lebensraum* or *Mare Nostrum* or "East Asia," they entail slavery for the smaller or weaker Powers who have the misfortune to come within their scope. China is a melancholy example of this fact. In about a month she will enter the third year of her struggle with Japan. This week brings news of the fall of Ichang and of a renewal of mass air raids on Chungking. The Japanese are possibly not much nearer the end of their task than they were two years ago, but the material ruin and useless suffering of the Chinese and Japanese peoples is on a catastrophic scale. Nor, given the Allies' weakness and the state of the war in Europe, are the Chinese likely to receive much help from the West. The terms of the new Tientsin agreement, reached at last after months of bargaining, show that Britain, so heavily engaged and so hardly pressed on other fronts, has felt impelled to give way on several points.

Service in Civil Defence

Sir John Anderson's broadcast appeal last Sunday for more part-time volunteers for civil defence did not mince matters. The danger of tremendous bombing attacks seems imminent, and experience across the Channel—and in Germany—has revealed something of their likely consequences. The Home Secretary appealed especially to two categories, young men who for one reason or another could not join the fighting forces and men and women trained in A.R.P. work who had resigned from their defence units during the nine months of "quiet war." The demands of the front line in France, in the air and at sea, as well as the new call for military defenders at home, make it impossible to make up the deficient strength of civil defence by whole-time enlistments. Any waste of man-power for passive defence duties would be criminal at this moment, and the duty of safeguarding our homes and workplaces against air raids rests on the shoulders of those citizens who have time to spare and no more active rôle to play in the national effort. Rightly, Sir John—while favouring voluntary means—threatened compulsion. If the worst dangers were realised some sort of *levée en masse* could not be avoided. The chief obstacles to recruitment are two. There are, first of all, the obstinate relics of the complacent apathy spread abroad after last September by a section of the Press which regarded A.R.P. in all its forms as an unseemly brake on the business activities of its advertisers; and, secondly, there are far too many self-centred and short-sighted firms—many of them great powers in the business and financial world—who forbid their staffs, by direct or indirect pressure, to take up any kind of part-time defence work—on the plea that, in a grave emergency, their businesses might be seriously incommoded if such work had to be made temporarily whole-time. Obstructionism like this should be ruthlessly ridden down.

Strength at Home

It would be very wrong to overstate the weakness in civil defence due to shortages of personnel here and there. On Wednesday Sir John Anderson told a reassuring story in the Commons. The total establishment, paid and unpaid, in the A.R.P. services is just under a million; 180,000 are whole-time workers. Local authorities and employers have furnished shelter for 20 million people. The provision of shelter in factories and mines is completed. Sir John could rightly claim that his first duties had been fulfilled. The existing gaps in domestic shelter, the main line of protection for a majority of the population, are very largely due to the reluctance of households to take ordinary precautions themselves, though the absence of safeguards in many private hotels and flats can be traced back to the short-sighted

parsimony or laziness of proprietors and landlords. The important point has been realised, in high places and low, that the aim of A.R.P. is not to keep the population safe and immobilised, but to enable them to go to work in reasonable safety. The test of the system, when it comes, will be tremendous. Nothing will be spared against the Nazis' final foe in Europe; and it is encouraging to know, for instance, that 60 million gas masks have been issued, though a scandalously large number of people still do not carry them about. The new problem is the likely combination of air raids and air invasion, and everything points to the urgent necessity of bringing A.R.P. and the Army much closer in their direction than previously seemed desirable.

Command in Britain

The shuffle of high military offices which began with the appointment of General Sir John Dill as Chief of the Imperial Staff, in place of General Sir Edmund Ironside, who became Commander-in-Chief of Home Forces, has been carried a stage further. General Sir Robert Gordon-Finlayson, who was once in command in Egypt, has relinquished the post of Adjutant-General to the Forces to become G.O.C. Western Command. Major-General (acting Lieutenant-General) H. C. B. Wemyss becomes Adjutant-General; while Lieutenant-General Sir Ronald F. Adam, who has been in France with the B.E.F., has been appointed G.O.C. Northern Command. Mainly, the changes concern home defence, which has never been more important; and the crucial test of British military talent in the times of trial to come is likely to be the extent to which home commanders can devise means to counter the enemy's novel assaults and preserve these islands' centuries-old immunity from invasion—of any kind. For the moment they are screened by the French Army before Paris, the Royal Navy and the R.A.F. It is a precious breathing space. The combination of mobile regulars, volunteer vigilantes and local fortification that is being worked out appears to be on the right lines. Every soldier who can be spared must go to France; occasional reports that too many trained troops are still being kept back in England cannot but be disquieting; and the embodiment of enlisted youths aged 18 to 19 in home defence battalions is adding to the personnel available at home. The chief doubt is whether fortification has gone far enough. To the lay eye there still seems to be over-reliance upon barbed wire and rifles to cope with the grenades and automatic arms of airborne invaders. Strong points are being established all over the country, but they must be really strong, in the light of Dutch, Belgian and French experience; and, should the time come to bring all the defence into play, land, sea, air and civil, they must have a single plan and a common commander.

Noises Off

This week's secret session of the Commons to discuss defence was not held. Mr Churchill and Mr Eden were in France discussing the defence of Paris. All that emerged, therefore, from the proposal to hold such a session was a remarkable outburst of backbiting and innuendo in a certain section of the Conservative Press and in letters and speeches

by impenitent supporters of the old regime. Their case was that the secret debate had been worked for by their political enemies with the intention, in the depths of emergency, of bringing certain Ministers and Members to book for past errors, vindictively and uselessly. Actually, this outburst was due to fear. The pressure for a debate was not of party origin. Mr Churchill himself, remembering that a secret session had been promised by his predecessor, offered it for this week, and it was well-known that the frankest criticisms were going to come, not from Labour or Liberal members, but from serving Members, mainly Conservatives, men who had come from Flanders or who claimed to speak for those who had gone through the ordeal there. The fact is that there has been a spontaneous and mainly unpolitical uprising of popular opinion against the men responsible for that famous Army's deficiencies in equipment and supplies. Mere recreation would indeed be intolerable at a time like this. Mr Churchill and, for the Labour leaders, Mr Morrison have made this plain. But it is not a political vendetta that is in train. There is an honest desire to recall the past only to make sure that similar fatal mistakes are not made in the future; and, while it would be criminal waste of time on the part of any group to manoeuvre to oust any Minister or Ministers left over from the bad old days, it would still be wise, discreet and patriotic for such Ministers to consider speeding their own departure.

Industrial Welfare

One of the chief gains of the last war was the establishment of the Ministry of Labour. Now, as a direct result of the strain that is being imposed upon working people by the call for ever more arms and aircraft, another new department has appeared. The Ministry of Labour has taken over the responsibility of the Home Office, under the Factory Acts, to watch over the health, welfare and safety of workers. A Factory and Welfare department in the Ministry will be aided by a Factory and Welfare advisory board; and in these new arrangements there is the makings of a new Government function in the field of labour as important as any that has been assumed in the past. The new department and advisory board, in addition to implementing existing factory and workshop law, will have special war duties. Workers are moving into growing aircraft and munitions centres. They are employed for arduously long hours. Accordingly, billeting, housing and rest periods will be the department's main concern; and it is a clear advance, administratively, that the supply and care of labour should be entrusted to the same public office. The Ministry of Labour under Mr Bevin is being transformed. The old-established employment exchanges are being given their due rôle in vacancy work. The Ministry has become one of Labour Supply and Industrial Welfare; and it only needs to become a Ministry of Industrial Training as well to round off its task.

* * *

Reservation and Recruitment

The plight of Paris and the loss of more British units, cut off in Normandy, emphasises more painfully than ever the need to waste not a single man here in Britain. The Schedule of Reserved Occupations, always provisional, has again been altered. Some changes take effect now, others on August 1st. In two months 30,000 "black-coated" workers now exempted will be liable for military service. An extra 12,000 agricultural workers, stewards, bailiffs, foremen, carters, ploughmen, machine attendants, market gardeners and nursery workers, become reserved. Startlingly, about 100,000 workers in the distributive trades, mainly owners or managers of businesses, are made exempt. In several industries, the age for reservation will not be raised until August, so that between now and then skilled men in them will have the chance of moving from their present non-essential jobs into war work, where they will be reserved. Skilled woodworkers, joiners and carpenters can go into aircraft factories, metal workers into munitions. This process of forcing men into actual war work will be invaluable and should be extended. It has been ludicrous that men in reserved occupations and exempt from military service should have been allowed to go on in non-essential jobs. It is also obviously more important than ever that farm workers should be reserved. But, on balance, the adjustments hardly face up to the magnitude of the present crisis. Their net effect is to reserve more, not fewer, men; and the time is surely very near to put a plain choice before every able-bodied man of military age; either they must be prepared to fight or

they must do indispensable war work. There is no room for tenderness towards any individual who is doing work that is not needed—and there are still millions of these.

* * *

The Colonies' Help

With the entry of Italy into the war, the battlefield has extended to the colonies. Thirty-five civilians were killed in the first air-raids on Malta; fighting is reported to have occurred in British and French Somaliland; and Kenya, Cyprus and Gibraltar are other potential military zones. But the chief contribution of the colonies still lies in the economic field, and Lord Lloyd has addressed a dispatch to all Colonial Governments indicating how the war effort of their territories can best be applied. The general aim of policy must be to bring to the maximum the amount of supplies which they can contribute and to reduce to the minimum their demands on this country's resources in men, materials and money. Non-essential imports should be curtailed, especially those involving the use of iron and steel; self-sufficiency in food must be achieved as far as possible; and colonies which produce raw materials of importance to the war effort, including those sold for "hard" currencies, should aim at the optimum level of production—though it is difficult to see how they can vary the amounts of their agricultural and plantation products to meet the inevitably rapid changes in that level. Any diversion of man-power from the war effort at home is to be reduced as far as possible by the release of civilian officers for local military duties, and by the curtailment of leave and longer hours of work among the consequently depleted staffs. As a corollary to this concentration on what will be the most effective immediate contribution the colonies can make, the new policy heralded by the Colonial Development Bill, which passed its third reading in the House of Commons this week, will be shelved for the time being; but assistance will be given for schemes which can be carried out from local resources, and Governments are urged not to close down social services indiscriminately, but, where finance is the chief stumbling block, to consider the possibility of increasing direct taxation upon those best able to bear it. The immediate future for the colonies is, therefore, a grim one, especially for those producing unessential commodities, for which markets and shipping are to be curtailed. But their spontaneous support from the very beginning of the war justifies the assumption that they will be encouraged, not dismayed, by the greater effort they are now called upon to make.

Milk—Cheap and Dear

Mr Boothby announced on Tuesday that the retail price of milk would be raised by 4d. per gallon from July 1st. This increase is designed not, as might be imagined, to compensate farmers for the rise in agricultural wages, or to reduce the Government subsidy for milk production, but to cover increased distributive costs. These costs have apparently increased since last autumn, in spite of the reduction in the number of deliveries and other simplification of services. But the increase in distributive margins is to be a temporary measure, valid until the end of September, by which time the Ministry of Food will have completed its review of the possible ways of cheapening distribution. This increase will raise the price of milk in London to 8d. a quart, but the rise is to be accompanied by a comprehensive national scheme for supplying milk at 2d. per pint to expectant and nursing mothers and to children under school age. Free milk will also be available for households which cannot afford to buy it, this inability to be determined by a "simple criterion of need." In addition, the provision of cheap milk in schools is to be extended. The Ministry will no doubt shortly make public the details of these arrangements for cheap milk to those most in need of it, but as a part of a policy of improved nutrition it can only be heartily approved. A vigorous advertising campaign should be immediately begun, so that households eligible for this new social service may know how to obtain it.

Holidays in Industry

At this grave hour in the history of the French and British Empires every additional aircraft and gun or tank that can be thrown into the battle now is worth more than large numbers of them later on. The leaders of the Labour

Party have been quick to appreciate this, and they have urged the munition workers to produce to the limit of their physical capacity during the next few weeks and to forgo, for the time being, their usual summer holidays. As Mr Herbert Morrison pointed out in a speech on Wednesday, the munition workers have responded to this call without hesitation. But while the output of munitions must be speeded up as much as is physically possible, there is no reason why workers in the less essential trades should work on Sundays, for it is essential that the standard of health and physical fitness of the nation should be maintained at the highest possible level. This principle has been recognised by the Trades Union Congress and by the Ministry of Labour in announcements made this week. Moreover, in order to avoid fatigue, the Ministry of Labour's consultative committee has recommended that there should be frequent rest periods, that two or three shifts should be worked where practicable and that production should be reorganised in order to ensure the early restoration of a weekly day of rest. As Mr Ascheton, Parliamentary Secretary to the Ministry of Labour, pointed out on Thursday, adequate rest periods are necessary, even on urgent priority work, if output is to be maintained at the highest level. But as work in the essential industries cannot now be interrupted at this stage, the weekly day of rest of individual workers will not necessarily fall on Sunday. Much as the leisurely pace of our effort on the home front during the first eight months of the war is to be deplored, and encouraging as is the willingness of the working population to work to exhaustion, the unnecessary expenditure of physical energy is not in the interests of the country and is not conducive to maximum efficiency.

* * *

Official Waste

Extravagant mistakes made by the Air Ministry in the leisurely days before the war, or before the war gathered its real momentum, may seem stale news just now. Nevertheless, the statements in the fifth and latest report of the Select Committee on National Expenditure (to take only one or two examples) that £250,000 was wasted last year in the attempt to site an aerodrome and dépôt on an undrained Scottish bog, that land in Kent was bought in a "careless and haphazard" way at £144 and £220 an acre, and that estimates made in these and other cases were "little better

Books and Publications

"Raw Materials and Foodstuffs." Economic Intelligence Service, League of Nations. Allen and Unwin. 75 pages. 2s. 6d.

The Economic Intelligence Service of the League of Nations has been a veritable pioneer in assembling and publishing statistics hitherto inaccessible or scattered over hundreds of periodicals and statistical returns. Apart from bringing up to date its many annual statistical volumes, the League's Intelligence Service frequently adds to the series. The latest addition contains statistics of the production (in 1935 and 1938) and of the import or export surplus (in 1935) of some 128 raw materials and foodstuffs in 95 countries or areas. It is thus possible to see the position of each country at a glance. The new work is a most valuable reference book, and it is to be hoped that, like the other series, it will be brought up to date every year.

"The Insurance Directory and Year Book (Post Magazine Almanack) 1939-40." (London). Buckley Press, Limited, 20 St. Andrew Street, E.C.4. 568 pages. Price 7s. or 6s. net (according to binding).

All who are interested in insurance business will find in this year-book an unusually complete set of statistics, relating alike to insurance business in general over a long period, and to individual offices for recent years. The book is also a comprehensive directory to the personnel of all offices and institutions—whether British or foreign—in any way connected with this country. The student of insurance history will find something of more than ephemeral interest in a number of lists of companies and diaries of events.

than a mere formality" should not pass unnoticed. They are plain evidence in a single small corner of the national effort of the sort of inefficiency that has sapped the country's war potential until now, and pointers to the errors of attitude and action that must be ruthlessly rooted out. Money was grudged for vital needs and thrown away on details. It is not merely that public money was ill-spent. More important, labour and materials were in many cases squandered fruitlessly—in tune with the reckless complacency that has only just been banished, it is hoped, from high places.

Shorter Notes

Under the Government's scheme of compensation for war damage to property, payment will not normally be made till after the war, although essential repairs to buildings and plant will be made at once, the cost being met out of Government loans. Arrangements have now been made, however, for advance payments of compensation, up to limited amounts, in respect of damage to essential household furniture and clothing. For furniture, the advances will only be made where the total income of the claimant's household does not exceed £400 a year; and for clothing where the total income of the claimant does not exceed £250 a year—or £400 a year if there are dependants. The maximum sums advanced will be £50 for furniture, and for clothing £10 if there are no dependants, and £20 where one dependant, or £30 where more than one dependant, has also suffered damage.

*

The Compensation Board to assess the amount of loss or damage to property, arising from enemy action or from counter-action against hostile attacks, has been appointed. "Property," for the purposes of the Government's scheme, is defined as real and personal property within the United Kingdom, but excluding property and goods insurable under the War Risks Insurance Act, 1939, property belonging to local authorities and public utility undertakings, and money, valuable securities, jewellery or works of art which are not at the date of the loss or damage insured specifically against loss or damage by fire, burglary or theft.

THE WORLD OVERSEAS

Oil from Roumania

(By a Correspondent)

THE war has brought prosperity to many branches of Roumanian industry. The Germans are turning increasingly to Roumania and other countries of South-Eastern Europe in a desperate effort to close the gap between supplies and requirements; and every artifice has been employed to induce these countries to speed up their deliveries. Britain and France, on the other hand, have striven by pre-emptive purchases and other means to divert the flow of essential materials from the Reich to themselves. The Balkan exporter has naturally been making hay while the sun shines.

Nowhere has economic warfare been waged more keenly than in the case of Roumanian oil. Roumania supplied just under 1,000,000 tons of mineral oil to Germany, Austria and Czecho-Slovakia in 1938, when the aggregate consumption of these countries was in the neighbourhood of 7,000,000 tons and their combined imports about 5,000,000 tons. Since the blockade has severed Germany's connections with all other oil exporters except Russia, the relative importance of Roumanian oil has been considerably enhanced. After prolonged negotiations, Roumania undertook last December to supply 1,560,000 tons of oil to Germany this year, besides certain unspecified additional quantities on account of previous arrears. Since the war began, however, Britain and France—to which countries Roumania consigned 540,000 and 289,000 tons of oil respectively in 1938—have been competing strongly for Roumanian petroleum products, and prices for many products are double those ruling a year ago. Though the Government has taken a substantial share of the resulting profits, the oil companies have naturally benefited considerably from this price boom.

Diminished Surplus for Export

The boom cannot, however, be attributed to the intensified demand alone. It results in part from the shrinkage of the surplus for export, due in turn to the growth of home requirements and dwindling crude oil production. Home consumption is estimated to have advanced from 1,674,000 metric tons in 1938 to 1,936,000 tons last year, and from 462,600 tons in January-March, 1939, to 582,600 tons in the first quarter of this year. Production, on the other hand, fell from a peak figure of 8,704,000 metric tons in 1936 to 6,240,000 tons last year. That the tendency persists, in spite of the stimulus of war demand, is evident from the fact that only 1,525,500 tons were produced in the first three months of 1940, against 1,571,800 tons in the corresponding period of 1939. As a result of these complementary influences, exports and bunker sales accounted for only 68 per cent. of total demand last year, compared with 82 per cent. five years earlier.

The downward trend in Roumanian crude oil production which must be accounted a bull point for the Allied cause, is due to the gradual exhaustion of many of the older fields. Notwithstanding the persistence of the decline, it is probable that it could have been offset by the opening up of new fields, were it not for the fact that exploratory drilling has been discouraged by restrictive legislation. Deprived of the incentive to embark upon large-scale prospecting work, the oil companies have confined their activities in the main to proved areas. The amount of drilling consequently fell from 940,000 feet in 1939 to 845,000 feet last year; and the latest statistics show that the same tendency has been in evidence during the first quarter of the present year.

With a falling production and expanding home requirements, it has been impossible for the Roumanian oil industry to raise its exports in response to the increased call from abroad. Indeed, so far from increasing, the country's oil exports have actually been appreciably smaller during the war months than in the corresponding period of 1938-39. They amounted in the first four months of the war to 1,223,500 metric tons, compared with 1,468,200 tons in the same period of 1938; and in the first quarter of this year

823,500 tons were sold abroad, compared with 1,130,800 tons in January-March, 1939.

Germany's Diminished Share

In determining the distribution of these diminished exports between the belligerents, the Allied contraband control has played an important part; in normal times about one-half of the oil sent from Roumania to the Greater Reich went via the Black Sea and the Mediterranean. Now, however, the bulk must be shipped up the Danube and the remainder sent by rail; and the capacity of these routes has been strained to the utmost. Frost and subsequent floods rendered the Danube impassable for shipping for a much longer period than usual. While supplies to Germany were thus greatly reduced, Britain was taking much larger quantities. The following figures speak for themselves:—

ROUMANIAN MINERAL OIL EXPORTS

	(Metric Tons)			
	Greater Germany	U.K.	France	Total*
1939—				
September	69,691	32,974	4,120	205,911
October	83,713	29,772	21,624	305,286
November	88,835	37,010	15,188	299,905
December	81,923	139,880	33,566	412,443
1940—				
January	28,246	118,956	34,482	307,849
February	30,778	75,536	408	217,190
March	44,797	122,504	10	298,468

* Including other countries.

In the light of these figures, it is interesting to speculate on the possibility of the German-Roumanian oil agreement being fulfilled this year. Official export statistics are not yet available for April, but the quantity consigned to Greater Germany in that month is estimated at 90,000 tons. Excluding the unspecified arrears, this would leave a balance of rather more than 1,366,000 tons to be shipped to Germany in eight months. The likelihood that the Danube will again be frozen during part of December should be borne in mind; but, ignoring this factor, the required monthly average shipments for the fulfilment of the agreement works out at a little over 170,000 tons, or approximately twice as much as Germany has received from Roumania in the best month since the war began. To assert that the required rate of shipment is impossible would, perhaps, be unwise; but some authorities claim that a monthly average of 130,000 tons represents the practicable limit, and it is certain from the known facts of the case that the maintenance of supplies at the higher rate for the eight months would tax the available transport facilities to breaking point. It is thus highly probable that the quantity actually received by Germany this year will fall well below that specified in the agreement of 1939.

June 11th.

France's Leaders

[FROM OUR PARIS CORRESPONDENT]

EVER since the German break-through at Sedan, now a name of doubly ill omen for every Frenchman, Paris has been living through a drama of such high intensity that a supreme climax always seemed just around the next corner. With the great struggle that is sometimes called the Battle of Paris and sometimes the Battle of France in full course, it would seem that this climax cannot now be very long deferred.

There are causes for hope and causes for apprehension in connection with the latest great German drive. Perhaps the chief reason for optimism is the magnificent leadership of

United States Defence

[FROM OUR NEW YORK CORRESPONDENT]

THE programme of national defence is now the most important influence in United States economy. On May 16th the President recommended additional appropriations of about \$1,200 millions for accelerating a programme that already budgeted something over \$2,000 millions for the coming fiscal year. Two weeks later, in another message to Congress, he asked for approximately \$1,000 millions more. At the same time, he asked authority to call into active service all or part of the National Guard and the Organised Reserves. This may have been no more than a precautionary measure; but, if exercised, it seems probable that it would require another appropriation.

These measures have been accompanied by proposals for increased taxation. The only suggestion so far advanced is for a flat 10 per cent. increase on all, or nearly all, existing Federal taxes. Such a method might be expected to produce between \$600 and \$700 millions. It has at least the merit of simplicity—no small concern for legislators at the moment, especially since an early adjournment of Congress is still on the schedule.

The programme outlined does not go to the extent of transforming the United States into a "war economy," but it is of sufficient magnitude completely to alter the present economy. In initiating this programme, the President laid down these general principles: that the programme must not be allowed to create any millionaires; that the social legislation adopted in recent years was not to be suspended; and that he hoped that labour would not take advantage of the situation by striking.

June 1st.

Russian Trade Possibilities

[BY A CORRESPONDENT]

THOUGH the prospects of an effective trade agreement as a result of Sir Stafford Cripps's journey to Russia are all too easy to exaggerate, it is worth while examining them. On the principle that "the more there is of mine, the less there is of yours," any goods we can secure from Russia represent the stopping of some leak in the economic blockade of Germany. Moreover, to set against the many considerations which make the conclusion of an agreement difficult and its implementation problematic, there is one circumstance which should make it easier than it was at the time of Mr Hudson's visit to Moscow: the fact that the British Government now has powers not merely to discuss general terms but to place and accept orders.

The following table shows the value of United Kingdom imports from and exports and re-exports to Soviet Russia, and the percentages which these constitute of our total trade with all countries:—

('000's omitted)						
Year	Imports		Exports		Re-exports	
	£	%	£	%	£	%
1933	17,491	2.59	3,341	0.91	957	1.95
1934	17,326	2.37	3,640	0.92	3,905	7.62
1935	21,763	2.88	3,482	0.82	6,243	11.29
1936	18,903	2.23	3,507	0.80	9,838	16.19
1937	29,096	2.83	3,083	0.59	16,432	21.86
1938	19,543	2.12	6,433	1.37	10,985	17.83
1939 (1st quarter) ...	1,626	...	1,889	...	3,351	...

Imports have been fairly constant; the large increase in 1937 was mainly due to the general rise in prices.

The table below shows the proportion of British imports from Russia represented by the six main items:—

('000's omitted)									
Commodity	1935		1936		1937		1938		
	£	%	£	%	£	%	£	%	
Timber & plywood	7,600	34.9	7,682	40.6	11,125	38.2	6,316	32	21
Grain and flour ...	3,597	16.5	575	3.0	4,465	15.3	3,187	21	22
Furs and skins ...	1,553	7.1	2,057	10.9	3,750	12.9	3,630	18	18
Butter	1,670	7.7	1,644	8.7	1,258	4.3			
Oil	1,284	5.9	1,477	7.8	1,729	5.9	1,415	7	7
Flax (inc. tow) ...	1,533	7.0	1,253	6.6	1,146	3.9	376	1	1

Timber and plywood were the most important Russian exports to Great Britain and represent between 33½ and 40 per cent. of the total. The group is comprised chiefly of

General Weygand, who has already communicated a new atmosphere of confidence both to the front and to the rear.

Weygand has already achieved two very difficult tasks. He has restored a morale that was inevitably shaken after the German break through and the subsequent sweep to the Channel. The stout defence of Dunkirk, in which the French Admiral Jean Abrial played such a prominent part, and the rescue of a far larger proportion of the French and British forces in Flanders than had seemed possible after the abrupt capitulation of the King of the Belgians, was another steady-going factor.

Weygand's second achievement has been that, within the very brief period of his command, he has grasped what his predecessor unfortunately failed to understand during the respite of eight months which followed the declaration of war: the tremendous offensive rôle of the tank and the best means of counteracting it. The world war idea of linear defence, foredoomed to disastrous failure in the face of the terrific shock of massed aeroplanes and tanks, has given way to a supply system of defence in depth, in which those tanks which penetrate the advanced line are subjected to the harassing fire of many "points of support," established in hills, woods and other favourable natural obstacles. The destruction of a very large number of tanks during the first days of the present battle has been the reward of the new tactics.

Another favourable sign is the rumoured deterioration in the quality of the German pilots. It is hoped here that both the human and material resources of the German military machine may be approaching exhaustion under the stress of the terrific activity of the last weeks.

At the same time there is no reason for not regarding the situation as extremely grave. France to-day faces the formidable problem of fighting alone, apart from the co-operation of the R.A.F., against an enemy that possesses twice its population and more than double its potential output of war industries. In man-power, in tanks, in aeroplanes the material odds which France must face are cruelly heavy. Typical of this situation was the remark of a French aviator attached to a squadron of pursuit planes:—

At a conservative estimate we shoot down five enemy aeroplanes for every two of our own that we lose. But that proportion is not favourable enough.

Cabinet Reconstruction

As the military drama seems to be approaching a climax the tempo of activity is quickening in the fields of internal politics and of diplomacy. There has been another important shake-up in the Cabinet, the effect of which is to concentrate still more power in the hands of M. Reynaud. The Prime Minister now holds the two key portfolios of Defence and Foreign Affairs, and one of his intimate associates is Minister of Finance. All this follows the familiar historical law of concentration of authority and responsibility in moments of great crisis.

Two significant eliminations from the Cabinet were those of Anatole de Monzie, formerly Minister of Public Works, and Edouard Daladier, the former Premier, who has now been dismissed from the Ministry of Foreign Affairs. M. De Monzie was rumoured, rightly or wrongly, to be doubtful about the prospects of the successful prosecution of the war, and even such a suspicion is enough to end a man's usefulness as a Cabinet Minister at a time like the present. The personal relations between M. Reynaud and his predecessor, M. Daladier, have never been cordial, so that the disappearance of M. Daladier will presumably make for greater Cabinet unity. Moreover, M. Daladier, in view of his long tenure of office as Minister of War and his close association with General Gamelin, can scarcely escape some measure of responsibility in the public mind for the disaster of mid-May.

Ambassador to Russia

France has followed the British lead in seeking prospects of accommodation with the Soviet Union by appointing a new Ambassador to that country, M. Erik Labonne. There is no serious expectation here of positive anti-German action from the Soviet side. But there is a hope that supplies of petrol and other material to the Reich may be slowed down or stopped. Stalin, originally, in the opinion of many of the best informed observers of Soviet affairs, based his policy on the idea that the war would lead to stalemate, exhaustion and all-round social and economic collapse in Central and Western Europe. Now he may well be alarmed at the outlook for the Soviet Union in the event of a clear-cut German victory. Despite the existence of a strong *a priori* anti-Communist feeling in French conservative circles, M. Reynaud evidently feels that every possibility of help, however small and indirect, is worth exploring at the present time.

June 8th.

sawn softwoods, pit props and plywood, together with a certain quantity of hewn soft woods and sleepers. Timber is still the commodity of greatest interest to the British market.

Poor Import Prospects

The import of grain from Russia has varied considerably according to the harvest; the prospects of an increase of Russian exports of grain this year are slight, as the occupation of Poland has increased the home demand and will contribute little to the supply.

The imports of furs and skins have recently increased, but as luxuries their import is not likely to be encouraged by the British authorities. The import of flax has dwindled since 1935, as it is required by the greatly expanded Russian textile industry, and standard flaxes are now being removed from the list of goods offered for export from Russia. Butter imports are also declining as the needs of the Russian home market increase.

Oil imports remained fairly constant during the whole period, and Russia is even in a position to increase her exports, especially since new wells have lately been drilled in the districts of Ural and Baku. The question of oil supplies will, however, be decided more by political than economic considerations.

Supplies for the Soviets

British exports to the U.S.S.R. remained fairly constant up to 1937. A large increase was observed in 1938 as a result of large shipments under the Credit Agreement of July, 1936. The following table gives the values of the four main groups of exports to the U.S.S.R., together with the proportions of the total British exports to the U.S.S.R. which they represent:—

(‘000’s omitted)

	1935	1936	1937	1938
Machinery	£ 902	£ 689	£ 818	£ 3,353
Non-ferrous metals & manufactures	474	754	986	1,329
Rags, woollen and hair, not pulled	166	252	387	390
Iron & steel manufactures	951	598	407	326
	25.9	19.6	26.5	52.1
	13.6	21.5	32.0	20.6
	4.8	7.2	12.5	6.1
	27.3	17.0	13.2	5.1

The chief main groups of commodities exported from the United Kingdom to the U.S.S.R. were machinery, including machine tools, and non-ferrous metals (unwrought nickel and tin). All these commodities are now available for export from Great Britain in comparatively small quantities, and it is unlikely that the Ministry of Supply will be inclined to release considerable quantities of them. Moreover, since Russia is looked upon by the trade as a very difficult customer, no machine and tool-making firm would be keen to accept new Russian orders. The same applies to other commodities exported to Russia, so that it will not be easy to promote a larger export to the U.S.S.R.—especially in times of war, when the country needs for the prosecution of the war exactly the same goods Russia is prepared to buy.

These difficulties do not, however, apply to re-exports, because the articles involved are mostly standardised and the inspection and receiving of goods more simplified. Re-exports from the United Kingdom to the U.S.S.R. consisted mainly of non-ferrous metals, raw rubber, raw wool, and tea, as shown in the next table.

The re-exports of non-ferrous metals were by far the largest group from 1935 onwards, and they consisted mainly of unwrought copper, nickel and lead. The re-export of raw rubber has somewhat declined in the years 1937-38. The Russian demand for wool and tea remains as high as

(‘000’s omitted)

	1935	1936	1937	1938
Non-ferrous metals	£ 2,823	£ 5,000	£ 11,287	£ 7,783
Rubber, raw, incl. crepe and latex	1,715	2,819	2,681	1,056
Wool, raw	627	609	1,115	995
Tea	463	573	543	553
	45.2	50.8	68.7	70.8
	27.5	28.7	16.3	9.6
	10.0	6.2	6.8	9.1
	7.4	5.8	3.4	4.9

in pre-war years, and these goods would be willingly accepted by the Soviet Trade Delegation in exchange for other goods.

Though the increased powers of the British Government in the control of foreign trade make the position in some ways more favourable to an agreement than it was a year ago, there have, on the other hand, been such changes in our import requirements and in the goods we have available for export that it seems hardly likely that such an agreement, even if concluded and faithfully executed, could have any very considerable importance, except in so far as it contributed to the blockade of Germany.

June 10th.

Latin America and the War

[BY A CORRESPONDENT]

THE effect of the European War upon South American conditions has not been at all what was expected. Exports of primary products have been much reduced by the extension of the Allied blockade to Germany and the countries which she has overrun, and this has not been compensated by higher commodity prices.

The Allies are benefiting by a wider spread of their purchases of wheat, meat and wool at lower prices over certain of the Republics. Britain normally is Argentina's largest market, and record meat shipments will probably be registered this year, but the loss of the German and Scandinavian markets is not negligible, and Argentina, in present world conditions, is alive to the necessity of conserving her resources.

Britain's latest purchase from Uruguay consists of 8,000 tons of corned beef for about £660,000, but the outlook for wool, the chief product, is not favourable; Scandinavia and the Low Countries had purchased important quantities which still await shipment and for which many orders have been cancelled.

Difficult Coffee Position

The adverse effect of the spread of German occupation, however, is mainly felt in Brazil and the other "coffee" countries. The value of Brazil's exports to Germany and the countries which she has now brought within the operation of the blockade amounted in 1939 to 25 per cent. of the total. Brazil's adverse trade balance at the end of February was about £113,000 (gold), since when there has been a considerable decline in exports, including coffee, cotton, hides and skins, cocoa and tobacco. It is now thought that exports of Brazilian cotton to Europe may be reduced by about 47 per cent., whilst the production of coffee in São Paulo alone is at least 6,000,000 bags per annum in excess of war-time demands, and the Coffee Department's decisions as to "sacrifice" quotas for the next crop year are being awaited with intense anxiety by planters.

Brazil is giving strong hints that she intends to restrict imports, and although exchange so far continues to be available under permit, it is significant that no credits may now be opened without special permission for imports from countries other than the United States of America, while permission has been suspended for the closing of exchange against imports from all European countries, except the United Kingdom, France and Portugal.

Exchange Difficulties

The expected announcement has not yet been made by the Bank of Brazil regarding the distribution of the second instalment of milreis against remittances of profits.

In Chile, there are liberal supplies of sterling exchange as the result of Britain's recent large purchases of Chilean products, but in Peru, although exchange control is still

avoided, heavy imports have led to considerable stringency in the foreign exchange market and weakness in the sol.

Among the smaller "one-product" countries, Ecuador is suffering from failure of the cocoa crop and over-importation, so that the Central Bank has been unable to hold the rate of exchange and a decree of June 4th re-established exchange control with the Central Bank as the sole buyer and seller at rates of 17.90 and 18.00 sucres per dollar. In Nicaragua, there is increasing delay in obtaining exchange and import permits, while Salvador has sold much coffee to Norway against credits, but this has not been shipped. The outlook in Colombia is increasingly uncertain, as the severe fall in coffee prices abroad has already nullified the effects of a Government bonus to producers. A short-term credit of U.S.\$10 millions has been made to Colombia by the Export-Import Bank of Washington, but as this is to pay for future imports from the United States, it is hardly likely to relieve the present exchange stringency, and exchange permits are being granted more and more sparingly for essential imports only.

June 12th.

Italy's Finances

[FROM OUR TURIN CORRESPONDENT]

THE report of the Governor of the Bank of Italy, Signor Azzolini, to the annual meeting contained the following figures for December 31st, except this year:—

In millions of lire

	1937	1938	1939	Mar. 20, 1940
Circulation	17,468	18,955	24,432	22,644
Deposits	1,465	1,721	2,486	1,917
	18,933	20,676	26,918	24,561
Gold	3,996	3,674	2,738	2,602
Foreign exchange	32	152	393	
	4,028	3,826	3,131	
Ratio of cover to sight liabilities	21.3%	18.5%	11.6%	
Discounts	2,544	3,704	4,833	
Advances	4,508	3,686	2,992	
	7,052	7,390	7,825	
Ways and means advances:—				
Short dated	1,000	1,000	1,000	
Extraordinary	...	2,000	8,000	
	8,052	10,390	16,825	

The gold reserve has steadily fallen and there has been an increase in sight liabilities. If it is assumed that discounts and advances correspond to the demand for money on the private market, while ways and means advances vary according to the needs of the public Exchequer, the major part of the increase in the note circulation can be explained by the exigencies of the State.

Increased State Requirements

This assumption requires, however, some qualification, since discounts and advances also reflect the increasing intervention of the State in economic activity. For example, the decrease in advances is entirely due to decreases of 330.8 and 381.9 million lire in the advances guaranteed by the Redeemable Compulsory Immobiliare, 1936, Loan and the 5 per cent. Rentes, respectively, both of which advances were made to facilitate the issue of the loans. The increase of 1,129 millions in discounts is mainly due to the financing of the purchase and processing of wheat by public State bodies, to purchases of cocoons, wool, hemp, rice and other materials, and to the discount of short-dated Exchequer bills.

The new State economic activities are in fact the best source of profit to the Bank of Italy. Trade discounts proper seem to be diminishing, in accordance with the policy of making the Bank of Italy a true central bank, and were only 149.5 millions at the end of 1939. Except in September, however, the banks, being in funds, did not offer their commercial paper for rediscount, and the Bank of Italy's best customers are now the public bodies which finance armament and other essential industries and the purchase of agricultural products.

The requirements of the State are, however, the principal cause of the increase in circulation. Advances to the Treasury increased by 2,000 million lire in 1938 and by 6,000

millions in 1939. Ordinary expenditure in 1938-39 was 33,353 million lire, and extraordinary revenue 6,500 million lire, while revenue amounted to 27,576 million lire, leaving a deficit of 12,278 millions against 11,174 millions in the preceding year. Assuming that the advances by the bank to the Government were divided evenly between the half-years concerned, the Budget deficit of 1938-39 was covered as to 32½ per cent. by the issue of bank notes, compared with a corresponding percentage of just under 9 the year before.

Cost of Living

Signor Azzolini stoutly denies that the increase in circulation is inflationary, alleging that it was preceded and caused by the rise in prices. Prices have undoubtedly increased: the 1939 index number of wholesale prices at 99.4 (1928 = 100) was 4.3 per cent. higher than that of 1938, and from August, 1939, to February, 1940, the increase was 14 per cent. The cost of living increased by over 17 per cent. between March, 1939, and March, 1940. Average wages during the first ten months of 1939 were 10 per cent. higher than in the corresponding period of 1938. There was a general upward revision of wages and salaries amounting to 6-10 per cent. in March, 1939, and another of 10-15 per cent. in March, 1940. When allowance is made for the increase in employment, Signor Azzolini maintains that working class real income has remained stable.

June 1st.

More Exports to Brazil?

[FROM OUR RIO DE JANEIRO CORRESPONDENT]

THERE is a strong impression in Brazil that Great Britain, in her drive to increase exports in order to finance the war, is showing an extraordinary indifference to the largest potential market in South America. The British Chamber of Commerce in São Paulo observes:—

Apart from the question of transport facilities, the essentials necessary to secure a much larger volume of orders for British goods, and to take advantage of the excellent opportunity which now presents itself for the expansion of our trade with this country, are so simple that they should really not need enumeration. During such time as prices remain competitive—and they are competitive (when compared with prices of similar imported goods) for a large range of articles—these essentials are that manufacturers should be able to quote fixed prices and give a guarantee as to delivery. In the case of contracts for long-term delivery and where it is possible, and probable, that prices will be modified, there is much to recommend the introduction of a variable price clause, so that the prospective client might be aware of the maximum increase that he could be called upon to pay. But when goods for short-term delivery are in question it can be said categorically, and without fear of contestation, that the "prices ruling clause" will not only prevent an expansion in Britain's foreign trade but will make difficult the maintenance of that done in the past.

Regrettable as delay in delivery is, the handicap it inflicts on importers here is insignificant in relation to that imposed by the impossibility of getting firm prices for most articles.

The feeling that British exporters are not really interested in this market is intensified by the almost complete absence of advertisements by British firms in the local papers; many American firms spend more on advertising in a month than the whole British industry does in a year. Many manufacturers seem to think that if they appoint an agent on a commission basis, orders should come rolling in without any further effort on their part.

THE BUSINESS WORLD

Towards Real Exchange Control

EXCHANGE control in the United Kingdom and throughout the sterling area has been made a far more efficacious instrument by the various measures taken by the Government towards the end of last week. In judging them we must ask whether they fulfil two fundamental conditions: firstly, do they ensure that the terms of trade between the sterling area and the neutral world are as favourable as they can be; and secondly, do they ensure that the full proceeds of our export trade are, in fact, canalised to the central authority and are not dissipated to any appreciable extent in financing the exodus of capital from the sterling area? Those must be the main objectives of our system of exchange control. Other considerations such as the standing of sterling as an international currency are of altogether subsidiary importance. The best way to ensure the future of sterling as an international currency is to win the war, and the working of our system of exchange control should therefore be guided with that all-embracing objective in view to the exclusion of all others.

Judged by these fundamental criteria, the measures announced by the Treasury last week must—so far as they go—be given approval. They can be briefly summarised. No licences will for the time being be given for the sale in the United Kingdom of securities owned by persons resident outside the sterling and franc areas. All exports from the United Kingdom to the United States and Switzerland will have to be paid for in sterling obtained from the Exchange Control or else in United States dollars or Swiss francs respectively. Current commercial and financial payments (such as interest and dividends) due to residents in the United States of America and Switzerland will be eligible for exchange at the official rates. As regards transactions with other neutral countries, the same canalisation of exchange operations into official channels will be achieved by the extension of the network of payments agreements, special accounts and fixed rates of exchange. If such agreements defy the efforts of amicable negotiation, the principles of exchange clearing will be applied unilaterally from our side. All these arrangements, in so far as they apply to the United Kingdom only, will be matched at an early date by similar arrangements by other countries in the sterling area.

By these measures an encircling attack is being made on what remains of the free market in sterling. The supply of sterling in the free market will lose one of its main sources by the blocking of sterling securities owned by non-residents. It will be further depleted by making financial payments to the two remaining hard currency countries, the United States of America and Switzerland, eligible for exchange at the official rates. The flow of sterling transferred to foreign account by way of Form E. 1 will thus suffer a major diminution. On the demand side the free market in sterling will suffer almost equal curtailment. This will be achieved by the compulsion to invoice in hard currencies or official sterling all exports from this country to the United States and Switzerland. The trade with the two free currency countries will thus yield no demand for free sterling. When the chain of payments agreements with the controlled-currency neutrals is completed, the commercial demand for free sterling will, it is hoped, have been reduced to negligible proportions. The invasion of the Low Countries and the extension to all commodities of the compulsion to invoice exports to the United States and Switzerland in hard currencies have involved the repeal of the earlier regulations relating to the exports of jute, rubber, tin, whisky, furs and diamonds; but the experience gained in working this selective control of export proceeds will undoubtedly have proved extremely valuable in applying the more comprehensive

scheme. As for trade between the sterling-franc area on the one hand and what remains of the Belgian franc-guilder area on the other, this is being satisfactorily settled by the formal inclusion of these two currencies within the bloc of Allied currencies.

The new regulations may be said to hinge on the decision to block the really material part of the foreign assets remaining in this country. The bank balances of non-residents remain free; but their total may be regarded as exceptionally small and as representing the minimum required for the normal financing of trade between the countries concerned and the sterling area. There will be no appreciable leakage to the free market from that source. The securities are the important factor. If they had not been blocked and if at the same time the other features of the tightened exchange control scheme had been applied, the result would have been another slump in the free sterling rate and the consequent deterioration of the terms of our trade with all soft currency countries temporarily outside the circle of payments agreements. The decision to block such assets has been facilitated by the temporary immobilisation of Dutch and Belgian assets following the German invasion of those two countries, whose sterling holdings represented a not inconsiderable part of the total of foreign investments in this country. Even more important as a factor in the decision has been the rapidity of the change in American opinion in favour of the Allied cause in recent weeks. A few weeks ago it would have been highly dangerous to block American investments here, for such a move might well have been followed by retaliatory and far more painful action on the part of the United States.

While we may assume that the new regulations will drastically curtail the volume of business handled by the free market in sterling, it is still too early to compute with complete confidence what their ultimate effect on the free rate will be. That consideration is of importance, since the regulations leave some function to be played by the free market. Financial remittances to this country in respect of invisible exports, such as dividend payments, insurance premiums and freight charges, will continue to be allowed to use the free-market route. If the rate obtaining in this market is unduly low, there will be some loss in foreign exchange to the country as a whole, though it should be remembered that the loss will in the main fall on those non-residents to whom sterling is accruing and who are given permission to convert it into other currencies at the free rate. It may, in fact, be hoped that the new regulations, by cutting off the whole of the investment supply of free sterling while leaving an appreciable demand for financial sterling to reach the free market, will make for a much narrower margin between free and official rates than we had become accustomed to before the new announcement was made. This conclusion seems to be that to which the market has been driven, for despite decidedly discouraging military news, the free sterling rate in New York has since Thursday of last week recovered from 3.20 to around 3.80 and is holding its recovery in the most remarkable manner.

This jump in the free rate is partly an acknowledgment of the contraction which an already narrow market is suffering as a result of the stricter regulations. It is also a reflection of the technical position in the free market which obtained when the news of the regulations burst upon it. For some weeks past that position has been persistently oversold. There have been some out-and-out bear speculative positions, many commercial firms operating in both sterling and non-sterling areas have as far as possible financed themselves by sterling overdrafts, and all concerns having remittances to make to

this country have in the recent past tended to defer covering their requirements as long as possible. This accumulated short position, though not substantial when judged by normal standards of the pre-war exchange market, was sufficient to provide a considerable factor of support in the market when news came that a contraction of the free market would occur, especially as the first rumours of the new regulations hinted at the virtual elimination of the free market. The rush to cover the open position and to provide for future requirements of sterling was sufficient to cause the exchange rate to stage its remarkable recovery. The chances are that the narrowing of the gap between official and free rates is of more permanent character than the nature of the immediate forces at work in the recovery would suggest. But in a market so narrow as the free market in sterling is likely to become, inordinate movements must be expected. And in view of the relative unimportance to which the operations in that market are likely to sink, those movements will not cause our authorities serious concern.

The advance which the latest regulations represent towards a reasonably watertight and effective system of exchange control is thus considerable. But it would be false optimism to suggest that they constitute the ideal beyond which it is needless to strive. Our exchange relations with the United States—and they are the vital factor in the whole exchange position—are placed on a more satisfactory basis. The vital distinction between pounds that originate in commercial transactions and pounds arising from capital holdings has, by inference, been clearly made. Our exports to the United States should henceforth be entirely financed at the official rate, though it is still possible that imports into this country

may be financed at the free rate and therefore at unfavourable terms of trade. This gap still remains to be closed.

The weak point in the structure of our exchange control will remain in the relations with the soft currency countries. On present evidence it is likely to remain a weak point even when the chain of payments agreements is completed. That is partly because these agreements are payments and not full clearing agreements. They leave too much room for evasion and for contravention of the spirit of the agreements on the non-British side of the account. Full clearing is the only effective solution to the problem of watertight control. There are welcome indications in the agreement signed this week with Roumania that this is the road towards which we are travelling. But why not faster? If the reason be administrative laziness or unwillingness to discard old orthodoxies, they are wholly inadequate to the urgencies of the present situation. Stricter application of the principle of bilateral clearing would also remove one of the present weaknesses of the present control system, namely, the possibility for neutral creditors of this country to switch from soft to hard currencies. The potential of that danger has been increased by the favourable terms on which financial remittances to the hard currency countries are to be made from the sterling area. This will undoubtedly increase the temptations of our creditors in soft-currency countries to evade their own regulations and register their claims under one of the hard-currency flags. These points may be unimportant in relation to the considerable advance which the new regulations constitute; but they should be kept in mind and militate against any feeling of complacent gratification at the progress which has been achieved.

Finance and Banking

The Fiduciary Issue

Last week's Bank return pronounced the urgency of an increase in the fiduciary issue. The expansion in the active circulation had reduced the reserve of unissued notes in the banking department to £10,975,000 and the ratio of the reserve to liabilities to the unprecedented figure of 6.8 per cent. This week the fiduciary issue of the Bank of England has by authorisation of the Treasury been increased by £50 millions to £630 millions, and, in accordance with the Currency and Bank Notes Act of 1928, the required Treasury minute is being laid before Parliament. The note circulation is being subjected to two kinds of influences, both making for expansion. In the first place, the secular trend in the system of currency issue in the event of a serious emergency, are increasing and prices are still inclined to rise. Secondly, the arrangements which are being made to decentralise the system of currency issue in the event of serious emergency, such as invasion, have involved considerable increases in the total amount of till money maintained by the clearing banks. In addition, the renewal of movements of population from evacuation areas has immobilised some currency, while the uncertainties of the war situation have undoubtedly caused a larger amount of currency to be held by the people as a precaution against sudden emergencies. Part of the recent expansion in the circulation is thus of essentially temporary character. In view of this fact, the decision to increase the fiduciary circulation by as much as £50 millions should meet the situation for a long time ahead.

Circulation Still Climbing

The latest Bank return, which gives effect to the increase in the fiduciary issue, reveals a further jump of £9,103,000 in the active circulation, which in the space of three weeks has risen by £31,868,000. The increase in the fiduciary total has been effected by a transfer of £50,000,000 of Government securities from the banking to the issue department. Apart from this transaction, the banking department has acquired additional securities in order to offset the effect of the expanding active circulation on the volume of bank cash. Consequently the net reduction in the holding of Government securities amounts to £37,755,000 only. In spite of this more than adequate offsetting operation, bankers' deposits show a reduction of £15,632,000 over the week, but this is explained by the rise of £21,278,000 in public deposits. This last movement must, in the face of the continuing revenue deficit, be explained in terms of the additional

issues of Treasury bills both through the tender and through direct sales of tap bills to the banks. The clearing banks have shown some diffidence this week in buying bills from the market, an attitude which is adequately explained by the reduction in bankers' deposits at the Bank of England. Though there has been no scarcity of loanable funds in the money market, the margin on which the market has been working has narrowed sufficiently to cause some apprehensive queries as to the facility with which the end of June will be financed by the market. One may confidently assume that all the necessary arrangements will be made to avoid any appreciable pressure over this period, even though the market will once again be unable to pass the burden of the half-yearly window-dressing to the Treasury by deferring payment for its bills during the crucial week until the first day of July, which falls on a Monday.

* * *

Clearing Bank Statements

The clearing bank statements for May reveal the biggest movements that have taken place since the war. The expansion of the money supply to cope with the quickened war effort is now influencing the whole credit structure of the

country. Last month the basis of bank cash expanded by £3,099,000, and, on this, the total deposits rose by about £60 millions to £2,413,339,000. The pace and volume of

Government disbursements are the dominant factor in the changes of banking assets, while the methods chosen to bridge the deficit are for the time being the main influence making for an expansion in the total volume of these assets. As was to be expected it is in the growth of the Treasury bill holding that the principal motive force of the expansion in the credit structure is to be found. The bill portfolio last month rose by no less than £70,361,000, and as commercial paper is still on the decline one may assume that more than this figure was contributed to the total by Treasury bills. The rate at which bills had to be marketed reflects the considerable acceleration which has recently taken place in the flow of payments to various Government contractors. The quickening of Government disbursements is partly reflected in the increase in deposits, but it is also apparent in a surprising reduction of loans and advances. These fell last month by £19,079,000 to £964,281,000, a total appreciably lower than obtained on the outbreak of the war. An interesting movement in the latest return is the increase of £15,603,000 in the banks' investments. The banks were persistent buyers of gilt-edged during May, the main supply coming from various public departments. This movement helps to explain the exceptional strength of gilt-edged during this period.

* * *

By-Passing the Discount Market ?

The large increase in the banks' holdings of Treasury bills opens up some interesting queries on the mechanism of Treasury bill issue. It should be noted in the first place that the increase of £70,361,000 (and probably more) in the banks' holdings of Treasury bills compares with an increase of £35 millions only in the total of bills issued through the weekly tender over the same period. The banks may to some extent have increased their holdings of bills at the expense of discount market portfolios and the reduction of £9,732,000 in their money at call and short notice suggests that, to approximately this extent, such a movement has occurred. But the unaccounted for balance of the banks' increased holdings of bills must have come from the official seller. The exceptionally close touch maintained between the clearing banks and the Bank of England in the matter of open market operations has been in ever increasing evidence since the outbreak of the war, and the latest clearing bank figures suggest that it is being carried forward to the point at which a considerable part of the supply of Treasury bills reaching the clearing banks does so direct through the "tap" issue and by-passes the discount market altogether. The authorities may feel that the discount market does not merit its turn on the volume of bills that would have to pass through its hands now if the whole of the bills marketed were to be made available through the weekly tender. Moreover, there is some measure of precaution in gradually forging and putting into motion the machinery of direct sales of bills to the banks that would come to be used exclusively in the event of such an emergency as would cause the City of London to be abandoned.

* * *

Belgium Joins the Monetary Alliance

The formal adhesion of Belgium to the Anglo-French monetary agreement was announced at the end of last week. The new tripartite agreement differs in one important respect from the provisional arrangements made on the invasion of the Low Countries to regulate the exchanges between Belgium and the Allied Powers. That agreement had necessarily to be based on the level of rates obtaining immediately before the invasion and fixed the Belgian franc at 120 to the £. By the new agreement the value of the Belgian franc has been levelled with that of the French franc, and both are fixed, for the duration and six months after, at 176½ to the £. It is interesting to note that the text of the agreement refers only to Belgian francs and omits mention of the "belga," that comparatively recent currency innovation which never entered into popular usage in Belgium and to some extent symbolised Belgium's ill-fated attempts to sever herself from the French alliance. The Belgian franc now ranks in the tripartite agreement equally with the French and British currencies. The authorities of each of the three countries will make their currencies available to those of the other two without immediate settlement in gold. Moreover, as a result of the new agreement, there will be "an equitable division" between the three countries of the charges in gold or foreign exchange resulting from the war. The main operations on the Belgian side will be those concerned with the Belgian colony. The

signature of a similar agreement between the Allied Powers and the Netherlands Government is expected within the next few days.

* * *

Anglo-Roumanian Payments Agreement

A new agreement has been concluded between the British and Roumanian Governments covering the trade and payments between the two countries. This may be regarded as the first of the new batch of payments agreements, the accelerated output of which was announced last week with the tightening of the Exchange Control regulations. The new agreement supersedes that which was signed last July and which had ceased to be altogether suitable to war conditions. It differs in the main from its predecessor in covering payments for freight, insurance and other financial transactions as well as for the visible trade between the two countries. It stipulates that no part of the sterling which will be paid into the payments account will be at the disposal of the Roumanian exporter for sale at market rates, since he is now obliged under the Roumanian regulations to surrender the whole of the sterling to the National Bank of Roumania at the official rate of exchange. Another important extension of the agreement is the provision that part of the sterling arising from Roumanian sales in this country will be available to pay for purchases by Roumania from the whole of the sterling area.

Speculation in Silver

As one of the few free markets remaining in the City, the silver market must continue to attract special attention—certainly greater attention than the size of its turnover justifies. The position remains decidedly intriguing. A fortnight ago it was learned that the reason why the United States House of Representatives had sent the Townsend Bill back to the Senate was that the measure infringed the prerogative of the lower House to institute measures of taxation. The Townsend proposals did not merely affect the powers of the Treasury to purchase imported silver, they also provided for the abolition of the 50 per cent. duty on the profits made by silver arbitrage. If the whole difference between the House of Representatives and the Senate merely concerns this technical infringement of the United States Constitution, it should be rapidly remedied, and we may yet see the essential part of the Townsend Bill passed into law before the end of the present session. The London market has, however, been moved by influences quite other than this fundamental question of American attitude and policy towards silver. The military news from France and especially the entry of Italy into the war has been causing some nervousness in India and has led to attempts to cover bear positions which Bombay operators had opened in London on anticipations of a reversal of American silver policy. The attempts to cover or extend these positions have led to a serious shortage of spot silver and to an inordinate widening of the spread between cash and forward quotations. This was narrowed on Monday when the small demand was almost entirely for forward; but on Tuesday more forward selling from India caused the forward price to fall to a discount of 1½d. and this spread has since been maintained. The experience of the market in the past two weeks has revealed the exceptional meagreness of the stocks held in this country. It is estimated that the stocks held in other than official quarters do not exceed 2,000,000 ounces—and a substantial part of this is earmarked for industrial requirements. The Indian Government's London stocks cannot be more than about 8,000,000 ounces at the moment. It was from these stocks that most of the recent demand for cash silver had to be satisfied.

Bank of New Zealand

The chief changes in the balance sheet of the Bank of New Zealand at March 31st last, compared with 1939, are a rise of £3,147,190 in cash to £10,825,109 and a big fall in discounts and advances from £27,202,740 to £22,959,596, most of the latter movement being explained by falls in advances to primary producers and wholesalers. Profits, however, are only some £5,000 lower at £580,926, so that the dividend is again 10 per cent.; and the rise in cash, money at call, investments and remittances in transit to a total which is equal to 77 per cent. of deposits shows a highly liquid position.

Investment

A Stoical Market

The Stock Exchange concluded long before the Italian Government that the latter would enter the war, and the event proved an anti-climax rather than a new shock. Despite the predicament of France, by which the Italian decision was cynically timed, the reaction of the market was not so far-reaching as on the occasion of the attack on the Low Countries four weeks earlier. Gilt-edged closed unchanged, or at worst fractionally lower. And by Thursday, War Loan, which closed at 99 last Friday, stood at 99½, unchanged after a day of serious news. The gilt-edged market, indeed, remains unshakeable—an excellent portent for the reception of the next War loan. Home rails found a strong point, and defended it to good advantage. And even industrial shares, as measured by the *Financial News* index, recovered Tuesday's loss on the following day, though they reacted again on Thursday. The obvious victims of the week are to be found in the foreign bond market. French railway bonds inevitably showed a further decline, and the two Italian issues were marked down sharply to a nominal basis. With such exceptions, the investment bearings of the market are unaltered. Gilt-edged remain steady and firm. Industrials still defy investment calculation. Commodity shares refuse to respond to the sharp rise in prices. But where a case can be made out for a positive investment policy—as it could in home rail prior charges at the end of last week—the market is still capable of response.

* * *

The Investor's Part

The sharp improvement in the sales of Savings Certificates and 3 per cent. Defence Bonds during the fortnight to June 4th provided an excellent curtain-raiser for this week's National Savings drive. The total sales of £9,742,000 for the week to May 28th and £9,490,000 for the week to June 4th are reminiscent of the figures which were achieved at the beginning of the campaign last November, and they mark the willingness of the small saver to respond at a time when support for the National Savings Campaign is vital and urgent. Opening the campaign at the Guildhall on Monday, the Chancellor of the Exchequer reminded large investors that he had under constant consideration the time and form of the next market issue. That issue will probably appear at no distant date. Supply costs for the financial year to date have amounted to £424.7 millions. In the same period total sales of Savings Certificates and Defence Bonds have provided £54.7 millions towards the cost of war, while the 90 per cent. call on the 3 per cent. War Loan, which was finally payable on April 15th last, provided £270 millions. Despite the funding of Treasury bills as a result of this issue, the total volume of bills issued through the tap and tender has increased since March 31st to the extent of £106.1 millions. Moreover, approximately £100 millions is payable to holders of 4½ per cent. Conversion Loan who exercised the option not to convert into the 2 per cent. issue on July 1st. These figures clearly indicate the measure of the financial burden and it is increasing fast. For seasonal reasons tax revenue is not throwing its full weight into the revenue returns, but its turn will come later in the financial year, and may well include revenue from new imposts. Meanwhile, the fullest support for the National Savings Campaign is required, and it should be forthcoming from every class of investor. It may, perhaps, be significant that sales of Defence Bonds, after running for some weeks below those of Savings Certificates, have in the last two weeks drawn abreast. The 3 per cent. bond is unquestionably an attractive security. It may be purchased up to a limit of £1,000; it is redeemable seven years after purchase at a premium of 1 per cent.; interest is subject to tax but not deducted at the source; and the redemption yield of £3 2s. 7d. per cent. is obviously attractive, considering its short life. Even the largest investor would serve himself and his country well by investing the maximum sum in Defence Bonds.

* * *

Moral Dividend Limitation

There is further evidence this week that a finite rule, subject to reasonable facilities for appeal, would have been preferable to an exhortation to company directors to observe the spirit of the dividend limitation provisions. In so technical a matter, to place a moral responsibility on directors who are, in fact, answerable to their shareholders, may impose on them an invidious choice. A further case of this sort, in

addition to British Electric Traction, to which reference was made in last week's issue, is Linggi Plantations. The directors intended to pay, and actually announced, a dividend of 7½ per cent. The rate was later reduced to 5 per cent., for on considering the Bill and taking account of the reduction in the company's capital, the directors concluded that the payment must be confined to that rate. They do not propose to alter the revised declaration, but they intend to declare in about two months' time an interim dividend of 2½ per cent., treating the amount involved as a deduction from the balance carried forward from last year, and not as an appropriation from the current year's profits. In the company's circumstances, this appears to be a reasonable compromise, but the directors might well have wished to be spared the necessity for evolving it. Ballito Hosiery Mills provides another example of revision. The board originally intended to pay 17½ per cent., but reduced the rate to 12½ per cent. to conform to the Bill. In finally recommending a payment of 15 per cent., therefore, the company has followed a middle course, in an attempt to satisfy its shareholders and the Chancellor. In all cases where, despite the incidence of 100 per cent. E.P.T., companies find themselves with an appreciable margin of profits, the willingness of directors to follow the Chancellor's wishes will have to be weighed against their responsibilities to shareholders. Such cases will probably be sufficiently numerous to make their task unenviable.

* * *

Italy and the Investor

No investor will complain that Italy's intention to enter the war was not fully advertised in advance. The direct consequences of her long-delayed decision, therefore, would have been small, even had British interests in Italy been appreciable. In fact, they are of a most limited order. Italy's direct sterling obligations are restricted to the £1,119,340 5 per cent. Maremma Railway bonds, and £562,600 7 per cent. bonds of the Consortium for Public Works. The former, which touched 52½ last year, are now quoted at 5-15, while the latter stand at 15-25 against last year's high of 89. Certain lira obligations may also be held by British investors, but they have never been a popular security. Among Italian industrial concerns, only one is of outstanding interest to British investors—"Snia Viscosa," of whose 2,660,000 shares of L.250, some 396,812 are officially listed in London. In each of the past two years, dividends of 10 per cent. have been paid on these shares, but the transfer of payment to British holders has been possible only through the Anglo-Italian Clearing. Courtaulds has a substantial investment in and working agreements with "Snia Viscosa." At the meeting in March, Mr Samuel Courtauld referred to

the satisfactory trading of "Snia Viscosa" last year—when profits were, in fact, the highest since the reorganisation in 1931—and to the "cordial relations" between the two concerns. But although direct British interests in Italy are small, the extension of the war to the Mediterranean profoundly affects Allied interests in Egypt and the Suez Canal. The Egyptian public debt, managed with exemplary care, has preserved a high place in the foreign bond list. French and British interests preponderate in the Suez Canal Company. Participation in the Iraq Petroleum Company is distributed among Anglo-Iranian, Royal Dutch, Compagnie Française des Pétroles, and Near Eastern Development Corporation, all of which hold a 23½ per cent. interest. British investments in Palestine and Egyptian undertakings are also considerable. These are tempting prizes; they are also repositories of economic and strategic power which the enemy must first overthrow before he may enjoy the spoils.

Home Rail Recovery

On Tuesday, the home railway market at last stood its ground at an effective resistance point. The rally in prices which then occurred was due not to any sudden decision of the public to buy, but rather to a simple test which dealers themselves applied. A slight raising of quotations brought out no further supply of stock, and proved that the recent selling had exhausted itself. But the rally evidently provided a signal for which investors had been waiting, and even a small amount of buying on Wednesday, coupled with the absence of any appreciable supply of free stock, caused a further rise throughout the market. There can be no doubt that this recovery, at least in the senior issues, is well deserved, for the debentures and senior prior charges have suffered most conspicuously and least justifiably in the recent retreat. A yield basis of nearly 4½ per cent. for L.M.S. 4 per cent. debentures and over 5 per cent. for L.N.E.R. debentures was plainly out of touch with the returns offered by the gilt-edged market. Recent falls, and the extent of recovery, are shown below:—

HOME RAIL MOVEMENTS

* Ex interest.

Depression in home rail prior charges is a serious matter for stockholders, but it also has wider implications. The structure of interest rates in a controlled capital market must hang together satisfactorily if control is to be effective. Home railway prior charges, though not supported by minimum prices, nevertheless cover such a wide investment area that some correction was inevitable, either through the natural process of the market or through official intervention, unless their prices were to be allowed to fall grossly out of line with those of protected stocks. Possibly the fact that the L.M.S. 5 per cent. redeemable preference stock was marked xd. last Monday—which implies that the much larger 4 per cent. preference issue, which ranks *pari passu* with the redeemable issue, will receive its due payment on August 24th

**FOR ALL
INSURANCE
NEEDS**

Head Offices:
LIVERPOOL LONDON
North John St. Lombard St.

—encouraged the market to take a less despondent view about war damage and any additional reserves which the companies might make voluntarily to cover damage in excess of the guaranteed £10 millions. The prices of certain junior prior charges suggested an attempt to discount the possibility of heavier damage according to the geographical position of the lines. That policy depends on the assumption that damage exceeding £10 millions will fall upon the individual companies concerned and will not be shared. Since, however, the precise terms of the railways' financial agreement have still to be fixed, and published, the assumption is quite unconfirmed. In fact, it would seem more probable to assume that excess damage will be shared in the pool proportions, for the loss sustained by any one line will be a purely arbitrary consequence of war, whose consequence in other matters of railway operation and railway finance has been to put the four main lines and London Transport on a co-partnership basis. Investors who have been attempting to value the relative vulnerability or immunity of the undertakings to excess war damage might therefore reconsider their policy.

J. Lyons' Profits

Despite the reduction of the ordinary and "A" ordinary dividend to 20 per cent. less tax, for the year to March last, from the traditional payment of 22½ per cent., the annual report of J. Lyons shows that net profits, after making the usual undisclosed provisions, have been well maintained. After charging debenture and mortgage interest, administration expenses, depreciation, taxation, and providing for contingencies, net profits at £1,024,623 are only £1,067 below those of 1938-39 and exceed the 1937-38 figure by £163. Seven months of war have not affected the stability of J. Lyons' profits, as disclosed in the accounts:—

	Years ended March 31, 1938	1939	1940
Profit	1,024,460	1,025,690	1,024,623
Directors' fees.....	13,460	13,710	13,171
Pref. dividends	462,353	462,353	462,353
Pref. ord. div.	28,000	28,000	28,000
Ord., "A" ord., and proportional profit shares:—			
Earned	520,647	521,627	521,099
Paid	417,661	417,661	371,255
Earned %*	29.9	30.2	32.9
Paid %*	22½	22½	20
A.R.P. provision	...	100,000	...
Carry forward	145,189	149,154	298,998

* On ordinary and "A" ordinary; each proportional profit share ranks for one-fifth of dividend on an ordinary share.

The report, indeed, gives only the broad indication that business done in the war months may be considered satisfactory, and that lower profits due to war disturbance were quickly countered by reorganisation. The latter, coupled with a subsequent improvement in trade, provided approximately unchanged net profits, after making an "adequate provision" for contingencies. The sum earned for the ordinary, "A" ordinary and proportional profit shares amounts to £521,099 against £521,627 last year. The reduced dividend of 20 per cent. on ordinary capital is covered by earnings of 32.9 per cent. compared with 30.2 per cent. in 1938-39. Thus the decision to reduce the ordinary dividend and the consequent raising of the carry forward from £149,154 (after providing £100,000 for A.R.P.) to £298,998, provides evidence of a conservative policy which is prepared for the possibility of a deterioration in earning conditions as the war develops. It is worth noting in this connection that while equity capital represents only 21½ per cent. of the total debenture and share capital, it absorbed 34 per cent. of last year's earnings. The balance sheet position shows little change, although stocks, despite higher prices show a slight reduction at £2,630,475, while the surplus of liquid assets has risen from £945,000 to £1,011,000. At a current price of 81s. 3d., the £1 ordinary shares yield £4 18s. 5d. per cent.

Guest, Keen and Nettlefolds Profits

The directors of Guest, Keen and Nettlefolds announce an increase in earnings for the year ended March 31, 1940, from £985,785 to £1,003,000, after charging £200,000 to depreciation and £98,964 to debenture and sinking fund service. These latest profits are only £72,467 lower than the

record net profit of 1937-38. After deducting £326,732 for preference dividends, equity earnings would amount to £676,268, equivalent to 10½ per cent. tax free, against 10.2 per cent. last year. By raising the tax free dividend from 6 per cent. to 6½ per cent., the directors have preserved the previous year's margin of undistributed profits. Allocations of £100,000 to contingencies account and of £150,000 to reserve fund have been made, compared with £300,000 to reserve in the previous year. At 19s. 3d. ex dividend, the £1 ordinary stock yields £6 15s. 2d. per cent. tax free.

Bleachers' Association

Bleachers' Association shareholders will be encouraged by the substantial improvement in earnings for the year ended March 31, 1940. Earnings have recovered from the record low level touched in the previous year to the scale—still a depressed scale—which ruled between 1935 and 1938. Total profit, after charging general expenses and taxation, amounted to £453,351 against £332,422 in 1938-39, excluding £15,000 credited from tax reserve in that year. The provision for repairs and maintenance has been raised from £157,010 to £160,031. After allocating £140,000 for depreciation, as in the previous year, and charging the normal £2,349 for directors' fees, the sum of £150,971 is available to meet fixed charges, the highest figure since 1936-37, when £178,400 was earned. The amount earned for dividends, after debenture interest, totals £49,721, compared with a debit balance of £68,187 in 1938-39. From this sum the directors have decided to pay off one quarter's arrears of dividend on the 5½ per cent. cumulative preference stock, which absorbs £34,203. This payment, the first since 1937, will leave six years' arrears of dividends on the preference stock amounting to £820,875 gross, or 6s. 7d. per £1 of stock. The amount carried forward is raised from £134,173 to £149,691. Despite the improvement in earnings during the past year, the trading position of the company (which has not paid an ordinary dividend since 1929-30) may be affected by the isolation of many export markets and by the check to the export drive. At home, the restriction on textile supplies will also be operative, and Bleachers may not be able to obtain from war work the return which would have attended a successful expansion of export trade. There is no evidence, at least, that the Association will earn sufficient during the course of the war to escape the burden of over-capitalisation and capital reconstruction. Net current assets have increased from £1,493,000 to £1,749,000. The 5½ per cent. cumulative preference stock at 8s. 1½d. yields £3 7s. 6d. per cent. on the basis of the 1½ per cent. distribution paid last year, without allowance for accrued dividends.

Consett Iron Record

Despite heavily increased provision for taxation and rising costs, the Consett Iron Company achieved higher gross and net profits during the year to March 31, 1940. Trading profit rose by £369,307 to £982,615. Though the latter sum is struck after charging large black-out and A.R.P. expenditure, it came close to the record figure of £983,229 in 1937-38. Total income reached £1,061,188, against £669,717 last year, and actually exceeded the 1937-38 figure by £23,235. The advance in trading profits, however, is largely absorbed by an increased allocation for taxation, which has been raised from £120,000 to £428,000. As a result, earnings for ordinary capital amount to only £347,341, compared with £554,453 in 1937-38 and £280,168 in the following year. The ordinary dividend has been maintained at last year's level of 7½ per cent., less tax, but is covered by earnings of 15.3 per cent., against 11.0 per cent. This decision has evidently been influenced by the need to place a further £100,000 to the reserve for improvement of plant and machinery, which now stands at £800,000. The directors emphasise that consideration is being given to the task of modernising blast furnaces and sectional mills, and the reserve will be of the utmost value for this purpose, not least because the company has been working to full capacity throughout the past year. Any new plant can be financed comfortably from the company's own cash resources, which have increased from £1,033,089 to £1,567,521 during the year. The rolling mills of the New Jarrow Steel Company, which is controlled by Consett Iron, have commenced operations. The amount carried forward is raised from £186,120 to £200,461. At the current price of 6s. 3d. ex div., the 6s. 8d. ordinary stock stands to yield £8 per cent.—a return which is little higher than the average return on steel shares.

Kaffir Mining Policy

Spokesmen at recent Kaffir mining company meetings have naturally welcomed the new legislation which allows the mines to obtain the full benefit of gold at 168s. per ounce, although the companies are subjected to increased taxation and charges. The chairman of Rand Mines has shown that the change would lengthen the lives of mines, without, generally speaking, having any material effect on future dividend prospects. This point has been confirmed at the recent annual meetings of such mines as East Rand Proprietary, Crown Mines, City Deep and Durban Roodepoort Deep, among others. The native labour shortage throughout the Rand during last year was emphasised, and the agreement reached some weeks ago between the Union and the Portuguese Governments to increase from 80,000 to 100,000 the number of Portuguese natives which could be recruited from Mozambique has been welcomed. For many years past, the incidence of pneumonia amongst tropical natives working on the Rand has received most intensive medical research, and mortality has fallen to a very low figure. It is interesting to note, therefore, that the chairman of Rand Mines has indicated that it might be possible shortly to obtain increases in quotas of tropical natives from territories north of Latitude 22° South. Labour-saving devices on the Rand are being improved continually and, in due course, the labour shortage, which has so hampered underground and surface operations at times in the past, should be overcome. At the Robinson Deep meeting the chairman referred to the future of deep level mining. It would be physically possible to work to a depth of 12,800 feet in this mine, provided that suitable shafts were sunk. With the present shaft system, however, the limit is 9,000 feet. The cost of sinking such new deep shafts would be extremely heavy and unjustifiable with mining taxation at its present level. Sooner or later, however, the Government may have to reconsider the relation of its tax policy to deep mining, for certain great mines of the Central Rand will, in due course, be faced with problems similar to those of Robinson Deep. A series of new deep level mines might be of inestimable value to the Union at some future date. At the Simmer and Jack meeting the chairman confirmed that, despite delay in delivery of plant, the mill should be operating at the full rate of 180,000 tons a month by the end of the year, thus fulfilling the original estimates. At the Government Areas meeting the chairman again emphasised the irregularity of the Black Reef formation, and stated that the importance of these conglomerates could only be indicated by development from year to year. A lens is being opened up in the north-west section of the mine, and another lens in the north-eastern section has been indicated by boring, but in other parts of the property the prospects of the Black Reef formation are unpromising.

Venezuelan Oil Results

V.O.C. enjoyed a rise in gross income for the year ended December 31, 1939, from £6,478,489 to £7,114,798. The sum available for dividend distribution fell, however, from £1,482,829 to £1,281,984, the lowest figure since 1935. This divergence between gross and net receipts is due, first, to the fall of sterling against the United States dollar, on which currency the company's crude oil sales are based, and, secondly, to the unfavourable course of the sterling-bolivar exchange, through which large sterling sums are converted for meeting its costs in Venezuela. Expenses reached a new record level, and the company was obliged to increase its taxation provision from £296,000 to £850,000. The sum of £1,281,984 earned for dividends represents 18.4 per cent. for the ordinary and 7 per cent. participating preference shares, against 22.0 per cent. in 1938. The reduction in the rate of earnings, however, has not affected the directors' decision to maintain the dividend at 16½ per cent. No sums are transferred to exploration or general reserves, compared with £250,000 in 1938 and £500,000 in 1937, and the balance carried forward amounts to £243,193, against £175,767. For reasons of public policy, no figures for production or shipment of crude oil have been included in the report. Exploitation of all the company's oilfields was pushed forward vigorously during the past year. Progress has been made with the construction of a coastal dyke in the Bolivar district and the drilling of exploration wells is continuing. Although the report lacks statistical evidence of increased output—which since 1936 has grown at a remarkable rate—it is a fair inference from the general character of the report that the undertaking is maintaining its progress. At the present price of 21s. 3d., the 13s. 4d. ordinary shares yield £10 13s. per cent.

THE STOCK EXCHANGES

London

Note: all dealings are for cash

THE tone of the gilt-edged market has remained firm and unwavering in the face of news of Italian intervention, the effects of which had, in fact, been discounted long ago. Though sharp falls were experienced in the foreign bond market by those stocks especially affected, the undercurrent of confidence was sufficient to produce a significant rise in home rails. Industrials remained uninspired and the mining, oil and rubber markets failed to profit from higher commodity prices.

At the beginning of the week, the strong French resistance to the German offensive helped to maintain prices in the gilt-edged market, though turnover remained slight. National Defence 2½ per cent. and Conversion 2½ per cent. alone lost ½ on the day. After the news of Italy's declaration of war various falls of ½ were recorded by short-dated issues, but irredeemable stocks showed no change. Later in the week small gains were recorded by 3½ per cent. Conversion and 3 per cent. War Loan, though 4 per cent. Consols lost ½ on Wednesday. Despite the threat to Paris, the market regained its early losses on Thursday.

Falls were heavy in the foreign bond market. Nervous selling due to political developments in South America, caused Chilean, Brazilian and Argentine bonds to slump. French railways and Seine "four and a half" were weak on Tuesday, when Italian bonds slumped 7½ points, followed by a further fall of 5 points on Wednesday. Spanish bonds also fell.

The home rail market staged a welcome recovery this week, numerous buyers being attracted by the low prices ruling. Great Western and L.M.S. ordinary stocks were in demand and showed substantial gains. In midweek, Southern preferred and deferred gained one point and Great Western and L.N.E.R. preference and debenture issues also improved.

Throughout the week, the small amount of business transacted in the industrial market has had little influence on prices. A tendency among international stocks to rally in midweek, under the influence of Wall Street, was not maintained. On Monday breweries were in demand and Charrington, Courage and Distillers all showed gains of the order of 2s. Later in the week, the downward trend was especially marked among electrical supply shares, aircraft issues and shipping companies. Carreras and J. and P. Coats were firm. Improvements occurred in iron and steel issues on Wednesday, and among stores Harrods and Woolworths improved.

The oil, rubber and Kaffir markets have shown a minimum of movement. Rubber shares remained uninfluenced by the strength of the commodity, and quotations remained virtually unchanged. Kaffirs showed some firmness on Wednesday, when gains were realised by "Sallies," Robinson Deep, "West Wits," and on a smaller scale by a number of dividend paying companies. Slight gains were also shown by market leaders in the oil market, including Shell Transport, Burmah Oil and Canadian Eagle.

New York

ANXIETY with regard to Italian policy was responsible for a critical opening on Wall Street on Monday. The market closed above the worst, but falls of one point were general. The tone became firm, however, and activity increased on news of Italian intervention. Steel and aircraft shares led the market, rising several points on Tuesday and Wednesday. Investors were encouraged by news of the readiness of Ford Motors to undertake mass production of planes and by indications that steel activity would reach 90 per cent. of capacity in certain districts in the present week. The *Iron Age* estimates steel activity at 85.5 per cent. of capacity, against 80.5 per cent. last week. The Dow Jones industrial index, which fell from 115.36 to 111.84 on Monday, recovered to 121.46 on Wednesday.

SHORTER COMMENTS

The Week's Company Results.—

A reduction in output, due to shortage of labour, coupled with rising costs, has resulted in a fall in net profits of MANCHESTER COLLIERIES from £217,747 to £106,328; in consequence the dividend is sharply reduced from 5 per cent. to 2 per cent. PARTRIDGE, JONES AND PATON, however, have maintained the tax-free dividend at 5 per cent. and report an increase in net earnings from £162,890 to £170,512. Rubber companies again report higher profits and dividends. Among them, CENTRAL PERAK reports an increase in net profit from £18,687 to £27,110 and in dividend from 2½ per cent. to 6 per cent., but GORDON (MALAYA), with a fall in net profit from £20,765 to £15,237, due to increased taxation and to the fall in production from 1,923,000 lbs. to 1,407,000 lbs., is a notable exception to the trend. Two provision firms, C. AND E. MORTON and SAMUEL HANSON, realised striking improvements from a debit of £8,200 to a credit of £48,853 and from profits of £12,143 to £21,787 respectively. Neither company, however, resumed dividends. Net earnings of JOHN I. JACOBS, at £29,988, have been based on a conservative estimate of Government rates of hire for the company's tanker fleet. This fact explains the maintained dividend of 12½ per cent., despite the nominal drop in profits of £39,083. GREENE, KING has maintained its dividend at 18 per cent., despite a fall in net income of £9,408 to £9,563. The net loss of PARA ELECTRIC RAILWAYS has risen from £32,790 to £36,458, mainly on account of motor bus competition. In spite of deteriorating conditions of world trade, WHITEAWAY, LAIDLAW have converted a loss of £13,645 into a net profit of £32,429 for the year ended February 29, 1940.

MISCELLANEOUS

Butterley Company, Ltd.—Net profit, year to March 31, 1940, after taxation and preference dividend, £120,344 (£146,105); ordinary dividend 10½ per cent., less tax (6½ per cent. tax free).

Modern Machine Tools, Ltd.—Trading profit, 1939, £51,792 (£26,852); taxation, £26,783 (£9,100); net profit, £23,250 (£16,872); ordinary dividend maintained at 15 per cent.; investment reserve, £2,000 (nil); carry forward, £43,957 (£34,857).

Partridge Jones and John Paton, Ltd.—Net profit year to March 31, 1940, £207,211 (£162,890), after taxation £130,000 (£61,000); ordinary dividend 5 per cent. tax free as before; carry forward £270,414 (£170,512).

Liverpool and London and Globe.—The assets of this company are in the aggregate fully of the value of £33.9 millions as shown in the balance sheet without taking into account the general contingency fund of £2 millions, which is therefore a freely available fund. The reference to this company's assets in last week's issue of *The Economist*, page 1014, was incorrect in stating that, after taking into account the contingency reserve, total assets stood in the balance sheet below actual values.

Allied Ironfounders.—Net profit, year to March 31, 1940, £112,424 (£198,428). Ordinary dividend, 5 per cent. (9 per cent.).

Industry and Trade

Unemployment and Munitions

On May 20th the number of registered unemployed in Great Britain was still 881,000, including 731,000 wholly unemployed. So large a figure is an indictment of the economic policy that has been pursued since September. It is true that unemployment had been rapidly declining since February, and that a further fall of 92,000 took place between April 15th and May 20th. But by no means all of those who found employment were engaged by the munition and ancillary trades. The main changes in unemployment between April 15th and May 20th are shown below:—

CHANGES IN UNEMPLOYMENT BETWEEN APRIL 15TH AND MAY 20TH
(Industries chiefly affected)

Decreases:—	
Building.....	16,994
Distributive trades	16,184
Hotel, boarding house, etc., service.....	10,992
Public works contracting	7,588
Agriculture, horticulture, etc.	6,278
Local government service	5,373
Coal mining	4,217
Motor vehicles, cycles and aircraft	2,580
Metal goods manufacture	2,378
Road transport.....	2,182
Engineering, etc.	2,008
Increases:—	
Dock, harbour, etc., service.....	4,956
Cotton.....	3,924
Paper and paper board	2,786
Textile bleaching, printing, dyeing, etc.	2,302

The rate of transfer of labour from unessential to essential work, moreover, has been much too slow up to the present. With the new Government, the absorption of labour into the munitions industries is now being rapidly speeded up. But owing to the previous failure to perceive the size and urgency of the task, the attainment of maximum striking power has been seriously delayed.

Mass Production of Aircraft

The mass production of aircraft, which is now a matter of vital urgency, calls for more imagination than has hitherto been shown. First, it is necessary to select the categories and types which are to be produced in large numbers. So far as individual categories of aircraft are concerned, the choice must be influenced by geography. Long-range bombers can be flown across the Atlantic; fighters and short-range bombers cannot. Fighters must therefore be produced here, while long-range bombers might best be manufactured in large quantities in North America. (This does not mean, of course, that we should make all the fighters on the spot or that we should cease the construction of long-range bombers.) So far as types of fighters, bombers or trainers are concerned, the choice must depend on military considerations. Secondly, it is essential to simplify as much as possible the type or types selected for mass production, for the wings and fuselage of the modern military aircraft consist of thousands of small parts of duralumin or other alloys. Their rapid manufacture on a large scale requires batteries of press tools; while the manufacture of the dies for these tools—which must be made by hand—requires a large number of highly-skilled die-makers. Next, the rapid assembly of all the separate parts, with the assistance of jigs—a kind of scaffolding or framework—requires large numbers of jig draughtsmen and jig makers. If Britain's engineering industry had been famous for its typewriters and its cash registers rather than for its turbines, locomotives and bridges, there would have been no difficulty in securing a more rapid expansion in the output of aircraft. But owing to its concentration on the "individual job," the speeding-up of production has been hampered by the lack of sufficient press tools, die-makers and jig-makers, and hitherto far too many parts of our aircraft have been made laboriously by hand, chiefly by general precision fitters working from drawings with file, vernier and vice. But while the concentration of large-scale production on as few types as possible and their simplification should enable total output to be speeded

up rapidly, this will not be enough. As a third step it will be necessary to draw considerably more than hitherto on the abundant supply of skilled workers available in the mass production engineering plants of the United States and Canada, either by the import of skilled fitters or by the extension of the manufacture of parts across the Atlantic or by both methods. Indeed, if the output of aircraft is to be multiplied as quickly as possible—as it must—close collaboration between the industries in this country and in North America is now absolutely essential.

Britain's Iron Ore Supplies

The raw materials required in 1937—the best pre-war year—for the production of 13 million tons of crude steel included 6¼ million tons of pig iron and 7½ million tons of scrap. Again, to produce 6¼ million tons of pig iron the industry used 14 million tons of the comparatively low-grade domestic iron ore and 6¼ million tons of (chiefly high-grade) imported ore. These figures, together with the table below, show the quantitative effect of the loss of the Swedish and Norwegian iron ore, which is one of the consequences of the withdrawal from Narvik, in its true perspective:—

U.K. IMPORTS OF IRON ORE

(In thousands of tons)

	1913	1929	1937
Foreign Countries:—			
Sweden	367	724	1,729
Norway	488	513	657
Holland	27	50	65
Germany	10	14	1
France	327	240	408
Algeria	759	927	1,451
Tunis	279	427	715
Spain	4,526	2,619	930
Spanish ports in N. Africa	...	68	185
Brazil	(a)	(a)	94
Other foreign countries ...	335	32	103
Total	7,119	5,615	6,339

British Countries:—

	1913	1929	1937
Newfoundland and Coast of Labrador.....	100	5	259
Sierra Leone	...	...	337
Other British countries ...	12	4	16
Total	112	9	611
Total imports	7,231	5,624	6,950

(a) Negligible.

As our sources of imports are widely dispersed, the loss of Scandinavian ore is unlikely to have a very serious effect on our output of pig iron. The position would become more serious if shipments from Algeria and Tunis were also interrupted. But even then it would be possible to draw bigger supplies from other countries. And in any case America's steel-producing capacity is so big that she could easily spare us several million tons per annum.

Italy and Raw Material Markets

The declaration of war by Italy had little immediate effect on international commodity markets, with the exception of those for tin and rubber. The blockade of Italy will reduce the annual demand for these commodities by some 5,000 tons for tin and some 25,000 tons for rubber, but, in spite of this loss of trade, their prices turned upwards, in the expectation of large purchases by the United States. Italy herself produces only one commodity of international importance in excess of her own needs—quicksilver, but the demand of the Allies for this metal can be adequately met, although at high prices, from Spain, so long as that country remains neutral and her Atlantic ports are open to trade. The extension of the war to the Mediterranean will, however, increase the difficulties of shipping between the Allied countries, the Balkans, and the North African coast. There will be delays in exporting iron ore and phosphate rock from Algiers, Tunis and French Morocco, esparto from Algiers and Tunis, chrome ore from Turkey and Greece, oil from

Russia, Roumania and Iraq, manganese from Russia, cotton from Egypt and the Sudan; the competitive position of Germany in the Balkans will be strengthened by the added difficulties of sea communications with these countries. But even if none of these raw materials could be shipped from the Mediterranean area, alternative sources of supply are available elsewhere, though their use may involve the expenditure of more American dollars and the diversion of ships to longer sea routes.

Dislocation of Europe's Coal Trade

Of the major branches of Europe's international trade there are few whose direction and volume have been as greatly affected by the war as that of the coal trade. Continental countries are now almost entirely dependent on coalfields under German military occupation, and the United Kingdom has been deprived of markets which before the war were absorbing from one-third to one-half of its total cargo coal exports. In 1937 and 1938 shipments from this country to the Baltic region amounted to nearly 10 million tons per annum, and to the North Sea markets of Germany, Holland and Belgium about 5½ million tons. It is difficult to foresee to what extent our exports to the Mediterranean will be affected by Italy's declaration of war on France and the United Kingdom, but in 1938 our trade with countries possessing Mediterranean seaports, or passing through the Mediterranean to Egypt and as far as Aden, totalled about 6½ million tons. Of this traffic Italy and her Colonies took in that year about 2½ million tons, but during the first quarter of 1940 Italy herself had been taking supplies from the United Kingdom at the rate of 4 million tons per annum. Thus, the closing to us of the Italian, the North Sea and the Baltic markets affects nearly 20 million tons of our shipments; this is equivalent to about 55 per cent. of our total cargo exports of 35.8 million tons in 1938. If coke and patent fuel are included, the percentage would be still higher. On the other hand, our trade with France and French Possessions has enormously increased, particularly since the occupation by Germany of the Nord and Pas-de-Calais coalfields, which were responsible for roughly three-fifths of France's production. Indeed, the quantity of coal which we now have to send to France is substantially in excess of our aggregate average annual exports in recent years to the Scandinavian, North Sea and Italian markets. As our domestic consumption is also increasing the urgency of an expansion in output needs no emphasis.

South African Wool

While the British Wool Control has agreed to take all the surplus wool of Australia and New Zealand, the agreement with South Africa was limited to the acquisition by the Control, at certain minimum prices, of not less than the normal British purchases from South Africa. The primary purpose of this agreement was "to put a bottom" into the South African wool market, since it was feared that the loss of the German purchases might cause a collapse in prices. So far, however, purchases at the South African wool auctions have been much larger than was expected and prices have been 4d.-5d. per lb. higher than in the previous season. The following figures relate to the period from July to April and are taken from *The Wool Record and Textile World*:

SOUTH AFRICAN WOOL SALES (million lb.)		
	July to April 1938-9	1939-40
Received into store.....	221	210
Unsold in store (at end April)	10	7
Sold, awaiting shipment (at end April)	22	54
Exports, greasy	205	147
of which to U.K.	35	28
France	44	28
Germany.....	79	1
Belgium	16	12
Italy.....	20	17
Japan	2	14
U.S.A.....	1	32

Increased purchases by America and Japan have partly compensated for the loss of trade with Germany. The quantity unsold in store at the end of April, 1940, was rather smaller than in April, 1939, but it will be seen that the amount of sold wool in store was considerably greater; shipping difficulties rather than lack of demand are responsible for the smaller volume of exports.

Labour Shortage in Cotton Industry

Although there are still some 24,200 workpeople formerly engaged in the cotton trades registered as unemployed, there is a definite shortage of various skilled grades of labour in spinning mills in many parts of the North of England. In some cases the lack of skilled workers is causing a hold-up of the urgent orders which are now on hand for the fighting forces, not only of Great Britain, but also of her Allies. Appeals have been made to the Government to arrange for a transfer to this country of some of the French refugees who are skilled textile operatives. Many of the refugees in Northern France, who had to leave their employment and homes when the German invaders reached the industrial regions and large cotton spinning districts around Lille, could quickly fill the gaps which now exist in the British textile trades, and thus join the other skilled refugees from Poland and Czecho-Slovakia who have already been absorbed. It is probable that the 5½-hour week will be continued after the expiry of the original four-week period for which it was instituted.

Wheat Prices under Control

The collapse of wheat prices which was noted on page 944 of *The Economist* of May 25th was finally checked by the imposition of minimum prices in the three principal markets, those of Chicago, Winnipeg and Buenos Aires. In North America these prices were fixed at about the level reached on May 16th or 17th; in Buenos Aires minimum prices for wheat and maize futures were fixed at the level of those ruling at the close of trading on May 27th. These prices are given below, together with those of the week preceding the break:—

	Prices on Minimum May 9 Prices	
Wheat:—		
Chicago, cents per bushel, May futures....	105½	79
Winnipeg, cents per bushel, May futures	88½	70½
Buenos Aires, pesos per quintal, June futures	9.76	8.46
Maize:—		
Buenos Aires, pesos per quintal, June futures	4.58	4.09

There has since been some recovery in North American prices above these minimum levels, but the prospects for "dollar" wheat, so anxiously wanted by wheat growers, are not at all hopeful. The United Kingdom, France and Spain are now the only countries in Europe who are likely to import grain, and realisation of the fact that the bulk of these purchases will be supplied from the huge Canadian stocks has kept wheat and maize prices at Buenos Aires down to the minimums recently imposed.

Italy's Oil Supplies

Italy is notoriously deficient in essential war materials; but nowhere is this deficiency more apparent than in the case of oil, which plays such a vital rôle in modern warfare. Consumption of petroleum products in Italy—including the bunker oil requirements of the naval and mercantile marine—has lately been running at about 3½ million tons a year, and virtually the whole of this consumption has been covered by imported supplies—including imported crude oil for treatment in the domestic refineries. Despite intensified prospecting work, the domestic output of natural petroleum has been dwindling of late and is not expected to contribute more than 10,000 tons this year. To this must be added the output of Albania, which has been steadily expanded in recent years, and which may provide a maximum of 300,000 tons of low-quality crude oil during the current year. Owing to her lack of coal and lignite, Italy, unlike Germany, has no appreciable output of synthetic motor fuels, though she has striven to increase her production of such substitutes as alcohol (from agricultural produce) and natural gas. From all these sources, however, including Albanian crude, she is unlikely to obtain more than the equivalent of 450,000 tons of oil this year—say, 13 per cent. of her normal peacetime requirements. Well over two-thirds of her peacetime imports came from sources outside the Mediterranean, and these are now cut off by the Allied blockade. Apart from Albania, the only producers to which she will have access will be Roumania and Russia (which together supplied about 17 per cent. of last year's imports); and if she cannot keep open her sea communications, her receipts from these sources will be confined to the small quantity that can be sent via the Danube and by rail. Civilian consumption of petrol may, it

is true, be reduced by further economies—though, in view of the recent drastic restrictions, there would appear to be little scope for further saving—while requirements of bunker fuels will undoubtedly show a sharp decline. But it seems unlikely that consumption for normal purposes can be cut below 2-2½ million tons, while it is not impossible that military requirements might double this figure. It is thus apparent that steady inroads will have to be made into

accumulated stocks from now on. These stocks are known to be considerable—and have been unofficially estimated at approximately one year's normal consumption—but with consumption on a wartime basis, they cannot last for long. If, as may be expected, they are subjected to aerial attack, their life will be considerably shortened, and, in the absence of replenishment, Italy's war machine may be brought to a standstill within a few months for lack of oil.

COMMODITY AND INDUSTRY NEWS

IN expectation of large American purchases, prices of tin and rubber have risen sharply since the Italian declaration of war. There has also been an improvement in the volume of cotton dealings, which induced the directors of the Liverpool Cotton Exchange to reopen futures dealings on Thursday. Elsewhere, prices are little changed.

Cotton (Manchester).—There has been a fairly encouraging demand for actual cotton, particularly for Egyptian and South American varieties. The directors of the Liverpool Cotton Association decided to permit from Thursday morning the resumption of trading in cotton futures. Minimum prices have been fixed on the basis of the closing values on May 17th, and daily fluctuations will be limited to 25 points for American and 50 points for Egyptian contracts. The longer working hours are having some effect upon the output of yarn. The Government demand for cloth tends to increase and substantial contracts have again been given out. The most hopeful export trade is at present with South America. Reports from the home trade are less favourable than a little time ago, and some buyers have been trying to cancel contracts.

RAW COTTON delivered to Spinners				
Variety ('000 bales)	Week ended May 31, 1940	Week ended June 7, 1940	From Aug. 1 to June 9, 1939	From Aug. 1 to June 7, 1940

Total	63.7	65.7	2,241	2,682

Source: Liverpool Cotton Association's Weekly Circular.

Metals.—Rhodesian copper mines are now working a seven-day week, so that purchases from non-Empire sources will be small, although the placing of certain refining contracts for Empire ore in the United States can be expected. On the New York market demand was stronger but prices remained unchanged. American stocks of spelter fell by about 6,000 tons to 75,000 short tons in May, owing to an increase in deliveries.

Tin.—The price of standard cash tin gained £10 10s. this week and closed at £286 per ton. The backwardation (premium on cash) almost disappeared in the course of this week, though it stood at £2 per ton a week ago. The advance was due to both British and American buying after Italy's entry into the war. There is a widespread belief that the United States will greatly increase its stocks in the immediate future in order to be prepared for any emergency, and prices are correspondingly affected.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

" 18	67.90	65.96	
" 25	64.93	72.49	
June 1	64.37	70.82	

Grains.—Markets have been very quiet in the last week, and the entry of Italy into the war had little effect. The

United States Crop Reporting Board has now estimated the winter wheat crop at 489 million bushels, an increase of 30 million bushels from the May forecast. The Argentine maize market has been steadied by the decision of the Government to raise the loans to growers from 2 to 3 pesos per quintal; the second official estimate of this crop was also slightly below the first.

WORLD SHIPMENTS OF WHEAT AND FLOUR

Oils and Oilseeds.—Shipments of linseed from the River Plate have fallen to the low level of 4,000 tons, but very large quantities are afloat, some of which was originally destined for Belgium and Holland. The new Indian crop is officially estimated at 467,000 tons, compared with 445,000 tons last season, in spite of a considerable reduction in acreage.

Rubber.—The markets both in London and New York were very firm in the past ten days, and after Italy's declaration of war there was a considerable rise in prices. On Wednesday standard smoked sheet on the spot rose to 13½d. per lb. in London and to 22½c. per lb. in New York. Although the blockade of Italy will reduce world demand by some 25,000 tons a year, the market expects a large spurt in American buying and some delays in shipping.

Export Groups.—The following export groups have been formed since the last list was published in *The Economist* of May 25th:—

Aluminium Hollow-ware.
Architectural Craftsmen's.
Bakers' Sundries.
Beer.
Brush.
Chemical Traders.
China Clay.
Chocolate and Sugar Confectionery Machinery.
Dairy Equipment.

Drawing Office Materials and Equipment.
Dried Salted Fish Curers.
Elastic Textile.
Electric Lamp Manufacturers.
Electro-Plating, Polishing and Finishing Equipment.
Ferrous and Non-ferrous Valves.
Food Preparation Machinery (Miscellaneous).
Foundry Equipment.
Gin Distillers.
Iron, Steel and Metal Work Equipment.
Laundry Blue.
Lead Traps and Bends.
Lock and Allied Manufacturers.
Machine Knife and Allied Trades.
Marine Boilers.
*Meters and Measuring Apparatus.
Needles, Fish Hooks, Fishing Tackle and Allied Industries.
Perfumery and Toilet Preparation.
Pigment Colour Makers.
Plastics:
Moulding Powder Manufacturers.
Moulders.
Reinforcement Manufacturers.
Roadmaking Machinery and Contractors' Plant.
Roll Makers.
Scientific Instruments and Appliances.
Scythe, Sickle and Hook.
Shoe Machinery and Accessories Manufacturers.
Silk.
Stationers' Sundries.
Steam Engine.
Surgical Dressing and Adhesive Strap.
Water Purification Plant.
Wedge Wire Manufacturers.
Wheelbarrow Manufacturers.
Winding Engine.

The Cooking Apparatus Group has been formed as a Sub-Group of the Ironfounders' (Light Castings) Export Group.

*Apparatus for industry and public works, excluding electricity and domestic gas.

COMPANY MEETINGS

ASSOCIATED NEWSPAPERS LIMITED

THE HON. ESMOND HARMSWORTH'S SPEECH

STRONG FINANCIAL POSITION

The thirty-fifth annual ordinary general meeting of Associated Newspapers, Limited (proprietors of *The Daily Mail*, the London *Evening News*, and the *Sunday Dispatch*), was held, on the 11th instant, in the Memorial Hall, Farringdon Street.

The chairman (the Hon. Esmond C. Harmsworth) said:—Ladies and gentlemen, the profit of the company for the year to March 31st last, after providing for interest on the 3½ per cent. registered notes, depreciation of plant and machinery, National Defence Contribution and income tax, was £401,018 6s. 7d., which compares with £445,266 1s. last year.

The fixed rates of dividends on the 5 per cent. preference and 7 per cent. ordinary shares have been paid. Shareholders were informed at last year's annual meeting that the directors proposed paying one interim dividend on the deferred shares in January and this was done, the rate of dividend being restricted to 2 per cent. on account of the obscurity of the general situation. It is now proposed to pay a final dividend of 6 per cent., making 8 per cent., less tax, for the year.

Your directors considered it advisable, owing to present circumstances, to transfer from appropriation account a further £100,000 to reserve for contingencies.

THE DAILY MAIL

The position in regard to the advertising side of our business in the present crisis may be regarded as very satisfactory.

The reduction in the sizes of the newspapers produced a proportionate reduction in the space available for advertising purposes. It was inevitable, therefore, in view of the supreme position of *The Daily Mail* in the advertising field, that the demands for space should exceed the supply. Our policy has been to limit the size of advertisements with a view to accommodating the largest number of advertisers, and it is very gratifying to note that the advertisement revenue has not decreased in proportion to the reduction in the amount of space available.

THE EVENING NEWS

The Evening News continues to hold its dominant position both in regard to sales and revenue.

The lead over its competitors has become even more pronounced during the period under review, and has been reflected in the fact that it continues to carry its full quota of advertising in the sizes now being published.

SUNDAY DISPATCH

With the *Sunday Dispatch*, sales have been mounting steadily, while the demand for advertising space in this great Sunday newspaper has greatly exceeded the space available; there again our policy has been to limit spaces and preserve good will by carrying the largest number of advertisers.

The Overseas Daily Mail is playing its part in the "Export for Victory" campaign, particularly with its important supplements for British engineering and other trades.

I shall refer later to our staff serving with the Colours, but would like to add here that on the outbreak of war our advertising department responded nobly to the call for service. Practically the whole of the men of military age joined up, and to-day much more than half of the entire staff of this department are serving in the Forces.

NEWSPRINT

When we met in June last year we were at peace, and I referred at some length to the subject of newsprint. The events which followed, wherein this country was plunged into war, naturally put an entirely different complexion on the whole question of newspaper production. It has, indeed, proved fortunate that, owing to the foresight of your company, we found ourselves at the outbreak of

war not only with a considerable stock of newsprint on hand, but with a large interest in the Anglo-Newfoundland Development Company's mill in Newfoundland and in possession of the Empire Paper Mills at Greenhithe.

The Government has laid it down that the production of newspapers is essential to the country in wartime, and with the disappearance of the Scandinavian countries as suppliers of pulp for the production of paper by the home mills, the problem of acquiring sufficient supplies of newsprint to keep the newspapers going has been an ever-increasing one.

Arrangements are being made at present to import a large tonnage of newsprint from Newfoundland and Canada for the benefit of all the newspapers in the country, and here I might say that your company has at no time attempted to exploit its more favourable position in regard to paper supplies to the detriment of its competitors.

STAFF WITH THE FORCES

At the present time 340 members of our staff are serving with the Forces, and it has been our concern to ensure that they and their families receive adequate allowances from the company whilst they are away. Ever since the outbreak of war up to date all members of our staffs who have joined up have continued to receive a substantial percentage of their salaries, and it is our intention to continue this arrangement as long as possible. In the schedule of allowance due regard is paid as to whether a man is married or single.

PRESTIGE

I believe that your newspapers have more than maintained their prestige and position during the war. Our policy is, as always, to tell the public the truth, fearlessly as possible consistent with the national interests, and to give what leadership we can with one object in view—the successful, victorious, and speedy prosecution of the war.

For years before the war broke out our newspapers fearlessly warned the country of the approaching cataclysm and urged that we should make all preparations. We foretold the importance of the air, and emphasised that victory would go to the side that won predominance in that sphere. We were only partially successful owing to the unaccountable blindness of many of our leading men and contemporary newspapers. Had we been adequately prepared it is unlikely that the war would ever have broken out. Unfortunately, we were a voice almost alone, and although undoubtedly we accomplished much, it was not enough.

I would like to thank all those who so loyally stood by us when we became unpopular because we spoke the truth. Our newspapers have always striven for the best interests of the country, irrespective of popularity or circulation. It is a tradition we inherited from the late Lord Northcliffe. We shall continue in the same way—we know you would not have it otherwise.

I cannot close without a warm tribute of thanks to my colleagues on the board, and to the staff. Sacrifices, financial and otherwise, have been demanded and willingly given, and every new problem has been faced with energy and cheerfulness, all of which have contributed so largely to the present position of your company.

All our loyal friends on the advertising and distributing sides of the business have, as always, stood by us. They have all had new problems to face, and I wish to extend to them our warm thanks for their co-operation.

The Chairman concluded by moving the adoption of the report and accounts.

Mr Stanley Bell (managing director) seconded the resolution, which was carried unanimously.

The retiring directors were re-elected and the auditors, Messrs Lever, Honeyman and Company, were reappointed.

The proceedings terminated with a vote of thanks to the chairman and directors.

BOOTS PURE DRUG COMPANY, LIMITED

RECORD SALES AT HOME AND ABROAD

LORD TRENT'S REVIEW

The Fifty-second Annual Ordinary General Meeting of Boots Pure Drug Company, Limited, was held, on the 6th instant.

The Right Hon. Lord Trent, chairman of directors, said:—Freehold properties are up £120,668, plant and fittings £86,220, stock-in-trade shows the substantial increase of £743,423.

Sundry debtors are up £188,531, whilst amounts owing by subsidiary companies show a reduction of £93,698.

On the other side of the balance sheet sundry creditors and provision for contingencies show an increase of £762,634. Up to date we have spent more than £150,000 on A.R.P. We have made up the works development reserve to £100,000. The freehold property reserve has been increased by £29,298.

Last year I said that under the conditions then obtaining your directors considered it prudent to have a substantial contingencies reserve. To-day, that is, obviously, even more desirable and we have accordingly transferred £250,000 to that fund, bringing it up to £750,000.

Let me now revert to the matter of our stock-in-trade. You will appreciate that essential medicines are a vital need for the country alike in peace and in war. Therefore your directors regarded it as their duty to make sure, as far as was humanly possible, that the supplies would be in the right place when they were wanted.

It was in order to safeguard the supplies to the public that we built up a substantial increase in stock, a large proportion of which has already been turned into finished products and is stored all over the country. Following our established policy, our prices have only been increased and will only be increased when our costs make it necessary.

PROFIT AND LOSS ACCOUNT

Turning now to the profit and loss account, you will see that our trading profit, after providing for contributions to staff pension funds, management remuneration, compulsory war risks insurance and all forms of taxation, i.e. income tax and E.P.T., amounts to £980,851, an increase of £29,842.

Repairs and renewals and provision for depreciation all show increases, and we are left with a net profit for the year of £782,467, an increase of £6,175.

After payment of all preference and preferred ordinary dividends, and of four quarterly dividends of 6 per cent., less tax on ordinary shares, we have a balance of £301,717, which together with the balance brought forward amounts to £550,441, against £642,272.

For many years your directors have recommended the payment of a bonus of 3d. per share (free of tax) on the ordinary shares, but the introduction of the Limitation of Dividends Bill made this no longer possible, since the rise in income tax has the effect of increasing a tax-free bonus.

Your directors, therefore, recommend the payment of 4.1379 pence per share (less tax) on the ordinary shares, which is the gross value of a bonus of 3d. per share (free of tax at 5s. 6d. in the £). This absorbs £68,965, which together with the allocations already mentioned will leave £199,711 to be carried forward to next year.

We have easily had a record year for sales both at home and abroad, but practically the entire profit on the increased volume has been absorbed, as I have said, by increased taxation, etc., and we are left with a smaller net profit than in 1937, when both our volume of trade and trading profit were considerably less than this year.

These results have been achieved under quite exceptionally arduous working conditions and with a staff inadequate for our requirements, for already over 1,300 have left to join the Forces. There is all the more reason, therefore, to pay a special meed of praise this year to the staff of the offices, laboratories, warehouses and shops for their excellent work in most trying circumstances and I know that you would like me to place on record our thanks for and appreciation of what they have done. You will be glad to know that we have instituted a system of allowances for all married men serving with H.M. Forces and in certain other special cases we are supplementing Army pay.

One very important way in which the firm are helping the national war effort is in the matter of War Savings Certificates.

The various savings groups which have already been formed have 10,236 subscribers, and it is hoped that there will be a material increase in the individual holdings in the next few months.

During the year we have opened 25 new branches and, owing primarily to war conditions, have closed 10. The total number open at the end of March was 1,210.

As you will be aware, owing to the control of timber as well as of other building requisites, it is now practically impossible to carry out any alterations beyond those absolutely necessary on the medicinal side of the business. Our shopfitting works, however, are being kept employed on Government work.

DEVELOPMENT OF COMPANY'S EXPORT TRADE

Last year I referred in my speech to the steady increase which had taken place in our export trade. This year I am glad to be able to report further substantial development. The figures for the first four calendar months of this year are more than double those of the corresponding period of last year.

As you know, the Government have asked all companies to pay particular attention to the development and expansion of their export business. We have taken our responsibilities in this connection very seriously, and are only too anxious to play our part in association with export groups, to several of which we already belong. We are also co-operating with other exporting pharmaceutical organisations to the same end.

MEDICINAL RESEARCH

The undesirability of perpetuating the goodwill in enemy proprietary medicines has led us to elaborate processes for the manufacture of British-made equivalents, and in several cases our products are now on the market. Methods of manufacture of other foreign-made drugs have also been under investigation by our research department since British manufacture would both save import and therefore shipping space, and also give us further lines to export.

All these tasks have thrown a very large amount of work on our research department, and we have consequently expanded it very considerably.

The processes elaborated in our research department lead to production in the fine chemical department, and this has consequently also been extended. It is now a valuable asset not only to the firm but also to the nation, particularly in its capacity for producing medicinal chemicals for home and export.

AGRICULTURE AND VETERINARY

We are conducting a considerable volume of research on the influence of nutrition and the special significance of trace elements on the health of farm stock as well as on the treatment of various diseases of animals. In this work we are co-operating with agricultural colleges, and also with individual veterinarians. We regard this side of our work as so important that we have now increased our staff on this side by the addition of a full time veterinary surgeon of the highest standing to advise us.

Following researches on chemicals which stimulate the root-growth of plants, carried out in association with high authorities on the biological side, we have introduced a new product, "Harvesan," containing these "growth hormones" in addition to the mercurial salts which protect crops from certain diseases. Extensive field experiments have proved that higher yields of grain and other crops can be obtained by the use of this preparation.

HORTICULTURE

During the last few years we have been busy building sound foundations on the horticultural side of our business, the consequence being that when the call came for the nation to grow more of its own food we were in a position to give real help, and this has led to a rapid expansion on that side of our business.

Nobody to-day would forecast the business future, but our shareholders can rest assured that they have a sound business, well distributed for retail sales, and an organisation determined under all circumstances to live up to the slogan "Chemists to the Nation."

The report was unanimously adopted.

UNION CORPORATION, LIMITED

POSITION MAINTAINED — INCREASED PROFITS

MR P. M. ANDERSON'S REVIEW

The ordinary general meeting of shareholders of the Union Corporation, Limited, was held in Johannesburg on the 23rd ultimo. Mr P. M. Anderson presided.

The Chairman, in the course of his remarks, said:—The accounts accompanying the annual report of the directors show that a profit of £618,296 was made for the year. That profit is slightly higher than the sum earned in 1938, and I think we have a right to be satisfied with having maintained our position so well in a critical period.

By the declaration of a final dividend of 5s. 6d. United Kingdom currency per share, the total for the year, including the interim dividend of 2s. 6d. declared last October, amounts to 8s. and absorbs £616,000. We thus repeat our 1938 performance and increase by £2,297 our carry-forward, which now amounts to £126,637.

The reserve account remains at £2,000,000, but the exploration reserve account has been reduced by the expenditure during the year on exploration work amounting to £56,517. You will remember that the exploration reserve account was set up in 1937 to meet the heavy outlays on exploration then anticipated. It is, therefore, being employed for the purposes for which it was intended.

The Union of South Africa Companies Amendment Act, No. 23 of 1939, has necessitated some changes in the form of the balance sheet. In particular, you will notice that the balance sheet sets out on the one side the corporation's shareholdings in subsidiary companies and the amounts they owe to us and on the other side the amounts we hold on current account for subsidiary companies. We continue to maintain a strong liquid position. Our liquid assets, including debtors, exceed £6,000,000 and cover all our liabilities.

CORPORATION'S GOLD INTERESTS

After reviewing the Witwatersrand gold mining industry generally and the effects of the new taxation, the Chairman then proceeded: I will now deal briefly with the gold mining companies under our administration and in which our share interests are principally centred. Marievale Consolidated Mines, Limited, reached the production stage on November 1, 1939. This marked the completion of an extensive development programme upon which the corporation entered some eight years ago and which has resulted in the opening up of Van Dyk Consolidated Mines, Limited, Grootvlei Proprietary Mines, Limited, and finally, Marievale Consolidated Mines, Limited. It covers an additional mining area equivalent to 16,136 claims, and has involved a total expenditure for development and equipment of more than £7,000,000.

Van Dyk reached the production stage on May 1, 1938, Grootvlei on September 1, 1938, and Marievale on November 1, 1939. The reduction plants of Van Dyk and Grootvlei were originally designed to deal with 60,000 tons a month, but, soon after those plants were in full operation, the development results in both mines gave sufficient encouragement for the companies to decide upon extending the plants to a nominal capacity of 80,000 tons per month, both of which extensions came into operation in 1939. Since then each of these plants has in fact been milling well over 90,000 tons per month. It is contemplated further to increase the crushing capacity of Grootvlei to 120,000 tons a month. When this further extension has been completed the mines of the Union Corporation Group will be dealing with 7,000,000 tons of ore per year, representing over 11 per cent. of the total tonnage dealt with by the whole of the Rand gold-mining industry.

The total yield of the mines of the group is estimated to amount to 1,700,000 fine ounces of gold per annum, representing nearly 13 per cent. of the present total gold production of the industry; while the working profits estimated to be earned by the mines of the group will, at the present price of gold, total some £7,000,000 per annum, equivalent to about 15 per cent. of the profits at present being earned by the whole of the industry. These figures do not take into account increases in the crushing capacity of Van Dyk and Marievale, which may well be justified in the not too distant future.

The chairman then reviewed the main features of the operating results of the gold mining companies on the Witwatersrand under the administration of the corporation—namely, the Modderfontein

Deep Levels, Limited (in liquidation), Geduld Proprietary Mines, Limited, East Geduld Mines, Limited, the Grootvlei Proprietary Mines, Limited, Marievale Consolidated Mines, Limited, and Van Dyk Consolidated Mines, Limited, and also dealt with the affairs of the Withok Proprietary Company, Limited, and later those of South African Pulp and Paper Industries, Limited, all of which were fully reviewed in the addresses from the chair at the respective annual meetings held recently. He then proceeded:—

ORANGE FREE STATE

Northern Area: Options are still retained over farms in the northern portion of the Free State which lie just south of the property of Western Reefs Exploration and Development Company.

Sand River Options Area: Geological and geophysical surveys and eight boreholes have been completed. Of the latter, five boreholes were south of the Sand River. No payable values were encountered in any of these five holes and the larger part of the area has been abandoned. Three boreholes were completed north of the river, in two of which low or marginal values were encountered at depths of 4,500 feet and 5,000 feet respectively. A portion of this area has already been abandoned.

Two further boreholes are being drilled south of the Sand River and one borehole north of it.

Western Holdings, Limited, with whom the corporation is collaborating, is drilling the area north of our Sand River Area. The drilling has proved the presence of the Upper Elsburg Reef Zone of the Witwatersrand System at comparatively shallow depth. This Reef Zone is of considerable extent, and at least two of the reefs in it appear to be of considerable promise. A limited amount of shaft-sinking and underground exploration is justified when world conditions permit.

By arrangement with Western Holdings, a large area has recently been acquired under option extending north from the previously held areas to the Vaal River. While the corporation and that company will have interests in the whole area, each will prospect, at its own expense, certain defined portions of this area. The area taken over by the corporation for investigation is the middle portion which lies east of Bothaville and north of the Valsch River.

OTHER INTERESTS

Bay Hall Trust continues to function satisfactorily as an investment trust.

British Enka has benefited materially by a cessation of the violent competition among rayon producers that prevailed in the United Kingdom for many years, during which time no producer was able to earn a fair profit from its British production. At long last the producers are co-operating wholeheartedly, with benefit to producers and consumers alike.

San Francisco Mines, of Mexico, is having a bad time. The policy pursued by the authorities in Mexico continues to be antagonistic to foreign enterprise, with the consequence that operations are plagued by labour troubles and by taxation imposed on production whether it be profitable or not.

Our Rhodesian interests are represented directly by our holdings in Roan Antelope and Rhodesian Selection Trust and indirectly by our holdings in Selection Trust. Selection Trust has an important shareholding in American Metal Company, which, in turn has a preponderating interest in the two Rhodesia copper companies I have just named. Rhodesian copper production is sold, by agreement with Great Britain, at approximately the price which ruled at the outbreak of war, and consequently much below the world price; nevertheless, good profits are being earned. Unfortunately, the amounts available for dividend distribution have been sadly whittled down by the extraordinary effects on profits of retrospective and double taxation, relief in regard to which is being sought.

We have a holding in Consolidated African Selection Trust, which is a successful West African diamond enterprise. Here, again, we are also indirectly interested through the Selection Trust, which has a very large interest in this diamond venture. The report and accounts were adopted.

BRITISH AND CHINESE CORPORATION, LIMITED

JAPANESE INTERFERENCE WITH CORPORATION'S RIGHTS

SIR JOHN PRATT'S SPEECH

The forty-second ordinary general meeting of The British and Chinese Corporation, Limited, was held, on the 12th instant, at 3 Lombard Street, London.

Sir John Pratt, K.B.E., C.M.G. (chairman), who presided, said that the year 1939 must have claims to being the most unsatisfactory year ever experienced by the Corporation. Not only had there been an almost complete cessation in the servicing of the loans in which the Corporation was interested, but also an unprecedented interference with the rights of the Corporation under its agreements with the Chinese Government.

All the railways in which the Corporation was interested were in Japanese hands, and all were being operated by the Japanese. Their protests against the many contraventions of their rights, made through diplomatic channels to the Japanese Government, had met with no satisfaction. The damage done to the railways in which the Corporation was interested had greatly impaired the security for the loans in which the bondholders had invested their money. The interests of the bondholders had suffered even greater injury from the action of the Japanese military authorities in completely ignoring the rights both of the bondholders and the Corporation under the loan agreements in question. Every opportunity had been taken to protest in the strongest terms against all such infringements of their rights and the Corporation gratefully acknowledged the assistance and support they had received in this matter from the Foreign Office and the representatives of His Majesty's Government in China and Japan. The directors were considering what further steps it was possible for them to take to protect the interests of the bondholders and the legal questions involved, which were of great complexity, were under examination.

THE RAILWAY POSITION

With regard to the actual railways themselves the Peking-Mukden line was being operated, together with certain other railways in North China, by the North China Railway Company—a Japanese-sponsored subsidiary of the North China Development Company. Actual figures as to the earnings of the line were not available, but the loan service instalments had continued to be paid on due dates.

The Shanghai-Nanking Railway and the Shanghai-Hangchow-Ningpo Railway from Shanghai to Hangchow remained under the control of the Japanese during the whole year, and were now administered by the Central China Railway Company, a Sino-Japanese concern formed by the Japanese Government. On the Shanghai-Nanking line passenger and freight traffic had been maintained mostly with Japanese rolling stock and locomotives; the trains ran frequently and were freely patronised, but reliable information as to the earnings was not available. No payments of loan service were made during 1939. The Canton-Kowloon Railway was in a very bad state and had probably suffered worse than any of the railways in which they were interested. A very large sum would be required if it was ever to be restored to its former condition.

An Agreement was signed at Chungking on December 11, 1939, and ratified on March 1, 1940, under which a group of French banks agreed to provide against promissory notes to be issued by the Chinese Government the materials required for a railway from Kunming (Yunnanfu) to Suifu on the Yangtze. The credits for the railway materials in question were guaranteed by the French Government through the French counterpart of the Export Credits Guarantee Department. A strong desire was expressed by the Chinese Government and in various other quarters that British interests should participate in the Burma-Yangtze Railway by entering into a similar agreement with respect to the section running from Kunming (Yunnanfu) to Burma. The matter received the earnest and prolonged consideration of the directors and was the subject of much correspondence and many discussions. It was frankly admitted, however, by the Chinese Government that the capital required for the construction of such a railway could not be raised on a commercial basis.

Eventually, however, it was found that credits extended to the Chinese Government under the Export Credits Guarantee scheme

could not be employed for the materials required for the Burma-Yunnan Railway and this, apart from the many other difficulties inherent in this scheme, rendered any immediate participation by the Corporation impossible. The political and commercial advantages to China, and indirectly to the British Empire, of improved communications by road and rail with Burma and the south-west were not in dispute. It was to be hoped that the present check was only temporary and that the Corporation might in the not too distant future find the occasion to co-operate in a project so much in the interests of all concerned.

THE YEAR'S RESULTS

The report and accounts which the directors presented for consideration this year were an eloquent testimony to the injury that had been inflicted on them, in common with all other commercial interests in China—not only foreign but Chinese, and they believed Japanese as well—by the conflict that had now been dragging on its dreary course for nearly three years. At the moment this conflict was overshadowed by the greater tragedy that was now being enacted in Europe. It was evident that no improvement in the position of the Corporation could be expected until peace and sanity returned to the world once more.

Turning now to the Corporation's financial position it would be readily appreciated that the loans in which they were interested, with one exception, were not being serviced, and their revenue in China might therefore be said to be in abeyance. There was, however, a profit of £1,701 2s. 1d. on the year's operation, but after providing £53,522 15s. 7d. for depreciation on investments, £41,909 6s. for loss in exchange and £12,110 13s. 9d. for loss on sales of investments, there was a debit balance to profit and loss account of £105,841 13s. 3d. Including the debit brought forward there was a total debit balance of £181,868 5s. 9d. In view of the uncertain future the directors had considered it advisable, instead of carrying forward that substantial loss, to transfer to profit and loss account £200,000 out of the £325,000 at credit of general reserve account, leaving £125,000 general reserve and a credit balance of £18,131 14s. 3d. in profit and loss account, which it was proposed to carry forward.

The report was unanimously adopted.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED

PAST YEAR'S OPERATIONS

The fifty-second ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 11th instant, in London.

Mr A. W. Bolden (chairman and managing director) presided and, in the course of his speech, said that a decrease in gross receipts of £23,000 for the year 1939 had been made worse by an increase in working expenses of £37,000, so that the net receipts from the operations of the railway and waterworks were some £60,000 less than for the previous year. With regard to goods tonnage, there had been increases in nitrate, tin, sulphur, general merchandise, cereals and sugar, with decreases in copper bars, blends, mining articles, coal and fuel oil.

Passenger traffic on the Chilean section was less in numbers by almost 10 per cent., but had given slightly higher receipts expressed in sterling by reason of a more favourable exchange. In Bolivia both numbers and receipts were more.

Dealing with their decision to redeem the 4½ per cent. debenture stock and to submit a scheme to the 5 per cent. debenture stockholders under which 60 per cent. of their holdings would be paid off at par and the date of the repayment of the balance extended, he said that as a result by the realisation of the greater part of their investment in the Andes Trust and of their general investments they had liquidated a liability of some £2,200,000 and reduced by rather more than £100,000 the annual charge for interest on their debenture stocks.

The report was adopted.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes.

Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, 8 Bouverie Street, E.C.4.

SELECTION TRUST, LIMITED

MR A. CHESTER BEATTY'S SPEECH

The seventh ordinary general meeting of Selection Trust, Limited, was held, on the 11th instant, in London.

Mr A. Chester Beatty presided, and said:—The net profit, before providing for taxation, was £125,044, compared with £202,511 for the preceding year.

We have written down the book values of our investments by a total of £807,799, and to do this we have utilised £662,845 from reserve and £144,954 from the balance of profit brought forward. The greater part of this sum has been employed in writing down our large holding in Trepca Mines, Limited. At yesterday's prices the market valuations of the quoted investments of the company and its subsidiaries were, in the aggregate, in excess of the values at which they are stated in the books.

A subsidiary company named Seltrust Investments, Limited, has acquired from Selection Trust, Limited, the bulk of its holdings in American Metal Company and Consolidated African Selection Trust.

COPPER AND DIAMOND BUSINESS

Operations at the mines of both the Roan Antelope and Mufulira Companies in Northern Rhodesia are proceeding satisfactorily. Since the outbreak of war these companies have been working at an increasing rate and at the present time they are operating seven days a week in order to produce for the British Government every ton of copper possible with the labour and supplies available. The staff and employees are making a very important contribution towards the war effort.

The Consolidated African Selection Trust, Limited, and its wholly owned subsidiary (Sierra Leone Selection Trust) have maintained active production of diamonds at their mines on the Gold Coast and in Sierra Leone. Notwithstanding war conditions, the market has been absorbing considerable quantities of diamonds, but, with the recent invasion of Holland and Belgium and the consequent disorganisation of the cutting industry, there must inevitably be a setback for the time being in the demand for diamonds of certain categories.

At our meeting last year I mentioned that Trepca Mines, Limited, might have to pay a lower rate of dividend in 1939. Actually the company paid no dividend. The main factors contributing to this result were, firstly, the closing down of the Stan Trg Mine from June 19th to September 3rd on account of a strike of workmen, with consequent loss of output; and, secondly, the low metal prices before the war. Apart, however, from the strike period, the mine and plant have continued to operate at normal capacity and the staff are doing excellent work under difficult conditions.

GENERAL POSITION

Reviewing our interests as a whole, one very satisfactory feature is that the principal companies in which we are interested have built up substantial liquid resources which give them added stability in these difficult times. Regarding our diamond interests, they have had a better year than the preceding one, although at the moment it seems unlikely that they will do so well in the coming months. Our Yugoslavian business is affected by the one outstanding consideration at the present time—namely, its geographical position—and given once again stable conditions in Europe, there is no reason why our holding in Trepca Mines, Limited, should not continue to be an asset of considerable value. Our copper-mining interests are in companies which have established themselves among the leading producers of the world. They are of great importance to the Empire, especially at a time like the present, when they are making maximum efforts in the production of metal required for our war supplies.

In conclusion, I should like to say that we and our associated interests and the employees are contributing in every way we can to the great national war effort and I am sure that in these days that fact is of far more concern to all of us than any other consideration. You will not expect me to venture any forecasts. We have, however, excellent grounds for confidence in the enterprises with which we are associated and I hope that our next meeting will be under happier conditions.

The adoption of the report and accounts and the payment of a dividend of 7½d. per unit of ordinary stock, less tax at 6s. in the £, were approved.

A hearty vote of thanks to the Chairman, directors and staff concluded the proceedings.

BURMAH OIL COMPANY, LIMITED

PAST YEAR'S PROFITS

SIR JOHN CARGILL'S REVIEW

The thirty-eighth annual general meeting of the members of this company was held, on the 7th instant, in Glasgow.

Sir John T. Cargill, Bt., chairman of the company, presided, and in the course of his speech said: Before proceeding to to-day's business it is my colleagues' desire, as they feel it will also be yours, that expression be given to our deep regret at the death, since we last met, of Mr David Cargill.

Our thoughts and energies to-day are directed not to matters of profit or loss for ourselves but to the struggle in which our country and Empire, with our Allies, are engaged in the defence of everything which makes life itself worth while, and in these anxious and critical times I propose to confine my remarks to-day to the essential business of taking you as shortly as possible through the accounts which record the results of your company's activities in 1939 and show how the profits arising from them have been already dealt with and what your board recommends should be done with the remainder of them.

THE OPERATING COMPANIES

For reasons fully explained in the report transfer was effected as from January 1, 1939, to new subsidiary wholly-owned companies of the benefits and obligations in respect of the production of natural petroleum and natural gas, their transport, their refining into products, their ocean shipment and their distribution, and sale which we ourselves hitherto respectively enjoyed and were responsible for in Burma and India. From that date, therefore, your company ceased trading in these countries, and the net 1939 results of these various activities of the new companies, after provision by them for their administration expenses and for depreciation, have reached your company in the form of dividends by them. The producing companies have charged all their fields' expenditure to revenue, as we ourselves were in the habit of doing, and depreciations at £370,000 provided by them and by the other subsidiaries are on the same conservative and ample scale of our own past practice.

By providing you with a consolidated balance sheet and, as in the past, segregating in the profit and loss account the income which we receive from the new companies, we have done everything possible, and I venture to think you will agree that we have succeeded, to prevent these changes depriving you of any of the very full information with regard to your business and the results of our conduct of it which you have received in the past.

PROFITS

When we met last year I warned you that profits for 1939 were likely to be down both in respect of our own activities in Burma and India and in respect of our investments. In the sequel the overall reduction in profits was, as you have seen, £391,527, but since we bring in from the 1938 carry-forward £64,883 more than was brought into 1938 from the carry-forward of 1937 the reduction in the amount disposable in respect of 1939 is actually £326,644.

You will not expect me and I certainly would not venture to prophesy what the current year's results may be. Our interests in Burma and India have so far escaped the sorts of disturbances to which unhappily our largest investments elsewhere have been subject, and so long as this comparative immunity continues and costs can be kept within reasonable control we may expect them to contribute satisfactorily to our profits. It is, however, quite impossible for me to give any idea of what our very substantial interests in the Anglo-Iranian Oil Company, Limited, and the Shell Transport and Trading Company, Limited, may yield in the conditions of these times and we must wait on what their chairman may have to say at their annual general meetings in due course.

The report and accounts were unanimously adopted.

DIVIDEND

The resolution authorising payment of the final dividend of 2s. and the bonus of 1s. 2½d. per £1 unit on the ordinary stock, both less income tax at 5s. 6d. in the £, was approved.

The election of Sir William Fraser to the board was confirmed; Sir John T. Cargill, Bt., and Colonel Hugh B. Spens, D.S.O., the directors retiring by rotation, were unanimously re-elected; and the auditors, Messrs Brown, Fleming and Murray, were re-appointed for the current year.

CURRENT STATISTICS

Finance

GOVERNMENT RETURNS

For the week to June 8, 1940, total ordinary revenue was £12,767,000, against ordinary expenditure of £68,927,000. Thus, including all sinking fund allocations, the deficit accrued since April 1st is £354,719,000, against £119,826,000 for the corresponding period a year ago.

Once to Every Nation

BRAVE words are cheap. We have had too much already of the frantic boast and foolish word; let us test each sentence to be sure that we do not deceive others about our intentions or ourselves about our powers. For never in the long history of the British race has there been a more momentous decision to take—a decision which every citizen must help in taking and help in carrying out. This is our moment to decide—the moment that comes but once to every man and nation.

There can be no doubt about our decision. We must fight on. We have pledged ourselves before all history to save Western civilisation from the menace of Nazi barbarism; we are in no way released from our bond merely because the menace has grown larger. To give up the struggle now would be to admit for all time the truth of the jibe that England is ready to fight to the last Frenchman.

The arguments of honour would, indeed, lead to the conclusion that we must fight on however desperate the outlook. The Prime Minister told the country in his broadcast speech on Tuesday that he would be of that opinion even if the odds against us were infinite. Fortunately, however, there are arguments of expediency to fortify hearts that are less stout than Mr Churchill's. Not only should we fight on; we can do so with high hopes, soundly based, of ultimate success. This island is now the frontier bastion of liberty; but it is not the last fortress. We have accepted the great sacrifice of the Czechs, the Poles, the Norwegians, the Dutch, the Belgians—and now the French. They have laid down their lives and their liberty to gain time for us; could we do less to give the Americas time to stretch out a hand and take the torch from us?

But matters are not at so desperate a pass. There are many sound reasons for hoping that we can not only win the war for liberty, but hold its English bastion. Before Hitler can gain control of this island he must either bomb

us out or starve us out or drive us out. The bombing has already started, but our defences are strong and we can retaliate with a force that will constantly grow. Hitler has been trying since September to starve us out, with the result that there is probably more food in the country now than ever before. The only trick that has not yet been tried in force is the bombing of our ports; and a port is a small target to attack and a small area to defend. As for driving us out, the one thing that we might possibly not possess the means to repel—the landing and continuous reinforcement of a large and heavily armoured force—is the one thing for which Hitler, who has no Navy, is not equipped.

The chances of war are infinite, and Hitler has a way of upsetting the rules. But at least we are not deluding ourselves, as General Gamelin did, with a tactical theory; we are comforting ourselves with physical facts, such as the difference between land and water. We cannot exclude the possibility that Hitler may be such a skilful military alchemist that he can interchange the elements, but the burden of evidence, weighed dispassionately, gives us every chance of resisting with success. Resistance, admittedly, is not itself victory, though it is an essential prelude. But a draw, if that is what it comes to in the end, will be better than the terms of submission we could now expect from a tyrant drunk with conquest. Moreover, the blockade remains, and though it is unlikely ever to lead to a German collapse, it does set limits of time and extent to Hitler's effort, while we shall form part of the military machine of the free outer world, to whose expansion no limits can be set.

There are no illusions left anywhere about the cost of the victory we are determined to achieve. But there is no flinching from it either. It is our duty and privilege "so to bear ourselves that if the British Commonwealth and Empire lasts a thousand years, men will still say, 'This was their finest hour.'"

The Fate of France

WHATEVER the outcome of the negotiations between France and Germany, the fate of France is for the time being determined. The French people, the freest, most intellectual, most cultured people of Europe, are to pass under the tyranny of a ruler whose chief aim since he achieved power has been to banish liberty, degrade reason and destroy civilisation. The eclipse, however temporary, of France means more to Britain than the military loss of an ally. We lose part of ourselves when France's liberties are trampled underfoot. We know that our reeling Western society has taken one further step towards the abyss of annihilation when the mechanised columns of a slave State can crush out the resistance of a nation whose very name is incorporated in the idea of enfranchised liberty. We grieve with France in this her darkest hour and with all the more resolution we devote ourselves to the task of securing Germany's defeat and her liberation.

The final military collapse was not unexpected. In the first days of the German onslaught on the Weygand Line, the inability of the French troops to dislodge the German army from a number of bridgeheads on the Somme was the preface to the Nazis' powerful thrust on the Western flank of the French army which brought their motorised columns to the Seine and threatened an immediate encirclement of Paris. Before the French could deploy their forces to meet this drive, a virulent attack was launched on the Langres plateau and the French line to the east of the capital was pierced.

The decision to abandon Paris might not have entailed complete disaster had the French troops thereby gained sufficient respite to reach the Loire and establish new positions, even though such a line would have placed the Maginot Line in jeopardy. But an effective withdrawal was made totally impossible by the mass evacuation of Northern France and the cluttering of all the roads to the south with civilians in flight. As it was, the German army caught up the French retreat and German tanks, French supply columns and helpless panic-stricken refugees made a hideous confusion on the roads between the Seine and the Loire.

Neither the piercing of the Weygand Line nor the decision to abandon Paris shook the determination of the Reynaud Government to continue the struggle. M. Reynaud himself pledged his country to carry the fight if necessary "to one of our provinces . . . to North Africa . . . to our possessions in America." But his appeal first to Britain then to the United States to increase both the speed and bulk of their military help was a clear indication of France's desperate straits.

The answer to his appeals was a pledge from Mr Roosevelt to redouble America's efforts in the Allied cause, while Britain despatched all the troops and equipment which she could muster from the wreckage of the Flanders campaign. The military insufficiency of this reply is a tragic commentary on the long months consumed in complacency in this country, and on the time-lag in both democracies between their first realisation of danger and any subsequent mobilisation of their national resources. Britain and the United States, the two greatest industrial nations of the world, could not provide France with enough machines. And all the time the machines of Germany were pouring through the cracks in the disintegrating French line. The Nazi advance guards were in Champagne, they had crossed the Loire, on June 15th came the news that the Rhine had been forced at Neuf Brisach and the Maginot Line outflanked. France's military effort, magnificent and sustained though it had been, was nearing its end.

It was at this point that, with dramatic suddenness, the Reynaud Government submitted its resignation, and late on June 16th a new Ministry was formed under the leadership of the veteran Marshal Pétain, which included many of France's highest military authorities, among them General Weygand and Admiral Darlan. This change immediately gave rise to uneasy suspicions. M. Reynaud, who had sworn resistance to the end, was gone. Yet the

presence of the military chiefs was reassuring, and it was therefore with stunned surprise that Great Britain received the news that Marshal Pétain had determined France "must cease the fight" and had applied to Germany "to sign . . . as between soldiers after the fight and in honour, a means to put an end to hostilities." About the same time it became known that in this hour of extremity Britain had offered France an Act of Union of the most complete and far-reaching kind. It proposed to substitute for the two separate nations a Union based on a common policy for defence, foreign affairs, finance and economics and on immediate and complete interchangeability of citizenship. A single war Cabinet would be set up, the Parliaments would be associated, the two Empires would share equally the burden of arms and the responsibilities of victory. As a proposal, the British scheme was a milestone in the slow journey away from frenzied and stultifying nationalism. As a practical possibility, it depended upon its reception in France. But France's reaction remained in doubt, as did everything else in the first days of the calamity.

The week which has passed has shed only the faintest glimmerings of light on the situation. The two dictators met at Munich on June 19th to discuss the terms to be imposed on France, and the following day France sent her plenipotentiaries to receive the *Diktat*. It was obviously no question now of honourable surrender. The German Press and wireless maliciously recalled the Armistice of 1918 and threatened reprisals. But in France the tone was changing. Marshal Pétain's speech had seemed to imply that France had already ceased fighting. Such was not the case. Their line broken, their armies isolated, their munitions nearing exhaustion, the French carried on the struggle with hopeless but unrelenting courage. The French Foreign Minister corrected the impression that France would surrender on any terms. Only honourable conditions, he said, would be accepted. The armies and colonies of Northern Africa and Syria pledged their fidelity and support. Discipline among the refugees was improving. There were signs that the first shock of collapse had been overcome.

Yet the situation remains very grave. Whatever the fate of all France's armed forces, the Allies are weaker now by the loss of the strong, valiant and highly trained French army, of France's war industries, of our most important foothold on the European continent. The task of defeating Hitlerism is rendered many times more arduous. It must also take years longer to bring about.

Again, whatever the outcome, Germany will now be in physical possession of the soil of France and the Nazis' strained resources will receive the welcome addition of France's annual output of over 30 million tons of iron ore and 683,000 tons of bauxite. France, it is true, is only just self-supporting in food supplies. She has exportable surpluses of grain only in years of exceptional harvest, and this year's crops are poor. This fact, coupled with the serious devastation due to tank warfare, will make France an economic liability from the point of view of food. It is also true that France has to import one-third of her coal requirements and virtually all her oil supplies, non-ferrous metals and textile raw materials, but the stocks are large (some estimates place the oil reserves at about one million tons) and, whatever the difficulties of compelling the industrial system of a conquered nation to work for a hated overlord, the Nazis have their own hideous means of compulsion. We do not know to what extent the French military authorities have been able during their retreat to destroy stocks and plant which would assist the enemy, but the bombing by the R.A.F. machines of oil stores in Rouen and the extreme rapidity of the drive which carried Germany's motorised columns into Le Creusot, centre of one of France's biggest groups of armament factories, suggests that to some extent France's war reserves are falling intact into the hands of the invader.

France has borne the brunt of the military struggle. She has received little help from her neighbour and ally, and

if we point out that a mere 12 divisions was all that we undertook to provide from the start, the French can reply with every justification that it was not at their suggestion, but in spite of their constant complaint, that the number was fixed at so low a level and that so little effort was made during the long months of waiting to increase it by speedier calling-up or greater drive in our armaments production. There can and must be no recrimination. France has fought a gallant fight. If outnumbered in men and machines, she decides that her sacrifices for the common cause have surpassed the limits of her endurance, then we in Great Britain will fully accept the validity of the reasons which have led her to this tragic decision.

Nevertheless, we can plead that no step be taken which will render even more difficult and dangerous the military ordeal which confronts this country. It is not a question either of sentiment or even of treaty obligation. It is true that France and Britain have contracted towards each other a solemn obligation not to conclude a separate peace, an obligation from which, in Mr Churchill's words, we are unable to release France. But it is also true that if France,

by concluding a separate peace, could save her country from ruin and secure such a measure of independence that she could of her own efforts rise again to the stature of a great and free people, then it would be difficult to cavil at her decision, whatever the cost to ourselves.

But clearly France's only hope of ultimate independence lies in our victory. If, hoping to alleviate her present misfortunes, she agrees to terms which in any way jeopardise our chances of success, then she is purchasing temporary relief at the price of permanent enslavement. Whether France continues the struggle or no, Germany's treatment of the French homeland will be merciless. France's best hope is to break in the quickest and most effective way the power of her enslaver, in other words to continue to contribute with all her power to an Allied victory. Her armies in North Africa are undefeated, her navy is intact, her air force battered but still powerful and undaunted. In company with her Ally she can help to spread this war to the seven Seas and the five Continents until all the resources of the world's greatest Empires have been mobilised to wipe Hitlerism from the face of the earth.

A People's War

BRITAIN will fight on, and on Tuesday the Prime Minister told the people why. It is because cold calculation has decided that the defence of these islands is practicable. Beside the trained and equipped fighting men, on whom the chief burden of defence must fall, is the civilian population, over forty millions of them, and it is about their duties in the coming siege that debate has become most keen. Clearly their rôle is crucial. They can buttress or undo the work of the fighting men. On the one hand, their labours to supply the Forces with weapons and munitions, and to feed and clothe every soul within our frontiers, are the foundation of the national effort. On the other hand, as tragic experience has shown in France and Flanders, their behaviour under fire may determine the very issue of the conflict.

The wish to serve is unanimous among civilians. There has been an outcry, in the Press and wherever men meet to talk, for an immediate *levée en masse*, for the calling up now of every able-bodied man not busy on war work, even for the arming at once of the whole population. The reasons for these demands are plain. They are due to the deficiencies in manpower revealed in the great battles the Allies have lost and to the perils that are now imminent in Britain. They represent a civilian revolt against military failures and a determination, by making this what is called a People's War, to prevent the happening here of the civilian tragedies witnessed on the Western Front.

The outcry is understandable—even laudable. It is true that the key to future successes must be the better and fuller use of Britain's manpower, first and foremost now in the factories. But the lessons of the war so far are still imperfectly understood. Every man must, indeed, be used wherever he can be useful and effective, whether at work or in battle, but the Nazis cannot be driven back by amateurs, by bill-hooks and staves and broomsticks. The Allies were beaten in France by superior equipment and better training in more effective tactics, and it would engender a false, and possibly fatal, sense of security if our chances of success now were measured merely by the counting of heads.

We can only call up for military service the men we can train and equip. That is hard fact. To arm untrained civilians with simple firearms—quite apart from the fact that all the arms we have are needed for instructed soldiers—would be to invite their destruction at the hands of ruthless and heavily armed invaders, and to court defeat.

The voluntary physical training scheme now set on foot for men of military age is a good start. There are many labour tasks and fatigues, now done by soldiers, that might be done by civilians not on war work. There is room in our city parks for exercise and drill; they should be made compulsory for all. But these steps will not make soldiers

capable of holding ground. They are only preliminaries. And it would be a national tragedy to rely upon anything but instructed firepower and mobile armour for the country's defence.

The rate of registration for military service is being accelerated. More important, the rate of calling-up for actual training is to be speeded up something like five-fold. If the Ministers of Supply and Labour, Mr Morrison and Mr Bevin, can give these men the arms and mechanised weapons they must have, the steady flow of trained recruits may in time accumulate the effect of an ordered *levée en masse*; every source of supply for Tommy-guns, grenades, tanks and planes is now being combed, including Russia. There is the plainest room for extending and intensifying the whole scheme of training for the Forces. Nevertheless, training, equipment and tactics—these are the limiting factors, and no amount of enthusiasm can burst their bonds. To deal with wreckers from the air, no less than to repel boarders at our coasts, heavily armed, extremely mobile and subtly disposed bodies of troops are needed. Anything less will stop nothing; and to arm housewives with hand grenades, as has been suggested, would be to add nothing to our ability to resist an invasion but to make certain that it would be a massacre. Let us by all means demonstrate the courage of every last citizen. But let us not lose our heads.

To say this is not to deny that the only sure defence is to make this a nation in arms. It is only to admit, quite frankly, that we are burdened with the legacy of a slothful past, to confess that we still lack the wherewithal to arm many more troops effectively. The popular instinct is sure and right in its view that total war, brought to our own shores, requires the mobilisation (for work or fighting) of every able-bodied man between, say, 16 and 60 years of age; and the need to raise the rate of war supplies to make this process possible is bitterly urgent.

Indeed, one might go further and say that the time has come to abandon the voluntary principle altogether in national defence. A resolution adopted by an all-party meeting of Members of Parliament this week makes this point. It is an anachronism, with grave danger in it, that the Ministry of Home Security should only this week have put out a pamphlet of advice on invasion which leaves it to factory managers, shopkeepers and garage proprietors to organise some system of protection for their premises—for themselves without compulsion. And it is similarly perilous to allow ourselves, for instance, to regard the Local Defence Volunteers as an effective striking force, instead of the invaluable observers and obstacles they should prove to be. It is a welcome augury of fresh firmness that travellers are now instructed, and no longer simply asked, not to visit the defence areas between the Wash and Sussex.

Military training for all—outside the war workshops

whose output is the core of our defence—for whom we can furnish supplies; military discipline and instructions for all who have defence duties to perform—these surely are the principles of policy for a nation preparing for siege. And, for the rest, the civilian's duty is not spectacular. It is simply to obey orders, orders that must be given now. Rightly, the Ministry of Home Security has told civilians to "stay put if invaders come," to remain where they are, and give what aid is asked to the military authorities. Everyone in a danger zone who should be evacuated should be instructed to go now; but chaotic, unorganised evacuation might well be the instrument of defeat, as it was in France, if refugees in flight were to block the roads and impede the swift, free movement of troops which is a chief weapon of defence. The feeling that ten miles away is safer than where one is may be very natural, but it is quite unsound. The time has surely come when, even apart from the need to conserve fuel supplies, private motoring for any but quite essential purposes should be stopped and long-distance travel sharply restricted. The means of panic flight must be taken away.

The old-style evacuation from crowded areas vulnerable

Salvation for India

THE elements of the Indian problem are clear and wearisomely familiar. Congress saw in the war an opportunity to constrain the British Government into con-
vinving at the establishment of what would have been virtually Congress Party dictatorship—disguised in parliamentary forms. The other great party in India, the Moslem League, fearful that the British, for the sake of peace and out of weariness with the whole Indian problem, would yield, made it clear that, if that happened, it would adopt unconstitutional means of obstruction. Furthermore, it took a leaf out of the book of Congress in adopting a policy of co-operation—in saying, that is, that it would refuse to co-operate with Congress. This is the significance of the Moslem League resolution on the setting up of independent Moslem States which it passed at its recent Lahore conference. In default of co-operation between Congress and the League, a constitution for a united India becomes unworkable.

The Congress tactics have surprised those who sympathised with its national ideals, who admired its past endeavours, and who had in the past two years watched with admiration the working of the seven provincial Congress Governments. These friends have been bewildered and embarrassed, as by the sudden development of eccentricities in an old and respected friend. By a leadership which it would not be too strong to describe as crazy, Congress has thrown away the commanding position which it had built up in the country, converted Mr Jinnah from a comparatively minor politician into one who, as Hyder Ali once over the Carnatic, looms like a thunder cloud over all India, forfeited much of the sympathy of Great Britain, and jeopardised the unity of India. Moreover, though it professes to outdo all others in its detestation of Nazism, Congress could not, until very recently, have conducted itself in a way which better suited Hitler's book.

About the reason for this strange and unexpected behaviour it is hard to be precise. It may be that Congress leaders have been so misinformed about sentiment in London that they believed that, by maintaining their pressure long enough, they could force London to capitulate—even though such capitulation meant the appalling risk, or even the certainty, of communal civil war. It may be, as is sometimes suggested, that they were fatally misled in this respect by the unhappy visit of Sir Stafford Cripps. It may be that they built upon the coercive power of American opinion, which is uninformed about the Moslem viewpoint and, since the publication of Gunther's book, "Inside Asia," is convinced that Jawaharlal Nehru is a kind of Asiatic demi-god. Or it may merely be that, after two years of office and great power, Congress leaders have been carried away by a kind of Hitlerian megalomania.

What has been the rôle of Mr Gandhi in these trans-

to air attack has still good grounds, better grounds than ever, as this week's widespread bombing raids have plainly shown. The removal of children and non-workers, not only from air targets but from the coastal areas where the enemy may seek bridgeheads, may aid defence, if it is done now and by order. Plans are already prepared to move people from areas likely to become the scene of military operations. It is for the Government to decide, not parents or individuals; and it would be shirking of public duty to hold, as Mr MacDonald hinted last week, that compulsion is not feasible. The Government must make up its mind what amount of movement is practicable and desirable (it may, in fact, at this stage, prove to be only small); then, having ordered and arranged it, the Government should permit no more. There must be no delay; "go now or never" must be the rule.

A nation in arms is not yet a practicable proposition, though vast defence forces are and more arms should flow in fast. Defence is a soldier's task. A nation at work and under orders is possible—and imperative. To achieve this will be the acid test both of the Government's decision to fight on and the people's wish to serve.

actions is one of the enigmas. Those who still respect his statesmanlike instincts are inclined to think that he has been in the position of the gentleman at the Paris Revolution in 1848 who, found wandering alone in a back street, cried out: "Where is the crowd? I am their leader. I must not be left behind"—though it is only fair to add that Mr Gandhi, like other individual Indian leaders, seems to have been startled into greater reasonableness by recent developments in Europe. The growing danger of their own position is being borne in upon Indian Nationalists. India is becoming alive to the need for putting her house in order and for strengthening her defences. Congress has markedly stiffened its attitude towards Germany. Hostility towards Nazism is greater than ever. But it is still opposition to Germany, rather than support of Britain, that is stressed.

Meanwhile, the task of repairing the damage falls to Great Britain. For, as much as Congress, we are interested in the unity, contentment and good government of India. Our task is therefore to guide both Congress, with its heady and reckless mood and its amateurish and infatuated notions about tactics, and the Moslem League, in its long-headed determination to make the most of the mistakes of Congress and to remove all possibility of government by a Congress majority, in such a way that they do not fly at each other's throats. On the contrary, they must come together once again on the basis of co-operating in a coalition government of India.

The task is appallingly difficult, but not hopeless. In all camps there is a strong body of opinion alarmed by the drift of events, exasperated by the follies of the extremists, and ready to call a plague upon both houses. At present, these sections are ineffective because they are disunited and have no common programme. One of the most disturbing features of the situation is a bankruptcy of thought, a despair on all sides of being able to formulate any policy or suggest any compromise which might stop the drift to calamity. But if proposals could be submitted, moderate, reasonable, and practicable, they might well rally all this broad central section of opinion, with the result that the atmosphere would become favourable to discussion and compromise. Extremism would be put at a discount.

Here surely is a chance for British intervention. What is needed is a great intellectual effort, first to devise the principles of a constitution (perhaps involving very radical amendments of the Act of 1935) which would assure all parties of a share in the central Government and none of a monopoly of power; and, secondly, to commend the solution thus arrived at to a sufficient body of opinion in both camps to provide a backing in the country for a revival of constitutional government. Such an initiative might possibly come less effectively from the Government

than from private agencies, from eminent individuals, from research and study institutions. It is impossible not to feel surprised at the way in which these agencies in England have recently ignored the Indian question; and, in blaming Congress, it is fair to attach scarcely less blame to the British intellectual public which has left Congress to its own devices.

The British Commonwealth, if it means anything at all, should mean a common intellectual life, and inter-communion of minds, a mutual awareness of ideas, and action guided by deliberation in which all participate. To bring about this state of affairs as far as India is concerned,

Great Britain seems to have made the slenderest efforts. India is the intellectual desert of the British Empire, and Congress, for all its folly, can be excused for its ignorance of the ideas informing Commonwealth policy, since so few have troubled to expound them on Indian soil.

A happy issue of the present crisis can hardly come about except as the result of the joint labours of British and Indian statesmen, constitutionalists, students and publicists. From this co-operation might well grow the common intellectual life and common point of view which would be the surest guarantee of India's continuing connection with the British Commonwealth.

NOTES OF THE WEEK

Italian Belligerency

The suspicion that Italy had yet another type of belligerency up her sleeve has been confirmed by the week's events. Allied bombers have attacked Milan and Turin, but Italy has taken no reprisals. Reports from the Mediterranean suggest that, apart from some slight submarine activity (our losses have included *H.M.S. Calypso*, a veteran cruiser on the retired list), the Italian navy has not left its bases; and the warfare in Africa appears to be developing very favourably from our standpoint, while meeting with only limited opposition. Italy has been either unable or unwilling to submit our bases to severe punishment, whereas the Italian air force operating in Africa has gone through a gruelling week. This may be belligerency, but it is so far of a very pallid kind. It is possible that Hitler has better uses for Italy's war machines than to risk them in the hands of their own personnel, or very possibly this 'canny' period is the prelude to a vast concerted offensive, once French resistance has been finally crushed. But France's powers of resistance may still be effective in the Mediterranean and the Near East, and the Nazis are likely to have their hands more than full in other areas for many weeks to come. Italy's passive belligerency in the Mediterranean may therefore continue.

— and Egyptian Non-Belligerency

Nowhere would this possibility be more welcome than in Egypt, where a situation of extraordinary delicacy has been brought about by the Italian declaration of war. Egypt is frankly unwilling to risk belligerency at this uncertain moment in the war, yet she feels compelled to fulfil her treaty obligations to this country and place air and naval bases at our disposal. Italy has retaliated by frontier raids, during which specifically Egyptian objectives have been attacked. Egypt is thus faced with the decision whether or not she should make war. Diplomatic relations are severed, but, over the more drastic step, political opinion is so divided that a Cabinet crisis threatened at one time to develop. For the time being, however, the Prime Minister, Ali Maher Pasha, is likely to remain in office and to pursue a policy of loyalty to the British treaty, combined with the avoidance of any provocation to Italy. Egyptian troops have been withdrawn a certain distance from the Libyan frontier to avoid further incidents. There can be no doubt that our cause is preferred in Cairo as in Ankara. But our physical means of defending it is for the time being in doubt, and until we can put a check to Hitler's sweeping victories we shall continue to pay the penalty of ill-success.

Russia Makes Hay

Russia is steadily pursuing her "reinsurance" policy. Her troops along the German-Polish frontier have been reinforced, 120 divisions are said to be massed on the Hungarian and Roumanian borders, and the week-end has seen the completion of the Soviet occupation of the Baltic States. Early in June, using alleged attacks on Soviet garrisons in Lithuania as a pretext, the Soviet Government began to demand the removal of various Lithuanian ministers and the substitution of a Government subservient to the Kremlin. The demands increased in intensity until, on the night of June 14th, Lithuania received an ultimatum to remove the offending Government and permit a Soviet military occupation of her territory. The Lithuanian Government accepted Russia's terms and Soviet troops marched across the frontier

next day. Having secured her German flank, Russia then turned her attention to Latvia and Estonia, and on June 17th and 18th Soviet troops occupied all the chief centres, while negotiations were opened with the Soviet authorities in Riga and Tallinn to decide the composition of new Governments acceptable to Moscow. It remains to be seen whether Russia will be able to make as full a use of Germany's preoccupation in the West when she turns to the lands lying beyond her southern and western frontiers. Germany's interests are too closely bound up with the Balkan States, and particularly with Roumanian oil, to make a Russian occupation at all feasible, short of war. On the other hand, Germany dare not risk direct intervention in an area which might embroil her with her Russian "friend." Thus, between German pressure and Russian counter-pressure, the Balkans will probably remain neutral until Germany is either so powerful that she can risk Russian opposition or so exhausted that Russia can risk hers.

Turkey and the Soviets

Russia has shown much greater interest in Turkey's policy in recent weeks. Since October last, Turkey has been bound by treaty to France and Britain, and from the first Russia looked on the alliance with some suspicion. Under certain circumstances, it provides for Turkish help to the Allies should they find it necessary to go to the aid of Roumania in accordance with their guarantee. The most obvious form of help would be the opening of the Straits to the Allied Navies, and Russia is determined to keep foreign battle fleets out of the Black Sea. Even if the issue were not Balkan but Mediterranean, a belligerent Turkey would, in the view of Moscow, still offer a certain threat to Russian security, a belief which the tone adopted by the Turkish press during the Finnish war and the accompanying talk in the West of attacks on Baku only helped to confirm. There is therefore nothing unexpected in Russia's diplomatic activity since Italy's entry into the war, and its aim, though undeclared, is obvious enough: to keep Turkey neutral. Russia's pressure has apparently been successful. Although it is over ten days since Italy's declaration of war, Turkey's attitude is still undefined; and now reports suggest that the Turkish Foreign Minister will go to Moscow to complete the negotiations for a non-aggression pact which were broken off last October. If the new conversations follow the lines of the old, Russia may be offering a guarantee of the Balkan *status quo* in return for the abrogation of the Treaty of Ankara or, at the very least, for a guarantee to close the Straits to the Allied Navies. It is difficult to forecast Turkey's reaction, but France's defeat has had an obviously discouraging effect.

Bombs on England

Real air raids have started, though not even yet in full force, and the anxieties that flared up in September, only to die away again, have returned. There is no sense of surprise—which is greatly helpful in meeting the danger—and false illusions about this island's immunity are swiftly fading. Beyond the bombers there is the larger danger of invasion, a realisation which renders the air raids oddly more tolerable; and soon the population will have learned the day-to-day common-sense routine of raided people: to take cover at once and keep still. On Tuesday night, something like 100 bombers raided districts from Yorkshire to the Thames. Twelve people were killed, nine, including six children, in one Cambridge-

shire street; three died; and thirty were injured. An oil pipeline on the Thames was damaged, but the raiders' targets seem to have been our eastern air bases. The attack failed, and a certain seven of the German planes were shot down—in conditions unusually favourable for fighter action. On Wednesday, the raiders ranged more widely. Alarms were sounded from Scotland down East England to the South Coast, in North-West England and in South Wales. Bombs were dropped on the North-East Coast, in Lincolnshire, in the South of England and in Wales. Six civilians were killed and 60 injured; at least three raiders were shot down. This time the objectives seem to have included more than airfields, and it appears sure that these raids have raised the curtain on the many-pointed assault we have so long expected against the nation's vitals.

* * *

Balance above Ground

Mr Churchill forecast early air raids in his speeches on Tuesday, and he gave two reasons for facing them with confidence. Britain's fighter strength, relative to Germany's, was greater now than ever before, and Britain had many bombers. The Prime Minister expected the R.A.F., operating from close home bases, to take heavy toll of any raiders, heavier even than the destruction wrought at Dunkirk, and the events of Tuesday night in a clear, bright sky pointed his prophecy. His reference to Britain's bomber strength was not prophetic. For weeks now heavy bombers of the R.A.F. have been hammering at German communications, key stores and industrial centres far back into Germany; and the people of the Ruhr Valley, the Rhineland and West Germany have already grown to expect what has burst upon Britain this week. Even so, these reasons for confidence furnish no grounds for complacency. Since May 10th aircraft production in every category has exceeded all losses of every kind. More planes are now in use than before Hitler broke loose. This is a tribute to Lord Beaverbrook, Minister of Aircraft Production, and the aircraft industry; and the number of aircraft from North America, now and in coming months, is rising. But Germany is still left with superiority in the air. Concentrated operations over our own soil may enable the R.A.F. to prevent the *Luftwaffe* from making that superiority effective at any particular locality; and the other defences, anti-aircraft artillery, searchlights, balloons, observers and A.R.P., are strong. But the whole future of the war turns upon the balance of power in the air being decisively tipped in our favour; quality we already have in superior measure, both in machines and men; now it is numbers we need. Aircraft gain no ground, it is true. They win no battles. But they can strike at the heart of production; they can bring in wreckers; and, as auxiliaries in naval and military operations, they can blast a way clear for invaders' bridgeheads.

* * *

Hitler's Monroe Doctrine

The collapse of France has removed any lingering doubts the Americans may still have felt about the world-wide scale of the present struggle. If France accepts the spoliation of her Empire, transfers of sovereignty become possible in areas within the United States' immediate sphere of interest. If France continues the struggle in her colonial empire, the theatre of actual warfare is likely to spread to every quarter of the globe. The war has, in fact, become an oceanic and continental war, and, however much Congress may resolve not to "acquiesce" in any transfer of possessions from one non-American Power to another in the Western hemisphere, this Western hemisphere is itself surely and with a quickening tempo being drawn into the struggle, and America realises that to will the end of security is also to will the means. There is now virtual unanimity over the increase in the United States' armed forces. Even such staggering demands as that of Admiral Stark, that the U.S. Navy be increased by 70 per cent., are unlikely to rouse much opposition. There is growing unanimity that "everything except men" must be sent across the Atlantic to assist the Allies. President Roosevelt's telegram to M. Reynaud, in which he promised redoubled efforts to provide the Allies with the machines of war, troubled only the extreme isolationists, a dwindling group. The country, as a whole, accepts the view that the Allies are fighting America's battle, and is ready to recognise that arms sent across the Atlantic will be used in the defence not only of the Allies but of America. The inclusion of two leading Republicans, Mr Stimson and Colonel Knox, in Mr Roosevelt's Cabinet does not have the same significance as a British Coalition. But it is nevertheless a clear indication that Mr Roosevelt's policy holds the country and a promise that it will continue.

German propaganda has therefore taken on a new twist. The pretence is no longer that the war in Europe is of no interest to America, but that any intervention on the part of the United States would come too late to have any effect on the issue of the struggle, and that war material dispatched to an already defeated belligerent is so much waste; let America, therefore, recognise a new version of the Monroe doctrine, "America for the Americans and no Americans anywhere else," and come to terms with the new situation. Europe will be virtually a "centralised German State." Between the two great economic systems of the Old and the New World profitable commercial operations will be possible; the United States might, for example, inaugurate the new era by a vast loan to Germany to enable her to exploit her subject peoples. This propaganda touches only a fringe of the American people. The vast majority agree with the cryptic comment—"that rouses recollections"—with which President Roosevelt greeted Hitler's alleged promise not to intervene in America. The extent and ingenuity of Nazi intrigues in Uruguay, where fully organised "shock troops" have been discovered, is an apt illustration of Hitler's pledge. Against this background of German encroachment, there must be set the proposal to create a vast trading corporation, financed largely by the United States and designed to dispose of the surplus stocks of all the South American States. Centralised control of this sort would put an effective obstacle in the way of Nazi commercial penetration. It is in these terms rather than in terms of German propaganda that the American business world is likely to react to the German challenge.

* * *

Spain Finds Her Non-Belligerent Feet

Spanish non-belligerency has had a successful first week. The occupation of the internationalised zone at Tangier, although it was apparently carried through with the consent of the French and British authorities and was specifically limited to "the preservation of law and order," is hailed in the Spanish Press as a territorial conquest and is obviously whetting Spain's appetite for more. Bills have appeared on the streets claiming Gibraltar, Casablanca, Fez, Oran and Algiers, and the *Giornale d'Italia's* statement that Spain should be given French Morocco has been quoted with exultant approval. That Italy would like to help Spain at the expense of France is obvious enough, but Italy has little say in the matter. Berlin is deciding the extent and nature of any redistribution of French territory, and although the Caudillo appears to have acted as Marshal Pétain's intermediary in the first inquiry on the possibility of an armistice, there is as yet no evidence to suggest that this service was in itself sufficient to earn territorial compensation, even though any territory secured in this way would be held, whether by Italy or Spain, in only very precarious fief. However, whether or no Spain joins the vultures round the body of France, her co-operation with our enemies is surely sufficient for us to study in a very serious light the nature of her non-belligerency. Italy's non-belligerency enabled her to stock her own war reserves and pass on a considerable surplus to Germany. Are we to repeat the same miserable comedy with Spain? The Iberian peninsula is now Hitler's chief avenue to the Western World and the vast supplies of the Americas. We cannot suppose that Spain, simply for the *beaux yeux* of Sir Samuel Hoare, will put a ban on Hitler's vital supplies. The mistake of Italy must not be repeated.

* * *

The French Navy

In strength the French Navy is the fourth in the world, with no superior in the continent of Europe. In the present war, its efficiency has been proved more than once to stand at a higher level than in 1914-18; and its fate now, whether or not it is to stay by its Allies' side and under its British command, is still not sure. A considerable proportion of its material is of up-to-date design, French naval constructors having shown themselves to be both enterprising and resourceful. From capital ships to destroyers their productions have been uniformly successful at sea. There are eight battleships in completed condition, of which five are relics of the last war, though three of these have undergone extensive reconstruction and modernisation. Two of 26,500 tons, completed in 1937-38, the *Dunkerque* and *Strasbourg*, have exceeded a speed of 31 knots and are armed with eight 13-inch guns each; they are undoubtedly better ships than Germany's only two battleships, the 26,000-ton *Scharnhorst* and *Gneisenau*. One new battleship of 35,000 tons, the *Richelieu*, was finished recently but is not yet officially in

service. A sister ship, the *Jean Bart*, was floated out of dry dock in March, and is reported to be nearing completion. A third, the *Clémenceau*, has been building at Brest for 18 months past, while a fourth, the *Gasconne*, should have been begun at St. Nazaire by now, though little progress is likely to have been made with her. There are 18 cruisers of from 5,886 to 10,000 tons, completed between 1926 and 1937; 49 destroyers of from 1,319 to 2,884 tons; 12 sea-going torpedo boats of 610 tons; and 76 submarines of varying types. Exceptionally useful craft are the 29 heaviest destroyers, all well over 2,000 tons (which, under the system of classification at one time obtaining, would have been classed as cruisers). There is also an aircraft carrier of 22,146 tons, the *Béarn*, completed in 1927 and thoroughly refitted in 1935, and a 10,000-ton seaplane carrier, the *Commandant Teste*. Eight modern vessels of 1,969 tons and 18 recently completed *avisos-dragueurs* (patrol minesweepers) of 630-647 tons are other useful units of the fleet. Small craft include over 20 modern submarine chasers of between 100 and 150 tons, and a number of fast motor torpedo boats. French naval personnel, which numbered some 87,000 officers and men when war began, has been expanded considerably since. Compared with French naval man-power in 1914-18, the percentage of long-service ratings is decidedly higher. In dealing with the U-boat menace and in the operations off the coast of Norway the French Navy has shown itself to be keen, well-trained and reliable, and its future rôle in the war is crucial.

Financing the Fortress

Slowly, the minimum requirements of financial policy appear to be dawning. This is a department of defence in which scandalously little has been done—and that under unremitting pressure—by those formerly responsible. Sir Kingsley Wood told the nation no more than it already knew when he disclosed, on the third reading of the Finance Bill last Wednesday, that a second Budget must be introduced this year. Sir John Simon's Budget, with its round figures and telephone numbers, was out of date even before the Finance Bill was printed. It merely imposed income tax burdens which had already been discounted, and which do not become payable until next year, and postponed for a further period increases in surtax. It introduced the principle—a good principle—of dividend limitation, which has been gratuitously abandoned, though E.P.T. has been raised to 100 per cent. It introduced the proposal for a Purchase Tax, about which nothing has been heard for several weeks. When the Upper House has concluded its consideration of the Finance Bill, this measure, inadequate when it was first outlined on April 23rd, will become law something like two months afterwards. Military events, however, have not moved with the same leisure. The nation is now faced with the most unrelenting and arduous military task which it has ever undertaken. We cannot afford to fight shy of the financial burden which that task dictates, as though by sparing the rod of taxation we could avoid the fundamental economic burden of short commons which all wars, and especially this war, inevitably involve. Our financial strength is an asset if it is fully used. If not, it may become an encumbrance and an anachronism in the total war which is now starting at our very gates. No considerations of normal budgeting.

no questions of institutional privilege, no tenderness towards any section for the wrong-headed purpose of preserving business "confidence," should be tolerated. The nation was ready to be taxed hard before Sir John Simon's Budget, and it was frustrated and disappointed. Sir Kingsley Wood must not lose a similar opportunity.

* * *

The Wider Dispersal

The Government has adopted the Inter-Departmental Committee's scheme for sending children to safety in the Dominions for the duration of the war, and discussions have already taken place with the Governments concerned to implement it. Briefly, it proposes that a Board should be set up under the chairmanship of Mr Geoffrey Shakespeare, Parliamentary Under-Secretary for Dominion Affairs, who will be assisted by an advisory committee composed of representatives of the various organisations experienced in the migration of children; and similar central organisations are already being set up in the Dominions to administer the scheme at their end. Over here, the Board will receive applications in respect of children between the ages of 5 and 16 living anywhere in Great Britain, including refugee children from Allied countries, and attending any kind of school. Contributions from parents both for the transport and the upkeep of their children will be according to their means. Those of children from grant-aided schools will be asked to make the same contribution towards upkeep as if their children were evacuated in this country, and will receive free transport for their children. Other parents may in general be asked to pay a larger contribution towards expenses and will, in addition, be asked to pay steamship fares at a reasonable migrant rate, although the discretion of the Board may be exercised in respect of these contributions. Mothers will not at first be allowed to accompany their children, although an exception may be made later in the case of war widows, but the children will be escorted by qualified and experienced persons, including doctors and nurses. One question has been answered by allowing parents with friends or relatives in the Dominions to nominate them to receive their children; but, in order that shipping facilities will be adequate to ensure that a fair balance between the various categories of children will be maintained, private evacuation can only take place after the consent of the Board has been obtained. On the basis of the offers already received from the Dominions about 20,000 children could be sent off immediately, of whom half would go to Canada, and these could be sent without any alteration in the present shipping schedules. But it is not intended that there should be any limit fixed at this end, and now that large-scale bombing has begun it is probable that the first quota will be rapidly exhausted.

Japan Blows Hot and Cold

The Tientsin settlement appears to be more satisfactory than the time at which agreement was reached—in the midst of Britain's enormous difficulties in the West—appeared at first to suggest. The concessions made touch British rather than Chinese rights, and on the crucial question of the £1 million of silver coin and bullion in the

Chinese Bank of Communications, the Government of Chungking have been consulted and given their consent to the placing of the money under the joint seal of British and Japanese Consul-Generals at Tientsin, with the exception of some £100,000, which will be distributed for famine relief. Where Britain has given way is in the matter of the policing of the British Settlement, and here there is no question of a breach of faith with a friendly Government fighting for its life. Japan's readiness for compromise on the Tientsin issue does not, however, denote any general change in her attitude towards "East Asia." The collapse of France has brought up in a new and urgent form the question already raised by Holland's eclipse: who is to be the heir of the older Imperial powers? From the Japanese standpoint there is only one answer. Fear of United States intervention was a restraining influence in the Dutch crisis, but the Japanese Government may argue that the United States would be less interested in developments on the Asiatic mainland. A powerful, if secondary, reason for action is the extent to which Chungking depends upon Indo-China to maintain its communications with the outside world. Japan is already demanding that all transit traffic shall cease. The next step may well be an accusation that, in spite of the demand, traffic has not ceased; thereafter the third step—judging by European precedents—will be occupation without delay.

* * *

The Empire Fights On

The Prime Ministers of the Dominions have endorsed Mr Churchill's decision to continue the war, declaring themselves ready "to share our fortunes and to persevere to the end." And in support of this declaration comes more news of the redoubling of the war effort throughout the Empire. Australia and Canada have followed the example of New Zealand in introducing Bills giving the Government complete power over men and property for the prosecution of the war, with the proviso that conscription for military service would not extend to service overseas. But it is in South Africa, which so nearly assumed a non-belligerent rôle last September, that a change of spirit is most clearly seen. The entry of Italy into the war has revived the old hostility which underlay the Union's uncompromising attitude over sanctions; South African aeroplanes, together with Southern Rhodesian ones, have been bombing Italian East Africa from the word "go"; and a South African mobile field force is serving with the British East African forces in East Africa. Of all the Dominions, South Africa, as General Smuts has pointed out in a broadcast, is in the most immediate danger. For as a colonial power France has a greater territorial stake in the African continent than even the United Kingdom, and her suing for peace has brought home to the isolationists the consequences for South Africa if the French collapse were to be followed by a British one. General Smuts has now been assured of the support of many who last September believed that the Union could remain neutral, and his personal position is becoming stronger every day. As officer commanding the Union Defence Forces, this one-time enemy of England is for the second time taking up arms in her cause.

The Spectre of Famine

The organisation of scarcity has long been one of the chief occupations of the Nazi regime. With each extension of their power over Europe, the area of created scarcity extends, until to-day most of Continental Europe is faced with the prospect of famine. The severe winter, the late spring and the mobilisation of peasant labour for attack or defence

limited, particularly in Western Europe but also in Germany and the Danubian grain lands, both the area sown to food crops and the intensity of cultivation. The tenth of the cereal supplies of Continental Europe that is normally imported across the sea is now shut off by blockade and in the last two months such crops as were growing in Norway, Belgium, Holland and North-Eastern France (the main French cereal district) have been drowned, burnt, shelled, crushed and destroyed. Livestock must also have largely disappeared and equipment been destroyed; and the tragic exodus of refugees that blocked the routes of the French Army bears ghastly witness to the depopulation of once busy towns and well-tended farms. But whether the local population stayed, as in Denmark, or fled, as in France, famine seems their inevitable prospect. Such food as can be spared from the Balkans, together with the herds of Denmark and the rye of Poland, will go to feed the undernourished Germans; and German *Lebensraum* becomes synonymous with starvation, disease and sickening misery.

* * *

Welfare Organisation

On Tuesday the Minister of Labour met the representatives of over 120 voluntary organisations to ask for their help in organising welfare facilities. Billeting arrangements, communal feeding, the care of children and young people, and a wide range of other services clearly require to be organised at once. But with the threat of invasion and heavy bombing, the scale on which these things will have to be done is hard to determine. So long as there is no havoc or ruin, welfare is concerned with services for special classes of the population, such as factory workers, their wives or their children. So long as things remain fairly quiet, the various groups of society can be attended to by different Government Departments, local authorities and other bodies, each with its own resources and limited powers. But in any real emergency, all these piecemeal, departmentalised welfare services would prove either inadequate or unworkable. In the event of invasion, the military authorities would have to take over in the threatened areas, and the organisation of food, shelter and other necessities for refugees would become their responsibility. Meanwhile, Mr Bevin has arranged for the setting up of a National Consultative Council, representing all the voluntary organisations from the Y.M.C.A. to PEP, to deal with welfare under five main heads—health, juveniles, recreation, professional workers and "general." This will be a help. The Minister of Labour now has a sort of Brains Trust, to examine and sift all the ideas coming forward daily from bodies all over the country. Devoted and hard-working people in voluntary organisations who have been burning their hearts out ever since war began will be able to make themselves heard. In the localities also voluntary effort is to be co-ordinated. The Minister of Labour has appointed Chief Welfare Officers to serve on the Labour Supply Committees attached to the employment exchanges in a number of important industrial areas. These officers, responsible for arranging all welfare services in such a way as to assist the Labour Supply Officers in making labour available, will be concerned with the health, feeding and general welfare of workers inside the factories and of their families and dependants outside the factories. Communal feeding, billeting, domestic difficulties, recreation and the care of young people—all will be their responsibility; and they are expected to make the fullest use of every available voluntary organisation in their districts.

*

It is not difficult to think of a great many steps that might be taken. The children of married women recruited for war work might be housed in large suburban dwellings, away from the factories. Arrangements will have to be made for the care of children whose parents have been killed in air raids. Halls could be used as canteens, where well-cooked food could be provided in the evenings for workers whose wives are no longer at home to do the cooking. Feeding problems arise, especially in connection with shift work, which may completely disrupt the domestic arrangements of workers. For many workers to maintain their efficiency under the strain of disturbed living conditions, it is essential for them to be able to find proper sleep and rest; and it may even be desirable to house people in hostels, away from the noisy centres of towns. And there is the organisation of rest periods. In all this there are two vital points. First, the Minister must take almost unlimited powers to get things done. There is a danger that the Chief Welfare Officers and the Ministry as a whole may slip into the pace set by the myriad committees of voluntary organisations. Secondly, the scope of the Ministry's competence should be made clear. In the event of the country being turned into a battlefield,

it will be impossible to leave the frontiers between the local authorities, the voluntary bodies and the various departments obscure. One department, and one only, should give orders, and the others should obey.

* * *

Milk—Free and Cheap

The details of the new milk scheme were published on Thursday. One pint of milk a day will be available at the price of 2d. per pint (the ordinary price will be 4d. from July 1st) for every expectant and nursing mother and for each child under five that is not attending school; there will be no means test or income limit for this service. This allowance of milk can be obtained free if the income of the two parents is less than 40s. per week (with an allowance of 6s. per week for each non-earning dependant) or if the head of the household is receiving unemployment or public relief or a supplementary old age pension. With children of school age getting milk in schools, this bold scheme of the Ministry of Food should do much to improve the nutrition of the rising generation, if, and only if, housewives will co-operate by applying for the milk. The mistakes and carelessness of which the public have been guilty over the sending-in of applications for the new ration books, in spite of clear instructions from the Ministry of Food, emphasise the need for this new health service to be well advertised—officially, by posters and the press, and unofficially by the pressure and advice of social workers, health visitors, doctors and teachers.

* * *

Social Research in Merseyside

The war has dealt a serious blow at social research work, since, for one thing, many research workers have been drawn into the Government service. But such work should not be regarded as a luxury we can easily forgo, for post-war reconstruction will be easier if it can be based upon detailed knowledge of pre-war conditions and the effects of the war upon them. The Social Science Department of the University of Liverpool is, therefore, to be congratulated for continuing its series of studies into the social life of Merseyside. The latest publication gives full statistics of population, trade, employment and unemployment, and rates, and in some cases they are brought up to date to show the effect which the war has already brought about. In a time of approaching labour shortage, the employment statistics are naturally the most interesting. At the outbreak of war the unemployed totalled 80,000, compared with a peak of 101,000 in the depression and 57,000 in the pre-depression years. Out of this 80,000 unemployed, 35,000 may be regarded as normal, 8,400 as the result of the abnormal times common to all parts of the country, and 36,600 as a result of the peculiar character of Merseyside. And of this last figure, 11,400 were in the shipping and shipbuilding industries, 8,900 in transport and distribution, and 6,400 in building and furnishing. In the opinion of the authors of the survey, there can be no doubt that the war is reducing considerably the unemployment in these industries, either directly or by diversion to war work. So far as total unemployment is concerned, its effect is seen in the decline in those registered as unemployed at employment exchanges from 94,667 in February, 1939, to 70,966 in February of this year. But the decline is entirely accounted for by men and boys; unemployment among women and girls rose in the same period from 15,650 to 22,132. Already, however, the labour thus set free by non-essential industries, in which most of the women were employed, is being absorbed; and in April of this year the number of women unemployed was only 33 per cent. greater than in the same month of 1939, compared with 38 per cent. in February and slightly over 40 per cent. in March.

* * *

Soviet Manpower

More details of Soviet manpower at the date of the last census on January 17, 1939, have now become available. Of the 170 million inhabitants of the Soviet Union, excluding territory acquired from Poland and Finland, 61 millions are children under 15 and 71 millions are men and women between the ages of 15 and 39. Thus there are more Soviet children than can be found in all Germany, Great Britain, France and Italy put together; and, as far as the numbers of men of military age are concerned, the Soviet Union could face with confidence the combined forces of all the European belligerents. This Russian superiority in men is, of course, not new, but the gap has grown.

Shorter Notes

In last week's debate on the war services of the Ministry of Health, almost the whole of the time was spent in discussing evacuation. Only one speaker dealt with the emergency hospital scheme in any detail, although the time is rapidly approaching when it will be severely tested. The criticism made was that decentralisation has gone too far—at least, so far as the treatment of air-raid casualties is concerned—and that more attention should be paid to the necessity of ensuring an adequate supply of skilled surgeons in London and other bombworthy places, instead of sending them to await casualties in the country. The experience of Barcelona was cited; and the lesson learned from over 340 air raids by the Spanish surgeon, Professor Trueta, that surgical attention must be immediate or it is often quite useless, should awaken doubts whether we have not concentrated too much on first-aid posts under the charge of one or two general practitioners, where cases will, perhaps, be "doctored," instead of providing facilities for highly skilled surgical aid on which alone the saving of life will mainly depend.

*

The second evacuation of London's schoolchildren is now completed with the removal of 105,000 children of the 120,000 who were registered. But there are still 345,000 children of school age left, and some provision must be made for continuing their education. It is announced that London schools, closed while evacuation was in progress, are to reopen as soon as possible, but instruction will be at the best half time. At the end of May 8.3 per cent. of London's elementary schoolchildren were receiving no instruction at all, 15.9 per cent. were receiving a home teaching service and 42.7 per cent. were having only half-time instruction. Now that precautionary evacuation is at an end, the authorities ought to arrange for enough schools to be open to secure full-time attendance from the children left behind. They will be safer there than in the streets.

* * *

The appearance of the annual report of the Racecourse Betting and Control Board coincides with an announcement that horse-racing under Jockey Club rules is to be stopped until further notice. The recent heated arguments have included greyhound racing; but the Government's view is that the workers' entertainment should be restricted as little as possible, and it has so far been content to restrict greyhound racing to non-working hours. There is certainly no reason on moral grounds why racing should be prohibited any more than cinemas or theatres, and workers will work all the better if they can go to the dogs in their leisure time if they wish. A more serious argument is that scarce materials are consumed. The cancellation of horse-racing is probably mainly due to the use of petrol in transporting spectators; and greyhounds, it appears, eat vast quantities of eggs. But dogs are as rationable animals as men, and the public interest and the public conscience might both be satisfied by cheapening and reducing their diet.

THE WORLD OVERSEAS

Russia's Baltic Policy

(By a Correspondent)

FOR the second time in nine months the Baltic States have had to yield to Russian demands, and in both cases the demands came at a time when German armed forces had scored military successes on the battlefields. Russia's new move in the Eastern Baltic is fresh proof of her intention of safeguarding her frontiers against surprise attack from any side, and particularly from Nazi Germany.

The developments in the small Baltic States during the past year were conditioned by the general international situation. The long struggle for centuries between the two great Baltic Powers, Germany and Russia, has become again the driving force behind these important political moves, and Stalin has again shown clearly that Russia is not prepared to tolerate any weakening of her defence on any of her frontiers.

After Hitler's invasion of Prague and Great Britain's guarantee to Poland, the Eastern Baltic States became the main point of bargaining between Russia and the Western Powers. The Soviet Government then expressed their willingness to participate in an agreement with the Western democracies, on the condition that the guarantee given to Poland should be extended to the Eastern Baltic States, and that Russia as a signatory of such an agreement should have the right to establish military, naval and air bases in these countries and safeguard herself in that way against any attack from Germany. The British and French Governments were unwilling to agree to such terms, especially in view of the strong opposition from the States concerned. Meanwhile, Hitler decided to invade Poland, and offered not to interfere with Russian policy in the Eastern Baltic in exchange for the Russo-German pact. The Baltic was then divided into two zones: the Western Baltic, which was left entirely under German influence, and the Eastern part, which the Germans left to the Russians.

Military Agreements

After the German advance into Poland the Red Army occupied the eastern parts of that country up to the Curzon line. The establishment of their garrisons at strategic points in the three Baltic States was achieved, thanks to the foreign policy of Molotoff, with the full consent of the Governments concerned. The arrangement with Lithuania was based on a mutual agreement, according to which Lithuania allowed the Soviets to establish air bases and military garrisons in exchange for the Vilna territory which the Russian forces transferred to them from Poland.

The escape of the Polish submarine *Orzel* from internment in Tallinn on September 18th last year served as a pretext for securing from the Estonian Government a pact permitting Russia to lease military, naval and air bases on the islands Hiiuma and Saaremaa, at Paldiski and at certain points between Tallinn and Parnu. Russia then undertook not to interfere with the internal affairs of Estonia, and a trade agreement was also signed with the intention of quadrupling the commerce between the two countries. On the other hand, Estonia was bound to render military assistance to Russia in the event of aggression or the threat of aggression by any great European power. A similar pact was made with Latvia and Lithuania. Stalin had by these treaties openly revived the policy of Peter the Great and Catherine by opening the window to the Baltic. The same policy resulted in the Russo-Finnish war, which further strengthened the Russian position on the Eastern Baltic, and helped to safeguard the approach to Leningrad.

Germany acquiesced and suddenly reversed her Baltic policy. An order calling on the German-speaking peoples to leave the Baltic States and return to the Fatherland was enforced on pressure from Moscow, and about 80-90 per cent. of the German minority in Lithuania, Latvia and Estonia migrated to Germany, where they were mostly settled in the Polish Pomorze districts and round Gdynia.

No Internal Interference

The relations between the small Baltic States and Russia have since then been normal. The countries felt safe against any German aggression, and Russia fulfilled her undertaking not to interfere in their internal affairs. The garrisons stationed in different places were mostly isolated from the general public, and the members of the Red Army serving in these garrisons were under strict orders not to mix with the local population and not to try to enforce Socialism in the countries where they were stationed.

The closer trade relations which followed greatly improved the economic position of these small States. The new Russian market is a good substitute for the Western European export and import markets. Russia also encouraged greater political and economic collaboration between the three Baltic States and raised no objection to the military alliance between Estonia, Latvia and Lithuania.

Change of Policy

The advance of the German armies on the Western Front however, has changed the Russian attitude towards the three Eastern Baltic States. The Soviet authorities have decided to reinforce further the garrisons stationed there and to make the north-eastern frontiers of Russia impregnable against a sudden attack through the three small countries.

There is no doubt that the three States on the Baltic play the same rôle with regard to Russian safety as the three Northern countries, Belgium, Holland and Denmark, towards the safety of England and France. East Prussia could always serve as a perfect base and springboard for German forces to attack Russia via Lithuania, Latvia and Estonia. The Russian tendency to strengthen her armies in these countries, at a time when the potential aggressor can be only Germany, shows clearly how far Russia distrusts her partner in the non-aggression pact.

The "kidnapping" of a Russian officer has been the direct cause for new demands in Lithuania, the military pact between the Baltic States has served as a pretext for strengthening the Russian hold on Latvia and Lithuania. This time the military demands were coupled with political requests, that new Governments friendly to Soviet Russia should be established in all these countries.

These requests for a change of Government and the tendency to control the political life of the countries concerned are the result of the experience with Fifth Column activities in different countries in Europe. It is difficult to forecast what the future has in store for the three small Eastern Baltic States. One thing is, however, certain; the present Russian move is not directed so much against the countries involved as against Germany.

June 15th.

Canada Goes All Out

[FROM OUR OTTAWA CORRESPONDENT]

THERE is a widespread demand for an enlargement of the war programme, and the King Ministry has responded to it by instalments. It has authorised the recruitment of a Third Division and nine rifle battalions for a Fourth Division; it has decided to accelerate the dispatch overseas of the Second Division, which has been training in Canada, and of reinforcements for the First Division now in Britain; and to raise corps troops for a Canadian corps which is to be formed; it is also organising a veterans' home guard and reserve companies of veterans and increasing the personnel of the Navy.

The Commonwealth air training scheme, which was planned on a long-range basis, is to be speeded up; the construction of its 70-odd training establishments, which was to have been spread over two years, is to be rushed to completion before the end of this year, and 5,000 recruits whose names have been kept on a waiting list are to be called up at once. When the recruits are secured for the new units now authorised, Canada will have about 135,000 men in her military, naval and air forces.

Demand for Leadership

The burdens of the Minister of National Defence have been lessened by the creation of a separate Ministry of Air, and the Ministry of Munitions and Supply is to be given a full-time Minister and armed with very drastic powers to stimulate the production of war materials. The Government finds itself confronted with a rising tide of popular agitation in the English-speaking provinces for more vigorous leadership at Ottawa. It is now beginning to take the form of a demand for a reorganisation of the Federal Government on the lines of the reconstruction which has taken place in Britain, and, since Mr King has always set his face against any coalitions, his retirement is being openly called for in various quarters.

Britain's Unhelpful Attitude

The Opposition groups have been arraigning the Government for its failure to mobilise the industrial resources of Canada for the production of munitions and war equipment on a much larger scale than has been attempted. In reply, Ministers have shown a disposition to blame the non-cooperative attitude of the British Government and British industrialists, and some of the statements which they have made have created a very unfortunate impression throughout Canada. Apparently the military authorities here agreed to the British suggestion that the mechanical equipment of Canada's troops should be identical with the British equipment, so that it should be interchangeable, and this meant that British designs had to be followed. According to Mr Howe, the acting Minister of Munitions, difficulty was experienced in securing these designs. Speaking in the House of Commons on May 22nd he said:—

One of our chief difficulties has been to obtain the latest British designs for mechanical equipment used by our troops. British industry has not been too willing to part with these designs, many of which represent years of study and development by private manufacturing firms. The fact that to date Britain and France have been satisfied to rely largely on their own production and mechanical equipment, and have not been disposed to encourage Canadian production of heavy equipment to the extent of furnishing up-to-date plans and specifications, has undoubtedly prevented Canadian industry from playing its full part in mechanical warfare. I am happy to say that there are now indications that this will not continue.

On May 29th, Mr Howe, answering complaints that no tanks were being manufactured in Canada, told another disquieting story. He said that on October 20, 1939, the British Supply Mission had filed with the Canadian War Supply Board a requisition for 100 infantry tanks Mark III, but specifications and plans were not forthcoming until January 27, 1940. Arrangements were made for the tanks to be constructed at the Montreal shops of the C.P.R., but suddenly, on April 2nd, the requisition was withdrawn on the understanding that there would be a fresh requisition for tanks of a later design. However, up to date there had been no further communication on the subject from Britain. The comments of the Canadian papers upon these revelations have been very severe.

Government Borrowing

The Government has secured authority from Parliament to borrow an additional 700 million dollars for war purposes, and on May 28th the Minister of Finance announced the sale of 65 million dollars' worth of five-year 2 per cent. bonds to the Bank of Canada and the chartered banks, the price being 99.375 per cent. and accrued interest, which makes the yield 2.3 per cent. The proceeds will be used to help the redemption of an issue of 80 million dollars' worth of 1½ per cent. bonds due June 1st. The Government has also announced the details of its plan for the sale of War Savings certificates. They will be issued in multiples of \$5 at a discount of 20 per cent., and as they will be redeemable in 7½ years, they will yield the purchasers 3 per cent. compound interest. There will also be issued War Savings stamps purchasable for 25 cents each, and 16 of these will buy a War Savings certificate for \$5.

Increased Munitions Production

Before the German drive eight Canadian plants had orders for 2½ million shells, but now orders have been given to six more firms and the prospective output of shells increased to 4½ millions; 30 million dollars are being spent on enlarging the capacity of Canada's explosive plants, and contracts totalling more than 40 million dollars have been placed for their products. The primary iron and steel industries are working nearly at capacity, and the output of pig iron and steel for April amounted respectively to 84,210 and 153,451 tons, as compared with 99,752 and 46,254 tons last year, while the production figures for the first four months of 1940 were respectively 367,717 and 617,616 tons, compared with 185,970 and 350,826 tons last year.

May 29th.

Occupied Holland

[BY A CORRESPONDENT]

It is five weeks since the main Dutch armies had to give up all resistance to the invaders. The German air force, which had destroyed half Rotterdam in an afternoon, was threatening to destroy Amsterdam, The Hague and Utrecht as well unless the army surrendered. The military situation was hopeless and, as there was no prospect of sufficient Allied reinforcements, General Winkelman decided to save the lives of the soldiers as well as of the civilian population.

Heavy damage had been done, although the war had only lasted four days. Almost all the important bridges had been destroyed in the centre and south of the country, where fighting had been most severe. Even in the west, there were parts where not a house was undamaged. This was due to the action of parachutists and Fifth Columnists and to the measures taken against them. The devastation cannot possibly be repaired within a few weeks or even months. The situation is still so critical that all children under six have been sent to other parts of the country.

A National Assistance Committee has been founded which will collaborate with the Reichskommissar Herr Von Seiss Inquart and with various other committees. Their object is to give assistance to those whose possessions were destroyed during the war. The wives, children, parents and grandparents of the fallen soldiers—estimated at between 25 and 80 thousand—will have a right to some kind of pension.

According to Dr Fischbach, one of the four German higher officials who act as personal collaborators of the Reichskommissar, there are still some 295,000 unemployed. Dr Fischbach has declared that he will solve the unemployment problem within a short time by prohibiting dismissals and transferring to Germany those who do not find any kind of work in the Netherlands. The reconstruction of the devastated parts of the country will provide work for tens of thousands of labourers.

Rations and Restrictions

The whole Dutch economic system will now be incorporated into the Reich. Stocks of industrial raw materials and foodstuffs will be laid aside for the needs of the German military machine. It is highly significant for the precarious oil position of Germany that one of the first measures taken in the Netherlands was the rounding up of all oil barrels fit for transport. Stocks of petrol are stated to be very low. Only those who have no gas or electricity for cooking may be able to get some petrol for domestic use. Gasoline is scarce. In the provinces of Utrecht and Noord-Brabant a Central Transport Board has been organised to avoid waste of gasoline. The use of private cars is no longer permitted.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office: 8 MOORGATE, LONDON, E.C.2

Temporary Address: BRAMLEY CROFT, HINDHEAD, SURREY

Tel. No.: HINDHEAD 680

Subscribed Capital	-	£6,000,000
Paid-up Capital	-	£2,000,000
Reserve Fund	-	£1,000,000
Currency Reserve	-	£500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

A similar system was inaugurated in Germany shortly after the outbreak of war.

Several measures will be taken to secure for Germany all Dutch agricultural exports. The execution of this scheme is severely hampered by the difficulties of transport, but the Germans are buying lorries on a vast scale. The use of some raw materials, notably oil, rubber and hides, which are particularly important to Germany and whose import is prevented by the British blockade, is to be restricted. Shoes have been rationed. Wooden shoes (*klompen*), the symbol of poverty in some parts of the Netherlands, are produced in increasing quantities. All textile products have been rationed. The same severe restrictions which have existed in Germany since September last year will no doubt be imposed upon the population of the Netherlands. Tea, coffee and bread are rationed, and there are indications of scarcity of food in some parts of the country, probably due to difficulties of transport.

On the whole, the Dutch economy presents the picture of a people which is earnestly trying to make the best of it, to repair the damage done and to restore the economic life of a once prosperous country. There is no doubt, however, that they cannot themselves reap the fruits of their labour as long as the German domination lasts. Reichskommissar Von Seiss Inquart knows his task very well indeed. The Dutch people will have to increase their working hours and to lower their living standard according to the wishes of Berlin.

June 19th.

The Mood of Eire

[BY A CORRESPONDENT]

As the tide of war advances Britain is thrown back for its food supplies more and more upon the resources of the family "estate"—bacon from Canada, butter from New Zealand, eggs from Australia. So confident are we in the British Navy, and so complacent about the ties of Empire, that we are apt to take this for granted, and to treat as of little account the loss of Denmark, and now Holland, as a source of supply.

It is probably not generally realised that the chief contribution to the English breakfast-table is furnished by Ireland—a country whose whole national idiom is flavoured with anti-British sentiment. Northern Ireland supplies its quota of eggs and bacon, it is true, but Eire provides the main contribution. In the year ending 1938 the United Kingdom imported from Eire eggs in the shell to the tune of 22 millions, bacon to the value of £2,188,343, and butter to the extent of 326,604 cwts. These figures compared favourably with the amounts from any other country except Denmark.

Officially, Anglo-Irish relations are excellent these days. And the nation as a whole is no more morally neutral than the United States. For the first time in history Britain is engaged in a war which the mass of Irish people, whatever they may say, want her to win. This does not alter the fact that the centuries-old sense of grievance persists. So long as the problem of partition remains unresolved, the state of mind of the Irish people is a positive danger to Britain's war effort. Three months, two months, ago, Ireland was a playboys' paradise—the only European country where one did not feel the shadow of war. Now, indeed, the pos-

sibility of invasion has dawned on the citizens of Eire. Identifiable Nazi agents are few and discreet; but it is not necessary to give credence to the alarmist stories to appreciate the chances of German intrigue. There is the same ground-work of sentimental idealism, the same complete unreadiness for the craft and stratagems of the new war-making which was to be the downfall of Norway and Holland. At the same time there has been, at any rate until recently, a feeling that Eire should make the most of her economic opportunity.

This, then, is the background of the Anglo-Irish trade conversations in London. The Irish believe our food position to be desperate, while we on the other hand imagine that, because of the utter dependence of Eire on British sea-power, in any economic bargaining we are in a position more or less to dictate our terms.

Dr Ryan has had to tell the Irish farmers that, so far, he cannot get them better prices for butter, nor an increase in the export quota for bacon. Irish delegates in London were pressing for most-favoured-nation treatment, and for a long-term arrangement such as has been denied to our own farmers. Eire, that is to say, is claiming the same standing as Northern Ireland, without being prepared to accept the political status even of a Dominion. (She is already on the "home" price level as regards cattle and pork, and on the same footing as New Zealand in regard to butter.)

This attitude is just typical of the peculiar position of Mr de Valera's Ireland. The President knows his people, and we should be continually thankful to him for his discovery of the talisman of External Association which has unquestionably brought good fortune to Anglo-Irish relations. As things are, psychologically, in Eire there was no other way of ensuring Eire's present condition of benevolent neutrality; and any presumption by Whitehall of Irish loyalty might well have kindled again the flames of civil war.

In existing circumstances, an increase of supplies from Eire is surely vital. British official circles in their dealings with Eire may fairly be asked to relax ordinary "commercial" standards and actively assist Mr de Valera in his efforts for national unity. If we fail to meet him half way we may be sure that sooner or later Eire will go the way of all the other protagonists of "neutrality."

June 12th.

Steel Drive in Italy

[BY A CORRESPONDENT]

THE State holds the controlling share of the steel industry and through the company *Finsider* controlled in 1938 70 per cent. of the ore production, 76 per cent. of the pig iron output, and more than 45 per cent. of the steel production. These figures must since have, if anything, increased, as the various decrees aimed at raising production have mainly benefited the State concerns. *Finsider*, with 1,800 million lire, owns the largest capital of any company in Italy.

A large programme of increased production is to be put into action during this year. According to the autarkic programme, a steel output of 2.5 million tons is to be obtained during 1940, but this figure had already been nearly reached in 1938, and in view of the greatly increased demand can hardly be regarded as adequate, despite far-reaching decrees which forbid the use of steel for private or civilian requirements. Actually, the industry will be able to produce nearly double the quantity.

Improved Raw Material Supplies

The most remarkable fact in the latest annual report of *Finsider*, published last summer, was the statement that the existing capacity of the Italian steelworks had only been utilised to 55 per cent. The reason given was that the ore-producing plants had not kept pace with the growth of the steelworks. On the other hand, the position of Italian foreign currency, as well as the scarcity on the world market, made it impossible to import sufficient scrap iron or foreign ore. Meanwhile, the Italian domestic ore position has greatly improved, largely owing to the Albanian mines, whose ores possess a very high iron content, on an average about 60 per cent. Italy has, during the last few years, preferred ore imports from the Mediterranean countries, which, including Spain, have an average total annual output equivalent to about 6,000,000 tons pig iron. In addition, there has been an increase in domestic scrap iron deliveries.

According to the new production schedule, the "highly autarkic" plants must each produce a daily output of 1,000

tons of steel. Recently, furthermore, a group of comparatively new and small plants has come to the fore which produce steel in electric smelting ovens, thereby helping to make manufacture less dependent on imported industrial coal. These are usually works with comparatively small figures of production, but, owing to preferential treatment with regard to taxation and other concessions, their number will, even during 1940, increase sufficiently to make them of essential importance. Their especial advantage is to be found in the fact that, technically, they can more easily smelt the inferior domestic ores than is possible in the blast furnace of the large-scale concern. The chief incentive to this new construction programme was provided by the new price increase ranging from 8 to 52 per cent., under an order of January 1, 1940, which allows the producer and manufacturer to pass on the increased costs to the consumer.

The control and supervision of the entire change-over process, which will still have to face many difficulties, especially with regard to raw materials, has just been transferred from a committee of manufacturers to the Iron and Metal Corporation, which formerly had had no direct influence on the process of production. By this measure it may now be possible to safeguard the interests of the workers. Such protection is imperative in view of the prevailing tendency to lengthen the working hours and to speed up work.

June 16th.

British Opportunities in Chile

[FROM OUR SANTIAGO CORRESPONDENT]

THE Exchange Control Board has asked all importers wishing to import a large specified range of goods from Great Britain to register their requirements without delay. It is thought that the Board's object is to guarantee supplies of sterling for future imports, or to allow funds to be remitted on placing an order, since there is an ample supply of sterling on the market, and this must be used for purchases of goods from the sterling area. No arbitrage for dollars is allowed. This large supply of sterling, after months of scarcity, has been received through the action of the British authorities in placing large orders, especially for wool and frozen meat. All requests to the Board for sterling to cover imports have so far been satisfied, and a substantial balance remains for future imports.

The time is ripe for British exporters to take full advantage of ruling conditions to replace those markets formerly enjoyed by Germany. Particularly is this so in the heavy goods trade, hardware, metal industries, etc., and no time should be lost in ascertaining local requirements. The light car market opens up an important field which has been dominated by Germany in recent years, but in this case imports are subject to quota. The increased cost of living in Chile has driven people to purchase an economical car. To meet this demand the quota for Italian light cars has been increased, and it only requires effort on the part of British exporters, coupled with an energetic and reliable sales organisation in Chile, to introduce the well-known British counterpart to the Chilean market. Bicycles have become very popular in recent months, and here again there is scope for British manufacturers. It is impossible to overstress the fact that price, not quality, is the ruling factor in the Chilean market.

The demand for coal in Chile has outstripped production, and a Bill was recently passed exempting foreign coal from an import duty in an endeavour to make up the deficiency. A similar step has been taken with regard to cement. In these and other cases there is ample scope for British exporters. The outlook for British trade is helped by the fact that the United States, which is trying to obtain the bulk of Germany's lost trade, has not notably increased its purchases of Chilean goods, and there is, therefore, an acute scarcity of dollar exchange.

Imports from Great Britain into Chile for January and February, 1940, show a small increase over the figures published for the same period of 1939. Exports to Great Britain show a considerable decrease. This poor showing will, however, be rectified when statistics are published for the months of March and April, in which months Great Britain commenced large-scale buying of Chilean produce.

Imports from Germany continue to arrive, and their value during January and February was \$3.6 millions of gold pesos. By comparison with the first two months of 1939, Italy doubled her purchases of Chilean goods.

May 16th.

Think of Great Britain as one great Factory. Working at full pressure its output of goods can be vastly increased. But from this entire output must come both the needs of the fighting services and the requirements of the rest of us. The Services must come first.

The war must be won and in the shortest possible time. This means—and we must face the hard fact—that you and I must go without many of the things we used to enjoy in peace time.

The vitally necessary war supplies must be produced in ever increasing quantities.

The money we don't spend on our own personal requirements and pleasures can then be lent to the Nation to be devoted to Britain's vast war effort.

If everyone with good pay coming in continues to spend on things they can do without, our resources will be in danger of speedy exhaustion. Prices will go rocketing up, and the arming and equipment of our forces will be seriously hampered.

We must make ends meet—but not by the method of burning the candle at both ends.

There is no time to be lost. Lend the full weight of your money to the struggle now. Invest as much as you possibly can in National Savings Certificates, Defence Bonds and in the Post Office and Trustee Savings Banks.

Books and Publications

Shorter Notices

"Food Production in Western Europe." By P. Lamartine Yates. London. Longmans, Green & Co. 572 pages. 15s. net.

An account of the agricultural development and policy of six European countries—Germany, France, Denmark, Holland, Switzerland, Belgium—in the last ten years. Mr Yates takes for his subject not only the technical and economic changes in agriculture in this period, but also the whole field of rural sociology, including housing, education, distributive margins, retail food prices, agricultural co-operation, rural incomes and comparative standards of living. The descriptive parts of the book suffer from the disadvantages inevitable to the attempt to include such an enormous field within the limits of a single volume, but the necessary compression has been excellently done. In the last section Mr Yates draws his conclusions, which reinforce the age-old dilemma of agricultural policy—the choice between a large rural population at a low standard of life, or mechanised farming with high wages and incomes. But since this book was written, the agriculture of four of these countries lies ravaged and destroyed by mechanised hordes of mental robots bringing desolation and famine in their train.

"Basic Theories of Distribution." By B. F. Catherwood. P. S. King. 262 pages. 12s.

This is an exposition by an American professor of the theories of distribution of Adam Smith, Malthus, Ricardo, Nassau Senior and John Stuart Mill. Mr Catherwood states in his introduction that his intention is to expound their ideas by reference to their own words. His path is beset with difficulties from the beginning. In the first place, the selection of a single subject—that of distribution theory—and the attempt to pass judgment on each author's treatment of that subject alone must encounter the obstacle that not one of them attempted to treat distribution in isolation. Mr Catherwood

takes this fence after a slight scramble. But he falls heavily when he attempts to evaluate these classical doctrines in the light of modern theory. This is a task which requires a sympathetic touch and sound historical perspective, and it is to be feared that Mr Catherwood lacks the first and is not convinced of the importance of the second. There can be no other explanation of the constant intermixture of passages from the original works with comment which is on an entirely different plane of discourse. This method has the dual defect of obscuring the exposition of the original while laying the commentator open to the accusation that he is reading history backwards. The book is excellently printed and illustrated, but is not in any other sense a notably successful work.

"A Railroad Crisis." By William James Cunningham. University of Pennsylvania Press and Oxford University Press. 84 pages. 4s. 6d.

The British railway problem, as it existed before the war began and as it will no doubt re-emerge when the war is over, is merely one instance on the national scale of a world-wide difficulty of economic change in the organisation and methods of transport. This fact is continually illustrated by literature from all parts of the world. Mr Cunningham's book, although it contains no more than a passing reference to British experience, is a forcible illustration of the closeness of the parallel. It includes a historical sketch of the American railroads; an examination of their present plight with one-third of the existing mileage in bankruptcy, one-third on the verge of bankruptcy, and only one-third financially sound; a concise and unequivocal outline of the defects of their present capital structure; and an assessment of remedial legislation in and since the New Deal. The book is outstanding among American studies of practical economic questions in that it is both short and free from any semi-legalistic padding. It will provide a useful guide to reorganisation when the war is over and the tide of artificial prosperity falls back to reveal the stubborn rocks of railway depression.

POPULATION POLICIES AND MOVEMENTS IN EUROPE

by
D. V. GLASS
25/- net

This book begins by examining population movements in England and Wales since the middle of the nineteenth century, and attempts to evaluate the means by which the recent decline in fertility has been brought about, and the general social and economic factors which may have been responsible for the development of the small family of to-day. The major part of the book then discusses in detail the development and present position of population policies in France, Belgium, Italy, Germany, and the Scandinavian countries. An Appendix contains a brief account of the most important statistical methods used in analysing reproductive trends

THE BUSINESS WORLD

Defending Gilt-Edged

THERE can be no illusion about the military and economic task which confronts the nation following the military exhaustion of France. Defensive and economic ties between the two Allies have been suddenly snapped. It is too early to attempt to define the new financial lines which must be improvised, but some strong points must be set up immediately. Among these, the maintenance of adequate dealing facilities in gilt-edged and other securities is indispensable. To the market's credit, it has remained possible to deal, though with some difficulty, in most sections of the Stock Exchange this week. The gilt-edged market fell back to a wall buttressed by the schedule of minimum prices introduced last March. Trustee stocks have retreated to similar prepared defences, and though the market was at first numbed, it never became frozen. It has not infrequently been difficult to deal in home corporation and some Dominion issues. Home rail prior charges have become increasingly abject. And where dealing in industrials has been possible—that is, where jobbers have been able to find a buyer for stock offered to them—prices have suffered severely.

Yet a market has been maintained, at a time when it is crucially important. In gilt-edged, the subsequent course of prices after Monday's shock has been uninterruptedly progressive, despite the opening of aerial bombardment. Fortunately, the Stock Exchange Committee did not listen for one moment to suggestions that the "House" might close for a short period to take new bearings. Except in circumstances of the most compelling necessity, such a step would damage investment morale; it would do a grave disservice to the nation's financial effort; and it would offer the poorest example to other sections of the community who are fully mobilised for war production. It is one thing, however, to keep the doors of the Stock Exchange open; it is quite another thing to maintain an effective market. That could not be done if the gilt-edged market were to remain impaled on the palisade of minimum prices for any length of time. The limited number of frozen stocks among the Funds has, however, since disappeared, thanks to the steady recovery which has occurred since the darkest hours of last Monday. That recovery has to be made decisive, before the full force of the *Blitzkrieg* is unleashed. Plainly, it is desirable to examine the function of minimum prices critically, with an eye to even more disturbed conditions in the near future.

Controlled prices always carry some disadvantages, and of minimum gilt-edged prices it may be paradoxically said that they are most useful when they remain ineffective. Their part is to provide a defence against severe but essentially temporary aberrations of prices in wartime. As soon as they become operative, they must be rendered irrelevant as quickly as possible by a general recovery in prices. The existence of a minimum price schedule, of course, may itself play a part in recovery, if it prevents "snowball" selling and rallies support. But the raising of the price pegs last March to a considerably higher level than that prevailing immediately before war broke out was intended to do more.

The Government nailed a 3 per cent. banner to the mast. This was supported by a general structure of interest rates, whose maxima were determined by the minimum price schedule, and which corresponded to 2 per cent. on a five-year bond, 2½ per cent. for 5-10-year stocks, 3½ to 3¾ per cent. for 15-20 year issues, and about 3½ per cent. for "irredeemables." By providing this firm basis for dealing in gilt-edged for the duration of the war, protection should be afforded to collateral security and to the investment portfolios of financial institutions. But to implement such assurances, leading gilt-edged stocks must have both legs well free of minimum prices.

The task can be measured from the accompanying table, which sets out minimum prices at September, 1938, end-August, 1939, and mid-March this year, together with more recent comparisons of prices and redemption yields. Gilt-edged are now defending relatively advanced lines, compared with August last year, but they are lines which could not be abandoned without calling into question the assurances of the Government last March that they measured the determination of the authorities concerned to maintain low interest rates. More recently, the investor has been warned that no rate of interest is considered sacrosanct; in other words, that these are maximum and not minimum rates for war borrowing. New powers over property, wielded by a new administration, must surely imply that there will be no departure from this clearly defined and widely approved policy. And investors this week have been quick to take a hint from the appeal for interest-free loans that the principle of low interest rates will be properly enforced.

To make it effective, gilt-edged must stand firm at some level above minimum prices, though perhaps below the high quotation, before Germany invaded Holland and Belgium on May 10th. Otherwise, the attributes of minimum prices will be mere accounting make-believe. Doubtless there will be considerable support for the Chancellor's appeal on Tuesday for loans free of interest, and the Dominions have shown how such appeals can be successfully combined with open-market issues at interest. But the way to adequate war finance lies not through patriotic benevolence, but through a market marshalled and organised for the war effort. To equip the gilt-edged market for the war loans which will be needed in the very near future is an immediate task arising from the events of the past week.

It should be accompanied by closer consideration of the technical problem of security dealing, as far as that problem can be foreseen. The scheme for carrying out Stock Exchange business at Denham, if the City of London becomes untenable, is a clearing scheme, designed to maintain public confidence in the machinery of the Stock Exchange at a time when dealing will no longer be possible in the "House." It is an air-raid scheme, rather than an invasion scheme, and it is not intended, in the first instance at least, to provide anything more than the machinery for clearing bargains which members can make by telephone. But it may be necessary to widen the scope of the scheme in two ways—firstly,

(f) Flat yield.

by providing an alternative to Denham, whose limited natural advantages have not been improved by the prospect of attempted invasion; and secondly, by devising some facilities for dealing by personal contact between brokers and jobbers in a new dealing centre. The task will not be a light one, but unless and until normal financial business breaks down, and the nation is forced to accept real rather than monetary standards, the need for a gilt-edged market which functions will continue to be paramount. The objection to Denham is not that the scheme is unnecessary, but that it may prove insufficient to achieve this essential object. Meanwhile, how is the recovery in gilt-edged, already well advanced, to be further encouraged? The authorities need few lessons to-day in the art of market control, and their power to intervene should not be minimised. Prices fell at first as a result of selling, but the unwillingness of jobbers to take any significant amount of stock on their books also accentuated the fall. Hence, the market was soon ripe for a technical response, and in fact it staged such a response after Mr Churchill's speech on Tuesday. It may well be, further, that some institutional buyers of gilt-edged tend to wait for opportunities to obtain stock near minimum levels. If so, their duty and interest is plain. But the price pegs could be made more firm, and dealing conditions encouraged, if specific assurances could be given to jobbers, protecting them against the possibility of frozen "books" in the Funds. That suggestion may seem unorthodox, but the authorities are committed to a schedule of gilt-edged prices, and if necessary they must be prepared to reinforce them. A congealed market at minimum prices might be a worse evil than a free market at sadly depressed prices.

In other markets, as in gilt-edged, the investor's fate is the nation's fate. There is a case for extending some form of minimum price control to important groups of fixed-interest securities outside the trustee investment circle. Home railway

prior charges, for example, are still being subjected to heavy pressure from a volume of selling which in normal conditions would be regarded as ludicrously small. When a selling order for £1,500 of a senior debenture has to be split between three jobbers—an actual case this week—it is obvious that some protection is needed for a section of the market which, in everything but legal qualification, ranks side by side with trustee investments.

There is no counsel for total war which can be usefully given to the equity shareholder, save that he should hold his stock. That is the sober duty of citizenship. It is also an appeal to self-interest, for on any rational weighing of the alternative possibilities of the war situation this is the wrong time to sell. Even in the short run, any selling of industrials, caused by temporary immobilisation of gilt-edged stocks, should soon be arrested. In the longer run, when national resistance can be transformed into initiative, the position of equities may be much more favourable than it is to-day. Admittedly, there are risks which cannot be minimised. The threat of air attack on specific industrial plants is responsible, for example, for yields of 15 per cent. on aircraft shares. And, in general, the equity interest in British industry is now vested in the nation as a whole, and not in a group of shareholders. But unless one outcome of the war is the supersession of equity capital, the ordinary shareholder must be content to await the outcome of the war with the same personal courage and spirit of sacrifice as other sections of the community. There are two paramount tasks. The first is production for war needs, without count of profits or dividends. The second is the fullest mobilisation of savings and our financial resources to finance the productive machine. Under both heads, the rôle of equity investment is of minor importance. But under the second task, the need for the continuous and efficient functioning of the gilt-edged market is inescapable.

Finance and Banking

Prospects for Funding

Expectations of an early Defence Loan have been revived by the official support for the gilt-edged market. The need for a second major funding operation is emphasised by the recent sharp upturn in national expenditure. The Supply Services, whose total costs during April and May averaged only just over £40 millions, spent £60 millions in each of the first two weeks of June. As revenue is now seasonally small—from £10 millions to £15 millions per week—the deficit is rising at the rate of around £50 millions per week. Fortunately, receipts from the savings drive have spurred sharply, the total for the second week of June being over £11 millions, but the Treasury bill issue is still expanding at the rate of £40 millions per week. The Floating Debt had risen to £1,636 millions by mid-June, some £130 millions beyond the figure reached before the launching of the first War Loan. The Treasury tender issue at £740 millions is nominally £31 millions lower than in mid-March, but, in fact, the quantity of bills held by the market and the banks is probably much greater than at that time. Many of the bills acquired by the authorities from the market for various reasons in the early months of the year have not been renewed upon maturity. Again, the fact that the bill portfolios of the clearing banks have recently increased at a much greater pace than the Treasury tender issue makes it clear that the clearing banks have also been absorbing substantial quantities of paper through the "tap." In addition to providing for the growing excess of expenditure over revenue, the authorities have also to meet the redemption of about £100 millions of dissented 4½ per cent. Conversion Loan on July 1st next. A big funding operation in the near future is thus necessary if the Floating Debt is to be kept under control.

* * *

The Demand for Bills

Despite the approach of the last week of the banking half-year, there has been no sign of preparations to meet any credit stringency, and the market knows full well that no serious stringency will be allowed to develop. The only reflection, so far, of the approach of the half-year has been the contraction in applications for Treasury bills. These fell to £102 millions at the mid-June tender from the record figure of £131 millions touched a fortnight earlier. The market syndicate could doubtless achieve some improvement in the rate by taking advantage of the contraction in the demand for bills. Fortunately, it fully understands the inappropriateness of any such course. The recent sharp decline

in applications for Treasury bills is not due wholly to seasonal influences. Apart from the war situation, probably the most important factor has been the absence of the much-discussed cut in the banks' short-term money rates. This possibility resulted in considerable speculative buying of bills some weeks ago, and outside quarters are probably now reluctant to add further to portfolios. It now seems fairly clear that no move to bring about a reduction in short-term rates is officially contemplated at present. Replying to questions on the point early this week, the Chancellor put the now familiar case that while it is the policy of the Government to secure that interest rates shall always be the lowest which circumstances permit, it was necessary to hold a fair balance between the factors involved.

* * *

The Fate of French Balances

One of the questions resulting from the dramatic developments in France is the fate of French assets abroad. Although, at the time of writing, it is not yet known on what terms the Pétain Government will surrender, it is safe to assume that the Nazi Government will insist upon huge reparations, and will demand the surrender of French gold and foreign exchange assets as a first instalment. As far as the gold reserve of the Bank of France is concerned, the bulk of it is beyond the reach of the present French Government or of the Nazi army of occupation. During the fortnight or so that preceded the occupation of Paris, the gold reserve was evacuated, and the major part of it is already in New York. Since President Roosevelt issued an order on June 17th freezing all French assets in the United States, the Pétain Government will not be in a position to surrender this gold, or the official or unofficial dollar balances. On Tuesday last, the British authorities followed the American example, and temporarily blocked French accounts, pending a clarification of the situation. The amounts involved are known to be very substantial indeed. Official sterling balances alone must run into a big figure, as a result of the surrender of large amounts by private holders since the beginning of the war. Only part of the amount thus obtained was spent on French official purchases in this country and in the British Empire, and in any case this expenditure was partly offset by the outlays of the B.E.F. in France and British official purchases in France and in the French Empire. There are, moreover, still many private French accounts in London, and substantial French holdings of South African gold shares in bearer form, in which dealing is now carefully restricted.

Migration of French Banks

The evacuation of Paris resulted in the transfer of the head offices of most French banks to provincial centres. Most banks were realistic enough not to attempt to re-establish themselves in Central France, but chose southern cities such as Bordeaux or Marseilles. The German advance threatens, however, even the southernmost districts of France. If the Government should decide to try to defend the North African French possessions, then the head offices of most leading French banks will probably be transferred to Algiers or French Morocco. Never in the history of banking has there been a migration of banks on a comparable scale. The banking centres of Amsterdam and Brussels were overwhelmed in May too suddenly, and in any case there was nowhere for the banks to go. In the case of France, even if the banks had to move to Algiers, they would still remain on French territory, for Algiers is not a colony but forms part of the French metropolis.

Holland Joins the Allied Bloc

On Monday it was announced that Holland had joined the Allied monetary bloc. The completion of arrangements for Belgian participation had been announced some days earlier. Although this strengthening of the Allied monetary structure may afford small compensation for the possible loss of French co-operation, it is none the less of great importance. In particular it ensures that the resources of the rich Dutch possessions in the East are at the disposal of the Allied cause, without the necessity for payment in gold or foreign exchange, apart from its possible value in post-war reconstruction. Although the belga has been brought under the pact at a materially lower rate than the former official rate, the level of 7.60 for the N.E.I. guilder is little changed. It was, however, generally acknowledged that, while the fall in the pound at the outbreak of war left the belga at an unjustifiably high level against sterling, the new relationship with the N.E.I. guilder was reasonable.

Investment

Equities Take the Strain

The gilt-edged market (as we show on page 1079) quickly recovered from last Monday's shock, but for the leading equities there has been no similar relief, despite the fact that the gilt-edged market later in the week was quite capable of taking the strain of any necessitous selling. On Tuesday, when the number of bargains in the Stock Exchange Official List shrank near the lowest, if not to the lowest, recorded total of 1914 bargains, *The Financial News* Ordinary Share Index also touched a new low of 55.9 and this was succeeded by further falls to 55.7 on Wednesday and to 54.4 on Thursday. Evidently the industrial market is making an attempt to reckon with the threat of air damage to industrial plants. It is doing so, however, without any knowledge either of the extent or of the dispersion of damage, though it may well be justified in taking a sober view of the aerial risk. It is impossible to deal with accustomed freedom even in the leading stocks, and except in certain lines in which jobbers happen to be short of stock they have usually preferred to restrict their operations to shares for which they already have buyers. The accompanying table measures the extent of the latest falls against prices which prevailed on May 9th, immediately before the *blitzkrieg* started, and on May 28th, when its progress was assisted by the surrender of the Belgian army:—

	High 1940	May 9	May 28	June 14	June 17	June 18	June 19	June 20	Change since June 14

The yield basis of equities has now been driven up to a point at which, on any normal basis, even in wartime, equities would seem attractive. But, in truth, nice calculations of comparative yields give no air raid protection to the investor, and there is no assurance in these critical days that a share bought to-day will not be represented by destroyed plant and stock to-morrow. But the converse is hardly true for the would-be seller. If he reinvests in equities, he still faces the same risk. If he reinvests in gilt-edged, he must be prepared to forgo a substantial part of his investment income. In fact, the equity market is to-day a frozen market which fails to attract buyers, but yet provides no alternative refuge for sellers.

War Loans Without Interest

With recent examples from the Dominions before us, it is satisfactory that the Chancellor has made a general appeal to citizens, who are able to do so, to make interest-free loans to the Exchequer. The machinery which Sir Kingsley Wood has outlined this week is simple. He asks persons or companies willing to advance money to the State without interest for the duration of the war to send it direct to the Treasury. A certificate will then be issued to the lender, which will entitle him to repayment three months after the conclusion of a peace treaty. For smaller investors who can spare less than £100 the Chancellor has suggested that the sums might be deposited with the Post Office Savings Bank, with instructions that interest is to be surrendered to the Exchequer. These arrangements are precise, and they have already produced a considerable response. But there are funds, probably large, which will be untapped by the scheme, though they would be willingly lent to the State without interest for shorter periods than the duration of the war. Information has been invited by the Chancellor of such funds. But if the response to the main scheme is satisfactory—and it has had a good start—it should surely be a simple administrative matter to make arrangements for receiving interest-free loans for various fixed periods. A uniform term for the duration of the war, plus three months, is doubtless a convenience to the Treasury. But it may not be convenient for a citizen who is prepared to lend money for nothing for a shorter term.

* * *

Dealings Suspended in Restricted Securities

Notice was given by the Bank of England on Monday that permission to transfer securities which come within the scope of the Securities (Restrictions and Returns) Order of August 26th last year will be withheld until further notice. Dealings in American and other securities which are affected have accordingly been discontinued. The ban applies to all transfers, whether between residents or from residents to non-residents, of securities of which the principal or interest is payable in the currencies of Argentina, Belgium, Canada, France, Holland and the Dutch East Indies, Norway, Sweden, Switzerland and the United States, either directly or at the option of the holder. Permits for sales abroad not already acted upon are no longer valid, and must be returned in exchange for the registration certificates which were issued when the securities were originally declared by the holders to the authorities. Some United States and Canadian dollar securities have already been requisitioned under vesting orders, at prevailing market prices, and the suspension of transfers in the entire list of restricted securities may be the preliminary to further requisitioning. An alternative suggestion, which has found some currency in the market, is that a loan scheme may be evolved by which restricted securities may be taken over by the authorities in exchange for deposit receipts.

E.P.T. and Wasting Assets

The amendments to the Excess Profits Tax which were moved by the Chancellor on Wednesday met, in principle, the point that extractive industries should be entitled to a higher minimum profits standard for E.P.T. than other businesses. In the debate, however, the Chancellor deferred to the contentions of Labour spokesmen that the present was an inappropriate time for concessions, though the criticisms were founded, in many cases, on a misreading of their effect. But it was plainly better to defer the matter to the next Finance Bill—due at no distant date—to give an opportunity for full consultation with the critics. The changes would have given power to the Board of Referees, upon an application made on behalf of any class of business which gets minerals or oil from "a natural source of a wasting nature" to direct that the minimum rates of 6 per cent. and 8 per cent. allowable to companies and director-controlled companies should be further increased by not more than 4 per cent. The concession to extractive industries was not hailed with great enthusiasm in the market for West African gold shares, on the ground that a 4 per cent. allowance would amortise the wastage of assets at too low a rate. Nor would such relief have extended to the numerous special cases under the Excess Profits Duty in the last war. The concessions were strictly limited to the extractive industries; they did not apply to companies which undertake any exceptional industrial risk.

Canadian Loan Requisition

A second Canadian sterling issue, called for redemption by the Dominion Government, is now requisitioned by the Treasury. Holders of Canada 4 per cent. stock, 1940-60 (which will be repaid by the Dominion on October 1st next) are required to make returns of their holdings to the Bank of England not later than June 29th, and dealings in the stock are now restricted by Order. The stock, of which £19,300,000 is in issue, will be taken over by the Treasury at the price of £100 12s. 6d. per £100 stock, and will be paid for on July 1st if delivery has been made by June 21st. It will be recalled that a similar method was employed last October, when the

Treasury acquired British holdings of Canada 3½ per cent. stock, 1930-50, which the Dominion repaid on April 17th last. The clearing of such large transactions between the two exchange controls provides evidence of their smooth functioning, and cannot fail to be advantageous to both the British and Canadian authorities.

Company Notes

John Brown Report

The accounts of John Brown and Company for the year ended March 31st throw little direct light on the sharp fall in profits revealed in the preliminary statement, which was discussed in *The Economist* of June 8, 1940. The latest year's profits of £566,595 are shown after undisclosed provision for taxation and are therefore comparable not with the record gross profits of £925,032 for 1938-39, but with £687,819, after provision for taxation and N.D.C. Thus the fall in trading profits after taxation amounts to £121,224. The figures are analysed below:—

	Years to March 31		
	1938	1939	1940
Gross profit	817,544	925,032	...
Profit after provision for taxation and N.D.C.	676,301	687,819	566,595*
Depreciation	49,787	64,317	58,372
Fees	5,867	5,868	6,653
Debt service	93,674	91,952	90,232
Preference dividend	49,010	49,010	49,010
Ordinary shares:—			
Earned	477,963	476,672	362,328
Paid	376,931	376,931	323,084
Earned "†"	22.2	22.4	16.8
Paid†	17½	17½	15
Reserve	100,000	100,000	Nil
Carry forward	163,392	163,133	202,376

* After providing for contingencies.

† Free of tax.

The latest results, however, are struck after providing for taxation and also for contingencies, to which no allocation was apparently made in the previous year. As a guide to trading conditions, probably the directors' report, which records full employment at the shipyards and engineering works and larger coal production, is a better indicator than the disclosed profit figures. It seems probable that the directors have pursued a deliberately conservative policy in striking available profits, which are equivalent to 16.8 per cent. tax free against 22.4 per cent. for 1938-39. Although the amount carried forward shows a substantial increase from £163,133 to £202,376, no allocation has been made to reserve, against £100,000 in each of the two previous years. The undisclosed provision to contingencies, however, may have provided an adequate substitute for an allocation to free reserve. The balance sheet shows some striking changes. Creditors have increased from £705,335 to £1,662,131—a rise which may be accounted for, in part, by increased tax and contingencies provisions. Cash holdings have jumped from £832,280 to £1,862,930, while Government securities have fallen from £1,000,000 to £413,200. Since the board has clearly revealed its intention to observe the spirit of dividend limitation by maintaining its dividend at a stable gross rate the equity element in the 10s. ordinary shares at the current price of 18s. 6d. appears limited. The shares, however, offer the satisfactory yield of £8 2s. per cent. tax free.

Guest, Keen and Nettlefolds' Report

The annual report of this company (whose preliminary figures were discussed in *The Economist* of June 15th) provides additional information regarding the allocation of increased income which the company obtained in the year to March 31st. The preliminary statement showed an increase in net profit from £985,786 to £1,003,169, accompanied by an increased tax-free distribution of 6½ per cent. against 6 per cent. The advance in net profit provided an increase of £16,236 in ordinary earnings to £675,290, and the 6½ per cent. tax-free payment absorbs £32,172 more at £418,240. Subject to the provision of £250,000 for reserves and contingencies, the dividend was well within the company's earnings, which were equivalent to 10½ per cent. tax free, though it is close to the "moral maximum" for dividend limitation. The balance sheet shows greater liquidity than in 1938-39. The rise in the total of net current assets from £1,057,000 to £1,405,000 is accounted for by an increase in cash and bill holdings of £310,000, in trade debtors of £374,000 and in stocks from £535,000 to £624,000. On the other hand, there is a marked rise in provisions for taxation and contingencies from £461,000 to £792,000. At the current price of 15s. 9d. the £1 ordinary stock now yields £8 5s. per cent. tax free, or as much as £13 4s. per cent. gross. The company is largely engaged in war production, but its equity possibilities are probably limited.

Lever and Unilever Rearrangements

The devastation of war has severely afflicted the Lever Brothers and Unilever Group's interests in Holland, Belgium and France. Oil stocks have been destroyed; at least three plants out of fifteen in Holland have been seriously damaged; and important quantities of vegetable oils have probably been seized by the enemy. With the Dutch company's European interests so largely under the German heel, some rearrangement of the group's interests obviously became necessary. The company has therefore transferred its United States, South American and other world interests outside the British Empire to a South African subsidiary company, operating from Durban. This latter concern was formed about two years ago, when the exchange of interests between the British and Dutch Unilever companies took place. The shares which "N.V." then acquired have now been taken over by the South African company, together with a debt of approximately £11 millions owing by the Dutch to the British company. The Dutch company transferred its French interests to the British company last year, and its assets outside German-occupied territory are vested in the Netherlands Government for the duration of the war. The extent of this reorganisation measures the disturbance which war has inflicted upon the Dutch group. It is not intended, however, to depart from the dividend equalisation arrangement which has always subsisted between "Limited" and "N.V." "Limited" is to make a sufficient provision out of its 1939 profits to cover a dividend to "N.V." shareholders equivalent to the 10 per cent. dividend already announced by "Limited." The reserve will be used only if no dividends or smaller

dividends are paid by the Dutch company, and the distribution of this and any further sums so reserved will not be made until after the war. No information is available regarding any payment which may have been made by the Dutch company since the invasion of Holland. The 10 per cent. dividend of "Limited," announced before that event and now confirmed by the directors, would have been equivalent to a 6½ per cent. payment for the Dutch company.

B.E.T. Dividend Decision

The main interest in the British Electric Traction report for the year to March 31, 1940, lies in the decision to raise the deferred dividend from 5 per cent. to 45 per cent. For many years past, the company has paid 5 per cent. in cash and has distributed a 10 per cent. capital bonus. The latter is now prohibited for the duration, and consequently the company is a very special case under dividend limitation. Total income reached a new high level of £745,874, against £728,513 for 1938-39. The increased cash distribution is largely responsible for the sharp reduction in the company's income tax provision from £104,709 to £4,306, though the directors have earmarked £50,000 for E.P.T. Earnings of £385,427 for the deferred stock represent 50.9 per cent. against 59.4 per cent. for the previous year. A balance of undistributed profit, amounting to £29,789, raises the total sum carried forward to £1,962,514. The directors state that the adjustment of the dividend—the first to be declared entirely in cash—has proved a difficult matter, and they might well have preferred to leave the decision to the Treasury on appeal, rather than face the moral obligation imposed by the Chancellor to limit dividends in the spirit of the abandoned dividend limitation Bill. The directors claim that the distributions of recent years have had a "grossed up" value far in excess of the 45 per cent. cash dividend now recommended, and that their dividend proposal is well within the principle laid down by the Chancellor. This statement evidently employs the term "grossed up" in a different sense from that implied in the dividend limitation discussions, where it was always applied to the calculation from net or tax-free dividend pay-

TURKS AT THE OFFICE

It is interesting to note how many business men have taken to smoking Turkish cigarettes these days. They find the matchless aroma of these fine cigarettes helps them greatly in their affairs. And they have also found they can get them at the same price as ordinary Virginias by asking for

De Reszke TURKS

THINGS YOU OUGHT TO KNOW. Turkish tobacco, of which the British Government have made large purchases from our ally Turkey, is the finest cigarette tobacco the world produces. The 'chain-smoker' can confidently take to Turkish, which have less than half the nicotine content of Virginia cigarettes.

COMMERCIAL SERVICE

The Bank has over 380 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

ments of equivalent gross sums, by reference to the standard rate of tax. The directors of B.E.T. appear to apply the term to a calculation of the equivalent cash value of the annual share bonus, which is determined, not by the standard rate of tax, but by the market price of the deferred stock. The resulting increase in the cash distribution is very considerable—£355,838 in 1939-40 against £35,943 in 1938-39. In this connection, it may be recalled that one important feature of dividend limitation was to limit the purchasing power which comes into the hands of the consuming public in the form of dividends. B.E.T. is a unique case, for which some degree of special treatment was justified. The directors were faced with an invidious decision, and deferred stockholders at least should not be dissatisfied with their recommendation. The stock rose from £500 to £600 on Wednesday on the announcement, and at the later price of 540 yields £9 2s. per cent.

* * *

"Shell" Shock

The decision of the directors of "Shell" Transport and Trading Company to pass the final dividend came as a blow to the market on Thursday afternoon. The £1 stock units collapsed from 57s. 6d. to 37s. 6d., and Burmah Oil, which has substantial holdings in "Shell," were also markedly depressed. The over-running of Holland affected the "Shell" company's prospects, though it retained its 40 per cent. interest in combined Royal Dutch Shell business outside Holland. But the direct losses incurred by the company in France must have been extremely heavy, and these no doubt account largely for the directors' decision.

* * *

Whitehead Iron and Steel

Trading profits and total income of Whitehead Iron and Steel reached record levels for the year ended March 31, 1940. Total income at £565,480 exceeded by £47,262 the previous record set up in 1937-38. All the main items of expenditure, however, markedly increased. The provision for taxation is raised from £40,525 to £202,000, and for depreciation from £25,000 to £90,000. Hence, ordinary earnings, despite the record trading figures, amount to £264,902 against the previous record of £397,875 for 1937-38, though they are £35,326 higher than those of 1938-39. The 20 per cent. ordinary dividend maintains the total distribution on a capital increased by the previous year's bonus of 25 per cent., but the directors could still conform to the spirit of the dividend limitation rules if they were to pay up to 28 per cent. on the increased capital. Earnings were, in fact, equivalent to 42.1 per cent., so that the directors are evidently pursuing a conservative policy. After placing £100,000 to general reserve, which is raised to £295,000, the balance of £33,613 is carried forward. Evidently the company's earning capacity last year benefited considerably from the modernisations and extensions carried out in recent years, and a new factory will come into full production towards the end of the present year. As a re-roller, Whitehead Iron and Steel has on past occasions had reason to complain of shortage of semi-finished supplies. But under present conditions it is evidently maintaining a very high rate of output. The £1 ordinary stock at 52s. 6d. ex div. yields £7 12s. per cent.

London and Thames Haven Reconstruction

The scheme for the reorganisation of London and Thames Haven Oil Wharves and C.I.M. Holdings recommended by the shareholders' committee attempts to solve two immediate problems. The first task of the committee is to liquidate unprofitable interests in the network of oil companies controlled by London and Thames Haven's subsidiary, Patent Petroleum Interests. The second is to liquidate the Holding Company formed to acquire London and Thames Haven shares in the Compagnie Maritime Industrielle, a concern with important concessions in the port of Le Havre. To achieve the first object, the committee recommends the sale to Andrew Weir and Company of the London and Thames Haven Company's shares in, and debt owing by, P.P.I., in the formation of which Andrew Weir was interested and in which it is already a shareholder. In consideration, Andrew Weir undertake to discharge bills and assume liabilities outstanding on the Irish Refineries project, and to reduce the company's bank loan by £400,000. The second task is to be carried out by merging London and Thames Haven with C.I.M. Holdings. London and Thames Haven will thus revert to its original oil storage and wharf-

ingers' business and will have direct control of C.I.M. The scheme will involve a reduction of the issued share capital of London and Thames Haven from £1,300,000 to £780,000 by cancelling 8s. on the £1 shares and dividing the resulting 12s. shares into 4s. units. The preference capital of £1,000,000 4 per cent. £1 shares is to be allotted to the preference shareholders of C.I.M. Holdings. To provide working capital, an arrangement has been made with the company's bankers for loans up to a limit of £900,000. According to the *pro forma* balance sheet, the bank overdraft will be reduced from £1,053,834 to £653,834 and the total of investments, loans and advances from £1,576,432 to £955,060. The reconstruction should do much to clarify the London and Thames Haven position. For the present, however, while Le Havre is in enemy occupation, the company's interest in C.I.M. has conjectural value, and future income will be determined by the storage business of London and Thames Haven itself.

* * *

Electric Cable Profits

In 1939, both Callender's Cable and W. T. Henley's Telegraph enjoyed satisfactory trading conditions. Callender's Cable, indeed, achieved a record total profit of £989,157, against £723,307 in 1938 and £924,990 in 1937. Henley's Telegraph gross earnings, however, showed a further moderate fall from £445,159 to £415,204, but increased taxation is evidently mainly responsible. Comparative results for the two companies are set out below:—

	Years to December 31			
	Callender's Cable		W. T. Henley's	
	1938	1939	1938	1939
Profit	723,307	989,157	415,159*	415,204*
Expenses, fees and pensions...	274,695	282,881	13,605	10,105
Taxation and N.D.C.	75,000	230,000		
Depreciation	60,000	70,000	61,012	61,246
Debt service	13,500	13,500	Redeemed	Redeemed
Preference dividends	56,000	56,000	9,000	9,000
Ordinary stock:—				
<i>Earnings</i>	244,112	330,776	361,542	334,853
<i>Paid</i>	168,587	168,587	260,000	260,000
<i>Earnings %</i>	24.3	33.9	30.8	28.2
<i>Paid %</i>	15	15	20†	20†
Reserve	250,000		100,000	100,000
Carry forward	390,548	398,369‡	411,894	384,331§

* After adjustment for taxation, bad debts and contingencies. † Including 5 per cent. cash bonus. ‡ After £ 15,169 for A.R.P. expenditure and £125,000 to dividend equalisation and war contingencies. § After charging £2,416 net loss on sale of trustee securities.

Callender's Cable have maintained their customary conservative distribution policy. Depreciation absorbs £70,000, against £60,000, and taxation requires £230,000, against £75,000 in the previous year and £100,000 in 1937. Thus ordinary earnings at £336,776, represent 38.9 per cent., against 24.3 per cent. for 1938, so that the 15 per cent. ordinary dividend is very satisfactorily covered. It may be significant of the directors' intentions that the 5 per cent. cash bonus paid in 1936 and 1937 has not been resumed, although earnings exceed the level of these years. Some £125,000 has been transferred to dividend equalisation or war contingencies. The directors state that the substantial increase in profits was attributable to trading before the war, but war production and export trade are now providing the bulk of turnover. The directors of Henley's Telegraph have maintained the 20 per cent. distribution, which is covered by slightly reduced earnings of 29.2 per cent., against 30.8 per cent., and reserve again receives £100,000. At 55s., Callender's Cable £1 ordinary stock offers £5 8s. per cent. Henley's Telegraph 5s. units at 16s. 3d. yield £6 3s. per cent.

* * *

June Kaffir Dividends

The table opposite shows the June Kaffir dividends compared with those of December, 1939, and a year ago. In general, the new tax legislation has not had a material effect on dividends, and a conservative wartime policy has probably been adopted. The reduction in the Brakpan dividend is not surprising, but the repetition of the December distribution by South African Lands is highly satisfactory. East Daggafontein now enters the dividend list, and promises well. City Deep has fulfilled the best expectations by repeating the 2s. 6d. dividend and should be able at least to maintain this payment over a long period. Other mines in the Central Mining group maintain their dividends, except

THE STOCK EXCHANGES

London

Note: all dealings are for cash

THE outstanding feature of the gilt-edged market this week has been the progressive recovery from minimum levels to which the market immediately fell on the news of the French decision to cease fighting. The market has already discounted some portion of the losses implied in the start of large-scale bombing raids. Business in many sections has been restricted by the Government decision to prohibit dealings in securities registered at the Bank of England under Treasury Order. Dealings in the foreign bond market were nominal. Home rails slumped throughout the week and industrials, after a firmer tendency at midweek, gave way again on the commencement of aerial warfare.

On Monday, restricted dealings in *gilt-edged* were based on minimum price levels. An improvement in sentiment throughout the week affected all securities. Gains in the order of 1/2 on Tuesday were followed by substantial rises of more than one point and by Wednesday 3 1/2 per cent. War Loan had risen 2 1/2 to 97 1/2; 3 1/2 per cent. Conversion to 97 1/2 and 2 1/2 National Defence Bonds to 99 1/2.

Most prices remained nominal in the foreign bond market, but Japanese bonds came on offer and French issues slumped heavily, Nord bonds falling from 70 at the beginning of the week to 50 on Wednesday. Italian bonds lost 5 points and closed at 10 on that date.

Home rails were sold on an unwilling market and losses were general throughout the week. Southern preferred lost three points to 41 on Monday and Great Western ordinary lost the same amount in the first two days of the week. Falls of two points were common among the debenture and preference issues.

In the industrial market falls were severe and dealing was difficult. Tobacco and brewery shares have been outstandingly depressed, although Distillers held up against the trend. B.E.T., which at one time touched 600 on the news of the dividend decision, failed to maintain its gain. Electrical equipment shares experienced heavy selling. In the iron, coal and steel group, losses, if less severe, have been steady. There was some demand for Stewarts and Lloyds on Wednesday, and in the stores group, Marks and Spencer and Woolworths also recovered slightly. Dealings in shipping shares were very restricted.

Kaffirs fell heavily on Monday, with Sub Nigel, the Gedulds and Crown Mines leading. By midweek a better sentiment prevailed and gains of 1/2 were recorded by a number of dividend paying companies, including "Sallies," East Daggafontein and Randfontein. In the rubber market dullness was relieved only by small falls. The

low price of oil shares induced some buying on Wednesday, when Attock and V.O.C. showed gains. The market was, however, severely shaken on Thursday by the passing of the final dividend by "Shell" Transport, which slumped heavily.

New York

AFTER a sharp setback caused by the news on Monday last of the French decision to seek an armistice, trading on Wall Street has shown a steady improvement. Dealers were encouraged by the British decision to take over French war orders and by the scale of war spending in Great Britain and the United States. Steel shares were active and rail issues improved on traffic prospects. Aircraft issues were also in demand, but copper shares, influenced by the scrap position, were weak on Wednesday. The Dow Jones industrial index improved from 122.80 on Monday to 123.86 in midweek. Steel mill activity is estimated at 87 per cent. of capacity by the Iron Age, against 85.5 per cent. a week ago.

Industry and Trade

France's Raw Materials

Germany's immediate gains in munitions and munition materials in France are likely to be large by reason of the heavy war reserves accumulated since 1938. Although a substantial proportion of France's military equipment has been destroyed, large stocks of tanks, guns and other stores, as well as of raw materials, such as oil and metals, may be expected to fall into Germany's hands. But as France, like the United Kingdom, has to feed the major part of her industries with imported raw materials, many of them will become idle as soon as existing stocks are exhausted. And as Germany is already short of most of the essential materials that France lacks, her ultimate economic gains derived from the control of French industry must not be exaggerated. France has to import one-third of her coal requirements, the bulk of her needs in steel alloy and non-ferrous metals, as well as the greater part of the raw materials for her textile industries. But there are a few important exceptions, such as iron ore, bauxite and potash. Thus, France is the largest producer of bauxite in Europe; in 1938 she produced 683,400 metric tons of this raw material. Access to it will add substantially to Germany's aluminium supplies. Most important, however, for Germany are the French iron-ore deposits south of Luxembourg. In 1937, a reasonably good year, France produced 37 million long tons of iron ore, with a metal content of 13 million tons. The control of France's iron ore deposits will appreciably strengthen Germany's steel position. But the French iron and steel industry is almost completely dependent on imported supplies of manganese, nickel and the other ingredients essential in the manufacture of the kind of steel used in munitions. These supplies will now presumably be cut off; and as Germany already suffers from a shortage of steel-alloy metals, she will not be able to use the French iron and steel industry to full advantage.

Mineral Resources of French Empire

A substantial proportion of France's raw material requirements are derived from her Empire. The output of some of the more important minerals is shown below:—

OUTPUT OF MINERALS IN 1937

Metric tons		Metric tons	
Algeria—		Morocco—	
Iron ore	2,372,000	Anthracite.....	107,200
Lead ore	7,295	Manganese ore	79,100
Zinc ore	17,690	Iron ore	66,900
Antimony ore ...	2,160	Molybdenum ore	196
		Cobalt	5,280
Tunis—		Indo-China—	
Iron ore	947,000	Anthracite.....	2,265,000
Lead ore	21,000	Zinc ore	11,100
		Tin ore	2,600
		Tungsten ore	498
		New Caledonia—	
		Nickel ore	249,000
		Chrome ore ...	48,000

Algeria and Tunis are rich in iron ore, of which metropolitan France has already substantial supplies; these two, as well as Morocco, Indo-China and New Caledonia, also produce steel alloy and non-ferrous metal ore, but mostly in small quantities. Apart from Canada, New Caledonia is the most important source of nickel supplies. But with a few exceptions France has to purchase most of her requirements in steel alloys and non-ferrous metals outside her empire.

France's Oil Position

Though Germany's economic resources will be considerably increased as a result of her victory in France, there is some consolation in the knowledge that her oil position will, fairly soon, be weakened by the past week's tragedy. France produces a negligible quantity of crude oil, output having fluctuated between 70,000 and 80,000 metric tons annually during the past few years; practically the whole of this quantity is obtained from the old Pechelbronn field in Alsace. She is consequently compelled to cover practically the whole of her requirements by purchases overseas. French mineral oil imports in 1938, the latest year for which complete statistics are available, amounted to

8,136,000 metric tons, of which practically 7,000,000 tons (86 per cent.) consisted of crude oil for treatment in the country's modern refineries. Relying as they do almost exclusively upon imported raw materials, these refineries will be of no use to Germany, so long as Britain can enforce a blockade of French territory. Thus the only contribution which France will be able to make to the German oil economy will be the stocks of crude oil and finished products which the oil companies have been forced to accumulate over a period of years. These minimum stocks were at first equivalent to three months' normal supplies, but the limit was raised some time before the war began and there is no doubt that a further considerable increase has taken place since last September. A clue to the magnitude of these reserves is given by a comparison of imports and estimated home consumption. Thus, whereas a total of 8,136,000 tons of mineral oil was imported in 1938, domestic requirements (including bunkers) are put at only 6,500,000 tons. Allowing for refinery losses and for exports, this would leave at least 850,000 tons available for additions to the quantity already in storage. As the growth of stocks has been considerably speeded up since 1938, there must have been several million tons of oil in storage when the *Blitzkrieg* began. How much of this oil has been used or destroyed by the French and how much has fallen into the Nazis' clutches it is impossible to say. But it is certain that if the country's economic machine is to be allowed to function at all it cannot be wholly starved of oil; and when present reserves have run out the Germans themselves will have to find the required oil—provided, of course, that the British blockade is effective. On this latter point, however, there seems to be little doubt, for Britain and the United States control virtually the whole of the free tanker tonnage available on the world market. The loss of French demand will strike a further blow at the American oil market, for over one-third of the Republic's oil imports came from this source. Other suppliers were Iraq (39 per cent. of the 1938 total), Venezuela-Dutch West Indies (9 per cent.), Colombia (5 per cent.), Peru (4 per cent.), and Roumania (3 per cent.).

Italy's Metal Supplies

Italy is deficient in most of the raw materials needed in modern metal industries. She has no copper or tin, little iron ore, no coking coal and hardly any of the ferro-alloy minerals. She is a net exporter of aluminium, worked by cheap hydro-electric power, and has also developed her zinc smelting capacity by Government subsidies to about 45,000 tons per annum; she exported 88,000 tons of zinc concentrates in 1938. She produces a considerable quantity of lead, as a by-product of the zinc industry, but still needs imports from Mexico and Spain; about 13,600 tons of lead ore were also imported in 1938 from Australia and Yugoslavia:—

ITALIAN NET IMPORTS OF METALS

	1936	1937	1938
Base Metals ('000 metric tons):—			
Copper	82.8	80.8	74.3
Lead	5.5	4.8	3.9
Tin	3.5	2.9	3.5
Zinc	4.3	0.6	1.6

(a) Net export.

In the last pre-war year the Italian output of aluminium amounted to 25,800 tons, and this was to be increased to 40,000 tons in 1941, in the hope of diminishing the need for copper, imported from Chile, the United States and Portuguese West Africa. The minute production of magnesium was also to be raised to 6,000 tons by this year, using dolomite and seawater as raw materials. Output of manganese ore amounted in 1938 to some 50,000 tons, and a further 58,000 tons of high-grade ore were imported, mainly from British India. Production of nickel is negligible, though there is a reserve of some 3,000 tons in the nickel coins now being withdrawn from circulation. Germany cannot make good the Italian deficiencies in these metals; Yugoslavia and Turkey can supply some chromite and Roumania has a small

surplus of manganese, but the available amounts will not supply all the Italian requirements. The blockade of the Mediterranean may have, therefore, a very serious effect on the Italian metal industries, once accumulated reserves have been exhausted.

Overseas Trade in May

There was a slight fall in the value of both imports and exports in May compared with April, though imports remained considerably higher than in May, 1939. The fall in the value of British exports—they were only 7.6 per cent. higher than a year ago—is particularly disappointing, since in April the corresponding increase was 33 per cent. But the suspension of trade with the greater part of Continental Europe was undoubtedly responsible for most of this fall, and it is hoped that the goods which might have found a market in Europe will be sold elsewhere. The import figures give reassuring evidence of the huge supplies of food and raw

	1938	1939	1940	Change between 1939 and 1940	%
May					
Total imports.....	75,369	78,509	105,553	+ 27,044	+34.5
British exports	38,165	42,273	45,500	+ 3,226	+ 7.6
Re-exports	7,177	5,012	3,214	- 1,798	-25.9
Total exports	45,342	47,286	48,714	+ 1,428	+ 3.0
Excess of imports over exports	30,057	31,223	56,839	+ 25,616	+82.1

Five Months ending May					
Total imports.....	393,455	366,059	522,309	+ 156,251	+42.7
British exports	196,306	196,477	213,706	+ 17,229	+ 8.8
Re-exports	27,933	23,816	17,337	- 6,479	-27.2
Total exports	224,239	220,293	231,043	+ 10,751	+ 4.9
Excess of imports over exports	169,216	145,766	291,266	+ 145,500	+89.9
Transshipments under bond	13,457	13,549	11,226	- 2,319	-17.1

materials that are coming into the country. Compared with last year, the value of imports of the following classes had increased in May by more than £5 millions: grain and flour, meat, dairy produce, other food, cotton and wool, oils and oilseeds, metals and metal manufactures (both of iron and non-ferrous metals), textile goods other than cotton, woollen and silk, and manufactured oils. Details of the trade in the most important classes are given on page 1097. It will be noticed from the table above that the import surplus in the first five months of this year is still almost exactly double that of the corresponding period of 1939.

Coal Exports

The defeat of France has deprived the United Kingdom of its principal coal export market, and as a result of the German occupation of the whole of the coastline between Narvik and Bayonne and the entry of Italy into the war, we have lost, temporarily, approximately 75 per cent. of our normal outlets for coal exports. In 1938 the Baltic absorbed 24.8 per cent. of the total quantity of coal exported as cargo from the United Kingdom, the North Sea 40.1 per cent., the Mediterranean 20.7 per cent., North and Central America 4.2 per cent., and South America and other regions 10.2 per cent. In Europe and the Mediterranean the principal markets which remain open to us are Portugal, Spain, and Egypt, to which shipments from the United Kingdom in 1938 totalled about 3.3 million tons; and the extent to which we may be able to retain or expand trade with these markets will depend partly on military and naval operations and partly on the efficiency of our convoy system. The quantity of coal shipped in 1938 at the ports of the United Kingdom as bunkers for the use of foreign-going vessels was about 10½ million tons. No statistics are available of the volume of this branch of the trade since last August. It has necessarily suffered from the decrease in the employment of tonnage normally engaged in the commerce between the United Kingdom and countries now in enemy occupation, and from the ban on the employment of American ships in the war zones; on the other hand, it has benefited from the closing of the competitive bunkering ports in the North Sea (including particularly Rotterdam, Antwerp and Hamburg), from the diversion to Allied control of a large proportion of the mercantile marines of Norway, Holland and Denmark, from the additions which have been made to our own merchant ships by new coal-driven vessels and captures from the enemy, and, until this week, from the greatly intensified traffic between our ports and those of France. It is difficult to estimate the extent to which the coal import trade of neutral countries has been adversely affected by the war, but exports from Germany,

Poland, Belgium and Holland to neutral countries that are still open to us exceed 5,000,000 tons per annum, and with a larger surplus available for export than we have possessed at any time during the war the recapture of a considerable proportion, if not the whole, of this trade should be possible. Our increasing industrial needs have, of course, chief claim on our output, and in recent weeks the home market has been absorbing between 83 per cent. and 84 per cent. of our total output.

Exports of Wool Textiles

Despite the enormous demands made upon the wool textile industry by the Services, it has not neglected the export trade. As the table below shows, the volume and value of exports recovered rapidly after the first two months of war:—

EXPORTS OF WOOL TEXTILES

	Woollens		Worsted	
	sq. yds. ('000's)	£ ('000's)	sq. yds. ('000's)	£ ('000's)
Sept. 1939	3,553	504	1,626	284
October	3,476	517	2,103	365
November	5,647	848	3,358	569
December	4,110	634	3,667	709
January 1940	4,299	725	4,148	772
February	5,287	888	4,400	842
March	4,789	869	3,640	713
April	4,796	910	4,446	909

Exports of worsteds during the first eight months of the war were appreciably higher in volume than during the same period in 1938-39; they amounted to 27.3 million square yards, against 20.5 million square yards, in the eight months ended April, 1939. Shipments of woollens, on the other hand, declined somewhat in volume during this period, from 40.3 million square yards to 35.9 million square yards. As a result of Germany's offensive, a number of markets have been closed to the industry since April, and a temporary decline in total exports may therefore be expected.

Increasing Cotton Output

In response to the appeals of the Minister of Labour and the Cotton Controller, the cotton industry is increasing its output. In mills making aeroplane and barrage balloon cloths work is proceeding in double shifts, thus raising the working hours of the machinery from 5½ to 90 per week; trade union objections to the two-shift system have been waived for the time being. Weavers are also being transferred from work on civilian fabrics, since the rationing of the home trade has restricted the inflow of orders. The new standstill order prohibits operatives from seeking employment in other trades and joint area committees are regulating the flow of labour within the cotton industry. Although, therefore, there is a shortage of certain types of skilled and juvenile labour, the output of cotton textiles needed for service contracts has enormously increased in the past week or two.

Farm Wages and Prices

The Agricultural Wages Boards have gone through the formalities necessary to bring into operation the minimum agricultural wage of 48s. per week imposed by the Government. The new regulations take effect at the end of the month, so that within a fortnight farmers will be called upon to pay wages considerably higher, by one-third in some counties, than those now in force. The Minister for Agriculture specifically stated that prices of agricultural products would be raised to enable farmers to pay the higher wages, but so far not one of the new prices has been announced. Farmers are naturally anxious over the delay; apart from dairying, whose returns are evenly spaced throughout the year, there will be considerable time-lag between the rise in wages and the sale of the products, and during this period farmers will

FAMOUS SINCE 1795

OTARD'S
COGNAC BRANDY

have to draw on their own resources. It is clearly essential that the new prices should be known before the end of the harvest, and the sooner they are published the better. In some cases it may be necessary for the county committees to use their powers of advancing credit to farmers to tide them over until the harvest has been gathered and sold. The Ministry of Agriculture is also making valiant attempts to stimulate the output from pasture, from which our cattle must now be largely fed. A campaign has started to popularise the making of silage from the autumn-grown grass; two pasture farms in the Midlands have been acquired by the Ministry and handed over to Sir George Stapledon for him to demonstrate the new methods of grassland improvement in ordinary commercial conditions.

The Fur Trade in War

The German occupation of Norway and the isolation of Sweden from western trade will greatly affect the supply

of raw furs in London. In 1938, some 21,400 cwt. of undressed furs were imported from Russia and Scandinavia out of total imports of 77,000 cwt. The fall in imports has not yet reduced the amount available for sale, and both in volume and prices, the recent spring sales held in London were the best since 1929. But the prospect of diminished supplies has induced the Hudson's Bay Company to absorb the fur business of Messrs C. M. Lampson and Company, one of the oldest firms in the trade, with whom it has been financially connected for some years. Some of the trade that London has lost will be gained by Leipzig, which has already benefited by the large supplies of undressed Russian furs imported by Germany since the war for re-export to neutral countries. Shipping and exchange difficulties have also led to some transference of trade from London to New York. These shifts are inevitable in war, but the importance of London as the centre of the Empire fur trade, its close connections with Scandinavia, together with the immigration of many Leipzig merchants, should enable London to resume its leading position in the fur trade for a post-war world.

COMMODITY AND INDUSTRY NEWS

MARKETS reacted in very varying fashions to the news that France had asked for an armistice. Grain prices in North America again relapsed, and there was also a fall in both London and New York in the level of tin prices on the assumption that French purchases would be discontinued. Cotton prices in America are higher than a week ago, and rubber prices were only slightly lower. Dealings in some of the British markets have been very small in the past few days.

Cotton (Manchester).—Output in the cotton trade is being enlarged. The Controller has asked numerous spinners to produce additional quantities of certain counts and qualities of yarn; the Ministry of Aircraft Production has made an urgent request for bigger supplies of fabrics and in addition to Sunday work at certain mills it has now been agreed that workpeople engaged on this class of trade should work two shifts.

In the Liverpool cotton market, trading in futures has been allowed on the basis of minimum prices with a maximum advance or decline in prices each session. The longer working hours in the mills are having an effect upon raw cotton consumption and last week the total deliveries to spinners were 85,143 bales, the biggest total in any week for the last 13 years. Yarn counts and qualities that are required for Government contracts have continued in active demand, but some spinners that cannot turn to this class of work are not doing too well. The export trade in piece-goods is negligible and home trade buyers have also been cautious.

Metals.—The prospects of the copper market in the United States have been much affected by the possibility of a French surrender. The French Government has placed contracts for the delivery of about 350,000 tons of copper per year in the United States, which will now most probably be terminated. This means a further serious contraction in American exports and in the demand for Chilean copper, on which the American output is based. Copper prices in New York may be maintained for the time being by heavy domestic purchases for the armament trade, but the copper producers will be well satisfied if they can maintain the present price of 11.50 cents per lb.

Tin.—After a further rise in the standard cash price for tin to a maximum of £290 5s. per ton on Friday, the market suffered a serious reverse early this week. By Tuesday the quotation was down to £264, but on Wednesday it recovered slightly to £266 10s. per ton. Although the break was stimulated by the French request for an armistice, it was primarily due to a sudden stoppage of American buying, which brought about the liquidation of substantial speculative accounts. It is possible that buying both on British and American account will be resumed on a large scale before long; but, on the other hand, consuming markets have been narrowed further by the exclusion of France.

Grains.—With the news that France had asked for an armistice, grain prices at Chicago again relapsed; July wheat futures were quoted at one time at 74 cents per bushel, though purchases by the Government for relief brought a slight recovery later. With the occupation of the greater part of industrial France, it is to be presumed that the United Kingdom is now the sole importer of grains from

overseas, and even her demand is likely to be much smaller, since her own output has been increased.

Oils and Oilseeds.—There has been a continuous fall in linseed prices in the past week, both in North America and for Indian varieties. The fall in American prices was due mainly to the influence of the recent decline in the grain markets, which has been checked by minimum prices. Exports of linseed from Argentina are still continuing.

Rubber.—There was a sharp rise in the price of standard ribbed sheet over last weekend, but business was nearly suspended on Monday. The Committee of the London Rubber Exchange then requested members to refrain until further notice from new speculative commitments, except in liquidation of existing contracts. Prices in New York have been fairly steady throughout the week.

The casualty figures include only losses suffered through German action, and not those suffered through any other war action. Ships which have disappeared without a trace are included, the presumption being that they have been mined or torpedoed. Norwegian and Danish losses before April 9, and Belgian and Dutch losses before May 10, are classed as Neutral. Italian losses are also classed as Neutral. Source: The Shipping World.

COMPANY MEETINGS

VENEZUELAN OIL CONCESSIONS, LIMITED

PROBLEMS OF EXCHANGE

DIVIDEND 2s. 3d. PER SHARE

The twenty-fourth ordinary annual general meeting of this company was held, on the 18th instant, in London, Sir Andrew Agnew, C.B.E. (chairman of the company), presiding.

The chairman, in the course of moving the adoption of the report and accounts, said:—Shareholders will be aware from our experience during the past several years that exchange rates have a considerable influence on the results of our operations. In the case of 1939, although this influence was stronger than ever before, the two tendencies which were operative were to some extent of a compensating nature.

Oil proceeds and value of oil stocks have increased from £6,450,000 to £7,080,000. This improvement, namely, some £630,000, can be attributed almost entirely to the more favourable dollar-sterling exchange rate. On the expenditure side of the account the first two items, comprising the sterling required to finance our expenditure in Venezuela, amount to £4,131,733, as against £4,051,086 in 1938, an increase of some £80,000 or 2 per cent.

A summarised comparison of our 1939 profit and loss account with that of the previous year is provided by the fact that the increase of £630,000 in our revenue is almost exactly offset by additional expenditure in the fields and for extra taxes. There remains the increase of £200,000 in the year's allowance for depreciation. Against this it has not been considered necessary to make any provision for 1939 to exploration and general reserve, compared with £250,000 set aside last year, thus also enabling us to increase the profit by £50,000, which is available to increase the carry-forward. Our cash position at the end of 1939 was a strong one, with cash on deposit and current accounts and in hand totalling £953,000, and our cash position to-day is adequate.

CURRENT EXPENDITURE

As regards current operations in our fields, you will likewise not expect me to give you so much information as is customary at these meetings. Our expenditure is being confined to what is strictly necessary for the production and delivery of crude oil and the maintenance of essential requirements and commitments.

For the purpose of doing our utmost to avoid the use of foreign currency, every endeavour is being made, in close co-operation with the Petroleum Ministry and the Ministry of Supply, to purchase the maximum proportion of our requirements of materials and equipment in the United Kingdom. Under normal conditions a large proportion of our needs is obtained from the United States.

Our drilling programme now comprises eight strings of tools, all of which are employed in the Bolivar District. The string which was previously operating in the Concepcion field in the Maracaibo District has recently been transferred to the Bolivar District, where it can be employed to better advantage.

Our policy of electrifying our principal fields is being extended to Cabimas, since although this field has passed its peak as a source of production, it has, we consider, sufficient useful life still before it to reap the benefits of economy and flexibility made possible by the use of electric prime movers in the pumping of wells, the gathering of oil, and other similar phases of our operations.

FIELD PROTECTION WORKS

The coastal dyke to counteract the effect of subsidence at Lagunillas, to which reference was made in the report, has now been completed in the central part of the Lake shore frontage, and should give adequate protection for a considerable number of years. Additional work to maintain the existing flood protection and drainage schemes is being carried out as necessary in other parts of the field. It has recently become apparent that appreciable subsidence is taking place at Tia Juana, and to a lesser degree at Cabimas. In the former field conditions are such that large expenditure will be necessary, either this year or next year, for the purpose of providing the necessary protection from flooding. At Bachaquero, no subsidence has yet become apparent, but in the light of our experience in other fields a system of periodic surveys has been instituted, so that immediate steps may be taken should subsidence commence. We must thus be prepared for continued heavy expenditure for the purpose of maintaining the surface condition of our fields.

As regards our one-third participation in the Venezuelan Oil Development Company, Limited, you will have seen from the report that no success has yet been obtained by that company in its exploration for oil-producing territory on its concessions, and that since the war its exploration programme has been suspended. In consequence of this our expenditure commitments in this direction are reduced to comparatively small sums.

As you will see from the accounts, our exploration and general reserve as at the end of 1938 stood at £1,000,000, while our contribution to V.O.D. expenditure as at the end of 1939 amounted to £550,000. For this reason it has not been considered necessary to set aside any further sum to exploration and general reserve in respect of last year. Nevertheless, as explained in previous years, it must be appreciated that this reserve, besides providing for our interest in V.O.D., is intended to contribute to writing off the value of our wasting assets and other intangibles. Your directors will have the question of the exploration and general reserve constantly before them and additions will be made to it in future years whenever this is justified.

The report and accounts, with the recommendation of a final dividend of 1s. 7d., making 2s. 3d. per share for the year, were unanimously adopted.

GEDULD PROPRIETARY MINES, LIMITED

SATISFACTORY RESULTS

The thirty-ninth ordinary general meeting of shareholders in Geduld Proprietary Mines, Limited, was held at Johannesburg, on the 16th ultimo.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—The results achieved in the course of the year's operations have again been satisfactory.

The milling record of the previous year was improved upon by 36,500 tons, the total for the past year being 1,365,000 tons. Working revenue improved by £16,734 owing to the increased tonnage milled and the higher average price obtained for gold. On the other hand, working costs increased by £45,821, or 3d. per ton milled, leaving a working profit of £1,326,530, as compared with £1,355,617 for the previous year.

Increased dividend income from our shareholdings in East Geduld Mines and Grootvlei Proprietary Mines substantially improved our sundry revenue, which amounted to £489,313. After setting aside £606,176 to meet taxation liability and providing for other items detailed in the profit and loss account, the net profit was £1,194,759, or £59,017 more than in the preceding year. The addition of £247,791 brought forward from the previous year made available for disposal a sum of £1,442,550, and £1,168,686 was absorbed in the payment of two dividends totalling 16s. per share.

DEVELOPMENT WORK

The results of development work during the year showed little variation from those of the preceding year. Apart from a small footage preparatory to Black Reef development, 13,070 feet were driven, of which 9,145 were on reef and sampled and 3,350 were classed as payable with an average value of 6.6 dwt. over 37 inches. This work was insufficient to fully maintain the ore reserves, which, on being re-estimated at the end of the year, showed a decrease of 150,000 tons to 8,900,000 tons, averaging 4.7 dwt. over 56 inches. This value was one-fifth of a pennyweight lower and the width one inch less than when calculated a year previously.

During the first three months of the current year development results have been well maintained. Of the 2,000 feet sampled in the Main Reef Leader, 1,175 feet, averaging 8.6 dwt. over 32 inches, were classed as payable. The ore milled totalled 336,500 tons, and the working revenue, based on selling gold to the Treasury at 150s. per ounce fine, amounted to £566,739. After deducting working costs, which averaged 16s. per ton milled, the working profit was £296,786, which is somewhat below the average of the previous year.

TAXATION AND PROFITS

The full price of gold as from January 1, 1940, has been reinstated to the producers, who will have to bear increased taxation imposed on profits and additional realisation charges. As the

result, the published gross profits of all mines will be greater, but on average the profits distributable to shareholders will be unchanged unless the price of gold exceeds 168s. per ounce.

As an example of how our company is affected by this change, for the first quarter of this year our working profit under the new scheme showed an increase of £55,500 over the old, but taxation is increased by £58,200, so that the net working profit to our shareholders is slightly lower. On the other hand, it is estimated that the ore reserve tonnage as calculated at the end of last year could be increased by about 20 per cent.

Our shareholdings in East Geduld Mines, Limited, and the Grootvlei Proprietary Mines, Limited, remain intact.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED

CONTINUED PROGRESS

The thirteenth ordinary general meeting of shareholders in East Geduld Mines, Limited, was held at Johannesburg, on the 16th ultimo.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—Results for the year 1939 present a gratifying record of continued progress and efficient conduct of operations.

The reduction plant treated a record total of 1,829,000 tons, or 77,200 more than in the previous year, the average yield per ton milled, at 5.74 dwt., being slightly lower. Working costs per ton milled were reduced by 6d. to the low level of 15s. 8d., two-thirds of the decrease being due to a lower charge for development redemption.

INCREASED OUTPUT

The output of gold increased by 19,798 ounces fine to 525,247 ounces fine, and the average price realised was 6s. 5d. per ounce fine more than in the previous year. The working profit increased by £290,604 to £2,476,316, and the gross profit, including sundry revenue and dividends on our shareholding in the Grootvlei Proprietary Mines, Limited, amounted to £2,505,610. Out of this £1,167,040, or 47 per cent. of the working profit, had to be provided for taxation, the net profit amounting to £1,320,203. Including the balance brought forward at the beginning of the year, there was available for disposal an amount of £1,540,335, of which £1,215,000 was distributed in two dividends totalling 13s. 6d. per share, an increase of 2s. per share over the previous year.

The development footage during the year amounted to 18,713 feet and, of 12,615 feet on reef and sampled, 7,500 feet, or 59 per cent., were payable, the average value being 13.2 dwt. over 33 inches, equivalent to 434 inch-dwt. The payable footage was sufficient to maintain the ore reserves, which, based on a slightly lower pay limit, amounted at the year end to 11,500,000 tons, the value of 5.7 dwt. being three-tenths of a pennyweight lower and the estimated stoping width of 56 inches two inches less than at the end of the previous year.

CURRENT YEAR'S DEVELOPMENT

During the first quarter of the current year the development footage driven amounted to 5,843 feet, of which 4,010 feet were on reef and sampled, the payable reef being 2,550 feet, or 64 per cent., having an average value of 15.0 dwt. over 34 inches, equivalent to 511 inch-dwt. The tonnage milled during the quarter totalled 461,000 tons, or an increase of 17,000 tons over the corresponding period of last year, and the yield per ton milled showed a slight increase above the average of the previous year. Working costs per ton milled, at 16s., were 4d. above the average of last year, the increase being due to the rising cost of stores and materials. The working profit amounted to £627,191, on the basis of a gold price of 150s. per ounce fine. The full price of gold as from January 1, 1940, has been reinstated to the producers, who will have to bear increased taxation imposed on profits and additional realisation charges. As the result the published gross profits of all mines will be greater, but on average the profits distributable to shareholders will be unchanged unless the price of gold exceeds 168s. per ounce fine.

So far as our company is concerned the effect of this change for the first quarter of this year is that the distributable profit is decreased by about £15,000. However, as the rate of net profit at

present being earned is approximately the same as last year, shareholders should suffer no diminution in the dividend rate. On the other hand, the life of the mine will be considerably lengthened, as it is estimated that the ore reserve tonnage as calculated at the end of last year could be increased by over 40 per cent. by the addition of low-grade ore.

Your company's share interest in the Grootvlei Proprietary Mines, Limited, remains intact, and I feel sure shareholders will have observed with satisfaction that the company has entered the ranks of dividend payers.

The report and accounts were adopted.

MARIEVALE CONSOLIDATED MINES, LIMITED

IMPROVEMENT IN DEPTH

The fifth ordinary general meeting of shareholders in Marievale Consolidated Mines, Limited, was held at Johannesburg, on the 17th ultimo.

Mr P. M. Anderson, chairman of the company, presided, and, in the course of his remarks, said:—With regard to capital expenditure, it has been necessary to make use of the arrangements, previously announced, to obtain temporary finance from Union Corporation, Limited. Since the close of the year the loan has reached a maximum of £104,974, which is about £45,000 less than the estimate I gave at our last meeting and at the end of last month it had been reduced to about £43,000.

Milling on a regular basis commenced on November 1st, eleven months after the decision to erect a plant was made by your board. The full nominal capacity of the reduction plant—40,000 tons per month—was reached in December.

Due to the inevitable absorption of gold in the plant and the milling of a high percentage of comparatively low-grade development rock, the yield for the first two months of production was only 3.55 dwt. per ton milled, and with the inclusion of initial starting-up expenditure a working loss of £20,709 was incurred by the year end. During the first quarter of the current year a total of 120,000 tons were milled, the yield being 4.50 dwt. per ton. Working costs per ton milled, which included an average development redemption charge of 7s. 8d., were 28s. 10d., and the working profit for the quarter—declared on the basis of selling gold to the Government at 150s. net per ounce fine—was £29,284, or 4s. 11d. per ton milled. In April the yield had risen to 5.2 dwt. per ton and further improvement in accordance with the ore reserve value may be expected.

THE NEW TAX BASIS

The new tax basis, although a severe one, is a superior form of impost in many respects and results in some saving to our company compared with the amount which would have accrued to the Government under the Gold Price Levy. For example, under the new arrangement, which came into force as from January 1st, the working profit for the first quarter of this year, after allowing for extra taxation and charges, becomes £44,926, as compared with £29,284 previously published, being an increase of £15,642.

During last year 35,723 feet of development, exclusive of work on stations, were accomplished, which represents an increase of 7,806 feet over the previous year. 22,915 feet were on reef and sampled and, of this, 12,760 feet were found to be payable, averaging 9.6 dwt. over 26 inches. Ore reserves were increased by 600,000 tons, and at the year end were calculated at 1,700,000 tons, having an average value of 5.3 dwt. over an estimated stoping width of 40 inches. Development footage for the first three months of this year amounted to 9,707 feet, of which 6,560 feet were on reef and sampled. The 2,890 feet payable averaged 10.9 dwt. over 23 inches.

GRATIFYING DEVELOPMENT RESULTS

I have previously informed shareholders that development results, particularly in the No. 1 Shaft area, showed definite signs of improvement in depth, and it is gratifying to be able to state that subsequent development in this area does not give me any grounds to change my opinion. Unfortunately, the development of the lowest levels has been retarded owing to the downthrow of the reef

by the dyke to which I referred at our last meeting. Consequently, the results of the year, although satisfactory, do not fully reflect the improved values encountered in depth because the bulk of the work has necessarily been restricted for the time being to the levels above the dyke. The opening up of the area below the dyke, however, will be facilitated by two inclines from No. 1 Shaft, which are being pushed forward as rapidly as possible.

Development in the No. 2 Incline Shaft area has been delayed from time to time by water-bearing fissures and last month an abnormal flow of water was encountered in the 12th Level Drive. This additional flow exceeded the limited pumping capacity at this shaft, consequently all perishable equipment was withdrawn and the water allowed to rise to the 7th Level on which it was transferred to the main pumping station at No. 1 Shaft. Additional pumping equipment has been obtained and is being installed in No. 2 Incline preparatory to dewatering this incline to the 12th Level. This mishap has not affected the output and in no way endangers the rest of the mine, but will involve some additional expenditure and delay development in this section.

The mine is opening up very well and I feel confident that shareholders can look forward to improving profits until normal production is reached on full scale operations.

The report and accounts were adopted.

THE GROOTVLEI PROPRIETARY MINES, LIMITED

SATISFACTORY DEVELOPMENT RESULTS

The thirty-third ordinary general meeting of The Grootvlei Proprietary Mines, Limited, was held at Johannesburg, on the 16th ultimo.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—The reduction plant, which has now been in commission for some twenty months, has operated most satisfactorily, and last year the ore milled totalled 947,500 tons. In the early part of 1939 the plant was extended to a rated capacity of 80,000 tons per month, but results have shown that the actual capacity is well above that figure; in fact last month 97,000 tons was reached. You will be glad to hear that, owing to satisfactory development results, it has been decided to proceed immediately with extension of the plant to a rated capacity of 120,000 tons per month and the main items of additional machinery and equipment have been ordered.

The working revenue totalled £1,669,916, or 35s. 3d. per ton milled, and working costs amounted to £1,066,603, or 22s. 6d. per ton milled, leaving a working profit of £603,313 and a net profit of £517,721 which, together with the carry-forward from the previous year, made £529,740 available for disposal, of which £408,750 was absorbed in the payment of the two dividends of 1s. and 2s. per share.

The capital funds on hand at December 31, 1938, totalled £403,658, which should be sufficient to finance the extension of the reduction plant to which I have already referred.

ACCELERATION AND DEVELOPMENT

The main haulage between Nos. 3 and 4 shafts was completed in May last year and this assisted considerably in the acceleration of development in that section of the mine. Altogether 64,272 feet were driven during the year, which is almost double the footage accomplished in the preceding year, 44,590 feet were on reef and sampled and, of this, 25,350 feet, or 57 per cent., were payable, having an average value of 12.5 dwt. over 28 inches, equivalent to 350 inch-dwt.

The ore reserves, when recalculated as at December 31st last, showed an increase of 40 per cent. and amounted to 5,250,000 tons with an average value of 5.5 dwt. over 52 inches. This compares with 3,750,000 tons having an average value of 5.5 dwt. over 55.5 inches at the end of 1938.

The results of the company's operations during the first quarter of the current year show that satisfactory progress is being maintained. Development work totalled 15,893 feet, of which 10,365 feet were on reef and sampled. 4,950 feet, or 48 per cent., were payable, having an average value of 13.1 dwt. over 29 inches, equivalent to 380 inch-dwt. The ore milled totalled 277,500 tons and the working revenue was £536,942, or 38s. 8d. per ton milled.

Working costs amounted to £315,524, or 22s. 9d. per ton milled, leaving a working profit of £221,418, which is substantially above the rate for last year. These figures are based on a gold price of 150s. net per ounce fine.

TAXATION AND FUTURE PROFITS

The full price of gold as from January 1, 1940, has been reinstated to the producers, who will have to bear increased taxation imposed on profits and additional realisation charges. As the result, the published gross profits of all mines will be greater, but on average the profits distributable to shareholders will be unchanged unless the price of gold exceeds 168s. per ounce.

As an example of how our company is affected by this change, for the first quarter of this year our working profit under the new scheme showed an increase of £52,600 over the old, but taxation is increased by £50,000, so that the net working profit to our shareholders is much the same. On the other hand, it is estimated that the ore reserve tonnage as calculated at the end of last year could be increased by over 30 per cent.

The financial resources of the Palmietkuil Gold Mining Company, Limited—in which your company's shareholding remains unchanged—became exhausted during the year, and, as the present state of world affairs made the raising of further capital impracticable, mining operations have been suspended and the mine placed on a caretaking basis.

The report and accounts were adopted.

VAN DYK CONSOLIDATED MINES, LIMITED

YEAR OF STEADY PROGRESS

The sixth ordinary general meeting of Van Dyk Consolidated Mines, Limited, was held at Johannesburg on the 17th ultimo.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—The year under review is the first complete year of milling operations, and steady progress has been made towards full scale production. Although the extension to the reduction plant from 60,000 to 80,000 tons per month was not brought into commission until the end of February, the ore milled during the year reached the satisfactory figure of 1,026,600 tons, which is substantially above the rated capacity of the plant.

The yield per ton milled continued to show improvement throughout the year and averaged 4.80 dwt., an increase of about two-thirds of a pennyweight, and revenue improved by 5s. 9d. per ton milled compared with the previous year. Working costs per ton milled, which averaged 22s. 10d. and included a charge for development redemption averaging 5s. 2d., showed a reduction of 5d.

The increases in tonnage milled, yield and price of gold, coupled with the decrease in working costs, accounted for the working profit being increased, compared with the previous year, by nearly half a million pounds to £664,550, the net profit transferred to the appropriation account being £476,645. With the balance unappropriated from last year of £95,858, there was thus a total of £572,503 to be dealt with. Of this, two dividends, each of 9d. per share, absorbed £412,500.

INCREASED ORE RESERVES

Development accomplished during 1939 amounted to 73,205 feet, which was an increase of 22,849 feet over 1938. Due to the large footage of incline haulage ways and to broken ground in certain areas, a considerable portion of the development was off reef. Of the 37,700 feet on reef and sampled, 15,725 feet were found to be payable averaging 12.5 dwt. over 20 inches. The ore reserves were increased about 15 per cent. during the year, and at December 31st were estimated to amount to 2,600,000 tons, having an average value of 5.6 dwt. over an assumed stoping width of 40 inches.

During the first three months of the current year, 20,738 feet of development were accomplished, of which 11,270 feet were on reef. Of the footage sampled 2,800 feet were payable, with an average value of 10.7 dwt. over 21 inches. The ore milled amounted to 274,200 tons, the average yield per ton milled being 4.94 dwt. Working costs, at 23s. 3d. per ton milled, were 5d. higher than the average of the past year, due in part to increasing the charge for development redemption to 5s. 6d. per ton. The working profit was esti-

mated at £189,229. This figure is based on a gold price of 150s. net per ounce fine.

TAXATION AND FUTURE PROFITS

As from January 1, 1940, the full price of gold has been reinstated to the producers, who will have to bear increased taxation imposed on profits and additional realisation charges. As the result, the published gross profits of all mines will be greater, but on average the profits distributable to shareholders will be unchanged unless the price of gold exceeds 168s. per ounce.

As an example of how our company is affected by this change, for the first quarter of this year our working profit under the new scheme showed an increase of £49,800 over the old, but taxation is increased by £46,000, so that the net working profit is much the same. On the other hand, it is estimated that the ore reserve tonnage as calculated at the end of last year could be increased by about 35 per cent.

The report and accounts were adopted.

FORSTER'S GLASS COMPANY, LIMITED

PROFIT MORE THAN DOUBLED

The twenty-first annual general meeting of Forster's Glass Company, Limited, was held, on the 20th instant, in London.

Col. Charles E. Ponsonby, T.D., M.P. (the chairman), said he was sure it would be agreed that the report and accounts were very satisfactory. The profit for the year, after meeting all expenses, but before providing for taxation, was £115,233 as against £54,020 last year. This showed a very large increase over last year, but in order to cover estimated liabilities for taxation it had been found necessary to provide £64,519 as against £9,600 last year. Included in this provision was an amount for excess profits tax calculated on the 60 per cent. basis. After deducting the preference dividend for the year and bringing in a balance of £16,701 from last year, the amount available for distribution was £54,290. The directors recommended a dividend of 6 per cent. and a cash bonus of 5 per cent. on the ordinary shares.

The increase in profits was remarkable, and was accounted for in several ways. The sales of the company for the year under review were the largest in the company's history, and were roughly an increase of 30 per cent. on those of the previous year. In order to meet the enormous demand the plant had been working almost to capacity during the whole period.

During the year only one small increase in sale prices had taken place, and this increase only applied to a relatively small proportion of the company's sales. On the other hand, costs of production, both in the way of materials and wages, had increased considerably, but, so far, it had been possible to carry these increases by reason of the greater volume of sales.

The great increase in sales had been due partly to an increase in

their general trade, especially in the mineral water trade owing to the satisfactory weather conditions during last summer, but also to a considerable increase in the demand for containers to be packed with goods for export, and in response to the request of the Government the company had been pushing the sale of empty containers for export purposes, and they had met with satisfactory success in this field. As to the current year, at the moment the plant was fully employed, and they were doing a considerable amount of work for the Government.

The report was unanimously adopted.

LISBON ELECTRIC TRAMWAYS, LIMITED

RECORD TRAFFIC

The forty-second ordinary general meeting of this company was held, on the 19th instant, in London.

Mr A. Newcombe Rye, M.I.E.E., the chairman of the company, who presided, said that traffic during the past year had constituted another record. 134,238,698 passengers having been carried, against 131,087,670, an increase of 3,151,028. The profit at £161,688 was, however, £9,810 lower owing to increased expenditure, largely due to the cost of removing and relaying track, the continued increase in the car mileage run and higher taxation. The board now recommended the declaration of a final dividend of 4 per cent. net, making, with the interim dividend, 6½ per cent. net for the year.

As to exchange, the escudo, for some years past linked to sterling at about 110 escudos to the £, in the latter part of last year was related to the United States dollar, and was now about 100 escudos to the £. It was satisfactory to note, however, that there was a free market for all currencies in Portugal, and no difficulty had been experienced in making remittances.

The period covered by the accounts included only the first four months of the war, and as the company carried substantial stocks purchased at pre-war rates, the war had had only a small effect during the period under review. In 1940 they must expect heavy additional expenditure. Coal was now double the price of 1939, difficult to obtain and poor in quality. Also the majority of the materials required showed a substantial increase.

This year Portugal was holding a series of centenary celebrations and an exhibition in Lisbon, showing the many resources and products of the various territories of its Empire. They had made a substantial contribution to the amenities of the exhibition by diverting certain sections of their tramway track and providing additional facilities for the rapid handling of passengers. The cost of these works, which would be substantial, the company was bearing as its contribution to the Portuguese national celebrations. In view of the difficult times he felt shareholders would agree that the results of the year's working were as satisfactory as could have been expected.

The report and accounts were unanimously adopted.

Shorter Comments

Company Results of the Week.—The BUTTERLEY COMPANY has realised an increase in trading profit from £287,288 to £343,714. Net profit, however, is £25,761 lower at £141,594. The company has made no allocation to reserve, against £30,000 in the previous year. The 10½ per cent. ordinary dividend absorbs a slightly larger sum than the 6½ per cent. tax free dividend paid in 1938-39. **ANGLO-EGYPTIAN OILFIELDS** earned a trading profit of £831,397, nearly double the 1938 figure. After making a taxation provision of £200,000 and placing £100,000 to exploration reserve, net profits amounted to £223,940 against £188,993. In 1938, the net profit figure was augmented by a transfer of £50,000 from stock reserve no longer required. The ordinary dividend has been maintained at 12½ per cent. W. J. BUSH, with a trading profit of £142,581, has also nearly doubled the 1938 total, but has maintained the ordinary dividend at 10 per cent. **MARSTON THOMPSON AND EVERSHED** net profits show a slight decline from £104,404 to £101,292. The company has in effect reduced the total dividend distribution by changing the rate from 15 per cent. tax free to 20 per cent. less tax. **TRUST HOUSES** realised an increase in trading profit of some £70,000 to

£297,203. The increase in net profit at £139,534 amounts to only £13,654, and the 7 per cent. dividend was maintained. The previous year's dividend of 5 per cent. is maintained by GRIFITHS HUGHES despite lower net profits of £82,835 against £89,252. **HALL AND COMPANY**, with a total income of £98,952, also enjoyed a less successful year than in 1938-39. Net profits at £50,129 showed a fall of £4,116. A 25 per cent. dividend is announced as before. Pending the announcement of the Government terms of hire for requisitioned tonnage, an element of estimate enters into the calculation of ROYAL MAIL trading profits, at £1,002,218 against £980,222 in 1938. After placing £508,714 to depreciation, net profit is £29,019 lower at £110,048. The 5 per cent. dividend is maintained.

MISCELLANEOUS

Royal Mail Lines.—Total revenue year 1939, £1,002,218 (£980,222). Trading profit, £915,616 (£903,187). Administration and taxation, £356,950 (£345,017). Fleet replacement account, £502,394 (£136,166). Depreciation, nil (£317,700). Ordinary dividend, 5 per cent. as before. Carry forward, £14,344 (£29,296).

Griffiths Hughes Proprietaries.—Total income year to March 31, 1940, £87,719 (£94,418). Net profit, £82,835 (£89,252). Ordinary dividend, 5 per cent. as before. Carry forward, £4,446 (£2,236).

Doncaster Amalgamated Collieries.—Trading profit, year to March 31, 1940, £427,830 (£216,650). Net profit, £289,250 (£120,115). General reserve, £100,000 (nil). Additional depreciation, £40,000. Ordinary dividend, 4 per cent. against nil. Carry forward, £85,922 (£125,013).

Rhodesia Broken Hill Development.—Net profit, 1939, £177,892 (£158,105), after charging £29,858 (£7,370) for tax. Written off development expenditure, £12,115 (£13,156). Capital expenditure, £300,000 (nil). Carry forward, £137,996 (£272,219).

Anglo-Egyptian Oilfields, Ltd.—Total revenue, 1939, £1,331,661 (£714,282), including credit from stock reserve, £50,000. Depreciation, £132,373 (£104,270). Taxation, £200,000 (nil). Exploration reserve, £100,000 (nil). Net profit, £223,941 (£238,993). "B" shares dividend, 12½ per cent. (unchanged). Carry forward, £141,249 (£150,808).

Primitiva Holdings, Ltd.—Net profit year to April 30, 1940, £65,333 (£81,022). Ordinary dividend maintained at 3½ per cent. Reserve, £5,000 (£10,000). Carry forward, £122,108 (£123,297).

Zinc Corporation.—Net profit, 1940, £142,575 (£184,422). Ordinary dividend, 30 per cent. Transfer from £ reef equalisation reserve, £42,240. Carry forward, £58,437 (£57,584).

CURRENT STATISTICS

Finance

GOVERNMENT RETURNS

For the week to June 15, 1940, total ordinary revenue was £10,763,000, against ordinary expenditure of £62,971,000, and allocation to sinking funds of £250,000. Thus, including all sinking fund allocations, the deficit accrued since April 1st is £407,178,000, against £127,299,000 for the corresponding period a year ago.

ECONOMIST BINDING CASES

Attractive binders to hold three months' issues of *The Economist* are still available. These binders have no wires, clips or metal contrivances so that each issue can be bound in an instant for permanent reference. Reading Cases to hold two issues, and made on similar lines, are also available. Both are bound in full cloth (blue) and lettered in gilt. The price of the Binder is 5s. 6d. post free (Overseas 6s. 6d.) and of the Reading Case 4s. post free (Overseas 4s. 6d.).

The French Collapse

THE full dimensions of the French collapse become daily more apparent. What was, only two months ago, a Great Power, strong and proud, is now so shattered that there is no entity to which the name of France can be attached. The French people, it is true, are still there, with their honour and their courage intact; but the people of Gaul are once more divided into three parts: one occupied, one muzzled, one exiled. The Government of France is a clique of generals and politicians at Bordeaux, whose actions are disowned by every organ of French opinion that still retains its freedom to speak. The soldiers and statesmen who are outside metropolitan France are still without any cohesive organisation. The whole structure of the French State is either captive or shattered.

It is a spectacle that has shocked the world. To those who took the Nazis at their word the brutal severity of the Armistice terms came as no surprise. The "grief and amazement" which have been felt both in Great Britain and throughout the world rather arose from the discovery that there was any group of Frenchmen—let alone a Government with a semblance of constitutional origin—who would accept such terms while they had an atom of free choice left to them. Even if Marshal Pétain and his colleagues were determined to ignore their treaty obligations and their ties of honour and loyalty, even if they were concerned only with the narrow interests of metropolitan France, it is hard to see why they should not prefer to fight on from North Africa. Severer terms could scarcely be imposed if German and Italian troops were to occupy every inch of French territory. It is difficult to understand why there was such ready, almost eager, acceptance of anything that Hitler and Mussolini chose to demand, such anxiety on the part of the men of Bordeaux to prostrate themselves before their country's enemies, such willing-

ness to strip themselves of the last vestige of dignity and courage.

One thing is quite certain: this is not France. If Britain has been betrayed by the men of Bordeaux, how much worse has been their disloyalty to France. There will never be a word of recrimination from this side of the Channel against the people of France, who have fought and laboured and died for the cause we share with them—who have given it much more than we have. We know there is a real France, which will one day be restored and with which we shall resume, as a matter of course, the ties of increasingly intimate friendship that joined us a few weeks ago. But in the meantime it is essential that we should make the most searching enquiry into the causes of the collapse. How did it happen that men who could act like this were in control of the State and its armed forces at the crucial moment? Was it a ghastly accident? Was it part of some sinister plot? Or are other free countries subject to the same fate? Could it happen here?

Dr Goebbels and his new French accomplices are, of course, already proclaiming that the whole episode merely exposes the fundamental rottenness of democracy. But, apart from the fact that all history refutes the argument, there is no evidence for it in the facts of the French collapse. It cannot even be argued that the Parliamentary system contributed to the weakness of French equipment. The people and the politicians were not responsible for the faulty tactical ideas of the French army; it was not the things that Parliament or the people could give—money and man-power—that were at fault. When the crisis came, it was not pressure from Parliament or the electors that determined the actions of the Government. M. Reynaud was not defeated in Parliament; he was dismissed by the President and his successors never consulted

Parliament. As for the people, the Armistice terms had to be kept from them until it was too late for them to make any protest, and Mussolini was apparently instructed to make his conditions moderate—for the time being—lest the French people should rise in their wrath and throw Marshal Pétain into the Gironde. It was not the people, nor even the Army, but the generals whose morale cracked. One of the clearest lessons to be drawn is that the surest way of preventing such a surrender is to keep Parliament in session and leave the Press unmuzzled.

Nor can the tragedy be explained by the temporary panic of men who have been bombed or shelled without mercy. The men who surrendered had not been in the front line; they had not undergone more than one or two air raids, none of them of particular severity. The men who *were* the targets of the dive bombers,

Nous, les petits, les obscurs, les sans-grades,
Nous qui marchions fourbus, crottés, malades

—they fought on with undiminished courage for ten days after Marshal Pétain begged for peace. The operations of the Army and the nerve of the commanders may have been affected by the vast host of refugees clogging every channel of communication. There is a warning in this for us—civilian movement in a theatre of war must be completely prohibited—but it can hardly be a sufficient explanation.

Must we, then, put it down to Fifth Column tactics, to the deliberate preference of some Frenchmen for Fascism, even if it is German, over liberal or socialist democracy, even if it is French? Undoubtedly this played a part. There are many circles of French politics where patriotism has for decades been at a discount, since it implied loyalty to

the detested Third Republic. In this respect France was far weaker than Britain, for with us it is the Right that has built the State and largely runs it, and the overwhelming majority of the Right are British first and capitalists second. But even in the French case it would be a gross over-simplification to say that the Right seized control and betrayed the nation. For there are many men of the Right, like M. Marin, whose courage was undaunted, while the men of Bordeaux include Socialists like M. Faure and former Socialists like M. Marquet.

The final truth seems to be that neither dialectical materialism nor military strategy can provide a complete answer; what was fundamentally at fault was the personal characters of the ruling men. And why was it that so many among the eminent characters of the Third Republic cracked under a strain less severe than other groups of statesmen have successfully withstood? Marshal Pétain himself has almost provided the answer. He said that France was defeated because she had too few children; he would have been nearer the truth if he had said that she had too many old men in high places. We have suffered from the same blight in this country in the recent past; we ought to be ready to learn our lesson now. We must put a premium on youth and vigour and courage rather than on "experience" and "judgment." We must be quite unsparing in rooting out of positions of trust all those whose resolution cannot be relied upon. These are tasks for the Prime Minister—and we may be thankful that we have a Prime Minister whose stoutness of heart none can question. There is nothing in the collapse of France that cannot be avoided here by vigilance and precaution.

Go To It

ON May 10th Mr Chamberlain resigned. He and the men about him had failed. The prologue to military disaster had begun abroad, and at home a sense of impending tragedy was awakening an anxious public to what was amiss in high places, to the lack of vision, courage and competence, to the phrase-bound timidity that was fast allowing the willingness of a united people run to waste.

Inevitably Mr Churchill took over and, since then, the character of our leadership has entirely changed; it is no longer a confidence trick. The spirit of Mr Churchill's administration is as different from that of Mr Chamberlain's as petroleum is from bilge water. The Prime Minister and the new men he has called in are not afraid to make war. They have no sworn tenderness for things as they are, for the mere habits of peace and the soft, seductive phrases of property and interest. They know the enemy's strength and colossal skill; and the old false-coloured picture of an enfeebled Nazi gambler tottering month by month to his certain doom has been packed away. In a mere six weeks, six weeks that shook the world, the new Government has shown itself not shy of taking the powers needed for meeting the most formidable menace this country has ever faced. The Emergency Powers Act in itself is a monument to the resolution of the new regime.

Even so, even though it is with a sense of gratitude and real confidence that the country can contemplate its new leaders, it would be a false and dangerous step to suppose that Britain's disjointed and tawdry war programme has yet been set right and made effective. If Mr Bevin, Mr Morrison and the rest are not shy of taking strenuous powers, they still seem slow to use them. Even in the new order of government, the phrases of Ministers still outstrip their performance. It is still not proved, as it could and should be, by hard deeds, that democracy in its British form is capable of meeting the totalitarian threat with an equal firmness and greater flexibility.

Illustrations are not hard to find. The prime subject of debate and argument at the moment is home defence. The Government has rightly rejected schemes to provide the entire population with weapons. To arm the people would be nonsense; and a people's war, in the vague catchpenny sense of the phrase, might prove to be no less than a people's massacre. But to enrol and train the people is

vital. A nation of grenade throwers is a figment of fancy; a nation of soldiers and munition makers is a necessity. The key to the achievement of this great army of defenders lies in the multiplication of equipment, and it will take time to raise the supply of arms from the pitifully low level at which it was allowed to rest for nine months of pseudo-war. Yet there are prior steps that could and should be taken; and first and foremost among them is the speedier summoning of men of military age for drill and training. To fight with shovels and broomsticks would be ludicrous, but to train with them, as the men of Kitchener's Army did during dark days in the last war, is not only feasible but imperative.

There is a point of great technical importance which strongly reinforces the demand, now widespread, for speedier calling up. At present, there is not the equipment to supply a great army. But the wheels are being set in motion, the men and machinery enlisted, for pouring out a flood of arms and munitions. On Thursday, Mr Morrison reported big gains in output. The time will come, if the mobilisation of men and machinery is carried through now with sufficient daring and completeness, when the furnishing of a great army will be possible. Then the need will be for men. We must see to it that the men are ready, fit, disciplined and made used to the exercise of arms.

This necessity for long sight and timely planning runs through the whole range of war organisation in these critical days. Powers have been taken in the field of production to employ all property and all persons as the Government may choose for the prosecution of the war. There is need to use those powers now, even though the immediate military effort that can be made is plainly limited by the shortcomings of past organisation and the grievous setback of disastrous defeats in Germany's chosen battlefields. We may ask whether these powers are being used as they should be. Arms factories and munition makers are working harder and more continuously than ever before. We know that a count has been made of the machine tools, skilled labour and plant available for war work, but it is hard to be certain yet that the widest possible immediate effort is being made. Have all the precious machine tools in existence been effectively marshalled for

war work, and war work only? Is it not true that, despite the recent speeding up, too many factories are still working only one shift daily? Is it not true that a great number of small firms and works which were used on war contracts in the last war are not being used now?

The same doubts apply to labour. Mr Bevin has talked well and finely. He has been given authority to deploy the country's workers as and where he thinks fit. But it is still his boast that his aims can be sufficiently gained by voluntary means without the use of these powers. It is true that some use of them has been made, largely to meet local difficulties, as in the redistribution of skilled labour between neighbouring works; but no steps have yet been taken sufficient to set on foot the recruitment of an Industrial Army, big enough to meet every need of the nation in arms that we have now to build. It is not enough simply to juggle locally, or even nationally, with the scarce supplies of skilled labour that are available. What is needed is a great increase in the labour force available for war purposes, skilled and semi-skilled; and the only way to do this, as in the creation of a great army, is to begin now with enrolment, enlistment, drill and training. Men must be ready when the need arises.

In all these fields the new Government has eyes to see what is wanted, but the advance towards that goal has not yet taken on that mounting speed which alone will bring this nation first to the winning post. To take but one more example: there is finance, the measure and mechanism of the translation of national resources into the sinews of war. Sir Kingsley Wood has pledged himself to undo the perilous leniency of his predecessor. But there is no tangible sign yet of the broad new conception of war finance that is now a sore and urgent need. The outline of the financial planning that total war economy requires is stated yet again in a leading article on page 1113. All that need be said here is that the single, simple truth that every possible useful resource must be taken away from civilian and non-necessary use and mobilised for war employment has not yet begun to permeate official policy. It has proved, perhaps understandably, impossible to limit civilian con-

sumption by clamping down wages. It is proving impossible to meet the needs of the expanded war effort solely by the transfer of purchasing power to the Government through taxes and loans. More loans and more taxes there must be, but the direct instrument whereby the nation's wealth can be dedicated to war, and to no other purpose, is the instrument of rationing and restriction. The aim should be to leave for civilian use only what is absolutely and barely necessary and every means to that end, including ruthless taxation and forced saving, in addition to the widest feasible system of rationing, should be employed.

It is widely and rightly held that this is no time for recriminations. Still less is it any time for captious criticism of a new and able Government which is facing a tremendous task with clear eyes and courage. It is only with the desire to help that we ask these questions. Why is the flow of deeds still seemingly retarded? It is not, as some think, because the old gang of politicians still holds some sway in the councils of State. Physically they are still there, but their influence is at present sterilised. It is not they, but men and methods not open to public criticism or responsible to the people's will, who probably stand most stubbornly in the way now. Mr Churchill and his new men have not yet found it possible to remove the bureaucratic inertias upon which the political sloth of the past fed and waxed fat. The qualities of timid caution and negative thinking, always a danger in a bureaucracy, have been encouraged in the past two decades both by unadventurous Ministers and by the overstrict control of the Treasury. Feather-bed obstacles of this sort are hard to overcome; but in every vital matter of war organisation, in home defence, production, labour and finance alike, Ministers should ask themselves one question, and one only. Could Hitler do it? If Hitler could, then they can. The mood of the people now is such that they, unlike Hitler, can do it without the aid of any Gestapo or concentration camps. "Go to it," Mr Morrison has urged the nation. The nation is now echoing back to the Government itself the Government's own appeal. "Go to it"—and let nobody stand in the way.

The Secret Weapon

HITLER'S training ground for a propaganda which has just scored its most astonishing triumph in the collapse of France was his own unfortunate nation. The Nazi campaign began to gain momentum during the world economic crisis. The complete irrationality of the world's economy and the meaninglessness of its local manifestations in Germany induced in the German masses a mood of irrational despair and a corresponding hope in some equally irrational deliverance. The Nazis exploited this mood. They had no rational programme, and, having abandoned reason, inevitably they fell back on a programme of naked power unjustified by any consecration to particular ends. Interpreted in terms of a national movement, this programme spelt unlimited German domination.

As a programme it lacked popular appeal. The German people were not interested in world empire. They wanted bread, work, security or defence against rival interests. Hitler had to find other means of persuasion. He therefore promised everything to everybody—freedom to the employers, equal freedom to the workers, security for the small tradesman, security for the big trust, peace for the pacifists, war for the soldiery, nationalised industry to the Socialists, economic feudalism to the capitalists. At the same time he played off these groups against each other, fomenting Communism, for example, to frighten the business world into submission and promising to destroy capitalism in order to content the "little man." The dual method was on the whole successful. Such was the mood in Germany during the crisis years that Hitler's wildly inconsistent programme was believed because of, rather than in spite of, its inconsistencies, and the increase in mutual fear and distrust which Nazism engendered played into the hands of the man who had promised each group salvation from all the rest.

Thus, almost without a blow, Hitler undermined Ger-

man society before he captured it. His policy with other societies has been no different. There is a bitter analogy between Nazi propaganda and the Nazis' mechanised columns nosing their way along the enemy lines, thrusting here, thrusting there to find the weak spot in the defences, and once the weak spot has been discovered concentrating all their power and strength and venom on that particular point, bursting through and spreading out behind the gap they have created. So it is with their propaganda. There is not a body politic in the world whose spiritual defences are not being felt and tested by the Nazi propaganda machine. The weak spots of treachery, cowardice, avarice or honest prejudice are carefully marked. At the appointed time the flying columns of bribery, lies, threats and promises are launched and the bridgeheads fall. Perhaps it is the head of a Government department, a distinguished publicist, an ex-Cabinet Minister, a disgruntled general, the director of some important industrial concern. Through these men in key positions the propaganda passes and spreads out—to the Government department, to the political coterie, to the military clique, to directors and shareholders or to other members of the same industry.

The aim of German propaganda never varies. It is the forwarding of German power. The content varies considerably, according to the group under attack. The technique, too, has as many forms as it has victims, but the appeal is invariably launched at a sub-rational level. The Nazis do not, in the first place, seek to convince. Their aim is to create an atmosphere in which half-submerged phobias, hates and fears can be brought to the surface and there guided towards the desired end. They play on prejudice, increase distrust, whisper suspicion, sow doubt. They act as a dissolvent force on principle, faith and honest conviction. It is an incredibly skilful exploitation

of psychology, of the semi-unconscious, semi-automatic instincts of the human mind.

The Nazis have probably scored their easiest triumphs by exploiting human vice and weakness. Their commercial penetration, for example, has been powerfully aided by bribing important business men into profitable but illegal operations and then using the threat of exposing this illegality to turn the frightened industrialist into a Nazi agent. There is hardly a Balkan country which does not offer examples of this method. Dissatisfied ambition has also played an important part, especially once the possibility of German domination of Europe turned to certainty. Many men prefer a position of quasi-authority under German rule to obscurity under their own national Government. Major Quisling is an example of this, and a host of other instances could be cited in the Low Countries or South America.

The exploitation of vice is not, however, either the most horrifying or most skilful side of Nazi propaganda. The Nazis have secured their greatest successes by exploiting honesty. Any society is divided and subdivided into different groups of interest or opinion. Between the various groups, tension exists. Where the differences go deep, as, for example, with racial differences or economic cleavages, the tension can be great enough to destroy social cohesion. It is the Nazis' first aim to make use of all these differences, and by increasing tension to cracking point to create a moment of anarchy in which the intervention of extraneous force is welcomed by some while the rest are powerless to resist. In the early years of Nazidom, national differences were most fully exploited, not only among German groups outside the Reich, but Czech against Slovak, Magyar against Roumanian, or Serb against Croat. For the last year or so, however, the differences played upon have been mainly in the sphere of ideology and of the economic and social ferment from which the ideologies have sprung.

Two of the strongest motive forces in the Europe Hitler found were hatred of capitalism and fear of Communism. He has made good use of both. Right Wing groups have been encouraged to look to him as the bulwark of Western civilisation, and Spain, and to a lesser extent and more cynically Italy, have been brought into his orbit on this basis. But the Communism from which he offered to protect timid industrialists, Right Wing Catholics, traditionalists and Conservatives was, more often than not, being backed by Nazi funds and carried on by Nazi agents provocateurs. The play on these rival fears was so skilful that Hitler has—as the last weeks show—actually brought off the *tour de force* of keeping intact, simultaneously, the Anti-Comintern Front and the Pact of Friendship with Russia. France, to-day, is a pitiful example of this technique. Since the beginning of the war, Thorez, the Communist leader, has been in Germany, and German propaganda among the French troops has followed the lines of "plutodemocratic capitalist Britain" and "Ger-

many linked with revolutionary Russia for the destruction of world capitalism." On the other hand, the Pétain Government, like the Franco Government, represents those forces of the Right which prefer the European hegemony of Germany to collaboration with the "Liberal-bourgeois-Socialist democracy of Great Britain, carrier of Bolshevism."

Nor is the chronicle ended with Right and Left. The British imperialist who thinks that Europe is no concern of Britain's finds an enthusiastic response and more support than he is aware of in Berlin. The American isolationist who prides himself on his power of resistance to Allied propaganda is permeated with Germany's. The pacifist who, with religious conviction, denounces the wickedness of war may well find his honest peace propaganda sheet financed out of Nazi funds. At another level, groups and societies of every sort—anti-vivisectioners, missionary societies, health and sports and beauty leagues—can find themselves being used as centres for a propaganda of which they are almost unconscious.

The danger to democratic society of Nazi methods is so obvious that it need hardly be stressed. Unlike the totalitarian dictatorship, democracy admits and recognises the fact that any healthy society is composed of different groups of interest and opinion, and that tension between these groups is possible and must be met not by suppression but by the discovery of a *via media*. But a condition of this method is that no differences shall be allowed to grow into unbridgeable gulfs and no group shall entertain feelings of hostility deep enough to defeat all hopes of compromise. Nazi tactics are exactly designed to undermine these safeguards of liberty. The whole aim of Nazi propaganda is to exacerbate differences, fan hostility, breed distrust and create fear. Its business is to see that men are divided from their fellows, that interests clash and differences of opinion grow into the conflicts of rival fanaticisms. The unity of democratic society, which is above all a unity of tolerance and balance, is peculiarly vulnerable to a propaganda which threatens to destroy both.

We need not suppose that our own country has escaped the dangers of Nazi infiltration or that war with Nazidom has rendered us immune. We have our cowards and our ambitious men; we have our extremists to Right and Left; we have our anti-war groups—all real or potential instruments of Nazi propaganda. In spite of our representative and truly national Government, in spite of the overwhelming loyalty of the mass of the people to the cause of freedom for which we took up arms, in spite even of the age and stability of our national traditions of unity and liberty, we must remain unceasingly alert to counteract in others and crush in ourselves the fears, suspicions, resentments and prejudices on which Nazism hopes to feed. To sap our moral resistance first is a condition of any Nazi victory, but this is a front on which we are all mobilised for the fight. Here, in a valid sense, it is a people's war where "nothing but ourselves can beat us."

NOTES OF THE WEEK

The Armistice Terms

France's armistices with Germany and Italy, signed on June 22nd and June 24th respectively, have brought her into complete subjection "under the German jackboot and the Italian dancing pump." According to the terms of the German armistice, Germany is to occupy a large part of France, north and west of a line running from Geneva through Chalon, Moulins, and Bourges to St. Jean Pied de Port and the Pyrenees frontier. Germany can demand the surrender and delivery of armaments from non-occupied territory and all fortifications are to be handed over intact. "The French fleet, except that part left free for the safeguard of French interests in the Colonial Empire, shall be collected in ports to be specified, demobilised and disarmed under German or Italian control." Germany gives a guarantee not to use the French fleet in the war "except those units necessary for coast surveillance and minesweeping" (a proviso whose application can be extended almost indefinitely). All French naval vessels outside territorial waters are to be recalled. No French soldiers are to leave

France, no Frenchman may fight Germany in the service of other Powers, no war material is to go to Britain. French merchant shipping must remain in harbour and resumption of commercial traffic will be impossible without German and Italian permission. Aircraft is to remain on the ground and all aerodromes will be under enemy control. All armament works, stocks, naval yards and so forth must be abandoned intact. France is to have no wireless transmitting stations. Refugees are to be returned to occupied France and German prisoners of war must be given up. French prisoners will not regain their liberty. France is to pay for the German army of occupation and "the present armistice is to be valid until the conclusion of a peace treaty and to be denounced at any moment if the French Government do not fulfil their obligations."

The Italian armistice terms repeat such provisions as the handing over of military stocks, war material, naval bases and aerodromes, the demobilisation of the French Fleet, the immobilisation of the merchant fleet and of all aircraft.

the release of prisoners and internees and the conditions regulating the duration of the armistice. Italy's own terms are largely concerned with the French Colonial Empire. Italy is to have full rights over the port of Jibuti and the French section of the railway to Addis Ababa. Various zones in France, Tunisia, Algeria and French Somaliland are to be demilitarised to a depth varying from 30 to 120 miles. For the duration of the war, the naval bases of Toulon, Bizerta, Ajaccio and Oran are to be demilitarised and the process must be complete within fifteen days. Italy's direct territorial claims are limited to the "advance lines" on which the Italian armies were standing at the close of hostilities. The frontier town of Mentone will thus presumably be handed over. In fact, however, reports suggest that the Italians are interpreting the "advance lines" elastically and are swarming into French Savoy. These then are the terms to which the Pétain Government has agreed. It is difficult to imagine a capitulation more complete or terms which cripple more effectively the nation's life and liberty.

The Franco-British Negotiations

"No doubt," in Mr Churchill's words, "a much fuller account will be given by history" of the tragic events of the last fortnight, but a fairly full account has already come from the Prime Minister himself, and it is possible to give at least an outline of the progressive stages of France's collapse. General Weygand was summoned to Tours by M. Reynaud, and on June 12th he gave his opinion that France could not escape total occupation. M. Reynaud invited Mr Churchill to consult with him, and on June 13th, accompanied by Lord Halifax and Lord Beaverbrook, the Prime Minister flew to Tours. Here M. Reynaud explained the plight of France and pleaded to be released from the undertaking not to seek a separate armistice. Although Mr Churchill fully realised that France had borne the brunt of the fight and that "we had not so far endured equal trials or made an equal contribution in the field," he could not consent to the request, and M. Reynaud agreed to make another appeal to the United States. It was decided that if the answer was unsatisfactory, then the situation would be reconsidered. M. Prouvost, speaking for the Pétain Government, would have the world believe that, at this point, Britain consented to the possibility of a separate armistice "against her will" but understanding France's difficulties. However, a Cabinet record has been kept of the meeting, and we have no reason to doubt Mr Churchill's version of the conversations. On the 16th M. Reynaud, now in Bordeaux, told the Prime Minister that the American response was inadequate, and asked for a formal release from the agreement. Our reply was to consent, subject to one proviso, "that the French fleet would be despatched to British ports and remain there while the negotiations continued," and to dissociate ourselves from the armistice. That same evening, Mr Churchill was about to set out for France when news of the fall of M. Reynaud reached him. With the Pétain Government it was impossible to establish anything like satisfactory relations. The First Sea Lord, the First Lord and Lord Lloyd all went to Bordeaux to urge the importance of the French fleet, but "everything was fusing into collapse at that time." Nevertheless, "many solemn assurances" were received that the fleet would not be allowed to fall into Germany's hands. It was this breach of faith and not (as Marshal Pétain so ungenerously suggested) "fear lest the same fate should overtake" their own country that caused the "grief and amazement" of the British Government on reading Article 8 of the Armistice.

France d'outremer

The continuance of any armed resistance on the part of France depends upon the attitude of the Colonial Governors and in particular upon the High Commands in overseas territory. As soon as the extent of France's capitulation became known the Prime Minister issued an appeal "to all Frenchmen outside the power of the enemy to aid . . . to the utmost of their strength the forces of liberation" and, on the same day, it was announced that General de Gaulle would, in agreement with the British Government, set up a Provisional French National Committee to carry on the struggle and "to take under its jurisdiction all French citizens at present on British territory." The composition of the National Committee, in spite of a promise of immediate publication, has not yet been made public, and a good deal of uncertainty still prevails over its status and its connection with the French colonies and armies overseas. There can

be no doubt that *France d'outremer* is anxious to continue the struggle, and is outraged by the humiliating terms of the Armistices, particularly the Italian terms. Yet there are a number of obstacles in the way of co-operation and action. There is, first of all, loyalty to the Pétain Government, which includes General Weygand and may still include Admiral Darlan. General de Gaulle is a general of very recent standing, and difficulties of military status may well prevent General Nogues in Morocco and General Mittelhauser in Syria from accepting his leadership in place of that of the Bordeaux Government. His presence on British soil is also a handicap, since resistance must ideally be organised from French territory. Again, the colonies are still in the dark over the nature of the threat which they are to meet. General Nogues, the Resident General of Tunis, and the High Commissioner of Syria have declared their refusal to surrender territory and their determination to defend their lands against attack. Does this, however, cover active and offensive co-operation with the British Forces? The latest reports from North Africa suggest that General Nogues has determined that resistance must continue and is prepared to lead it, but much depends on the amount of assistance in money and war material that Britain can provide. Everything suggests the colonies will fight on, provided we can reassure them that their intervention will be effective and contribute to the final liberation of France.

A Bigger Army

Last Saturday the registration of just under 333,000 more men (born in 1911) for military service brought the total number of registrations since conscription began up to over 2,800,000. Next month four further age classes will be registered, bringing the total up to about 4,000,000. Even if due allowance is made for the fact that in the thirties more men are likely to be engaged in reserved occupations than at the earlier ages, the number of men liable to be called up will be formidable by the end of July. Actually, these figures of registrations have been dangerously bemusing in the past. They have hidden—even been used to hide—the slowness of the actual call-up. Up to now, in spite of the introduction of conscription, Britain has been planning to have a relatively small army (by Continental standards) at a fairly late date. The rate of calling-up is determined by two things: the projected size of the army at some fixed future date; and the rate at which supplies and equipment are forthcoming. The first has been too small—and too late; the second too slow. There are some who say that the loss of a battlefield in France absolves us from the need to carry on with the expansion that the defeats there appeared for a spell to make imperative. On the contrary, the need for a big army is greater than ever. Not only a battlefield was lost with the French capitulation, but the French army as well, an army of millions, an army that must now be replaced by the free peoples, if the double task of defending Britain and then of striking at Germany is ever to be achieved.

The call-up in June was speeded up; and the restrictions on voluntary enlistment have been somewhat eased. But registrations are still too far ahead of summonses to serve;

and it is only a very partial explanation to say that the men who opt on registration for the Navy or the Air Force are kept back to be called upon when they are wanted. The Schedule of Reserved Occupations has always been a monument to the meagre imagination of Britain's war chiefs, and the latest revision (now available in detail at any bookseller) is no conspicuous exception. The idea of scientifically sorting out, and exempting from soldiering, men whose abilities and experience must be of more use in essential work at home is excellent—in fact, indispensable. But the Schedule is too swollen with trimmings, with occupations that a beleaguered nation could do without to-morrow; all sorts of academic and professional people are unaccountably reserved; workers in non-essential trades, or in trades like distribution which, though essential, could bear cutting down drastically, are protected. In the beginning, when we were starting to organise for war, this was understandable. Now, when we are fighting for our lives, it is hardly credible that an appreciable part of the male adult population should be established by law (however provisionally) in a barren limbo, neither fighters nor war workers. There is a vicious circle here that *can* be squared. The barrier to a bigger army is the lack of supplies and equipment; if every useful man—and woman—were put to produce war goods, then the rest could be made ready, in their hundreds of thousands, for fighting.

* * *

Industrial Man-Power

Mr Bevin is beginning to repeat himself. "There will be a wider call (he said again last week) for labour from less essential industries and for women to go into munitions . . . we are all one army." This is pease pudding in the pot nine months old. The new Minister of Labour has complete powers, not only to enlist unemployed people and women for war industries, but also to transfer workers from employment that is not needed into employment that is. Yet there is small evidence that these powers are being at all widely used, or likely to be so used. Mr Bevin has shown energy. His words have been blunt and frank. He has in mind an important scheme to bring women into factories for one or two days a week to relieve the workers there and to accustom the women to industrial employment. But, though it is too soon yet to pass judgment when much greater schemes may be swiftly ripening, the Minister's deeds still fall short of his exhortations. There has been an appreciable voluntary increase among firms in the unskilled men and women put under practical instruction; and the training of unemployed workers has quickened; but the chief actual and direct consequence of Mr Bevin's administration so far is the unremitting toil that the existing staffs of war factories have willingly consented to put in. There are two possible reasons for the seemingly slow progress, both disquieting to a nation on the point of siege. One emerges from the stock answers still being given to Mr Keynes's plea that workers should be forced out of non-essential trades *en masse* and made available for war work: namely, that the people put out of work would not be suitable for war work; that private and public enterprise are too precious to stop; even that the whole business of cutting civilian consumption to the bone can, and should, be left to "private retrenchment and the good taste of the mass of the public." The notion that workers of all sorts can, and must, be *made* suitable for war work spreads only slowly, and the hard fact that civilian consumption and, *pari passu*, civilian manufacture and services must be drastically lopped by force is not found uniformly palatable. The second possible reason for timidity might conceivably lie in the Government's own planning. If the Government were not making every effort to raise the output of aircraft, tanks and every sort of war supplies to the absolute maximum possible, if it were still the view that more than a limited effort to increase productive capacity was not necessary, then it would indeed be no use Mr Bevin ruthlessly transferring workers and enlisting new ones, because there would be no work for them—and no security for these islands, let alone a chance of victory.

* * *

Isolation *versus* the Monroe Doctrine

The centre of American politics has shifted from Congress to the Republican Party Convention at Philadelphia. The Republican Party finds itself in a very uncomfortable position with regard to foreign politics, for the Republicans must either plump for isolationism, a step which would alienate millions of voters to-day and untold more millions once London has been bombed, or else launch a "help for the Allies" campaign on which they have long been forestalled

by the President. The election "platform" prepared by the Resolutions Committee of the National Convention is an uneasy compromise between the two courses—with its talk of preparedness, no war and help for oppressed peoples. But the American public is on the whole in no mood for compromise, and the only hope the Republicans have of victory is to nominate a personality with a policy, which is one reason why Mr Wendell Willkie, with his uncompromising championing of the Allied cause and his equally uncompromising attacks on the New Deal, stands a chance of nomination. Whether the other Republican aspirants, Messrs Dewey, Taft, Vandenberg and possibly, after his important speech this week at the Convention, Hoover, will be able or anxious to manoeuvre Mr Willkie out of the running remains to be seen. Certainly he seems to be the only man of a stature sufficient to make the attempt to stand up to President Roosevelt's popularity and prestige. A recent Gallup survey showed that, if the President were to stand again, 49 per cent. of the electorate would vote for him in spite of the vexed question of a third term. The same survey, however, prophesies a landslide for the Republicans if any other Democrat is nominated.

*

The international situation continues to play into the hands of those who support the Allied cause. The extent to which Germany's success has encouraged Japan's extremists and has led to a delicate situation in the Pacific is a reminder to the United States that, in a world given over to the robber States, American interests might, indeed most likely would, suffer along with those of Britain and France. The reason behind the movement of important naval units from Honolulu is still obscure. Possibly the United States is anxious to reinforce the Atlantic fleet in face of the menace from Germany. Another likely explanation is that the ships have been sent to keep watch on the Japanese naval units off Indo-China. A third possible destination is South American waters. The reports of Nazi activity below Panama grow graver every week. On top of the Uruguay scare comes news from Brazil which suggests that German propaganda—on the lines of the British blockade ruining the market for South America's agricultural exports—is making considerable headway in Brazil and the Argentine. Anti-United States propaganda—Yankee imperialism, dollar diplomacy—is also prevalent. The Navy Department appears to take these threats to the Monroe Doctrine very seriously indeed, and talks of "trouble" in terms of months, not years. The cruiser *Quincy* is remaining at Montevideo, and the flagship *Wichita* is at Rio de Janeiro. The battleships *Arkansas*, *Texas* and *New York* put into La Guaira in Venezuela during the week, and now the cruiser *Phoenix* has been despatched to Valparaiso. This use of sea power to shore up South American independence may help to remind the United States that the British Navy is still the first bulwark of the Monroe doctrine.

* * *

The Mediterranean Front

The future course of the war in the Mediterranean obviously depends on the degree to which the French Colonies decide to carry on the struggle, but our air raids continue, and a number of towns in South Italy, including Naples, have been bombed. The week's fighting in Libya and Abyssinia has been in the shape of local skirmishes, in which the morale of Italy's native levies appears to have left something to be desired. The Italians themselves are too busy organising victory marches at home to do much fighting, and, in any case, they are waiting to see if the demilitarisation clauses of the French armistice are carried out. Then presumably they hope to stage other victory marches—into France's disarmed territories. The state of non-war makes Egypt's position easier for the time being, but Alexandria has been bombed, and Egypt cannot hope to postpone a decision indefinitely by steadily increasing the distance between her troops and the Libyan frontier. The Egyptian Cabinet has resigned, and there is a possibility that an All-Party Cabinet under the leadership of Ali Maher Pasha's brother will be set up to take a more decided line over the present crisis. The Egyptians are naturally reluctant to commit themselves with the war in its present fluid state, but not all Italy's propaganda can convince them that they would be better off as an Axis fief than as a free associate of Great Britain.

* * *

Kremlin and Axis

There is perhaps rather too much wishful thinking in the country on the subject of Russia. We have Mr Churchill's

word for it that our relations with the Soviet Government are "agreeable," and it is certainly true that, in the long run, the Soviets and Britain have this in common, that neither in Europe nor in the Far East does the hegemony of a single warlike Power increase their security. But the run is very long, and, for the time being, we have to reconcile ourselves to a large measure of Russo-German collaboration in the political sphere. It springs from the fact that, however fundamentally hostile their outlook, for the time being Germany is too heavily engaged elsewhere to resist Russia's defensive expansion, while Russia's relative unpreparedness, which her new seven-day-week armament drive will not remedy for months to come, fixes a limit beyond which she dare not tempt Germany's patience. Within these limits, the "reinsurance" policy goes merrily forward, if not with German connivance at least without formal protest from the Reich. King Carol's transformation of his country into a totalitarian State, with Axis affiliation, has not saved his country from Russia's advance. After an ultimatum delivered, it seems, by the Kremlin on June 26th, Bessarabia and part of the Bukovina appear to have been ceded, and it is even reported that Constanza and possibly other Black Sea ports will be given up as well. What Germany's *quid pro quo* will be remains to be seen. Very possibly it will take the form of an exclusive lien on Roumanian oil. On the other hand, the landslide of Balkan revisionism may now have been set in motion, and what territories will be redivided and to whom the sovereignty will pass *may* be decided by force of arms, but a division on the basis of pre-agreed spheres of influence is a possibility confirmed by the rumour that Turkey's abstention from the war in the Mediterranean on the grounds of Protocol 2 of the Treaty of Ankara (which absolves Turkey from any intervention which might involve her in hostilities with Russia) was dictated by Russia in direct understanding with Germany.

* * *

Japan's New Demands

Japan is making the most of the Allies' embarrassment. The extremists are once again urging a close alliance with Germany and Italy to drive Great Britain and France from the Far East and the papers are full of "East Asia" and Japan's "Monroe Doctrine." Probably the only restraint at this moment is uncertainty over Russia's reactions and the likelihood of the United States' grave concern over any alteration of the *status quo* in the Far East, a concern which might be translated into terms of a trade embargo. But there are obvious concessions which can be wrung from the Allies, short of actual territorial modifications of the *status quo*. France is, militarily speaking, non-existent for the time being. Hence the confidence and effrontery with which Japanese inspectors are supervising on Indo-Chinese soil the stoppage of China's supplies and the speed with which Japanese warships have arrived off the Indo-Chinese coast. Great Britain's forces and particularly her naval forces are heavily engaged in the defence of her own security. The Japanese fleet, let loose in Far Eastern waters, threatening Australia's lines of communication and the integrity of the Netherlands Indies, would be an added embarrassment in a military situation which is already quite delicate enough. It is therefore likely that Britain will seek some sort of compromise with Japan over the three recent demands that the passage of arms to Free China via Burma and Hongkong should cease, and the troops at Shanghai be withdrawn.

* * *

Two Blockades

Invasion may still not be the chief weapon in the enemy's armoury against us. Counter-blockade accords even better with Hitler's will to turn back the pages of history and re-write them, and attacks upon British trade and shipping were the one consistent element in Germany's waging of the war before the land battles in the West began. Then they failed, and the crisis of 1917, when the submarine menace threatened Britain with speedy defeat, never seemed likely to be repeated. Now Germany, with air and sea bases from Norway to Spain, is better placed to renew the campaign to fray our vital sea-routes. Already, as the latest published figures of sinkings (for the week ended June 16th) show, submarine activity has restarted, and the recent regular air raids on this country have included the tentative bombing of certain ports. Indeed, according to a significant new propaganda chorus in the Reich, Britain is already blockaded. This claim is based, first, on our loss of imports from Europe, and, secondly, on the new vulnerability of the English Channel and East Coast ports. On the first count,

the loss of European eggs, bacon, vegetables and (perhaps most important) vegetable seeds has undoubtedly been inconvenient; but there has been no serious loss whatever that cannot be substantially replaced from other sources beyond the German grip. Actually, incoming food supplies as well as stocks of vital foods are strikingly high. It is the rate of supply from overseas that really matters over any period longer than several weeks, and so far this has not been appreciably disturbed. Here Dr Goebbels's second count comes in. If recent events prove to have improved Germany's naval, as well as her topographical, position in the war, then the threefold task of British sea-power, to protect shipping, to blockade German Europe and to defend these islands (to say nothing of offensive and defensive obligations in the Mediterranean), will admittedly become much harder. The French Navy, for instance, has done notable work up to now in both convoy and interception. Even so, there is no evidence—and small reason—to suppose that Germany will in fact be able to turn the tables of blockade on Britain. Since the beginning of the war, 25,473 ships have been convoyed, with a loss of only 36, and the flow of food and materials has been unceasing. At the worst, so far as we can tell yet, intensified enemy action should only cut down the luxurious margin of imports we have so far allowed ourselves; and the fact that our blockade of Germany is operated on the ocean highways, at long distances from European shores, should make the enemy's acquisition of a vast Western seaboard of relatively minor moment. The peril is undoubted, but the remedy is within our power.

* * *

A Food Plan

Shipping losses are likely to go up in the near future, but it is not losses that we have most to fear. The chief check on our imports will probably be the need to re-route our shipping and to reshape the present arrangements for unloading and distribution. Steps to minimise the delays and brief shortages that this will cause are already being taken. The long-seen necessity to make larger use of every available port and harbour in the West is, belatedly, inspiring action—though it should be emphatically denied that the Port of London and the East Coast have fallen out of busy use. And arrangements for distributing and stocking foodstuffs are being strategically decentralised to fit new channels of entry, to serve each locality from near at hand and to make use of every possible place of storage right down to the whole congeries of retail shops. Even so, the flow of imported foodstuffs which is our life-line, whatever the size of our stocks may be, must necessarily be slowed down and reduced in volume; and, as a striking letter from a group of research economists to the *Manchester Guardian* urged a few days ago, the need for an immediate and "drastic extension of the rationing system in order to conserve food supplies" seems plain. Officially, there is "no suggestion of an immediate extension of rationing." Stocks and supplies are at present excellent, and facilities for really large-scale storage are unfortunately not sufficient to permit the simple transfer of foodstuffs from consumption to stock. Nevertheless, it would obviously be possible, for instance, to go some way in the direction of concentrating current consumption as far as practicable on perishable foodstuffs, setting aside more

durable foods for future use; and even more obviously possible actually to cut down the quantity of food needed to be imported by sternly reducing the amount consumed now or at any time. Combined with the Government's new agricultural policy, which is to rush up home output and sharply curtail imports of feeding stuffs, as well as with a much-needed nutrition policy, which would concentrate our eating on a restricted range of basic foods balanced to maintain health and strength, some such programme of deferred consumption, storage and extended rationing must be a main buttress of home defence. The only really difficult problem then would be a social one, not one of absolute shortage at all. As a nation we eat far too much, just as we consume far too many other things that should also be ruthlessly rationed now; but the poor cannot afford to indulge themselves at any time, and the strictly limited basic ration—of food or anything else—must be kept within everyone's reach.

* * *

The Defence of Ireland

The peril to this country of the continued neutrality of Eire is causing grave concern, and signs are not lacking that Eire realises the peril it involves for herself. At a recent all-party meeting in Dublin a strong appeal was made for recruits for the defence forces, and the people as a whole were urged to respect and support legally constituted authority. Not only is there a ready-made Fifth Column in the persons of the I.R.A. and the members of the German Embassy, but neutrality forbids any staff talks with Great Britain (or even Ulster alone) on the best means of defence. Many recruits have stipulated that they must not be asked to fight on the side of Britain so long as partition exists. In the meantime, the physical division between Eire and Ulster has been made more real by the closing of the frontier between them—visitors from Eire are now required to prove that they are entering Ulster for purposes of national importance to the United Kingdom. The Ulster leaders, for their part, have expressed a willingness to drop the partition controversy during the present danger, a concession which manifestly comes easier to them than it would to their neighbour. They are anxious to discuss mutual defence measures, and it has, in fact, been reported that unofficial talks with Eire have been held. The sense of injustice which Eire nourishes is understandable, but she must realise that at any time now she may have to make a stand, and, unaided, will certainly fall. In this war of non-neutrality, even America has abandoned many of neutrality's prescriptions. Cannot Eire do likewise and drop the self-evidently absurd pretence that Great Britain is as likely to invade her as Germany is? There is no doubt that Irishmen will readily spring to arms in defence of Ireland. But the fact remains that an alliance between Eire, Ulster and Great Britain is the only way of making the defence effective.

* * *

Purchase Tax Discussions

It is reported that consultations between the Customs and Excise and trade organisations to thrash out the method of applying the Purchase Tax have been largely completed. Such consultations were obviously necessary if the tax was to be equitably administered. In normal circumstances, the fullest opportunity would be required to establish precisely what firms should be allowed to register as wholesalers, and ample time could have been given to the innumerable marginal cases. Trades are complex, and their complexities differ so widely that no hard and fast definition of wholesaler and retailer could be applied to them all. In each case, it is a question of fact. That being so, can we afford to waste any further time and effort in devising a tax which will involve a tremendous administrative problem; will react uncertainly and unfairly on small firms in many trades; will seriously assist the already strong forces which are working for a rise in prices; and, withal, will produce no volume of revenue sufficient to justify its adoption, even if the tax is inflicted at the stiffest conceivable rate? If we are serious in our protestations that prices must be kept as low as possible, we shall avoid this gratuitous measure to increase them. If we are serious in our efforts to bridge the gap between revenue and expenditure by sterner means than inflationary borrowing, we shall eschew any new tax whose contribution to revenue is measured by a paltry hundred millions, at most, and obtained only at great administrative cost. Dividend limitation had merits, but it was abandoned. In our present situation a Purchase Tax would be an untried instrument for producing a fraction of the revenue which is needed. It, too, should be replaced by simpler and more fruitful measures, accompanied by a stringent extension of rationing.

Higher War Pensions

Before the war the Ministry of Pensions was a slowly dying Department. Now it covers the pensions and allowances for members (and their dependants) of the fighting Services, the Mercantile Marine and the fishing fleet, and it administers the Personal Injuries (Emergency Provisions) Act, by which pensions and allowances are paid to civil defence volunteers suffering physical injuries in the performance of their duties and to gainfully occupied civilians suffering physical injuries as a result of enemy action. In addition, it is responsible for the War Service Grants Advisory Committee, which considers claims for allowances in respect of serious hardship, that is, inability to meet commitments as a result of calling-up. The rise in the cost of living since last September, when the new Royal Warrant for war pensions was introduced, has strengthened the opinion generally expressed at the time that the rates were fixed far too low, and they have now been revised. In the House of Commons on Tuesday, the Minister of Pensions said that the new rates would mean a rise from 32s. 6d. to 34s. 2d. for a totally disabled private soldier, from 5s. to 8s. 4d. for a wife, from 5s. to 6s. 3d. for the first child and from 3s. 4d. to 5s. for the second and all other children—the ridiculous provision under which children's allowances stopped at the third child has, therefore, been abolished. The new rates have been based on the cost-of-living index number at the end of May and are liable to adjustment in the event of a sustained rise in it. Another amendment enables pensions to be paid to parents not only if they were actually dependent upon their son's allowances at the time he was killed, but also if they should subsequently be in need; that is, prospective contributions from a son to his parents are taken into account. The chief objection is not that they will have to pass a needs test as such, but that it introduces another needs test. It is now possible that in the same household there will be a means test for an unemployed member, a means test for old-age assistance and a means test for pensions of war. The case for bringing all social service allowances and pensions into line, on the basis of a minimum below which no household should be allowed to fall, is getting stronger every day.

* * *

Maintenance or Work

The Unemployment Insurance Bill introduced in the Commons on Wednesday has two objects. One, in line with the general upgrading of social allowances and pensions that has proved necessary since September, is to counter the effect of a 17 per cent. increase in the cost of living on the purchasing power of insured unemployed. The other is to bring into the insurance scheme nearly half a million workers with incomes between £250 and £420 a year, workers who have long lived in an uneasy no-man's-land between the State-aided poor and the independent well-off, and who are now liable, with the cutting-down of non-necessary civilian trades, to fall out of work and into distress. This latter change (carried out two years ago in health insurance, has long been advocated, and after the war, when all the hard problems of remobilisation for peace work come up for solution, the extended structure of the unemployment insurance scheme should prove invaluable. In future, single men over 20 years of age in benefit and out of work will get £1 a week instead of 17s. and unemployed women of the same age will get 18s. instead of 15s. Under 20 the all-round increase will be 2s. a week. Now that minimum agricultural wages have been put up to 48s. a week, the maximum amount of weekly benefit (including all allowances) that can be paid under the agricultural scheme has been raised from 35s. to 38s. This is not mere largesse. Unemployment insurance is actuarially based. That basis has been broadened by the inclusion of new classes. Contributions (from workers, employers and the Exchequer alike) are to be increased by one penny a week in the general scheme and ½d. in the agricultural scheme. The number of unemployed a month ago was still over 900,000, and Mr Bevin's amelioratory changes will bring very widespread relief. The real trouble is that there are far too many unemployed—or, rather, since large numbers of workers in civilian trades must lose their jobs, too few openings for them to find war work.

* * *

The Londoner's Fares

From Wednesday next, the Londoner will pay more for his transport. The suburban railway traveller has been paying 10 per cent. more for his ticket since May 1st, and the new increases relate to the road and rail fares of London Transport. The late Minister of Transport was willing to order a general 10 per cent. increase in charges on the main

line railways, but he preferred to refer the question of London fares to the Charges Consultative Committee—which is the Railway Rates Tribunal bereft of its executive powers. The Committee has accepted the London Transport case that no increase in receipts can be obtained without first tackling the 1d. fare, and has recommended the increase of the minimum road fare (covering two fare stages) to 1½d. The small number of 1½d. fares will be raised to 2d., and existing 2d. fares covering three stages will remain unchanged. For four stages, however, the fare will be increased to 2½d. Among other alterations of road fares, the Committee recommended an increase in 2d. workmen's fares to 2½d., compared with the Board's proposal of a 3d. minimum. Similar changes in fares on the Board's railways are to be made. The total result of these increases is estimated to produce £2,070,500, which is slightly more than the 10 per cent. increase in receipts to which the Board is entitled. But the figures are obviously subject to considerable reservation. Even the Board's most expert officers could not know the extent to which revenue may be lost as a result of the increase in fares on its most remunerative, but most sensitive, short-distance traffic. The 1½d. minimum, again, is somewhat at odds with arguments put forward on behalf of the Board at the fares inquiry in March last year that the halfpenny was an unmitigated nuisance to the quick clearance of passengers. There is plainly a risk, too, that the Board's 1,580,269,440 passengers who travel at penny fares during the year may find themselves short of halfpennies. These increases are ordered to take effect from July 3rd. But actually there is this consolation: the Board cannot prepare 2½d. tickets before the first week in September. Until that time, the passenger who has to contemplate paying 1½d. for two stages will be able to double the length of his journey for another halfpenny.

* * *

Eyes Open

There are suggestions to curb the Press still more. Rightly, it is argued that irresponsibility and wrangling controversy on the part of newspapers have no place in a state of siege; and it is undeniable that, in the first half-year or more of war, some of the most widely-read newspapers in the country did the national cause a grave disservice by consistently attacking (with at least the sympathy of their advertisers) most of the economic restrictions and defence precautions that are now seen to be vitally necessary. Actually, however, these suggestions are misconceived. Mr Churchill himself paid tribute on Tuesday to the vital rôle of Parliament and a free Press in national defence. The Government has already ample power, through the censorship and by the use of new defence regulations, to put a stop to both irresponsibility and obstructionism. Indeed, the chief safeguard against blindness and obstruction in places higher even than the Press is the maintenance of a free forum for all news and views which do not stand in the way of waging the war. The fact is that the lesson of France has to be learned. There, a main cause of collapse was the double failure of the men in charge either to face the facts themselves or to permit the French people to know them. The recent picture of France's citizens left unaware of the slavery into which they were being led was the tragic symbol of France defeated. If the people and rulers of this country are to go "eyes front" to face their greatest peril, they must go with their eyes open.

* * *

Reward for Valour

The wholly inadequate accommodation for the rest and refreshment of troops at large railway stations, in the provinces as well as in London, has been a consistent scandal ever since the war started. Now the Commons has taken up the case, and all that Mr Richard Law, for the War Office, has to say in reply is that "measures are being taken." Elsewhere in this issue the need for swift decisions and speedy action in all branches of administration is emphasised. There could be no better example in small of the prevailing inertia arising from routine and habit than this callous offence against serving men. It is easy for official spokesmen to multiply difficulties. They say that provision for troops might impede railway traffic, as if unfed and weary soldiers littered about the stations did not already impede it to the maximum. There are solemn discussions with the railway companies about the hire of rooms, as if all property were not *in posse* at the State's disposal already and the railways already under Government control. There is not a single good reason why the problem, which we are told is "regarded seriously by the War Office," should not be solved in a few hours. Every

available space for rest, refreshment and washing should remain open, day and night and free of charge, so long as there are waiting soldiers to use them. In addition, since English stations are notoriously lacking in the ordinary amenities of a decent and sanitary life, temporary and mobile facilities, canteens, mattresses, blankets and so on, should be made ready forthwith in a sufficient number—quite regardless of whether or not railway caterers may be afraid of competition—to be rushed at once to stations whenever troops congregate there. Anything less will be sheer neglect of the Government's plain duty. Some voluntary bodies, such as, notably, the Y.M.C.A., and some stationmasters have done their best, but the responsibility is a public one, and only the provision of Government-directed and Government-financed amenities can fully and satisfactorily discharge it.

* * *

Shorter Notes

With the rest of civilised Europe crumbling about her and with refugees, driven ever further by the westward drive of Nazi barbarism, pouring in upon her, peaceful and happy Portugal continues her centenary celebrations. This week the Duke of Kent, as the special ambassador of her oldest ally, arrived in Lisbon, to join the other diplomatic missions which are presenting their countries' congratulations on the eight hundredth anniversary of her independent existence. That this should continue must be the wish of all who are now fighting for their own.

*

On Wednesday, the Indian and Burma (Emergency Provisions) Bill passed through all its stages in Parliament. It is, as Mr Amery, the Secretary of State, pointed out, chiefly an insurance measure against an interruption of communications between this country and India, and gives the Viceroy and the Governor of Burma power to take certain actions that would normally be referred to the British Government. One of the actions contemplated is the conscription of European British subjects, which by the 1935 Act is at present excluded from the purview of the Indian Legislature, and consequently from the ordinance-making power of the Viceroy. The conscription of Indian British subjects is already within his competence, and the appropriate ordinance is to be issued shortly.

*

The entry of Italy into the war lends more interest than usual to the annual return of shipping and tonnage for the Suez Canal. For Italy takes second place in the nationalities of vessels using the Canal, and last year 866 Italian merchant vessels with a net tonnage of 4,154,285 passed through it. Italy has frequently complained of the amount she is consequently mulcted in dues, but by far the greater part of the Canal's revenue is provided by Great Britain. Last year the number of British merchant ships using the Canal was 2,469 with a net tonnage of 14,486,352.

*

The scheme for evacuating children overseas has achieved considerable popularity. So far, 20,000 are covered both by offers and by shipping facilities, and it is probable that lack of shipping, not lack of offers, will be the ultimate limiting factor. On Wednesday, Mr Geoffrey Shakespeare announced the personnel of the Advisory Council. The chairman is Lord Snell, and he will be assisted by four Government officials, representatives from virtually every voluntary organisation even remotely connected with emigration, and members of such bodies as the headmistresses' association, the Boy Scouts' and Girl Guides' Association, the Free Church Council and the Salvation Army—making a Council of 32 members in all. The Government has evidently been anxious not to cause offence by omitting any body of importance, but such an abundance of "expert advice" will surely defeat its own ends.

VOLUME CXXXVIII

With next week's issue of *The Economist* the half-yearly index (January to June, 1940) will be published. Normally, *The Economist* index is distributed to every reader, but on this occasion, in view of the shortage of paper, it is proposed to supply copies of the index (post free) only to readers who apply for it. Applications should be made to

THE ECONOMIST, 8 Bouverie Street, London, E.C.4 and no charge will be made.

THE WORLD OVERSEAS

Germany's Non-Ferrous Metals

(By a Correspondent)

GERMANY'S drive for self-sufficiency in non-ferrous metals began long before Hitler took over, for up to the depression she had been developing the extensive use of light metals and plastics as substitutes for copper and tin, her domestic supplies of which were hopelessly short. But in 1934 the so-called Metal Plan imposed direct control of imports and exports of non-ferrous metals and manufactures with the ultimate aim of making Germany independent of imports in any future blockade. This policy was based on a system of quotas for manufacturers as well as on opening up new sources of supply in countries likely to be neutral in a war against Great Britain and France. At the same time, the use of copper, tin and lead was restricted for a steadily increasing number of civilian articles, and stocks were accumulated, especially in 1938 and the early months of 1939.

Since the beginning of the war, the Government, which had already assumed direct control of the metal industry through the *Reichsstelle für die Metallwirtschaft*, has imposed complete rationing of non-ferrous metals; and the metal industries of Czecho-Slovakia and Poland have been incorporated in Germany's industry. So far as her recent conquests are concerned, Germany will benefit to the extent of a little copper and nickel in Norway, and in Belgium and Holland she will have been able to seize accumulated stocks. In France, however, she will gain the large bauxite output, which in 1938 amounted to 683,400 metric tons, although the fate of the French colonial production of other non-ferrous metals, such as molybdenum, which is produced in French Morocco, is still in doubt. But, whatever her conquests in Europe, Germany's shortage of copper, tin and nickel remains, because by far the greater part of the world's production of these metals is in non-European countries. Only Yugoslavia from countries near at hand might be developed into a larger producer.

The Supply Position

The size of Germany's consumption of non-ferrous metals can be seen from the following table, which was compiled by *Metallgesellschaft* of Frankfurt:—

CONSUMPTION IN 1938 ('000 Metric Tons)					
	Copper	Lead	Zinc	Tin	Aluminium
Germany & Austria	446.9	260.9	269.4	20.2	176.6
Czecho-Slovakia ...	35.1	18.0	16.0	1.6	3.5
Poland	26.1	13.5	53.0	1.8	2.4
Total	508.1	292.4	338.4	23.6	182.5
<i>Total as percent. of world consumption</i>	<i>26.6</i>	<i>18.2</i>	<i>23.7</i>	<i>14.3</i>	<i>35.5</i>

For the first four of these, the proportion to total consumption in terms of metal content of imports of crude metal and ores was as follows:—

	Per cent.		Per cent.
Copper	92.0	Zinc	8.0
Lead	64.1	Tin	99.0

These percentages would be slightly reduced if it were possible to calculate the output of metal from scrap, but recent figures of the recovery of metal from scrap have been kept secret. With regard to aluminium supplies, home production is nearly 100 per cent. dependent on imports of bauxite, though this dependence will be substantially reduced by the seizure of France's output. In magnesium, on the other hand, Germany is a net exporter.

In 1938 accessible neutral countries supplied the following proportions of crude metals:—

PERCENTAGE OF TOTAL IMPORTS			
Copper	10.9	Tin	34.5
Lead	10.7	Bauxite	75.0
Zinc	94.0		

The occupation of France will more than assure Germany of her bauxite supplies; and the annexation of Austria, Czecho-Slovakia and Poland has made her self-sufficient in zinc and magnesium. But her weakness *vis-à-vis* the blockade in copper and lead is very apparent—and the proportion of her tin imports shown to have come from accessible sources is misleading, for it is really accounted for by re-exports from Holland of tin from the Dutch Colonial Empire.

Efforts to reinforce supplies of non-ferrous metals include the complete prohibition of the use of copper, lead, tin and aluminium in civilian industries. In addition, scrap metal and unnecessary metal articles were the object of an intensive collection campaign carried out in March and April of this year. The result of this campaign has not been published, but it was probably not very satisfactory. For even if church bells and public monuments had been included, the result would hardly exceed a total for all metals of some 150,000 to 200,000 tons, and it is not enough church bells have been spared to ring out the fall of France. Moreover, it was proved during the last war that metal collection cannot replace imports. The third and most important means of reinforcing supplies, however, is the substitution of light metals—aluminium and magnesium—and plastic materials for copper, tin and lead in which supplies are badly deficient.

The Use of Substitutes

In Germany (including Austria) aluminium accounted for 38 per cent. of the total consumption of the five non-ferrous metals, copper, lead, tin, zinc and aluminium, in 1938, compared with only 14 per cent. in 1929. On the other hand, the proportion of copper fell from 28 to 24 per cent.; of lead from 22 to 13 per cent.; of zinc from 33 to 23 per cent.; and of tin from 3 to 2 per cent. Unfortunately, there are no figures showing the consumption of magnesium, but the importance of this metal, whose specific gravity is considerably lower than that of aluminium, has grown considerably in recent years, and it is now used extensively in the manufacture of aeroplanes, motor vehicles, munitions and as a structural material for movable hospitals or other temporary buildings. The relative importance of the various non-ferrous metals in the German motor vehicle industry is shown by the following figures for 1938: lead, 7,500 tons; aluminium, 7,000 tons; copper, 6,600 tons; zinc, 2,100 tons; magnesium, 1,400 tons; tin, 900 tons; and nickel, 100 tons. In the munitions industry, both magnesium and aluminium are good substitutes for copper, one use of magnesium being in the manufacture of the outer shell of bombs. Aluminium is also extensively used to replace copper in the electrical industry. Other means of economising the consumption of metals are the use of ceramic pipes instead of metal pipes in house-building, in the substitution of slate roofing for zinc roofing, and in the prohibition of the use of tinsplate for food containers. Finally, there is the ever-increasing use of plastic material in the engineering industry. For instance, the heaviest types of machinery used in rolling mills have been equipped with bearings made of plastic material; and plastic structural material has been introduced into the aircraft industry. In fact, light metals and plastic material between them have ousted copper, tin and lead to a very large extent.

This policy of substitution has been made possible by the complete State control of every stage in the production and consumption of all metals. The aluminium and magnesium industry, for instance, is highly centralised, and the State-owned *Vereinigte Aluminium Werke* produce roughly three-quarters of the total output. It may be assumed that the production of these two metals and of plastic material has increased considerably since the beginning of the war. It must also be assumed that certain quantities of copper, tin and lead have reached Germany in spite of the blockade. The *Blitzkrieg* may have made a big inroad on stocks, estimated on an average at some three-quarters of the 1938 consumption figures, but it would be futile to suppose that Germany's war machine will be held up for lack of copper and tin for some time to come.

Denmark after the Occupation

[BY A CORRESPONDENT]

THE German occupation of April 9th has threatened Denmark with economic chaos, for she was cut off overnight from three-quarters of her normal export markets and from more than one-half of her sources of supply. Two-thirds of her agricultural exports had gone to Great Britain alone, and she took third place among Great Britain's European customers.

The German-controlled Copenhagen radio has openly admitted the financial and transport difficulties involved when, after the occupation, stocks destined for Great Britain were suddenly diverted to Germany. The value of these goods amounted to £2½ millions, and they were paid for by German exports. New trade agreements between Denmark and the Baltic countries, including Soviet Russia, have been, or will be, concluded on a clearing basis, but otherwise Denmark is reduced economically, as well as politically, to a part of Germany; and Danish agriculture and industry, cut off from feeding stuffs and raw materials from the West, are consequently facing insoluble problems.

The Agricultural Crisis

Denmark's agricultural production was like a huge factory converting imported feeding stuffs into livestock products for export. All small and medium-sized farms had to supplement their own crops by purchases of grain, the country's total import surplus of grain and feeding stuffs being approximately 1.2 million to 1.4 million tons in a year. As Germany cannot provide them with feeding stuffs, the Danish farmers have already begun the slaughter of the 3 million pigs and the 28 million hens, although the summer grass and the existing stocks have saved the cattle for the time being. Denmark's constant supply to Germany of agricultural products was dependent on the maintenance of her imports from Great Britain and the West, and this had inspired false hopes that Germany would forbear to kill the goose which laid the golden eggs. As it is, when the shortage of feeding stuffs is felt, which must be at the latest in the autumn, the farmers will have to begin the sad task of mass slaughtering.

Danish agriculture has been organised on a co-operative basis ever since the time, 60 to 70 years ago, when her farmers, of their own accord, switched over from grain producing to grain importing and the more profitable livestock industry. To-day the growing crisis is threatening to destroy this co-operative basis by splitting the farmers into two extreme political groups for and against the Nazis. If conditions get much worse, the anti-Nazi farmers may resort to ca' canny methods in the hope that by so doing they may shorten their period of slavery.

Attempts to Avert Collapse

Meanwhile, the Prime Minister, Hr. Stauning, is striving hard to prevent the economic collapse of his country. He has again and again appealed over the wireless to all political parties and classes to share the burden. In May, after broadening his Socialist-Radical Government by inviting representatives of the two other big political parties, the Left and the Conservatives, to join the Cabinet, he tabled a whole set of economic emergency Bills which were rushed through the Rigsdag at unprecedented speed. The new laws provide for severe anti-inflationary measures. The automatic adjustment of wages according to an official cost-of-living index number has been abolished. The index itself had risen to 168 in April, compared with 109 in April of last year, but the rise has now been checked by refusing to allow wages to move with it. Another measure fixes the prices of commodities, and yet another attempts to reduce the number of unemployed by making industry share out the work available. Some compensation is given to the workers whose working hours are cut as a result of this measure, and the cost of it is to be met partly from a special tax on all wages and partly from the Government's unemployment fund. The number of registered unemployed was 116,000 in May, an increase of 50,000 on May, 1939. But the Germans have been quick to reap the advantages to them of the large number of unemployed. A German labour exchange has been opened in Copenhagen, and many unemployed Danes have already left for Germany, so that the problem of unemployment has taken on a new national and political aspect.

In the financial sphere, dividends are limited to 5 per cent. of the company's capital plus two-thirds of the average dividend above 5 per cent. for the last three years. Many companies, however, especially in the shipping industry, will not be in a position to pay as much as this. The Copenhagen Stock Exchange, which had been closed since April 8th, reopened on May 28th, after the discount rate of the National Bank had been reduced from 5½ to 4½ per cent. This reduction gave a stimulus to fixed-interest bonds, which have continued to show good resistance, but the quotations for other shares are substantially lower than before the German invasion.

June 20th.

Financing America's Re-armament

[FROM OUR NEW YORK CORRESPONDENT]

EXTENSIONS of the armament programme have now lifted the total for the coming fiscal year to the vicinity of \$5,000 millions, or some \$3,000 millions above the initial Budget estimate of about \$2,000 millions. It is by no means certain that the full appropriations have yet been called for, and this figure seems not unlikely to be revised upwards. There are, however, as yet no visible impacts on our economy of the programme, the initial phase of which was launched less than a month ago, except possibly some anticipatory ordering of steel.

The accompanying tax proposals, now before Congress, are expected to raise about \$1,000 millions, mostly by levying flat-rate increases on existing taxes. By the lowering of the income tax exemptions some 2,000,000 additional income tax payers will be brought in, but, in the main, the increase in income tax will fall in the form of increased surtaxes on the \$15,000-\$50,000 income grades.

At the same time the debt limit will be increased from \$45,000 millions to \$49,000 millions, but it is stipulated that this increase shall take the form of "National Defence" notes of a maturity not to exceed five years. In other words, the defence budget is considered a special budget of about \$5,000 millions, to be financed one-fifth by taxation and four-fifths by a special issue. By shifting \$2,000 millions of defence expenditure out of the regular Budget and increasing taxes by \$1,000 millions, the regular Budget is practically balanced and most, if not all, of the deficit becomes chargeable to defence. At the same time, however, the proposed appropriations use all or virtually all of the \$4,000 millions increase in the debt limit, and this suggests that the limit will not prove very permanent.

Sterling's Spectacular Recovery

Financially, the principal feature of the week was the rebound in free sterling. From early March it sank rapidly from about \$3.85 to nearly \$3.00; about a week ago it began its erratic and spectacular climb from about \$3.11 to \$3.85 again, the quotations being extremely erratic. Several rumours have accompanied this advance—that the short position was being run in, that the supply of free sterling had diminished to scarcity, that the control intended to end the free market, etc. Perhaps all of them are true. It has always been claimed that the supply of free sterling was so small that the market could be controlled at will. Indeed, New York has never quite grasped the *raison d'être* of the free market, with its extreme gyrations, and would be quite glad if it were abolished. It has been argued by some that the free rate constituted a sort of subsidy to British exporters.

BANK OF MONTREAL

(Incorporated in Canada in 1817 with Limited Liability)
Financial Agents of the Government of the Dominion of Canada in London

CAPITAL PAID-UP \$36,000,000
REST AND UNDIVIDED PROFITS \$40,265,700
TOTAL ASSETS IN EXCESS OF \$1,025,000,000

Head Office: MONTREAL
H. R. Drummond, Esq., President.

Major-General The Hon. S. C. Mewburn, C.M.G., W. A. Bog, Esq., Vice-Presidents. Jackson Dodds, G. W. Spinney, Gen. Managers

LONDON COMMITTEE { The Most Honourable The Marquess of Willington, P.C., G.C.S.I., G.C.M.G., G.C.I.E., G.B.E. (Chairman), F. R. S. Balfour, Esq., Sir Hardman Lever, Bart., K.C.B., Sir Frederick Williams-Taylor.

London Offices: 47 Threadneedle Street, E.C.2 (Edward Pope, Manager) 9 Waterloo Place, Pall Mall, S.W.1 (J. H. Pangman, Manager)

The Bank undertakes general banking business and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

In this respect its efficiency was doubtful, because of the uncertainties of the market and because only the official rate was recognised by the Customs.

Less important, but even more spectacular, was the arrival of \$533 millions of gold in a single week; but most of this seems to have been scheduled for earmark. Total sums under earmark are now nearing \$2,000 millions.

High Share Yields

While the complete May data are not available, it is clear that in that month the sharp decline in the production index was reversed. Perhaps this is attributable to an increase in Allied orders; possibly it indicates that the corrective movement had been overdone. So far the upturn has been most visible in the steel industry, although the motor output has been well maintained. The share market, which remained horizontal while business was receding in the late winter, slumped badly in May, about the time that business began to improve. As yet it has shown no response to the evidence of more active production. The position of the share market is not readily explicable. Yields on fairly well secured issues are rarely under 6 per cent. and commonly 8 or 10 per cent. The wide disparity between the institutional rate and the non-institutional, which was striking in the early spring, is now even wider. There are few features of our economy more arresting than this spread between the institutional and the non-institutional rate of interest; yet, conspicuous as it is, it has almost entirely passed unnoticed by theoretical commentators.

June 12th.

Greater Unity in Canada

[FROM OUR OTTAWA CORRESPONDENT]

THE Canadian people and their Government had been fully prepared for the entry of Italy into the war on Germany's side, but now that it has actually occurred, they share the indignation of the rest of the Anglo-Saxon world, and there were anti-Italian demonstrations in Toronto and other places. The great majority of the 120,000-odd Canadians of Italian blood are completely loyal to the British Commonwealth. They resent the course taken by Mussolini, and some of their organisations have passed resolutions condemning it and urging their younger members to enlist. But there is an element of more recently arrived immigrants from Italy, who have been organised in active Fascist cells, the largest being in Montreal, and the authorities lost no time in internment their ringleaders. The general effect of Italy's action has been to strengthen the Canadian people in their determination to stand firmly by Britain and France until victory over the two dictators is achieved, and French-Canadian opinion was greatly impressed last week-end when Cardinal Villeneuve, Archbishop of Quebec, who is head of the Roman Catholic Church in Canada, issued a *pronunciamiento* denouncing Hitler and all his works in forthright language.

The Government Wakes Up

The King Government has suffered a serious loss through the tragic death of its youngest member, Mr Norman Rogers, the Minister of National Defence, in an aeroplane accident, but the Prime Minister has won commendation by inducing Colonel Ralston, now Minister of Finance, who had a fine record in the last war and held the portfolio of Defence from 1926 to 1930, to resume charge of it as soon as he has delivered his Budget speech. His probable successor in the Department of Finance is Mr Ilsley, the Minister of National Revenue. The Government now realises that there is widespread indignation in the country over its complacent acceptance of the thesis of the Chamberlain Ministry, that the war could be won cheaply by the persistent application of the sea blockade, and its consequent failure to mobilise the industrial resources of Canada for the production of essential war supplies on the same scale as in the last war; and it has now begun zealously to enlist the co-operation of the manufacturers, who made known their exasperation at the slackness and dilatoriness of both it and the British Government at their annual convention held in Winnipeg in the closing days of May. The production of munitions and war equipment in Canadian plants is being rapidly speeded up, and the Canadian Government has arranged to build, in association with the British Government, a shell-filling plant to cost \$8 millions. Recruiting of the new units which have been authorised is being pushed vigorously, and

aeroplanes from Britain, which were about to be delivered in Canada, have been turned back for British use, while all the military equipment which can be spared is being shipped overseas.

Favourable Crop Prospects

The crop reports from the prairie provinces are very optimistic; the young crop has been favoured with ideal growing conditions, warm weather and generous rains at regular intervals in the past fortnight, and the rains have been particularly good in the central and northern areas of Manitoba and Saskatchewan, which needed moisture badly. In the Eastern Provinces fine weather since the beginning of June has enabled leeway lost through delays in planting in May to be made up and helped the growth of crops and pastures. In British Columbia crop conditions are satisfactory, with growth more advanced than usual, and there is so far a good prospect of abundant harvests this year.

The yield of the Federal revenues for May was \$137½ millions, compared with \$105½ millions in May, 1939. For the first two months of the present fiscal year their yield was \$178 millions, compared with \$135½ millions; in the same period expenditure totalled \$102½ millions, compared with \$79½ millions. May also witnessed a gratifying increase in Canada's export trade, its value being \$109,852,171, compared with \$83½ millions in April and \$80 millions in May, 1939; for the first four months of 1940 the total value of exports was \$437½ millions, compared with \$327½ millions.

In the first four months of 1940 the physical volume of business in Canada showed a gain of 19.5 per cent., compared with the figure for the same period of 1939, while industrial production was up 27.5 per cent. The following table gives data about the *Index of Statistics' weekly economic index* and three of its components:—

Week ended	Car-loadings	Wholesale Prices	Bank Clearings	General Index
May 27, 1939 ...	70.9	73.5	93.9	102.1
May 18, 1940 ...	83.2	81.9	103.9	105.4
May 24, 1940 ...	85.2	81.2	103.9	105.9

The large expansion of the flow of war contracts promises to cause a great increase of industrial activity in the coming months, and there is already in some industries a shortage of skilled labour.

June 14th.

Poland Fights On

[BY A CORRESPONDENT]

WHEN the German and Russian forces overran and occupied Poland in September last, the Polish people did not give up their struggle. The Government left the country and crossed to Roumania; but before doing so, everything was arranged for a new and legally appointed Government to carry on from France. The former Polish President, Dr I. Moscicki, resigned office before leaving Polish soil, and, in accordance with the Polish constitution, he designated his successor, M. Z. Rackiewicz. This act was fulfilled with all necessary formalities, and there was no legal excuse for the enemy to institute a new head of the State.

The Government of General Skladkowski, known as the Government of the Colonels, also resigned, and General Sikorski took office as Prime Minister and Commander-in-Chief of the Polish forces. Neither task was easy; the Government was formed on foreign soil—in France—and the army had to be created from Poles living abroad and refugee soldiers and war prisoners who managed to escape either from the Germans and Russians or from the internment camps of neutral countries.

The new Polish Government was based on more democratic principles than the Government of the Colonels, and included representatives of all the political parties, from the reactionary National Democratic Party to the leaders of the Peasant and Polish Socialist Parties. The French Government put at its disposal a castle and several houses in Angers; all the buildings in which the offices of the Polish Government were situated were given extra-territorial rights, so that in theory it was established on its own territory.

The authority of the Government was reinforced when General Sikorski created the National Council, consisting of 24 members representing all political parties, with the world-famous Polish pianist, Paderewski, as its President. Most of the neutral States have recognised the Polish Government in

exile as an official and legal body, and the former Ambassadors to Warsaw, among them also the United States and British Ambassadors, followed the Government to Angers. The people in Poland also looked upon the Sikorski Government as their only legal and official Government, and in spite of pressure from the German authorities, nobody in Poland was Quisling enough to create a puppet government.

The first task of General Sikorski was to create a Polish Army and to continue the fight against Germany side by side with the Allies. On the call of the Polish Prime Minister, tens of thousands of Poles living abroad and many thousands of former soldiers in different neutral countries went to France and joined the Polish legion, which was equipped by the Allies and started training a month after the occupation of Poland. General Sikorski did not limit his activities to the creation and training of the army; he also organised the Polish Navy and Air Force, which became a part of the British Navy and the Royal Air Force, and were trained in ports and airfields of Great Britain.

The Polish Navy, though small in numbers, has distinguished itself. Many Admiralty dispatches have mentioned the skill and daring of Polish seamen and naval officers, and the exploits of the submarine *Orzel* became world-famous.

Escape to England

When the German attack on France started at the beginning of May, Polish forces took up their positions with their Allies. But the capitulation of France came too soon for them. To prove their fighting qualities; and as soon as the news of the French negotiations for an armistice was known, General Sikorski had to make the necessary preparations for their evacuation from France. The Polish Merchant Navy, which at the beginning of the war escaped from the Baltic ports of Gdynia and Danzig, played an important part in that evacuation scheme. All available boats were employed, and thousands of Polish soldiers with their equipment sailed from Bordeaux and Bayonne to safety in British ports. The Polish airmen stationed in France also lost no time and flew their machines to England. But a large part of the Polish Army in France, the divisions under General Duch and General Prager which were fighting near the Maginot Line, had, unfortunately, no time to withdraw further than to Switzerland, where they were disarmed.

Marshal Pétain's Government broke France's promise not only to Great Britain, but also to her second ally, Poland. France solemnly agreed in the treaty with Poland not to make a separate peace, but she did not even trouble to ask the Polish Government to release her from her obligations.

General Sikorski has decided to carry on the struggle, and he is again reorganising his army, this time on English soil. Nearly all the members of the Polish Government and National Council are now in London; arrangements are being made with the British authorities to create a seat for the Polish Government somewhere in the provinces; and it is expected that most of the ambassadors to Warsaw who followed it to Angers will follow it to England. Its organisation will, however, be different from its organisation in France: the big administrative staff will be cut down to a skeleton, and the main effort will be concentrated on the participation of the Polish Army in the home defence of Great Britain. Details are not yet available, but it seems that the Polish Army will exist as an independent unit and will fight under its own command and preserve its individuality. This is similar to the arrangement made some time ago with regard to the Polish Navy and Air Force trained in Great Britain.

Poland fights on and is prepared to carry the struggle to final victory. The disappointment in France has not discouraged her leaders. The Government and the Army are supremely confident in their ally, Great Britain, with whom they are now going to share all the fortunes of war.

June 26th.

Indian Railway Problems

[FROM OUR CORRESPONDENT IN CALCUTTA]

DOMESTIC manufacture of locomotives has been one of the unfulfilled ambitions of Indian industrial enterprise during the last twenty years. The report of two experts appointed by the Railway Board states that there are no difficulties of a mechanical or technical character standing in the way of locomotive building in India. According to the experts' estimates, the annual requirements of the Indian railways, stated in terms of complete locomotives, would amount to 108 broad-gauge and 28 metre-gauge locomotives, which

would be adequate to provide the economic output for a new factory.

The actual proposal is to convert the Kanchrapara locomotive shops of the Eastern Bengal Railway, about 28 miles from Calcutta, into a manufacturing shop at a cost of Rs. 47½ lakhs. The total cost of production of an "XE" type locomotive is estimated at Rs. 98,000, which is about 20 per cent. cheaper than the imported locomotives. From the references made to this subject in the speeches of the Railway Member and the Chief Commissioner of Railways in the Central Legislature, it is to be inferred that detailed proposals may be expected before long.

Railway Budget

The Railway Budget estimates were introduced in the Assembly on February 16th and revealed certain characteristics of a war budget. The actual figures for 1938-39 were 0.1 the whole a disappointment and yielded a smaller surplus than was expected. The current year, 1939-40, judging from the traffic trends down to August, foreshadowed a further deterioration, but the effect of the war since September has proved stimulating. The principal features of the estimates are the increase in traffic due to war and the increases, effective from March 1st, of rates and fares.

The estimates for 1940-41 reflect the full effects of the increases in the rates and fares. The increase in the rates amounts to 12½ per cent. on all goods, except food grains, fodder, manures and military traffic. A partial exception is made for coal on which, besides removing the maximum, the surcharge is raised from 12½ per cent. to 15 per cent. till November and to 20 per cent. thereafter. Passenger fares exceeding a rupee have been increased by 6½ per cent. The Budget estimates, with the actual figures for 1938-39 and revised figures for 1939-40, are summarised below:—

INDIAN STATE-OWNED RAILWAYS

	1938-39	1939-40	1940-41
	(In crores of Rs.)		
Gross traffic receipts	94.48	97.30	103.00
Working expenses (including depreciation)	64.04	65.35	66.64
Net revenue (including miscellaneous transactions)	30.67	32.53	37.11
Interest charges	29.30	28.92	28.82
Surplus	1.37	3.61	8.29

Criticism of the estimates has been directed mainly against the increases of the freight rates and fares, the case for which, judging from the Railway Member's speech and the traffic trends, does not appear to be as strong as is claimed. In view of the abstention of the Congress Party in the Assembly, the Government had a smooth sailing for all its proposals.

Books Received

The United States. Picture Post Special. Hulton Press, Limited. 172 pages. 1s.

A remarkable, vivid and timely glimpse at a few striking facets of the United States' multi-sided existence, including in charts and diagrams some impression of their economic wealth and resources. The contrast between these pictures with their pointed captions and the world we know would always be striking. Now, when it is the difference between peace and war, it is almost sensational—and not a little disturbing.

turnover which must be taken into consideration; the shops outside London have therefore probably suffered very little from the war. But while the value of sales remains above last year's level, its volume must have shown an appreciable decline, for retail prices are now substantially higher than a year ago. In the absence of a satisfactory price index, the decline in the volume of non-food merchandise is difficult to measure. In the case of food, however, changes in the volume of sales can be roughly calculated from their value by taking account of the variations in the official index of retail prices. On this basis, the volume of food sales in March and April was about 10 per cent. smaller than in the corresponding period last year, although their value was 5.6 per cent. higher. The fall in the volume of turnover in non-food merchandise may have been even more marked. Broadly, however, civil consumption remains at a high level; the volume of retail food sales in March-April, for example, though lower than in the corresponding periods of the four preceding years, was substantially higher than in the same months in 1932-35. Indeed, a substantial proportion of the resources at present devoted to the import, manufacture and distribution of consumption goods could be used for war purposes without causing any hardship to the civil population.

World Sugar Markets

In the past few years, the steady increase in the European sugar production from beet and the restriction of consumption by tariffs and high retail prices has led to an excess of world production of sugar. The cane-producing countries have suffered most, and even under the International Sugar Agreement countries such as Cuba and Dominica obtained the right only to a share in that part of the British market (the one remaining large importer of world sugar) which the Dominions and Colonies could not supply. The shortage of shipping and the introduction of sugar rationing have now still further reduced this market. Total sugar consumption in this country is not expected to exceed 1½ million tons, against a normal intake of about 2½ million tons. Of this amount, the British Empire will supply about 1¼ million tons, as well as smaller amounts to the non-sugar producing Dominions such as Canada and New Zealand. Consequently, if the British beet harvest can again provide some 500,000 tons of sugar, as it has in the current season, there will be no need for imports from foreign countries, which normally send about 1 million tons. This is a serious outlook for Cuba, who usually sends some 600,000 tons of sugar to this country. So far her exports have been well maintained by purchases made by the Ministry of Food over

the winter to build up reserves, but once this has been accomplished the British market may be virtually closed to foreign sugar.

South American Wool Exports

The contracts made by the Ministry of Supply to take all the surplus wool of New Zealand and Australia have necessarily affected British purchases from other wool exporting countries. The blockade has also deprived these countries of German purchases, which have been fairly considerable, particularly from South America. The following table (taken from *The Wool Record and Textile World*) shows wool exports from Argentina and Uruguay, in the season 1938-39 and in the six months to March:—

To:—	EXPORTS OF WOOL ('000 bales)			
	Argentina		Uruguay	
	Season 1938-39	Oct. to March 1938-39	Season 1938-39	Oct. to March 1938-39
U.K.	135	72	2	11
France	64	40	20	6
Germany	47	31	...	36
Poland	21	12	...	8
Italy	7	3	11	16
Belgium	25	17	4	18
Holland	8	5	10	8
Scandinavia	66	44	100	5
U.S.A./Canada	2	1	13	1
Japan	13	8	12	1
Other	...	...	...	...
Total	389	232	180	126

These two countries managed to export very considerable quantities of wool to neutral countries in Europe, such as Scandinavia and Holland. Now that these markets are also fenced off by the blockade, the United States, Canada and Japan remain the only important buyers of South American wool. A certain amount of competition with Dominion wools still remains in these markets, since arrangements have already been made for the usual re-export trade from London to be maintained, though the huge requirements of the Allies will probably diminish the amount available for this trade. But the outlook for the wool trade of South America is not very encouraging, unless a marked trade revival in the United States should lead to the rapid absorption of the wool stocks accumulated since last autumn.

COMMODITY AND INDUSTRY NEWS

The North American grain markets are now operating against minimum prices, and fixed prices continue for Liverpool cotton futures. The New York cotton market remains weak, but prices of tin, spelter and rubber were marked up.

Metals.—British maximum prices for copper, lead and spelter remained unaltered this week, but in the United States the price for spelter was advanced by another 0.25 cents to 6.25 cents per lb. In the past fortnight the quotation has thus been raised by 0.50 cents, due to the stronger demand for home and export deliveries. Imports into the United States of foreign zinc ore, formerly sent to Europe, are increasing, and no shortage of supplies is likely. Demand for copper and lead in the United States has also improved of late, and if it continues to do so for another few days an increase in prices may be expected. One feature on the United States copper market this week was the British demand for 25,000 tons of copper to increase emergency stocks. The present price of 11.50 cents per lb. corresponds to about £65 5s. per long ton f.o.b., while the current British price is £62 delivered consumer's stores. It is unlikely, however, that this difference will result in an increase of the British maximum price for the present, as the huge supplies of Empire copper, which cover our whole requirements, have been bought well below the maximum price.

Cotton (Manchester).—Futures trading in Liverpool continues at fixed prices. The raw cotton situation remains uncertain. Plentiful supplies are still available on this side, but imports at the moment are less than the consumption, which has been increased by the longer working hours in the mills. In the spinning section there has been a stronger call than ever for bigger supplies of yarn to meet the requirements of the Government. The Controller has instructed more spinners to put an increased amount of machinery on particular counts and qualities. Some spinners are now fully sold for six months ahead on Government work. Very little business has been done in cloth apart from the needs of the government, and orders for export have been few and far between.

Variety ('000 bales)	RAW COTTON delivered to Spinners			
	Week ended May 24, 1940	May 31, 1940	June 2, 1939	May 31, 1940

Source: Liverpool Cotton Association's Weekly Circular.

Tin.—The price of standard cash advanced by another £5 10s. to close at £275 10s. per ton after having touched £277 earlier in the week. There was again some American inquiry and in addition British consumers showed greater interest. World stocks with the exception of European smelter stocks (for which no figures are available) rose by 449 tons in May to 28,109 tons. New supplies, at 15,873 tons, exceeded deliveries by just over 2,500 tons.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

Week ending	1939	1940
April 20	56.96	72.93
May 27	53.97	63.17
May 4	64.55	66.78
" 11	65.32	70.66

" 25	64.93	72.49

Grains.—Minimum prices for wheat and maize have now been fixed for the Buenos Aires market, at prices prevailing at the close of May 27th. As minimum wheat prices are also in operation at Chicago and Winnipeg, the international grain market is now well under control. Crop reports from the Danube continue unfavourable, and exports are likely to be much smaller than normal, so that competition from these countries will be very limited. The warning of the Minister of

(Continued on page 1024)

COMPANY MEETINGS

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

INTERIM BONUS POLICY

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 5th instant, at 7, Leadenhall Street, E.C.

Mr Hugh E. Seebohm, J.P. (the chairman), said: Before dealing with the business part of our agenda, I must refer to the loss of our chairman, Mr Harold Morland. He became a director in 1914 and was elected chairman in 1927. His death on October 9th last year came upon us suddenly.

The new life assurances were £2,010,356, annuity premiums £595,546 and sinking fund assurances £360,264. The annual premium income was increased by £8,724. The ratio of life expenses was moderately increased at 17.18 per cent. The gross rate of interest was £4 16s. per cent., which compares with £4 16s. 7d. per cent. for 1935, the first year of the quinquennium now closed. The increase of the standard rate of income tax in the autumn Budget of 1939 resulted in a fall in the net rate of 5s. 4d. to £3 11s. 5d.

In the past five years the development of the office has been progressive and profitable, and normally there would have been a declaration of bonus at a satisfactory rate. Under the conditions of a modern war, it is plainly unjustifiable to add to existing capital liabilities. Your directors have adopted the principle of restricting their action to the payment of interim bonuses under with-profit policies at the rate of £1 per cent. for each year's premium due and paid from January 1, 1935, to December 31, 1939, and 15s. per cent. for each premium due and paid from January 1, 1940, such interim bonus being calculated on the sum assured and existing declared bonuses.

CENTURY GENERAL ACCOUNTS AND DIVIDEND

All accounts earned profits. The marine profit was retained in the account, and in the profit and loss account; the underwriting profit from the fire and accident departments (including interest) was £37,922, while net interest was £34,554; £25,000 was transferred to investment and general reserve; £2,500 to the additional reserve in the accident department; a dividend of 20 per cent. costing £58,500 was declared and £98,262 carried forward.

We usually review the progress of the Century at the end of each five years' period. It is satisfactory to find that in the five years 1935-1939 the Century has earned for the shareholders £356,670 clear of taxation, of which £268,625 has been paid in dividends, yielding the Friends' Provident an average of £6 3s. 4d. per cent. per annum, and £88,045 has been added to reserves. At the end of 1939 there was a substantial surplus on valuation of the assets.

Much thought has been given to the recasting of the terms of our life assurance policies in order to make them more appropriate for the new circumstances arising from the war. At the outbreak of war all offices agreed to insert a stringent war clause in all new policies issued, the effect of which was to restrict payment in the event of death of the life assured by reason, directly or indirectly, of the war, to the amount of premiums paid, while the full sum assured would be disbursed in the ordinary way should death arise from normal causes. It is our desire that the benefits given shall be as liberal as due regard to the interests of the whole body of our members will permit, and we have now decided that, while continuing a war clause, we may suitably include war risks within the United Kingdom and Eire to persons who at the time of making the proposal are civilians, and have no present intention of joining the Forces in the near future, still excluding death from warlike operations abroad or in the Armed Forces. This liberalisation of the cover offered in respect of new assurances has been accompanied by a readjustment of our premium rates for without-profit policies, in order to make some small contribution towards the additional hazards incurred, and for the lower rates of interest which are likely to be obtained on our funds in the future.

In the with-profit section of our operations, rates of premium have not been generally increased, but it is provided that during the war no bonus will be distributed to new members, the benefits of the with-profit contract becoming operative so soon as peace returns.

The chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr Robert H. Marsh, F.C.A. (deputy-chairman), and carried unanimously.

POINTS from the Speech of MR MAGNUS GOOD-FELLOW (Chairman) at the Annual General Meeting of THE EVER READY COMPANY (GREAT BRITAIN) LIMITED ON June 3rd, 1940.

ABNORMAL TRADING CONDITIONS

At the outbreak of war the "black-out" caused so great a public demand for our goods that, in spite of the preparations we had made, it was not until February that we were able to fill the demand. All requirements for the Services were, of course, always met. To-day, with trifling exceptions, we are in sufficient supply and, subject to the operations of war, we expect to be able to maintain this position during the present year.

During the period of shortage we found it necessary to ration rigidly the distributing trades of the country, and we attempted and, I believe, succeeded in doing this with fairness. I pay a warm tribute to the patience, reasonableness and helpfulness of our distributing friends in assisting us to grapple with a situation that at times grew almost impossible.

INCREASED PRODUCTION COSTS

The cost of production of our goods has risen steadily since September last. Apart from a few unimportant increases in our prices, such increases in cost have been borne by the margins on the greater volume of business done. It is our policy to keep the prices of our goods at the lowest possible level, and we do not at present contemplate any alteration, indeed we hope that the much larger business we continue to do will make unnecessary any increase for some time to come.

STRONG FINANCIAL POSITION

Turning to the accounts, there are one or two comments I think I should make. While our nominal Issued Capital is £1,210,402, the Capital really invested in the business is in excess of £4,500,000, for our Reserves total approximately £1,000,000, and we have written off over the past few years the cost of all Goodwill, Patents and Trade Marks—the cost of the Continental businesses—and large sums from our various Plants amounting in all to £2,354,000. The Reserve Account shows that we have removed the Special Trading Reserve of £100,000. No expenditure was incurred under this head during the year and, under present conditions, we have decided that this Reserve is unnecessary.

The liquid Asset position of the Company has been much improved in spite of the necessary provision of large sums for taxation and the increase in the proposed dividend for the year. You will observe that the surplus of liquid Assets over Current Liabilities has risen from £350,000 a year ago to £566,000 to-day.

You will, I know, join with me in expressing thanks to our Managers, Executive Staff and workpeople for their achievements during the past year.

not, in all probability, offer the same measure of market-ability as the general range of Government issues, while the "tap" is open.

These technical points are of importance in gauging the measure of response to the first "tap" issue of the war. But larger problems of war finance are also involved. The prime object of financial policy is to deny the people by taxation, or to persuade them to forgo by lending, purchasing power which would otherwise be spent upon consumption, and would thus compete with essential war industries for labour, raw materials and productive capacity. If sufficient taxation and saving are performed in advance of the Government's spending on war services, there will be no inflationary consequences. But if the Government spends first, and thus creates new purchasing power which will soon find its way into personal incomes, then the saving of even the entire excess of money incomes over the previous level will not suffice to prevent a rise in prices; the same real sacrifice will have been borne through that rise in prices, though its incidence will be different. This test may be applied to the National War Bonds. Will subscriptions represent new savings? Clearly, if they represent merely a rearrangement of existing assets, the answer will be "No." If the banks, for example, decide to reduce their Treasury bill holdings to take up an equivalent amount of the new Bonds, the result will be an exercise in book-keeping, which increases the return on their investments, but contributes nothing on balance to the sinews of war, real or nominal. The same conclusion holds for all subscriptions made from funds already accumulated. What is needed is an unremitting, deliberate forgoing of purchasing power on the part of all sections of the community. In general, the character of the new War Bonds is not designed to produce a maximum response of this sort.

Unless, at this late stage, a far more vigorous curtailment of purchasing power can be achieved than has yet been attempted, the forces of inflation may burst out of their insubstantial fetters. In wages policy there appears to be no desire to contain them under control. The worker's pennies, rather than his real income, are the criterion, and those pennies are substantially increasing at a time when the available volume of consumption goods is falling, and will fall more sharply still in the near future. Meanwhile, financial policy is committed to low interest rates for war loans. But would these rates be proof against an appreciable rise in prices? Would investors, like wage-earners, be content to think in money rather than real terms? The answers to these questions may eventually affect the assurances implicit in the 3 per cent. war-borrowing schedule. And once there is any deviation from that schedule, unless towards still lower rates,

no declaration regarding interest rates would be accepted as convincing. The train would be laid for a repetition of the excessive interest rates and febrile finance which characterised the last war.

The alternatives to a more vigorous financial policy are clear, and in the end they involve a heavier economic sacrifice. They include a very great extension of rationing, and the prospect of rocketing prices for such unrationed goods as are still obtainable. It may be true that, in the early stages at least, inflation on this scale would not affect the scope of war production. But its indirect economic consequences, to say nothing of its effects on morale, might ultimately become crucial. The current measure of war finance is equally clear. In recent weeks expenditure on the forces has been running at £3,120 millions a year, and total expenditure at, say, £3,750 millions. If tax revenue fulfils Sir John Simon's estimates, the current deficit would be of the order of £2,500 millions, and although Sir Kingsley Wood has promised stiff increases in taxation to reduce that figure, the balance will still be most formidable. We should face frankly the possibility that it will be too formidable to be satisfied by the voluntary system. For the moment, we have got into the *impasse* that the only sort of voluntary loan that is technically possible is one that contributes little to the fundamental problem. The *impasse* may only be temporary, and it may soon be possible to issue a loan of a character that will absorb genuine savings. But it is quite obvious that it is not going to be possible to cover the deficit by means such as these. Our present methods of finance, in short, are proved inadequate. We have reached the stage when compulsion becomes necessary. We may be able to avoid forcing the public to lend its savings to the Government—which would come up against strong institutional resistances as well as ruining the excellent work of the National Savings movement. But we can no longer avoid forcing the public to increase its savings by compelling it to reduce its spending.

"It is high time that the heroism which is fighting our battles at the front should be supported by some attempt to imitate it by those of us who are left at home in the use that we make of our money. Financial heroism, if it can be so described, will pay us directly and indirectly. Not many of us can flatter ourselves that we have made any such effort. Plenty of people have suffered privation and cut down expenditure, but in most cases when this has been done drastically it has happened through compulsion. The revolution in our spending habits which has been preached as essential to the sound finance of the war has not yet been accomplished." These words appeared in *The Economist* in October, 1917. Have we learned nothing in the 23 years which have since elapsed?

British and German Steel Supplies

AT the beginning of the war one of the weakest links in Germany's armour was her shortage of iron ore. In 1938, the combined crude steel output of Germany, Czechoslovakia and Poland exceeded 26½ million metric tons. The cessation of imports of iron ore from France and an efficient blockade of Narvik were bound to reduce Germany's output of crude steel well below that level. The position of the Allies was then comparatively much more favourable. France, with her enormous iron ore deposits in Lorraine, was in a position to produce some ten million tons of crude steel. The United Kingdom's capacity was rated at 14½ million tons and that of Australia, Canada, India and South Africa at nearly 4 million tons per annum. Moreover, the Allies were in a position to draw on the enormous steel supplies of the United States. If the war was to be decided by the weight of steel that could be produced, as distinct from the steel already accumulated in the form of tanks, guns, aircraft and other munitions, the dice were heavily loaded in favour of the Allies.

These long-term calculations have been completely upset by the superior weight of metal that Germany was able to throw into the balance *immediately*. As a result of the conquest of Norway, Holland, Belgium, Luxembourg and France, virtually the whole of the iron ore deposits (excluding those of Spain) and of the pig-iron and steel-producing capacity of Continental Europe have passed under the Nazis' control. They have also secured access, through the occupation of France, to the iron ore fields of "non-belligerent" Spain, and they hope to be able to tap the rich ore deposits in French and Spanish North Africa. Italy's entry into the war has added steel-producing plant capable of turning out at least 2½ million tons and iron ore deposits yielding more than half a million tons per annum to the resources of the

enemy. The magnitude of the resources that have passed under Germany's control and of those to which she hopes to obtain access is indicated in the following table, which shows the metal content of the output of iron ore and the production of crude steel in the countries concerned in the best year between 1929 and 1938:—

(a) PRODUCTION OF IRON ORE (METAL CONTENT)			
(Thousands of metric tons)			
Countries under German Control	Other Countries		
Germany	Spain†	3,100 (1938)	3,185 (1929)
Austria*	Spanish Morocco	672 (1937)	782 (1937)
Czecho-Slovakia*	Algeria	595 (1937)	1,640 (1938)
Poland	Tunis	270 (1938)	508 (1929)
Norway	French Morocco	1,030 (1938)	140 (1938)
Sweden		9,136 (1937)	
Luxemburg		2,287 (1929)	
France		18,000 (1929)	
Total†	Italy	35,090	510 (1937)

(b) PRODUCTION OF CRUDE STEEL			
(Thousands of metric tons)			
Countries under German Control	Other Countries		
Germany and Austria	Luxemburg	23,208 (1938)	2,702 (1929)
Czecho-Slovakia	France	2,315 (1937)	9,716 (1929)
Poland		1,542 (1938)	
Sweden		1,106 (1937)	
Belgium		4,110 (1929)	
	Italy		2,323 (1931)

* Latest year available. † Present capacity below this level.
‡ Excluding certain smaller producing countries.

Source: *Statistical Yearbook of the League of Nations*.

The control of the iron-ore resources of Continental Europe and North Africa and of the European iron and steel

and metal industries has long been a German dream. The aim has been to build up a vast iron, steel and metal industry to rival that of the United States. This dream, however, is still far from realisation. The complete integration of Continental Europe's iron and steel industry would require years of hard work and, in any case, could not be accomplished without access to ample supplies of manganese, nickel, tungsten and other steel alloy metals which are vital to the production of modern steel. These essential steel alloy metals, however, are not available in any quantity in Continental Europe and North Africa. And so long as they can be denied to Germany by the British blockade, she will be unable to obtain the full advantage of the iron-ore deposits and of the steel-producing capacity over which she has gained control this summer.

But while a simple addition of the iron and steel output of the countries that have passed under the Nazis' control considerably exaggerates their immediate gains, their position relative to the British Empire has nevertheless been appreciably strengthened. Although the iron- and steel-producing plant in the countries they have conquered may have been damaged, at least in part, they will be able to replenish their shrunken reserves of steel alloy metals from the probably fairly heavy war stocks accumulated by France. Moreover, the increase in Germany's command over iron and steel supplies has been effected largely at Britain's expense. The loss of the large French iron and steel industry and of the imports of steel from Scandinavia and from Belgium and Luxemburg has severely reduced the steel resources of the Allies. Secondly, as a large proportion of the imported iron ore used in this country has been derived from European countries now occupied or controlled by Germany and from Spain and Spanish and French North Africa, it may be difficult to maintain our domestic output of pig iron. The distribution of our imports of iron ore in 1937 is shown below:—

UNITED KINGDOM IMPORTS OF IRON ORE IN 1937
(In thousands of tons)

Foreign Countries	British Countries
Sweden	Newfoundland and Coast of Labrador
Norway	Sierra Leone
Holland	Other British countries
France	
Algeria	
Tunis	
Spain	
Spanish ports in North Africa	
Brazil	
Other foreign countries

Finance and Banking

Unusual Credit Shortage

Conditions of unusual tightness have been experienced in Lombard Street this week. In addition to the heavy flow of funds from the banks to public departments resulting from the War Bond issue, the market has had to face the customary seasonal pressure towards the end of the half-year. By Tuesday money had become quite usable, and for the past few days supplies have proved only just sufficient to go round—a most exceptional state of affairs in these days. However, the market has not experienced the serious credit stringency which would have arisen from such a combination of circumstances in normal times, and would have necessitated extensive market borrowing from the Bank of England. It was remarked last week, however, that no such borrowing from the Bank would take place during the present period of strain. The market syndicate has forgone the temptation to lever bill rates to higher levels, in exchange for a virtual assurance that the situation will be "taken care of," and the authorities will doubtless see that their part of the bargain is carried out. The very knowledge that any last-minute credit difficulties will be smoothed over averts any need for normal precautionary borrowing—much of which eventually proves to have been entirely unnecessary. If the banks cannot establish sufficiently strong cash ratios for balance-sheet purposes without calling in day-to-day loans from the market, the deficiency will be made good by official

Serious though the stoppage of imports from the majority of these countries would be, its adverse effect on Britain's steel-producing capacity must not be exaggerated. The British steel industry used 6½ million tons of pig iron and 7½ million tons of scrap to produce 13 million tons of crude steel in 1937. Again, in order to produce 8½ million tons of pig iron (2½ million tons were used for purposes other than steel making) the industry in this country consumed 6½ million tons of (chiefly high-grade) imported iron ore and 14 million tons of (chiefly low-grade) domestic iron ore. While only a comparatively small tonnage of the steel produced in this country is thus derived from imported iron ore, its qualitative importance is rather greater than the figures suggest. Some of the foreign ore to which access has been, or may be, lost can probably be made good by increased domestic production and by bigger imports from other countries. So far as possible, however, the deficiency should be made good by an increase in the proportion of domestic scrap used in the steel furnaces. Much has already been done to stimulate the collection of scrap. But, apart from appeals to individuals and local authorities (waste collection by local authorities has now been made compulsory), the Ministry of Supply has hitherto relied chiefly on ordinary commercial methods. But in the present emergency, when it is absolutely essential to maintain the domestic steel output, other means of collecting scrap available in the form of public and private railings and of unused or obsolete plant and structures must be employed. It is understood that the Steel Control of the Ministry of Supply has asked many thousands of architects to make a return of the potential scrap supplies in their localities. But, instead of negotiating with the owners of unused or obsolete plant and structures and other sources of scrap, the time has surely come for requisitioning.

But even if the output of steel in this country can be maintained at the rate of about 13½ million tons per annum and if the Dominions can produce another 4 million tons per annum, the steel supplies available to Germany will be considerably more than twice as heavy as those available to the British Empire. But, unlike Germany, the United Kingdom has access to ample supplies of steel alloy metals. And, most important of all, this country will be able to draw to an increasing extent on the immense resources of the American steel industry. The crude steel-producing capacity of that country was estimated at the end of 1938 at 73 million tons per annum. The English-speaking nations as a whole are therefore able to produce about twice as much steel as Germany and the rest of Continental Europe put together. For the time being the steel which is made into munitions in the United States may not exceed a few million tons per annum. But if the potential weight of metal that the English-speaking nations could throw into the balance against Germany were the only deciding factor, the ultimate issue of the war could scarcely be in doubt.

purchases of very short-dated bills from them. The authorities have shown little inclination to assist the market on this occasion by extensive direct purchases of bills from the market, and it would seem that this practice has now been largely replaced by "back-door" purchases from the banks, a comparatively recent innovation. From the Treasury's viewpoint, the back-door method of releasing funds has definite advantages over the older practice of direct purchases from the market, combined with sharp reductions in the weekly Treasury bill offers. In the first place, the Bank acquires bills with a much shorter currency and obtains them with far less trouble since it is dealing with a few institutions in large amounts. But, perhaps even more important, intervention of this kind enables the Treasury to avoid sharp fluctuations in the weekly offerings of Treasury bills. This is especially valuable at the present time when big funding operations must from time to time result in vast but temporary accumulation of funds in the hands of public departments.

* * *

Rising Note Circulation

The continued expansion in the Bank of England note circulation is being watched with close interest and just a little anxiety in banking quarters. The Bank return to

Wednesday last shows yet another increase of £13,100,000 in the active circulation over the week to £602,153,569. The issue has risen to this all-time record by an expansion of some £55,000,000 in little more than a month. To some extent the latest increase may be attributed to seasonal factors, but, after allowing for this, there is still an efflux of £9,000,000 or so of notes to be explained on other grounds. There appears to be little doubt that the big expansion in the demand for notes arising from the increase in working hours in armament factories and elsewhere has recently slowed down appreciably. A more important influence during the past week or two has been the resumption of evacuation on a fairly extensive scale. In addition to the migration of population from coastal areas, the beginning of air raids upon inland towns has resulted in a resumption of the evacuation from vulnerable areas which was in progress in the early days of the war. Many of the business institutions which returned to London after the first few months of the war had passed without any air activity over Britain have now returned to the comparative safety of the country. In consequence the banks have been forced to effect a redistribution of note supplies. Moreover, in view of the ever-present possibility of the interruption of communications, stocks of notes in various centres have been greatly increased.

* * *

The French Gold

Reports concerning the whereabouts of the French gold are contradictory, but it is safe to assume that none was left in Paris, and at least a substantial part of it has reached the United States. While there is little reason to hope that any gold that is on French territory can escape from being seized by Germany, it is possible, and even probable, that the gold deposited in the United States may not be surrendered to the conqueror. The swift action taken by President Roosevelt in freezing all French assets when the Pétain Government first announced its intention to ask for an armistice seems to indicate the spirit which prevails in Washington on the subject. Admittedly, if the United States Government should continue to regard the Bordeaux Government as the recognised ruler of France, then it may be argued that instructions given for the surrender of the gold cannot be disregarded. In reality, the question has a legal as well as a political aspect. In the United States, as in most other countries, it is the right and duty of banks to refuse to comply with instructions given by their clients under duress. A test case concerning Austrian deposits was decided in that sense last year by the American courts. And since there can be no doubt that the French authorities would not surrender their gold to Germany unless they acted under duress, the Federal Reserve authorities would be within their rights in refusing to comply, even if the Administration were to withdraw the Order blocking the French assets.

* * *

Rally in Free Sterling

At the end of last week free sterling in New York experienced a sharp recovery, in spite of the grave developments in France. The rise was due to rumours of an impending relaxation of the control over the proceeds of British exports to the United States, which were subsequently confirmed. American importers are now allowed to cover their sterling requirements in the free market instead of having to pay the official exchange rate, provided that they placed their orders before the new restriction became operative on June 8th. Since it is comparatively easy to pre-date orders, this means that for some time at any rate the Treasury will fail to collect the proceeds of British exports (other than those covered by the Order of March 8th) to the United States. This step was taken presumably in order to counteract the adverse effect upon free sterling of the unfavourable military and political developments, and the net result is that the Treasury has decided to forgo a certain amount of dollars for the sake of supporting the free sterling rate. As dollars are now needed more than ever for the purchase of war materials, the wisdom of the decision is open to question. The free sterling rate could have been supported without having to sacrifice much-needed dollars by stopping some of the loopholes in exchange restrictions. Admittedly, the law is now applied with greater severity than before; during the past week evaders have been fined £5,000 and £2,000, compared with the only previously recorded penalty of £100. Much remains to be done, however, in reducing the supply of free sterling by stopping up the leakages.

Canada and Sterling Bloc

The Government's refusal to authorise transfers for the benefit of women and children to be evacuated to Canada has drawn attention to the anomalous position of the Dominion in the monetary system of the British Commonwealth. Together with Newfoundland and Hongkong, Canada remains outside the sterling bloc, for the simple reason that her currency is the dollar and not the pound. While there are practically no restrictions upon transfers to other parts of the Empire, Canada is kept in isolation from this country, just as if she were a foreign country. Admittedly, there is a risk that a removal of restrictions in relation to Canada might lead to a flight of capital to the Dominion, and thus imperil the Treasury's reserves of Canadian dollars. It would be possible, however, to remove the existing anomaly without running such risks. Under the present rules, it is easy to transfer funds to Dominions other than Canada, and since in some of them exchange control is not enforced rigorously enough, the funds can be retransferred to the United States. This loophole could be stopped by supervising transfers to all Dominions. Once this is done there is no reason why Canada should not be placed under the same regime as the rest of the British Empire. There is reason to believe that the Dominion itself would not be opposed to closer monetary relations, as part of the intensified efforts to support Britain's war effort in every possible way.

* * *

Transfer Agreements

When the Treasury announced on June 7th the re-implementation of control over the proceeds of exports, it was also foreshadowed that a series of transfer agreements would be concluded with neutral countries in the immediate future. In fact, it was understood that unless the negotiations for such agreements were concluded within a few weeks, the Government would resort to unilateral clearing pending the negotiation of bilateral arrangements. Although three weeks have passed since this announcement, the number of transfer agreements concluded is still very small. Apart from the Anglo-Swedish agreement, which has been in existence since December, 1939, the only countries with which similar arrangements have been made are Roumania, the Argentine and Brazil. Admittedly, this country's bargaining position is affected by the possibility of export difficulties. Although the figures for May were reasonably satisfactory, fears are entertained abroad that any intensification of German submarine warfare or a fall of production through air raids or the arms drive might impair Britain's capacity to maintain her exports. Exaggerated as these fears may be, they do not make it any easier to conclude transfer agreements. In this sphere, as in so many others, the former Government allowed many valuable months to pass before taking action. The system which is aimed at by the present negotiations could easily have been established soon after the beginning of the war, and would be working smoothly by now. As it is, the proceeds of British exports to a number of countries continue to elude control.

* * *

Assisted Finance for External Trade

Discussions have recently taken place between the banks and Government departments with the object of ensuring, as far as possible, that manufacturers who have received Government contracts shall not be hampered from carrying them out by lack of finance. There are indications that this principle might be extended to importers and exporters if our overseas trade is not to be needlessly restricted for the same reason. The extent to which war conditions have increased the burden of financing the shipment of goods to and from this country is not always appreciated, but it is evident that the greatly lengthened period of shipment due to such factors as the diversion of British shipping from the Mediterranean must correspondingly increase the volume of funds immobilised in financing a given turnover of goods. Moreover, a larger proportion of the total finance now has to be provided in this country, for foreign exporters are unwilling to incur the risks of shipping goods without prior payment to a belligerent country, while overseas banks show increasing reluctance—owing to delays and difficulties in communication—to negotiate sterling drafts pending reimbursement after some protracted and uncertain period. In general, it would appear that a liberal official credit policy is all that is needed to enable the banks to meet the additional demands on their resources. But it can readily be understood that the banks, who look primarily to the standing of their

(Continued at foot of page 1117.)

Investment

Plumbing the Depths

There are arguments for neglecting equities in present circumstances; there are none for acquiescence in a collapse of the ordinary share market. On Wednesday this week collapse was imminent. Heavy losses had been running for several days, and the market had reached the limit of despair, a despair which was made the more emphatic by the market's evident inability to translate Tuesday's recovery into a more substantial and permanent gain. Since the eve of the Blitzkrieg

on May 10th, leading equity shares, as measured by *The Financial News* index, had lost exactly one-third of their value by the close of the market on Wednesday, and since the Pétain Government first sought an armistice on June 17th the fall had averaged nearly one-seventh. Falls of this order clearly threatened failures on the Stock Exchange. They also threatened the stability of the gilt-edged market, with which equities had clearly lost all touch. And they were the more disturbing since the volume of selling which was responsible

Continued from page 1116

customers, might hesitate to encourage what in peacetime could be regarded as overtrading; and even where a bank looks primarily to the security of the goods, a point is reached at which the resources of the individual merchant—normally fully employed—are insufficient to provide an adequate margin against greatly increased commitments. The fundamental difficulty which prevents a bank from providing unlimited finance for any genuine import or export transaction is, however, the question of risk. The heavy

losses which must now fall upon many traders who have not received payment for goods shipped to France—in many cases actual war supplies needed by the French Government—are a sharp reminder that the risk factor cannot lightly be dismissed. To prevent such financial obstacles from impeding export trade or restricting the inflow of essential imports, Government assistance seems necessary, either in the form of greatly extended war risk insurance facilities or the guarantee of advances to traders.

* * *

Thursday's Recovery

On Thursday, however, a new spirit was evident. From the opening of the market, buyers were abroad, and the ensuing recovery in prices, halted for a brief spell at mid-day, became more rapid towards the close, and continued after hours. Suggestions were heard that institutional buying was responsible, and that it was of an organised character, since operations were concentrated, according to some accounts, on about twenty investment industrials. But in later buying, the field of interest was much wider. Prices rise disproportionately to buying, and dealers found themselves short of stock when on the previous day they had felt themselves uncomfortably "long." The reversal of the collapse in equities is important, for had it continued, stoppage and failure would have been unavoidable. If a more secure basis can be built on Thursday's prices, the market may be able to withstand any further adverse news. Its response to good news would be stupendous.

Minimum Prices for Equities?

The devastation in the equity market has prompted considerable discussion whether minimum prices should be introduced in the ordinary share market. It may be regarded

INSURANCE NOTES

tion on this occasion. As the table shows, the non-life business of the Century yielded a rather lower profit.

The assets of the two offices are entered at £22.9 millions in the books, securities being valued at middle market prices.

Gresham Fire and Accident.—The earned premiums of this company, which is a subsidiary of the Gresham Life, itself a subsidiary of the Legal and General, were only slightly less in 1939 than in the previous year. Underwriting profits, however, declined considerably, owing to a less favourable accident experience. A larger loss on investments and foreign exchange was also incurred. The carry-forward, however, has been raised above the amount brought in (£22,445 against £21,093) by forgoing any increase in general reserve and staff pension reserve (against transfers of £10,000 and £5,000 last time).

	Earned Premiums		Profit Balance

			35,105	20,439

The dividend is maintained at 6 per cent.

as certain that the Stock Exchange authorities have no intention of taking that step, and it is a simple matter to rehearse the arguments against it. On what level of prices, or on what date, would minimum prices be applied? Could the minimum price of any particular share be maintained in the event of a reduced dividend or aerial damage? What general adjustments could be made to take account of the gearing factor for ordinary shares in the event of widespread damage or reduced earnings? These are some of the technical problems. But marketing problems are equally insuperable. Will it profit an investor to hold an ordinary share at a frozen minimum price if he cannot sell it? And by what means could the equity share market be prevented from freezing at minimum prices unless buyers could be found? The argument for minimum prices for gilt-edged is to prevent a fall in the Funds from becoming a rout, and to give the authorities—whose control is an essential support for minimum prices—an opportunity to rally the market. Minimum prices are only justified if they provide the floor from which a rebound is possible; but whose intervention would prevent equity prices from becoming nailed to it in periods of crisis?

*

The present condition of equities is admittedly a serious embarrassment to many shareholders. But the remedy is not to be sought in artificial measures like minimum prices, which are either ineffective or would freeze the market solid. The present margin between gilt-edged and equity yields is doubtless too large, even where the specific risks attaching to equities are discounted. In this situation a natural corrective must sooner or later occur. Either gilt-edged will fall or equities will rise—and Thursday's recovery in equities may be the solution. There is some danger lest sadly depressed prices for the highest class of ordinary shares should react unfavourably on gilt-edged. Obviously, investors who require cash are less likely to sell equities at their present levels, and more likely to realise gilt-edged. What is needed is a sober estimate of war damage. So far, that estimate—it can, of course, be nothing more than a preliminary guess—seems favourable. And surely the railways, in whose stocks fear of war damage first found expression (despite the Government's guaranteed contribution of £10 millions towards war damage, which no other industry has been offered), are probably least likely to be put out of action completely by air attack. A direct hit on a factory might involve a total loss. A direct hit on a railway line could be repaired with little delay. Perhaps a more considered view of air raid risks may provide the encouragement for equities which is sorely needed. It is for Stock Exchange members and investors who have been left at home by their younger and more enterprising colleagues to attempt that judgment without delay.

* * *

National Savings

Although the nation's financial effort still falls far short of what is required for the efficient prosecution of the war, the response to National Savings Week at least points in the right direction. During the week ending June 18th (which in fact covered two days not included in National Savings Week) some £20,174,422 was raised—£8,641,377 in Savings Certificates, £9,292,045 in Defence Bonds, and £2,241,000 by increased balances in the Post Office and Trustee Savings Banks. Since the end of May, subscriptions for Certificates and Bonds have been running consistently little short of the £10 millions mark, whereas a month earlier they had fallen to below £4 millions. The improvement is welcome, and it cannot be denied that the raising of £233,616,000 since the Savings Campaign opened is a substantial contribution to war finance. But no frank observer could pretend that popular saving, even on this scale, is enough. Even if the total ran week after week at the encouraging figure achieved in National Savings Week, it would cover less than half of the current rate of deficit between anticipated tax revenue of £1,234 millions and an annual expenditure in the region of £3,750 millions. There is, therefore, no reason to regard the result of National Savings Week as a conclusive piece of work. It should rather be set up as a normal, every-week standard. Meanwhile, the response to Sir Kingsley Wood's appeal for non-interest-bearing loans, though it is at present unnecessarily circumscribed by the condition that loans must be offered for the duration, has useful publicity value. In the space of a week, the Treasury has received £3,350,000 in cash, and promises

of another £1 million. Even a scheme which meets the cost of war for a mere twelve hours is not to be despised, particularly since it costs the Exchequer nothing, and must encourage the acceptance of low interest rates on war loans. But the response could be increased—probably very considerably—if loans were accepted for fixed periods.

* * *

Eclipse of the Bearer Security

The Bank of England announced a fortnight ago that charges for the re-inscription of stock certificates to bearer issued by a number of Governments and authorities, including, for example, New Zealand and the London County Council, have been waived until further notice. The London offices of South African mining companies have also decided to reduce the charge for converting bearer share warrants into registered certificates from 5s. per 100 shares and 1s. per certificate to 2s. 6d. per 100 shares, without charge for certificates. With the occupation of a large part of France, the danger that the enemy may be able, through some neutral channel, to turn his financial spoil to account has been increased. The French investor has a decided preference for bearer securities, and holds large quantities of Kaffir shares in this form. To prevent these from being converted into free exchange by the enemy, holders of bearer shares resident in this country can assist the authorities by converting their warrants into registered certificates. They may also save themselves future trouble. Formerly, the bearer security transferred unimpeachable title simply by passing from hand to hand. Now it is inevitably an object of inquiry, if not suspicion, and the investor's convenience is better served by a registered holding.

* * *

Metal Box

After providing unstated amounts for depreciation and E.P.T., the Metal Box Company reports a record trading profit for the year to March 31, 1940, of £606,642, against £482,715 in the previous year. Net profits, however, are almost unchanged, and the ordinary distribution has been maintained at 17½ per cent., as in the two previous years. The allocation for taxation has jumped to a record level of £278,500, compared with £145,500 in 1938-39. Earnings for ordinary dividend totalled £242,487, and represented 25.8 per cent. on the increased capital. No allocation is made to reserve, and the carry-forward is raised from £39,609 to £117,404. Greatly increased activity is clearly indicated by balance-sheet changes. The company's stocks rose from £617,149 to £1,134,902, and the group's stocks fell from £1,287,679 to £2,496,629. The company's cash holdings fell from £179,420 to £3,200, and there have been most striking increases in both debtors and creditors. The company's current liabilities have increased from £352,459 to £854,626, not including a bank overdraft of £121,869. The financial strength of the group has been well able to cope with this expansion. Reserves and undistributed profit amount to £1,687,903 and exceed the issued ordinary capital, while net current assets of the group exceed £2,000,000, against £1,577,000 in 1938-39. The directors maintain a discreet silence regarding the company's present activity, but it points to a considerable volume of war production. The £1 ordinary shares yield £5 8s. per cent. at 65s.

* * *

J. Lyons in Wartime

Sir Isidore Salmon's statement at this week's meeting of J. Lyons and Company frankly reviewed the company's wartime difficulties, and did not flinch from the conclusion that the company would do well to keep its capital and reserves intact. Sir Isidore pointed out that the company's trading problems were due not to any fall in demand, but to the inevitable restriction of supplies and the control of materials, which have already caused a fall in production. Although the balance on trading account remained approximately unchanged last year, the decision to reduce the traditional dividend to 20 per cent. was taken on the realisation that extended rationing would involve further restriction in supplies, while experienced buying would give way to the arbitrary allocation of goods through the various controls. Since restriction of supplies leaves the company with a dead-weight of surplus capacity and idle machinery, the directors' decision is wise. They offer no criticism of rationing in principle; and they are evidently working with energy to adjust a complex and detailed business to wartime changes.

ISSUE OF

2½% NATIONAL WAR BONDS, 1945-1947.

Interest payable half-yearly on the 1st January and 1st July. A first interest payment will be made on the 1st January, 1941.

PRICE OF ISSUE £100 PER CENT.

PAYABLE IN FULL ON SUBSCRIPTION

Bonds of this issue are an investment authorised by The Trustee Act, 1925, and The Trusts (Scotland) Act, 1921.

THE GOVERNOR and COMPANY of the BANK OF ENGLAND, by authority of the Lords Commissioners of His Majesty's Treasury, offer the above Bonds for subscription. Subscriptions will be received on Tuesday, 25th June, 1940, and thereafter until further notice and may be lodged at any office of the Banks hereafter mentioned.

Subscriptions must be for sums of £100 or for multiples of £100 and must be accompanied by the full amount payable in respect thereof.

The Principal of and Interest on the Bonds will be a charge on the Consolidated Fund of the United Kingdom.

If not previously redeemed, the Bonds will be repaid at par on the 1st July, 1947, but His Majesty's Treasury reserve to themselves the right to redeem the Bonds in whole or in part, by drawings or otherwise, at par on, or at any time after, the 1st July, 1945, on giving three calendar months' notice in the *London Gazette*.

The Bonds will be registered at the Bank of England and at the Bank of Ireland, Belfast, as:—

(1) "transferable in the Books" subject to the provisions of the Government and other Stocks (Emergency Provisions) Act, 1939; or

(2) "transferable by Deed."

Holdings will be interchangeable without payment of any fee; Bonds will be transferable in sums which are multiples of one penny.

Transfers will be free of Stamp Duty.

Interest on the Bonds will be paid half-yearly on the 1st January and 1st July. Interest will be paid by warrants transmitted by post and Income Tax will be deducted from payments of more than £5 per annum. The warrant for the first interest payment due on the 1st January, 1941, representing interest from the date on which the subscription accompanied by payment is lodged, will in all cases be sent to the person in whose name a Bond is originally registered or, if registered in joint names, to the person first named.

The Bonds and the interest payable from time to time in respect thereof will be exempt from all United Kingdom taxation, present or future, so long as it is shown in the manner directed by the Treasury that they are in the beneficial ownership of persons who are neither domiciled nor ordinarily resident in the United Kingdom of Great Britain and Northern Ireland. Further the interest payable from time to time will be exempt from United Kingdom Income Tax, present or future, so long as it is shown in the manner directed by the Treasury that the Bonds are in the beneficial ownership of persons not ordinarily resident in the United Kingdom of Great Britain and Northern Ireland.

These exemptions will not apply so as to exclude the interest from any computation for taxation purposes of the profits of any trade or business carried on in the United Kingdom. Moreover the allowance of the exemptions is subject to the provisions of any law, present or future, of the United Kingdom directed to preventing avoidance of taxation by persons domiciled, resident, or ordinarily resident in the United Kingdom, and in particular,

the interest will not be exempt from Income Tax where, under any such provision, it falls to be treated for the purpose of the Income Tax Acts as income of any person resident or ordinarily resident in the United Kingdom.

Subscriptions, which must be accompanied by payment at the rate of £100 for each £100 of Bonds subscribed, may be lodged at the Bank of England Loans Office, E.C.2, or at any office of the following Banks:—

IN GREAT BRITAIN

Bank of England.	Isle of Man Bank, Ltd.
Bank of Scotland.	Lloyds Bank, Ltd.
Barclays Bank, Ltd.	Martins Bank, Ltd.
British Linen Bank.	Midland Bank, Ltd.
Clydesdale Bank, Ltd.	National Bank, Ltd.
Commercial Bank of Scotland, Ltd.	National Bank of Scotland, Ltd.
Co-operative Wholesale Society, Ltd.	National Provincial Bank, Ltd.
Coutts & Co.	North of Scotland Bank, Ltd.
District Bank, Ltd.	Provincial Bank of Ireland, Ltd.
Glyn Mills & Co.	Royal Bank of Scotland.
Grindlay & Co., Ltd.	Union Bank of Scotland, Ltd.
C. Hoare & Co.	Westminster Bank, Ltd.
	Williams Deacon's Bank, Ltd.
	Yorkshire Penny Bank, Ltd.

IN NORTHERN IRELAND

Bank of Ireland.	National Bank, Ltd.
Belfast Banking Co., Ltd.	Northern Bank, Ltd.
Munster and Leinster Bank, Ltd.	Provincial Bank of Ireland, Ltd.
	Ulster Bank, Ltd.

A commission of 2s. 6d. per £100 will be paid to Bankers or Stockbrokers on subscriptions bearing their stamp.

Subscriptions must be made on the printed forms which may be obtained, together with copies of this Prospectus, at the Bank of England Loans Office, London, E.C.2, or at any of the Branches of the Bank; at the Bank of Ireland, Belfast; of Messrs Mullens & Co., 13 George Street, Mansion House, E.C.4; or at any Bank or Stock Exchange in the United Kingdom.

BANK OF ENGLAND, LONDON,
24th June, 1940.

N.B.—Separate Prospectuses relating to 2½ per Cent. National War Bonds, 1945-1947, to be held on the Post Office Register will be issued by His Majesty's Postmaster-General (and may be obtained at any Savings Bank Post Office or Bank), and by the National Debt Commissioners on behalf of Trustee Savings Banks. The amount subscribed by any person under the Prospectuses issued by His Majesty's Postmaster-General and by the National Debt Commissioners must not exceed £1,000.

Colliery Profits

Dividends announced by the Powell Duffryn group this week indicate a favourable year's trading. Powell Duffryn Associated, the operating company, is to pay a total ordinary dividend of £415,000, against £385,000 in 1938-39 and £475,000 in 1937-38. The ordinary dividend is paid as to £138,333 to Welsh Associated Collieries and as to £276,667 to Powell Duffryn Steam Coal. Welsh Associated have announced a 1½ per cent. dividend which absorbs £55,224, and is the highest ordinary distribution for more than ten years. Powell Duffryn Steam Coal has raised the ordinary dividend from 6 to 7½ per cent. Thus the £1 ordinary stock, quoted at 14s. 0½d., yields £10 13s. 4d. per cent. William Cory realised a slight increase in gross income from £764,310 to £766,427, after taxation. The dividend is maintained at 20 per cent. as in the last three years and in the absence of any allocation to reserve the carry forward has been increased from £998,549 to £1,123,457. The company's £1 ordinary stock quoted at 60s. yields £6 13s. 4d. per cent. Among other recent results for the year to March, Doncaster Amalgamated and the Butterley Company showed record trading profits, while Tredegar Iron and Coal reported a reduction in gross income for the third successive year. Doncaster Collieries obtained equity earnings of £239,827, against £54,465, and the directors have resumed ordinary dividends with a 4 per cent. payment. The Butterley Company, whose trading profit was £56,426 higher than the 1938-39 figure of £287,288, showed distributable earnings of £120,344, against £146,105, but the former figure is affected by A.R.P. charges and an increased tax allocation. The dividend of 10½ per cent., less tax, requires £119,250 net, or slightly more than the £117,000 required for the previous year's tax-free dividend of 6½ per cent. Tredegar Iron and Coal had a less satisfactory year, for net profit fell to £58,882, against £73,380 in 1938-39. The tax-free dividend of 3 per cent., against 4 per cent. in the previous year, is covered by earnings of 3.4 per cent. All three companies experienced the pressure of increased taxation and other costs; and the more favourable results of Doncaster Collieries and Butterley may be related to output. No figures are given, though the Doncaster Collieries directors state that output exceeded that of the previous year by 200,000 tons. Future prospects have been affected by the sudden disappearance of the French market. In 1938, 38.19 million tons, or 16.82 per cent., of the coal raised were sent abroad. Possibly, bunker coal trade will increase as a result of the same changes, and lost markets on the Continent may to some extent be made good in South America. An active home trade should be assured, though the position of the iron and steel industry, dependent largely upon supplies of imported iron ore, is a factor which must exercise a powerful influence, especially on companies such as Tredegar Iron and Coal and Butterley, which are integrated with the iron and steel business. At current prices, Butterley and Doncaster Collieries ordinary offer £7 and £8 10s. per cent. respectively. The £1 shares of Tredegar Iron at 13s. 9d. yield £4 10s. per cent., tax free.

Great Boulder Proprietary

The exchanges between the directors of Great Boulder Proprietary and the Grundt Committee continue. The Committee have recently circularised shareholders and have refused *pourparlers* between the Board and the Committee to arrive, in the directors' words, "at unanimity of purpose." The company's report for last year appears satisfactory. Some 172,668 ounces of gold were produced at a value of £758,265, against 145,869 ounces with a value of £609,769 in the previous year. Net profits increased from £172,481 to £225,120, and the dividend of 50 per cent. compared with 37½ per cent. in the preceding year. With their report, the directors have circulated the report of Sir William McIntock to the Board of Trade following his inspection of the affairs of the company. Sir William states that, in his opinion, some of the allegations of the (Grundt) Committee cannot be substantiated, while the technical difficulties inherent in other allegations would make it difficult for him to report usefully one way or another. In brief comments on the Committee's allegations the inspector refers at one point to the connection between Great Boulder Proprietary and the flotations of Southern Cross Gold Development, Murchison Gold Development and Great Boulder Mining and Finance (to which Great Boulder Proprietary were the vendors of certain investments). Regarding these issues, Sir William McIntock declares that the directors of Great Boulder Proprietary had a duty, before lending the company's name to the flotations, to confirm that all relevant information regarding the new companies was placed before the public

and to assure themselves that the prospects of the companies were at least as good as the directors anticipated, and he is not satisfied that this duty was fulfilled. The directors of Great Boulder Proprietary, in a commentary upon the inspector's report, declare that the Southern Cross and Murchison properties were under water before the issue of the prospectuses, and that facts registered by the Western Australian Government Mines Department formed the basis of the mining engineers' reports.

Attock and Phoenix Oil

Attock Oil, with a record total profit of £467,589 for 1939, has enjoyed the best year for a decade. The profit figure is struck without provision for E.P.T., which the directors consider impossible to estimate. Moreover, it is probable that the company will appeal when the assessment is made known. Expenditure includes the interesting item of £1,167 for prospecting in England. A total of £150,000 against £180,000 has been charged for depreciation. The 7½ per cent. dividend on the increased ordinary capital absorbs £135,000 of the £305,043 available for ordinary distribution, representing earnings of 22.6 against 9.3 per cent. The carry forward, after charging the balance of new capital issue expenses amounting to £441, has risen from £19,607 to £188,768. The directors disclose no figures for output, but it is probable that the upward trend of the last five years has been continued. In the Dhulian oilfield, three new wells were drilled last year, and two more are nearly completed. The £1 ordinary shares, quoted at 21s. 3d., yield £7 1s. 2d. per cent. Although the Phoenix Oil Company's gross income suffered a further fall in 1939 from £139,276 to £118,245, the financial position has been much clarified by the capital reorganisation of last year. As a result, the issued capital was cut from £3,787,553 to £1,438,268, on which a net profit of £84,304 was earned, against £90,246 in 1938. The directors have declared a dividend of 7½ per cent., of which 2½ per cent. is distributed from accumulated profits. The balance of 5 per cent. is covered by earnings of 5.9 per cent., and the total distribution absorbs £107,870. Some £25,000 has been provided for investment reserve, leaving the balance carried forward reduced from £314,396 to £263,715. The total investment reserve of £1,175,000 and the sum of £2,349,320 written off under the capital reorganisation have been applied against investments in subsidiaries and advances, reducing the total from £5,394,581 to £1,870,261. The balance sheet at December 31st showed a deficiency of liquid assets amounting to £168,000, against £1,000 in 1938, but increased sales to the British Government since the outbreak of war have raised the company's sterling balances. Under the new Payments Agreement which came into force this month, however, it is unlikely that further substantial transfers of sterling will be made. The effect of higher prices in Roumania has been largely counteracted by increased costs of production and transport. The prospects for the company are dominated by the political situation, and in the circumstances a quotation of 2s. for the £1 stock is hardly surprising.

Union Corporation Group

The annual meetings of the leading companies in the Union Corporation group, recently held in Johannesburg, have, as usual, disclosed some very interesting information. It is expected that under the new system of taxation, by which the companies receive the ruling price for gold, the profits will not be materially changed, after allowing for increased taxation. For instance, the East Geduld net profit was reduced by £15,000 for the first quarter of this year, and

	January (Working Costs per Ton)	May
Geduld	15/9	17/5
East Geduld	15/10	16/9
Grootvlei	22/8	23/8
Van Dyk	23/2	24/2
Marievale	28/9	30/2
City Deep	25/7	27/4
Daggafontein	19/4	20/7
Luipaards Vlei	24/-	25/-
Randfontein	16/11	18/-
Rand Leases	20/2	21/3
Simmer and Jack	20/9	21/3

a small decrease is shown by Geduld. On the other hand, Grootvlei, Van Dyk and Marievale show slightly higher net profits. Thus the new taxation system is unlikely to have any

major effect on dividend payments in future unless, of course, the selling price of gold rises above the present figure of 168s. an ounce. As the result of the increased price of gold, and allowing for lower grade ore to be included, the ore reserves show important increases and are respectively 20 per cent., 40 per cent., 30 per cent. and 35 per cent. higher for the Geduld, East Geduld, Grootvlei and Van Dyk. The lives of all these mines will consequently be lengthened very considerably. The question of working costs of the Rand mines has received much attention recently, and in many

quarters it was anticipated that these would increase substantially. The accompanying table gives costs per ton for various mines for January this year and for May. In this connection it must be realised that the gold realisation charges are now included in working costs, and these amount to rather over 3s. an ounce. Some other leading mines, apart from the Union Corporation group, are included in this list for comparative purposes. The table shows that, up to the present, the rise in working costs is generally not of any material importance.

THE STOCK EXCHANGES

London

Note: all dealings are for cash

FOLLOWING the news of the French capitulation, all sections of the markets have been extremely depressed. The greatest selling pressure has been experienced among equities, but on Thursday a striking improvement took place. Falls were unrelieved in the foreign bond market. Home rails have suffered losses, but the ordinary stocks have been relatively well supported. In the commodity markets, dullness has been the outstanding feature, but all sections have lost ground.

The *gilt-edged* market closed above the worst on Monday, but net losses of ½ were experienced by 2½ per cent. Consols, 3½ per cent. War Loan and Local Loans followed by similar losses the next day, which extended to Conversion 3½s and Funding 4s. Further small falls in mid-week were checked by institutional buying on Thursday, when the market closed steady rather than strong. The political news served to offset the influence of the War Bonds issue.

In the *foreign bond* market falls in Japanese bonds, following news of closer association between Tokyo and the Axis, were general. Brazilian and Argentine bonds also came on offer, and on Monday falls of 10 points were sustained by all French railways, after which quotations became nominal.

Starting with declines in the order of ½ on Monday, increasing resistance developed among *home rail* ordinary stocks. Prior charges of the L.M.S. and L.N.E.R. lost up to two points on Monday, and further declines have followed. Great Western and Southern 5 per cent. preference issues each lost two points on Tuesday, and on Wednesday falls of a further point were common among fixed interest issues.

The *industrial* market was the outstanding section to suffer selling pressure. This was at its most acute on Monday, and a slight improvement the next day was not maintained. The tobacco and brewery groups have been among the heavy sufferers. "Imps." and "B.A.T.s." lost ¼ and ½ respectively on Monday last, followed by further losses during the week; Guinness lost as much as 6s. 6d. on Monday, followed by 2s. 6d. on Tuesday, while Courage fell 3s. 9d. in midweek. Other heavy losses on Monday included 2s. in John Brown and Lever and Unilever, 2s. 6d. in Wm. Cory, Tate and Lyle and Woolworths, and 1s. 6d. in Marks and Spencer. Later in the week Metal Box lost 3s. and J. and P. Coats 2s. 6d. Gains by Dunlops, Courtaulds, and Morris Motors on Tuesday were not maintained. These falls were dramatically reversed on Thursday, when gains of up to 2s. 6d. were recorded in the investment industrials.

Oil shares closed at the worst on Monday, losses of ½ for Anglo-Iranian and ¾ for Shell were temporarily checked by gains of ½ the next day. Attock Oil gained ½ in midweek. The market was depressed and turnover was

small throughout. No improvement was realised in the *rubber* market. Losses were experienced by United Siam Betong, Anglo-Dutch, Allied Sumatra and other leading issues. The *Kaffir* market was adversely influenced by political sentiment in the Cape, and Paris favourites also came on offer. Selling pressure was slight, but losses of ½ by Geduld and of ¾ by Consolidated Main Reef and City Deep were experienced on Wednesday.

New York

WALL STREET opened quiet but firm on Monday, having already discounted French acquiescence in the armistice terms. Markets were buoyed up by prospects of increased armament expenditure. Steel issues advanced and utilities were strong. An unfavourable reaction to Mr Churchill's speech later in the week caused losses in the order of \$2 in various sections, though no selling pressure developed. The Limitation of Profits Bill caused a slump in aircraft issues, and motor shares were depressed on news of the size of dealers' stocks. Copper and rubber shares also lost ground. The Dow Jones industrial index fell back from 123.76 on Monday to 119.73 in midweek. A check to the rise in steel mill activity is indicated by the *Iron Age* estimate of 88 per cent. of capacity against 87 per cent. a week ago.

BY PUBLIC OFFER

British Government.—Issue of 2½ per cent. National War Bonds at 100, Redeemable at par July 1, 1947, or (whole or part) from July 1, 1945, on three months' notice. Interest: January 1, July 1. Tax deducted from warrant payments over £5 per annum. Non-residents exempt from all U.K. taxation. Trustee stock.

CONVERSIONS AND REPAYMENTS

Victory Bonds.—£3,938,300 4 per cent. Victory Bonds have been drawn for repayment at par on September 1, 1940, comprising £3,772,000 Bank of England issue and £166,300 Post Office issue. Total drawn for repayment to date £57,466,500.

Industry and Trade

The French Merchant Navy

Among the aids to the prosecution of war which have fallen into Hitler's hands as a result of the capitulation of the Bordeaux Government, French shipping and shipbuilding capacity are not to be reckoned as highly as might be supposed. According to *Lloyds' Register*, the gross tonnage of steam and motor vessels of over 100 tons owned by France in 1939-40 was only 2.9 millions out of a world total of 68.5 millions. The British Empire owned 21 million tons, the United States 11.5 millions, and Japan, Norway, Germany (with nearly 4.5 millions), Italy and Holland all owned larger merchant fleets than France. Much of this French shipping must presumably be outside European waters, so that by no means all of it is likely to fall into German hands. The capacity of the French merchant shipbuilding yards, as indicated by the launchings in recent years, is very small. During the ten years 1929-38, the tonnage launched in France was only 3 per cent. of the world total. The average annual launchings during those years was 58,000 gross tons; in the best year, 1931, it was only 103,419 tons, and since 1932 the figure has never risen as high as 50,000 tons. It will not be easy for the Germans to exploit the naval shipyards of France, for, though they have greatly improved their iron ore position by the occupation of Lorraine, they still lack steel alloys.

* * *

France's Food Production

It is widely held that France produces food considerably in excess of her own requirements. In fact, she is normally an importer of virtually all the basic foodstuffs, of the conventional necessities, such as coffee, cocoa and tea, as well as of wine. This is revealed by the accompanying table, which compares the domestic production with retained imports of some of the chief foods in 1936-38. Although imports are comparatively small relative to production, except in the case of maize, it is doubtful whether the yield of the

METROPOLITAN FRANCE
Million metric tons

	1936		1937		1938		Average	
	Production	Net Imports	Production	Net Imports	Production	Net Imports	Production	Net Imports

Sugar ...	0.8	0.1	0.9	0.2	0.8	0.1	0.8	0.1

crops can be maintained in the absence of imported fertilisers. And as the current year's crop may be as much as 20 per cent. smaller than last year's, France will not be able to supply Germany to any great extent, unless she is made to starve. France's livestock, on the other hand, is substantial, and much of it is in the occupied part of the country. It included, in 1938, 15½ million heads of cattle, 10 million sheep, more than 7 million pigs, and nearly 1½ million goats. Judging by their behaviour in other countries, the Nazis will have no scruples in depleting France's livestock.

* * *

Europe's Food Supplies

As the accompanying table shows, Continental Europe, like France, is barely self-sufficient in the basic food supplies and feeding stuffs. Nor can the recent level of output be maintained without the import of fertilisers. Continental Europe is also dependent upon the import of large quantities of edible fats and of other commodities, such as coffee,

cocoa, tea and spices. It is already beyond doubt that this year's harvests will yield appreciably less than in normal years, for in many countries cultivation has been hampered by the calling-up of large numbers of able-bodied men to

the Colours. If the British blockade can be made effective, Continental Europe will be short of food this winter, for Russia, even if she were willing, is not in a position to make up the deficiency.

* * *

America's Lost Oil Markets

In sharp contrast to its pre-war expectations, the American oil industry has been hard hit by the conflict in Europe. So far from booming, the price of its principal export product—petrol—has fallen well below the level ruling before hostilities commenced; and the end of the downward movement is apparently not yet in sight. During the first seven months of the war, America's mineral oil exports amounted to little more than 86 million barrels, or 10 per cent. less than during the corresponding period of 1938-39. Shipments of petrol and of residual fuel oil were both down by 26 per cent. and, although exports of lubricating oils showed an increase of 48 per cent., the quantities involved were not large enough to make very much difference to the total. The reasons for this reduction in sales abroad are not difficult to find. The Allied contraband control, besides stopping direct shipments to Germany, brought about drastic reductions (of 51 and 35 per cent., respectively) in exports to Holland and Belgium, through which sizeable quantities of oil reached the Reich in normal times. Moreover, in consequence of the severe restriction of civilian demand and the tendency to purchase oil from other suppliers in order to conserve dollars, the United Kingdom took 43 per cent. less from the United States in September, 1939-March, 1940 than in the same period of the previous year, while shipments to France were down by 34 per cent. Italy, who considerably increased her purchases from Mexico during these war months, reduced her takings from the United States by 35 per cent. A few countries, notably Canada and Japan, took increased quantities, but on balance the movement was unfavourable to America during the first seven months of the war. Nor is this all. In consequence of recent German successes, practically the whole of Scandinavia, the Low Countries, much of the Mediterranean area and, presumably, France as well, are temporarily lost to the American oil exporter. The severity of these losses can be appreciated by the fact that American oil exports to these countries (including Germany) in 1938 amounted to over 57 million barrels, or almost one-third of the industry's total overseas business in that year. This figure, moreover, does not take into account the reduction in business with the United Kingdom. If America could bring herself to jump the hurdle which separates "non-belligerency" from active participation in the war, the demand for her oil products might conceivably rise. But until then the oil industry's prospects must remain somewhat gloomy, notwithstanding the favourable course of domestic demand.

Europe's Lack of Oil

Many have been the gains secured by Germany as a result of her conquests in Europe. But there are a number of essential commodities in which Europe as a whole is seriously deficient; and of these none is more important than oil. According to the Statistical Yearbook of the League of Nations the whole of Continental Europe (excluding Russia) produced only 8 million metric tons of crude oil in 1938; Roumania, the biggest source of oil, produced 6.6 million metric tons in that year. Even if allowance is made for the several million tons of oil which can be produced from coal and by other methods, chiefly in Germany, domestic supplies are far below normal requirements. And Russia has little oil to spare. In 1938 Germany (including Austria and Czecho-Slovakia) consumed about 7 million tons and France 6½ million tons (including bunker oil). In Italy consumption (including bunker oil) has recently been running at the annual rate of about 3½ million tons, while the requirements of the rest of Europe, including the Low Countries, Scandinavia and Switzerland must amount to several million tons per annum. The stocks accumulated by France and other countries may last for a few months. But it is clear that Europe's industries and transport will be crippled next year for lack of oil unless the Nazis can secure access to non-European sources of supply, in Iraq and Persia, for example.

* * *

Unemployment and Munitions

The urgent need for additional labour in the industries producing war materials is reflected in the accompanying figures. The table analyses the distribution of unemployment as given in the *Ministry of Labour Gazette*. Although there are still nearly a million insured persons without work the percentage of unemployment in essential industries such

UNEMPLOYMENT IN AUGUST, 1939, AND IN MAY, 1940

as chemicals, vehicle manufacture and engineering is so small that there are virtually no reserves on which to draw. It is therefore essential that training should be provided for the unemployed in less essential work or even for workers who can be taken out of those industries. The Government training scheme has now been revised and enlarged with a view to training over 100,000 men a year. Only engineering trades are taught, existing centres are being enlarged and six new ones acquired. The scheme is being worked in close co-operation with employers so that the training may be as useful as possible; in some cases partly-trained men continue their courses under their employers, thus making room for more trainees at the centre. In addition, the trade unions and the employers reached agreement on May 22nd as to the conditions under which women shall be admitted into the engineering industry. They are already being withdrawn from non-essential occupations and trained.

* * *

Cotton Yarn Margins

For the second time since their inception at the beginning of the year the fixed margins under which all single cotton yarns are now sold are due for a revision. The futures month which governs the price of yarn has so far been July, and as the Control will probably be unwilling to allow quotations to be based on the current month, the approach

of July will make necessary a change-over, probably to the January position. A revision of margins took place in April to cover the higher costs of production which spinners have had to face since January. This included a wage advance of 7½ per cent. to the operatives as a result of the rise in the cost of living. A further increase of 2½ per cent. is to be paid to the workpeople in the first week of July, so that producers of yarns will have an additional expense to meet if their margins are not adjusted accordingly. In the spinning branch of the trade much irregularity still exists owing to the fact that coarse counts are urgently needed for the production of heavy cloths required by the fighting forces and home defence. Certain very fine Egyptian counts are being used in considerable quantities for aeronautical fabrics, but the medium numbers in both American and Egyptian descriptions are neglected. Operatives in mills spinning only these counts are being transferred to work double-shifts in mills which are devoting their whole capacity to the production of the more urgent Government needs.

* * *

Cotton Export Trade

The Cotton Board and Cotton Control have now been separated. Mr E. Raymond Streat, secretary of the Export Council, is the new chairman of the Board, leaving Sir Percy Ashley to concentrate on his duties as Controller. This appointment is understood to be the forerunner of other important changes in the organisation of the cotton industry. It is rumoured in Manchester that Mr Platt, who has just resigned the Deputy Controllorship, is shortly to become the head of an entirely new department entrusted with the special development of overseas trade in cotton yarn and piece-goods. Throughout the industry the separation of the Control from the Board has been welcomed. It is thought that it will aid the drive, on the one side for ample supplies for the Services, and on the other for the extension of export trade.

American Apples

In recent years, between 10 and 15 per cent. of the apples grown for sale in the United States have been exported. The proportion is not high, but as it represents the balance between a fairly steady domestic consumption and a varying yield, the power to export has a large influence on the average prices received by American apple growers. The European war began just when apples from the fairly large 1939 crop were reaching the ports in bulk. Most of the trade with Europe, and with the United Kingdom in particular, has been stopped by import restrictions and exchange control, and in the nine months from July 1939—March 1940, American apple exports were not one-third of those in the same period of the preceding season:—

U.S. APPLE EXPORTS
(Million bushels)

	July 1-June 30		July 1-March 31	
	1937-38	1938-39	1938-39	1939-40
Total exports	11.0	12.0	11.0	3.0
Of which—				
To U.K.	4.2	4.3	...	...
To Europe	4.2	4.3	...	...

Prices received by American farmers fell sharply in August and September and have remained at very low levels since; they have even been lower than in the winter of 1937-38, when the exceptionally large crop of 1937 was being sold. To assist the growers in disposing of their crop, apples have been included among those foods which can be bought with food stamps by persons on relief and it is also hoped to reduce the surplus by more rigorous culling of blemished and poor quality fruit. But as long as blockade and war needs limit the exchange and shipping available for exports of non-essential foods to Europe, American apple growers are likely to suffer from low prices for their product. Conversely, the loss of American imports is likely to cause rather higher prices and rather smaller consumption in this country; the United States supplied about one-quarter and Canada some two-fifths of British imports of apples in recent years. In years when the British apple crop is good, apple imports from Canada and the United States are less important than those from Australia, which arrive in the early spring and summer; imports from North America are concentrated in the autumn and winter.

COMMODITY AND INDUSTRY NEWS

In general, markets show little change on the week. They have been chiefly influenced by the political news, and in consequence have been dull. The most spectacular change has been the fall in the price of tin. Rubber is 1d. per lb. cheaper on the week, business having been very small while the complete ban on speculative transactions was in force. Cotton prices improved during the latter part of last week, but have since suffered from lack of support; they are, however, still higher than a week ago. The market in Egyptian cotton has been influenced by the uncertainties of the Mediterranean shipping position. Eggs are dearer than a week ago, and coffee cheaper, but most food prices are unchanged.

★

Cotton (Manchester).—For several weeks the trade in yarn and piece-goods has been almost entirely to meet Service requirements. In other directions demand has been slow. Offers from abroad for piece-goods have been scarce, and shippers have restricted their commitments as much as possible. Business has been largely confined to South America and the Dominions. Fresh buying for the home trade has also been very limited. More cases have been reported of buyers trying to cancel contracts or defer taking up deliveries. Spinners are adversely affected by this, and order lists are more irregular than for some time back. Operations in the Liverpool market have been affected by increased uncertainty as to shipping facilities from Egypt. There has been an active demand for near months futures with signs of some manipulation of the market, which the directors of the Liverpool Cotton Association, however, have taken action to stop.

★

Metals.—Conditions on the New York metal markets have been quiet, with prices inclined to fall. The export price of copper has been reduced from 11.50 cents to 11.25 cents per lb. This was due to the loss of French markets, which took about 300,000 tons a year. Steel activity in the United States continues to increase, and was this week at 88 per cent. of capacity. Fixed prices in this country remain unchanged. The price of quicksilver, of which an important source of supply is in Italy, continued to advance.

★

Tin.—The recovery in the price of tin at the end of last week was not maintained, and the acceptance by France of the armistice terms and the decline in American buying caused a renewed fall, and on Wednesday standard cash spot closed at £256 to £257 per ton, against £266 10s. to £266 15s. a week earlier.

TINPLATE PRODUCTION: PERCENTAGE OF S. WALES' CAPACITY IN OPERATION

" 25	64.93	72.49
June 1	64.37	70.82
" 8	63.13	63.05
" 15	72.23	69.95

Grains.—Markets have been very quiet for the past week and wheat prices in America are very near the fixed minima. With daily improvements in the western crop and a record carry-over of about 240 million bushels, there is little likelihood of a substantial increase in the near future. The American grain trade is likely to be affected by the United States proposal to form a cartel for the disposal of the export surpluses of all American countries. Maize prices have improved slightly on the week. There are reports that the Government is in negotiation with the Argentine Government for the purchase of about 14 million quarters on a barter basis. The barley season can now be regarded as ended and business is at a standstill.

★

Oils and Oilseeds.—The armistice in France has brought business on the oilseed markets to a complete standstill. A large quantity of linseed afloat from the Plate to France has been diverted to the United Kingdom, and the Control has withdrawn from the market for the present. Official maximum prices are unchanged, but a new schedule to come into force on July 1st will be issued this week. Supplies of home produced and imported oils and fats are good. There are favourable reports of the United States crops. There were no shipments from the Plate last week, but Indian exports to the United Kingdom continue normally. Trading in Egyptian cotton seed is impossible owing to the closing of the Mediterranean.

★

Rubber.—On June 26th the complete ban on speculative transactions with non-members, imposed by the London Rubber Trade Association on June 17th, was modified. Such business is now permitted subject to certain restrictions, and the Committee will take steps to see that there is no undue fluctuation in prices. The motive behind the restrictions is to maintain stocks in, and the regular flow of shipments to, the United Kingdom. There are unconfirmed reports that 100,000 tons of rubber has been sold to the United States by this country on a cash basis.

★

Export Groups.—The following export groups have recently been formed:—

COMPANY MEETINGS

J. LYONS AND COMPANY, LIMITED

TRADING PROFIT MAINTAINED

DIVIDEND OF 4s. PER SHARE

WARTIME PROBLEMS

SIR ISIDORE SALMON'S REVIEW

The forty-sixth ordinary general meeting of J. Lyons and Company, Limited, was held, on the 24th instant, at the Trocadero Restaurant, Piccadilly Circus, London.

Sir Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

REPORT OF THE DIRECTORS

The directors have the pleasure to submit their forty-sixth annual report, with a balance sheet and profit and loss account, made up to March 31st last, showing the financial position of the company at that date.

The year's trading includes seven months of war, and the business done under the circumstances may be considered satisfactory. The period immediately following the outbreak of war caused considerable disturbance to trade with consequent diminution of profits. This called for the warning to shareholders, when paying the interim dividend, that the year's results might be disappointing.

Immediate steps were taken to meet the altered conditions by reorganisation. The effect of this prompt reorganisation aided by a recovery of business has resulted in the amount available for distribution being approximately equal to last year's figure after setting aside an adequate provision for contingencies.

	£	£
The balance of trading account after providing reserve for contingencies (including N.D.C.) is		1,011,452.00
To which is to be added the amount brought forward from last year	249,154.05	
Less amount appropriated towards expenditure on A.R.P.	100,000.00	149,154.05

Showing available for distribution a total of

From this total the following dividends have been paid or provided:—

On preference and preferred ordinary shares to March 31, 1940	490,353.27
On ordinary, "A" ordinary, proportional and "B" proportional profit shares—interim paid December 1, 1939	92,813.65

And the directors propose to deal with the balance as under:—

To pay a final dividend of 3s. per share on the ordinary and "A" ordinary shares, making 4s. per share for the year ended March 31, 1940

To pay a final dividend of 7.2d. per share on the proportional and "B" proportional profit shares, making 9.6d. per share for the year ended March 31, 1940	249,940.95
	28,500.00
	861,607.87

Leaving to carry forward to next account

298,998.18

The dividends received from subsidiary companies have been included in the company's trading account. In the aggregate the profits of the subsidiary companies exceeded the declared dividends. Losses of subsidiary companies so far as they concern this company have been dealt with in this company's accounts.

In January last the Board suffered a great loss in the death of Mr Julius Salmon, one of the managing directors. He had rendered most valuable service to the company and was held in the highest esteem both by his colleagues and the staff, by whom his loss is deeply deplored.

Mr I. M. Gluckstein has been appointed a managing director.

The directors propose to convert the issued and fully paid ordinary, "A" ordinary, 5 per cent., 7 per cent. and 8 per cent. preference, 6 per cent. preferred ordinary and proportional profit shares into stock and the notice of meeting includes a resolution for that purpose. The stock of each class will be transferable in amounts and multiples of £1 corresponding to the present nominal value of the shares.

Mr B. S. Gluckstein and Mr. Lt. Julian Salmon retire from the office of director and being eligible offer themselves for re-election.

Messrs H. H. G. Bennett and J. M. E. Sierra, employee directors, retire and are eligible for re-election.

Messrs Turquand, Young, McAuliffe and Company, the auditors, retire and are eligible for re-election.

(Signed) ISIDORE SALMON } Managing
HARRY SALMON } Directors.

Cadby Hall, London, W.14.

June 11, 1940.

CHAIRMAN'S SPEECH

The Chairman said:—Ladies and gentlemen, we have met to-day to review the results of the forty-sixth year of the company's trading. At such a time as this, when we are confronting the greatest menace which has ever threatened the country, I am sure you will want me to be brief in my remarks.

THE LATE MR JULIUS SALMON

I wish in the first place to refer to the death last January of Mr Julius Salmon, my brother. It has been a grievous blow to us all and a great loss to the company, which he had served with wholehearted devotion and conspicuous ability. This is a tribute of knowledge and affection which expresses, however inadequately, the feelings not only of myself and my colleagues but of the staff too, by all of whom he is greatly missed.

You will have read the directors' report, and I do not think I need add anything to what is said there on the general nature of the year's trading.

The balance of trading account is £1,011,452. As you will see, we have taken £100,000 from the 1939 carry-forward towards expenditure on air raid precautions in accordance with my statement at the last meeting that, although the 1939 trading figures had borne a preliminary charge, we did not feel it possible to charge the whole of this heavily increasing expenditure against revenue. As the expenditure is still going on, we may have to adopt a similar course in the current trading year. The balance of the 1939 carry-forward is therefore £149,154 and the total available for distribution £1,160,606. Of this amount £583,000 has already been paid or provided for dividends, and the carry-forward, after

paying the final dividends now proposed, will be £298,998. Although the balance of trading account is almost the same as last year, we have, as a matter of precaution, reduced this year's dividend to a total of 4s. per share.

MANY DIFFICULTIES

We have had to face many difficulties arising from war conditions both in the retail and the wholesale sections of our business. If I refer specifically to rationing and regulation of supplies it is not with the intention of criticising these necessary measures; nor do I wish to imply that they have been the only cause of anxiety to us. Up to the end of the financial year, and indeed up to the present, we have been able to adjust our methods to minimise the effect of these various difficulties upon the business; but the position changes from day to day, particularly as further restriction in the interest of the country's war effort is imposed.

Never was the company's policy of having a board whose whole time is devoted to the administration of the business more justified than now. Two members of the board are absent on service with the Forces, as well as almost the whole of our younger managers who have been trained, as we have often told you, to become our successors in the fullness of time.

INCREASED ORDERS

It has thus been a period of very hard work for the rest of us. It has not been difficult to sell our products—orders have indeed increased in many directions—but, through restriction of supplies, production has often fallen below demand. We have had to discontinue some lines and, to our great regret, we have had to increase some prices. Of course, we can no longer, as we did in the past, buy many of our commodities direct from producers nor directly import certain goods. We cannot, since so many of our supplies are now allotted to us under the various control schemes, exercise our judgment and experience in selection and buying. I repeat that this is not meant as a criticism but as an indication of some of the problems which will become increasingly pressing as the war goes on.

As we have often told you, it has been our ambition, by conserving our resources, to maintain a stable dividend—it seemed possible to achieve that ambition in peacetime. As I have said, however, we felt it necessary to take the precaution this year of making some reduction in the dividend.

QUESTION OF SUPPLIES

How long we can continue to overcome our difficulties and maintain a satisfactory total volume of business is more than we can say. The availability of the supplies we require is an important factor. If we cannot get them, no amount of reorganisation will avail, for it cannot remove the deadweight charge of idle machines and buildings. If during the war we can do no more than keep the capital and the reserve capital intact, we shall have cause to be thankful. I am sure you will agree with me in this, that whatever may be the cost to any of us individually or collectively, the war must be won and to that end the whole effort of the nation must be devoted. (Hear, hear.)

I do not think it is necessary to comment in detail on the several differences between this year's assets and liabilities and those of last year. The comparison is set out in the balance sheet. The differences are only such as might be expected under the altered conditions in which we are working and they are none of them sufficiently large to be regarded as abnormal.

TRIBUTE TO STAFF

It is a pleasure as well as a duty once again to pay a tribute to the staff of all grades for their magnificent co-operation and their continued loyalty to the company. You will, I am sure, wish to be associated with the board in this expression of thanks to them for their contribution to the achievement of the year's results. A large number of our men are serving in the Forces and to those who have dependants we are making allowances to supplement their Service pay according to their individual circumstances and their service with us. I am sure you will wish to join with me in conveying to all of them our good wishes for their safe return. (Hear, hear.)

SUCCESS OF NATIONAL SAVINGS GROUP

Early in the campaign we set up a National Savings Group to enable employees to purchase Savings Certificates by instalments deducted from wages and salaries. We have had a remarkable

response—the group has no less than 12,000 members who are subscribing for over 1,800 certificates per week. We have encouraged them to join the group by purchasing all the certificates in advance so as to give them, on completion of their payments, certificates which have earned interest from the date of their first instalment, and by giving for monthly ballot a number of free certificates.

CONVERSION OF SHARES INTO STOCK

Finally, I must say a word upon the resolution, dealing with the conversion of certain classes of shares into stock—a purely formal matter. The proposal does not in any way modify or affect the rights as to dividend, return of capital, voting, etc., attaching to the various classes of shares. It is made with the object of effecting economy in office work, which, where there is a large number of shareholders, is considerable. Each class of stock will be transferable in £1 units as at present, and will, of course, be quoted on the Stock Exchange. The board recommends the proposal for your approval.

THE RESOLUTIONS

The adoption of the report and accounts and the payment of the recommended dividends was moved by the chairman, seconded by Mr Harry Salmon, J.P. (one of the managing directors), and carried unanimously; and the resolution converting certain classes of shares into stock was passed.

The retiring ordinary directors (Mr B. S. Gluckstein and Flight Lieutenant Julian Salmon) and employee directors (Mr H. H. G. Bennett and Mr J. M. E. Sierra) were re-elected; the auditors (Messrs Turquand, Youngs, McAuliffe and Company) were re-appointed, and the proceedings terminated with a vote of thanks to the directors and staff.

GRIFFITHS HUGHES PROPRIETARIES LIMITED

PROFITS INCREASED

The sixth annual general meeting of Griffiths Hughes Proprietaries, Limited, was held, on the 27th instant, at Salford, Manchester.

Mr Harry Marland, J.P. (the chairman), said: You will be pleased to see that in spite of seven months of war, and the creation of a special reserve of £35,550 in respect of assets in certain European countries, the actual profit has risen from £112,550 last year to £155,418 this year, an increase of £42,868. The increase in profit was well spread over our numerous lines—Digestif Rennies in particular showing better results both at home and abroad.

Our export trade, in spite of the very serious difficulties experienced during the year under review, with inevitable loss in some countries as compared with previous years, has contributed an increased net profit to the accounts this year. During the six months ended March 31, 1940, the operating company delivered to H.M. Treasury controlled foreign currency amounting to £61,527 under the Defence (Finance) Regulations.

The company's liquid financial position continues to be very strong. The general reserve of £180,000 is the same, but the capital reserve now stands at £251,925. Liabilities, including provisions for the final dividend, taxation, and special reserve, total £212,394, against liquid assets of £691,187, a surplus of liquid assets of £478,793.

The report and accounts were unanimously adopted and the payment of a final dividend of 3 per cent., less tax, was approved.

The retiring directors, Mr C. B. Green, Mr W. W. Sim Harris and Mr E. S. Watts, were re-elected. The auditors, Messrs Deloitte, Plender, Griffiths and Company, and Messrs J. B. Boyd Wrigley and Company, were re-appointed.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED

SATISFACTORY RESULTS

The sixty-seventh annual general meeting of this company was held, on the 26th instant, in London.

The Rt. Hon. the Earl of Middleton, P.C., K.P. (the chairman), said that the net income for the year was £213,587, as against £258,331. With the amount brought forward, there was a total of

ZINC CORPORATION LIMITED

EXCELLENT DEVELOPMENT RESULTS

VISCOUNT HORNE'S REVIEW

The twenty-ninth ordinary general meeting of the Zinc Corporation Limited was held, on the 25th instant, at 95 Gresham Street, London.

The Rt. Hon. Viscount Horne of Slamannan, P.C., G.B.E. (chairman), presided.

After reviewing the accounts for the year ended December 31, 1939, which had been circulated to the shareholders, the chairman stated: While the outbreak of war caused the suspension of the contracts for the realisation of our main products, the provisions made in advance to meet this emergency prevented any interference with our productive operations, and employment at the mines and smelters was in no way affected. The contracts made with the British Government by the Lead Smelters and Zinc-treatment works enabled the latter to purchase our products, and permitted us to continue our operations at Broken Hill. In negotiating the terms of these contracts, the Broken Hill Mines, together with the smelters and treatment companies, had three main and clearly defined objectives, viz.: To give the utmost aid to the war requirements of the British and Australian Governments; the avoidance of "war profits"; and the maintenance of the fullest possible employment and the prevention of industrial distress. The final terms of the contracts, I can assure you, fulfil these purposes.

I should emphasise that while the Government contracts do not cover the whole of the Broken Hill production of lead and zinc concentrates, outside sales have, up till now, absorbed all the surplus. The present world position and outlook do not justify me—or anyone else—in saying more than this.

While our ability to sell the major part of our output was safeguarded by contracts designed long in advance of the outbreak of war, our ability to continue production necessitated a far-seeing provision of adequate stocks of essential materials which are normally obtained from widely distributed overseas suppliers. As a result, we faced the outbreak of war in a very strong position, and up to date I think I can say that we have not suffered a single moment of inconvenience from the absence or scarcity of anything essential to productive operations. Had these wise precautions not been taken, the great non-ferrous metal industries of Australia would not only have been unable to render assistance to the British Government, but the livelihood of the many thousands of workers directly and indirectly employed would have been gravely endangered.

DEVELOPMENT RESULTS

Developments continue to give excellent results. At our annual meetings during the past few years I have been able to advise you in each succeeding year that the "mine never looked better." I say the same with emphasis to-day. The 14th Level—approximately 2,000 feet below the surface—has now been opened up and shows a greater area of ore, with higher assay values, than any other level in the mine. (Cheers.)

In our reports and at our annual meetings in previous years, you have been fully advised of the difficulties in the shape of very bad ground met with in completing our new main shaft and new ore pass system. The extent to which these difficulties delayed our production programme is now fairly clear, and I think it is accurate to estimate that we lost between 12 and 18 months. Notwithstanding these delays—due to causes entirely beyond the control of the management—our output last year reached over 426,000 tons, and during the current year, if there be no interruption in production, I estimate it will exceed 500,000 tons. Some time in 1941 our lead lode development will, I anticipate, be sufficiently advanced to enable us to make substantial additions to this total if markets are in a position to absorb the resulting metals.

THE FUTURE

It has been my custom at previous meetings to deal at some length with the factors likely to influence the immediate future of our business. To-day there is very little I can say that is not already known to you. Our future, our very existence, depends on the outcome of the war. We cannot allow ourselves to contemplate any other result than complete victory for our arms. During the war we have a very important part to play in providing munitions. After the war, I hope we shall have an even more important part to play in the reconstruction of Europe.

On the question of prices there is little or nothing to say—they

£331,579, and, after deducting expenses and the dividend on the 6 per cent. preference and making provision for excess profits tax, there remained £238,637. They had already paid three interim dividends of 1½ per cent., and, with a final dividend of 2½ per cent. net, making 6 per cent. net for the year, they were carrying forward £121,511. They had disposed of sufficient funded income stock to repeat the 2½ per cent. bonus, but the balance of that stock now remaining was £52,866, which would not permit a final distribution of quite the same amount as previously.

The year had been a very difficult and anxious one, and at the moment there was no cheerful prospect ahead, but their main holding in Cable and Wireless had so far weathered the storm in a most gratifying and comforting manner. With the world in its present state it was impossible to make any forecast of future prospects. So long as they could carry on the trust would continue paying interim dividends quarterly as hitherto. While their income had remained steady, the additional income tax last year, and the further increase for 1941, made it necessary to be very careful of their resources, but they were carrying forward sufficient to provide funds for the next two interim dividends, and in the absence of any setback they might hope to be in a position to continue the distribution of a reasonably good dividend for the coming year.

The report was unanimously adopted.

MEXICAN RAILWAY COMPANY, LIMITED

TRAFFIC POSITION

The 150th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 20th instant, in London.

Mr Vincent W. Yorke (chairman) presided, and, in the course of his address, said: The result is the worst of any half-year in the history of the company and shows a loss of over P.860,000. This compares unfavourably even with the result of the second half of 1932, at the end of the famous depression in the United States, when the loss was P.711,000. The results of the current half-year I am glad to say are distinctly better. Gross traffics have been very good for the first three months (January-March) and exceed those of the corresponding half-year of 1939, which, as you may remember, constituted a record for all the first half-years in the history of the company, but the net receipts for those three months, according to a return received since the issue of the report, amount to the trifling figure of P.9,900. From the end of March last gross takings have shown a declining tendency, and at May 21st last showed a decrease of P.230,000. It is, therefore, unlikely that the net receipts of the current half-year will be equal to those of the corresponding half-year of 1939.

The economic position of Mexico, which might appear from the very high figures of our earnings to be a good one, is by no means such in reality. The very high rates of salaries and wages which have been reached have brought about a state of serious inflation, accompanied by a steadily increasing cost of living. Simultaneously exchange has shown a weakening tendency, and to such an alarming extent that the Government took steps to restrict banking credit in February last. This has increased difficulties of manufacturing businesses, which are burdened with high wages and find sources of obtaining new capital closed to them.

To sum up our own position, we have for some time past found great difficulty in making two ends meet. Although traffic has been heavy and receipts good, the very high wages paid to labour, combined with the heavy cost of materials due to the fall in the value of the peso, are leaving no margin for the proper upkeep of the property. Although the track and equipment are still in fairly good condition, renewals are naturally falling into arrear, and new rolling-stock is needed in order to meet road competition and satisfy the needs of the public. The National Railways of Mexico, which for the last two years have been administered by a syndicate of workmen, are suffering from the same causes and are, in my opinion, in even worse financial and physical condition than ourselves, so much so that in April last the Government appointed two controllers to investigate the position. It is much to be hoped that they may lead to some action being taken by the Government either in the direction of increasing the rates or regulating the labour situation throughout the whole railway system of the Republic. Unless some steps of this nature are taken and taken quickly the outlook would appear to be well-nigh hopeless.

The report was adopted.

are controlled by the Government in the national interest. I can, however, express the opinion confidently held, that our industry has been given a fair deal by the Government and is giving a full return.

You may expect me to make some reference to new taxation and its effects on the corporation. It is scarcely necessary for me to refer to the inevitable increase in British taxation. We must all be affected by the higher rate of income tax, but so far as the excess profits tax is concerned I do not think this company will be affected under the existing provisions. Our present rate of earnings is less than that in the standard period, and we are not making, nor are we seeking to make, war profits.

In Australia two new taxes have been introduced by Mr Spender, the Treasurer of the Commonwealth, both of which affect companies operating in the Commonwealth. A tax is imposed on undistributed profits at the rate of 1s. in the pound where these exceed 25 per cent. of the profits made in the year of distribution. This is unlikely to have an important effect on our affairs, but the other tax—that imposed on "Wartime Profits"—is in a different category.

The proposed tax is to apply to companies only, and is to disregard the question of a pre-war standard of profits. It will exempt from tax profits up to 8 per cent. on the capital employed in the business. So much of the profit as is between 8 per cent. and 9 per cent. on capital will carry a tax of 4 per cent. on that profit; that portion of the profit between 9 per cent. and 10 per cent. will be subject to a tax of 8 per cent. on that profit, and so on until the maximum rate of tax of 60 per cent. is reached—which maximum will apply to all profits over 22 per cent. on the capital employed in the business.

Until we receive complete details of the bill as finally passed and the official definition of "capital employed in the business" has been settled, it is not possible to estimate the liability which it will impose on the corporation, and in these circumstances no provision has been made in the 1939 accounts with regard to it. But I may at least say that those who recognise the extent of the financial burdens Australia must carry as a result of the war cannot reasonably object to Mr Spender's new imposts.

The report and accounts were unanimously adopted and the recommendations of the directors were approved.

W. J. BUSH AND COMPANY, LIMITED

RECORD PROFITS

The forty-third annual general meeting of W. J. Bush and Company, Limited, was held, on the 24th instant, Mr James Mortimer Bush, chairman and managing director of the company, presiding.

The chairman, in the course of his speech, said: Since the last annual meeting we have seen war in Poland, Finland, Norway, Denmark, Holland and Belgium, and recently Italy has become engaged. Our trade with all these countries has for the time being come to an end, and we are left with a number of probable bad debts.

Notwithstanding these deplorable conditions, I think you will agree with me that our accounts for the past year are much more favourable than might have been expected. It would, of course, be unwise to attempt to prophesy what the future has in store. A very considerable proportion of the company's raw material requirements are shipped from overseas and the question of supplies becomes more difficult as the war proceeds.

The profit for the year under review at £120,700 is approximately £1,500 higher than the company's best figure in 1936. In view of the difficulties to which I have referred, and the very uncertain future, your directors consider that the company should husband its resources, and it is for this reason they propose maintaining the dividend on the ordinary shares at the same figure as last year.

I should like to refer to the item in the accounts, "Provision for taxation and contingencies, £63,610." In the past it has not been our practice to provide for tax payable on the accounts under review. In view, however, of the very big proportion of the profits which now has to be paid by way of taxes, your directors consider it desirable to provide for such payments on the face of the accounts. The figure of £63,610 includes a provision of £10,000 for contingencies.

The report and accounts were unanimously adopted and a final dividend at the rate of 6 per cent., making, with the interim dividend already paid, a total of 10 per cent. for the year, was unanimously approved.

IMPERIAL BANK OF IRAN

DIVIDEND MAINTAINED AND RESERVE STRENGTHENED

SIR HENRY McMAHON'S ADDRESS

The fifty-first ordinary general meeting of the Imperial Bank of Iran was held, on the 26th instant, at 51, Gracechurch Street, London, E.C. Colonel Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (the chairman), presiding.

The chairman, in the course of his speech, said:—The balance sheet before you shows an increase in the total figures, which is partly due to the lower rate of exchange at which the accounts from Iran have been converted into sterling. Exchange in Teheran is now based on a fixed buying rate of 17 rials to the U.S.A. dollar, and the rate of 64.35 rials per £ sterling at which the Iran accounts have been adjusted is the official selling rate in Teheran at the date of the closing of our accounts.

Apart from this consideration, the balance sheet shows an increase in deposits, in acceptances, in discounts, loans and advances, and in bills receivable, and a decrease in cash and investments. I referred a year ago to the increased liquidity which placed us at that time in a position to respond to greater calls for our services. The figures now before you show that the occasion for fuller utilisation of our resources has since arisen.

We are not permitted to withdraw in sterling the full fruits of our labours in Iran, and we have therefore again made adequate reservations on that account, but we are nevertheless able to show a moderate increase in profit. We propose therefore to place £10,000 to reserve account, which has not been added to since 1937, to pay the same dividend as last year, and to carry forward £55,366, which is £1,563 less than last year. I should point out that this carry-forward has been gradually increased over the past ten years by some £20,000.

DEVELOPMENT IN IRAN

Our position in Iran continues to be fairly satisfactory. Under the firm and wise leadership of H.I.M. the Shah the policy of strict neutrality in the present war has been well maintained. The peaceful development of industry continues. The numerous factories and mills, established in recent years for the production of cotton, woollen, and silk textiles, beet sugar, cement, jute, and so on, are turning out more goods than ever, and their products are the more valuable now that communications with abroad are impeded and the supply of such goods is curtailed.

The uncertainties created throughout the world by the European situation have led to a more general use of bankers' credits for both import and export trade, and in this business we have been able to take a somewhat larger share than fell to us in the previous year or two. There has also been no lack of opportunity throughout the year for the employment of our internal resources in Iran. It is noteworthy, on the other hand, that since the outbreak of war our customers' deposits with us in Iran have increased.

The currency in Iran, as you know, is now entirely in paper, against which an adequate reserve in gold and silver is maintained by the National Bank. The control of the note issue is in good hands, and the gradual expansion of the circulation is warranted by the growth of industrial activity. The statutory limit of the note issue was raised in March last to a figure which will permit of further increases in the circulation as the need may arise. The trade agreement with Russia which was signed at Teheran last March should be of mutual benefit, as all impediments to the natural flow of trade between these neighbouring countries are to be deplored.

Transport in Iran, as new roads are made and old ones improved, is rapidly approaching the standards of Western Europe.

BAGHDAD AND BASRA

Business in Baghdad and Basra has suffered no diminution since the outbreak of war. The monopoly for the export of dates has worked well, though the crop was smaller than usual. Wheat and barley, wool and cotton have found good markets for export. Importers of textiles, tea and sugar, and other goods have been exceptionally active in anticipation of rising markets or of restricted supplies. In the financing of these activities our branches in Iraq have taken their due share with satisfactory results. Here, again as in Iran, we find that our customers' deposits have maintained appreciably higher figures than they showed a year ago.

The report and accounts were unanimously adopted and the final dividend of 6 per cent. was confirmed.

BRITISH BORNEO TIMBER COMPANY, LIMITED

FURTHER INCREASE IN DEMAND GROWTH OF EXPORTS

SIR EDGAR HOLBERTON'S SPEECH

The twentieth annual general meeting of the British Borneo Timber Company, Limited, was held, on the 25th instant, at 1-4 Gt. Tower Street, London, E.C., Sir Edgar J. Holberton, C.B.E. (the chairman), presiding.

Mr S. G. Sandeman, representing the secretaries (Messrs Harrisons and Crosfield, Limited), having read the auditors' report, The chairman said: Gentlemen, with your permission I propose to take the report and accounts as read. (Agreed.)

At the commencement of the year's operations now under review, our stocks of rough and sawn timber were merely sufficient to provide buyers with their immediate requirements. This was due to the restriction of production during the preceding year, but the demand in our export markets was improving, and we felt justified in taking steps to increase the production both in the jungle and in the sawmills. I made some reference to this change in the market position when I addressed you last year, and I am pleased to say that the demand continued to improve for all grades of rough and sawn timber. During 1939 our production of rough timber was increased by nearly 500,000 cubic feet to just under four million cubic feet. This enabled us to export increased quantities of rough timber, to maintain the sawmills with an adequate supply of logs for full-time working, and, in addition, to accumulate a normal stock of rough timber at the year's end.

Prior to the war we were able to arrange contracts for increased forward shipments of logs and sawn timber sufficient to cover as full a jungle production as we might expect to obtain. Immediately following the declaration of war, and since then, the operations in the jungle and in the sawmills have been mainly directed to speeding up shipments to the United Kingdom under those contracts.

With regard to the present year, production and shipments continue along satisfactory lines, but under the existing conditions it is not possible at present to say more.

SATISFACTORY RESULTS

Turning to the accounts which are now before you, I think you will agree that the results are satisfactory. The capital expenditure of £3,302 mainly represents additional sawn timber storage and rail transport facilities. The stocks of materials and stores, £19,387, are up £5,678, and the sundry debtors and payments in advance, at £41,270, show an increase of £22,351 as compared with the previous year. These items reflect the increase in our trading. Investments show a reduction of £11,000 due to our holding of 3½ per cent. Dominion of Canada stock having been taken over by H.M. Government in October last. During the present year we have participated in Government issues, and as circumstances permit it is hoped to increase such investments. The increase of £3,000 under sundry creditors, etc., is mainly due to the reserve shown in the profit and loss account for excess profits tax and National Defence contribution.

The balance of the profit and loss account brought forward from the previous year is £9,905, to which has been added £21,086, the balance resulting from the year's trading. After providing for the amount payable to the British North Borneo (Chartered) Company under the terms of our Concession, there remains a sum of £30,185 which the directors propose to deal with as follows. A sum of £5,000 is to be reserved for depreciation of machinery and plant. I mentioned last year that our present milling plant may have to be augmented to enable us to meet the increasingly keen competition in supplies of sawn timber. Then, in conformity with the Chancellor of the Exchequer's general request to companies, we propose to limit the dividend which we recommend to 8 per cent., the amount paid last year. These proposals will enable us to carry forward £10,785, or, say, £900 more than the balance brought in at the commencement of the year.

In conclusion, I wish on behalf of the board to acknowledge the special efforts of our manager and his staff in Borneo and of our agents in the Far Eastern ports, all of whom have contributed in no small measure to the favourable position I have been able to place before you to-day.

The report and accounts were unanimously adopted.

The retiring director (Mr H. W. Horner) was re-elected and the auditors (Messrs Mann, Judd, Gordon and Company) were reappointed.

GUEST, KEEN AND NETTLEFOLDS, LIMITED

STEADY DEVELOPMENT

CONTRIBUTION TO NATIONAL WAR EFFORT

The annual general meeting of Guest, Keen and Nettlefolds, Limited, was held, on the 25th instant, at the Queen's Hotel, Birmingham. Mr S. R. Beale (chairman and managing director) presided.

The chairman, in the course of his speech, said:—In the period now under review, we had five months of peace and seven months of war, and, as you all know, war means control—control of our supplies, control of our production, control of the destination of our products and of the price at which they are sold.

Control, exercised in the national interests as it is, and should be, must inevitably upset the delicate balance between producing and consuming works. Nevertheless, I think I should tell you that, in my opinion, the control to which we have been subjected has been well administered in the national interest.

In any case, no one wants to make profits out of the country's danger, and we can all be glad that the great productive capacity of all our works, which, as I have told you year by year, we have done our utmost to maintain at the highest pitch of efficiency, can be of service in the war effort.

Though, as I have said, it would be unsuitable to go into much detail, I should like to make one or two references to our activities.

JOHN LYSAGHT, LIMITED

Our allied company, John Lysaght, Limited, were active in a line familiar to many of you. They began producing for A.R.P. shelters in February, 1939, and during the whole year 35 per cent. of their output was for this purpose. Not only were their English works so engaged, but their Australian works contributed, and added 40,000 tons to the total. This manufacturing co-operation of their overseas branches in war activities is another illustration of the united effort which the Empire is capable of making. The export trade in the meantime was reduced to a low level, but they were fortunately in a position to supply a large proportion of the requirements for their overseas markets from their works in Australia, Canada and the Argentine.

At their steelworks four furnaces out of five were in continuous operation, and the steel plant and rolling mills were kept busy.

In their constructional works they have been largely engaged on the construction of airplane factories, hangars, military hutments and other works in connection with armaments.

GUEST KEEN BALDWIN'S

The other great interest I should like to refer to is that of Guest Keen Baldwins. The chairman of this company—Sir Charles Wright—is, as most of you know, Controller of Iron and Steel at the Ministry of Supply, having succeeded Sir Andrew Duncan on the latter's appointment as President of the Board of Trade.

Guest Keen Baldwins has had another good year, though the stress of taxation has prevented the shareholders from any benefit in their increasing productivity. Sundry arrangements for increasing capacity entered into before the war were completed and have been of immediate benefit to the country, if not to the shareholders.

Once again I am able to tell you that every one of our subsidiary companies has made a profit.

You will have noticed that I have not yet referred to our own works at Cardiff, Birmingham, Darlaston and Cwmbran. The volume of orders has become enormous; there have been still further developments in the modernisation of plant and machinery; the workpeople are pulling their weight and, in short, we are doing everything possible to take our part in the war effort.

The chairman then referred to various items in the balance sheet and said: If you will compare the liabilities with the liquid assets on the other side of the balance sheet you will see the position is very sound.

PROFIT AND LOSS ACCOUNT

The profit for the year is shown at just over one million pounds, which is £17,384 more than last year. The dividend recommended on the ordinary stock brings it to a figure of 6½ per cent., free of income tax, for the year, as against 6 per cent., free of income tax, for the previous year, a result which, we feel sure you will agree, may be viewed with satisfaction, however modest the return may be in respect of the actual capital employed or the total volume of turnover.

The report and accounts were adopted.

THE MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED

DIVIDEND 6 PER CENT. TAX FREE

The ordinary general meeting of the Madras Electric Supply Corporation, Limited, was held, on the 26th instant, at 1 Queen Victoria Street, London, Mr James Gray (the chairman) presiding.

The chairman, in the course of his speech, said that the balance of net revenue was £58,628, being £16,235 less than that of the previous year. This was explained by a slight diminution in consumption, to lighting restrictions, to the imposition of electricity duty amounting to £13,869 for nine months from April 1, 1939, when it came into force, and to the operation of the new tariff which had been negotiated with the Government of Madras with effect from June 1, 1939.

The Government had rejected the proposal that the new electricity tax should be recovered from consumers.

The directors' estimate that the company would be able to pay a dividend of 6 per cent. free of tax proved rather optimistic, but this could be reasonably attributed to the outbreak of war. Adding £43,724 brought forward, there was £102,352 available for distribution, and after making provision for preference dividend the directors recommended a final dividend of 4 per cent. on the ordinary shares, making 6 per cent. for the year, free of income tax, leaving £41,611 to be carried forward.

The strictest economy was being practised, but the cost of materials had increased considerably as a result of the war. The additions to capital expenditure represented extensions of buildings and additions to power station and sub-station plant and to mains. The tramway company was affected by a serious dislocation of traffic caused by the closing of the Stanley Viaduct, by the "black-out," and by the curtailment of festivals.

The cost of living in Madras had increased, and a concerted scheme of war allowances was having sympathetic consideration. The board wished to express their acknowledgment of the loyal services of all the staff and workers.

The report and accounts were unanimously adopted.

HENDERSON'S TRANSVAAL ESTATES, LIMITED

DISTRIBUTION 12½ PER CENT.

The twenty-eighth ordinary general meeting of Henderson's Transvaal Estates, Limited, was held, on the 26th instant, in London.

Mr W. L. Castleden (deputy chairman and managing director), who presided, in the course of his speech, said:—On the debit side of the balance sheet, "Reserve for contingencies, etc.," is increased by £20,000 to £80,000. This sum, with the £100,000 "Reserve for depreciation in investments, etc.," is, in our opinion, ample to provide for any eventualities.

On the credit side, Government securities are increased by £10,000, this sum having been invested in the new War Loan.

With reference to the first item in the profit-and-loss account, £71,155, the war and the consequent demands of the National Exchequer by way of greatly increased taxation has naturally affected the company's income; it should, however, be borne in mind that the reduction in the item "Dividends and interest" includes all necessary taxation adjustments.

As a result of the year's work we are able to recommend payment of a dividend of 12½ per cent., the same as for the last three years, and to carry forward the sum of £45,267.

I am sure you will not expect me to forecast the prospects of your company during the current year. The present position of affairs throughout the world is so uncertain as to make any anticipation neither advisable nor profitable. To-day nothing can be regarded as certain and the factors governing the position are entirely outside our power to alleviate or foresee. In spite of these reservations, I have no hesitation in stating that the position of the company remains fundamentally sound.

Our coal interests, which furnish the bulk of our income, continue to maintain their output and profits, the returns for the eight months to date being only slightly lower than for the corresponding period of the previous year.

The report and accounts were unanimously adopted and the dividend of 12½ per cent. was approved.

BANGRIN TIN DREDGING COMPANY, LIMITED

INCREASED YARDAGE WORKED

The twentieth ordinary general meeting of Bangrin Tin Dredging Company, Limited, was held, on the 27th instant, in London.

Mr Kenneth O. Hunter (the chairman) said that their operations during the past year had resulted in the recovery of 916 tons of ore, compared with 1,121 tons obtained in 1938. This fall in output occurred despite the increased yardage worked and the loss of fewer dredging hours, namely, 13½ per cent against 21 per cent. The ground worked proved of poorer quality than that on which they had been operating previously. The average proceeds per ton of ore won were £166 15s. 9d., against an average of £127 0s. 2d. for 1938. On the other hand, mining expenditure averaged £55 5s. per ton, compared with £45 8s. 7d.

The profit for the year amounted to £51,238, and the directors recommended a final dividend of 5 per cent., making 10 per cent. for the year.

When addressing the shareholders last year he mentioned that boring operations were in progress on a new small area adjoining their present lease, which was estimated to contain 3,000,000 cubic yards of tin-bearing ground with an average value of 0.51 lb. per cubic yard, and 800,000 cubic yards with an average value of 0.31 lb. The boring of this area was completed early in 1939 and disclosed 5,500,000 cubic yards, with an average of 0.4 lb. per cubic yard. The necessary applications for mining leases were lodged in July last.

Their output for the first five months of the current year was 528 tons, with an estimated mining profit of £49,900, the comparable figures for the same period in 1939 being 361 and £28,871.

The report was unanimously adopted.

SIAMESE TIN SYNDICATE, LIMITED

IMPROVED RESULTS

The thirty-third ordinary general meeting of the Siamese Tin Syndicate, Limited, was held, on the 27th instant, in London.

Mr Kenneth O. Hunter (the chairman) said that the tonnage outputs of ore were 649 tons at Ngow, 950 tons at Kopah and 405 tons at Huey Moot, a total of 2,004 tons from the three properties. The proceeds of this ore received from smelters in the East averaged £166 16s. 10d. per ton for Ngow, £167 10s. 2d. for Kopah and £170 for Huey Moot, and reflected the higher average price of the metal during the past year compared with the average for 1938. Mining costs at Kopah and Huey Moot showed satisfactory reductions compared with the previous year.

Mining revenue from the operations as a whole totalled £342,618, compared with £267,441, and the net profit amounted to £119,677, as compared with £71,128 for 1938. The directors had appropriated £20,000 to a reserve account for loss on properties, and they now recommended a final dividend of 10 per cent., making, with the interim dividends, 50 per cent. for the year.

With regard to the Kopah properties, preparations were being made for starting work on their new area. This new area contained approximately 9,500,000 cubic yards of tin-bearing ground with an average content of 0.53 lb. of tin ore per cubic yard. They also had another adjacent area containing 14 million cubic yards with an average content of 0.50 lb. per cubic yard.

The output for the first five months of the current year was 875 tons with an estimated mining profit of £82,300, the comparable figures for the same period in 1939 being 719 tons and £48,855.

The directors proposed to take steps to change the title of the company to the Thai Tin Syndicate, Limited, the word "Thai" meaning Siamese.

The report was unanimously adopted.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes.

In time of war the value of this practice is greatly enhanced because *The Economist* provides valuable information which is not otherwise available to investors, who therefore read it more carefully than ever.

Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, 8 Boulevard Street, E.C.4.

CURRENT STATISTICS

Finance

GOVERNMENT RETURNS

For the week to June 22, 1940, total ordinary revenue was £18,279,000, against ordinary expenditure of £58,613,000. Thus, including all sinking fund allocations, the deficit accrued since April 1st is £447,512,000, against £128,246,000 for the corresponding period a year ago.

SIX PER CENT. STERLING LOAN OF 1924

NOTICE IS HEREBY GIVEN that the COUPONS due 10th July, 1940, will be PAID on and after that date (Saturdays excepted) between the hours of 11 and 2 at The Yokohama Specie Bank, Limited, where lists may be obtained.

Coupons must be left three clear days for examination prior to payment.

For THE YOKOHAMA SPECIE BANK, LIMITED,

H. KANO, Manager.

7 Bishopsgate, London, E.C.2.
25th June, 1940.

OTTOMAN BANK

The quorum prescribed by the Statutes of the Bank not having been present or represented at the Annual General Meeting convened for Tuesday, the 25th June, 1940, NOTICE IS HEREBY GIVEN (pursuant to the Statutes) that a further General Meeting of Shareholders will be held on Wednesday, the 17th day of July, at Winchester House, Old Broad Street, London, E.C.2, at 12.30 p.m., to receive a Report from the Committee with the accounts for the year ending 31st December, 1939, to propose a dividend and to replace the retiring Members of the General Committee.

By the 31st Article of the Statutes, members present or represented at this second Meeting can validly transact the above business, whatever may be their number or the number of shares they represent. To be entitled to form part of the Meeting, members must deposit their Shares at the Chief Office of the Company, Istanbul, or at any of the several Branches or Agencies abroad (in London at 26 Throgmorton Street, E.C.2) eight days at least before the day fixed for the Meeting.

W. STEWART McKIM,

Secretary to the Committee.

London, 28th June, 1940.

ECONOMIST BINDING CASES

Attractive binders to hold three months' issues of *The Economist* are still available.

These binders have no wires, clips or metal contrivances so that each issue can be bound in an instant for permanent reference. Reading Cases to hold two issues, and made on similar lines, are also available.

Both are bound in full cloth (blue) and lettered in gilt. The price of the Binder is 5s. 6d. post free (Overseas 6s. 6d.) and of the Reading Case 4s. post free (Overseas 4s. 6d.).

THE BUDGET

The past financial year has cut across both peace and war conditions. Five months were spent in the twilight of intensive re-armament, seven in the deeper twilight of a "quiet" war. The rate of expenditure even at the end of the year did not approach the maximum which will be required in the next few years. In 1939-40, ordinary revenue brought in £1,049.2 millions, and money was raised by debt creation to the extent of £778.5 millions gross. Against this, total expenditure was £1,821 millions, a sum which includes issues under the Defence Loans Act and also sinking fund payments, but not miscellaneous issues for special purposes of about £7 millions. The main figures and facts of the national revenue, and of expenditure, are described below. The comprehensiveness of this year's Budget Supplement is, however, affected both by the secrecy that necessarily surrounds many forms of expenditure and also by the delay in publishing certain documents, notably the annual report of the Inland Revenue.

Revenue

For the first time since 1931 it was necessary last September to follow up the April Budget with a special War Budget of exceptional severity, designed not only to make a small additional contribution to the total cost of war, but also to make good reduced yields caused by the country's change-over to a war economy. In the April Budget, it was expected to raise in all £15.3 millions more than in 1938-39. The yield from existing taxation was put at £4 millions lower, but increased rates added £24.3 millions. A sum of £3,969,000 more was expected from inland revenue, £8,492,000 more from customs and excise, and £7,842,000 more from motor duties. Against this, a reduction of £4,990,000 in non-tax revenue was assumed. In addition to higher surtax and estate duty, sugar, tobacco and motor duties imposed by the April Budget, it was decided soon after to levy a new tax, Armament Profits Duty. This A.P.D. was withdrawn in the September Budget in favour of an Excess Profits Tax. At the same time, income tax and beer, wine and spirits duty were raised, and surtax, estate duty and sugar and tobacco duties were increased for the second time in 1939-40. (Details of the changed duties are given below under separate headings.) On the other hand, the curtailment of peace activities was expected to reduce the yield of pre-war taxation by £54.3 millions. Finally, the net result of the two Budgets was expected to be an increase (as compared with 1938-39) of £67.9 millions, made up of £58.5 millions more from inland revenue, £31.9 millions more from customs and excise, but £13.6 millions less from motor duties and £8.9 millions less from non-tax sources.

In the event, ordinary revenue collections in 1939-40 exceeded the War Budget estimate by the substantial sum of £54 millions, while the excess over 1938-39 receipts is £121.9 millions. This satisfactory outcome, however, is due mainly to indirect taxation, for customs and excise duties provided £27.6 millions more than the September estimate, while the sharp fall in the yield from motor duties did not fully materialise.

Details of Exchequer receipts in 1939-40 and certain earlier years are given in Table 1, while in Table 3 we show the proportions from direct and indirect taxation. Direct taxes are taken to include all inland revenue duties except stamps, and indirect taxes comprise all customs and excise duties, stamps, and motor vehicle duties.

CUSTOMS AND EXCISE

DURING 1939-40 these duties produced an unexpectedly good yield, for receipts of £400.0 millions were in excess of final Budget estimates by £27.6 millions, of original estimates by £51.3 millions, and of 1938-39 receipts by £59.5 millions. The changes brought by war conditions and taxation do not allow an estimate to be formed as to which items have contributed to this high return.

Broadly speaking, the April Budget had assumed that consumption of dutiable goods would be on a similar level to 1938-39. A small reduction in yield was expected from import duties owing to the Anglo-American trade agreement, and from sugar owing to a better British crop, but some increase from tobacco was anticipated. On the other hand, higher duties (mainly from tobacco and sugar) were

estimated to bring in a further £11 millions in 1939-40. Then the War Budget allowed for a decrease in yield of £6.9 millions on the basis of April taxation, and for an increase of £30.6 millions (or £66.6 millions in a full year) from further additions to tax on tobacco, sugar, and beer, etc.

Tobacco duties were increased in both Budgets by 2s. a lb., or 1½d. an oz., on each occasion, and are now 13s. 6d. a lb. at the full rate. The sugar tax has also been raised twice, by 2s. 4d. a cwt. at the full rate in April and by 9s. 4d. a cwt. (or 1d. a lb.) in September, making the rate 23s. 4d. The beer duty, which had remained unaltered since the reduction of April, 1933, was raised in September by 24s. a bulk barrel, or 1d. a pint, making the present excise duty 48s. At the same time, the basic duty on spirits was increased by 10s. a proof gallon, and wine duties were advanced, in most cases by 50 per cent. (Duties on tea and petrol were last altered in 1938-39.)

Some details of receipts and amounts consumed in 1938-39 are given in Tables 2 and 4. Increased duties (2d. a lb. on tea and 1d. a gallon on oil and petrol) in the April, 1938, Budget, rather than a rising trend of consumption, were responsible for the increase over 1937-38. The demand for petrol rose normally in spite of the advance in duty; tobacco consumption continued to increase. The apparent rise in tea consumption, however, is believed to be entirely due to forestalments. Some decline in receipts from import duties arose from the trade recession.

INLAND REVENUE

THE yield from the main items in this group of taxes in 1939-40 was very close to the revised estimates presented in the War Budget. Exchequer receipts of £582.9 millions exceeded revised estimates by £4.2 millions, original estimates by £58.7 millions and 1938-39 receipts by £62.6 millions. It had been expected in September last that inland revenue receipts in 1939-40 would fall by £22 millions on the basis of April taxation, but that increased taxation would bring in £76.5 millions, or £160 millions in a full year assuming a standard rate of income tax of 7s. 6d. and excluding E.P.T. Death duties and N.D.C. yielded between them £4.2 millions more than estimated in 1939-40, other inland revenue duties being in accordance with expectations.

Income Tax.—Exchequer receipts from income tax during 1939-40 were £390.1 millions, or just over the revised estimates, and £54.2 millions more than in 1938-39. No changes in income tax, either in the standard rate or in allowances, had been made in the April Budget, which, in view of the industrial recession of 1938, estimated 1939-40 receipts at £327 millions, or £8.9 millions less than in 1938-39. A further loss of £7 millions was expected in the September Budget, but increased taxation was estimated to bring in a further £70 millions during 1939-40, and this expectation was realised. The War Budget raised the standard rate from 5s. 6d. to 7s. (regarded as the average of 5s. 6d. for the first quarter and 7s. 6d. for each of the other three quarters), and the reduced rate payable on the first £135 of taxable income from 1s. 8d. to 2s. 4d. This Budget took the unusual step

of proposing changes in income tax for 1940-41, proposals which, of course, cannot be regarded as final. On the basis of a 7s. 6d. standard rate, half the standard rate on the first £165 (instead of one-third the standard rate on the first £135) and lower earned income and other allowances, a further £146 millions over the yield at the 5s. 6d. rate and corresponding allowances is estimated. Standard rates in force since the last war and recent changes in the allowances are set out in Tables 5 and 6. Also the incidence of taxation at various levels is shown in Table 7. The Crisis Budget of 1931 initiated a policy of relief to small incomes which has, broadly speaking, continued. Proposals for 1940-41 represent a reversion to the pre-1931 basis of an earned income allowance of one-sixth and a relief of half the standard rate for the first portion of income.

The year 1937-38 is the latest for which details of income-tax receipts are available. In that year gross income, before any kind of deduction, was £3,800 millions. Exemptions accounted for £115 millions, and various depreciation, repairs and other reductions for £635 millions, leaving an actual income of £3,050 millions. After personal, earned income and similar allowances, there remained a taxable income of £1,440 millions, and the average effective rate of tax on each £1 of actual income was 2s. It was estimated in 1937-38 that there were 8,800,000 persons with incomes above the £125 exemption limit, and that of these 5,150,000 were entirely relieved by the operation of allowances.

Sur-Tax.—In 1939-40, receipts of £69.8 millions from this source were practically up to final estimate, and £7.3 millions more than in 1938-39. Owing to the greater time-lag than in the case of income tax, the April Budget expected a rise in sur-tax receipts of £3.5 millions on the basis of the old taxation, and a further £4 millions from increased rates. The September Budget provided for a fall of £5 millions in the normal yield, but an identical rise from yet another increase in rates.

In the Crisis Budget of 1931, sur-tax rates current for 1929-30 were raised by 10 per cent. After that there was no change at all until last April, when this old 10 per cent. addition was made 15 per cent. for incomes of £2,000-£8,000 and 20 per cent. for incomes over £8,000 (thus making the actual increase in rates 1/22nd and 1/11th respectively). The September Budget substituted a new scale, representing a still further increase. The lowest rate is 15d. (against 13.8d. in April, 1939, 13.2d. in September, 1931, and 12d. in 1930) on incomes of £2,000-£2,500, while it is 5s. on the £6,000-£8,000 slice, and the maximum, on incomes in excess of £50,000, is 9s. 6d.

No official figures are available of the distribution by amount of the lower incomes, but Table 8 shows the income distribution of sur-tax payers.

‡ In 1939-40, E.P.T. yielded £40,000.

National Defence Contribution.—The year 1939-40 was the first in which this tax was estimated to produce a full year's revenue. Exchequer receipts of £26.9 millions were £1.9 millions above estimate (which was not, like most other estimates, revised in the course of the year) and £5.1 millions more than in 1938-39. Details of assessments in 1938-39 are not yet available. Intended originally as a special tax for the pre-war armaments programme, and imposed for the five years from April, 1937, this tax in its relationship with E.P.T. or other war taxation will no doubt be reviewed before long, and meanwhile N.D.C. or E.P.T. is payable, whichever is the higher. The N.D.C. in actual operation, in contrast with the first version consisting of a tax on growth of profits, is a flat rate on profits irrespective of what they may have been in the past, and E.P.T. is therefore not a complete substitute.

Excess Profits Tax.—The principle of a tax on growth of profits, contained in the old E.P.D., in the abortive first version of N.D.C. and in the repealed Armament Profits Duty, has now become operative. E.P.T., introduced in the War Budget, is a flat rate of 60 per cent. of the excess of business profits over those earned in 1935, 1936, or the average of the years 1935 and 1936 or 1936 and 1937, the standard being at the taxpayer's option. Alternatively, companies in a developing or depressed stage in the standard years may apply for a standard sufficient to cover fixed charges and preference dividends plus 6 per cent. on ordinary capital. Professional earnings are exempt, and there is an absolute minimum standard of £1,000 or £750 per working proprietor up to a total of £3,000. For E.P.T. purposes, profits are computed on an income-tax basis, with the further deduction of debenture interest, while for income-tax (but not N.D.C.) purposes, E.P.T. is allowed as an expense. The A.P.D. proposed last summer, and since repealed in favour of E.P.T., was on similar lines, but referred only to profits on armaments contracts (including those for the supply of certain commodities), and not to general business profits.

No estimate has yet been made of the yield from E.P.T., and it has, of course, produced only a nominal amount in 1939-40. While a large yield can be undesirable in so far as it implies an inflationary rise in profits, this tax can be a very important source of income. Thus in 1919-20 the 80 per cent. E.P.D. then in force produced £290 millions, or 29 per cent. of that year's tax revenue.

Death Duties.—These duties provided £77.7 millions in 1939-40, or £2.2 millions more than the latest estimate, and some £290,000 more than in 1938-39. The original estimate for 1939-40 consisted of £77.0 millions on the basis of the old taxation (or about the same as

1938-39), plus £3 millions from increased rates on the larger estates. Another £1½ millions from further increases in rates in September, however, was expected to be offset by a drop of £6 millions in yield owing to the decline in Stock Exchange and other values.

Estate duty is another example, with surtax, of two increases in one year after a long period without changes in rates. The April Budget increased the rates of duty on estates over £50,000 by 10 per cent. The September Budget then altered this 10 per cent. increase to 20 per cent. and raised the rate of duty on estates in the £10,000-£50,000 class by 10 per cent. Thus there is no change for estates under £10,000; in the £10,000-£12,500 class the duty is now 5.5 per cent., and it rises to 60 per cent. (against 55 per cent. in April last and 50 per cent. since 1930-31) on estates over £2,000,000.

In 1937-38, the latest year for which details are available, the gross capital value of all property was £639.9 millions, of which Stock Exchange securities accounted for 54.6 per cent., house property and business premises 13.2 per cent., cash and insurance policies 13.4 per cent. Legacy and succession duties account for roughly £10 millions a year out of the death duties total.

Stamp Duties.—In April last these duties were estimated to bring in £21 millions in 1939-40, or about the same as in 1938-39. Then in September a reduction of £4 millions was expected owing to the curtailment of normal financial activity, and the revised estimate was exceeded slightly, by £70,000. The latest stamp receipts, in fact, are identical with those of the depressed year

* According to Budget of September, 1939.

1931-32. In 1938-39 stamps on stock and share transactions and company capital duty provided £6,529,000, or 31 per cent. of the total of £21,115,000, against 47 per cent. in the recent peak year 1936-37.

Motor Vehicle Duties.—Satisfactory receipts from this source form one of the main features of the national revenue in 1939-40, considering the supposed severity of wartime hindrances to motoring. On the basis of old taxation, it was expected in April, 1939, that receipts in 1939-40 would be £37.2 millions, or 4½ per cent. more than in 1938-39. But a rise in taxation from 15s. to 25s. per h.p. for vehicles of over 6 h.p., with a corresponding increase in other classes, was expected to bring in £6½ millions in 1939-40, or double that sum in a full year. The War Budget then reduced the estimate of receipts from £43.5 to £22.0 millions, but actual receipts were £34.1 millions. Table 9 summarises the main features of motoring finance as shown in the national accounts.

Non-Tax Revenue.—This is taken to include miscellaneous receipts, Post Office and wireless licence net profits, receipts from sundry loans, and net revenue from Crown lands. Miscellaneous receipts vary widely in amount from year to year, and include repayments and other receipts which are really of a capital nature. They were estimated for 1939-40 at the exceptionally low figure of £10,750,000 in the April Budget, and although this estimate was raised later to £13,650,000, actual receipts were £20,364,000. Out of £12,941,000 received in 1938-39, £3,151,000 was Post Office savings bank profits, £2,662,000 came from the Mint, and most of the

remainder were departmental receipts. The importance of this class of revenue may well grow during the war, owing to the Government's trading activities. In the April Budget it was expected to receive in 1939-40 some £6,734,000 Post Office profits and £466,000 wireless licence net receipts, and to clear the balance remaining in the Post Office Fund. Rising expenditure in war was then expected practically to eliminate these profits altogether, by reducing the combined Post Office and wireless net receipts to £400,000. Actually some £3,846,000 was forthcoming, and the Post Office Fund provided £1,757,000. The exhaustion of the latter fund and the rising trend of

Expenditure

THE war has made it impossible either to present estimates of certain classes of expenditure or to distinguish properly between civil and war services. Votes of credit are to be the normal method of financing the armed forces, the Ministry of Supply, and a number of civilian departments covering civil defence, agricultural and other war services (Food, Shipping, Economic Warfare, Information, Home Security, plant and building material, and sections of the Ministries of Health and Agriculture), token votes being provided merely to give an opportunity for debate. A vote of credit for £500 millions was granted on the outbreak of war, and another of £700 millions is available for 1940-41, but it is not correct to regard these votes as anything more than a series of payments on account of an undetermined cost of war. Sir John Simon stated in March, however, that expenditure was running at the rate of roughly £4 millions a day for the armed forces and the Ministry of Supply, and £1 million for A.R.P., evacuation, shipping and food services, or £6½ millions all told after including the debt and civil services.

The April Budget had provided for a gross expenditure in 1939-40 of £1,314.9 millions (including expenditure from loans and provision for supplementaries of £397.5 millions in all). Just before the War Budget this gross estimate had been increased to £1,453.3 millions, owing chiefly to further requirements of the army and army supply and to a smaller extent of the Air Force. A vote of credit for £500 millions, less an estimated saving of £20 millions on civil services, raised provision for 1939-40 expenditure to £1,935.4 millions (after allowing for some small supplementaries and adjustments in 1940). Actual expenditure (including issues out of loans, and statutory sinking fund payments) was £1,821 millions. Although a vote of credit cannot be regarded as an estimate, this outlay represents a short-spending which is evidence of some lag in the war effort, and on opening the War Budget the Chancellor had said: "I cannot guarantee that this first vote of credit will be sufficient to cover all our requirements up to March 31st next."

Expenditure in recent years is set out in Table 10, and the relationship between Central Government expenditure and the national income is shown in Table 11. In addition to the expenditure described above, over £7 millions was issued in 1939-40 for special purposes, over half of this being in respect of the Overseas Trade Guarantees Act of 1939. Details of these issues are included in Table 16.

Consolidated Fund Services.—In the 1938 Budget the fixed debt charge was raised, for the first time since 1933, to £230 millions, and no alteration was made in the September Budget. Borrowing for the arms programme has made this sum insufficient to cover all sinking fund requirements in 1939-40, nor does it include interest paid by the defence departments out of their supply votes. Large-scale borrowing for war purposes—not to mention payment of a full year's interest on money already raised since last September—makes it practically certain that the fixed debt charge will be raised again unless the device is carried

Post Office expenditure makes some revision of the relationship between Post Office and Exchequer urgent. With some 9,086,000 licences in force last September but an estimated 1940-41 broadcasting expenditure of £4,500,000 (against an estimated £3,765,000 for 1939-40), broadcasting can no longer be viewed as a source of measurable profit. Receipts from sundry loans (which consist mostly of Suez Canal and Anglo-Iranian Oil dividends) in 1939-40 yielded £4,916,000, against an estimate of £5,000,000, and 1938-39 receipts of £5,699,000. The latter sum included £2,813,000 Anglo-Iranian and £1,699,000 Suez Canal dividends.

further of including part of the charge in the supply service votes. In 1928-29, the original fixed charge was as high as £369 millions, but £57½ millions of this was available for sinking funds, which latterly have been on a much lower scale. Most of the payments to the Northern Ireland Exchequer (£9.5 millions in 1939-40) consist of the due share of reserved taxes, while the 1939-40 increase from £4.8 to £7.3 millions in other Consolidated Fund services reflects the cost for a full year of various Eire services transferred from civil votes after the Eire agreement of April, 1938.

Defence Services.—In the absence of detailed defence estimates for 1940-41, we show in Table 12 the trend of expenditure on the armed forces in recent years. The latest available detailed figures are those in existence just before the outbreak of war. Past expenditure is of course no guide to the cost of the war, nor can it be assumed that the relationship between the different services will be on the same lines as in the past. For the shifting of emphasis between one department and another is perhaps the chief feature, apart from the actual growth of total expenditure, of the arms programme. At one time the Navy took by far the largest share of the defence votes, then the Air Force came to occupy first place, but since last April, when conscription was introduced, the need for training and equipping a large army has directed attention primarily to the Army. Between the April Budget and the war, militia training and general expansion required a supplementary estimate for £79.1 millions, and the formation of the Ministry of Supply (replacing and enlarging the ordnance factories votes) brought a further net addition of £28.5 millions. A supplementary estimate was voted of £39.5 millions for the R.A.F., but apart from a token vote no specific addition was made to navy expenditure between April and September. Civil defence may conveniently be included in total defence expenditure, on the lines of the Financial Statements of April and September, and it has been taken to comprise the six services, central A.R.P. department, essential commodities reserves, emergency hospital and evacuation services, and reserves of merchant ships, agricultural machinery, and plant and building materials. But in the 1939-40 civil estimates, at any rate, there are numerous smaller civilian services which come on the border-line between peace and war services, and in preparation for total war the demarcation between military and civil expenditure is necessarily arbitrary.

Civil Estimates.—Although the broad division between civil and other expenditure can still be seen through publication of the civil estimates as usual, the numerous war services performed by civil departments and the decision not to disclose certain kinds of expenditure prevent close comparison between civil estimates in successive years. Quite apart from financing new war ministries and new war functions of existing ministries through votes of credit, the Ministry of Food in particular has taken over certain peacetime functions. Also, for some years past Class II votes have included increased expenditure on items which belong really to the category of overseas defence. The trend

of civil expenditure must therefore be looked for in details rather than in totals.

Original 1939-40 estimates were £442.5 millions for the civil and revenue departments (excluding civil defence items described above, and broadcasting), Supplementaries for £16.6 millions (of which the largest group was £8 millions for various types of assistance to agriculture) were presented during the year, but on the other hand a saving of £20 millions was expected in the War Budget, thus making final estimates £439.2 millions. Actual expenditure for 1939-40 is not known yet. Estimates for £419.8 millions in 1940-41 exclude livestock and grassland ploughing subsidies (which were estimated to absorb £5,736,000 in 1939-40, and have now been transferred to votes of credit) and also beet-sugar, oats and barley and bacon subsidies, which were estimated at £7,749,000 for 1939-40. On a comparable basis, 1940-41 expenditure may be considered a few millions less than final estimates for 1939-40, the increased cost of pensions being more than offset by reductions in other directions. Civil votes are summarised in Table 13, and are discussed in more detail in succeeding paragraphs.

CENTRAL GOVERNMENT (Classes I, II, III).—Class I, covering central government and finance, remains by far the smallest of the separate groups, and the recent increases in votes are due mainly to Secret Service requirements. Supplementaries and adjustments during 1939-40 increased original estimates by £639,000.

In Class II, supplementaries in 1939-40 required £2,741,000, principally for expenditure in Palestine. The reduction in 1940-41 estimates in the diplomatic and consular services is due to the absence in that year of various special relief grants. Among the Middle Eastern services, Palestine will require £1,381,000 more in 1940-41, and the apparent reduction in the India and Burma vote is now shown to be due to the transfer of defence expenditure (estimated at £3,750,000 in 1939-40) to votes of credit.

Class III votes, now shown in our table after elimination of A.R.P. expenditure, required supplementaries and adjustments of £2,784,000 in 1939-40, consisting mostly of £2,500,000—which is only technically a current expense and which is not repeated in 1940-41—for the Czech refugee fund.

EDUCATION.—Educational progress has been checked by war, and the raising of the school-leaving age has been postponed. Some information on the course of expenditure on education is brought out in Table 14. Figures of average attendance at elementary schools assumed for 1940-41 are not available owing to the war, but the latest figure is 4,392,000 for 1939-40 assumed for the Board of Education's Estimates for that year. Meanwhile the allocation of 1940-41 expenditure is in practically the same proportion as for 1939-40, teachers' salaries being estimated to absorb 59.2 per cent. of total expenditure other than capital items. The slight net increase in the Class IV estimates for 1940-41 is more than accounted for by the cost of pensions.

HEALTH, LABOUR AND INSURANCE (CLASS V).—Pre-occupation with war has not prevented the Government from maintaining or extending expenditure on the social services. Any decrease in the total cost of this class of votes in any one year is more than accounted for by variations in unemployment assistance, and the trend of expenditure which is under control is steadily upwards. Expenditure by the central Government, however, is only an imperfect guide to the gross cost of the social services, for the Ministry of Labour and the National Health Insurance votes depend primarily on the number of persons insured and not on disbursements by the unemployment and health insurance funds. Original Class V estimates for 1939-40 were £172.3 millions, and supplementaries were presented during the year for £1,884,000, chiefly for war services. But it is probable that a part of the saving estimated in the War Budget has been obtained by this Class, and 1940-41 estimates are below the original 1939-40 estimates in spite of the increase in votes for pensions. And actual expenditure in 1938-39 was £5,368,000 below final estimates for that year.

Health.—The greater part of the cost of the Ministry and the Department of Health votes consists of housing grants. In 1940-41, payments to the National Health Insurance Funds are estimated at £6,788,000, against £6,553,000. Other health services (apart from those under the insurance schemes) receive relatively trifling sums from the central Government, the cost being borne chiefly by local authorities.

Labour.—Estimated payments by the central Government under the Unemployment Insurance Acts in 1940-41 show the normal small increase, but the estimated expenditure on benefit through the labour exchanges is about £29 millions, against an original estimate for 1939-40 of £51 millions. A sharp fall in the vote for the Unemployment Assistance Board from £43.9 to £30.0 millions reflects the effect upon employment which is expected in a full year of war, though the former figure is stated before deduction of any saving that may actually have been made in 1939-40. The payment of unemployment allowances through the local exchanges is estimated at £25 millions for 1940-41, against an original estimate of £39 millions for 1939-40, while the costs of administration in 1940-41 recoverable from the Unemployment and the Unemployment Assistance Funds are £3,114,000 and £1,547,000 respectively.

Pensions.—This class of expenditure represents a steadily increasing charge on the Exchequer. Pensions to persons over 70 are expected to absorb £49.8 millions in 1940-41, against £48.7 millions in 1939-40, non-contributory pensions accounting for £13.9 millions of the former figure, and contributory pensions, £35.9 millions. The annual payment by the Exchequer in respect of contributory widows', orphans' and old age pensions shows the statutory increase of £1,000,000 in 1940-41, while the additional payment in respect of voluntary contributors is estimated at £1,550,000 against £1,950,000. Recently, the age at which women whose husbands are 65 or who are insured in their own right become pensionable has been reduced from 65 to 60, but the cost of this concession (say £8 millions a year, rising to £10 millions in ten years' time) is being met for the present by an increase in contributions. On the other hand, additional relief to pensioners in need of assistance is now to be paid by the central Government instead of by public assistance authorities, and a new vote of £6 millions plus expenses is included in the 1940-41 estimates.

TRADE, INDUSTRY AND TRANSPORT (CLASS VI).—The estimated 1940-41 expenditure on Class VI votes is not comparable with earlier years, owing to the altered methods of agricultural assistance brought by the war. Pending legislation, provision for the beet sugar subsidy is held over, and will in any case be made by the Ministry of Food. The livestock industry and cattle fund grants have also been transferred to be met from votes of credit, while owing to the adequacy of oats and barley prices, no provision for these subsidies is being made at present other than a trifling remanet payment. During 1939-40 supplementary estimates for £8,166,000 were presented, including £3,394,000 for oats and barley, £3,006,000 for milk supply, and £760,000 for the ploughing up of grassland. Estimates for 1940-41 include £1,920,000, against £3,449,000, for milk. The former sum, however, covers grants up to September 30, 1940, only, and if and when statutory sanction for continued assistance is obtained, supplementary estimates will be presented. Provision for land fertility improvement is practically unchanged at £1,540,000.

There is, however, one major item in the Class VI votes which represents a genuine decrease in expenditure. Roads are estimated to require votes of £16.4 millions in 1940-41, against an original estimate (which has not necessarily been achieved) of £24 millions in 1939-40. It has been decided, broadly speaking, greatly to curtail new schemes but to carry on with work already in progress, and even maintenance and minor improvement expenses are being reduced. Gross Road Fund expenditure of £16.7 millions compares with £26.1 millions originally estimated for 1939-40. The largest reduction is in the year's allocation

Loan, 1940-44, into 2 per cent. Conversion Loan, 1943-45. About a month later it was stated that of the old loan assent to conversion had been received in respect of £236 millions, and £99 millions would be repaid on July 1, 1940, while full particulars were not then available of the £15 millions balance. Finally, after catering first for the small saver and then for the money market, Sir John Simon announced on March 5, 1940, a 3 per cent. War Loan, 1955-59, at par, to the nominal amount of £300 millions plus any small issues "on tap" through the Post Office and savings banks. In the current year, regardless of further war loans, provision will have to be made also for the £100 millions odd of 1 per cent. Treasury Bonds, 1939-41.

Nominal Value.—The latest year for which official details are available is 1938-39, and in Table 15 we show how the dead-weight debt was made up in March, 1939, and certain earlier years. On a comparable basis, the debt can be estimated at about £8,930 millions at March 31, 1940. This sum, it should be noted, includes only £99.2 millions out of the £300 millions 3 per cent. War Loan—the balance is due on April 15th—nor does it allow for repayment on July 1st next of the dissented 4½ per cent. Conversion Loan. By the time of the Budget, therefore, the net total dead-weight debt will be well over £9,000 millions. The way in which the change in the debt during 1939-40 is made up is indicated in Table 16 of the year's transactions, set out in the form of a balanced statement. Treasury bills (shown in Table 18 of the floating debt) account for over two-thirds of the year's increase in debt.

Net Indebtedness.—The real burden of the National Debt is rather smaller than the nominal total indicates. On the one hand, that total omits accrued interest on Savings Certificates, which is charged in the accounts only as repayments are made (and which will grow faster with the

war's fresh impetus to small savings). On the other hand, it includes our external debt (chiefly to the U.S.A.) which is no longer an effective part of our debt since the practical cessation of war debt payments in 1932; and it takes no account of certain financial assets (principally sums due from the Exchange Equalisation Account). In order to present a more correct picture of the debt position, adjustments to the nominal total are set out in Table 17 of net indebtedness. No account is taken of certain physical assets such as Crown lands or public buildings, or of other capital liabilities which amounted to £138 millions at March 31, 1939. These other liabilities consist chiefly of money raised for Post Office purposes, and as they are represented by assets, they can reasonably be excluded.

The Debt Charge.—After a comparatively modest increase in interest required during 1938-39, interest and expenses on the National Debt rose fairly sharply during 1939-40 to £228.6 millions, a sum which includes nothing on account of the £300 millions 3 per cent. War Loan and practically nothing on account of the new issue of National Savings Certificates, but which on the other hand does not allow for any interest saved on the new 2 per cent. Conversion Loan. This 1939-40 total includes £5,787,000 falling ultimately on defence votes and not on the Consolidated Fund, since the defence services pay 3 per cent. on the sums issued to them in preceding years out of defence loans. Interest and sinking fund payments in recent years are shown in Table 19, while Table 20 relates interest to nominal debt. Inevitably there will be a further marked increase in interest charges during 1939-41, but such prospective increase is not serious in relation to the total cost of war. At an over-all rate of interest of about 2½ per cent., an increase in debt of around £3,500 millions could be supported before the interest charge of £326.6 millions in 1919-20 is approached.

Local Authorities

THE year 1936-37 is the latest for which detailed local government accounts are available, and their main features are summarised in Tables 21 and 22. Estimates of rate collections in later years, however, are £176 millions for 1937-38 and £189 millions for 1938-39, and by April, 1937, rateable values had risen to £304.0 millions, or to £310.8 millions (of which a fifth is accounted for by the Metropolitan boroughs) a year later. By now the cost of civil defence has confused the distinction between local and central government services. All figures given here refer to England and Wales only.

In the rate fund services, the normal tendency is increasing expenditure on education and on public health principally, with smaller amounts of increase in other items. The proportion of expenditure represented by loan charges varies widely, of course, between the different services,

and capital expenditure includes repayments (£9.8 millions in 1936-37, against £8.4 millions) as well as the cost of new works. In both 1936-37 and the previous year specific income (consisting of rents, fees, recoupments, etc., and Government grants) contributed about 39 per cent. to total expenditure on revenue account, the balance being met by rates and block grants. Out of rents, fees, etc., of £53.7 millions, £22.4 millions was provided by house rents in 1936-37, while rather over half the specific Government grants of £87.7 millions was for education. In addition to this income on revenue account, £73.1, against £58.6 millions, was raised by loans, and other special receipts of a capital nature were £15.1, against £12.3 millions. Gross loan debt continues to mount, but at the end of 1936-37 it was partly offset by £45.6, against £63.3 millions, standing to the credit of sinking funds.

THE ECONOMIST

TRADE SUPPLEMENT

APRIL 27, 1940

The Trend of Business

AFTER the interruption of progress by the dislocation of transport in January and early February, the pulse of industry has tended to quicken. Between February 12th and March 11th the number of registered unemployed in Great Britain fell by 383,000 to 1,121,000. The reduction was widespread, for of all the industries listed in the *Ministry of Labour Gazette* only two—slate quarrying and mining and port transport—experienced an increase in unemployment between February and March. The expansion in business activity has continued during the past month, and the unemployment figures for April are expected to show a further substantial reduction.

There are indications that the problems of increasing the output of military equipment and of stimulating exports are being tackled more vigorously. Thus, early in April, the Mines Department set up a Coal Production Council, whose task is to "promote a substantial increase" in the production of coal. Lord Portal, the chairman of the Council, has already discussed the position with representatives of owners and miners in the principal coal-mining districts. The Control of Iron and Steel (No. 8) Order, which came into force on April 8th, provides machinery for a more efficient distribution of steel. Early in April a census of labour was taken in the engineering, shipbuilding, motor and aircraft industries. Next week negotiations are to take place between the employers and the unions in the engineering industry concerning the employment of women during the war. Again, the enlistment by the Air Ministry of Sir Charles Craven suggests that a determined effort is to be made to speed up the production of aircraft.

So far as exports are concerned, the constitution of the Export Council has been followed by the rapid formation of

Export Groups by a large number of industries. In view of the enormous increase in the excess of the value of imports over that of exports, a vigorous drive to expand overseas sales is now absolutely essential. In March, the adverse balance of trade was again more than twice as high as in the corresponding month last year, and for the first quarter it amounted to £178.7 millions, against £85.1 millions in January-March, 1939. Even if exports were valued on a c.i.f. basis, the adverse balance of trade would probably still show a very substantial increase.

Further progress has also been made in setting free additional resources for the production of munitions for export. Thus, by an Order of the Board of Trade, sales of cotton and rayon piece-goods to retailers during the 5½ months from April 16th to September 30th will be restricted to 75 per cent. of those made during the six months ended September 30, 1939, and those of linen piece-goods to 25 per cent.

The invasion by Germany of Denmark and Norway on April 9th has interrupted our trade, not only with these two countries, but with Sweden and Finland as well. But while the absence of Scandinavian supplies of paper-making materials, iron ore, metals, machinery, chemicals and foodstuffs may cause temporary inconvenience, it is not likely to impair our war efforts. Moreover, the cessation of exports to these countries, while causing temporary dislocation in certain trades, should have no serious consequences, for they consist largely of the kind of goods which can be sent elsewhere. To Germany, on the other hand, the loss of iron ore shipments from Narvik is a very serious matter, as she has no access in winter to alternative sources of supply.

British Industrial Developments

COAL

There was an improvement in coal output during March, when unemployment showed a decline in most districts, and the latest reports suggest that it has continued. Exports, however, showed a decline in March compared with the corresponding month last year, and even their value, at £2,728,000, was £209,000 lower. In South Wales there has been a steady expansion in output, which is now running at about 800,000 tons per week. Lord Portal, the chairman of the Coal Production Council, met representatives of the Welsh coal owners' and miners' representatives on April 15th, when a Joint Committee was appointed to prepare a report on ways and means of increasing output. Similar steps are being taken in other coal-mining districts. The coal-mining industries in Northumberland and Durham have been chiefly affected by the problem of finding alternative markets. In the Sheffield district the supply position has shown improvement, and industrial requirements can now be met without difficulty.

IRON AND STEEL

The most important event in the iron and steel industry was the publication of the Control of Iron and Steel (No. 8) Order on April 8th; this Order substitutes a more efficient system of distribution for the licensing scheme introduced after the outbreak of war. The new scheme was outlined and discussed on pages 688-9 of *The Economist* of April 13th. The Order also provided for an increase in the prices of certain steel products. The decision to suspend the operation of the scheme until May 31st for old contracts and until April 29th in the case of orders placed on and after April 8th has smoothed the path for the change-over. Reports from Scotland point to an improvement in the supply of scrap and other raw materials of the iron and steel industry. In the Sheffield district all materials are operating at capacity. In South Wales the manufacture of corrugated sheets for air-raid shelters has affected the heavy sheet mills, but there has been an improvement in the output of tinplates. Although the limited supply of scrap is hampering steel production, the activity of heavier sections of the industry remains at a high level. Imports of iron ore and scrap rose from £518,000

in March, 1939, to £1,194,000 last month; during the same period the intake of iron and steel increased from £1,172,000 to £2,380,000, but exports fell from £3,204,000 to £3,066,000.

ENGINEERING

The labour problem is becoming increasingly acute; thus, on March 11th only 2.7 per cent. of the total number of insured persons in the various branches of engineering was unemployed. Early this month a census of labour was taken in the engineering, shipbuilding, and motor and aircraft industries, and negotiations between the employers and unions are to take place next week on the conditions of the employment of women during the war. Imports of machinery rose from £2,340,000 in March, 1939, to £2,528,000 last month, but exports fell heavily from £5,104,000 to £3,782,000.

CHEMICALS

Business in the home chemical industry has been quite active during the past month, and there have been increasing inquiries for export. Most industrial chemicals have been in very fair demand, and supplies of some products are still scarce. There has been an increased interest in fertilisers; sodium chlorate, lithopone and formaldehyde are active items. As the output of wood distillation products is limited, demand has exceeded the supply, with rising prices and delay in delivery. Business in coal tar products continues to expand, due partly to the Government arrangements for the use of pitch-cresote mixtures for fuel purposes. The volume of inquiry for pharmaceutical and other fine chemicals has been satisfactory, and increased interest has been shown in the export trade.

FOOTWEAR

There has been some slackening in the flow of civilian orders since Easter, though manufacturers are still busy on old contracts. Leather supplies are adequate in the lighter bends, but it is still difficult to get much heavy leather for the civilian trade. Deliveries of army boots have been speeded up, and capacity is fully engaged until June on the present contracts. An increase in wages in the leather trade became operative this week; piece-workers

obtained an increase of 5 per cent. on existing rates and adult time-workers one of 1d. per hour.

COTTON

Spinning production at the end of March was 80 per cent. of capacity, the same as a month ago, and compares with 60 per cent. a year ago. During the first half of April the amount of fresh business done in yarn and piece-goods was very limited, and it was estimated that the sales were not more than 20 per cent. of production. This hold-up of trade was due to the uncertainty of the revised margins for spinners. As the wages advance to the operatives came into force on April 1st, the delay caused much irritation. However, on April 17th the revised schedules were available. The net margin for spinners shows very little change, but an allowance was made for increased production costs due to higher wages and the levy on raw cotton purchases to provide funds to meet the expenditure of the Cotton Board on research and investigation in foreign markets. There has been no hurry on the part of spinners to accept new contracts, and the decision of the Board of Trade not to allow any purchases of yarn for the home trade for a month has had a detrimental effect upon business. In certain quarters, however, freer buying has taken place in piece-goods for export, most of the orders being for South America, West Africa and the Dominions, and this type of business may expand further. From time to time fairly large Government orders have been given out.

WOOL

The Australian wool clip of 1939-40 is estimated to be nearly 3.4 million bales, probably a record in size. The carryover is expected to be small, as more than 1.6 million bales have already been shipped and 2.5 million bales appraised. The New Zealand clip is expected to equal that of last season, while a moderate increase is almost certain in South Africa. Most wool mills are exceedingly busy, in spite of a shortage of skilled workers, but the supplies of wool and tops for the civilian trade have been so seriously reduced that firms not on Government or export work are working short time. The trade with Scandinavia has come to an end, but there is a fair amount of work in hand for export to neutrals and the Dominions.

JUTE

The invasion of Norway and Denmark by Germany caused prices for both raw jute and Calcutta goods to advance, though the jute trade is likely to be adversely affected by the new phase of the war. Denmark is accustomed to purchase millions of yards

of jute cloth for bacon wrappers each year, while Norway, Sweden and Finland are also important customers. Short time is already being worked in Dundee; immediate further orders for sand-bags are not likely. But the advance in raw jute was not maintained, and prices are down about 30s. per ton from the top points reached last week, while Calcutta goods have also fallen. Full group of Daisee-2/3 is quoted at £35 and Tossa-2/3 at £36 15s. per ton, May/June. No prices have yet been named for new crop Marks, £41 5s. for Lightnings and £38 15s. per ton for Hearts, August/September. Yarns are lower at 4s. 10d. done for common 8 lb. cops, while cloth rates are now at 6.12d. for 10½ oz. 40 in., 5.78d. for 10 oz. and 4.75d. for 8 oz. Calcutta hessians are at 30s. 2d. for 10 oz. 40 in. and 25s. 3d. for 8 oz. June/September.

LINEN

Further Government orders have been allocated for a large volume of yarns and cloth to be delivered over a period of five months. The export trade is being hampered by high prices and shortage of the raw material; the new restriction on the domestic sale of linen goods is likely to check considerably the sale of linen goods from stocks of old yarn. There has been some fall in Belgian flax prices, due mainly to a co-ordinated withdrawal of French and British buying, under the influence of the very high prices demanded by sellers.

RAYON

The industry is working to capacity in spite of rationing of sales of piece-goods to the home market. Export trade is being developed with satisfactory results. Raw material prices are rising and the temporary stoppage of wood pulp supplies from Scandinavia has added another difficulty. Prices of rayon yarns are to remain at present levels until July.

AGRICULTURE

In spite of the late spring, most of the two million acres have now been ploughed and sown, as well as the normal acreage. The increase in work, and the shortage of labour caused mainly by competing employers in rural districts, have led to an intensified demand for members of the Women's Land Army; further volunteers are now required for training. The need for feeding stuffs has eased. The fall of lambs is reported to be high, but mortality is probably above the average owing to the poor condition of the ewes at lambing time. Complaints are still frequent at the long delay in obtaining payments from the various Government departments, both for livestock and for ploughing grants.

Business Developments Overseas

UNITED STATES.—The recession in business activity since the beginning of the year has been as rapid as the previous expansion. Thus, the Federal Reserve Board's index of industrial production, adjusted for seasonal variations, dropped from 128 (1923-25 = 100) in December to 119 in January, 109 in February and 105 (provisional) in March; the figure for last month is the lowest recorded since last August. While activity in the aircraft, ship-building, machine tool and motor industries was well maintained in March, reports from the building, iron and steel and textile trades were disappointing. Retail sales, while showing a downward trend, remained above last year's level. The latest reports, however, suggest that the curve of business activity has been flattening out this month, and there are even signs of improvement here and there. Raw material prices have tended to rise, and there have been indications of a slight improvement in the volume of new orders. The evidence of a coming revival, however, is not yet conclusive.

EUROPE

GERMANY.—Wartime restrictions on civilian industries have generally been tightened up. The process of closing down factories manufacturing civilian goods is gathering momentum as a result of new restrictions on the allocation of raw materials. Industrial activity taken as a whole seems to be increasing. There are many signs that work on the additional capacity to be set up under the enlarged Four-Year Plan is being speeded up, particularly in the coal, iron and steel, and chemical industries. The replacement programme for locomotives and railway rolling stock seems to be well under way. Exceptionally long working hours in the locomotive and wagon industries are reported. The production of munitions and war material is now completely centralised under the new Minister for Munitions, Dr Todt. During March and April several hundred thousand Polish workers were transported to Germany, mainly for work on the land and in the coal-mining industry of the Ruhr area. Enforced rationalisation has created a shortage of semi-skilled workers, and the training of unskilled workers as semi-skilled workers has been made compulsory for all metal factories. The issue of industrial loans has been temporarily stopped. The index of industrial share prices continued to advance, from 116.2 in March (1924-26 = 100) to 119.5 in the second week of April. For the first time since the beginning of the war prices show a definite increase. The index of wholesale prices advanced from 108.4 (1913=100) in February to 109.4 in March, and the index of the cost of living (1913-14=100) from 127.2 to 128.6.

HOLLAND.—Exports remain at a low level, while the value of imports is higher than last year, due partly to the rise in prices. Both import and export trade have now been centralised in one official body, known from its initials as ANIC; this body will co-operate with the British contraband control authorities in securing free passage for certain imports. Exports to Germany of foodstuffs and other commodities will be limited to a certain proportion of the pre-war level. The effects of these new measures on Dutch foreign

trade is still uncertain. The transit trade has come almost to a standstill and a considerable amount of trade with Scandinavia has now been lost. The rise in wholesale prices has been checked, in sympathy with those in American markets. The Netherlands Bank has now revalued its gold by 22 per cent., so that the gold reserve was marked up by 221.6 million guilders to 1,244.7 million guilders.

BRITISH EMPIRE

CANADA.—The index of the physical volume of business has risen steadily for the past twelve months and reached 138.6 (1926 = 100) in January, compared with 113 in January, 1938. The number of persons on urban and agricultural relief was 30 per cent. smaller in December than in the corresponding month a year ago. Mineral and lumber production is being increased, although shipments of timber have not kept pace with the higher output. Farmers in the Western Provinces are agitating for higher wheat prices, but in quotations at Winnipeg have been fairly steady at about 90 cents a bushel, compared with 60 cents a year ago. The consequent increase in rural purchasing power, combined with the expansion in war industries, provides a very favourable outlook for Canadian business.

INDIA.—The Central Budget is to be balanced, in spite of an increase in expenditure of Rs. 5,74 lakhs, compared with the revised estimates for 1939-40. The petrol duty has been increased by 2 annas per gallon, the excise and import duty on sugar has been raised by 1 rupee per cwt., while an excess profits tax is expected to bring in Rs. 3,00 lakhs. The total expenditure is expected to be Rs. 92,59 lakhs and revenue Rs. 92,54 lakhs. The rise in wholesale and retail prices has been checked since the beginning of the year, and there was a definite fall in prices in February and March. Upcountry trade in textiles remains very slack; production in Bombay has been reduced by the strike, but prices remain low. Imports from Britain are small, as the British price level is too high to be competitive. Working hours in the jute mills have been reduced from 60 to 54 per week, as mills have considerable stocks of both raw jute and of jute goods on hand.

LATIN AMERICA

ARGENTINA.—The poor crops of fine cereals should be compensated by the recent improvement in prices; the maize crop is estimated at some 11 million metric tons, against the 1938-39 crop of about 5 million tons. Prices of maize, however, are low, and rural incomes will be correspondingly reduced. The Government is granting loans to growers to cover the cost of harvesting. Britain continues to lead as a supplier of textiles to Argentina, but high prices and long delivery for British goods are leading to a renewal of competition from other supplying countries and are also encouraging the local manufacturing industry. It is becoming increasingly evident that the United States is the most serious competitor of Britain in the Argentine and other South American markets; the inroads of American goods at the expense of British will increase if British prices continue to rise.

Unit Trusts in Wartime

THE war has hit all investment business hard and the unit trust movement, with its special insistence upon the merits of a diversified holding of equities for the small investor, has naturally suffered also from two key factors: the war savings campaign and the inferred wish of the authorities to encourage investment in gilt-edged rather than equity securities. The test of the movement's success in the past year, therefore, is whether its defences have proved sound against recurrent crises and war itself. On the whole, the verdict which can be reached in the following pages is not unfavourable. The British General episode, which came to light at the end of June last year, did not cause any general weakening of public confidence. There was no violent pressure to resell units at that time, nor, indeed, on the outbreak of war itself. One of the features of an extremely difficult year for the movement is that, while sales have shrunk to an extremely low level, the volume of repurchases has been even smaller.

War has so far brought no official discouragement to unit trust sales. The authorities appear to take the view (in contrast to their attitude on municipal conversions) that since the sale of units does not involve the creation of new securities, the purchase of underlying securities by the managers will put cash in the hands of the seller for reinvestment in war loans. Yet it may be doubted if the authorities would welcome any extensive publicity for the unit trust movement. A limited number of trusts have, of course, been affected by the two requisitions of dollar

securities. A year ago the Prevention of Fraud (Investments) Bill concluded its remarkable career and was entered on the Statute Book. The outbreak of war has prevented the implementing of many of its provisions, including those relating to the licensing of unit trusts. Officially, the latest date for the receipt of applications by the Board of Trade has been twice postponed—from September 15th last year to March 15th last, and again until September 16th next. Nor is any progress recorded on the question of the form of unit trust accounts, on which a discussion appeared in the Unit Trust Survey of May 13, 1939. Official control is therefore a dead letter for the time being.

In the following pages of this, the Sixth Annual Survey of the Unit Trust Movement published by *The Economist*, these and other matters are discussed in detail. The movement as a whole can still claim that, on balance, it has provided a net addition to Stock Exchange business during the year. That confirms the view, based on earlier experience, that the investor tends to hold his units, having once bought them. But business has now fallen to such a low level that the economics of unit trust management require careful examination if the interests of holders, whose units may have anything up to 25 years still to run, are to be fully protected. The movement's responsibilities, admittedly great when it was developing rapidly, are no less important to-day, when unit trust management has become a depressed industry.

Sales and Repurchases

IN the twelve months to March 31, 1939, the sales of the unit trust movement at least provided bread and butter business for some of the managements. The latest year's sales and repurchase figures, however, are of a totally different order. They show that total sales of unit trusts for the year to March, 1940, amounted to no more than £2,125,000—between one-quarter and one-third of the previous year's revised total sales figure of £7,625,000. The one consoling feature about the past year's business is an appreciable reduction in the value of repurchases from £1,600,000 to £1,175,000. The latter figure represented no more than 1.46 per cent. of the net value of sales outstanding at the beginning of the year, whereas the equivalent proportion for the preceding year was 2.15 per cent. But these repurchase figures, however, are subject to one qualification as an index of the volume of units offered to the managers. Since they are expressed in value terms, account must be taken of variations in prices in estimating changes in the volume of re-sales. It seems

doubtful, however, if the total volume of re-sales to the managers exceeded that of the preceding year.

In compiling the table below, which shows the trend of unit trust business over the past three years, the object has been to compute the total and net cash sums entrusted to the movement by the public. The latter figure, to March 31, 1940, is £81,195,000, compared with a slightly revised total of £80,345,000 to March 31, 1939. This sum, it should be emphasised, is not the current value of unit trust securities now in issue, which would actually represent an appreciably lower figure. The difference is composed of current paper losses on unit trust holdings, net losses resulting from re-sales of units to the managers, and certain losses arising on the termination of six trusts during the past year. It has only been possible to give an approximate estimate of the liquidation value of these trusts of £100,000, which is subject to some margin of error. The remaining figures have been compiled from returns supplied in confidence to *The Economist* by all the

management groups, with one exception. The table follows below:—

UNIT TRUSTS' SALES AND REPURCHASES

	Year to Mar. 31, 1938	Total to Mar. 31, 1938 (79 trusts)	Year to Mar. 31, 1939	Total to Mar. 31, 1939 (96 trusts)	Year to Mar. 31, 1940	Total to Mar. 31, 1940 (96 trusts*)
Cash sales	£12,930,000	£88,000,000	£7,625,000	£95,625,000	£2,125,000	£97,750,000
Cash repurchases	2,620,000	10,550,000	1,600,000	12,150,000	1,175,000	13,325,000
Net cash sales	10,310,000	77,450,000	6,025,000	83,475,000	950,000	84,425,000
Cash value of conversions ..	3,130,000	3,130,000	...	3,130,000	...	3,130,000
Cash value of terminated trusts	...	...	...	...	†100,000	†100,000
Net cash invstd. in unit trusts	7,180,000	74,320,000	6,025,000	80,345,000	850,000	81,195,000

* Of which 6 trusts terminated during year. † Approximate estimate only.

It is plain from such figures as these that unit trust management, in general, must have been a decidedly unremunerative business last year. It is not surprising that, for the first year in a decade, not a single new unit trust was formed in 1939-40. For the majority of the trusts, moreover, it is probable that changes in the total size of their funds, after allowing for repurchases, have been extremely small. It follows, therefore, that where managers are in part remunerated by a percentage charge, either annually or semi-annually, they should have been more successful in covering the inevitable losses on their current business. The sales figures given above, however, do not permit any quantitative estimate of this factor to be made. And even these charges are based, in most cases, on the current value of the trust funds, which has been affected by falling security prices.

Hitherto, the economics of unit trust management have been discussed in terms of the income arising to the managers when a fund is growing. *The Economist* was among the first to point to various methods, such as using Official List prices, rounding-up price adjustments and other "sweepings" by which managers could supplement their income. Such fields become virtually closed as soon as the movement ceases to sell any appreciable volume of new units, and managers are then forced to rely largely on dealing in, or closing down, existing units.

At this point, it is probably convenient to set down the obligations of unit trust managers with regard to dealing. They hold themselves out, in the case of an open trust, to sell units on the basis of the cost of acquiring the underlying securities, plus Stock Exchange and other charges, the service charge, and a fractional amount to round-off the price, usually to the next 3d. multiple. At the other end of the scale they undertake to repurchase units from holders on the basis of the realisable value of the underlying securities, after deducting charges and an amount to round-off the price to the next lower 3d. multiple. Between the offered price on an open basis—the first case

—and a bid price on a closed basis, there may be a gap of as much as 2s. 6d. or 3s. for a unit priced at about £1.

So long as a trust is open, the offered price, which is based on the replacement value of the underlying securities, usually forms the basis for the bid price at which managers are prepared to repurchase the units—usually at a turn of, say, one shilling below the offered price. If, at a later stage, the trust is closed, the price will be adjusted to a bid price corresponding to the realisable value of the underlying securities. Hence, if on the closure of a trust, the managers decide to maintain a two-way market in closed units, they would quote, in addition to the bid price, at a dealing turn of, say, one shilling per unit. Taking as a typical example a £1 unit at the open price, the corresponding bid price on a closed basis would be, say, 17s. If a two-way market in closed units were maintained, the closed offered price might be, say, 18s. The relation of these prices demonstrates what is still rarely appreciated among unit trust investors—that it is sometimes possible to buy units in a closed trust from the managers at less than the cost of acquiring the underlying securities, and without any initial service charge. During the past year the number of closed trusts has grown from 36 to 49, and the number of units which are now consequently priced on a bid basis has thus increased. With the fall in security prices, however, many typical units in which business started around 20s. have fallen, for example, to 14s. or less. In such circumstances the maintenance of a dealing turn of one shilling in the case of an open trust would bring the bid price closer to the liquidation value, and in actual fact some managers have widened their price margins in order to bring about a closer identity between the bid price and the liquidation value of the units. Such managers are obviously left with a satisfactory dealing margin.

Moreover, within the range between the open offered price and the closed bid price the managers have almost complete discretion. Most groups would normally buy back units in any open trust in moderate amounts at the quoted bid price. For larger blocks of units offered back to them, they would normally scale the price down by stages so that a selling order of, say, 5,000 units might be carried out at five different prices with a margin of 3d. per unit between each. The managers, of course, can only afford to maintain a limited book in their units, and if they find that repurchases are increasing in volume they will attempt to offset such offers by reducing the bid price, and to encourage new purchases by reducing the offered price of the units below the replacement figure. For closed trusts, a further source of small profits to the managers may arise on liquidation, from the price adjustment and from realising the underlying securities at slightly more advantageous prices than are employed in pricing the units. But by far the greatest incentive in "unwinding" a closed trust lies in the release of the proportion of escrow funds which had previously been set aside for the full life of the trust.

The "British General" Episode

IN June last year it became known that the British General Fixed Trust, Limited, was in financial difficulties. This company, which had a paid-up capital of £10,000 in preference shares, £75 in ordinary, and £25 in "A" ordinary shares, was responsible for managing the British General "A," "B" and "C" trusts, and also First Recovery. Of these trusts, the General Accident, Fire and Life Assurance acted as trustee for the British General trio, and Martins Bank for the First Recovery. As a result of negotiation, in which members of the Unit Trusts Association were closely concerned, the management of these four trusts was taken over by National Fixed Investment Trust, Limited. Three trusts under the management of Improving Securities Trust, Limited (an associated company of the British General), were taken over by the Allied group—namely, Capital Securities, British and American Securities and Commodity Share Trust. Specialised Unit Trusts, Limi-

ted, which also had connections with the British General company, continues to manage the Trust of Rubber and Tin shares, while the other trust formerly under its control, the Gold Share Trust, has been terminated.

The case at least demonstrated that the safeguards provided by the vesting of underlying securities with a trustee were completely vindicated. Defalcations occurred, but they involved the management company's funds, and not the assets of the unit holders. The investor was accordingly protected against loss, except of an incidental character arising from the lowering of prices and, possibly, the subsequent termination of certain of the trusts concerned.

But that fact cannot be allowed to obscure certain other issues which were raised at the time in *The Economist*, and which did not receive any public answer. It is an open secret that, in arranging the transfer of the trusts to the care of the National and Allied groups, members of the

UNIVERSAL SECOND UNIT TRUST

Certificates

provide an investment which combines wide spread with good income yield.

The investments of the Trust are spread over a wide range of securities of

LEADING INDUSTRIAL CONCERNS

and Trustee securities. The portfolio may, subject to the limitations set out in the Trust Deed, be varied by selection of securities from a list of some 320 permitted companies and from Trustee investments and such other investments as may, subject to the Trust Deed, be added by the Managers.

LONG TRUST PERIOD: The Trust period will expire in July 1954 but sub-unit holders will have the option, subject to the agreement of the holders of a certain minimum percentage of sub-units as defined in the Trust Deed, to renew the Trust for a further 16 years. Thus the effective period may be 32 years in all.

The gross annual yield based on the actual dividends paid during the past year on the securities constituting the present portfolio and at a price of 16s. 3d. per sub-unit (the price on 30/4/40) would be approximately

£5 : 9s. : 2d. PER CENT.

This yield is not fixed and is stated only as an indication of the return obtainable during the past year on the investments which form the present portfolio of the Unit.

The offered price of these sub-units on 30th April 1939 was 16s. 3d. and the offered price on 30th April 1940 is 16s. 3d.

Unit Trusts Association actually undertook a liability, which is being met collectively. For this action, which is undoubtedly in the larger interests of the movement, they deserve the thanks of unit holders in the trusts concerned. But although the episode did not imperil the main security of unit holders in these trusts, it did suggest the possibility of certain weaknesses in their previous management. The announcement on behalf of the managers referred to "insufficient financial resources" as a reason for transferring the operation of the trusts into stronger hands. But throughout the period of rumour, statement and negotiation early last July, no information was furnished regarding the adequacy, or otherwise, of the escrow funds which the managers had built up and deposited with the trustee for the future management of the transferred trusts. Such escrow funds, as *The Economist* then pointed out, were specifically intended to cover just those contingencies which had arisen in the British General case. Our Unit Trust Surveys of the preceding three years had recorded the statement, offered by the managers, that provision had been made for the future management of British General "A" and "C" and First Recovery and had been deposited with the trustees (Martins Bank) on each distribution warrant that escrow funds still in hand were sufficient to cover full management and trustee services for the life of the trust. The position for the British General trusts was less explicit, to judge by the trust deed of British General "A." But the importance of creating an adequate escrow provision, even if it was not fully appreciated in June, 1934, when this trust was formed, had certainly been well ventilated in subsequent years.

The conclusion which is suggested by the terms on which the British General trusts were taken over by new managements points to the possibility of some defect in the escrow arrangements, at least for certain of the trusts. Trustees normally hold escrow funds, in which they themselves have a future interest for services over the life of the trusts for which they act. But they also have some implicit

responsibility towards unit holders for ensuring that the deposited funds are adequate for the routine management of the trust, on a closed basis, in the event of any defection on the part of the managers. It cannot be expected that the Unit Trusts Association should step into the breach and co-operate in the management of weak groups on every occasion. And the present economic position of some sectors of the unit trust movement does not suggest great strength on the part of certain managements. It is of the highest importance, therefore, that adequate escrow funds should be vested in the hands of trustees, and there would seem to be some justification for publication of the amounts, in relation to future needs, by individual managements. In the course of nearly ten years, the unit trust movement and trustees should have obtained a fairly accurate idea of the size of an adequate escrow fund, and their problem has been rendered easier, and not more difficult, by the multiplication of annual and semi-annual charge trusts since escrow funds became a matter of public attention. The implications of the British General episode thus have considerable relevance to the present position of the unit trust movement, now that new business has fallen to exiguous dimensions. At present, a number of management groups must be prepared to exercise patience for eventual victory and recovery if they are to secure a reasonable return upon their investment in unit trust business. But if they should fail in their responsibilities towards the unit holder in the interim, that chance may never come.

Unit Trust Directory

The following three pages consist of a condensed version of the Unit Trusts Directory which has been a regular feature of *The Economist's* Unit Trust Surveys. For fuller particulars, reference should be made to last year's Survey, published on May 13, 1939, which included details of the provisions for earlier termination of certain trusts. Trusts which have been terminated are described in a separate section on page 9.

ALLIED INVESTORS GROUP OF UNIT TRUSTS

Chairman: HARTLEY WITHERS

BRITISH INDUSTRIES FIXED TRUSTS

Four Portfolios, each comprising shares in 25 selected British Industrial concerns. Dividend distributions so timed that holders who spread their investment over the four Portfolios receive a cheque roughly every six weeks. Yield on the basis of last two distributions about 5½%.

Trustees: Midland Bank Executor & Trustee Company, Limited

METALS AND MINERALS TRUST

This Trust is of equal interest in peace or war, since the concerns whose shares it holds produce commodities essential under all conditions. Thus, it affords a valuable protection against inflation. The Trust Deed entitles the managers to place a part of the income of the Trust to reserve. Whilst they have availed themselves of this authority until now, they have decided to distribute the whole of the income during the war. Yield based on the full distribution of income for the past two periods, about 6%.

Trustees: Midland Bank Executor & Trustee Company, Limited

ALLIED INVESTORS FIXED TRUSTS LIMITED

165, MOORGATE, LONDON, E.C.2

MANAGERS

Phone: NATIONAL 4931

Units or sub-units may be bought through any stockbroker or bank. Explanatory booklets may be obtained on request.

CUMULATIVE INVESTMENT TRUST

Consisting entirely of Ordinary shares in 51 first class companies. The Trust Deed provides for the reinvestment of part of the dividends received with a view to augmenting, year by year, the investors' capital and income. Estimated yield on last two distributions: 4½% in respect of the amount actually distributed. In addition, amounts representing 1% per annum have been placed to reserve.

Trustee: Midland Bank Executor & Trustee Company, Limited

ELECTRICAL INDUSTRIES TRUST

Trust fund consists of the shares of 41 of the best electrical supply and equipment companies. These units thus afford a means of acquiring an interest in this progressive and expanding industry without being exposed to the risk of local conditions adversely affecting results, which it is impossible to escape when investing in the shares of an individual enterprise. Approximate yield based on last two distributions 4½%.

Trustees: General Accident Fire & Life Assurance Corp., Ltd.

Unit Trust Distributions, 1935-1940

IN previous Unit Trust Surveys* we examined the price performance of a number of unit trusts. For this year's Survey an investigation has been made into the other investment aspects of unit trusts—their record as producers of income. The first step is to set out the object and method of the enquiry.

With only one exception, unit trusts in this country make payments to certificate holders at half-yearly intervals. These payments are composed mainly of the net amount of dividends received on the underlying securities, but they may include also items of a capital nature arising from the sale of rights or bonus shares, the return of capital from companies in the portfolio or the proceeds of sale of any shares which it has been decided to eliminate from the trust. The treatment of these capital items varies widely among different trusts. The total amount returned in this way to date ranges from nothing for fully cumulative trusts to as much as 15 per cent. of the initial price of the sub-units of one trust. But such items are not income, and must therefore be excluded from the distribution in assessing true income. Further, the investigation must be based on gross income rather than net income, for the latter may be affected from year to year by changes in the rate of income tax. In this respect, there is a slight lack of uniformity among the available figures which, however, does not materially affect the results.

Gross income—the subject of our investigation—is expressed in pence per sub-unit. Hence, an index number has been constructed for each trust, with the income paid in the calendar year 1937 as the base (=100). This admittedly precludes a broad comparison of rates of return on different trusts. But in any event, such comparison is difficult, since it must take account of any differences in the status of the trusts—it would be wrong, for instance, to compare the yield on a closed trust with the yield on an open trust—and in the manner of charging management expenses.

The investigation has perforce been restricted, in the main, to the older trusts, though, to give an account of flexible trusts, certain trusts formed in 1936 have been included. In some cases the period covered includes a trust's first distribution period, which seldom covers exactly a half-year's income; it follows that where an index figure has been calculated from the first two distributions of a trust, it may not be entirely reliable. In the table below the index for Fourth British Fixed Trust shows a sharp fall from 98.5 in 1938 to 79.2 in 1939, resulting in part from such delays, and a substantial increase in the May, 1940, payment shows that delayed dividends have subsequently been received. The same is true of National D. In order to give as up-to-date a picture as possible, we have therefore computed an index figure based on the last two distributions when one was made in 1939 and one in 1940.

There is the further possibility that the sum of two distributions may not correspond exactly with one year's dividends on the underlying securities. In many trusts this may happen as a result of an alteration in the date of payment of certain dividends, and it is specially significant just now, as some dividends were delayed at the outbreak of war. In the table the index for Fourth British Fixed Trust shows a sharp fall from 98.5 in 1938 to 79.2 in 1939, resulting in part from such delays, and a substantial increase in the May, 1940, payment shows that delayed dividends have subsequently been received. The same is true of National D. In order to give as up-to-date a picture as possible, we have therefore computed an index figure based on the last two distributions when one was made in 1939 and one in 1940.

The thirty-three trusts covered by the inquiry have been grouped according to whether they are fixed or flexible, and whether they have a general or specialised portfolio. Thus there are four groups. Most of the eighteen trusts in the first and largest group—general fixed trusts—were formed before the end of 1934, that is to say, before the

movement reached the period of largest and most competitive sales. The yield of a trust was, from the very beginning, a selling point of value, but it had hardly then become the subject of the fierce competition which developed in 1935 and 1936. There is, nevertheless, confirmation in the record of those early trusts, and more clearly in that of later ones, that yield is generally a good index of risk. Four years ago† we gave a table of yields at the end of 1935, arranging the trusts in the order of their formation, an arrangement which showed clearly the growth in the importance of yield as a selling point. Omitting trusts in gold-mining shares, the earliest trust formed showing an average yield as high as 5 per cent. on its underlying securities was First Provincial B (November, 1934) and Security First (July, 1935) was the earliest formed with securities averaging 5.2 per cent. At that time we wrote: "Where yields of 5 per cent. or more are shown (except in special instances like the gold share trusts) the question arises whether a significant proportion of 'gingering' has not been introduced into the holding." The table suggests that this caveat regarding high yields in general, entered in 1936, has been fully justified in the succeeding four years. By contrast, the specialised fixed trusts show appreciable income stability.

* Distributions include income arising from broken period. † Index numbers based on last distribution of 1939 and first of 1940.

The group of general flexible trusts is probably the most interesting of all, though it is not very well represented, since few trusts of this type were formed before 1936. These figures give the results obtained to date by the managers of two of the most important groups of flexible trusts of a general investment character. The Municipal and General group, represented by the Limited Investment Fund and the twin regional funds (the Midland and Southern and the Scottish and North Country) show the best income trends of all the trusts examined. They may be compared with the results of the Domestic and the Producers trusts, the high initial returns on which have not been maintained. The following table shows the

[* March 28, 1938, page 21; May 13, 1939, page 31.

† Unit Trust Survey, March 7, 1936, page 3

CENTURY FIXED TRUST Certificates

Sponsored by the "National" Group of unit trusts, which is by far the largest unit trust organisation in this country, Century Fixed Trust Certificates provide a complete investment programme in a single investment.

Your funds are spread over a list of

100 First-Class Securities

chosen for their

Steady Dividend Record
Vast Earning Power
Great Financial Strength
Easy Marketability

Through the wide "spread" the safety margin is greatly strengthened, and security is combined with an attractive income yield.

THE YIELD

at the current price of sub-units, and on the basis of the income actually paid to certificate holders in the past year was:

£5 : 12s. : 5d. per cent.

gross, from cash dividends, plus

£ - : 9s. : 0d. per cent.

net, from sales of bonus shares, etc.

Trustees: Midland Bank Executor & Trustee Co. Ltd.

Member of the Unit Trusts Association.

return on an investment made at the end of 1936 in each of these five flexible trusts:—

COMPARISON OF FIVE GENERAL FLEXIBLE TRUSTS

	Price, Dec. 31, 1936	Gross return on price at Dec. 31, 1936				Price, April 23, 1940	% change in price
		1937	1938	1939	1939-40		
Limited Inv. Fund	24/9-25/3	3.34	3.80	3.40	3.40	16/1-16/9	-34.5
Midland & Southern	22/6-23/1	3.64	4.12	4.10	4.21	16/9-17/6	-24.7
Scottish and North Country	23/-23/6	3.16	3.83	3.80	3.90	16/6 bid	-28.3
Domestic Inv. Trust	9/9-10/3	3.34	4.72	3.68	3.29	5/4½-5/10½	-43.7
Producers Inv. Trst.	11/-11/3	4.75	4.58	4.20	...	6/3-7/-	-40.4

In examining these calculations, the reader may recall that *The Economist's* 1938 survey discussed the nature of a "true" yield on a flexible trust as distinct from the distributions made by a given trust. That distinction can now be put in historical perspective.

Finally, there is the group of specialised flexible trusts. In this field also there are strong contrasts between different managements with similar investment interests. For example, the trusts in the Trust of Insurance Shares group

have maintained their distributions very satisfactorily, but the record of Bank Insurance and Financial Shares Trust shows a downward trend. The details of the comparison are as follows:—

COMPARISON OF FOUR SPECIALISED FLEXIBLE TRUSTS

	Price, Dec. 31, 1936	Gross return on price at Dec. 31, 1936				Price, April 23, 1940	% change in price
		1937	1938	1939	1939-40		
Trust of Insurance Shares	23/3-24/3	2.98	2.97	2.98	2.95	16/3-17/6	-29.0

The unit trust movement in Britain is now in its tenth year. On questions of yield it has had to face an amount of criticism, much of which has been justified. There is reason to-day for hoping that the movement increasingly realises that investors do not credit a unit trust with a magic capable of producing a return of 6 per cent. from securities which themselves yield an average of 5 per cent.

Termination or Consolidation?

DURING the past year, five unit trusts have been terminated. In assessing the significance of this fact it is important from the outset to distinguish between termination and closure. Managers may close a trust, after it has been open for some time, by ceasing to create new units and by lowering the price from an open basis to a closed basis. This is a familiar technique. But, when a trust is closed, it remains in being; the price of the sub-units is put on a bid or liquidation basis, corresponding to the amount which can be realised for the underlying securities comprised in the units. The managers' dealing policies vary widely among the closed trusts. Some managers maintain a two-way market in closed units based on the bid price, while others unwind any units which are sold back to them.

Termination, however, is entirely different. Under powers contained in their trust deeds, which in one case at least date back to April, 1934, many managers have reserved the right to liquidate a trust if the number of units in issue falls below a specified figure. Such powers provide a safeguard for the managers. The small trust is an uneconomic trust, and managers encumbered with such a trust for as long as twenty years would suffer appreciable loss. The average charge for unit trusts assumes a considerably greater volume of sales of units than the minimum figures which govern the termination powers. As a very rough guide, it is probable that sales of half or three-quarters of a million units are required if a trust is to pay its way. But the typical termination clause provides for a minimum of, say, 250,000 units. In other words, between this minimum and the volume of sales which would be required even to cover expenses on the working of a trust, there is in probably every case a wide margin in respect of which the managers are "on risk." So long as the unit trust holder is correctly informed at the time of purchase that powers of termination are available to the managers and that the expected life of the trust may accordingly be reduced if the powers are exercised, he has no ground, in principle, for complaint. But the purchaser necessarily undertakes two risks in this respect. First, he pays an initial service charge which will normally be lost on termination (Orthodox is an exception in this respect). Secondly, he must risk the possibility, if the trust is terminated, of receiving no more than the liquidation value of the units, compared with their replacement value when they were purchased.

Of the trusts terminated during the past year, British and Dominion Insurance-Bank was formed in July, 1938, and Trans-Atlantic (Canadian and United States) Trusts in November, 1938. In these cases the managers had power to terminate after one year if less than 200,000 units were outstanding. Three other terminations have

been effected in the case of trusts formerly in the British General group. Of these, the Commodity Share Trust and British and American Securities Trust were liquidated on January 31st and March 15th last, respectively, and the trust deeds provided for termination after one year from the date of the deeds, if the units outstanding fell below 250,000. In these two cases, at least, details of the powers of termination were, unfortunately, not given in the booklets, and it is questionable whether any holder had read the full terms as set out in the trust deeds. The Gold Share Trust formed in September, 1938, completes the list of terminations during the past year, though it is understood that the American Industries Trust (Allied Group) will be added to their number on May 15th next.

Two general points can be made regarding termination. Since powers to terminate are, in the nature of things, likely to be exercised when the security markets are in poor health and sales are sub-normal, the holder is likely to be turned out of his security at an unfavourable time. Secondly, the cost of termination to the unit holder is so high that it should be avoided as far as possible. The managers of American Industries Trust have shown the way in this respect. On March 18th, after the first requisitioning of dollar securities had reduced the security holdings of the trust from nearly 100 per cent. to something like 67 per cent., leaving an abnormal balance of 33 per cent. in cash, they offered holders the opportunity to sell back their units to the managers and to purchase in exchange units of the Cumulative Investment Trust—a flexible unit in British, as compared with American, industries. The relative prices of the two units at that date was 19s. 6d. bid for American Industries and 17s. 6d. for Cumulative, and the managers offered to forego their initial service charge on the latter to the extent of 9d. per unit. With the second requisitioning of dollar securities, it is possible that the proportion of cash now remaining in the fund has risen to about 60 per cent., and it is understood that the managers are contemplating a further offer to remaining holders of the American Industries units.

Assuming that the price basis is fair—as it appears to be in this case—the offer of conversion into another trust is clearly preferable to outright liquidation. There are probably several trusts which could at present exercise powers of termination. It may be difficult to consolidate a relatively unsuccessful trust with a specialised portfolio with a more successful general trust. Again, when the majority of trusts in one group have been relatively unsuccessful the managers will usually lack the opportunity to consolidate. But terminations are not a good advertisement for the movement, nor a good investment for the unit holder.

ORTHODOX INVESTMENT UNITS

have set up a record for security of capital

13th April, 1940.

THE PLAN

The Orthodox Unit Trust was created exactly a year ago to combine if possible a steady 5 per cent. yield with the utmost security of capital against loss. In the opinion of the Managers this result was most likely to be achieved if the Trust adopted the principle of "orthodox investment." Orthodox Investment is a matter of placing—in substantial proportions—part of one's capital in Gilt-Edged Securities, part in Debentures and Preference shares, and part in "Equities," this last part to be well divided over the chief types, which to-day are (1) Bank and Insurance Shares, (2) Industrial Ordinary Shares, and (3) Gold Shares. This has been the established practice of the soundest authorities—in other words the "Orthodox" way to invest—for generations. The Managers further decided from their experience and judgment what proportion of the Trust should be invested in each of these types. These proportions were fixed. Moreover, in order to perfect the "balance" of the investment they gave due weight to important sub-types of securities. (To understand this properly, it is essential to see the chart of the portfolio in the Booklet which is obtainable free by writing to the Managers.) They selected 300 securities and arranged them in a specially created system of thirteen Separate Trusts within one Master Trust known as the Orthodox Unit Trust. The purpose was to give scope for skilful management and yet to let the investor see exactly where and how his money was invested.

THE TRUST IS OF THE HIGHEST STANDARD

1. It is a "Cash Fund" trust, preventing profits to the Managers on purchase and sale of securities.
2. The yield is assessed by auditors, preventing artificial effects from buying securities "cum" or "ex" dividend.
3. The price of units is certified daily by a Member of the Stock Exchange, London.
4. The buying and selling prices are both free of commission and stamp duty.
5. The re-purchase price as quoted in the press is a

5%

approx. gross yield

true price applying without limit to any quantity of units that may be offered for realisation.

6. The Trust has the longest unexpired life of all the Unit Trusts—24 years, an important consideration.
7. Its Management Company is the first to have a Board of Directors with a strong representation from the Investment Trust world.
8. It claims to be the first Unit Trust adequately to reconcile and combine the merits of both fixity and flexibility.

NOTE—Trusts of chiefly gold shares are excluded from the comparisons above.

Towards Stronger Management

JUST over nine years ago, the first unit trust was introduced to investors in this country. Those nine years can be divided into roughly three phases. The first three and a half years were required to establish the claims of the movement to the serious attention of the small investor. The following three or four years saw its most rapid development, in which new trusts appeared almost at weekly intervals, and new groups hit the trail which had been opened up by the pioneers in the earlier period. This middle phase was one of acute competition; selling features were elevated as investment canons; yield figures were advertised which attracted the small investor but which caused serious misgiving in more informed investment circles. Business was abundant, and management appeared to offer quick profits and handsome returns.

During the past two or three years, however, the rate of growth has shown a natural decline, followed by an abrupt slump. The hard realities and the serious responsibilities of unit trust management are now becoming apparent. Some of the movement's camp followers have departed. Six trusts have been terminated under minimum subscription provisions. What of the remainder? What form is consolidation to take, after a period of vigorous—even extravagant—growth?

It should be self-evident that, in the consolidation phase, the objective should be to protect the investors' interests to the maximum extent, if the unit trust movement is to survive as a respected investment service. Unit trust managements have undertaken to manage investors' funds for periods of twenty years or more. That is their first job, and no current difficulties or hardships should be allowed to obscure that central fact. If there are any management groups which entered the movement on the optimistic assumption that the continued influx of new business would enable them to reap continuous profits for a period of twenty years or more, they are doubtless feeling chastened. And it would be idle to blame political crises and war itself for a fact which was obvious even during the period of most active unit trust formation—that the pace of growth was too rapid to provide an adequate current return on new investment in unit trust management and at the same time to allow sufficient provision for the future management of new trusts throughout their full life.

To-day, unit trust groups may be divided into three broad categories. There are two groups of outstanding size, and three in what may be called the middle range. The remainder have achieved a satisfactory but more moderate volume of sales in some cases, while others are quite small. In part, but by no means entirely, the present size of management groups reflects the date of their entry into the movement, though size does not depend, in every case, upon the number of trusts managed by a given group. The very differences which exist to-day between the various groups are an index of the prolific growth of the movement in happier years. But these differences make it the more difficult to discern any lines of common action which the movement might adopt to meet the difficult period which appears to lie ahead.

It is sometimes asserted that the solution of these difficulties, and the formation of lines of common policy within a competitive framework, lies in the amalgamation of management companies. Something has indeed been done in this direction. The National group, for instance, acquired the issued capital of Protected Fixed Trusts, Limited, and assumed the management of its three trusts, more than a year ago. But the root difficulty in absorptions of this type is to value the new asset acquired by the purchasing company. The capital of unit trust management companies is largely composed of a goodwill element, expended in the formation of new trusts. For that reason, a management company which is for sale is not likely to be worth a high price, except on two assumptions: firstly, that it brings with it substantial escrow funds to provide for the future management of the trusts under its control; and, secondly, that it has reasonable expectations of future income from regular annual or semi-annual service charges. If its trusts have enjoyed only a limited success, these two conditions are unlikely to be fulfilled. There will, therefore, be little

incentive for a well-established group to take them over, even though it can expect to run the trusts very economically, if it has a large organisation.

The minimum management costs are usually estimated per distribution warrant prepared and posted to unit holders. Experts disagree in detail regarding the amount which each warrant costs, but there is good authority for the estimate that it lies between 1s. and 1s. 3d. per holder. In other words, the routine issue of two distributions each year may cost up to 2s. 6d. per account—an amount which may more than absorb any annual service charge paid by small holders. The latter is frequently one-eighth of one per cent., and hence is less than 2s. 6d. annually for a holding of 100 units priced below £1. In this connection, it may be recalled that a special investigation into unit trust holdings in our 1938 Survey showed that up to 70 per cent. of the total number of holders held less than 200 units in a number of leading trusts. Moreover, some part of the charge is often payable to the trustee. Hence, there is little opportunity for obtaining any profit from acquiring the management of less successful trusts. It is even questionable whether, in general, they pay their way.

Hence, the consolidation of management companies, advantageous though it may be on general grounds, may frequently lack any economic basis to become effective. It is probable, for example, that the National group (whose total sales have been reported to exceed £23 millions and whose organisation is, therefore, among the largest in the movement) would claim little monetary advantage from its acquisition of the Protected trusts, while the British General trusts, which were taken over last year, are understood to involve a liability upon members of the Unit Trusts Association. The logical solution is clear. A management which wishes to divest itself of the responsibility of continuing to operate the trusts under its charge should be prepared to pay, if necessary, for the relief from future liability. If such cases should occur in the future, the logical solution may, in fact, become the practical solution. The value of management capital depends almost entirely upon expectations of future income. If, instead, future liabilities exist, that capital value becomes negative.

But there is another interesting development during the past year, which would be even more clearly illustrated if space permitted the reproduction of up-to-date particulars of management companies, on the lines of the table on page 32 of last year's Survey. Mr Denys Lowson, formerly associated with the Fifteen Moorgate group, was appointed chairman of Proved Securities, Limited, more than a year ago, and has since joined the boards of Domestic Trust Managers, Limited, and Brewery Trust Managers, Limited. These three companies are now associated, and their joint operation in routine work is doubtless providing economies. In addition, Mr Lowson has more recently joined the board of Allied Investors Fixed Trusts, Limited, and within the last few weeks has become a director of National Group of Fixed Trusts, Limited, while Sir Arthur Griffith-Boscawen, the chairman of the last-named company, now has a seat on the board of Domestic Trust Managers, Limited. These changes in directorates suggest the possibility of closer business links between an important sector of the unit trust movement.

Consolidation, however, will be a slow process at best, for even in difficult times groups will naturally strive to preserve their individuality. But the present phase of unit trust business will at least bring home one lesson—that unit trust management, however attractive it may look on a short view when business is active and units “sell themselves,” is in reality a serious and risky enterprise when viewed in its proper context of providing the investor with a twenty-year service. If and when another progressive phase opens out for the movement, it may be hoped that this lesson will be applied, by fixing adequate service charges without dependence upon adventitious profits; by the provision, and disclosure, of adequate escrow funds as units are sold; and by sober estimates of the responsibilities of unit trust management over the vicissitudes of the following decades.

Banking Policy and the War

THE war has faced British banking with a new and formidable set of problems. They relate to questions of general credit policy as well as to those of a more technical character, deriving from the phenomena of evacuation, decentralisation and the departure of the clearing from London. It is the former and more fundamental issues that will be considered in this article. These problems of credit policy are not new; they call for no revolution in banking practice and tradition. Each specific transaction and decision involved has had its countless precedents in the history of British banking policy. But what is new is the context of a controlled economy into which they are framed. For the first time the British banking system has had to fit itself into the pattern of a rigidly controlled capital market and of an economy consciously tuned to maximise our war effort ("consciously" in this context need not mean "effectively").

The authorities had realised before the outbreak of the war that the test which was then forcing itself on this country and the Empire would, if it was to be successfully survived, require a more complete mobilisation and more controlled canalisation of our capital resources than could be achieved by the incentive of private gain in an individualistic economy. Hence the immediate attack on the freedom of the capital market as the key position in the attainment of an effectively controlled economy. The first move in this offensive was the control of the exchange market which was to convert the capital market into that closed circuit in which alone efficient directive control could be exerted. In the second place, a complete ban was placed on issues of new capital and conversions other than those operations specifically authorised by the Capital Issues Committee. By these two measures—one preventing the exodus of domestic capital and compelling the gradual return of capital invested abroad, and the other canalising the stream of new capital in the required directions—the authorities were given a power altogether unprecedented in this country of shaping the character of new capital expenditure and consequently of our productive effort. That power has been gradually reinforced since the outbreak of the war by such measures as the increased restriction of rents (which militated against investment in bricks and mortar) and, later, by the limitation of dividends on ordinary shares (which militates equally powerfully against investment in equities).

This control of the capital market would have been to some extent undermined if the banks' operations had not been co-ordinated to it. British banks would, it is true, have been unlikely to satisfy the needs for long-term capital which, by reason of the control, could not be filled in the open market; but the control of short-term credit provided by the banks is in many ways complementary to the controlled distribution of longer term capital, and somehow or other the banks had to be brought within the scope of a co-ordinated capital market. There were obvious objections to achieving this end by virtue of the Defence Regulations which had brought into being such measures as the control of the foreign exchange market. The solution adopted was a typical example of British technique. There was an informal approach to the banks requesting them to follow certain general precepts in their policy on loans and advances, and one may confidently say that the results of this informal approach have been every whit as effective as those flowing from the application of a statutory form of control backed by all the penalties of the law. The banks were requested in the first place to refuse demands for advances by trades of luxury and non-essential character. At the same time they were asked to recall, wherever feasible, facilities being used for such purposes. The positive converse of these negative injunctions was the request to give special consideration to requests for credits from firms engaged on Government work or in activities of an essential character. Moreover, after the issue of the first War Loan, the banks undertook with a unanimity which could not be fortuitous to provide special short-term facilities to enable

their clients to apply for the stock and spread their instalments over a lengthier period than that provided in the prospectus.

Under the guidance of these instructions, and given the new orientation of industrial activity in this country since the outbreak of the war, the banks have effected a considerable redistribution of their advances over the past eight months. The customary figures of the distribution of bank advances were not published at the end of the last year, and no official data on this subject are available to the public. But one may confidently assume that beneath the astonishing stability of the total of clearing bank advances—they stood at £984,518,000 last August and at £983,360,000 last April—there has been a considerable volume of repayments and fresh advances. The mechanism by which this control of bank advances functions is that which each bank has gradually elaborated to solve the problem of loans policy. In some cases, it is a decidedly centralised machine; in others, it leaves more room for local initiative. The guiding lines have been given to the appropriate authorities—local boards, branch managers, and head office officials to whom questions of advance policy have to be referred—and a great deal has been achieved in shifting the orientation of bank loans to trade and industry. Some of this shift has, needless to say, been due to changes in industrial demand for accommodation and has been initiated by the customers themselves, rather than by the banks.

The discount policy of the banks has necessarily been dominated since the beginning of the war by the expansion in the Treasury bill issue. With the outbreak of the war and the compulsory cancellation of foreign acceptance credit facilities, the volume of commercial paper in the London market fell abruptly. That movement was, however, completely masked by the simultaneous expansion in the Treasury bill issue. The volume of commercial paper has rapidly recovered from this immediate war slump. As soon as the machinery for re-granting overseas credits under the new exchange regulations got into its swing the volume of commercial paper arising from these reconstituted credits began to swell again. But the total has never regained even the depleted level at which it stood on the outbreak of the war. In the first place, the volume of international trade has slumped, while German standstill paper and Scandinavian acceptances have disappeared from the market. In the second place, the tendency since the outbreak of the war has been for acceptance credits to be replaced by confirmed credits available at sight. The banks have found that the uncertainties of war have emphasised the unpopularity of the unconfirmed credit, which had been losing importance for many years past. The confirmed credit is more adaptable to the scheme of exchange control now operating in this country. In any case it answers the need for certainty and gives the protection which the beneficiary is in particular likely to demand in times of war. But within the grant of these confirmed credit facilities it is also apparent that the requirements of international trade have since the outbreak of the war been more and more concentrated on credits available at sight under which the paying bank pays cash against the receipt of documents. This form of credit fits in well with the demand for liquidity and safety in times of war, and the banks have been providing such facilities on an increasing scale. But these particular credits produce no bills, and the increasing resort to them has caused another diminution in the volume of commercial paper circulating in the market and available for the banks' portfolios. It was hoped soon after the outbreak of the war that the immediate slump in commercial paper might be substantially made good by the increase in the volume of paper drawn or accepted by various State organisations and discounted in the market. There has, in fact, been a welcome inflow of bills to which the names of the Ministries of Supply and Food have been appended. But their aggregate volume remains small.

From the point of view of discount policy, therefore, commercial paper has sunk into complete insignificance. It is the Treasury bill which now, more than ever before, dominates the stage. Since the outbreak of the war the total of Treasury bills outstanding has been increased by £264,600,000, and of this sum £185,000,000 is accounted for by Treasury bills issued through the weekly tender. Over the same period the clearing banks have increased their holdings of bills by some £60,000,000—a movement which must veil a considerable reduction in the holding of commercial paper. This increase in the bill holding has been an exceptionally welcome movement. It has removed all traces of that Treasury bill starvation, the result of Exchange Account support for sterling at a time when foreign funds were leaving this country in large quantities, from which the banking system suffered during a large part of 1939. The authorities for their part have done their part in ensuring that the cash basis was at all times adequate to enable the banks to take up without difficulty the increased supply of bills making its way to the discount market. The position as reflected in the latest clearing bank statements—those for April—is admittedly becoming slightly over-liquid. The liquidity ratio—taking cash, "near cash," short loans and bills as against deposit liabilities—works out at 35.1 per cent., which is well above the accepted norm. That figure will, other things being equal, tend to rise further, as we are now at the beginning of a period in which the floating debt should expand sharply. But these "other things" may be disturbed by a funding operation for which the banking position appears to be fairly ripe.

This position will stand out in greater emphasis when we consider the banks' investment policy since the outbreak of the war. There has been a gradual increase in their investments from £599,356,000 last August to £617,590,000 for April. But the expansion has not been proportionate to the general growth in balance sheet figures. The ratio of investments to deposits has in fact fallen between these months from 26.7 to 26.2 per cent. Admittedly these percentages are high when judged in the light of what appeared normal before the enormous expansion of the early 1930's—an expansion that must, incidentally, have yielded magnificent capital profits. But new criteria of what is normal are being created in this as in other spheres, and it looks uncommonly as though the banks were destined to see their ratio of investments to total resources increase further. In the United States, for example, where the principles of liquidity in deposit banking are as strongly entrenched as in this country, the present ratio of investments to deposits among member banks is as high as 46 per cent. Those may well be the levels towards which our own banking situation will be trending. The

fears of seeing the position seriously unbalanced by a heavy depreciation in the value of gilt-edged securities is for the time being removed by the establishment of minima below which the prices of these securities will not be allowed to fall. If the banks' holding of Government securities reaches a point at which the solidity of balance sheets might be called into question, it would always be open to the Government to make special provisions for the valuation of these holdings in the books of the banks. There are many precedents for such arbitrary valuation of investment holdings in Continental banking legislation. As yet, however, the need to envisage such devices does not arise. The investments still stand in the books at figures which represent considerable hidden reserves. The banks have not yet embarked on a substantial expansion of security holdings at the prices ruling in the present "closed circuit" capital market. Their participation in the 3 per cent. War Loan seems to have been insignificant—and rightly so if their help was not required—and their gilt-edged absorbing capacity reserved for other occasions.

Hitherto the main change in the structure of banking assets brought about by the war has been a considerable increase in the liquidity ratio. It has not been a change militating greatly against banking profits—as such changes normally do—because the banks have been able to maintain their short loan and discount rates at about twice the level which obtained under the previous 2 per cent. Bank rate period. But the expansion in liquid assets is not likely to continue. It has been a result of the gearing of the banking system to the task of financing the war. That gearing must be the dominant factor in banking policy for the time being. The next step which it is likely to bring will be funding of part of the liquid assets into longer term Government securities.

So far, therefore, the war has brought little apparent change to the crystallisation of banking policy as represented by the structure of banking assets, but at the same time a considerable redistribution of the banks' loans and advances has taken place. It is in the sphere of discount policy that the impact of the war has made itself most evidently felt. The growth in the bill portfolio represents up to now the most direct contribution that the banks have made to the financing of the war. That contribution will sooner or later make itself apparent in the investments, a transition which will probably be hastened with the gathering momentum of war. The banks as a whole must accept the prospects of a growth in their holdings of Government securities both absolutely and in relation to their aggregate resources. That will be the next direction in which the banks' adjustments to a war economy will probably manifest itself.

The French Banks since the War

(From a French Correspondent)

ON the outbreak of war France was in the very middle of a financial and economic recovery. Business activity was picking up rapidly. The index of industrial production reached 100 in June, 1939—back to the level of the base year 1928—against 81 in July, 1938; foreign trade, showing an improvement in volume as well as value, resulted in a deficit of only Frs. 5,607 millions in the first eight months of 1939 against Frs. 7,977 millions for the same period of 1938, which was itself better than in 1937. Refugee capital was returning voluntarily for investment at home; Frs. 8,700 million in the last quarter of 1938, and more than Frs. 17 milliards in the period January to August, 1939, so that the Equalisation Fund was able to transfer Frs. 10 milliards of gold to the Bank of France, thus providing a solid backing to the increase in the note circulation.

Bank notes in France have a far greater importance than in Great Britain, and each serious crisis evokes a considerable demand for the means of payment. In September, 1938, the note circulation of the Bank of France had grown from less than Frs. 102 milliards to more than Frs. 124 milliards, from which it later declined to around Frs. 110 milliards; in March, 1939, it again rose to Frs. 125 milliards, but thenceforward it stayed at around that level. In September, mobilisation, the needs of the army and evacuees, together with a general uncertainty of what the morrow would bring, caused an additional demand of Frs. 20 milliards of notes, and the circulation settled at Frs. 145 milliards in September, from which it gradually rose to Frs. 149.5 milliards in December. Since the beginning of the year, rising prices and the growing activity in the war industries and in other spheres of business life brought about another increase of 10 per cent., and in April the circulation passed Frs. 156 milliards.

The gold reserve of the Bank of France, revalued in November, 1938, was then Frs. 87.25 milliards; after the transfer from the Equalisation Fund in August, 1939, the total value meant that the amount of gold was double the quantity held by the bank in August, 1914. For fear of alarming a public opinion traditionally attached to the idea of a currency backed by gold, the French authorities did not act so radically at the beginning of the war as did the British authorities, and the gold in the bank was not transferred to the Equalisation Fund. However, the necessity of keeping movements in the reserve secret and of reinforcing the Fund, which controls the purchases made by France abroad, led to a new revaluation followed by a transfer to the Fund. This was done by a decree of February, 1940. Revaluation was made on the basis of 23.34 milligrammes (.900 fine)=one franc. On this basis, the reserve should have increased from Frs. 97.25 milliards to 114.6 milliards. But 30 milliards were transferred to the Equalisation Fund and the bank received in exchange a similar sum in Treasury Bonds.

At the end of April, 1940, the position of the Bank of France can be summarised as follows:—

(Frs. milliards)			
LIABILITIES		ASSETS	
Notes	156.0	Gold	84.6
Accounts	17.0	State debt*	66
		Discounts	14
		Advances	4
		Miscellaneous	4.4
	173.0		173.0

* Including 51 milliards of new advances made since the war.

Under the control of the Bank of France the French credit machinery proved its strength and flexibility in the critical hours of September. The Bourse did not close for a single day, and all business was transacted normally in spite of the inevitable fall in prices—which was, however, of short duration. There was no moratorium, and

only those who were mobilised were given the chance to postpone settling their debts. The only relief given to other debtors was a short extension owing to the difficulty of ensuring that maturing bills were met on the due date. The banks and the saving banks met on demand all the sums required of them, thereby reducing the volume of the demand. To help these institutions and, in a more general way, the economic situation of the country, the Bank of France greatly increased its discounts and advances. Between August 17th and September 7th its bill portfolio grew from Frs. 8.9 milliards to 24.5 milliards, and advances from 0.4 milliards to 2.4 milliards.

Events were to justify this policy. From the beginning of September, withdrawals of deposits from the banks and saving banks ceased, and funds started to return. After November the Bank's bill portfolio fell back to 12 milliards and 30-day advances to 0.4 milliards. Faithful to its traditions, it has, therefore, succeeded in its double task of helping the State and private enterprises to meet the sudden requirements and the new burdens arising from the war. And that it succeeded far better than in 1914 is clear from the maintenance of such easy conditions on the money market that it was not necessary to raise the discount rate from 2 per cent., whereas in 1914 it was raised to 6 per cent. in August and remained at 5 per cent. for a long time afterwards.

After having played to perfection its rôle of shock-absorber, the Bank worked to assure the flexible working of the machinery of credit. In addition to the exceptional measures referred to, it has expanded to the utmost possible since the war the facilities granted to commerce and industry. Thus, it has agreed to *bona fide* renewals resulting from abnormal difficulties, and to discount bills, guaranteed by collateral security, without the three signatures required by its statutes, while to encourage exports it has granted to bills payable in foreign exchange the same discount facilities as to bills payable in francs.

The other big banking institutions have shown the same characteristics: flexibility and resistance to shock and wide credits granted to the State and to individuals. This can be seen from the figures of the "Big Four" (Crédit Lyonnais, Comptoir d'Escompte, Société Générale, Crédit Industriel et Commercial). Their combined deposits had risen from Frs. 33 milliards at the beginning of 1939 to Frs. 36.6 milliards in the summer; similarly, discounts had reached Frs. 25.5 milliards in July, 1939. From July to August deposits only fell by Frs. 3.3 milliards, but to guard against every eventuality the banks doubled their cash, which reached Frs. 6.6 milliards, while their discounts fell heavily from Frs. 25.5 milliards to Frs. 18.5 milliards. By November, however, their deposits had again recovered to the figure of Frs. 36 milliards, which was the average of the first seven months of the year. Since then the advance has been constant, and the February figures, the latest available, show a total of Frs. 43.7 milliards.

On the other side of the balance sheet, the liquid assets remain very stable. Normally, the cash of the French banks, combined with their reserves at the Treasury and the Bank of France, is equal to 10 to 11 per cent. of their liabilities; after being raised to 18 per cent. last August, this proportion was re-established and has since been maintained. Discounts have risen to more than Frs. 30.5 milliards, and doubtless include a growing amount of Treasury bonds.

It is quite obvious that a part of the prosperity of the French banks is due to the appreciation of their holdings of Government or other securities. But, besides this, there has also been the greater activity due to the financing of the much bigger imports, to the capital issues made necessary by the expansion in plant and machinery, and to the increased needs of the Treasury to pay those concerns working for war purposes or for export. Finally, the banks play an important part in the placing of Armament Bonds,

subscriptions to which amount to about Frs. 8 milliards a month.

This brief review of French banking since the war is not complete without a mention of the effort the banks have had to make to meet heavier tasks with a very much reduced staff. In the Bank of France, the proportion of the

staff which has been mobilised amounts to 35 per cent., and an equal or bigger proportion is true of all the other banks, which have just been affected by a new calling-up of certain categories of employees. This loss of personnel has been partially offset by increased work on the part of the unmobilised and recourse to pensioners and women.

The Banking Structure of the United States

(From our New York Correspondent)

THE last six months have been uneventful in American banking. They give a record of the usual gold imports, the usual financing of the usual deficit, the usual increase in demand deposits, and the usual increase of currency in circulation.

This routine progression has no significance within the six month period, bracketed between two dates on a calendar. Its significance derives from its place in a longer sequence. For the purpose of this discussion, the current phase dates from the end of March, 1938, when the decision was taken to abandon the Inactive Gold Fund and, with it, the attempt to "manage" the volume of bank cash.

TREASURY AND FEDERAL RESERVE BANK ITEMS

	(\$'000,000)			
	March, 1938	March, 1939	Sept., 1939	March, 1940
Bills discounted	12	3	6	2
Bills bought	1	1	1	...
U.S. securities	2,564	2,564	2,804	2,475
Gold stock	12,794	15,160	16,925	18,413
Gold certificates issued to				
Reserve Banks	9,213	12,424	14,657	16,048
Member Bank balances...	7,312	9,125	11,621	12,294
Treasury balances	292	1,201	552	700
Federal Reserve notes in				
circulation	4,122	4,345	4,684	4,899
Total currency in circula-				
tion	6,329	6,765	7,238	7,471

Only two faults interrupt the smooth continuity of these series—the increase and subsequent reduction of the Treasury balance, by figures large in themselves but relatively too small to have any influence; and the open market episode—the support afforded by the Reserve Banks to the nervous Government bond market at the outbreak of the war, and the subsequent reduction of the position to below its starting point. Again, the figures are absolutely of impressive magnitude; but, relatively and effectively, inconsequential.

The real figures are, as usual, those that reflect the gold

movement. In these two years the increase in the gold stock is just under \$6,000 millions (almost 50 per cent.); and in the last six months, the increase has approximately held to the average of the period. The increase in the sum of monetised gold is, of course, greater than that of its gold stock, as it includes the realisation of the Inactive Fund. The increase in member bank cash is of the order of \$5,000 millions; and, in spite of the fact that present required reserves are almost double the legal minimum, total member bank cash is almost double the requirements. Total currency in circulation has steadily continued its meteoric climb, the greater part of the increase being met by Federal reserve notes and the minor part by the issue of silver certificates. One of the most remarkable statistical facts in our economy is the steady increase in the amount of currency in circulation compared to demand deposits. There would seem to be an evidence of changing monetary habits; but probably it reflects principally currency hoarding, again, probably by foreigners.

Contact with the market, through bills and discounts, was no more than vestigial two years ago. It is merely historical now. The net conclusion of the whole data is that the Reserve System no longer possesses any power over the "market," nor any capacity to control, one way or the other, the volume of money (currency or bank deposits) in the United States. The System still retains the functions of clearing and limited powers of supervision; and the Board has the authority to audit the twelve Reserve banks. But there is neither monetary power nor monetary responsibility now vested in the System. Such functions of monetary management as exist in our scheme of things are not to be found or even sought in the Federal Reserve System; they reside in the Treasury.

The function of the Reserve System may be epitomised in a single sentence: to finance the Treasury's gold purchases, by the acceptance and monetisation of non-interest-bearing public debt, whereas abroad Stabilisation or Equalisation Funds finance (but do not monetise) gold purchases by the sale of interest-bearing public debt.

ERLANGERS LTD.

BANKERS,

4 Moorgate,
London,
E.C.2

The statements of the Reporting Member Banks likewise primarily reflect the gold movement; but in addition they have the specific function of financing the deficit.

REPORTING MEMBER BANKS OF NEW YORK CITY (\$'000,000)				
	March, 1938	March, 1939	Sept., 1939	March, 1940
Total loans & investments	7,576	7,895	8,477	9,050
Total loans	3,158	2,864	2,871	2,946
U.S. and gtd. securities	3,263	3,845	4,348	4,756
Other securities	1,155	1,186	1,258	1,348
Cash reserves	2,958	4,390	5,640	6,134
Demand deposits adjusted	6,100	7,135	8,170	9,037

In this space of two years, the cash reserves of these banks have risen 100 per cent., and their deposits have risen 50 per cent. Loans are lower than two years ago, although showing a recent increase; holdings of United States and guaranteed securities have risen 50 per cent., by \$1,500 millions, and holdings of other securities by \$200 millions. Some years ago, a proposal was made that, as demand deposits were essentially money, they should be covered fully by cash and Government securities. This Hundred Per Cent. Reserve Plan was regarded as extreme at the time. Actually, at present the New York banks show cash and Government securities (exclusive of the guaranteed issues) of \$9,639 millions, and demand deposits of \$9,037 millions. That is, demand deposits are fully covered as suggested by the proponents of the scheme, with a residuum of \$600 millions, which could be attributed to the \$750 millions of time and Government deposits.

REPORTING MEMBER BANKS OUTSIDE NEW YORK CITY (\$'000,000)				
	March, 1938	March, 1939	Sept., 1939	March, 1940
Total loans & investments	13,234	13,684	13,942	14,272
Total loans	5,613	5,327	5,479	5,650
U.S. and gtd. securities	5,671	6,277	6,321	6,453
Other securities	1,950	2,080	2,142	2,179
Cash reserves	2,797	3,125	4,154	4,237
Demand deposits adjusted	8,168	8,856	10,163	10,239

The experience of these banks over the past two years is radically different from that of the New York banks. Thanks to a rise in loans over the past year, that item has returned to the figure of two years ago. Their purchases of "other securities" have been about equal to those of the New York banks; their purchases of Government securities have been only half those of the metropolitan banks, although the aggregate holdings are higher. Their combined holdings of cash and direct Treasury obligations

(\$9,562 millions) fall a little short of their demand deposits of \$10,239 millions; but if the fully guaranteed issues are counted, the figure rises to \$10,690 millions. Time deposits figures bulk larger in the outside banks; for while the demand deposits of the New York City banks are 80 per cent. as large as the total demand deposits of the reporting member banks in 100 cities outside New York, the time deposits of New York are only one-sixth of those of the outside cities.

The movement of cash between New York and the interior is always puzzling. Member bank cash reserves are almost exclusively created by gold imports arriving in the port of New York. The reserve balances are then distributed through the country by a movement analogous to an adverse balance of payments of New York City *vis-à-vis* the United States. They then return to New York by the deposits of interior banks with their New York correspondents—balances which have doubled in the last two years. Formerly, these funds shifted largely in response to the demands of the call market; the motivating force at the present time is not clear, as these balances draw no interest for their owners and produce little, if any, net income for their metropolitan holders. The net statistical effect is, of course, to swell the cash of the New York banks; but, as the episode of 1937 showed, an uncertain part of these balances is hot money—much hotter than the foreign balances have proved to be. In 1937, a comparatively small efflux produced some stringency and more alarm in New York; but the amplitude of the present excess reserves concentrated in New York provides some assurance against a repetition of such an episode. This adventitious concentration of reserve balances in New York functions smoothly—too smoothly for the inquiring mind. The old barometer of money rates has been destroyed, and one has to guess the barometric pressure. As was said above, there is a lot of persuasive but inconclusive evidence that New York has an adverse balance of payments toward the United States; and that this is compensated by (a) the continuous influx of gold (flight-money from Europe) and (b) by the re-deposit of non-interest-bearing interior balances in New York. One side of this equation is of doubtful perpetuity, as the flight-money has been more or less completely shut off, or replaced by war purchases of merchandise, which may or may not produce the same effect on our internal balance of payments. But the point is that an adverse balance of payments, however compensated statistically, puts the area on notice; and deserves more attention than it gets, or is likely to get so long, as was said above, as the mechanism runs smoothly. It is remarkable that seafaring men never thought of stabilising the barometer at 30 in order to prevent fluctuations in the weather.

Banking in Some Neutral Countries

(From our Belgian Correspondent)

THE banking situation in some of the neutral States has certain features in common. Money markets, for instance, have been generally disturbed by several circumstances, the first being the withdrawal of foreign capital which had been sent to countries like Switzerland and Holland for safety. Other neutral countries, whose fate seemed rather uncertain in case of war, had long ago lost the refugee capital which had temporarily been deposited with them. They have also suffered from the export of capital belonging to their own citizens, for in the first months of the war the public bought either gold or foreign notes. The Scandinavian countries soon took measures against this evasion, while Switzerland, Holland and Belgium were much more lenient. Finally, there has been some export of capital, though without any serious economic repercussion, resulting from certain credit operations. In a general way, England and even America called in the credits which they had previously granted to neutral countries. Also important is the fact that the countries producing staple commodities ceased to agree to the usual credit terms and insisted on cash payment on shipment. Importers had thus

to find the necessary facilities at home, which caused stringency in the money market. The Scandinavian countries, in particular, have suffered in this respect since the end of 1939.

At home there was at first an increase, which was sometimes considerable, in the note circulation. This increase was marked in the case of Belgium but less obvious in Holland, and the chief reason was the desire of the population to have large sums on hand in the event of their having to evacuate. There was, therefore, a need of additional notes which were rapidly hoarded. In addition to this, the Treasury found itself almost everywhere in financial difficulties which necessitated a recourse to indirect advances from the Central Bank.

On examining the bank deposits in the neutral countries it is surprising to realise that, except for Belgium, there has hardly been any decrease in spite of the withdrawals of capital on foreign and home account which have already been mentioned. Finally, in spite of the hardening of discount rates, the money market has kept more liquid than might have been expected. The reason for this lies in the

creation of supplementary credits for the needs of the State Treasuries, whose payments have kept the recipients liquid, which has in turn provided new deposits for the banks. In fact, the hardening of the discount rate has been moderate everywhere, and it is surprising that it has in most countries only increased from $\frac{1}{2}$ to 1 per cent.

Long-term loans, on the other hand, have been much more influenced by events; almost everywhere the prices of gilt-edged securities have been lowered by about 20 per cent., and on the average State funds have at present a yield of 5 per cent. instead of 4 per cent. as before.

Though bank deposits have been almost stationary, except in Belgium, it cannot be said that the business of the banks has remained satisfactory. Inside, as well as outside, the country, commercial credits have been much curtailed, and the discount of bills has declined even more. Mention has already been made of the absence of credit facilities in international commerce. At home, the usual terms of payment have everywhere been a little shortened. Merchants have been compelled to do this to prevent their customers from building up stocks of goods to their detriment.

Nor have the banks been able to compensate themselves by investments in securities. The creation of new industries has been negligible; and loans to the State have, in most countries, been limited to short-term Exchequer bills, which scarcely leave any profit for the banks. More recently, certain countries such as Holland and Sweden have issued medium- or long-term loans, but only under conditions which made them more like taxes than loans.

As for the central banks, their rôle, first and foremost, has been to finance the special needs of the State. The usual means has been, not the so-called direct advance according to the French method, but the discounting or rediscounting of Exchequer bills. In the first place, the central banks have re-accepted, in moments of tension, the bills for which the private banks had subscribed. Then they have accepted some directly, in accordance with the needs of the Exchequer. It is not possible to tell how far this was an open market operation or inflation, but up to now it seems that on the whole it was the former, which gave the money market facilities rendered necessary by hoarding and the export of capital.

It is probably Belgium that has most practised open-market operations, just as she has also experienced the most extensive hoarding. It is generally admitted that in the beginning of 1940 the National Bank held Treasury certificates to the value of £35 millions, though later on this amount seemed to have decreased to about £30 millions. In Switzerland the intervention of the Central Bank only reached £10 millions, but for a population half as large.

The second task of the Central Bank in the neutral countries has been to provide the foreign currencies that the market demanded in great quantities for the reasons already stated; the withdrawing of foreign credits, the export of domestic capital, and the financing of foreign trade. Moreover, with the exception of Belgium, neutral countries have had an adverse trade balance, which is no longer neutralised by their important invisible exports, particularly in the case of Switzerland, which has lost almost entirely the contributions of foreign tourists. The deficit in their trade balance is due chiefly to the large purchases of armaments which they have made without making the necessary reduction in their consumption of other goods.

Switzerland and Holland have till now been able to offset their adverse balance by exporting gold, of which they possess important reserves. The Scandinavian countries have not had that resource, and from the first months of the war they have taken measures for controlling the exchanges, which they have had to tighten progressively. Lately they have even had to reduce their imports and control all their foreign trade.

Up to the present Belgium is in a situation diametrically opposite. It was generally believed that in case of war she would have serious difficulty in keeping her trade balance stable. To the surprise of all, her trade in October to March yielded a surplus averaging £4,000,000 a month, and she has maintained a good part of her invisible exports;

moreover, she has not reduced her stocks of goods to achieve this surplus, since after eight months the normally favourable situation in this respect has been maintained. On the other hand, it is evident that the country is largely a creditor and that for ten years much capital has been placed in foreign countries. Belgium's weak point in her financial situation is found elsewhere. There is first the mistrust that the public entertains with regard to her financial position and her currency; political insecurity and the risks of war justify that sentiment to a certain point. Then there is the lack of eagerness shown by the public in entrusting its money to banks, which are suffering from a kind of anaemia. The amount of their deposits, which had risen in 1936 to more than 20 milliards of francs, was only 13 milliards at the end of 1939. Since then the decrease has slowed down owing to the favourable trade balance. However, the Belgian banks have had to face during four years a contraction of deposits by 36 per cent. With the single exception of the Crédit Anversois, which had been losing ground for ten years, they have come through this ordeal satisfactorily, and have to-day a very solvent position.

On the whole, it may be said that the European war has posed important problems for the Central Banks. The principal one has been to husband their gold reserves, and this has been solved by them with varying success. In some cases, deflationary measures have not been applied where they should have been to conform with traditional banking technique. In other countries better supplied with resources, like Switzerland and Holland, the problem of providing the market with foreign currencies has been resolved temporarily by an export of gold, which cannot continue at the same rate without endangering the monetary equilibrium. As for Belgium, to her great surprise she has been able to strengthen her assets and thus constitute a strong gold reserve which may prove useful later on. On the other hand, the activity of private banks has been everywhere reduced, but generally speaking they have not been put to too hard a test.

Wills and Trusts in Peace and War

Desirable as it is in normal times to consider appointing the Midland Bank Executor and Trustee Company as your executor or as trustee of an estate or fund in which you are interested, prevailing conditions render such a step even more advisable now.

A complete and efficient service is afforded by the Company which with the aid of a specially trained and expert staff, acting in close collaboration with the organization of the Midland Bank, has gained an invaluable experience. This experience and the many important advantages attaching to the appointment of the Company are at your disposal for a moderate fee.

The benefits thus to be derived are too numerous to be mentioned here in detail. They will, however, gladly be explained by any Midland Bank branch manager in his capacity as a representative of the Executor and Trustee Company. Whatever you tell him will be treated in the strictest confidence.

If at first you are unable to call upon the manager of the branch most convenient for you, ask him to send you a copy of "The Service of the Midland Bank Executor and Trustee Company" and other informative literature. These may also be obtained from the Head Office in Poultry, London, E.C. 2.

MIDLAND BANK
EXECUTOR & TRUSTEE CO. LTD.

NATIONAL PROVINCIAL BANK, LIMITED

Member of the London Bankers' Clearing House.

Established in 1833 as the National Provincial Bank of England, and registered as limited in 1880; the Union of London and Smiths Bank was established in 1839, and registered as limited in 1882. Amalgamation took place under title of National Provincial and Union Bank of England, Limited, as from December 31, 1917, and on February 15, 1924, name changed as above. As from December 31, 1917, the Bradford District Bank, Limited, as from December 31, 1918, the Sheffield Banking Company, Limited, and as from December 31, 1919, the North-

amptonshire Union Bank, Limited, were acquired. From January 1, 1920, Messrs Coutts and Company became affiliated, December 31, 1919, Messrs Richards and Company, Llangollen, and June 30, 1920, Messrs Shilson, Coope and Company, St. Austell, and as from Aug. 23, 1922, Messrs Dingley and Company, of Launceston, and Messrs Dingley, Pearce and Company, of Okehampton, were acquired. December 31, 1923, the Guernsey Banking Company, Limited, and the business of Messrs Grindlay and Company were acquired, the latter undertaking being continued as a private limited company.

PROVINCIAL BANK OF IRELAND, LIMITED

The directors' statement for the half-year ending December 31, 1939, states that, including £40,447 brought forward from last account, there remains a profit of £72,403. Out of this the directors have declared a dividend for the half-year at the rate

of 11½ per cent. per annum, less income tax, which will require £20,183. They have added to reserve fund £5,000, written off bank premises account £7,000, and carried forward £40,220.

THE ROYAL BANK OF IRELAND LIMITED

The directors have to report that the net profits of the bank for the year ended December 31, 1939, after making provision for bad and doubtful debts, amounted to £35,262, which, with the amount brought forward from last year of £9,941, make together £45,203. From this an interim dividend at the rate of 7 per cent. per annum (less tax) for the first six months of the year has been distributed to the shareholders, £7,875, leaving

a balance of £37,328, out of which the board have appropriated to reserve fund, officers' superannuation, and other contingencies £20,000, leaving available a balance of £17,328, which they recommend should be appropriated as follows: A further dividend at the rate of 7 per cent. per annum (less tax) for the six months ended December 31 last, £7,612; the balance to be carried forward to the credit of next year's account, £9,716.

NETHERLANDS BANK OF SOUTH AFRICA

The directors' report for the year ended September 30, 1939, states that after making provision for bad and doubtful debts, etc., the accounts show a net profit of £115,957. Contrary to the practice followed in former years this amount has been arrived at after making provision for taxes other than dividend tax. To this sum has to be added the profit of £2,638 brought

forward from last year, making a total of £118,595, which they recommend should be applied as follows: Writing down bank premises, £35,266; special reserve, £25,639; 6 per cent. dividend to shareholders, £45,282; tantièmes to directors and staff, £6,485; dividend and tantième tax, £3,356; balance carried forward to next account, £2,567.

BANK OF BRITISH WEST AFRICA, LIMITED

The directors' statement of accounts for the year ended March 31, 1939, states that after providing for current charges (including contributions to the staff profit sharing fund and the provident fund), rebate on bills and appropriations to contingency accounts, out of which accounts provision has been made for all bad and doubtful debts and depreciation of investments, there remains a balance of profit for the year of £42,878. To this must be added £55,714 brought forward from last year, making

a total amount available of £98,593. Of this sum £24,000, being an interim dividend of 2 per cent., has already been distributed, less income tax, and the directors now recommend the payment of a final dividend of 2 per cent., absorbing a further sum of £24,000, less income tax, making a total distribution for the year of 4 per cent., less income tax. This distribution will leave a balance of £50,592 to be carried forward.

THE BANK OF AUSTRALASIA

The directors state that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, and making a transfer to the credit of Contingencies Account, out of which account provision for all bad and doubtful debts has been made, the net profit for the year ended October 16th last amounted to £292,024. To this has to be added £227,879 brought forward from the previous year's account, making a total of £519,903. From this, £130,922 was paid as an interim dividend

on October 6th last, and the directors have now appropriated a further sum of £151,875 to pay a final dividend of 4s. 6d. per share, less income tax at 5s. in the £, making in all £282,797, equal to 8s. per share, less tax, and representing for the year a distribution at the rate of 8 per cent., less tax. There will remain £237,106 to be carried forward to the next account.

BANK OF NEW SOUTH WALES

The directors submitted to the proprietors the following statement:—The net profits for the year, after deducting rebate on current bills, interest on deposits, and paying income, land and other taxes, reducing valuation of bank premises, providing for bad and doubtful debts, fluctuations in the value of investment securities, and other contingencies, and including recoveries from debts previously written off as bad, amount to £550,876, to which is added undivided balance from September 30, 1938, £166,977—£717,853; interim dividends

at the rate of 6s. per share (Australian currency) for quarters ended December 31, 1938, March 31, 1939, and June 30, 1939, paid out of the year's profits, in terms of Clause 105 of deed of settlement, £395,100, leaving a balance of £322,753, which the directors recommend to be dealt with as follows: To quarter's dividend to September 30, 1939, at the rate of 6s. per share Australian currency, £131,700; to balance carried forward, £191,053—£322,753.

From September 30, 1935, to September 30, 1939.

BANK OF NEW ZEALAND

The directors state that the profits for the year ended March 31, 1939, after providing for expenses of management, and for all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, are £885,941, to which has to be added balance brought forward from last year, £373,880, making a total of £959,821. From which has been paid: Dividend on preference A shares, £50,000; interim dividend on C long-term mortgage shares, £7,031; interim dividend on D long-term mortgage shares, £17,578; interim dividend on preference B shares, £31,250;

interim dividend on ordinary shares, £187,500, leaving available for distribution, £666,462. This the directors propose should be disposed of as follows: Dividend on C long-term mortgage shares at 6 per cent. per annum, £7,031; dividend on D long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference B shares (making £100,000 for the year), £68,750; dividend at rate of 5 per cent. on ordinary shares (making £375,000 for the year, equal to 10 per cent.), £187,500, leaving balance to be carried forward £385,602.

THE NATIONAL BANK OF NEW ZEALAND, LIMITED

The directors' statement of the bank's affairs as on March 31, 1939, states that the net profit for the year, after appropriations to contingency accounts, out of which full provision has been made for bad and doubtful debts, exchange, N.D.C., etc., amounts to £106,524; to be added £113,690 brought forward, making an available total of £220,214. The interim dividend at the rate of 2½ per cent. per annum, free of income tax, paid in January, 1939, absorbed £41,041, £14,000 has been placed to

pension and gratuity funds, and £10,000 has been transferred to premises account, leaving £155,173 available for distribution. The directors propose to allocate this amount as follows:—In payment of a final dividend of 2½ per cent. less United Kingdom income tax (at the rate of 3s. 7d. in the £, after allowing relief for Dominion income tax), £41,042; balance to be carried forward, £114,131.

January, 1939, absorbed £41,041, £14,000 has been placed to

INDIAN BANKS

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

The directors' report for the year ended December 31st last showed a net profit, after providing for all bad and doubtful debts and including a transfer from contingencies account to meet depreciation on holdings of Government securities, of £517,443, inclusive of £179,094 brought forward from the previous year. The interim dividend at the rate of 10 per cent.

per annum paid in September last absorbed £150,000. The amount now available is therefore £367,443, and the directors propose to pay a final dividend at the rate of 10 per cent. per annum, less income tax; to add £35,000 to the officers' pension fund and to carry forward the balance of £182,443.

THE EASTERN BANK, LIMITED

The directors state that the net profit to December 31, 1939, after providing for income tax and national defence contribution, and after appropriations to the credit of contingency account, out of which account full provision for bad and doubtful debts has been made, and including the balance brought forward from the last account, amounts to £187,282. An interim dividend at the rate of 2s. a share was paid

in October, absorbing £20,000, and the directors now recommend a final dividend of 4s. a share, less income tax at the rate of 5s. (after allowing for relief in respect of Dominion income tax). They propose to set aside £45,000 on account of contingencies, leaving a balance of £82,282 to be carried forward to the next account.

IMPERIAL BANK OF INDIA

The report shows that, after making the usual and necessary provisions, the net profit of the bank for the half-year ended December 31, 1939, amounted to Rs. 38,14,477 which, with Rs. 30,71,454 brought forward from the half-year ended June 30, 1939, makes a total of Rs. 68,85,931. This sum the directors of the bank have disposed of as follows: In payment of a divi-

dend to the shareholders at the rate of 12 per cent. per annum free of income tax, Rs. 33,75,000; transferred to premises account, Rs. 2,50,000; transferred to pension funds, Rs. 72,600; transferred to the reserve fund Rs. 2,50,000; carried forward to the profit and loss account of the current half-year, Rs. 31,88,331—total, Rs. 68,85,931.

MERCANTILE BANK OF INDIA

The directors' report for the year ended December 31, 1939, shows that the balance of profit and loss account for the year amounts to £198,869, and the amount available, after adding £177,770 brought forward from last account, is £376,639. From this sum has to be deducted £63,000, being the interim dividend of 6 per cent., less income tax, on the "A," "B" and "C" shares paid in September last. The directors have added

£13,000 to the officers' pension fund, written £25,000 off freehold banking premises, and made an additional allocation of £30,000 to contingencies account. They now recommend a final dividend on the "A," "B" and "C" shares of 6 per cent., less income tax (making 12 per cent. for the year), leaving a balance of £179,639 to be carried forward.

THE ECONOMIST

TRADE SUPPLEMENT

MAY 25, 1940

The Trend of Business

THE past month has witnessed a further expansion in business activity, reflected in the decline in the number of registered unemployed in Great Britain from 1,121,000 on March 11th to 973,000 on April 15th. The improvement has been fairly well spread and was by no means confined to the munitions sector of industry. Exports showed an encouraging revival, from £41.5 millions in March to £48.3 millions in April, while imports, at £110 millions, were maintained at a high level.

If we were still at peace the fall in unemployment below the million level would provide cause for satisfaction. But as a measure of our effort on the home front in war conditions, the fall in the number of unemployed by 259,000 between August, 1939, and April, 1940, when a very much greater number joined the Colours, is miserably small and reflects a complete lack of appreciation of the nature and magnitude of the exertions necessary to win the war.

Indeed, our war preparations on the home front have hitherto been strictly limited and circumscribed by the adherence to pre-war conventions. In no single sphere has the failure of the Chamberlain Government to depart from pre-war conventions done more to impair our war effort than in the recruitment of labour for the munition industries. To mention only one example. As long ago as last August only 4.6 per cent. of the 862,100 persons insured in the engineering industries were unemployed. But although it was quite clear at the outbreak of war that these industries would shortly need a vast army of additional workers, scarcely anything was done to provide it by the intake of large numbers of trainees. As a result the rate of expansion in output has been on nothing like the scale required in war conditions. In the aircraft and other essential industries expansion has been held up for similar reasons; as the Committee on National Expenditure pointed out, the scarcity of labour in engineering and in aircraft manufacture has given rise to regular auctions in skilled engineers.

The former Government's unwillingness to depart from

pre-war conventions has not been confined to the recruitment of labour, but was also reflected in its failure to lengthen working hours where necessary. The output of coal, for example, does not appear to have risen to the rate demanded by the Mines Department at the outbreak of war; there has been much talk of the need for additional coal-miners; it does not seem to have occurred to the authorities that the addition of half an hour to the daily working time would raise production by about 15 million tons per annum.

In short, the Government's man-power policy has not yet been adapted to war conditions. So far as supplies of imported raw materials are concerned, the position is more encouraging. Ever since the beginning of the war imports have been on a large scale, irrespective of the increase in the adverse balance of trade. But while the accumulation of food and raw material stocks was sound, this policy was only carried out because it did not involve a departure from the pre-war conventions established by vested interests. Where a departure from pre-war practices was needed, very little has been done. It has been quite evident ever since last September that an increase in the supply of domestic scrap would economise shipping and foreign exchange. But instead of immediately preparing a survey of the very large potential supply and proceeding to its collection, the Government has relied on an appeal to the public and on an increase in prices. While the response to these efforts has been encouraging, they have not brought out anything like the quantities which are required.

One of the most urgent tasks of the new Government is to adapt our economy to wartime conditions. It has armed itself with the powers to do so by the Emergency Powers (Defence) Act. And as the rate of progress on the home front has hitherto been altogether inadequate for the winning of the war and far from commensurate with our resources; it is to be hoped that no further time will be wasted in harnessing our large potential reserves to the war effort.

British Industrial Developments

COAL

As a result of the rise in coal-miners' wages this year and of the 10 per cent. increase in railway freight rates on May 1st, the price of coal was advanced from May 2nd, by 8d. per ton for inland supply and by 1s. per ton for export. The rise in prices has come at a time when they are normally reduced to encourage the accumulation of stocks during the summer. The number of unemployed in the coal-mining industry, amounting to 50,570 on March 11th, was reduced by 6,294 during the five weeks ended April 15th. The course of production may therefore have been upwards during this period, but there are indications that it remains below the level desired by the Mines Department. The Coal Production Council, established to speed-up output, is reported to have been impressed by the need for additional miners. But, in view of the need for economising man-power, it may be necessary to maintain production in the summer at full capacity and, possibly, to lengthen working hours. The German offensive through Holland and Belgium increased France's dependence on British coal. In the current year, for example, France had arranged to buy 5 million tons from Belgium and 1-1½ million tons from Holland. In view of the loss of its Scandinavian markets the industry in this country should have no undue difficulties in meeting France's requirements. The value of British coal exports rose from £2,728,000 in March to £3,094,000 in April, when it was £371,000 higher than in the corresponding month a year ago.

IRON AND STEEL

The supply of raw materials for the iron and steel industry is reported to have shown some improvement in recent weeks. The import of iron ore and scrap rose from £1,194,000 in March to £1,891,000 in April; in April, 1939, the intake was only £627,000,

though prices have risen very substantially in the interval. Domestic supplies of scrap have also tended to increase, but the Steel Control is relying far too much on ordinary commercial methods of collection and on an appeal to the public. In view of the urgent need for still heavier supplies, it seems desirable, at this stage, to adopt more efficient methods of collection. For example, the Ministry of Supply, through its local organisations, could surely make a survey of potential scrap supplies and proceed forthwith to its collection. Owing to the loss of Belgian supplies this step is now essential. Imports of iron and steel (finished and semi-manufactured) rose from £2,380,000 in March to £2,777,000 in April; but exports also increased, from £3,066,000 to £3,636,000. The pressure for supplies is steadily growing, and the commencement of large-scale military operations on the Continent this month is likely to bring a further intensification of demand.

ENGINEERING

Activity in the engineering industry has continued to expand, but the rate of increase has been comparatively slow owing to the shortage of labour, a direct consequence of the lack of preparatory training. The number of insured persons unemployed in the industry declined by a further 2,786 between March 11th and April 15th; expressed as a proportion of the total number of insured persons in the industry, unemployment is now only 2.4 per cent. Conferences have been held concerning the conditions in which women are to be taken into the industry, but the actual intake has so far been small. To some extent the pressure of demand has been relieved by higher imports of machinery; these rose from £2,528,000 in March to the record level of £3,643,000 in April. The bulk of these imports come from the United States, while a large proportion of them probably consists of machine tools. Exports of machinery also rose between March and April, from £3,782,000 to £4,152,000.

CHEMICALS

Trade in most sections of the home chemical market has been on a satisfactory scale during the past month, and there has been a continued increase in export trade. The industrial chemicals market has been fairly active, particular interest being shown in borax, boric and formic acids, but supplies of certain products are still scarce. There has been a steady business in fertilisers, and in pharmaceutical and other fine chemicals. A number of coal tar products, including creosote oil, pitch and tar, have been in very fair demand, but little interest has been shown in the lower grades of the tar acids. The overseas trade returns for April show that the value of exports of chemicals, drugs, dyes and colours was £1,374,276 greater than in April, 1939, and that the value of imports increased by £1,999,346.

FOOTWEAR

There has been a noticeable falling off in civilian demand for footwear since the early spring, particularly for men's styles; the Whitson trade was only moderate. Supplies of free leather are larger, both of bends and offal. Most centres are very busy on Government contracts, and manufacturers are now tendering for the sixth series of contracts or "reserve," from July to September. Stricter attention is being paid to punctuality of delivery.

COTTON

The Liverpool cotton market was closed on Monday, at first for three days only, but the suspension has now been prolonged. There has been a persistent demand for yarn and piece-goods, but on the whole rather less business has been done, due partly to the embargo upon sales of yarn to the home trade; this ban, however, has now been lifted by the Cotton Controller. Yarn business has been irregular. The scarcity of coarse American yarns and of certain counts of ring descriptions continues, but spinning production remains at 80 per cent. of capacity, compared with 62 per cent. a year ago. As expected, the Ministry of Shipping has reduced the shipping tonnage for American raw cotton from May onwards from 100,000 bales a month to 50,000 bales a month. Of this total only 30,000 bales a month will be available for spinners, 20,000 bales being barter cotton. Further large Government cloth orders have been placed with manufacturers. Most of the export trade has been for South America and the Dominions, and it is rumoured that standard cloths are to be produced for the most important foreign markets.

WOOL

Owing to the accumulation of noils in the Bradford district, the Wool Control has decided to issue noils to exporters free of

ration; the restrictions on the use of noils in the home trade have also been considerably eased. Yarn and cloth sold to the Scandinavian markets but not shipped have been bought back by the Control, so that firms engaged in this trade have suffered no immediate loss. The Export Credits Guarantee Department have extended their transfer risk guarantee from 75 to 90 per cent., and it has been announced that this cover will continue for countries which have been involved in the war. Export demand is slowly improving, particularly that from the Empire, but the loss of Scandinavian and North European markets will necessarily reduce the total of British exports of woollen textiles for some time to come. Arrangements are being made to produce standard cloths for various uniforms required by public authorities, other than the Services, in order to reduce the multiplicity of designs and dyes.

LINEN

More than half of the British imports of flax normally comes from Belgium and Holland, and the invasion of these countries, with the suspension of imports from the Baltic countries, will accentuate the shortage of flax in the next season. The Flax Control Board has issued no further licences to spin, weave or purchase yarn. A reduction in working hours is expected in the industry, and the export drive may have to be modified as Government requirements in both yarns and cloth are still very large.

RAYON

Demand for rayon and staple fibre far exceeds supply, partly because prices are low in relation to those of other textiles. Government orders are increasing and the export trade is steadily expanding. Orders at present prices are not being accepted for home delivery after July, when another increase is expected.

AGRICULTURE

The ploughing-up grant has again been extended, this time for several months. Arrears of field work have been made up in the last few weeks, though some breaking up of old grass is still continuing. The Ministry of Food has wisely decided not to allow a special price next year for early sucking lambs, but this decision will bring some revision of plans on arable sheep farms. The shortage of labour is causing much concern, as the gap left by the disappearance of skilled men cannot be entirely filled by partly-trained substitutes. So far no announcement has been made over the cropping programme for next year, but in view of the loss of Dutch and Belgian vegetables, a large production of all field vegetables on general farms will be urgently needed.

Business Developments Overseas

UNITED STATES.—The curve of business activity, which was steeply downwards in the first quarter of the year, flattened out at the beginning of April and has since begun to turn slightly upwards. According to the seasonally adjusted indices of the National Industrial Conference Board, manufacturers' stocks declined slightly between February and March, but new orders and deliveries also continued to fall. Orders showed some improvement in April and early May. While the increase did not immediately spread to all industries, it encouraged the belief that recovery was on its way. The output of crude steel, for example, rose from about 60 per cent. of the industry's capacity in March to 70 per cent. in the third week of May. The aircraft and engineering industries, which scarcely felt the recession of general business in the first quarter, have remained very busy, and the expansion of the capacity to produce military aircraft is being increased fairly rapidly. As a result of the Government's decision to speed up re-armament, and of President Roosevelt's call for an output of 50,000 aircraft per annum, the importance of the munition sector of America's industry is likely to grow steadily in coming months.

BRITISH EMPIRE

CANADA.—After a brief halt in March, the index of the volume of business compiled by the Bureau of Statistics resumed its upward course in April. The St. Lawrence is now open to navigation, and shipment of wheat from the eastern seaboard is proceeding. The suspension of trade with Denmark, Norway, Holland and Belgium will mean a considerable loss to the Canadian grain trade, which has huge stocks from last year's enormous harvest. The price break last week on the Chicago and Winnipeg wheat markets has much disturbed the Canadian wheat farmers, who had been hoping for dollar wheat during the war. On the other hand, livestock producers expect increased demands for bacon, butter and eggs from the British Ministry of Food. The metal trades are exceedingly busy. The production of steel nearly doubled between February, 1939, and February, 1940, and that of pig iron and ferro-alloys also showed large increases. Imports of industrial machinery and of farm implements, mainly from the United States, are far higher than a year ago.

INDIA.—There was a speculative rise in jute prices early in May, but it was short-lived and quickly followed by a relapse. The mills are still working short time. The latest wheat forecast indicates a slightly larger crop than last year's, but the estimate was smaller than had been expected. Considerable difficulties have arisen in the sugar market. The price of raw sugar, and consequently that of sugar cane, in the United Provinces and Bihar, was pushed up early

in the autumn under the influence of speculation; growers sold to the sugar factories supplies normally used for the manufacture of ghee, and crushing was forced almost to capacity. As a result, prices of sugar have now had to be reduced, in an effort to stimulate consumption, and there is talk of exports to the United Kingdom from the stocks that have accumulated. Imports of textiles from Britain are negligible, in spite of the reduction in duty, as British prices are still too high.

SOUTH AFRICA.—The tone of the wool markets has been good and prices are considerably higher than last year. Local and overseas demand for hides has also been well maintained, though the delay in securing shipping is a handicap. The maize crop is distinctly poor; it is estimated at about two-thirds of that of last year, and, in view of the large Argentine surplus and the relatively low price of maize on world markets, exports are likely to be very small in the coming season. Gold production rose still further in April to 1,170,763 fine ounces, an increase of 23,381 ounces over the previous record obtained in March. Business is generally good, with secondary industries well employed.

AUSTRALIA.—The long-drawn-out coal strike seriously affected some of the heavy industries and has led to the disappearance of stocks at the consuming centres. The steel output had to be reduced, but, now that work has been resumed at the mines, a return to full production is expected. In spite of the good prices obtainable for exports, further restrictions have been announced on imports from non-sterling countries and control over new issues on the capital market has also been tightened. A cable from the National Bank of Australasia reports that good rains have fallen in all States except Western Australia and that agricultural prospects are good.

LATIN AMERICA

ARGENTINA.—Buenos Aires was severely flooded in the middle of April, and the wool warehouses were among the worst affected. Trade in wool was at a standstill for some weeks. The disposal of the huge stocks of maize has been made more difficult by the loss of the Norwegian, Danish and Dutch mercantile fleets. In the first quarter of 1940 the favourable balance of trade amounted to more than 81 million pesos, compared with 67 million pesos in the same period of 1939. The new Government loan was over-subscribed and the stock exchange is firm.

June 29,
1940

FOOTWEAR

Factories working on contracts for service boots continue to be very busy, and many are working overtime. Contracts expire at the end of June, and orders for the new contract period are now being issued. There has been some improvement in civilian demand during the month, but it has now fallen off again. Civilian trade varies a good deal in different districts, orders for the autumn being satisfactory in some parts of the country and very disappointing in others.

COTTON

Trade developments have been overshadowed by the important developments in the war situation in Europe. Government requirements have increased and the Ministry of Supply has urged spinners and manufacturers to place more machinery on this class of work. By means of working longer hours and double-shift working in some mills, spinning production is now 95 per cent. of capacity against 80 per cent. a month ago and 64 per cent. a year ago. Although most of the cloth required has been of heavy styles, more orders have been given out for fine strong materials made from Egyptian cotton. In the spinning section, demand has been active, especially in coarse counts made from American cotton, and spinners have been requested by the Controller to increase their output of such qualities. Demand for Egyptian yarns has broadened and more business has been done. Raw cotton consumption in Lancashire is now on a larger scale than for 13 years. Under the cost-of-living sliding-scale agreement, all cotton operatives will receive a further advance in wages of 2½ per cent. from July 1st. Home trade prospects are more uncertain in view of the Government's decision to restrict consumption still further from October 1st. Some buyers have wanted to cancel contracts. The volume of export trade has also been limited.

WOOL

Developments in the wool textile industry naturally reflect international political conditions. Export markets have been closed so suddenly and unexpectedly as to give rise to inevitable difficulties. In almost every instance considerable commitments existed at the time of closure and goods were actually in transit—some beyond recall but others still capable of diversion. The drive for business continues, however, in those markets still available. Obviously, this section of the industry is second in importance only to that which provides service clothing, and exporters are fully alive to the need

for maximum turnover. In allocating supplies of raw material and semi-manufactures, the control authorities have made conditions considerably easier for the manufacturer. Since the beginning of rationing the policy has been to make certain of raw material supplies for service and export needs, a matter which called forth some criticism in early days, but which is now regarded as an indication of long-headedness on the part of the authorities. Meanwhile, with service demands increasing with the increased rate of calling up and export demands ranking second, the section of the industry catering for home trade civilian needs must inevitably face uncommon difficulties. Home trade manufacturers, however, have shown great adaptability in using materials unusual to them, and the retail customer has not suffered to the extent which might have been expected.

JUTE

In the home jute industry during the past month, little of importance has taken place. Business has generally been slow, but the Dundee jute trade expects to be running at full capacity in the near future. The Belgian and French jute industries are now lost to the Allies, and Dundee will have to produce jute goods of various descriptions to replace those which have been lost in the evacuation of Belgium and France. In addition, the requirements for the defence of our own country are likely to be enormous. Fortunately, arrivals of Calcutta goods in the shape of sandbags and camouflaged hessian have been on a large scale and these are now likely to be of value, though they have recently been a disturbing factor to the Dundee industry, which has been, and still is, curtailing production by stopping machinery or working short time. Prices have been forced down, but spinners and manufacturers are now not so anxious to sell. The Government, through the Jute Control, may now acquire the whole of the production of Dundee and commandeer supplies of Calcutta goods. The prospects for the new crop are favourable.

RAYON

The limitation of consumption by the home trade has caused a decrease in the volume of new business; moreover, no announcement has been made with regard to the extent of limitation after October. The export trade is suffering under the difficulties of the new European situation. Prices remain stable, but a further change in an upward direction is expected at the end of July. Mills are still fully engaged, and when readjustments in export markets have been completed, it is expected that further headway will be made.

Business Developments Overseas

UNITED STATES.—The expansion in business activity which began early in May has since made rapid headway. The improvement is reflected in the rapid increase in the output of steel. Thus, the proportion of the crude steel producing capacity in operation, as estimated by the American Iron and Steel Institute, rose from 60 per cent. at the beginning of the week ended April 22nd to 87.7 per cent. at the beginning of last week. The majority of the U.S. business indices have also shown an upward trend since the beginning of May. Indeed, there has been a remarkable upturn in the volume of new industrial orders, prompted, in no small measure, by the prospect of heavy domestic defence expenditure and increased British purchases of aircraft, machine tools and other products. The expansion in business, as the rise in steel production indicates, has been very marked in the metal-consuming industries. Activity in the engineering, shipbuilding and aircraft industries has been intensified; the capacity of these trades is likely to be considerably enlarged. The output of motor vehicles has been well maintained in spite of the seasonal decline in demand, for the industry is accumulating stocks on the assumption that a growing proportion of its resources will be devoted to defence work. The textile and other consumption goods trades, on the other hand, have not yet shown much improvement. The indications are that the upturn in business activity will continue.

BRITISH EMPIRE

CANADA.—Industrial activity continued to increase during May due to the growing influence of the war upon the Canadian economy. The recent progress of the iron and steel industry has been particularly marked; the production of pig iron in March was more than double that of March, 1939, while the output of steel rose by over 60 per cent. during the same period. The construction industry also advanced. At April 1st the general level of employment was at the highest point since 1920. In agriculture there was a general decline at home both in trade and prices, but exports of wheat increased. Canada's export trade is already showing the effects of the dislocation of Scandinavian exports, as the greatest alternative sources of supply for many of Scandinavia's main exports are in Canada. The British demand for Canadian lumber has increased substantially, and almost all the countries which import pulp and paper are now obtaining their requirements from Canada. Dairy products are also affected by the loss of Scandinavian supplies, but the most optimistic hopes of Canadian producers have been disappointed by the fact that British consumption of these goods has been restricted. The production of munitions is gaining momentum; the Ministry of Munitions and Supply is to be given a full-time Minister with very drastic powers to stimulate production, and on June 20th a Bill was passed conferring on the Government emergency powers for the full mobilisation of the man-power and industrial resources of Canada.

SOUTH AFRICA.—Trading conditions have been affected by South Africa's increased participation in the war, and general business, though steady, is rather hesitant. In the wool markets business is practically confined to dealings with the United King-

dom at the minimum prices fixed last December. The bulk of the summer mohair clip has been cleared at good prices. Trading in hides and skins is awaiting a clarification of the overseas markets position. On the whole, agricultural conditions are satisfactory. While the maize market remains dull the prospects for wheat in some Cape areas are good. Gold production in May reached a new record at 1,186,063 fine ounces, compared with 1,170,763 fine ounces in April, the previous record.

AUSTRALIA.—The growing expenditure on defence and the higher prices obtained for rural products are having their effect upon industry. The recently improved conditions are being maintained in industrial activities, building operations and commerce. Exports of merchandise for the first ten months of the current financial year amounted to £95 millions sterling and imports to the same figure. Exports of merchandise in April amounted to £11,119,000 sterling and imports to £12,206,000 sterling. In agriculture the seasonal conditions in Queensland are excellent, according to a cable from the National Bank of Australasia, but in other crops a good start. The War Loan for £20 millions was oversubscribed and Government stocks were little affected by the evacuation of Belgium, although industrial and mining shares fell substantially.

LATIN AMERICA

ARGENTINA.—In order to remove the uncertainty caused by European developments, the Argentine Government fixed minimum prices for cereals and oil seeds at the end of May; in the Buenos Aires stock markets, the Central Bank announced fixed minimum prices at which it would buy any quantity of Argentine Government bonds. These measures immediately restored confidence. Stocks of wheat and linseed are low, and Argentina's chief problem is disposing of the large maize crop at the present very low world prices. Although it is still smaller than that with America, Argentina's trade with Britain is recovering; Britain has made further large purchases of meat from both Argentina and Uruguay. A recent Treasury Order requires all commercial or current financial payments from Britain to Argentina to be made in sterling to an Argentine special account with an authorised bank in this country.

BRAZIL and CHILE.—Further payments agreements between Britain and South America may be announced shortly, and, in fact, an arrangement similar to that with Argentina has been concluded with Brazil. The loss of the North European markets for coffee presents an increasingly serious problem to Brazil, Colombia and the Central American "coffee" States; possibly some import quota system as well as minimum prices will be arranged with the U.S.A., which is now virtually the only large coffee market left open. Brazil's exports are declining, and, by the end of March, the adverse trade balance was already nearly £1 million sterling. In consequence of Britain's recent large purchases of Chilean products, there is an ample supply of sterling in Chile to pay for imports from Britain. A special feature in Chile's trade is the increase of shipments of copper.
