VOL. XXVII. No. 2 SATURDAY, JANUARY 11, 1941 PRICE RE. 1

Match point

Don't keep your Gold Flake to yourself! That's one of the rules of the game, if you wish it to be a love game. Remember how popular they are with women nowadays. It's the flavour of the really fine Virginia tobaccos of which Wills's Gold Flake are made that appeals to the ladies as much as to you. So, if you want to be the court favourite, be generous with your Gold Flake.

WILLS'S GOLD FLAKE

is the man's cigarette that women like

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

WITH banks and markets closed on Thursday and Friday, the sentiment in the money market during the current week has been largely affected by the holiday feeling. Business turnover was on the lowest scale; and everyone seemed to give way to the prevailing languor. Short credits continued to be in superabundant supply; and interbank call money continued to be nominally quoted at ½ per cent. in Clive Street and ¼ per cent. in Hornby Road, with none so poor as to turn a borrower. Plethoric money is duly reflected in the routine monetary communiqué of the week. Against Rs. 1 crore of three months Treasury Bills on offer, tenders amounted to Rs. 3,12.25 lakhs. The average rate of accepted tenders has come down to annas 14 and pies 2 per cent. per annum as compared with annas 15 last week. The weekly offer continues to be maintained at Rs. 1 crore. The Central Provinces and Berar Government also figured in the Treasury Bill market during the present week; they came out with three months bills for Rs. 50 lakhs on January 6. Applications amounted to Rs. 86 lakhs. The average rate of accepted tenders was Rs. 1-0-6 per cent. per annum which is 2¼ annas higher than the corresponding rate for the Central Government's Treasury bills. That the gap between the discount rate of the Central Government Treasury Bills and that of Provincial Treasury Bills has now been reduced to roundabout 2 annas per cent. per annum, has been acknowledged in these columns, as a movement in the right direction. We have, however, no doubt in our mind that this movement must continue till the gap is altogether removed. For, it cannot be too often reiterated that, so far as the credit behind short-term bills is concerned, there can be no justification for distinguishing between the credit of the Central Government and that of the Provincial Governments or between that of one Provincial Government and another.

It is also necessary to draw attention to the fact that banks are not prepared to pay more than ½ per cent. for three months deposits. For our part, we have not been able to understand a state of affairs in which the Governments have to pay higher for their three months' accommodation than the banks. We have repeatedly urged the imperative need for a scientific understanding of the function and significance of Treasury Bills in a properly functioning money market; and for taking all those steps which would make Treasury Bills in India not a mere short-term investment as they are now, but an essential money market instrument. Why nothing worth while has so far been done to create a bill market in India and to secure for Indian Treasury Bills all the attributes which their British counterpart possesses is a matter which it is difficult to understand, especially, as the installation of Treasury Bills in their proper status in the money market, will make defence borrowings more easy to plan and accomplish. Judging by the present price levels of India's sterling stocks, one may conclude that the London market rates India's credit almost as high as that of Britain. Why should not authorities in India show equal appreciation of the credit of India in the Indian market? Our case is that if banks were able to look upon Treasury Bills as cash instead of as a short-term investment, the Government of India should have no difficulty in securing generous response to a six-year defence loan on not more than a 2½ per cent. yield basis. Cheap money policy, as such, has not only proved successful, but has been found inevitable in the conditions that prevail in India and also with reference to British monetary policy and London monetary conditions.

The giltedged market in India has, all through this period, shown remarkable strength of sentiment and firmness of rates. The various loans which the Government of India have been selling on tap have been absorbed, without any indigestion being caused. The banks are embarrassed with piling-up cash balances. New capital issues in respect of industrial enterprises have been conspicuous by their absence. These are ideal circumstances in which a wise and courageous policy in regard to defence loans will be assured of complete success. It is time that the Government realise that the need of the hour is for men who can take what we may call a creative outlook in financial and monetary policy and who can plan financial and monetary operations with skill and self-assurance. The time for routine policy and routine

Finance Abroad

TOTAL war has in its second year caused the United States Government to embark on a programme of total defence of democracy, entailing a National Defence expenditure of astronomical proportions. Mr. Roosevelt has, in his Message to the 77th Congress, envisaged an expenditure of 25 billion dollars on defence in a three-year period; and the ultimate cost of the programme is as unpredictable as the future. The highlight of the President's message is not the announcement of this record expenditure but his insistence that the provision of finance for so gigantic an arms programme should in no way militate against the social principles of the New Deal which apparently is to be adhered to as here-to-fore. It is characteristic of the high moral courage of the President that he should stick to his guns where most people would be content to leave the past well alone.

The 1941-42 Budget estimates total expenditure at $17.48 billions, which marks an increase of 29 per cent. over the previous budget. Of this sum, 62 per cent. is to be earmarked for defence purposes. Such vast expenditure is estimated to swell the budget deficit to $9.2 billions from the previous year's level of $6.9 billions. These figures, however, have ceased to have meaning and it is obvious that the President is little worried about an increase in the National Debt. On the other hand, he was even inclined to be optimistic in foreseeing economic activity and national income rising to record heights. Whether his optimism will be rewarded is more than anyone can say, especially when, despite the billions spent on armaments, industrial profits are going to be thoroughly soaked and the President himself does not show any sign of having shed his old bias against Big Business.

In order that the defence programme may not give rise to inflationary trends in the national economy, an immediate and large increase in direct taxation, which would contribute partly to defence expenditure, has been recommended by Mr. Roosevelt; and stiff increases in income-tax and excess profits tax are foreshadowed. These new taxes will bring in the highest revenues recorded in American financial history. The limitation of profits from armament manufacture is likely to be carried further as the President is hardly convinced that existing laws are adequate enough to stop profiteering. In other words, the executive will, at every stage, determine the profits to be made by each industry and an industrial boom is scarcely likely. The productive capacity of the nation will, of course, increase as a result of the drive for industrial expansion and the contracts and orders running into billions may be expected to result in an increased turnover in which employment will rise rapidly and a more even distribution of social incomes will be obtained. If on the enormous sums spent on defence are superposed the social security programme and the agricultural programme, the resulting expenditure might, in due course when the full productive capacity is nearly reached, set the stage for inflation. Another contributory factor would be the loans to democracies abroad which, the President has given a clear hint, Congress would be asked to recommend. Now as these "loans" are not loans in the usual peace-time sense but are sums which would be utilised by the new debtors to buy industrial and wartime equipment, the pressure on national resources would increase still further.

In fact, it is this concern over inflation that has caused the Federal Reserve Board and its Chairman to demand special powers to exercise, from now on, suitable control over credit conditions. The Board has already complained to the Government that, though it has responsibility for credit control, its powers were inadequate for the discharge of its duty. The powers asked for by the Board are: (1) an increase in the deposit of reserve requirements of all banks and authorisation for the Board to double these if necessary and make all banks subject to these requirements; (2) removal of the President's powers to change the gold value of the dollar, repeal of the Treasury's authority to issue 3,000 million dollars "greenback money" and to issue money against foreign silver which it buys; (3) neutralisation of the expanding effects on currency resulting from the U. S. purchase of foreign gold; (4) the sale of future issues of government securities to individuals and corporations and not to banks; (5) a gradual increase of taxes to balance the budget as far as possible. It is interesting to note in this connection that the President predicts sales of Government bonds on a scale surpassing the Liberty Bond drive in the last war. These steps have, at the moment, no more than a precautionary significance. But as the defence programme gets well under way and as the war enters on a more active phase, the stage may well come when inflationary tendencies will begin to set in. If they do, it will be no easy matter to check them in the case of so gigantic an economy as that of the United States. Mr. Eccles' anxiety to be forewarned is not at all surprising.

LLOYDS BANK
LIMITED

methods is past. In all humility and in all seriousness, we would like to suggest to Sir Jeremy Raisman that he cannot postpone any longer securing the services of a real expert in money market technique. The Indian money market will then be assured of smoother functioning. The banks in India will then be in a position to plan their operations under higher guidance and the Government themselves will reap a harvest of benefits in regard to their short-term loan requirements as well as their defence borrowings.

The New Year sees the Central Government improving their cash position with the Reserve Bank by nearly Rs. 1¾ crores to Rs. 12¼ crores. This improvement has taken place in a week during which the usual month-early disbursements must have involved an outgo of more than Rs. 1½ crores. Provincial Governments have also strengthened their cash position from Rs. 3.60 crores to Rs. 4.18 crores. Member banks start the New Year with the substantial cash balance of Rs. 47¾ crores maintained with the Reserve Bank. Foreign Balances held in the Banking department of the Reserve Bank have shown a further big bulge to over Rs. 59½ crores. Possibly on account of payment by the Government of Burma to the Government of India in respect of the Funded debt, the cash balance of the Government of Burma has sunk to the low level of Rs. 1.39 crores; and it is quite possible that owing to such a low cash balance, recourse to a Ways and Means advance from the Reserve Bank was found necessary. For, loans and advances made by the Reserve Bank to Governments have appreciated from Rs. 9 lakhs on December 27, to Rs. 84 lakhs on January 3.

Investments in the Banking department are higher at Rs. 7.53 crores as against Rs. 6.71 crores in the previous week. This is possibly due to further purchases of India sterling stocks in pursuance of the sterling debt redemption scheme. Thanks to the increase under foreign balances and investments, notes held in the Banking department have declined from Rs. 13.94 crores to Rs. 12.05 crores. The statement of the Issue department for the week ended January 3 does not otherwise call for comment.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T.T. at 1s. 5 31/32d., all through for six months: banks were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months D. A. bills were quoted: 1s. 6 7/32d., for the first month; 1s. 6¼d., for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d., for the fourth month.

Interbank call money is quoted ½ per cent. lenders with no borrowers; ½ per cent. for deposits of two months to four months.

Outlook for Raw Materials

THE survey of industrial profits in 1940, which was essayed in these columns last week, has now to be supplemented by a review of the commodity markets during the year to enable clearer ideas of the fortunes of India's national economy in the old year. As we observed last week, the absence of trade statistics imposes an almost irritating handicap on the reviewer, who is thus thrown back on other statistics which by themselves can yield no reliable conclusions. It is extremely difficult to form any idea of the fortunes of Indian agriculture merely on the basis of the vicissitudes of the commodity markets. And yet there is unfortunately no alternative to such a course. But disparate accounts of the various markets can hardly serve the purpose in view. We have, therefore, to attempt, while providing the reviews of the various commodity markets, to draw a few conclusions of a general, though necessarily vague, character.

A perusal of the reviews appearing in this issue will show that certain factors have affected all the markets equally, whether for the better or for the worse. The immediate effect of the outbreak of hostilities, as is well-known, was to encourage the anticipation of changes in the markets on almost exactly the same lines as at the time of the last war. A period of frantic activity and soaring prices was thus common to all the principal markets, but disillusionment came with the onset of the special factors of the present war. The tax on excess profits which started the downward trend has indeed led a long train of adverse circumstances. Shortage of shipping space and the general apprehension of a system of price control in the interests of the consumer came next. And it was soon found that, if the war increased the demand for foodstuffs and raw materials of various kinds, it also placed the principal buyers of these commodities in positions of special vantage and that India's exports could be robbed of their scarcity or emergency value by various systems of control originating abroad. But the disabilities arising from these are nothing compared to those arising from the triumph of German arms over a large part of the European Continent. India was somewhat slow to recognise that the occupation of a number of countries by Germany would inevitably lead to a widening of the scope of the British blockade and, as a consequence, to the loss of Continental markets to the Indian exporter. It may be said, therefore, that, by the middle of the year, the outlook had gathered the utmost gloom. The announcement by the Government of India of the decision to send Dr. Gregory and Sir David Meek to America to explore the possibilities of alternative markets induced for a time a faint and hesitant hope of relief. But, as there was at no time any sound reason for such hope, Indian trade was learning to take its reverses in the proper spirit.

There is, indeed, no ground for suggesting that the latter half of the year witnessed any improvement. Even the rise in prices noticeable in some instances can hardly be held to be indicative of an improvement in demand. For demand and offtake are far more important as an index of prosperity than fluctuations in prices. And, of this index, India has to-day none. For in the absence of trade statistics, there is hardly any means of ascertaining the extent to which exports of particular commodities have taken place. Even a cold chronicler would wish to set down a few heartening developments and the reviewer of Indian trade cannot help feeling that it is extremely unfortunate that no commodity was in a position till the year-end to recompense its producer for his troubles. The case of jute is, perhaps, the worst instance, for its actual experiences through the greater part of the year are such a sad contrast to its bright expectations at the beginning of the war. The history of jute during 1940 is the history of unsuccessful attempts to curb the rise in prices when prices were rising and check the fall when the fall came in. Oilseeds and groundnuts are not less unfortunate because they could not entertain high hopes at any stage. Sugar worsened as the year progressed and hides and skins suffered vicissitudes of prices at low levels. Only tea was in a fortunate position inasmuch as the customary foreign demand was concentrated in the British Government.

It is necessary, however, to make special mention, in a review of this kind, of the improvement in the price level noticeable in the latter half of the year under review. The index numbers of wholesale prices, despite the persistent decline in the case of a few commodities like sugar, show, generally speaking, an upward trend of prices since the middle of the year. The General Index which stood at the high level of 137 in December, 1939 came down to as low as 114 in May and June but has shot up to 122 since. Except in the case of raw jute and sugar, there is an improvement in the last four months of the year which should normally be considered as some consolation in a position that is otherwise totally depressing. But one can hardly afford to overlook the pitfalls of such reasoning. For one cannot afford to overlook the fact that not only cotton goods, which have a good market both at home and abroad, improved from a low of 119 in May and June to 123 in November, but even oilseeds, which have not had a ray of hope, show a similar improvement during the same period from 97 to 102. When the increase in the General Index is accompanied by an increase in the cost of living index such as has occurred in the principal cities of India during the same period and when there can be no doubt that the export trade has been languishing at the same time, it is difficult not to suspect an incipient inflationary trend in commodity prices. This, however, is a matter that calls for more comprehensive and careful examination which cannot be attempted here. Suffice it that 1940 closed with the outlook extremely bleak and disquieting so far as India's commodity markets and the prospects of our export trade are concerned. And one must be content with the doubtful consolation that the glut of raw materials resulting from the check to exports might well prove to be the incentive for establishing new industries which will utilise indigenous commodities in industrial production. The movement, though it is not already afoot is bound to be witnessed before long. In his presidential address at the Indian Science Congress, Sir Ardeshir Dalal laid great emphasis on the importance of establishing new industries which can utilise our raw material at home. Our industrial progress has so often been the result of expediency, that one might almost welcome a crisis like the present as the precursor of much good in the future.

Commodity Markets in 1940

THE year 1939 began under rather auspicious circumstances for the jute market. Though there was a relapse in the third quarter of the year and it was found necessary to promulgate an ordinance fixing minimum prices for jute and jute manufactures there was a jump in prices soon after the outbreak of the war, and the rise in prices was held up for a time only by the conclusion of the "Gentlemen's Agreement." The announcement of a big order for sandbags marked the next phase of the movement and the highest levels for the war period were touched in the first week of December. Speculative selling and the absence of fresh orders, however, caused a decline in prices and at the close of the year, the tone was rather less confident. Thus the year 1940, did not open under very happy circumstances. Speculative buying had been overdone; and as there were no fresh orders and rumours regarding fixation of maximum prices were rife, the tendency continued to be downward. Till September 1940, there was no reversal of the trend and only the favourable developments during the last quarter of the year resulted in a slight rise in prices from the lowest levels for the year. Just as there was a rise from Rs. 36 before the war to Rs. 126 in the futures market in the first week of December 1939, there was a decline from Rs. 114-8 in January, 1940 to Rs. 33 in September 1940 and a slight recovery to about Rs. 40 at the year-end.

The earlier rise in prices was due to the anticipations of a continual flow of sandbag orders and of shortage of jute. The absence of any further orders, the publication of the Excess Profits Tax Bill and the decision to postpone the date of delivery for the big order for sandbags from April to August 1940 killed the boom. On the day the announcement regarding the decision to postpone the date of delivery for sandbags was made, there was a drop of more than 20 points in the futures market. Thereafter there was little inducement for buying, and it was very difficult to check the downward movement. Just as the upward movement was checked by rumours regarding fixation of maximum prices, reports regarding minimum prices and government intervention were circulated to prevent any undue decline in prices. But it was of no avail. The high level of prices had induced large sowings. In the absence of any large orders, it was feared that there would be a glut of jute. The difficulties regarding shipping were also making themselves felt.

In May 1940, the Bengal Government convened a conference of jute interests to consider the problem of stabilising jute prices. Before any definite scheme could be formulated by those interested in the industry, an ordinance was passed fixing the minimum prices in the futures market at Rs. 60. This resulted in a recovery to Rs. 73-2, but it was shortlived. The German invasion of Scandinavia caused heavy selling and on 30th May, the futures market had to be closed as there were no buyers above the minimum rates. The Bengal Government tried to restore activity in the futures market by announcing their decision to buy up stocks of old crop jute. The actual purchase of Firsts around Rs. 58 was responsible for the reopening of the futures market on 7th June ; but, with the worsening war situation, it again closed on 12th June. Prices for pucca bales began to decline. As the *satta* for the new crop over the old crop was widening, mills found it advantageous to sell their old stocks of jute and cover them by purchases of new crop. The order of the Bengal Government to postpone transactions in new crop did not improve matters. The premium for early deliveries caused a rush of supplies and in September Firsts Ready were as low as Rs. 36.

The reopening of the futures market on 25th September, 1940, caused a further fall to Rs. 33-14 ; and though the decline in prices from Rs. 60 to Rs. 36 in the following months was due to the deterioration in the war situation and the loss of the Continental markets, the Bengal Government's policy was also partly responsible. The latter had given out earlier in the year that the 1940-41 crop would be regulated. Subsequently, the ordinance had to be withdrawn. This, combined with favourable weather conditions, resulted in a bumper crop. Even the final forecast estimated the yield at 125 lakhs bales. The reduction in the number of working hours from 60 hours to 54 per week in April and 45 hours per week in August indicated that mill consumption would be on a considerably smaller scale, and that, with the poor prospects for export, there was bound to be a huge surplus. The decision to close down mills for one week every month from September made the outlook more gloomy. It, therefore, became imperative for the Bengal Government to adopt drastic measures to stabilise prices. At first an agreement was concluded between the Indian Jute Mills Association and the Bengal Government that mills would agree to buy jute at fixed minimum prices. The terms of the agreement were circumvented and as the amount of mill buying was not enough to put up prices in the mofussil, further measures had to be adopted. The Indian Jute Mills Association suggested a revision of the minimum prices and the creation of a new "low bottom mark" so as to enable greater buying of jute. The Bengal Government, however, were not agreeable to the lowering of the rates in the absence of a guarantee from mills for the purchase of a specified quantity of jute within a specified date. They were not also in favour of the creation of a new bottom mark. As the mills refused to give a guarantee regarding the purchase of jute, the Bengal Government approached the Central Government for a solution of the problem. The reports regarding the possibility of a loan being floated for the purchase of surplus jute did not materialise.

Early in December a conference of jute interests was held in Delhi at the instance of the Bengal Government. As a result of the conference the revised minimum rates proposed by the I.J.M.A. were accepted and the proposal for the creation of a new "low bottom" mark was dropped. It was agreed that mills should endeavour to buy 15 lakhs bales before January 15, 1941, another 10 lakhs bales before February 15, 1941, 7½ lakhs bales by March 15, 1941 and 5 lakhs bales by April 1941. In the event of mills being unable to complete quota, the Indian Jute Mills Association was to purchase the short-fall on behalf of the Government. It was believed that the purchase of 37½ bales would relieve the pressure on the ryot and that the fairly high average price realised on a good portion of the crop would enable him to hold the remaining stocks for higher prices. This scheme was to be backed by a policy of regulation of the crop in the next few years. The crop for 1941-42 is to be sown only on one-third of the area under the crop in the 1940-41 season. Precautions have already been taken to ensure the success of the scheme. It remains to be seen as to how far the Bengal Government will be successful in their policy. It has however, to be admitted that the question has assumed less unmanageable proportions than four months back when it seemed that there could be no satisfactory solution to the problem of stabilising prices and disposing of the surplus stocks of jute. It will thus be seen that fears of a shortage of jute held earlier in the year have been dispelled and the position reversed at the close. Jute prices receded to the levels of August 1939, and it was only the determination of the Bengal Government and the co-operation of the Indian Jute Mills Association, that enabled the price to recover to around Rs. 40. With the difficulties regarding shipments and the close of the Continental markets, it is difficult to gauge the trend of prices in the future. But the Bengal Government may be trusted to make a conscientious effort to keep prices steady around the minimum rates.

The course of prices of jute manufactures has naturally been similar to that of raw jute. The higher levels for jute futures discouraged buying and the lack of freight placed difficulties with regard to exports. Moreover, it was only the fears regarding a shortage in goods for ordinary consumption for the near position, (mills being busily engaged on production of sandbags), that pushed up prices for the near positions to very high levels. The discount for the September position early in 1940 was well over one point. It was not surprising, therefore, that, with the reduction in the delivery of sandbags to five millions from

February and the abrupt fall in jute values, 9 porters ready came down to Rs. 14-8 by the end of February from Rs. 20-14 earlier in the year. The downward trend continued uninterrupted. It was for some time hoped that the lower level of prices would induce export buying. Mills did not, therefore, reduce the working hours on account of the smaller production of sandbags. In the first week of April, however, it was found necessary to reduce the number of working hours from 60 to 54 per week. This only accentuated the fears regarding a further decline in consumption and before the Ordinance was passed in May, fixing the minimum price at Rs. 13 in the hessian futures market, a level of as low as Rs. 12-8 had been touched. There was a recovery to Rs. 15-2, only to relapse to Rs. 12-1 below the minimum levels. The hessian futures market closed earlier than the jute futures market. It has not reopened since.

After the completion of the sandbag order in July, working hours had to be further curtailed to 45 per week. 9 porters ready came down to Rs. 8-12. It was expected that there would be a decline in local hessian stocks by 30 crores yards by July. As the expectation did not materialise and as it was feared that there would be large accumulation in the same if production was not drastically curtailed, it was decided to close down mills for one week every month as from September. While there has been a decline in hessian stocks of nearly 15 crores yards, there is a rise of about 4 crores in sacking stocks, cloth and bags. Mills are to remain closed for one week in January 1941, work normally in February and again close down for one week in March.

It is this policy of drastic reduction in working hours that has kept the stock position healthy. This policy of curtailment in production combined with the determination of the mills to refrain from selling goods to the bazar at below the minimum rates agreed between the I.J.M.A. and the Bengal Government improved the technical position of the market. The agreement referred to previously, fixing minimum rates for jute, also provided minimum rates for 9 porters Ready and other standard fabrics. As the market was heavily overbought, it was decided to give every possible assistance to operators. For sometime, there was even a scheme to buy back stocks of 9 porters hessian 40" 8 ozs. as it was believed that the main reason for the depressed state of the market was the presence of large stocks of 9 porters hessians. This scheme, however, had to be abandoned. Production of this class of fabrics was not permitted and nobody could sell excessive stocks to the bazar unless there was a guarantee regarding shipment. Only in November was there a recovery in the quotation to above the minimum prices. The placing of small orders for sandbags and the shortage of goods for ready shipment pushed up the quotation to Rs. 12-14 but at the higher levels, mills turned sellers. Mills' order books are unfilled so that with every rise there is heavy selling from mills for the forward positions. 9 porters Ready closed at Rs. 12-10 at the end of the year. It looks as if consumption for the duration of the war will not be equal to the normal producing capacity of the mills. There is no possibility of any large increase in exports on account of the difficulty in shipment. The demand on account of sandbags also cannot be on a large scale though it would be legitimate to expect that there would be some orders now and then. Only last week, an order for 26 millions sandbags was placed with the I.J.M.A.

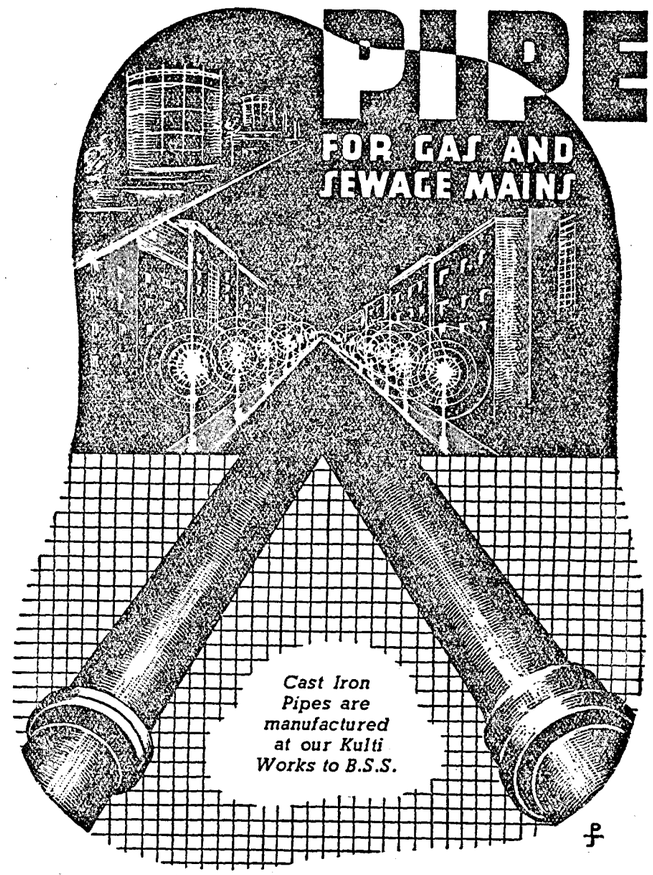
Production in the eleven months ended November 1940, totalled 958,400 tons against 1,003,700 tons in the same period in 1939. Only in August 1939 did mills work 40 hours per week with a certain percentage of looms sealed. Soon after the outbreak of war, there was an increase in the working hours to 45 per week with the full complement of looms, to 54 shortly after and 60 in the middle of November 1939. American consumption totalled 655 million yards in the first eleven months of 1940, against 712 million yards in the corresponding period in 1940.

* * * *

The raw cotton market witnessed wild fluctuations in prices. Only small war orders were placed with Indian mills and it was only the hope that large orders would be placed in the future that took prices up. The technical position of the market was very healthy. A fairly high level of internal consumption and good exports took up prices in the initial stages. Soon after the outbreak of war, there was a rise from Rs. 160 to 226 in the course of hardly two weeks. The issue of an Ordinance suspending option dealings and the failure of overseas markets to follow up the rise in prices in Indian cotton kept values down. There was a reaction to Rs. 184½ though there was a subsequent recovery to Rs. 206. But the lapse of the Ordinance banning option dealings in the first week of November, and the boom in other commodity markets consequent on the placing of huge orders for sandbags kindled speculative activity. Calcutta operators, who had made "piles" by the abrupt rise in prices for jute and jute manufactures, indulged in heavy speculative buying. The rush of mill bying and short covering resulted in a firming up in the quotation for Broach April/May, but it was only early in 1940 that the peak levels for the war period were touched. Broach April-May touched Rs. 341 on January 5. The Bombay cotton market moved independently of the other overseas markets and was mainly guided by Calcutta operators and Calcutta prices. As such, this resulted in a wide difference between American and Bombay parity prices. At one time, Broach cotton sold at a premium of 147 cents over American against a discount of 149 to 183 cents at the beginning of the 1939-40 season. This relative cheapness of American cotton and other growths prompted the U.S. Administration to withdraw the subsidy on exports. This artificial position, however, could not continue for long. The weakness of the jute market, the collapse in the cloth market, heavy short-selling and the announcement of the levy of the excess profits tax made a debacle in prices inevitable.

By the end of February there was a drop of more than sixty points. It was feared that the ban on exports of oilseeds would result in a similar ban on cotton exports also. The reverses of the Allies on the Continent and the continuing difficulties regarding cotton exports to Britain and the indefinite postponement of the negotiations for a new Indo-Japanese agreement were further adverse factors. Broach April/May came down to Rs. 147½ on July 2, 1940 that is below the prewar level of Rs. 160. It was pointed out that the fall in prices was unjustified, especially as the statistical position was very sound and that with competitive prices for Indian goods there was bound to be a recovery. Actually, by August-end there was an improvement by nearly thirty points to Rs. 175. Bombay mills received large orders for Khaki cloth, and other materials and as there was heavy straddle buying also, the upward movement was helped. The tendency continued to be in evidence till the end of the year when a recovery to the high level of Rs. 211½ was recorded. The rise has not been sustained, however, and there has since been a decline to below Rs. 180.

Raw cotton is faced with many difficulties at the present moment. The likelihood of a major complication in the Far Eastern situation at any moment and the absence of any agreement regarding exports have given rise to grave fears regarding the continuance of export. Already, Japanese exports are running at a low level. No doubt, there has been an increase in Indian mill consumption and optimistic estimates for the current season even place them at as high as 3½ million bales. But with a probable export of about one million bales, there will be a good surplus left. The crop for the current season is expected to be about 7.2 million bales as, according to the third cotton forecast, there has been an increase in the area by 7 percent, and in the yield by as much as 22 percent. It is not surprising, therefore, that, with the pressure of arrivals and bear-selling, prices have dropped by more than thirty points in recent weeks in spite of the strength of the overseas markets and good spot demand. The world cotton position is unsatisfactory. In the United States also, a similar position exists and it is only in the hope that it would be possible to liquidate loan stocks after the termination of the war by the restoration of the normal channels of trade, that the U. S. Administration have decided to continue their farm programme. In Egypt the position became critical. Egyptian cotton was cut off from the Continental market and the British Government were obliged to give an assurance to the Egyptian Government that the whole of the crop for the season would be purchased. A purchasing commission has been set up and all cotton offered to the commission has been taken up. Any loss on account of the transactions will be borne by the British Government, but any gains will be shared equally between the two governments. It will thus be seen that the leading producing countries have got their own difficulties and that, for the duration of the war, it is impossible to anticipate the trend of prices. While the American farmer is assured of a good loan and the Egyptian farmer is in a position to sell crop to the commission, the Indian farmer has no option. It cannot be expected that he can keep his stocks for the duration of the war and the need for disposing of surplus stocks at sacrifice prices should be an ever-present bearish factor.



* * * *

The expectations regarding the possibility of a big rise in bullion prices soon after the outbreak of the war were fulfilled. There was the usual rush for hoarding purposes and both gold and silver prices were substantially high. The slump in the gilt-edged market, the sharp rise in the sterling price for gold, which was finally stabilised around 168s., and the boom in commodity markets caused gold ready to be quoted at Rs. 43-8 and silver ready at 63-12 in the first month of the war period. After the initial rush for buying was over, there was a drop in gold ready to Rs. 40-12-6 in October. The hectic activity in the commodity markets in December brought about a rise to Rs. 42-9. Only after

the slump in February, on the announcement of the Excess Profits Tax, there was again public buying on a large scale and the quotation further improved to Rs. 42-3-6. Till the middle of May, there was no important development and quotations were fluctuating around Rs. 42.

After the fall of Norway and Denmark, there was great panic in the several markets. The stock markets were closed and gilt-edged securities were sharply marked down. Even institutions bought gold on a large scale for investment purposes and gold ready was as high as Rs. 48-8 in June. But this rise in prices could not be sustained as it was considerably above export parity prices. A level as low as Rs. 40-10 was touched even by the end of July. Values have been fluctuating around Rs. 42 during the last six months. Business reported has been mainly on account of export, the hoarding demand having abated to a considerable extent. As gold can not be exported to countries outside the Empire, the fluctuations in prices should be confined to very narrow limits, around parity prices, so long as the British Treasury's price for gold remains.

CAST IRON PIPES

For Gas and Sewage Mains the superiority of Cast Iron Pipes over all other forms of piping remains unchallenged. Impervious to rust and the corrosive effects of gases and chemicals, Cast Iron Pipes have almost a limitless life, which makes them the most durable and dependable of all underground conveyors. Engineers know that by specifying Cast Iron Mains they are safeguarding a city's vital services against risks of sudden breakdowns and expensive replacement costs.

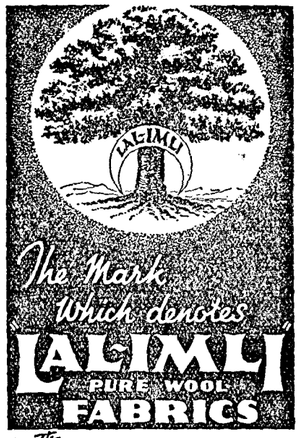
Editorial Notes

Export Trade with the U.S.A.

Facts and figures relating to the U.S.A. do not readily percolate into the general consciousness, at any rate in India. That is one reason why as many people as possible should attempt to read the Meek-Gregory report on the prospects of India's trade with the U.S.A. Everything is necessarily viewed from the Indian angle, but one wishes that some sort of effort had been made to look at Indian trade from the U.S. point of view. That would have been a wholesome and essential corrective to the slight optimism that may be engendered by the conclusions. Actually, the prospects do not appear bright. Rearmament may be a big factor in U.S. industrial activity, but the markets apparently ignore it persistently, and the collapse of Latin America's export trade naturally increases U.S. responsibilities and prejudices also India's prospects. The report, however, indicates that Sir David Meek and Dr. Gregory alike are endowed with a full measure of realism. It is recognised, that the agricultural surpluses like the industrial maturity of the U.S.A. set very definite limits to the probable expansion of Indian trade. Any probable rise in the level of incomes in the U.S.A. may be offset by a rise in taxation, and the economic effects of rearmament, including conscription, need not be wholly favourable. These considerations are not overlooked by the authors of the report who however urge that there are several compensating factors at present.

From any survey of the U.S. market where efficiency and novelty in any product offered are equally important, it will be obvious that the battle there is to the strong and the race to the swift. India can hope to cash in on the strength of the prevailing anti-Japanese feeling only if Indian wares appeal to the American customer. The report points out in this connection: "There is a growing interest in Indian consumers goods such as cotton prints, druggets, etc. Made in India is itself a selling point and the anti-Japanese prejudice on the part of certain consuming sections should assist the sale of Indian products. On the other hand since a considerable proportion of the total sale of consumers goods takes place through large scale organisations, it is imperative that Indian producers and merchants should pay regard to the special character of the American market. Variety, novelty, strict adherence to the specifications laid down and promptness of delivery are essential." This is wise counsel to the merchants who have been told that trade promotion is mainly their own job. The same advice is valuable also for the shipper of raw materials which may be in demand for the rearmament programme.

In discussing the content and character of American import trade and India's share thereof, the report imports a timely appreciation of the various cardinal factors in the recovery still in progress. There may be increased offtake of manganese, shellac, mica and possibly rubber, for defence purposes because accumulation of stocks is an essential feature of the arms programme but only manganese and mica stand a really good chance of being bought up in increasing quantities. The general public in India may think that the report would have a blanketing effect but one of the essential purposes of the investigation was to show that a vast structure of optimism should not be reared on very slender foundations. It certainly stands to reason that the U.S.A. cannot take the place of Europe as a customer. That country may be third among India's customers at present but there is little chance of selling cotton, oilseeds or other products of which there is an abundance. The report emphasises that in regard to Indian coffee the price is far above the New York parity, even if quality may be higher.



The Export Advisory Council has already been given an opportunity of discussing the report at its recent meeting, and it will not escape notice that the report which describes the prospects of groundnuts, coir, hides, cotton and jute as a trifle obscure underlines the fact that myrobalans, chromite, kapok and shellac are likely to benefit substantially from U.S. demand. Improved shipping communications are expected to play a part—the new service of the U.S. Export Lines, Inc. will help materially. Shippers with a direct interest in the U.S. should go to the report rather than the press summary to see what chances there are for them at present. It must, however, be pointed out that the depreciation of the rupee may not be of much help while export licensing is in force. The import restrictions enforced since last year may have the effect of curtailing U.S. interest in a market that is unable to take part in a reciprocal exchange of goods.

The position in regard to hessian is clearly summarised. The challenge of substitute fibres admittedly confers added importance on the U.S. market and the jute mill industry is likely to take immediate note of the recommendation from the importers over there that promotional effort is called for.

Bengal's Hosiery Industry

A recent bulletin of the Industries Department, Bengal, prepared by Mr. Mukul Gupta, the P. A. to the Director of Industries, is a reminder of the importance of the hosiery industry in the Province. The investigation, thorough detailed and critical, carried out by Mr. Gupta is a model for ambitious young economists keen on chronicling the rise of local industries. There may be no large concentrations of capital or artisans but Bengal unquestionably leads in hosiery manufacture which dates from 1893 when the Oriental Hosiery Manufacturing Co. led off. The small cottage establishment is still the rule rather than the exception and its suitability as a part-time occupation has been demonstrated over a long period. In spite of certain gaps in information, Mr. Gupta draws a complete and convincing picture of the industry which can be studied best at Pabna whose products enjoy a considerable amount of consumer loyalty. Japan has attempted to copy the Pabna trade marks, and the export trade built up by Pabna factories surpasses that of Cawnpore. The present distribution of the industry suggests that Calcutta *cum* Howrah is of increasing importance and though the majority of establishments do not come under the Factories Act the use of power is fairly common. Though the industry is not on the verge of overproduction it is certain that the limit of expansion has been reached, though only half a dozen concerns carry on work in the fashion of large scale factories. Dependent on yarn procured from outside Bengal and dependent also on extra-provincial markets, the industry faces competition not only from within but from the industry established elsewhere. To consolidate the position of the industry, in which Rs. 34 lakhs have been invested, giving at present employment to nearly 4,600 workers and turning out hosiery products worth nearly Rs. 60 lakhs a year is the main task of the future. There is good reason to hold that the industry is one eminently suited to Bengal where the small units, *e.g.*, at Pabna have made good rapidly. There are many points of resemblance between the hosiery industry of the Punjab and Bengal, and the natural immunity to competition is still an arresting feature. Female labour engaged on piecework by the factories may raise fears of the sweatshop but Mr. Gupta's survery lays to rest the horrid suspicions. Moreover, labour organisation is not unknown in the hosiery industry and if comparisons with Japan indicate the relative inefficiency of labour in Bengal factories, the survival of semi-feudal conditions in Japan finds no parallel at home.

Describing what may be called the export trade, the author notes that Bombay has been always the most important customer for the finer goods. The U. P. also takes a good deal, but Bihar, Assam and Orissa, which have no local manufacture, take only the coarser types. It is evident that in this branch of cotton consumption Bengal is far and away the most important, the annual intake of yarn being estimated at Rs. 40 lakhs. Of the principal mills supplying yarn only one is located within Bengal, and Mr. Gupta discusses at length the possibility of using Bengal-made yarn in greater quantity, though the deficiency of long-staple cotton must always present a serious difficulty. Though the industry has not qualified for fullblooded protection the ability to withstand strenuous competition from abroad is not in doubt. But internal regulation (voluntary or other) is a more pressing consideration. A very valuable discussion of the problems of the industry supports the view that control through a representative association may provide great advantages and help also in obtaining from Government the badly needed facilities for the training of the superior personnel of hosiery factories. In this connection Mr. Gupta rightly draws attention to the limited progress made by the manufacturers of woollen hosiery in Bengal though Calcutta alone imports in a year over Rs. 6 lakhs worth of hosiery. The Punjab has a special training institute at Ludhiana, and the author mentions that locally made knitting machines have been tried out with success. Summing up prospects, Mr. Gupta notes that Japanese competition is not a serious danger and organisation *plus* rationalisation, both aiming at the restraint of excessive competition, will more than enable the industry to hold its own. That is a conclusion acceptable on every ground, and the first signs of a general appreciation of where the true interests lie have been already noticed by Mr. Gupta whose bulletin will remain not only a model for similar investigations but will remain the most important source of information relating to an efficient and well-organised cottage industry.

Indian Insurance Progress

The Insurance Year Book 1939, prepared by the Superintendent of Insurance, not the Government actuary this time, however retains the old form since the amended Act had not come into force and the figures published relate mostly to 1938. The comments are of little interest compared with the gross totals which alone can help us to judge the progress made by insurance companies. The total new life business for 1938 of Indian companies was 296,000 policies assuring in the aggregate a sum of Rs. 43.3 crores on a total of 322,000 policies assuring a total of Rs. 51.7 crores. The premium addition for the year secured by Indian companies is Rs. 228 lakhs; by all companies Rs. 271 lakhs. This figure is as important as the total premium revenue to judge what contribution insurance makes to the growth of savings in India. Total premiums for the year amounted to Rs. 11.49 crores against Rs. 9.81 crores though the number of companies covered had risen from 180 to 186 only: it shows that business expanded at more than the normal pace. Assuming that claims, surrenders and expenses of management do not come under savings, it may be inferred that premiums plus interest and other receipts of insurance companies provide an addition of Rs. 6 crores to the net annual savings of the nation. This of course exceeds the figure of Rs. 5.44 crores shown as the increase under the Life Funds of Indian companies in 1938. This total is the highest ever recorded but it shows that the actual increase over the years 1929-38 when Funds have risen from Rs. 18.73 to Rs. 50.56 crores is very small compared with the contemporaneous rise under Bank Deposits. The increase of just under Rs. 32 crores under the funds is, however, no true measure of the progress as the total business in force has risen from Rs. 82 crores to Rs. 219 crores.

Over 81 per cent. of the income of companies was derived from premiums. Investment receipts amounted to 17 per cent. of the total but the rate of return on the Funds was 5.15 per cent. on the average suggesting that the investment income of Indian companies held up very well in spite of cheap money. The rate earned was the highest for the 5 years between 1934 and 1938 and probably marks the beginning of a downward phase. The new Insurance Act with its restrictive clauses should have lowered the yield on the Funds.

Another means of ascertaining the income and funds of the life offices is to look at the actuarial valuations. The Year Book records that the total funds of the companies reporting amounted to Rs. 42½ crores and the annual premium income was Rs. 9¼ crores. In the case of as many as 34 companies there was no surplus disclosed after the actuarial valuation. But not all young offices are handicapped by a deficit and the report bears witness to the beginning of an amalgamation process that may have far-reaching and wholly beneficial results. The usual analysis of the gross total of investments is one more way of judging both the progress and policy of Indian insurance companies. Out of a total of Rs. 61.62 crores over Rs. 32.19 crores were invested in Indian government securities while Rs. 68 lakhs had gone into British, colonial and foreign government securities. It is not, however, known how much of the giltedged was in sterling securities and what was the proportion in rupee securities. The statement furnished in the Year Book indicates that policy loans rank after government securities in the total of assets. The summary table is more than reassuring since it shows that mortgages account for only Rs. 2.04 crores and shares in Indian companies take up only Rs. 4.38 crores. It is obvious that the greater part of this must be in prior charges. But the foreign companies have a big stake in the insurance field and the total assets of non-Indian companies amounted to over Rs. 49½ crores. The bulk of this belonged to British companies whose Indian assets are lumped together. As is well known the majority of British offices concentrate on general insurance where the Indian share is less than a third of the net premium revenue of Rs. 282 lakhs for the year 1938. British companies continued to get the lion's share of the fire and marine business though Indian companies transacting a substantial amount of fire and marine business with oversea branches recorded fairly even progress and obtained Rs. 78 lakhs from business outside India.

P. and T. Revenue Up.

The annual report of the Director-General of Posts and Telegraphs on the working of his department shows clearly that the Indian Post Office's activities have suffered little on account of the war. The complaints made in Britain about the delays and slackness of postal officials there can have no application in India where the Department has prepared carefully for wartime conditions. The increase of business due to the war was accompanied by a reduction of oversea services. Nevertheless, the outstanding feature of the war period was an increase in telegraph traffic. The number of telegrams booked last year was about 18.6 millions showing a pronounced increase on the total for 1938-39. The further development of the telephone lines, with seven new exchanges and thirteen trunk circuits, belongs to the year ended March 1940 though some of the work connected with the provision of additional carriers on the Delhi-Calcutta and Bombay-Karachi routes has been delayed by the war. The financial side of the year's operations calls for more than ordinary attention. Total receipts from the Post office exceeded Rs. 831.8 lakhs as compared with Rs. 812.73 lakhs in 1938-39 and against a total expenditure of Rs. 778.1 lakhs. The surplus of Rs. 53.67 lakhs contributes directly to the largest surplus ever realised by the Department. The outstanding improvement in the financial results is independent of any increase in charges, and was achieved in spite of the delays and restrictions arising from the imposition of censorship, the suspension of the Empire air mail schemes and the considerable withdrawal of savings bank balances, the net total showing a fall of over Rs. 3½ crores on the previous year.

Even more striking than the growth of postal revenue is the narrowness of the deficit on the telegraph side. The total receipts of Rs. 283.4 lakhs are only slightly lower than the annual expenditure of Rs. 283.43 lakhs. The difference is only Rs. 2,281 so that it may be justly claimed by the present Indian Director-General that in his time the telegraph department is almost self-supporting. The steady rise in telephone revenue continues to be a feature of every annual report. The telephone branch alone provides a surplus of over Rs. 35.45 lakhs to the annual profit of Rs. 89.59 lakhs for 1939-40 returned by the Department. Interesting cartograms are furnished to illustrate the financial side of the departments working. The handsome surplus, the highest ever shown, proves that the Post Office is neither a public service nor a commercial establishment. It is one of the revenue departments of the Government as Jevons emphasised long ago. Compared with the surplus of Rs. 18.98 lakhs for 1938-39 the increase in that for 1939-40 is bound to stand out. The total revenue for 1939-40 stands at over Rs. 12.48 crores as compared with Rs. 10.55 crores in 1932-33 when surcharges were in operation and Aden and Burma formed part of India. The great strengthening of the revenue in recent years cannot be due to the telephone development alone. It may also be recalled that at least for six years the Department showed a loss of over half a crore, and the real benefits of economies were obviously obtained only after 1937-38, though a surplus was shown in the year 1933-34, owing to the fact that a salary cut was in force and the full contribution to the Depreciation Fund was not made. The report analyses the remarkable improvement in revenue from all aspects and concludes 'that the Department has not only been able to liquidate completely all the heavy losses which had accumulated since 1927-28 but has been able to carry forward a surplus of about Rs. 82 lakhs.' Certain graphs are appended to illustrate the financial results between 1925 and 1940 of the several branches and the Department as a whole. An interesting departure is the attempt to compare the growth of revenue with those from State Railways and customs duties. Though no definite conclusions are available, the data may give an indication of the probable growth of revenue or traffic. The proportion of working expenses in the P. & T. Sections to total outlay may appear high, but it must be remembered that nearly 66 per cent. of the receipts is absorbed by pay and pension charges. The interest on capital outlay last year accounted for Rs. 73.67 lakhs nearly as the Department held fixed assets worth over Rs. 17.19 crores at the end of March 1940. Progress made by the several branches may be gauged by the increase of 436 in the total number of post offices during the year, owing to the steady growth of postal traffic, mainly letters, noticed since 1933-34.

Netherlands Trading Society

The vast colonial empire of Holland is now in active alliance with the British Commonwealth. The Netherlands Trading Society has long been among the most important of Dutch banks now necessarily based on Batavia. Caution and stability have so long been a distinctive feature of all branches of Dutch business that compliments to Dutch banking will appear superfluous. The balance-sheet of the Society as at the end of October appearing in this issue, however, merits special attention as illustrating certain aspects of the mixed type of banking favoured in Europe and elsewhere for very sound reasons. The rupee equivalents of the gross totals will assuredly indicate that, with the possible exception of the Imperial Bank, no banking institution in India possesses anything like the immense resources, the inherent adaptability or the trained judgment associated with the Dutch banking system. Former and prospective clients of the Society, which has been among the principal financing agencies of India's foreign trade, will note with interest the high degree of liquidity implied by a cash ratio of over 30 per cent. The enormous deposits indicate that the Nazi occupation of Holland has made no difference to the customers who can count on the usual safety (implied by a higher cash ratio) and service. The capital and reserves alone total 4 million guilders equal to over Rs. 6,99 lakhs. The Society's readiness to promote foreign trade may be inferred from the high proportion of bills receivable among the assets shown in the latest balance-sheet. The substantial character of Bankers' balances reflects in the same measure the extensive nature and high character of the Society's connections. The reduced proportion of Advances is presumably a temporary phenomenon, and it may be justifiably pointed out that the reduced profitability of banking confers extra distinction on the balance-sheet which warrants complete faith in the remarkable immunity of Dutch Indian banks to the shocks of war in Europe.

Popularising Tea

At the last meeting of the Indian Tea Market Expansion Board, a decision was reached as regards urban propaganda by means of advertisement on match boxes. Previous experience favoured the extension of this type of publicity to six new towns, *viz.*, Allahabad, Lucknow, Patna, Nagpur, Jubbulpore and Trichinopoly. A more important decision relates to the inauguration of a tea popularity campaign in schools. Though the actual start of the campaign may be delayed slightly and the experiment in its initial stage will be confined to the High Schools of Dacca and municipal primary schools of Bangalore, it should show valuable results as the teaching of the young to drink tea should convince their parents that tea is the best and cheapest drink. The scheme provides for the distribution of free tea to all students and for arrangements for educative talks by teachers on various aspects of tea and for the supply of information to students. Lantern slides, films and prize contests will play a part in the new campaign which will be in charge of two specially selected officers. The report of the meeting draws attention to the draft provisions of the Bengal Pure Food Bill, promoted by the Ministry. The clauses contain fairly stringent penalties for the adulteration of tea. The Board, like the Indian Tea Association, has welcomed the Bill which seeks to provide effective administration and defines in detail the conditions under which the sale of adulterated tea might be permitted.

Aluminium Imports

The wartime importance of aluminium is clearly revealed by a recent notification announcing the Government's decision to restrict imports of aluminium in all forms from all countries including the U. K. The purupose is to see that Indian demand does not trench on the supplies available in Britain for the aircraft industry. The British Government has bought up the production in Britain and Canada well ahead. The drastic reduction of imports is intended to prevent India taking for civilian consumption a vital war material. The coming into production of an Indian aluminium reduction plant at the end of this year will have added importance, in view of the cancellation of open general licenses previously available to importers.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It.)

THE man-in-the-street at the present time thinks more of science as such than even the specialist scientists of earlier days. When I see the prominence given in the press to the proceedings of the Indian Science Congress, I am struck by the paradoxical nature of our interest in science. As a race, Indians are easily the most unscientific-minded. There are, no doubt, a few Indians who have a prominent place among the world's leading scientists. But of the scientific outlook and of the scientific mind, the people have none. Nor have we much of applied science in our daily life. Some of the best minds in the country are not merely sceptical of the value of science, but would have a minimum of it both in our mental and in our material life. And all of a sudden, within a few years almost, there is a sort of mass suggestion that we must have more of scientific research, more of that strenuous application of science to practical problems which has made other nations wealthy, though hardly wise, and more of even that disinterested and ostentatiously inutilitarian pursuit of scientific truth, which India has not cared for and which in the present state of the country is clearly a luxury.

This revolution in outlook should be far more significant than the political, economic and social revolutions which a few self-important individuals imagine they are achieving and which, the wishful vision of some suggests, are actually in progress. Where does this new found interest in science originate? The speech of Sir Ardeshir Dalal at the Indian Science Congress and the frantic efforts that are being made to force the pace of India's industrialisation suggest that it is part of our economic renascence. Turn to some of the papers read at the Conference, and you would think that the source is to be found in the aspirations of Indian scientists, who have been encouraged by the successes so far achieved to strive for more and more honours. In either case, science would seem to be the interest of the upper classes. The industrialists are after more money, the scientists after more honours. Isn't this interest, then, a phenomenon of restricted, if not significant, scope? I am reluctant to believe that the scope is so restricted. Interest in science, like any other cultural interest, has to percolate from the classes to the masses; and the process of taking culture to the doorstep of the average man is, whether you like it or not, an economic activity. The spiritualist may turn up his nose at science. The scientist may treat with disdain the attempts of lesser breeds to prostitute his discoveries to other ends. The average man, too,—if you begin from the other end—may not care for science or scientific truths, or culture, or things of the spirit. But economic progress necessarily holds within itself the seeds of political and cultural democracy which neither dictatorship nor snobbery can effectively sterilise. The things of the mind, the things of the spirit, which not long ago were the special possession of the few are now being passed on to one and all by cheap print—I mean cheap, without its snobbish association—and cheaper schooling.

Science, in the ordinary sense of the word, is to-day an entity in every household; one might even say it is part of the domestic furniture. Hardly anyone feels the painful bewilderment which the rustics of a century ago felt at the sight of the railway engine. Millions of homes are equipped with electricity; the radio is a common sight; the factory hand handles complicated machinery; even the Indian cultivator uses electric power on his farm. Every home is suffused with science through the amenities which the application of science renders possible, while at the same time printing, whether in the form of books or of journals, supplements it with culture. Both science and culture, in the form in which they are available for the average man, may be of the crudest kind. But once the raw material is there, one need not despair of the process of refining it.

Our trouble in India is that even of this crude raw material, we have an insufficient quantity. When I said that every home is suffused with science, I was indulging in an obvious exaggeration. I was thinking of the cities; and even in the cities, I overlooked the *bustis*. Of the seven lakhs of Indian villages only a microscopic minority can claim to have electric lighting. Quantitatively, Indian science is woefully inadequate. Of quality, I own I am hardly competent to speak. I know there are Indians who are as tall as any in the world of science. But that of itself means nothing. One swallow does not make a summer. And if you contrive somehow to get a number of swallows, not only will the season remain unchanged, but the swallows will die out in no time. It is the mental climate of organised science, and not freakish genius for research, that matters.

TELEPHONES: CAL. 2645, 1273, 5387

Science in India, even like culture in this country, has a notably uneven quality. In the realms of science as well as of culture, we have the rarefied heights of Everest, healthy hill stations and insanitary marshes of the lowlands, dreary deserts and every variety of natural resource and of attainment. We have brilliant scientists, who are growing in number. We have small groups of scientific workers scattered in laboratories and institutes in various corners of the country. We have factories and workshops engaged in the most up-to-date and highly scientific technique of production. But over the country as a whole, there is primitive ignorance, anti-diluvian methods and utter lack of will to progress. What is true of science is also true of our cultural progress. It is not national vanity that often prompts a sense of cultural superiority in the educated Indian. Our sense of values is keener, more rational and less coloured by passing conventions than that of other races. But "we" do not represent the whole nation, which is too deeply steeped in poverty and ignorance to be conscious of cultural values. Culture, whatever cultured individuals may believe or like to believe, is what intelligence rears on the foundations of science and material comfort. If poverty and ignorance are the foes of culture, then, by the same token, are wealth and knowledge the best contributories to culture. And it is to science that man has to look for wealth, not less than for knowledge.

Is India, then, looking into the well of science alike for prosperity and for wisdom? I prefer to think so, till some untoward event forces on me a cruel disillusionment. But I can find reasons for this preference which can invest it with meaning. To-day India is experimenting —I shall say experimenting, for want of a term nearer to what I have in mind—in two different spheres. These two spheres are even mutually opposed for the present, though there is probably a satisfactory synthesis which will be revealed to us in the fulness of time. But it is this contradictory character of these two movements which suggests that, when the time comes, India will derive from science, not merely the knowledge which other nations have gained to their detriment, and the wealth that is indistinguishable from illth, but true wisdom and well-being.

But I am anticipating the later stages of this line of thought. When I referred to two experiments, I referred firstly, to the nationalist movement under the leadership of Mahatma Gandhi and secondly, to that progress in industry and science which is being achieved, despite a thousand and one obstacles, at the present time. Behind the former, despite all its imperfections, its unpractical ideology, its abstruse methods and its oversight of basic facts of life, lie the deepest yearnings, of the Indian nation. The essence of Gandhism lies in the absolute denial of the reality of polities and economics as the modern world understands them.

But Gandhism is the true incarnation of our ancient culture and signifies India's insistence that the values which that culture held high shall not be sacrificed for political power or economic prosperity. Gandhism adopts political and economic policies to suit the supposed requirements of that culture and is, therefore, at variance with the policies that are in vogue in the rest of the world. At the same time, the country is experiencing the exhilaration of an incipient industrial revolution which is progressing under the stress of the war and the aspirations of certain classes of industrialists and scientists. In a superficial view, these two movements are opposed to each other. The industrialist wants complete industrialism, while the Congress is scared at the thought of it. The scientist is keen on more research, while traditional Indian spiritualism, of which, too, Gandhiji is representative, scorns science.

But is science an enemy of the Spirit? Sir Radhakrishnan in his welcome address to the Science Congress spoke of linking science to the spirit? But is not the link inherent in science and in its capacity to minister alike to the mind and the body? Modern industrialism and modern warfare are, no doubt, the most tangible results of the progress of scientific knowledge. But they are not the only possible fruits of science. Chemistry and physics cover but a part of its vast domain. Man himself accounts for the larger part of it; and science is tackling but slowly its task of wresting from Nature the secrets pertaining to Man as an individual and as a community. The sciences that have a bearing on the ordering of man's social existence are still in the earliest stages. And for me, at any rate, it is not a vain hope that when they develop, the beneficence of science will be as prominent as its soulless malignancy is to-day.

The Science Congress gives ample evidence that Indian scientists are not all after the Nobel Prize for Physics or Chemistry but are working patiently on many subjects of unquestionable social usefulness. And we have need for such. For, ours is a country in which no large social problem can be tackled without more complete understanding of the natural laws governing such aspects of life. Whether it is nutrition, or birth control or public health, or the psychology of political schism, we have far more need for scientific knowledge than what can be claimed by the more fortunate peoples of the globe.

For the present, however, India can ill afford to despise the first fruits of scientific progress, material prosperity and military security. I have said that behind this new found interest in science, there is the vague feeling shared by one and all that, for a country so distraught as India and so ill-served by its lore of ancient spiritualism, science may have unsuspected gifts in store. But, in the words of Sir Anthony Absolute, if you want the estate, you must take it with the livestock on it. You cannot cultivate science without getting industrialism and armament as its first sheaves. And there is no reason why you should hate either; for, the former creates material prosperity and the latter the freedom to realise the soul of the nation.

The time is come when India can, and should, knock at the door of science for both prosperity and security. The political situation makes security an immediate and imperative need. The evolution of our national economy thrusts on us the problems which we would fain shirk. The development of our industries, their disabilities and shortcomings make further delay in industrial organisation impossible. Meantime, the scientist is starved of resources. He knows that without the help of industry no considerable progress in research can be made. There is an inevitable give-and-take between science and industry which brings them together and sets a leading industrialist like Sir Ardeshir Dalal in the chair of the Indian Science Congress. Sir Ardeshir was a civilian. He is a non-technical administrator of by far the biggest industrial concern in the country. He is a cultured individual with a wide outlook and a keen appreciation of the needs of the nation, material as well as cultural. As an industrialist, he knows the sins of omission of which industry is guilty. And he is necessarily conscious of the shortcomings of official policy. Sir Ardeshir's address naturally covers the whole range of issues concerning the relation of science to industry. The failure of Government to provide the same stimulus to industries as in Australia and other Dominions comes in for due censure. Nor does Sir Ardeshir omit to remind the Government of its breach of faith to the industries which came into being in the last war. At the same time, he is free from the desire to extenuate industry and is ready to stress the fact that industry to-day needs research, not only for progress, but even for survival. Indian Science has had another impressive exhortation from a representative of the Tatas, who more than any other factor in our national life gave the biggest fillip to industrial research in the country. And Science, I am sure, will respond. "EAVESDROPPER"

EASTERN GROUP-SLEEPER CONTROL

Tender No. 100 40-41

Sealed tenders are invited and will be opened at 3 p.m. (Calcutta time) on the 24th January, 1941 for the supply of 2,00,000 (Two lakhs) metre gauge (6" × 8" × 4½") standard track sawn first or second class sal sleepers. "ASK JACKS ABOUT IT"

Olympus

For Protection of
Exteriors of Buildings
ARMOURCOAT
"ASK JACKS ABOUT IT"

New Delhi, January 8.

THE New Year has opened sadly for the Government of India's Secretariat. Two high officials who were both personally popular in social circles lost their lives in an air disaster within just two miles of the Secretariat buildings. Mr. Rhodes, Joint Secretary of the Home Department, and Lt. Col. Walker, an officer on special duty in connection with A.R.P. arrangements for India were to proceed that morning on an official inspection tour to Karachi, but within a few minutes of their departure the plane carrying them crashed killing both the passengers and the pilot. Mr. Rhodes who is an Assam Civilian, has done good work in the Reforms Office as Joint Secretary. It was only recently that he came back to the Government of India first as Establishment Officer and then as Joint Secretary of the Home Department. For some time there have been reports that he might be selected as Reforms Commissioner in succession to Sir Hawthorne Lewis who is leaving at the end of this month on leave prior to his taking up the Governorship of Orissa. Air travel is both convenient and cheap for the officials of the Government of India who have to make extensive tours, and have to economise time as much as possible, but this accident, the exact cause of which is still a mystery, is likely to discourage the habit of air travel.

* * *

No light is yet available on any possible move to reconstruct the Government of India. There have been increasing demands from many sides during the last few days for a move forward—pressure from influential critics in England like Mr. Edward Thompson who is advocating National Governments both at the Centre and in the Provinces, pressure from non-official Europeans in India like Mr. Arthur Moore who want India to be declared a Dominion at once, and pressure from various political groups in India as was to be seen from the resolutions of Christmas conferences. Official circles in New Delhi are as usual observing discreet silence on these constitutional questions, but this very silence is regarded in some circles as showing that something is impending in the near future. It is extremely difficult at this stage to foresee when or in what form the move will be taken. It is believed, though on what authority the belief is based one is not in a position to say, that the whole Indian situation is being reviewed by Whitehall in the light of the latest reports from India on recent political developments. As soon as the Viceroy returns from his tour, there may be some indication to show whether the present policy of inaction is intended to be continued or some forward step however small may be expected.

* * *

One question which has been prominently raised in the course of political discussions in New Delhi is whether it is not possible, without waiting for any political settlement, to decrease the official and European element in the Viceroy's Executive Council—as a small gesture in response to the demands of political India. Why should there be four official members in a council of six when according to the Government of India Act the minimum required is only three? Why should there be three European members in a council of six when there is no stipulation at all about racial percentages in the Government of India Act? These and other questions are being asked in connection with any possible reconstruction of the Viceroy's Cabinet for the purpose of deofficialising and popularising its personnel. There have been particularly three important suggestions made in this regard. One is that the time has come to entrust the Finance portfolio to some prominent Indian non-official who commands respect and confidence in the country. The second is that as there is nothing in the Government of India Act to prevent the appointment of an Indian as Defence Member this long overdue reform should immediately be undertaken for giving a new orientation and speeding up the policy of national defence. And the third is that a prominent industrialist should be appointed to the Viceroy's Cabinet to help the Government of India in promoting a policy of rapid industrialisation. These, it is said, can be done without any difficulty as initial reforms to add some strength to the Government of India in its new tasks for coping with the war emergency whatever may be the chances of political settlement with the major parties in the country.

The difficulty now-a-days of obtaining aeroplanes for civil purposes has evidently stood in the way of giving effect to the Government of India's aviation training scheme. The scheme, which was announced early in the autumn last year, provides for the training of 300 pilots and 2,000 airmen mechanics for their ultimate absorption into the Indian Air Force. The existing civil flying clubs in the country, numbering ten, have undertaken the task of pilot training, for which purpose the clubs have been specially equipped and separate instructors have been appointed. As regards the training of mechanics, arrangements have been made with technical institutes in various cities of India. A start is reported to have been already made in the New Year in the training of mechanics, about 600 of whom are being sent to different parts of India to be attached to the technical institutes selected for the purpose. Over a hundred candidates are reported to have been selected for training as pilots who will be detailed in batches of ten or more to the different flying clubs in the course of a week. The number of probationer pilots and mechanics comprising the first instalment has been in conformity with the existing capacity in the country for providing such training. It is to be hoped that the facilities, particularly for the training of mechanics, will be extended by adding to the number and equipment of technical institutes, so that when the turn comes for sending the next batch of apprentices which is due in March, a greater number of pupils than 300 may be admitted to technical institutes. It is encouraging to note that a new technical school with this object in view is being formed in Benares. The Government of India as well as the Provincial Governments will be well-advised to take steps for the formation of more such schools and for the reorganisation of schools which are inadequately equipped.

Gateway of India

(From Our Correspondent)

Bombay, January 8, 1941.

THE Princes' representatives, who asked for fuller information not long ago as to the ways in which the States could co-operate in India's war effort, have quite recently arranged a meeting to discuss the means of implementing the decisions reached earlier. The Committee of Ministers who met last week with Sir Akbar Hydari as Chairman took up the question of war supplies to be made available in the States. It will be recalled that Hyderabad and other States have set up special departments to work together with the supply organisation of the Government of India. That is one main reason to regard the industrial outlook as quite fair. It is believed that the committee has indicated readiness to act vigorously in concert, and the assistance hitherto afforded should increase considerably since the Governments of the States have an industrial bias that is of special value to local enterprises. A statement issued from Mysore recently indicated that wartime industrial expansion was a notable feature of the past year.

The establishment of a Consulate for China in place of the Vice-consul's office was a measure sanctioned last April but given effect to only last week when the new Consul arrived from Fiji. The previous Vice-consul has been transferred to Fiji. The decision to raise the status is due to the commercial importance of Bombay, according to Mr. C. T. Tsiang the new Consul. He expressed the hope that trade with China woud show some improvement. He was certainly prepared to study the situation carefully. He explained that Free China was holding her own in many ways and the financial position was not prejudiced by the launching of a campaign in the south by the Japanese forces. He added that China was getting stronger and there was no reason to despair about the military or the economic outlook. Mr. Tsiang arrived by the American liner *President Jackson.* The vessel is one of the fast new vessels placed on the Eastern run and this is her maiden voyage. With a speed of 20 knots she does the trip to Bombay from New York in 29 days instead of the 37 days taken by most vessels.

The new President of the Bombay Chamber of Commerce is Mr. J. M. B. Gibbons of Wallace & Co. He succeeds to the office after having been Vice-President in the past year. Mr. Gibbons, after going down from Oxford joined the Bombay-Burmah Trading Corporation and came to Bombay in 1934. He is a partner in Wallace and has been of late Chairman of the Bombay-Burmah Trading Corporation, long prominent in both the timber and planting industries. He is a director of several companies and is the Honorary Consul for Thailand in Bombay at present. His election has been well received, and it is expected that Mr. Gibbons will fulfil many important functions that devolve in wartime on the principal representatives of commercial organisations who have been told that exploration of new markets, of answering trade enquiries and drumming for custom are not the business of Government but of businessmen.

Bombay has noted with interest the progress of the scheme designed to let flying clubs make their own contribution to the Indian Air Force. The troubles noted last year have not in any way affected the efficiency of the Bombay Flying Club. The arrival of new aircraft is calculated to give a further impetus to the scheme for training pilots. It is known that more than eight clubs have helped to give the necessary training to the additional pilots needed in wartime.

Apart from the additional facilities provided for training for Indian aviators. Bombay is greatly impressed by the efforts made to secure and ship supplies. Large arms shipments to Egypt explain in some measure the victory over Graziani which has resulted in the arrival of numerous Italian prisoners of war. The Eastern Group had apparently begun to get together and work together before the Conference was arranged. It is learnt that a new agreement has been reached with reference to the shipment of supplies to the Middle and Far East. This agreement has been made in order to relieve the pressure on British sources of warlike supplies. This agreement will not affect India's own output from the ordnance factories and interfere with the defence expansion programme to which the Government is committed.

The Honours list issued last week is distinctly pleasing to Bombay which finds that prince and commoner alike are honoured. The high title bestowed on the Gaekwar is a reminder that the young prince is the successor of the most prominent member of the princely order. The current joke about Linlithwaite finds support in the K. C. I. E. given to the Viceroy's Private Secretary. Major General Bradfield (recently retired from the I.M.S.) who was in Bombay as Surgeon-General before becoming Director-General of the Service finds a high place. Mr. Justice Broomfield is among the Knights of 1941 and his record as a District Judge and High Court Judge will be remembered long by all classes of people when the report on railway accidents is forgotten. Business circles consider that the titles bestowed on Sir Homi Mehta and Mr. S. D. Saklatwalla are amply merited. The latter represents the mill industry in the Bombay Assembly, and as a Director of Tata Sons and as guardian of the Tata Trust Funds, has made his mark in many branches of puplic life. Mr. A. G. Gray Manager of the Bank of India, who has been Sheriff of the City quite recently, is among the Knights. The Governing Director of Greaves, Cotton, prominent in the field of electricity and textile appliances alike, is among the C. B. E.'s in the list while Mr. Trollip of the B. E. S. T. gets a C.I.E. His work for safety in industrial establishments and on the highways finds well-merited recognition. Mr. Greaves of Greaves Cotton has been prominent like Mr. Trollip as a worker for good causes. Another energetic practising philanthropist who finds a place in the Honours list is Lady Lumley who is the recipient of a Kaiser-i-Hind Gold Medal.

The Far Eastern outlook alone is enough to comprise all prospect of recovery in the cotton market. There may be a tight spot situation in New Orleans but hectic selling from Bombay cannot be suppressed. There are apparently plenty of rumours to keep down prices, and indignant letter-writers ask in the press why nothing is done to put down the scaremonger. The blighting effect of rumours can be seen in the steady drop in prices. The absence of support is not surprising at all. If Alexandria has recovered quickly after the series of victories won by the army of the Middle East there is nothing to cheer Bombay up. The psychological deterioration alone is enough to rule out the possibility of improvement, and nothing that can be offered by way of comfort by the Export Advisory Council can or will help. Short selling has not been eradicated by the introduction of new procedure in the market, and the contrast between January, 1940 and the present month is driven home by the fact that the stock market, too, is unable to rally after a bearish spell. As everybody here realises, the mill industry can do nothing to alleviate the cotton-growers' difficulty, and the Bombay Government will not embark on a policy of drastic crop restriction.

Jute and Jute Manufactures

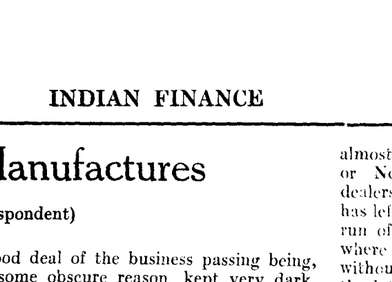
(From Our Jute Correspondent)

Calcutta, Jan. 8.

THE Mill Stock figures for December just issued show a pretty satisfactory position. Hessian stocks show a superficial reduction of 95 lakhs yards, but when increased Sandbag stocks are taken into consideration, the actual reduction of commercial hessian cloth amounts to 179 lakhs yards. Another interesting feature is that stocks of 8 oz./40 cloth, which not so long ago hung like the sword of Damocles over the market, now amount to no more than 869 lakhs yards, a further reduction of nearly one and a half crores during the past month. This factor no longer constitutes the menace it once did and the ban on its manufacture will doubtless shortly be lifted. For this is a description largely used in the U.S.A., and it would be impolitic to let stocks run too short for requirements from that important market. Heavy Goods stocks show a very small increase of 14 lakhs of yards, which considering the dull conditions which have been prevailing in this section of the market for some time past, must be considered quite satisfactory.

On the strength of these stock statistics it is understood that the Mills Committee have recommended that Mills should work the full month during February, that is that the "week off" will be discontinued for that month. At the same time the Committee recommend that Mills should close for a week during March. This recommendation is no doubt intended to prevent any undue depression in the market due to the temporary suspension of the "week off" working. And as the Bye-Laws require that a month's notice be given of any curtailment of production, no such long notice need be given of extension of working. So that, if circumstances justified such a decision, Mills could still be instructed to work the full month in March.

The expectations of the Bank in regard to fresh Government Orders could scarcely have been fulfilled by the issue, a few days ago, of an order for 26 million Sandbags at the same price as before, for February/March shipment. Boiled down, this order only represents one full day's production for the Calcutta Mills, or in terms of hessian, approximately 8 days' production, spread over two months. Not a severe tax on Mills' capacity, so it constituted no fillip to the market. In terms of jute, it represents a consumption of not much over 36,000 Bales.



The greater activity in the Jute market as a result of the new Purchasing policy of the Mills is reflected in the Jute arrival figures for the month of December which are estimated to amount to 9,48,000 bales as compared with 12,78,000 bales during December 1939. For the first half of the Jute season, July to December, the total arrivals are estimated at 45,18,000 Bales as compared with 76,10,000 Bales during the first half of the 1939-40 season. But if Crop estimates are even approximately correct, this means that scarcely more than one-third of the 1940-41 crop has come to hand in the first, and normally busiest, half of the season.

It is difficult to get accurate figures of Mill purchases under the new agreement and estimates vary rather widely owing to a good deal of the business passing being, for some obscure reason, kept very dark. Buyers might have been expected to be looking for credit for doing their bit towards implementing their share of the quota. It may be taken as approximately correct however that up to date some 10 lakhs of bales have been purchased, and as there are still several days to go, if buyers keep in the market, the total purchases up to the 15th January should not be far short of the quota. In any case it is extremely unlikely that, even if Mill purchases fall somewhat short, Government will immediately come into the market as buyers. Prices are being well maintained, and in the mofussil markets, have in most cases been marked up. So that the object of the Government, to secure good prices for the cultivator, appears to have been attained. This does not of course apply to low quality jute, which remains a drug on the market and which Mills are refraining from buying as it does not count towards the quota. European Dealers, with their facilities for selling "half Jat, half District" have been scoring under the recent purchases, for Mills have held back almost entirely from buying any District or Northern Bengal jute from Indian dealers, with the exception of Tossa. This has left the Europeans with the almost free run of the District and Northern markets where they have been able to operate without competition from Indian dealers, the latter in many cases being glad to sell their stocks to the Europeans as they were unable to secure a market for them in Calcutta.

The December Bulletin of the Indian Central Jute Committee contains not a few warnings to any who still cherish the idea that the world can still be held up to ransom for their supplies of Jute Goods on account of India's monopoly in the fibre. Linoleum manufacturers have been consuming in late years something like 50,000 tons of Jute materials yearly. Now experiments are being made with packings of paper and cotton in place of jute. In the Dutch Indies, some 25 per cent. of the Islands' requirements of bags are now being produced locally from locally grown Rosella fibre, replacing that quantity of previously imported Jute bags. In Australia, bulk handling of wheat has enormously increased in the past 10 years at the expense of bag handling and the former system is likely to go on increasing, though it is not suggested that bags will ever be altogether supplanted.

JUTE

By our staff correspondent.

Calcutta, January 8.

THE raw jute market has been absolutely uninteresting. In the absence of any large business, quotations have been fluctuating in narrow limits. Earlier in the week a slightly firmer tendency was noticeable on receipt of the order for sandbags, but the continued weakness of the jute manufactures market has not been quite helpful and the quotations came down to around Rs. 39. There are reports regarding further orders for sandbags but in view of the latest decision of the Indian Jute Mills Association regarding working for the next two months it is unlikely that there will be any new orders immediately or if, any, they will be big-sized. It was also expected that mills would buy their quota before 15th January, failing which the Government would make good the short-fall in purchases. However, it is now pointed out that neither the mills nor the Government will be obliged to complete the quota as at present mofussil prices are higher than Calcutta parity prices and that, as the desired objective has been reached, there will be no necessity for buying the agreed quota. But one important point has to be remembered in this connection. If the improvement in prices has been in expectation of mill buying for completing the quota, there would certainly be a recession in prices if it comes to be known that the Government will not act up to the agreement. The next week will, therefore, be interesting.

In the loose jute section sellers for low assortment have been pressing for business while those for higher grade jutes have been rather reserved. Indian District Tossa Middles and Bottoms 40/60 assortment sold at Rs. 7-12 and Rs. 6-4 per maund respectively.

In the pucca bales section not much of business has been reported. Shippers have not been quite active as overseas enquiry has been rather poor. Some business has been reported with mills. Dundee Daisee 2/3 being done at Rs. 34 per bale and Firsts 2/3 at Rs. 41 per bale, both for January shipment. N. C. sold at Rs. 16 to Rs. 17 per bale.

A level as high as Rs. 40-4 was touched in the futures market early in the week but on Tuesday there was a fall to Rs. 38-14. On reports of further orders for sandbags there has been a recovery to Rs. 39-10 at the time of writing. The undertone is quiet.

JUTE MANUFACTURES

Calcutta, January 8.

THE jute manufactures market has been very uninteresting. American enquiry had not been quite satisfactory. Mills continue to be eager sellers. The announcement of the new order for sandbags for 26 millions resulted in a mild rise in prices for 9 porters ready to Rs. 12-10, but when it was realised that the order was rather small-sized and much below market expectations there was a recession to Rs. 12-4. The revival of the reports regarding further orders has resulted in a recovery to Rs. 12-7 to-day. The decision to continue normal working in February and close down mills for production for one week in March may be said to have had a stimulating effect. 9 porters ready are quoting Rs. 12-7, February/March Rs. 12-7 and April/June Rs. 12-3. 11 porters ready are Rs. 16-5, February/March Rs. 15-15 and April/June Rs. 15-8.

The new order for 26 million sandbags is for delivery February/March at Rs. 10-8 per 100 bags f.o.r.

The local stock figures for December, 1940 are not quite encouraging. Hessian stocks were 21.93 crores yards against 22.89 crores yards at the end of November, 1940, or a decline of 96 lakhs yards. The decline in stocks for ordinary consumption is greater as there has been an increase in stock of sandbags by 84 lakhs yards. Sacking stocks at 13.40 crores yards show an increase of Rs. 15 lakhs yards over the figures for the previous month. The decline in sacking stocks on the former occasion was as much as 3.57 crores yards. The total decline in stocks at 64 lakhs yards compares very unfavourably with the figure for the previous month of 5.47 crores yards.

COTTON

Calcutta, January 8.

SENTIMENT in the Bombay raw cotton market still continues to be predominantly bearish. Straddle-buying and good trade enquiry have not been helpful to the market. It is generally feared that exports will be affected to a considerable extent owing to the difficulty in freight allotment. In spite of the estimates regarding a large crop and the possibility of a further decline in exports, the wide disparity between the values for American and Indian staples is not justifiable. And as the technical position of the market cannot be considered unsatisfactory, a recovery is overdue. Broach April/May are now quoting at Rs. 179-12, Bengal December/January at Rs. 126-4 and Oomra December/January at Rs. 15-12.

Overseas markets have been rather irregular. In Liverpool, closing quotations are below the last levels for the week, January being 8.21d. and March 8.28d. In New York, an easier tendency was noticeable in mid-week but the former levels have been regained. The spot position is tight and mills are buying cautiously. They are afraid that any forced buying would free loan cotton. March closed at 10.43 cents and May at 10.40 cents.

PIECEGOODS

Calcutta, January 8.

THE piecegoods market has been quietly steady. Despite the fact that a number of holidays has intervened since the time of last writing, there has been no change in sentiment. The offtake from the bazar to mofussil centres has been meagre but dealers have been rather active. With the reserve of sellers and the further increase in replacement costs dealers have been forced to enter into forward contracts for positions as far as June. The volume of business with indigenous mills would perhaps have been on a larger scale but for the reserve of mills. It is reported that recently, large war orders were placed with mills and that their order-books are in a very healthy state. In the Japanese goods section there has been a slight increase in ready rates. Owing to the difficulty in getting shipments and the higher replacement costs, business passing has been on a very small scale.

In the yarn market, South Indian spinners have sold small quantities of medium and coarse yarns at current market rates. It is reported that there has been a big increase in exports to China.

SILVER

Calcutta, January 8.

THE silver market also has been quite firm with some buying for the nearer positions. Speculative selling has been completely absorbed. Quotations in the London market are higher on balance, Indian Mint Silver ready being Rs. 62, First Settlement Rs. 61-15 and Second Settlement Rs. 61-15. In London, spot was quoted at 23⅜d and forward at 23 3/16d.

TEA

Teas with export rights.

Sale No. 26 was held on the 6th and 7th January 1941. Though this was the first sale after the holidays and contained a small quantity of offerings, there was a useful selection representative of all districts. There was a strong market for all grades and prices advanced by 6 to 9 ps. There was no selling below As. 14-6. Quality has appreciated and full prices were paid for all good liquoring teas.

Teas for consumption in India.

Unpolished green teas had a strong demand at advancing prices while polished ones met with ready sale. Dusts also had a good enquiry at rates fully firm to dearer prices. Other grades had a strong and active market; buyers appreciated better liquoring Assams which were ½ anna more. Fannings and curly Broken Pekoe Souchongs were particularly in demand.

Quota.

A fair business was done at As. 10-6 per lb. in export quota. At the close, in sympathy with the Export Tea Market, it rose to As. 10-9. Internal quota is steady at As. 1-6 per lb.

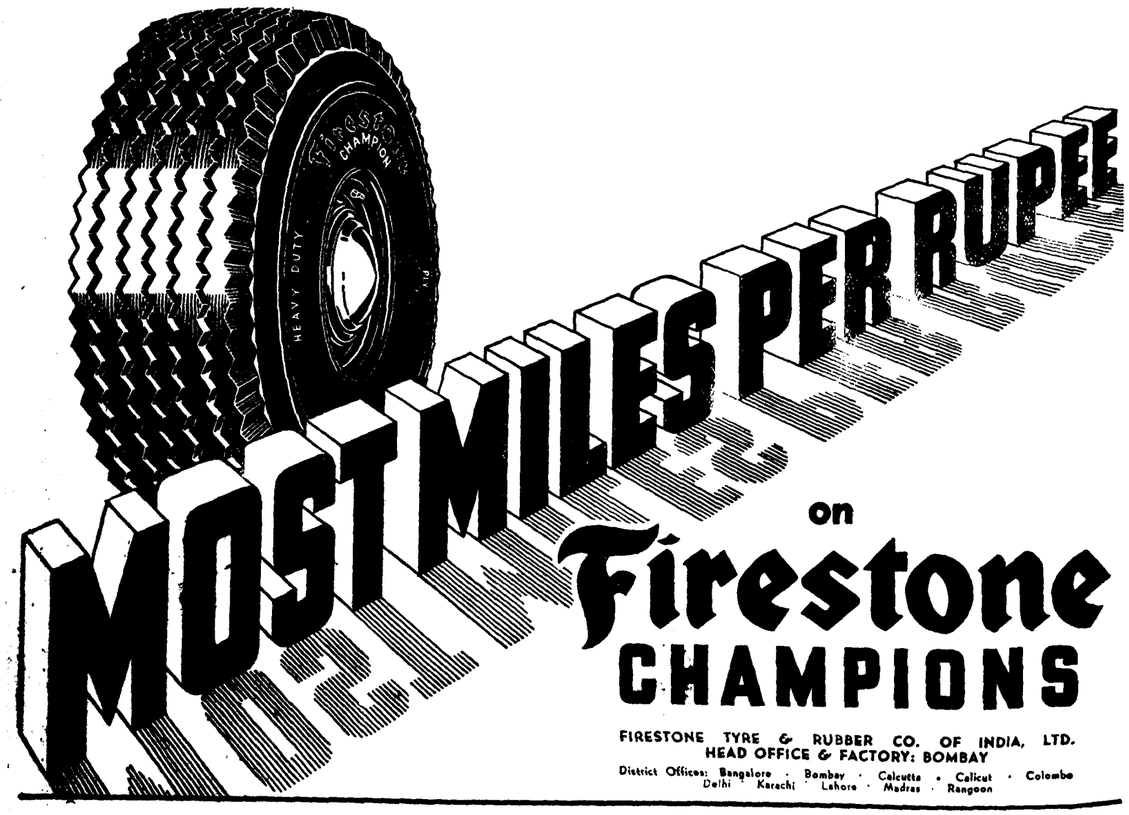
WHEAT

Calcutta, January 8.

THE Karachi wheat market has continued weak. Reports regarding favourable weather conditions in the U. S. and the Punjab, the absence of any large government buying for shipment to Egypt and the accumulation of unsold stocks at the ports have had a depressing effect on prices. There has been heavy selling and prices for old crop positions have been maintained only with difficulty. A further decline in quotations for new crop has been recorded. Choice White ready closed at Rs. 33-3-6, January at Rs. 33-1-6, March at Rs. 31-8-6 and July at Rs. 28-1-6. The quotations at the end of last week were Rs. 33-12, Rs. 33-8, Rs. 32-4-6 and Rs. 29-5 respectively.

In the Calcutta market, the decline in values has been more pronounced. The sharp fall in rates for flour and flour products has discouraged mill buying. Cawnpore and Punjab ready are now quoting at Rs. 4-8-6 and May at Rs. 4-2-6 against Rs. 4-11 and Rs. 4-5-6 respectively at the time of last writing.

MADRAS GROUNDNUTS



Madras, January 7, 1941.

THE market improved slowly but steadily during the week, and a somewhat better tone is evident after the holidays. It is reported that there were some purchases on account of the Ministry of Food, and locally Native buyers have also been active. Arrivals from the southern centres are quite good, but free arrivals have not yet begun in the Kondapuram area (Ceded districts). Shippers' buying limits opened on Tuesday last around Rs. 20-1 for Machined (Per candy of 531 lbs. ex-coast godowns), and improved to Rs. 20-4 and Rs. 20-8 on Friday and Saturday and to Rs. 20-6 and Rs. 20-8 at the close. Local buyers' limits opened on Tuesday last at Rs. 19-12 for Machined (Per candy of 531 lbs. ex-coast godowns) and advanced to Rs. 20 towards the latter part of the week. It is reported that Rangoon buyers were buying in Madras during the early part of the week. Groundnut oil prices opened steady, but declined as the week progressed. Towards the close, however, prices hardened due to good demand for shipment. Opening around Rs. 43 to Rs. 43-8 for "Chekku" quality and Rs. 46-8 to Rs. 47 for "Prodattur" quality on Tuesday last, prices eased to Rs. 42-8 and Rs. 46-8 respectively on Thursday and to Rs. 42 and Rs. 46 on Friday last. Prices, thereupon, improved to Rs. 43 and Rs. 47 respectively for "Chekku" and "Prodattur" qualities on Saturday, to Rs. 43-8 and Rs. 44 for "Chekku" and "Prodattur" yesterday, and to Rs. 45 and Rs. 45-8 for "Chekku" quality and Rs. 48 for "Prodattur" quality this morning for ready lots, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

Madras, January 7, 1941.

SOME interesting news has come through from London about the state of the Boot and Shoe trade. It is reported that a number of Shoe manufacturers have had orders cancelled which they had accepted for delivery before the Purchase Tax became operative, but this has caused them little concern in view of the quantity of other business they have on hand. It is felt in trade circles that business for civilian shoes must slow considerably in the immediate future on account of the new impost. Further, the advent of winter coupled with the fact that the public are being forced to walk more than is usual under normal conditions, is resulting in a better demand for the more solid types of footwear, and this is having the result of improving the call for types of leather usually in request at this season. There is growing confidence with regard to values and the problem at the moment is not so much one of paying the price, but of securing appropriate supplies. There is less anxiety on the part of those who hold stock to get rid of it, and more keenness on the part of buyers to replace current consumption and build up a reserve for future use while the market is in their favour. The local Tanned Cow market has been a shade easier by about ½d. per lb. during the week. Apart from some buying by Native operators, there has not been much doing locally. Last month's shipments amounted to 1,800 tons of Tanned Hides from Madras. Tanned Calf skins are easier, as also Buffs. Tanned Cow Calf has been done at as low a price as 29d. for Coasts. Tanned Buff Calf skins are lower at 19d. and 20d. Tanned Buffalo is quoting around 12½d. to 12¼d. Raw hide markets show signs of easing in up-country centres, although Calcutta and Karachi markets remain unyielding. It is reported from the latter market that the U.S.A. is buying the quality of hides sought after by the Madras tanner at competitive prices. Lahore Raw, Firsts, Seconds and Thirds are quoting at Rs. 46 per maund for 9 lb. averages.

Stock Markets to-day and to-morrow

TREND UNSETTLED : TAXATION FEARS

WITH the holiday feeling still in evidence, it is perhaps too early to take any definite view of the trend of stock exchange prices in the immediate future. But during the short period in which markets remained open this week the trend was unmistakably downward. In the absence of any support the rumours regarding fresh taxation in the coming budget, affecting particularly leading industries, have inevitably had a discouraging effect and prices have been marked down all round. The simultaneous steadiness of giltedged securities is perhaps due to the fact that no increase in income-tax is expected as only recently the Finance Member decided to levy a surcharge of 25 per cent. In view of the increase in expenditure forecast by one and all fresh taxation, both direct and indirect, is inevitable, but it is improbable that the Government would choose to raise the rate of E.P.T. at so early a stage. This much can be said. New taxation affecting particular industries is likely to be offset by the prospect of additional earnings. Till the Central Budget is out of the way, it would be useless to expect any definite trend in the stock markets, especially, after the chastening experience of the past year, but there is no reason for undue pessimism. It may even be said that the fears have to a certain extent been discounted.

* * *

Contrary to expectations, the net profit of the *Britannia Biscuit Company, Limited* shows a decline in earnings for the half-year ended September 1940, over those for the previous half-year. In spite of the steadily increasing sales higher production costs have evidently cut into profits. As it is found necessary to conserve the company's resources for the building up of stocks and to provide for very necessary extensions now under contemplation, to the company's factory in Calcutta, the ordinary dividend has been passed.

The net profit before providing for taxation is Rs. 99,545 against Rs. 1,15,747 in the previous half-year. The sum of Rs. 39,862 against Rs. 35,594 has been placed to depreciation. There were allocations of Rs. 10,000 each to the Contingency and General Reserve on the last occasion. After payment of the dividend on the preference shares the amount carried forward is considerably higher being Rs. 80,033 against Rs. 45,553 brought in.

* * *

Anent our comments on the results of the *Indian Cable Company, Limited*, for the year ended March 1940, last week, a correspondent writes to us expressing his surprise at the absence of any reference to the dividend policy of the directors. In view of the excellent prospects for the current year, at least the non-cumulative dividend of 6 per cent. could have been paid on the ordinary shares. As it is, the managing agents get more by way of commission on profits. By the payment in full of the arrears of dividends they are the main beneficiaries as the entire preference capital is held by them.

Started as a company with the name of Enfield Cables more than 20 years ago under the agency of Messrs. Kilburn & Company, the Company came to grief and was taken over by the present agents fifteen years back. It has taken such a long time even for such a big firm as British Insulated Cables Limited, to put the Indian company on a profitable basis. It is only fair, therefore, that the claims of the ordinary shareholders were given greater consideration.

* * *

Higher working expenses have been slightly responsible for the decrease in the earnings of the *Tide Water Oil Company (India) Limited* for the half-year ended October, 1940. But there has been no change in the dividend distribution which has been maintained at 5 per cent. The net profit before providing for taxation is Rs. 69,183 against Rs. 88,922 for the previous half-year. The amount set aside to depreciation is Rs. 4,183 against Rs. 6,187. There is no allocation to General Reserve against a sum of Rs. 5,000 on the former occasion. After the payment of dividend the amount carried forward is not greatly changed at Rs. 27,108.

* * *

The return on the shares around Rs. 14 is more than 7 per cent. tax free.

A higher level of despatches has enabled the *New Beerbhoom Coal Company, Limited*, to declare a larger dividend for the half-year ended October, 1940. The net profit before providing for taxation for the half year is Rs. 2,42,087 against Rs. 2,15,225 for the previous half year. The amount charged to depreciation is Rs. 80,379 against Rs. 83,759 previously, while the provision for taxation is Rs. 65,000 against Rs. 60,000. The dividend on the ordinary shares is higher at 5 per cent. against 3¾ per cent.

* * *

The total despatches were 2,98,189 tons against 2,79,255 tons in the preceding half-year and 3,18,479 tons in the same period in 1939. During the half-year the demand for inland consumption has been below normal but the demand for export has been maintained.

* * *

The accounts of the *Burma Corporation, Limited* for the year ended 30th June, 1940, just now available, are admittedly satisfactory. It was at first believed that the Corporation's earnings would be seriously affected by the dislocation in shipments and the difficulties in finding export markets. It is, however, encouraging to note now that in spite of the Corporation's difficulties there has actually been a substantial increase in the net profit before providing for taxation, the amount being Rs. 1,88,76,929 against Rs. 1,25,26,905 for the previous year. The increase in earnings by Rs. 18.5 lakhs has not been, however, beneficial to shareholders as the provision for taxation, with the supplementary provision for taxation of Rs. 5,50,000 for 1938-39 is as much as Rs. 70,75,466 against Rs. 48,22,417 previously. The amount charged to depreciation is Rs. 5,89,104 against Rs. 7,88,729. The final dividend of 3½ annas per share, which was paid on September 30, 1940, makes with the interim dividend, seven annas per share for the whole year against nine annas per share previously.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Jan. 10.

The period under review is short of two working days on account of markets being closed on Thursday and Friday. But during the three days on which the Calcutta Stock Exchange remained open a definitely weaker tendency has been noticeable. Reports regarding the possibility of additional taxation had a depressing effect on prices and in the absence of support even at the lower levels the downward trend has been rather pronounced. The behaviour of the markets until the Central Budget is out of the way is bound to be irregular, but there is nothing new in the reports regarding the increase in taxation as it is recognised that with the rise in expenditure and the likelihood of a further decline in customs revenue during the next financial year higher taxation is inevitable. It should be said that these fears have to a certain extent been already discounted.

Giltedged securities have been very firm and 3½ per cent. Paper is now quoting at the highest level for some time. London advices have been satisfactory. With the need for year-end adjustments over there has been some buying of Government securities. 3 per cent. Government Paper changed hands at the higher level of Rs. 80-15 and 3½ per cent. Paper at Rs. 94-7. Among terminable loans, 3½ per cent. 1947/50 were Rs. 101-14, 3 per cent. 1963/65 Rs. 93-6, 4 per cent. 1960/70 Rs. 107-12, 4½ per cent. 1955/60 Rs. 112-10 and 5 per cent. 1945/55 Rs. 112-8. Among provincial loans, 5 per cent. U. P. bonds were Rs. 106-6, 4 per cent. Punjab bonds Rs. 105-7, 3 per cent. Punjab 1952 Rs. 95-1 and 3 per cent. U. P. 1952 Rs. 95.

Bank shares have been steady with *Imperial Bank* at Rs. 1,572-8, *Reserve Bank* at Rs. 105-12 and *Central Bank* at Rs. 40-14.

Fixed interest securities have been very steady. Only a small business has been reported in public bodies' debentures owing to the scarcity of sellers. 3½ per cent. *Howrah Bridge* debentures were Rs. 98-7 and 5 per cent. *Calcutta Port Trust* Rs. 112-12. Among industrial debentures, 3½ per cent. *Chowringhee Properties* were Rs. 99, 5½ per cent. *Dalmia Cement* Rs. 102 and 4½ per cent. *Bengal Jute* Rs. 102-8.

First class jute preferences are further higher, *Anglo-India* being Rs. 169, *Bally* Rs. 162, *Fort William* Rs. 167, *Kanknarrah* Rs. 161 and *Standard* Rs. 151. It will be noted that the lower priced shares have been eagerly bought. The rise in *Standard*, for instance, is noteworthy. There has been a good demand for *Hastings* which have been done as high as Rs. 187. Among other sections, *Dalmia Cement* preferences were Rs. 110, *Steel Corporation* Rs. 114-8, *Kumardhubi Engineering* Rs. 124, *Shree Gopal* Rs. 100-8 and *Cawnpore Sugar* Rs. 179.

Cotton shares have been rather uninteresting with *Cawnpore Textiles* at Rs. 6, *Kesoram* at Rs. 6 and *New Victoria* at Re. 1-12.

Coal shares have been easier with *Bengal* at Rs. 370. *Amalgamated* were Rs. 27, *Equitable* Rs. 37-8, *Burrakur* Rs. 14-12, *New Beerbhoom* Rs. 16-4, *Pench Valley* Rs. 33 and *West Jamuria* Rs. 30-10.

In the jute section, the announcement of the sandbag order for 26 millions had a steadying effect for some time but the general weakness of the market was reflected in prices towards the close. *Howrah* were Rs. 49-8, *Anglo-India* Rs. 308, *Bally* Rs. 221-8, *Kamarhatty* Rs. 450, *Kanknarrah* Rs. 360, *Nuddea* Rs. 54-8, and *Northbrook* Rs. 31-4.

A rather weak tendency has been noticeable in the Engineering section. In the absence of any support, speculative selling on reports regarding the possibility of additional taxation brought down prices for *Indian Iron* to Rs. 31-8 and *Steel Corporation* to Rs. 19-8. *Burn & Co.* have been the exception, being steady at Rs. 885. *Hukumchand Electrical Steel* ordinaries were Rs. 10, *Indian Standard Wagon* Rs. 61-8 and *Marshalls* Rs. 2-1.

Sugar shares have been neglected. *Carew & Co.* were Rs. 9-12, *New Savan* Rs. 7 and *Purnea Sugar* Rs. 7. Among Breweries, *Murree Brewery* were noted at Rs. 12-10.

Greater interest was shown in Tea Shares earlier in the week but prices are a shade easier towards the close. *Bishnauth* were Rs. 24-8, *Hasimara* Rs. 41-8, *Patrakola* Rs. 781-8 and *Tezpore* Rs. 7.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were dealt in at Rs. 5-6 and Rs. 2-4 respectively. *B. I. Corporation* were Rs. 4-14, *Dunlop Rubber* Rs. 35-12, *Indian Cable* Rs. 19-4 ex-dividend, *Publicity Society* Rs. 6-8, and *Rohtas Industries* Rs. 21. Among Paper shares, *Bengal Paper* were higher at Rs. 125 while *India Paper Pulp* were Rs. 145-8 and *Titaghur Paper* Rs. 18. *Borooah Timber* were Rs. 15-4, *Humayan Properties* ordinaries Rs. 4-10 and *India General Navigation* Rs. 76.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 8.

Money.—Call money continued to be quoted at ¼ per cent.

Exchange Market.—The sterling exchange market remained flat throughout the week under review, Banks selling T.T. at 1s. 5 31/32d. and buying three months' bills at 1s. 6 7/32d.

Securities.—The turnover in this section was meagre and prices showed little change during the week under review. 3½ per cent. India Loan moved up from £96⅜ to £97, while, locally, 3½ per cent. Rupee Paper improved in sympathy, closing slightly higher at Rs. 94-8. 1948/52 were better at Rs. 96-4; 1963/65 at Rs. 93-3 and 1960/70 at Rs. 107-14, while 1947/50 remained unchanged at Rs. 102 and 1955/60 at Rs. 112-6. 1945/55 were, however, a shade lower at Rs. 112-3.

Shares.—There were only four working days. During this period business in the share market was restricted. Prices, after opening steady, met with some selling pressure in mid-week in the absence of buyers and were marked down considerably. The Budget uncertainty and the fears of an increase in taxation discouraged buyers with the result the market was a bit nervous. Towards the close, however, the market took a turn for the better with a slight improvement in prices. The closing tone was irregular.

Textiles.—Cotton mill shares suffered a sharp setback with the depressed state of the cotton market. Buyers continue to be cautious owing to the increasing arrivals. *Bombay Dyeing* were done lower at Rs. 1,021-4 as against Rs. 1,057 in the previous week. The closing level was slightly better at Rs. 1,026-4. *Century* lost about 10 points, *Central India* Rs. 20 points and *Swadeshi* 20 points, closing at Rs. 358, Rs. 284-8 and Rs. 247 respectively. *Colaba* were slightly lower at Rs. 158-8; *Kohinoor* at Rs. 376; *Gokak* at Rs. 199 and *New Great* at Rs. 368.

Hydro-electrics.—*Tata Power* lost about 20 points to close at Rs. 1,480. *Andhra Valley* remained unchanged at Rs. 1,640 and *Tata Hydro* at Rs. 177.

Steels.—The notification regarding the prohibition of imports of iron and steel helped to push the prices of steel shares, *Tata* ordinaries opening at Rs. 1,920 and the deferreds at Rs. 374. In mid-week there was a decline in prices owing to heavy liquidation in the absence of purchasers, the ordinaries touching a low level of Rs. 1,827-8 and the ordinaries Rs. 363. Towards the close, however, the deferreds improved by 30 points to close at Rs. 1,857-8, while the ordinaries remained unchanged at Rs. 363.

Banks, Insurance and Railways.—Bank shares met with good investment support following the publication of the accounts for the year 1940. *Bank of Baroda*, which give a good yield, were wanted at Rs. 105-12. *Central Bank* were slightly marked up at Rs. 41. *Reserve Bank* were done at Rs. 105-12; *Imperial Bank* fully paids at Rs. 1,572-8; and contributories at Rs. 389-6.

In the Insurance section, *New India* were slightly better at Rs. 40-4.

Among Railway shares, *Tapti Valley* ruled quieter at Rs. 705.

Miscellaneous.—*Associated Cement*, which were done at Rs. 141-12 last week, eased off during the week to Rs. 140. *Bombay-Burma Trading* declined by about Rs. 20 to close at Rs. 525. *Belapur Sugar* were dull at Rs. 214-8. *Shivrajpur Syndicate* were done lower at Rs. 35; *Premier Construction* at Rs. 92 and *Scindia Steam* at Rs. 20-2. *Wimco*, however, showed an improvement to Rs. 186-4 from Rs. 180.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Jan. 8.

The local market ruled steady during the week under review, prices remaining more or less unchanged. Rubbers were slightly marked down owing to slight profit-taking, while Teas continued to meet with fair support. Mill shares were unchanged.

Securities.—The securities market continued to be steady, 3½ per cent. Paper, closing slightly better at Rs. 94-5. Among other loans, 5 per cent. 1945/55 changed hands at Rs. 112-5 and 3 per cent. 1963/65 at Rs. 93-3. State Loans were in good enquiry, 3 per cent. 1956/61 *Mysore Loan* being wanted at Rs. 102-14 and 4 per cent. 1953/63 at Rs. 113-6.

Mills.—*Buckingham and Carnatic* were a dull market at Rs. 237. *Madura* had sellers at Rs. 37-4. *Kothari Textiles* ordinaries were done at Rs. 9-14 and preferences at Rs. 11-2. Among Bombay shares, *Century* came in for transaction at Rs. 360-12 Feb.; *Bombay Dyeing* at Rs. 1,058 Jan. and *Gokak* at Rs. 206-8 Jan.

Utilities.—A fair volume of business was done in this section. *South Madras Electric* ordinaries continued to meet with buyers at Rs. 13-4. *Rangoon Telephone* after a long time came to business at Rs. 18-8. *Cochin State Power* were in request at Rs. 8-12 x.d.

Plantations.—Rubber shares met with some profit-taking during the week and prices were slightly marked down. *Cochin Malabar* closed at Rs. 6-9 x.d. and *Cottanad Plantations* at Rs. 5. *Thirumbadi* met with good enquiry at Rs. 1-14 c.d. Among Tea shares, *Peermade* were in support at Rs. 27; *Periakaramalai* at Rs. 17-12. *Devon* preferences met with business at Rs. 101 and *United Nilgiris* ordinaries at Rs. 101.

Sugars.—*Mysore Sugar* were a dull market, being done at Rs. 44-8, while *Travancore Sugars* were transacted at Rs. 18-13 x.d.

Miscellaneous.—Cement shares met with good business during the week, *Associated Cement* being done at Rs. 140; *Andhra Cement* preferences at Rs. 101-8 and *Dalmia Cement* deferreds at Rs. 3-4. *Mysore Chemicals* were steady at Rs. 15. *Indian Steel Rolling Mills* ordinaries were a shade easier at Rs. 7-14. *Mysore Paper* were done at Rs. 18-4 and *Mysore Stoneware Pipes* at Rs. 8-2 and *Mysore Tobacco* at Rs. 8-14.

LONDON STOCK EXCHANGE

The news of the British successes in North Africa has had a definitely encouraging effect on the London Stock Exchange during the past week. Though there has not been any appreciable increase in the volume of turnover a sharp rise in prices has been recorded around. Giltedged securities, especially India loans, have been prominent. 3½ per cent. Indian Sterling Paper were 97, 4½ per cent. 1958/68 112¼, 4½ per cent. 1950/55 105¼ and 3½ per cent. 1954/59 101¾. Among British Funds, 2½ per cent. Consols were 77, 3½ per cent. Conversion 103 7/8, 3½ per cent. War Loan 103 3/8 and 3 per cent. War Loan 101.

Among other sections, Rubber and Tea shares have remained unchanged while Kaffirs have been in request. Oils have shown improvement alround with *Burmah Oil* as high as 55s. There has been a jump in the quotations for Home Rails.

NEW YORK STOCK EXCHANGE

Wall Street has been inactive during the past few days. Business has been on a restricted scale. *General Motors* were $48 1/8, *Anaconda Copper* $27¼ and *U. S. Steel* $70¼.

(*Continued from page 57*)

The Corporation has contracted to supply large quantities of lead and zinc concentrates on terms which provide a fair price and important safeguards in regard to transportation and production costs. The balance of lead production, after providing for the requirements of the Ministry of Supply, is sufficient to meet demands from India and the requirements of other established markets. A new market for copper matte has been developed and substantial shipments have been already made. With the possibility of arranging an outlet for part at least of the production of nickel speiss and a satisfactory demand for silver a good increase in earnings for the current year can be expected. But the imminence of a further increase in taxation in the United Kingdom makes it impossible to estimate the dividend prospects for the current year. It can be only said that, given no further large increase intaxation, it would be possible to increase the dividend distribution.

The ore reserve position should be considered rather satisfactory. The total tonnage was estimated at 3,411,912 tons against 3,607,945 tons at the end of June, 1939 or a decline of 196,758 tons after the extraction of 473,568 tons of new ore during the year. Development operations have apparently been successful as the new ores added to the reserves during 1938-39 were only 485,115 tons.

WATCH-DOG.

BURN AND COMPANY, LIMITED.

NOTICE

is hereby given that the Board of Directors of this Company have sanctioned payment of the usual Dividend on the Preference Share Capital of the Company for the half-year ended 31st December, 1940. Payments will be made on or after the 17th January, 1941 to those Shareholders whose names appear on the Company's Registers on the 31st December, 1940 or in accordance with their instructions.

By Order of the Board,
BURN & COMPANY,
Managing Agents.

MARKET POINTERS

Indian Iron & Steel Company, Limited :

The undernoted particulars cover the period October to December, 1940 :—

Production—
Pig Iron ... ... 200,409 Tons.
Coke ... ... 195,153 ,,
Iron Castings—
Heavy ... ... 15,313 ,,
Light ... ... Nil.
Shipments from Works—
Pig Iron ... ... 166,991 ,,
Iron Castings—
Heavy ... ... 15,873 ,,
Light ... ... 386 ,,

Plant—All Furnaces at Hirapur and Kulti are working to capacity.

* * *

Tata Iron & Steel Co., Ltd. :

Messrs. Tata Sons, Ltd., Managing Agents for the *Tata Iron and Steel Co., Ltd.*, report that the total approximate production of iron and steel at the steel works at Jamshedpur during December, 1940, was :—Pig Iron 99,300 tons; steel ingots 102,800 tons. Finished Steel : Semi for sale 12,100 tons and finished 68,500 tons.

* * *

Order for 26 million Sandbags :

It is understood that an order has been placed by the Controller of Purchases (Jute) on behalf of the Government of India for 26 million sandbags for delivery February-March. The price paid is Rs. 10-8 per 100 bags f.o.r.

Sugar Prices Fixed :

The standard minimum price of sugar manufactured in 68 factories of the United Provinces has been fixed by the provincial Government. The prices vary from Rs. 8-1-3 for sugar manufactured in a Gorakhpur mill to Rs. 9-10-3 in a Meerut district mill, according to differing grades of quality.

* * *

Demand for Indian Coal

In view of the altered position in the Mediterranean, many countries in the Middle East and Near East have now turned to India for their supplies of coal.

In recent months demands were received from the Sudan railways for 16,000 tons of coal and from Palestine (Haifa) for 20,000 tons. Further demands for 25,000 tons a month were received from Greece.

Hongkong asked for 5,000 tons and orders for 30,000 tons for Port Said, Malta, Aden and Egypt were placed with Indian firms direct by the British Shipping Controller, London.

Demands were also received for hand coke and gas coke from the Middle East and Palestine respectively.

* * *

Rice Exports to India :

From January 1, the Government of Burma, it is understood, have imposed a duty on rice exported to India of two annas three pies per maund, which is at present levied by the Burma Government on rice exported to other countries.

The extension of export duty to rice exported to India is in accordance with the provision of the India and Burma (Trade Regulation) Order.

G. I. P. Railway :

The approximate earnings of the *G. I. P. Railway* for the period ended December 20, 1940, amounted to Rs. 52,47,000 as compared with Rs. 47,28,000, the actual earnings for the corresponding period of 1939. The up-to-date earnings for 1940 amounted to Rs. 11,32,54,000 as compared with Rs. 9,61,54,000, the figure for the corresponding period of 1939.

*Includes Bonus of 2 per cent.

(*Half-yearly Meeting, 22nd January, 1941 at 11 a.m.*)

Audited accounts for the half-year ended 31st October, 1940 :—

After providing Rs. 3,00,000 for Depreciation and Rs. 8,00,000 for Taxation and Cesses, including E. P. T., there is a balance at the credit of Profit and Loss Account of Rs. 7,46,713-8-3 from which the directors recommend:—

	Rs.	A.	P.
Dividend of Rs. 10 per share	4,00,000	0	0
Bonus of Rs. 2 per share	80,000	0	0
Provision for Commission to Directors and Staff	7,800	0	0
Carry forward	2,58,913	8	3
TOTAL ...	7,46,713	8	3

Raisings can be considered as satisfactory for the period under review and *despatches* were probably assisted to some extent by the increased rate of surcharge on railway freight from 1st November, 1940, inducing consumers to lay in stocks since when despatches have decreased.

The export trade, which constitutes a large proportion of the Company's business, has been affected during the closing months of the half-year by lack of tonnage.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 40,00,000 in 40,000 shares of Rs. 100 each, fully paid up.

(*Half-yearly meeting 27th January, 1941 at 11 a.m.*)

Audited accounts for the half-year ended 30th September, 1940 :—

After providing Rs. 39,862-3-2 for depreciation and reserving Rs. 24,584 for Income-tax, Super-tax and E. P. T., the Profit and Loss Account shows a net profit of Rs. 35,098-13-6. Adding the amount brought forward from the last account of Rs. 45,552-10-11, there is a total sum of Rs. 80,051-8-5 from which the directors propose to declare the dividend on only the Preference Shares, leaving a balance of Rs. 80,033-8-5 to be carried forward.

While sales continue to increase steadily the rise in cost of certain raw materials and to a lesser extent in Taxation and operating costs has resulted in reduced profits.

In view of the present abnormal conditions the directors recommend that the entire profits be utilised to increase the liquid assets of the Company to allow for the building up of stocks of certain raw materials, which are becoming increasingly difficult to obtain, should suitable opportunity occur and to provide for very necessary extentions to the Company's factory in Calcutta, now under contemplation.

Secretary.—Mr. A. P. Chanda.

Authorised Capital—Rs. 20,00,000 in 2,00,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 13,50,000 in 1,33,455 Ordy. and 1,545 8% Cum. Pref., both of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 30th September, 1940:—

‡ Arrears of dividend, 3 per cent for the year ended 31st October, 1939 together with the dividend for the year ended 31st October, 1940.

(*Annual meeting held 19th December, 1940*)

Audited accounts for the year ended 31st October, 1940 :—

		Rs.	A.	P.	Rs.	A.	P.
The year's working shows a profit of ...					4,44,191	1	2
Less:—							
Refund of Income-tax	...	21,197	3	0			
Depreciation	...	1,30,336	0	0			
					1,51,533	3	0
Leaving at credit of Profit and Loss Account which the directors recommend to dispose of on Preference Shares as follows:—					2,92,657	14	2
In payment of 3% arrears of dividend for the year ended 31st October, 1938 ...					48,165	0	0
In payment of 6% arrears of dividend for the year ended 31st October, 1939 ...					96,330	0	0
In payment of 6% dividend for the year under report					96,330	0	0
In provision for Secretaries' and Directors' commissions					34,197	6	0
In carrying forward					17,635	8	2
TOTAL ...					2,92,657	14	2

In spite of the adverse trading conditions prevalent throughout the year and the phenomenal fall in price which cotton registered, the results are gratifying and the directors are in a position to recommend the payment of all arrears of Cumulative Preference dividend. *This should improve the future position of the Ordinary Shareholders.*

The outlook for the future though uncertain is distinctly hopeful.

Secretaries.—Messrs. J. P. Srivastava & Sons Ltd.

Authorised Capital—Rs. 5,00,00,000 in 1,00,00,000 Ordy. of Rs. 2½, 40,00,000 6% Cum. Pref. of Rs. 5 and 50,00,000 Defd. of Re. 1. (a) Issued at par on 29th October, 1937, repayable at par on 25th October, 1952, with the option of repayment at par in whole or in part on six months' notice at any time after 28th October, 1942. Taxable. (b) Issued on 1st January, 1933, repayable at par on 31st December, 1946. Taxable. (c & d) Issued at par in April '38 in taxable bearer bonds repayable at par on 31st March 1953, with the option of repayment at par whole or part at any time after 31st March 1943 on 6 months' notice. (e) Includes first and second issue issued in 1921 and 1931 respectively, due for repayment on 1st July, 1936, redemption date postponed to 1st. July, 1946 and rate of interest reduced from 7 to 4½ per cent. Taxable. (f) Carry preferential claim to repayment of capital. (h) Issued at par on 3rd July, 1933, repayable at par on 30th June, 1943. Option of repayment in whole or part at any time after 1st July, 1938, on six months' notice. (g) Issued in 1897, redeemable any year on the 4th May, on Six months' notice. (i) 4½ per cent. redeemable on 31st March, 1944 and 7 per cent. redeemable on 31st March, 1944 or earlier in the event of special purchase of the Company's undertaking by the Secretary of State for India in Council. (k) Includes first issue of Rs. 5 lakhs repayable on 1st July, 1918 but extended for further periods. Now redeemable on 1st July, 1948. Second issue issued in 1913, repayable on 1st July, 1943, extended for further 20 Years redeemable 1st July, 1948. (l) Originally issued in 29th September, 1923. Repaid and reissued in October, 1934, redeemable at par on 30th September, 1953. Option repayment any time after 30th September, 1939, on six months' notice. (m) Originally in 6½ per cent. Issued at par in August, 1925. Redeemed and Reissued at par on 1st October 1936 redeemable at par on 30th September. 1951 option of repayment after 30th September, 1956 on six months' notice. at par 1st May, 1935, redeemable at par on 31st December, 1944, option repayment at par on 31st December, 1939 on six months notice. (o) Issued at par in October, 1933, repayable at par on 1st October, 1943. Option repayment at any time after 1st October, 1938 on six months' notice on any interest due date. (p) Carry guarante from Government of India of 3½ p.a. Net earnings between rebate shares in proportion of 63-36 and 23-36 respectively (q) Issued at par on 1st February, 1935, repayable at par April, 1935 option repayment any time after 1st April, 1940 on any interest date on six months' notice. (r) Issued at par in 1924, redeemable at par on 30th September, 1940. (s) Sterling debenture issued in 1905 redeemable at any time after 25th May 1928. (t) Dividend non-cumulative, carry preferential claim to repayment of capital.

(a) Issued at par on 20th March, 1937, repayable at par on 20th March, 1947, with option repayment at any time after five years from the date of issue. (b) Issued at par in 1897, and repayable at par on 15th November, 1936, date of repayment has been extended to 15th November, 1956, and the rate of interest reduced to 4½ per cent (taxable) from 15th November, 1936. Option of repayment at a premium of 3 per cent. at any date after 15th November, 1926, on three months notice. (c) Issued at par on 14th May, 1938, repayable at par on 14th May, 1958. (d) Issued at par on 1st April, 1934, repayable at par on 1st April, 1959 with option repayment any time after 1st April, 1941, at 3 per cent. premium. (ff) Carry interest at the rate of 20 per cent. per annum (7 per cent. Cumulative and 13 per cent. non Cumulative). This dividend is to be paid before any dividend is paid on the ordinary Shares. The Company may, by giving one year's notice convert the preference shares into ordinary shares. (g) Issued at par on 1st October, 1923, redeemable at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent. of the total issue, is due to be placed annually. (h) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (i) Entitled to participate in dividends only upto 10 per cent. per annum after the preference shares have received acumulative dividend of 6 per cent. and ordinary shares 10 per cent. Surplus divisible profit remaining after these dividends will be apportioned in three equal parts for payment of further dividends to the three classes of shares. ϕ In payment of arrears of dividend's on "A" preference shares for half-year ended December, 1927. † Bonus for every ordinary share held in the shape of a second preference share of Rs. 25 bearing interest at 4½%. ‡ Includes Bonus. § Arrears of dividend for six half-years ended June, 1934. Arrears of dividend to the extent of Rs. 1,22,500 to the end of December, 1937 outstanding. ** Includes 1152 mule spindles. (p) Arrears of Dividend for eight half-years ended 31st Dec., 1931. (s) Arrears of dividend for eight half-years ended 30th June, 1938. Also non-Cumulative dividend of Rs. 13 per share for the whole year 1938. (x) Arrears of dividend for 3 half-years ended 30.6.1938. (J) 6% for the year 1938 and 8% for 1937. (K) 8% for 1937 and 1938. (l) Included in Reserves.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits are positively unlendable; and the quoted rates of ½ per cent in Calcutta and ¼ per cent in Bombay for inter-bank call money are really farcical. The weekly sale of Treasury Bills continues to be Rs. 1 crore; and Treasury Bill maturities continue to exceed fresh issue of bills by anything like Rs. 1 crore per week. This means constant flow of funds from the coffers of the Government to the market. In addition, there has been further expansion of currency in the week ended January 10. In our issue dated January 4, we, in fact, forecast expansion of this nature; and, while examining the consequences of swelling foreign balances in the Reserve Bank's banking department, we felt constrained to draw attention to the resultant decline in the notes held in the banking department and visualised future developments on these lines:—

"If it should happen that foreign balances go up by Rs. 20 crores or Rs. 25 crores by March, notes held in the banking department may sink to nothing. In that situation, what would the Reserve Bank do? This decline in notes held in the banking department may reach an acute phase by the end of January or the middle of February. This might well necessitate the transfer of sterling securities from the banking department to the issue department against receipt of notes from the issue department. This would definitely involve expansion of currency at a time when the cash position of the Central Government as well as of the banks would not warrant such currency expansion."

The acute phase foreshadowed by us to materialise by the end of January has come to pass in the second week. The statement of the Reserve Bank for the issue department for the week ended January 10 shows a rise of Rs. 4 crores (that is, £3 millions) in sterling securities from Rs. 131.50 crores to Rs. 135.50 crores. Notes held in the banking department are shown at Rs. 13.07 crores; and this means that, but for this expansion of currency, notes in the banking department must have dropped to Rs. 9 crores. Rapid accumulation of foreign balances in the banking department seems inevitable. Which means that further expansion of currency by transfer of sterling securities to the issue department is equally inevitable. This is a dilemma which must be tackled as early as possible; and all that we can say is that there seems no escape from the solution suggested by us on January 4. We extract the relevant portion below:—

> The proper and scientific way of solving this conundrum is the utilisation of the surplus sterling balances for a more substantial repatriation of sterling debt, and the issue of rupee loans in India for substantial amounts. INDIAN FINANCE has constantly urged that the time has come for revising the sterling debt redemption scheme and for linking it with a more diversified plan of rupee defence loans. The British Treasury has made such changes in the plan of the defence loan during the current week. This suggests the need for the Indian Government also to withdraw on tap the 3 per cent Defence Loan and to introduce, in its place, a cheaper and more variegated loan issue designed to satisfy all tastes and preferences. That is to say, we would welcome a 2 per cent 3 to 5 year loan; a 2½ per cent 5 to 7 year loan; and a 3 per cent 7 to 15 year loan, and the issue to be made available simultaneously. It is necessary to utilise this opportunity for an examination of the appropriateness or otherwise, in the Indian giltedged conditions, of loans indefinitely on tap. It is also up to the Finance Member to decide on such changes in the sterling debt redemption scheme as will enable him to repatriate large parcels of sterling loans.

In this context, it is useful to examine the methods by which, and the extent to which, currency expansion has been effected in 1940 and also in the period following the outbreak of war. Such a survey will be topical to this week's issue as providing an addendum to our review of "Money and Exchange in 1940" in the Editorial section. The first method of expansion is against sterling securities. Sterling securities held in the issue department were Rs. 59.50 crores at the end of August 1939; Rs. 96.30 crores at the end of December 1939; Rs. 131.50 crores at the end of December, 1940; and Rs. 135.50 crores on January 10, 1941. Expansion of currency against sterling securities has, therefore, been Rs. 35.20 crores in 1940; and Rs. 76 crores between the end of August 1939 and January 10, 1941. The second mode of expansion is against rupee securities. The rupee securities held in the issue department were Rs. 37.39 crores at the end of August, 1939; Rs. 37.73 crores at the end of December 1939; Rs. 49.61 crores at the end of December 1940 (This figure is unchanged as from January 10, 1941). Expansion of currency against rupee securities has, therefore, been Rs. 11.88 crores in 1940 and Rs. 12.22 crores since the beginning of the war. Total expansion of currency is, thus, Rs. 35.20 crores plus Rs. 11.88 crores or 47.08 crores in 1940; and Rs. 76 crores plus Rs. 12.22 crores or Rs. 88.22 crores since the beginning of the war.

Turning to increased note circulation (which is not the same as currency expansion), the following table indicates the position both as regards paper notes and rupee coin:—

Month.		Increase or decrease in circulation as on last Friday of the month (in lakhs of rupees). Note circulation.	Rupee coin circulation.	
Sept.	1939 ...	+ 24.03	+ 33	
Oct.	„ ...	+ 7.38	+ 2.60	
Nov.	„ ...	+ 9.81	+ 3.04	
Dec.	„ ...	+ 15.81	+ 5.28	
Total	...		57.03	11.25
Jan.	1940 ...	+ 1.92	+ 3.37	
Feb.	„ ...	+ 1.71	+ 2.56	
Mar.	„ ...	− 1.00	+ 2.35	
April	„ ...	+ 1.06	+ 2.56	
May	„ ...	+ 8.92	+ 6.81	
June	„ ...	− 1.59	+ 15.12	
July	„ ...	− 9.02	+ 5.18	
Aug.	„ ...	− 6.43	+ 3.62	
Sept.	„ ...	− 2.31	+ 2.03	
Oct.	„ ...	− 51	+ 1.00	
Nov.	„ ...	+ 48	+ 83	
Dec.	„ ...	+ 12.09	+ 1.13	
Total	...	+ 5.32		44.56

The following conclusions from the above table may be stressed:—

(1) Active note circulation has risen in 1940 by Rs. 5.32 crores and silver coin circulation by Rs. 44.56 crores. Total in 1940, Rs. 49.88 crores.

(2) Active note circulation has risen between September 1939 and December 1940 by Rs. 62.35 crores; and rupee coin circula-

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, the 14th January, 1941. Total amount offered was Rs. 2 crores, 99 lakhs and 25 thousand. Tenders at Rs. 99-12-9 per cent were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 89 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen and pies eleven per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, the 21st January, 1941. Successful tenderers should make payment on Friday, the 24th January, 1941. Other conditions are as usual.

During the week ended the 10th January, 1941, Government of India Treasury Bills for Rs. 44,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

THANKS to the bold and forward policy initiated by Mr. Roosevelt and endorsed by nearly all important Congressmen and state officials, the financial ability of Britain to pay for war purchases from the U.S.A. is no longer shrouded in mystery as was the case a couple of months ago. Indeed it was not until the late Lord Lothian pricked the bubble that the world came to be aware of the precarious state of Britain's dollar resources. Now, just a month after the whole question was reopened, the world finds the Secretary of the U. S. Treasury, Mr. Morgenthau, giving evidence before the Foreign Affairs Committee of the House of Representatives as to the exact foreign exchange assets of Britain. The subject is no longer discussed in a hush-hush spirit; on the other hand, complete candour prevails. The Lease and Lend Bill has been the occasion for the frankest affirmation by the Administration officials that (1) Britain is in dire need of armaments from the U. S., and (2) she has not got the wherewithal to pay for them, as will appear by the figures that have been compiled in the most scrupulous and exhaustive fashion. It is said that Britain will need £755 millions to pay for purchases from the U. S. A. in 1941 and that, of this, £366 millions will have to be found anyhow. Mr. Morgenthau's memorandum shows that Britain's dollar assets do not exceed £443 millions, of which only £218 millions have been listed as liquid assets. In brief, this financial picture means that "the British can pay for what they have already, but when it comes to finding dollars for anything like what they need, they just have not got it."

So downright a statement had naturally to be supplemented by further details concerning the British Government's gold resources scattered in various parts of the world. According to Mr. Morgenthau, the gold thus available to the British Government was of the value of £33 millions and not in a position to be shipped quickly to the U. S. The balances of British banks and corporations etc., in the United States total about $305 million. These resources, however, cannot count in the general list of foreign exchange assets if only because they represent the minimum necessary for the conduct of trade; and they are thus, in a sense, not available for purchases of war material from the U. S.

BRITISH EMPIRE HOLDINGS OF GOLD, DOLLAR BALANCES AND AMERICAN INVESTMENTS.

(In millions of dollars)

Condition Aug. 31, 1939.	United Kingdom	Canada	Other Empire	Grand Total
Central gold reserves ...	2,000	215	525	2,740
Dollar balances ...	595	355	**	950
Negotiable securities market value	735	500	**	1,235
Total ...	3,330	1,070	525	4,925
Direct Investments	900	560	**	1,460

**Not available, probably small. Arranged from the Federal Reserve Bulletin, December 1939.

When the war broke out, the readily available resources of the British Government, consisting of the Central Bank's gold reserves, dollar balances and American negotiable securities—all usable in the U. S. A. as payments—amounted, according to an estimate by the Federal Reserve Board, to $5000 millions. Their distribution is given in the table above. In addition, the so-called "direct" investments of the British Empire countries in the U. S. A., such as ownership of mines, oilwells, manufacturing enterprises and agricultural property which are all classed as less readily marketable, were estimated at $1460 millions.

The reactions of Congressmen to the Lease and Lend Bill are still uncertain, though it is obvious that the President can count on a large majority backing him in the Bill. There are even predictions that the U. S. will find itself at war in April and Senator Wheeler's attack on Mr. Roosevelt's policy shows that members of the Senate are mustering courage to oppose the Lease and Lend Bill. It is interesting to note that members of the House Foreign Affairs Committee did not forget to ask about British assets in South America and elsewhere. Mr. Morgenthau's figures show that the total of U. K. investments outside the United States was £3363 millions, of which nearly a third was in Latin America. The U. S. Secretary's figures appear to have been frequently challenged by Congressman Fish who quoted the Federal Reserve Board's figures to show that Britain had foreign balances over £1750 millions transferable to the U. S. Mr. Morgenthau, however, was able to refute the charge of inaccuracy by showing that the estimate was made in August 1939 before the war began and that they included Central gold reserves of members of the British Commonwealth of Nations amounting to £683 millions, besides private dollar balances totalling £262 millions.

The British Exchequer has already published its financial figures to the end of 1940. The fact that emerges is that, as the war goes on, expenditure rises; and this is taken as proof that every effort is being made to reach the maximum output. Last year the Chancellor was reproached for having slowed up the rearmament tempo by undue carefulness. One can now trace, almost from month to month, how the Exchequer has resolved to increase the war expenditure more and more in accordance with requirements. In the Supplementary Budget of July 1940, the Chancellor estimated that the total monthly expenditure for the period up to March 1941 would be about £290 millions. The expenditure has already increased to about £313 millions in August, £324 millions in September, £321 millions in October, £361 millions in November and £342 millions in December. The December figures fell because less wages were paid out among war industries during Christmas week. The expenditure for December should have amounted to about £375 millions, in the opinion of Oswald Dutch.

Figures just published cover the first nine months of the financial year 1940-41, i.e., April to December 1940. During this period Britain's total expenditure was £2825.5 millions and this was met as follows: £752.4 millions by ordinary revenue, £937.1 millions by the War Savings campaign (loans with and without interest) and £1,137 millions by the additions to the floating debt. In July 1940 Sir Kingsley Wood estimated that Britain's total expenditure for 1940-41 would be roughly £3467 millions, and that ordinary revenue would amount to £1,360 millions. According to the new figures it appears that both estimates were too low.

Taking as a basis the results to the end of 1940, the *Economist* estimates that actual expenditure for the financial year 1940-41 will be something more than £3800 millions with a further increase in expenditure to £4600-4700 millions to be reckoned with in the financial year 1941-42. So far revenue has in fact amounted to more than one-third of the expenditure. From previous experience it may be concluded that by the end of March the total of ordinary revenue will reach from £1,400 to £1,450 millions. This is not an inconsiderable increase on the Budget estimates. It shows, above all, that revenue from the new Excess Profits Tax is better than the Chancellor has anticipated, also that receipts from the income-tax are very satisfactory. On the other hand, the yield from customs and excise is below the estimates.

As revenue can only cover about one-third of war expenditure, an intensive effort will be made to stimulate war savings. In a New Year message Sir Robert Kindersley pointed out that savings during the second year of war must bring in twice as much as in the first year of over £900 millions. As the increased Government expenditure is made up almost entirely of increased wages and salaries the British people can save all the more. Sir Robert further stated that the British people's best means of counteracting inflation was not to use their increased savings for bigger purchases at higher prices but to give them back to Government in savings.

LLOYDS BANK
LIMITED
(Incorporated in England.)

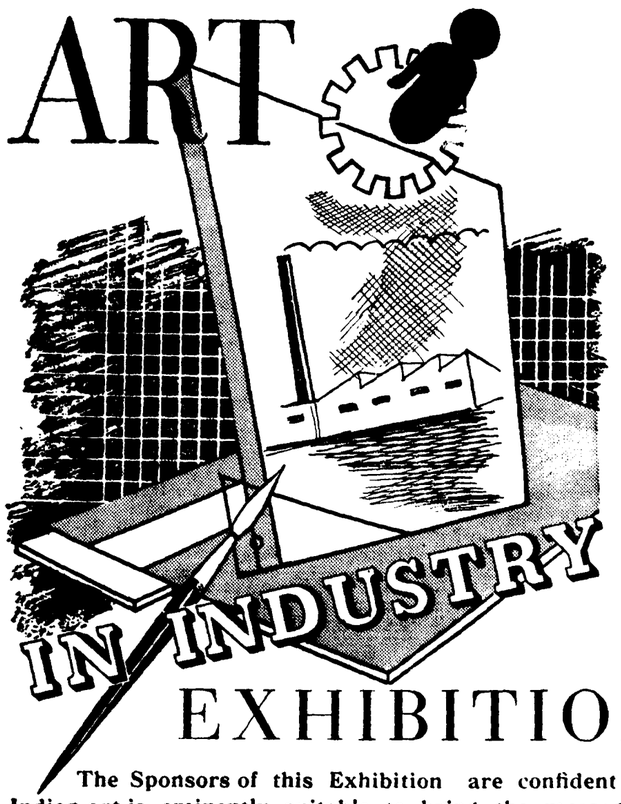
Adaptability

The experience of nearly two centuries of private and commercial banking, coupled with an efficient and world wide organisation and the highest reputation for thoroughness and financial stability, enables Lloyds Bank to adapt itself to every class of banking business, whether in times of peace or war.

(*Continued from page 83*)



tion by Rs. 55.91 crores. Total since the beginning of the war, Rs. 118.26 crores.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T.T. at 1s. 5 31/32d., all through for six months; banks were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months D. A. bills were quoted: 1s. 6 7/32d., for the first month; 1s. 6 9/32d., for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d., for the fourth month.

Interbank call money is quoted ½ per cent leaders with no borrowers; ½ per cent for deposits of two months to four months.

EXHIBITION

The Sponsors of this Exhibition are confident that Indian art is eminently suitable to bring the messages of Indian industry to the vast public of this country.

Entries of original work are invited from all artists at present in India, and Burmah-Shell, the Sponsors will award a prize of Rs. 500 for the best exhibit. Rules and details can be obtained from Burmah-Shell or from any of the donors of prizes. The Exhibition is divided into six sections. The first five each carry prizes of Rs. 250, Rs. 100, and Rs. 50, while scholarships at approved art schools are offered in the Juvenile Section.

All entries received at Government School of Art, Chowringhee, Calcutta, from 1st to 15th February.

SPECIAL CONCESSION
REGARDING ENTRANCE FEES.

In order to encourage Indian students, there will be no entrance fee for any section for entries which are accompanied by a certificate from the Principal of any recognised School of Art that the entrant is still an Art student. The entry fee in all other cases has been reduced to Re. 1/- for one or more entries up to a limit of six entries from any one individual.

Money and Exchange in 1940

THE money and exchange markets were on a wartime footing throughout 1940; and, taking the twelve months as a whole, the control and direction of the markets must be said to have been fashioned on the right lines. In the first quarter of 1940, there were fluctuations in money rates and exchange rates; but, during the remaining months, more or less flat, unchanged rates have prevailed. The trends and developments in January-March disclosed the continuing effects of the influences that were released on the outbreak of war in September 1939 and that were in full sway in the last four months of 1939. Since April 1940, however, a kind of reaction has been manifest; and this phase has continued right to the end of the old year and the first fortnight of the new.

It will be remembered that 1939 closed on a note of monetary stringency, which was particularly accentuated in the last week of December by the year-end adjustments of the banks. 1940 opened with inter-bank call money remaining in good demand at near 2 per cent. with supplies extremely limited. The speculative markets were all active; prices in most cases ruled at giddy levels; and the turnover was brisk and considerable. Banks were required to provide large loans against stocks, shares and commodities; and they, in their turn, had recourse to advances from the Imperial Bank whose rate was raised to 3½ per cent. The Reserve Bank, too, had to afford relief by rediscounting Treasury Bills whose total, on occasions, exceeded Rs. 10 crores. Further expansion of currency was effected by transfer of sterling securities from the Reserve Bank's banking department to the issue department. Meantime, the Government had adopted a scheme for the repatriation of sterling debt; and, to the extent that the scheme involved sale of rupee securities in India, this was a further contributory cause to dear money.

It were best that the monetary developments of the first three months of 1940 are studied in relation to those of the last four months of 1939 as this period of seven months may be said to reflect the full impact of war on the Indian money market. At the end of August 1939, advances made by scheduled banks in India stood at Rs. 102.97 crores. By the end of December 1939, these had risen to Rs. 129.69 crores. That is, the increase in Banks' advances in the first four months of war was Rs. 26.72 crores. Bills discounted by member banks had slightly fallen, in the same period, from Rs. 4.02 crores to Rs. 3.93 crores or by Rs. 0.09 crores. The net increase in trade advances was, therefore, Rs. 26.63 crores. Between December-end and March-end, banks' advances had improved by Rs. 17.88 crores to Rs. 147.57 crores and bills discounted by Rs. 2.16 crores to Rs. 6.09 crores. Total increase in trade advances in January to March 1940 was, thus, Rs. 20.04 crores. Between September 1, 1939 and the end of March 1940, the banks in India had increased their trade advances by as much as Rs. 26.63 crores *plus* Rs. 20.04 crores, Rs. 46.67 crores in all. The result was that the percentage of banks' advances and discounts to their demand and time liabilities rose from 44.58 per cent. in August 1939 to 55.54 per cent. at the end of December 1939 and 62.73 per cent. at the end of March 1940. As was to be expected, the percentage of banks' cash and Reserve Bank balances to their demand and time liabilities, which was 12.33 at the end of August 1939, came down to 9.33 at the end of December 1939 and to 8.98 per cent. at the end of March 1940. The total of banks' cash and balances with the Reserve Bank as at the end of March 1940 was Rs. 22.79 crores.

While banks were thus called upon to finance an increased volume of trade at rising prices, their own resources received but slight augmentation from increased deposits. Banks' demand liabilities in India were Rs. 135.50 crores at the end of August 1939; Rs. 137.99 crores at the end of December 1939; and Rs. 139.24 crores at the end of March 1940. Their time liabilities in India were Rs. 102.66 crores, Rs. 98.96 crores and Rs. 106.87 crores respectively on the above dates. That is to say, the deposits of banks improved by Rs. 8.16 crores in the first three months of 1940 and by Rs. 6.95 crores in the first seven months of the war. In simple terms, banks increased their deposits only by Rs. 6.95 crores while they had to increase their advances by Rs. 46.67 crores.

Most of these trends were reversed in the remaining nine months of 1940. Prices in most markets and of most commodities suffered heavy falls; the hectic activity of markets gave place to stagnation and listlessness. In the crash of prices, the advances which banks could make were necessarily lower; and, in a large number of cases, stocks and commodities must have changed hands from weak to strong parties. Advances made by banks in India fell from Rs. 150.21 crores on March 29 to Rs. 97.86 crores on December 27 or by Rs. 52.85 crores; and discounts from Rs. 6.32 crores to Rs. 2.27 crores or by Rs. 4.05 crores. The total shrinkage in advances and discounts in these nine months is, therefore, Rs. 56.40 crores. As was to be expected, the percentage of banks' advances and discounts to their deposits, which reached the peak in March-end (62.73), declined to 37 by the end of the year. During this period, two factors have been at work to augment the cash resources of banks. There has been a steady rise in deposits; this has been accompanied by a rapid fall in advances. Banks' demand liabilities improved from Rs. 150.38 crores on March 29, to Rs. 174.95 crores on December 27, or by Rs. 24.57 crores. Time liabilities fell from Rs. 108.88 crores to Rs. 100.76 crores or by Rs. 8.12 crores. Net increase in deposits is, therefore, Rs. 16.45 crores. The total increase in banks' deposits in 1940 is Rs. 24.61 crores. As a result of improving deposits and declining advances, the ratio of banks' cash (including balances with the Reserve Bank) rose from 8.98 per cent. at the end of March to 20.50 at the end of December.

In these circumstances, it was but natural that easy conditions have prevailed in the money market since April, 1940. For most of this period, interbank call money has been going begging at ¼ per cent. in Bombay and ½ per cent. in Calcutta; and if one were to search, Diogenes-like, in broad day-light with a lantern in one's hand, it were difficult to discover a borrower. Rates for term deposits have likewise declined and the rate was no better than ½ per cent. for deposits of three or four months.

Treasury Bill rates have been near 2 per cent. in the first quarter of 1940 but have declined almost throughout the next three quarters. Below are given the average rates

for each month of 1940 as well as the last four (war) months of 1939 :—

Month.	Average Rate. Rs. A. P.
October 1939	... 2 11 4
November ,, ...	... 1 15 7
December ,, ...	... 1 15 7
January 1940	... 1 15 3
February ,, ...	... 1 13 7
March ,, ...	... 1 13 2
April ,, ...	... 1 8 4
May ,, ...	... 1 2 1
June ,, ...	... 1 1 9
July ,, ...	... 1 1 4
August ,, ...	... 0 12 10
September ,, ...	... 0 10 8
October ,, ...	... 0 10 4
November ,, ...	... 0 14 7
December ,, ...	... 0 15 7

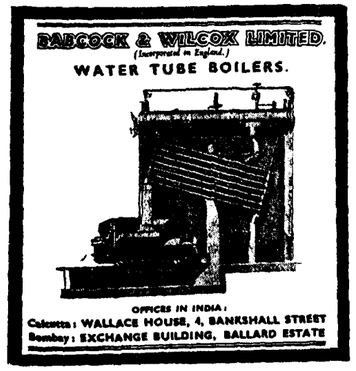
The total Treasury Bills outstanding in the hands of the public at the end of 1940 were Rs. 31.86 crores.

The exchange market was, by the same token, marked by all the attributes of a closed market. It will be remembered that, on the outbreak of war, the Central Government delegated to the Reserve Bank authority under the Defence of India Ordinance to administer the regulations controlling dealings in coin, bullion, securities and foreign exchange. The policy of the Exchange Control was to ensure that all foreign exchange transactions in India were done on the basis of the rates quoted by the London Exchange Control combined with the current rupee rate for sterling, and authorised dealers in foreign exchange were informed that no business must be done by them outside these rates.

It will also be remembered that, in October, 1939, when, owing to the difficulty of obtaining cover in London for positions other than spot and the rise in discount rates there, banks were reluctant to do business, the Reserve Bank entered the forward market in order to provide cover for exports and intimated its willingness to purchase sterling up to three months forward at a rate 1/32d., higher per month than the spot rate. During the same month, the Bank also raised its tap rate to 1s. 6d., as a result of which the market rate for ready T.T. improved to 1s. 5 31/32d. This level remained unchanged for the remainder of the year. While, in October, 1939, the Reserve Bank came on the market as a buyer of sterling for three months forward, the forward period was extended to six months on February 12, 1940. The tap rate was fixed at a flat rate of 1s. 6d., for ready to six months. For nearly 10½ months, exchange rates have maintained an unchanging character. The Reserve Bank's tap rate for sterling has remained at 1s. 6d., all through for six months; and Banks have continued to be sellers of T.T. at 1s. 5 31/32d., all through for six months; and buyers of T.T. at 1s. 6 1/32d., for six months.

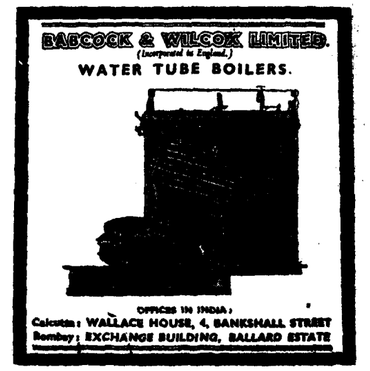
Thanks to the strict control on foreign trade and exchange, the Reserve Bank has been able to buy sterling on a large scale. In fact, colossal purchases of sterling started with the outbreak of war. The figure for December, 1940, is not available at the time of writing; but, from an analysis of the foreign balances held by the Reserve Bank, it seems safe to infer that sterling purchases in the last month of 1940 must be roundabout £6 millions. We give below the monthly figures not only for each month of 1940 but for the first four months of the war:

Month.	Sterling purchases. (000's of £)	Average rate s. d.
September 1939 ...	... 6,860	1 5 15/16
October ,, ...	... 10,393	1 5 63/64
November ,, ...	... 8,445	1 6
December ,, ...	... 9,929	1 6 1/64
Total	... *35,627*	
January 1940 ...	... 11,438	1 6
February ,, ...	... 7,798	1 6
March ,, ...	... 9,867	1 6
April ,, ...	... 2,314	1 6
May ,, ...	... 4,855	1 6
June ,, ...	... 5,765	1 6
July ,, ...	... 3,824	1 6
August ,, ...	... 5,137	1 6
September ,, ...	... 4,180	1 6
October ,, ...	... 2,735	1 6
November ,, ...	... 5,509	1 6
December ,, ... (provisional)	... 6,000	1 6
Total in 1940	... *69,422*	



It will be thus seen that sterling purchases in 1940 came to £69.42 millions and in the sixteen months of war to £105.04 millions.

These purchases are duly reflected in the increase in the Reserve Bank's sterling resources. Both in regard to sterling securities held in the issue department and in regard to foreign balances held in the banking department, there are substantial increases. Sterling securities in the issue department stood at Rs. 59.50 crores at the end of August, 1939; at Rs. 96.30 crores at the end of December, 1939; and at Rs. 131.50 crores at the end of December, 1940. The increase in 1940 is, therefore, Rs. 35.20 crores; and, since September, 1939, is Rs. 72 crores. Foreign balances in the banking department were Rs. 4.44 crores at the end of August, 1939; Rs. 9.71 crores at the end of December, 1939; and Rs. 57.15 crores at the end of December, 1940. That is to say, the increase in 1940 is Rs. 47.44 crores and, since September, 1939, Rs. 52.71 crores. Taking the two together, that is, sterling securities in the issue department and foreign balances in the banking department, the total increase in 1940 is Rs. 82.64 crores and, in the sixteen months of war, Rs. 123.71 crores. Converted into sterling, the amounts are £61.98 millions and £92.79 millions respectively.



In this context, two important considerations have to be borne in mind. On the one hand, the increases thus disclosed do not disclose the actual total of sterling acquisitions. In addition to sterling purchases made at the tap-rate (which, as we have shown, are £69.42 millions in 1940 and £105.04 millions in September, 1939—December, 1940), the Reserve Bank received sterling on account of (1) large purchases of war materials made by the Indian Government on behalf of His Majesty's Government; (2) the latter's share in India's war expenditure; (3) their contribution towards defence under the recommendations of the Chatfield Committee; and (4) sales of silver. Under these four heads, the Reserve Bank's sterling receipts might have been of the order of £30 millions since September, 1939.

On the other hand, account has to be taken of two kinds of outgo: First, the funds required by the India Office. Second, the funds used up for purchase of sterling securities. That, after these disbursements, the net increase in the Reserve Bank's sterling assets since the beginning of the War, is as much as £92.79 millions, is a factor of which India should take full advantage by further improvement in the scheme for sterling debt redemption.

Editorial Notes

Central Revenues

With the Budget barely six weeks ahead, it is natural that budget prophecies should become rife. In the stock market, the probability of a more stringent Excess Profits Tax is being briskly canvassed. The shape of the next Budget, however, does not lend itself to easy prognostication if only for the reason that both sides of the budget are still obscure. There is no manner of ascertaining the trend of defence expenditure and all that one can say is that it may run much ahead of the calculations in the supplementary budget. And, as for revenue, it is a known fact that the declines under customs, salt etc., have been serious, only partially offset by the improved income-tax receipts, railway and postal earnings, etc. At the moment, the November revenue returns are the only indices by which one can go. Incidentally, it is a matter for satisfaction that the monthly statement of the Central Government's receipts and disbursements is being issued in a new form, which admits of no wrong interpretations. Till lately, the statement had been issued with a view only to show the ways and means position of the Government as a whole; and it was a fruitful source of misunderstanding for the layman. In the revised form, this statement is prepared in two parts: one dealing with ordinary revenue and expenditure and the other with the ways and means position. And the receipts from commercial departments, the periodical adjustments such as recovery of interest charges from other Government departments, etc., and payments to provinces of their share of income-tax, adjusted irregularly and generally towards the end of the year, are all shown separately. The statement has thus gained in lucidity and detail.

The revenue returns pertaining to November leave little room for enthusiasm and the prospect for the taxpayer is not too bright. In the eight months, customs revenue, salt duty and corporation tax have, as compared with the previous year, fallen by Rs. 5 crores, Rs. 2.28 crores and Rs. 24 lakhs respectively. On the other hand, central excise duties, income-tax and other taxes went up by Rs. 1.84 crores, Rs. 51 lakhs and Rs. 19 lakhs respectively. Total expenditure, up to the end of November, was Rs. 77.61 crores as compared with Rs. 69.95 crores in 1939-40, the largest increase being under defence (Rs. 86.51 crores as against Rs. 28.18 crores). In the result, the net revenue showed a deficit of Rs. 31 crores, which boils down to Rs. 5 crores net decline if the railway receipts of Rs. 25.28 crores and postal receipts of Rs. 66 lakhs are taken into account. The December returns show a downward trend in customs and excise revenue, and only income-tax receipts may perhaps show an improvement. All told, there is strong reason to believe that realisations will fall short of Budget anticipations, unless indeed the last quarter, always noted for bumper revenue receipts and pleasant surprises, should show a great change.

I. C. A. R.'s work in 1939-40

The strengthening of the resources of the I. C. A. R. since the passage of the Agricultural Produce Cess Act comes in for mention in the annual report issued last week. The levy of the cess will give about Rs. 14 lakhs per annum and the Council will be largely relieved of any anxiety over the recurring grants from the Centre. The report, which is shorter than usual, directs attention to the successive instalments of research, publicity for which is now secured by the new popular journal *Indian Farming* which aims to give the layman an idea of what is going on and how the results of scientific work can be utilised by the practising agriculturist in India. The continuance of work on dry farming (examination not being confined to the Bombay Deccan) and on the system of mixing crops and learning above all what crops should be combined bears witness to the importance of one branch of the Council's work. The notes on the progress of various schemes reveal, that in the tenth year from its foundation, the Council did not lack opportunities, and the experiments carried out ranged from soil surveys to the making of fertilisers. If crop production loomed large as the object of the Council's schemes, it is but right to recognise that improved outturn, except perhaps in the case of the so-called commercial crops, is the direct concern of all agricultural activities including those of the various Departments. The report reviews the progress made under experiments in flax cultivation in Bihar, describes the new South African tobacco, now being acclimatised, and refers to the valuable experience obtained since the return of a special officer from Madras who visited the U.S.A. to learn all about curing, marketing etc. The additions to the list of medicinal plants investigated gains in interest from the existing shortage of many imported drugs and the importance of producing local supplies. The report does not mention what is being done at the research stations of the Indian planting industry though it covers the work done in nearly all provinces and States. The review should surely gain in interest if the results of a year's work carried on by the special scientific officers of the tea and coffee plantation industry were summarised. The lack of any reference to the planting industry, apart from the mention of recent attempts made to encourage cinchona cultivation in India will not be overlooked by the more diligent type of reader. The appendices contain a good deal of interesting information as usual, and the report has something to interest the veterinarian, the poultry-breeder and the man raising Angora goats.

Burma Rice

It is difficult to understand the Burma Government's decision to levy from the New Year a duty on exports of rice to India. The levy comes somewhat strange when negotiations for a new trade agreement between India and Burma are being carried on. But it is said that Burma is quite within the provisions of the Indo-Burma Trade Regulation Order in imposing the levy. Rice will, of course, loom large in the negotiations if only because it accounts for more than half of the total value of Burma's exports to India. The duty has ostensibly been imposed for revenue purposes and Burma apparently does not care if the burden of the duty falls on the Indian consumer or reacts on the Burmese ricegrower. India imported Rs. 10.98 crores worth of rice from Burma in 1937-38, but in the following year imports went up to Rs. 16.65 crores, that is, an increase of 50 per cent. The increase is explained by the very poor rice crop in India for 1938-39 when the outturn was only 23.9 million tons, which was the smallest recorded in the previous nine years. India had, therefore, to increase her imports of rice from Burma to make up the deficit in domestic supplies. At 25.3 million tons the 1939-40 rice crop in India was only slightly better than its predecessor. There is still a long way to go to reach the 1937-38 yield which amounted to 26.7 millions or that of 1936-37 which was 27.8 million tons. These figures show the inadequacy of Indian agricultural policy in which basic food requirements are so entirely neglected.

The immediate effect of the new duty will be a rise in the price of Burma rice for the Indian consumer. It is hardly necessary to state that this is not much of a protection to the indigenous rice-grower, so long as the dependence on Burman rice is so acute. Now that a good many other commodities find no export markets, it is perhaps wise to extend the areas under rice cultivation and to increase the outturn of foodcrops. The outbreak of war, according to the *Review of Trade*, has introduced new factors in the rice situation in the East. Burma's levy of an export duty on rice to India will seem particularly strange in view of her inability to maintain her exports to many of her customers ; and the country has appreciable surplus stocks of rice seeking outlet in nearer markets. The offsetting factors are the emergence of additional demand from the Eastern countries. As a result of the reported heavy deficit in Chosen, Japan may well have to increase her exports of rice from other countries. British Malaya, Ceylon and Netherlands East Indies may also have to compete for Burma's surpluses of rice because the rising prices of plantation and other products may have the double effect of reducing the area sown in rice and also raising the standard of living, thus increasing the consumption of rice in those countries. Above all, there is the possibility of emergency stocks of food being built up to face the needs of the war. Since it is quite possible that the other exporting countries in the East may exercise more control over rice exports in order to conserve food supplies, Burma perhaps feels that her loss of trade with the European markets will be compensated by increased exports to countries of the far East.

Rural Debt Problem

The second bulletin of the Research Department of the Federation of Indian Chambers of Commerce deals with Provincial Debt Legislation. The author, Mr. N. G. Abhyankar, describes the efforts made in the last ten years to relieve rural indebtedness in the several Provinces, distinguishing incidentally the temporary measures adopted during the depression from the permanent statutes, most of them embodying largely the principles of the Congress party in relation to the rural electorate. Much of the legislation bears the impress of the party program that won general approval in the first elections under the new constitution. The C. P. and Berar tried Debt Conciliation Boards first and the Punjab has been energetic in passing Acts to regulate moneylending, restrict the alienation of land, control pawnbroking and simplify the rural debt problem. The last of the measures has not come yet since the U. P. Government (in commission) has quite recently promulgated a new Regulation of Accounts Bill. The rural credit problem is being attacked by the establishment of land mortgage banks, Madras being the pioneer, and the gradual spread of this type of co-operative credit is perhaps the most encouraging feature of the remedial measures adopted. A summary table of legislation passed since 1930 shows that the rate of interest legally permitted is not uniform, and the only common feature is the attempt to go behind the original transactions and fix an arbitrary maximum for payment to creditors. The critical estimate of the reforming zeal of legislatures provided by Mr. Abhyankar does well to emphasize that no relief measures can work effectually until the credit problem is dealt with. The Rural Credit Department of the Reserve Bank has been among the first to stress the intricacy of the rural credit problem and the function of the moneylender in the countryside. The foundation of an agricultural credit corporation is therefore recommended so that land mortgage banks could obtain adequate funds and it is pointed out that debt conciliation could work successfully only if there were facilities for getting the cash needed for settling the creditors' claims. While conciliation boards in most provinces have contributed, in some measure, to the relief of the peasantry, the drying up of credit that has followed the rapid passage of debt relief acts constitutes in itself a formidable problem.

The control of usury may recall the zeal of mediaeval reformers but the justification is apparent. The author endorses the general view that the agricultural debtor stands in need of protection, but he stresses also the need for safeguards against interested or communally biased legislation. Greater interest attaches to the analysis of the rural credit problem. A sound financial system aiming at a regulated flow of credit for agriculture is yet to be created, and the existing agencies sufficiently numerous and unco-ordinated have yet to realise their functions. The proposals made in the bulletin for reorganising the machinery of rural credit deserve to be widely studied, inasmuch as a suggestion is made that the savings of the masses should not go, as of yore, into the form of silver coin or ornaments. It is urged that a special type of savings certificate should be issued in order to encourage thrift in the countryside. The issue of such certificates would necessitate the holding of a separate gold reserve, and the savings thus attracted should in turn be made available to trade and industry, assuming that the Reserve Bank would embark on a venturesome and unusual

ELECTRICITY
plays a part

Electricity is indivisable from life as we know it today. Where it is hot, Electricity brings cool air. Where it is cold, it brings warmth and comfort. It creates security; banishes gloom. It lights the way and makes our streets safe to walk upon at night. Our daily paper, our wireless set, the visit to the cinema—in each of these it plays a part and of all that we see and handle, there is but little in which Electricity has not had some share in bringing us.

type of banking business. But savings connote prosperity and prosperity can only come from agricultural progress. To this end certain suggestions are made by the author but money incomes for the masses presuppose an agrarian revolution, and standstill governments have neither the courage nor the desire to pursue reforming policies. India has to wait for an enlightened and disinterested dictatorship such as can promote progress without being perplexed by the inheritance of preconceived ideas and practices.

Indian Tobacco in Britain

The measure of preference accorded to Indian tobacco in the U. K. market since 1932 is not merely due to the improvement in the quality of Virginian tobacco grown in India. Tobacco from India like other parts of the Empire has obtained a bigger share of the U. K. market for sentimental and practical reasons. The growing popularity of what is called Indian virginia is borne out by the following figures. In 1934-35 the U. K. bought only 9.8 million lbs. but in 1939 the offtake of Indian grown virginia had reached over 65 million lbs. valued at nearly £2 millions. India's exports are not likely to diminish since Britain should reduce, in any event, purchases of American tobacco. India is already well-established as the most important of Empire suppliers; Southern Rhodesia stands next. It has been pointed out that few Englishmen realise how great a proportion of the tobacco in their cigarettes is Empire-grown and fewer still appreciate the fact that India after the U.S.A. is the U. K.'s chief supplier. India's own consumption is satisfied by Indian varieties and indigenous manufactures of tobacco. It may interest many to learn that only 15 out of 1,000 cigarettes smoked here come from abroad. More than 98 per cent. of the cigarettes sold in India are, whatever the packing, also made in India. India has ample supplies of what the smoker wants and regular shipments of tobacco and cigarettes to the troops on active service are a feature of the war contribution made by India.

Indians in Malaya

The annual report of the Indian Government's agent in Malaya states that at the end of 1939 the total Indian population in Malaya was nearly 745,000 forming 13.8 per cent. of the total population. About 80 per cent. of these were wage-earners engaged in some form of manual labour. These facts and figures give the clue to the position of Indians and the protection they require. The two major industries, rubber and tin, depend on immigrant labour; the Chinese predominate in the mines and factories while Indians predominate on the plantations. During the year 1939 the ban on the emigration of unskilled labour was in force and the advent of war conditions had the further effect of reducing the movement of labour from South India. Two hundred and eighty-seven persons were assisted to emigrate to Malaya while 10,775 persons were repatriated to South India. Of 28,674 persons who paid their own passage to Malaya, only 2,166 persons were classified as labourers and the rest as traders and others. Of 31,949 who returned to South India at their own expense, only 12,106 persons were presumed to be labourers. The balance of assisted and unassisted labour migration against Malaya was 20,428. This fall in the labour supply did not contribute to any improvement in the standards of Malayan labour. Despite the ban on unassisted emigration and the increase in the rubber quota—the average for 1939 was 62.5 per cent. as against 55 per cent. in 1938—the supply of Indian and Chinese labour was ample. But the rise in the price of rubber after the outbreak of war led to the rise of wages of Indian labourers after October 1, 1939. The rates which stood at the reduced level of 45 cents per diem for male and 35 cents for female were enhanced by 5 cents per diem. The employees of public authorities were also benefited by the grant of a cost of living bonus varying from Straits dollar 1 to dollar 2 per month. Sections of the report deal with the welfare work conducted on estates. A new departure was a nutrition survey on 37 estates which revealed that Tamils on the estates suffered severely from under-nourishment. The depression in wages affords an explanation for the backward condition of labour on the estates. Such indications of progress in 1939 as are chronicled in the report include a reduction of liquor shops on the estates, an increase in the number of co-operative credit societies and an increase in savings deposits though the volume of remittances to South India showed a decrease. An increase in the number of schools on estates is also reported, but the quality of the instruction made available stands greatly in need of improvement. Two scholarships awarded in 1939 by the Annamalai University to Indian students who had taken the Cambridge School Certificate may be said to mark a welcome beginning. Malaya does not provide any facilities either for the higher or the vocational education of Indians, though a commission reported recently on the measures for raising standards of education. Labour unrest following the outbreak was noticed on the estates and Indians were perceptibly affected. The industrial legislation under consideration included a Trade Unions Bill. F.M.S. Government employees qualify for 9 days' leave with pay in a year according to a decision reached in 1939. Such improvement in wages and conditions as was attained was apparently the result of successful strikes. The visit of Mr. Ahearne to India and that of Pundit Kunzru to Malaya had no effect on the situation created by the ban on Indian emigration.

Minerals in N. W. F. P.

A recent press note summarises the paper recently prepared by Dr. Coulson of the Geological Survey dealing with the mineral resources of the N. W. F. P. It is said that the province is an inexhaustible source of limestone and rich deposits of marble of good quality. Dr. Coulson is of opinion that the white marble found in the Province should be carefully conserved for ornamental statuary work and the more abundant coloured varieties should be used for ordinary building purposes. Apart from this the minerals of the N.W.F.P. are unimportant consisting almost entirely of salt, limestone, marble and road material. There is, however, abundant power available from the Malakand Hydro-electric scheme and Dr. Coulson recommends that every encouragement should be given to industrial enterprises desirous of using this source of power. There is a minor occurrence of coal in the Singhar range on the border of the Kohat district. The deposits await development, and Dr. Coulson recommends that mining should be encouraged. Reference is also made to the deposits of gypsum found in the Kohat and D. I. Khan districts. This mineral may prove more important than any other as the base for fertilisers and Dr. Coulson draws attention to the possibility of utilising the deposits. Mention of limestone always raises the question of portland cement manufacture. Discussing possibilities Dr. Coulson is not at all optimistic about any cement factory in the Frontier province competing successfully with the existing works in the Punjab. Perhaps the most important suggestion made by Dr. Coulson favours the impounding of flood water to the north of the Upper Swat Canal to meet the increased demand for water. It is known that the sources of surface and underground water supply are deficient in the settled districts. The water problem has always been the most conspicuous of economic handicaps in every province.

Paper Mill For Baroda

A recent press note issued by the Government of the Gaekwar states that the Baroda Government in pursuance of a policy of fostering industrial enterprise in the State intends to assist a joint-stock company to be floated, with a capital of Rs. 30 lakhs, for the manufacture of paper. The Government has decided to grant certain concessions which include the purchase of preference to the extent of 20 per cent. of the company's subscribed capital and permission to use the waters of the Tapti River free of charge. The press note

WALFORD'S
PARK STREET, CALCUTTA

SIR Alexander Roger, it is now learned, is to be the President of the Standing Committee which is to implement the recommendations of the Eastern Group Conference. Whether the news report is premature or wholly conjectural, I cannot say. But it is extremely significant that this soldering of the British Supply Mission to India on to the Eastern Group Conference is, after all, to be formally achieved. When the Mission was first announced, there was probably little thought of bringing about a conference of the Eastern Empire countries in the capital of the Indian Empire. Nor was it supposed that the Roger Mission would do anything more than provide the Government of India with expert advice where it was most in need. But the Government's ideas in respect of supplies have gradually widened, not, indeed, I am sorry to say, on account of foresight or vision, but under pressure of expediency. The Roger Mission was followed soon after by the Eastern Group Conference. On paper, the latter seems by far the more important. But it would be unwise to count on quick progress so far as the work of the Eastern Group Conference is concerned. The position of the Supply Mission in India is different. Its task is definite; and if its sphere of action is wide, it is not because it was given wide powers or broad terms of reference, but because the accomplishment of the task takes it over wider realms. The Roger Mission has travelled all over the country. And what is more important, Sir Alexander and his colleagues have been in constant touch with industrialists, engineers and practical men, not indeed as some of us might like, but as their immediate objectives require them to do. The result is that during these months of their stay in India, the Roger Mission have made themselves thoroughly familiar with the conditions of industry and the potentialities of armament production in this country. They have also worked in close collaboration with the Eastern Group Conference while it was in session. It may be said, therefore, that to their specialised knowledge of supplies, they have now added the wider perspective of the Eastern Group Conference. It is natural, therefore, that the task of continuing the work of the Eastern Group Conference should be entrusted to Sir Alexander Roger.

On what lines the work of the Conference may progress in the future, it is not easy to say. But so far as India is concerned, the public in this country has no doubt that the need for development and the possibilities of it are to some extent independent of the resources and requirements of other Eastern Empire countries. I should be the last to deny the value of co-ordinate action on the part of these countries. But that hardly implies that India must view things only as a member of the Empire and keep step, in every matter, with the Dominions and Colonies in the East. Just as in the matter of political status, India is on a footing of her own, neither a Dominion nor a Colony, so in the matter of developing war potential or organising the economic defences, India's position is unique. I cannot help feeling that Sir Alexander Roger, too, must be inclined to a similar conclusion. The ideas with which a foreign expert comes to India are necessarily wide of the mark. In some respects he is bound to experience nasty shocks. But in others some pleasant surprises are also inevitable. With some adjustment of over-estimate and under-estimate, one gets a fair idea of what the country can do, left to itself, what it may accomplish with some assistance, and what it could achieve under pressure of necessity. Sir Alexander has been long enough in India to have completed this process of adjustment of ideas. And I expect he will bring to his work the kind of disciplined imagination which alone can picture accurately the practical possibilities and initiate the efforts necessary for their fulfilment. Sir Alexander Roger has a great mission, far surpassing, both in immediate importance and in historical significance, the mission on which he first set out to this country.

In this mission, it should be widely recognised, he has need for the help of Indian public opinion and of those who are in a position to influence it. The contours of India's national economy are changing, at once vastly and rapidly, during the course of the present war. We have seen prices suffer a meteoric rise; we have seen the rise of new markets, the loss of old ones, alternations of high demand and depressing glut, hopes of industrial boom followed by bitter disappointments. We conjured up visions of India as the arsenal of the Empire, but only to be awakened to the reality of a far lesser role. Sometimes, we are treated to exhilarating bits of news that certain lines of production, which we could not dream of after 50 years of peaceful development, have suddenly been made practicable.

To preserve stability amidst this ceaseless see-saw of things is not easy. But behind these vicissitudes, there remain a few simple facts, that the war is yet young, that the limit of external danger to India has not yet become clear, that, however much Britain may have stood up to the Nazi onslaught, the lines of the counter-offensive cannot be clearly foreseen, that here is a country with immense potentialities and that, both on her account and on account of the Empire of which she is an important member, India needs to develop those potentialities. These facts are indisputable; only, the lines on which the national economy has to be developed, so that it can serve the needs alike of peace and war, have to be carefully thought out. We have all sorts of conflicting ideas swaying the mind of the people. Even in the matter of pure industrialism, untouched by warlike purposes of defence or aggression, India has a divided mind. We are wedded to non-violence; but the blandishments of military power are not without effect on our national psychology. We want simple living; but we can devise no means of clothing and feeding and housing our teeming millions except the charka and the primitive plough and trowel. The Government have their conflicting aims and incompatible ends. But when we complain against them, we ought to be aware of our shortcomings too.

It is to this task of clarifying aims and methods of economic development during the war that INDIAN FINANCE has addressed itself since the outbreak of hostilities in September 1939. At every stage of the war, we have given attention, as in duty bound, to the problems of our war economy. These problems, as I said earlier, had been somewhat elusive in the earlier stages. They changed colour like a chameleon. But now there is no mistaking the identity of the problem. It is one, pure and simple, of making India industrially and militarily self-sufficient. Eight or nine months of the war sufficed to reveal this problem in its true form and in a manner that allowed of no doubt that it might be affected by changes in the course of the war. Whatever course the war in Europe may take, nothing can happen to obviate the need for India's self-reliance in the matter of defence; and not inconceivably, the Empire may have need for more strenuous help from this country in its task of saving democracy and civilisation. In the sphere of industry, likewise, nothing can happen to bring back to us all the lost markets or to ensure the conditions in which India could expect to grow rich merely on the basis of exchange of raw materials for finished products. Now at last we see this problem, not as in a passing phase, but in its true identity; and the time is appropriate for presenting it in all its facets.

The Eastern Group Number of INDIAN FINANCE, which was released towards the year-end, is an attempt at such a presentation of India's economic problem at the present time. The Roger Mission and the Eastern Group Conference provided the occasion; but India's economic development is not a "topic", in the sense connoted by commonplace journalese. In fact, those who have followed the special publications of INDIAN FINANCE must be

struck with what I might even call the Marxian dialectic which underlies them. We started a long time ago at the time of the Banking Enquiry Committee with a Banking Supplement; the Editor and Managing Editor even appeared before the Committee for oral evidence on the basis of the leading article in the Supplement. But other concrete issues were not made the theme of special publications, for the simple reason that they had not become sufficiently concrete. Instead INDIAN FINANCE turned to the compilation of the *Year Book* which since 1932, the year of its first publication, has been universally acknowledged as the most handy and the most comprehensive book of reference on all matters pertaining to India's national economy. Leading off with a mass of data covering the whole field, we began the survey of particular areas. Tea, Sugar, Building, Engineering, Transport, every particular problem, the contours of which were before either hazy or indeterminate, was taken up; and the interests concerned were quick to appreciate the value of these special publications in focussing public attention on them. But that comprehensive, but clear, outlook on the Indian economic problem, which takes in at once the broad expanse and the little details, took time to form. The advent of the Congress ministries and the appointment of the National Planning Committee lent point to the ideas which had germinated and had been growing for a long time. And INDIAN FINANCE launched the National Planning Series, of which two numbers had been published before the war finished its first three months.

With the outbreak of the war and the resignation of the Congress ministries "national planning" was obviously inappropriate. It would not be accurate to talk of economic planning either. The clouds of war hung thick on our economic horizon. And the shape of our plans was to be determined by military considerations. Economically, there was need to align ourselves with the Eastern Empire. Nevertheless, it was to be planning; it had to be economic. And in a real, though hardly formal, sense, therefore the Eastern Group Number is a continuation of our National Planning Series. As an interesting and, in some ways, instructive study, I would ask the responsive reader to compare our Planning Supplement with the Eastern Group Number. The differences are not seen, except with a little effort. The whole scheme of the former had of its very nature to be more of a wish than of a resolution; the volitional element was weak. For, the motive force behind economic planning was a pious resolution of a Committee. But behind the plans connected with the Roger Mission and the Eastern Group Conference are the inexorable forces of history. In wartime Indian economy is reshaped under the hammer blows of a world war.

I have said this only to bring out the fact that the Eastern Group Number has of necessity a more practical outlook. The issues are more concrete than "raising the standard of living of the masses". Every contributor is engaged in the practical work of running a new industry, or developing an old one or organising new departments. The authors are conscious of what they are about. They are aware that what seemed like insuperable difficulties some time ago may be counted on to disappear. There is no problem of academic interest. The problem of key industries, which Dr. Matthai considers in his article is seen in the Eastern Group Number in a new light. Mr. J. J. Ghandy's account of new developments in the steel works at Jamshedpur has new significance. Officials, who have written on their main tasks, show a singular width of vision. When Mr. Kapilram Vakil writes on the chemical industry, when the distinguished scientists talk each of his own sphere, we have passed out of that realm of mere aspiration in which the Planning Supplement had perforce to linger. And all these articles are presented with that wealth of general data which are the distinguishable mark of our Year-Book.

The Eastern Group Number is, even in point of size, the biggest supplement ever produced by any journal. In ordinary book print, it would run to a thousand pages. And no modesty is required for the admission that for such a mighty effort, help from all quarters was necessary. The Government of India gave their fullest benediction to our effort. And there is a large circle of businessmen and industrialists who, whenever we set out on a new project, wish us godspeed in concrete form. To them all, INDIAN FINANCE has reason to feel deeply grateful. For what sustains us in this office is the knowledge that every special effort on our part meets with special applause. Imagine our pride when Sir Alexander Roger offers his "sincere congratulations on the form and contents of the issue" and assures us that it "will do fine work, particularly at the present time." Not only Sir Alexander or Dr. John Matthai, but even in most unexpected quarters, in strange settings and queer contexts, I am told, the sight of a copy of the Eastern Group Number inspires a round of compliments. For all of which we are truly grateful, less as a requital for past endeavours than as an inspiration for the future.

INDIAN STORES DEPARTMENT

TENDER NOTICE

The Chief Controller of Stores, Indian Stores Department (Textiles Section), New Delhi, invites tenders for the stores detailed below :—

Tender No. Sy/X-3/11142/TX/125

Canvas Cotton Khaki W.P. (Common) Grade 'C'

1.	40" wide	...	21,50,000 yards
2.	36" wide	...	8,70,000 yards
3.	30" wide	...	6,40,000 yards
4.	24" wide	...	7,00,000 yards

Canvas Cotton Khaki W.P. (Special) Grade 'C'

5.	36" wide	...	2,100 yards
6.	24" wide	...	2,400 yards

N.B. 1. All the Canvas (1—6) required are to conform to Specification No. I. M. 1680(c).

2. The delivery of items 5 and 6 is required by April 1941 and of the remaining items (1—4) is required to be completed in 5 equal monthly instalments commencing from April 1941.

Price of tender forms, etc. is Rs. 10/- per set and is not refundable and the forms are not transferable. Payment should be made in cash or by money order only quoting tender number and remitter's full address on the coupon.

Tenders will be received up to the 24th February, 1941.

*Samples against this tender are required to be submitted to the Chief Inspector of Stores and Clothing, Cawnpore, by 20th February, 1941.

A NEW form has been adopted by the Finance Department of the Government of India for presenting their monthly statement of receipts and disbursements. Though the form has been improved in order to make the figures more intelligible to the public, something more can even now be done to expedite its publication. Only the November figures are now available. A study of these figures shows that compared with the same month last year—also a war month—there has been a general fall in revenues. The only head under which increase has been registered is the revenue from Central excise duties which has more than doubled. The resulting position so far as the month is concerned is that there is a fall in revenue to the extent of Rs. 70 lakhs as against an increase in expenditure which is nearly Rs. 2 crores. Taking the eight months up to the end of November one finds a drop of Rs. 5 crores in revenue and an increase in expenditure which is nearly Rs. 8 crores. As the Budget for the year has provided only for a fall of Rs. 3 crores in revenue for the whole year and a total increase in expenditure of Rs. 5 crores, the position cannot be said to be so disquieting as one might have feared.

As this is the time when the Finance Member is engaged in preparing the Budget proposals for the coming year these figures are important. One additional source of revenue which at the time of the Budget discussions last year was looked upon as likely to yield a good amount, was the Excess Profits Tax. According to the Budget statement it was expected to yield only Rs. 3 crores, but non-official critics in the Asembly were disposed to regard it as an underestimate. Enquiries made of the Central Board of Revenue reveal that assessments to the extent of some lakhs of Rupees have been made, but it seems doubtful whether the estimated Rs. 3 crores will be realised within this financial year or not. Owing to the delay in the preparation of rules and other preliminary arrangements necessary for bringing the measure into operation, this fruitful source of revenue may not be helpful to any great extent so far as this year's finances are concerned. The general estimate is that even after making allowance for the surplus money available from last year's account and the income arising from the additional taxation imposed in November, the year will close with a deficit of about Rs. 15 crores. This, as the Finance Member explained in his speech in November, is partly due to the addition in administrative expenditure and partly to the huge Defence expansion scheme undertaken by the Army authorities.

In judging whether the Finance Member will find it necessary to impose further taxes in the next Budget or not, one will have to take into account not only this deficit which will be left over to be covered but also the large commitments for the coming year's account. These commitments involve a recurring increase of Rs. 16 crores in a full year and non-recurring expenditure of well over Rs. 30 crores to be spread over the next year or two. In the coming months it may be necessary owing to new Defence requirements and other reasons to enter into more commitments involving further financial outlay. But far the most encouraging features in the revenue position are three in number. Firstly, there is the increase in Railway earnings which promise to show an improvement of over Rs. 10 crores as compared with last year. Secondly there is the tide of prosperity which the working of the Posts and Telegraphs Department shows. In both these cases however, one has to remember a good portion of the increased earnings is due to Governmental activity and military movement necessitated by the war. Thirdly, there is the flow of subscriptions to Defence loans which, excluding conversions, stand to-day at over Rs. 25 crores. There is no reason to suppose that these subscriptions will not continue at the same rate but also show a useful way of helping the war effort.

The conclusion to be drawn from the above figures—particularly from the fact that the usual sources of revenue like customs are yielding diminished returns is that the present scale of taxation and the present investments offered by the Government are not likely to be enough to meet the expenditure which will have to be met next year—even as envisaged at the moment. Taking this year's deficit and the recurring and non-recurring expenditure already announced for the coming year—not to mention the growing civil expenditure and the threatened fall in income—one finds that the additional amount to be met may be well over Rs. 60 crores. In his last statement in the Central Assembly the Finance Member said: "While I do not pretend that this should be met entirely from taxation it is obvious that with defence expenditure now running at the rate of 20 lakhs a day we must begin at once to raise extra revenue to cover at least a portion of additional expenditure, the reminder being met from the proceeds of our Defence loans." It is believed that the Finance Member will proceed on this basis in framing his Budget proposals for the coming year also.

Many businessmen like Mr. Shantidas Askuran said in the course of their speeches in the Central Legislature on the Supplementary Finance Bill that the proper course for the Government was to raise loans for meeting this abnormal expenditure since it should not be thrown on the present geeration alone and that it should be shared by succeeding generations also. There appears to be a feeling that the Government of India is not tapping the loan market as much as it should in the present favourable conditions for raising more money to meet the additional war expenditure. In view of this feeling it seems extremely likely that the Finance Member may have some important loan proposals for the coming year. But reports current in New Delhi go to show that the Finance Member is not likely to leave taxation where it is. As the established principle of war taxation emphasised in the discussions in the Assembly is to tax those who have benefited financially from war conditions, the new taxation proposals though they may not be considerable may take that line.

In Assembly circles one could see even in the last session a pronounced desire that the Government should undertake a comprehensive policy of retrenchment and economy in the Central Government's administration. The official attitude to this was that in the midst of a war it was not possible to find the time or the facilities for retrenchment work. From Ceylon however has come a different story. Despite the war there has been a Retrenchment Commission which has examined in great detail the administration of no less than 140 Departments and Sub-departments. The full programme of reorganisation and retrenchment has already been carried out in no less than 81 Departments and Sub-departments while in the remaining 57 Departments where action was proceeding the majority of the recommendations of the Commission had already been given effect to. The principle adopted has been that the staff deemed surplus should not be sent away but should be absorbed in their own or other Departments as vacancies arise. What has been done in Ceylon can with even greater success be adopted in the Government of India where the scope for large scale retrenchment and reorganisation for economising expenditure is very large. In so imporant a matter as the release of more funds for Defence expenditure and at the same time proportionate relief to the taxpayer the plea that the officials concerned cannot spare the time for a retrenchment committee sounds unreal and certainly unwise.

Gateway of India

(From Our Correspondent)

Bombay, January 15, 1941.

THE arrival of the Viceroy on a visit to the Kathiawar States prompted the query whether he would soon come to Bombay. Recalling the Orient Club speech of last year certain hopefuls in political circles expect that some sort of statement on the political situation may be forthcoming, but the majority of informed observers think that the Viceroy will stand pat on the statement of August 8. Like Mr. Montagu's declaration in August 1917, the August statement will apparently dominate for all time the course of Indian politics. The Viceroy is doing the regular round in Kathiawar and visited Rajkot where a new Ruler played host. The trip thence to Jamnagar shows that the Viceroy is interested in Nawanagar whose ruler as Chancellor of the Chamber of Princes has a special position, more so in view of the all-round progress made by the State under the present ruler.

The Governor stated that the approximate total of Bombay's contribution to the Defence loans was Rs. 964 lakhs made up as follows:— 3 per cent. Defence Loan, excluding conversions, Rs. 861 lakhs: Interest-free loans Rs. 65 lakhs; 10 year defence certificates Rs. 38 lakhs. It is interesting to note that the total for the Districts is completely overshadowed by the contribution of the city which alone has raised Rs. 847 lakhs. If it were not for the handicaps of high taxation and poor trade the total would be considerably larger, and Sir, Roger mentioned in passing that the subscriptions to the interest-free loan from Bombay were longer than those reported by any other Province. If the war gifts fund collections are added, the money raised during the last six months appears to be well over Rs. 10 crores. Mr. V. N. Chandavarkar proposed the vote of thanks to the Governor, who, as the first public servant of Bombay more than fulfilled the definition of active but silent service inculcated by Rotary. Incidentally, I should mention that Mr. V. N. Chandavarkar has been unanimously re-elected Chairman of the Bombay Millowners Association. Long a pillar of the Liberal party, Mr. Chandavarkar inherits both his political faith and ability from his father, the famous judge. His work as Mayor of the City and as a Vice-Chancellor of the University shows that his public interests are both wide and enduring, while his active interest in the mill industry is recognised by his election for more than one term as Chairman of the Bombay Millowners Association.

Bombay does not show much interest in the resolution sponsored by a member of the Punjab Assembly asking the Government of India to impose a heavy import duty on foreign cotton. The mill industry is not likely to welcome such a proposal, intended to favour a few cotton-growers in the Punjab producing long staple varieties. There is already a duty of one anna per lb. on imported cotton, which is a sufficiently high revenue duty. In fact, the cheapening of cotton prices should increase the burden of the tariff on the Indian importer in this case, the textile manufacturer, who may well put in a claim for its reduction to the former level of ¼ anna per lb. The increase in the 1939 budget was a severe and unpopular measure, but one might presume that the Punjab proposal (made by a non-official member) is merely intended to draw attention to the pressing difficulties of the Indian cotton-grower. The proposals for giving relief seem rather vague and half-hearted. Suggestions for the restraint of speculation are prolific, though it is scarcely recognised that the slump is independent of local factors such as short selling.

The Corporation's finances are not improving, and a definitely pessimistic view is generally taken of the Estimates for 1941-42. The Standing Committee's efforts to curtail expenditure reduce the budget deficit to Rs. 15 lakhs for meeting which the cash balance and Revenue reserve must be drawn upon. A purely formal surplus of Rs. 6 lakhs does not produce much of an impression, and the misgivings expressed a month ago find renewed expression. Essentially the problem is one of inadequate revenues. Over a ten-year period expenditure has risen by Rs. 61 lakhs and revenue which has improved by Rs. 43 lakhs during the same period has hardly kept step. The contraction of the usual margin in revenue receipts has been obvious in a series of budgets, and not much reliance can be placed on casual and irregular receipts arising from the sale of land belonging to the Improvement Trust. Once again the claims for effective retrenchment are being put forth, and the Chairman of the Standing Committee has been the most vigorous of the advocates of economy. A simpler and cheaper municipal administration may find favour, but the probable loss in efficiency has to be taken into account. A reduction under Establishment Charges will, however, be preferred to any reduction in the amenities available at present to the ratepayer, and a reform widely approved is the merging of the separate engineering and accounts staff retained for the sake of the Improvement Trust's operations. Certain critics also dwell on the scope for pruning expenditure on the schools and restricting charitable grants. The Corporation would, however, welcome grants from the proceeds of the Tobacco Duty and the Entertainments Tax. There is certainly a strong case for a division of the revenue, with the Municipality as a co-partner in this case. Leading members of the City Council have argued vehemently in favour of Government's shouldering part of the expenditure on primary education in the City. And the chances of increasing the annual rate on immoveable property do not appear bright at all, in case a suggestion is made that the general tax can be increased without difficulty.

At the recent meeting of the Indian Central Cotton Committee, with Mr. P. M. Kharegat in the chair, several questions of interest were discussed. The views of commercial bodies should have facilitated an expression of the Committee's opinion on the scheme for a new organisation to promote the export of Indian cotton. This, like the similar scheme for a special export council to assist the shipper of Indian textile manufactures, should have received immediate approval. The Committee is understood to have reviewed the progress of various research schemes in cotton growing districts. A new scheme intended to encourage the use of mill waste as manure is known to have figured in the agenda and the Committee had an opportunity to reach decisions concerning the scheme to eradicate the root rot disease in the Punjab. Another proposal relating to the setting up of model projects that would embody all improvements and refinements in cotton-growing was intended to familiarise Madras with the need for raising the quantity and outturn of locally-grown cotton. The Committee should have also formed its views on the scheme to develop rayon manufacture on the basis of low staple cotton. With reference to the project (approved readily enough by the new Board of Scientific and Industrial Research it is known that the Indian Central Cotton Committee has decided to proceed beyond the initial investigations and has placed an order for the purchase of a pilot chemical plant which will be suitable for determining whether any any new film akin to artificial silk can be made out of linters, cotton waste, fuzz, stained cotton and short staple varieties. One of the results obtained from recent investigations is that there is not much scope for using cotton cloth as covering for bales of pressed cotton. This might have meant a new use for coarse cloth, but there does not appear to be much chance of its coming into vogue since hessian bags are much cheaper than cotton packing.

The elections of Seth Maganlal C. Ghia as chairman of the Indian Merchants Chamber comes as no surprise as he has been vice-president last year, and his personal qualifications and robust faith in Indian enterprise alike make him a suitable spokesman for Indian commercial interests. He succeeds Mr. Chunilal B. Mehta whose year of office has been marked by the familiar vicissitudes caused by war. Seth Maganlal, known primarily as a director of mill companies, will have heavy responsibilities but he has the courage and patience of the pioneer and can be trusted to be more than a daring pilot in extremity. He will have the assistance of Mr. J. C. Setalvad as Vice this year. Insurance and financial interests will as before claim the attention of Mr. Setalvad. Elections to the Committee of the Chamber will excite more than the usually keen contest as 38 candidates are in the field. Committeemen have been in the previous years keen canvassers for themselves, and the flow of new blood has been generally regulated by the advent of new names into the Committee.

A Resume of Commodity Markets

SINCE the beginning of the New Year, commodity markets have been rather uninteresting. With the exception of the mild recovery in prices in the Karachi wheat market there is no particular feature of interest. In spite of the steadier overseas advices the Bombay raw cotton market has continued to be weak on pressure of arrivals and on fears of a drop in exports to Japan. Only during the last few days there has been a check to the downward movement and quotations are barely steady around the lower levels. In the raw jute futures market, it was anticipated that there would be a sharp rally with the need for large buying by mills to complete the quota of 15 lakhs bales for the first period of the agreement. But the expectations of operators have been belied. There has certainly been some large buying of loose jute in the mofussil centres, though the quota has by no means completed, but there has been a complete lack of activity in the futures market and quotations have been fluctuating in narrow limits. The jute manufactures market has tended to be steadier in the past week due to large export buying. At first, the local stock figures for the month of December had a discouraging effect but when it was known that mills were to close down for one week in March there was a slight recovery. Bullion markets have been firm. While gold prices have been steady, silver prices have registered a good rise.

It would thus be seen that the opening for the New Year in the several commodity markets has not been quite encouraging. The tone in the several sections is undecided. The main problem is that of finding export markets and adequate freight and disposing of surplus crops. With a plentiful supply of raw cotton, it cannot be expected that the short fall in exports to Japan can be made up by increased internal consumption. Even the fact that prices for Indian cotton are considerably below American parity prices has not induced any good buying. The problem of disposing of surplus stocks of raw jute is as difficult as ever. As far as jute manufactures are concerned, demand has been restricted by the availability of space. Unless there is a satisfactory solution of the special difficulties facing commodities and the freight position is improved, there cannot be any substantial rise in prices from the present levels.

Jute

As remarked at the beginning, the jute market has been dull. During the latter half of the week, a large amount of business has been reported in the loose jute section. Sellers of the Tossa qualities have been rather reserved but business is freely possible in Indian Jat and Indian District Jute. Sellers are still pressing for business in low assortment. In the mofussil, prices are reported to be higher than minimum prices for all grades except low assortment. Large buying by mills and balers has been reported. It is not still definitely known whether the Bengal Government would buy up the balance of the quota. It is not so much as buying the balance of the quota that is necessary for stabilising prices but of taking off the huge stocks of jute of low assortment from the market. Mill purchases in recent weeks have been mainly of the grades which can be included in the quota.

Jute Manufactures

The absence of any big decline in local stocks at the end of December has to a certain extent been due to the larger production during the month. But, even after allowing for the increase in production the decline in stocks is only about half the figure for November. The decision of the Indian Jute Mills Association, therefore, to work mills normally in February, a short-working month, and close down mills for one week in March is to be welcomed. If North American buying during the current month is maintained at the level of last week, the stock figures at the month-end can be expected to make satisfactory showing.

Cotton

Recovery from the low levels touched at the end of last week has been very difficult. Japanese export buying and Indian mill buying in mid-week took up the quotation for Broach April/May to Rs. 185-4 but bear selling at the higher levels caused a recession to Rs. 182-4. Prices have been fluctuating around that level since. The sentiment in the market is predominantly bearish. The decline in prices to very much below American parity prices is not justifiable especially after the declaration of the American President that the interests of the farmer would be safeguarded. But in the absence of free marketing conditions it cannot be expected that the competitive abilities of Indian cotton will come into play. At a time when pressure of arrivals is heaviest bears have naturally taken advantage of the situation.

Wheat

The Karachi wheat market has recorded an appreciable rise in prices during the past few days on reports that the Government of India have bought about 10,000 tons of wheat for shipment to the Middle East. The rise in prices for ready to above Rs. 35 on the last occasion was mainly due to the possibilities in this regard.

Sugar

The minimum selling prices for all grades of sugar manufactured in the provinces of Bihar and U. P. during the season 1940-41 have been fixed. These prices, which vary according to grades, were calculated by the Indian Sugar Syndicate and have been approved of by the provincial governments in consultation with the Sugar Commission.

The communique lays down that sugar produced in 1939-40 shall not be sold at rates less than what has been approved of by the Government and adds that "sugar of any grade produced in a factory in the season 1939-40 shall not be sold by the occupier or manager of such factory except in such quantities based on a percentage of its production as may be fixed from time to time by the Sugar Commission with the approval of the Provincial government."

It is pointed out that the control of sugar prices has been necessitated by the slump in values in Cawnpore consequent on the wavering policy of the Indian Sugar Syndicate with regard to the grant of rebate of twelve annas per maund for sugars sold to Bombay.

MADRAS GROUNDNUTS

Madras, January 14, 1941.

THE market improved further during the week, the increase at the close in shippers' buying limits amounting to nearly 8 annas per candy. The larger allotment of steamer space for Groundnut cargoes in the coming weeks is having a steadying effect on the market. At the close, it is reported that an Indian operator was paying Rs. 21-2. Shippers' buying limits opened on Tuesday last at Rs. 30-6 to Rs. 30-8 for Machined (Per candy of 531 lbs. ex-coast godowns), and improved to Rs. 20-8 and Rs. 20-10 on Thursday, to Rs. 20-10 and Rs. 20-12 on Friday and to Rs. 20-15 and Rs. 21-2 at the close. Local buyers' limits have remained more or less unchanged around Rs. 20 to 20-2 for Machined (Per candy of 531 lbs. ex-coast godowns) during the week. Rangoon buyers who were recently active have now withdrawn from the market, and there is therefore no possibility of any advanace in local buyers' limits. Arrivals from the southern districts are very free, and it is reported that firms are buying freely in the Salem area and shipping their Salem purchases from the West Coast. First arrivals are reported in the Kondapuram area (Ceded districts). Groundnut oil market ruled firm during the week, mainly on account of demand for the PONGAL festival. Opening at Rs. 45 to Rs. 45-8 for "Chekku" quality and Rs. 48 for "Prodattur" quality, prices for Groundnut oil eased slightly to Rs. 45 and Rs. 47-8 to Rs. 48 for "Chekku" and "Prodattur" qualities respectively on Thursday and closed steady around Rs. 45 for "Chekku" quality and Rs. 48 for "Prodattur" quality, for ready lots, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

Madras, January 14, 1941.

DURING the week, the market has been flooded with enquiries from Britain for all weights and grades of Tanned Kips; but shippers are unable to operate freely on account of scarcity of shipping space and the restrictions imposed on the export trade in Madras limiting the quantity to be shipped to 4,000 bales monthly for Tanned hides and skins. Despite the firm tone of the Raw stock market, local prices for Tanned Cow hides have ruled easier by about 3 pies to 6 pies per lb. on the schedule prices. European shippers have not been buying freely as in the previous weeks. Arrivals into Madras of Tanned Cow hides are now on the small side. Even so, tanners are not disposed to extend their commitments by increasing their soakings or by fresh purchases of raw hides at the present high levels. America is now reported to be actively buying in the North Indian Raw hide markets, and prices, that were expected to come down in line with the parities for the tanned article, are maintained at a high level. It is obviously impossible for the Madrassee tanner to operate in the present state of the Raw hide markets. Daccas, 1st. 2nd and 3rd selections 6/6½ lbs. including Calves and Rejections are being quoted at Rs. 80 for 20 pieces, Dacca delivery. Imports into that market are reported to be very large, and the cure somewhat better than before. Tanned Buffalo hides, heavies, are quoted at 12½d. in London, and local prices stand around As. 9 to As. 9 pies 3 per lb. Tanned Buff Calf skins are definitely weaker at 10½d., local prices being in the region of As. 11 to As. 12. Tanned Cow Calf skins are likewise easier, current London quotation being 28½d. to 29d. for Coasts Run and 26d. for Fourths. Locally, Tanned Cow Calf prices have declined to Re. 1-6 and Re. 1-7 per lb.

(*Continued from page 93*)

indicates that another large paper mill will add to the output of paper in India, and if it helps in meeting the situation created by a drastic curtailment of imports from Europe, it may also raise the usual problems in the post-war period. Though the problems may not be acute, if production is diversified and the existing fiscal advantages retained, the existing mills may not be enthusiastic about the addition of another mill, especially, in view of the reopening of the Andh[illegible] Mills (under the auspices [illegible] Paper and Pulp Mills) which had ceased [illegible] and is likely to [illegible] work, accord[illegible] the last report [illegible] the Director of In[illegible] tries, Madras.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, Jan. 16.

THE first quota period under the Delhi Jute purchasing agreement expired yesterday and returns have now to be submitted by individual Mills to the Association who will submit the figure of the total purchase to Government. The Special Jute Officer will then be empowered to check any returns he may consider desirable. Estimates of the total purchase still vary considerably, the short-fall varying from 1 to 3 lakhs of bales according to different reports. It would appear to be the belief of the Association Committee that the quota of 15 lakhs of bales has not been reached, judging by the tenor of a circular issued a few days ago to all Mills. Generally speaking, most European Mills have stood up to their undertaking well, but Mills under Indian management have not appeared prominently in the market as buyers. At the same time the object of Government, that of securing a good price to the cultivator, must have been largely achieved, for Mofussil markets are all standing at higher levels than when the purchaser scheme was initiated, some of them actually over the Calcutta parity. So unless it is the intention of Government to relieve the weight of the surplus of low quality jute, Mill purchases of which are not credited to the quota and which in consequence has been almost totally neglected, there would appear to be no occasion for Government to intervene as a purchaser to complete the quota quantity. It is certainly a problem how this surplus of low quality jute is to be disposed of. By the time the full purchase scheme is completed, both the storage and the financial capacity of most mills will be nearing their limits, and Mills will be looking towards the next crop rather than to further purchases of old crop jute.

Owing to a greater number of working days, December Mill production again jumped to 73,000 tons. Hessian produced was 1,215 lakhs yards and Sacking 8,54 lakhs. A comparison of the first six months of this season with the corresponding period last year is interesting.

Period July/December	1940	1939
	Tons.	Tons.
Mills total production	480,753	588,085
	B/s.	B/s.
Equivalent in Jute consumed ...	26,90,000	82,98,000
Estimated jute purchases by Mills ...	85,00,000	65,00,000

American consumption for December again shows a drop to 58 million yards, the same figure as December 1939, but a decline of 40 lakhs yards from last month. The total consumption for 1940 was 6,580 lakhs yards against 7,120 lakhs in the previous year, a short-fall of an average of 80 lakhs per month. Stocks at the end of December 1940 stood at 2,590 lakhs yards compared with 2,640 lakhs at the end of 1939. These figures correspond very closely with the average monthly stocks which for 1940 worked out to 2,570 lakhs and for 1939 to 2,690 lakhs.

Professor Todd and his committee continue to work on the problem of the future of the Futures market. It seems now to be more or less generally accepted that Loose jute, by reason of its much greater turnover, would form the most suitable medium for a Futures market, and certain tentative gradings have been evolved to cover transactions. Not unnaturally, the old guard of the Fatka market do not view this change with equanimity, as Loose Jute would not constitute so good a gambling medium, and it is recognised that it would be impossible to run two parallel markets in Pucca and Kutcha bales. There is still much spadework to be done, and Professor Todd's diplomacy will be strained to the limit, before a workable and generally acceptable scheme takes shape.

There has perhaps been a trifle more activity in the Export Jute market during the past week. Sales have been reported in Outport Firsts (Public marks) at Rs. 37 for ready and February, and in Private marks at Rs. 38-8. Dundee Daisee assortment sold at Rs. 37 ready and at Rs. 35-8 to Rs. 36 for Feb. Dundee Tossa 2/8 sold at Rs. 44 and Rs. 45, with 4s. at Rs. 36 all for February shipment. Mills have bought small lots of Firsts at Rs. 41 and of Special Firsts at Rs. 48 to Rs. 45, while very full rates continue to be paid for high quality parcels. Over the week-end the Futures market ruled steady around Rs. 40 but has since eased to close at Rs. 39-8 after Rs. 39 had been touched.

Loose Jute has not been active though there has been a moderate day to day turnover by Mills completing their quota quantities. European packing again changed hands at Rs. 9-4 and Rs. 7 for Middles and Bottoms with low assortment Supervised jute reported at four annas less. Indian District Tossa again found buyers at Rs. 7-12 Middles and Rs. 6 Bottoms, business also being reported in the latter grade alone. There are still plenty of sellers in sight for most descriptions though not in high assortments unless at a premium. Mills are now preparing their returns for the first quota period and it is unlikely that they will proceed to further purchases for the second period until it transpires how nearly the first quota has been covered.

The tone of the Fabrics market has been well maintained and prices show a slight appreciation on the week as a result of hessian enquiry from overseas for the near positions. This also encouraged some recrudescence of speculative buying in the further forward positions and Mills disposed of fair quantities of April/June 9 porters at Rs. 12-12 with elevens at Rs. 15-14 to Rs. 16 April/June and at Rs. 15-8 to Rs. 15-10 July/Septr. In the near positions, 9 porters advanced from Rs. 12-10 to Rs. 12-12 Feb./March with Rs. 13 to Rs. 13-4 basis paid for 7½ oz. Ready elevens sold at Rs. 16-8 to Rs. 16-10, with February at Rs. 16-6. Heavy Goods have been largely neglected, among the few transactions reported being "B" Twills at Rs. 32 for ready and February, Liverpools at Rs. 36-8 for Feb./March and for April/June, "A" Twills at Rs. 38 for Feb., Cornsacks at Rs. 33 ready and Woolpacks at Re. 1-9 basis for Jan./March.

CLIVE STREET GOSSIP

(*Continued from page 97*)

It is not all who appreciate at what pace or in what fashion industrial development is proceeding in the vicinity of Calcutta itself. A visit to the thriving, throbbing suburb of Panihati enabled me to see how a new enterprise, a new industry has struck root and flourished amazingly. The Bengal Waterproof Works factory at Panihati represents an original and successful enterprise for which the credit must be given to the successful visionaries, Mr. S. M. Bose and his brothers. The start was made twenty years ago: it was modest by every reckoning, but ten years of successful operation permitted the formation of a private limited company. The company's fortunes have been carried on the surging tide of success, and Duckback is now a name firmly entrenched in market favour. Mr. Bose's training as chemist and engineer has had much to do with the initiation and conduct of the waterproofing factory: its products are now so well established in public favour that the conversion into a public company could not be delayed. It is certainly a unique factory, as everyone who has seen it will testify, and a trip to Panihati on Saturday gave the guests of the company an opportunity to see what the scientist turned businessman can accomplish through faith and vision. The diversified range of the present production is in itself an acknowledgment of Mr. Bose's ability to keep in touch with industrial developments abroad. There is no field of waterproofed products that is neglected by the Panihati factory at present. Traveller's requisites and hospital equipment alike come from the factory, and public authorities have realised that purchase of the factory's products is one way of showing appreciation of the Duckback products. The production of raincoats for all classes at acceptable prices bearing a popular trade mark is not the only service performed by the factory. Those on active service are catered for by the hot-water bottles, air-cushions and gumboots produced at Panihati. Wartime opportunities have been promptly grasped, and it says much for the go-ahead spirit of the management that the factory has responded to the oversea demand that has sprung up recently. The visit also indicated that scientific management covers intelligent personnel administration, and the account given of the work done by the welfare department convinced me that the loyalty and efficiency of the Panihati factory's workmen has been secured by intelligent planning without more than usual effort. It would be far from correct to say that the factory is inclined now or ever to rest on its oars, and the spirit of progressive enterprise dominates the modern, efficient factory at Panihati. It is not easy to give a compressed account of what I saw and heard during a brief but thoroughly enjoyable visit, but I can honestly say that the success of what may be called the Duckback factory is as definitive as it is deserved.

"EAVESDROPPER"

JUTE

(By our staff correspondent).

Calcutta, January 16.

A greater volume of business has been passing in the raw jute market during the past week but it has not been reflected in the futures market where quotations have been fluctuating in very narrow limits. Mills have been buying in large quantities during the last three days through their mofussil agents. Balers also have been busy likewise. There has been a complete lack of activity in the futures market and quotations are, therefore, sticky around last levels. The undertone is quietly steady.

In spite of the buying in large quantities during the last few days, it is pointed out that the quota of 15 lakhs for the first period of the agreement has not been completed. It is reported that mills are to submit returns regarding jute purchases to the Special Jute Officer. The Bengal Government would, possibly, like to wait till the actual position is known.

In the loose jute section a good amount of business has been reported in Europeans and Indian District Jute. Sellers for the higher grades are reserved. While prices for these qualities are above the minimum prices the lower grades are still neglected and sellers are pressing for business. Supervised Jat Middles and Bottoms were done at Rs. 9 and Rs. 6-12 respectively earlier in the week. Indian District Tossa 40/60 assortment sold at Rs. 7-12 and Rs. 6 per maund. Indian Jat Bottoms alone were sold at Rs. 6-8 per maund.

In the pucca bales section, not much of business has been reported for export. Dundee Daisee 2/3 for ready shipment were done at Rs. 37. Firsts for prompt delivery were done at Rs. 37 per bale. Mills bought Firsts at Rs. 41 and Special Firsts at Rs. 45 per bale.

In the futures market, as remarked above, there has been very little speculative activity. Quotations have been fluctuating between Rs. 39-2 and Rs. 40-2. At the time of writing, it is around the lowest level for the week at Rs. 39-4. The undertone is quiet.

JUTE MANUFACTURES

Calcutta, January 16.

THANKS to the good buying enquiry from North America during the last few days, a definitely firmer tendency has been noticeable in the jute manufactures market. The decision regarding the restriction in production in March and the availability of freight for the near positions have induced buying. It is reported that a large amount of business has been done on Tuesday and Wednesday. 9 porters ready are quoting Rs. 12-13, February/March Rs. 12-13, and April/June Rs. 12-10. 11 porters ready are Rs. 16-10-0, February/March Rs. 16-8, and April/June Rs. 16.

The absence of any big decrease in local stocks during December has been partly due to the increase in production for that month. Total production amounted to 73,130 tons against 65,688 or an increase of 7,442 tons. Hessian production was 12.15 crores yards against 11.37 crores yards and sacking production 8.54 crores yards. The figures are given above.

The American stock and consumption figures for the same month cannot be considered unsatisfactory. There has been a decline in consumption to 53 million yards from 54 in the previous month, but it is unchanged when compared with the figure for the corresponding period in 1939.

U. S. A. Trade Statistics:
Excluding Pacific Coast Business
Millions of Yards

	Stocks at the end of Month. Spot		Afloat		Consumption for Month	
	1940	1939	1940	1939	1940	1939

PRODUCTION FIGURES

Memo of total reported production of manufactured goods by the mills in the membership of the Association and also by Gagalbhai Mills, excluding Bengal, Katihar and Maheswari Devi for the month of December 1940.

Description.	Quantity.	
1. Twist and Yarn—		
(a) for sale	1,533	tons
(b) all others, including that used in sewing bags	1,030	tons
2. Canvas	725	tons
	18,78,308	yards
3. Gunny Bags (Tonnages exclude sewing twists)	4,475	tons
(a) Hessian ...	2,00,96,798	yards
	1,78,39,750	number
	35,855	tons
(b) Sacking ...	7,95,27,485	yards
	3,16,89,789	number
4. Gunny Cloth—		
(a) Hessian ...	26,940	tons
	10,14,51,737	yards
	2,492	tons
(b) Sacking ...	59,17,845	yards
5. Other manufactures, including ropes ...	80	tons
6. Total production (above figures combined)—		
(i) All kinds ...	73,130	tons
(ii) Hessian (both as bags and cloth) ...	12,15,48,585	yards
(iii) Sacking (both as bags and cloth) ..	8,54,45,850	yards
(iv) Canvas (both as bags and cloth) ...	18,78,308	yards

COTTON

Calcutta, January 16.

RECOVERY in the Bombay raw cotton market has been rather difficult but there has been greater resistance to selling pressure. In mid-week there was large buying by Japanese firms and local mills but at the higher levels there was selling with the lower overseas advices. Closing prices, however, are higher on balance with the undertone distinctly better. Broach April/May were Rs. 183-4, July/August Rs. 189-8, Oomra December/January Rs. 154-4 and Bengal December/January Rs. 128.

Overseas markets were active early in the week on the excellent speech by President Roosevelt. The assurance that the interests of the farmer would be safeguarded was responsible for a rise in the quotation for March to 10.50 cents. There has since been a reaction to 10.43 cents. May closed at 10.44 cents. The quotations at the time of last writing were 10.43 cents and 10.40 cents respectively. It is interesting to note that there has been a rise of four points in the quotation for May position and that the discount has disappeared. In Liverpool, January closed at 8.26d. and March at 8.33d.

PIECEGOODS

Calcutta, January 16.

THE piecegoods market has continued firm with the arrest of the downward trend of the raw cotton market. Forward contracts concluded have not been on a large scale as mills have been very reserved. Early this week it was reported that further large orders had been placed with Bombay mills for the value of Rs. 75 lakhs. Indian mills are not sellers for the near positions and it is feared that there will be a further rise in bazar values if the present conditions continue to be in evidence. In the Japanese goods section business passing is on a restricted scale.

The yarn market has continued active. The exports to China should be considered satisfactory. Medium and coarser kinds have been in good demand.

GOLD

Calcutta, January 16.

THE Bombay gold market has been quietly irregular during the past week. Only a very small amount of business has been transacted. A slightly easier tendency was noticeable in mid-week but the former levels have been regained. Gold ready closed at Rs. 41-15-9, First settlement at Rs. 41-15-9 and Second settlement at Rs. 42-0-3. The London price has remained unchanged at 168s.

SILVER

Calcutta, January 16.

WITH the steadier tone of the raw cotton market, there has been a further improvement in the Bombay silver market during the past week. The closing quotations are at the highest levels for the week. There has been some buying for ready position. Indian Mint silver ready closed at Rs. 62-15, First settlement at Rs. 62-14 and Second settlement at Rs. 62-15.

The London market has not been quite steady. There has been a slight decline in the rates from 23 3/8d., for spot and 23 5/16d., for forward, to 23¼d., and 23 3/16d., respectively. There has been some buying at the lower levels.

TEA

Teas for Export

Sale No. 27 was held on the 13th and 14th January when 22,298 packages of teas for export were sold at an average price of As. 15-6 per lb. The corresponding figures for 1939-40 and 1938-39 were 22,298 (Sale No. 29) 20,683 (Sale No. 29) packages at average prices of As. 12-8 and As. 9-10 respectively. Offerings were from all districts and were on a larger scale than in the previous sale. Prices were somewhat irregular. Medium Orange Pekoes declined by 3 ps. while other grades were firm to dearer. Fannings were the strongest feature of the sale. Darjeelings were quiet.

Teas for Internal Consumption.

Green teas had a good demand and prices were maintained at last week's levels. Dusts also had a very strong market, changes in prices being in favour of sellers. All other grades except Broken Orange Pekoes and Orange Fannings with tip, which met with less enquiry, were well supported and prices showed little change.

Quota.

Little business was put through in export quota at As. 10-9 up to As. 11-0 per lb. Internal quota market is dull with a limited business put through at As. 1-6 per lb.

WHEAT

Calcutta, January 16.

A definitely firmer tendency has been noticeable in the Karachi wheat market during the past week. Reports regarding government buying for prompt shipment have been mainly responsible for the improvement in the quotations by more than a point. It would be remembered that it was in anticipation of this buying that a sharp rise was recorded a few weeks back and that it was only stale bull liquidation and the report regarding favourable weather conditions that brought down prices. As the overbought position had been liquidated the upward tendency has again been resumed. It is reported that already 10,000 tons have been bought for shipment to Persian Gulf. As a result of the recent purchases, the spot position has become tight. Choice White ready closed at Rs. 34-5, January at Rs. 34-4-6, March at Rs. 33-4-6 and July at Rs. 29-8-9 against Rs. 33-3-6, Rs. 32-1-6, Rs. 31-8-6 and Rs. 28-1-6 respectively last week.

There is a slight change in quotations to be recorded in the Calcutta market but the rise in prices has not been proportionate. In spite of the recent decline in prices for flour and flour products there has been no increase in consumption. Only the large demand from Rangoon has enabled mills to keep up the rate of production. Cawnpore and Punjab ready closed at Rs. 4-11 and May at Rs. 4-4-6 against Rs. 4-8-6 and Rs. 4-2-6 respectively last week.

It's a Fact—

that you can practically mint money without the slightest effort on your part by depositing your surplus income regularly with the Palai Central Bank. Year by year, add the interest earned to your capital and watch the total grow steadily and safely.

Stock Markets to-day and to-morrow

RUMOURS IMPAIR TONE

AFTER the prolonged week-end, the tone noticed since reopening on the Calcutta Stock Exchange early this week was by no means encouraging. There was a definite suggestion of weakness all through and in the absence of any public buying prices tended to sag. On Wednesday and Thursday too prices were fluctuating around the lower levels, but the undertone seemed to be slightly steadier. Till Friday afternoon it was not expected that there would be any further decline in values. But in the last two hours operators gave credence to sundry rumours and the leading counters suffered: Indian Irons were pushed down to Rs. 29-14 and Steel Corporation to Rs. 18-2. The quotations are a shade better at Rs. 30-2 and Rs. 18-2 at the time of writing (5 p.m.). It is generally asserted that there has been no selling from the Western centre and the work has been done mostly by local bears. There is undeniably a state of suspense in the markets. In an otherwise dull market, Indian Cables were marked higher at Rs. 20-4 on fresh buying. The prospects for the current year are considered to be satisfactory and a fair-sized dividend on the ordinary shares is generally expected.

The weakness of equities has not affected giltedged and fixed interest paying securities. 3½ per cent Rupee Paper has improved to a new recovery high level of Rs. 95-1. The demand for first class preference shares too is unsatisfied, while the hunt for preference shares which have arrears of dividend which are expected to be paid off in the near future continues.

* * *

In the unavoidable absence of Mr. P. E. Marmion, the Chairman, Mr. H. Ponsford read the speech of the Chairman at the annual general meeting of the shareholders of *Burma Corporation, Limited*, held in Rangoon in the last week of December. After referring to the satisfactory arrangement with the Ministry of Supply regarding the disposal of lead and zinc concentrates and the difficulties in finding alternative markets, the Chairman rightly drew attention to the need for adopting a conservative dividend policy on account of the uncertainties regarding taxation. "In the present circumstances and in the light of recent experience, you will agree, I am sure, that it would be imprudent to declare dividends on the assumption that there will be no increase in the rate of taxation when the relative profits come under assessment some two years after they were earned."

On the subject of the mine and ore reserves he had some revealing remarks to make. With the completion of all development work it is estimated that the total of proved and probable ore is 11,002,840 tons. Owing to the progressive improvement in operating costs and metallurgical efficiency it has been possible to mine a lower grade of ore than contemplated when the original estimate of ore reserves was made, without detriment to resulting profits and thus to bring a larger tonnage of ore within the zone of payability and extend the life of the property. A preliminary reassessment of the original estimate of tonnage and grade of ore reserves, with the application of a factor of 5 per cent to both the tonnage and grade of the original ore reserve estimate, gives an addition of 550,142 tons of excess ore, sufficient to keep the treatment plants in full operation for fourteen months at last year's rate of extraction.

The 5 per cent reduction in grade still leaves the estimated average assay value of the reserves remaining in the mine well above the average grade actually mined and treated during the last few years and from which current profits have resulted. The addition of 550,142 tons of ore includes the 286,417 tons of excess ore to which reference was made last year and the tonnage of 3,411,192 estimated to be in reserve at 30th June, 1940, compares with 3,607,945 at the end of the previous year, after allowing for the extraction of 473,568 tons during the year 1939-40.

Even the preliminary adjustment to the preliminary reassessment has resulted in an extension of the life of the mine by fourteen months. At last year's rate of extraction the life of the mine is about 8 years with a reserve of 3,411,192 tons. Further readjustments might extend the life of the mine by more than two years. The mines, therefore, are still good enough for another ten years.

* * *

Among the newly started companies *Orient Paper Mills, Limited*, has been able to report satisfactory progress during the past three half-years. The earnings for the half-year ended September, 1940, are the highest for the company. Specialising in the production of kraft paper, the company enjoys a marked advantage. The Directors are at present considering the manufacture of certain varieties of paper which have so far been not made at all in India. Negotiations are in progress for the necessary plant.

The net profit before providing for taxation and depreciation is Rs. 4,72,392 against Rs. 3,73,862 for the previous half-year. The sum of Rs. 3,00,000 against Rs. 2,00,000 previously has been set aside to depreciation. The arrears of dividend on the Preference Shares from 1st January, 1938 to 31st March, 1940, and the dividend for the half-year 30th September, 1940, are to be fully paid. The amount carried forward is Rs. 21,155 against Rs. 9,500 brought in.

In order to enable the company to increase the paid-up capital when it is found necessary, it is now proposed that the authorised capital should be increased by Rs. 50 lakhs to Rs. 1 crore by the creation of 1,50,000 ordinary shares of Rs. 10 each and 35,000 preference shares of Rs. 100 each.

The Preference Shares have recorded a sharp rise to Rs. 118 on the publication of the report. The amount on account of dividends alone amounts to Rs. 15-2 per share so that the shares are available at the net price of around Rs. 103. Considering the fact that 5 per cent Steel Corporation shares are quoting at Rs. 115 there is scope for substantial appreciation. The ordinary shares also are attractive as with the payment in full of the arrears of dividend on the preference shares a dividend on the ordinary shares can be paid out of the earnings for the current half-year.

* * *

One of the older established companies to report an increase in earnings is the *India Paper Pulp Company, Limited*. The net profit, before providing for taxation and depreciation, for the half-year ended 30th September, 1940 is Rs. 4,45,434 against Rs. 4,08,720 for the previous half-year. The sum set aside to depreciation is lower at Rs. 1,50,000 against Rs. 1,80,000 on the former occasion while the allocation to General Reserve is Rs. 25,000 against Rs. 75,000. Provision for taxation is sharply higher at Rs. 1,25,000 against Rs. 58,500. The ordinary dividend is higher at 7 per cent per annum against 6 per cent per annum brought in. The amount carried forward is the big sum of Rs. 68,812 against Rs. 28,378 brought in.

There has been a sustained demand for the papers manufactured by the company and selling prices have increased.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 17.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week and a slight recession in prices has been noticeable alround. The lower level of prices has been mainly due to the lack of support. There has been no bear selling and the tendency during the last two days should be considered rather steady. The volume of business transacted is on a very restricted scale. Operators and investors alike are awaiting further developments. It looks as if there will not be any substantial improvement in prices unless the Central Budget is out of the way. The feature of the week is the strength shown by both giltedged securities and preference shares. There is a general feeling that the rate of income-tax may not be increased.

In the giltedged securities section firm conditions have been noticeable. 3½ per cent. Paper is quoting at the highest level for several months. The quotation has improved from Rs. 94-7 at the end of last week to Rs. 95-1. Terminable loans are not very much higher but sellers are firm in their ideas. 2¾ per cent. 1948/52 were dealt in at Rs. 96-8, 3 per cent. 1951/54 at Rs. 98-10, 3½ per cent. 1947/50 at Rs. 102, 3 per cent. 1963/65 at Rs. 93-12, 4½ per cent. 1955/60 at Rs. 112-12 and 5 per cent. 1945/55 at Rs. 112-4. Among provincial loans, 5 per cent. U. P. bonds 1944 were Rs. 106-3 and 3 per cent. 1952 issues at Rs. 95.

Bank shares have been steady with *Imperial Bank* fully paids at Rs. 1,595 cum-dividend, contributories at Rs. 392 cum-dividend and *Reserve Bank* at Rs. 106-4.

Among fixed-interest securities, 5 per cent. *Calcutta Port Trust* debentures were done at Rs. 108. 5½ per cent. *Dalhousie Properties* debentures were Rs. 100-8 and 6 per cent. *Nawabganj* debentures Rs. 102-12.

Preference shares have been firm with *Anglo-India* at Rs. 169, *Auckland* at Rs. 144, *Bengal Jute* at Rs. 108, *Kanknarrah* at Rs. 163 and *Reliance* at Rs. 174-8. The preference shares having arrears of dividends have been in good request. *Hastings* are higher at Rs. 138, *Hukumchand* at Rs. 112-8 and *Soorah* at Rs. 116. Among other shares, *Burn & Co.*, were done at Rs. 169, *Steel Corporation* at Rs. 115, *Dunlop Rubber* Second preference at Rs. 115, *Titaghur Paper* Second preferences at Rs. 115 and *Midnapore Zemindary* at Rs. 141. There is good enquiry for *Orient Paper* preferences which have been done up to Rs. 118. The arrears of dividends since December 31, 1937 have been fully paid.

Cotton shares showed an easier tendency in mid-week. *Cawnpore Textiles* were lower at Rs. 5-10 but they have since recovered to Rs. 6. *Kesoram* were Rs. 6, *Elgin Mills* Rs. 17-5 and *New Victoria* Rs. 1-12.

In the Coal section, there is no important change in prices to be recorded. After being lower at Rs. 370, *Bengal* are slightly higher at Rs. 376. *Burrakur* were Rs. 14-5, *Equitable* Rs. 36-13, *Pench Valley* Rs. 33-12, *New Beerbhoom* Rs. 16-4, *Raneegunge* Rs. 25-8 and *West Jamuria* Rs. 30-10. Among the speculative counters, *Bhalgora* were Rs. 4-15, *Ghusick* and *Muslia* Rs. 4-14 ex-dividend and *Lakurka* Rs. 10-4.

The general tendency in the jute section has been downward. *Anglo-India* changed hands at Rs. 307, *Bally* at Rs. 217, *Gourepore* at Rs. 660, *Howrah* at Rs. 49-8, *National* at Rs. 21, *Nuddea* at Rs. 53 and *Reliance* at Rs. 53. *Hukumchand* have met with some buying being done up to Rs. 8-13.

There has been a complete absence of speculative activity in the Engineering section. *Indian Iron* have come down from Rs. 31-8 at the time of last writing to Rs. 30-12 towards the close. *Steel Corporation* also are lower in sympathy at Rs. 18-8. *Burn & Co.*, have again been the exception being done around Rs. 385. *Indian Galvanizing* were Rs. 28-14, *Indian Standard Wagon* Rs. 61-4, *Braithwaite* Rs. 10, *Kumardhuri Engineering* Rs. 4-12 and *National Iron and Steel* Rs. 7-2.

Among Utilities, *Bengal Telephone* were steady at Rs. 16-8. *Benares Electric* changed hands at Rs. 14, *Jubbulpore Electric* at Rs. 14-8 and *Upper Ganges Electric* at Rs. 11-8.

Sugar shares have been neglected. *Carew & Co.*, were noted at Rs. 9-10, *New Savan* at Rs. 6-8 and *South Behar* at Rs. 14-14.

A larger number of transactions has been recorded in the Tea section at last rates. *Bateli* were done at Rs. 5-4, *Eastern Cachar* at Rs. 8-6, *Killcott* at Rs. 45, *Tezpore* at Rs. 14 and *Patrakola* at Rs. 784.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were sticky around last rates. *B. I. Corporation* have been firm at Rs. 4-14. *Dunlop Rubber* were Rs. 35-12, *Indian Wood Products* Rs. 27-8, *Publicity Society* Rs. 6-8, *Rohtas Industries* Rs. 20-12 and *Delhi Flour* Rs. 10-12. *Indian Cable* had good buyers up to Rs. 20-4. The highest level recorded during the week is Rs. 20-12. Among transactions recorded in Paper shares, *Titaghur Paper* were dealt in at Rs. 17-4 ex-dividend, *Mysore Paper* at Rs. 14, *Orient Paper* at Rs. 10-13, *Shree Gopal Paper* at Rs. 9-10 and *Star Paper* at Rs. 8-10. *Borooah Timber* were Rs. 15-3, *Midnapore Zemindary* Rs. 73 and *Assam Saw* Rs. 3-2.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 16.

Money.—Call money continued to be cheap at ¼ per cent. with demand for funds being very slack.

Exchange Market.—This section remained dull and inactive. Rates were unchanged.

Securities.—Giltedged securities showed further strength during the week following further successes in the African front. 3½ per cent. Paper gained about half a point to Rs. 95-1. Among medium and long-dated issues, 1948/52 improved slightly further to Rs. 96-6; 1951/54 to Rs. 98-8; 1947/50 to Rs. 102-2; 1960/70 to Rs. 108-4; 1955/60 to Rs. 112-10 and 1945/55 to Rs. 112-5. 1963/65 were, however, neglected at Rs. 93-10.

Shares.—A limited turnover took place in the local share market during the week as the forward section was closed on Monday owing to settlements and there was no trading on Thursday. In the cash list there is no important change to be recorded. The general feeling is hesitant owing to the uncertainties regarding the Central Budget. After earlier weakness a slight improvement in prices has been recorded towards the close.

Textiles.—General selling earlier in the week was responsible for the downward tendency in this section. Following the announcement that fresh orders for the supply of more than Rs. 75,00,000 worth of textiles for military requirements a firmer tendency has been noticeable. It is estimated that the clothing requirements of the Defence Department for 1941/42 will be around Rs. 15,25,00,000. *Bombay Dyeing*, after touching Rs. 1,030, improved to close at Rs. 1,043-12, showing a rise of about 15 points over the previous week. *Century* were at Rs. 367-8; *Central India* at Rs. 287; *Colaba* at Rs. 159; *Gokak* at Rs. 201; *Kohinoor* at Rs. 381; *New Great* at Rs. 380 and *Swadeshi* at Rs. 251.

Hydro-electrics.—This section was featureless, *Andhra Valley* remaining unchanged at Rs. 1,640 and *Tata Hydro* at Rs. 177. *Tata Power* met with some speculative support and closed slightly higher at Rs. 1,496-4.

Steels.—The rise in Steel shares, witnessed last week, was short-lived and there was a sudden fall in prices due to various rumours about forward trading coupled with the fears of increased taxation in the Central Budget. The drop in Tata deferreds was rather severe, the lowest level recorded being Rs. 1,800. The ordinaries touched a low level of Rs. 356. Towards the close there has been a slight recovery, the deferreds closing better at Rs. 1,856-4 and the ordinaries at Rs. 364.

Banks.—Bank shares were in good demand owing to continued investment support. *Central Bank* were done higher at Rs. 42-4 on good buying enquiry, while *Bank of India* were steady at Rs. 139-8; *Imperial Bank* fully paids at Rs. 1,580; *Contributories* at Rs. 388-12; *Reserve Bank* at Rs. 105-12 and *Union Bank* at Rs. 6-5.

Miscellaneous.—*Associated Cement* were an active counter during the week, being done higher at Rs. 145. *Belapur Sugar* were a dull market at Rs. 206. *Bombay-Burmah Trading*, after being done lower at Rs. 518-12, closed at Rs. 525. *Scindia Steam* were unchanged at Rs. 20-2 and *Shivrajpur Syndicate* at Rs. 35. *Premier Construction* were at Rs. 93.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Jan. 16.

There has been no change in trading conditions in the local share market during the week. As the market remained closed on Monday and Tuesday owing to the *Pongal* holidays, the turnover has been restricted. Textiles were dull, while Rubbers were a shade easier.

Securities.—A somewhat cheerful feeling prevailed in the securities market following the encouraging war news, 3½% Paper being done slightly higher at Rs. 95-1. 3½ per cent. 1947/50 were done at Rs. 102; 4½ per cent. 1955/60 at Rs. 113-2 and 4 per cent. 1960/70 at Rs. 108-2. State Loans met with good enquiry, particularly Mysore Loans, 4 per cent. 1953/63 being done at Rs. 113-14 with few sellers in evidence.

Mills.—Very little enquiry was in evidence in this section. *Buckingham & Carnatic* remained dull at Rs. 237 and *Madura* at Rs. 37-4. *Radhakrishna* changed hands at Rs. 121, *Kothari Textiles* ordinaries at Rs. 10 and preferences at Rs. 11-2.

Utilities.—*South Madras Electric* ordinaries were transacted at Rs. 13-3. *Salem-Erode* came to business at Rs. 10-12.

Plantations.—Rubber shares showed an easier tendency during the week under review, *Cochin Malabar* closing at Rs. 6-8 and *Thirumbadi* at Re. 1-13 c.d. *Midland* were at Rs. 5-8 x.d. and *Tropical Plantations* at Rs. 17-8. Tea shares remained fairly steady. *Peermade* were taken at Rs. 27 and *Periakaralamai* at Rs. 17-12. *Balanoor* were quoted at Rs. 10-14 and *Devashola* at Rs. 7-14.

Sugars.—This section was neglected, *Mysore Sugar* remaining unchanged at Rs. 44-8. *Travancore Sugars* had sellers at Rs. 13-12, while *Jeypore Sugar* were transacted at Rs. 9-8.

Miscellaneous.—*Mysore Chemicals* met with good enquiry during the week, the price closing higher at Rs. 15-8 against Rs. 15 in the previous week. *Mysore Paper* were marked at Rs. 13-6 and *Mysore Tobacco* at Rs. 9. *Tata Chemicals* changed hands at Rs. 12-8 and *Mettur Chemicals* deferreds at Rs. 2-1. Among Cement shares, *Dalmia* preferences recorded business at Rs. 110 and *Associated Cement* at Rs. 137-4 c.d. cash.

LONDON STOCK EXCHANGE

Firm conditions have been noticeable on the London Stock Exchange during the past week. There has been a broadening of interest in Kaffirs, Oils and Home Rails. The diversion of interest to these three groups has been responsible for the halt in the upward movement of giltedged securities. London operators have shown preference for Kaffirs while from the provinces there has been good enquiry for Home Rails on dividend hopes. There has been good demand for Oils. Among giltedged securities, prices for India loans have been fluctuating around last levels, 3½ per cent. Sterling Paper being 96¾, 4½ per cent. 1950/55 109¾, 4½ per cent. 1958/68 112¼, 5 per cent. 1942/47 104½ and 3½ per cent. 1954/59 101¾. British loans are higher with 2½ per cent. Consols at 77 5/8, 3½ per cent. Conversion at 104 1/8, 3½ per cent. War Loan at 103½ and 3 per cent. War Loan at 101.

Among other sections, Tea issues have been firm and business has been restricted only by the scarcity of scrips. Kaffirs were in good request while Oils recorded substantial gains, *Burmah Oil* being further higher at 36s. 10½d. Home Rails rallied but in mid-week there was some profit-taking. The close has again been steady.

NEW YORK STOCK EXCHANGE

Fears regarding heavy increase in taxation following President Roosevelt's statement have been mainly responsible for the dull tone of Wall Street during the past few days. The turnover has been on a very restricted scale. *U. S. Steel* were $67 7/8, *Anaconda Copper* $26 1/8 and *General Motors* $46 3/8.

(Half-yearly meeting, 29th January, 1941 at 11-20 a.m.)

Audited accounts for the half-year ended 30th September, 1940:—

After providing Rs. 1,25,000 for Taxation, Rs. 1,50,000 for Depreciation and placing Rs. 25,000 to Reserve, there is a balance of Rs. 1,73,812-2-11 at the credit of Profit and Loss Account out of which the directors recommend payment of a dividend of Rs. 3½ per share absorbing Rs. 1,05,000, leaving a balance of Rs. 68,812-2-11 to be carried forward.

The costs of production reflect the continued rise in the cost of stores and raw materials during the half-year. There has, however, been a sustained demand for the papers manufactured by the company and selling prices have increased.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised Capital—Rs. 40,00,000. Issued and Subscribed—Rs. 30,00,000 in 30,000 shares, fully paid up.

(a) Issued at par on 20th March, 1937, repayable at par on 20th March, 1947, with option repayment at any time after five years from the date of issue. (b) Issued at par in 1897, and repayable at par on 15th November, 1936, date of repayment has been extended to 15th November, 1956, and the rate of interest reduced to 4½ per cent (taxable) from 10th November, 1936. Option of repayment at a premium of 3 per cent. at any date after 15th November, 1926, on three months notice. (c) Issued at par on 14th May, 1938, repayable at par on 14th May, 1968. (d) Issued at par on 1st April, 1934, repayable at par on 1st April, 1959 with option repayment any time after 1st April, 1941, at 3 per cent. premium. (ff) Carry interest at the rate of 20 per cent. per annum (7 per cent. Cumulative and 13 per cent. non Cumulative). This dividend is to be paid before any dividend is paid on the ordinary Shares. The Company may, by giving one year's notice convert the preference shares into ordinary shares. (g) Issued at par on 1st October, 1923, redeemable at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent. of the total issue, is due to be placed annually. (h) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (i) Entitled to participate in dividends only upto 10 per cent. per annum after the preference shares have received acumulative dividend of 6 per cent. and ordinary shares 10 per cent. Surplus divisible profit remaining after these dividends will be apportioned in three equal parts for payment of further dividends to the three classes of shares. * In payment of arrears of dividends on "A" preference shares for half-year ended December, 1927. † Bonus for every ordinary share held in the shape of a second preference share of Rs. 25 bearing interest at 4½%. ‡ Includes Bonus, § Arrears of dividend for six half-years ended June, 1934. Arrears of dividend to the extent of Rs. 1,22,500 to the end of December, 1937 outstanding. ** Includes 1152 mule spindles. (y) Arrears of Dividend for eight half-years ended 31st Dec., 1931. (z) Arrears of dividend for eight half-years ended 30th June, 1938. Also non-Cumulative dividend of Rs. 13 per share for the whole year 1938. (x) Arrears of dividend for 3 half-years ended 30.6.1933. (J) 6% for the year 1936 and 3% for 1937. (K) 3% for 1937 and 1938. (l) Included in Reserves. (L) 3% for 1938, 6% for 1939 and 6% for 1940

THE GUZERAT RAILWAYS COMPANY, LIMITED

NOTICE

Notice is hereby given that an Ad-interim dividend for the half-year ended 30th September, 1940 at the rate of 4% per annum less Income Tax has been made payable at the Chartered Bank of India, Australia & China, Bombay, on and after 24th January, 1941 to those shareholders whose names stood on the Company's Register on 4th January 1941 to whom Dividend Warrants will be posted.

Intimation of any change of address should be given to the undersigned immediately.

By Order of the Board,
KILLICK, NIXON & CO.,
Agents.

Home Street, Fort,
Bombay, 10th January, 1941.

MARKET POINTERS

Minimum Selling Rates for Sugar :

The minimum selling prices for all grades of sugar manufactured in the province during the season 1940-41 have been announced by the Government of Bihar.

These prices, which vary according to grades, were calculated by the Indian Sugar Syndicate and have been approved of by the provincial government in consultation with the Sugar Commission. The note lays down that sugar produced in 1939-40 shall not be sold at rates less than what has been approved of by the Government and adds "that sugar of any grades produced in a factory in season 1939-40 shall not be sold by the occupier or manager of such factory, except in such quantities based on a percentage of its production as may be fixed from time to time by the Sugar Commission with the approval of the provincial government."

* * *

Sugar Production and Stocks :

The Director of Imperial Institute of Sugar Technology, Cawnpore, reports the following figures for Sugar Production and Stocks in respect of central sugar factories in India for the fortnight ended November 30, 1940, as also for the corresponding fortnight in the previous season.

		Current fortnight	Corresponding fortnight in the previous season.
		Mds.	Mds.
1.	Opening Stock	9,117,996	382,985
2.	Production of Sugar	390,332	643,908
3.	Despatches of Sugar	814,986	254,891
4.	Closing Stock	8,693,342	771,002

Figures for the current fortnight relate to 119 factories representing 84 per cent. of the total cane crushing capacity.

* * *

Cotton Consumption

The following is a statement of Indian cotton (pressed and unpressed) consumed in mills in India during November, 1940, in bales of 400 lbs. The figures in brackets represent the consumption during the corresponding period of 1939.

British India, 237,867 (199,600); Indian States, 47,944 (45,368); Total—India 285,811 (244,968).

* * *

Tata Electric Agencies

Messrs. Tata Hydro-Electric Agencies Ltd., agents for the Tata Hydro-Electric Power Supply Co., Ltd., the Andhra Valley Power Supply Co., Ltd., and the Tata Power Co., Ltd., report that the revenue from energy sales (subject to adjustment) of the three companies during December, 1940 was Rs. 3,02,376, Rs. 4,30,473 and Rs. 7,05,017 respectively, against Rs. 2,68,421, Rs. 3,93,933 and Rs. 7,87,666 for December, 1939. The revenue for the current financial year up to December 31, 1940, was Rs. 17,89,377, Rs. 24,57,878 and Rs. 38,12,505 respectively, against Rs. 16,81,449, Rs. 24,24,449 and Rs. 40,75,068 for the financial year up to December 31, 1939.

* * *

State-owned Railways:

The total approximate gross earnings of all state-owned railways for the period (11 days) ending December 31, 1940, (27th period) amount to Rs. 354 lakhs. This is Rs. 22 lakhs more than the approximate gross earnings for the corresponding period of the previous year and Rs. 16 lakhs more than the actuals for the corresponding period of 1939-40. The total approximate gross earnings from April 1 to December 31, 1940, amount to Rs. 79,64 crores. This is Rs. 837 lakhs more that the actuals for the previous year, and Rs. 1,015 lakhs more than the actuals for 1938-39.

ORIENT PAPER MILLS, LIMITED

NOTICE is hereby given that the Seventh Ordinary General Meeting of Orient Paper Mills, Limited, will be held at the Registered Office of the Company, No. 8, Royal Exchange Place, Calcutta, on Friday, the 31st day of January, 1941, at 4 p.m.

(a) to receive and pass the Directors' Report and audited Accounts for the half-year ended 30th September, 1940.

(b) to declare Dividend on Preference shares, which is payable, on application, to the Shareholders, when declared, and

(c) to alter the conditions of the Memorandum of Association of this Company for the purpose of increasing its Share Capital by the issue of new Shares as follows: that is to say,
that the Capital of the Company be increased to Rs. 1 crore by the creation of 1½ lacs additional Ordinary Shares of Rs. 10/- each, and 35,000 additional Preference Shares of Rs. 100/- each ranking for dividend and in all other respects pari passu with the existing Shares of the said respective classes in the Company provided that the existing and the new Preference Shares so to be issued may be redeemed by the Company in accordance with Clause 43(b) of the Articles of Association of the Company.

And that the above resolution be passed with or without modifications as may be decided at the meeting.

The Share Transfer Register will be closed from 18th to 31st January, 1941, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS, LTD.,
Managing Agents.

Calcutta, 11th January, 1941

THE NEW MANBHOOM COAL CO., LTD.

A Dividend at the rate of 20 percent. per annum for the half-year ended 30th September, 1940, has been declared payable at once.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

Calcutta, 11th January, 1941.

'If a man can't take a hint

It may not be Leap Year but you *can* propose to him that when he offers you a cigarette it should be a Wills's Gold Flake. Let him know that your taste in cigarettes is the same as his — that the flavour of the fine Virginia tobaccos of which Gold Flake are made appeals to women as much as to men. The other alternative is to buy your own and show him that young women to-day can have Wills of their own.

WILLS'S GOLD FLAKE

is the man's cigarette that women like

WORLD OF INDIAN FINANCE

Calcutta, Friday evening.

THE topic of topics for the current week is the announcement of the issue of the new loan. The new loan, described as the Second Defence Loan, takes the form of 3 per cent. 1949-52 loan. We understand, though no notification has been issued up to the time of going to press, that the 3 per cent. 1946 loan, which has been available through the tap since August 1, 1940, is being withdrawn. As in the case of the first Defence Loan, the Second Defence Loan will be on tap "until further notice", and subscriptions will be received "without limit of amount". By the same token, the issue price will be Rs. 100 with subsequent weekly increases approximating to the net accrued weekly interest. The conditions as regards issue price are thus described in the Government Notification:

"The prices at which the loan will be issued are as follows:—

Issue Price on any date from the	Price per Rs. 100 nominal. Rs. A. P.
1st February 1941, to the 8th February 1941	100 0 0
10th „ „ 15th „	100 0 0
17th „ „ 22nd „	100 1 6
24th „ „ 1st March, 1941	100 2 3

and thereafter at prices increasing by 9 pies per cent. weekly until further notice. This weekly increase approximates to the net interest which accrues on the securities".

The two notable points of difference between the First Defence Loan and the Second Defence Loan are that, while the former was repayable at a premium of one rupee per cent., the new loan is to be repaid at par; and that, while the 3 per cent. 1946 Bonds are redeemable on a fixed date (namely, August 1, 1946), the present 3 per cent. 1949-52 loan contains the option for the Government to repay on any date on or after the 1st August 1949 by giving three months' notice, but before August 1st, 1952.

Our readers will recall that, in our issue of January 4, we suggested the need for an overhaul of the defence loan plan; and we extract below the considerations which urged us to put forward such a plea:—

> "The British Treasury has made such changes in the plan of the defence loan during the current week. This suggests the need for Indian Government also to withdraw on tap the 3 percent Defence Loan and to introduce, in its place, a cheaper and more variegated loan issue designed to satisfy all tastes and preferences. That is to say, we would welcome a 2 percent 3 to 5 year loan; a 2½ percent 5 to 7 year loan; and a 3 percent 7 to 15 year loan, and the issues to be made available simultaneously."

There are three points made out in the above extract. First, the 3 per cent. 1946 Bonds must be withdrawn. Second, the new issue must be on a cheaper basis. Third, the new loan must be in three types, an extremely short-term loan, a short-term loan and a medium-term loan. The first two suggestions have been given effect to; and we are quite prepared to believe that the Finance Member must have had strong reasons for restricting the new loan to one type.

The present new loan is one which INDIAN FINANCE can welcome with special gratification and support with more than ordinary enthusiasm; for, it embodies the features about Government borrowing which have been urged by us over a number of years with little impression being made on the authorities. This loan is, at last, a triumphant signal and token that Sir Jeremy is fully alive to the exceptionally strong position of India's credit and is fully determined to have this high credit reflected in his defence loan programme.

The progress between August 1940 and January 1941 is truly impressive from a 3 percent 6 year loan redeemable at one percent premium to a 3 percent 8½-11½ year loan redeemable at par. We congratulate Sir Jeremy on the skill and courage he has shown on the planning of the second defence loan. This is one of the very rare instances in the annals of the Central Government's borrowings where the yield on the new loan is lower than that forthcoming on existing analogous securities on the basis of the price quotations ruling on the eve of the new loan. We give below the particulars about the analogous securities:—

	Rs. A. P.	Redemption Yield. %
2½% 1948-52 ...	96 10 0	3.02
3½% 1947-50 ...	102 0 0	3.18
2 % 1951-54 ...	98 4 0	3.03

To the extent that the corresponding securities are giving yields slightly higher than 3 percent, they must improve in prices so as to bring their yields to 3 percent. This will inspire higher prices in the giltedged market and thus provide the appropriate setting for the success of the new loan. We look forward to appreciable improvement in giltedged prices—particularly in 3 percent 1946 Bonds.

Market circles must have got scent of the impending withdrawal of 3 percent 1946 Bonds. For, in the week ended January 18, subscriptions for these Bonds jumped to the high figure of Rs. 5·57 crores. And, from the enquiries we have made in banking circles, we have reasons to think that banks and other investors have applied for large parcels of the Bonds in the last two or three days. We shall not, therefore, be surprised if the total of subscriptions (which was Rs. 43.75 crores on January 18) comes to near the fifty crore mark when the final figure is announced.

This also accounts for the sharp fall in the deposits maintained by member banks with the Reserve Bank from Rs. 45.17 crores on January 10 to Rs. 41.82 crores on January 17.

The exchange market was extremely dull.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T.T. at 5 31/32d., all through for six months; banks were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months D.A. bills were quoted: 1s. 6/72d., for the first month; 1s. 6½d. for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d., for the fourth month.

Interbank call money is quoted ½ percent lenders, no borrowers.

Two to four months deposits quoted ½ percent.

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, 21st January, 1941. Total amount offered was Rs. 3 crores, 8 lakhs and 25 thousand. Tenders at Rs. 99-12-9 per cent and above were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 21 per cent. Lower tenders were rejected. Total amount accepted was 1 crore, the average rate of accepted tenders being annas thirteen and pies four per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, 28th January, 1941. Successful tenderers should make payment on Friday, 31st January, 1941. Other conditions are as usual.

During the week ended 17th January, 1941, Government of India Treasury Bills for Rs. 2,92,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Banking business of all descriptions including foreign exchange, transacted at most favourable rates. For rules and other terms of business, apply to the Manager, Head Office, or any of the branches.

YODH RAJ, *Secretary*.

Finance Abroad

It has been said that truth is the first casualty of war. But lately, even ordinary news pertaining to the financial sphere have tended to become such rarity that the composition of "Finance Abroad" is becoming an increasingly difficult task. There seems no valid reason why so little should be known about the financial condition of Germany or the fate of the drachma or even nearer home, the progress of the Thai currency since that country is at war. It is particularly to be regretted that there is little news allowed to filter through. Is it the censoring or the lack of enterprise of news agencies which is responsible for this exiguous state of our knowledge? All that one is vouchsafed even in the most competent papers is a stray item about the London money market or an occasional bit of tendentions stuff relating to the economics of this belligerent or that. It is surely time that so bad a state of things was mended. The availability of correct information concerning the economic and financial stamina of the nations at war will be of great help in judging the manner of its end and prospects of its early termination; and incidentally, it would also enable the poor financial scribe to eke out a column or two with more ease.

The London money market witnesses abundant supplies of credit at the moment although there must be large transfers of money from the public to the coffers of the treasury on account of the tax payments due at this time of the year. Short-term borrowers would appear to have found no difficulty in obtaining their requirements. In such a market, it is no wonder that the £65 millions of Treasury Bills offered were alloted at a rate which is only a few pence above 1 per cent. Last Friday, applications for Treasury Bills rose to a record, £146 millions being tendered against the £65 millions on offer. The discount market syndicate, therefore, had to be content with a 27 per cent. allotment whereas it had obtained 36 per cent in the previous week. Incidentally, this is the second lowest allotment it has received since January last. The abnormal expansion in the applications does not come from the discount market proper. For the syndicate under present arrangements only makes an aggregate bid equal to the amount of the bills on offer. It may, therefore, be presumed that the discount market's bid was for only £65 millions. The huge non-market applications of £81 millions for the week's bills would take a good deal of explaining, especially as the amount of foreign money in London at the moment can no longer be a violently fluctuating amount as in former days. Much of the increase in the applications must hence be attributed to overseas Central Banks' requirements. The volume of dominion and other sterling area money, which has been steadily increasing owing to the excess of imports into the United Kingdom over exports, is naturally finding employment in Treasury Bills. To the usual outside applications, there have also been the funds employed in stock exchange finance which, on account of the lethargy in the markets, are perhaps also finding investment in Treasury Bills. The returns of the Bank of England duly reflect this abundance of credits; while bank deposits are rising to exceptionally high levels, causing a fall in public deposits, there has been an increase in the holdings of government securities bringing in its wake an expansion of the credit basis.

The absence of any alarums and excursions on the war front has enabled financial and technical factors to play their full part in the stock market during the past week, though *Reuter* reports dull conditions on the whole. Among these factors, the most potent is the gradual accumulation of uninvested funds which has been going on for some time, and whose weight has been but moderately reduced by the activities of the war savings movement. There has, in the first place, been the effect of large wage increases besides substantial interest and dividend disbursements. Again, on top of these, there are the accumulated sterling balances of the Dominions and the Empire countries. These, in turn, are swollen by the continuous stream of extra-budgetary funds derived from savings banks and insurance premiums, including ill-health and unemployment contributions. The cumulative effect of all these is on the bill market, where the quota of the syndicate has been steadily falling, week after week. The question that arises is whether this falling trend of the quota will stimulate a tendency to invest once more in "shorts," though the unpleasant experiences in this direction a year ago will perhaps be a strong deterrent. Additional to the plethora of money envisaged from the above sources, there are also the proceeds from the 3rd and 4th vesting orders as well as the dividends on War Loan. Taking all these together, it will be seen that the market is in a period in which the pressure of money is likely to produce a considerable advance in prices.

LLOYDS BANK

LIMITED

(Incorporated in England.)

1677

Adaptability

The experience of nearly two centuries of private and commercial banking, coupled with an efficient and world wide organisation and the highest reputation for thoroughness and financial stability, enables Lloyds Bank to adapt itself to every class of banking business, whether in times of peace or war.

It is not clear how much of this money will go into the Government issues now on tap, but the recent widening of the basis of investment has gone far to reduce the spread between the yields on government securities and the yields on trustee securities. The further widening of this scope of enquiry in both giltedged and investment sections must be extremely interesting to watch.

Meantime, February 1, 1941, will witness the final date of maturity of the one per cent. Treasury Bonds, which will disappear from the list of British loans as from that date. The discount houses and banks in particular, to whom the issue was primarily intended, will watch its redemption with but faint interest, as these bonds have never had much of an appeal and, in the 5 years of their life, most of the £100 millions on issue have been taken up more by the various public departments than by banks and discount houses. This trend indeed tended to be emphasised in recent months and dealings in the bonds were confined mostly to government purchases. At the moment, the proportion of the issue still remaining in the hands of the market must be very small—according to one estimate, not more than £15 millions at the most remain outside Government departments. Obviously, if this is the position, the redemption of these bonds will not need any fresh conversion operations. The bonds could be repaid at maturity without much difficulty for the simple reason that the consequent disbursements would be lost in the ways and means operations of the Government and felt very little in the market.

* * *

In the pre-war era, financial and economic news about France were always available in superabundance. Now there is a great dearth of news from "unoccupied" territories. A decree was, however, issued in Vichy sometime in November raising the maximum of provisional advances which the Bank of France had undertaken to make to the State to cover the German costs of occupation. This increase is from 50 milliards to 60 milliard francs. These "costs" have been put at a fantastic 400 million francs a day, so much as to suggest that these are the veiled reparation demands of Germany. It is not known how these demands are being met, but there must certainly be a large dose of inflationary bank credit created in the course of satisfying the voracious German masters, since the capital market in France is not functioning at all, and the taxation machinery must largely be out of gear. The precise effect of these on the currency and credit structure in France is not easy to ascertain owing to the cessation of the issue of the Bank of France returns since the June collapse. The Paris establishment of the Bank of France is, in effect, a mere conversion office issuing franc notes, against the Reichmark issues of the German High Command. The franc is thus no longer in the hands of the French authorities to manage; and there have been some interesting replacements of officials of the Bank of France by nominees of the Reichsbank.

GOVERNMENT OF INDIA

3 per cent Loan 1949-52

(Second Defence Loan)

Redeemable at par not earlier than 1949 and not later than 1952.

Subscriptions **in cash,** unlimited as to amount, will be received from 1st February, 1941, until further notice.

The issue price will be Rs. **100** with subsequent weekly increases approximating to the net accrued weekly interest.

Copies of the Notification and Application Forms will be available at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras, at branches of the Imperial Bank of India at other places, and at all Government Treasuries.

New Trends in India's Trade

If the changes and complications born of war have been more pronounced during the current year than in the last, it has long been apparent that the changes in themselves were but symptoms of the radically altered character of India's foreign trade. In no field are wartime changes so acute and perplexing, and the Review of India's Trade in 1939-40 sustains the impression that the first instalment of changes was to be succeeded by more adverse indications in the following year. The anxious concern manifested by commercial organisations and Government alike betoken an attitude that is far removed from optimism and the persistent difficulties in regard to shipping space suggest that the outlook for export commodities is hardly bright. Such views may run counter to the impression produced by a glance at the summary totals of export trade in the 8 months ended November. It has been noted that the value of exports as compared with the corresponding period of 1939-40 is higher by Rs. 8.7 crores in spite of the loss of several European markets owing to the spread of hostilities. The increase is attributed to the enlarged offtake of Indian produce by Empire countries, the U.S.A. and South American countries. In the case of the Empire alone the increase is as much as Rs. 13.72 crores: the U.S.A. has increased its purchases by Rs. 3.76 crores and South America by Rs. 65 lakhs. The increase may be contrasted with the fall of Rs. 6.08 crores noted under exports to European countries and the fall of Rs. 2.65 crores under exports to Japan, while the rapid decrease in the value of exports to Egypt shows that the rise reported after the outbreak of war was due to adventitious circumstances.

The changes recorded during the period that followed the year covered by the official review of India's trade are necessarily of greater immediate significance; and where they are in the nature of a secular movement, founded on the vulnerability shown by India's economy in wartime, they necessarily call for greater attention. The familiar caution that changes in gross totals ignore changes in aggregate values or of variations in the volume of trade consequent upon alterations in the price level should be remembered, particularly, in reviewing wartime changes. The rise in the grand total of India's exports and imports raising the balance of trade to Rs. 48 crores from Rs. 17 crores during 1939-40 obscures, for instance, the decisive influence of the short-lived boom, as also the rise in the value of imports, engendered both by the acute shortage of supplies and the dislocation of shipping. A more correct basis of comparison is the year 1937-38 when the total value of exports and imports was only Rs. 15 crores lower than the total for 1939-40 which includes seven months of the war period. And a study of the export trade in respect of the principal commodities brings home the drastic loss entailed by war. A decrease of Rs. 3.19 crores is recorded under oilseeds and a fall of Rs. 4.42 crores is shown under grain, pulse and flour. And there is also an outstanding improvement under jute and hessian as well as tea in the second half of the year.

The measure of improvement under cotton is negligible in spite of the very considerable advance in prices: so also the improvement noted under exports of hides and skins. The increase under jute manufactures accounts for the rise of Rs. 22.48 crores whereas it is only Rs. 6.88 crores under raw jute. The mere fact that the value of jute and jute manufactures alone accounts for over 34.6 per cent. of the merchandise exports in 1939-40 shows that India is too much tied up with one commodity, a dubious monopoly whose prospects are uncertain in the most promising of available markets, namely, the U.S.A. It has been frequently remarked that 70 per cent. of the increase in the value of India's foreign trade in 1939-40 is accounted for by the increase registered under jute and jute manufactures; and the possibility of rapid shrinkage in foreign demand is not overlooked by the Review. It is again noteworthy that in the eight months of 1940-41 for which trade figures are available, the decreases noticed under the heads of raw cotton, raw jute, groundnuts and hides and skins, in comparison with exports during April to November, 1939 produce the impression that the improvement arising from war under jute and cotton was factitious, that the trend remains essentially unfavourable and that the scope for improvement is strictly limited. But the damage done to exports of raw materials may be offset by the improvement apparent under such heads as cotton piecegoods and yarn, gunnies and hessian and tanned or dressed hides, the basis of comparison again being the eight months ended November, 1939.

The Review does not gloss over the fact that the increase recorded under cotton in 1939-40 was largely governed by uncertainties relating to the U.S. subsidy which had the effect of diverting demand to other growths. The decisive reversal of trend since must foster pessimism. The improvement under tea is directly traceable to two factors—the increase in the quota and the admitted need in Britain for replenishing stocks. The most significant, and in some ways, the most typical change is the reduction in the volume of hides and skins shipped in 1939-40; though the rise in value compared with the previous year is Rs. 24 lakhs, the total value shows a fall of Rs. 95 lakhs compared with 1937-38.

The increase of Rs. 40.65 crores on the value of exports is largely explained by the wartime gains of Rs. 31 crores

2

under the main heads. If that were ignored, the actual measure of improvement would appear small, having regard to the fact that the increase over 1937-38 is only Rs. 22.52 crores. Any comparison with the succeeding period on the basis of such assumptions as continued growth in inter-imperial trade may appear superfluous but there are certain simultaneous developments that must be considered in this connexion. The general view is that the contraction in trade with Europe is more than offset by the rise under the value of exports to the British Empire and the U.S.A., but a more valid way of gauging changes should be to consider the trade totals for the first quarter of the war period with those for the months of September to November, 1940. This attempt would certainly point to a considerable measure of deterioration, even after making due allowance for the rise in prices that was the first direct consequence of the war.

Reference has been made quite often to the remarkable improvement last year under the balance of trade in India's favour. Though reasoning on such lines may not appear warranted, it should be noted that the rise under imports in view of the cessation of trade with enemy countries appears exceptional. The rise of Rs. 12.94 crores compared with 1938-39 in the total value of India's imports may not appear as a change due entirely to the war, since the increase during September-March is of the order of Rs. 2.26 crores only. It may be remarked in passing that, if the totals for the war period of seven months were left out of consideration and comparisons were made entirely on the basis of the first five months of 1939-40, the increase shown under imports would be nearly equal to the increase noted under exports. In that event, the conclusion that India's trade was more or less stagnant, and in the same condition as in 1938-39, accepted generally as an indifferent year, appears justified.

This is a conclusion that appears to be supported by the changes in import trade. The increase under imports of sugar is a fairly accurate measure of the difficulties experienced by the Indian sugar industry, while the increase under minerals is ascribed to the more intense industrial activity; part of it must be set down as due to the rise in prices. The very slight reduction shown under imports of cotton manufactures, together with a simultaneous rise under rayon, does not reflect the enhanced prosperity of the Indian mill industry. While the increase under drugs, chemicals and colours is taken as an encouraging sign that India would not be prejudiced by the sudden failure of imports from Germany, the reduction under coal tar dyes certainly points to the fact that the war hampers the Indian textile industry. It may also be noted that the fall under imports of machinery and millwork, instruments and implements contains a warning against entertaining unduly high hopes of industrial development. Under non-ferrous metals or iron and steel, import figures show a fall compared with the previous years, and the rise of Rs. 21 lakhs under the head, Paper and Pasteboard etc., affords no true indication of the prosperous conditions peculiar to the Indian paper industry. Perhaps, the last conclusion may thus suggest that trade totals may not afford a complete and correct picture of the changes in progress, in which case, there need be no undue pessimism. Since Empire demand for India's exports shows no sign of slackening and prospects in the U.S.A. are sure to improve along with the progress of the rearmament programme there is admittedly some ground for cautious optimism.

The justification for this is apparent on a cursory view of changes in the quantum of trade over the last five years. These changes indicate, by the way, that 1936-37 represents the best year of the recovery period, though they also emphasise that 1939-40 was a year of genuine recovery indicating incidentally that the rise in prices after September can be ignored. The index for exports (though approximate and constructed on the basis of only a part of India's trade) has risen during 1939-40 from 102.2 to 105.9 while the index for imports shows a smaller rise having advanced from 88.7 to 90.5, the index for the previous year (the base year in both cases being 1927-28). It is always difficult to express any judgment on changes still in progress, uncertain in pace and far from complete, but there is no reason for taking an unduly pessimistic view. As regards the major exports like jute, hessian and cotton, the situation may give rise to anxiety and the shipping position may raise further difficulties; but the possibilities of greater trade with the Empire and the U.S.A. are not prejudiced by the development since March, 1940. If the mission to the U.S.A. has not yielded immediate results, the report has made it plain that the prospects for Indian maganese, shellac, chromite, mica etc., are sure to undergo a very substantial improvement.

In view of the very considerable increase shown under imports during 1939-40 when the total value of imports from the U.S.A. rose from Rs. 6.4 crores to Rs. 9 crores while exports also rose in value from Rs. 8.5 crores to Rs. 12 crores raising the U.S.A. to the position of the second most important customer for Indian exports, there is certainly reason to believe that there is considerable scope for a further expansion of trade with the neutrals in spite of exchange restrictions and import control. Imports from the U.S.A. during the eight months of 1939-40 have shown no signs of falling off. In the total Indian imports, the increasing preponderance of imports from the U.S.A., under machinery, hardware and iron and steel as also chemicals, motor vehicles and mineral oils, (judging by the figures for 1939-40) warrant the belief that the most important economic development of the present war will be the increased importance of the U.S.A. as a source of India's imports and also as a buyer of India's exports. It is only necessary to look at the very limited progress made by Japan in India's import trade, when new opportunities were presented unexpectedly to her, to realise that wartime strain has impaired Japan's ability to exploit the advantages created by a European war. It may well happen that the U.S.A. will run ahead of Japan which benefited substantially during the war of 1914-18 but cannot hope to obtain equal advantages at present.

It is widely realised that the import restrictions as such may not hamper the developments of trade with the U.S.A. The expansion of imports into the U. K. will, however, give a stimulus to exports from the Empire as a whole. The exchange regulations in force since April provide for the reservation of the dollar proceeds of jute and hessian exports; they may not stimulate imports into India but will probably induce the U.S.A. to take as much as possible in order to offset the import surplus. It is hardly necessary to emphasise the commonplace that trade between Britain and America must always be considered in relation to the trade of the U.S.A. with the Empire. There has also been a dramatic expansion in China's trade with the U.S.A. at a time when Britain has lost ground in the Far Eastern markets. It may be readily predicted that the U.S.A. would encourage trade with China, India and other countries which are more acceptable than Japan.

"ASK JACKS ABOUT IT"

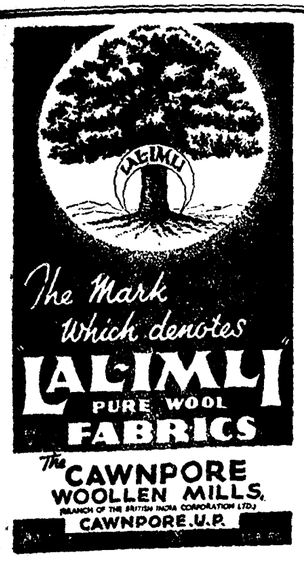
Future of Co-operation

Co-operators are eternal grousers—so the cynic and the administrator will perhaps remark. But surely there is much that is amiss when so staunch a protagonist of the movement like Mr. V. Ramdas Pantulu is obliged to confess to a feeling that the movement has no genuine future before it and that its contribution to our national life will be little. Such pessimism is induced more by the innumerable difficulties confronting the co-operative movement at every stage than by the poor prospect for the future. It is hardly necessary to stress that the lot of the primary producer, especially under current world conditions in which export trade stands disorganised, can be improved only by an efficient co-operative organisation. The movement has been successful in the West and there is no reason why it should not be so in our country ; and the larger complexities are derived from the fact that the movement in India has not developed from the bottom as in other countries but is more or less a structure imposed from the top by the Government. To broaden its basis will depend entirely on the cultivators, who must be provided with necessary credit, marketing and other facilities. The facts and the problems of the co-operative movement have been gathered and posed admirably by the Vijayaraghavacharya Committee on Co-operation. A Royal Commission could not have submitted a better report. The administrative machinery is far too centralised ; the co-operative banks cannot go all out for helping the ryot, the Central Bank's policy being too conservative ; the co-operative societies are still caught in in the bog of corruption and inefficiency ; the middleman is far too much of a parasite on the producer, marketing facilities being yet inadequate—these, to name only a few, are the defects that dog the co-operative movement in India. Even the Congress ministries were only content to mark time in this respect. The problem has to be grappled on an all-India basis if it is ever to be solved.

Axis Funds Frozen

THE decision of the United States Administration to "freeze" Axis funds so as to prevent the Axis countries from using their American balances flows logically from the strong pro-British policy now adopted by that Government. The latter have been at pains to make it clear to the Axis powers that they would allow no truckling to Axis policies. Indeed, only jurists will perhaps maintain that the United States is not at war with the Axis, since in almost every respect arrangements for *de facto* belligerency are all but complete. There is unfortunately no manner of ascertaining precisely the extent of Axis balances in the U.S.A., but at any rate to the countries concerned, they must be not inconsiderable—even if we discount the allegations of enormous sums lying to the credit of Nazi robber barons like Goering. The Axis had apparently not bargained for so swift a change in American policy, since only a small part of the Axis balances is said to have been withdrawn prior to the freezing order. There are, however, certain difficulties in putting a total embargo on the withdrawal of Axis funds. One instance is afforded by the representations of Catholic authorities in the U.S.A. that the new order should not be applied to them as that would both disclose the amounts that Rome receives from the United States and prevent their transfer to the Vatican. As a remedy against such hardships, the Administration has been obliged to modify its original attitude to one in which only the employment of Axis funds for purposes inimical to United States interests will be forbidden. The U. S. A. is now in a unique position to apply the check-rein to every nation and if the States were once deemed a safe haven for foreign funds, it has not been without attendant complications. All these emphasise how very much the reconstruction of post-war international monetary economy would come to depend on U. S. policy.



Helping the Cottongrower

The Indian Central Cotton Committee has never neglected an opportunity to encourage the use of Indian cotton. At the last meeting measures designed to increase the use of cotton were considered in detail, though the actual course of discussions is not known. It is understood that the various Government departments have been asked to do their best for medium staple varieties of Indian origin and that textile exports from India should be facilitated by trade negotiations with colonial governments. If preference were accorded, Indian goods may be able to compete in all Eastern and African markets where the offtake is increasing. Inspection under the auspices of an export organisation is generally favoured. The propaganda, it was urged, should be carried on by special trade delegations. Attention was also drawn to the need for releasing shipping for exporters of cotton and a suggestion was made that mills should be lent money to buy up stocks of Indian cotton. Sir Purshottamdas Thakurdas is said to have drawn attention to the need for avoiding accumulation of stocks as the U.S.A. with its heavy stocks might prove a formidable rival in the years succeeding the war. Dr. Gregory is understood to have dwelt on the fact that India with her inadequate means could do little for the cottongrower but promised to recommend to Government, after investigation, the methods of implementing the recommendations of the Committee.

LIFE ASSURANCE is the only means whereby one can, by easy periodical payments, provide with certainty, an amount one considers sufficient to ensure FINANCIAL INDEPENDENCE for oneself in one's old age and/or for one's dependents.
EVERY YEAR thousands of discerning persons lay the Foundation Stone of ECONOMIC INDEPENDENCE for themselves in their old age and/or for their dependents after them by insuring their lives with the

Irrigation in India

THE considerably belated report issued by the Department of Labour, Government of India, about irrigation in India during 1937-38 makes interesting reading. The total area irrigated by Government works during the year under review, including the Indian States, showed a marked increase over the average area irrigated during the previous triennium (1934-37). The net return of 5.91 per cent. on the total capital outlay must be deemed to be quite satisfactory in every way and it incidentally shows the extent to which the undertaking is helping the agriculturist. An important event of the year was the decision of the Government of India, at the instance of the Central Board of Irrigation, to take over charge of the Irrigation and Hydrodynamic Research Station of Poona. This station was being maintained by the Government of Bombay, but as this station deals largely with hydro-dynamic problems of All-India importance, it is only fitting that the Government of India should take it over.

So far as the provinces are concerned, all except Bengal, the Northwest Frontier Province, Orissa and Bihar can boast of steady progress in irrigation. Orissa and Bihar seem to be the worst sufferers, since during the year there was no important work on hand, nor was any new project taken up. The achievements of the Punjab Government in this direction have been especially praiseworthy; not only for completing no fewer than six important projects and continuing work on two new ones, but also for the valuable work done by the anti-waterlogging section of the Research Institute. A five-year drainage programme, designed to deal with the problem of waterlogging, was prepared by the Punjab Government in 1933, at an estimated cost of Rs. 40 lakhs. The construction of the main drainage lines under that programme was continued during the year under review. The Marh-chinsit drain and Chakku reservoir drain were virtually finished and work on five other drains was in progress. During the year a fresh two-year plan was drawn up for 1938-40. The Punjab deservedly takes credit for leading the others in point of extending irrigational facilities. The loans floated by that provincial government are almost always utilised for capital expenditure, and the extremly good return on such capital has been one of the important factors determining the success of the loans. In fact, most provincial loans are devoted to the same purposes, mostly irrigation and electrical projects. The total capital outlay direct and indirect, on navigation works, including works under construction amounted to Rs. 15,028 lakhs. The gross revenue during the year was Rs. 1,851 lakhs, while the working expenses were Rs. 462 lakhs. The return on capital invested in productive irrigation works was highest in the Punjab where Rs. 3,586 lakhs were invested and the estimated value of crops raised were Rs. 4,082 lakhs, the yield being 14.99 per cent. The returns were 11.29 per cent., 6.82 per cent., 5.32 per cent. in the N.W.F. Province, Bombay, Madras and the United Urovinces respectively.

U. S. Defence Plans

The creation of another Federal agency is foreshadowed in recent reports from Washington. The new Board is expected to work along with the Defence Production Council of which Mr. William S. Knudsen and Mr. Sidney Hillman are the most prominent members. The Council has superseded the earlier consultative board in view of the vast increases in both the defence programme and its unlimited industrial consequences. While Mr. Jesse Jones has neatly fitted into the President's cabinet, no place has been found for Mr. Kennedy in spite of earlier reports that the defence commission or council would be headed by Mr. Kennedy, better known at home as the chief of S. E. C. and the U. S. Maritime Commission than as the envoy to Britain. The creation of new *ad hoc* agencies suggests that the New Deal policies are being repeated, and the probable variations in labour conditions resulting from the armaments drive are to be met by a new effort to secure previous consent. The change in the leadership of the Committee of Industrial Organisation (Mr. John L. Lewis having retired to give place to Mr. Phillip Murray) indeed suggests that organised labour will co-operate even if the conditions laid down in the Walsh-Healy and Wagner Acts are broken. There will be no recurrence of the trouble experienced last May in the anthracite industry, and the special efforts made to stimulate machine tools production since December by unusual offers and arrangements show that all sections of industry in the U.S.A. will be called upon to hasten the completion of the defence programme.

In the announcements of Navy spokesmen that the U.S.A. must have decisive superiority in numbers may be discerned new hope for the shipbuilding and steel industries while the forecast that ten billions will be taken up by the new naval building programme alone, affords an idea of the necessary fiscal burdens. A high tariff country can only turn to direct taxation, and the Federal Government in virtue of the amendments to the Constitution, will not hesitate to increase the income and other taxes. This explains adequately the refusal of U.S. markets to cheer up in spite of the authoritative request for 400 small vessels for the Navy and the frank testimony of Colonel Knoxon the naval requirements of the U.S.A. in the event of hostilities. But U.S. stock markets may also be restrained by the calculation that the Lend and Lease programme will keep down the cost of British purchases. The U.S.A. will not appear as a competitive buyer and the new Supply Council, set up according to the announcement made last week, will keep in touch with the U.S. defence production council. Anglo-American co-operation will keep down both prices and profits, and the early realisation of the probable fiscal burden necessarily makes the U.S. markets cautious. There is no sign of a bull market; the news of a 25 billion dollar programme two weeks ago left Wall Street cold and the fluctuations in commodities temper the talks of optimism. The third term gave a very small dose of courage, which has practically disappeared with the calculations incidental to the appearance of the eleventh consecutive deficit. It may be said that the investor has no interest in the defence programme except in his capacity as taxpayer even though the greater part of the programme may be met by loans which can be raised without effort (as medium term debenture issues were successfully placed at 2¾ per cent. quite recently). The interest has shifted long ago from the fiscal aspect to that of industrial shifts and displacements. The entry of the automobile giants into the field of aircraft engine production will suggest that the U.S.A. is embarking on what is similar to the shadow factory scheme accepted in Britain in 1936. The General Motors Corporation has arranged with the North American Aviation Company to produce 1,500 engines per month along with parts for 200 bombers. According to the same report plans for a new plant at Kansas City are said to be nearing completion and the actual output may begin late in the summer.

A New Year Book

The appearance of the New Year Book (S. C. Sarkar & Sons Ld. Calcutta. Re. 1) is a reminder of the interest taken by the public in compilations that claim to be encyclopædic. While the work referred to presents no departure attention may be usefully drawn to the considerable emphasis laid on the statistical armoury furnished by the compiler. Figures relating to currency, public debt and revenue find a place and in other respects too the book recalls similar British publications though the actual difference in standards of accuracy and book production may suggest that there is room for improvement. It is, however, gratifying to find that much information concerning trade and industry is presented in the Year Book so that the schoolboy looking up batting records may be impelled to turn his eyes to the nature and composition of India's trade with Japan. The reader may well express surprise to find no reference to the Investor's India Year Book (the indispensable Black Book) whereas the Calcutta Stock Exchange Year Book for which one must invent *a raison d'etre* is cited as a source. Nor can it be said that the information presented as regards the vitamin content of Indian diets gains in value by being ascribed to some report drawn up by a chemical company when the public must be aware of the existence of a lucid and very interesting bulletin (priced as Rs. 2 only) which deals with the dietaries in vogue prepared by Dr. Aykroyd.

Rumania's Oil

The *Times* publishes the following cable from the German frontier: Uneasiness is expressed in the German technical press at the heavy decline of the oil output of Rumania which is revealed by official statistics just published.

The total production of Rumania crude oil in October 1940 was 415 thousand tons as against 528 thousands for October 1939, in spite of the fact that borings have increased by 11 per cent. This clearly proves that many of the older borings are yielding considerably less than before. Rumania's oil exports for the first nine months of 1940 are returned at 2,700 thousand tons as against 3,160 thousand for the first nine months of 1939. This decline in exports has been mainly caused by the blockading of the sea routes towards Germany, but it is also due in part to internal political upheavals, successive losses of territory and earthquakes. Further evidence in support of this explanation is afforded by the fact that exports to England in the first nine

STYLE and VALUE LEADERS
HUMBER
HILLMAN
SUNBEAM-TALBOT
COMMER
KARRIER
AGENTS:—
WALFORD'S
PARK STREET, CALCUTTA.

Two of the important leading industries in India have had occasion to bring to public attention their position and prospects; and, when a general review of Indian industry is beset with so many difficulties, the coincidence is to be welcomed. In fact, there are always two ways of appraising economic conditions. There is the method of the ultra-academic economist, who deals, in the main, not with economic facts in the raw, but only in the form in which they emerge from the statistical laboratory. He prefers index numbers to prices, graphs to tables, bulletins and returns of associations or departments of government to the reports of particular companies. He would, no doubt, recognise the need for verifying his conclusions by reference to actual conditions, but he would not think of looking into the reports of companies to make a picture of the industry or of putting the pictures of each and every industry together to make up the composite picture of Industry as a whole. It is the financial journalist who favours the inductive method. His impressions are formed by the daily study of the miniutiæ of the markets. Market reports, reports of joint stock companies, trade returns, official and organisational bulletins—all these have to be studied in detail from day to day. The impressions are clear, though the mental pictures so formed are necessarily diminutive, and their bearings on the rest of the panorama of economic life are not always obvious. But Walt Disney makes his full-length features; and the effect is even more impressive than that of the super-productions from the usual studios.

The Chairman's speech at the annual meeting of a leading company has thus a special value. It is a picture of the industry drawn by those who have a stake in it and who are in touch with it, day in and day out. It is not a learned deduction from statistical abstractions, from facts obtained second-hand. It is a presentation promoted by self-interest, but bridled at the same time by the knowledge that, where questions of public interest are involved, there are governmental authorities and publicists and even their own competitors to question inaccurate statements or inequitable claims. When a Chairman speaks at the annual meeting, he is addressing not the shareholders alone, most of whom nominate the Chairman or his immediate associates as their proxy, but the country as a whole. The speech calls for and fully deserves the utmost publicity. To smother it within the four walls of the Company's Registered office is to deprive it of all its importance and usefulness, alike to the company and to the public. And yet it is more than INDIAN FINANCE has been able to do to induce the leading companies in India to give the best publicity to their Chairman's speeches. I cannot believe that expenses are the primary consideration. For the question does not arise except in the case of institutions which are in a position to make the outlay and reap a return. It is rather a question of certain inhibitory modes of thought which incapacitate people for a proper appreciation of the value of such publicity. Even in the case of the two speeches which form the theme for this week's Gossip, the Associated Cement Companies, Ltd. has, during this year, chosen to restrict the publicity afforded to its Chairman's speech. In the previous one year or two, space was taken for the publication of the speech; and as if the Company has had too much of a good thing, the policy has been reversed. In the case of the Bengal Coal Company, the privilege of publishing the Chairman's speech has at long last been granted.

I do not know why Managing Agents in India are so chary of introducing in India customs and practices which are accepted as salutary in other countries. How can the publication of a Chairman's speech in journals of standing be supposed to be conditioned by the vicissitudes of business activity or by the varying need of public support? Have not the cement and the coal industries the same obligations as others to maintain a healthy public opinion on economic questions? And, even if one were to look at it from a narrower standpoint, is not the investor, the shareholder, entitled to have these speeches in the pages of the journal on which he relies for all the information he needs about companies and markets? A journal which has specialised in catering to the needs of investors all over India has a special claim on the appropriations of joint stock companies for publicity, whether of the statutory or of the optional kind. But what is more important, the readers of the journal who are, in fact, the shareholders of their companies are entitled to have all the matter pertaining to these companies brought home to them through the columns of this journal. And yet, it is as patronage that most people insist on looking at the request for publication of company notices or Chairman's speeches. The change is being achieved, no doubt, but the pace is often disheartening. And a reverse on one side naturally enhances the value of progress in another.

That, however, is by the way. For the importance of the speeches of Sir Homi Mody and the Hon'ble Mr. J. H. S. Richardson lies in their being an able and

FOREIGN EXCHANGE

By virtue of its 72 branches in 25 foreign countries plus thousands of correspondent Banks located in every commercially important city of the world, National City is in an excellent position to offer the most favourable rates in foreign exchange. You are cordially invited to ask for quotations.

EASTERN GROUP-SLEEPER CONTROL

Tender No. 13/41-42.

Sealed tenders are invited and will be opened at 3 p.m. (Calcutta time) on the 21st February 1941 for the supply of 14,130 (fourteen thousand one hundred and thirty only) special size sawn sal and/or pyinkado and teak sleepers. Full particulars may be obtained from the undersigned on payment first of Rs. 5/- (Rupees five), being the cost of tender documents, to the Chief Auditor, B. N. Railway House, Kidderpore, whose receipt for the amount must be produced before such documents can be issued. This sum will not be refunded.

W. H. GILLON,
Sleeper Control Officer,
Eastern Group.

B. N. Railway House,
Kidderpore, Calcutta,
Dated 22-1-1941.

authentic survey of conditions and prospects in the cement and coal industries in India. Cement and coal are by no means similarly placed in our national economy; but there is one point of similarity that is of somewhat recent origin, but which is significant of a new trend both in our internal economy and our foreign trade relations. For, both cement and coal, content for a long time with the internal market, now seem to feel the urge for foreign markets. Both are feeling the lack of shipping space consequent on the war. And both have had a foretaste of the foreign demand which is now in prospect. Is that symptomatic of a new trend? Will Indian industry seek an economic hegemony in the lands that skirt the Indian Ocean, in the islands that are near to her? Cotton mills have increased the exports of cotton goods. Indian sugar is ready to flow into foreign markets, even at a loss, if the ban were removed. India has long been an important source of pig-iron. And now the cement and coal industries have shipped their products to foreign countries near to our shores.

But then, coal is not altogether a newcomer to foreign markets. It was the last war which, through an ill-advised system of controls, pushed Indian coal out of Ceylon. The footing, once lost, was not regained till recently. The Hon'ble Mr. Richardson, would seem to suggest that this war might win back for Indian coal the foreign markets which were lost during the last war:

"Some of the cargo coal which has been leaving Calcutta has been consigned to markets as far afield as Alexandria and Greece, which, before the war, were quite out of our reach. We shall not, of course, be able to maintain any hold on such markets after the war, but it is to be hoped that the work, which we are now doing to consolidate the markets in the Straits and Far East—which should, geographicail speaking, be ours—will bring the reward later."

One hardly needs to be told, however, that "although the demand for coal for export is good, we cannot get the steamers to carry it." And that, let me say here, is the burden of Sir Homi's song too.

Of the other questions of importance which Mr. Richardson has discussed in his speech, sandstowing is the most topical. And those who have followed the controversy regarding assistance to sandstowing will be interested to learn that the Bengal Coal is in the enviable, but costly, position of having done on its own, what others are still slow to do even at the expense of the Government. It may be that every distinction has a price; but the iniquity of making Bengal Coal pay for its progressive outlook is too obvious to call for mention. As for the results of the Company's working, they are more appropriately discussed elsewhere in this issue of INDIAN FINANCE. One point, however, needs special mention. As the Hon'ble Mr. Richardson was at pains to point out, Bengal Coal's results to-day seem to compare unfavourably with those of fifteen or twenty years ago, not because the Company produces less or less efficiently, but because the State has come in for an increasing share of the profits of the industry. For the same profits as in the last half-year, the Company paid in the half-year ending October, 1924, Rs. 3 lakhs as taxes against Rs. 8 lakhs to-day. That is a sample of the changes in our taxation. The Finance Member, for his part, could invite the coal companies to compare their lot with that

EAST INDIAN RAILWAY
TENDER NOTICES

The General Manager, East Indian Railway, 105, Clive Street, Calcutta, invites sealed tenders for the exchange of scrap Brass boring mixed with white metal for New Bronze metal.

Tender No. Sale/1 may be purchased from the Controller of Stores' office, at Rs. 2/- per copy on production of Treasurer's receipt. This sum is not refundable.

Opening date Wednesday, the 19th February, 1941.

The General Manager, East Indian Railway, Calcutta, invites sealed tender for the supply of Phosphor Copper Ingot. Tender No. S/SP/1215/Gb4/491/C with full particulars may be purchased from the Controller of Stores Office, at Rs. 2/- per copy. No refund is permissible.

Opening date 10/2/1941.

R. MAIR,
General Manager.

of the sugar companies, some of which have paid taxes out of capital or reserves. Poor consolation, but effective reply!

Sir Homi Mody, as Chairman of the Associated Cement Companies, is, in the style of the Grand Monarch, the industry itself. And the claim is stronger now that a settlement has been arrived at with the Dalmia group of cement companies which formed the principal, almost the sole, competitors of Associated Cements. Competition has been the moot problem of the cement industry from the beginning except during the period in which Mr. F. E. Dinshaw's genius provided it with a common marketing organisation. The security of this position was challenged when the Dalmia group of companies was formed; and the negotiations for an understanding have suffered such vicissitudes that it was a hard job to follow their fortunes. But there is always a fund of adaptability and accommodativeness in the leadership of the cement industry which, I for one, knew would prove equal to any demand. And so Sir Homi is now in the happy position of being able to announce that a settlement has been arrived at. Though the details of the scheme are not available, its main feature can be understood from the following extract from Sir Homi's speech:

"The arrangement is on the basis of a joint selling organisation functioning under the existing Cement Marketing Company of India Limited, which will conduct the entire sales of both concerns. The constitution of the Cement Marketing Company will have to be somewhat amended to admit of representation of the Dalmia interests. The majority interest in the new organisation will naturally be held by your Company, as constituting the older and considerably larger cement interests in this country. The arrangements allow for the division on a percentage basis of the total sales of the two concerns on an agreed formula, but in view of your Company's rights as the pioneer industry and in consideration of the sales which it has built up in the country over a number of years, the eventual agreed quotas will not be obtained for a period of five years, the Dalmia interests receiving a smaller but gradually increasing percentage of their quota during that period."

It is characteristic of Sir Homi that, while he assures the shareholders that price cutting will be eliminated, he also affirms the intention of the Company to keep the interests of the consumer in mind as heretofore. For the problem of the cement industry, while it can, no doubt, be aggravated by cut-throat competition, cannot be solved merely by a settlement among competing interests. As Sir Homi has said pointedly, the total manufacturing capacity in this country is now over 28 lakhs of tons and the present sales of cement are just about 58 per cent of the total capacity. To help consumption to grow to the level of present capacity is the main task of the captains of the cement industry and it would require a very liberal and far sighted policy on their part. The cement interests have not shown themselves lacking in that wide outlook, which suggests and sustains such a policy. The events of the last one year or two have no place in that long term trend in a country, whose needs in new building, whether of houses or of public works are unlimited. A large demand is in prospect. Export markets are becoming available though, through lack of shipping space, they are not within reach. These outlets can only afford relief. The solution of the problem lies in providing facilities for a growing building movement. INDIAN FINANCE has stood so long by a scheme of its own that I can hardly resist the temptation to mention it here. The cement industry has carried on intelligent propaganda. The time is come for more concrete action. Sir Homi has the qualities of a business head and the vision of a statesman. I am confident it will not be long before he pulls the industry out of the present position of excess capacity.

Gateway of India

(From Our Correspondent)

Bombay, January 22, 1941.

A stay-in strike in the G.I.P. Railway workshops has created considerable stir locally. The trouble reported appears to be of smaller dimensions than anticipated, and the cause of it is said to be the delay in the publication of the Special Court of Enquiry appointed to consider the claims for a 'dearness allowance'. The press report that the report will be published early in February, has not served to allay the railwaymen's anxiety and the usual demonstration of displeasure has followed. Considerable reserve is displayed in local comment as the Executive Committee deprecated the strike though the delay is deplored. Employees of Government other than railwaymen are qualified for the receipt of a war allowance that comes into effect when prices of foodstuffs advance beyond a certain point. Though prices have not risen and the allowance has not been paid either by the Central or Provincial Government, the railwaymen's argument is that orders should have been passed earlier and perhaps they think that the rise in railway receipts justified an increment in wages.

The arrival of Sir Alexander Roger and a few of his colleagues on the Supply Mission has been noted with interest by all industrialists. The frank advice of Sir Alexander at Hyderabad on the subject of India's industrialisation justifies the belief that he is not indifferent to the schemes in the air. The advice that schemes of development should not be neglected will be readily accepted but the question is what help would Government be prepared to give. Considerable interest has been evinced in the speech of Sir Akbar Hydari made at the dinner given by the Hyderabad Chamber of Commerce. His reference to Hyderabad's interest in the proposed Supply Council taken with the readiness of the Nizam's Government to co-operate has been well received. His hint that the State needs an outlet to the sea will not provoke surprise. Though he refrained from giving details of what Hyderabad has achieved so far, it is known that industrial enterprises in the State have responded promptly to the demands made by war, and the profitable nature of Indo-British connections is admitted by others besides Nawab Sir Akbar Hydari. The assurance that Hyderabad is ready to play its part in organising the flow of supplies for defence and other purposes was only to be expected after the creation of a special organisation under Colonel Slaughter of the Nizam's Railway. It is now known that 10,000 men are now available to carry on war work. The expectation of reciprocal advantage is not far removed from the expressions of opinion in the Indian press since the Eastern Group Conference took place. Sir Alexander Roger's tribute to the Hyderabad administration was based on a comparison of the impressions obtained eleven years ago with his more recent impressions. The tribute puts Bombay in mind of what has been achieved under Sir Akbar Hydari. The purchase of the Nizam's railway with the help of money borrowed from the Imperial Bank has been vindicated by the remarkable financial results year after year and the departmentalisation of finance has not only restrained expenditure but allowed the State departments to forge ahead on the assumption that larger appropriations would come when revenue showed signs of expansion.

The outbreak of communal trouble at Sholapur last week has not been exaggerated. The trouble was local and temporary, and the suspension of business too was brief. There has been no reason to anticipate a repetition of the troubles noted ten years ago, and it can certainly be pleaded that the recent rioting is to be wholly dissociated from the Satyagraha movement. Magisterial precautions have been ample though casualties are meagre. The situation was generally mastered by the promulgation of strict orders against meetings and demonstrations.

The Bombay Art Exhibition this year is hardly up to expectations. The exhibits may be varied in character but the quality is not remarkable. Critics consider that the leading artists represented at the show are not producing their previous form. One or two amateurs have, however, added an element of novelty, and this has been welcomed on all hands. The award of prizes in the form of War Bonds by the Governor may appear rather unusual, but the artists have no reason to be displeased as they will be contributing to India's war effort. Sir Roger Lumley was pleased with the show to which Sir Cowasji Jehangir welcomed him. Sir Cowasji regretted the lack of variety and the flatness of the exhibits; this should put aspiring artists on their mettle, and future exhibitions may avoid the charge of monotony and artists may, as advised by Sir Cowasji, turn to traditional Indian sources for inspiration and attempt producing the miniatures which were in vogue in the past. Calcutta will perhaps note with interest the name of Mr. R. Grahame Mervyn who gets a prize for black and white work.

The retirement of Sir Gilbert Wiles is announced this week. Sir Gilbert has had a very distinguished career in the Indian Civil Service and he goes back to fill one of the Adviser's posts in the India Office. His work for the Indian Tariff Board will certainly go down in history, and people here recall that no official has ever acquired such remarkable knowledge of the cotton market and the stock exchange. The valuable work performed by Sir Gilbert with the Cotton Contracts Board should certainly keep his memory green in the cotton market. He made a very successful Chairman of the Port in recent years and reverted to Government service only on the special request of the Ministry. As Adviser since the Ministry vacated office he has occupied a more important position than ever, and Bombay has bidden farewell with keen regret. Sir Gilbert has spent over 36 years in the I.C.S. and the long record will probably not be surpassed soon. The local press records also his patronage of the arts and the local Art Society long had the benefit of his knowledge.

Industrial news of first rate importance is available in the speech of Sir H. P. Mody at the annual meeting of Associated Cement Co. The fourth meeting must have listened with special attention to Sir Homi's informed and agreeable review of the Company's affairs in relation to India's general development. His observations on the outlook that is clearing up in spite of the war demand extended comment. Sir Homi stated that Indian factories could produce 28 million tons of cement while total consumption as measured by sales was equal to 58 per cent. India's production is more than equal to the needs, and the necessity for an agreement in regard to selling prices was undeniable. The justification for the agreement negotiated with the Dalmia Group was lucidly explained, and his assurance that prices would not be enhanced indiscriminately, that the interest of the consumers would be borne in mind consistently as heretofore was more than ever welcome. Sir Homi mentioned that export possibilities were not inconsiderable if foreign conditions showed improvement, and he was therefore in a position to take a more optimistic view than last year. The Company is known to have invested Rs. 5 lakhs in interest-free loans by the exchange of various security deposits. Extensions to the Okha factory and improvements at the other works indicate that the A.C.C. is endeavouring to keep down costs and improve manufacturing in view of the increase in costs and the use in railway freight rates not wholly met by the policy of forward purchases. The Chairman explained that the accounts do not take into account the profits arising from the investment in the Patiala Cement Works. The initiation of a plan that will provide for the representation of the Dalmia Group in the Cement Marketing Company's organisation was referred to and it was pointed out that the quota assigned to the Dalmia group in the first five years will be smaller than expected, rising gradually during the period. Sir Homi made it clear that the cement industry has developed its efficiency to the maximum and that new entrants into the field of cement manufacture had no place as the existing factories are well distributed and assure cheap, regular and convenient surpluses.

NEW TRENDS IN WAR ECONOMY

Indo-American Trade

India's trade with the United States of America recorded a remarkable increase in 1939-40. Exports nearly doubled, rising from Rs. 14,29 lakhs in 1938-39 to Rs. 27,18 lakhs, while imports increased from Rs. 9,78 lakhs to Rs. 14,88 lakhs. India's principal exports to the United States of America consist of jute, raw and manufactured, hides and skins, lac and raw wool. These items taken together represented 73 per cent. of India's exports to the United States of America. Despatches of Indian raw Jute amounted to 51,000 tons valued at Rs. 2,02 lakhs as compared with 31,000 tons valued at Rs. 67 lakhs in the previous year. Exports of jute cloth however fell to 764 million yards from 841 million yards in 1938-39, but due to the rise in price the value advanced from Rs. 3,71 lakhs to Rs. 10,41 lakhs. There was a greater demand for gunny bags exports of which totalled 12.5 million as compared with 10.9 million.

Shipments of lac also recorded an improvement from 279,000 cwts. to 501,,000 cwts. Under hides and skins, despatches of raw goat skins, despatches of raw goat skins, which formed the bulk of shipments in this group, rose to 13,000 tons. Exports of tanned and dressed hides and skins amounted to 1,068 tons as against 439 tons.

Shipments of fruits and vegetables, consisting mainly of cashew kernals, were valued at Rs. 98 lakhs as compared with Rs. 1,11 lakhs in the previous year. The value of raw wool exported showed an improvement of Rs. 88 lakhs. Exports of raw cotton totalled 21,800 tons as against 10,400 tons. Direct shipments of tea to the United States of America also rose by 5 million lbs. There was no demand for Indian linseed, but exports of the year, totalled 13,000 tons valued at Rs. 28 lakhs.

India's imports from the United States of America consist chiefly of machinery and millwork, motor vehicles, mineral oils, instruments, tobacco, unmanufactured and raw cotton. Those items taken together represented 60 per cent. of the total imports into India from the United States of America, as compared with 65 per cent. in the preceding year. Imports of machinery and millwork rose in value from Rs. 2,12 lakhs to Rs. 2,49 lakhs and those of motor vehicles and parts from Rs. 1,65 lakhs to Rs. 2,48 lakhs. The number of cars imported, however, fell from 3,170 to 2,969. while that of omnibuses advanced from 5,095 to 10,362.

Imports of mineral oils including lubricating oils rose from Rs. 86 lakhs to Rs. 1,46 lakhs. Receipts of kerosene oil showed an improvement, amounting to 3.9 million gallons. The total value of instruments imported amounted to Rs. 1,09 lakhs as against Rs. 88 lakhs and tobacco, unmanufactured, came to the extent of 3.7 million lbs. Imports of raw cotton amounted to 9,000 tons as against 5,000 tons.

U. S. Aircraft Production

According to the Air Correspondent of the *Manchester Guardian* the statement made by President Roosevelt in his address to Congress that the United States is behind schedule in its output of finished aircraft, focuses attention once more on the American aviation industry. Ever since the British Purchasing Commission began negotiations in the United States, there have been many conflicting and inaccurate reports about orders placed and the rate of deliveries. The fact is that the American industry has been undergoing a huge reorganisation to enable it to carry out the task of turning out in great numbers all types of aircraft—tankers, fighters, bombers and flying boats. Three months ago, 21 of the principal companies were given authority to push ahead with the manufacture of 14,394 machines costing £312,750,000 and in order to deal with these orders, every factory has been and is being expanded. The Moeing Company alone, which makes B-17-C Flying Fortress bombers, has already enlarged its plant more than 2½ times over since 1939 and when extensions are fully completed in four months' time, the floor area will be 1,600,000 square feet. At the present time, one B-17-C is being turned out every two days, one Steerman training machine, which is also built by Boeings, is produced every three hours. In some other factories, the output is not so satisfactory and production has been fluctuating between 800 and 1,000 aeroplanes monthly. Hitherto there has been some difficulty about the output of engines for certain types of aircraft and this has been one of the main troubles experienced by manufacturers, but these have now been solved and it is certain that tremendous drive now being made in the United States will soon bring aircraft production up to decisive proportions.

Disappointment to the Nazis

Commenting on the latest of trade agreements negotiated by Germany last week, the Diplomatic Correspondent of the *Daily Telegraph* says:

It was announced in Berlin and on the Moscow radio on the 10th night that an alleged Soviet- German economic agreement was signed in Moscow. It is valid until August 1942. Other agreements cover frontier and repatriation questions. Deliveries by two countries provided for in the economic agreement far exceed those of the first year of treaty, adds the announcement. Germany will deliver industrial equipment to Russia, who will in her turn deliver to Germany industrial raw materials, oil and foodstuffs, particularly, grain. It is interesting to observe that the German propaganda machine on the previous day had been expressing grave dissatisfaction because the much-vaunted agreement for increasing trade with Russia seemed unlikely to yield the promised results.

Russia was also giving some prominence to the fact that her supplies of oil would be sufficient for her own requirements only if she husbanded them carefully. This might indicate that no surplus was available for export to Germany, an important consideration since there is no other evidence to show that Germany's need for extended oil supplies is pressing. In the light of these previous indications the latest statements give the impression of an attempt to put the best face on what has not been a very good job.

A Resume of Commodity Markets

WITH the exception of the jute manufactures, bullion and wheat markets there has not been anything of interest in the commodity markets during the week. The Bombay raw cotton market has continued weak while the raw jute futures market has been absolutely uninteresting. There has been no general broadening of interest.

The strength of the jute manufactures market has been due to the consistent buying by American consumers. Latterly, mills have shown some unwillingness to sell for the near positions. The silver market has been marked higher on rumours regarding the possibility of a higher import duty. The improvement in prices however, has not been maintained and prices, on balance, for the first two positions are not very much changed. Second settlement, however, is now quoting at a discount of eight annas over first settlement. The wheat market showed a tendency to improve further. But towards the close fears regarding the Marketing Bill having an adverse effect on prices have caused quotations to close below the best levels.

Jute

The raw jute market has been absolutely uninteresting. In the absence of any large mill buying there has been very little activity in the futures market and quotations have been confined to a few annas. It was generally expected that mills would continue buying in an effort to complete at least the quota of 10 lakhs bales for the second period of the agreement. But mills seem to be inclined to await the finding of the Special Jute Officer. Consumption of jute for the eight months ending March is estimated at 28 lakhs bales. Even at the time the agreement was concluded, mills had purchased about 28 lakhs. With the carry over from the last season of 1½ lakhs bales and the purchases of about 13 lakhs bales, mills stocks were, therefore, 42½ lakhs. It would thus be seen that even with the purchases to the middle of January, mills were well stocked with jute. With no possibility of an immediate rise in prices, the tendency of mills will naturally be to avoid buying jute further as far as possible. It is not expected, therefore, that the quota for the second period will be completed.

Jute Manufactures

The availability of freight and the soundness of the local stock position consequent on the successful policy of the Indian Jute Mills Association of regulating production, have resulted in a good rise in prices for hessians. 9 porters ready are substantially higher at Rs. 18-6, the quotation at the end of last week being Rs. 12-13. During the last two days, mills have been rather reserved and selling only sparingly at advancing rates. North American buying has been very satisfactory during the past week. It is reported that bazar operators have found it advantageous to sell for the nearer positions and buy for the farther positions.

Condition affecting Jute Trade in Argentine

The Argentine Correspondent of the Indian Central Jute Committee states that although the prospects of the coming grain harvest are considered to be bright, it will be difficult to find a market for the produce. With the export markets practically closed the future financial condition of the country is likely to become worse. A plan is, however, afoot to help the agriculturists by governmental purchase of crop surpluses; and to assist the industry by advancing loans to manufacturers who lack capital.

Exportation of meat has suffered a further shrinkage and activity in the building trade is dwindling. The condition in the bag trade also has been much disturbed due to the refusal of the influential members of the bag trade to sell bags at the new maximum price fixed by the Government.

In view of the growing difficulties of exporting low quality cotton and importing jute from India, a commission has recently been set up to study the possibilities of using cotton in place of other materials such as jute.

The stocks of Bags and Sacks as at 31st October are given below :—

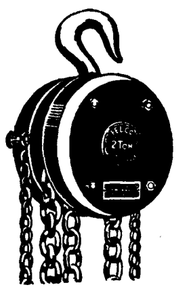
		1940	1939
		metres	
Canvas	...	45,055,776	...
Sacking	...	5,226,136	...
New Bags	...	52,251,917	57,818,029
Old Bags	...	20,881,515	18,561,784

14,162 bales of jute and 20,489 bales of jute manufactures were imported into the Republic during November. Almost all of these came from India.

Cotton

The sentiment in the Bombay raw cotton market still continues to be predominantly bearish. The difficulties in regard to the exports to the United Kingdom, the reduced rate of exports to Japan and the pressure of arrivals have prevented any recovery in prices. The lower overseas advices also have been none too helpful. A level as low as Rs. 177 has been touched during the week.

Bullion



As is usual for this time of the year, there have been rumours regarding the possibility of an increase in the import duty on silver. These have resulted in a rise in the quotations for the pre-budget positions but the rise in prices has not been maintained. Owing to the difficulty in importing silver and the restrictions imposed by the Reserve Bank of India it is unlikely that the Central Government will find it advantageous to increase the import duty. This is perhaps the reason why the rise in prices has not been maintained. It has, however, resulted in a discount for second settlement by as much as eight annas over first setlement. The firmer tone of the gold market has been purely in sympathy with the silver market.

MADRAS HIDES AND SKINS.

Madras, January 27, 1941

DURING the past week, shipping difficulties have been accentuated; and added to this handicap, certain restrictions imposed on the export of certain averages of Tanned Kips have added to the difficulties of both the tanners and shippers in the Madras Trade. It is learnt that 5/5½ lbs. and 5/7½ lbs. in all grades (Run, Fourths and Fifths) can be shipped, and these hold priority over others. In 6/6½ lbs. only Run and Fourths can be shipped. No grades of 7/7½ lbs. and 15/16 lbs. can be shipped. In 10/12 lbs., only Run and Fourths can be shipped. In Interiors, only 4½ lbs. and 5½ lbs. can be shipped. In Tanned Buffalo, the weights to be shipped will be 12/13 lbs. and 10/12 lbs. This restriction has reacted unfavourably on local prices and the local market has turned easier in weights and grades that cannot be shipped. Curiously enough, there has been no slackening of enquiries from London for all weights and grades of Kips at the schedule prices. But shippers are chary of booking orders which they will not be able to execute in the face of the shipping scarcity. They and the tanners are, therefore, reducing their commitments to the minimum. Stocks in their hands are being reduced and raw hide purchases by tanners curtailed. The quota system in the allotment of shipping space is not allowing clearance of more than 10 per cent of the quantity to be shipped in several cases, and even extension of time by 3/4 months will hardly help the shippers. Tanned Buffalo 12/13 lbs. are quoting at 12½d. Tanned Buff Calf is quoted at 10d. and Cow Calf around 9½d. for Coasts. In the face of the situation for the Tanned article in Madras, raw hide values have not responded to lower prices. The latest news from Lahore reports that GOKA Firmas 9 lb. averages are being bought by shippers in that market and that there is no possibility of any decline in prices at present.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, 23rd January.

No official announcement has yet been made of the total jute purchase made by Mills during the first quota period of the recent Delhi agreement. It was reported earlier in the week that the returns received only totalled some 13,41,000 bales, but at that time it is believed that there were still some returns to come in. Also it is suggested that Mills who are not allied to the Association have been asked to submit returns so that the final figure to be submitted to Government may make the best showing possible. It is quite reasonable that non-associated mills' purchases should be included in the total, though the undertaking was made by the I.J.M.A. only for their members. But outside mills' purchases are made in the same market and under the same conditions as those of the associated mills, and their quota may be quite rightly added to make up the full purchase figure. In any case the figure aimed at, viz. 15 lakhs of bales, has been sufficiently nearly attained to relieve Government of any urgent necessity to come into the market as a purchaser, more particularly when their object, that of raising the price to the cultivator, has in most districts, and for all qualities except the lowest, already been achieved. So for there has been no marked movement towards proceeding with purchases for the second quota period, viz., a further 10 lakhs of bales before the 15th February. It may be that Mills would like to know how their neighbours have borne their share of the burden before proceeding to take the next step. Storing capacity in some instances acts as a deterrent to further early buying. Mills who had bought more or less normally earlier in the season, and consequently had their godowns fairly comfortably filled, have during this first period purchased much more than their consumption, and are consequently short of space. During a normal season, a mill's godowns are at their barest about the month of September, before the weight of the crop begins to come forward. From then on to the end of the year, godowns rapidly fill up, till by the turn of the year a mill is generally regulating purchases so that arrivals of jute will just about replace the amount consumed during the month. Owing to unusual circumstances, mills' overhead purchases this year are much under normal, but these are very unequally distributed, so that in some instances storage space is severely taxed.

The Fabrics market should indeed be giving Mills every encouragement to proceed with jute purchases, for export demand for hessians has been brisk and near goods have moved to a sharp premium during the past week. The fact seems to be that, so far as hessians are concerned, mills are pretty fully sold for the January/March position and standard goods have to be sought mainly from second-hands. For specialities of course and for odd widths and weights, mills have to be approached, and they are asking—and getting—very full rates for such descriptions. Unfortunately the same tale cannot be told regarding the Heavy Goods section of the market, where demand remains very sluggish though quotations are wonderfully well maintained considering the paucity of business.

Considerable comment can be heard these days in the marketplace on the dead set which the Advisory Board seems to have made at the Broking fraternity in selecting men for service. Not that the Brokers are unwilling to serve. Far from it. Very few of them indeed cannot show service in the 1914-18 War, and that is partly why they want to know why they are being called up again when there are still many young men in offices, in positions which by no stretch of the imagination be described as "KEY", who have not yet been called on. The Broker has long ago got used to being called a parasite on commerce. He has to be thick-skinned, otherwise he wouldn't last long on the Calcutta market. But the services he renders are by no means inconsiderable though seldom appreciated. Since the long period of trade depression, few Brokers offices are even now fully staffed and further depletion will bear very hardly on those who may be permitted to remain. It is of interest to note that in the hey-day of Gunny broking there were no fewer than 28 firms in the business employing up to 98 individual brokers. The number of firms listed to-day is 14, of whom only 10 are active, and the number of individual brokers listed is 47, of whom some have already proceeded on service and another half dozen or so are inactive. Much the same applies to the Jute broking firms, and in their case their services to the Mills are multifarious. Passing a contract is only the beginning of their job. They collect offers from the vast army of Indian sellers and present them in such form that a Mill can see at a glance what is offering. They have to influence the sellers to offer the assortments the mills want, at the price mills want to pay. Then they undersign the contract to protect the mill completely from any default on the part of the seller. If the mill has any complaint about the delivery, the broker has to go to the mill to inspect the jute and effect a settlement. His working hours in the busy season are not infrequently from 5 a.m. to 6 or 7 p.m. So he earns his bread by the sweat of his brow. But if the Mills were to be deprived of any of these services they would be the first to raise a howl. And further deletion of Brokers staffs cannot but have this effect.

There has been slightly more activity in Export Jute. Business was done for South America in Dundee Tossa 2/8 at Rs. 44/- and in Outport Tossa 2/8 at Rs. 34/- February shipment. For Dundee there have been sales of Tossa Actuals 2/8 at Rs. 47/- with 4s. at Rs. 36/4. Dundee Daisee sold at from Rs. 36/4 to Rs. 36/8 assortment. Mixing Cuttings sold for shipment at Rs. 14/2. Mills bought a fair quantity of M.C.s at Rs. 18/8 and N. Cs at Rs. 14/8 and at Rs. 14/-. Firsts have also been reported to Mills at Rs. 41/- and Lightnings at Rs. 36/-. The Futures market has moved within narrow limits from Rs. 39/- to Rs. 39/8, back to Rs. 39/- and is again firmer at the close at Rs. 39/9.

Loose jute has not been active, mills still holding off from commencing the second quota and sellers offering freely. European jute has sold at Rs. 9/4 and Rs. 7/- and at Rs. 9/4 and Rs. 6/12 according to assortment. Bottoms alone sold at Rs. 6-12. Supervised Jat 50/50 sold at Rs. 9/- and Rs. 7/-. Indian Jat is offered at Rs. 8/8 and Rs. 8/4 and Rs. 6/8. Balers have paid from Rs. 9/8 to Rs. 11/- for good Tossa Middles. Mofussil markets are fully steady.

As indicated above, there has been a good demand from overseas for hessians for the early months, which owing to mills being pretty well sold, has had to be met largely by second-hands, who in turn have been replacing with further forward positions. Near 9 porters have moved from Rs. 12-14 to Rs. 18/4 while 7½ oz. for February sold at Rs. 18/4 to Rs. 18/8 basis. Eleven porters for January have moved up from Rs. 16-12 to Rs. 17-2, April/June from Rs. 16-2 to Rs. 16/8 July/Septr. from Rs. 15/12 to Rs. 16/2. 12 oz. for March fetched Rs. 18/- basis. Heavy Goods have been largely neglected, only a few transactions in near "B" Twills at Rs. 32/- and Liverpools at Rs. 36/8, also Jan./Feb. Cornsacks at Rs. 33/- being reported.

JUTE

(By our staff correspondent).

Calcutta, January 23.

THE raw jute market has been rather uninteresting during the past week. After Wednesday, last week, which was the last day of the first period for completing the quota, there has not been much buying on account of mills. There is a general tendency to await the results of the investigation by the Special Jute Officer. Meanwhile, it is suggested that with barely three weeks it is not possible for mills to make up the short fall in the first quota and buy 10 lakhs for the second period of the agreement. With restricted consumption and ample stocks of jute, there is no tendency to buy in any large quantities.

Sellers are pressing for business in low assortments while it is difficult to purchase Tossa qualities for which there is good demand.

In the loose jute section a fair amount of business has been reported in European Supervised Jat Middles and Bottoms 30/70 assortment at Rs. 9 and Rs. 6-12 per maund. Indian Jat Bottoms alone were done at Rs. 6-8.

In the pucca bales section, not much of business has been passing. Shippers have been inactive. Dundee Daisee 2/3 and Dundee Tossa 4 were done at Rs. 6-4 per bale for February 15 shipment. Firsts for February shipment were Rs. 41 per bale and Special Firsts Rs. 45 per bale. Earlier in the week, mills bought cuttings M.C. and N.C. at Rs. 13-8 and Rs. 14-8 respectively.

In the futures market, there has been very little activity. An easier tendency has been noticeable and quotations have been fluctuating around Rs. 39-4. The rate at the time of writing is around Rs. 39-7. The undertone is quiet.

JUTE MANUFACTURES

Calcutta, January 23.

The jute manufactures has been definitely firmer during the week. As there has been continued buying from North America, there has been a rise of more than six annas in the quotation for 9 porters ready. Mills have been able to report good business and have sold for positions as far as September. Local bazar operators have found it advantageous to sell their stocks for near positions and replace them with purchases for the farther positions. The demand earlier in the week was confined mainly to 9 porters maintains. During the last two days there has been some slowing down in overseas buying but it is reported a good quantity of 11 Porters has been purchased for early shipment. 9 Porters ready are now quoting Rs. 13-4-6, February/March Rs. 13-4-6 and April/June Rs. 13-1. The quotations at the time of last writing were Rs. 12-13, Rs. 12-13 and Rs. 12-10 respectively. 11 Porters ready were Rs. 17, February/March Rs. 16-13, April/June Rs. 16-6 and July/September Rs. 16.

In the heavy goods section, there has not been much doing but rates have been fully maintained. B Twills for February shipment were Rs. 32, Cornsacks for the same position Rs. 33-2 and Liverpool Twills Rs. 36-10.

COTTON

Calcutta, January 23.

WEAKER overseas advices, lack of export demand and increasing arrivals have been responsible for the further decline in prices in the Bombay raw cotton market during the past week. Even a slight rise in prices induces bear selling. Owing to the confused export outlook, there is no tendency to enter into commitments on a large scale. Mill buying during the past week has been rather restricted. Closing quotations are around the lowest levels for the week. Broach April/May closed at Rs. 177-4, July/August at Rs. 181-8, December/January at Rs. 125-8 and Oomra December/January at Rs. 147.

Cautious buying and a tendency to await further developments in Washington have been responsible for the decline in prices in the New York market during the past week. As New York prices were above the loan level, it was expected that there would be some repossession of loan cotton. But as no such movement has been in evidence, buyers have thought it wise not to push up prices further. The reduced buying and the weakness of other markets have caused a decline in prices. March closed at 10.30 cents and May at 10.36 cents against 10.43 cents and 10.44 cents. The premium for May position has improved further to six points. The Liverpool market also has been easier with January at 8.18d and March at 8.26d. There has been little trade buying.

PIECEGOODS

Calcutta, January 23.

THE piecegoods market has been rather uninteresting. With the weakness of the raw cotton market and the unwillingness of buyers to enter the market at the present moment, business passing has been on a very small scale. As replacement costs are considerably above bazar values genuine buying has been limited. Indian mills are reported to have done some business for March delivery while there have been some repeat orders of the standard lines with the Japanese manufacturers. With the improvement in the ready position, it is expected that there will be greater buying in the next few weeks. Seasonal demand for hot weather styles should be in evidence soon.

The yarn market has not been quite active. As bazar dealers did not follow up the recent rise in spinners' quotations buyers have been rather hesitant. Forward business has been restricted. In order to stimulate buying, South Indian mills are reported to have reduced their limits to market quotations.

GOLD

Calcutta, January 23.

IN sympathy with the rise in prices in the silver market, a firmer tendency has been noticeable in the Bombay gold market. Not much business has been done for export but owing to the scarcity of supplies, quotations are appreciably higher. Gold ready closed at Rs. 42-2-3, First Settlement at Rs. 42-2-9 and Second Settlement at Rs. 42-3-6. The quotations at the end of last week were Rs. 41-15-9, Rs. 41-15-9 and Rs. 42-0-3 respectively. The quotation for first settlement is now at a premium of six pies while that for second settlement has improved from 9 pies to 1 as. 3 pies. The London price has remained unchanged at 168s.

SILVER

Calcutta, January 23.

THE sharp rise in prices in the Bombay silver market last week was in part due to the rumours regarding the possibility of an increase in the import duty on silver. This induced covering for the ready and first settlement. A quotation as high as Rs. 63-7-6 was recorded early in the week. It is significant that in the later stages of the rise, there has been a good appreciation in the quotations for the first two positions while the quotation for second settlement is on balance lower. Indian Mint Silver ready closed at Rs. 63-1, First Settlement Rs. 63 and Second Settlement at Rs. 62-10 against Rs. 62-15, Rs. 62-14 and Rs. 62-15 respectively.

In the London market, there has been very little activity. Some selling was absorbed by speculative buying. Spot closed at 23 3/16d. and forward at 23 1/8d.

TEA

Teas for Export

AT sale No. 28 held on 20th and 21st January 1941, only 9,367 packages were sold at Re. 1-0-3 per lb. as against 18,924 packages (sale No. 30) at an average price of annas 12 and pie 1 per lb. in 1939-40 and 20,683 packages (sale No. 29) at an average price of annas 9 and pies 10 per lb. in 1938-39. There was a general decrease in supplies and most of the qualities on offer were from Darjeeling with a useful standard of quality throughout. All types had a good demand. Prices for common and medium broken grade rose from annas 14 and pies 9 to annas 15 and pies 6 per lb. Darjeelings in spite of the large quantity of offer met with satisfactory prices. Iranian types were irregular and an easier tendency was in evidence in the case of Orange Fannings.

Teas for Internal Consumption

Green teas had a limited offer with a fair demand. Dusts had a strong market with prices fully maintained. All types, except Broken Orange Pekoe and Darjeelings had a fair demand though prices were on the downward trend. Darjeelings had practically no enquiry at all.

Quota.

The export quota is firm at Annas 11 per lb. A limited business was put through the internal quota which declined from anna one and pies 6 to one anna per lb.

Crop.

Northern Indian outturn during December is estimated to be 2.8 million lbs. as against 6.5 millions last year. The total for the year up to the end of the month is 385.3 million lbs. as compared with 384.7 millions last year.

WHEAT

Calcutta, January 23.

THE Karachi wheat market was inclined to be firmer in mid-week on discount and speculative buying. Choice White ready were done as high as Rs. 35-4 but during the last two days an easier tendency has been noticeable on account of the pressure of arrivals. Quotations are not very much changed on balance. Choice White ready closed at Rs. 34-8, January at Rs. 34-8-6 March at Rs. 33-6-6 and July at Rs. 28-14. Last week, the quotations were Rs. 34-5, Rs. 34-4-6, Rs. 33-3-6 and Rs. 29-8-9 respectively. It will be noticed that the quotation for July position suggests some weakness. While there has been a rise of about four annas in the prices for old crop positions, the quotation for July is nearly eleven annas lower. This is perhaps due to the fears that the import duty on wheat which expires on March 31, 1941 will not be renewed.

In the Calcutta market rather dull conditions have been noticeable. Reports regarding favourable weather conditions in U. P. have had a discouraging effect. Cawnpore and Punjab ready were Rs. 4-11-6 and May Rs. 4-2-9. The demand for flour and flour products has shown no signs of improvement. Some mills have been obliged to curtail production.

MADRAS GROUNDNUTS

Madras, January 21.

Upcountry markets were sluggish during the past week on account of the Pongal festivities. Locally, ever since the middle of last week, a certain amount of uncertainty has been prevailing following rumours of an understanding between the Government of India and the British Ministry of Food in regard to the supply of Groundnut kernels. A conference of Groundnut interests was convened by the Southern India Chamber of Commerce yesterday. It was pointed out at the meeting that, although the minimum limit of £10—F.O.B. was fixed by the Government of India in consultation with the Ministry of Food with effect from September last, the absence of any extensive purchases rendered the minimum price ineffective. Thus, prices which, before the fall of France, stood round about Rs. 36 per candy dwindled down and now stood in the region of Rs. 21. After calculating all expenses, the cultivator, it was stated, realised only Rs. 12 per candy which hardly paid harvesting expenses in certain hard soils. Ways and means were canvassed of making the profits available in a larger measure to the cultivators. Late in the evening, reports gained currency that an understanding was reached providing for collection of a rebate from shippers of 25 shillings per ton in South India and 15 shillings from Bombay. Shippers' buying limits opened on Tuesday last at Rs. 21 for Machined (per candy of 531 lbs. ex-coast godowns) and after minor fluctuations closed steadier to-day around Rs. 21 to Rs. 21-12. Local buyers' limits opened at Rs. 20-2 and advanced steadily to close at Rs. 20-8 to Rs. 21-4. Groundnut oil prices declined during the early part of the week, but steadied later on to close around Rs. 45-8 to Rs. 46 for "Chekku" quality and Rs. 48-8 to Rs. 49 for "Produttur" quality, for ready lots, loose, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

(Continued from page 139)

months of 1940 totalled 17.6 per cent. of the whole, whereas for the corresponding period of 1939 the proportion was only 13 per cent., while the amount Germany obtained declined from 1,250 thousand tons or 89.6 per cent. of the whole in the first nine months of 1939, to 975 thousand tons or 86.1 per cent. for the same period of 1940. The oil that the Germans were unable to transport by sea routes could not be sent by rail mainly owing to the lack of tank wagons.

Since the Iron Guard seized power and Germany occupied Rumania, no mineral oil whatever has been sent to England, but Germany has not profited substantially by the change so far as transport along the Danube is stopped by ice while rail and road transport is hampered by floods, snow and sabotage. Recently some oilfields were forced to curtail heavily their production because, owing to the lack of transport, all the available oil reservoirs were filled up.

Indian Exports to Australia

Indian exports to Australia improved to the extent of Rs. 2,52 lakhs in 1939-40, while Australian imports into India recorded a slight fall. Principal items of India's exports to the Commonwealth consist of jute manufactures. Nearly 71 million gunny bags and 41 million yards of gunny were exported as against 66 million gunny bags and 31 million yards of gunny cloth in the preceeding year. Exports of tea continued to rise and shipments amounted to 3.7 million lbs. as compared with 1.8 millions lbs. Similarly shipments of linseed improved from 21,000 tons to 81,000 tons.

Wheat, the largest item of imports from Australia, declined from 151,000 tons in 1938-39 to 85,000 tons. India imports a large quantity of raw wool from Australia which amounted to 4.9 million lbs. as against 4.4 million lbs. in 1938-39. Imports of tallow and stoarine rose, while those of zinc fell. Among other important items of import, provisions accounted for Rs. 25 lakhs as against Rs. 18 lakhs in the preceding year.

Stock Markets to-day and to-morrow

SECOND DEFENCE LOAN

THE feature of the week is the announcement of the terms of the Second Defence Loan. The new loan is a medium-dated loan, issued at par and carrying interest at 3 per cent. per annum. The loan is repayable at par not earlier than August 1, 1949 and not later than August 1, 1952 on three calendar months' notice. The list will be opened on February 1, 1941 and subscriptions will be received for unlimited amounts until further notice. The existing offer for 3 per cent. Defence Bonds, it is reported, will be withdrawn.

* * *

The terms of the new loan, it is unnecessary to point out, are bullish for the giltedged market. As the new loan is repayable at par this should result in a good rise in the quotation for 3 per cent. Defence Bonds which are redeemable at one per cent. premium. It is also important to note that the yield available on analogous securities is higher and if this loan should meet with response, which is very likely the case, there should be an upward revision of values.

* * *

After nearly a week of stagnant markets there has been a sudden improvement in the speculative counters on Friday afternoon. On bear covering Indian Iron and Steel Corporation are appreciably higher at Rs. 30-10 and Rs. 18-10 respectively.

* * *

The annual meeting general of the shareholders of the *Associated Cement Companies, Limited* has been of more than usual interest to investors. Shortly after the balance-sheet of the company for the year ended July, 1940 was published it was announced that an agreement had been concluded between the two rival groups and that the rate war in the cement industry had ended. As the details were not known, the remarks of the chairman at the annual meeting regarding the agreement were keenly awaited. After dealing with the difficult conditions in the industry in 1939/40 and the improved prospects for the current year the chairman made the following remarks regarding the negotiations which have recently been successfully concluded with the company's principal competitors, the Dalmia group.

"The arrangement is on the basis of a joint selling organisation functioning under the exististing Cement Marketing Company of India, Limited, which will conduct the entire sales of both concerns. The constitution of the Cement Marketing Company will have to be somewhat amended to admit of representation of the Dalmia interests. The majority interest in the new organisation will naturally be held by your Company, as constituting the older and considerably larger cement interests in this country. The arrangements allow for the division on a percentage basis of the total sales of the two concerns on an agreed formula, but in view of your Company's rights as the pioneer in the Industry and in consideration of the sales which it has built up in the country over a number of years, the eventual agreed quotas will not be obtained for a period of five years, the Dalmia interests receiving a smaller but gradually increasing percentage of their quota during that period."

So far as the working for 1940-41 is concerned, the agreement will only have effect for the latter half of the year. Apart from the advantages that may accrue therefrom the dislocation which was in evidence in the earlier stages of the war has to some extent righted itself and there should be increasing activity in trade and industry which will be felt in all directions. With the increasing demand for export it is possible to strike a rather more optimistic note regarding the future prospects for the industry.

* * *

Speaking at the half-yearly general meeting of the *Bengal Coal Company, Limited*, the chairman pointed out that the high level of earnings for 1939-40 were due to exceptional factors and that since 1st of November, the date of the further increase in the surcharge on coal, the demand has fallen so much that it has been necessary to restrict output. Regarding prospects for the current half-year he pointed out, "I am afraid that we may be in for a difficult time this half-year, as the satisfactory profits recently obtained have in a large measure been due to the fact that we have been able to maintain a large output without running into stock." The export trade also has been affected. Although the demand for coal for export is good it is difficult to get the steamers to carry it.

It should not, however, be taken to mean that the earnings for the current half-year will be so low as to result in a substantial reduction in the distribution. It should not be forgotten that out of the total earnings of Rs. 15.59 lakhs for the half-year ended November, 1940 the sum of Rs. 8 lakhs had to be provided for Excess Profits Tax, Income-tax ad Super-tax.

* * *

The results of the Andrew Yule group of jute companies for the half-year ended November, 1940 reveal clearly the effect of the decline in the prices for jute manufactures after the fall of France. Even the accounts of some companies for the half-year ended September, 1940 showed a decline in earnings, but no uniform tendency was noticeable as several mills had sold heavily forward and the effect of the steep decline in prices was not fully felt.

The general decline in earnings of five companies under the management of Andrew Yule group has not, however, affected to any great extent the distribution to shareholders. The aggregate profit of the five companies for the half-year ended November, 1940 is Rs. 23,97,804 against Rs. 44,17,823 for the previous half-year or a decrease of Rs. 20,20,190. Only half the amount of this decline should be considered as a loss to shareholders as the provision for E. P. T. and income-tax and super-tax was as much as Rs. 24,08,801 for the half-year ended May, 1940, and it has been found necessary to allocate the sum of Rs. 11,25,000 in this respect for the half-year ended November, 1940. As on earlier occasions the dividends were declared on a very conservative basis there has been only a slight reduction in the ordinary dividends now recommended. The total amount on account of ordinary dividends for the half-year ended May, 1940 was Rs. 7,94,425. The amount on account of ordinary dividends for the half-year ended November, 1940 is Rs. 6,27,660. There has been a decline of only 21 per cent. in the dividend amount against a decline in total earnings of 45.7 per cent.

It is just possible that the earnings for the half-year ended May, 1941 of these same companies show a further decline but it would not be difficult to maintain dividends as the amount now distributed is only 26.2 per cent. of total earnings.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 24.

THE Calcutta Stock Exchange has been absolutely uninteresting during the past week. With the various rumours regarding fresh taxation there has naturally been little inclination to enter into fresh commitments. Business transacted has been on a restricted scale and fluctuations have been confined to very narrow limits. During the past four days there has been very little speculative activity and quotations are in most places unchanged. Giltedged securities have been very steady while among equities Indian Cables have again provided the feature being marked higher at Rs. 21-8. The firmness of the jute manufactures market has had an encouraging effect on the jute section but with the quiet feeling in the other sections no important rise in prices has been recorded. Unless there are any extremely favourable developments it does not look as if there will be any improvement in prices until the Central Budget is out of the way.

The giltedged securities section has been quietly steady during the past week. Prices are on balance a shade easier but the undertone is quite steady. After the satisfactory rise in prices during the past few weeks the inactivity in this section is explainable. The announcement of the terms of the new term should be encouraging for the market. 3½ per cent. Paper is now quoting around Rs. 94-14 and 3 per cent. Paper at Rs. 81-4. Among terminable loans, 3 per cent 1968/65 were Rs. 98-10, 2½ per cent. 1948/52 Rs. 96-10, 3 per cent. 1951/54 Rs. 98-4, 3½ per cent. 1947/50 Rs. 102-1, 4 per cent. 1960/70 Rs. 107-14, 4½ per cent. 1955-60 Rs. 112-14 and 5 per cent. 1945-55 Rs. 119-6. Among provincial loans, 5 per cent. U. P. 1944 were done at Rs. 106-8 and 3 per cent. Punjab 1952 at Rs. 98-2.

Business in public bodies' debentures is still restricted owing to the paucity of offerings. 6 per cent. *Calcutta Port Trust* 1955-35 debentures were noted at Rs. 125-4, 3½ per cent. *Howrah Bridge* debentures at Rs. 96-8 and 3 per cent. 1963 *Calcutta Improvement Trust* debentures at Rs. 88-8. Among industrial debentures, 4½ per cent. *Bengal Paper Mills* debentures were Rs. 105, 5 per cent. *Samastipore Central Sugar* debentures Rs. 103 and 5 per cent. *National Iron and Steel* debentures Rs. 101.

Demand for first class preference issues continues to be in evidence. First class jute mills preference shares have been well held. *Anglo-India* were dealt in at Rs. 169, *Birla* at Rs. 124-8 ex-dividend, *Gourepore* at Rs. 152. *Hooghly* at Rs. 19-5, *Kamarhatty* at Rs. 164, *Lothian* at Rs. 174 and *Reliance* at Rs. 174-8. *Hastings* were steady at Rs. 187-8 and *Hukumchand* preferences at Rs. 112. Among others, *Steel Corporation* have been rather sticky at Rs. 115 while *B. I. Corporation* were Rs. 175, *Dunlop* first preferences Rs. 155, *Burn & Co.* first preferences Rs. 169, *Dalmia Cement* Rs. 109 and *Kumardhubi Engineering* Rs. 127-8. *Titaghur Paper* first preferences were in great request and marked higher at Rs. 200.

Bank shares have come in for greater attention. There was a sharp rise in *Central Bank* early in the week on investment support and the quotation was noted as high as Rs. 45-15. There has been a setback to Rs. 43-4 on profit-taking. *Imperial Bank* fully paids were dealt at Rs. 1,568 ex-dividend and *Reserve Bank* at Rs. 105-8.

Cotton shares have been quietly steady. *Elgin Mills*, however, are higher at Rs. 17-9. *Kesoram* were noted at Rs. 6, and *Dunbar* at Rs. 186. *New Victoria* have met with some buying and been done upto Rs. 2.

Less attention has been paid to Coal shares. The warning uttered by the Chairman at the half-yearly general meeting of the *Bengal Coal Company, Limited* regarding the future of the industry has perhaps had a chilling effect. *Amalgamated* were Rs. 27-2, *Bengal* Rs. 375, *Burrakur* Rs. 14-10, *Dhemo Main* Rs. 15, *Pench Valley* Rs. 38-12 and *West Jamuria* Rs. 30-4.

Jute shares are inclined to be steadier but no rise in prices could be recorded with the dullness of the other sections. *Anglo-India* were sticky at Rs. 307, *Bally* at Rs. 214, *Empire* at Rs. 28-2 and *Reliance* at Rs. 52-4. *Nuddea* were a shade better at Rs. 54 and *National* at Rs. 20-12. *Rameshwara* changed hands at Rs. 6. *Hukumchand* were marked higher at Rs. 9.

In the Engineering section there has been very little activity and prices have been fluctuating in narrow limits. *Indian Iron* and *Steel Corporation* have been fluctuating around Rs. 30 and Rs. 17-14 respectively for the most part of the week. *Burn & Co.* came down to Rs. 370 but have recovered towards the close to Rs. 375. *Indian Galvanizing* were Rs. 20-12, *Hukumchand Electric Steel* Rs. 8-15, *Indian Standard Wagon* Rs. 60-8, *Kumardhubi Engineering* Rs. 4-6 and *Saran Engineering* Rs. 5-6. There has been some buying of *National Iron and Steel* and the quotation has improved to Rs. 7-6.

Sugar shares have been unchanged with *Buland* and *Raza* at Rs. 15-4. *Murree Brewery* were Rs. 18 and *Carew & Co.* Rs. 8-14. *Champaran* were lower at Rs. 18-5 while *Dyer Meakin Brewery* were noted after a long time at Rs. 5-12.

In the Tea section, small lots of *Hasimara* were put through at Rs. 41. *Patrakola* were crossed at Rs. 790. *Sonai River* were better at Rs. 16. *Betjan* were Rs. 25-4, *Tezpore* Rs. 7-4 and *Killcott* Rs. 47-8.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have been unchanged at Rs. 5-5 and Rs. 2-4 respectively. The passing of the interim dividend of the *Indian Copper Corporation, Limited* for the year ended December, 1940 had a slightly discouraging influence but in view of the fact that the directors have expressed the opinion that earnings for the year just ended have been satisfactory the decline in the quotation could only be short-lived. *B. I. Corporation* were Rs. 4-15, *Dunlop Rubber* Rs. 85-8, *Indian Wood Products* Rs. 27-6, *Publicity Society* Rs. 6-11 and *Macfarlane* ordinaries Rs. 5-12. *Indian Cable* were again in the limelight and there has been a further improvement to Rs. 21-8. *Midnapore Zemindary* were lower at Rs. 71-12, *Humayan Properties* ordinaries were unchanged at Rs. 5-4. *B. B. Petroleum* were Rs. 3-8, *Borooah Timber* Rs. 15-8 and *Tide Water Oil* Rs. 14-11 ex-dividend. Among Paper shares, *Titaghur Paper* ordinaries were Rs. 17-2, *Orient Paper* Rs. 10-4 and *Shree Gopal Paper* Rs. 9-14. There was a rise in *Orient Paper* to Rs. 11-4 early in the week.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, January 23.

Money:—The rate for call money continued to be quoted at ¼ per cent.

Exchange Market:—Dull conditions continued to prevail in this section and the rates remained unchanged.

Securities:—Government securities showed little change during the week under review. 3½ per cent. Paper, after opening at Rs. 95, touched Rs. 95-1 on Tuesday, but closed slightly easier on Wednesday at Rs. 94-14. Towards the close of the week, however, the price again improved to close at Rs. 95. There was fair investment enquiry in dated issues, particularly medium-dated ones. 1948-52 changed hands at Rs. 96-8; 1951-54 at Rs. 98-6; 1963-65 at Rs. 98-11; 1947-50 at Rs. 102; 1960-70 at Rs. 107-15; 1955-60 at Rs. 113 and 1945-55 at Rs. 112-5.

Shares:—There was a general improvement in prices in the local share market during the week under review. The re-opening on Monday was fairly steady with an improved demand and prices recorded moderate gains. On Tuesday and Wednesday, the market developed a sagging tendency with profit-taking and scattered selling. On Thursday a steady tone was noticeable at the opening, but later the market took a slight downward trend and the closing tone was slightly quiet. Trading continues to be restricted due to the uncertainties regarding the Central Budget. Mill shares closed slightly higher than in the previous week. Steels, despite profit-taking, have recorded small gains.

Textiles:—Cotton mill shares showed minor changes in prices during the week under review. After a steady opening prices declined in mid-week in sympathy with the cotton market. At the lower levels sellers were less active and prices at the close assumed a steady tendency. *Bombay Dyeing*, after opening at Rs. 1,056-4 touched Rs. 1,052-8, but closed again higher at Rs. 1,062-8, showing a rise of about 20 points over the previous week. *Central India* closed slightly higher at Rs. 291; *Colaba* at Rs. 169-8; *Gokak* at Rs. 208-8; *Kohinoor* at Rs. 383-8 and *Swadeshi* at Rs. 264. *Century* were, however, a shade lower at Rs. 365. In the cash section, *Ahmedabad Advance* were Rs. 265 and *New City* Rs. 228-12.

Hydro-electrics:—This section recorded slight improvement in prices during the week under review, *Tata Power* closing higher at Rs. 1,527-8 and *Andhra Valley* at Rs. 1,682-8, showing a rise of about 31 and 40 points respectively over the previous week's levels. *Tata Hydro* closed at Rs. 177-8.

Steels:—Steel shares, after opening higher with *Tata* ordinaries at Rs. 368-8 and deferreds at Rs. 1,880, were slightly marked down in mid-week owing to lack of support, the ordinaries being done at Rs. 366-8 and the deferreds at Rs. 1,867-8. Towards the close of the week prices recorded moderate gains despite profit-taking. The ordinaries closed at Rs. 367-8 and the deferreds at Rs. 1,871-4 as against Rs. 364 and Rs. 1,856-4 respectively last week.

Banks and Railways:—Bank shares met with good enquiry. *Central Bank* were in good request and the quotation improved further to Rs. 45-15 from Rs. 42-4. The close was slightly easier at Rs. 43-12 on profit-taking. *Bank of Baroda* were done at Rs. 105-12; *Bank of India* at Rs. 142-8; *Reserve Bank* at Rs. 105-4; *Imperial Bank* fully paids at Rs. 1,570 and contributories at Rs. 384-8.

Miscellaneous:—The rise in the price of *Associated Cement* to Rs. 145, witnessed last week, was short-lived and there was a slight fall in price during the week owing to the rumours of an excise duty in the forthcoming Budget. The shares closed at Rs. 134-12. At the annual general meeting held this week the Chairman, Sir H. P. Mody, made an optimistic reference to the settlement reached between the two rival groups. *Bombay Burmah Trading* closed slightly better at Rs. 522-8 and *Premier Construction* at Rs. 95. *Scindia Steam* were dull at Rs. 20-8 and *Belapur Sugar* at Rs. 206. *Shivrajpur Syndicate* were noted at Rs. 36-4; *Alcock* at Rs. 536-4; *Indian Iron* at Rs. 29-15 and *Steel Corporation* ordinaries at Rs. 18-4.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, January 23.

The local share market has been very dull with business limited during the week under review. Rubbers showed an easier tendency owing to the lack of support, while Teas were steady. Textiles were unchanged.

Securities:—The securities market continued to be steady, 3½ per cent. Paper closing slightly easier at Rs. 95. 3 per cent. 1963-65 came to business at Rs. 93-13; 3½ per cent. 1947-50 at Rs. 101-15 and 5 per cent. 1945-55 at Rs. 112-5-6. State Loans continued to meet with good enquiry, 6½ per cent. *Mysore Loan* being done at Rs. 105-4 and 3 per cent. 1953-61 at Rs. 103-10. 3½ per cent. *Travancore Loan* changed hands at Rs. 103-8. Among Provincial Loans, 3 per cent. 1952 *Madras Loan* were done at Rs. 96-6.

Mills:—Prices remained unchanged in this section. *Buckingham & Carnatic* ordinaries continued to be steady at Rs. 237, while the preferences came in for business at Rs. 188; *Vasanta* at Rs. 114; *Madura* at Rs. 37-4 and *Mettur Industries* at Rs. 181. Among Bombay shares, *Century* were noted at Rs. 370 February.

Plantations:—Rubber shares met with limited support and prices were slightly lower. *Cochin Malabar* were done at Rs. 6-9; *Thirumbadi* at Rs. 1-14 c.d.; *Kalpetta* at Rs. 18-8; *Malankara* at Rs. 85-4 and *Velliamuttam* at 18-4. Among Tea shares, *Periakaramalai* were well supported at Rs. 17-12 and *Peermade* at Rs. 27-8. *Chembra Peak* closed slightly higher at Rs. 3-6.

Sugars:—*Mysore Sugar* met with some buying during the week, closing better at Rs. 45. *Jeypore Sugar* preferences were crossed at Rs. 101 and *India Sugars and Refineries* preferences at Rs. 102.

Miscellaneous:—*Mysore Chemicals* continued to be an active counter, being done at Rs. 15-8, while *Mysore Paper* remained at Rs. 10-12 and *Titaghur Paper* ordinaries at Rs. 16-14. *Indian Steel Rolling Mills* ordinaries were a dull market at Rs. 7-12. *Associated Cement* were in demand at Rs. 141-8 x.d. Feb. and *Indian Cable* at Rs. 20-5.

LONDON STOCK EXCHANGE

The London Stock Exchange has been rather quiet during the latter half of the week. There has, however, been no suggestion of weakness and the slightly easier tone of the markets has been only due to the smaller volume of business passing. Giltedged securities have been steady. Among India loans, 3½ per cent. Sterling Paper were 96⅝, 4½ per cent. 1958-68 112¼, 4½ per cent. 1950-55 109¾, 3½ per cent. 1954-59 101¼ and 3 per cent. 1949-52 98¾. Among British Funds, 2½ per cent. Consols were 77½, 3½ per cent. Conversion 104½, 2 per cent. Conversion 98⅞, 3½ per cent. War Loan 104¼ and 3 per cent. New Loan 101.

Among other sections, Tea shares have been very steady with Rubbers unchanged. Kaffirs are slightly lower. Oils have met with some profit-taking. Home Rails also are lower.

NEW YORK STOCK EXCHANGE

For several weeks in succession Wall Street has been rather quiet and prices have been fluctuating in very narrow limits. *U. S. Steel* closed at $66⅛, *General Motors* at $45⅛ and *Anaconda Copper* at $25⅛.

COMPANY MEETING:

BENGAL COAL COMPANY, LIMITED

RECORD RAISINGS DURING THE YEAR

DIFFICULTIES IN THE WAY OF EXPORTS

THE HON'BLE MR. RICHARDSON'S REVIEW

PRESIDING over the Half-yearly General Meeting of the Shareholders of the Bengal Coal Company, Limited, held on 22nd January, 1941, the Hon'ble Mr. J. H. S. Richardson, the Chairman of the Company, said:

The accounts are in their usual form and I do not think there is any need for me to go through them in any great detail, though I shall be happy to answer later any questions which you may wish to put regarding them. The dividend for each half-year of 1940 has been Rs. 10/- with a Rs. 2/- bonus, making a total payment of 24 per cent tax free for the year, which I think you will agree to be satisfactory. Depreciation has been maintained on the level which I indicated to you two years ago as being necessary in view of the large additions to Block Account which your Company has had to make in recent years, but additions to Block Account this year have totalled rather less than Rs. 7½ lakhs, as against a little over Rs. 12 lakhs for the previous year and over Rs. 15½ lakhs for the year before that. Stores stand at over 10 lakhs of rupees, a very high figure, in fact I think it is the highest in your Company's history, but you will all appreciate the advantages nowadays of carrying heavy stocks of items such as ropes which have to be imported, and our position in that respect is a very satisfactory one.

The only other figure in the Accounts to which I propose to draw particular attention is the provision for Taxes and Cesses in the Profit and Loss Account, which stands at the colossal figure of 8 lakhs of rupees for the half-year as against 3 lakhs of rupees and 2 lakhs for the corresponding half-years of 1939 and 1938. This figure is necessitated by the Income-tax, Super-tax, Surcharge and Excess Profits Tax which the Company has to bear, and you may be interested to learn that looking through the Company's old records the other day, I found that in the half-year ending 31st October, 1924, our gross profit was approximately the same as in the past half-year and our provision for tax was then 3 lakhs of rupees as against 8 lakhs now. In those days your company was paying a very much higher dividend than it is now, but I would point out that were our taxation figure to-day 3 lakhs of rupees as it was in 1924, we should have been able to double our dividend, which would put our dividend payment on to approximately the same level as it used to be. When therefore you compare present day results with those to which you were used 15 or 20 years ago, to the detriment of the former, please remember what I have just told you, and reflect that the Company is doing as well now as it did then, although its profits are being diverted to an ever increasing degree from the shareholders to Government.

Output for the year was 17,95,104 tons. This is again a record in the Company's history, being substantially higher than last year's record figure. I personally am rather nervous of the present very large output of coal in India, and in fact I emphasized this particular matter in my speech last year, but we found it possible to achieve this output without any danger of increasing our stocks of coal at pithead, due to exceptionally heavy sales, and so long as this was the case it was safe for us to carry on without restricting. Much credit is due to the Company's staff both in Calcutta and on the coalfields for these results and they are deserving of your thanks.

This large demand was, however, only artificial during the latter part of the year; the Railway Board announced an increase in the surcharge on rail freights last March with immediate effect, and a further increase as from the 1st of November, which latter increase was only to be operative during the busy season months when the demand for railway wagons normally exceeds the supply. Presumably the Railway Board expected to stimulate the demand for coal in the off season and thus free wagons for transport of other commodities such as grains and sugar during the busy season, and that is what apparently has happened. Since the 1st of November, the demand has fallen away so much that we are running into stocks and so have recently found it necessary to restrict output, and I am afraid that we may be in for a difficult time this half-year, as the satisfactory profits recently obtained have in a large measure been due to the fact that we have been able to maintain a large output without running into stock.

The price of coal at pitsmouth, as you are probably aware, has not increased since the outbreak of war. The increased prices being paid by consumers are due to the higher freights now charged.

A branch of the Coal industry in which our Company is, as you know, particularly interested, is the export trade, and you will have seen from the Directors' report that this branch is having a difficult time at present, not through any lack of demand but through a lack of shipping tonnage. Although the demand for coal for export is good we cannot get the steamers to carry it; but we realise, of course, that this shortage of tonnage is one of the inevitable consequences of war, particularly of a war such as this and that of 1914-18, when our enemies' exploits upon the sea consist of sinking as much mercantile tonnage as possible, and we must accept this difficulty as just a part of the general stress which the whole Empire is at present experiencing. Although full figures of exports are not published as they used to be, I can tell you that shipments of coal from Calcutta in the first eight months of the fiscal year 1940-41 showed a decline of approximately ½ million tons on the figures of the previous year.

Some of the cargo coal which has been leaving Calcutta has been consigned to markets which before the war were quite out of our reach, as far afield as Alexandria and Greece. We shall not, of course, be able to maintain any hold on such markets after the war, but it is to be hoped that the work which we are now doing to consolidate the markets in the Straits and Far East which should geographically speaking be ours, will bring its reward later.

You will be interested to learn that recently we have been asked to make a small shipment of cargo coal through the port of Vizagapatam. This is so far as I am aware the first time that coal from the Bengal and Bihar fields has been shipped as cargo from any port other than Calcutta.

The Coal Mines Stowing Board, which was created about a year ago, has started its labours by tackling the Jharia Fire Area and the special interest taken generally in these operations is evidenced by the fact that His Excellency the Viceroy was gracious enough to stop at Dhanbad on his way from Delhi to Calcutta last month in order to inspect the Jharia and Kusundu Fire Areas; and he was I understand much impressed by the blanketing work already done by the Board at Jharia. On the same day he paid your Company the honour of a visit to Sodepore 9 and 10 pits colliery in order to inspect the sand stowing plant there, which I think we can claim to be one of the most uptodate and efficient of its kind in the world, and he spent some time at both the river bank and the pithead terminals of the plant. This honour has been much appreciated by the Directors and staff of the Company. The sympathetic concern shown by His Excellency in industrial affairs at a time when he is so preoccupied by the heavy responsibilities of his high office, has given great satisfaction and the Coal industry is grateful to His Excellency for sparing the time and trouble to make these inspections.

Your Company has applied for financial assistance from the Stowing Board in respect of the stowing which we are doing in our Dishergarh pits, and I hope that some measure of assistance will be forthcoming for the current year, as well as in future years, as the report of the Board for 1939-40 indicates that budget provision has been made for assistance for the year 1940-41. According to the official rules published on the subject by the Government of India, assistance will be given according to a table of precedence, the work done by the Board itself coming first, compulsory stowing under orders from the Chief Inspector of Mines second, loans of cash and of plant third and fourth, and voluntary stowing fifth and last. We have had to apply for assistance under the fifth category, "voluntary stowing," inasmuch as we have not actually had any orders to stow served upon us by the Chief Inspector of Mines. The fact is, however, we were asked in 1936 to stow by Dr. Penman, then Chief Inspector of Mines, in these words:

"It is my opinion that depillaring work should be immediately stopped in No. 9 and 10 pits Sodepore colliery, and arrangements made to sandstow, and thereafter no coal should be taken out without sandstowing. If you consider it desirable I am prepared to issue an order requiring this to be done, but if you would be good enough to give me an assurance that it will be done there will be no necessity for an order."

We felt at that time that we should accede to this request without insisting upon an order, but had we then known that an official order would translate a claim for financial assistance from the Stowing Fund to the second category in the table of precedence for assistance instead of the fifth, I think we should have asked for such an order; and I hope that the Board will take cognisance of these very pertinent facts, which have been placed before it, when considering your Company's case for assistance.

In conclusion I may say that we have all had a series of grave shocks in 1940 and that world events in that year have moved with a truly shattering rapidity, but it would appear that our feet are now set on the road to victory and that we can face 1941 with determination and confidence that Nazism with all it means in the way of enslavement of the human spirit will shortly finally be overthrown.

(*Continued from page* 153)

Jute shares affording a return of six per cent. should be, therefore, considered attractive.

* * *

"The directors of Indian Copper Corporation, Limited have decided that in view of heavy commitment on forward purchases of Zinc and in connection with heavy contracts on behalf of Government they will not pay an interim dividend in respect of the year 1940. The profits for the year, 1940, however, are so far as can be ascertained at present not less than in the previous financial year 1939."

This announcement had a slightly discouraging effect on the market. But the decline in prices is not justifiable as the directors have clearly pointed out that the interim dividend for 1940 has been passed only because of the need for larger funds. The company is at present busily engaged on Government contracts.

As the dividends are declared subject to income-tax the higher rate of taxation in the United Kingdom cannot affect the dividend distribution (gross) for 1940.

THE MYSORE SPINNING & MANUFACTURING COMPANY LIMITED

NOTICE OF 56TH DIVIDEND

Notice is hereby given that the Directors have determined to pay an Interim Dividend of Rs. 2 per share of Rs. 50 for the half-year ended 31st August 1940. The Dividend will be payable on and after Friday, the 7th February, 1941 between 12 noon and 3 P.M. on week days, other than Saturdays, and between 12 noon and 1-30 P.M. on Saturdays, to those share holders whose names appear in the Register of Members on Thursday, the 23rd January, 1941.

The Transfer Books of the Company will be closed from the 24th January, 1941 to 6th February, both days inclusive.

By order of the Board of Directors,

N. SIRUR & CO., LTD.,

Managing Agents.

70, Forbes Street, Fort,
Bombay.
15th January, 1941.

MARKET POINTERS

India's Paper Manufacture :

The production of paper in India followed a steep rising trend during 1939-40. It amounted to 1,416,,000 cwts. as compared with 1,184,000 cwts. in the preceding year and 1,076,000 cwts. in 1937-38.

The dislocation of trade with the Scandinavian countries and the consequent reduction in imports of paper gave the industry a respite from foreign competition, and although costs of materials increased along with the prices of paper, the situation still left a substantial balance of advantage in favour of the industry. The older mills had a sufficient supply of bleaching powder and other essential materials to enable them to tide over the shortages for some time.

Under the stimulus of rising demand, mills started working at full pressure and the result was seen in the production figures for September, 1939 to March, 1940, which showed an increase of 30 per cent. over the corresponding period of the preceding year.

There were altogether 18 paper mills at work in India. Imports of wood pulp mostly for the use of the Indian paper mills amounted to 234,000 cwts. valued at Rs. 22 lakhs as compared with 277,000 cwts. valued at Rs. 26 lakhs during the preceding year.

Imports of paper and pasteboard declined in quantity from 3,100,000 cwts. in 1938-39 to 2,700,000 cwts. in 1939-40, but higher prices accounted for a rise in value from Rs. 823 lakhs to Rs. 846 lakhs. Imports of printing paper increased, but those of writing paper, envelopes, old newspapers, pasteboard, millboard, cardboard and paper manufactures decreased.

*Amount on forfeited shares.

HOOGHLY DOCKING & ENGINEERING CO., LTD.

Audited accounts for the half-year ended 30th June, 1940:—

The trading result for the half-year shows a decrease as compared with the preceding half-year, the gross profit amounting to Rs. 2,61,443-12-7 as against Rs. 2,96,354-3-9. After the deduction of all charges for directors' and auditors' fees, Head Office expenses, interest on loan, debenture interest, debenture trustees' fees and Managing Agents' Commission and providing Rs. 45,212 for depreciation, there is a net profit for the period of Rs. 1,68,354-1-10.

This sum deducted from the debit balance of Rs. 12,70,556-4-0 brought forward from the preceding half-year leaves a net debit on Profit and Loss Account of Rs. 11,11,202-2-2 to be carried forward.

The net value of work done during the period amounted to **Rs.** 10,42,245-6-9 against Rs. 11,57,131-0-0 for the preceding half-year.

Managing Agents.—Messrs. Martin & Co.

Authorised Capital—Rs. 12,50,000 in 25,000 shares of Rs. 100 each reduced to Rs. 50 each, fully paid up. Debenture Capital—(now outstanding) Rs. 7,42,000 in 742 debentures of Rs. 1,000 each, redeemable at par on 31st December, 1942.

Synopsis of the balance sheet as at 30th June, 1940:—

Liabilities	Rs.	Assets	Rs.
Capital Paid-up ...	12,50,000	Gross Block ...	33,80,105
4% Mort. Debentures ...	7,42,000	Depreciation ...	21,37,625

‡ Arrears of Dividend on Preference Shares Rs. 16,38,000. ♦ Depreciation Fund Included Rs. 12,77,54,965 (a) Bearer bonds of Rs. 500 each issued at par in July, 1938, repayable at par on 1st July, 1948 with option repayment of all or any of the debentures at any time at par after 30th June 1938, on 3 months' notice. The date for repayment was extended to 30th June, 1958, with option repayment in whole or in part, any time after 30th June, 1948 and the rate of interest reduced to 5 per cent. per annum, tax free. (b) Issued at par on January, 1935, repayable at par on 31st December, 1944. (c) Shares numbered 1-6,000 have priority over any class of share regarding repayment of capital. For dividend purposes both classes of preference shares rank eq rally. (d) Issued at par on 13th November, 1922, redeemable at par on 31st December, 1942. Option redemption in whole or part on any interest date. (e) After 5 per cent. on the ordinary Shares eligible for one half of the surplus profits. Ordinary Shares rank before the deferred Shares in respect of repayment of Capital. After deferred Shares surplus of assets divided equally. (g) Issued in December, 1936 at 98 per cent. redeemable by operation of sinking fund of 1½ per annum. Commencing in 1941 Option redemption in whole or part on any interest date after 31st December, 1951. Latest date of redemption 31st December, 1966. (h) Issued at par on 31st December, 1936 repayable at par 31st December, 1961. Option redemption in whole or part at 2 per cent. premium on any interest date after 31st December, 1943 after six months' notice. Option to holders for conversion into fully paid ordinary Shares at 1-10th of Convertible Stock upto and including 1943. Converted ordinary Shares rank for dividend in the following year after Conversion. Interest is paid at 4 per cent. in respect of year in which option was exercised. (j) After 3 per cent. on ordinary Shares eligible for half of the surplus profits. (k) 4½ per cent. guaranteed convertible registered mortgage debentures (unconditionally guaranteed as to principal and interest by the Indian Iron and Steel Co., Ltd.) issued at par in May, 1937, repayable at par on 1st January, 1967, option redemption in whole or part at 2 per cent premium on six months' notice on any interest date after 1st January, 1947. Option to holders at any time upto 1st January, 1947 to convert £50 worth debentures into 40 ordinary Shares of Rs. 10/- each. (l) Entitled to a non-cumulative dividend of 35 per cent. per annum, after the dividend on preference shares and 8 per cent. on ordinary shares. (m) Repayable after 1944 with the option of redemption after 1945.

(a) Issued at par on 20th March, 1937, repayable at par on 20th March, 1947, with option repayment at any time after five years from the date of issue. (b) Issued at par in 1897, and repayable at par on 15th November, 1936, date of repayment has been extended to 15th November, 1956, and the rate of interest reduced to 4½ per cent. (taxable) from 15th November, 1936. Option of repayment at a premium of 3 per cent. at any date after 15th November, 1926, on three months notice. (c) Issued at par on 14th May, 1938, repayable at par on 14th May, 1958. (d) Issued at par on 1st April, 1934, repayable at par any time after 1st April, 1941, at 3 per cent. premium. (ff) Carry interest at the rate of 20 per cent. per annum (7 per cent. Cumulative and 13 per cent. non Cumulative). This dividend is to be paid before any dividend is paid on the ordinary Shares. The Company may, by giving one year's notice convert the preference shares into ordinary shares. (g) Issued at par on 1st October, 1928, redeemable at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent. of the total issue, is due to be placed annually. (h) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (i) Entitled to participate in dividends only upto 10 per cent. per annum after the preference shares have received acumulative dividend of 6 per cent. and ordinary shares 10 per cent. Surplus divisible profit remaining after these dividends will be apportioned in three equal parts for payment of further dividends to the three classes of shares. ♦ In payment of arrears of dividend's on "A" preference shares for half-year ended December, 1927. † Bonus for every ordinary share held in the shape of a second preference share of Rs. 25 bearing interest at 4½%. ‡ Includes Bonus, § Arrears of dividend for six half-years ended June, 1934. Arrears of dividend to the extent of Rs. 1,32,500 to the end of December, 1937 outstanding. ** Includes 1182 mule spindles. (y) Arrears of Dividend for eight half-years ended 31st Dec., 1931. (z) Arrears of dividend for eight half-years ended 30th June, 1938. Also non-Cumulative dividend of Rs. 18 per share for the whole year 1938. (z) Arrears of dividend for 3 half-years ended 30.6.1938. (J) 6% for the year 1938 and 3% for 1937. (K) 9% for 1937 and 1938. (l) Included in Reserves. (L) 8% for 1938, 6% for 1939 and 6% for 1940

IS IT NOT WISE TO INSURE NOW ?

With an uncertain future ahead Conservation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an inestimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

Write to us for further particulars or advice.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

OWING to the discharges of Treasury Bills exceeding sales by as much as Rs. 2 crores and owing to the continued absence of any demand for finance on account of trade, conditions in the short loan market remain easy in the extreme; and banks are chary of deposits altogether. The interbank call money is nominally quoted ½ per cent in Calcutta. There are no takers at all. Against Rs. 1 crore of Central Treasury Bills on offer this week, applications came to Rs. 3.89 crores. This is nearly Rs. 80 lakhs higher than last week. The average rate of accepted tenders is lower at annas 11 and pies 6 per cent per annum as compared with annas 13 and pies 4.

The statement issued by the Reserve Bank for the week ending January 24, is interesting in more ways than one. There has been a big bulge in Central Government balances to Rs. 16.38 crores from Rs. 13.35 crores. In the week ended January 10, 1941, the figure stood at Rs. 10.56 crores. In the course of a fortnight, there has, thus, been an expansion in the Central Government's cash balance by nearly Rs. 6 crores. This must be largely connected with the heavy subscriptions received in recent weeks for the 3 per cent 1946 Defence Bonds. In view of the last-minute rush on the part of investors, the next statement of the banking department of the Reserve Bank may show further rises in the balances maintained with the Central Government. It is curious that, while the Central Treasury's balances have risen, there has also been an increase in the balances maintained by member banks with the Reserve Bank. On January 24, balances of member banks came to Rs. 44.59 crores as against Rs. 41.52 crores on January 17. One would have thought that, to the extent that Government balances have increased on account of New Loan subscriptions, scheduled banks must have lost cash on balance. That both Government balances and member banks' balances show increases in the same week, may be taken as an indication that quite a lot of subscriptions for the 3 per cent 1946 bonds might have come from sources and institutions outside the money market proper. In view of the accelerated flow of subscriptions towards the close, there is every reason to believe that the total realisations from the 3 per cent 1946 bonds may exceed Rs. 50 crores. At the time of writing, the final figure has not yet been made known to the press.

The foreign balances held in he banking department continue their upward march, the latest figure being Rs. 58.40 crores against Rs. 57.60 crores. Another satisfactory feature, to which we may draw attention, is the continued return of rupee coin to circulation. Rupee coin held on January 24, was Rs. 30.66 crores as compared with Rs. 30.02 crores in the previous week. The statement of the Imperial Bank shows a steady decline in investments from Rs. 54.64 crores to Rs. 52 crores. There is more or less a corresponding addition to cash from Rs. 19.16 crores to Rs. 21.50 crores.

As was foreshadowed in our last week's comment on the New Loan, there has been a much more lively giltedged market as the result of the skilful planning of the New Loan. The undertone is definitely firm and the turnover greatly improved. There has been a good demand for all classes of Government securities, particularly the short-dated and medium ones. There has been a substantial rise over the whole range of giltedged. The improvement thus recorded is given in the following table:

	24-1-41			30-1-41		
	Rs.	A.	P.	Rs.	A.	P.
3% Defence Bonds	100	0	0	100	15	0
3½% 1947-50	102	1	0	102	9	0
3% 1951-54	98	6	0	99	2	0
2¾% 1948-52	96	6	0	97	0	0
3½% Paper	94	13	0	95	8	0
3% Paper	81	4	0	82	0	0

The issue of a 3 per cent loan at par in the form of a longer-dated security than the first defence loan has been correctly understood by the market as a definite indication on the part of the Finance Member that he is fully confident of the credit of the country whose finances he administers, and that his credit policy will be consistent and determined. Once there is clear understanding in this regard in the market, investors will be participating in giltedged without the diffidence which the experience of past wars had engendered. INDIAN FINANCE has, from the outset, endeavoured to prove that this war will be unlike any war in history so far as the behaviour of giltedged was concerned. In the earlier stages, we were almost alone in this view. Recent developments in giltedged, however, have compelled increasing conviction in the inevitability of cheap borrowing on the part of the Government during the present war. Gratified by the materialisation of its hopes and expressions as regards giltedged, INDIAN FINANCE believes that, with the present comfortable ways and means position of the Indian Government, the further stages of defence borrowing could be accomplished with such ease and success that Government securities should attain even higher levels than the present ones.

The exchange market has been dull and lifeless. It is dominated by the difficult freight position. There have been hardly any bills. Remittance enquiry has, however, been noticed here and there. It is reported that a few Indian dollar bills made their appearance.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T.T. at 1s. 5 31/32d., all through for six months; banks were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months D.A. bills were quoted; 1s. 6 7/32d., for the first month; 1s. 6 9/32d., for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d. for the fourth month.

Interbank call money is ½ per cent lenders no borrowers.

Two to four months deposits quoted ½ per cent.

TREASURY BILLS

India

Tenders for Rs. one crore of three months' Government of India Treasury Bills were opened on Tuesday, January 28, 1941. Total amount offered was Rs. 3 crores and 89 lakhs. Tenders at Rs. 99-13-3 per cent were accepted in full and those at Rs. 99-13-0 per cent were allotted approximately 99 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas eleven and pies six per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, February 4, 1941. Successful tenderers should make payment at Calcutta, Madras and Karachi on Thursday, February 6, Bombay on Friday, February, 7, Lahore on Wednesday, February 5, and Cawnpore on Saturday, February 8, 1941. Other conditions are as usual.

During the week ended January 24, 1941, Government of India Treasury Bills for Rs. 1,77,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

THE sudden death of General Metaxas in the hour of Greek's glory is a great loss to that country when it is standing up so bravely to the Italian onslaught. It is an odd coincidence that General Metaxas' successor is Monsieur Korizis, who has been Governor of the Bank of Greece since 1988. The success of Greek resistance has been nowhere more truly reflected than in the firmness of the rate for the drachma which is the Greek currency. It is true that one gets little news about the exchange position in the daily papers, but the drachma exchange position has been sufficiently nominal for some time past to allow the Italian invasion to leave it affected. It is said that the free rate as quoted in London remains at 515 drachmas to the pound, sellers. In the present closed circuit of exchange operations between Greece and the sterling area, a free rate has limited significance. The whole of the trade between the United Kingdom and Greece is now financed through a series of special sterling accounts opened by the exchange banks in London; and what purchases are made by the United Kingdom from Greece are negotiated through the United Kingdom Commercial Corporation, which latterly plays a dominant part in controlling the trade between the United Kingdom and the Balkan countries. It is common knowledge that the British Government have offered to make large credits available to Greece to enable her to prosecute the war. One must assume that these credits will also very probably be handled through the existing Special Accounts system. As for blocking of these accounts and of Greek assets in London in general, the question does not arise as there is little danger of any Greek assets falling into the hands of the foreigner and being misused for his own purposes. It is true that the United States Government has blocked Greek assets in that country, but no more significance need be read in that freezing order than that it is a purely a precaution which a neutral country was bound to adopt. One may be sure that the United States will relax the restriction, the moment it is found that it affects the Greeks' fighting power in the slightest degree.

After the invasion of Greece, the British Government announced that Greek residents had been given powers to open Sterling area accounts, besides the special accounts through which the whole of the payments within the two countries were passing. That the two should have coincided was not in any way pre-meditated, as the question of granting the Greek nationals the same banking facilities had been under discussion for some time past. Indeed, foreign representatives in London have, for sometime past, been demanding an extension of the very restricted banking facilities now provided in London in opening sterling area accounts. That would considerably simplify the procedure of exchange control. The objection to this course, however, comes from the foreign central banks concerned which see in the extension of these facilities an encroachment on the profitable business which reaches them through their control of the Special Accounts operations.

In the second week of January savings contributions to financing the war again reached a very high figure. During the week £11.8 millions were subscribed to the new 2½ per cent. War Bonds, £10.7 millions to three per cent. Savings Bonds, whilst so-called "small savings" amounted to £9.7 millions. The total realised from these sources was therefore more than £32 millions.

This is obviously a very important sum. But financial and economic circles are counting on a still greater extension of war saving activities during coming weeks and months. Above all, it is hoped that the efforts of the "small saver" will bring better results. From November, 1939 to November, 1940 they have contributed a total of over £475 millions. Efforts are now being made to increase small savings to £800 millions during the period November, 1940—November, 1941.

The number of savings groups making propaganda for the war savings campaign, is growing weekly. In the second week of January a further 811 groups were affiliated. The total number of savings groups to-day amounts to 176,782 with an approximate membership of 10 millions. In addition there are in Britain about another 12 million accounts in the Post Office Savings Bank and a further three million accounts with the Trustee Savings Banks.

From this one might conclude that there are about 25 million small savers in Britain, but the fact must not be overlooked that some depositors have accounts in all three groups, so that the total figure is not actually so high. Nevertheless it can be assumed that in the first savings year each of these small savers has lent to Government about £20 for war finance purposes. That is almost 8sh. per week or more than 1sh. per day. The tendency is now to reach 2sh. per day per saver and also to bring other classes of the population into the movement. For in Britain there are about 35 million people (over fifteen years of age) who come into consideration as wage-earners and potential savers.

During November, 1939 to January, 1941 small savers have lent Government approximately £547 millions. Up to the middle of January this year, approximately £896 millions have been subscribed to the various war loans. In addition about £27 millions have been lent to Government free of interest. This makes a total of about £1,470 millions in addition to the budget revenue available for financing the war.

The greatest number of savings groups is composed of British workers. There is hardly a firm in which a large or a small number of employees has not got together to make special contributions in this way. It is true that it is the workers who belong to that class of wage-earners who, owing to the increase in production and a partial raising of wages, have had increases in income which make saving possible. That is one cause of the growth of savings activities. Another cause has come to light from a report published by the Ministry of Labour. This remarkable report brings out a substantial rise in the British standard of life in recent years. The British worker spent a far smaller proportion of his total income on food and drink than in the first fifteen years of the century.

The Ministry of Labour's survey shows that in 1904-1914, 100 British workmen spent about 60 per cent. of their income on food. In 1937-38 this had dropped to 89.6 per cent. On rent, clothing, heating, and lighting, the workman had to spend a far higher percentage of his income before 1915 than in the year before the outbreak of the present war. On the other hand the British workman's budget previously included only 4 per cent of his income for "other expenses" (articles of furniture, tobacco, amusements, health, holidays, insurance, books, physical culture, etc.) whilst in recent years not less than 29.7 per cent. went in these items. The obvious conclusion is that the so-called "luxury expenditure" played as good as no part in the life of the British worker before the Great War, whilst in recent years a considerable part of his wages has been spent this way. If the luxury expenditure of Britain is now to be curtailed in conjunction with the savings campaign, it follows that very large sums of money will be set free for saving and thus for financing the war.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1940. The Auditors' Report is also annexed

	Rs.	A.	P.
The transactions for the past year, including the balance brought forward from the previous year Rs. 8,86,336-8-0, have resulted in a profit of ...	28,45,284	7	11
An ad-interim dividend was paid for the half-year ended 30th June, 1940, at the rate of 11 per cent per annum, which absorbed	5,50,000	0	0
Provision made for Income-tax and Super-tax for the year	2,50,000	0	0
Bonus to Staff	96,500	0	0
The Directors now Propose:—			
To pay a final dividend for the half-year-ended 31st December, 1940, at the rate of 11 per cent. per annum on the Paid-up Capital of 100 lacs, free of Income-tax, which will absorb	5,50,000	0	0
To Place to the Bank's Property Account ...	2,50,000	0	0
To Place to the Bank's Reserve Fund	2,50,000	0	0
To carry forward to the next account	8,98,784	7	11
Total ...	28,45,284	7	11

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3 per cent.

Sir Joseph Kay, Kt., was on leave of absence during the greater part of the year.

Mr. R. L. Ferard was invited to join the Board on 9th May, 1940, he resigned his seat on the 23rd December, 1940, when Sir Joseph Kay returned to India.

In accordance with Article 92, Sir Chunilal V. Mehta, K.C.S.I., and Mr. Ramniwas Ramnarain retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

CHUNILAL V. MEHTA, *Chairman.*
AMBALAL SARABHAI,
JOSEPH KAY,
A. GEDDIS,
COWASJEE JEHANGIR,
DINSHA K. DAJI,
RAMNIWAS RAMNARAIN,
Directors.

M. G. KOPPIKER, *Chief Accountant.* A. G. GRAY, *Manager.*

N.B.—The Dividend, when sanctioned, will be payable on and after Tuesday, the 25th February, 1941, to those Shareholders whose names stand on the Register on 1st February, 1941.
Warrants for the amount of Dividend due will be posted to Shareholders at their Registered Addresses.
Early intimation should be given to the Bank of any change of address.

BALANCE SHEET AS ON 31st DECEMBER, 1940

LIABILITIES.	Rs	A.	P.	Rs	A.	P.
Authorised Capital, two lakhs Shares at Rs. 100 each	2,00,00,000	0	0			
Issued and Subscribed Capital, two lakhs Shares at Rs. 100 each ...	2,00,00,000	0	0			
Paid-up Capital, two lakhs Shares at Rs. 50 each				1,00,00,000	0	0
Reserve Fund				1,13,00,000	0	0
Reserve for Contingencies ...				3,50,000	0	0
Fixed, Short and Savings Bank Deposits				8,47,43,810	0	6
Current Deposits and Contingency (unadjusted) Accounts ...				13,80,17,138	6	7
Rebate on Bills Discounted and on Government of India Treasury Bills, not due				42,530	13	11
Unclaimed Dividends				91,414	0	0

Wages And The War

In the Hitlerian war, industrial labour has come into its own. It could not indeed have been otherwise. Re-armament and the vital needs of national defence left little choice for the various Governments except to keep labour in good mood. The safety of every realm in the past one year has been closely dependent on the willingness of industrial labour to apply itself with unbounded energy to the task of increasing output, industrial and armament. Let not the true scale of labour's self-abnegation be overlooked. For the war came when, thanks to the I.L.O's work, a new labour code had been fashioned in all the industrial countries of note; and the gains secured were gladly forgone because national defence admitted of none but the utmost effort that labour could put forth to improve the economic and military fitness of every nation. The only reward came in the shape of increased wages on account of the larger production, though the gain is offset by increases in taxation and in the cost of living. In Britain, the insistence on minimum spending has actually enabled the working class to contribute a large part to the sum of national savings. Labour has thus in every way strengthened the sinews of war.

Obviously, the above description is most true of those countries in which the industrial machinery is geared directly and entirely to the prosecution of the war. In a country like India, war has by no means been the unmixed blessing that it has been to labour in other countries. Industrial output and production of armament and ammunition are rising no doubt, but it is still a war effort of sorts, if only because the whole nation is not backing it. Besides the war has not given rise to any large expansion in industrialisation and new industries are too tardy in coming, for reasons hardly relevant to this context. The effect of all this on industrial labour in India has been to cause a rise in the cost of living, seldom accompanied by proportionate rises in wage incomes. Naturally, the cry for dearness allowances was raised in an insistent form. The bigger organised industries such as cotton, jute etc. were the first to be faced with the demand. The Governmental agencies were the next to feel it and the Bombay railwaymen took the lead in the general agitation for relief from the higher costs of living. The industrial situation was unhealthy to the extent that organised industry was obliged to raise wages and generally enable workers to maintain the pre-war standard of living, even though industry had had little access of prosperity through the war, and the capacity to increase wages was in most cases a matter for doubt.

The blame for such a state of affairs must be laid largely at the door of the Government, whose price control policy took little count either of economic conditions at the start or of the trend of the forces released by the war. Price control was just control of prices unrelated either to the posibilities of maintenance of the pre-war standard of living or the fact that wage incomes were, on the whole, stagnant. As it happened, the fixation of maximum prices merely mitigated the hardships of profiteering on the part of unscrupulous traders. It did not in any way provide a solution for the difficulties of the working classes; nor did it in any way ease the strains set up in all directions by the war. The last war provided a precedent for the suggestion of dearness or other compensatory allowances, which placed Government and industry in a quandary. A more enlightened price control policy based on a firmer grip on the cost of living would have saved many an embarrassment for Government and industry. But as they were absent, there was on every side a disposition to fidget alternately between price control and payment of dearness allowance. It was inevitable, therefore, that, when price control lost its efficacy, the question of the grant of dearness allowance had to be taken up for active consideration. Labour, particularly on the State industrial enterprises, was agitating; and Government could not very well burke the issue without exposing the war effort to the risks of a worsening industrial situation.

This is the broad economic context in which the Court of Inquiry presided over by Sir B. N. Rau set to work. Its report is a great document and is noticed in a note in another section. The assumption underlying its estimates is that, in the areas to which each figure pertains, hardship has been caused only to those with incomes below the levels advocated. It is perhaps questionable whether relief is not also due to even higher income groups, but the Court seems to have formulated its recommendations with an eye to their feasibility while confining relief to the classes most in need of it. Its opposition to the principle of granting dearness allowance at a fixed per centage of the income is sound in principle because it would only tend to give more to those who have already more, while it makes no allowance for the fact that the increase in the cost of living affects the lower income groups more than the higher. The allowance recommended reduces the burden on general revenues to a minimum, while giving relief to those who are living above the level of bare subsistence. A revision in the rate every three months and the insistence that no change in the allowances should be made unless the cost of living index changes by five points would keep the system from becoming too rigid in working. The proposals must receive the earnest attention of the government. And the principles accepted must be applied to all railways. Inquiries like these enable government to have a consistent and comprehensive labour policy.

KARDEX for any Business, any Department

Just as signals guide the pilot, so does Kardex guide the business executive. Flashing signals instantly answer questions bearing on management control. The facts are revealed at a glance. Burdensome detail is eliminated. Manufacturers, wholesalers, retailers, large enterprises, goverments, banks, insurance companies as well as the small, progressive concern—all profit through the speedy, accurate guidance of Kardex. Its applications are innumerable—it facilitates operations, cuts costs and increases profits in any business.

3, Council House St., CALCUTTA

While on this subject, we feel constrained to sound a note of warning. Hitherto, it is organised labour in private industry and government services, which has procured for itself the utmost relief. Its organisation has enabled it by threat of strikes to get its demands. What about the large mass of unskilled or agricultural labour whom a rise in prices affects perhaps the most seriously? They have no aggressive means of securing relief. They form the bulk of the population and the impact of rising prices on them has hardly ever been studied. The rise in the cost of living in their case is much higher than in the case of income groups higher than theirs.

SULPHUR FOR INDIA

By *Dr. C. S. FOX, Director, Geological Survey of India.*

A GREAT deal of publicity has recently been given to the subject of India's deficiency in resources of sulphur (brimstone) and pyrite (iron sulphide). It has been urged on the one hand, that the known occurrences of these mineral substances should be re-examined and the country carefully searched. On the other hand, attention has been directed to the recovery of sulphur from smelter gases, coke-oven gases and the treatment of gypsum. The objective of all these endeavours is, of course, the ultimate preparation of sulphuric acid for industrial purposes as a major consideration. More attention has been directed to the question of sulphur supplies because one ton of sulphur will produce more than four tons of sulphuric acid and it is thus far more convenient and cheaper to transport the solid sulphur than the dangerous liquid acid. Pyrite (with about 40 per cent. sulphur) will produce about twice its weight of sulphuric acid and bulk for bulk occupies less than half the space that an equal weight of sulphur would do. It would thus seem more economical to transport the relatively cheaper pyrite than sulphur, if the former is of good quality as their sulphur content will be the same.

Before the outbreak of war, two relatively attractive occurrences of pyrite were known and both have been opened by exploratory headings to prove their extent and the reserves available. Similarly, a well-known deposit of sulphur-bearing sandstone had been examined at the close of the last war and is being carefully prospected with a view to proving whether it contains more than 10,000 tons of elemental sulphur, then very conservatively estimated. At the same time, steps have been taken to examine all previously recorded or newly reported occurrences of sulphur in India which are not definitely known to be trivial. While these field investigations have been instituted and are in progress, careful consideration has also been given to the possibility of recovering sulphur from smelter (roaster) gases and from coke-oven gases containing appreciable percentages of sulphur dioxide respectively by some such process as that used at the Bolilen plant (in Sweden), for the former; and the Katasulf process (in Germany) for the latter. Even greater attention has been given to the extraction of sulphur from gypsum on the lines of the Schaffner-Helbig process used in Germany during the last war when anhydrite was used as the raw material. It is claimed that 4.5 tons of anhydrite yielded one ton of sulphur and that this recovery represented 60 per cent. of the sulphur in the original calcium sulphate.

It is of interest to record very briefly the abovementioned processes. The *Boliden* process which is suitable for treating the furnace gases given off in smelting copper and zinc sulphide ores is operated as follows:—A portion of the smelter gases is mixed with air to give a predetermined oxygen content, and passed through a bed of heated coke in a specially designed gas producer. After this the gas is returned and mixed with the remainder of the original gas and the gases are then conducted through a tower over a catalyst composed of ferric and luminous oxides. After reduction by the action of the catalyst the gas is cooled and the condensed sulphur collected. The *Schaffner-Helbig* process for the treatment of anhydrite was operated as follows:—The calcium sulphate is crushed and mixed with dried coal and reduced in a rotary furnace (temperature 1,100°C) to calcium sulphide. This sulphide is decomposed by adding magnesium chloride lye and then steam-heating (at 70°C) the mixture until the whole of the sulphuretted hydrogen gas has been given off. This gas, after cooling, is passed into a mixing chamber and mixed with sufficient air for the complete burning of the hydrogen. The mixed gas is drawn into large 'contact' furnaces in which bauxite is the contact material. The hydrogen burns flamelessly in these furnaces and liberates the sulphur, which, being in a liquid condition, is run into moulds.

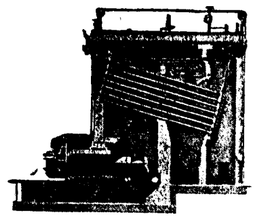
The Katasulf process appears to have been successfully applied in Germany for treating coke-oven gases which contain appreciable amounts of sulphur dioxide. The coke-oven gas is mixed with a small proportion of air and passed through a heated catalytic chamber. The nature of the catalyst and the temperature are such that selective oxidation of hydrogen sulphide to sulphur dioxide and water occurs. The gas is then scrubbed with water, giving a solution of ammonium sulphite and bisulphite which when heated under pressure yields ammonium sulphate and free sulphur. Although this process may not prove equally useful for the particularly low sulphur Gondwana coals of the Damodar valley, it should be useful for the high sulphur Assam coals. Yet another process, known as the Westcott process, aims at recovering sulphur from pyrite. The pyrite, in a finely divided condition, is treated with chlorine to form ferric chloride and gaseous sulphur which is condensed to liquid sulphur. The ferric chloride is oxidised to ferric oxide thus regenerating the chlorine for return for further operation. Details are not available but the cost of preparing the chlorine and the subsequent disposal of the ferric oxide might prove deciding factors in the success of this process.

Although the different processes which have been outlined in the previous paragraphs appear simple those who are able to understand the chemical implication will know that their operation on a commercial scale must be difficult and costly. When applied to existing smelting plant or the materials available in India there are additional factors to consider. For example: (1) the Boliden process applied to the operations at Maubandar would deal with about one third the sulphur evolved from the copper ore being smelted as the greater part of the sulphur is driven off in the intermittently worked convertors; (2) the Schaffner-Helbig process would have to use gypsum which contains combined water instead of anhydrite which is not available at present in large quantities; (3) the Katasulf process could only be applied to the Upper Assam coals where by-product coke-ovens would presumably also have to be installed and yield high sulphur coke which may be difficult to sell; and (4) the Westcott process for treating powdered pyrite can be no real advantage since the pyrite would have to be ground to power and the sulphur produced can hardly bear transportation more economically than the pyrite if the price is suitable. However, these are details for commercial consideration and must be very greatly influenced by the available facilities and cost at which sulphur (and perhaps high grade pyrite) may be imported.

During recent years India has imported the following quantities of sulphur (brimstone):—

	1937	1938	1939
Quantity	619,738 cwts.	459,282 cwts.	621,429 cwts.
valued at	Rs. 26,25,160	Rs. 21,96,565	Rs. 33,47,942

These imports were obtained as follows:—



from Italy	354,796 cwts.	268,087 cwts.	182,917 cwts.
from Japan	211,407 ,,	106,257 ,,	107,666 ,,
from other countries	53,535 ,,	84,938 ,,	330,846 ,,

It may be mentioned that the annual world production of sulphur in 1937-39 was nearly 3,000,000 tons of which the United States produced 1,800,000 tons. Italy and Japan were also important producers of sulphur. India at present does not import any pyrite, the world production of which has averaged over 8,000,000 tons annually during recent years—chiefly from Japan, Spain, Norway and Italy—the Japanese share of which has been nearly 1,800,000 tons annually.

In addition to the 30,000 tons of sulphur which has been imported into India yearly at an average price of Rs. 90/- per ton, but already increased to over Rs. 100/- per ton in 1939, India has imported appreciable quantities of Black Sulphur for the dyeing and tanning industries. The average annual imports, almost exclusively from Germany were roughly 1,600 tons a year at an approximate cost of Rs. 500/- per ton. Similarly, small quantities of sulphuric acid, about 140 tons a year costing nearly Rs. 200/- a ton, were imported, largely from Belgium, before the war. Thus India's absorption of sulphur, by imports, is equivalent to nearly 150,000 tons of sulphuric acid if all was used for this purpose and none was utilised in making gunpowder and for various other purposes. Compared with the world's production both of sulphur and of pyrite—especially from the United States and Japan—India's requirements appear very small and there would appear to be little difficulty in obtaining supplies of both these substances for some time. Meanwhile, it is hoped, the prospecting and experiments now in progress will show to what extent India's requirements in sulphur can be provided for from domestic raw materials and recoveries from smelting and other furnace operations.

New Labour Legislation

Important legislation concerning industrial labour was to be expected in the wake of the recent conference of representation of the Central and Provincial Governments. The conference has not attracted as much interest as the first, held fourteen months ago, having naturally been overshadowed by internal political developments. The Employers' Federation has indicated in advance that it approves in principle legislation designed to reduce labour unrest provided that too onerous burdens are not thrown on the employer.

An agreement concerning means to prevent strikes and lockouts during conciliation proceedings has been reported and the further amendment of the Trade Disputes Act may be expected. Central legislation may be varied to suit Provincial requirements, and the acceptance of uniformity in standards of labour laws may be facilitated. Preliminary enquiries relating to health insurance and holidays with pay furnished materials for the recent discussions, and in view of the Shops Act passed in Bengal and Bombay, the question of holidays with pay for workers in shops, restaurants etc., was of some interest. The extension of maternity benefits to women employed in coal mines and the recognition of trade unions etc. called for attention. As the Commerce Member's speech indicated, few post-war problems demand so much attention as labour and the promise to give ample opportunities for previous discussions has been kept. Though the formation of an Industrial Council may be delayed, it is officially recognised that conferences of a more or less formal nature have their uses. A desire to define and uphold common standards was referred to and the value of co-ordination (for which there is a wide-felt demand) was emphasised. There can be no question of conflict or rivalry, and industrialists will note with interest that the Government of India is alive to the need for securing as far as possible uniformity of legislation. Central direction and advice have their place at all times, and the Commerce Member's suggestion that regular annual conferences would be arranged will be generally welcomed.

The enquiries relating to the introduction of sickness insurance have evidently reached a satisfactory point and the recent conference was asked to consider a memorandum dealing with the actual calculations relating to the incidence of sickness among factory operatives. There has been since a suggestion that the Government should undertake a special survey by experts of certain leading industries in order to ascertain what forms of sickness insurance schemes would work best in practice.

The Associated Press reports that six new bills will be drafted in accordance with the conclusions reached by the conference. One of them seeks to bring establishments employing ten or more persons within the scope of the Factories Act which is to be amended. More than once in recent years the absence of statutory regulation of conditions of work in smaller industrial establishments has been the subject of discussions in the Central Legislature and a fairly old promise will be redeemed by passing an Act that will stimulate the Provinces to arrange for the inspection of such establishments. The conference has been more than useful inasmuch as Government can undertake the preparation of six draft bills. It may occur to some that the possibility of private Member's bills in the field of industrial welfare is more than usually limited and the reason, one fears, is the inadequate representation of labour in the Central Legislature at present. But Government need not wait for the constitutional reforms at the Centre and the Bills, in their scope and objects, are such as might be promoted by Labourites in a Federal Assembly, The imposition of conditions for recognition of trade unions differs from Province to Province, and a new measure approved by the Centre, will do away with complaints that registration or recognition otherwise is hampered by unusual conditions. It is certainly a mark of legislative activity of wartime that it is not merely a conjunction of appropriations with confirmation of Defence of India Rules. And praise is certainly due to the present Commerce Member who spent a rather long and busy period in Calcutta to gain close knowledge of the problems of trade and industry and went back to a more arduous period of work in Delhi, equally fruitful to judge by the report that the conclusions reached by the conference will be soon embodied in the work to be undertaken by the Legislative Department.

The Roads Congress

The Indian Roads Congress, which was opened by Sir Andrew Clow last week at New Delhi, has an abundance of problems for discussion. Some idea of the enormous scale of the road problem in India may be had from the fact that the total extra-municipal mileage is only 280 lakhs in this vast subcontinent with a population of well-nigh 400 millions. Even at the above mileage, it is doubtful what fraction would conform to the description of road. The state of the road impinges directly upon agriculture in the sense that the cost of transportation of produce from one centre to another on poor roads are larger, not to mention the physical difficulties of transportation. Besides, it constitutes a big fraction of the selling price. It should, therefore, be obvious that, if better roads are available, quicker means of transporting produce may be devised, and the selling price of produce could be accordingly reduced. One reason why commercial farming on a large scale has yet to replace individual farming in India is the absence of good roads. The Road Congress has not certainly shirked this aspect in its discussions at which some of the most novel suggestions were made. Sir Andrew Clow was ready to concede that, in a country in which the people could contribute little with money for public welfare and public works, the most should be made of voluntary effort. The Communications Member was waxing almost poetic when he visualised roads being built by full blooded bureaucrats and nervy businessmen for a change, not to mention members of other provinces. The desirability of enlisting upcountry labour in this as in other questions is obvious. It is doubtful how far these suggestions would take us towards better roads for the country. The suggestions to which Sir Andrew Clow lent his full support related to the replacement of steel-tyred bullock carts by rubber tyred ones. In fact, this suggestion has been propounded almost every year; and the rubber tyre companies have taken the initiative in the matter not only in the manufacture of the right type of tyres for ordinary bullock cart vehicles but even in the design of the kind of vehicles which would at the same time be light, durable and efficient for haulage purposes. It is, however, a different question whether the idea is as practicable as its originators think and, in any case, it will require a considerable sum of money in the first instance to finance the change over to rubber tyres.

The construction of trackways, as in the other advanced countries of the west, is almost an article of faith with Mr. K. G. Mitchell, Consulting Engineer to the Government of India. It was only recently that he discussed the advantages of trackways in the *Indian Concrete Journal* and showed that, although the initial cost of outlay may be large, the cost of maintenance would be so low as to offset every other factor. Besides the above points, there are also problems of administration and finance raised in a discussion on roads in India. At the moment, roads are within the jurisdiction of provincial governments, but it would be a healthy system to have a sphere in which the Central Government would have a sort of marginal power, if only to see that the provinces have enough funds to maintain and open roads and spend them wisely. The Road Congress has the handicap that it is meeting at a moment when the war tends to relegate its discussions to secondary importance. This need not, however, deter it from putting forth constructive suggestions, if only because, in any scheme of large-scale public works, road building, like the initiation of a building movement and similar coustructive work, is bound to loom large.

India Ignored

The International Sugar Council, which met in London early in January this year and was fairly well attended by the member delegates, did not take any fresh decision of importance. The delegates were unanimously in favour of carrying on the International Sugar Agreement and formally adopted the various decisions reached at the informal meeting held in August last year. One of the decisions related to the fixation of export quotas adopted for free market for the third quota year ended August 31, 1941. It was even then decided that these quotas would be maintained in the fourth year ending in the middle of 1941, instead of reverting to a larger free quota. Finally, the Council decided that it would be necessary to revise the arrangement only if a radical change occurred in the world sugar situation during the year. That the Council should have carried on its deliberations as if nothing had happened to the rest of the world in the past one year to change its policy, reflects nothing more than the dominance of Cuban-Dutch British interests in the discussions. The existing quotas were fixed at a time, when a country like India was in its industrial infancy. It is now common knowledge that the Indian sugar industry is not only capable of catering to the fullest needs of the internal market but can, if allowed, also meet the needs of an export market. The International Sugar Agreement, to which this country is a party, however, debars the export of sugar from this country to any other country other than Burma before May 1942. One must, therefore, assume that the Government of India's efforts to get the Agreement modified have not borne fruit. The present is a legitimate opportunity to this country for improving the status of its sugar industry. It is no doubt true that, in these days when freight still presents enormous difficulties, sugar exports could not be any easier than exports of any commodities; but the fact remains that, on account of the war, countries like Great Britain require a sufficiency of stocks of sugar, which could will be satisfied by producers like India. It would also come to the rescue of the internal industry. It seems high time that India was given greater recognition in the counsels of the International Sugar Council or, in the alternative, that she dropped out of it.

J. K. and Cawnpore Labour

The establishment and conduct of house organs is not confined to European enterprises who have seldom ignored the value of publicity in regard to labour organisation and welfare. Go-ahead Indian companies too realise that one way of enlisting the goodwill and co-operation of employers is to provide a forum for the expression of the views of management and staff alike. Whether such publicity constitutes part and parcel of industrial welfare may be doubted by a few, but it must certainly be urged that efficiency and harmony may be promoted and retained. The J. K. Review standing forth as the group magazine of the Juggilal Kamalpat enterprises centred in Cawnpore is a fortnightly publication; it contains letters and contributions from several employees in addition to friendly counsel from the pen of Lala Padampat. The review is set on the encouragement of the team spirit in and outside the factories, and its objects may be commended to other employers too. The new review does not suffer from heaviness and the natural informality of a house organ is retained. The racy ventilation of grievances, complaints etc., may be facilitated by the new journal of the Planning, Co-ordination and Publicity Committee of the J. K. mills and this may be an effective means of reducing the all-too-familiar friction between Labour and Capital. The Editor is Mr. H. K. L. Badhwar, Bar-at-law and the journal promises to publicise the welfare departments of the J. K. enterprises and indicate

how industrial safety etc. may be secured. It must be stated that the location of mill retail shops conveniently near is among the amenities provided by the management. And industrial Cawnpore may learn too how the new Labour Office of the mills deals with the usual petitions and complaints.

Sugar Outlook

Mr. B. L. Gray, speaking as the President of the Sugar Producers Association last Saturday at Cawnpore, rightly drew atention to the position of the share-holders in sugar companies. The interests of the silent investor are deliberately ignored, whereas the canegrower, the merchant and the importer of sugar, too, can make their views heard and respected. The crisis in the sugar industry is no longer a matter for description or comment, but the responsibility of the U.P. and Bihar Governments cannot be minimised. Mr. Gray endorsed the view that the sliding scale introduced last year led to excessive production. There were plenty of warnings and representations on the subject. The consequences are many and serious. As he pointed out, 'events have proved that the fears were only too well-founded. It is convenient I know to blame the Sugar Syndicate for its failure to bring down sugar prices and to involve the factories in any early loss to be recouped later by means of cheaper cane, but the fact remains that the scale was at the root of the trouble and that it should have been abandoned.' The result are to be seen in the next season. As. Mr. Gray showed 'the abnormally high prices which factories were forced to pay for cane last year very naturally stimulated plantings, there being no control of these by Government with the result that the present crop is greatly in excess of factories' requirements. This has created a serious situation in many districts but it is to be hoped that the compensation scheme recently introduced by the Government for the growers whose cane is not taken by factories will alleviate the distress, if only to a limited degree.' It may be argued that sugarcane is not the only crop of which there is a surplus at present. Cotton, oilseeds, and wheat, too, are depressed owing to insufficient demand, but in the case of cane, the extra production is the result of the misguided policy of Government policy just as the increase in the jute crop was due to the hasty suspension of the restriction programme. The remedy is effective control, preferably by mutual agreement, as in the case of jute, and Mr. Gray admitted that control will have to continue for some time to come.

Mr. Gray's observations on market trends should evoke considerable interest. With the declared intention of Government to maintain prices, market confidence has returned, and according to Mr. Gray, there are grounds for viewing the immediate future with some degree of confidence. The further observations on the position of the Northern India sugar industry will, however, modify the outsider's view. Production in provinces and States other than Bihar and the U. P. exceeds 250,000 tons per annum and former markets have been irretrievably lost. Unless the factories in the two provinces could count on supplies of cheap cane, they would lose further ground, and the policy of high cane prices explains the losses and gains referred to. An all-India marketing scheme, aiming at the stabilisation of prices, might be of some help as Mr. Gray observed, and an any reckoning, the Provincial Governments should refrain from doing anythng calculated to endanger the position. The industry outside the Provinces will probably develop further unless a policy of planning involving restrictions in the establishment of new factories is resorted to by the centre. Mr. Gray's speech, however, suggests that the new official minima for sugar prices are likely to stand and that merchants and others are prepared to buy at the basic price. Factories are relieved of some anxiety and the sugar industry in the U. P. and Bihar will be spared advice and admonitions.

The Bank of India, Ltd.

The slacker conditions of trade resulting in prolonged easy money conditions are naturally reflected in the profit and loss statements of the leading Indian banks. While the main impression is one of great strength capable of resisting successfully the tension and torsion of the war period there is in some of the recently published reports and accounts, for instance, of the Bank of India, Limited whose balance sheet as on December 31, 1940 is published together with the Directors' report in this issue, a distinct hint of reduced earning power, for which again the war is primarily responsible. While the first phase of the war quickened, in unexpected measure, the pulse of financial centres, producing incidentally better profits for banks, the second phase is marked by hesitancy and slackness in markets. But they are adverse factors that cannot be communicated to institutions that have developed not only tolerance but extraordinary powers of resistance, and the bank statements for the year ended December 31, 1940 deserve to be described as eminently reassuring in every respect.

A remarkable increase in Deposits is the outstanding feature of the Bank of India's statement. It is as good an indication of progress as any vouchsafed hitherto. Compared with the position at the end of 1939 when current deposits stood at Rs. 10.42 crores the increase is indeed remarkable; a rise of Rs. 3.4 crores under Deposits lends distinction to a balance sheet, now as always, clear in every sense. Fixed and other deposits too show an increase, but smaller, as they are up from Rs. 8.17 crores to Rs. 8.47 crores. In spite of the larger working capital, reflected in the heady rise in the balance sheet total which amounts to Rs. 24.66 crores nearly against Rs. 20.97 crores shown at the end of 1939, the profits show a noticeable reduction of over Rs. 1½

lakhs compared with the second half of 1939 when the war boom stimulated the demand for funds and pulled profits up in a striking manner. The explanation for the reduction in profits is afforded also by the changes over a year in the assets columns. The total Advances are down to Rs. 7.52 crores as against Rs. 9.97 crores at end-December, 1939. The increase under Investments too is a logical consequence of the reduced demand for funds. While the Directors state that the Bank's business continued to function satisfactorily and the Bank rate remained unaltered they say little else though the figures make the fall under Advances plain. The settled policy of a conservative Board finds expression in the high degree of liquidity that characterises this balance sheet. The rise in the cash ratio may be attributed to the slow demand for funds as to enhanced caution on the part of the management amid the uncertainties of war. There is justification for the increase in the rates which should strengthen the confidence of depositors, shareholders and all customers of the Bank of India. A cash ratio of nearly 25 per cent may be claimed as a proof of exceptional strength and standing, if such proof were at all needed in the case of the oldest of the jointstock banks. A more striking exhibition of confidence in the banking outlook than the disposition of the profits cannot be produced. The dividend is maintained, the allocation to reserve is unchanged and the only change is the allocation to the Property Account. Higher provision for taxes and staff bonus is only to be expected and the increase in the sum carried forward namely Rs. 8,98,784-7-11 deserves notice. The Bank of India's statement proves that it enjoys not only strong and skilled management, but informs the world in a compelling manner that it is admirably entrenched in war as in peace.

Higher Pay for Railwaymen

The Court of Enquiry appointed last August to examine the claims of the railwaymen, particularly G.I.P. railway workers, for what is known as a dearness allowance, has concluded that the lower ranks of wage-earners deserve an increment in wages. What is called a subsistence level is taken as the datum line and an increase of Rs. 3 thereto is recommended. The principal reconmmendation relates to the grant of Rs. 3 to all adult employees, and in order to make relief apply to those just on the borderline, the grant of an allowance enough to make the difference equal to Rs. 3 should be granted. Employees below 17 years of age are to get half the above rates according to the report published on Tuesday. The Court has also stated that there should be no discrimination between employees who entered service before the war and those who entered after, and the most important recommendation, perhaps, relates to the grant of these allowances as from October 1, 1940.

The report discusses at length the reasons for the grant of an immediate addition to wages. At the sittings of the Court in Bombay and elsewhere the railwaymen led a great deal of evidence relating to the higher cost of living. Their case is admitted as sound, but the flat rate of increment is preferred to the percentage allowance on the ground that the lowest paid would obtain greater benefit. There is, however, a very important qualification to these recommendations. The court does not specify these as minimum wages; they are primarily selected for the purpose of defining those who should receive Rs. 3 in addition to their present wages. Revision is to be undertaken only in the event of the cost of living index falling by five points, though the wage position is to be reviewed formally every quarter. A question that arises would be as to the existence of cost of living indices for the urban and rural areas. A suggestion made incidentally in the report that merits special attention in view of the recent rise in prices in Bombay is the opening of cost price grain shops. A supplementary recommendation in the report relates to the provision of milk, either free or at a reduced price for the children of railway workers. The supply of milk on special terms would also stimulate interest in the infant welfare centres run by the railways.

As the terms of reference envisaged an early conclusion of the investigation the enquiry was restricted to the G.I.P. but Government announced that if the Railway Board accepted the principles regulating the grant of a dearness allowance to any class of lorkers on the G.I.P. railway, they would be applicable to workers on other railways to whom such principles would apply. The report is known to be under active consideration, and it may be assumed that the recommendations would be given effect to. In view of the procedure adopted before the institution of the enquiry, the composition of the Court as also the fact that many classes of railway workers are co-operating in the war effort, the increase in wages recommended will probably be provided by the railways without demur. The actual cost of the relief to workers is not inconsiderable. The allowance of Rs. 3 may appear trifling but if it were to operate for a full year (without modification during the interval) the cost may be as high as Rs. 2 crores assuming that the allowance is going to be granted to workers on all Class 1 railways. If the allowance were restricted to the four State lines, the cost would probably be Rs. 1 crore. In view of the tacit promise made when the surcharge on railway rates and fares came into force, the Communications Member will probably have to provide for the grant of the allowance in the coming Budget if not earlier. The State as employer has to set an example and as the recent spontaneous though short-lived strike in Bombay showed there are few subjects on which railway workers feel so strongly.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It.)

I OFTEN flatter myself that I am not easily repulsed in an attack on a new problem. However strange or abstruse the problem may be, I persist in the attack till the brain gets familiar with the theme and becomes fit to overcome its abstruseness. This is in part making a virtue of necessity. The working journalist, who deals at one time with the intricacies of the money market and at another feels obliged to examine the philosophy of non-violence or to clarify the issues before the Eastern Group Conference, has perforce to acquire a degree of mental nimbleness as part of his stock-in-trade. But I must own to having been repulsed by the technical issues connected with modern industrial processes, particularly, those relating to the manufacture of munitions. I am full of enthusiasm for the idea that the present war must be utilised as an opportunity for equipping the country with the most uptodate means of defence; that before long India must be invulnerable by land, sea and air; that, in other words, we must be so strong that there will be no need for us to display our superiority either in violence or in non-violence. But the exact processes involved in this mighty change have been somewhat beyond my essentially lay understanding.

The political obstacles in the way of progress in this direction did not obsess my mind, if only because there seems to be no practical advantage in bestowing intensive thought on them. But what are the various steps to be taken to ensure for this country the requisite military strength? What is the kind of obstacles that an enthusiastic, energetic and popular Minister of Defence would encounter when he gets down to brass tacks? Is there a real danger that, as the saying goes, he may cross the oceans only to be drowned in a pool? By which, I mean, you may organise big industries, you may train technicians by the thousand, you may link up industries in a co-ordinated war effort, but you may stumble over obstacles which are small, but insuperable. As, for instance, when some essential raw material cannot be obtained from abroad, and no suitable indigenous substitute can be found. It is not the function of any publicist to master the details of highly intricate and technical subjects; but when one is engaged in rousing public enthusiasm for the ideal of military self-sufficiency, there is the disquieting feeling at the back of one's mind that the advocacy of the cause may have been vitiated by ignorance of some of the important facts.

I do not claim to have mastered the details. But my visit to Jamshedpur, last Saturday, I must say, has reassured me to no small extent that these obstacles, of which I had more a vague dread than clear knowledge, are likely to prove both few and small. For I had occasion then to see firsthand the efforts made to tackle these very problems which had caused me the disquiet I have spoken of. If, as the spokesman of the Eastern Group Conference said, India is the arsenal of the *Empire in the East*, by the same token, is the Tata Iron and Steel Company at Jamshedpur the armoury of this country. The bulk of the War effort proper in India devolves on the Tata Iron and Steel Company; and the difference between the last war and this is seen in concrete form in the tasks that the Government of India, and particularly the Supply Department, have had to entrust to the management of the Tata Iron and Steel Company. Normally, one does not get the chance to see for oneself, the new developments that the Company has undertaken to enable India to surmount the difficulties caused by the war and particularly by the lack of communications in ensuring the ability of this country to defend herself and assist the war effort. For, manufacturing activities of military importance are not generally exposed to idle curiosity; and particularly, when a war is on, special precautions are taken to ensure that the necessary secrecy is being maintained. But I have been fortunate, through the courtesy of my friend, Mr. J. J. Ghandy, the General Manager of the Tata Iron and Steel Company, to have had the chance of seeing the new additions to the Tisco plant in actual working. It was particularly kind of 'Joe' to have made this provision for me. For it involved an uncommon degree of forethought to make the necessary provision, for, as Mr. Ghandy himself was to be absent from Jamshedpur on the day of my visit, he had to make the necessary arrangements before his departure.

To me, as I have taken pains to point out already, this visit to the new extensions of the Tisco Works had a special value. To us from South India, it is not any foreign language that is Greek or double Dutch, but the technique of modern industry and of modern warfare. Seeing is believing; and though in my enthusiasm for India's military preparedness, I would be only too ready to believe,

Kidderpore, Calcutta,
Dated 22-1-1941.

that India's resources are equal to any aspiration or achievement, it was good to have ocular proof at first hand, that many problems which, a few years ago, would have been considered beyond the pale of practical consideration, have now been brought within the scope of actual accomplishment.

My stay at Jamshedpur was confined to the afternoon and night of Saturday last. And, at that late hour, as you know, the works are indeed a thrilling sight. Two new electric furnaces, I could see, had been added. And the whole place was throbbing with the new life that comes of new aspirations and special efforts. But one cannot comprehend all the changes merely by sight-seeing. Figures tell a more thrilling tale; and my friend Mr. Phiroz Kutar, who took me round and knew my fondness for figures, was there to tell me that, when the figures for 1940-41 are published, it would be found that the average monthly production was at least five thousand tons more in the current year than in 1939-40. What is even more astounding, December witnessed a record shipment of 82 thousand tons and the management in Jamshedpur is confident that March will see an even higher figure of 90 thousand tons. At this rate, the Tata Iron and Steel Company is bound to reach the record figure of one million tons of steel alone in a year. I do not know if, and to what extent, analogous developments are taking place in the other important steel works at Kulti. With Tatas' production being taken so largely by the Government, there might well be a famine in the case of steel. There is no industry where the national outlook is of such obvious importance as the iron and steel industry. To bring about a greater correlation between the activities of our two steel companies, even to the point of exchange of technical knowledge and personnel, is in the interest of the country at large.

That, however, is a digression. I had set out really to convey to the reader the same confidence that I have been enabled to feel in the capacity of India ultimately to solve all the technical problems connected with military efficiency and the same feeling of satisfaction as I have in the rate of progress that is now being maintained in technical improvement.

To some extent this tale is largely a repetition of what Mr. J. J. Ghandy has himself given in a special contribution to the Eastern Group Number of INDIAN FINANCE. For, in the case of the iron and steel industry, we had been careful to get an authoritative account, straight from the horse's mouth, so to say, of the new developments and extensions in the Tata Iron and Steel works and their significance to the progress of our war effort and of India's industrialisation. But even that story is now a few months old and needs to be supplemented. I shall give the gist of it in the words of Mr. Ghandy himself when he spoke at a function in honour of Sir Mahomed Zafrulla Khan when he visited Jamshedpur last. But one development, I might cite here, as important not so much in itself as because it is a sample of the changes that are taking place. It is not perhaps as widely known as it should be, that soon after the outbreak of war, the Ordnance factory at Ishapore experienced considerable difficulty in carrying on with its productive processes, as the foreign supplies of imported ore were no longer accessible. But this difficulty has been got over with the assistance of technical experts of Jamshedpur who have found the means of making the Jamshedpur ore serve just as well as the ore that had been imported from abroad. As I said, this is only a sample of what the Tisco works is able to accomplish in its present stage of progress. Whatever the national ideology may be, or whatever it may develop into in the near or distant future, no one can deny that the nation owes a debt of gratitude to those in charge of the iron and steel industry at Jamshedpur, where even the normal pursuit of business activities has been actuated by the feeling that no new opportunity shall find them lacking in the resources necessary for their utilisation. To-day, the technical problems that have to be solved are numberless. And it is hardly an exaggeration to say that but for the development of a Control and Research Board in Jamshedpur, some of these problems at any rate would have to be given up in despair.

To turn to Jamshedpur's contributions for the war effort, as I have said already, I can hardly do better than give below a few brief extracts from Mr. Ghandy's speech :

> "The Company, to-day is able to turn out a rich variety of products for supply to the Army and for the Government's programme of War-time expansion—ordinary products like structurals, rails and galvanised sheets ; special products like bars for the manufacture of shells, etc.

BY APPOINTMENT TO THE LATE KING GEORGE V

OBTAINABLE THROUGHOUT INDIA

In connection with the Government's proposal to build armoured vehicles on Canadian chassis in this country, we have developed a bullet-proof armour plate of special alloy steel which has withstood the severe firing tests demanded by the British Armour Plate Specification and is considered by Government to be equal in quality to any armour plate manufactured in Great Britain. In addition, we have been able to turn out special alloy steel for the manufacture of armour piercing projectiles.

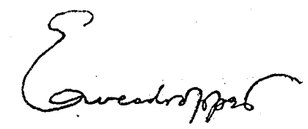
As a result of researches conducted by us to meet the requirements of the Government Telegraph Department, it has also been possible for us to make special type of steel for drawing into telegraph wires.

Development work is also being carried out in our New Control and Research Laboratories on the production of deep stamping steels for rifle and machine gun magazines for anti-aircraft bullet clips as well as special alloy steel sheets for the manufacture of steel helmets for the Indian Fighting Force, and nickel steel sheets for fabrication into gun platforms and carriages.

Another line of research successfully pursued is that in connection with the welding of special steel for the proposed manufacture of aircraft in India.

The process of expansion still continues. The Tata Iron & Steel Company has now an elaborate programme of extensions in hand which should be of the greatest value to the development of supplies for the Army in India as well as to the railways. The Company has installed two electric furnaces capable of producing about 1,500 tons of the steel of highest quality per month, and has ordered a plant for the manufacture of wheels, axles and tyres so vital to the manufacture of locomotives in India, and the maintenance of transport facilities essential both in times of peace and war.

The Company had also worked out plans for the installation of a hoop and strip mill and a tube mill in collaboration with Messrs. Stewarts and Lloyds for the conversion of tube strip into welded tubes. This scheme, however, has had to be kept in abeyance, as preference had to be given to other extensions of greater immediate importance.



A further development of the industry worthy of mention is the manufacture of acid quality steel from indigenous materials. This steel is essential for the manufacture of locomotives, wheels, tyres, axles and machinery in which highest quality steel is required, and is thus of considerable importance for the Government's War time requirements. Tatas are erecting a steel making plant which will increase their capacity by 200,000 tons a year of which it is estimated, 70,000 tons would be of acid steel.

The Steel Company also proposes to bring to completion in 1941 a Billet Mill that will roll billets suitable for several types of forgings and to put into operation by the close of the current calendar year an ingot mould foundry to increase the output of castings and a Benzol Plant on behalf of Government for the production of benzol and toluol which will be used by the Indian Ordnance Factories for the manufacture of high explosives.

Further, the Company has undertaken to train 250 apprentices as flight mechanics for the Indian Air Force and a certain number of apprentices for the Ordance Factories.

I have dwelt at some length on the work that is being done by the Tata Iron & Steel Company at Jamshedpur as, in modern warfare, it is not sheer superiority in men that counts, but superiority in material. To win, we must have air supremacy coupled with sea and land supramacy, and to achieve this triple supramacy, we must have aircraft, battleships, tanks, munitions and shells. We must have sufficient means of communication and transport."

The layman is in no position to appraise the exact significance of these developments. But no one will fail to share the confidence that I have gained that we are no longer living in a primitive country, with just a feeling of painful bewilderment where the problems of modern industry are concerned, and that the industry which has been reared at the cost of enormous sacrifices by individuals no less than the country at large is now more than able to return to the nation the debt it has owed.

NEW DELHI presents a busy appearance this week after a fairly long period of lull. The Viceroy, who returned from his tour on Sunday, is expected to hold a meeting of his Executive Council before the close of the week and will probably take the opportunity to review the political situation in consultation with his colleagues. The new Commander-in-Chief, General Auchinleck, has also arrived and assumed charge of his high office. Owing to the great public interest which Defence questions have aroused in the country, it is likely that he will soon make a broadcast to the country and indicate the general lines of policy which he proposes to adopt. In the Secretariat itself, important conferences are going on. The second conference of Labour Ministers which was opened by Sir Ramaswami Mudaliar on Monday morning is expected to conclude today. The Council of the All-India Road Congress has also been in session during the week end. Lastly, there is the meeting of the Standing Finance Committee for Railways which began to-day to consider the Revised Estimates for the year.

* * *

I learn from talks among the members of the Standing Finance Committee for Railways that this is going to be a peak year so far as Railway revenues are concerned. The Revised Estimates for the year may show an improvement of no less than Rs. 9 crores. And judging from the Railway Board's returns for January, one has reason to think that the actuals may be even more favourable. As the expenditure sides has not shown any abnormal increase, the Railway Member will find himself in a very fortunate position this year, when he comes forward to present his Budget proposals. In ordinary circumstances the benefit of this large increase would have gone to the provinces, but as the Niemeyer Award has been changed by a subsequent Order-in-Council immediately after the outbreak of war, the benefit will now go to the Central Exchequer. At any rate, one may safely expect that the Railway Member will not find it necesary to raise fares and freights again. As a matter of fact, there is a good case for reconsidering the increases ordered (last year both in the freight rates and giving some measure of relief to the tax-payer.

* * *

It is gratifying to note that the present Communications Member, Sir Andrew Clow, is faithfully keeping to the policy of purchasing company-managed Railways at the earliest opportunity. One proposal of the Government of India which the Standing Finance Committee will discuss to-morrow is the purchase of the Tapti Valley Railway (near Surat) when the date of option arrives on the 31st March, 1942. The purchase price is about Rs. 1 1/2 crores, but as the gross revenue per year comes to an average of Rs. 26 lakhs, an income of over 8 per cent on the capital may be expected even if we put the net revenue as half of the gross collctions. As both financially and administratively it is a good proposition, the Government of India have done well in coming forward with this proposal to buy the line during the coming financial year. The Tapti Valley Railway is about 150 miles long and connects the B. B. and C. I. Railway and the G. I. P. Railway near Surat.

* * *

An important observation was made by Sir Ramaswami Mudaliar in opening the Labour Ministers' Conference. . . One finds a tendency in many places to assume that at the 'moment nothing more need be done than such measures and policies as are necessary for the present war emergency. "These are matters which may be left for consideration after the war" is a plea which one often hears in high circles. The warning, therefore, given by Sir Ramaswami Mudaliar that, instead of accumulating problems for consideration after the war, we should from now on consider and prepare for the changes which are bound to take place after the war has considerable practical value. "No one who had paid any attention to world affairs could ignore the fact that, when the war was over, tremendous problems of reconstruction were bound to arise and radical adjustments to new conditions would be imperative. It was the path of wisdom not to accmuulate problems for the day when peace was restored but to take them up even now and try to find a solution", said Sir Ramaswami Mudaliar. That was very good advice, which other Departments of the Government of India may also usefully bear in mind.

* * *

The agenda of the Labour Ministers' Conference is practically the same as last year. With one exception, the stage has not yet been reached for circulating even a draft Bill in connection with any of the subjects discussed last year. This exception is the Weekly Holidays Bill which seeks to provide for the grant of weekly holidays to persons employed in shops, commercial establishments, restaurants and theatres. The Bill is limited in scope and does not attempt to cover such questions as hours of work, payment of wages, prohibition of juvenile employment and other points covered by some of the Provincial Acts. It appears that, since the last conference was held, Acts regulating conditions of labour etc. have been passed in the Punjab and Bengal and similar legislation is under contemplation in Sind. As regards the difficult question of sickness insurance which has been for a considerable time before the public, it appears that some further time must elapse before the details of a scheme are finally settled. Replies received from the Provincial Governments by the Government of India show that the principle of compulsory contribution by employers and employees is generally accepted. There is at the same time a general demand for contribution from Governments. Apart from the question of Government contribution, one other question which the conference has to consider is whether the scheme should cover the whole industrial field from the start or as a first step should be limited to well-organised industries to which both employers and prescribed classes of employees would contribute and from which the employees who contribute should be paid an allowance at prescribed rates during periods of illness when they have no other earnings.

* * *

Two other important questions which are under consideration at the conference are the proposed amendment of the Trade Disputes Act for the prohibition of strikes and lockouts during conciliation and recognition of trade unions. The proposal is that a new section (15 A) should be added to the trade Disputes Act to make strikes and lockouts illegal from the date of appointment of a Board of Conciliation or a Court of Enquiry. All the Provincial Governments with the exception of one or two are reported to be in agreement with the proposal. One other suggestion which has emanated from certain provinces is that, in all cases before a strike or lockout is commenced, the parties should be required to give 14 days notice to the opposite party sending a copy simultaneously to the Labour Commissioner or other officer appointed for the purpose. As regards the question of recognition of trade unions, the conference has now the views of all the Provincial Governments. Some of the Provinces have submitted drafts of conditions for consideration. As far as the Central Government are concerned, it is stated that they have already evolved a set of rules for the recognition of associations of their industrial (including Railway) employees. Supplementing these rules, the Railway Board has drawn up a set of conditions for the guidance of Railway administrations. The conference has to decide whether recognition of registered trade unions should be made compulsory by law and if so under what conditions.

(From Our Correspondent)

Bombay, Jan. 27.

THE constitution of two new committees, charged, one with the encouragement of industrial research and the other with the giving of advice to film producers, has been hailed with interest, if not gratitude, in Bombay. The latter will, perhaps, break new ground in regard to Government publicity. The co-operation of newspaper interests and foreign film distributors has been evidently ensured to procure exhibition facilities, for the tied house is as much a feature of the film trade in India as in Britain. The list of members is a little overpowering, and it will occur to many that Calcutta studios and executives have been neglected. It seems rather strange, to say the least, though there is provision for the cooption of more members on the new Board. As the headquarters are in Bombay, whatever pickings there are, will be available primarily for Bombay studios, and the prompt appearance of a complaint that the work of the Indian soldiers in Egypt has not been dramatically popularised while the Australians have had more than their normal share of reclame, suggests that more shorts dealing with the Indian Army wll be ground out. It may occur to some that specialists in advertising and publicity who have assisted in producing shorts previously, do not find a place on the new advisory committee and may not secure adequate recognition. It is believed that the Committee will assist the imported expert, Mr. Shaw who has been connected with the E.M.B. and the M.O.I. to pick subjects for a series of shorts. British film critics have damned with faint praise the shorts made by the new Ministry and it has been suggested that commercial film-makers would have done better in most cases. War propaganda through films has been promised since the release of three shorts is expected. One of them deals with ordnance factories and another with bazar rumours.

* * *

The Committee set up for promoting industrial research is to function for two years. Essentially similar in object and composition to the new Board of Industrial Research, the provincial committee is not dominated by an official majority, though both the secretaries will be officials of the Industries Department. The allocation of grants and the selection of subjects for investigation will be among the chief duties of the new committee. Noteworthy among the names of its members are those of Mr. V. N. Chandavarkar, the Chairman of the Bombay Millowners Association, and Mr. Kapilram H. Vakil, Technical Director of the Tata Chemicals, Limited. The Board is expected to help considerably in the establishment of small industries using local raw materials.

The Viceroy's tour in Kathiawar has stimulated interest in the lesser known states like Junagadh. Newspapers feature the progress made by the premier Muslim state of Western India under Nawab Sir Mahabat Khan. Rich in historical remains and gaining a new distinction as the home of the now almost extinct Indian lion, the Gir Forest has been shot over by five Viceroys. The Dewan is a section of the ruling family of Tonk and has succeeded Mr. J. Monteith who was long the head of the State Administration. The State Railways account for an investment of Rs. 175 lakhs and of equal if not greater interest is the outlay on Veraval port. With a balanced budget and free of debt Junagadh certainly compares favourably with states of its size. Horse-breeding is well-established in the State which is noted for the Cutchi bloodstock that has acquired more than local fame. The Viceroy's keen interest in the progress made by the administration was a handsome acknowledgment of the welcome given by prince and people last week.

* * *

A temporary local shortage of food and other supplies has led to a sharp advance in prices. The situation is being watched closely as the revival of profiteering is to be deprecated on every score. The poor and lower middle class have been inconvenienced already owing to the rise in the price of salt, wheat, rice, coal and sugar. A contraction of stocks at Wadala is assigned as the reason for the sudden increase in retail prices of salt. In spite of a ban on sales to industrial consumers, there has been shortage and only after newly-made salt is available will the situation become normal. A 50 per cent rise in the price of matches may appear inexplicable, but here too, the temporary shortage of supplies affords a reasonable explanation. Shipping and other difficulties, Far Eastern competition and the export duty are referred to in connection with the increase in the price of rice, and it is gently pleaded that there can be no allegation of profiteering in this case. A sympathetic rise in the case of fruits, vegetables etc. has taken place indicating that other retail dealers are not reluctant to grasp an opportunity. It is, however, known that strict control measures may be introduced immediately and Bombay is not likely to hear too many complaints and protests.

At the last meeting of the Provincial War Supplies Committee it was Stated by the Controller of Supplies that orders given in November alone amounted to Rs. 1½ crores in value. The normal figure would be more like Rs. 1 crore in the opinion of Mr. Bennett who explained that the November total was due to exceptional circumstances. Mr. Bennett reported that local manufacture of shells was progressing rapidly as 4.5" shells were being made, hand grenades and small arms ammunition were being turned out and an experimental order for land mines had been executed successfully. Cooperation with the Gaekwar's Government in regard to supplies needed for the war is to be secured by liaison with the Director of Industries, Baroda. The committee approved the suggestion to hold a permanent exhibition under Government auspices of the supplies in demand and arrangements should be made to explain the samples and specifications whenever necessary, and the Controller of Inspection, according to Mr. Bennett, would supplement the information made available on request.

* * *

The Roger Mission during its recent visit has visited the General Motors assembly plant at Sewri. In view of the interest created by the volume of Government orders for vehicles and the remarkable expedition with which they are executed the visit must have been more than instructive. Army vehicles being built to order were inspected by members of the Ministry of Supply Mission. A visit to the G.I.P. workshop followed and metal manufacturing factories were visited in turn. The Hattersly mills belonging to the Maharaja Scindia and donated by him to the Government was visited by some members of the Mission who must have learnt that in regard to tapes and webbing alike Bombay's production is more than satisfactory.

* * *

A resolution recommending the imposition of a tax on professions is now before the Corporation. Leave is sought to get the Municipal Act amended by the Government. The idea is that both persons and companies should be taxed and the latter will be taxed on the basis of rent paid by them. Nurses and masseurs, too, are liable to the tax like doctors and lawyers who are to pay according to their standing in the profession, calculated on the basis of the years they have spent in the profession. Rates are to vary from Rs. 10 to Rs. 50 the maximum being due to the amendment of the India Act. As the Corporation's life has been extended, the present Council will not delay consideration of the proposal. The revenue position is definitely disturbing and fresh taxation is demanded by the reformers. Businessmen, too, will be called upon to pay the proposed tax like members of the learned professions.

* * *

Bombay has reacted quite favourably to the announcement on Saturday of the new loan. A leading finance broker thinks that

(Continued on page 199)

A Resume of Commodity Markets

A GENERALLY firm tone was noticeable earlier in the week following the sharp rise in prices in the jute manufactures market and the fairly noticeable recovery in the raw cotton market. But the rise in prices in several markets has not been well held and there has been a recession to the former levels, with the exception of the raw cotton market. There is no definite change in sentiment, but it is generally felt that with higher stock exchange prices it would be possible to record an improvement in commodity prices. The hessian market is definitely better, demand for the near positions being unsatisfied and exports restricted only by the difficulty in obtaining shipments. But for the renewed fears regarding complications in the Far East the recovery in the Bombay raw cotton market would perhaps have been more pronounced. While the sentiment in the Karachi wheat market is bearish for new crop positions, there is good support for old crop and quotations have been firmly held. The first All-India forecast for 1940-41 published during the week reveals that there has been an increase in the area under the crop over 1939-40 by 1 per cent. It is remarked that the crop was affected by insufficient rains but its present condition and prospects appear to be on the whole fairly good. Bullion markets have been quiet while the Linseed market has been absolutely uninteresting.

Jute

The jute market has been easier during the past few days. In the absence of any large buying by mills the rise in prices earlier in the week in sympathy with the hessian market has proved temporary and the quotation in the futures market has come down to Rs. 38-12 from Rs. 40-2. Mills are buying only small quantities of jute of the higher grades. Sellers of Indian packing are pressing for business. In the absence of any large mill buying or increase in consumption the problem of disposing of the surplus stocks of jute, especially the lower grades, will be as difficult as ever. It remains to be seen how far mills will be able to complete the quota prescribed for the second period of the agreement.

Jute Manufactures

Speculative buying by the bazar and good American enquiry took up prices in the hessian market early in the period under review. Mills were not inclined to sell freely in the initial stages. Bazar operators found it advantageous to sell their stocks for near positions and cover them with purchases for the distant positions. This buying for positions from April to December brought forth mills as sellers. The liberal selling for the forward positions caused a setback in prices. The withdrawal of support resulted in a decline in quotations in mid-week to the former levels. There has since been a recovery to Rs. 13-7 for 9 porters ready from Rs. 13-1-6. Demand for standard goods for near positions is still unsatisfied and buying at the present moment is restricted only on account of the difficulty of shipments. Heavy goods have been absolutely uninteresting and quotations have been only around minimum rates.

Raw Cotton

The Bombay raw cotton market has been active on short covering and buying by commission houses. It is believed that increased mill consumption will not leave any surplus of the basic staple varieties. But for the continued uncertainty regarding the future course and quantity of exports to Japan the recovery in raw cotton values should be sustained.

Linseed

The Linseed market was inclined to be steadier in mid-week but quotations are easier towards the close, Linseed ready being Rs. 5-0-6 and May Rs. 5.

Rubber & Tin

There has been a gradual rise in recent weeks in the prices of both Tin and Rubber. Tin cash per ton has improved in London from £252 to £257 while Rubber on the spot is higher at 12½d. and the forward price stands at 12 9/16d. It is reported that there has been greater American buying.

Tea.

At Sale No. 29 held on 27th and 28th January, offerings were again on a small scale with quality less attractive. Demand was more restricted and prices irregularly lower. Common tea was in strong demand at annas 15 and there was little selling below this level. Medium teas were, however, a much quieter market with broken grades selling at, or fractionally above, common tea levels. Tippy teas were maintained at about last rates. 7,845 packages against 16,421 packages in Sale No. 31 were sold at annas 15 pies 7 against annas 11 and pies 5 per lb.

At the auctions of tea for consumption in India, last week's rates for green teas were readily paid for the small selection on offer. There was a strong demand for all descriptions of dusts, particularly best qualities and good commons. Prices were fully firm to 3 pies dearer. 12,551 packages were sold at an average price of annas 5 and pies 3 against 17,747 packages at annas 3 and pies 11 in Sale No. 31 last year. Among other grades, well-made teas were in strong request at fully firm to dearer rates while prices of broken pekoes, broken pekoe souchongs and fannings were barely steady. 18,839 packages were sold at an average price of four annas one pie per lb. against 27,747 packages at annas three eleven pies per lb. in Sale No. 31 in 1939-40.

Only a small business has been transacted in export quota at 11 annas per lb. There has been a strong demand for internal quota at 1 anna per lb. with sellers scarce.

It is reported that the British Ministry of Food will purchase about 272 millions lbs. of tea from India during the current year. Of this quantity 225 millions will be purchased from the tea estates in North India and the rest from those in South India. The terms of contract are not known but it is believed that they may not greatly differ from those for 1940.

MADRAS GROUNDNUTS

Madras, January 28, 1941.

The British Ministry of Food is reported to have purchased again during the past week 6,000 tons of kernels for shipment from the East as well as the West coast. It is understood that the Food Ministry ordered in the week previous to the last 6,000 tons from the West Coast and another 6,000 tons from the East Coast. The Ministry have also shown an inclination to buy Groundnut oilcake for February/March shipments from Calcutta and Vizagapatam. Arrivals in the southern districts of the new winter crop have been fair, but those from the Ceded districts have been small. During the week, Rangoon buyers and, to a lesser extent, Singapore buyers were active in the local market and a fairly large volume of business resulted. Shippers' buying limits opened on Tuesday last around Rs. 21 to Rs. 21-12 for Machined (Per candy of 531 lbs. ex-coast godowns) and after remaining steady during the early part of the week eased to Rs. 20-15 and Rs. 21-9 on Friday, to Rs. 20-14 and Rs. 21-8 yesterday and to Rs. 20-8 and Rs. 21 to-

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, 30th January.

THE quantity of Jute purchased by Mills under the Delhi agreement during the first quota period up to 15th January has now been returned as 67,93,725 maunds, the equivalent of say 13,58,745 bales. This is about 1,40,000 bales short of the agreed quantity, and it is understood that Government are not altogether satisfied with the effort made by the mills to support the scheme. We are afraid the magnitude of the effort can not have been fully appreciated, if that is the case. In the first place the purchase represents the expenditure of probably something over 5 crores of rupees—no mean sum in little over a month. Moreover the effort has placed not a few mills in somewhat of a quandary with regard to storage space as the purchase amounted to much more than the relative consumption during the same period. It is reported that enquiries are being made as to the storage space available if Government decide to come into the market as a purchaser to make up the balance. This would cause still further difficulties, for any Government purchases would have to be stored in godowns apart from normal mill stocks. We also hear of exception being taken to one individual mill in a group being slightly short of its quota although the quota for the whole group was actually exceeded. This we think is squeezing the point almost too far.

The important point is that the object of Government has been to a large extent achieved inasmuch as jute prices in the mofussil are in almost all districts now standing at higher levels than before the inauguration of the agreement. With this we think Government ought to be content. Unless of course it is their idea to come out as purchasers of low quality jute which mills avoided buying because it did not count towards their quota. The glut of this low quality is becoming increasingly embarrassing to dealers, who cannot avoid getting a proportion of low quality in their purchases, but have no means of getting a market for it.

It is of interest that the sub-committee of the Indian Central Jute Committee which has been studying the question of jute prices has made recommendations very closely resembling the terms of the Delhi agreement but they have confined their attention to the 1940-41 crop and have refrained from putting forward proposals for any long term policy. The sittings of the I.C.J.C. still continue.

Professor Todd's recommendations for the proper constitution of a Jute Futures market, as a result of the deliberations of the various sub-committees, have now been circulated for criticism and comment. The scheme as formulated is a comprehensive one, and though there may be room for criticism on particular points, the general lines are such as can scarcely call for serious objection. The main problem still remains however, and that is whether the largest factor in the industry, the Jute Mills, will be persuaded to take advantage of the facilities offered. Failing support from the Mills, we fear that Mr. Todd's efforts will be largely wasted, and that even if the Futures market is reconstituted on the lines he suggests, without the stabilising element which the Mills would provide, the Futures market would rapidly degenerate into much the same condition as it is now—little better than a gambling pit.

Freight—or the lack of it—continues to be the dominating factor in commodity markets, and gunnies have not come off well in recent freight allotments, which perhaps accounts for the late relapse in this section after a short period of brisk trading in the near positions. Almost all commodities, including raw jute, have been given preference over gunnies in recent allotments and overseas enquiry has in consequence dried up almost completely.

Export Jute has not been an active market and the few shipment sales reported have been confined to Dundee Tossa 2/3 at Rs. 45/- and Rs. 46/- with 4s. at Rs. 36/4 and Outport assortment at Rs. 34/-. Some sales to Mills have been recorded including Firsts at Rs. 41/-, Lightnings at Rs. 36/-, Dundee Daisee at Rs. 38/- and special Firsts at from Rs. 45/- to Rs. 50/-. Further Cuttings business has also been reported, in M.C. at Rs. 13/8 to Rs. 13/12 and in N.C. at Rs. 14/- to Rs. 14/8.

Mills for the most part have shown no great anxiety to get ahead with their purchase of 10 lakhs of bales for the second quota period ending 15th February. There has been a fair turnover in European jute which seems to be getting the preference just now. For 50/50 assortment Middles and Bottoms Rs. 9/4 and Rs. 7/- has been paid, half Jat half District, while for lower assortments Rs. 9/- and Rs. 7/- was accepted. Supervised jute also came in for some attention at from Rs. 8-12 and Rs. 6/12 to Rs. 9/- and Rs. 6/12 for Mids and Bots according to assortment. Indian packing has been almost entirely neglected. Good quality jute continues to command a smart premium, Middles alone being saleable to Balers from Rs. 9/8 upwards for white and from Rs. 10/- and over for Tossa.

The Jute Futures market has moved within narrow limits but with a declining tendency. Opening at Rs. 39/8, Rs. 40/2 was touched, but since then the level has been around Rs. 39/- with as low as Rs. 38/10 touched.

The activity in the hessian market reported in our last review continued over the week-end and quite a considerable turnover was put through. Eleven porters were the favourite counter and the highest rates recorded were Rs. 17/8 January, Rs. 17/6 Feb./March, Rs. 17/- April/June, Rs. 16/4 July/Septr. and Rs. 15/8 Octr./Decr. Owing to Mills being fully sold in the earlier positions, most of the demand had to be met by second-hand holders, and specialities unobtainable from them were practically unpurchaseable. The forward purchases were mainly on Bazar account in replacement of nearer sales. April/June was the limit of the actual shipment demand.

In the heavy Goods section there was rather more done than of late, but probably more in sympathy with the firmness of hessians than from any fresh demand. "B" Twills sold at Rs. 32/2 near and at Rs. 32/- for Feb./June. Liverpools found buyers at Rs. 36-12 ready and at Rs. 36/8 Feb. to June. Cornsacks sold at Rs. 33/4 January and at Rs. 33/- from February to September. With demand fading out, all sections are quieter in tone at the close and prices have been marked back. Closing quotations are:—

	Ready	Feb./ March	April/ June	July/ Sep.
	Rs. A.	Rs. A.	Rs. A.	Rs. A.
9 porters ...	13 4	13 4	13 1	12 14
11 porters ...	17 6	17 3	16 6	15 10
"B" Twills ...	32 0	32 0	32 0	32 0
Liverpools ...	36 8	36 8	36 8	36 8
Cornsacks ...	33 0	33 0	33 0	33 0
Heavy Cees ...	31 12	32 0	32 0	32 0

(*Continued from page 196*)

day. Local buyers' limits opened around Rs. 20-8 to Rs. 21-4 for Machined (Per candy of 531 lbs. ex-coast godowns) and, after remaining steady earlier in the week, eased to Rs. 20-4 and Rs. 20-12 on Friday and to Rs. 20-4 and Rs. 20-8 this morning. Groundnut oil prices advanced steadily during the week, but eased off towards the close. Prices of "Produttur" and "Chekku" qualities opened around Rs. 48-8 and Rs. 45-8 respectively and, after advancing to Rs. 51 and Rs. 48-8 on Saturday, closed a shade easy at Rs. 47 to Rs. 47-8 for "Chekku" and Rs. 49 to Rs. 49-8 for "Produttur" quality, for ready lots, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

Further particulars about the Government communique proposing to permit only certain types of Hides and Skins by grade and weight are to hand. The Priority schedule covers Cow Hides 4-4½ lbs. Run, IV, V and Inferior Fifths, Tanned Cow 5-5½ lbs. Run, IV, V and Inferior Fifths, 6-6½ lbs. Run and IV, Tanned Cow 10-12 lbs. Run and IV, Coco Buffalo 10-12 and 12-13 lbs. Run and III, and Tanned Cow and Buff Calf in all selections and averages. According to the communique, those left out of the above list cannot be shipped from Madras. It is also understood that the above order will affect orders already accepted. In that case it will be a hard blow to shippers and Tanners in Madras, who havee already covered sales. It is also wellnigh impossible to ship only particular weights and grades to the exclusion of the others, which will mean that although there were orders for the latter they would remain as dead stock in the hands of the sellers. In that event, the shippers will have no option but to bale the goods against accepted orders and keep them in their Warehouses at the buyers' risk and ship them, if at all, at the first available opportunity. Enquiries are, nevertheless, plentiful for all descriptions of Tanned Kips, Buffalo and Calf skin at schedule prices, but in the face of shipping scarcity and the restrictions on the shipment of non-priority goods there is little or no business passing. There has been a sharp break in local prices, in the absence of buying support and some descriptions have lost nearly an anna per lb. — Madrassee tanners have now withdrawn from the raw hide markets, and it is understood that upcountry markets in the Circars have turned easier and wet salted hides have eased to about 3¼ annas per lb. Dacca Dry are quoting at about Rs. 6 per 20 lbs. and Dharbanga-Purneas around Rs. 9 per 20 lbs. Tanned Buff Calf are quoted at 18½d. to 19d. and Tanned Buffalo 12-13 lbs. around 12¼d. to 12½d. to 12¾d. Tanned Cow Calf are locally quoting at Re. 1-5 to Re. 1-6-6 per lb., and Coast Calves are being freely sought at 19d.

JUTE

(By our staff correspondent).

Calcutta, January 29.

The raw jute market was inclined to be firmer earlier in the week in sympathy with the sharp rise in the jute manufacture market but during the last two days there has been a recession in prices and the undertone is very quiet towards the close. Mill buying during the past week has been on a rather small scale.

In the loose jute section only a small amount of business has been passing. Sellers of Indian packing have been very eager for business. Some business has been reported in European Jat middles and Bottoms at Rs. 9 and Rs. 6-12 per maund. Supervised Jat middles and Bottoms sold at Rs. 8-12 and Rs. 6-12 per maund. Earlier in the week a small business was reported in Indian Jat Middles at Rs. 8-6 per maund.

In the pucca bales section shippers have been inactive. Mills bought cuttings N. C. and M. C. at Rs. 14 and Rs. 13-8 per bale. Firsts 2-3 were Rs. 41 per bale and Lightnings 2/3 Rs. 36 per bale.

In the futures market, as remarked earlier, a firmer tone was noticeable and a quotation as high as Rs. 40-2 was recorded. During the last two days all the gains have been lost and the close has been quiet at Rs. 39.

JUTE MANUFACTURES

Calcutta, January 29.

The upward tendency noticeable in the jute manufactures market continued to be in evidence till Tuesday this week. The reserve of mills and good buying by the bazar for the farther positions took up prices to high levels. 9 porters recorded a rise of nearly ten annas in three days but at the higher levels mills sold freely. This brought down prices but with the unsatisfied demand for near positions there has been a recovery. If freight were available it would have been possible to put through some more business. 9 Porters ready are now quoting Rs. 13-3, February Rs. 13-3-6, March Rs. 13-3, April-June Rs. 12-15 and July-September Rs. 12-3. 11 Porters ready are Rs. 17-11-6,, February Rs. 17-4, March Rs. 17-4, April-June Rs. 16-4 and July-September Rs. 15-12.

In the heavy goods section, the tone was slightly better earlier in the week but not much of business was passing. Quotations are a shade easier towards the close. There was some enquiry for Cornsacks for early shipment. B. Twills for February shipment were Rs. 32, Liverpool Twills Rs. 36-10 and Cornsacks Rs. 33.

COTTON

Calcutta, January 29.

The recovery in the stock market and straddle buying have been responsible for the good recovery in prices in the Bombay raw cotton market during the week. Arrivals in up-country centres continue to come in large quantities but as has been pointed out on earlier occasions prices of Indian cotton have been hammered to such low levels that any increase in buying should be reflected in higher levels. Buying by commission and export houses has been on a fair scale during the last two days. Broach April-May closed at Rs. 187, July-August at Rs. 191-8, Oomra March at Rs. 152-4 and Bengal March at Rs. 127-4. The quotations at the end of last week were Rs. 177-4, Rs. 181-8, and Rs. 125-8 respectively.

Overseas markets have been rather irregular but the undertone is firmer. There is continued uncertainty regarding the farm programme of the U.S. Administration. In New York, March closed at 10.40 cents and May at 10.43 cents. In Liverpool, easier conditions have been noticeable. American January closed at 8.21d. and March at 8.26d.

PIECEGOODS

It is expected that the slight improvement in raw cotton and piecegoods ready values will lead to greater activity in the cloth market.

It is unnecessary to point out that the paucity of forward contracts has been mainly due to the disparity between replacement costs and bazar values. Early in the week some business was done with indigenous mills for the popular styles. Business in the Japanese goods section continued to be restricted as dealers were not inclined to operate in bulk quantities. If the anticipated demand for hot weather styles materialises there should be a further improvement in values.

The yarn market was easier owing to the lack of support. Exports of yarn to China have diminished. The decline in prices has been more pronounced in medium and coarse counts.

GOLD

The Bombay gold market has been rather uninteresting during the past few days. The slight improvement in the quotations last week was due to the reports regarding the possibility of a reduction in war insurance rates. These have not materialised and quotations have thus receded to the former levels. Gold ready closed at Rs. 42-0-6, First settlement at Rs. 42-1 and Second settlement at Rs. 42-1. The London quotation has remained unchanged at 168s.

SILVER

Calcutta January 29.

There has been very little doing in the Bombay silver market during the past week and quotations have been fluctuating around last levels. Indian Mint Silver ready closed at Rs. 63-2, First Settlement at Rs. 63-1 and Second Settlement at Rs. 62-10. In the London market a slightly firmer tone was noticeable but business passing has been on a very small scale. The quotations for spot and forward are slightly better at 23¼d. and 22 3/16d. respectively.

WHEAT

Calcutta, January 29.

After earlier firmness a weaker tendency has been noticeable in the Karachi wheat market during the past week. The strength of the markets earlier in the week was due to the firmness of the January position. The long term view of the market, however, is definitely bearish and it is generally felt that with rush of arrivals on acount of the need for cashing the crop, the tendency in the immediate future would be rather downward. This will be clearly evident from the further decline in the quota-quotation for July position during the past few days. The publication of the All-India first wheat forecast for 1940-41 also has been none too helpful for the market. The area under the crop in 1940-41 is estimated at 32,809,000 acres against the revised estimate of 32,526,000 acres for 1939-40 or an increase of 1 per cent.

In the Karachi market, Choice White ready closed at Rs. 34-11, January at Rs. 34-11-6, March at Rs. 33-3 and July at Rs. 28-12-6.

In the Calcutta market, quieter conditions have been witnessed. There has been no improvement in the demand for flour and flour products. Cawnpore and Punjab ready were Rs. 4-9 and May Rs. 4-2-3.

The following is a summary of the All-India first wheat forecast, 1940-41:

	1940-41	1939-40 (Corresponding)	Increase (plus)
Wheat Area	Acres 32,809,000	Acres 32,526,000x	Per cent. plus 1%

xRevised.

Remarks: Crop affected by insufficient rains but its present condition and prospects appear to be on the whole fairly good.

OLYMPUS

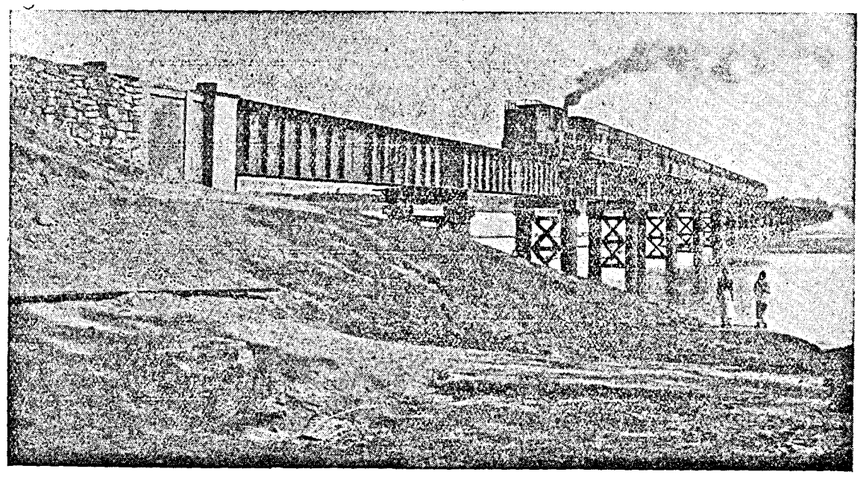
(*Continued from page* 194)

India's Consulting Engineer. The latter emphasised the importance of a well-regulated and efficiently maintained road system in these days of rapidly developing mechanisation of the Army. I suggest" said Mr. Mitchell, "as one consideration the sometimes forgotten theory of public finance that the authority or legislature responsible for imposing the taxation from which certain revenues are derived should be responsible for the proper expenditure of those revenues and should not to the extent which is at present prevalent give doles to some other authority and wash their hands off the results". In his opinion it is the unbalanced nature of the road system which has led in no small measure to the unbalanced distribution of motor transport.

The question of petrol rationing which is now before the Government of India has led to a good deal of speculation in some quarters. It is stated for instance that if the petrol rationing scheme comes into operation it will mean to some extent dimunition in the Central Government's revenue from that source and that the only way to recoup it is by raising the duty proportionately. There is also the effect of the rationing on the Road Fund which has to be considered.

HILL-BIRD.

GATEWAY OF INDIA



(*Continued from page* 195)

the conditions are unusually favourable and it has been pointed out that the proposal to consolidate the new rupee counterparts of the repatriated sterling loans with the Second Defence Loan will stimulate interest in the securities issued by the Reserve Bank and also in the new loan which offers 3 per cent like the loans issued during the course of the last year. The giltedged market shows marked improvement since the loan announcement appeared, and the fact that Rs. 45 crores of the first defence loan have been absorbed already shows that the appetite for fresh issues has not vanished. The decision to keep down the cost of borrowing is universally approved and a three per cent basis is wholly acceptable. The probability of a rise in the rates for issues which offer a little over 3 per cent is accepted in all quarters. Certain brokers have, however, drawn attention to the fact that facilities in regard to the non-deduction of tax at source have not been offered to small investors. A taxfree loan cannot be expected, but facilities similar to those available in Britain could have been provided in order to stimulate the interest of the middle classes in the new loan. The concession would have been quickly appreciated according to experienced observers.

Jute for Shoes

Mr. D. L. Mazumdar, I.C.S., Secretary, Indian Central Jute Committee recently visited the Bata Shoe Factory at Batanagore (24-Parganas) and discussed with the management of the factory the possibilities of using jute in the manufacture of shoes. He drew their attention to the extensive use that was now being made of plaited jute for making soles of slippers known as "Alpargata" in the Argentine Republic. These were the commonest forms of footwear among the working classes of the Argentine and appeared to be very popular among all classes of poor people. He thought that there was an extensive untapped market for similar cheap shoes inthis country also, and suggested that the Batas might explore the possibilities of this particular line of manufacture. Mr. John Bartos, Managing Director of the Company informed Mr. Mazumdar that the factory had recently turned out cheap shoes with uppers made of cotton and jute, and also of jute exclusively. They were at present experimenting with soles of plaited coir, and in view of what Mr. Mazumdar had stated, would gladly investigate the possibilities of using jute on an increasing scale both for making uppers and soles of cheap shoes. The former required a suitable type of jute canvas, and the latter some sort of "treated" or "proofed" jute. Mr. Mazumdar informed the management that he would bring the subject to the notice of the Indian Jute Mills Association and assured them of all help and co-operation from the Technological Research Laboratories of the Indian Central Jute Committee.

Stock Markets to-day and to-morrow

ENGINEERINGS AND TEXTILES PICK UP

As expected, the announcement of the terms of the new loan has had a definitely stimulating effect on the giltedged market. An all round rise in prices has been recorded, 3½ per cent Paper being higher at Rs. 95-8 and 3 per cent Defence Bonds at Rs. 100-15. Medium-dated and short-dated loans which afford a higher yield have also been in good request. 3½ per cent 1947-50 have thus been bought up to Rs. 102-8, 3 per cent 1951-54 to Rs. 99-2 and 2¾ per cent 1948-52 to Rs. 97. With the continuance of easy money conditions the upward movement should continue to be in evidence. There is scope for rise in 3 per cent Defence Bonds 1946 as they are redeemable at one per cent premium.

It will be remembered that there was a sharp rise in the leading industrial counters towards the close of last week on bear covering besides some investment buying. There has been a further improvement in prices during the past few days, Indian Iron being noted higher at Rs. 31-10 and Steel Corporation at Rs. 19-6. But while the rise in these speculative counters has been due to bear covering in an over-sold market it is interesting that some spectacular rises have been recorded on knowledgeable buying. Thus, Muir Mills are thirty points higher at Rs. 304, Arthur Butler five points higher at Rs. 15-6 and Indian Galvanizing two points higher at Rs. 31-8. The other important feature is the high premium being asked for the ordinary shares of the Alkali and Chemical Corporation, Limited. The position of these shares is discussed below at some length.

The firmness of the giltedged market, the anxiety of bears to cover their open positions and the steadily increasing appreciation of the relative merits of equities augurs well for the future of market. If only the Central Budget does not contain any nasty surprise the rise in prices in the first week of March should be quite pronounced.

* * *

Initial dealings in the ordinary shares of *Alkali and Chemical Corporation, Limited* have been done at the high premium of Rs. 10 per share. The fully paid-up shares were quoted as high as Rs. 21-4. It was generally expected that a good premium would be available for the ordinary shares, but it is surprising to note that there has been such a high premium even at the beginning.

The fully paid up-ordinary shares are now available in the market as a result of the exercise of the option by shareholders of taking up six ordinary shares of Rs. 10 each at par in respect of every preference share held by them. The option may not be exercised before the 1st day of January, 1941 nor after the 30th day of June, 1941. The shares allotted in respect of the exercise of any such option will not share in any dividend declared in respect of the financial year of the company during which the option is exercised (i.e. in respect of the financial year ending on the 30th June, 1941).

The issued ordinary capital of Rs. 21,69,000 at the end of June, 1940 was held by the Secretaries, Imperial Chemical Industries (India) Limited. The ordinary shares of Rs. 10 each which were Rs. 5 paid up are now Rs. 6 paid-up. It is only this capital that is eligible for dividend on account of the earnings for 1940-41. The debit at Profit and Loss account is only Rs. 39,546 and there is no liability on account of the dividend on Preference shares (those paid by the Secretaries do not constitute any liability) in the case of the Alkali and Chemical Corporation. The Caustic Soda-Chlorine Factory near Calcutta commenced production on the 4th April, 1940. Difficulties were encountered, particularly, during the early stages, but these have been satisfactorily overcome by the factory management staff to whom every credit is due. Production has steadily increased and is now practically at peak. The quality of the Calcutta factory's products is satisfactory and up to expectations and no difficulty has been experienced in disposing of them.

Construction of the Soda Factory is expcted to be completed by the end of this year. With full working of the Calcutta Factory and partial working of the Punjab factory it may be expected that enough would be earned to declare an ordinary dividend. But as pointed out earlier, the shares issued as a result of the exercise by preference shareholders of the option are not eligible for dividend and the first dividend on these shares can be expected only in 1942. With two factories in full working in 1941-42 it will be certainly possible to report a higher level of earnings but the liability of the company to E. P. T. should not be ignored. The shares are however fully good from a purely investment point of view.

If all preference shareholders choose to exercise the option, which will naturally be the case, in view of the high premium quoting for the ordinary shares, the additional ordinary capital will be Rs. 19,60,000. The total subscribed capital may thus be at the end of June, 1941 Rs. 40,30,000.

* * *

Inspite of a slight increase in charges, the *Bengal Assam Steamship Company, Limited* has not been able to report an increase in net earnings owing to the increase in working expenses. The net profit before providing for taxation is Rs. 6,69,261 for the year ended October, 1940 against Rs. 8,14,411 for the previous year. The sum set aside to depreciation is Rs. 2,75,000 against Rs. 3,00,000, while the provision for income-tax and super-tax is Rs. 1,11,250 against Rs. 1,45,789. On the last occasion Rs. 75,000 was transferred to Fleet Replacement Fund, while Rs. 56,604 was written off depreciation on investments. The dividend has been maintained at 12½ per cent.

* * *

Engineering shares have necessarily commanded greater attention during the past few days alongside of the improved tone. Arthur Butler and Indian Galvanising have recorded sharp rises, being quoted at Rs. 15-6 and Rs. 31-8 respectively. The results of *Arthur Butler and Company (Muzafferpore) Limited* for the year ended October, 1940 are due to be published in March, 1941. It is reported that the Company, has done well and that recently it has received larger orders. As for *Indian Galvaniz-Company, Limited*, the progress during the past four years has been quite satisfactory. The increase in orders and the extensions to plant should result in a considerable rise in earnings. The dividend for the year ended December, 1940 is also due in March.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 30.

The improvement noticeable in the various sections on the Calcutta Stock Exchange towards the close of last week has continued to be in evidence during the past few days. The announcement of the terms of the Second Defence Loan and bear covering have had an encouraging effect on the markets. Greater attention has been paid to Engineering shares. Arthur Butlers and Indian Galvanizings are sharply higher on expectations of larger dividends. Indian Cables have continued firm at Rs. 22 with good buyers at the higher levels, while initial dealings in ordinary shares of Alkali and Chemical Corporation have been reported at a premium of Rs. 10 per share. The giltedged securities section also has been firm with the buying of terminable securities which have a higher redemption yield than that available on the new loan. The undertone in the several sections is satisfactory.

As pointed out above, the giltedged securities section has been firmer since the announcement of the terms of the new loan. As the Second Defence loan is issued at par carrying interest at 3 per cent per annum and is repayable in 1949/52 there has been good buying of medium and short-dated issues. 3 per cent. Defence Bonds 1946, which are redeemable at one premium, have been marked higher at Rs. 100-12. 3½ per cent. Paper has been done as high as Rs. 95-10 and 3 per cent. Paper at Rs. 82. Among terminable loans, 3½ per cent 1948/52 were done at Rs. 97, 3 per cent. 1963/65 at Rs. 94-4, 3 per cent 1951/54 at Rs. 99-2, 3½ per cent. 1947/50 at Rs. 102-9, 3½ per cent. 1955/60 at Rs. 113-2 and 4 per cent. 1960/70 at Rs. 108-2. 5 per cent. 1945/55 were noted at Rs. 112-8. The provincial issues also have been marked higher with 3 per cent. 1952 issues quoted at Rs. 95-12.

Only a small business has been reported in public bodies debentures, 3½ per cent *Howrah Bridge* debentures being noted at Rs. 98-6 and 3¼ per cent. *Rangoon Municipal* debentures at Rs. 100. 6 per cent. *Hukumchand* Fourth mortgage debentures were higher at Rs. 100-4 and 5½ per cent. Third mortgage debentures at Rs. 108-8.

Among preference shares, not many transactions have been recorded in first class preference issues but rates have been fully maintained. *Agarpara* were noted at Rs. 158-8, *Kamarhatty* at Rs. 164, *Howrah* 7 per cent preference at Rs. 172 and *New Central* at Rs. 172. Among shares which have got arrears of preference dividends, *Hukumchand* are higher at Rs. 118 and *Soorah* at Rs. 119-8. *Rameshwara* also have improved to Rs. 10-14 while *Hastings* have been steady at Rs. 137. Among other sections, *Burrakur* were crossed at Rs. 161. *Alkali and Chemical* preference shares are sharply higher at 120 ex-rights while *Steel Corporation* have been steady at Rs. 114, *Titaghur Paper* second preferences at Rs. 113 and *Dunlop Rubber* Second preferences Rs. 115. *Kumardhubi Engineering* were Rs. 127, *Bengal Chemical* Rs. 16-12 and *Bengal Telephone* Rs. 12-2.

Bank shares have been firm with *Imperial Bank* fully paids at Rs. 1,578 ex-dividend and contributories at Rs. 368 ex-dividend. *Reserve Bank* were Rs. 106 and *Central Bank* Rs. 43-4.

Cotton shares, especially those belonging to Cawnpore, have been firm. There has been a sharp rise in *Muir Mills* to Rs. 304 from Rs. 271-8. The results of this company for the year ended December, 1940 are due to be published in the next few weeks. There has been good buying of *New Victoria* and the quotation has been marked higher at Rs. 2-2. *Kesoram* were Rs. 6-6 and *Dunbar* Rs. 197.

Coal shares have not met with any buying. *Bengal Coal* have receded to Rs. 363 ex-dividend, *Hurriladih* were Rs. 13-4, *Amalgamated* Rs. 27-2, *Burrakur* Rs. 13-4, *Equitable* Rs. 36-14, *Raneegunge* Rs. 25-8 and *West Jamuria* Rs. 30-8.

Jute shares are firmer and a slight rise in prices has been recorded alround. The strength of the jute manufactures market has been mainly responsible for the increased interest in this section. *Anglo-India* were noted at Rs. 317, *Bally* at Rs. 220-8, *Belvedere* at Rs. 379, *Champdany* at Rs. 163, *Hukumchand* at Rs. 8-15, *National* at Rs. 21, *Presidency* at Rs. 4-6 and *Reliance* at Rs. 58-8.

In the Engineering section, there was a sharp rise on Friday last week in Indian Iron and Steel Corporation with bear covering. There has been a further rise in the quotations during the last three days and the quotations at the time of writing are around the highest levels for the week. *Indian Iron* have been dealt in as high as Rs. 31-10 to-day. The quotation at the time of writing is Rs. 30-8 and *Steel Corporation* Rs. 19-5. *Braithwaite & Co.* have been more popular and marked higher at Rs. 10-10. *Indian Galvanizing* and *Arthur Butler* are sharply higher at Rs. 31-8 and 16-4. *Hukumchand Electric Steel* ordinaries were Rs. 10-8 and deferrends Rs. 2-13. *Kumardhubi Engineering* were sticky at Rs. 4-14 and *Indian Standard Wagon* at Rs. 60-8.

Sugar shares have been steady with *Cawnpore* at Rs. 18, *Champarun* at Rs. 13-8 *Carew & Co.* at Rs. 9-8 and *Murree Brewery* at Rs. 12-12.

A greater number of transactions has been recorded in the tea section at better rates *Bishnauth* were Rs. 26, *Patrakola* Rs. 834-8, *Rydak* Rs. 59, *Tezpore* Rs. 7-8 and *Tukvar* Rs. 10-8.

In the miscellaneous section, *Burma Corporation* were Rs. 5-4 and *Indian Copper Corporation* Rs. 2-3. *B. I. Corporation* were Rs. 4-15, *Dunlop Rubber* Rs. 35-4, *Balmer Lawrie* Rs. 309, *Indian Wood Products* Rs. 27-8, *Publicity Society* Rs. 6-10 and *Alkali and Chemical Corporation* Rs. 19-12. *Indian Coble* continued strong at Rs. 22. Among Paper shares, *Titaghur Paper* ordinaries were Rs. 17-4, *Star Paper* Rs. 9-13, *Orient Paper* Rs. 10-8, *Shree Gopal Paper* Rs. 10 and *Titaghur Paper* preferred ordinaries Rs. 5-1. *Borooah Timber* changed hands at Rs. 15-8 *Dalmia Cement* at the lower level of Rs. 12 and *Midnapore Zemindary* at Rs. 71-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, January 29.

Money:—Call money continued to be quoted at ¼ per cent. with borrowers scarce.

Exchange Market:—There is nothing to report in this section, the rates remaining unchanged.

Securities:—In the early part of the week under review 3½ per cent. Paper remained unchanged at Rs. 95-1. Subsequently there was continued enquiry for all the issues and the rate rose to Rs. 95-8. Among terminable securities, 1948-52 improved from Rs. 96-8 to Rs. 96-14; 1951-54 from Rs. 98-6 to Rs. 98-14; 1963-65 from Rs. 93-11 to Rs. 94; 1947-50 from Rs. 102 to Rs. 102-3; 1960-70 from Rs. 107-15 to Rs. 108-3; 1955-60 from Rs. 113 to Rs. 113-2 and 1945-55 from Rs. 112-5 to Rs. 112-6.

Shares:—Prices in the local share market showed little change with small business passing. There was no trading on Wednesday and as such there were only two working days to be reviewed during the period under review. Buyers continued to be cautious due to the forthcoming Budget. Steel shares were remarkably steady with a slight advance in prices. Textiles, in sympathy showed an upward trend.

Textiles:—Cotton mill shares were higher on encouraging reports from the local cloth market. About 10,000 bales of cloth are reported to have been sold by one of the prominent local mills last Thursday. *Bombay Dycing* advanced further by about 10 points to close at Rs. 1,070. *New Great* were an active counter and met with good buying enquiry at Rs. 406. The ordinary shares of Rs. 200 each of this Company are likely to be subdivided into shares of Rs. 100 each. *Central India* were slightly higher at Rs. 295; *Century* at Rs. 371-8; *Gokak* at Rs. 204-8 and *Kohinoor* at Rs. 386. *Swadeshi* remained, however, unchanged at Rs. 364 and *Ahmedabad Advance* at Rs. 265-10.

Hydro-electrics:—A fair business was put through in this section. *Andhra Valley* were in keen demand, being done

higher at Rs. 685, while *Tata Power* rose by about 30 points to close at Rs. 1,560. *Tata Hydro* were steady at Rs. 177.

Steels:—Steel shares opened steady with *Tata* ordinaries at Rs. 367 and the deferreds at Rs. 1,877-8. The fluctuations in prices were confined within narrow limits during the period under review and the undertone remained remarkably steady. There were good buyers for deferreds and the price steadily advanced to close at Rs. 1,902-8, while the ordinaries were slightly higher at Rs. 370.

Banks and Insurance:—Bank shares ruled easy on slight profit-taking. *Central Bank*, which were done higher at Rs. 45-15 last week, closed easier at Rs. 44-4. *Bank of India* found strong buyers, being done at Rs. 142-8. *Bank of Baroda* were at Rs. 105-12; *Imperial Bank* fully paids at Rs. 1,576-8; contributories at Rs. 386-4; *Reserve Bank* at Rs. 105-12 and *Union Bank* at Rs. 6-9-6.

In the Insurance section, *New India* changed hands at Rs. 41-4. Other shares were unchanged at last week's rates.

Miscellaneous:—*Associated Cement* met with some liquidation from weak holders and the price closed slightly easier at Rs. 136-8. *Belapur Sugar* showed small variations around Rs. 205. *Bombay Burma Trading* were in good favour during the week and the price rose to Rs. 586-4 as against Rs. 522-4 in the previous week. *Premier Construction* were at Rs. 95-8. *Western India Match* were steady at Rs. 186 and the market circles talk of higher levels for these shares. *Shivrajpur Syndicate* changed hands at Rs. 86-12; *Scindia Steam* at Rs. 20-3; *Indian Iron* at Rs. 31-4 and *Steel Corporation* ordinaries at Rs. 19-4.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, January 29.

Prices in the local market were well maintained during the week though business was limited. Rubbers met with some buying enquiry, while Teas remained steady. Sugars were in fair support. Textiles were unchanged.

Securities:—There was a somewhat cheerful feeling in the local giltedged market and prices showed a slight advance. 3½ per cent. improved to Rs. 95-6. 3 per cent. 1963-65 were done slightly higher at Rs. 94-1 and 3 per cent. Paper at Rs. 81-11, while 3½ per cent. 1947-50 remained unchanged at Rs. 101-15. Business in State Loans and Provincial Loans was of a limited character. 6½ per cent. *Mysore Loan* were at Rs. 105-4; 3½ per cent. *Cochin Loan* at Rs. 105-4 and 3½ per cent. *Travancore Loan* at Rs. 103-8.

Mills:—*Buckingham and Carnatic* were slightly better at Rs. 288, while *Bangalore Woollen and Cotton* met with some buying enquiry at Rs. 205 with no sellers in evidence. Among Bombay shares, *Central India* came in for business at Rs. 296-8 Feb. and *Century* at Rs. 370-8 Feb.

Plantations:—Rubber shares met with some buying during the week. *Cochin Malabar* were slightly better at Rs. 6-10 and *Thirumbadi* at Rs. 1-14 c.d. *Nellithanam* came to business at Rs. 7-8; *Udayagiri* at Rs. 5-8 and *Ayer Manis* preferences at Rs. 101.

Miscellaneous:—*Mysore Chemicals* were well supported at Rs. 15-12. *Mysore Paper* were slightly marked higher at Rs. 13-14, while *Orient Paper* ordinaries were done at Rs. 10-6. *Singareni Collieries* were done at Rs. 11; *Dalmia Cement* ordinaries at Rs. 12 and *Spencer 'B'* preferences at Rs. 9. *Indian Steel Rolling Mills* ordinaries were a dull market at Rs. 7-12.

LONDON STOCK EXCHANGE

The slightly easier tone noticeable on the London Stock Exchange at the end of last week has continued to be in evidence during the period under review. There was a hesitant feeling and business transacted was of smaller proportions. The announcement of the Woolworth dividend that it has been maintained at 6S per cent. had a steadying effect but the improvement in prices has not been held. Even giltedged securities are a shade easier. Among India loans, 3½ per cent. Sterling Paper were 96⅜, 4½ per cent. 1950-55 109¼, 4½ per cent. 1958-68 112½, 3½ per cent. 1954-59 101¾ and 3 per cent. 1949-52 98½. Among British Funds, 2½ per cent. Consols were 77½, 3½ per cent. Conversion 104⅜, 3½ per cent. War Loan 108⅜ and 3 per cent. War Loan 101½.

Among other sections, Tea shares are slightly easier while Rubbers have been fully steady. Kaffirs met with some buying earlier in the week but gains have been lost to a certain extent towards the close. Oils have been reactionary while Home Rails have been weak.

NEW YORK STOCK EXCHANGE

Earlier in the period under review a firmer tone was noticeable and a slight rise in prices was recorded alround. During the latter half of the week dull conditions have again been noticeable. *U. S. Steel* closed at $67½, *Anaconda Copper* at $25⅜ and *General Motors* at $44¼.

THE AHMEDABAD ELECTRICITY COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the TWENTY-EIGHTH ORDINARY GENERAL MEETING of THE AHMEDABAD ELECTRICITY COMPANY, LIMITED, will be held on Thursday, the 13th February 1941, at 4-30 p.m., at the Registered Office of the Company, Home Street, Fort, Bombay, to transact the following business :—

1. To adopt the Directors' Report and Audited Statement of Accounts made up to 30th September, 1940.
2. To declare a Dividend.
3. To elect Directors in the place of Mr. C. S. Bell, Mr. A. S. Trollip, C. I. E., and Mr. Chamanlal G. Parekh, who retire by rotation, but are eligible and offer themselves for re-election.
4. To elect Mr. R. C. Lowndes, who retires under Article 98, as a Director.
5. To appoint Auditors for the current year and fix their remuneration.

The Transfer Books of the Company will be closed from Monday, the 27th January to Thursday, the 13th February 1941, both days inclusive.

By Order of the Board,
KILLICK, NIXON & Co.,
Agents.

Bombay, 16th January 1941.

MARKET POINTERS

Jute Purchases by Mills

The total purchases of jute by the mills to January 15, is reported to be 67,98,725 maunds.

An arrangement entered into at the recent New Delhi Conference was that mills should try their utmost to purchase 75,00,000 maunds.

Government's decision as to whether they will make good the difference is not yet known.

* * *

Jute Position

The year's jute crop was expected to amount to 12,500,000 bales, whereas the maximum requirement could never exceed 10,000,000 bales, said the Hon. Sir Nazimuddin, Home Minister, speaking at a function held at Comilla. The Minister said that following a settlement with the Indian Jute Mills Association, Government had succeeded in raising the price of jute. If they wanted to avert disaster befalling the people, no other option was left to them but to make the restriction scheme a success.

* * *

India Exports more to Australia

Indian exports to Australia improved to the extent of Rs. 2,52,00,000 in 1939-40, while Australian imports into India recorded a slight fall.

Principal items of India's exports to the Commonwealth consist of jute manufactures. Nearly 71,000,000 gunny bags and 41 million yards of gunny cloth were exported, as against 66,000,000 gunny bags and 81 million yards of gunny cloth in the preceding year. Exports of tea almost trebled and linseed shipments improved from 21,000 tons to 81,000 tons.

* * *

Import of Aluminium Goods Stopped

The import into India of a number of aluminium manufactures has been stopped by a notification published in the Government of India Gazette.

These are aluminium powder and paint, aluminium tea chest linings, domestic hardware and stores and smokers' requisites made of aluminium.

KINGSLEY-GOLAGHAT-ASSAM TEA CO., LD.

NOTICE.

To The Members of the
KINGSLEY-GOLAGHAT-ASSAM TEA CO., LD.

AT a Directors' Meeting held on 24th January, 1941, a dividend at the rate of 6 per cent., free of Income Tax, was declared payable on the Preference Shares for Season 1940, and Dividend Warrants will be despatched to the registered addresses of or in accordance with instructions received from those Members whose names appear in the Company's Register on the 12th February, 1941. The Transfer Register will be closed from 4th to 12th February, 1941 both days inclusive.

By order of the Directors,
SHAW WALLACE & CO.,
Managing Agents.

Calcutta, 24th January, 1941.

Carry forward ..	8,158	4,486	3,988	11,676

(Half-yearly meeting, 14th February, 1941 at 12 noon).

Audited accounts for the half-year ended 31st August, 1940 :—

After providing Rs. 33,352-5-9 for Depreciation and transferring Rs. 2,500 to Reserve for bad debts, there is a balance of Rs. 8,157-12-7 at the credit of Profit and Loss Account which the Directors recommend be carried forward.

Considerable competition was encountered during the half-year and although the volume of sales was satisfactory, it was not always possible to obtain prices sufficient to offset the higher costs of coal, raw material and wages. The Company's Works continue to be fairly employed.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 6,00,000 in 60,000 shares of Rs. 10 each, fully paid up.

(c) Carry preferential claim to dividend of 7%. Rank equally with "A" shares for further distribution after similar distribution. (c) Carry no preferential claim to repayment of capital. (d) Carry right to fixed cumulative preferential dividend of 5% per annum and to a noncumulative dividend of 2% per annum. After dividend of 5% on ordinary shares also participate in a further dividend of 2½ per annum rateably with the ordinary shares in proportion with the respective capital thereon. Before December, 1938 may be converted into ordinary shares with equal rights. (e) Holders have option to exchange holding to fully paid ordinary shares at par on six months' notice expiring at the end of any half-year. (g) Redeemable at par between 1955—1960. (h) Redeemable from 1st January, 1943, by 12 annual instalments. (i) Repayable at par by 12 annual instalments from 1st January, 1944, with the option to redeem one six months' notice after 1st January, 1950.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THERE is an even more plethoric supply of short credits than ever. This is not surprising, as Treasury Bills maturities exceeded issue of fresh Bills by as much as Rs. 5 crores in the week ended February 1. In the week ended January 25, the market received, on balance, Rs. 2 crores from this source. In the current week, another two crores will be added to cash resources in banking circles. The Imperial Bank's weekly return provides a significant pointer in this regard. Investments as on January 31 were Rs. 48.98 crores compared with Rs. 52.00 crores on January 24. It looks as though, of the maturities of Rs. 6 crores of Bills in the last week, the Imperial must have been holding over 60 per cent. As a result, the cash held by the Imperial has shot up to Rs. 24.07 crores from Rs. 21.50 crores. With such conditions prevailing in the money market, the Treasury Bills average shows this week a rather sharp fall from annas thirteen and pies four per cent. per annum to annas eleven. By the same token, applications received on February 4 at Rs. 3.75 crores were on the large side. Next week's offer remains unchanged at Rs. 1 crore. Indeed, why should the Central Government ask for more money from short-term bills? On the contrary, there is every reason why the Treasury Bills can be suspended for the time being.

The main reason in this regard is the swelling cash balance of the Government. The latter's cash balance with the Reserve Bank had risen to Rs. 20.26 crores on January 31, from Rs. 16.38 crores on January 24. The January 24 figure itself was nearly Rs. 3 crores up on the January 17 figure. On January 10, the Central Treasury had Rs. 10.56 crores with the Reserve Bank. That is to say, the cash position of the Central Government has improved by nearly Rs. 10 crores in the space of three weeks. With cash at Rs. 20 crores, the Government must consider themselves exceptionally affluent. If, at all, the Treasury Bill sales are continued, it is less for the sake of replenishment of the Treasury than for maintaining an essential money market service. It is, no doubt, true that the maturities in the next three weeks of February are near Rs. 9 crores. But this is the best revenue-producer. The excess of current revenue over current expenditure must more than suffice to take care of the heavy Treasury Bill maturities. While, statistically, the Government may well discontinue the sale of Treasury Bills for some time, there are other considerations which suggest the need for their continuance. It is well-known that the Indian Government have to do a lot of financing in respect of purchases made in this country for the British War Office and in respect of other sundry commitments of the British Treasury. These payments in India are made ahead of corresponding receipts in London. While New Delhi has this responsibility, it is as well that the Central Treasury maintains substantial cash balances.

The return of the Reserve Bank for the banking department for the week ended January 31 discloses one such heavy payment in London by the British Treasury to the credit of the Indian Treasury. Balances Held Abroad in the banking department of the Central Banking institution, which stood at Rs. 58.40 crores on January 24, disclose a sharp and eminently large jump to Rs. 67.01 crores on January 31. There is no other possible explanation for this sudden increase than the one we have advanced, namely, that this must represent a big payment by the British Treasury to the credit of the Indian Government with the London Branch of the Reserve Bank. This amount may be on account of purchases and/or in respect of the arrangements between the British War Office and the Indian Government concerning allocation of expenditure on the Army.

Thanks to this large receipt in London and thanks to February being a most busy time for the tax-gatherer of every description, the cash balances of all governments with the Reserve Bank reveal substantial improvement. As already stated, the Central Treasury has improved its cash position from Rs. 16.38 crores to Rs. 20.26 crores. The Burma Government from Rs. 1.83 crores to Rs. 2.16 crores; and other Governments from Rs. 4.82 crores to Rs. 6.67 crores. At the same time, the balances maintained by the member banks with the Reserve Bank have also risen from Rs. 44.59 crores to Rs. 46.88 crores. Verily, money is a drug. And this is supposed to be the height of the busy season—the season ordinarily busy as to trade and stringent as to money. Conclusion? No busy season or stringent season this year.

The exchange market has been dull and lifeless. It is dominated by the difficult freight position. There have been hardly any bills.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T.T. at 1s. 5 31/32d., all through for six months; were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months D. A. bills were quoted; 1s. 6 7/32d., for the first month; 1s. 6¼d., for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d., for the fourth month.

Interbank call money is ½ per cent. lenders, no borrowers.

Two to four months deposits quoted ½ per cent.

IMPERIAL BANK'S REPORT

To the reduction in the demand for funds during the half-year ended December 31, 1940 several bank reports and statements have borne witness and it is but natural to look for a sizeable contraction in the profits of the Imperial Bank. According to the latest report presented by the Directors, the seasonal activity failed to materialise and demand for funds has been poor, particularly for jute finance. A comparison with the report for the preceding half-year suggests that the profits have fallen by over Rs. 11 lakhs, though allowance must be made for the enhanced provision for taxes. This decrease was inevitable, and a comparison with the comparable period of 1939 indicates that it is the larger carry-forward from the first half of 1940 that accounts for the increase in the sum available for disposal. While the decrease disclosed by such comparisons can be explained readily enough, they are not without interest to the study of general economic trends. Money conditions are reflected in the fall of the average rate for Treasury Bills during the period, and the only gratifying feature to which the report refers is the pronounced improvement in the giltedged market. This

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, February 4, 1941. Total amount offered was Rs. 3 crores and 75 lakhs. Tenders at Rs. 99-13-3 per cent and above were accepted n full and those at Rs. 99-13-0 per cent were allotted approximately 8 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas eleven per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, February 11, 1941. Successful tenderers should make payment on Friday, February 14, 1941. Other conditions are as usual.

YODH RAJ, *Secretary*.

Finance Abroad

COLONEL KNOX's startling remarks are not the only indications of the apprehensions, in American circles, of an early crisis being reached in the war. The celerity with which the Lease and Lend Bill has been negotiated through the Foreign Relations Committees and the chafing of the Democrats at the least sign of delay in assistance being rushed to Britain suggest how near to belligerency Washington has moved in the last one month. The Lease and Lend Bill has now reached Congress and its early passage is predicted on all sides; if any doubts were there, the testimony of Mr. Wendell Willkie would clinch the issue. The Administration is ready to despatch the planes of the Army and the Navy, besides Flying Fortresses, to Britain. The Army's own needs will be met, it is said, from internal production.

On the economic side, America is about to embark on economic warfare. In some quarters, a forecast has already emanated that the United States will shortly establish control of all American and foreign trade under a scheme stated to include the freezing of all foreign funds, besides the introduction of a licensing arrangement to cover all exports. The executive order for bringing this scheme into effect is believed to have been already drafted, and its issue is delayed only because the Administration has not decided as to which of its departments or agencies is to operate the scheme. Meanwhile, a number of reserve officers are said to be trained in the latest methods of conducting economic warfare. It is amazing with what quickness the United States administration is perfecting all arrangements for *de facto* belligerency. *Per contra*, in a way, all these are an indication of the seriousness of the hour so far as Britain is concerned.

A great difficulty in arranging for quick supplies of arms and planes to Britain is that most of the orders could not be placed. Indeed, Mr. Knudsen, Director-General of the Directorate for speeding up United States arms production recently called up Mr. Morgenthau to ask if something could not be done to permit Britain's orders to be placed. As is well-known, the obstacle in the way of these being executed is the question of payment. An early passage of the Lease and Lend Bill will alone enable the Administration to surmount the difficulty. Meantime, British assets in the U.S.A. are being sold at a rapid rate and every means of realising the dollar assets are being adopted on a vast basis. In fact, it is with this end in view that Sir Edward Peacock who has great experience in such matters is going to the U.S.A. to examine the possibilities on the spot. Of late, it has become exceedingly difficult to obtain actual figures pertaining to the cost of arms etc., despatched by the U.S.A. to Britain. There are a few statements here and there which may be put together to have some idea of the enormous expenditure entailed. Mr. Morgenthau recently stated that British gold and dollar assets had been depleted by £2316 million dollars in the first sixteen months of the war. He also testified that British citizens had arranged to sell within twelve months every bit of property they had in the U.S.A. to enable the signing of war contracts. The Secretary of the U.S. Treasury also remarked *sotto voce*, in referring to the depletion of British assets in the U.S.A., that he had simultaneously written off sometime ago Britain's debts to the U.S. arising from the last war. In retrospect, it might be stated that, when Britain defaulted on the war debt, U.S. Congressmen were at one time chafing not a little that Britain was not playing the game. In fact, in the early stages of the war, this was made the most of by certain Isolationists. Now, there is not even a mention of that, which shows what a great swing in American public opinion has occurred latterly.

* * *

There is little change of note in the London money market where an occasional tightness develops on account of tax payments. But conditions are on the whole easy. In fact, the last £65 million Treasury Bill tender attracted applications which ran close to £150 millions, which is only slightly short of the record established last November. In consequence, the average rate came to £1-0-2.84 per cent compared with £1-0-4.04 last week.

IMPERIAL BANK REPORT

(Continued from page 227)

is no inconsiderable gain for an institution 50 per cent. of whose assets are lodged in Government securities, and this point invites as elaborate mention as is possible even in the briefest of comments. The most obvious inference is that the Bank has gained on the roundabouts what has been lost on the swings.

The most remarkable feature of the Imperial Bank's balance sheet as of other similar documents is the fall shown under Advances. A comparison with the similar statement, published a year ago, attests a fall of about Rs. 16 crores under this head. This funishes an adequate explanation for a rise of over Rs. 10½ crores under Investments, shown at Rs. 48.57 crores in the balance sheet as on December 31, 1940. A simultaneous growth under Deposits gives also a clue to the increase under Investments. Deposits during the year have risen from Rs. 87.84 crores to over Rs. 96.08 crores. This is a point that hardly invites comment here since one of the salient features of the war period in India has been the unassailable confidence of the public in the banking system. It may well be that within a short while total deposits would exceed Rs. 100 crores, making the Imperial Bank more than ever the giant of the Indian banking world. It is noteworthy that the contraction in Advances as compared with the balance sheet issued last year is more than offset by a steep rise in cash balances. It is certainly not without significance that these balances, totalling over Rs. 24.82 crores, represent a cash ratio of over 25 per cent., suggesting incidentally that no institution with similar standing possesses an equal proportion of freely liquid assets. The actual increase in the balance sheet total over a year is more than accounted for by the rise of over Rs. 8 crores under deposits alone. Reference was made last week to the striking growth of deposits in the case of the Bank of India. The Imperial Bank too retains an ample measure of the confidence of clients and depositors alike. The latest balance sheet bears it out fully, and it is only necessary to point out that deposits as between June and December, 1940, have risen by over Rs. 7 crores, indicating quite clearly that war-time influences, if unfavourable to the growth of profits, had strengthened the bulwarks of the Indian banking system. The actual disposal of profits conforms to precedent. It may be added that Reserves in the case of the Imperial Bank will henceforth exceed the paid-up capital, if that distinction were at all necesary for a Bank, which leads the field.

The New Industrial Phase

THE creation of an Industrial Research Utilisation Committee by the Government of India is at once justification and testimony to the work of the Board of Scientific and Industrial Research. It was a pity that the inception of an institution like the Research Board had to wait for the pressure of wartime exigencies; and the rapid success that has attended the results of experiments, now calling for their industrial utilisation, provokes not a few regrets that scientific research had not been harnessed earlier to industry. It is for the future historian to judge how much India's industrial progress had been retarded by the inability of the government to realise the value of a large and well-endowed institution for the development of industrial research. If the useful work done in the Alipore laboratories in the last one year, which the Government themselves recognise, is any guide, it should not be too much to state that our economic progress was delayed by at least a decade.

Leaving aside those regrets, it is a matter for gratification that the industrial utilisation of the results of research is to be proceeded with apace. Details of the results are lacking, but inasmuch as the researches were known to be related to the solution of the economic problems caused by the war—such as surpluses of commodities, shortage of certain manufactured products owing to import restrictions etc.—it may be assumed that the practical application of the new inventions and processes would affect both agricultural and industrial economy. When so much is going to be on the anvil, it is, therefore, necessary that, at every stage, the public interest has to be kept in the forefront. For it may well be that these are the beginnings of India's industrial revolution—one, in which her primary producer would not have to be so entirely at the mercy of the foreign importer and her people would not have to be at the mercy of the foreign exporter. It is of the first importance that the forces making for that revolution should be understood and controlled by a policy marked by pre-vision and calculation.

The constitution of the Research Utilisation Committee raises many issues of principle concerning its personnel and functions. According to the official announcement, the committee will be composed of an overwhelming number of business men and industrialists, Indian and British. While this is a compliment which industry certainly deserves, it may not be amiss to point out that the inclusion of economists of repute and of public men of standing could alone give that objectivity of outlook and freedom from inherent bias which would be essential for imparting correct direction to economic forces. While it is perhaps inevitable that organised industry has a large say in the matter of utilising the new inventions and processes, the dominance of big business in the committee is a factor likely to be viewed askance by the consumer public. Much would depend, therefore, on the degree of control which the State would reserve to itself not only in disposing of the findings of research but even later when they are put to practical use.

The functions of the Committee, as set forth in the official announcement, will be to advise the Government on the selection of the concern or concerns which will utilise the results of research and on the terms and conditions on which they are to be made available. The patent rights will, of course, vest in the Central Government. It is, however, a moot question whether the new industries made possible by the investigations should be left to private enterprise (assisted or not) or whether they would be developed directly by the State. This is a polemical question, but in so far as the patent rights of the new industries will be vested in the Government, the problem is simpler. It must be stressed here that the official announcement contains no hint of the state undertaking the management of the new industries. Is this a mere accident or does it imply that the new industries will all be run only by private enterprise? It is true

that the state may not be able to provide the bulk of the capital for the new industries and the aid of the private capitalist and the enterpreneur may be necessary; but the question should not be settled off hand on the basis of mere pre-conceived notions. The only criterion by which the question should be judged is that the interests of the people must be the paramount consideration. They must get the full benefits of the new discoveries.

Private enterprise, at any rate, in the industrially advanced countries of the West, has often shown itself very chary of utilising the latest results of research for fear that advances in productive technique may lead to the scrapping of current equipment and create such obsolescence of machinery as would add unduly to capital costs. This apprehension would, in the eyes of the equilibrium economist, seem legitimate and valid. It is this which is responsible for innumerable valuable inventions and processes being consigned to the "ice-box". The history of the gas mantle, the zip-fastener, of "Nylon," the synthetic silk product, and numerous others show that they were all bought up and patented by private interests and pigeon-holed for years until the former considered economic forces favourable enough for their introduction. Here is the testimony of Dr. W. C. Mitchell of the New York Bureau of economic research:

> Business enterprises have uses for science in so far as it promotes their pecuniary aims. They maintain research staffs to study their problems, but do so chiefly with the exception of keeping newly discovered ideas in reserve until business conditions make their use expedient. In many an American corporation tension has developed between the engineering staff interested in technological perfection and the financial executives interested in profits. This gives evidence that our economic organisation, in spite of its prodigious efficiency in comparison with the forms it has superseded, still fails to make full use of the resources at its command. This is true even at times of greatest expansion. A great increase in the output of useful goods —no one can say how great—might be effected if we employed our basic resources of knowledge to the full.

The force of this indictment will be readily realised from the fact disclosed by the U. S. Federal Communications Commission that the Bell Telephone system suppressed 3,400 unused patents in order to forestall competition!

The subject was hotly debated when, at the British Association some years ago, scientists threw the challenge that scientific discoveries and inventions were bought up and suppressed by big industrial interests. Lord Stamp was counsel for the defence. He argued plausibly that a big industrial interest had to decide whether it was "economic" to introduce a new process before existing ones were obsolete, because the resulting obsolescence of capital equipment would be too much to be provided for by any concern. Lord Stamp thus raised, in acute form, the question as to who was to hold the key to the "ice-box" to which all new processes were to be consigned. The economic and social implications of this theme are examined in "Clive Street Gossip" in this issue.

That controversy is as relevant to India as to any other country for the reason that, when the pace of research improves, as well it might, the probability of rapid obsolescence of machinery cannot be discounted. If the working of the new industries or processes is to be left to private enterprise, it may well result in a phenomenon not dissimilar to what obtains in the West where scientific discoveries are only tardily applied to industry. And if it concerns key industries, in which each country has to keep abreast of the world and cannot afford to be weighed down by the inertia or reluctance of private enterprise for whatever reason, the case for state management becomes strengthened. There is no room for the traditional fear of Government trenching into the legitimate spheres of private enterprise. Industrial policy in modern times has to take note of an altogether new sect of factors; the priemacy of defence needs and the stress on self-sufficiency are only two of the aspects which the war has tended to emphasize. By all tokens, this country is on the eve of great changes, not to mention the changes which the forces in the post-war era are likely to cause. There is need for a greater balance between agriculture and industry; and to the extent that scientific research helps in achieving that equilibrium, it will be a most potent factor in the next phase. But other forces are also likely to be unleashed, upon whose control would depend economic and social progress. Our industrial policy must be so guided that we shall avoid the pitfalls of the maturer economies in the West. That is almost the only advantage of a belated start, but it is certainly a great advantage.

The question has also to be looked at from another angle. In the post-war period, the new industries would be faced with conditions in which their existence would be threatened by foreign competition, and if they are run by private enterprise, the need for fiscal assstance would be felt. There is, therefore, need for a clear fiscal policy in regard to these new ndustries.

Whether the latter are run by private enterprise or government, it is the duty of Government to reserve to itself a degree of power to regulate production and prices in the best interests of the consumer. Government can also have a say in influencing the location of new industries. It is to be hoped that they would strongly discountenance unwieldy urban concentrations, which in wartime are a source of worry and danger. Dispersion of industrial sites would incidentally also help to stop the emigration of rural workers into urban areas and give to rural economy a new tone.

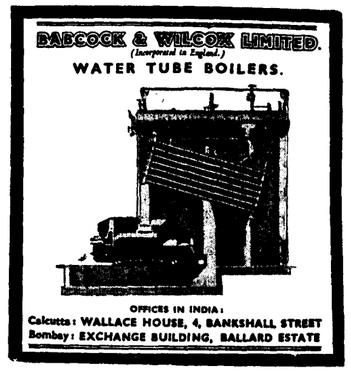
Editorial Notes

U. S. Aid to Britain



The rout of Isolationist sentiment in the U.S.A. can be measured enough in the swift progress of the Lend and Lease Bill. Secretary Hull was one of the first to lay his views before the Committee. The general expectation that the Bill will go through in a month or so is based largely on the Administration's belief that Congress, after considering the authoritative estimates of British financial resources, will deal summarily with amendments. The Speaker has no intention of permitting dilatory tactics: the solid Democratic majority is an obstacle to any filibuster, and possible amendments are likely to turn on the proposal to give the Executive vast discretionary powers. If the statements of the Floor leaders are any guide, the legislature is not likely to raise difficulties over the 5-point programme outlined last week. It has been pointed out that since November efforts have been made to make available an increasing proportion of U. S. aircraft factories. An official of the Curtiss-Wright Company has said so. A further increase is anticipated by many papers because it is believed that the British Aid Bill law laid before Congress will go through in spite of its high cost.

The Bill contains a provision enabling the President to authorise manufacture in the factories and yards of the U.S.A. any material required by a country whose defence is deemed vital to the defence of the U.S.A. This is the first official admission of the importance of the 'Atlantic Link.' The war loan clause is the second provision, and the words used are comprehensive enough. Repairs etc. to existing weapons and equipment belonging to Britain are authorised by Clause III. Under the fourth clause, the President will be permitted to furnish information relating to any defence article provided by sale or on lease and the last clause empowers the President to release for export any defence article for any Government. The British Aid Bill marks a definite breach with the Neutrality Acts of the past. The proclamation procedure will be applied not to restrict supplies but to release supplies immediately and no questions are to be raised as regards the time or terms of payment. The introduction of such a Bill betokens complete confidence in British victory. Britain is rated as a very good risk, and Mr. Harry Hopkins, the special Envoy to Britain, endorsed what is probably the Administration's view as to the outcome of the war in his first statement to the British Press on January 10th.

War and Manpower

The familiar statement that industries are in the front line gains in importance from the attempts made by Mr. Bevin to use the powers, vested in the Government, to secure industrial conscription. Diversion and dilution are already common and demobilisation too has been practised. With every successive call-up of workers in non-reserved occupations, the labour reserve has grown smaller, and the stage of full employment has been evidently passed. The existence of millions in khaki, though many may be only in the Home Guard, means that even after the successful addition of over half a million women to the working population the demand for labour is exigent and more women are being taken.

The decision to provide more men for industry may not be due to the pressing needs of the damaged areas, but to the desire to increase both civilian and munitions output. A regular flow of imports renders both practicable. While all calculations based on 1940 figures may be valueless, the general presumption that unemployment had suffered successive reductions after dropping below the million mark before the autumn raises certain questions. In view of the unexpected smallness of casualties in the *blitzkrieg* the pressure on manpower may be surprising unless a field force of say four millions is to be kept for preventing invasion and even launching an offensive on the mainland of Europe. But it is open to question if the new conscription move is the result of a shortage of labour as such. It is probably the consequence of a temporary but acute scarcity of skilled or specialised labour, and Mr. Bevin, as Minister for National Service, is perhaps appealing as much for the relaxation of normal restrictions as for recruit for industry. The appeal may be due in part to the defects of the system of registration, and the late introduction regulations for the enforced enrolment in industry may also be ascribed to the intensification of war effort. If that were so, the conscription scheme would be readily approved, especially, if it is designed to get mechanics and operators needed to assemble imported aircraft and armaments. There have already been, in the case of dock labour for instance, decasualisation and enforced migration. Evacuation requirements have also conferred additional mobility of labour to compromise on the transference which is dictated by present circumstances. The actual position may be better than imagined, but advance consultation, as is implied by the conference proposal, has its virtues. It is, however, misleading to speak of an industrial Parliament since what is envisaged is not an assembly, organised mainly on a functional basis, as on the lines described by the Webbs twenty years ago; nor is it a reproduction of the institution peculiar to the corporative state. The cables suggest that Mr. Bevin is merely following the practice adopted by Mr. Neville Chamberlain when he conferred with Mr. Fred Smith and other Trade Union leaders in 1938 so that hours of work could be modified in the heavy industries, to hasten the completion of rearmament. Mr. Bevin has of course the immense adventage of working with the Emergency Powers Act passed in May 1940 behind him. The application of its provisions to labour should be easy as Mr. Morrison, Mr. Greenwood and Mr. Bevin are in the Cabinet and one of the implications of 'total' war is the artificial, but previously known, diversion of manpower. Mr. Bevin may be adopting precautions against a period when war demand for labour may be greater. A three-year was is still considered a certainty, as Britain is without the power to draft, like

Germany, the nationals of the occupied countries', she is compelled to look at home and industrial conscription comes nearly two years after the National Militia Act, so that the public is not unprepared. The situation is not one that will cause anxiety. As to the state of employment, there is every indication that the optimum has been almost reached. According to a recently cabled summary which sets out the position in regard to human resources, as distinguished from the material, needed for the war effort, there has been a continued absorption of men in a diversity of industries.

Japan as Peacemaker.

The submission of the Indo-China Government last September to the demands of Japan has been helpful in only one respect. Japan has intervened as mediator in the unofficial war, raging for a month, until January 28. The terms of the armistice concluded at Saigon on January 28 were announced from Vichy after a few days. The articles provide for the cessation of hostilities and the adjustment of differences by a boundary commission on which Japan would be represented. It has already been forecast that Thailand would retain part of the territory won in Cambodia and Laos through successful aggression. The despatch of a special mission to Tokyo immediately after the armistice suggests that Bangkok and Tokyo are completely *en rapport*. It may be recalled that as soon as the news of fighting along the border of Indo-China came through most observers professed to see the hand of Japan, though Indo-China had arranged to provide air and naval bases, avoid commercial relations with China and permit the stationing of 12,000 Japanese troops at various ports. It was generally believed that commercial penetration would increase as Indo-China, dependent on France to a striking degree until June, would have to look to Japan for supplies and purchases too. The piastre (previously worth 12 francs) had been detached from the franc and a new link with the yen only revealed the extent of Indo-China's dependence.

While the war of January had apparently little or no effect on the Siamese currency (the exchange rate quoted being Rs. 124¼ per 100 bahts) it should have had no ill effects on the Indo-Chinese currency either. Th yen-dollar rate hardly moved, and the piastre therefore could have undergone no change. If the Siamese paper currency (notes for 1 baht have been long current) has suffered no depreciation though it is more or less baht money, the Indo-China piastre, too, should be unchanged. But the fortunes of the piastre are of small importance to the 24 millions living in the five territories grouped under Indo-China with two capitals Saigon and Hanoi. The fighting, since the regular air raids on Sisophon and other towns of Indo-China and the reprisals against Bangkok, has assumed a more serious character than anticipated, but it was inevitable after the presentation of an ultimatum outlining demands for the restitution of territory along the Mekong, surrendered about 1867 to France, which laid the foundations of a Far Eastern empire about this time, and extended it by the time Britain had moved into Upper Burma. Sections of the Indian press, in spite of a rooted distrust of aggression, have not disguised their view that Indo-China had a poor case. But the successful mediation of Japan provokes ill-concealed anxiety in most quarters. The certainty of the cession, the districts of Battambang and Siamreap mean an addition to Thailand's territory. But Thailand, after the abdication of King Prajadiphok, has moved away from Britain steadily and the ruling clique has been distinguished by pro-Japanese feeling. It is generally feared that Japan will make use of the two puppets to advance her interests in the South Seas regions. The last declaration of Mr. Ohashi, the Vice-Minister for Foreign Affairs, the accredited expert on the tropics to which Japan has directed her attention in 1940 suggests that Japan has a forward policy. The success of that policy depends, in the last resort, on the conclusion of the war with China, and the efforts lately made to blockade the coast and also to throw over the Nanking regime suggest that the Japanese Foreign Office is nothing if not resourceful. The U.S.A. may interfere with the prosecution of the South Seas policy though Mr. Matsuoka's precautionary speeches may suggest otherwise.

Relief to Young Life Offices

Two new Bills that will be considered during the Budget session of the Central Assembly seek to amend the Insurance Act of 1938. The Bills are official in origin, and one of them seeks to give effect to the conclusion reached at a conference held last year. Representatives of Insurance Associations have put forth their views relating to the Chief Agency clause particularly, and expressed also their views on reforms and clarifications that were required. The Bill thus promises to make the law more comprehensive, clear and correct so that defects and gaps are removed. The Conference held last year dealt more particularly with life insurance. But the claim for protection advanced then as before was overruled.

The draft Bill has already appeared in the Gazette of India. The other Bill seeks to relax the salutary provision relating to deposits payable by insurers. Young life offices, that is to say, new companies which have not developed enough strength, have not experienced anything like favourable conditions. At a time when the biggest and oldest companies feel the effects of wartime uncertainties as is reflected in the slower growth of new business, the young companies are faced with falling business and a rising lapse ratio ; they are not in a position to pay the deposits by instalments as fixed

by the Insurance Act. The Bill seeks to reduce, for the duration of the war and one year afterwards, the instalments of deposits due from such insurers carrying on life insurance business only, subject to the provision of certain safeguards for preventing advantage being taken of the concession to incur increased expenditure or liabilities of an unjustified nature. If the Bill is passed as introduced, insurance companies other than co-operative or mutual companies which commenced business between September, 1929 and September, 1939 and whose premium income does not exceed Rs. 30,000 will be entitled to the facility of paying only half the minimum deposits during the war and for one year later companies can waive the concession or claim as they like. As the relief promised is conditional it is not likely that all companies will apply for the concession. Further, an eligible insurer desirous of making use of the facility offered by the amendments will not be allowed to declare after January 1, 1941, any bonus or dividends at rates higher than those last declared prior to the outbreak of war and and the renewal expense ratio as calculated according to the Insurance Rules must not exceed the ratio to the business of the period ended December, 1939 subject to appropriate treatment of capitalised expenses.

British War Savings Movement

Mr. H. L. Humphreys Hon. Sec., British War Savings Movement, 7, Council House St., P. O. Box 625, Calcutta writes:—

As I am informed that Banks are receiving an increasing number of enquiries with regard to the non-receipt of acknowledgments of purchases of National Saving Certificates or Bonds I seek the publicity of your columns to explain the situation.

The present delay in acknowledgments of purchases made is unavoidable and is due to the irregularity in the mails due to War conditions and also to the great congestion in the British Post Office owing to the number of small purchases which amount to over £1,000,000 per day.

For the information of purchasers in India and to assure them that these contributions to the support of the War are reaching their objective I would like to explain the procedure in respect of purchases made through Banks in India.

Each purchase is entered on a Schedule in duplicate and the duplicate copy is sent to London by a different mail from the first copy. These Schedules are numbered and owing to the system of checking and reconciling of accounts adopted by Banks, non-arrival would immediately cause enquiries to be made at both ends, and thus these remittances must be accounted for ultimately.

On arrival of a Schedule in London, the Bank instructs the Post Office. The Post Office has to scrutinise each application and identify by the specimen signature if it is not an initial purchase. For a first purchase, the specimen signatures are recorded against a new Registered Holder's number in the issue of a numbered Bond Book as the case may be. Despite the enormous volume of this work the acknowledgments are being issued by the Post Office within three to four weeks.

When the London Bank receives this acknowledgment from the Post Office it is recorded in the Bank's books and then sent to India where possible in duplicate by different mails. If a mail is lost by Enemy action as was recently notified concerning mails ex London November 4th to the 8th, the London Office will repeat the information of the documents which were in the missing mail.

Acknowledgments are now being received by Banks of purchases included in Schedules sent to London in some cases as long ago as June. It will therefore be seen that under present conditions it takes between 5 to 7 months before an acknowledgment can be expected. Purchasers may rest assured however that every sum contributed in this way to the support of the War reaches its objective, although there may be and is delay in their receiving acknowledgments.

I would like to add that an enormous amount of work is undertaken by the Banks at no remuneration. The transaction is carried out at the fixed open market rate of Exchange. I know it would assist the Banks considerably if purchasers who consider their acknowledgments to be overdue would refer to me with full details of their application rather than cause further expense to the Banks by extra correspondence.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS

OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 31st December, 1940.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Mr. James Orr, Sir Shapurji Billimoria and Mr. C. Gill respectively.

JAMES ORR,
S. B. BILLIMORIA,
C. GILL, } *Auditors.*

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It.)

If I could persuade myself to be conventional, I should begin the week's "Gossip" with a welcome to the latest entrant into the field of daily journalism. And I should follow it up, too, with the usual remarks about there being room for another evening paper and hopes that the new daily will uphold the best traditions of journalism. Such conventionalism must no doubt be cut out; and the links between INDIAN FINANCE and THE TELEGRAPH constitute only another argument against such a line of comment. THE TELEGRAPH has spiritual kinship, too, with this journal. For it has been started with no other strength than the consciousness of need for certain kinds of services and confidence in the ability to render such service. That, indeed, is sufficient justification for any sort of enterprise, though it can hardly be pretended that it lacks altogether the element of competition. I am sure there are many readers of INDIAN FINANCE who can recall the grudging welcome accorded to it by one of our financial contemporaries of this city and of that time. Those were days when the courtesy of welcoming a new daily or periodical was not altogether forgotten. And the birth of INDIAN FINANCE was given due editorial notice. Even when the INDIAN FINANCE YEAR-BOOK was first issued, editors were generous enough to proclaim its merits through their columns. But times seem to have changed vastly since. Even more praise-worthy publications than the YEAR-BOOK have been brought out. The ALL-INDIA PLANNING SUPPLEMENT and the EASTERN GROUP NUMBER are, to my mind, deserving of some editorial notice. I have, no doubt, that a personal appeal, more or less importunate, would bring in the bouquet. But leave aside the personal aspect. The revival of old time courtesies has a lot to be said for it apart from the merits or demerits of particular cases.

Perhaps a clause must be added to the above statement. There is something particularly irritating in a welcome which is lacking in cordiality. A rival is a rival, even when, according to some conventional terminology, the rival is to be called a contemporary. And the sphere of competition is not so clearly demarcated. I have heard it said that Penguin Books are a menace to all serious journals; that, when the works of first rate writers are available for five or six annas a volume, no one would think of subscribing to THE NEW STATESMAN OR THE SPECTATOR. Imagine the editor of a journal like that, who is uneasy with this thought and who has still to welcome the Penguin Specials. Language is bound to be stilted. The welcome will be hedged in with all manner of qualifications. He might talk of the democratisation of culture. But he would wish, not in so many words though, that democracy did not cut so big a hole into his pockets. Silence, discreet and dignified, is far better.

I was talking of the democratisation of culture. A pice paper such as THE TELEGRAPH can justly claim that its aim is no less. It is unquestionably within the reach of all who can read a newspaper in English. May be, many of those for whom it is intended, have not developed the habit of buying a newspaper, because, as a rule, newspapers are not within their means. Even those who buy a newspaper in the morning may have to deny themselves this amenity for the simple reason that two annas a day is too big an outlay on newspapers. For such, THE TELEGRAPH will provide real relief; and others will before long acquire the habit of buying the pice paper that presents full news and eminently readable matter in every one of its features.

I did not set out either to offer a welcome to THE TELEGRAPH or to air a grouse, though I have done a little of both. There is one aspect of THE TELEGRAPH which is of special importance to the readers of INDIAN FINANCE. They should have guessed by now that finance—as a theme or subject and not as the staying power of a new venture—is not the weak, but the strong, point of THE TELEGRAPH. It carries every day what I had vainly pleaded for a long time, a city column conducted by a competent City Editor. And THE TELEGRAPH attempts in its three editions to provide up-to-the-hour news of importance to businessmen. There are special arrangements for the delivery of these editions at the appointed hours to firms which require such service.

The Government of India have appointed an Industrial Research Utilisation Committee to examine the terms on which the patents resulting from official research should be leased to private corporations. This announcement appeared weeks ago; and some item of news or other relating to this committee has been appearing in the press ever since. I wonder whether there is adequate understanding on the part of the public of the importance of the issues connected with this subject. So far as I am aware, only a few papers have taken editorial notice of this problem. And, for my part, as I had occasion to confess last

week, problems requiring knowledge of modern science are fairly beyond my understanding. I have no idea of the kind of specialised processes which research under official auspices might evolve or the exact uses to which industrialists may be able to put them. But I have no doubt in my mind that, during the course of the present war, India, too, will have made striking progress in scientific research and that the problem of utilisation of research will be no less urgent in her case than in the case of countries where the war has made a more powerful impact on science and industry. In fact, I believe that the appointment of this committee is the surest sign that the days are gone when industrial research was but glorified routine or just plain eye-wash. The war has begun to exert its full pressure on scientific research and inventions. But, as the requirements of the Government increase more and more, problems of a highly technical nature are bound to be tackled and solved.

The results of all this research would not be restricted to the momentary solution of the problems tackled. More problems are bound to be raised. For the moment, it is the narrow question of determining the terms on which private parties are to be allowed the use of these patents. You may imagine that, whatever the terms, the basic principle should be one of limiting their use by private parties to the period of the war, after which the question should be gone into again. I am by no means sure that this principle will be adopted. And yet the adoption of this principle is fundamental to any sound solution of this problem. The profits that private enterprise may derive from the utilisation of patents during the period of the war are not really so much the important point, as the need to ensure that nobody will be placed in a position to prevent Society from reaping to the full the benefits of new inventions.

It is not known as widely as it should be that the economics of new inventions has undergone a vast change during the last twenty, thirty years. Formerly, it was assumed without serious question that, when a new invention was made, its utilisation in industry would be of advantage alike to the community and to the capitalists. Inventions being, as a rule, labour-saving devices, only the interests of labour seemed to be affected; and the opposition to the use of mechanical inventions was met by the argument that, in the long run, the cheapening of the product and the expansion of demand for it would lead to the employment of more labour than was originally thrown out of work. The contingency of new inventions hitting the capitalist was so remote that it was not even thought of. And orthodox economics centres round assumptions which are not universally valid. It was heard, therefore, that the incentive to invention should be nursed by the protection of patent rights, though few inventors are known to have reaped the fruit of their special faculties. Patent rights are most zealously guarded with the help of the law; and in this one sphere at least, the law was truly international. The inventor, often a crank with a kink, hawked his invention, till some capitalist drove a veritable bargain with him that should deprive him of all zeal for more inventions. But, whatever the fate of particular inventions, the utilisation of new inventions was a more or less quick process; and Society reaped the benefits, though at some cost.

All this has changed during the last few years. The capitalists' interest no longer lies in the quick exploitation of new inventions. Now, plant and works bear the same relation to new inventions as the skill of the artisan bore to the spinning jenny and the flywheel. With this difference that, while the labourers could do nothing to foil the industrial revolution of the eighteenth century or the labour-saving devices of later times, the capitalists can well acquire the patent rights of new inventions and smother them in their strong rooms. The capitalist

is as zealous as ever for the protection of patent rights. The motive is the same, private profit. Only the results of that motive are different. It is extremely significant in this connection that a world war is the occasion for the birth of new inventions. It is said that the last war advanced industrial efficiency by twenty-five years. The present war may prove to have accelerated it in terms of time by fifty. Post-war reconstruction is a difficult problem even in the absence of radical changes in technology. But when these changes are added to it, solution is impossible, at any rate, with hide-bound ideas of social structure.

The question is in the last resort one of society absorbing changes in productive technique and in the volume of production. Changes in productive technique affect capital and the factors of production, while changes in the volume of production affect primarily consumption and the distributive system. When new goods and services are produced, changes in credit and currency would suffice to meet the problems raised by such addition. But when new productive processes are invented, their adoption necessarily involves a process of scrapping fixed capital engaged in production, whether it be in the form of plant and machinery or acquired skill of individual artisans. When it is labour that is adversely affected, orthodox economics is in no doubt that the adoption of new processes at the expense of the working classes is economic. But when the interests of investment are threatened, economists are ready to urge that the inventions must be put in the ice-box. The industrial revolution of the eighteenth and nineteenth centuries was achieved at the expense of labour. The new industrial revolution threatens, not helpless individual workers, nor even organised Trade Unions, but the powerful capitalist classes, who would experience little difficulty, in the absence of social vigilance, in practically extinguishing new inventions that threaten their vested interest. It will be clear, therefore, that the principle of protecting patent rights, which in the past was indubitably in the interests of society at large, may no longer be in accord with the public interest. For protection of patent rights may lead, as indeed it has led in the past few years in many instances , to selfish withholding of their benefits from society. The present war has already assailed patent rights of private corporations. In Britain, the Government has power to assume these rights, if such assumption is necessary for the more efficient prosecution of the war. No private interest can dare raise its voice of protest against it, when the whole country is threatened with invasion. When the war is over and peace dawns, the requirements of post-war reconstruction are bound to be even more pressing than the requirements of war. There will be no tenderness left for the private proprietary rights as such; and the question of utilising new inventions will be judged on its merits, that is, without any facile assumptions about the sanctity of patent rights.

But whatever may be the State policy of the future, the fundamental economic problems governing the adoption of new inventions will remain. I have referred already to the difference in the attitude of orthodox economists to the question, when it is capital, and not labour, that is adversely affected. Is the problem intrinsically different in the two cases? Let me emphasise what orthodox economists often overlook, that the acquired skill of, say, 100,000 workers is capital, though of an intangible kind, the same as plant or machinery valued in the balance sheet at £1,000,000. The justification for adopting laboursaving devices calculated to throw 100,000 workers out of employment is that the change will lead to a larger flow of goods for consumption. And if the same justification obtains when capital has to be scrapped, no one can reasonably urge that the change is economic from the point of view of society at large. The problem cannot be different merely because the value of plant and machinery is set down in terms of pound, shilling and pence in a printed balance sheet and the capital value of skilled labour is not easily assessed. Capitalist arguments, generally derive their strength less from economics than from mathematics and accountancy. When capital is affected the loss which a few individuals may sustain is capable of being magnified into a staggering loss of millions of pounds of capital wealth accumulated by society over a long period; while, in fact, the problem for society is to choose between one form of capital and another for future productive activity.

I confess I have to some extent unduly simplified the problem. The issues are no doubt a little more complicated. Adoption of a new process involves large investments. The investments so called for and the investments already in being have to be compared before one can decide which course is more socially advantageous. But it would be foolish to leave the decision on economic issues in the hands of commercial accountants, or to allow private capitalists to decide whether new inventions should be utilised in production or smothered at birth through the instrumentality of patent rights which are never meant to be used. Some of the new processes are so revolutionary in nature that their adoption would involve not only the scrapping of a large part of existing capital, but also a thorough overhaul of the system of distribution. Provision has to be made not only for the flow of these goods into consumption buto also for compensat-

ARMOURCOAT
"ASK **JACKS** ABOUT IT"

CONSIDERABLE activity is already to be seen in Council House though the session of the Central Assembly is not due to begin before Tuesday next. A meeting of the Select Committee was held yesterday to examine the Merchandise Marks Bill. To-day there is another Select Committee sitting to go through the provisions of the Railways Act Amendment Bill—what is popularly known as "the Ticketless Travellers Bill". The agenda for the opening day of the session is an unexpectedly short one. In addition to certain formal motions to fill vacancies in committees of the House, the only business for the day is the consideration of the Bill to amend the Insurance Act.

Talks in connection with the Indo-Burma trade negotiations have begun this week in a fairly calm atmosphere. The importance which the Government of Burma attaches to these negotiations is shown by the fact that it has sent a strong delegation headed by the Premier himself. The Indian delegation is equally strong with both the Commerce Member and the Finance Member in it and also a representative body of non-official advisers to keep the Government in touch with commercial opinion. From the trade figures for December last published this week one finds that the value of Indian merchandise exported to Burma was nearly Rs. 1 1/2 crores in December 1940 as against just a crore in December, 1939. Taking the nine months, April to December 1940, the increase in the export of Indian merchandise to Burma was of the value of over Rs. 2 crores. On the import side we find that India took from Burma merchandise worth nearly Rs. 180 lakhs in December 1940 as against Rs. 201½ lakhs in December 1939—a declining tendency. The decrease during the nine months, April to December, is about Rs. 3 crores. These are highly significant figures which emphasise the importance to Burma of the Indian market and the need for maintaining cordial trade relations between the two countries. In the year 1939-40 the total exports from Burma were of the value of Rs. 55 crores of which India took as much as Rs. 33 crores—three-fifths of its total which is a fairly large proportion. As regards imports India supplied goods worth nearly Rs. 14 crores as against the total of Rs. 25 crores.

Two factors emerge as a result of the present trade position disclosed by the figures given above. The first is the enormous balance of trade in Burma's favour As the imports from Burma into India during the nine months, April to December 1940 totalled nearly Rs. 21 crores, which is nearly double the value of India's exports to Burma during the same period, the advantage which Burma enjoys is obvious. It is true that India's exports to Burma are, owing to the position created by the war rapidly increasing, but this does not affect the claim that the continuance of the present trade relationship between India and Burma has always been to Burma's advantage. And secondly, as is well-known, the anxiety of the Burma Government is to see that this important possible source of revenue by means of customs duties viz. imports into Burma from India should be utilised in the revised trade agreement to add to Burma's finances. This raises many difficult and complicated questions, but it is hoped that as a result of the negotiations now begun in a friendly and mutually accommodating spirit, a satisfactory arrangement will be entered into. Whatever is done to increase India's exports to Burma is of the greatest importance at this juncture. Conversely, anything done which has the opposite effect and adversely affects the volume of Indian exports to Burma has to be deprecated. As the wider question of the position of Indians in Burma is necessarily involved in these negotiations, though technically they pertain only to commercial matters, the problem before the two delegations is by no means a simple or easy one.

The Central Board of Revenue has to-day issued the All India Income Tax Report and Returns for the year 1938-39. As compared with the two previous years a steady increase in the total demand and net collections under income-tax is disclosed —the latter being nearly Rs. 1¼ crore more in 1938-39 than the figure for the previous year. The report contains an account of certain features of trade conditions based on Commissioners' reports, from which one sees that though there had been in the year some improvement in trade and industries, the money lenders generally had a bad year due largely to the result of debt legislation in the provinces and the agriculturistss' inability to pay. On the whole it seems that the Co-operative movement has not as yet suceeded in serving adequately the needs of small borrowers.

Mention is made in the Board's report of the new experiment started in Bombay by organising a Special Provincial Circle in October, 1938 to examine important and difficult income-tax cases on the lines followed by the Enquiry Branch in the United Kingdom. Nothing more is said of the working of this experiment about the results gained or the possibility of extending it to other big centres of income-tax collection. It is however mentioned that the total income assessed to income-tax in Bombay was Rs. 53 crores in 1938-39 as against Rs. 48 crores in the previous year—an increase of Rs. 5 crores which may to a certain extent be due to this new organisation for tracking evaders and preventing in other ways loss of legitimately due revenue. I learn on enquiry that it is now proposed to open a similar circle in Calcutta with effect from April next and that a scheme with this purpose in view will be placed before the Standing Finance Committee at its next meeting on the 15th February for its consideration. On the general question of evasion the Central Board of Revenue says in its report for the year 1938-39 : The tendency on the part of the assessee to evade tax by maintaining double sets of accounts, false purchase figures, suppressed sales, omission of sources of income such as branch businesses, house property etc., maintaining accounts in fictitious names, debit of bogus expenses in regard to interest and salaries, etc. continued unabated". What further steps are necessary to check evasion and get the full dues to the Exchequer is still a matter for consideration.

Another important proposal which will come up for consideration at the coming meeting of the Standing Finance Committee is the appointment of three more Trade Commissioners—long expected and long over-due. The intention is to have the three new Indian Trade Commissioners at Ottawa, Buonos Ayres and at Durban respectively. The two former will probably work under the supervision of the present Indian Trade Commissioner in the United States of America, Mr. Mallick, who is a senior officer of the I.C.S. One of the three new Trade Commissioners will, it is understood, be Mr. Ahuja of the London office. The Commerce Member, Sir Ramaswami Mudaliar, is entitled to the thanks of the country for taking up this question of appointing new Trade Commissioners so energetically that already this year a new office has been opened in Australia and it is soon to be followed by three others. It will be no small satisfaction to the commercial community if to these newly created posts men with commercial experience who have not only practical knowledge of the trade problems and difficulties but also command the confidence of the community are appointed. For some time unfortunately there has been a tendency to prefer officials from the services to men connected with trade and commerce.

The selection of Mr. M. S. A. Hydari, as the representative of the Government of India in the Eastern Group-Council has given great satisfaction. So glaring has been the absence of Indians in the appointments made to war departments that the selection of a popular Indian official like Mr. M. S. A. Hydari as India's representative in the Eastern Group Council has come as a pleasant surprise. It is understood that his successor as Labour Secretary will be Mr. Prior and that Mr. N. R. Pillai will be Additional Secretary, and Mr. T. S. Pillai will be Joint Secretary of the Commerce Department.

(From Our Correspondent)

Bombay, February 5.

Coinciding with the plea of Mr. C. B. Mehta, the outgoing president of the Indian Merchants Chamber for the development of industries in wartime comes a speech at Poona asking for the development of heavy industries. The speaker was the Punjab Finance Minister and economists and officials heard with respect the views of Sir Manohar Lal on the subject of Industrialisation. Heavy industries were essential, in his opinion, because the future development of India depends on them. But he added that cottage industries and hand-spinning too would retain their importance. He urged that India should embark on the manufacture of the machinery and equipment needed for defence. He said that at present the 400 millions of people had no value in the defence of the country unless they were properly equipped. He insisted that India had no time to lose and that unless Indians took up the organisation of heavy industries they would have no place in the world.

Advice to the same effect was tendered by speakers in Bombay who assembled to see off the young men who were to go away to Britain to learn industrial technique and imbibe the spirit of labour organisation under the scheme introduced by Mr. Ernest Bevin. The meeting in Bombay was large and representative though the Commerce Member could not come down from New Delhi. Mr. M. S. A. Hydari and the new adviser, Mr. C. H. Bristow were prominent and the Commissioner of Labour too was present. Mr. Hydari compared the batch of recruits for industry with the Byng Boys of the last war and said they were on a very important mission and should uphold the national representation. They were volunteers, free men who chose to play the role of Britons' comrades in factories that were needed for the war effort. In spite of dangers the experience would be worth while and they would help to hasten and expand munitions production. They would learn much about self-government and cooperation in industry and the lessons could be applied after their return to India. Mr. N. M. Joshi, who was asked to speak, declared that the young men deputed to Britain under the scheme would prove the truth of the assertion that given good opportunities, Indian workmen would be found as efficient as those of advanced countries. He expressed his gratitude to Mr. Bevin for affording Indians an opportunity for studying the trade union movement in Great Britain, and hoped that the contingent of workers would come back not only as better technicians but full of ideas for improving the lot of the Indian worker. Mr. A. S. Trollip of the B.E.S.T. observed that the trip would facilitate India's further industrial development. He was sure that the young men would get a warm welcome in Britain where they would have a chance to imbibe the British spirit and see how harmony resulted through organisation. Mr. Trollip praised the Indian worker for his adaptability and gave an example of how untrained hands had within four or five months acquired technical skill. Mr. Husseinbhoy Lalljee and Sir Sultan Chinoy wished the young men godspeed and the latter referred to the existence of a concern conducted mainly by Indians which was certified as being more efficient than similar organisations inother parts of the world. Another gathering at the University Hostel listened to remarks on industrial advancement and its necessity when Dr. John Matthai spoke to the young men. Dr. Matthai suggested that it was highly desirable to have close collaboration between economists and technologists for the industrial development of India and thought that it was of good augury that students of economics and technology resided in the same hostel.

Reference to industrial progress figures largely in the Poona session of the Institute of Engineers (India). Sir Ardeshir Dalal was the principal guest and a happy reference was made to his connections with the iron and steel industry. Mr. N. V. Modak spoke on general problems rather than on engineering in particular and discussed the relations between business enterprises and scientific research which could never be divorced from its practical application. Research resulted in profits more often than not. Sir Ardeshir discussed certain general aspects of industrial development and described India's responsibilities. He mentioned that war had revealed serious chinks in India's industrial armour. He instanced the inability to produce motors, locomotives and aircraft or even stationary oil engines. He implied that such incapacity was likely to prejudice India's defence and reduce the value of the country's war effort. A noted industrialist endorses the widespread view that key industries need to be developed by special efforts. Sir Ardeshir referred to the steady rise in munitions production as a result of the expansion scheme. Things not previously made are being turned out in quantities. Three or four large plants will soon produce basic chemicals and the production of aluminium from native bauxite is projected. Industrial progress, however, is hampered by lack of sufficient machinery and machine tools. Sir Ardeshir went on to describe what was being done at Jamshedpur for young men eager to acquire skill in industry. He suggested that engineers should put up a scheme to provide for the practical training of qualified young engineers in industrial establishments and Government workshops.

The most brilliant social event of the season was the warplane at Government House last week. For a month the press was full of references to the big crush and the function was brilliant to a degree. A 100-rupee note autographed by Sir Archie Wavell was among the exhibits put up for auction and the bigger noises of Bombay vied with one another in acquiring such choice items as a letter written by Marshal Graziani to a divisional Commander. This is not the only memento of the Libyan compaign as the city had seen plenty of Italian prisoners getting into the train for a long stay in the detention camps. Racehorses came under the hammer and golden retrievers (golden not only in name) fell to the men who paid heavily for the privilege of owning them. Over Rs. 1 lakh was realised and this means three Boulton Paul Defiants for the R.A.F.

The motor trade is not greatly concerned over the report that lorries and other vehicles may be requisitioned by the Government for its own purposes. Compulsory purchase has been referred to in a recent report, and the execution of the scheme may help the motor trade here to sell more vehicles to private users though the advent of petrol rationing and the higher prices are naturally disturbing factors. The Army is bent on having more vehicles such as are needed for a force of half a million and the *communiqué* issued last week refers also to the need for trained drivers. It is for the training of these that more motor vehicles are needed and the usual survey of resources has been taken in hand. Powers to buy them outright have been taken under the Defence of India Rules and though only certain types have been specified a fairly large number of vehicles will be obtained. Provision for voluntary sale at a price providing a generous margin over the given market value has been made and arrangements for the employment of men thrown out of work are also contemplated. The home market is not likely to be influenced greatly as demand has fallen away since the war and the offtake of special types under the scheme for compulsory purchase may help increase the sales of not greatly different vehicles.

The Government of Bombay propose to introduce a new Act intended to fight farm pests. Damage due to insect pests has been considerable in recent years and crops have necessarily suffered. The investigations of the Agricultural Department have been concerned with the prevention or reduction of such loss as is occasioned by pests.

A Resume of Commodity Markets

WITH the exception of the raw cotton and jute manufactures markets, a generally easier tendency has been noticeable in the commodity markets during the past week. Even the former have shown an irregular tendency towards the close and prices on balance are not very much higher.

The weakness of the jute market has been due to apprehensions regarding the policy of the government. The jute manufactures market continued to be firm on good buying support. The forward positions showed a tendency to improve, and on Thursday morning, 9 porters July/September improved to Rs. 13. Lack of buying support and some disappointment with the local stock figures have resulted in a slight recession in prices. The raw cotton market recovered on bear covering and trade and export buying. The soundness of the technical position was mainly responsible for the recovery in prices, but continued weakness of the overseas markets caused selling at the higher levels. The wheat market has been very weak. Encouraging crop prospects and the absence of buying on a large scale for military purposes has created a bearish sentiment for old crop positions. It is felt that the high premium for old crop positions is no longer justifiable. The decline in quotations for Choice White Ready and March is, therefore, more pronounced than the decline in the quotation in new crop July position. While Choice White Ready is nearly two and a half points lower on balance, July has shed only ten annas on balance. Bullion markets have not been active. The only feature of importance is the recovery in the quotation for Indian Mint Silver Second Settlement and the resultant narrowing in the discount over Ready.

Jute

The raw jute market has been rather weak during the past few days. Only towards the close there has been a recovery. There is considerable anxiety regarding the policy of the Government.

Answering a question in the Bengal Assembly, the Commerce Minister said that it was not a fact that the governments of Bihar and Assam had refused to co-operate with them in their scheme of restriction.

"The Governments of Bihar and Assam, he said, "have pointed out that they are not in a position to enforce regulation of the 1941 crop by the same methods as is being adopted in Bengal. Besides the lack of suitable legislation, there are other difficulties which make it impracticable for them to control the 1941 crop in the same way as Bengal is doing. The Government of Bihar have assured this Government that they will take steps to prevent any increase of acreage in Bihar next year. The Government of Assam have asked for certain financial assistance to enable them to regulate the 1942 crop by the methods employed in Bengal and an agreement with this Government is at present under their consideration. I am quite sure that both these Governments will do all they can co-operate with us at least to the extent of discouraging any increase in the acreage under jute in their provinces next year."

He denied also the rumours regarding the application made by the Bengal Government to the Central Government seeking permission from the latter to raise a loan of Rs. 15 crores for the purchase of jute.

The jute manufactures market was firm throughout, in spite of the weakness of the raw jute market. Only towards the close has there been a decline in prices on lack of support. The local stock figures at the end of January 31, 1941, reveal that total hessian stocks show a slight decline of about 20 lakhs yards, while there is an increase of about 11½ lakhs in sacking stocks. If the increase in stocks of sandbags of 40 lakhs yards is taken into account, the decline in stocks for ordinary consumption is perhaps even greater.

Following heavy American buying and reports regarding shipments two weeks back, it was expected that the decline in stocks would be even greater. There has thus been some disappointment in this regard.

Rice

The question of levying an import duty on rice has been in the limelight for some time. Non-official advisers in the Indo-Burma trade talks have been insisting that a duty on imports of rice should be levied especially as there is every likelihood of an increase in supplies on account of the difficulty in exports and the possibility of an increase under the crop with the restriction in other crops like jute, grounds, etc. It was expected that there would be some opposition from the Burmese delegation. But it has now been agreed that the duty will be leviable in case the price for rice went below a specified minimum level. It is pointed out that this contingency may not arise so long as the war lasts.

Groundnut

A conference of provincial representatives and the Central Government is to be held in New Delhi at an early date. With the closure of the European markets, there has been a sharp decline in exports and the problem of disposing of the surplus has become very difficult. It is proposed to restrict the area under the crop for the next season. It is expected that the ryots who may be agreeable to restrict the area under the crop will be compensated to a certain extent.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, 6th February.

IT would appear that the Bengal Government is evincing some concern at the progress, or what they consider the lack of progress, of the Jute Purchase Scheme. As a matter of fact it is difficult to estimate as yet how much has been bought towards the second quota, and the issue is further complicated by the fact that some groups who had bought beyond their quantum in the first period, did not declare the excess but may be carrying it forward to the second period. In reply to an interpellation in the Assembly, the Finance Minister quoted the figure of 68 lakhs of maunds purchased up to the 15th January. There is reason to believe that if the excesses noted above had been declared, the total would have very closely approximated to the figure undertaken, *viz.* 75 lakhs of maunds. On the other hand, estimate of the quantity purchased during the second period, since 15th January, while they vary considerably in no case exceed 25 lakhs of maunds, that is only half the quantity covered with only another week to go before the end of the quota period. It is difficult indeed to get confirmation of even this quantity of business done, though quite a number of Mills and groups of Mills declare that they have already completed their proportion of the quota up to 15th Feb. It may be taken for granted that Government has no desire to enter the market as a purchaser of Jute, (there is already some 30 lakhs of rupees locked up in the purchase of 50,000 B/s at the end of last season for the purpose of supporting the market, which nest-egg Government is not likely to realise on for some considerable time except at a heavy loss) so it may be assumed that strong pressure will be brought to bear on the Mills to stand up to the engagement entered into on their behalf at Delhi.

An interesting item in the January Bulletin of the Indian Central Jute Committee suggests the possibility of a cheap chemical treatment being evolved to remove the dark gray colour from what is commonly known as "shamla" jute, and to restore the natural light or golden colour of the fibre. If this could be done without damage to the fibre in other respects, it would be a Godsend to the trade. Mymensing, for instance, the largest jute growing district in Bengal, produces a preponderating proportion of "shamla" fibre, usually attributed to most of the jute being steeped in borrow pits which rely entirely on rain for replenishment and soon become fouled after one or two steepings. The fibre is amongst the best for spinning purposes but the lack of colour frequently relegates this jute to a grade lower than it would be entitled to if the colour could be retained or restored.

While the Bulletin contains its usual quota of warnings to the monopolist school of thought with regard to jute, there are also one or two grains of comfort. On the one hand are reports of the probable loss to the trade of some 150,000 New Zealand woolpacks as that country intends to operate a factory to make packs from flax. Spain is also reported to be supplementing a shortage of jute with Esparto Grass, and Formosa is reported to be increasing its production of Jute. On the other hand the Amsterdam Museum of Trade, which has been experimenting with Sisal bags for the past three years concludes that, generally speaking, Sisal cannot compete with Jute. Nor can serious competition be expected meantime from a cheap form of fibre known as "Caroa" grown in Brazil.

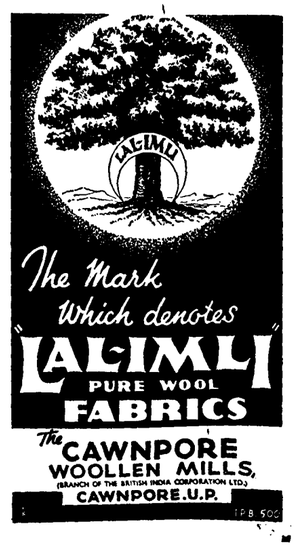
Strong efforts are being made by the Dundee section of the Jute industry to encourage the use of Jute Hammocks in Air Raid Shelters. Already it would appear that jute fabric is in use for kutcha camp beds in such shelters. But it is contended that jute hammocks would be easier to keep clean and would also take up much less room.

The most trenchant criticism of Prefessor Todd's scheme for the reconstitution of the Jute Future Market comes from the East India Jute Association. This is not surprising when it is considered that the acceptance of the Todd scheme by Government would mean the demise of the East India Jute Association, for one of the first principles of the scheme is that it should have the legislative monopoly of dealing in Jute Futures, and all the other *baras*, whether *burra* or *chota* would become illegal.

The *Pucca* Bale Jute market has ruled dull and inactive since our last report. Almost no shipment business has been recorded, lack of freight being the stumbling block. A small quantity of Mixing Cuttings was reported for shipment at Rs. 1-4, while Mills bought Mixings at Rs. 13-8 and N. C. at Rs. 14 to a moderate extent. A few sales were reported to Mills of high quality jute. Dundee Lightnings at Rs. 68, Dundee Firsts at Rs. 75 and Daccas at from Rs. 81 to Rs. 85. The nominal quotation for Outport Firsts for shipment is Rs. 85. In the earlier part of the reporting period Futures fluctuated narrowly between Rs. 89 and Rs. 88-8 but latterly dipped sharply as low as Rs. 87-8 though closing slightly steadier at Rs. 88.

Loose Jute has not been an active market on the surface though there have been unconfirmed reports of considerable business in European packing at rates varying from Rs. 9-4 and Rs. 7 for Middles and Bottoms to Rs. 9 and Rs. 6-12 according to assortment and Districts. At the latter price business was done in low assortment which included free storage up to June. Supervised packing has met with slender support but Indian packing has been entirely neglected except for some moderate purchases of District Tossa at Rs. 7-12 and Rs. 6 for Mids and Bots. The Delhi purchases are reflected in the January arrival figures for loose jute which are estimated at 11,60,000 Bales against 7,91,000 B/s last year. This brings the total arrivals from July to end January to 57,25,000 Bales this season against 84,01,000 Bales last season at the same time.

Mofussil markets rule generally steady with imports tending to increase after some falling off at the time of the *Id.* In some Jat stations in fact the rates asked are over the Calcutta party. Buyers are mainly Europeans, or Indian dealers who have sold stocks for which they could not find a market in Calcutta, to European buyers locally, which they are now replacing. It would almost seem that Mills could have saved some money by buying from the Indian dealers direct.



The supply of freight is the controlling factor in the Fabrics market. That this is barely keeping pace with production is shown by the January Stock figures in which Hessians, after making allowance for accumulations of Sandbags, show a decline of 66 lakhs of yards, while Sackings show a rise of 11½ lakhs yards. Stocks of 8 oz./40 hessian continue to decline, the January figure being 77 lakhs of yards down from December. In hessians there has been a spasmodic demand for early shipment goods but the demand is not sustained and at the close rates have been marked down, mainly on account of a steamer for America having been cancelled. Earlier on, 9 porters improved on ready demand from Rs. 13-6 to Rs. 13-10, and Rs. 14-4 basis was recorded for 7½ oz. Similarly 11 porters registered a rise from Rs. 17-4 to Rs. 17-10 for near at hand, but both sections close easier at about Rs. 13-6 and Rs. 17-8. Speculative demand has also been on a more limited scale and did not go beyond June, Rs. 16-14 for April/June elevens being the best rate touched. There has been a little more activity in the Heavy Goods end, Liverpool Twills having met with enquiry at from Rs. 36-8 to Rs. 37 for February to April shipment. Cornsacks sold at Rs. 33 for the same positions with Rs. 33-4 paid for near. "B" Twills sold at from Rs. 32 to Rs. 32-4 for all positions from ready up to April/June. Some Woolpacks changed hands at Rs. 1-9 basis Feb./May.

MUGHALPURA, LAHORE.

JUTE

(By our staff correspondent)

Calcutta, February 6.

The raw jute market has been rather weak during the past four days. In the absence of any large mill buying there has been some anxiety regarding the policy of the Bengal Government towards stabilising jute prices. Sellers for low assortment are pressing for business. Only during the course of to-day there has been a reversal of the tendency though it cannot be said by any means that there has been a change in the sentiment. A level as low as Rs. 37-7 was touched in the futures market on Wednesday. There has been a slight recovery to-day to Rs. 38.

The total purchases of jute by the mills for January 15, is reported to be 67,93,725 maunds. Under the agreement reached at Delhi, the Indian Jute Mills Association are to purchase up to 75,00,000 maunds for the first-period of the agreement. Any shortfall was to be purchased by the Bengal Government. The quota for the second period is 10 lakhs bales. At the present rate of buying it is very unlikely that the quota for the second period will be completed.

In the loose jute section sellers are pressing for business. Indian District Tossa Middles and Bottoms were done at Rs. 7-12 and Rs. 6 per maund.

In the pucca bales section, there has not been much business for export. Mills are reported to have bought Firsts 2/3 for February shipment at Rs. 36 per bale. Cuttings N. C. and M. C. were bought at Rs. 14 and Rs. 13-8 per bale.

In the futures market after earlier weakness a slightly firmer tone has been noticeable but quotations are lower on balance. From Rs. 39 at the end of last week, there was a setback to Rs. 37-7. The quotation at the time of writing is Rs. 38.

JUTE MANUFACTURES

Calcutta, February 6.

With the continued weakness of the jute market there could not be any recovery in the jute manufactures market. During the last three days, however, a firmer tendency has been noticeable. There is good demand for the near positions but business is restricted on account of the difficulty in shipments. 9 porters ready are Rs. 13-8-6, March Rs. 13-9, April/June Rs. 13-6 and July/September Rs. 12-4. 11 porters ready are Rs. 17-9, March Rs. 17-6, April/June Rs. 16-11 and July/September Rs. 16-3.

In the heavy goods section only a small volume of business has been passing. The tone is slightly better towards the close 'B' twills are quoting at Rs. 32-2 for February shipment; Liverpool twills for the same position at Rs. 37 and Cornsacks at Rs. 33-6.

The local stock figures for the month of January, 1941, indicate that there has been a slight decrease in hessian cloth and bags to 21.69 crores yards from 21.93 crores yards. The decline in stocks for ordinary consumption is greater as stocks of sandbags are higher at 6.85 crores yards against 6.43 crores yards. Sacking, cloth and bags, at 14.51 crores yards show a slight increase of 11 lakhs yards.

Memo of total reported stocks of manufactured goods as at :--

Description	31st December Yds.	Tons	31st January Yds.	Tons
Hessian Cloth and Bags*	21,98,42,651	58,803	21,69,36,628	53,418
Less sandbags on Govt. A/c	6,42,97,877		6,85,18,561	
	15,50,44,774		14,84,28,067	
Sacking Cloth and Bags	14,39,97,713	61,72	14,51,49,424	63,174

COTTON

Calcutta, February 6.

After earlier firmness the Bombay market was inclined to be easier in mid-week. Towards the close, however, there has been some recovery and quotations are higher than the lowest levels for the week and higher on balance. The recovery in the markets early in the week was due to bear covering, Japanese and spot buying. The strength of the Bombay raw cotton market in the face of the continued weakness of the foreign markets clearly indicates that there was an oversold position. Broach April/May closed at Rs. 189-4, July/August at Rs. 192-12, Bengal March at Rs. 126-4 and Oomra at Rs. 153-12. The highest levels for the week were touched on Saturday last, the quotations being Rs. 194-4, Rs. 197, Rs. 131-4 and Rs. 158-4 respectively.

Overseas markets have been very weak during the past few days and there has been considerable selling for the forward positions. In New York, March closed at 10.31 cents and May at 10.30 cents. The quotations at the end of last week were 10.40 cents. and 10.43 cents respectively. It will be noted that the premium for May position has disappeared and that the quotation is now at a discount of 3 cents. In Liverpool also an easier tendency has been noticeable with the quotation at 8.29d. for March and 8.32d. for May.

PIECEGOODS

Calcutta, February 6.

The firmer tone of the raw cotton market, greater enquiry from upcountry centres and the difficulty in placing orders for particular styles and deliveries have resulted in an appreciation in bazar values in the piecegoods market. However, there is still considerable disparity between sellers and buyers ideas. With mills not quite anxious to book orders and the possibility of an increase in seasonal demand, it is expected that there will be greater buying for forward deliveries. In the Japanese goods section, there is some shortage of stocks of the popular styles and dealers are eager to put through some business. In the Lancashire goods section, however, fresh business has been very disappointing.

In the yarn market, a buoyant tendency has been noticeable. The firmer tone of the cloth market and greater offtake from mofussil centres have created a good demand for medium and coarse yarns. At the rise, South Indian mills are reported to have done a large amount of business for deliveries as distant as September.

GOLD

Calcutta, February 6.

The Bombay gold market has been rather idle. Business has been on a restricted scale. No arbitrauge business was reported as prices were above export parity prices. Gold ready closed at Rs. 42-1. First settlement at Rs. 42-1 and Second settlement Rs. 42-2-3. The London price for gold has remained unchanged at 168s.

SILVER

Calcutta, February 6.

The rumours regarding the possibility of an increase in the import duty on silver were discredited in these columns even three weeks back. The recovery in the quotation for second settlement during the last two days brings forth clearly that market operators do not have any fears in this regard at present. From a discount of eight annas over spot last week, there has been an improvement and the discount now is only two annas. The tendency in the market in midweek was inclined to be firmer but the gains were lost on Tuesday, in sympathy with the decline in the raw cotton market. There has been a slight rally in prices towards the close. Indian Mint silver ready closed at Rs. 63-1, First settlement at Rs. 63, and Second settlement at Rs. 62-14.

London has been firm with very little business passing. The quotation for both spot and forward is the same at 23 5/16d.

WHEAT

Calcutta, February 6.

In the absence of any large Government buying for shipment to Egypt, there has been considerable selling pressure for old crop positions. New crop prospects are excellent. Other food crop prices also are lower. It is believed that prices for old crop cannot be maintained at the present levels. Stale bull liquidation and bear selling have resulted in a decline in the quotation for Choice White Ready from Rs. 34-11 to Rs. 32-8. The decline in the quotation for new crop position is not proportionate. Choice White ready closed at Rs. 32-8, March at Rs. 32, and July at Rs. 28-4. The quotations at the end of last week were Rs. 34-11-6, Rs. 33-3 and Rs. 28-12-6 respectively.

The Calcutta market has ruled very weak. Mill buying has been very poor. The demand for flour and flour products is showing no signs of improvement. Cawnpore and Punjab ready were Rs. 4-8 and Rs. 4-2-6 against Rs. 4-9 and Rs. 4-2-3 respectively.

TEA

There was no sale of teas for export this week. At Sale No. 30 held on 4th February, 1941, very few teas were offered on garden account which were mostly rather stalky, end of season types and met with fair enquiry. A strong demand prevailed especially for the best qualities which were often 3 pies dearer. The commoner sorts were sometimes easier. After next week there should be only a small quantity of dust left for disposal. 12,045 packages were sold at an average price of five annas and three pies per lb. against 5,816 packages at four annas and four pies per lb. in Sale 32 last season. Among other grades there was a good general enquiry and last week's rates were about maintained. The strong features of the sale were black leaf teas with tip and fannings of all types. 15,780 packages were sold at an average price of four annas per lb. against 21,524 packages at three annas seven pies per lb.

The export quota market is steady at As. 11 per lb. with very little quota being offered for sale. Internal quota is in good demand with the quotation at As. 13 per lb.

INDIAN TEA LICENSING COMMITTEE

Indian Tea Control Act 1938:
Export Licenses: Special Export Licenses

The attention of tea producers, tea exporters and shippers of tea is drawn to the provisions of Sections 16 & 17 of the Indian Tea Control Act of 1938 so far as they relate to the issue of ordinary and special export licenses towards the end of each financial year.

It should first of all be noted that Ordinary Export Licenses are valid between the 1st of April and the 31st of March of each financial year and Special Export Licenses are valid only between the 1st of April and the 31st of May of the year in which they are issued.

Section 16 (1) deals with the question of the issue of ordinary Export Licenses during the financial year to wwhich the export quota relates. It will be observed that the latest date for application for an ordinary export license remains the same as under the 1933 Act viz. before 21st March of each financial year, but under the terms of Section 17 (2) it is made clear that failure to apply for an ordinary export license before 21st March does not disqualify the party concerned from obtaining Special Export Licenses to cover the balance of export quota standing to their credit in the books of the Licensing Committee provided application is made for the Special Export Licenses before the 14th April of the following financial year.

CLIVE STREET GOSSIP

(*Continued from page 241*)

ing the capital and labour that would be thrown out of work The complications of the problem grow with the complications of the social structure; and it is obvious that the more you resist socialism, the more intractable the problem will be.

So far as India is concerned, we are still far from the stage in which the problem of new inventions will become imperative. But we cannot afford to allow the problem to grow under neglect. The Industrial Research Utilisation Committee must be aware of the immensity of the issues connected with it. National control of the patent rights over the results of research must be maintained intact, if at the end of the war, the country is to forge ahead with schemes of economic reconstruction.

Rai Bahadur A. C. Mukherjee was an official of the old school, which believed that nothing mattered to an official in the high cadres except careful acquisition of essential knowledge and readiness for hard work. Publicity and limelight are anathema to that school; and though the resulting obscurity involves obstacles in their path, such officials are inevitably sought after for important jobs. As the first Chief Accountant, Mr. Mukherjee did most of the essential spadework for the Reserve Bank of India; and his experience and knowledge as Deputy Controller of Currency for years helped him to make the transition smooth and easy. But he had soon to quit the job for which there was at first no alternative to him. His was a genial personality; his broad face was ever wreathed in smile; and as he knew what was secret or what was not he was always ready to greet even the financial journalist heartily.

If it is only for the facts and figures relating to the tinplate industry, The Story of a Kerosene Tin, a short documentary prepared by Burmah-Shell, should be of high interest to Indian audiences. Those, who were privileged to see the press show last week, certainly came away with a very lively impression of tinplate manufacture after seeing the first short made in India for Burmah Shell by the publicity staff. It is certainly a pleasing effort and the commentary moves slowly but spontaneously, when it moves on to describe what part the kerosene tin plays in the life of ordinary people. The empty tin does duty as vessel for many a water-carrier, is used as container in grocers, shops and the rusty flattened plates replace galvanised sheets as the roof of many a humble dwelling. If anything can be called the all-purpose material it is surely the tinplate that goes to the making of a kerosene tin. 16,000 tons of tinplate, mostly imported go into consumption every year, and the manufacture of kerosene tins is obviously the biggest outlet for all the stuff that comes in.

The cutting of the sheets, the binding and soldering are operations conducted by huge unerring machines and the Golmuri factory employs trained efficient operatives who should know that their product has a diversity of uses. The actual repetition of the opening shots (with the slight variation needed) drives home the point that the kerosene tin is a very important article indeed, needed every day every where as it provides not only oil but is the material out of which lots of things, lamps, cans and small barrels are made. Informative and unpretentious, it was as good in every way as the other shorts shown that day. Shelf on the petrol engine was almost formidable as a title; but it was a miraculously simple expansion of an invention that has influenced war and peace profoundly. How the engine works and why was explained without a word too much, and I think that all who saw it will agree that every motorist should make a point of seeing what keeps his engine to the mark.

I am glad to announce that the Indian Government have succeeded in securing the good offices of the British Treasury in regard to the scheme of India sterling debt redemption. The securing of the good offices of the British Treasury was, in the first instance, suggested editorially in the course of our series entitled "Planned Money for India", which appeared at the end of 1939. This suggestion has now been acted upon, as will be gathered from the following *Reuter* cable from London dated February, 7 :

> Financial transactions involving nearly £90,000,000 between the United Kingdom Government and the Indian Government are announced by the British Treasury.
>
> Holders of five Indian Government sterling loans are to sell them to the British Treasury at the price ruling at the close of business to-day. The British Treasury will then hand them over to the Indian Government at the same price for cancellation.
>
> Payments will be made by the Indian Government out of the large sterling balances which have been accumulated by the Indian Government since the outbreak of the war as a result of the large increase of British imports from India.

The decision to do this was made following the realization that India's large sterling balances might properly be used for debt redemption.

I must both thank and congratulate Sir Jeremy Raisman.

Stock Markets to-day and to-morrow

MUIR MILLS RESULTS

STOCK markets, both in Calcutta and Bombay, have been definitely firmer during the past week. Only on Thursday a slightly easier tendency was noticeable on profit-taking. The undertone in several sections, however, continues to be fully steady. The strength of the Calcutta market during the past few days has been mainly due to the buoyant tone of the western centre as there have been no particularly encouraging developments locally during the last two weeks. Most operators are inclined to take a more liberal view of the future. The uncertainty regarding the Central Budget is still there, but there does not to be much nervousness in this connection. The hopeful undertone in the several sections is presumably due to the hope that there will be no increase in income-tax and the super-tax so soon after the levy of the 25 per cent surcharge in Emergency Budget for 1940-41 and that there will no increase in the rate of E.P.T. either. There may be new forms of taxation. Existing Excise duties also may be increased. That is, new taxation may affect only those industries which are benefited to any considerable extent by the war effort. One cannot adopt any definite view in this regard but it may be expected that prices will register a sharp rise if the Budget does not contain any nasty surprises.

* * *

The outstanding feature of the week, as of the last, is the strength shown by cotton mill shares. Following the publication of the excellent results of the Muir Mills Company, Limited, the shares have gone ahead and Cawnpore Textiles too have been done upto Rs. 6-12. In the Engineering section, the recent rises in Arthur Butlers and Indian Galvanizings have not been well held. There has also been more enquiry for Hukumchand Electric Steel ordinaries.

* * *

Tea shares too have been in greater enquiry. The popular shares have been freely bought. Prominent in the list are Hasimaras with a rise to Rs. 43-8, Patrakolas to Rs. 840. Tezpores to Rs. 8-8 and Rydaks to Rs. 60. In view of the assured prospects for the industry the recovery in these shares has been overdue according to all the informed observers.

* * *

Further progress has been made by the *Ahmedabad Electricity Company, Limited,* for the year ended 30th September, 1940. The increase in earnings by over Rs. 1.70 lakhs has been achieved even after the reduction in rates to consumers in the middle of 1939 and which were, therefore, effective throughout the last accounting period. This has been possible only with the rise in energy for industrial consumption from 3.71 million units to 4.81 million units.

The net profit, before providing for taxation, is Rs. 12,75,081 against Rs. 11,04,427 for the previous year. The sum of Rs. 4,75,007 against Rs. 4,26,692 has been placed to depreciation, while the provision on account of taxation including E. P. T. is considerably higher at Rs. 2,38,502 against Rs. 1,32,841. The amount set aside for other purposes is Rs. 9,682 against Rs. 10,227. The distribution to shareholders is unchanged at 7½ per cent, though the dividend was 6½ per cent on the last occasion, and there was a bonus of 1 per cent. The dividend on this occasion is therefore higher at 7½ per cent.

As a final call of Rs. 25 per share on 15,000 Ordinary Shares, issued in 1938, was made payable on 1st May, 1940 and further 25,000 ordinary shares were issued during the year to shareholders, these shares are Rs. 50 called up and were eligible for dividend from 15th August, 1940, the dividend amount is considerably higher at Rs. 5,53,881 for 1939-40 against Rs. 4,73,604 for 1938-39. For the same dividend to be paid, the dividend amount should be much higher for the current year as a considerably larger amount of capital will be eligible for dividend purposes. The paid-up capital at the end of September, 1939 was Rs. 63,75,000. It had increased to Rs. 87,38,925 by the end of September, 1940. It should be expected that earnings for the current year will show a similar increase, if not greater, as till May, 1944 the Company will not be obliged to reduce rates. The need for a larger profit to declare the same dividend and the liability to E.P.T., however, preclude the possibility of any increased distribution. Still in view of the impressive progress in recent years and the likelihood of an increase in the dividend after two years the shares are quite good for investment purposes. At Rs. 179-6 cum-dividend the yield offered at 4.3 per cent tax free is satisfactorily.

* * *

A substantial increase in earnings has been reported by the *Muir Mills Company, Limited* for the year ended December, 1940. But the shareholders have derived only small benefit out of the increased earnings. The net profit, before providing for taxation and depreciation, for 1940 is Rs. 13,93,741 against Rs. 9,08,996 for 1939. The earnings for 1939 were liable for E.P.T. only for four months, from September 1, 1939 to December 31, 1940. The higher level of taxation and the necessity for providing for E.P.T. over the whole year have, therefore, necessitated an increase in the provision on this account from Rs. 2,75,000 to Rs. 6,25,000. The sum set aside to depreciation is Rs. 2,50,000 against Rs. 2,00,000. The ordinary dividend has been maintained at last year's level, the final dividend of 10 per cent making with the interim dividend of 10 per cent already paid 20 per cent for the whole year, but the bonus is higher at 5 per cent against 3 per cent. The directors could have been more liberal in the distribution of the bonus as the increase of over Rs. 33,000 in the amount carried forward to the next account could have been utilised for this purpose. Which means, the bonus could be easily Rs. 3/8 per share. The rise in the quotation for the shares, in view of the performance for last year, is, therefore, fully justified. The prospects for the current year should be considered even more satisfactory as only after the middle of 1940 large orders have been placed with cotton mills in India. Around Rs. 304 cum-dividend the return on the shares is 4.17 per cent tax-free.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 6.

A FIRMER tone has been noticeable on the Calcutta Stock Exchange during the past week in sympathy with the strength of the Bombay market. Engineering shares particularly have been active. There is no special reason for the spurt in values. Arthur Butlers rose by nearly five points early in the week and Indian Galvanizings by two points. Textile issues also have been prominent. Greater interest has been taken in the Jute section. The generally improved tone of the markets has been only due to the encouraging prospects for industry and the less apprehensions regarding the Central Budget. Giltedged securities have been firm though there has not been any large business passing.

Giltedged securities have been very steady with quotations slightly higher in places. With the continuance of extremely easy money conditions and the possibility of the new loan being successful giltedged values may improve further. The Treasury Bills rate for the week is lower at eleven annas per cent. annum against eleven annas six pies per annum in the previous week. 3½ per cent. Paper has been fluctuating around Rs. 95-8 and 3 per cent. Paper around Rs. 82. Among terminable loans, 3 per cent. 1963/65 were Rs. 94/4, 3 per cent. 1951/54 Rs. 99-2, 3½ per cent. 1947/50 Rs. 102-6, 4 per cent. 1960/70 Rs. 108-4 and 4½ per cent. 1955/60 Rs. 113-4. Provincial loans are higher with 3 per cent. issues at Rs. 96-4.

Business in public bodies's debentures has been rather restricted with scarcity of sellers. 4 per cent. *Calcutta Municipal Trust* 1915 were done at Rs. 104, 3½ per cent. *Howrah Bridge* 1956/66 at Rs. 98-11 and 5½ per cent. *Calcutta Port Trust* at Rs. 120. Business in industrial debentures has been on a small scale. 5 per cent. *National Iron and Steel* debentures were done at Rs. 101-8.

Among preference shares, there has not been much doing in first class shares. The relatively cheap-priced shares were in request. *Anglo-India* were Rs. 170, *Cheviot* Rs. 157 ex-dividend *Clive 'A'* preference Rs. 148-8, and *Hukumchand Jute* Rs. 117. *Hastings* were very steady at Rs. 137-8. In the Engineering section, *Burn & Co.* first preferences were Rs. 169, *Indian Standard Wagon* Rs. 153, *Kumardhubi Engineering* Rs. 126 and *Steel Corporation* Rs. 114. Among other sections, *B. I. Corporation* were higher at Rs. 178-8, *Dunlop Rubber* Second preferences at Rs. 116 and *Titaghur Paper* first preferences at Rs. 198.

Among Bank shares, *Imperial Bank* fully paids were done at Rs. 1,583 and *Reserve Bank* at Rs. 105-12. *Central Bank* were crossed at Rs. 44.

Cotton shares have been very firm with Cawnpore issues in favour. *Muir Mills* showed a rise over the week-end to Rs. 304. *Cawnpore Textiles* also have been marked higher at Rs. 6-12 though there has been a slight setback to Rs. 6-6. *Kesoram* were done at Rs. 7-10, *Dunbar* at Rs. 207 and *New Victoria* at Rs. 1-14.

Coal shares have been very uninteresting. *Amalgamated* were Rs. 27-2, *Bengal* Rs. 365 ex-dividend, *Dhemo Main* Rs. 15-2, *Equitable* Rs. 15-14, *Raneegunge* Rs. 26-8, and *West Jamuria* Rs. 30-2.

The Jute section was inclined to be firmer but the tendency has been slightly easier towards the close. Quotations, however, are higher on balance. *Anglo-India* were Rs. 317, *Bally* Rs. 217, *Dalhousie* Rs. 299-8, *Gourepore* Rs. 653-8, *Howrah* Rs. 49-12, *National* Rs. 21-2, *Nuddea* Rs. 55-8 and *Reliance* Rs. 53-2. *Birla* have been in good request up to Rs. 26 and *Naskarpara* at Rs. 18-3. *Hukumchand* have been done up to Rs. 9-4.

In the Engineering section there has been an all round improvement in prices. *Indian Iron* have been noted as high as Rs. 32. The closing quotation is slightly lower at Rs. 31-7. *Steel Corporation* also improved to Rs. 19-10. The close has been easier at Rs. 19-6. *Braithwaite & Co.* have been in good request up to Rs. 11. *Arthur Butler* have sellers and the quotation has come down to Rs. 14. *Indian Galvanizing* also are slightly easier at Rs. 30. *Indian Standard Wagon* were crossed at Rs. 61-4.

Among Electric supply companies shares, *Benares Electric* have been rather weak at Rs. 12-12. *Bengal Telephone* were steady at Rs. 27. *Mutlra Electric* came to business after a long time at Rs. 11-8.

The Sugar section has been firmer with *Cawnpore Sugar* at Rs. 19-8, *Carew & Co.* at Rs. 10-8, *Champarun* at Rs. 15-2, *New Savan* at Rs. 7-10 and *Samastipore* at Rs. 7-14.

Tea shares have been in good request and business has been done over a longer list. *Hasimara* were Rs. 43-8, *Patrakola* Rs. 840, *Rydak* Rs. 60, *Hattikhira* Rs. 19-2, *Tezpore* Rs. 8-1, *Sonai River* Rs. 17, *Killcott* Rs. 48-8, *Bhatkawa* Rs. 44-12 and *Tukvar* at Rs. 11-4.

In the miscellaneous section base metal shares have remained unchanged with *Burma Corporation* and *Indian Copper Corporation* at Rs. 5-6 and Rs. 2-3 respectively. Among others, *B. I. Corporation* were steady at Rs. 4-15. *Dunlop Rubber* were in good request and marked higher at Rs. 37. There was some profit-taking at the higher levels and the quotation is now around Rs. 36-6. *Indian Cable* have been steady around Rs. 21-8 and *Alkali and Chemical* at Rs. 17-12. *Indian Wood Products* were Rs. 27-6, *Midnapore Zemindary* Rs. 72 and *Tide Water Oil* Rs. 15-4. Among Paper shares, *Titaghur Paper* were Rs. 17-6, *India Paper Pulp* Rs. 146 cum-dividend, *Orient Paper* Rs. 10-8 and *Bengal Paper* Rs. 126.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Feb. 6.

Money.—The money market continued to be easy with practically no borrowers, the rate for call money being quoted at ¼ per cent.

Securities.—Following the announcement of the terms of the Second Defence Loan 1949/52 buyers predominated in all the issues in this section throughout the week under review. The volume of business was also comparatively better than in the last few weeks. 3½ per cent. Paper was done were marked higher, in the absence of sellers, at Rs. 95-6 and 1951/54 at Rs. 99-4.

Among other issues, 1948/52 were done at Rs. 97-2; 1903/65 at Rs. 94-4; 1947/50 at Rs. 102-9; 1960/70 at Rs. 108-2; 1955/60 at Rs. 113-4; 1945/55 at Rs. 112-7 and 3% 1946 Defence Loan at Rs. 100-14.

Shares.—The local share market remained closed on Monday owing to the death of a member. The market was cheerful at the opening on Tuesday and prices recorded substantial gains. Renewed buying coupled with the absence of selling pressure gave an impetus to the market and the rise in prices was maintained on Wednesday. Towards the close of the week, however, the market developed a sagging tendency owing to some profit-taking and there was a decline in prices. Regarding the Budget, opinion is divided in the market. In spite of the fears regarding the forthcoming Budget, the market kept a cheerful appearance and the undertone remained healthy.

Textiles.—Leading mill shares showed some strength and prices improved in general following the reports that most of the companies are making good money due to Government as well as export orders. *Bombay Dyeing* were done higher at Rs. 1,107-8, but closed slightly easier at Rs. 1,093-2. *New Great* were in demand at Rs. 417, the closing price being Rs. 411. *Gokak* were done at Rs. 212; *Kohinoor* at Rs. 405; *Century* at Rs. 378; *Central India* at Rs. 303-8 and *Swadeshi* at Rs. 271. In the cash list, *New City* changed hands at Rs. 230-10.

Hydro-electrics.—This section continued to meet with good investment demand, *Andhra Valley* being done higher at Rs. 1,760. *Tata Power* were marked up at Rs. 1,577-8, showing a rise of about 16 points over the previous week's close. *Tata Hydro* were slightly better at Rs. 179-8.

Steels.—Steel shares provided the feature of the week. In spite of lower Wall Street advices, *Tata* ordinaries, after opening at Rs. 377 and the deferreds at Rs. 1,942-8, advanced to Rs. 379 and Rs. 1,955-0 in mid-week respectively. At a later stage, however, prices were inclined to be somewhat easier owing to profit-taking, the ordinaries finally closing at Rs. 377 and the deferreds at Rs. 1,938-12. Although the higher level of production is maintained the forward business of the *Tata Iron & Steel Co., Ltd.*, remains restricted owing to Government requirements.

Banks.—The demand for Bank shares continued to be in evidence during the week, *Bank of Baroda* changing hands at Rs. 106-4; *Bank of India* at Rs. 143; *Central Bank* at Rs. 44; *Imperial Bank* fully paids at Rs. 1,562-8; contributories at Rs. 385-10; *Reserve Bank* at Rs. 105-12 and *Union Bank* at Rs. 6-10.

Miscellaneous.—*Bombay-Burma Trading* met with good support during the week and the price showed a rise of about 30 points, closing at Rs. 550 as against Rs. 522-4 in the previous week. *Associated Cement* were a little better at Rs. 137-12 and *Scindia Steam* at Rs. 21-13. *Premier Construction* were an active counter and were done higher at Rs. 98 c.d. following

report of an increase in the profit for the year ended 31st December, 1940. The dividend declared is higher at Rs. 5 per share against Rs. 4 per share in the previous year. *Belapur Sugar* were dealt in at Rs. 213; *Shivrajpur Syndicate* at Rs. 36-12; *Indian Iron* at Rs. 31-10 and *Steel Corporation* at Rs. 19-10. *Western India Match* improved to Rs. 193-8 from Rs. 186. *Tata Chemicals* were in good enquiry at Rs. 13. *This Company is expected to start full production by July-August.*

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Feb. 6.

The local share market ruled steady with prices showing little or no change. Textiles and Rubbers remained unchanged, while Teas were in good enquiry. Sugars met with good support with a slight improvement in prices.

Securities.—The securities market continued to be steady with 3½ per cent. Paper quoting at Rs. 95-7. 3 per cent. 1963-65 were taken up at Rs. 94-5; 3 per cent. 1951/54 at Rs. 99-4 and 4 per cent. 1960/70 at Rs. 108-4. Business in State Loans was confined to small deals. 3 per cent. 1959/61 *Mysore Loan* changed hands at Rs. 103-6. Among Provincial Loans, 3 per cent. 1952 *Madras Loan* were marked at Rs. 97-8.

Mills.—Buckingham & Carnatic improved slightly during the week to Rs. 240 and *Madura* to Rs. 37-8. *Kothari Textiles* ordinaries came to business at Rs. 10-4; preferences at Rs. 11-8; *Coimbatore Spinning & Weaving* at Rs. 35-8; *Sri Ranga Vilas* at Rs. 49-8 and *Bombay Dyeing* at Rs. 1,086-12 March.

Utilities.—South Madras Electric ordinaries were on offer at Rs. 13-2. *Madras Telephone* were taken up at Rs. 17 buyers, while *Rangoon Telephone* were a shade easier at Rs. 12-14.

Plantations.—A fair amount of business was put through in Rubber shares. *Cochin Malabar* were done at Rs. 6-9; *Tropical Plantations* at Rs. 18-8; *Ayer Manis* preferences at Rs. 100-8; *Malankara* at Rs. 39-12 and *Thamarapally* at Rs. 8-9. *Be Be* were taken up at Rs. 6-3 c.d. It is reported that this Company made an issue of Rs. 40,000 worth of debentures for the purchase of a small estate, the full requirements being obtained from the shareholders themselves. There was rather more enquiry for Tea shares, *Chembra Peak* being done slightly higher at Rs. 3-7; *Highland Produce* at Rs. 30; *Balanoor* at Rs. 9-12 and *Nilgiri Neerugundi* ordinaries at Rs. 1-5.

Sugars.—Sugar shares were an active market during the week following the rise in the price of sugar from Rs. 260 to Rs. 275 per ton. *Mysore Sugar* spurted to Rs. 47-8 buyers on good investment demand. There are again talks of a bonus issue and the Company is reported to be doing exceedingly well. *Deccan Sugar* small shares were taken up at Rs. 52-6.

Miscellaneous.—There was fair trading in *Mysore Paper*, being done slightly higher at Rs. 14-1. *Mysore Chemicals* improved to Rs. 15-11, while *Alkali & Chemical Corporation* ordinaries came up for business at Rs. 19 and *Mettur Chemicals* at Rs. 9-8. *Scindia Steam* were crossed at Rs. 21-12 and *Burn & Co.*, ordinaries at Rs. 384. *Spencer B"* preferences were transacted at Rs. 9-8 x.d. and *Indian Iron* at Rs. 31-13.

LONDON STOCK EXCHANGE

The London Stock Exchange has been rather quiet during the past week. The volume of business transacted has been on a considerably smaller scale. Among giltedged securities India Loans have been fairly steady with the exception of 3½ per cent. *Indian Sterling Stock* which is nearly a point lower at 95½. 4½ per cent. 1950/55 were done at 109¼. 4½ per cent. 1958/69 at 112½, 3 per cent. 1949/52 at 98¾ and 3½ per cent. 1954/59 101⅜. British Funds were steady for the most part of the week but towards the close a slightly easier tendency has been noticeable. 2½ per cent. Consols were 77⅛, 3½ per cent. Conversion 104⅜, 3½ per cent. War Loan 103¾ and 3 per cent. War Loan 101⅛.

Among other sections, Kaffirs have been lower with Oils irregular. Tea and Rubber issues have been steady. Home Rails have been steady at the decline.

NEW YORK STOCK EXCHANGE

Wall Street has been rather weak during the past few days and a further decline in prices has been recorded. There is no special reason for the weakness of the market at the present moment for the passage of the Lease and Lend Bill was a foregone conclusion. The decline in prices is perhaps due to the need for selling American securities by the British Government. *U. S. Steel* were $62¼, *General Motors* $42⅛ and *Anaconda Copper* $23⅜. The quotations at the end of last week were $67¼, $44¾ and $25⅜ respectively.

KANKNARRAH COMPANY, LIMITED

NOTICE

is hereby given that the One Hundred and Sixteenth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 noon on Friday, 28th February, 1941, for the following purposes :—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1940.
(2) To declare Dividends.

Burma Steel Exports to be Restricted

Owing to the heavy increase in demands for iron and steel in those countries in which they are produced, and in order consequently to conserve existing stocks for use within Burma, licences for export will be granted only in very exceptional circumstances, says a Press *communique*.

The *communique adds*: "It will be remembered that India is a producer of iron and steel while Burma is not, and although the export to India is not at present prohibited, it is not in the interests of Burma that the stocks held in the country should be depleted by exports to India. Traders are, therefore, advised to restrict their sales to India to the quantities, if any, which they normally exported to India prior to the war."

* * *

Pig Iron and Castings

Following is the statement of production at the Hirapur and Kulti Works of the *Indian Iron and Steel Co., Ltd.* for the month of January 1941: Pig Iron Production 74,897 tons; Castings 6,803 tons.

* * *

Indian Tea for Britain

It is now authoritatively learnt that the British Ministry of Food will purchase about 270,000,000 lb. of tea from India during the current year. Of these, 225,000,000 lb., including 1,000,000 lb. of dust, will be purchased from the tea estates in North India and the rest from those in South India.

* * *

Electricity Output

Messrs. Tata Hydro-Electric Agencies Limited, Agents for The Tata Hydro-Electric Power Supply Co., Ltd., The Andhra Valley Power Supply Co., Ltd., and The Tata Power Company Ltd., report that the total electrical (Board of Trade) units generated at the three Power Stations (Khopoli, Bhivpuri and Bhira) of the Hydro Group during the week ended January 28 were: 1941, 18,010,600; 1940, 14,498,700; 1939, 14,240,100. The total units generated from January 1 to date were: 1941, 69,083,500; 1940, 56,718,400 and 1939, 56,197,300.

* * *

State-owned Railway Earnings

The total approximate gross earnings of all State-owned railways for the period ended January 20, 1941 amounted to Rs. 327 lakhs.

This was Rs. 48 lakhs more than the approximate gross earnings for the corresponding period of the previous year; Rs. 46 lakhs more than the actuals for the corresponding period of 1939-40; and Rs. 55 lakhs more than the actuals for the corresponding period of 1938-39.

The total approximate gross earnings from April 1, 1940, to January 20, 1941, amounted to Rs. 86.29 crores. This was Rs. 928 lakhs more than the actuals for the previous year.

* * *

G. I. P. Railway

The approximate earnings of the *G. I. P. Railway* for the period ended January 20, 1941 amounted to Rs. 54,82,000 compared with Rs. 45,41,000, the actual earnings for the corresponding period in 1940. The up to date earnings for 1941 amounted to Rs. 13,01,72,000 compared with Rs. 11,05,74,000 the figure for the corresponding period in 1940.

* * *

B. B. & C. I. Railway

The approximate return of traffic of the *B. B. and C. I. Railway Company* for the period ended January 20, 1941 amounted to Rs. 44,10,000 compared with Rs. 36,20,000, the figure for the corresponding period in 1940. The total earnings to date amounted to Rs. 10,69,74,000 compared with Rs. 9,58,20,000, the figure for the corresponding period in 1940.

THE DACCA ELECTRIC SUPPLY COMPANY, LIMITED.

*Includes Bonus of 1 per cent per annum.

(*Annual meeting 13th February, 1941 at 4-30 P.M. at Bombay*)

Audited accounts for the year ended 30th September, 1940 :—

An outstanding feature of the year's results is the heavy incidence of taxation, the result of the war, the total provision in which respect is nearly double what it was last year.

Nevertheless, the satisfactory sales and economic operation of the Company during the year has resulted in the balance carried to the balance sheet amounting to Rs. 5,51,890, and in arriving at this figure, necessary provision has been made for depreciation and other appropriations.

Adding to the sum of Rs. 5,51,890, the amount of Rs. 28,908 brought forward from last year's account, a total of Rs. 5,80,798 is available for distribution, out of which Rs. 2,04,894 has been disbursed in paying an ad-interim dividend at the rate of Rs. 3 per share, free of income-tax, which was declared by the directors in August.

This leaves a balance of Rs. 3,75,904 out of which the directors have recommended a dividend for the half-year ended 30th September, 1940 at the rate of Rs. 4½ per share (making 7½% for the year), leaving a balance of Rs. 26,917 to be carried forward.

Share Capital.—The Final Call of Rs. 25 per share on 15,000 Ordinary Shares issued in 1938 was made payable on 1st May, 1940, making this issue fully called up A further issue of 25,000 Ordinary shares of Rs. 100 each was made in that month and offered at par to the shareholders of the Company, by whom it was considerably oversubscribed. The total issued capital of the Company is now Rs. 1 crore out of Rs. 1½ crores authorised. Shares of the New Issue are Rs. 50 called up and, excluding Consolidated (Coupon) Shares, rank for dividend on this amount as from the 15th August, 1940.

Rates for Supply.—There are no changes to report since the Tariff reductions of April and May, 1939.

Sales.—The figures of units sold, given in the above comparative statement, indicate progress under this head in relating to the figures of the three previous years.

Agents.—Messrs. Killick, Nixon & Co.

Authorised Capital—Rs. 1,50,00,000 in 1,50,000 shares of Rs. 100 each. Issued—Rs. 1,00,00,000 in 1,00,000 shares. Subscribed and Called up—Rs. 87,38,925 in 74,999 shares of Rs. 100 each, fully paid and 24,973 shares of 100 each, Rs. 50 Called up....Less Calls in arrears Rs. 9,625...Debenture Capital—Rs. 15,00,000 in 5 per cent bonds of Rs. 50,000 each, repayable on the 14th June, 1944.

Synopsis of the balance sheet as at 30th September, 1940:—

(*Half-yearly meeting 20th February, 1941 at 12-5 P.M.*)

Audited accounts for the half-year ended 31st July, 1940 :—

After providing Rs. 15,108 for Depreciation and transferring 21,000 to Reserve for Taxation and Cesses, there is a balance of Rs. 92,965-13-2 at the credit of the Profit and Loss Account out of which the directors recommend a dividend of Re. 1 per share, leaving a balance of Rs. 42,965-13-2 to be carried forward.

The limited life of the Company's Seebpore Colliery to which reference has already been made in the previous directors' report is now influencing *raisings* which are lower than in the previous half-year.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 5,00,000 in 50,000 shares of Rs. 10 each, fully paid up.

The results for the period show a profit of Rs.		1,00,683	0	2
From which has to be deducted:—				
Taxation Reserve for Fiscal year 1941-42	8,500			
Depreciation	70.000	78,500	0	0
Adding the carry forward from the last year ...		1.15,536	4	10
Leaving at credit of Profit and Loss Account to be carried forward		1,46,719	5	0

It is regretted that no dividend can be recommended at this stage owing to the heavy stocks of last season's sugar still remaining unsold.

The Crushing Season, which this report covers, has been one of the most difficult in the history of the industry in the United Porvinces and Bihar. The policy of the Governments of these two Provinces by adopting a scale for cane rates which when linked with market quotations for sugar, which were for the most part never realised, so raised the Sugar Syndicate's basic rates as to make it impossible for manufacturers in the two Provinces to compete with production in other provinces and Indian States, which were in a position to undersell them and at the same time make a very large profits. Thus the outside production of some 2,50,000 tons was marketted before all but a small fraction of the United Provinces and Bihar Sugars could be disposed of.

Government has throughout sought to lay the blame on the Indian Sugar Syndicate for the critical position of the Industry and at one time withdrew statutory recognition of this body, but the directors are glad to be able to report that official recognition has been restored and the Syndicate's governing body has been strengthened by the inclusion of officials vested with very wide powers.

Under recent enactments a body has been constituted by the Governments of the United Provinces and Bihar under the title of Sugar Commission with a senior member of the Civil Service as its Chairman. The function of the Commission is to advise Government in all matters concerning the Industry and it is hoped that the numerous imperfections in the present Legislation will command their early attention.

From the manufacturers' point of view, however, much remains to be done by Government before the legislation imposed upon this section of the Industry will be satisfactory. The Industry in the two Provinces continues to press for the redress of grievances and for treatment which will enable outside competition to be met.

The Government of the United Provinces and Bihar have introduced a system of quotas for the coming season under which Factories will work considerably below their capacity. The object of this restriction is to reduce the production of sugar in an attempt to bring about equilibrium between consumption and production. A minimum rate for cane has been fixed at As. 4-3 per md. to which must be added the Provincial Cess of 6 pies per md. and 6 pies per md. towards the redemption of the Excise Subsidy. It is feared that the price, which factories will now have to pay, is not sufficiently low to enable manufacturers in the two Provinces to compete with those situated in other provinces and Indian States. The Excise Duty levied by the Government of India was increased form Rs. 2 to Rs. 3 per cwt. in respect of sugar manufactured on and after the 1st March, 1940.

Managing Agents.—Messrs. Begg, Sutherland & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 15,00,000 in 90,000 Ordy. of Rs. 10 and 60,000 10 per cent Cum. Pref. of Rs. 100, both fully paid.

(a) Issued at par on 20th March, 1937, repayable at par on 20th March, 1947, with option repayment at any time after five years from the date of issue. (b) Issued at par in 1897, and repayable at par on 15th November, 1936, date of repayment has been extended to 15th November, 1956, and the rate of interest reduced to 4½ per cent (taxable) from 10th November, 1936. Option of repayment at a premium of 3 per cent. at any date after 15th November, 1926, on three months notice. (c) Issued at par on 14th May, 1938, repayable at par on 14th May, 1958. (d) Issued at par on 1st April, 1934, repayable at par on 1st April, 1959 with option repayment any time after 1st April, 1941, at 3 per cent. premium. (ff) Carry interest at the rate of 20 per cent. per annum (7 per cent. Cumulative and 13 per cent. non Cumulative). This dividend is to be paid before any dividend is paid on the ordinary Shares. The Company may, by giving one year's notice convert the preference shares into ordinary shares. (g) Issued at par on 1st October, 1923, redeemable at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent. of the total issue, is due to be placed annually. (h) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (i) Entitled to participate in dividends only upto 10 per cent. per annum after the preference shares have received accumulative dividend of 6 per cent. and ordinary shares 10 per cent. Surplus divisible profit remaining after these dividends will be apportioned in three equal parts for payment of further dividends to the three classes of shares. * In payment of arrears of dividends on "A" preference shares for half-year ended December, 1927. † Bonus for every ordinary share held in the shape of a second preference share of Rs. 25 bearing interest at 4½%. ‡ Includes Bonus. § Arrears of dividend for six half-years ended June, 1934. Arrears of dividend to the extent of Rs. 1,22,500 to the end of December, 1937 outstanding. ** Includes 1152 mule spindles. (y) Arrears of Dividend for eight half-years ended 31st Dec., 1931. (z) Arrears of dividend for eight half-years ended 30th June, 1938. Also non-Cumulative dividend of Rs. 13 per share for the whole year 1938. (z) Arrears of dividend for 8 half-years ended 30.6.1933. (J) 6% for the year 1936 and 3% for 1937. (K) 3% for 1937 and 1938. (l) Included in Reserves. (L) 3% for 1938, 6% for 1939 and 6% for 1940

Match point

Don't keep your Gold Flake to yourself! That's one of the rules of the game, if you wish it to be a love game. Remember how popular they are with women nowadays. It's the flavour of the really fine Virginia tobaccos of which Wills's Gold Flake are made that appeals to the ladies as much as to you. So, if you want to be the court favourite, be generous with your Gold Flake.

WILLS'S GOLD FLAKE

is the man's cigarette that women like

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THE star event of the week under review is the announcement of the decision of the Government of India to redeem, in full, the six dated India sterling stocks. This news was received only last Saturday morning; and we had to content ourselves with a brief appreciative reference in Clive Street Gossip. Full analysis of the implications of this important operation is given, in this number, in the editorial section. From the point of view of the money market, which embraces also the giltedged section, the exact nature of the repercussions of sterling debt redemption cannot be understood till we have more details about the consequential changes that will take place in the composition of the assets of the Reserve Bank and also about the measures which the Government propose to adopt for raising the corresponding funds in India. So far as the changes in the Reserve Bank returns are concerned, we may have to wait till the end of March as the payments in respect of the redeemed loans are not due to be made till then. Once these payments are made, sterling securities will have been sold for the requisite amount from the assets held by the Reserve Bank both in the issue department and in the banking department. In this connection, the most important question is what amount of sterling securities will be used for this purpose from the Issue Department, and what amount from the banking department. The next question is in regard to the nature of securities which will be given by the Government to the Reserve Bank for replacement against the sterling securities lost.

The first impression produced by the Government Notification was that the present occasion would be utilised for effecting such changes in the Reserve Bank Act as would enable the bank to revalue its gold on the basis of the market rate ruling from time to time. If gold could have been thus revalued, the inner reserve of Rs. 40 crores would have been released; and the securities which the Government would be required to hand over to the Reserve Bank might have been less by that amount. We, therefore, made enquiries from Sir James Taylor, the Governor of the Reserve Bank, and we understand that there is no intention to change the existing legal provision as regards the valuation of gold stocks in the issue department. In other words, while the value of the sterling debt redeemed is £90 millions, the Government of India will have to deliver to the Reserve Bank rupee securities for the full amount of Rs. 120 crores.

Here also, we are faced with another conundrum. Will the Government of India be making payment in the form of *ad hoc* Treasury Bills or rupee counterparts of the redeemed sterling loans or some type of rupee loan which, the Government might think, the Reserve Bank will be in a position to sell on tap or otherwise in accordance with market conditions. For our part, we cannot see any advantage in issuing to the Reserve Bank rupee counterparts of the sterling stocks. These sterling securities were designed and fashioned in accordance with the market conditions and preferences of the time at which each one of them was placed on the market. A type of loan, which was, for instance, suitable for the London giltedged market conditions of 1913, need not necessarily suit the Indian giltedged conditions of 1941. In fact, our original criticism about the Government's scheme of issuing rupee counterparts of sterling loans receives all the more emphasis and validity from the present decision of the Finance Member to accept our scheme of securing the good offices of the British Government to be able, so to say, to cut the Gordian Knot. The scheme as originally fashioned has been functioning for over ten months; and, as a result, various new types of rupee loans are now held by the public, without full information being available as to the total amounts of each loan and the market prices for them. This is a kind of confusion that should not be allowed to continue in the giltedged market. We should, therefore, strongly urge upon Sir Jeremy Raisman that he should definitely abandon the idea of issuing rupee counterparts on tap or otherwise.

The real solution is to issue a series of loans of various types devised to suit varying tastes and preferences. When we suggest a series of loans, it is not our intention to support the system of loans available on tap. What we have in mind is the issue, in the first instance, of three types of loans one short-term, one medium and one medium to long. The three issues should be placed on the market for a limited period and for a limited total amount. We will then be able to know how much has been secured in this first experiment of the series, and under what categories. After a lapse of some time, the second of this series may be issued, with slight changes in the dates of the loans, but with a limit as to the total amount as well the period during which the loans are to remain open for subscription. The results of the second experiment also must be closely watched. The lessons of the first two must be incorporated in the third issue of the series. And so on. We wish to urge that a series of such loans would be more suited to India than the continued sale of a loan on tap.

As supporting our proposals, we should refer to the series of loans that were issued between 1932 and 1934 in the favourable giltedged conditions created by the delinking of rupee from gold. The first loan in that series was a 5½ per cent 1938-40 type at a discount. The next was a 5 per cent 1940-43. This progressive decline continued till a 2¾ per cent type of loan was made possible. It would be most interesting and helpful to the Finance Member if he could have a careful study made of the experience gathered in that important period in the annals of the borrowings of the Government of India.

As we favour the issue of a series of loans, we are naturally led to suggest that the kind of rupee securities which the Government should deliver to the Reserve

Finance Abroad

THE big news of the week is, of course, the financial agreement between the British Government and the Government of India as to the repatriation of the entire terminable portion of India's sterling debt. This amounts to £96.14 million and the Government of India have taken action to repatriate as far as possible the whole of this debt. It was on Friday last that the agreement was finalised by means of an announcement by the British Treasury of the transaction between the two countries. An order was issued by the British Treasury that holders of the six Indian Government sterling loans are to sell them to the British Treasury at the prices ruling at the close of business on Friday, February 7. The British Treasury will hand these over to the Indian Government at the same price for cancellation, as soon as the debt is repaid. The British Treasury's decision has been long expected, and the only surprise is that the Indian Government did not choose to conclude the deal earlier, in which case, it could possibly have been concluded in a manner more favourable to the Indian Government. There is, however, no mistaking the fact that the repatriation scheme has become a *fait accompli* only as a result of two forces—the rising trend of sterling balances on the one hand, and, on the other, of the British Treasury's own move, in its own interest, to release the money locked up in terminable India Government securities for investment in British funds. On this reading, therefore, it is not alone the rate of accumulation of sterling balances which has decided why this financial agreement has been concluded just at this moment.

From the standpoint that, to the extent the holders of India's loans for £90 millions are now paid out in cash, they must perforce be seeking investment in medium and long-dated British loans, the present financial deal is a great bull factor for the London giltedged market. It facilitates, therefore, subscriptions to the second Defence Loan. The London giltedged market cannot as yet reflect the results of this transaction for the reason that actual payment is expected to be made only by March 24, but pound securities have already been marked up. In fact, quotations of the leading scrips have changed in the past one week since the momentous announcement was made. 2½ per cent. Old Consols ahve improved by one-eight of a point; 8½ per cent. Conversion by a like amount while 2 per cent. Conversion 1948-45 and 4 per cent. Funding Loan are unchanged at £99 and £118⅝ respectively. 8½ per cent. War Loan, however, has put on one-eight of a point, at £108⅛, while the 3 per cent. War Loan has improved by one-eight of a point to £101¾. Naturally, it will be some time before the quotations for the London scrips reflect the in-flow of the amounts released from the Indian sterling loans. Meantime, an index of the improvement in India's credit is the fact that 8½ per cent. Indian sterling stock has, in the past six days, jumped from £95¼ to £98⅛. That India's foreign debt should be reduced by about 40 per cent., which is what the new deal amounts to, is certainly the best bull point for India's credit.

It is interesting to trace the progress of the decline in the sterling obligations of India. In 1937-38, £3 millions were redeemed—about Rs. 4 crores, of which just over a crore related to non-terminable securities. In 1939-40, the repatriation scheme was again taken up and, as the Finance Member admitted in his last Budget the amount repatriated was £9 million. The next landmark was the admission of Sir James Taylor in his address to the Reserve Bank that, up to the end of June, £24 million had been repatriated. Since then, repatriation has been going on and there have been reports from time to time that the 3 per cent 1949-52 sterling loan had been frequently bought by the Reserve Bank in London.

The remaining sterling debt of India must be somewhere in the region of £160 million, according to certain reliable computations. There are three so-called non-terminable loans, which are not redeemable on any particular date though the Government have the option to repay them. Thus, the 2½ per cent. and 8½ per cent. sterling loans could be repaid at any time after giving the formal notice of one year and the 3 per cent. loan after October 5, 1948. These three loans alone amount to about £175 millions.

(*Continued from page 275*)

Bank against the sterling securities utilised for redeeming the sterling loans must be *ad hoc* Treasury Bills. Another important argument in favour of this proposal is that it will be far less expensive as regards interest liability. If this suggestion were adopted, the immediate effect of the redemption of £90 million worth of sterling debt will be to provide, in the 1941-42 budget, welcome windfall of anything between Rs. 5 crores and Rs. 6 crores by way of saving in interest charges. In order to carry out the large rupee loan programme with success to ensure the credit of the Government remaining not only intact, but improving by these very operations, it will be necessary to keep a most alert watch on the giltedged market conditions from time to time and to perfect the technique of open market operations. The responsibilities in this regard are onerous; but the opportunity is also unique. Rarely has any Finance Member been vouchsafed such opportunities to show skill of this kind in regard to operations of such a tremendous character. Rarely has any Finance Member been vouchsafed the opportunities to be able to effect such a drastic reduction in interest charges through adroit handling of credit and of credit operations.

The money market has been easy, with inter-bank call money quoting ½ per cent. (nominal) in Calcutta and ¼ per cent. (nominal) in Bombay. On the weekly Treasury Bill tender day, the amount on offer was Rs. 1 crore. Applications came to Rs. 3,18.25 lakhs. The average rate of accepted tenders was annas 11 per cent. per annum, showing no change on the previous week. The amount on offer of tender bills in the next week is also Rs. 1 crore. The sale of intermediate Treasury Bills has been resumed. From the current money market conditions, and particularly from the rapid decline that has taken place in the investment portfolio of the Imperial Bank, there is every reason to believe that applications for tap bills will be on a large scale. The returns of the Reserve Bank for the week ended February 7 reflect the effects of the month early disbursements and of the transfer of sterling securities for Rs. 5 crores from the banking department to the issue department. The latest figure of sterling securities in the issue department is Rs. 140.50 crores. On September 1, 1939, sterling securities stood at Rs. 59.50 crores. There has, thus, been expansion of currency against sterling securities for an amount of Rs. 81 crores since the war began. Thanks to this expansion, active note circulation in India has risen from Rs. 230 crores to Rs. 235.14 crores. Rupee coin shows a decline of Rs. 50 lakhs on account of the demand usual at the beginning of the month. The cash balances of the governments show falls in all cases. Central Treasury's balances have fallen from Rs. 20.26 crores to Rs. 16.10 crores; Burma Government's from Rs. 2.16 crores to Rs. 1.78 crores; and other governments' from Rs. 6.67 crores to Rs. 5.62 crores. Foreign balances held in the banking department are Rs. 63.85 crores as compared with Rs. 67.01 crores on January 31. Even though this department has lost Rs. 5 crores on transfer of sterling securities to the issue department, the actual decline in foreign balances is just over Rs. 3 crores. That is to say, the sterling purchases in the week should have been about Rs. 2 crores.

The Reserve Bank's tap rate for sterling is 1s. 6d., all through for six months.

Banks were sellers of T. T. at 1s. 5 31/32d., all through for six months; banks were buyers of T.T. at 1s. 6 1/32d., for six months.

Three months' D. A. bills were quoted: 1s. 6 7/32d., for the first month; 1s. 6¼d., for the second month; 1s. 6 9/32d., for the third month; and 1s. 6 5/16d., for the fourth month.

Inter-bank call money quoted ½ per cent. nominal in Calcutta and ¼ per cent. nominal in Bombay.

Two to four months' deposits quoted ½ per cent.

LLOYDS BANK

LIMITED

1677

Adaptability

The experience of nearly two centuries of private and commercial banking, coupled with an efficient and world wide organisation and the highest reputation for thoroughness and financial stability, enables Lloyds Bank to adapt itself to every class of banking business, whether in times of peace or war.

ORGANISE YOUR LABOUR TO SAVE

Your Staff Should Buy and Stick these Savings Stamps on their Defence Savings Stamp Cards until Rs. 10/- has been saved to buy a Defence Savings Certificate.

Many employers of labour are encouraging their men, who do not at present contribute to a Provident Fund, to save money through the purchase of Defence Saving Stamps each pay day.

It is left with the employer to decide whether he contributes or not. It is, however, to every employer's advantage to see that his workers are provided for in old age. One of the simplest ways of doing this is by Defence Saving Certificates. Each Rs. 10|- Saving Certificate will earn money at the rate of 3½% and in ten years will be worth Rs. 13|9|-, free of income-tax. If at any time the money is needed on account of sickness or other causes, the Certificates can always be cashed at the Post Office for the full value, plus the interest due. So your staff have all the advantages of a Provident Fund with good interest on the money saved and full protection.

Reduction of Foreign Debt

THE announcement on Saturday last that the Government of India had decided, with the aid of the British Government, to redeem India's terminable sterling debt valued at £90 millions, will be welcomed by most sections of public opinion in India on a variety of grounds. For, there has always been, in this country, a pronounced sentiment in favour of reversing the financial policy of earlier times which only helped Britain to hold this country in fee forever. There are, doubtless, financial and economic considerations of a highly complicated character in connection with such a sudden reversal of this policy. But, generally speaking, Indian opinion has fought shy of the financial stranglehold which large-scale foreign obligations have invariably, though not inevitably, led to; and the demand for a progressive reduction of such foreign obligations has taken various forms, the most important of which are (1) the acquisition of Indian railways from foreign stockholders by the Government of India; (2) the stoppage of further issue of loans for the Government of India in London; and (3) the replacement at every suitable opportunity of the Government of India's sterling loans by rupee loans. Considerable progress had been made even before the outbreak of the war on these three lines. Though the problem of India's war finance had necessarily many phases, public opinion was quick to realise that large-scale reduction of our sterling indebtedness must necessarily be a part of planned money during the war period. The experience of India in regard to the accumulation of her foreign balances during the last war also lent strength to the sentiment in favour of utilising every opportunity that occurred for the repayment of our sterling loans and their ultimate replacement by the Government's indebtedness to the nationals of the country.

For our part, as our readers hardly need be told, the scheme that has now been announced is a matter for feelings of thankfulness and gratification. The outbreak of the war was the signal for our applying our mind to the varied problems of our national economy during the war period, and the first of our three-fold series of articles on Planned Economy during the war period was devoted to a study of the problems of currency and finance. Our main consideration at that time was not so much the sentiment in favour of reducing our financial obligations to Britain, as that the system of our national currency and finance should be cushioned, by appropriate and timely measures, against the variety of shocks which the unsettled conditions of the war period would inevitably impart to it. If one of the immediate effects of the war is to increase our foreign balances and release at the same time inflationary forces at home, the obvious way of providing against both would be to utilise the swollen foreign balances for redeeming, in part, our foreign obligations and to impart a check to inflationary tendencies at home by increasing the volume of the rupee debts of the Government.

Thus arguing, we outlined, more than a year ago in our issue of November 25, 1939, a scheme which, not only in its underlying principles and broad outlines but also in every detail, was suited to the special requirements of the position. Every technical and practical difficulty in regard to its execution was fully taken account of and provided for. As, at that time, there were no near maturities which the Government of India was entitled to redeem, we suggested that the Government should seek the good offices of the British Government in securing the right to repay the undated loans amounting to about £88 millions. It will be easily appreciated that, whether the loans chosen for repayment are undated ones for which a year's notice of repayment is necessary, or whether they are dated loans, the earliest of which matures in 1942, the help of the British Government and its consent to exercise the special powers, which it possesses during the war period, would be equally necessary. The gist of the scheme that we advocated at the time is given here below in the following two paragraphs :

> "It is, undoubtedly, a most rare happening that permits India an occasion to redeem its external obligation by such a substantial amount as £100 millions. India's sterling debt is now in the neighbourhood of £275 millions ; and if anything like a third of this could be liquidated, it should be a tremendous achievement for India from every point of view. India's credit will rise sky-high in the London market. This should have corresponding effects in the Indian market. To the extent that British investors are paid, say, £100 millions against their sales of British sterling stocks to the Indian Government, there is a considerable increase in the potential purchasing power of the British investor for the Defence Loans. India's redeeming of a moiety of its sterling debt will, thus, be a most direct help to Britain's economic defence in the difficult war period. It will, we venture to think, be generally agreed that, if India does accumulate excess sterling balances of the magnitude of £100 millions and if some plan could be put into operation to enable India to utilise such balances for the redemption of a portion of its sterling debt, such developments will be at once conducive to India's benefit and Britain's benefit.
>
> Just as the British Government have, under DORA, assumed (and exercised) the power to call for returns of various kinds of securities held by the British nationals and just as they may, by all present indications, be exercising, in due time, the power to ask for the surrender by British holders of specified foreign securities against payment in British currency so could they call for particulars regarding holdings in 3½ per cent. India sterling stocks and, on securing such particulars, decide on the scrip-holders being repaid on what may be decided on as equitable and fair terms. We suggest, by way of offering a basis for discussion that, as against the present market rate of £79½ (which includes a small amount by way of interest) an offer of redemption at £85 should be hailed by the British Treasury as well as by the British investors as an eminently satisfactory and fair offer. In requesting the good offices of the British Government for the smooth materialisation of this plan, the Indian Government will be on exceptionally strong ground as they can urge that their operation will be a most powerful contribution towards the more assured success of Defence Loans."

The scheme that has now been adopted by the Government is substantially identical with the scheme outlined above. But it is necessary to recall that the authorities had in the meanwhile tried a different method, namely of buying sterling securities in the London market and at the same time, offering corresponding rupee securities on tap. Readers of INDIAN FINANCE are familiar with the criticisms which appeared in these columns, from time to time, of this line of attack on the problem of repatriating our sterling debt. The essence of the scheme, which has now been happily discarded, lay in the preservation of a certain demand in the London market for India sterling loans and, at the same time, a regular flow of new rupee securities into the Indian giltedged market. To put up the value of what we are out to buy and depress the market where we have to sell is obviously not the way to put through these operations. The scheme, as it was outlined by the authorities, had within it the seeds of its natural end. And we had no doubt that Sir Jeremy Raisman would, as soon as the limitations of the scheme became clear, decide in favour of its abandonment, and once it was found unworkable we were confident that our scheme would have the most careful consideration at the hands of the Finance Member.

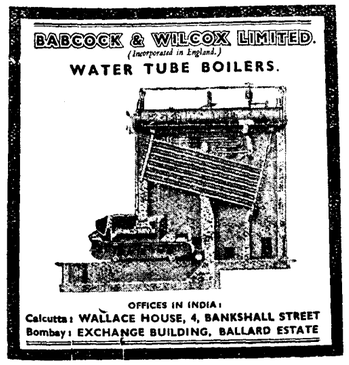
The sterling loans which have now been chosen for repayment are 5 per cent. Indian Stock 1942-47, 4½ per cent. Indian Stock 1950-55, 4½ per cent. Indian Stock 1958-68, 4 per cent. Indian Stock 1948-53, 3½ per cent. Indian Stock 1954-59 and 3 per cent. Indian Stock 1949-52. "All holders of these stocks, both in India and in England, are required to surrender these loans at the rates to be announced but approximating market rates and they will have the option to convert them into Rupee loans." It will be seen from this that the main points on which the present scheme deviates from ours is firstly, the time of introduction, secondly, the loans chosen for redemption and thirdly, the terms of repayment. A closer scrutiny of the facts will show that in none of these respects is there legitimate ground for complaint. The choice of dated loans in preference to the undated 3½ per cent. stock has the advantage that, for a long time to come, India will be free from the obligation to redeem any new maturing loan in the London market. Repayment of 3½ per cent. sterling would leave India to face problems of redemption in the early stages of the post-war period. As for the terms of repayment, the approximation of the purchase price to the market price ought in itself to be a guarantee of a fair bargain. We admit readily that often times it is not. And in this instance, the lapse of time since the original adumbration of these proposals in these columns may itself be held to constitute an injustice to India inasmuch as the price of India sterling loans has gone up by a good few points. It is well to have an accurate quantitative estimate of this rise before considering whether the delay in the adoption of our scheme has affected India adversely. The following table gives the prices of the securities to be redeemed at the time our proposals were made, in the comparatively stable conditions of January, 1940, at the time the earlier scheme of redemption was first announced and at present.

PRICES OF INDIA STERLING STOCK

			Nov. 30, 1939	Jan. 4, 1940	Feb. 22, 1940	Feb. 7, 1941
			£	£	£	£
3	per cent.	1949-52 ...	92¼	92⅜	96⅛	98⅜
3½	,, ,,	1954-59 ...	94	96	101½	101⅜
4	,, ,,	1948-53 ...	100	102	106½	105⅛
5	,, ,,	1942-47 ...	103½	104	107	104⅛
4½	,, ,,	1950-55 ...	103⅛	105	110⅛	109⅜
4½	,, ,,	1958-68 ...	104	106	111⅛	112⅛

It may be said that the rise in prices of about 5 points since January last represents a loss of £6 millions. But it is idle to frame a scheme of redemption on the assumption that prices would stand still. We are sure that nobody would like the Finance Member for India to adopt the tactics of Dr. Schacht in regard to foreign loans. It was with a view to overcome the possible recalcitrance of holders and to guard against obstructionist rises in prices that we suggested that the Government should offer 6 per cent. more per scrip than the prices ruling at the time. If it is realised that this premium is necessary, then there can be no legitimate grouse either against the delay or against the terms of repayment, as the redemption is now to be at the market price.

We may now turn to a consideration of the advantages of the policy now accepted by the authorities. We began by pointing out that it is in accordance with the nationalist sentiment as it has been evident for the last two decades or more. We have referred, too, to the intrinsic undesirability, both on economic and on political grounds, of the continuance of foreign obligations on a large scale. And it will readily occur to students of Indian currency and finance that large amounts of sterling resources have always been a temptation to our financial authorities, one which, in the past, had led to many wild and ruinously costly adventures in the region of currency and exchange. If we remember that the sterling resources resulting from the profits of the last war found their way only into the drain of reverse councils and a fabulously high exchange rate, at least the negative advantages of the present policy will be readily admitted. That, however, is not to say that it is lacking in positive merits. The difference in interest charges making for a saving of Rs. 4 crores a year is not to be despised. And if we may take the long view in such perplexed times, a country, which is losing foreign markets at a terrific rate and which in any case is to develop a large degree of self-sufficiency, would be well-advised to cut its foreign obligations and reduce its need for foreign currency.



It is, indeed, strange that a scheme so obviously beneficial to the country should be viewed askance. There is in the mind of the average Indian a crude feeling of suspicion about the intentions of the British. It is an axiom with many that, if the British accept the return of India sterling loans, there must be behind it some inscrutable disadvantage to this country. It is only to such psychology that we must attribute the tendency to argue that the utilisation of our sterling resources will leave us helpless for dollars when dollars are required, or will, in some manner, vitiate the position of the rupee at home and abroad. If Britain reserves to herself the first claim on the Empire's dollar balances, as, indeed, she must during the war, will the retention of our sterling balances make a difference?

The repercussions of this change on the currency position are, no doubt, a theme for independent discussion. Suffice it here that the sudden reduction of foreign balances may in a superficial view be held to be a source of weakness to the currency. But *prima facie*, repayment of foreign debts on so large a scale can only be a strength and not a weakness. A sudden and large need for foreign balances may change the position. But what shall we need such foreign exchange for? No large import surplus, no large scale orders for munitions abroad are yet on the cards. And if the need does develop, the enhancement of our credit should be more than sufficient to tide us over the crisis. As for currency reserves, it might be thought that the change from foreign securities to Indian would weaken the reserves. But let it not be forgotten that India is yet to revalue the gold in her currency reserves and that, if such revaluation were made, the gold in our reserves would admit of a far greater addition to the rupee securities than is now in prospect. The upper limit set to the ratio of rupee securities and the certainty of further accumulation of sterling in the normal course are sufficient guarantee of the value of the rupee.

Editorial Notes

Shape of Railway Finance

The Railway Budget will be presented in the Assembly on Wednesday. By all tokens, Sir Andrew Clow must be able to unfold a much more cheerful story than in February last. The trend of railway earnings has been quite satisfactory and the cumulative gross earnings from the beginning of the financial year up to January 10, were Rs. 83.02 crores, at which level they show an increase of Rs. 8.82 crores over the actuals for the corresponding period of the previous year. The flow of earnings is likely to be accelerated in the remaining months of the financial year, so that total gross earnings are likely to run well in excess of the budgeted total gross receipts placed at Rs. 103 crores. That the immediate financial position of Indian Railways is better than it has been for many years perhaps hardly needs affirmation. There should, however, be no illusions about the manner in which this improvement has been effected or the strain which Indian commerce and industry has been called upon to bear. The increased earnings have been made possible mainly by the 12½ per cent. increase in the traffic in commodities, the rise in the surcharge on coal from 12½ to 15 per cent. until November and thereafter to 20 per cent., and, lastly, the increase in fares by one anna in the rupee. The war effort, with its implication of larger movement of goods and materials on Government's own account, must, no doubt, have caused a handsome improvement in earnings. But industry and agriculture are entitled to relief when there is going to be a large surplus and Sir Andrew Clow, we trust, would yield to the pleas of agriculture and commerce for the removal of the surcharge on railway freights and for the restoration of fares to the original levels. There is little reason why expenditure should have gone up over the budgetted estimates, though the grant of dearness allowance to employees may take Rs. 3 crores. A year ago, Sir Andrew dwelt much on the difficulty of appraising the economic situation in the country. The difficulty would be there as long as the war lasts, but at the movement there are sufficient data to make certain broad assumptions of economic trends for the next year. One hopes that next week's Railway Budget would not put a premium on the essential unpredictability of future trends, but that it would, in the light of actual experience, give the utmost relief to the taxpayer. In wartime when balancing the general budget is a hard task, railway surpluses must be very welcome and continuance of existing burdens on the tax-payer very tempting. Under the present arrangement, even the provinces do not gain anything from railway surpluses. It is all the more necessary therefore that any improvement in railway receipts must excite sympathy for the tax-payer rather than budgetary cupidity.

December Trade Figures

The December trade returns confirm trends of increasing exports and diminishing imports, with proportionate improvement in the balance of trade in merchandise. In the nine months ended December 31, 1940, the balance was +Rs. 35.26 crores, which compares very well with Rs. 27.75 crores and Rs. 16.87 crores for the corresponding period in 1939 and 1938 respectively. Imports in the nine-month period of 1940 declined by Rs. 2.29 crores to Rs. 115.99 crores as compared with 1939, while the improvement in exports was Rs. 5.22 crores at Rs. 151.26 crores in comparison with the previous year's figures. In making the comparison, regard must be had to the fact that, in terms of volume, the change should be even more striking inasmuch as prices in the periods taken above were ruling very much higher in 1939, which included four months of the war. The December figures are even better than those for November; exports were higher and imports lower, the trend being very marked in the past quarter. On the imports side, the fall has occurred mainly under Food and Drink, though a rise under raw silk, raw cotton, oils, dyes and colours has been noted. The increases in individual imports have generally occurred in those articles required for manufactures in India.

The changes in the nine months' export figures reflect only too well the favourable effect of war on industries and the unfavourable effect on agriculture. Thus, while exports of manufactures went up by Rs. 13.93 crores, those of primary commodities suffered a heavy fall of Rs. 9.76 crores. In the former, jute, cotton and iron and steel manufactures are prominent, the improvement in the first two being Rs. 5.83 and Rs. 5.60 crores as compared with 1939. Among raw materials, exports of raw cotton and raw jute were the worst sufferers, the decline in exports being Rs. 2.93 crores and Rs. 5.16 crores respectively. Exports of hides and skins, oilseeds, oilcakes were also seriously affected. The favourable trade balance masks a deterioration in the lot of Indian agriculturists, concern for whose welfare would be felt more and more in the future. The favourable balance has been secured by means of tight import control schemes and at the cost of a large shrinkage in the total turnover.

Blow to Coffee

The coffee exporter in India is doing very badly at the moment, what with the loss of the entire Continental market and the lack of freight to export to even the few markets that still remain. Much depended upon the United Kingdom and when recently the Ministry of Food made the allotment to import 2000 tons from India, coffee planters were a little relieved. It now appears that even this offtake is not to be, since the shortage of shipping space has compelled the U.K. to

suspend the import licenses for certain articles, among which coffee has the misfortune to be classed. Thus, the only hope of relief has gone and coffee interests would appear to have been pleading in vain for including this commodity among the 'essential' articles of import. The war necessitates a revision of priorities every moment, and it is not surprising that coffee's interests should be disregarded where the interests of many a more important commodity are jettisoned altogether. The shipping position is acute and the availability of space is confined to the case of a few articles noted more for their importance as war material than as a commercial item. Our agricultural commodities, in all of which the 1940-41 season is witnessing bumper crops, are the worst sufferers. The lack of freight, coming on top of the loss of markets, has dealt them a great blow. The problem of these surpluses will become more and more acute hereafter. Never had India greater reason to regret the lack of a merchant fleet than now.

Wholesale Prices.

The index numbers of wholesale prices in Calcutta for January 1941 provide due confirmation of the trends disclosed by the trade returns. The index numbers of agricultural commodities and articles in the food group show a fall, while those of the manufactures group, metals and tea show a rise. The two have balanced themselves out with the result that the All-Commodities Index remains unchanged at the December figure. The cereals and pulses' price indices are down by three points, that of sugar by seven points, but tea is the most remarkable instance, the price index being up by seventeen points corresponding to the increased offtake by the U.K. The rise in raw jute, a steady feature since September, is maintained and is a reflection of the improved sentiment in that market, based on the hopes of effective restriction of the next crop. The rise of one point in the jute manufactures group has occurred mainly in sympathy with the rise in raw jute prices. The fall under raw cotton is more true of the prevalent trend and if the manufactures index has risen by five points, it duly shows the offtake by the Empire and placing of war orders. An increase by four points in the metals section index, which has been going up pretty steadily since June last is directly attributable to war demand. So, too, is the case with wool and other textiles. The oilseeds price index remains stationary at 101, but the fall had occurred three months ago and at current price levels, the effect of surplus production is probably yet to be felt.

Taken over a year, the movement of the various indices makes an interesting study. A comparison with the levels of January 1940 reminds one of the disillusionent suffered by producers of primary commodities in India as to the influence of war on prices. In most cases, the difference in the index numbers amounts to twenty points at least, while tea alone shows a movement in the upward direction. The curve of prices had, from January 1940, reached a low about the middle of the year or the third quarter, with an incipient upward movement thereafter. The question is, will it be continued? As yet, there is little reason for an answer in the affirmative, though the reports of compulsory restriction schemes for almost all crops in the coming year are encouraging. If the new year does not open up such fine vistas as 1940 did in the first few weeks of its advent, it at least holds out prospects of a more even tenor of prices and less spasmodic changes in objective conditions.

Paying for the War.

After the vote of credit for £1800 millions, the April budget acquires a fresh significance in Britain. While all estimates as to the possible amount that can be drawn through taxes appear superfluous, if not misleading, there is still ground for saying that over half of the national output, fixing the value of the latter at £5,500 millions per annum (the estimate of £5850 millions made by Mr. Horsefield in his book *The Real Cost of the War* relates to 1939) will be absorbed by taxation. It is perhaps calculated that the vote of credit will set free funds for six months of warfare but Parliament has not yet specified the means for getting the money. The orthodox view against inflation prevails, and the former Chancellor, Viscount Simon, has reiterated the view that any advance in the prices paid for imports does not warrant, and should not lead to, any rise in prices. The vicious spiral is so much deprecated and feared that a wholly static condition of prices and wages while both the tempo and process of industry change and increase is held desirable.

The actual cost to the British taxpayer cannot be computed yet, but the £1800 millions mean a net addition to the burden of taxation. Further changes in the standard rate of income-tax are inevitable, and the middle classes, at any rate, must count on a rise in rates, a reduction of rebates and allowances. No special privilege or stimulus is needed for savers when private consumption is drastically curtailed by the Purchase Tax that came into force in October as also the wide extension of rationing in regard to clothes, footwear, etc. Moreover the dismal conditions of investment preclude investment except in the new Government loans and the original notions of safety in regard to real property, debentures, etc., have gone by the board. While the expansion of the savings movement may provide double the savings formerly anticipated, it is obvious that at least £1,000 millions will have to be provided by way of savings in a year reducing thereby what is available for direct, current consumption. In its effects on the standard of living, enhanced saving scarcely differs from the increases in taxation and an annual expenditure of £4,000 millions (the well-known previous estimate of £3,600 millions was made in August) during the war period means that total war has to be met by total sacrifice. Previous analyses of the taxable capacity of Britain have always concluded with the view that a margin for additional taxation and additional saving existed even among the class of wage-earners. The further increase in taxation, direct and indirect, foreshadowed by the vote of credit may not upset either the taxpayer or the Government. For the war, to quote Geoffrey Crowther, must be fought on the maximum scale if Britain is to win it. Many have pointed out that the Nazis prepared for seven years for total war and price regulation, wage control, the direction of savings and taxation under a planning system had only one purpose, a war of revenge or of aggression, whatever it is called. Britain is preparing for a war on a smaller scale, and if one of the indirect and remote consequences is an increase in public expenditure in India, especially on defence, few can complain and fewer can argue. A probable rise in taxation need not cause alarm and if modifications in income-tax such as the reduction of withdrawal of rebates and allowances, or the lowering of the exemption limit come, they must be welcomed as wholesome correctives and essential reforms.

Industrial Location

It is not without interest to trace the evolution of official views on the subject of industrial location in India. While committees and officials have investigated the position of industries, great and small, the manner in which industrial development has proceeded in relation to geographical factors has been ignored. Sir Ramaswami Mudaliar's reference to the question of location of industry indicates that the earlier remarks of Professor Gadgil, stimulating rather than comprehensive in his analysis of industrial development in India, had directed attention to the subject. Here is a question of direct interest to the new department under the Economic Adviser, it might be said. Only a close study can indicate the maximum limit of development or the possibility of transfer of units to more promising sites in the case of any particular industry. Having regard to the cry of over-production raised in the sugar industry more than once, it is certainly permissible to recommend the shift of some factories to States where cane cultivation is possible and where the factories would not be handicapped by excessive State interference. The investor, who can draw lessons from the record of the two Rampur sugar companies will agree with this argument. Sir Ramaswami Mudaliar referred to the location of industry with reference to the grant of patent or other rights vested in the State. But the principle of limiting State aid admits of wider application in regard to tariff assistance also, though it will be argued that the conditions laid down by the Indian Fiscal Commission in 1923 in regard to natural advantages and the possibility of independent existence include the proper location of industry. The address of the Commerce Member to the new committee set up in connection with the utilisation of research however suggests that location might henceforth be regarded as an independent factor, and State assistance might be vouchsafed only on the conditions appropriate to regional planning.

The Board of Scientific and Industrial Research might in the course of its labours throw light on the subject of the industries that will do particularly well in new areas. The Commerce Member's mention of the subject reinforces the plea for an examination of modern industry's foundations in India with particular reference to geographical and other factors. Instances of excessive or lopsided development can be found, and to correct them with the least harm, is a function of the Government for the mistakes of private enterprise can only be set right by an authority, which can plan and guide, aid and advise, having regard to the wider setting and the surrounding circumstances.

Belgium's Gold

The first important litigation involving frozen foreign assets in the U.S.A. since the Nazi invasion of the European countries is the application of M. Theunis in the New York State Supreme Court in order to obtain possession of the £260 millions worth of Belgian gold which had been formerly sent to France for safe keeping when Belgium was invaded. M. Theunis is the former Belgian Premier, now representing the exiled Belgian government in the United States. The funds of the Bank of France lying with the Federal Reserve Bank at New York are sought to be attached by M. Theunis whose action is designed to secure that whatever gold had been entrusted with France the latter must pay back or else face an attachment of its property in a neutral country. The story of the trek of Belgian gold is extremely interesting From Brussels it went to Paris after the invasion of Belgium; from Paris it was removed to Bordeaux by the French

MUGHALPURA, LAHORE.

Government itself, whence it was to be sent on board a British cruiser to London; the Bank of France, however, sent it to Dakar in Africa; after the Armistice, the Vichy Government was persuaded to turn the gold over to the Germans. The Nazis, of course, deny having looted the gold and the only course open to M. Theunis is to establish his right in the United States, where French gold remains "frozen." It will be remembered that Poland's gold, too, had to do a lot of journeying before it reached London *via* Rumania. But then, there was no question of misappropriation.

'Lend and Lease' Progress.

The victory of the Administration by 95 votes in Congress with reference to the Lease and Lend Bill removes all doubts as to the ultimate passage of the Bill. The actual discussion on the Bill may be briefer than expected, and it is anticipated that by March the law permitting aid to Britain would release war materials for Britain. The Senate adheres to the curious procedure of seeking enlightenment from witnesses outside the Legislature, and the functions of a specialist committee seem to pass, to a great extent, to public opinion outside the Chamber which is more often impressed by emphatic language rather than logic. Senator Barkley's estimate that only 20 votes will be cast against the Bill, when it comes up, shows that the majority leader is more optimistic than the majority of observers judging by the ratio of votes gained in Committee. The Senate Committee has approved amendments which do not run counter to the principle of helping Britain. The limitations imposed will merely deprive President Roosevelt's successor (assuming that there is no fourth term) of the powers granted by the Act. The President is authorised until June 1943, to have manufactured or otherwise procure any defence article for the Government of any country whose defences he deems vital to the defence of the U.S.A. with the proviso that no such contract can extend beyond July 1946. The clause might suggest that a prolonged struggle in Europe is expected, that even the spread of the war is envisaged. The naming of exceptions has not come ; the President's discretion is absolute, and the clause might be applied to provide assistance by way of war materials to China. Though such assistance might reduce the amount of aid available for Britain, it might appear essential for a vigorous

successful policy in the Far East. After Colonel Knox's evidence and Mr. Matsuoka's bellicose speeches, there is reason to say that the breach between Japan and the U.S.A. has widened.

Though consultation with the heads of the Services is mentioned, the President's power to transfer defence articles, on any terms he considers satisfactory, is limited only by the provision fixing the value of 1300 million dollars for such equipment as is withdrawn from the existing military and naval supplies. While Congress retains under a separate clause the power to withdraw the powers reposed in the President by a concurrent resolution not requiring the President's signature there is no other restraint. The grant of funds periodically for the making of arms to be lent to others is a duty imposed on Congress which can influence policy in a prompt and practical manner. There is a saving clause prohibiting implicitly the entry of U.S. ships into the war zone or the use of the navy for escort purposes. But there is nothing to prevent the entry of ships belonging to friendly, though belligerent nations, into the U.S. ship yards, for refits or repairs.

The Senate refused to add a clause, demanding the prior approval of the Army and Chiefs for handing over defence articles to any other country. The amendment has been dropped by the

GOVERNMENT OF INDIA
FINANCE DEPARTMENT

NOTIFICATION

No. D-926-B/41 dated the 8th February, 1941.

Whereas the Central Government is of opinion that it is expedient for the purpose of strengthening its financial position to transfer to itself certain foreign securities :

Now, therefore, in exercise of the powers conferred by Sub-Rule (8) of Rule 94 of the Defence of India Rules the Central Government is pleased to make the following Order, namely :

All securities of the descriptions specified in the first column of the Schedule annexed, other than those to which the provisions of the said Rule do not apply by virtue of Sub-Rule (6) thereof, are hereby transferred to the Central Government at the prices specified in the corresponding entries in the second column of the said Schedule.

SCHEDULE.

Description and acquisition price of securities.

Description of Securities. (Column 1).	Price per Security of £100 nominal. (Column 2). Rs. A. P.
5% India Stock 1942-47 ...	1,397 11 0
4½% India Stock 1950-55 ...	1,467 14 0
4½% India Stock 1958-68 ...	1,504 11 0
4% India Stock 1948-53 ...	1,421 1 0

3% India Stock 1949-52 ...	1,330 12 0

By Order, etc.,
C. E. JONES,
Secretary.

INSTRUCTIONS TO OWNERS OF SECURITIES TRANSFERRED TO THE CENTRAL GOVERNMENT BY THE CENTRAL GOVERNMENT NOTIFICATION No. D—926-B—41,

Dated the 8th February, 1941

The following instructions are issued by the Reserve Bank of India under Sub-Rule 4(b) of the Defence of India Rules for the guidance of the owners of the securities transferred to the Central Government under their Notification No. D—926-B/41 dated the 8th February, 1941, hereinafter referred to as the Vesting Order.

The term "Owner" as defined in Rule 94(1) (*ii*) of the Defence of India Rules includes, in relation to any security, any person who has the power to sell or transfer a security, or who has the custody thereof, or who receives, whether on his own behalf or on behalf of any other person, dividends or interest thereon, or who has any interest therein.

2. Owners of the securities affected by the Vesting Order are required to make, or to arrange to make, delivery of the securities forthwith in the following manner. Holders are required to declare that the transactions do not constitute trading with the enemy, that no part of the proceeds will be made available to the enemy and that since the outbreak of war the coupons and the relative bonds or stock certificates have not been the property of an enemy.

(A) SECURITIES HELD IN INDIA.—

(i) *Stock Certificates to bearer* (*bearer bonds*).—If held in India the certificate and all coupons belonging thereto must be delivered to the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta either by registered post or personally or through a Bank or a Broker. Coupons which fell due for payment before the date of the Vesting Order must be detached.

(ii) *Inscribed Stock.*—A transfer in blank executed by the person in whose name the stock is inscribed should be lodged with the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta.

(iii) *Registered Stock.*—The registered certificate together with a transfer in bank duly executed by the registeded holder should be lodged with the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta.

(B) SECURITIES HELD IN THE UNITED KINGDOM.

If the securities are held in the United Kingdom the holders must declare to the Public Debt Office the name of the loan, the amount of the stock, the form in which it is held and the full name and business address of the United Kingdom agents in whose custody it is held. They must instruct their agents by DLT cable to make delivery of the stock and all the necessary documents to the Bank of England in accordance with such procedure as the Bank of England may prescribe in this behalf. The cost of the DLT cable will be borne by the Reserve Bank of India. The cable must be shown before issue to the Public Debt Office of the Reserve Bank, which will give a serial number to the holding under which the Agent should be instructed to surrender it to the Bank of England.

3. The owners of the securities to which the Central Government order mentioned above relates have the option to surrender the securities against rupee counterparts of the vested sterling loans or against cash payment in rupees, and the mode in which it is intended to exercise the option must be declared at the time of surrendering the securities or the relative documents or declaration.

4. The transfer forms and registered certificates delivered in accordance with paragraph 2(A) (ii) and (iii) above will be sent by air-mail to the Bank of England for verification and no payment will be made until the Bank of England telegraphs that they are complete and in order. Provided the delivery of the requisits documents is found on scrutiny to be complete and in order, payment in respect of documents handed in or or before the 10th March, 1941 will be made on the 24th March, 1941, and payment in respect of the documents handed in after the 10th March, 1941, will be made two weeks after delivery. Payment will be made to the owner or to the Bank or approved Broker duly authorised by him in this behalf. Allowance has been made in the price fixed for each security in the Vesting Order for the period that must elapse between the date of the Vesting Order and the first due date of payment. This price represents capital payment and is not subject to income-tax. All transactions will be put through at the standard rate of 1/6d. per rupee. Rupee counterpart loans will be issued in multiples of Rs. 100, being the rupee equivalent of £7-10-0 face value of the surrendered loans, any excess over this multiple being adjusted in cash.

5. Counterpart loans will earn interest from the last interest payment date of the surrendered loans and no adjustment on account of interest will be necessary in the case of securities surrendered against rupee counterparts. Interest earned on counterpart loans will be subject to Indian income-tax in the usual manner.

6. Brokerage will be paid by the Reserve Bank of India to Banks and Brokers in India who lodge documents with the Reserve Bank of India, irrespective of where the securities are deposited, at the rate of 1/8% of the nominal value of the securities delivered in good order converted at 1/6d. to the rupee. No commission will be charged by the Reserve Bank of India on the issue of rupee counterpart loans or the cash payment in rupees in exchange for the securities acquired.

7. Any further information that holders of the vested securities may require may be obtained from the Bombay or Calcutta office of the Reserve Bank.

J. B. TAYLOR,
Governor.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It.)

THE financial journalist has most reason to hate war. If at one end there is the munitions manufacturer interested in fomenting war and speeding up the armament race, the other end, I believe, is taken not by the pacifist, but by the financial journalist. To the pacifist, pacifism is a hobby or a luxury. Evangelical zeal comes of the priggish delight in not belonging to the crowd. And if pacifism is a game, half the fun is lost, where there is no threat of war. But with the financial journalist, matters are far different. Not only are economics and finance wrapped up in mist, but the very springs of essential economic intelligence are dried up. The war effort exhausts the energies of the Government; and to the extent that economic problems of a topical kind originate in Government's sins of commission or omission or, let me add, their good deeds, the financial press has to be content with problems of a routine kind. In normal peace time, the energies of Government and people flow into a variety of channels. Democracy is comparatively more of a reality. The Legislatures are more frequently in session and for longer periods. The legislators are more active, debates more lively. There is a regular flow of committees of enquiry, reports of more or less expert bodies on various questions. The conscience of the community is more sensitive to existing evils in the social life. And the press functions smoothly, but in lively and alert fashion.

War changes all this. The other three estates have, no doubt, their sufferings. But the Fourth Estate is crippled from the start. First come the restrictions on its liberties. Its daily work is hedged in with conditions of all kinds. It cannot send copies of newspapers or periodicals as formerly. Permits have to be obtained for despatch of copies. Reports have to run the gauntlet of new departments specially created for the purpose. Even the least important sections of the press have to assume that what they publish can make or mar the war and exercise almost superhuman vigilance in the choice of copy. On the business side, expenditure goes up, through rise in the cost of paper; and as misfortunes never come singly, revenue goes down. Advertisement of more than one line of goods is cut down either because stocks are low or demand is high.

It is not of this that I started to complain. One may get over personal hardships and privations. But it is the difficulties of the job on hand that sometimes depress me. Over the last one year and more, I have been watching closely the narrowing of the range of problems for comment. In the year before the outbreak of war, the new constitution was functioning in all the Provinces. In seven out of the eleven provinces, the Congress Party was in power. There was a substantial unity of principles underlying the Congress programme, especially on the economic side. The Finance Ministers, all over India brought a fresh outlook and, within limits, new ideas to their tasks. Their first budgets had inevitably to be a routine affair. But in the second, the will to reform was in evidence. Though the mainspring of financial readjustment lay in prohibition, the Congress ministers were conscious of the need for redistribution of tax-burdens. Mr. C. Rajagopalachari introduced the sales tax in Madras. Mr. Latthe in Bombay levied the tax on urban house property. Mr. Nalini Ranjan Sarker inaugurated the era of more comfortable finances for Bengal. And Mr. (now Sir) Manohar Lal struck a new note in appropriation, as he was more comfortably placed than his confreres in other Provinces.

All this meant a quickening of the financial and economic conscience of the country. The loss of excise revenue and the levy of new taxes to make good the loss provided themes for lively and illuminating discussion. The Congress governments took up the question of relief of rural indebtedness, a question round which there has always been a cluster of vital problems of rural economy. I forgot to mention Pandit Pant in the U. P., who with his graded professional tax forced the British Government to bring in an amendment of the Government of India Act.

But by far the most interesting part of the Congress Governments' work was the appointment of the National Planning Committee. I must confess I am no admirer of the work done in this regard. But that can hardly detract from the importance of the decision made by the Congress ministries. For the decision attracted public attention to the importance of the economic issues and the readiness of the Congress, if it were long enough in office, to tackle the whole of our economic problem and not to tinker with it piecemeal. The acceptance of economic planning as a practical policy by duly constituted governments enabled all men with any right to speak on the matter

to make it a subject of serious consideration.

With the outbreak of war and the resignation of the Congress ministries, economic planning has again gone beyond the pale of practical politics. For a time, we talked of co-ordinating the various economic measures which the stress of war almost imposed on us. The objects and methods of price control, the volume and distribution of war profits, the means of conserving them, these engaged our attention. But the bubble of war profits was soon pricked. Not only did prices tumble down and boom turn to virtual slump, but it was learned that, owing to the fall of France and the occupation of the greater part of Western Europe by the German army, all our Continental markets were lost to us. It was on the problems raised by our misfortunes that the financial press had to fatten. The Gregory-Meek mission was the centre of attention for an all too brief period. And even during this period, it was not open to us to deal with the question in the way that a financial journal should. It is alright for the daily press to base its comments on the official estimate that the loss of Continental markets represented a loss of about Rs. 30 crores of exports. But a financial journalist would naturally like to examine and handle the data himself ; and this was hardly possible. In any case, the Gregory-Meek mission was recalled to assist the Roger Mission and the Eastern Group Conference.

In fact, it may be said that after the appointment of the National Planning Committee, the Eastern Group Conference was the only big theme which called for attention. But, here too, I fear, the end of the Conference is no better than the fate of the Planning Committee. We hear little of the decisions of the Conference or of the efforts made to implement them. Even the Chairmanship of the Standing Committee has not gone to Sir Alexander Roger who is most qualified to fill that place. Where is that co-ordinated effort of the Eastern Empire countries, which it was the aim of the Eastern Group Conference to bring about? Even if the Conference led to any concrete results, there are, I suppose, reasons for withholding them from the public.

The war may bring the dailies some news every day, which they can splash on the front page. But the financial press is starved relentlessly. As I said, even the ordinary sources of economic intelligence are not accessible to us. *The Sea-borne Trade of India* is but a bitter memory, except when a ghost of its former self rises to haunt you out of your quiet. Figures of industrial production refer to an even more hoary past than formerly. And the economic activities of provincial governments, never much, are nothing to-day.

My purpose in saying all this is not to set up the journalist's wail. My purpose is rather to point out that economic problems and issues are fading into the background. All that we have to remind us of the Government's interest in the national economy is a series of notes, which are meant, not to enlighten the specialist, but to enthuse the public. Except for stray accounts, like that of Mr. J. J. Ghandy, for instance, of the latest developments in the Tata Iron and Steel Works at Jamshedpur, we have mostly stories of orders placed for carpets or shoes, new plant installed at Ichchapur, or changes in Railway workshops with a view to facilitate war production. We hear, too, of proposals for the utilisation of groundnuts and oilseeds in indigenous manufacture. Even larger schemes of crop restriction are talked of. But the means of intelligent discussion of these questions on their merits is not open to us. When provincial autonomy is suspended and the Central Assembly is boycotted by the largest popular party, it is idle to hope that economic questions will regain public attention. While the war must no doubt take the lion's share of the Government's attention, there must be some assurance that the economic problems are tackled as they will be if representative ministers were in power.

A regrettable error crept into the notice of the Burmah Shell documentary that appeared in these columns last week. The annual production of the Tinplate Works that produces kerosene tins for India's millions is not 16,000 tons, but 60,000. Perhaps, a mishearing explains the mistake. But there is another error to be accounted for. India is not, as many imagine, dependent on outside supplies of tinplate. The Tinplate Company of India has seen to it that she should be self-sufficient and India's tinplate is now home made. At Golmuri, things have shaped exceedingly well in recent years and last year's production, incidentally a record, exceeded 61,000 tons. And India is now independent of imports in this line. I am indebted to Messrs. Shaw Wallace & Co., for this correction, which, I am sure, my readers will be as glad to note as I am to own.

Senate which accepted the four amendments limiting the period of operation to June 1943, empowering Congress to suspend it before then by a concurrent resolution, asking the President to consult the heads of the Services before lending materials to others and forbidding by implication the entry of U.S. ships into the combat zone. The result of the Committee's discussions may be more or less the same as those of the Congressional committee. But Mayor La Guardia's testimony on Canada's whole-hearted and effective co-operation, dating from the Ogdensburg talks, may have great weight with the Senate. What makes the grant of U.S. aid possible, is the absence of a land frontier (the century of peace warrants this statement) while the ability of Canada to give her the same or most of the materials needed for the programme of aid to Britain must be emphasised.

Indo-Burma Trade

The trade returns for any recent year or month will indicate that Burma is, after the U. K., the most important source of India's imports. But Burma which provided 19 percent of the total imports in 1939-40 took only 6 percent of the total Indian exports. The rise, not necessarily permanent, in the adverse balance of trade deserves to be mentioned in view of the inauguration of talks recently as regards the conclusion of the new trade treaty to take the place of the Order which expires after more than three years. While the New Delhi discussions have run a set course they have not been exactly fruitful. The Burma Premier's first interview to the press in Bombay indicated that the Burma delegates wanted to discuss immigration and other contentious issues while the Indian advisers and the Government representatives took the conference as an opportunity to establish certain claims and propound certain views. It is not surprising that the pleas for harmony and mutual understanding were ignored, and the Burma delegates, after a few days of discussion, prepared to depart. The press reports do not agree on the cause of differences but it is generally surmised that the Indian rice-growers' claim to protection against imports from Burma was formally put forth and it should have been opposed for obvious reasons. With the cutting off of European markets, the export trade in rice with India acquires greater importance. Though the imports in the immediate past or future may be affected by the shipping position, India has long appeared to Burma as a large and regular buyer of rice, since there is a deficiency of supplies though exports of rice take place. Burma's principal exports to India are rice, mineral oil and timber. About half India's total imports of mineral oils come from Burma and in view of the importance of retaining this source of supply, it may be argued that India should display an accommodating attitude. But a probable, if not certain, increase in rice cultivation renders it necessary to restrict imports of rice by a change in the tariff which will make the existing import duty on broken rice apply to imports of rice and paddy from Burma. It might be argued also that the levy of the export duty on rice to India as from January 1 confers on India the freedom to ask for the right to levy an import duty on rice from Burma. In spite of the rather vague statement that Burma's fiscal autonomy is at stake what is now involved is the Burmese claim to change-over from a revenue tariff to a higher scale of duties. The war demands an early and easy addition to Burma's revenue, and it might be said that duties on imports from India would be helpful. It might also be argued plausibly that the Burmese taxpayer would be the one really affected since Britain and Japan, the most important rivals of India in regard to textile manufactures, Iron and Steel, jute manufactures and a variety of manufactured goods such as paper, chemicals and tyres are not likely to be energetic competitors on account of this war. But if the claim to levy duties is conceded the Indian sugar industry will lose its only export market and Indian tea may have no chance against tea from the N. E. I. in the Burma market. Moreover such advantages as may be conferred by the war on India's export trade may be purely temporary, even illusory, and the trade treaty should be designed for peace. While the importance of Burma for India's defence may be insisted upon, the actual contribution that the Indian army makes to Burma's security cannot be ignored. Though Burma's claim to import duties cannot be resisted having regard to the debt taken over at the time of separation the Indian agriculturist who is waiting for a rise in prices, impossible if duty free imports from Burma are allowed entry, must be remembered. And if it is a question of inter-imperial relations it must be remembered that the duty on wheat, renewed more than once, is mainly designed to keep out Australian wheat from the Calcutta market or to make it available at a price that allows Indian wheat to complete. The trade figures for the last three years reflect the fluctuations in the production of rice in India though imports have reduced the fluctuations in prices. A limitation of imports by quota may appear desirable to some who may urge that Burma must be shown some favour. But those who dwell on 'invisible' imports from Burma and their value will point to the cost to the Indian taxpayer of acquiring Burma and point also to the fact that Burma stands a better chance as Thailand and Indo-China cannot appear as effective competitors in the rice trade.

ELECTRICITY means prosperity
Follow a power line and you will find at its end, an Industry. It is Electricity that brings a factory to life, that lights its windows, starts its engines and gives it communication with sources of supply, whether they happen to be in a nearby town or a port in a distant country. Moreover, every factory worker from Durwan to Director would acknowledge with gratitude the essential aid of electricity in some part of his daily life.

"ASK JACKS ABOUT IT"

New Delhi, Feb. 12.

UNUSUALLY quiet was the beginning of the Budget session of the Central Assembly. Though there were as many as eight adjournment motions on the President's table, they were either ruled out or withdrawn. The reports of two select committees were ready for submission to the House. The one on the Indian Railways Amendment Bill—the Ticketless Travellers Bill—made only one important change in the Bill viz. the addition of a provision that no excess fare shall be payable by a person travelling without a ticket if he has obtained from a railway servant permission to proceed without having a ticket. A note of dissent submitted by two elected members, Sir Ziauddin Ahmed and Mr. G. V. Deshmukh, puts forward the view that "a better system of checking the tickets both in the running trains and at junction stations will achieve the object more effectively than by introducing the innovation of changing a civil liability to a criminal liability or in other words by changing the fine to imprisonment." Their suggestion is that persons who are merely guilty of travelling without a ticket or pass should be punishable only with fine extending up to Rs. 100. Owing to the widely divergent view held by the elected members on the principle of the Bill, it is hardly likely to have an easy time.

The select committee on the Merchandise Marks Amendment Bill has also submitted only a short report. One amendment proposed by it deals with cases in which piecegoods are passed from the factory which manufactures them to other factories for the completion of later processes. It has therefore suggested a provision that the goods shall bear the name of the owner of the premises in which the last of the processes fitting the goods for sale was carried out. The committee has also removed the requirement that the manufacturer's name must appear on goods which are destined for export to foreign countries. Another amendment extends to cotton sewing or darning thread the provisions affecting cotton yarn. In a note of dissent Sir Homi Mody says it should be made compulsory in clause 7 and other relevant clauses for the name of the manufacturer or the person in whose premises the final processing of the goods takes place to be stamped on the goods. Another elected member Dr. P. N. Banerjea, in his note of dissent suggests that instead of giving power to the Central Government to notify the classes of imported goods which should be compelled to show indication of origin, clause 8 should be so amended as to make it obligatory on all imported goods except those specified in a schedule to be attached to the Bill to show indication of origin and giving the Central Government the power to exempt other classes of imported goods from the operation of the Bill either on its own initiative or on representation from the interests concerned.

Certain important papers in connection with the recent Indo-Ceylon Relations Conference were placed in the hands of the members of the Assembly on Tuesday morning. A verbatim report of the entire proceedings of the conference has been published—a useful step which has enabled the public to understand the position in all its details. A Press Communique has also been issued by the Government of India explaining its position in answer to the report of the Ceylon delegates. From the latter one finds that the breakdown of the conference is entirely due to the totally indefensible attitude of the Ceylon delegates on the question of the status of the Indian residents in Ceylon. The claim made by the Ceylon delegates was that the Ceylon Government should have the right to reduce the Indian population in Ceylon and with this object in view apply economic and other pressure against the Indian community to squeeze them out. This is a proposition to which no Indian Government can agree. The proposal made by the Indian Government on the question of status was that the claim of Indians to equality of citizenship should be based on the same principle, the application of which they had consistently urged in respect of other countries in the British Commonwealth of nations where Indians have settled viz. that full citizenship rights covering the whole political and economic field could legitimately be claimed by all Indians who could establish proof of a prescribed period of residence and of a permanent interest in that country. As regards Ceylon the Government of India suggested five years residence and a permanent interest in Ceylon. As the Ceylon delegates refused to accept this principle the conference broke down.

It is not easy to see how the future will shape itself. The firm stand taken by the Government of India on behalf of the Indian community in Ceylon has been welcomed in Assembly circles. The Member-in-Charge, Sir G. S. Bajpai, took the opportunity only recently to pay a visit to Ceylon and meet the Governor and the Ministers. So far as one can see there is no change in the attitude of the Ceylon Ministry on the Indian question, but the action taken by the Governor of Ceylon in conveying a message to the State Council that he would withhold approval, ratification or assent in respect of any Act, Regulation or measure to which the Government of India did not agree and the effect of which would be to deprive Indians of the benefit of any of the undertakings given, has helped to reassure the public mind in this country. In the course of the conference itself, one of the Ceylon delegates, Mr. Huxham made a significant suggestion to the effect that at least during the period of the war nothing should be done by the Government of India by way of impediment trade. It was rightly pointed out on behalf of the Government of India that no undertaking could be given regarding the future.

The trade talks between the Government of India and the Government of Burma have now reached the crucial stage. The two Governments have exchanged notes setting out each other's reactions to each other's proposals. It is clear that the Government of Burma is anxious to take full advantage of the situation created by the war to earn as much revenue as it can by the imposition of important duties. The action taken by the Government of Burma in levying an export duty on rice is regarded as an indication of its intentions. Had the war not intervened the position would have been very different, but as the facts have to be taken as they are to-day, there is little use now in considering the situation as it existed before the war. The speeches and statements made by the Premier of Burma reveal that he is anxious to maintain cordial relations between the two countries and has no desire to take up, a challenging attitude. Though the original proposals made by the Government of Burma are reported to have been extreme in their demands, there is reason to hope that a satisfactory agreement will be entered into which while giving to the Burma exchequer the revenue to which it is reasonably entitled does justice to Indian trade and industries. The prospect of ever increasing trade between the two countries to mutual profit is immense, but apart from it, there is the general position of the Indian community in Burma which has to be kept in mind in these negotiations though they are primarily concerned with trade.

An important conference was held last week between the Railway Board and the representatives of the Railwaymen's Federation on the recommendations of the Rao Committee on dearness allowance. The Federation appears to be anxious that some relief should also be given to those getting above Rs. 35 a month. On the other hand the Railway Board apparently feels that the grant of Rs. 3 a month recommended by the Committee exceeds the requirements of the situation. The repercussions on other Departments have also to be considered. In fact, there was a censure motion yesterday on the subject of granting dearness allowance only to Railway employees and not to all. The Government's proposals are now under consideration by the Federation, and it is likely that there may be another meeting.

HILL BIRD.

Gateway of India

(From Our Correspondent)

Bombay, Feb. 12.

IN view of the reviving interest in the subject of road development, considerable importance attaches to a comparison of road outlay and income in Bombay. The descriptive account available hardly accords with the view that main roads have received too much attention, and that village roads have been neglected. Though the outlay on communications in all years has exceeded the revenue contributed by motor transport to the Province and to local authorities it has not been generous by any test. That is perhaps why such a small proportion of Bombay roads are surfaced with tarmac or concrete and it has been suggested that the condition of important roads has worsened considerably in recent years. If one excludes the purely urban roads the province is hardly well off in point of the main roads, which means that the story of too much money having been spent on the main roads is moonshine. How continued neglect reacts on economic development need not be detailed here, but it is worth remembering that the Industrial Survey Committee has reported in favour of immediate, well-planned road development in Bombay. It has been pointed out that the road users contribute a steadily increasing proportion of the total expenditure and that a rapid increase in Provincial expenditure is therefore justified on that score. That there is no place for retrenchment in road expenditure in spite of the war is a conclusion to which many will subscribe, and motorists and the motor trade fear that the future may witness a rapid deterioration.

The groundnut grower of the Karnatak and of Kathiawar faces a difficult period. Schemes for restriction of cultivation have been canvassed, but their practicability is not universally conceded. The idea of a rebate to shippers or other form of subsidy has been accepted, but the benefit may be confined to the trade rather than the agriculturist as has been pointed out promptly enough. Though it is admitted that expansion of groundnut cultivation has been rapid since the last war, the reduction by 88 per cent of the area under groundnut may not be feasible. It is, however, recognised that it will not be difficult to replace groundnut by sesame and jowar in suitable areas. It is believed that the groundnut crop can be reduced by at least 25 per cent. in Bombay and that the area under other crops can be increased. A Central subsidy is an idea that finds favour at present but its application to the States may not be without difficulty. The rebate system will procure the funds needed. The disposal of accumulated stocks presents a different problem. Though the surplus for 1940-41 is not more than 150,000 tons out of a total production of 2.3 million tons out of which 2.15 million tons have gone into consumption at home and abroad, the carry-over dominates the price situation. Government purchase of a large quantity, say 50,000 tons, is recommended by many on the ground that this would promote a prompt recovery in prices. These proposals are likely to be examined in detail by the forthcoming Conference, and Bombay hopes that the market *malaise* would disappear soon. The Conference will, probably, consider the suggestion, widely approved, for raising the price of oilcake by stimulating their use as manure. The development of the vegetable ghee industry will also be reviewed with a view to stimulate its further growth. Bombay has developed considerable interest in the manufacture of ghee substitutes as many factories have been established and the former imports have been largely displaced by local production of vegetable products.

A late improvement in the local piecegoods market may not be without a bearing on the share market's interest in textile issues. Though prices remain unaltered, sales have been brisker and there is no longer any preference for imported styles on the score of price or quality. For the last few days, active conditions have been reported though cheaper stuffs don't seem to encounter much demand at present. A recession in the prices of Japanese goods has not hampered trade in Indian goods. The restricted supplies of British goods has helped the clearances of fancies and high prices for replacements to retard imports from Lancashire. Further, exports to the markets lost by Belgium are a feature of Lancashire trade as it develops and the N.E.I. has been a useful customer, according to recent reports. It is believed that an effort will be made by Lancashire to win a market in the U.S.A. for tickings and furnishings which formerly went from Belgium.

Mr. Chunilal B. Mehta has drawn attention to what appears to be the solitary defect in the scheme for redemption of a considerable part of India's sterling debt. He does not favour the payment of a premium to holders who will anyway be inclined to sell out and invest in new British defence loans. Press comment locally approves the proposed transaction which should be completed by the end of March. The actual reduction in income for British investors may not have any effect on the standard of living though the continued liquidation of oversea investments will reduce the volume of invisible imports. The large holdings of sterling securities held by the Reserve Bank will help to put the deal through and the *Times of India* has endorsed the suggestion that the Bank's gold should be revalued. It is said, Revaluation is overdue, since present gold prices stand at double the official estimates, an unnecessarily great disparity. An increase in the Bank's future holdings of rupee securities is envisaged in several quarters as contributions to the Rupee Defence Loans will increase steadily. A reduction in the cover for the note issue may be temporary and that need not upset the ordinary citizen. The sterling assets gathered during the year are to be applied for the special purpose and the repayment of £90 million may help to break the invasion threat.

Bombay is not thrilled by the report that the Government has its own plans for our industrial and economic development. Though there is a conventional reference to the report of the special committee issued some months ago, the announcement is qualified by the mention of financial obstacles. What is promised is a capacity survey maybe, undertaken to oblige the Supply Department as before. The survey is expected to take two years, which means that the Supply Department will not benefit much and the collection of statistics and information will not be of direct assistance to those who plead for the starting of new major industries at once. It is believed that the Budget will provide for the schemes mentioned and also for urgently needed extensions to the laboratory of the Industries Department. The existing laboratory remodelled with its annexe will be transferred later on to the premises to be vacated by the University Department of Chemical Technology. A proposal that is to be considered in connection with the policy of assisting cottage industries relates to the exemption of these products from payment of octroi or terminal tax collected by local bodies. The exemption of raw materials from similar taxation is also to be considered. There is also a proposal to start sales depots in selected district centres in the next few months so that the public is persuaded to take more interest in cottage industries and their well-being.

Money-lenders who waited in deputation on Mr. Knight have been told that the debt relief legislation stands and will come into effect. Those who believed that like Prohibition the debt legislation would be watered down or delayed have been shown to be wrong. Mr. Knight told the representatives of moneylenders that the Government was bound to give effect to the decision of the Legislature. Though the proposed amendments to the Rules framed under the Act would be considered, objections to the Act would not be considered. The moneylenders pleaded that rural moneylenders who owed money to the bigger sowcars would suffer severely if agriculturists' debts were scaled down. It was also pointed out that the Act was passed in a hurry and that the postponement of its introduction was desirable.

A rise in local steel prices must be referred to here in view of the marked recovery in steel shares at a time when the Budget casts a very long shadow. The revision of the price schedule for untested materials was expected in market circles but the increase evidently applies to forward rates only. Local demand continues steady but dealers have limited supplies as Tatas are averse to provide supplies to the trade when emergent war orders are being received. Though forward business in certain types of steel products has been given up, prices have gone up and the latest percentage addition will not upset consumers though dealers are hampered by the Tatas' decision to allot only a small tonnage.

War materials produced in Bombay for Government requirements appear to be numerous and the quantity too must be considerable. Sir Alexander Roger saw for himself what is being done here and he was all promise for the contribution to the industrial part of the war effort. The Controller of Supplies has announced that Bombay can count on local sources of manganese dioxide, stainless steel for hospital instruments and equipment, cable chains and bandsaws. Enquiries from Greece and Australia compelled the Controller to look for producers of other materials and the news that local manufacture of grey marzy cloth, khaki ties, stainless steel, etc., has been established proves that the war has been a real benefit.

A Resume of Commodity Markets

COMMODITY markets have been rather uninteresting during the past few days. There has been a speculative rise towards the close only in the hessian market. The raw jute market has been very weak while the raw cotton market has been irregular on fears regarding the Far Eastern situation and the easiness of Oomra positions. Wheat prices have slumped further on account of the pressure of arrivals of old crop and encouraging prospects for the new crop. Linseed too has inclined to be easier. Bullion prices have been steady, the exception as usual.

The announcement regarding the possibility of a rise in rice prices on account of the shortage of shipping for imports from India at a time when there is a seasonal increase in imports is indicative of the gravity of the freight situation. This is perhaps the reason that several shipments for jute manufactures in recent weeks were cancelled. It would be foolish therefore to expect that there will be an improvement in the commodity markets so long as it is impossible to export in adequate quantities. The demand for just manufactures is only limited by the availability of space, while in the case of groundnuts, linseed and other oil seeds, there is a huge surplus owing to the closure of Continental markets and difficulties in exporting to countries which are still open. The position may be further complicated by the developments in the Far Eastern situation.

Jute

The raw jute futures market has been very weak, and there is a decline of nearly two and a half points during the week. The difficulties in exports and the adequacy of jute stocks held by mills have induced little buying. The second period for the quota of 10 lakhs bales expires tomorrow and it will be not be surprising if there is a considerable shortfall in this quota also. Mills' godowns are full, and it is reported that certain mills who have completed their quota for the second period have been unable to take deliveries owing to the lack of space for storage and stocks have been retained in the mofussil. It is not surprising that there has been only small business at minimum rates.

The policy of the Government of Bengal is not quite clear, but it is hard to see how they can buy up large stocks without the nesessary finance. Besides, the need for buying the better quality of jute to make up the deficiency in the quota, there is the problem of disposing of the large quantities of inferior jute.

Jute Manufactures

In the absence of any large export buying the jute manufactures market was inclined to be rather easy in the early part of the week. During the last two days, however, there has been a good rise in prices on account of speculative buying. The rise has been pronounced particularly in 80z. 9 porters hessian. The emergence of some foreign buying was the signal for a speculative rise in prices. The reason given is that stocks of 9 porters 80z. fabric are considered rather low.

The figures of American consumption for the month of January 1941, are rather encouraging. At 57 millions yards, there is an increase of four million yards over the figures for the various month and two million yards over the corresponding month last year.

Cotton

The Bombay raw cotton market has been narrowly irregular Earlier a slightly firmer tendency was noticeable but the renewed fears regarding the possibility of a further decline in exports to Japan and the difficulty in maintaining even the present price level resulted in a slight decline in values. There is some resistance to selling pressure but in view of the hurried arrivals of the Broach crop, prices may decline further particularly if there are any adverse developments abroad.

Wheat

The downward trend in the wheat market has continued uninterrupted. New low levels have been recorded during the week. Choice white ready as quoted at Karachi is nearly one and a half points lower on balance. In the absence of any Government buying there has naturally been a tendency to dispose of existing stocks of wheat.

Rice

A notification regarding the possibility of a slight increase in prices for rice in the near future has been issued by the Government. It is pointed out that the necessities of the war situation in the Middle East are likely to lead in the near future to further strain upon the available shipping. They have arisen at a time when rice shipments from Burma to India are subject to the normal seasonal increase and the Government, therefore, anticipate a reduction in the supplies from Burma arriving at this time of the year. This, coupled with unfavourable prospects for rice in some parts of India, may lead to a rise in rice prices and to attempts to exploit the situation at the expense of consumers.

The Government of India therefore, desire to make it clear that the shortage of shipping is purely temporary and that supplies more in accordance with normal shipments will be available in due course.

BEAUTY IS BUT SKIN DEEP...

IN STEEL LIES THE STRENGTH

"STEEL BY TATA" a Sign of Strength

When you pay tribute to the beauty of some architectural form, think of the hidden factor that makes possible such beauty, that supports and holds together with enduring strength such monumental form.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, Feb. 13.

THE somewhat halting progress of the purchase of Jute under the Delhi scheme seems to be causing both the Bengal Government and the Mills Committee some anxiety, to judge by a "whip" circular which was issued to all Mills at the end of last week. It would appear that returns up to 31st January only showed purchases of 88½ lakhs of maunds against the cumulative total aimed at of 125 lakhs of maunds by the 15th of February, that is, 15 lakhs of Bales by 15th January and a further 10 lakhs of Bales by 15th February. The returns indicated a margin of 36½ lakhs of maunds to be purchased in the first fortnight of February and the quantity of business reported as passing in the market suggests that the figures by the 15th will fall very considerably short of the total aimed at. Who the delinquents are it is difficult to ascertain, for many groups claim to have completed their quota. But it will be surprising if the full returns when rendered for the second quota period, will reach within 20 lakhs of maunds of the prescribed figure. What attitude Government will adopt if this turns out to be the case, remains to be seen. For this sluggishness in purchasing is accompanied by a very definitely easier tone in the Calcutta market, with strong pressure to sell at minimum prices and practically only European Balers able to do a limited business thereat. History is repeating itself, and it has not taken long for the revised minimum prices to become maximum prices. Developments will be watched with interest for Indian dealers are loaded up with stocks which they would not be averse from holding so long as the market remained firm. But any further tendency towards weakness will increase the already considerable selling pressure to a dangerous degree.

Another anxiety which appears to be facing Government is the problematic success of their restriction scheme for the coming Jute crop. It has already been admitted that no help is to be looked for either from Bihar or Assam so far as the coming crop is concerned, though these Provinces express the hope that they may be able to co-operate in the regulation of the 1942 crop. But that is of merely academic interest meantime. Reports from the U. P. again indicate that there may be an increase in the acreage under jute in that province owing to the increasing local demand which was previously largely met from Bengal and Bihar. So that Bengal has to rely entirely on its own resources if the regulation of the coming crop is to be effective. And reports from the districts are not reassuring. The object aimed at was to reduce the area under jute for the coming crop to only one-third of that sown in the current season. It now appears that there is little hope of such a drastic reduction being achieved, the most optimistic estimated figure being half of last year's area. In the face of such an accumulation of unwanted raw material, any attempt artificially to hold up prices seems doomed to failure. And we still have visionaries in the Legislature who demand that the minimum price of jute—any sort of jute, one presumes—should be fixed (save the mark) at twelves rupees per maund!

The first list of gradings of Loose Jute Marks delivered to Mills during the quarter July to September, 1940, has now been issued and has not unnaturally caused some heartburning. While in theory the idea is an excellent one, it can be foreseen that Sellers will be less anxious to settle claims on a reasonable basis if they see the prospect of their mark being thereby de-graded. As it is, any seller who makes a tender to-day conforming in all respects to the specification laid down in the Marks Register describing a Middle would, we fear, very soon find his mark graded as "D." And until Professor Todd's suggested "Standard Boxes" are installed, and the standards so fixed rigidly applied, grading stability will never be attained. It is to be hoped that the next list of gradings will show some improvement in the "condition" results which, in this first list, cannot be described as satisfactory.

Total Mill production for the month of January was 78,000 tons, about the average of recent months. As there will be no "week off" in February, production this month is bound to be higher and stocks at the end of the month almost inevitably higher also, in view of the present freight position. Hessian production in January was 1,241 lakhs yards and Sacking 856 lakhs yards. American consumption for January was 570 lakhs yards as compared with 530 in December and with 550 in January 1940. Combined Spot and Afloat stocks were 2,690 lakhs in January as compared with 2,570 in December and with 2,810 in January, 1940.

The Export Jute market is practically at a standstill despite the fact that Dundee quotations run Rs. 10 to Rs. 12 a bale over Calcutta parity. Dearth of freight is the explanation and no improvement in that respect is perceptible. Mill standard Firsts for March/April shipment were reported at Rs. 41 while the ordinary First quotation stands at Rs. 34. Outport Tossa 4s for storage on speculative account are reported at Rs. 27. A limited business has been reported with Mills, in lightnings at Rs. 36 and in fine qualities at varying prices. The Futures market has shown a steadily declining tendency from the opening at Rs. 37-6 to the close at Rs. 35-12.

Loose Jute has ruled dull and business has only been obtainable at discounted rates. Europeans have secured the bulk of the small turnover at from Rs. 8-12 and Rs. 6-12, Middles and Bottoms to Rs. 8-8 and Rs. 6-12, the last being minimum rates and reported to have carried free storage up to May. Bottoms alone have been done at Rs. 6-12 with Low Bottoms at Rs. 4-12. Tossa Bottoms sold at from Rs. 7 to Rs. 6-8 for Supervised marks and at Rs. 6 for Indian District packing. While Calcutta prices have declined, there has been little change so far in Mofussil rates. Ploughing for the New Crop has already started after the recent rains.

There was a sharp relapse in Hessian prices over the week-end due to ready reselling on account of freight cancelments. Rs. 13 and Rs. 17-4 were touched for nine and eleven porters respectively, but a recurrence of demand for specialities, which are difficult to secure, has since caused a recovery. Hessian turnover would be quite satisfactory were freight available to carry the orders which are coming in, but Heavy Goods demand continues disappointing and it looks as if some proportion of Sacking looms would have to be closed down in the early future. Sales recorded in Hessians are Rs. 13 and Rs. 13-2 ready 8 oz. Rs. 17-2 March elevens, Rs. 16-8 April/June and Rs. 16-4 July/September. In Heavy Goods Liverpools sold at Rs. 37 and Rs. 37-2 February, near Cornsacks at Rs. 33, ready Cubans at Rs. 39 and Woolpacks for June at Rs. 1-9. A firmer tone prevails at the close.

	Ready Feb.	March	April June	July Sept.
9 porters ...	13 9	13 9	13 6	13 0

JUTE

(By our staff correspondent).

Calcutta, February 13.

THE raw jute market has been rather weak in the absence of any large buying by mills. The large stocks of jute held by mills at present and the difficulty in selling jute manufactures on account of the lack of shipping space have been mainly responsible for the absence of activity in the several sections. There is considerable uncertainty regarding the policy of the Bengal Government. There is reason to believe that there will be a considerable shortfall in the quota of 10 lakhs bales for the second period of the agreement. There are only two days more for the second period to be completed. As yet there is no sign of brisk buying. The lowest levels for the period have been touched during the course of to-day, the quotation in the futures market being as low as Rs. 35-14.

In the loose jute section, as pointed out at the beginning, there has not been much doing. Sellers have been pressing for business. European Middles and Bottoms 30/70 assortment were done at Rs. 8-8 and Rs. 6-12 per maund. Indian District Tossa Bottoms alone were done at Rs. 6 per maund.

In the pucca bales section there has been no business and quotations have been nominal. The tendency is easier in sympathy with the futures market.

The futures market has been rather weak. There has been a decline in the quotation by more than two points during the week. After being lower at Rs. 30-14 the quotation is little better at the time of writing at Rs. 36.

JUTE MANUFACTURES

Calcutta, February 13.

THE jute manufactures market also has not been quite active. The difficulty in putting through business on account of the lack of freight and the discouraging local stock figures caused a set back in prices. 9 Porters ready came down to Rs. 13-0-6. During the last two days, however, there has been a sharp rise. There is good demand for 9 porters and as existing stocks are considered to be rather low the quotation improved to Rs. 13-10 this morning. Profit-taking has resulted in a slight recession to Rs. 13-9. 9 Porters ready are now Rs. 13-9, March Rs. 13-9, April/June Rs. 13-7 and July/September Rs. 13. 11 Porters ready are Rs. 17-7, March Rs. 17-7, April-June Rs. 16-15 and July/September Rs. 16-6.

In the heavy goods section a slightly firmer tendency has been noticeable during the latter half of the week with some demand for early shipment. "B" Twills for February shipment sold on the basis of Rs. 32, Liverpool Twills for the same position at Rs. 37 and Cornsacks at Rs. 33-4.

The production figures for the month of January 1941, indicate that there has not been much change in the tonnage of production, the figures for the last two months being Rs. 73,030 tons and Rs. 73,130 tons respectively.

The American stock and consumption figures for the first month of 1940 are rather encouraging. Consumption at 57 million yards compares favourably with 53 million yards for the previous month and 55 million yards for the corresponding month last year. Stocks afloat are sharply higher at 149 million yards against 129 million yards, while stocks spot are lower at 120 million yards against 130 million yards.

PRODUCTION

Memo. of total reported production of manufactured goods by the mills in the membership of the Association and also by Gagalbhai Mills, excluding Maheswari Devi for the month of January 1941.

Description.	Quantity.
1. Twist and Yarn—	
(a) for sale	1,647 tons
(b) all others, including that used in sewing bags	925 tons
2. Canvas	788 tons 18,93,826 yards
3. Gunny Bags (Tonnages exclude sewing twists)	4,165 tons
(a) Hessian ...	2,18,84,039 yards 1,47,81,490 number
(b) Sacking ...	35,757 tons 8,06,40,059 yards 3,40,78,941 number

COTTON

Calcutta, February 13.

THE Bombay raw cotton market has been rather irregular during the past few days. There was a slight recovery and Broach April/May was as high as Rs. 193.8. During the last two days, however, fears regarding the Far Eastern situation have pushed down prices. With the uncertainty regarding exports to the United Kingdom and Japan and pressure of arrivals, a further setback in prices will not be unexpected. But as the basis for staple varieties is sound there should be a recovery in values as soon the period of heavy arrivals is over. Broach April/May closed at Rs. 188, July/August at Rs. 191-4, Bengal March at Rs. 121-12 and Oomra March at Rs. 149-12.

Overseas markets have been firmer. Quotations in New York have improved, March being 10.39 cents against 10.31 cents and May 10.36 cents against 10.30 cents. It will be noted that the premium for March over May has improved further. In Liverpool, quotations are slightly easier, March being 8.27d. and May 8.28d.

PIECEGOODS

Calcutta, February 13.

THE piecegoods market has continued steady. With a depletion in stocks in the bazar and the reserve of manufacturers a firmer tendency has been noticeable and bazaar values have shown a tendency to improve slowly. Japanese styles have not been quite in good request. Some forward business has been reported with indigenous mills.

In the yarn market steady conditions have been noticeable and mills have again been able to do some business.

GOVERNMENT OF INDIA

3% LOAN 1949-52

(Second Defence Loan)

Redeemable at par not earlier than 1949 and not later than 1952.

Subscriptions in cash unlimited as to amount, will be received from 1st February, 1941, until further notice.

ISSUE PRICE.—The prices at which the loan will be issued are as follows :—

Issue Price on any date from the—	Price per Rs. 100 nominal
1st February 1941 to the 8th February 1941 ..	Rs. 100 0 0
10th February 1941 to the 15th February 1941 ..	Rs. 100 0 9
17th February 1941 to the 22nd February 1941 ..	Rs. 100 1 6
24th February 1941 to the 1st March 1941 ..	Rs. 100 2 3

and thereafter at prices increasing by 9 pies per cent. weekly until further notice. This weekly increase approximates to the net interest which accrues on the securities.

Copies of the Notification and application Forms will be available at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras, at branches of Imperial Bank of India at other places and at all Government Treasuries.

GOLD

Calcutta, February 13.

A SMALLER volume of business has been passing in the gold market but rates are quotably higher. Gold ready being Rs. 42-2-3, First Settlement Rs. 42-2-9 and Second Settlement Rs. 42-3-9. There has been an increase in the premium for first settlement from six pies to 1¼ annas. The London price for gold has remained unchanged at 168s.

SILVER

Calcutta, February 13.

THE Bombay silver market has been firmer though closing prices are slightly below the highest levels for the week. There has been good buying for spot and the discount for Second settlement over ready has widened to four annas. Indian Mint Silver ready closed at Rs. 63-6, First settlement at Rs. 63-4 and Second settlement at Rs. 63-2.

There has been very little doing in the London silver market and the quotation both for spot and forward has been for the most part of the week the same at 23 5/16d.

TEA

SALE No. 31 was held on the 10th and 11th February, 1941. At the auctions of teas for export, a small quantity of closing invoices virtually brought export sales to an end. There was very little buying power and the market was somewhat apathetic with prices one to one-half annas lower all-round. The only exception were a few well made Assam Orange Pekoes which sold at prices more approximating to previous rates. 4,329 packages were sold at an average price of fourteen annas four pies per lb. against 4,473 packages at ten annas and six pies per lb. at Sale No. 33 last season. At the auctions of teas for consumption in India there was a small offering of green teas which were sold at about valuation. Dusts comprised a large percentage of poor undesirable sorts. For all good liquoring and clean leaf types, prices were dearer by three pies or more, whilst for the remainder the market was firm. There will be no sale of dusts next week. 8,746 packages were sold at five annas two pies per lb. against 5,693 packages at four annas four pies at Sale No. 33 last season. For other descriptions excepi commonest stalky types there was a strong demand at last week's rates. Well-made teas and fannings were again in particular request at advancing prices. 18,633 packages were sold at four annas one pie per lb. against 21,188 packages at three annas six pies per lb.

Export Quota

There are sellers of limited quantities at As. 11 per lb. but buyers show no interest and the market is practically closed.

Internal Quota

There is a good demand at As. 1-3 per lb.

WHEAT

Calcutta, February 13.

THE Karachi wheat market has continued weak and quotations are further lower on balance. The prevalance of excellent weather conditions in the Punjab and U. P. and the absence of any demand from mills have pushed down prices. Chicago advices also have been discouraging. Owing to the excellent prospects there is pressure of arrivals. The quotations for old crop positions have, therefore, been marked down. New crop is also sympathetically lower. Choice White ready closed at Rs. 32-3, March at Rs. 31-11-6, and July at Rs. 28-3-6. The quotations at the end of last week were Rs. 32-8, Rs. 32 and Rs. 28-4 respectively.

The Calcutta market has been rather quiet. Punjab and Cawnpore ready are unchanged at Rs. 4-8, but May is lower at Rs. 4 against Rs. 4-2.

MADRAS GROUNDNUTS

Madras, February 11, 1941.

IN the local market, Rangoon buyers were active during the early part of the week, but have withdrawn from the market towards the close. Altogether, they are reported to have bought about 3,000 bags kernels during the week, and have completed their requirements for the present. The Ministry of Food, it is reported, have bought 5,000 tons kernels for shipment from the East and West coasts and have given an order for a similar quantity. It is understood that, unlike in the case of Hides and Skins shipments, sufficient freight space will be made available for Groundnut cargoes. Shippers' buying limits opened on Tuesday last around Rs. 20-8 to Rs. 21-4 for Machined (Per candy of 531 lbs. ex-coast godowns) and eased to Rs. 20-8 and Rs. 20-15 on Thursday and to Rs. 20 and Rs. 20-15 at the close. At the close, Northern quality Machined was done at Rs. 21 Local buyers' limits opened around Rs. 20-4 to Rs. 20-8 for Machined (per candy of 531 lbs. ex-coast godowns) and, after advancing to Rs. 20-4 and Rs. 20-10 on Thursday, declined to Rs. 20-2 and Rs. 20-4 on Friday. A steadier tone, however, developed towards the close and prices closed around Rs. 20 to Rs. 20-8. The flood of new crop arrivals and the reported levy of a rebate of 25s. per ton have tended to depress prices. What with restricted demand and free arrivals, the chances of raising the price level and avoiding huge surpluses seem remote. The whole problem is, understand, receiving the close attention of the Government of India and their decision is expected shortly. The Groundnut oil market is steady. Prices opened firm around Rs. 45-8 to Rs. 46 and Rs. 48-8 to Rs. 49 for "Chekku" and "Prodattur" qualities respectively and closed steady at Rs. 46 for "Chekku" quality and Rs. 48-8 to Rs. 49 for "Prodattur" quality, for ready lots, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

Madras, February 11, 1941.

THE local Tanned Kip market has been lifeless during the week with no business passing. No reply has yet been received to the local Trade Association's cable to the Ministry of Supply, London as regards the prohibition of Skins and Hides shipments during the current month and the non-availability of freight space. But although no official reply has been received from the Government of India, Department of Supply, the latter have, it is understood, instructed their local representative to canvas the views of the Hides and Skins trade as a whole in the matter of the control of shipments at Madras before representing the matter to the Secretary of State. He has been requested, it is reported, to consult all parties concerned and endeavour to reconcile various points of view and to compile a statement representing the wishes of the trade as a whole as regards changes they desired in the existing arrangements for Tanned Hides and sheep and goatskins. As a report is urgently called for, Mr. Armstrong, the local representative of the Ministry of Supply, has called for a meeting of the representatives of the Trade to meet him on Wednesday. It is also understood that the Southern India Skins and Hides Merchants' Association will also meet on Thursday to consider further the difficult situation created by the cancellation of the allotment of freight space during the current month, and also to consider the communication from the Government of India regarding the steps to be taken to check the standards of shipments of Tanned Hides to the United Kingdom. Another piece of interesting news from London is that the present schedule of prices for Tanned Kips may only be a temporary one to ensure supplies until some new system is devised. It is quite possible that some sort of POOL may be formed and the schedule taken off altogether. It is realised everywhere that the schedule system has not at all been satisfactory for shippers, Factors or Curriers.

CALCUTTA

JUTE

(By our staff correspondent).

Calcutta, February 13.

THE raw jute market has been rather weak in the absence of any large buying by mills. The large stocks of jute held by mills at present and the difficulty in selling jute manufactures on account of the lack of shipping space have been mainly responsible for the absence of activity in the several sections. There is considerable uncertainty regarding the policy of the Bengal Government. There is reason to believe that there will be a considerable shortfall in the quota of 10 lakhs bales for the second period of the agreement. There are only two days more for the second period to be completed. As yet there is no sign of brisk buying. The lowest levels for the period have been touched during the course of to-day, the quotation in the futures market being as low as Rs. 35-14.

In the loose jute section, as pointed out at the beginning, there has not been much doing. Sellers have been pressing for business. European Middles and Bottoms 30/70 assortment were done at Rs. 8-8 and Rs. 6-12 per maund. Indian District Tossa Bottoms alone were done at Rs. 6 per maund.

In the pucca bales section there has been no business and quotations have been nominal. The tendency is easier in sympathy with the futures market.

The futures market has been rather weak. There has been a decline in the quotation by more than two points during the week. After being lower at Rs. 30-14 the quotation is little better at the time of writing at Rs. 36.

JUTE MANUFACTURES

Calcutta, February 13.

THE jute manufactures market also has not been quite active. The difficulty in putting through business on account of the lack of freight and the discouraging local stock figures caused a set back in prices. 9 Porters ready came down to Rs. 13-0-6. During the last two days, however, there has been a sharp rise. There is good demand for 9 porters and as existing stocks are considered to be rather low the quotation improved to Rs. 13-10 this morning. Profit-taking has resulted in a slight recession to Rs. 13-9. 9 Porters ready are now Rs. 13-9, March Rs. 13-9, April/June Rs. 13-7 and July/September Rs. 13. 11 Porters ready are Rs. 17-7, March Rs. 17-7, April-June Rs. 16-15 and July/September Rs. 16-6.

In the heavy goods section a slightly firmer tendency has been noticeable during the latter half of the week with some demand for early shipment. "B" Twills for February shipment sold on the basis of Rs. 32, Liverpool Twills for the same position at Rs. 37 and Cornsacks at Rs. 33-4.

The production figures for the month of January 1941, indicate that there has not been much change in the tonnage of production, the figures for the last two months being Rs. 73,030 tons and Rs. 73,130 tons respectively.

The American stock and consumption figures for the first month of 1940 are rather encouraging. Consumption at 57 million yards compares favourably with 53 million yards for the previous month and 55 million yards for the corresponding month last year. Stocks afloat are sharply higher at 149 million yards against 129 million yards, while stocks spot are lower at 120 million yards against 130 million yards.

PRODUCTION

Memo. of total reported production of manufactured goods by the mills in the membership of the Association and also by Gagalbhai Mills, excluding Maheswari Devi for the month of January 1941.

Description.	Quantity.
1. Twist and Yarn—	
(a) for sale	1,647 tons
(b) all others, including that used in sewing bags	925 tons
2. Canvas	783 tons 18,93,326 yards
3. Gunny Bags (Tonnages exclude sewing twists)	4,163 tons
(a) Hessian ...	2,18,84,039 yards 1,47,81,490 number
(b) Sacking ...	35,757 tons 3,06,40,059 yards 3,40,78,941 number
4. Gunny Cloth—	
(a) Hessian ...	27,428 tons 10,22,10,058 yards
(b) Sacking ...	2,191 tons 49,51,709 yards
5. Other manufactures, including ropes ...	148 tons
6. Total production (above figures combined)—	
(i) All kinds ..	73,030 tons
(ii) Hessian (both as bags and cloth) ...	12,40,94,151 yards
(iii) Sacking (both as bags and cloth) ..	8,55,91,763 yards
(iv) Canvas (both as bags and cloth) ...	13,93,826 yards

COTTON

Calcutta, February 13.

THE Bombay raw cotton market has been rather irregular during the past few days. There was a slight recovery and Broach April/May was as high as Rs. 193.8. During the last two days, however, fears regarding the Far Eastern situation have pushed down prices. With the uncertainty regarding exports to the United Kingdom and Japan and pressure of arrivals, a further setback in prices will not be unexpected. But as the basis for staple varieties is sound there should be a recovery in values as soon the period of heavy arrivals is over. Broach April/May closed at Rs. 188, July/August at Rs. 191-4, Bengal March at Rs. 121-12 and Oomra March at Rs. 149-12.

Overseas markets have been firmer. Quotations in New York have improved, March being 10.39 cents against 10.31 cents and May 10.36 cents against 10.30 cents. Stock Markets to-day and to-morrow

JUTE MILLS EARNINGS

STOCK markets were quietly steady till Thursday both in Calcutta and Bombay. The only features of interest were the rise in Dunlop Rubbers to Rs. 41-8 and Mysore Sugars, the latter in Madras, to Rs. 49-8. On Friday, however, a quieter feeling has been noticeable on reports of new adverse developments in the Far East. The effect has been more pronounced in the Calcutta market. Giltedged securities have been wholly unaffected—testifying to an accession of confidence.

Early in the week the scheme regarding the repatriation of six Indian terminable sterling securities was announced. The implications of this scheme have been discussed fully elsewhere in this journal. Suffice it to say here that the effect of the repatriation of the big block of securities will be bullish on the giltedged market. The saving in interest charges, reduction in remittances to Britain and the strengthening of the financial position of the Government should have a stimulating effect on giltedged values.

* * *

Discussing the results of the *Mysore Sugar Company, Limited* for the year ended 30th June, 1940 in the issue of the *Investor's Supplement*, dated September 7, 1940, it was pointed out that the earnings constituted a record for the company and that the amount distributed by way of dividend was only a portion of the total net profits. I added:

> "Considering the fact that there is no necessity for any allocation to the Debenture Redemption Fund out of the earnings for the current year there is very good scope for increasing the dividend substantially. In fact, I have pointed out on several occasions that the directors have been pursuing a very conservative policy in the declaration of dividends. It would not be out of place to point out here that, after redeeming the 4 per cent. debentures at the end of next year, it would seem proper to declare a capital bonus of 50 per cent. to bring the amount of paid-up capital more in line with the value of the block. Thus, with the possibility of higher dividends and chances for a capital bonus, the shares are very attractive from the investment point of view. Earnings, before providing for taxation, for 1939-40 were 135.5 per cent. of the paid-up capital."

Recently there have been rumours regarding the possibility of a bonus issue and the quotation for the shares has gone up from Rs. 44-8 to Rs. 49-8 in a short time. Even if a 50 per cent capital bonus is declared, that is, shareholders get one share free for every two shares held, the average price of one's holdings in such an event will work out to only Rs. 33 per share. As it will be possible to maintain the dividend at 20 per cent even after an increase in capital to the extent of 50 per cent it is unnecessary to point that there is further scope for improvement. On the basis of a dividend of 20 per cent one may expect a quotation for Mysore Sugars of at least Rs. 40. That is to say there is clearly scope for a further rise in the shares by as much as 10 rupees.

* * *

Results of four important jute companies for the half-year ended December, 1940 have been published during the week. As is to be expected they bear witness to a sharp decline in earnings. The decline in earnings would perhaps have been greater but for the profitable sales that these companies had made earlier in 1940. But with the lower level of production and the slump in prices in the latter half of the year the earnings figures should be considered rather satisfactory. With the continued restriction of production, mills working from September, 1940 only forty five hours per week and remaining closed for one full week every month, it is quite likely that earnings would show a further decline. But as share values at the present moment are considerably below the levels for 1935 the prospects ahead have been discounted to a considerable extent.

The aggregate profit of four companies for the latter half of 1940 before providing for taxation is Rs. 20,46,796 against Rs. 36,90,085 for the previous half-year or a decline of nearly 45 per cent. But in spite of this sharp decline in earnings dividends have been reduced only in two cases, and that too slightly. The ordinary dividends of both the *Kamarhatty* and *Kanknarrah* companies have been maintained at Rs. 15 and Rs. 12½ per share respectively. *Belvedere Jute Mills Company, Limited* is paying a dividend of Rs. 12½ per share against Rs. 15 per share formerly, while the *New Central Jute Mills Company Limited* is paying Rs. 8 per share against Rs. 10 per share.

The dividends in the case of the Kamarhatty and Kanknarrah companies have been maintained only by drawing on the amounts brought in from the last accounts. In the case of the Belvedere and New Central these could have been maintained but in view of the likelihood of a further decline in earnings the directors have adopted a cautious policy and preferred a reduction in the dividend declaration.

* * *

The earnings of the *Bararee Coke Company, Limited* have shown a rise in recent years. The net profit for the half-year ended 30th September, 1940 is the highest for some years, being Rs. 1,87,512 against Rs. 1,79,616 for the previous half-year. The provision for income-tax and super-tax is Rs. 49,850 while the provision for E. P. T. is Rs. 17,000 against Rs. 20,000. The amount set aside to depreciation is Rs. 17,257 against Rs. 16,952. The dividend recommended is higher at 9 per cent against 8 per cent for the previous half-year. The amount carried forward is slightly lower at Rs. 40,141 against Rs. 44,737 brought in.

On the announcement of the dividend there has naturally been a rise in the quotation to Rs. 20-13. The yield on the basis of the latest dividend works out to more than 8.5 per cent tax-free. In view of the sound financial position of the company and the satisfactory earnings record the shares admittedly have some scope for capital appreciation.

* * *

An interim dividend of three annas per share has been declared by the directors of the *Burma Corporation, Limited* on account of the year ending 30th June, 1941. The dividend is payable on the 29th March, 1941 to those shareholders whose names stand on the register on the 17th February, 1941, free of income-tax. This distribution compares with the final and interim dividend of three and a half annas each per share for 1939-40.

In view of the poor showing made by the production figures for the first quarter of 1940-41 the reduction in the dividend is not surprising. Estimated surplus over operating expenditure for the quarter ended September, 1940, is Rs. 27,46,500. Estimated taxation is Rs. 12,48,300 and depreciation on machinery and plant Rs. 1,18,500. On the basis of these figures the total amount that will be available for distribution is Rs. 55.18 lakhs. But in view of the warn-

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February, 14.

WHAT may pass as steady conditions were noticeable on the Calcutta Stock Exchange earlier in the week but during the latter half of the week the tone was rather irregular. During the course of Friday definitely weaker conditions have been noticeable. The easier tendency during the last two days has been mainly due to the fears regarding the possibility of Japan entering the war. Indian Iron and Steel Corporation have been done as low as Rs. 30-7 and Rs. 19-8 to-day. The quotation is slightly better at the time of writing at Rs. 30-9 and Rs. 19-11 respectively. It is thought that Japanese entry in the war will not be early nor is it certain, and that the fears in this regard have been rather exaggerated. It has to be recognised, however, that the position in the Far East is disturbing. Mr. Fadden's broadcast leaves no room for complacency.

Giltedged securities were firmer on the announcement of the repatriation of terminable sterling securities. The sharp rise in 3½ per cent. India Sterling Stock resulted in a sympathetic rise in the quotation for 3½ per cent. Paper. Terminable loans also are higher with 3 per cent. 1951-54 Rs. 99-7, 3 per cent. 1963-65 Rs. 94-8, 3½ per cent. 1947-50 Rs. 102-10, 4 per cent. 1960-70 Rs. 108-8 and 4½ per cent. 1955-60 Rs. 113-8. Among provincial loans, the 3 per cent. issues were higher at Rs. 96-7. Easy money conditions have continued to be in evidence and the Treasury Bills rate during the week has remained unchanged at eleven annas per cent. per annum.

There has been no business in public bodies' debentures during the period. 3½ per cent. Howrah Bridge debentures were quoted at Rs. 98-10. Among industrial debentures, 5¼ per cent. Rohtas Industries were done at Rs. 102-4 and 5½ per cent. Dalmia Cement debentures at Rs. 102-4. 5 per cent. National Iron and Steel debentures were Rs. 101-8.

Preference shares have been very firm, first class preference shares being well held. Among jute mills preferences, Anglo-India were done at Rs. 170, Bally at Rs. 162, Birla at Rs. 129, Gourepore at Rs. 154, Kamarhatty at Rs. 165, Lothian at Rs. 174 and Reliance at the same level. Hukumchand preferences were steady at Rs. 117, while Alliance were marked at Rs. 125. Among others, Burrakur were noted at Rs. 158, Purtabpore at Rs. 15, Bengal Telephone at Rs. 12-4 and Steel Corporation at Rs. 115. Alkali and Chemical were higher at Rs. 123-8 and Titaghur Paper Second preferences at Rs. 112.

Cotton Mill shares have been steady with Cawnpore Textiles at Rs. 6-8, Elgin Mills at Rs. 18-10, Kesoram at Rs. 6-8, Dunbar at Rs. 210-8 and New Victoria at Rs. 2-2.

In the Coal section, slightly easier conditions have been noticeable with Bengal at Rs. 365, Burrakur at Rs. 13-14, Dhemo Main at Rs. 14-6, Equitable at Rs. 37, Raneegunge at Rs. 26 and West Jamuria at Rs. 30. New Beerbhoom were easier at Rs. 10. Bokaro and Ramgur were steady at Rs. 15.

Jute shares have been uninteresting and quotations are mostly unchanged on the week. The results of important jute companies published recently indicate that there has been a sharp decline in earnings but owing to the conservative policy of the Managing Agents regarding the declaration of dividends in the past it has not been necessary to reduce dividends proportionately. Anglo-India have been sticky around Rs. 317. Bally were dealt in at Rs. 21, Clive at Rs. 21-2, Birla at Rs. 25-12, Gourepore at Rs. 648-8, Howrah at Rs. 49-4, Hukumchand at Rs. 8-14, Kamarhatty at Rs. 453, Kanknarrah at Rs. 370, National at Rs. 21-4, Reliance at Rs. 53-8 and Presidency at Rs. 4-8.

In the Engineering section, earlier in the week, Indian Irons recorded a rise to Rs. 32 but the rise was not held. Profit-taking and some selling during the last three days have brought the quotation to-day to Rs. 30-7. Steel Corporation also are lower at Rs. 18-12. Burn & Co. were slightly easier at Rs. 377. Hukumchand Electric Steel ordinaries were very steady at Rs. 10-12. Indian Standard Wagon were Rs. 61-8 and Kumardhubi Engineering Rs. 4-14. Arthur Butlers have slumped to Rs. 12-6 after a series of downward jerks.

Among Utilities, Bengal Telephone have been marked higher at Rs. 18, Rawalpindi at Rs. 25-8 and Mirzapore at Rs. 3-10.

Sugar shares have been better with the slight improvement in the price for sugar. Cawnpore are higher at Rs. 19-8, Champaran at Rs. 5-2, Basti at Rs 150, and New Savan at Rs. 7. Buland and Raza were noted at Rs. 16-2. Samastipore Central were Rs. 7-12.

In the Tea section, a longer list of transactions has been recorded though there has been no noteworthy alteration in prices. Hasimara were easier towards the close at Rs. 42-4. New Dooars were done at Rs. 975, Hattikhira at Rs. 19-2, Killicott at Rs. 51, Sonai River at Rs. 17, Sapoi at Rs. 10-14 and Tezpore at Rs. 8-12.

In the Miscellaneous section, the announcement of the lower interim dividend of Burma Corporation for the year ended June, 1941, has not had any effect on the shares. The quotation is slightly easier at Rs. 5-2. Indian Copper Corporation have been sticky at Rs. 2-1. B. I. Corporation have been steady at Rs. 4-14. Balmer Lawrie are higher at Rs. 315 and Indian Cables at Rs. 22. There has been a sharp rise in Dunlop Rubber on reports of a higher dividend for the year ended December, 1940. From a quotation of only Rs. 37 last week there has been a jump to Rs. 41-8. Indian Wood Products were Rs. 27-8 and Rohtas Industries Rs. 20-12. Buraree Coke are higher on the good results for the half-year ended September, 1940. Among Paper shares, Titaghur Paper were Rs. 18-4, India Paper Pulp Rs. 147 and Bengal Paper Rs. 124-8. Mysore Paper were steady at Rs. 14 while Shree Gopal Paper were Rs. 10-6, Star Paper Rs. 10-6 and Orient Paper Rs. 10-13. Port Shipping were done at Rs. 17, Borooah Timber at Rs. 15-6 and Midnapore Zemindary at Rs. 72.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, February 13.

Money.—Call money continued to be quoted at ¼ per cent (unlendable).

Exchange Market.—The rupee-sterling exchange market continued to be featureless, the rates remaining unchanged.

Securities.—The feature of the past week has been the announcement concerning the repatriation of India's terminable sterling loans. 3½ per cent India Sterling stock in London was quoted at £98½, while 3½ per cent Rupee Paper locally, after being done higher at Rs. 96-2, closed slightly easier at Rs. 96. There were similar movements in other issues, 1948-52 closing at Rs. 97-4; 1951-54 at Rs. 99-6; 1963-65 at Rs. 94-10; 1947-50 at Rs. 102-12; 1960-70 at Rs. 108-7; 1955-60 at Rs. 113-6; 1945-55 at Rs. 112-8 and 3 per cent *Defence Loan* at Rs. 101.

Shares.—Steady conditions were witnessed in the local share market during the week under review. After opening steady prices met with some liquidation in mid-week with the result there was some reaction. Towards the close, however, the market rallied and prices showed substantial recovery. No business was done on Monday in shares on the forward list. *Tata* deferreds, *Bombay Dyeing* and *Tata Power* were prominent with a rise in prices.

Textiles.—Mill shares were active with buyers for all scrips. Favourable cloth market reports and increase in prices of some of the fancy goods combined with a growing export demand were responsible for the rise in prices. *Bombay Dyeing,* after being done at Rs. 1,115. touched Rs. 1,092-8 in mid-week on profit-taking, but closed steadier at Rs. 1,110. *New Great* were also higher at Rs. 420; *Kohinoor* at Rs. 417 and *Swadeshi* at Rs. 275-8. *Central India* closed at Rs. 306-8; *Century* at Rs. 379; *Colaba* at Rs. 170 and *Gokak* at Rs. 210-8. In the cash list, *New City* were at Rs. 261-4.

Hydro-electrics.—*Tata Power* were an active counter and the price spurted to Rs. 1,640, showing a rise of about 60 points over the previous week. Similarly, *Andhra Valley* steadily gained ground and the price improved to Rs. 1,825 as against Rs. 1,760 in the previous week. *Tata Hydro* showed a rise of about Rs. 10 to close at Rs. 190. Among other shares, fluctuations in prices were minor and negligible.

Steels.—Steel shares provided again the feature of the week. Prices were further marked up, the ordinaries touching a high of Rs. 385 and the deferreds Rs. 1,985. The gradual rise in prices of these shares was due to the increase in the price of Tata's products and the reports that dealers have small stock due to the Company being fully booked with Government orders. There was a slight setback in prices in mid-week owing to some liquidation, the ordinaries being done at Rs. 380-8 and the deferreds at Rs. 1,957-8. Towards the close of the week, however, there was a slight recovery, the closing quotations being Rs. 383 for ordinaries and Rs. 1,966-4 for deferreds.

Banks.—Bank shares were steady, *Bank of Baroda* being done at Rs. 107; *Bank of India* at Rs. 143-12; *Central Bank* at Rs. 44-2; *Imperial Bank* fully paids at Rs. 1,565; contributories at Rs. 385-10; *Reserve Bank* at Rs. 105-12 and *Union Bank* at Rs. 6-10.

Miscellaneous.—*Associated Cement* displayed good strength, closing slightly higher at Rs. 140. *Bombay Burma Trading* lost some ground during the week and closed lower at Rs. 540 as against Rs. 550 in the previous week. *Belapur Sugar* were a shade easier at Rs. 211; *Premier Construction* at Rs. 96-4 and *Scindia Steam* at Rs. 21-7. *Wimco* improved further to Rs. 201-12 from Rs. 193-8 in the previous week and Rs. 186 a fortnight ago. *Indian Iron* came to business at Rs. 31-4; *Steel Corporation* at Rs. 19-4 and *New India* at Rs. 42-8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, February 13.

The local share market continued to be steady during the week under review. Cotton mill shares were in good demand, while Sugars were firm. Rubbers were well supported. Teas remained unchanged.

Securities.—The securities market ruled very steady, 3½ per cent Paper closing at Rs. 95-15. 3 per cent Paper changed hands at Rs. 82; 4 per cent 1960-70 at Rs. 108-9 and 5 per cent 1954-55 at Rs. 112-3. State Loans continued firm, 4 per cent 1953-63 *Mysore Loan* being done at Rs. 115-8 and 5 per cent 1955 at Rs. 126-8. Among Provincial Loans, 3 per cent 1952 *Assam Loan* came in for business at Rs. 95-8.

Mills.—*Buckingham & Carnatic* improved further to Rs. 242, while *Madura* met with good enquiry during the week and were done higher at Rs. 39-12 in anticipation of a better dividend for the year ended December, 1940. *Pankaja* were done at Rs. 96 and *Saroja* at Rs. 20.

Utilities.—Business in this section was on a moderate scale. *Madras Telephone* were a shade easier at Rs. 16-12 owing to the excitement regarding the price that Government are likely to pay to the shareholders. *South Madras Electric* ordinaries were a dull market at Rs. 13.

Plantations.—Among Rubber shares, *Cochin Malabar* proved to be a popular counter, being done at Rs. 6-10. *Thirumbadi* improved to Re. 1-14 x.d. *Tropical Plantations* were in good support at Rs. 18-12. The Company is reported to have done well in the year ended December, 1940. *Rajagiri* were at Rs. 5-3; *Nilambur* at Rs. 11-4 and *Vaikundam* at Rs. 8. Tea shares showed no change, *Chembra Peak* being done at Rs. 3-7; *Nilgiri Neerugundi* ordinaries at Re. 1-6 and *Balanoor* at Rs. 9-11.

Sugars.—*Mysore Sugar* were an active counter and were done as high as Rs. 49 on continued buying enquiry, mostly from Bombay. *Deccan Sugar* small shares were also higher at Rs. 52 on anticipations of an increased dividend for the year ended December, 1940.

Miscellaneous.—Chemical shares met with good speculative support. *Mysore Chemicals* had strong buyers at Rs. 16-12; *Alkali and Chemical* ordinaries at Rs. 19; *Mettur Chemicals* ordinaries at Rs. 9-6 and *Tata Chemicals* at Rs. 13-14. *Mysore Paper,* on enquiry from Calcutta, were pushed up to Rs. 14-4. *Indian Steel Rolling Mills* preferences came in for business at Rs. 11-6; *Singareni Collieries* at Rs. 10-14; *Indian Iron* at Rs. 31-8; *Steel Corporation* ordinaries at Rs. 19-8 and *Hindustan Investment Trust* at Rs. 13.

LONDON STOCK EXCHANGE

A sagging tendency has been noticeable on the London Stock Exchange during the past few days. In the absence of any large volume of business quotations have been marked lower. The undertone, however, is steady. Giltedged securities have been firm. Following the announcement regarding the repatriation of Indian terminable sterling securities there has been a sharp rise in 3½ per cent Sterling Paper to 98½. British Funds also have been firm with 2½ per cent Consols at 77½, 3½ per cent Conversion at 104⅜, 3½ per cent War Loan at 103½ and 3 per cent War Loan at 101¼.

Among other sections, Teas and Rubbers have been unchanged while Kaffirs are slightly lower. Oils have been irregular with *Burma Oil* lower at 54s. 4½d. Home Rails have been weak. Giltedged Industrials have been mostly steady.

NEW YORK STOCK EXCHANGE

Wall Street has continued weak. On reopening after the holiday on Wednesday there has been a further decline in prices. *U. S. Steel* closed at $60½, *General Motors* $43 and *Anaconda Copper* $43. The quotations at the end of last week were $62½, $42⅜ and $23⅞.

THE FUTWAH-ISLAMPUR LIGHT RAILWAY CO., LTD.

MARKET POINTERS

Increase in Exports to South America

There was substantial improvement in India's trade with the South American countries in 1939-40. The aggregate value of imports amounted to Rs. 5 lakhs as against 3 lakhs in the previous year.

India purchased fairly large quantities of nitrate of soda from Chile, valued at Rs. 4 lakhs. Arrivals of mica from Brazil and Argentina amounted to about 1,200 cwt.

On the export side, India supplied as usual jute bags and cloth, exports of which were valued at Rs. 3,99 lakhs as compared with Rs. 3,13 lakhs in 1938-39. Argentina took 1.6 million gunny bags valued at Rs. 9 lakhs, Chile 7.8 million bags valued at Rs. 20 lakhs and Peru 8.3 million bags valued at Rs. 31 lakhs.

Shipments of gunny cloth to Argentina amounted to 217 million yards. Exports to Peru and Uruguay were comparatively small and amounted to 3.6 million yards and 14.2 million yards respectively.

Brazil took 34,000 tons of raw jute as against 25,000 tons, while Argentina took 15,700 tons as against 10,500 tons in the preceding year. Chile took 21,000 lb. of tea as against 8,000 lb. in 1938-39.

State-owned Railway Earnings.

The total approximate gross earnings of all State owned railways for the period (11 days) ended January 31, 1941, amount to Rs. 379 lakhs.

This is Rs. 72 lakhs more than the approximate gross earnings for the corresponding period of the previous year, Rs. 72 lakhs more than the actuals for the corresponding period of 1938-39.

The total approximate gross earnings from April 1, 1940, to January 31, 1941, amount to Rs. 90.08 crores. This is Rs. 1,000 lakhs more than the actuals for the previous year, and Rs. 1,216 lakhs more than the actuals for 1938-39.

* * *

B.-N. Railway Earnings.

Following is the statement of approximate earnings of the Bengal-Nagpur Railway Co., Ltd., for the period ended January 31, 1941 :—

	Rs.
Earnings for the period ...	40,32,000
Total to end of period ...	9,83,37,000
Corresponding period of last year	36,40,000
Total last year	8,86,42,000

(*Continued from page 297*)

ing uttered by the chairman at the annual meeting last year the directors are likely to be conservative as with the continuation of war taxation will increase further. The final dividend too may thus prove to be three annas. The amount required for a dividend of six annas for the whole year is Rs. 50.78 lakhs.

* * *

Another important feature of the week is the sharp rise in the quotation for *Dunlop Rubber* ordinary shares from Rs. 37 to Rs. 41-8 in the course of a week. I have fancied these shares for some time. Investors were fighting shy of this counter on account of the heavy incidence of E. P. T. on the earnings of this Company. The Company is doing very well and there are reports from several quarters that there is every likelihood of an increase in the dividend for the year ended 31st December, 1940.

THE CENTRAL BANK OF INDIA, LIMITED.

NOTICE

IS HEREBY GIVEN that the THIRTIETH ORDINARY GENERAL MEETING of the Shareholders of THE CENTRAL BANK OF INDIA, LIMITED, will be held at the CENTRAL BANK BUILDINGS, Esplanade Road, Fort, Bombay, on SATURDAY, the 1st day of MARCH, 1941, at 12 Noon (S.T.) to transact the following business :—

1. To receive the Report of the Directors and the Audited Accounts for the period ending 31st December, 1940.
2. To declare a Dividend and a Bonus.
3. To elect Sir Ardeshir Dalal who vacates his seat under Article 86 of the Articles of Association and who is eligible for re-election.
4. To elect three Directors in place of those who retire by rotation under Article 94 of the Articles of Association read with Regulation 78 of Table "A" of the Indian Companies Act and who are eligible for re-election.
5. To appoint Auditors and to fix their remuneration.
6. To do such other work as may be placed before the Meeting by the Chairmen.

By Order of the Board,
H. C. CAPTAIN,
General Manager.

Bombay, 10th February, 1941.

The Transfer Books of the Bank will be closed from MONDAY, the 17th FEBRUARY, 1941 to SATURDAY the 1st day of MARCH, 1941 both days inclusive.

By Order of the Board,
H. C. CAPTAIN.
General Manager.

N.B.—Dividend Warrants for the half-year ending 31st December, 1940 will be posted to the Shareholders at their registered addresses on and after the 3rd day of March, 1941. Intimation of any change of address should be given to the Bank immediately.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY, LTD.

NOTICE

is hereby given that the Ninetieth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday the 28th February, 1941, at 10-55 a.m., for the purposes of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1940 and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 21st to the 28th February, 1941, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta, the 13th February, 1941.

THE AHMEDABAD-PRANTEJ RAILWAY CO., LTD.

NOTICE

is hereby given that the FORTY-SIXTH ORDINARY GENERAL MEETING of the Shareholders of THE AHMEDABAD-PRANTEJ RAILWAY CO., LTD., will be held on Tuesday, the 25th day of February, 1941, at 4-30 p.m. at the Registered Office of the Company, Home Street, Fort, Bombay, to transact the following business :—

(Annual Meeting 27th February, 1941 at 3 p.m. at Cawnpore).

Audited accounts for the year ended 31st December, 1940:—

After providing for a bonus to employees and setting aside Rs. 6,25,000 for estimated Taxation, Rs. 2,50,000 for Depreciation and Rs. 20,000 to Pension and Gratuity Fund, the result of the year's working is a profit of Rs. 4,98,741-8-4. Adding to this Rs. 1,20,154-3-5 being the balance brought from 1939, there is a sum of Rs. 6,24,895-11-9 available which the directors have allotted as follows:—

Ad—interim dividend of Re. 1½ per share on the Preference Shares and Rs. 5 per share on the Ordinary Shares to 30th June, both free of income-tax	Rs.	A.	P.
Leaving for disposal a sum of Rs. 4,29,895-11-9, which they propose to deal with as follows:—	1,95,000	0	0
Final dividend of Rs. 1½ per share on the Preference Shares, free of income-tax	45,000	0	0
Final dividend of Rs. 5 per share on the Ordinary Shares, making 20 per cent for the year, free of income-tax	1,50,000	0	0
Bonus of Rs. 2½ per share on the Ordinary Shares, free of income-tax	75,000	0	0
To be carried forward	1,59,895	11	9
Total ...	6,24,895	11	9

The conversion of the drive of the Carding and Spinning Departments from steam to electricity, which was commenced in 1938, was completed during the year, the necessary plant having been ordered prior to the outbreak of war.

Managing Director.—Mr. K. J. D. Price.

Authorised, Issued and Subscribed Capital—Rs. 30,00,000 in 30,000 Ord. of Rs. 50 and 30,000 6% Pref. of Rs. 50, fully paid.

Synopsis of the balance sheet as at 31st December, 1940:—

		Total Liquid Assets ...	62,58,648

REFRIGERATORS (INDIA) LIMITED

Audited accounts for the year ended 30th June, 1940:—

The Company has made a net profit of Rs. 47,549-1-9 on the year's trading. Compared with the results for the two preceding years which showed a profit of Rs. 35,316 and Rs. 8,312 respectively, the result for the year under review must be regarded as very satisfactory.

The turnover increased by more than 20 per cent over the previous year and both the *Delhi and Lucknow* branches considerably improved their contribution. The directors consider that the Company's policy of carrying ample stocks was largely responsible for this increased business and justifies their past policy of conserving their assets.

The need of making ample provision for stocks in these days of increasing difficulty in the matter of supplies and transport has been foreseen and the company at the opening of the year 1941 are carrying a much larger inventory of ready for sale products than ever before. This has of necessity used to capacity the Company's liquid assets and for this reason the directors recommend that the profit for the year under review be carried forward, increasing the balance at credit of Profit and Loss Account to Rs. 1,41,974-2-1.

The outlook is still uncertain, but it seems likely that during the ensuing hot weather the Company's assets will take a more liquid form in which case the possibility of making an interim distribution to shareholders will be given consideration.

Managing Director.—Mr. E. G. Bromby.

Authorised Capital—Rs. 3,00,000 in 30,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 2,39,670 in 23,967 shares, fully paid up.

Synopsis of the balance sheet as at 30th June, 1940:—

Liabilities.	Rs.	Assets.	Rs.
Capital paid up ...	2,39,670	Gross Block ...	59,347
Reserves	19,894	Depreciation ...	38,790
Current debts ...	2,38,100		
Carry forward ...	1,41,974	Block (net) ...	20,377
		Stock-in-Trade ...	4,28,964
		Outstandings ...	1,85,850
		Cash	4,447

IMPERIAL BANK OF INDIA

	Year ended December		
	1940	1939	1938
	Rs.	Rs.	Rs.
Deposits	96,03,17,484	87,84,16,475	81,50,94,881
Cash	24,82,80,725	11,09,02,600	8,98 97,841
Investments ...	48,57,34,128	38,03,51,268	43,73,52,876
Loans & Advances etc	32,30,88,324	48,27,70,000	38,30,29,920
Net profit	78,03,672	77,92,887	78,87,488
Allocation to funds including depreciation ...	3,81,400	8,94,600	11,39,000
Dividend Amount ...	67,50,000	67,50,000	67,50,000
Dividend % ...	12	12	12
Carry forward ...	88,60,603	31,88,331	30,49,947

Report for the half-year ended 31st December, 1940:—

After making the usual and necessary provisions, the net profit of the bank for the half-year amounted to Rs. 33,33,836-10-7 which, with Rs. 39,62,566-9-8 brought forward from the half-year ended 30th June, 1940, makes a total of Rs. 72,96,403-4-3. This sum the directors have disposed of as follows:—

	Rs.	A.	P.
Dividend at the rate of 12 per cent per annum, free of income-tax	33,75,000	0	0
Transferred to Pension Funds	60,800	0	0
Carried forward to the Profit and Loss Account of the current half-year	38,60,603	4	3
	72,96,403	4	3

In common with all commercial institutions, the Bank has to face a steadily increasing taxation burden, which burden looms largely in the usual and necessary provisions which the directors must take before the profits are declared.

The Reserve Bank Rate and the Imperial Bank Advance Rate remained unchanged at 3% and 3½% respectively throughout the half-year.

Trade demand for bank finance declined more or less steadily until the end of November—a not unusual feature of the December half-year. The seasonal activity usually noticeable towards the end of the year, has, however, so far failed to materialise in any appreciable measure. In particular, demand for jute finance has been singularly poor.

Sterling exchange has been firm.

The average yield on Government of India Treasury Bills during the half-year was Rs. 0-13-6% per annum as compared with Rs. 1-14-8% per annum during the corresponding half of 1939.

Managing Director.—Sir William Lamond.

Synopsis of the balance sheet as at 31st December, 1940:—

Liabilities	Rs.	Assets	Rs.
Capital paid up ...	5,62,50,000	Cash ...	24,82,80,725
Reserves ...	5,62,50,000	Investments ...	48,57,34,128

Total ...	1,08,04,45,289	Total ...	1,08,04,45,289

Percentage of Capital & Reserve to Deposits—11.71.
Percentage of Cash and Investments to Deposits—76.43
Percentage of Loans and Advances to Deposits—33.64.

BURRA DHEMO COAL COMPANY, LIMITED

Audited accounts for the half-year ended 30th September, 1940 :—

After providing Rs. 26,000 for Reserve to Taxation and Cesses, including Excess Profits Tax, and Rs. 20,000 for Depreciation and after making sundry adjustments and adding the carry forward from the previous half-year, there is a balance of Rs. 12,334-7-2 at the credit of Profit and Loss Account which the directors recommend to be carried forward.

Raisings were higher than in the previous half-year and *despatches* were lower, but a better average selling price was realised.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 8,12,500 in 81,250 shares of Rs. 10 each, fully paid up.
