WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been in abundant supply; and the quotable rate continues to be ¼ per cent in Bombay and ½ per cent in Calcutta, the rate being mostly nominal. A different story is, however, told by the Treasury Bills results. Since the resumption of sales of tap bills, the tendency has, necessarily, been for a rather forced rise in the discount rates. The average rate of accepted tenders on April 1, was annas 13 and pies 11 per cent per annum as compared with annas 13 and pie 1 on March 25, annas 12 and pies 5 on March 18, annas 11 and pies 6 on March 11 and annas 11 and pie 1 on March 4. Applications received on the tender day were definitely on the small side and exceeded the amount on offer by only Rs. 31¼ lakhs. In the last week also applications were none too large at Rs. 1,55.75 lakhs. Intermediate Treasury Bills sold between March 19 and March 24 amounted to only Rs. 18 lakhs. The results of tap bills in the week ended March 31, however, have been more satisfactory. The total sales came to Rs. 1.21 crores. Judging from the poor response on the tender day, and the general trend of sales of tap bills in the previous weeks, it seems reasonable to suggest that the sales now announced for Rs. 1.21 crores in the week ended March 31, must be largely accounted for by support from special quarters. Here is a puzzling phenomenon: Short-term money rates are on the low side and interbank call money is plentiful; on the other hand, banking circles do not seem to be taking any lively interest in Treasury Bills and the discount rate is being forced up.

It must also not be forgotten that we are nearing the fag-end of the busy season. Most of the crop movements are nearing the closing stages. Produce finance will be returning to the money market centres in the course of April and May. We are definitely on the eve of the so-called slack season. In view of the current monetary situation, and in view of prospective conditions in the money market, it is difficult to understand the dearer discount rates. If the Reserve Bank finds next week that applications on the tender day are on the same scale as in the last two weeks, and that it could secure the quota of Rs. 1 crore only by letting the discount rate go higher, the bank authorities will do well to suspend the sale of intermediate Treasury Bills, so as to be able to revive tap bills at a more opportune moment. Meantime, the ways and means position of the Government could be adjusted by recourse to further ways and means advances from the bank or by issuing ad hoc Treasury Bills to the issue department of the Reserve Bank. We do not mean to suggest that the present rate of annas 13 and pies 11 is anything unduly onerous. But we do maintain that, in relation to the present and prospective money market position, there is no case for dearer discount rates.

Owing to the Easter holidays the next issue of "Indian Finance" will appear on Wednesday, April 9, 1941—Ed. I.F.

The most noteworthy development in the money market was the apprehended disruption of the sterling-rupee rate last Friday and the arrest of the rot by the Reserve Bank coming out as sellers of Reverse Councils at 1s. 5 31/32d. Owing to the continued difficulty of securing shipping space, export bills have been few and far between in the past few weeks. On the other hand, private remittances have been on a fairly substantial scale. In other words, there were abundant buyers of sterling and very few sellers of sterling. In the result, it looked as though from want of cover the rupee rate would break down. What happened since Saturday in regard to the developments in the exchange market is thus described by the City Editor of *The Telegraph*:—

"In simple terms, the rupee began to weaken suddenly in terms of sterling.

In such circumstances, talks took place between the Reserve Bank and the exchange bankers on Saturday.

The Reserve Bank suggested that it would support the rupee by coming out as sellers of sterling at 1s. 5 29/32d.

This was the proposal on Saturday; and the bankers were of the view that they should let the exchange rate slip down to 1s. 5¾d.

When the Reserve Bank came to know of this, the need for a bolder step was realised. Finally, the announcement was made that the Reserve Bank would sell sterling at 1s. 5 31/32d.

Since Monday, the rot in the exchange market has been arrested.

But the new rates in force are 1/32d. to 1/16d., lower than this time last week.

The rates to-day are 1s. 5 29/32d., B.C. rate; 1s. 5 15/16d., B.C. remittance. Banks are sellers of T.T. at 1s. 5 15/16d., all through for six months.

Till yesterday, banks were buyers of T.T. at 1s. 6 1/32d. That is, the margin between the T.T. buying rate and T.T. selling rate was as much as 3/32d.

Bombay has been agitating that this margin was far too much. From to-day, the buying rate for T.T. has been reduced to 1s. 6d.

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday April 1, 1941. Total amount offered was Rs. 1 crore, 31 lakhs and 25 thousand. Tenders at Rs. 99-12-9 per cent were accepted in full and those at Rs. 99-12-6 per cent were alloted approximately 81 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen and pies eleven per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Monday April 7, 1941. Successful tenders should make payment on Wednesday April 9, 1941. Other conditions are as usual.

Three months' Intermediates will be sold from April 2, 1941, at Rs. 99-13-0 per cent subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from March 26 to March 31, 1941, amounted to Rs. 1,21,00,000.

During the week ended March 28, 1941. Government of India Treasury Bills for Rs.1,05,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

MISRA HOSIERY
MILLS
CAWNPORE

Telegrams: MISRA, Cawnpore Telephone: 2336 Cawnpore

THE MISRA HOSIERY MILLS have, from the commencement of the war, been "on active service". Working day and night, the mills have been supplying essential requirements of the Army in the knitting line.

MISRA HOSIERY cater to the requirements of the general population and comprise socks, stockings, undervests, sports shirts, interlock underwear and outerwear, for men, women and children.

Production 8,000 Articles, daily.

Finance Abroad

THE final figures of Britain's national accounts for the financial year just ended throw a lurid light on what war means to the British public, that not all the gap of £2,458,378,573 between expenditure and revenue is a painful reminder to the British public, that not all the onerous sacrifices cheerfully borne hitherto can suffice to win the war. Total war indeed requires total sacrifice, as has long ago been unflinchingly recognised. And even at the staggering sum of £13 millions a day, Britain's war expenditure has by no means been halted in its upward trend, though the Lease and Lend Act has, to some extent, obviated the necessity for paying for imports of war materials from America. The average daily expenditure for the whole year is said to have worked out to £10.5 million, a figure which is, however, of statistical interest only, since, in the past three months, war expenditure has run in the neighbourhood of £13 million and all current indications seem to point to a heightened tempo of the war, necessarily calling for a still higher level of expenditure. The highest amount spent in one year of the last war had already been exceeded at the end of the first year of the Hitlerian war.

The Chancellor of the Exchequer will, therefore, have little short of an insuperable problem when he presents the Budget at the end of this month. His task will be doubly difficult since he cannot complain that revenues have been disappointing. On the other hand, of the £3,867,245,670 spent in the fiscal year just ended, the total ordinary revenue from all sources covered £1,408,867,097 at which level it is £48 million above the Chancellor's own estimate earlier and £360 million above the previous year's realisations. Neither the public nor the government have any illusions as to the manner in which this revenue increase has been brought about. It has been possible only by means of a drastic imposition of taxation. Nevertheless, the existence of a budgetary deficit to the extent of £2,458 million hardly permits of any complacency; and the problem for the Chancellor of the Exchequer in his forthcoming budget will be to decide what part of this deficit should be financed from additional taxation and what part by borrowing. It is a tribute to the British public that, even at the extremely stringent level, taxation is not considered high enough. In fact, every budget presented during this war has provoked the criticism that the Government were not tackling the budgetary problem with the seriousness it deserves. And though Sir Kingsley Wood has travelled a long long way from the budgetary somnolence of Viscount Simon, there is on the part of the Government an inability to take the fullest measures for curtailment of civil consumption and to realise the need for stiffer taxes to achieve its end. All the London financial journals are at one in making this criticism. And it was only recently that the *Economist*, the *Financial News* and the *Financial Times* unequivocally plumped for more taxes and further tightening of the national belt. This is not really difficult to understand, considering that there has been a biggish expansion of credit in the past year, wages and prices have steadily gone up, and the stage is well set for the vicious spiral, though as yet it has not manifested itself.

The National Savings Movement has done yeoman service and the sums netted in the pat year are a tribute alike to the patriotism of the British public and the organisational genius of Sir Robert Kindersley, who has been created a Baronet in recognition of his services to the country. But, it is an accepted fact that the country has not been saving as much as it should and could. Nearly all the Bank Chairmen were pretty loud in their complaints as regards this aspect. And Mr. McKenna at least did not forget to point out the increasing preference for keeping cash holdings where logically they should flow into Savings Bonds. Unfortunately, no forward policy has emanated from the Government which is just content to pay out more and more in the form of increased wages, without improvising corresponding machinery to lap up the savings into the pool.

Mr. Keynes' scheme of 'deferred pay' still remains unimplemented, though even its original critics have now come round to accept its soundness. And as for putting a stop to expenditure on luxuries, the suggestion of the introduction of an imports like the Purchase Tax has not been acceptable to Government. Sir Kingsley Wood cannot very well burke these issues longer; and the situation calls for a full-blooded policy designed to rope in as much money as possible through taxation while making the lending and saving movement a vigorous thing of its kind. The fact that the national income is higher at £8,000 millions as a result of the millions spent is, far from being a matter for complacency—an *a fortiori* argument why every penny saved must flow into one or other of the many securities introduced by the Government to finance the war. The coming British Budget will be unparalleled alike for its colossal dimensions and for the measure of still further sacrifices enjoined on the taxpayer in Britain.

Neither the long-term money rate nor the short-term rate is affected by the implications of the Budget. That this is a 3 per cent. War has become firmly established and 3½ per cent. War Loan quoting at £105 is the best indication of the strength of the British giltedged market. In the short-term money market too, all influences have pointed towards easy money, though the last tender was alloted on a slightly higher average rate at £1-0-2.46d. Two weeks ago, the rate stood at £0-19-11d. The improvement in the Treasury Bill rate in favour of the market is probably due to a curtailment of loanable resources, owing to the month-end adjustments of banks' accounts. Probably, but for the release of funds in connection with the repayment of the undated India sterling stocks, credit might have been more stringent. The Reserve Bank's statement for March 28, suggests that about Rs. 74 crores worth of sterling securities have been redeemed. In due course, most of that money is sure to find its way into the medium and longer-dated stocks. On the other hand, to the extent that India's free foreign balances, hitherto invested mostly in London Treasury Bills, have been utilised for debt redemption there must be less of competition for Treasury Bills and the discount houses must have cause to welcome India's sterling redemption scheme. Incidentally, it may be noted that the Treasury Bill offerings have been raised to £70 million, after having been stable for more than a year at £65 million. While this may have been entailed by the ordinary ways and means adjustments of the British Treasury, it is pertinent to recall here that April is the month when the Treasury deposits mature. It will be remembered that this system of Treasury deposits was initiated last July. In the coming weeks, the maturities of these must become larger and larger and it would not be surprising if the Treasury is obliged to have recourse to an expansion of the floating debt, considerable as it is already.

Significant Reserve Bank Returns

At the time when Government announced the proposal to redeem the dated India sterling stocks, we pointed out that there were many issues connected with this question which could be more fully elucidated only after the publication of the Reserve Bank returns which would reflect the changes in the composition of the Bank's assets consequential on the sterling payments made to the holders of the redeemed loans. We also gave full support to the principle underlying this scheme; and we were specially gratified as the final form in which the proposal was worked out was in line with the suggestion which we had made at the very beginning of the war. The statements of the Reserve Bank, issued this week, are for the week ended March 28; and they record substantial changes, all of which are presumably connected with the sterling debt redemption. We are not in a position to say whether such changes as are disclosed to-day are all the changes necessitated by the liquidation of the dated sterling loans. That is to say, we have no means of knowing whether the payments due to each and every holder of the sterling loans in question have been made in full, or whether there are some stragglers who will turn up leisurely and take the payments in their own time.

While we are now in a position to understand better some of the issues connected with the debt redemption, we are still left with a few unsolved conundrums. The first of these is, as we have said, whether the sterling payments have been made in full. The second is what proportion of the total holdings was held by Indian investors. The third is what proportion of the Indian holders accepted payment in rupee counterparts and what portion demanded payment in cash.

We are referring to these important matters at the very outset, as we believe that there is the utmost need for the Indian public to understand the full significance of this great scheme of foreign debt liquidation. Announcing the decision to redeem the dated loans, the Government issued a notification explaining the purpose and significance of this important operation. If we remember right, the Reserve Bank also issued a statement designed to elucidate the scheme in terms intelligible to the lay public. We suggest that, on the present occasion also, the Government will do well to set out in a notification the salient features of the various operations that have been put through. If, even to us whose daily task is the unravelling of the mysteries of finance, there are a few points that require clarification, the case for telling the man in the street in language that he will understand, is all the greater. The Government cannot surely plead that any question of public interest is involved in the divulgence of the transactions connected with the execution of the redemption scheme. On the contrary, public confidence in the credit of the Government will be greatly reinforced if there is more widespread and better informed public opinion as to the smoothness and thoroughness with which the repayment of loans to the value of £90 millions or Rs. 120 crores has been effected.

We may now address ourselves to a close analysis of the figures in the latest returns of the Reserve Bank. The two standpoints from which we have to study the figures are (*a*) the total amount of sterling handed over by the Reserve Bank to the Government for payment to the holders of the redeemed loans; and (*b*) the measures taken by the Central Government to find the rupee equivalent of the sterling assets thus received by them from the Reserve Bank.

So far as the utilisation of sterling balances is concerned, the Reserve Bank has withdrawn sterling assets both from the issue department and the banking department. On March 21, sterling securities held in the issue department stood at Rs. 140.50 crores. By March 28, these had declined to Rs. 102.24 crores. That is to say, the Reserve Bank has utilised, from the issue department, sterling securities of the value of Rs. 38.26 crores for the purpose of sterling debt repayment. The withdrawal of sterling securities for Rs. 38.26 crores is accompanied by the addition of a similar amount of holdings in Government of India securities.

This brings the total of gold coin and bullion and sterling securities to Rs. 46.65 crores. It is extremely satisfactory that, for an operation which was originally estimated to be over £90 or Rs. 120 crores, all that the issue department has to lose is Rs. 38¼ crores. It may be said that the strength of the external reserves of the Bank has not been affected to any worth-while extent by the scheme involving such unusually heavy sterling payments.

The ratio of the external reserve to total note liabilities is now 54.469 per cent. as compared with 69.035 per cent. last week. It will thus be seen that our external reserves have an ample margin over the 40 per cent. which is the statutory minimum. It may also be added that gold continues to be valued at the original price. The inner reserve under this head is of the order of Rs. 40 crores. The proportion of the external reserve to liabilities on the basis of a revaluation of gold, will be 70 per cent. There is the further reassuring fact that the foreign balances held in the banking department are very substantial.

Withdrawal of sterling securities from the banking department has also been effected to make up the balance of the sterling requirements for the payment on the loans. Foreign balances were Rs. 78.35 crores on March 21; they have declined to Rs. 42.25 crores in the week ended March 28. From the published figures, it appears that sterling securities utilised from the banking department for this purpose are Rs. 36.10 crores. We cannot, however, go on the basis of published figures. For, it is quite on the cards that the Reserve Bank has increased its sterling holdings in the course of the week under review. It is difficult to say what exactly would be the increase during the week. All that can be said is that the general custom is for Government accounts to be squared before the end of the financial year; that the last week of March accounts for considerable transactions of this kind; that, from this point of view, it is quite probable that, in the adjustments between

the British Government and the India Government, India has received large sterling balances; and that, as the return of the Reserve Bank we are now studying is for the week ended March 28, there might have been quite considerable sterling receipts of this nature during this week. As the total of sterling securities withdrawn from the banking department and from the issue department is Rs. 74.36 crores as disclosed in the published figures, it seems reasonable to assume that the sterling receipts of the Reserve Bank in the week ended March 28 might be, say, Rs. 5½ crores. In simple terms, we are led to the conclusion that the total amount of sterling balances utilised for repayment of dated sterling loans is Rs. 80 crores.

This conclusion is corroborated by the calculations in respect of the measures taken by the Government to find the rupee equivalent against the redeemed sterling loans. As we have already stated, the Central Treasury has secured Rs. 38.26 crores by the issue of government securities for that amount to the issue department of the Reserve Bank. We learn, from the statement of the banking department, that the Government have taken a ways and means advance of Rs. 16 crores from the Bank; and also that cash balance to the amount of Rs. 22.21 crores has been utilised from the Treasury's deposits with the Bank. The total of these three items comes to Rs. 76.47 crores. This also is as near Rs. 80 crores as we may consider necessary for purposes of our calculations.

It follows, then, that the total sterling payments involved in the redemption of dated loans are only £60 millions. This compares with the estimate of £90 millions given out originally as the amount involved in the redemption of loans. How is this difference of £30 millions to be explained?

We know for a definite fact that many institutional investors like the Oriental, the Empire of India and the New India Assurance Companies were holders of large blocks of India sterling securities. It is quite likely that all such investors have tendered their sterling securities and accepted rupee counterparts in their place. The point to understand in this connection is that, so far as the redemption of the sterling stocks of such investors is concerned, no payment in sterling is involved. They are to be paid either in rupees or in rupee securities. The question with which we are faced in considering this matter is whether the entire unaccounted balance of £30 millions can be in respect of sterling securities held by Indian investors.

It may also be that some of the institutional investors in Britain exercised the option to take payment in rupee counterparts instead of in cash. For, this redemption of India sterling securities must have created a very embarrassing situation for institutions like insurance companies as regards the securing of other investments equally satisfactory from the point of view of yield. They could very well have decided that a more satisfactory arrangement for them would be to continue to keep their funds invested in Indian securities, even though they have to hold them in rupee securities instead of sterling securities. Investors in Britain have every cause to look upon Indian securities as affording the best security in the present difficult political conditions of the world.

Pursuing our line of reasoning thus, we shall not be surprised to be told that all the sterling outlay needed in connection with the redemption of the dated sterling loans has turned out to be no more than £60 millions owing to the facts firstly that Indian holders were owning large parcels of these securities and secondly that British holders have preferred to take payment in rupee counterparts. This is a very interesting aspect of the issues arising out of the debt redemption; and any information that the Government vouchsafe to the public in this regard, must go to strengthen confidence by providing interesting evidence as to the increased good favour which Indian securities enjoy in the London market.

If our conclusions are correct only in part, we have to assume that it is not all the holders of sterling securities in Britain that have demanded and taken cash in the last week. That is to say, a few more payments will have to be made in the next few weeks; and, as these payments are being made, they will be reflected in the returns of the Reserve Bank from time to time.

Let us, however, proceed to view the likely future developments on the basis that only £60 million was needed for redeeming the dated India sterling stocks. These developments must be of an important nature in two respects. The first is in respect of the possibility that is now opened of India being able to take in hand the redemption of the 3½ per cent. non-terminable loan at a much earlier date than we could have thought possible two months ago. In respect of the 3½ per cent. loan also, the sequel may well prove that the sterling payments involved in the transaction are only about 70 per cent. of the total loan. There are big holders in India of 3½ per cent. India sterling paper. It is also reasonable to hope that many of the investors in Britain would like to continue their investments in the Indian security though it will have to be in the form of a rupee security. On the basis of these two assumptions, we may say that the redemption of the 3½ per cent. paper might not require more than £60 million, that is, Rs. 80 crores. This is an amount which should not present any great difficulty as, even after the recent depletion of sterling assets, the Reserve Bank holds, between the banking and the issue departments, sterling securities for Rs. 145½ crores. If the accretion of sterling assets in the next two or three months is on the same scale as in the past many months, the Indian Government might be able to decide on redeeming the 3½ per cent. loan before another three months are out. This means that the only sterling debt left to be tackled will be the 2½ per cent. and 3 per cent. non-dated loans.

Another problem of more immediate import is the measures which the Government propose to take for raising the funds in India with a view to replacing the sterling debt by rupee debt. In relation to our estimates, of the Rs. 120 crores involved in the recent debt redemption, Rs. 40 crores has already been found in the sense that holders in India as well as some holders in Britain have accepted rupee counterparts. As for the balance, approximately half is found by ways and means advances and by cutting into the cash balance. The other half is provided for by the issue of rupee securities to the issue department of the Reserve Bank. Have *ad hoc* Treasury Bills been issued to the issue department or rupee counterparts? We would suggest that the Notification, which, we propose, the Government should issue for the elucidation of the public, must also give information regarding the nature of securities delivered to the Reserve Bank.

Our own view is that the plan of giving rupee counterparts to the Reserve Bank and of the Reserve Bank selling these securities on tap from time to time, is neither satisfactory nor economical. We are definitely in favour of the transition being tided over with the help of *ad hoc* Treasury Bills issued to the Reserve Bank. We are also in favour of fresh planning of defence loans with a view to secure the large amounts now required. The second defence loan, which has been on issue for over two months, has not produced substantial results. This circumstance in itself should suggest the desirability and advisability of reconsideration of the plans of defence loans.

We propose to deal, in our next issue, with the problems connected with the marketing of the rupee securities in place of the sterling securities involved in the present or any future redemption scheme.

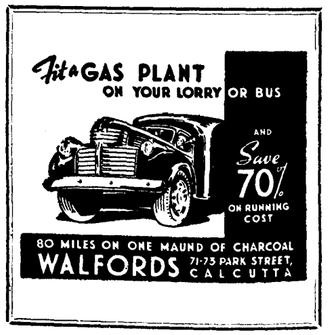
Editorial Notes



Indo-Burma Trade Agreement

THE conclusion of a new trade treaty falls to be recorded here. Comment must be reserved in the absence of a knowledge of the terms, but the outlines of the treaty, as mentioned in the press despatches, suggest that the talks begun in February were carried through to a successful conclusion because there was an acceptance of claims put forth on both sides. The basis of reciprocity has not been discovered without difficulty but in its essentials the treaty resembles the Indo-British trade pact of 1939 rather than the treaty with Japan. The emergence of a point of agreement in relation to the principle of a preferential tariff for India as such. Burma is applying the policy adopted by Canada in regard to the U.S.A. and the multiplication of rates of duty is not unknown in other Dominions. The Burma Government's plea for additional revenue is conceded, and the treaty has gone through mainly on that account. According to the Burma Minister that country will get Rs. 1 crore as revenue. But India is not debarred from levying duties on Burma rice or other produce though in this case too the principle of a preferential tariff will be applied. The most important advantage secured by India is in respect of textile exports; existing advantages cannot be neutralised by the grant of a reduced preference to textiles of British origin, and the revenue duty (Burma has no textile industry) will not prejudice the Indian exporter. India's share of the market cannot but increase during the pendency of the war and exports of manufactures will continue to grow despite the fact that they are not duty-free. The conclusion of the trade treaty with Burma is of more importance to India than the treaty negotiated with South Africa. Arguments in regard to the disparity of Burma's imports and exports did not influence the negotiations because the mineral oil is an essential item for India, and timber cannot be taxed. The abandonment of the duty on broken rice as from April 1st on the ground that the rice situation is discouraging makes it impossible to urge the levy of a duty on Burma rice, but action will be taken to protect the Indian rice-grower if an when necessary.

Trade in February

The February trade returns confirm the view that the increase in India's imports during January was temporary. The set back in re-exports too is due largely to the decline under imports which have fallen in value from Rs. 14.71 crores to Rs. 11.19 crores in February. More arresting than the decline in imports is the steep fall under exports of Indian merchandise. The fall from Rs. 19.69 crores in January to Rs 11.85 crores cannot be explained by the difference in the number of working days. But it should be remembered that monthly variations in the war period have an irregular character, and the fall in February may be due to the shipping situation or some other factor unconnected with foreign trade. There is, however, no doubt that the improvement recorded in January was due to adventitious factors. Indian merchandise exports in 1940-41 have been running at a lower level than the previous year, particularly, after June, and exports to Britain too have dropped. The eleven months totals suggest that the exceptions to the adverse trend disclosed by the figures are numerous enough. A good showing is provided by the Straits Settlements, Kenya, South Africa, Australia and New Zealand. But the most remarkable fact disclosed by the figures relating to the distribution of Indian exports is the further growth in exports to the U.S.A. The total value of Indian exports in the eleven months ended February exceeded Rs. 23.83 crores and this alone confers interest on the report of the Meek-Gregory Mission. In view of the improvement in the offtake of Indian exports mentioned by Mr. H. S. Malik in his last report for the second quarter of 1940 the further increase in exports indicating a rise of over Rs. 10.7 crores in the value of total imports from the U.S.A. over the year is of vast significance. The encouraging prospects for mica, manganese, chromite, rubber etc. have evidently materialised though the February figures, showing total exports of Rs. 1.64 crores (24 lakhs less than in February 1940) may suggest a setback. The secular trend is favourable because the increasing importance of the U.S.A. in the import trade must be reflected in India's export trade especially as the defence programme and the aid to Britain scheme are going through.

The decrease in exports over the year is of the order of Rs. 16 crores indicating that the loss occasioned by the spread of the war is less than that arising from the first declaration of war. But reference must be made to the increase in exports to Britain and the Empire as compared with 1939-40. This increase is as much as Rs. 8½ crores and the export trade problem appears less overwhelming. A point to which attention may be invited at present is the fall in exports to Japan whereas exports to China have increased. This development may complicate the export trade problem for raw cotton.

Total Indian exports for the eleven months were valued at Rs. 175.49 crores against Rs. 184.06 crores for the same period of 1939-40. Total imports in the same period were valued at 142.22 crores showing that the balance of trade had undergone no great change over a year. There is something like stability because the decline under exports (Rs. 8.56 crores) is almost cancelled out by the decline under imports (Rs. 8.29 crores).

Textile Inquiry

The Handloom Fact-Finding Committee which was appointed by the Central Government with a view to reconciling the conflicting claims of the handloom and the mill industry, has completed its tour in the course of which it has visited most of the important handloom and mill centres holding informal discussions with interests representing both. The Committee's detailed questionnaire is now said to be ready. If the views expressed by the Chairman of the Bombay Millowner's Association are to be regarded as representative, the millowners are dissatisfied with the terms of reference laid down for the Fact-Finding Committee, particularly, in regard to clause three. This clause seeks to ascertain the nature of competition that exists between the products of the handloom and power-loom industry. And this is what the millowners seem to take exception to, maintaining that there is, in fact, no competition between the products turned out by the two. But the very insistent disclaimer by the millowners in fact weakens their case. It cannot be denied that when a product with same sort of utility is marketed by two different industries, competition is taken for granted. This conviction will remain unshaken, despite what the millowners might say to the contrary, until their contentions are proved by facts and figures. Yet to say this is not to plead for some restrictive scheme which would curb the mills. Restrictive legislative action against the mills, therefore may not be the remedy. The solution is to be sought not in crippling the mills, but in improving the position of the handloom industry with reference to its known weaknesses and perfecting the organisation relating to all stages of handloom manufacture. There are problems such as providing for fixed and working capital, and helping the weaver during the period between manufacturing and marketing which have to be solved; but investigation must precede remedial action.

Coal Problems

Coal output rose to over 26 million tons in 1940 said the President of the Indian Colliery Owners Association at the annual meeting last Sunday. Like the Chairman of the Indian Mining Federation, whose meeting took place the next day he discussed the difficulties of the trade at some length and concluded that problems rather than opportunities were forced on the mining industry. This opinion was endorsed by the Chairman of the Indian Mining Federation and there is latterly no desire to view the coal trade's position as prosperous and secure. The higher surcharge on freights and persistent transport difficulties do not explain the decline in prices which is mainly due to the accumulation of stocks. And the increase in raisings has more than offset the normal increase in demand while there is a possibility that industries producing for civilian consumption may have taken less coal because of their difficulties. While Mr. Sushil Ghose discussed the problem of over production from one angle, Mr. Ojha did not altogether argue that consumption would not recover. He argued that coal consumption in India was lamentably low being 0.1 ton per head whereas in Japan it was six times higher. Industrialisation would lead to an increase in consumption and complaints of overproduction would disappear. On this point he was decidedly optimistic. Much of Mr. Ojha's speech was taken up with a recital of grievances and the views expressed on the subject of assistance for voluntary sandstowing reflect the difficulties occasioned by drawing a distinction not among those collieries submitting applications, but among the applicants desiring to stow for safety and those stowing for their own benefit. Mr. Ojha definitely deprecated any proposal to raise the rate of cess in order to augment the resources of the Stowing Board on the ground that the industry could not stand it. If Mr. Ghosh has not reiterated any special objections to the increase in the levy, his analysis of the difficulties of the smaller mines producing inferior grades of coal leaves the impression that only the prosperous section of the industry could afford to pay a higher cess at the rate of Rs. 0-3-0 per ton on coal and soft coke and Rs. 0-4-6 per ton on hard coke. Improvements in local board administration have been asked for in the past and Mr. Ojha announced that the Government of Bihar contemplates reform through the fusion of various local authorities in the mining areas. The other questions such as the Railways' tender system have so often been discussed that they excite little attention but the mention of Mr. Ojha of the Mining Federation's views on the subject of a special detailed investigation into the position and problems of the coal industry indicates that Indian interests do not disapprove Mr. Ghosh's suggestion, explained at some length in view of the need for conservation of good coking coal.

Jute and its Rivals

A new mixture named *celin* has been created out of selected jute. According to the latest issue of the Indian Central Jute Committee's bulletin, the new fibre is a a substitute for flax manufactured in Northern Ireland pre-eminent for its flax spinning. The product sells at £65 per ton, says the bulletin. The new fibre can be spun, woven and finished on orthodox flax machinery and is cheaper than flax. Conversion of jute into *celin* is performed by chemical means in a series of tank treatments which take only a few days. The fibre is rolled to the required degree of softness, dried and prepared for delivery to the spinning mills. *Celin* has been used as weft in making practically all classes of domestic goods and pure *celin* warp and weft have been used for making canvas which is claimed to be better than the cotton-jute union fabric evolved in India.

The bulletin refers also to the use of jute in making felt. It has been found that thermoplastic fibres such as Vinyon can be utilised to produce felt from mixture with other fibres such as wool, hair, jute, cotton and rayon. By varying the proportion in range of products from soft-wadding like insulating material to hard flexible tiling can be produced.

The bulletin refers to the cotton bag campaign in the U.S.A. The programme for 1941 calling for the manufacture and sale of two million patterns or bale covers has been announced. This new line is intended to increase the use of domestic cotton and a payment of 15 cents per cover is to be made to manufacturers holding approved applications. The desire evinced by Brazil to promote the use of local fibres is also mentioned. Jute is to be mixed with 10 per cent. of local fibres. Cordage factories are required to use 100 per cent. *Caroa* fibre in the production of gummed string and 100 per cent. *Caroa* or other national fibres in all products previously made from imported

jute. In the State of Pernambuco weavers have decided to mix 35 per cent. of *Caroa* and the Governor has asked the Federal Government to pass a law compelling all jute mills to use at least 25 per cent of *Caroa* fibre for cotton bags.

Tea Market Expansion

In the year ended September 30, 1940 the Indian Tea Market Expansion Board continued to work in accordance with the Tea Cess Act passed in 1903 with the 'object of providing the sale and increasing the consumption in India and elsewhere of tea generally and especially of Indian tea.' The thirty-seventh report prepared under the Act covers the first year of war, marked by difficulties in maintaining connections with the International Board and carrying on the campaign in the U.K. The International Board felt impelled to adjust its Budget to wartime exigencies by curtailing expenditure in the U.K. and raising the allotments for U.S.A. and South Africa. The European campaigns were interrupted by the spreading war and outlay in the U.S.A. and Canada, it was felt, would be affected by exchange regulations. Future expenditure is to be on a reduced scale since the Indian Board at their meeting on September 27, 1940, approved of revised allotments. India is to contribute £121,900 out of the total outlay of £242,950 for 1941 by the International Board largely through the inevitable reduction in the expenditure in North America. If foreign expenditure is to be limited, the urban experiments in India had yielded results that induced the Chairman and Vice-Chairman after a special tour to recommend an extension of urban work. Rural work was in progress in four provinces on the basis of free distribution of tea to villagers. This work together with the sale of pice packets and cinema demonstrations has been given up except in East Bengal in favour of intensive urban campaigns in six more selected centres. The rural campaigns, says the report, had been in progress for a sufficiently long period to warrant the expectation that withdrawal would not seriously affect the results which had been achieved from prolonged operations in those areas.

Reference is made in the report to the opening of more tea canteens in mills in Bombay, South India and Calcutta. The number of mills at which self-supporting canteens were established increased systematically. Further work on the estimates of tea consumption and the results of propaganda on consumption in particular areas appeared desirable, and the Board expects an improvement in the sources of information during this year.

The Board has been identified with the suppression of the trade in adulterated tea described at some length in the Commissioner's report for the year appended to the report. Particular attention was paid to the means of dealing with the large trade in adulterants known to be carried on in and around Bombay. Representations to the Government of India procured the answer that legislation is the concern of the Provinces. The Board with an annual income of Rs. 48,46,883-13-5 in 1939-40 spent over Rs. 10 lakhs on stalls, distributions, free cinema shows, etc. and contributed over Rs. 30 lakhs to the International Board, as India is the biggest producer and exporter of tea. Consumption in India is known to have risen to 100.9 million lbs. in 1939-40. This figure is the highest recorded and a comparison with the five-year and seven-year moving averages proves that internal consumption shows enormous growth since press publicity and other methods were applied to stimulate tea-drinking.

More Manure for Bengal

An article in *Indian Farming* for March draws attention to the possibilities of water hyacinth as an addition to existing manures. Mr. W. M. Clark has described the way in which the Bengal cultivator increases fertility by adopting well-tried methods. Though the alluvial soil of Bengal hardly stands in need of manuring the cold weather crops grown in soils which get both sand and silt certainly need manure. Plant rubbish obviously suggests itself, and water hyacinth which afflicts seventeen million acres and is regarded as Public Enemy No 1 in rural Bengal is likely source. The destruction of the pest has been among the leading objects of rural reconstruction. The first line taken by the Agricultural Department was to evolve during the period 1916-18 methods for the extraction of potash salts from the ash which contains 28.7 per cent. K_2O. The green plant contains only 1 per cent. of ash and 95 per cent. of moisture which makes the drying a laborious process. The subsequent treatment of the ash is easy, but the cash return for all the labour used is very small, and cultivators have never persevered with the methods evolved for them. In any case, in areas where water hyacinth is most abundant, the land available for drying the weed is scarce. The next investigation was directed towards making artificial farmyard manures and with that and the conversion of field weeds into manures the Department claims to have achieved sound results. The experimental work began in 1921 and the analysis of the manures made on the Dacca farm shows that nitrogen content was more or less equal for the three types of manures. Though laziness and prejudice have retarded progress in the past, the Agricultural Dept. claims that in the lats three years more manure is being made by the cultivators and applied successfully to the crops grown. Though cultivators use only 9 maunds per acre as compared with 20 maunds on Government Farms the results are by no means discouraging. Ryots are making manure from water hyacinth though moisture and nitrogen content vary and the percentage of nitrogen on a dry basis is distinctly higher the results of the campaign to make more manures are not discouraging. Cultivators are asked to collect weeds in the Water Hyacinth Week and heap them up, but on the Union Board Farms and demonstration centres it is shown how the rotting can be accelerated by flinging on to the heaps a slurry of fresh cowdung and water in order to create a sharp rise in temperature. These heaps are covered but not too efficiently in the drier tracts as a leaky roof saves bother in carrying rainwater. The figures cited in the article refer only to a small part of the manure made and used as the Department is helped considerably by the Water Hyacinth Week organised by the Bengal Government last year during which they are expected to arrange for mass collection of the mud from *bils*, tanks and slowflowing streams. Mr. Clark concludes that there is some inducement ot the cultivator to carry on the making of manures from water hyacinth from the conjunction of high prices for produce and the small area for cultivator. But if fragmentation is excessive, the latter is no advantage, and one must wait for general economic progress and the spread of knowledge to lead to the increased use of manure arising largely from the eradication of a pest which is a danger to cultivation and navigation in tracts often covered by water.

RAIL-CUM-ROAD TICKETS

Empire of India

Conditions for Indian insurance companies were not altogether favourable and the speeches at the Indian Life Offices Association meeting last month dwelt rightly on the handicaps rather than the opportunities of wartime. The recession in new business is not confined to one company during this period, but a considerable improvement both in business conditions and the law under which the business of life assurance is carried on is assured through recent developments. And having regard to the difficulties and uncertainties manifest last year, the business figures reported by several companies are not disappointing. Those which have gained stability through age and experience maintain an enviable record, and the confidence of the public in India should grow with the appearance of the reports for 1940. of the companies that have held their own fully in a difficult year one has already issued its report and accounts. The Empire of India Life Assurance Company's 43rd annual report states that 9165 proposals for Rs. 1.66 crores were received during the year resulting in the issue of 7319 policies assuring in the aggregate Rs. 1.31 crores. The total number of policies in force is

79,830 assuming in the aggregate a total sum of over Rs. 14.65 crores. The revenue account shows that total premium revenue for the year amounted to over Rs. 63.64 lakhs and Investment receipts for the year totalled over Rs. 23.27 lakhs. Claims by death took Rs. 13.54 lakhs and claims by maturity took Rs. 31.9 lakhs nearly. Total expenses inclusive of commissions by maturity took Rs. 31.9 lakhs. Total expenses inclusive of commissions took over 22.5 per cent. of the premium income, a feature to which special reference was made by Mr. E. B. Ghasvala in reviewing the year's results at the annual meeting on March 24th. The revenue account shows that the year's surplus is applied to strengthen the Life Fund which stands at over Rs. 5.02 crores at the end of 1940. Points that deserve attention here are the clean balancesheet presented year after year and the retention of strong reserves in addition to the Life Fund. The Investment Reserve Fund, the Life Insurance Reserve Fund and the Surrender value Reserve Fund total over Rs. 32.74 lakhs. The company purchased Rs. 4 lakhs worth of 3 per cent Defence Bonds and took £26000 worth of the new 3 per cent British War loan. A more important point is that the classified summary appended to the report shows that an ample margin exists as between the book value and the market value of securities belonging to the Life Fund. The Company held at the end of 1940 over Rs. 1.63 crores in Indian government securities over Rs. 4.10 lakhs in Indian State securities and Rs. 77.33 lakhs in Municipal and Port trust loans. The company held also over Rs. 2.04 crores in the 3 per cent and 3½ per cent India sterling loans held in the custody of the Imperial Bank of India. The sterling stocks have been replaced by new rupee loans since. Credit was rightly taken by Mr. Ghasvala for the retention of a strong balancesheet position. But for the contraction in new business and the restrained rise in the Funds it may well be urged that the results are more than gratifying, and if one can go by the revival in evidence towards the end of the year, business should respond swiftly, for the appeal of life insurance is greater than ever, and a policy issued by a sound and progressive office represents an asset which can be relied upon. The company's latest balancesheet shows that as against liabilities on account of claims, deposits etc, there were revenue items totalling nearly Rs. 10.75 lakhs in addition to cash balances exceeding Rs. 6.8 lakhs. Policy loans at the end of 1940 stood at Rs. 72.87 lakhs, and House Property valued at Rs. 3 lakhs after allowing for the special Reserve Fund was held by the Company.

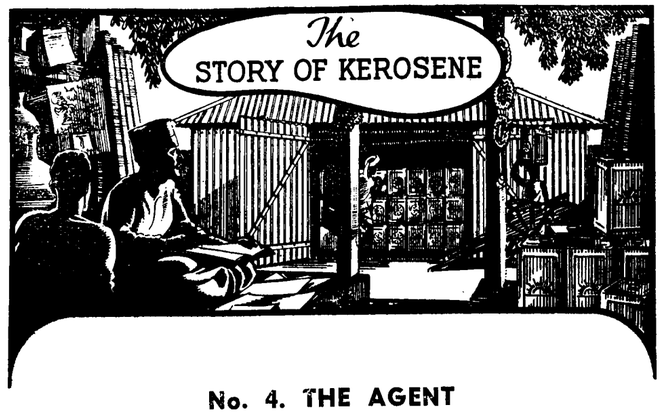
Turkey Holds Fast

The results of non-stop diplomacy are by no means discouraging for Britain whose Foreign Secretary has been for over eight weeks engaged in surveying the Balkan scene. The conference in Cyprus represented the climax of a visit well timed and well spread over a series of Capitals, Cairo first, then Ankara and Athens. The Germans who have an ingrained faith in the War of nerves have found that the nerves of those opposed to them have become much stronger. The visit to Ankara where Sir Stafford Cripps met Mr. Eden may appear more important in the light of subsequent developments. The transmission of British views as to the Balkans and the Near East has evidently not been without effect on the Kremlin whose attitude on the subject of Bulgaria's surrender has been open to more than one construction. The report of a warning to the Yugoslav Government, not to take any decision without consulting the Russian Government, has not been contradicted, and the report found support in the attempts made by Turkey to caution Yugoslavia against acceptance of Berlin's terms. The exchange of notes with Turkey has a special bearing on recent developments. Turkey can count on the complete and faithful observance of the non-aggression pact. When she fights for her existence, she will have as a neighbour a Russia whose neutrality will not be affected by the existence of Russia's understanding with Germany. The assurance will determine Turkey's decision to honour her obligations to Britain and Greece. Turkey does not froget that Italy coveted Smyrna during the last war and fortified the Dodecanese mainly to frighten Turkey which country since 1930 has shown that as the friend of Greece and the enemy in two wars of the past Turkey has no reason to trust Italy. A late entrant into the League of Nations, Turkey fulfilled international obligations, and the Sanctions episode, if it excited Italian hostility, gave Turkey her reward at the Montreux Conference in 1936.

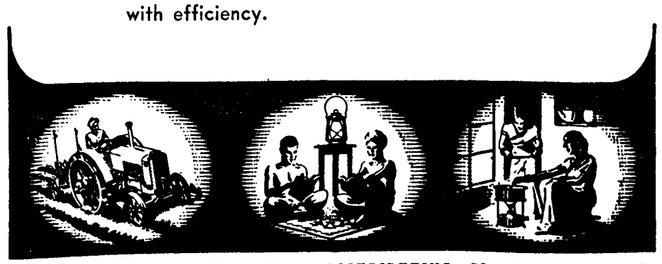


The assurance given to Turkey has been confirmed by communiques from two capitals. It puts an end to the speculation engendered by propaganda initiated by the German White Book in the Summer. Turkey is no longer suspect as a country in alliance with Britain, and Britain's guarantee is no derogation from the neutrality which Turkey seeks to maintain in the face of an expanding and ever-aggressive New Order. The reverses of Italy in the Balkans and the delay in getting Bulgaria and Yugoslavia to work under the New Order has made Russia revise her views on the subject of Britain's ability to deal with Germany. The victories in Africa, the solidarity of the Islamic powers confirmed by the Iragi Minister's visit to Cairo and the hardening attitude of the Great Power across the Atlantic may impress the statemen of Moscow who are no longer committed to designs of their own. The belief that the coming struggle will be severe may not be confined to Sweden, but Russia with her new interests in Scandinavia has retrieved her position in the Balkans by indicating that her interests cut athwart the Germans' dream of a road to the legendary East.

Sun Life Statement

With assests totalling almost a thousand million dollars, the Sun Life of Canada is one of the giants of the insurance world at home and abroad too. The 1940 report and accounts show that assets increased by thirty-six millions last year out of the surplus provided by receipts totalling $167 millions. The year's income showed normal growth despite the difficulties of wartime and that is why the seventieth Annual Report disclosing that business in force has risen to three thousand millions is of more than usual interest. The premiums for the year provided over $111½ millions and investment income yielded $34.7 millions. The total disbursements including payments of $94 millions to policyholders, amounted to $124.2 millions nearly, leaving a balance of over $43 million dollars to be applied for the benefit of shareholders and policyholders.

The rate of interest earned on the funds dropped to 3.96 per cent. but that hardly affords any measure of the wartime growth of the Sun Life. During the last war, the Sun Life demonstrated its vast strength and capacity for growth. Now, too, it grows and flourishes as is shown by the rise in the balance sheet total from $914 million to$951 millions. Reserves have been strengthened as in years before, and the outstanding increase in the holdings of giltedged investments proves that the Sun Life is providing its part of the finance needed in Canada for the war, apart from the higher taxes paid last year.



A trifling recession in new business and annuity contracts may be discerned on comparison with the 1939 results but the biggest mark of the public approval and esteem is the increase in the amounts left on deposit with the Sun Life by policyholders and others. War has meant little change for the Sun Life Company since the mortality rate in Britain or Canada shows no variation the death rate in the U.S.A. alone is higher. Only 13 per cent. of the company's business arises in Britain and Europe does not come within the range of the Sun Life; hence the small proportion of business affected by the war uncertainties. This explains the insignificant recession under new business and the slightly reduced income for 1940. Sun Life's services extend with the opportunities of wartime according to Mr. Arthur Wood who referred with pride to the amazing progress of the Canadian company in every country. A very wide selection of risks and careful management had contributed in part to the progress described by him as based on the soundness of life assurance and its ability to meet all obligations in a normal way, at all times and under all conditions. Sun Life statistics can only be compared with the figures presented by the same Company last year, and that is one reason why the short compressed statement issued by the Company tells the story better than the formal review.

No. 4. THE AGENT

Probably the most important link in the chain of Kerosene distribution is the Agent. He is responsible for distribution throughout the area that he covers. It is an essential part of his duties to ensure that every dealer in his district is regularly supplied and where necessary he must arrange for hawkers and bottle-wallahs. Burmah-Shell Kerosene Agents are merchants of high standing and they are respected throughout India for the valuable part they play in the life of the community.

Through their own staff of Inspectors, Burmah-Shell keep watch to ensure that all the links in the chain of distribution—which starts at the Company's Installation and ends in 600,000 villages—are functioning with efficiency.

THE old story about Haroun-Al-Raschid and the octagenarian who was watering a plantling comes to my mind when I hear of people talking of post-war economic problems. It is a matter both for laughter and for genuine admiration. You can certainly laugh at a childless old man of eighty tending a plant which will yield no fruit till years after he is dead and gone. You can also admire the altruism of one who is ready to sow that others may reap. But when altruism has so large an admixture of foresight, it requires much of thoughtful effort to replace laughter by admiration. Foresight always runs the risk of being derided; for, what it sees, the ordinary man is blind to. And as judgment is normally based on what the senses deliver, there is a natural tendency to regard the acts of foresight as the results of stupidity.

I may be thought to indulge in random remarks. But the fact is that the wisdom of providing from now for the economic readjustment in the post-war period is not obvious to the average man. It would be so in the case of any war. And it is particularly true of the present war which has thrown many things into the crucible of change and does not seem disposed to leave anything out. What will be the shape of things after the war? Germany is bound to be vanquished. Take that for granted; but does it make it easier to see the landscape of world economy during the post-war period? Though every war in history had been a major factor for economic change, only the last war taught mankind to look for the economic consequences of prolonged hostilities between great powers. But, then, the economic consequences of the Peace, thanks to Mr. Keynes, attracted more attention. That is by the way. What is important is that few people thought during the course of the last war that it would affect anything more than the census of population and the national debt. It was realised but slowly that a major war is the most powerful factor in the redistribution of productive activity among the various nations of the world. But this redistribution, while it would be simple enough if one country gains possession of the fixed capital of another, is extremely complicated, when it leaves a duplication of plant and machinery and brings about competition between the old producers and the new.

It was only long after the Armistice that the post-war economic problem was recognised to be one of adjustment to a new basis of distribution of productive activity. The older nations thought in terms of balancing of budgets, restoration of national credit, restoration of currency and the like. The greatest curse of a money economy is that it tends to obscure the realities of economic life. In handling tokens in the transactions of daily life, we tend to forget what the tokens stand for. My little boy reckons my bank balance in terms of the number of cheque slips left in my cheque book. Grown-ups are no better. A war which raged over half the world for a period of four years played havoc with world economic relations. And all that economists and statesman did in the post-war period was to think out refinements in the gold standard and get international collaboration in the flotation of important loans. When the problems of competition in redundant industry stared them in the face, they took to sermons on on free trade abroad and *laissez-faire* at home. Neither financial example nor economic precept would achieve anything. World economy gravitated towards the depression. And then came the pressing need for armament and the provision against what may be called the certain contingency of war. And now we have had the war for more than eighteen months, and we don't know how long it will last.

If the last war changed so much, how much more of change should the present war work? And if the world missed the essence of the post-war problem on the last occasion till the next war came on, are not those who talk of enquiry into post-war economic problems exposing themselves to the ridicule to which Haroun-Al-Raschid subjected the old man?

The answer is simple. A little thought would suffice to bring about a better attitude. The difficulties of a problem are no ground for shirking it. In fact, it is precisely the manifold complications of the post-war economic problem, and the virtual impossibility of seeing it in all its details that constitute the most powerful argument for bestowing thought on it in advance. And perhaps, I should add that what I said of the difficulties of a problem must be said with equal force of the failure of past efforts. If the post-war problem was not understood twenty years ago, it hardly means that we can do no better now. Who

D. F. SANDERS, *General Manager.*

can say, that if the problem had been thought out in advance even while the war was raging, it would not have been better appraised? I, for one, am certain that if such had been the case, much of the bungling of post-war economic reconstruction could have been avoided. When the war is raging and the belligerents are obliged to change over from the production of goods to the production of munitions, no one who gives thought to the post-war economic problem can think that those, who are grabbing the markets in the meanwhile will readily make way for the older industrial countries. But once the war is over, people are apt to assume without question the restoration of pre-war conditions. The idea, that others have got ahead while you are engaged in killing and maiming, does not enter one's head after peace is declared. Everyone goes back to his pre-war business in the thought that the war has changed nothing and every one has a place earmarked for him.

It is best, therefore, to consider as the Commerce Member proposes to, the problems of economic readjustment in the post-war period from now on. The announcement of an Inter-departmental Committee for this purpose was made by Sir Ramaswami Mudaliar in his reply to the debate on Pandit Kunzru's motion. Pandit Kunzru had worded his resolution most admirably. Rarely have I come across a motion in either House of the Legislature which shows clear understanding of all the aspects of our economic problem.

In the leading article of last week, INDIAN FINANCE was obliged to criticise the speech of the Commerce Member in the Assembly, on the ground that it tended to change the perspective in which our economic policy must be viewed. The points raised by Sir Ramaswami Mudaliar were in themselves by no means unsound. Who can say that the balance between industry and agriculture is not necessary or that we should take no thought for the morrow when our hands will be full with the distractions of post-war economy? But the emphasis is erroneous and the possible deductions dangerous. For my part, the speech came somewhat as a surprise. I do not know if Pandit Kunzru was prompted to give notice of his resolution by feelings similar to mine. But his motion is the exact corrective to the dangers that seemed to lurk behind the Commerce Member's speech in the Assembly. As such, it provided Sir Ramaswami the opportunity to re-state his exact position. Pandit Kunzru's motion laid emphasis on the progress of industrialisation with special reference to filling the lacunae in our industrial development and to the need to provide in advance for the problems of readjustment in the post-war period. His announcement of an Inter-departmental Committee to go into this question from now on is therefore most opportune.

But the task of the Committee is by no means an easy one. Its first handicap is the feeling widely prevalent, and one which has already been expressed by Mr. Richardson in the debate, that the enquiry is premature. And that is precisely the reason why I took pains at the beginning to show that it is by no means too early. The other difficulty in the way of the Committee is that of defining the standpoint that it has to adopt. Being a departmental committee, it is prone to bring the administrative, if not the official, standpoint to bear on its problem. Economic readjustment in the post-war period unfortunately lends itself to a narrowing of outlook and objective. And if Sir Ramaswami's speech in the Assembly is to be a guide, the Committee may start on its work with a bias in favour of restriction. The effect of the war is to force a number of our industries to expand capacity and output. It is true of iron and steel, cotton and woollen, though not jute, textiles, paper and a number of miscellaneous industries. The restrictive effect has been on groundnuts and to a lesser extent on hides and skins. It may be presumed with fair certainty that the effect of peace would be quite the opposite of war. The industries which have expanded may be called up on to reduce their output, and agricultural staples which are now in glut for lack of export markets may find them accessible again. There are also commodities like tea, rubber, sugar and, one might add, wheat, too, which before the war, had been subject to international agreements of production or marketing or both. And India would have to accommodate the claims of other producers to the preservation of order in the respective markets. Back of the problems in respect of particular manufactured articles and agricultural commodities, there is the general problem of foreign trade which implies as a general principle and as a universal rule, the obligation to reciprocity. We have to provide for the flow of imports into the country. We have to agree to export according to such international agreements as it may be possible or necessary to conclude. If this question should be viewed from the administrative point of view and without the light and direction which a broader national economic policy and its wide objectives can give to it, the remedies

are bound to be narrow and harmful to the nation, though they may serve the purpose.

The Committee can draw up a very attractive report emphasising the dangers of a headlong increase of capacity and output in the special conditions of the war. It can provide estimates of production of principal manufactured articles and agricultural commodities in the post-war years. It can cite the various obstacles which India may have to encounter in marketing her goods either at home or abroad. And with heroic unconcern for immediate reactions, it can stress the wisdom of preparing for eventual restriction.

But it should not be difficult to see that this line of reasoning presumes that economic progress in India can have only a normal pace, and that it must be beset by the usual cyclical changes. There is no reason, why India should view the problem of post-war economic readjustment in this humdrum and highly unimaginative way. It is not a fact without any relevance to this context that for more than two years, a National Planning Committee has been labouring to evolve a plan of action by which economic progress could be speeded up to many times the normal rate, and that, without the scourge of a cyclical depression. The committee, because it does not start with the administrative viewpoint, naturally makes the needs of the population the starting point of its enquiry. It has, no doubt, to take into account the existing resources; and the objectives, remote or distant, are fixed in relation to these two factors. Its enquiries suggest a certain rate of progress in production, and a level of optimum production and consumption. What we have achieved and what we may achieve before the end of the war cannot, in the nature of things, be in excess of what a National Planning Committee may deem it possible to achieve with the aid of a comprehensive plan. If it falls short, as I have reason to believe it will, the case is not for restrictive measures, but for steps to secure a like expansion in other spheres of production which will enable the smooth exchange of the additional production in all spheres without creating a glut in any market. It should certainly be possible to bring about such an all round expansion of production, at least where such production does not impinge on foreign markets.

Post-war readjustment is not necessarily of a restrictive kind. Drawing our ideas as we do from economic discussions in countries which produce for a number of foreign markets, we are prone to apply the same set of ideas to our problems. Even there the last depression popularised the idea of developing the purchasing power of the export markets in order that the producing countries will be spared the strains of a restrictionist trend. If this is true of industrial nations, which have complicated problems both in regard to the acquisition of raw materials and the marketing of the finished products, how much more should it be true of a country like India which has both the raw material and the consuming market at home, which is not waiting on the good graces of foreign countries for either. India, then, requires nothing more than alround expansion by way of economic readjustment during the post-war period. The task of the inter-departmental committee is to find out ways and means by which those lines of production which lag behind may be enabled to keep pace with the most forward. And it is from this point of view that the question of filling the lacunae gains the utmost importance. If we fill the lacunae, if we are all the time aware of the special conditions of the post-war period and if we keep in mind that we must maintain the import trade at least in

Since 1871, in its seventy years of practical service, the Sun Life of Canada has paid benefits totalling Rs. 3,80,76,94,667.

ON EACH WORKING DAY OF 1940, policyholders and beneficiaries received Rs. 9,20,000, or a total for the year of Rs. 25,80,09,539. Of this amount, no less than 73% was paid to living policyholders, and the balance to the dependants of policyholders who died.

Rs. 46,44,07,695 **of New Assurances** were issued during the year increasing the **total of assurance protection** to the amount of Rs. 8,11,97,50,221 . . . **The number of Policies** now in force (including Group Certificates) exceeds **one million two hundred thousand.** . . . **Total Assets** now stand at Rs. 2,60,49,16,073 the highest in the history of the Company.

its pre-war dimensions, then we shall recognise that we have to plan all the time, every step and at every stage. It is time that the public, the Government and industry realised the change in our position in respect of this question of planned economic development. A few years ago, economic planning was but a theory, and not a very respectable one at that. When the Congress assumed office in the Provinces and sponsored the National Planning Committee it became an ambitions aspiration. Now it is a palpable necessity.

Wartime progress in the Indian Paper Industry has been, according to all accounts, impressive and the Indian Paper Makers Association's annual meeting has necessarily acquired greater importance. Mr. Carmichael who succeeded Mr. R. W. Mellor as Chairman reviewed with satisfaction the developments that have enabled Indian mills to avert the threat of any paper famine in this country. It is certainly pleasing to learn that the mills in normal circumstances can provide all the wood-free paper needed for consumption and have something for export. In spite of the expansion in internal consumption, largely due to the failure of imports and their replacement by the Indian-made product, the actual expansion of the mills' output in the war period is not so great as to provoke fears except as to the difficulty of meeting the public's requirements, in view of continued anxiety as to the higher price of raw materials, chemicals and stores and the necessity of keeping stocks which might go down in value when the war comes to an end. Great praise is due to the Indian Paper Industry not only for its readiness to meet wartime demand, but its conscientious attitude in regard to prices. People who speak angrily about the rise in prices, hardly realise that the increase in prices quoted is merely an adjustment to the higher costs entailed by the war. Mr. Carmichael had hardly any need to defend the industry which derives its strength to mainly from the expansion in output following the rise in demand and not through price-raising tactics. If dealers have erred at any time the mills are not to blame, and the consumer does not need to be told that it is the war and not protection that lies behind the rise in prices.

Those who have eagerly canvassed the prospects for India's export trade in manufactures like paper should rejoice over the announcement that export control will not stand in the way of opening up connections in non-protected markets. Mr. Carmichael explained that if the quantities involved are small the privilege war is no light one: the industry is fully conscious of the value of new markets won in wartime at the expense presumably of foreign rivals.

Like Mr. Mellor last year he sounded naturally a note of caution as to the post-war period when supply will in all probability outstrip demand, but it is with an eye on the future that the industry has pleaded of late for opportunities to export, for though prices can be competitive, shipping space is not easy to get. No industry is more sensible of its responsibilities and opportunities and in no case is prosperity more deserved. In sober and illuminating fashion Mr. Carmichael explained how the prosperity has been used, not to exploit the market cut off from foreign sources of supply but to make good the claim of the industry to serve the public. The need for statistical data made available by members voluntarily was referred to, and this is probably a case where the Industrial Statistics Bill for which the Commerce Member is responsible will provide a remedy of sorts. The mills, however, need to be *en rapport* with one another and the Government too, and it seems a pity that mutual confidence has not grown to the extent that the industry can speak as a whole. But the older and stronger association has assuredly improved its position to judge from Mr. Carmichael's speech, and that is one reason why his review of the situation to-day is more than encouraging.

The news that one of the victims of the air raids on London was the office of the *Economist* is a reminder that the ravages of war are not different for its being an ideological one. The bombing of an ancient cathedral is usually regarded as the most outrageous instance of the vandalism which modern wars tend to cause. But newspapers and periodicals, which have maintained a glorious record of service for wellnigh one century are not less sacred. It speaks volumes for the vitality of the British press that the air raids have not disabled them for regular functioning. Though much of the standing matter and other necessary materials were damaged, the *Economist* made its appearance duly. We trust that the precious statistical records were saved from the flames and the wreckage. It was an unfair appeal for l.b.w. with the score at 97. Our distinguished contemporary, we are sure will live to celebrate its centenary and await in confidence many more happy returns.

"EAVESDROPPER"

Sugar Annual

The appearance of the 1940 Sugar Industry Annual issued by Messrs. Gandhi & Co. is proof that the developments of the year have been recorded and arranged for the student and businessman alike. The enlarged and improved Annual owes much to the energy of the compiler who has left no notification, conference or statement unmentioned in the course of an elaborate review. The statistics make the review both full and reliable, and the analysis of problems is a little overwhelming. The Annual is of high interest owing to the appearance of a proposal designed primarily to secure supervision of the working of protection but intended also to dilute the interference of the Provincial Governments in the sphere of the sugar industry. The Control legislation and the rules made thereunder, revised upto February 10, 1941 are reproduced in the Annual. Developments in provinces other than Bihar and the U.P. are not overlooked in the Annual, which from its neutral standpoint, chronicles in detail the progress of India's second industry over a decade. The outlook is by no means clear, but it is not so dark as it seemed, not long ago, and the Annual concludes that restriction of production will have a corrective action. A planned policy is expected to stabilise the position in 1942.

(From Our Correspondent)

Bombay April 2.

MANY matters besides foreign trade were discussed at the annual meeting of the Bombay Chamber by Mr. C. P. Bramble, the outgoing Chairman. His remarks on the eclipse of provincial autonomy in many provinces and the virtues of adviser regimes are bound to provoke controversy. His remarks may be interpreted as an attempt to prejudge the decision relating to the holding of a general election. But surely his belief that a party pledged to co-operation will be returned at the next election, has no basis if one can judge from the record of recent elections to the Central Assembly. Mr. Bramble's inference that the business community was not concerned with politics is belied by the speeches made by leading Indian businessmen at the annual session of the Federation of Indian Chambers. If his political observations will excite acute distrust, the remarks on the business outlook are non-contentious. He declared that India's export trade was helped by Britain's mastery of the seas. Referring to the proposal for restriction of the groundnut crop he said 'against the cost of any such scheme the Government will be able to offset the abnormal profits made on exports to the United Kingdom.' As regards cotton he said 'market now inacessible used to account for more than one million out of the three million bales exported, but this excess may well be absorbed by greater takings on the part of the United Kingdom, Shanghai and above all India. The latest figures available, those for January, indicate a rate for consumption of Indian cotton in India of well over three and half million bales in a year. He added 'to my mind the position can be contemplated with equanimity if the present state of affairs continues, that is to say, normal trade with Japan, China and the United Kingdom and abnormally good trade in India'. But the Far Eastern situation may develop in an untoward manner, and Mr. Bramble recognised that a collapse in all commodities led by cotton would be followed by a loss of confidence generally.' He approved the idea of dealing with the surplus of the commodity by special measures and urged that expenditure on such an object even in wartime would be altogether justifiable. As regards the Indian Central Cotton Committee's plan to aid the Indian cotton-grower, Mr. Bramble said little except to remark that the short-term view is hardly less important than the permanent aspects of the problem. The other speech at the meeting related to the need for conserving and developing the road transport system. Mr. J. M. B. Gibbons complained that the problem of inland transport was aggravated by the entire inadequacy of roads. Since India had undertaken the duty of aiding the Eastern group train on the transport system is only to be expected and a rapid and comprehensive was recommended by Mr. Gibbons who spoke in favour of a vigorous policy of road development by means of special loans.

The Government of India's decision as to the premium rate on commodity stocks was made known in March, but commercial opinion could hardly consider the increase in the premium for the third quarter in which the scheme of compulsory insurance is in operation justified. The war situation has undergone considerable changes since October, and it is not the Indian businessman alone who feels that the increase is not warranted. Mr. Bramble who commended the Government of India for launching its scheme of war risk insurance, criticised the decision strongly. The scheme was in operation within a remarkably short time at a not unreasonable cost to the merchants. 'Government's experience has been such a happy one in that a large premium income has been received and no claims paid that a reduction in the rate was expected. The recent ammounmement that it has been decided to double the rate is quite inexplicable.' The Indian Merchants' Chamber has protested promptly against the increase in the rate of premium from 1/32 per cent. to 1/16 per cent. The additional levy will adversely affect all trades and industries in view particularly of the stocks that have accumulated on account of lack of shipping facilities. The Chamber has pointed out that when the rate of premium was originally fixed, it was argued that the rate should be revised in the light of the loss ratio and experience of actual administration. The committee concluded by pointing out that war risk insurance scheme should not be used by Government as an instrument for obtaining additional revenue.

The recent improvement in the Bombay cloth market has been maintained, and recent reports from Calcutta certainly accord with the general impression that the market has picked up considerable strength, attested in a further advance in prices ruling in the local market. The advance in raw cotton prices has not been without advantage to dealers in piecegoods, though forward trade is still hampered by the general uncertainty because consuming centres have not made up their mind that the rise in prices is not fleeting. If imported goods keep rising, it is because of severely limited stocks. The Ahmedabad market shows encouraging form on account of the opinion that shipping facilities will be soon made available for textile exports. A point to consider here is that the Bombay industry may benefit from the introduction of a three-decker tariff in Burma. British competition may be ignored for the nonce, and Indian Preference may be more important than Imperial Preference. The scarcity of supplies here suggests the view that preference will be an illusory advantage to Lancashire which may prefer to export to the U.S.A. for the essential dollars than to the East. The textile industry here believes that business prospects have been transformed by the passage of the Lease and Lend Act, a belief that is shared by the share market latterly, in the belief that the general price level in the U.S.A. would rise. Commodity prices have improved and consumption is therefore expected to respond.

The retirement of Mr. J. M. Cordeiro this week from the service of the Bombay Mutual Life Assurance Society after a distinguished career of 27 years creates a big bid in insurance circles in this city. starting as a canvasser and agent in 1914 he joined the Asian Assurance Company two years later and passed on to the East and West Insurance Company. A nervous breakdown enforced temporary retirement but in 1929 Mr. Cordeiro joined the Bombay Mutual as Secretary in which capacity he served the Society long and faithfully. His acumen and experience contributed materially to the expansion of business that the Society had failed to secure previously in spite of its age and record. In his first year as Secretary, new business amounted to Rs. 33 lakhs while in 1940 the last complete year of his Secretaryship, the Society's business exceeded Rs. 2 crores. Mr. Cordeiro is remembered as an advocate of the chief agency system and he has always opposedd its abolition. He has has also been in favour of suspension and limitation of bonuses in the war period. Those who have read his speech at the last annual meeting of the Indian Life Offices Association, know that he is a strong believer in the ability of Indian insurance to stand up to wartime strain. He affirmed that an opportunity for consolidation was presented by the war because mortality, interest and expenses were affected to any extent in India by the present war. Mr. Cordeiro spoke in favour of a policy of mixed investment, and as this was not permitted by the Insurance Act, he considered the existing law defective so that he felt justified in demanding careful and sympathetic administration.

The motor trade in Bombay has learnt with an air of pleasant surprise that the promoters of the automobile factory scheme

(*Continued on Page* 643)

A Resume of Commodity Markets

With the exception of the wheat market, which was inclined to be very firm earlier in the week on resumption of buying by exporters and dealers, there have not been any important developments in the commodity markets during the past week. However, a generally steady tone has been noticeable in several sections. The jute manufactures market has been very firm throughout, and only the weakness of the jute market and free selling by the mills for the farther positions have prevented a further rise in prices. In the near positions bazar operators dominate the market and the high premium that was demanded last week continues to be available. It is now generally believed that with the concerted action on the part of the U. S. Government to seize ships in American ports, there will be a considerable improvement in the freight situation. It has been pointed out on more than one occasion in these columns that the technical position in the several markets is very sound and with the prospect of any improvement in the freight situation, there should be a substantial improvement in values.

The behaviour of the jute market is somewhat surprising in the face of the continued dry weather conditions in the mofussil districts and the strength of the jute manufactures market. While prices for hessian are quoting considerably above the agreed minimum rates, jute is quoting below the minimum level and there are sellers for low assortments. In the cotton market, after the recent advance in prices, a halting tendency has been noticeable especially on reports regarding difficulties in the way of exports and the cancellation of shipments to China.

The flutter in the bullion market early last week has died down on considerable selling by the Reserve Bank of large stocks of silver and the granting of permission to import silver from New York at control rates. Piecegoods have continued very firm with the continued anxiety regarding Far Eastern situation and the disinclination of mills to sell freely for the forward positions.

Jute

It was expected that mill buying would be on a large scale, especially, after the announcement that mills would endeavour to fulfil their quota under the Delhi agreement. Even with the reports regarding the possibility of the mills working throughout May and June, it is surprising to note that the mills have not chosen to enter into the market and buy in large quantities. There is absolutely no business for export and shippers are unable to do any business owing to difficulty in guaranteeing shipments. Under such circumstances, even with the reports regarding the slow progress of sowings, and the possibility of the Government Restriction Scheme being successful, prices have been fluctuating in very narrow limits. The tendency during the latter half of the week has been rather irregularly downward. Representations are being made by the balers and shippers to allot greater freight space for exports to the United Kingdom as stocks in that country are reported to be very small. And with Dundee mills working to full capacity, exports may help to bring a good replenishment before long. If there is any revival in exports and mills begin to buy on a large scale, it may be expected that jute values would tend to improve, especially, as it looks that the jute manufactures market will continue to rule firm during the next 3 or 4 months.

Jute Manufactures

In spite of the substantial selling for the farther positions by the mills, sales during the week ended March 29 have been again 6 crores yards hessians. The hessian market has been very steady. Shipments during the last month are reported to be over 10 crores yards, that is, nearly a month's production. Shipments during the current month are expected to be in large quantity. There are reports that in view of the shortage of goods for ready positions, mills are likely to work 45 hours per week, throughout May and June. It would be remembered that as a result of the placing of three large orders some weeks back, it was decided by the Committee of the Indian Jute Mills Association that mills should work 45 hours per week throughout April instead of closing down for one week as in March.

The local stock figures published for the month of March reveal that there has been a decline of 64 lakhs of yards in hessian stocks and 1,69 lakhs yards in sackings. On the last occasion, there was an increase in hessian stocks by 548 lakhs yards while there was a decrease in sackings by 29 lakhs yards.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, 3rd April.

The first chicken has come home to roost on the Board of Control. We understand that one operator in the Futures market has called in question the Spot rate as fixed at the last fortnightly meeting of the Board. As has been reported in these columns, the Board has of late, in the absence of any real volume of shipment business in the market, been taking into consideration the actual packing cost of a London Jute Association First mark in arriving at a Spot rate. On the other hand, the Spot rate reported to the Board and accepted by them, is not publicly reported. All that actually concerns the outside Futures market is the Clearing rate fixed by the Board, and as, at the last fortnightly meeting, the Clearing rate fixed was the rate ruling in the Futures market at one o'clock on that day, we do not see how any operator can have any legitimate grievance. Strictly speaking of course, the Board, in ignoring the definition of the Spot rate laid down in the Bye-laws, is contravening these, for the amended Bye-law permitting the Board to take packing cost into consideration in the absence of any other adequate basis, has not yet been formally adopted. The discretion of the Board is so wide however that it appears doubtful if any complaint can lie against any of its actions. In any case it would appear that if any member of the E.I.J.A. who is not a member of the Board has any complaint to put forward, the proper channel should be through the East India Jute Association.

Estimated Jute arrivals for March are 7,09,000 bales compared with 4,02,000 for last season the total aggregate from July to March being 78,58,000 compared with 92,51,000 respectively.

In spite of continued drought up-country and full rates in the Fabrics market being maintained it is noteworthy that Bull operators have not been in evidence in the Jute market, even this ideal combination of factors at this usually volatile period failing to inspire speculators with the necessary confidence. The Government's efforts towards restriction have thereby been favoured by providence but it must be remembered that the figure aimed at of 1/3rd of last year's crop is an ambitious one especially as the machinery of its imposition is in its embryo stage. The Scheme has received an auspicious start but will require unrelenting effort to enforce success.

There has been a steady turn-over in both loose jute and Pucca bales with mills which has been transacted quietly without undue excitement. Pucca Bale purchases by mills which threatened to ease off towards the end of last week again received steady attention from certain groups which had apparently decided to complete their final quotas before the Easter holidays. From 44 to 45 was paid for Superior Firsts or with the guarantee of free from Samla; otherwise both firsts and lightnings were normally dealt in at Rs. 41 and 36. N. C. Cuttings were sold @ Rs. 18-8 and special cuttings up to 17-8. European Bots. also found Buyers and fair quantities were disposed of at Rs. 6-12. Supervised marks on a 50-50 Mids and Bots assortment, were sold up to 8-12 to to 6-12 but lower assortment changed hands @ Rs. 8-8 and 6-8 for Jat as also Bots alone @ Rs. 6-8 of this quality.

There has been more general enquiry for X Bots or Low Bots. Indian marks having been done @ Rs. 3-12 and supervised @ Rs. 4. Europeans have sold their X Bot. from Rs. 4-4 to 4-8.

It would appear that if the present steady rate of purchases by mills are maintained up to the 15th April as from the 15th March the agreed figure figure of 5 lacks of bales on the last quota should be approximately attained. It is rumoured that Government intend to extend the agreement period from the 15th April into June so as to enable Mills to make up the leeway of 5 lakhs of bales on the previous quotas on the same price basis, but some arrangement over the question of encouraging the disposal of Low Bots should receive early consideration.

The Committee of the Jute Mills Association must be viewing with some concern the continued advance of fabrics prices, not only in the nearer positions but also forward. With Jute prices still ruling very near the minimum rates, it gives an appearance of profiteering on the part of the Mills though this is only so to a very limited extent. The profiteers are for the most part Bazar operators, those intelligent anticipators of hallowed memory, who bought hessians and gunnies at minimum prices and are now reaping the benefit of their foresight. Unfortunately overseas buyers are not so fully acquainted with the methods of business current in Calcutta as to place the blame where it lies, and to apply the stigma of profiteering on the part of the Calcutta Mills is their not unnatural reaction. Presumably it is only the scarcity of shipping space and the doubt of any improvement in this respect in the near future, that deters the Committee from recommending an immediate increase in working hours to counteract the upward movement. As things stand at present, much of the near-at-hand goods for which high premiums have been paid stand little chance of early shipment, though this is not the view of the Bazar. When it was announced that the U.S.A. were starting a programme of shipbuilding to relieve the shipping position in the Atlantic, according to the Bazar the whole 400 ships projected were as good as in the Hooghly ready to lift gunnies! With regard to the forward Bazar operations, Mills seem to be encouraging these without regard to their experiences of the past. It has been no case even of Mills anxious to sell against their holdings of Jute. Cases have occurred of Mills having to come into the jute market to cover the raw material against their forward sales of hessians. Another unsatisfactory feature has been a recurrence of "forced" methods in selling to the Bazar. As for instance, insistence on an equal weight of one fabric, which the Bazar did not want to buy, being taken as a condition of the sale of the particular type of fabric which the Bazar did wish to buy, and had a fair chance of re-selling in the near future.

During the week under review, the Hessian market has ruled fairly steady with prices for near ranging from 16-2 low to 16-13 high in 9 porters and 21-8 low to 23 high in 11 porters. Towards the close the market has eased off somewhat and seems to be pausing awaiting the mills decision about the working hours for May. Earlier in the week mills sold freely in all forward positions, chiefly to speculators 9 porters at Rs. 15 July/Sept. 14 October/December, Rs. 13 January/March and 11 porters at Rs. 19 July/Sept. Rs. 17-12 October/December Rs. 16-8 January/March. In the Heavy goods section there is little interest showing the following sales are reported. Sacks at Rs. 35-8 August/September and Striped Heavy Cees at Rs. 36 April and May and Rs. 34 August/September.

(*Continued from page* 640)

Tea

Sale No. 38 for teas for consumption in India was held on Tuesday. The last sale of the season of any size again consisted of poor quality. A very large percentage of lots having to be sold with "all faults". The market was generally strong for better qualities and sellers were able to get their prices. Only excessively stalky leaf teas were difficult of sale. The prices were again lower. 12,844 packages were sold at an average price of 8 annas 6 pies per lb., against 15,974 packages at three annas six pies in sale No. 36 last season. The market for export quota has been quiet but steady with sellers buying more quantities at 6 annas 7 pies per lb. Sellers were rather reserved and disinclined to offer below. The quotation for internal quota is one anna 5 pies per lb. Neither sellers nor buyers have shown much interest.

Rubber and Tin

It was pointed out last week that a decline in rubber prices for forward delivery to 14⅛d. was due to the suggestion that American ships should be sent to Malaya to help clear the surplus stocks of tin and rubber. This suggestion at that time did not have any effect on the price of tin, but the quotation for forward rubber came down from 14⅛d. to 14⅛d. The quotation for spot continued to be firm at 14¼d. There has been since a decline in the quotation for spot as well to 14⅛d. Tin standard cash per ton is also lower at £268 per ton.

JUTE

Calcutta, April 3.

With not much of business passing the raw jute market has been rather quiet during the past few days and only towards the close a slightly firmer tendency has been noticeable. Closing quotations in the futures market, however, are below the levels last week. With the unfavourable conditions in the jute districts and the little progress made with sowings the tone in the several sections should have been steadier but with mill buying only a small scale and shipper business practically absent, sellers for low assortment have been anxious for business.

Regarding the conditions in the mofussil, hot and dry weather conditions have continued. No appreciable progress can be made until there is good general rainfall. In comparing sowings this year with those of last year at this date, it must be remembered that last year's crop was sown earlier than usual. Further, owing to the restriction scheme, cultivators intend to sow this year principally in Mid and Highlands. River levels are about normal for this time of the year.

In the loose jute section only a very small amount of business has been reported with mills. Balers are reported to have bought small quantities of Indian Tossa Bottoms. Mills bought European Bottoms at Rs. 6-12 per maund and European Tossa Bottoms at Rs. 7-4 per maund.

In the pucca bales section no business has been reported with shippers. Mills are reported to have bought Firsts and Lightnings at the agreed minimum rates. Special Firsts were bought at Rs. 45 per bale and Superior Cuttings at Rs. 17 to Rs. 17-8 per bale.

There has not been much interest in the futures market and a rather easier tendency was noticeable in mid-week. The quotation came down to Rs. 39. There was a recovery to Rs. 39-14 but there has again been a recession to Rs. 39-10.

JUTE MANUFACTURES

Calcutta, April 3.

THE jute manufactures market was inclined to be firmer earlier in the week on reports of greater freight allotment. But in mid-week a lower tendency was noticeable owing to the need for month-end adjustments. There has subsequently been some recovery and quotations are higher on balance in all the sections. There is good demand for the near positions and the rise in prices has been checked only by the uncertainties regarding the availability of freight. Mills are not able to sell for near positions and are fully booked upto the end of June. 9 Porters ready are now quoting Rs. 16-11-6, April Rs. 16-10-6, May/June Rs. 15-6, July/September Rs. 15-2 and October/December Rs. 14-2. 11 Porters ready are Rs. 23-4, April Rs. 22-10, May/June Rs. 21-8, July/September Rs. 19-2 and October/December Rs. 17-12. It is interesting to note that there has been a further appreciation in the quotation for the near positions. There has been a good demand for 11 Porters and the quotations for the earlier positions are sharply higher.

In the heavy goods section a firmer tone has been noticeable though there has not been any appreciable increase in the volume of business passing. "B" Twills for April shipment sold on the basis of Rs. 35-12, Liverpool Twills for the same position Rs. 41-4 and Cornsacks Rs. 37-8.

COTTON

Calcutta, April 3.

The Bombay raw cotton market has been fluctuating in rather wide limits and the tone during the past three days has been irregularly down-ward. The sharp spurt in American cotton prices on the passing of the Bankhead Bill by the U.S. Senate did not have any great encouraging influence. There has been jobbers' selling and mill buying has been on a smaller scale. Closing quotations are around the lowest levels for the week. There is no suggestion of weakness, however. Broach April/May are now quoting Rs. 230, April Rs. 226-8, Oomra May Rs. 164, July Rs. 164-8, Bengal May Rs. 127 and July Rs. 128.

The passing of the Bankhead Bill assures greater benefit to the farmer but it is considered unlikely that the House of Representatives will approve the bill in the same form. In New York, a quotation as high as 11.20 cents was recorded. The quotation is now 11.10 cents. As previously reported, the Liverpool futures market closed down for business on the last day of March.

PIECEGOODS

Calcutta, April 3.

The Piecegoods market has not been very active but quotations have been well-held. Indigenous mills have again shared the bulk of the business and forward contracts have been concluded only for the farther positions. In the Japanese goods section, rates are slightly higher. Business in the Lancashire goods section has been mostly of a retail character. It is reported that a meeting of the textile interests was held sometime back to consider the manufacture of mosquito net cloth for the requirements of the troops. It was said that owing to the high quality of the specification demanded it was not possible to manufacture on a large scale but if it were possible to accept a slightly inferior quality manufacture could be started in one or two local mills.

The yarn market has been steady. Some business has been reported in coarse and medium kinds.

GOLD

THE Bombay Gold market has been fluctuating in narrow limits with very little volume of business passing. Gold ready were Rs. 43-6-6, First Settlement Rs. 43-7-6 and Second Settlement Rs. 43-8-6.

SILVER

Calcutta, April 3.

THE rise in prices in the Silver market last week in Bombay, in sympathy with the sharp increase in values in the cotton market, necessitated selling by the Reserve Bank of large blocks of silver and the permission of imports of the previous metal from New York. This is the first occasion since the new regulations were introduced that silver imports have been permitted. It was all long expected that the requirements of the country will be met from existing stocks. In the London market the quotation has been ruling for the most part at the tap rate with the quotation for forward at a discount of 1/16d. The Bombay market has been rather uninteresting during the past few days and quotations have been fluctuating in very narrow lints. Indian Mint Silver ready were Rs. 63-4. First Settlement Rs. 63-5 and Second Settlement Rs. 63-6.

WHEAT

Calcutta, April 3.

A SUBSTANTIAL rise in prices has been recorded in the Karachi wheat market thanks to regular demand from mills and exporters. Early in the week there was a sudden emergence of shippers in the buying centres in the mofussil. As it had been generally anticipated that there would be large scale buying by Government for shipment to Egypt and the Persian Gulf stockholders took advantage of the opportunity and there was a sharp rise in prices. Choice White ready were done as high as Rs. 35-10, the quotation at the time of last writing being Rs. 33-6. The rise in prices is pronounced especially for old crop positions. Stocks in ports are small and unsold stocks of old crop are tightly held. But for Punjab selling during the last two days there would not have been even the slight reaction in values. Choice White ready closed at Rs. 34-6-6, and July at Rs. 29-12-6 against Rs. 33-6 and Rs. 28-6 respectively at the end of last week.

MADRAS GROUNDNUTS

Madras, April 1, 1941.

THE Groundnut market has been lively and prices advanced shraply during the week. Shippers' buying limits opened on Tuesday last around Rs. 22-8 to Rs. 23-4 for Machined (Per candy of 531 lbs. ex-coast godowns), and advanced to Rs. 22-8 and Rs. 23-12 on Thursday, to Rs. 23-8 and Rs. 24-4 on Saturday, to Rs. 24 and Rs. 24-8 yesterday and to Rs. 24 and Rs. 24-12 this morning. Local buyers' limits opened on Tuesday last at Rs. 21 to Rs. 22 for Machined (Per candy of 531 lbs. ex-Madras port godowns), and rose to Rs. 22 and Rs. 22-6 on Thursday, to Rs. 22 and Rs. 22-8 on Saturday and to Rs. 23 this morning. There has been an advance of nearly Rs. 2 per candy on the week. Sellers are not keen on unloading their holdings, as they anticipate still higher levels. About 3,000 tons are reported to have changed hands during the week. This is partly attributed to speculative operations of Bombay merchants. Locally, Rangoon shippers have been buying, and the buyer on Hongkong account is reported to be taking deliveries of purchases already contracted. For the past few days, there has been buying by Calcutta merchants and despatches to Shalimar are reported. Groundnut oil prices have spurted during the week, recording a rise of about Rs. 2 per candy on balance. "Chekku" and local "Expeller" qualities opened around Rs. 46 and Rs. 49 respectively and after remaining steady during the early half of the week advanced sharply during the latter part to close firm around Rs. 48 and Rs. 51 for "Chekku" and "Expeller" qualities respectively, for ready lots, per candy of 500 lbs., loose, ex-sellers' Madras godowns. "Prodattur" quality oil remained firm and advanced by Re. 1 per candy during the week from Rs. 49-8 and Rs. 50 to Rs. 50-8 and Rs. 51 at the close, ready, per candy of 500 lbs. loose, ex-sellers' Madras godowns. Export demand continues for Burma, Straits, Calcutta and Mauritious. Not only the power-driven "Expellers," but bullock-driven GHANIES (CHEKKUS) are working in full swing in the oil crushing centres to meet the growing demand for oil.

MADRAS HIDES AND SKINS

Madras, April 1, 1941.

AT long last, there has been a clearance of Tanned Kips and E. I. tanned skins during the past week. A boat cleared with 2,000 bales Tanned Kips and about 500 bales Tanned sheep and goatskins, and another boat is loading 600 bales Tanned Kips and about 150 bales Tanned Skins. A third steamer will follow scheduled to take a further quantity of 600 bales Tanned hides. Altogether 3,200 bales of Tanned Kips would have been shipped by the first week of April. Another fixture is rumoured in the second week of April, and it is hoped hat April will see an appreciable quantity of stock cleared. Already, the more enterprising shippers have been making enquiries in the local bazaar for goods a penny or two below the schedule limits. In fact, it is reported that a shipper has been able to buy a small quantity of Bangalore Prime Kips at about 2 annas per lb. below the schedule parity. Interesting developments are expected in the next week. If only a fair portion of the sold stock is cleared by the early part of April, buying on a fair scale will be resumed. Enquiries and offers from Britain continue for all weights and grades of Kips, and once the shipping difficulty is out of the way, a period of brisk business will follow. There has been demand from America for Tanned Buffalo Lights (4½ lbs. to 5½ lbs.) on dollar basis, but on account of the prohibitive freight rates no business has been possible. Present quotations stand around 19 cents for 10/12 lbs. Buffalo and 25 cents for Buffalo Lights (4½ lbs. and 5½ lbs. averages). Stocks of Buff lights are moreover scarce in Madras. It is reported that Punjabee dealers from Madras are buying in the Cawnpore raw hide market around Rs. 65 to Rs. 70 per 20 pieces for the Madras quality, Chrome selections being quoted in that market at Rs. 120 to Rs. 140 per 20 pieces. Dacca dry are being quoted around Rs. 6 to Rs. 6-8 per 20 lbs. Dry hide stocks are running low. Prices of raw stock will therefore advance sharply when general buying by Madrassees starts.

(*Continued from Page* 623)

Though the rot has been arrested, it cannot be said that confidence has been restored. The exchange has been definitely quietish all through the week ; and transactions have been on a poor scale.

We have now an extremely piquant situation as a result of this development. The Reserve Bank is a seller of sterling at 1s. 5 31/32d., and at the same time, it continues to be a buyer of sterling at the old tap rate of 1s. 6d. It is also curious that, while in respect of what may be called the money market transactions, the Reserve Bank may be losing sterling (though, we believe, only for small amounts), the Bank should continue to be a gainer of sterling in connection with such transactions as payments by the British Governments for purchases or other commitments in India. On the present occasion, Reverse Councils, need not have such odium attached to it. It was a necessary step on the part of the Reserve Bank to arrest the weakness which was not due to the inherent position of the Indian currency, but to the mere technical position in the market.

Banks sell T.T. 1 5/15/16 ready up to 6 months forward. Banks buy T.T. at 1/6 for the same delivery.

Banks buy 3 months D.A. bills at 1/6 1/32 first and second months. 1/6¼ third month, and 1/6 3/32 fourth month forward. D. P. 1/32 higher.

Money Rates. Banks borrow Call and Short Notice ¼ per cent., one to five months ½ per cent.

(*Continued from Page* 639)

favour the establishment of an enterprise in Mysore. So no factory for Bombay. In an interview to the press Mr. Halsted of G. M. C. discussed the aspirations of the promoters and said that the factory would be little more than an assembly plant for some years. The Sewri Assembly plant of G. M. was doing the same thing with the confidence born of over ten years' experience. The Mysore Government's decision to take shares and guarantee a dividend of 3½ per cent has not been a surprise to any body but the fact remains that the plan has been hanging fire for nearly two years and there is also the fact that Mr. Chrysler's death may introduce troubles. But the major difficulty was the definite decision of the Bombay Government against aid to the project. Concessions obtained in Mysore, however afford facilities for rapid growth and as part of the capital has been under-written by members of the Board, there will be little difficulty in regard to the issue of shares to the public.

The political tumult and shouting never dies down and Mr. Roy spoke lately about his whirlwind tour at a Bombay meeting. He was more critical of the Government than at the start of his tour perhaps because he felt encouraged by his own modest estimate of success in the Solid South. He spoke of the need for a responsible government and deprecated the the weary waiting. The Anglo-Indian press may be surprised to see Mr. Roy a dyed-in-the-wool Liberal one of these days.

Stock Markets to-day and to-morrow

JUTE MILLS DECISION CHEERS MARKET

OPERATORS on the Calcutta Stock Exchange are still inclined to adopt a rather cautious attitude. The uncertain Balkan situation has had a restraining influence. And in the absence of any encouraging reports from the Western Centre, the Bombay Stock Exchange being closed on Thursday and Friday, an easier tendency has been noticeable. The undertone in the several sections, however, is steady. The feature of the week is the strength of the giltedged market even with the further increase in the Treasury Bills rate.

* * *

There has been greater enquiry for jute shares during the past few days in view of the continued strength of the jute manufactures market. The decision of the Indian Jute Mills Association to work mills forty-five hours per week throughout the month in May and June is not altogether surprising. In fact, with the good demand for near positions, the low level of stocks and the improvement in shipments the decision was expected earlier. With the increase in the amount of production and higher average prices mills should be able to earn better profits in the first half of 1941 than in the latter half of 1940. Even on the basis of the results for the six months ended 1940, jute shares are undervalued in the opinion of many. The decline in earnings has certainly not been to anything like the levels for 1935, and dividends in several cases are higher than for 1935. There is no justification, therefore, for jute shares to be quoting below the levels of 1935.

* * *

The annual reports of cotton textile companies for the year ended December, 1940 received during the week, reveal that the improvement in the conditions in the latter half of the year has not been enough to offset the decline in earnings noticed in the earlier part of the year. In the case of the Bombay mills especially the decline in earnings was pronounced owing to the prolonged strikes in the industry on the question of a dearness allowance.

* * *

The net profit of the *Bombay Dyeing and Manufacturing Company, Limited,* is considerably lower at Rs. 14,90,699 against Rs. 24,48,076 for the previous year. The dividend of Rs. 25 per share and the reduced bonus of Rs. 5 per share against Rs. 10 per share has been possible only with the small provision for depreciation of Rs. 5,83,803 (Rs. 10,24,968) and taxation of Rs. 2,50,000 (Rs. 4,50,000).

* * *

The earnings of the *Century Spinning and Manufacturing Company, Limited,* however, make a better showing. The net profit before providing for taxation is Rs. 8,96,229 against Rs. 6,76,764 for 1939. A greater amount has been provided for depreciation, being Rs. 6,30,000 against Rs. 3,68,625, while the General Reserve receives Rs. 29,000 against Rs. 30,000. There is no provision for taxation. The dividend is higher at Rs. 12 per share against Rs. 9 per share previously.

* * *

A company with a splendid record and a high level of earnings, the *Swadeshi Cotton Mills Company, Limited,* has been able to maintain earnings around the level of 1939. The net profit for the year ended December, 1940, before providing for taxation and depreciation, is Rs. 21,95,987 against Rs. 22,12,517. The provision for taxation is considerably higher at Rs. 7,49,056 against Rs. 3,49,786, while the charge on account of depreciation is lower at Rs. 5 lakhs against Rs. 6 lakhs. The dividend on the ordinary shares has been maintained at the high level of 50 per cent. When setting aside the amount for estimated taxation, it has been necessary to make provision for Excess Profits Tax for the year 1939 as the company has not yet been assessed for that year.

* * *

The higher level of operating expenses, consequent on the increase in prices for stores and the extensive damages to overhead lines on account of a severe storm in October and the restrictions on lighting have resulted in a decline in the earnings of the *Bombay Electric Supply and Tramways Company, Limited,* for the year ended December, 1940. Further, the reduction in charges granted in April, 1939, were operative throughout the year. In 1939, there was a sharp reduction in earnings on account of the disturbed conditions in the city and the prevalence of war conditions in the last four months of 1939. The loss in revenue on account of the war was estimated to be about 4.15 lakhs.

With the prevalence of war conditions throughout the year and the rigorous imposition of lighting restrictions since June the decline in earnings in 1940 could have been much more but for the appreciable increase in industrial activity during the second part of the year. Also, there was a good increase in transportation revenue.

The net profit for 1940 after providing for taxation is Rs. 71,62,093 against Rs. 72,08,280. The amount set aside to depreciation is Rs. 29,11,042 (Rs. 29,92,129). The ordinary dividend has been maintained at 12 per cent.

* * *

The Indo-Burma Petroleum Company, Limited, has been able to earn in 1940, the highest level of profit for some years. The net profit before providing for taxation for the year ended December, 1940 is Rs. 65,32,947 against Rs. 37,32,504 for 1939. A major portion of the increase in earnings, however, is absorbed by the need for a larger provision for taxation, Rs. 24,96,167 (Rs. 2,71,257).

The amount set aside for depreciation and insurance fund is Rs. 19,32,231 (Rs. 15,65,573). The final dividend of Rs. 5 per share with the interim dividend of Rs. 2 per share already paid makes Rs. 7 per share for the whole year (17½ per cent) against Rs. 6 per share (15 per cent) previously.

* * *

Speaking at the annual general meeting of the shareholders of the *British India Corporation, Limited,* Mr. R. Menzies referred to the changed conditions in the industry as a result of the war and their effect on the earnings of the Corporation. These changed conditions have resulted in a greatly increased outturn of goods manufactured by the branches of the Corporation. The sales made by the Corporation during the year 1940 easily constitute a record in its history.

The Chairman has perhaps laid undue emphasis on the need for adopting a conservative policy in the distribution of profits. While it is necessary that companies should be forearmed for the post-war slump the difficulty is perhaps exaggerated in the case of well-established companies like the British India Corporation, Limited.

"WATCH DOG."

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 4.

A STEADIER tendency has been noticeable on the Calcutta Stock Exchange during the past week but there has not been any appreciable broadening of interest and rises in the prices, as a consequence, have not been substantial. Public buying is still on a very small scale. In view of the uncertainty regarding the international situation operators are not prepared to take up the market themselves. It is encouraging to note, however, that the undertone in the several sections is healthy. There has been greater enquiry for jute shares and during the last two days a larger number of transactions has been recorded. Giltedged securities have been firmer with 3½ per cent. Paper higher at Rs. 95-14. Short and medium-dated loans also are higher. The balance-sheets of the important companies published at the present moment reveal that there has been a substantial improvement in earnings but owing to the higher rate of taxation it has not been possible to increase the distribution to shareholders. But with the lower level of yield on giltedged securities and the pressure of funds available for investment there should be an upward revision of values for equities.

As pointed out above, the giltedged securities section has been firmer though business passing has not been on a large scale. Money conditions during the week have been firmer and there has been a further rise in the average discount on treasury bills from thirteen annas one pie per cent. to thirteen annas eleven pies per cent. last week. 3½ per cent. Paper has improved from Rs. 95-10 at the time of last writing to Rs. 95-15. 3 per cent. Paper also is higher at Rs. 82-2. Among terminable loans, there is good enquiry for short-dated and medium-dated loans. 3 per cent. Defence bonds are higher at Rs. 101-12. 3½ per cent. 1947/50 were Rs. 102-8, 3 per cent. 1963/65 Rs. 95, 3 per cent. 1941 Rs. 100-8, 4 per cent. 1960/70 Rs. 109-2 and 4½ per cent. 1955/60 Rs. 118-1. There is good enquiry for 3 per cent. 1952 issues, provincial loans, and the quotation is higher at Rs. 97-8.

Bank shares have been firmer with *Imperial Bank* fully paids at Rs. 1,560 and contributories at Rs. 385. *Central Bank* were done at Rs. 44-8 and *Reserve Bank* at Rs. 105-8.

There has been very little doing in fixed-interest securities. Among public bodies' debentures, 3½ per cent. *Howrah Bridge* debentures were Rs. 98-6, 5 per cent. *Calcutta Port Trust* debentures 1978/88 Rs. 115-12 and 5 per cent. *Calcutta Port Trust* debentures 1956/86 Rs. 121-2. Among industrial debentures 5 per cent. *India General Navigation* debentures were Rs. 104, 5 per cent. *Darjeeling Ropeway* Rs. 100 and 6 per cent. *Humayan Properties* debentures Rs. 104-8.

There has been very little of activity in first class jute mills preference shares. Only *Hastings* preferences and *Hukumchand* preferences changed hands at Rs. 137-8 and Rs. 118-8 respectively. Among other sections, there was some enquiry for *Steel Corporation* preferences at Rs. 118-8, while *Indian Standard Wagon* were noted at Rs. 162-8, *Kumardhubi Engineering* at Rs. 121. *Alkali and Chemical* were Rs. 121 ex-dividend, *Dunlop* Second preferences Rs. 117, *Titaghur Paper* second preferences Rs. 113-8, *Dalmia Cement* Rs. 116-12 and *Orient Paper* new shares Rs. 103.

Cotton shares have been out of favour with *Dunbar* at Rs. 202-8, and *Kesoram* at Rs. 6-3. There has been slightly more enquiry for *New Victoria* and the quotation has been done upto Rs. 2-4.

In sympathy with the better tone of the Jute and Engineering sections Coal shares have been slightly better but business has been very restricted. *Bengal* were Rs. 352, *Dhemo Main* Rs. 12-15 cum-dividend, *Equitable* Rs. 36 cum-dividend, *North Damuda* Rs. 5, *Raneegunge* Rs. 25, *Rewa* Rs. 22 and *West Jamuria* Rs. 30-8 cum-dividend.

Owing to the continued firmness of the jute manufactures market, jute shares have been in greater enquiry. *Howrah* are higher at Rs. 51-12. *Anglo-India* were Rs. 317, Bally Rs. 228, *Clive* Rs. 22-8, *Hukumchand* Rs. 9, *Kamarhatty* Rs. 466, *Kanknarrah* Rs. 370, *National* Rs. 22-8, *Nuddea* Rs. 58 and *Presidency* Rs. 4-10 ex-dividend.

In the Engineering section, there has not been much of activity but Indian Irons and Steel Corporations were inclined to be higher in mid-week at Rs. 32-6 and Rs. 19-5 respectively. An easier tendency has been noticeable in to-day's session and the quotations are around Rs. 31-15 and Rs. 18-15 respectively. There has been greater enquiry for *Hukumchand Electric Steel* ordinaries and deferreds on rumours of a dividend of twelve annas per ordinary share and four annas per deferred share. *Britannia Building and Iron* were Rs. 7-14, *Indian Galvanizing* Rs. 29-4, *Indian Standard Wagon* Rs. 61 and *National Iron and Steel* Rs. 8-11.

Sugar shares have been rather uninteresting. *Buland* were Rs. 15-14, *Raza* Rs. 16 and *New Savan* Rs. 6-13.

Tea shares have been slightly better with *Hasimara* at Rs. 43-4. *Dessai and Parbuttia* were done at Rs. 221-8 ex-dividend, *East India* at Rs. 9-12 and *New Terai* at Rs. 9-12.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have again been fluctuating in narrow limits with the quotations around Rs. 4-15 and Rs. 2-2 respectively. *B. I. Corporation* are Rs. 4-4 ex-dividend. *Dunlop Rubber* has improved to Rs. 39-8 cum-dividend on the publication of the balance-sheet. *Indian Wood Products* were Rs. 27-12 cum-dividend, *Britannia Biscuits* Rs. 10-9, *New India Investment* Rs. 59-8 and *Publicity Society* Rs. 6-10. Among Paper shares, *Titaghur Paper* were steady at Rs. 17-6 while *India PaperPulp* were Rs. 141, *Orient Paper* Rs. 11-12 and *Star Paper* Rs. 11-2. *Assam Saw* were Rs. 3-7.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 2.

Money.—Call money was quoted at ¼ per cent.

Exchange Market.—Banks were selling T. T. at 1s. 5 15/16d. and buying three months' bills at 1s. 6 7/32d.

Securities.—Prices in the local giltedged market were fairly maintained throughout the week under review. 3½ per cent. Paper, after opening at Rs. 95-13, touched Rs. 95-11 in mid-week, and again closed at the opening level. 1948/52 were steady at Rs. 97; 1951/54 at Rs. 99-6; 1963/65 at Rs. 95; 1947/50 at Rs. 102-7; 1945/55 at Rs. 111-10; 1960/70 at Rs. 108-14; 1955/60 at Rs. 113-7 and 3 per cent. 1946 at Rs. 101-7.

Shares.—The local share market ruled very steady during the week under review. As sellers were scarce there was increased general buying and active shares recorded substantial gains. There was scattered realising, in mid-week, which was readily absorbed. The undertone remains very steady. Steels, after touching higher levels, closed slightly easier on profit-taking. Mill shares were much in demand and advanced in sympathy with the firm tone of the cotton market.

Textiles.—Sentiment in the cloth market continues to be encouraging. This led to the rise in prices in this section. The increasingly favourable political news and the announcement of further large government orders are further factors that stimulated bullish activity. *Bombay Dyeing*, after opening at Rs. 1,128-12, touched a new high of Rs. 1,153-12, but closed a shade easier at Rs. 1,148-12 on profit-taking. *Century* were higher at Rs. 433 as against Rs. 427 in the previous week; *Nagpur* at Rs. 96-8 against Rs. 93 and *Kohinoor* at Rs. 443 against Rs. 429-8. Among other shares, *Central India* gained about Rs. 4 to close at Rs. 382-8. *Colaba* were done at Rs. 191-8; *Gokak* at Rs. 224-8; *New Great* at Rs. 453 and *Swadeshi* at Rs. 312-8. In the cash list, *Vishnu* were higher at Rs. 1,410.

Hydro-electrics.—*Andhra Valley* improved by Rs. 40 and *Tata Power* by about Rs. 30 to close at Rs. 1,850 and Rs. 1,657-8 respectively. *Tata Hydro* were more or less unchanged at Rs. 182.

Steels.—Steel shares moved in sympathy with mill shares and showed a good rise over the last week's rates. *Tata* ordinaries and deferreds opened better and steadily improved to Rs. 403 and Rs. 2,067-8 respectively. Towards the close, however, the shares suffered a slight set-back owing to some profit-taking, the ordinaries closing at Rs. 400 and the deferreds at Rs. 2,030.

Banks.—There was little doing in this section in the absence of buying orders. *Bank of Baroda* were at Rs. 107-8; *Bank of India* at Rs. 141; *Central Bank* at Rs. 44-12; *Imperial Bank* fully paids at Rs. 1,560; contributories at Rs. 385-10; *Reserve Bank* at Rs. 105 and *Union Bank* at Rs. 6-10.

Miscellaneous.—*Bombay Burma Trading* met with some demand, closing slightly better at Rs. 571-4. *Associated Cement* were a shade lower at Rs. 146-8. *Belapur Sugar* were done at Rs. 219. *Shivrajpur Syndicate* were steady at Rs. 31-8 and *Premier Construction* at Rs. 90-8. *Scindia Steam* were dull at Rs. 21-1. *Wimco* were unchanged at Rs. 204. *Indian Iron* changed hands at Rs. 32-2; *Steel Corporation* at Rs. 19-2; *Tata Oil* at Rs. 43-10 and *Bombay Telephone* at Rs. 86-8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, April 3.

The local share market was very steady with prices showing little change. Cotton mill shares met with strong buyers and small gains were recorded in leading issues. **Rubbers were steady, while Teas met with fair support.**

Securities.—The securities market ruled very steady, 3½ per cent. Paper closing slightly better at Rs. 95-13. 3 per cent. 1963/65 came to business at Rs. 95-4 and 4 per cent. 1960/70 at Rs. 109. Among State Loans, 3 per cent. 1956-61 *Mysore Loan* changed hands at Rs. 104-4.

Mills.—There was a good demand for cotton mill shares. *Buckingham and Carnatic* moved up to Rs. 256 with sellers scarce. Cambodia met with good enquiry at Rs. 9-4, while *Madura* were done at Rs. 39-8 x.d. *Vasanta* at Rs. 116; *Coimbatore Spinning* at Rs. 101 and *Lakshmi* at Rs. 60-8. Among Bombay shares, *Bombay Dyeing* came in for business at Rs. 1,136-12 May and *Central India* at Rs. 336-8 May.

Utilities.—*South Madras Electric*, after being done higher at Rs. 13-4, closed steady at Rs. 13-2. *Vellore Electric* were transacted at Rs. 12.

Plantations.—Business in rubber shares was on a small scale and prices remained almost unchanged. *Cochin Malabar* were done at Rs. 6-12; *Kalpetta* at Rs. 18-12; *Tropical Plantations* at Rs. 19-4 and *Udayagiri* at Rs. 6-1. Among Tea shares, *Peermade* were in enquiry at Rs. 27-8; *Chembra Peak*, at Rs. 3-7 and *Nilgiri Neerugundi* at Rs. 1-8.

Sugars.—*Mysore Sugar* continued to have good buyers and prices improved further to close at Rs. 52. *Travancore Sugars* remained unchanged at Rs. 14.

Owing to the Easter holidays the next issue of "Investor's Supplement" will appear on Wednesday, April 9, 1941—Ed. I.F.

Miscellaneous.—*Mysore Chemicals* were in demand at Rs. 17-2. *Mysore Paper* were a dull market at Rs. 14-6. *Spencer 'B'* preferences had good support at Rs. 9-12. *Andhra Cement* ordinaries came to business at Rs. 69 and preferences at Rs. 110. *Dalmia Cement* ordinaries changed hands at Rs. 11-8 s.l. *Hukumchand* ordinaries were in enquiry at Rs. 11 and *Orient Paper* preferences at Rs. 104-8.

LONDON STOCK EXCHANGE

Generally firmer conditions have been noticeable on the London Stock Exchange during the past week and Industrials have been marked higher alround. There has been greater buying. In view of the proximity of the budget the behaviour of the market should be considered very satisfactory. Giltedged securities have been easier fearing a further rise in income-tax. India Sterling loans are further higher with 3½ per cent. Sterling Paper at 99 5/8. Among British Funds, 2½ per cent. Consols were 77 7/8, 3½ per cent. Conversion 101¼, 3½ per cent. War Loan 101¾ and 3 per cent. War Loan 100 3/8.

Among other sections, Tea issues are firmer while rubbers have remained unchanged. Oils have been very steady with *Anglo-Iranian* and *Trinidad Leaseholds* higher at 34s. 4½d. and 66s. 10½d. respecpectively. Mining issues also are better with *Nundydroog* at 18s. 1½d. and *East Rand Proprietories* at 40s. 1½d. Home Rails have been quietly steady.

NEW YORK STOCK EXCHANGE

Even with steel mill capacity running at 99.2 per cent. of capacity and the settlement of the strikes operators on Wall Street have not been inclined to extend their commitments. Quotations have been fluctuating in narrow limits. *U. S. Steel* were 55⅝. *Anaconda Copper* 24½ and *General Motors* 42⅝.

(*Annual Meeting held 4th April, 1941 at 3-30 p.m.*)

Audited accounts for the year ended 31st December, 1940 :—

Adding the sum of Rs. 1,84,381-9-0 brought forward from the previous year the total profits available for appropriation amount to Rs. 40,62,628-2-0 and the directors' recommendations are as follows:—

	Rs.	A.	P.
Transfer to Taxation Reserve	24,50,000	0	0
Dividend on the Guaranteed Preference Shares at 6 per cent.	1,80,000	0	0
Dividend on the Cum. Preference Shares at 6 per cent.	1,90,000	0	0
Dividend on the Ordinary Shares at 20 per cent.	10,00,000	0	0

the balance of Rs. 2,42,628-2-0 is carried forward.

The year under review witnessed further expansion of the Company's activities. A considerable increase in turnover has been achieved compared with 1939 and manufacturing capacity has been appreciably enlarged.

The year under review witnessed further expansion of the Company's activities. A considerable increase in turnover has been achieved compared with 1939 and manufacturing capacity has been appreciably enlarged.

At this time last year the Excess Profits Tax Bill had just been introduced and the directors reported that steps were being taken to press for equitable treatment for a pioneer industry such as the manufacture of tyres in India. Although amendments were made to the original Bill position as regards the Company's standard profit basis is still under consideration by the authorities and the directors, in recommending the transfer of Rs. 24,50,000 to Taxation Reserve, have again considered it expedient to take the most conservative view of the company's liability, based on the latest proposals contained in the Finance Member's 1941 budget speech.

Secretary.—Mr. A. W. Gillespie.

Authorised Capital—Rs. 2,00,00,000 in 13,00,000 Ordy. of Rs. 10; 30,000 6 per cent. Guaranteed Pref. and 40,000 6 per cent Cum. Pref. of Rs. 100 each. Issued and Subscribed—Rs. 1,20,00,000 in 5,00,000 Ordy; 30,000 Guaranteed Pref. and 40,000 Cum. Pref., all fully paid up.

(*Annual Meeting held 29th March, 1941 at Rangoon*).

Audited accounts for the year ended 31st December, 1940 :—

After providing Rs. 19,04,117-3-10 for depreciation, and setting aside Rs. 24,96,166-11-0 to meet Income-tax, Super-tax and Excess Profits Tax payments there remains a balance of Rs. 23,83,316-12-2 of which Rs. 2,83,767-7-0 was carried forward from the previous year at the credit of Profit and Loss Account.

The dividends on the 7 per cent Preference Share Capital absorb Rs. 3,50,000 and the interim dividend of Rs. 2 per share on the Ordinary Share Capital paid on the 29th November, 1940 accounts for a further sum of Rs. 5,00,000, leaving the net amount available for distribution at Rs. 15,38,316-12-2.

The directors recommend the payment of a final dividend on the Ordinary Share Capital of the company of Rs. 5 per share, *payable on the 25th April*, 1941, which will absorb Rs. 12,50,000 and that the sum of Rs. 2,88,316-12-2 be carried forward.

Managing Agents.—Messrs. Steel Brothers & Co., Ltd.

Authorised Capital—Rs. 1,00,00,000 in 2,50,000 shares of Rs. 40 each. Issued and Subscribed—Rs. 50,00,000 in 50,000 shares, fully paid up.

† Paid out of the Equalisation of Dividend Account.
‡ Includes Rs 22,164 transferred from General Reserve.

(*Half-yearly meeting 16th April, 1941 at 11-45 a.m.*)

Audited accounts for the half-year ended 31st December, 1940:—

The Profit and Loss Account reveals for the half-year of Rs. 17,937-9-10 against which the directors have transferred Rs. 20,000 from General Reserve. Taking into account the balance of Rs. 3,453-13-5 now remains to be carried forward.

The directors propose that a dividend at the rate of 2½ per cent per annum for the half-year absorbing Rs. 9,000, be paid out of the Equalisation of Dividend Account.

Conditions remained difficult over the half-year, local demand being poor and prices for Export most profitable.

Managing Agents.—Messrs. Balmer, Lawrie & Co., Ld.

Authorised Capital—Rs. 12,00,000 in 1,20,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 7,20,000 in 72,000 shares, fully paid up.

(*Annual Meeting 17th April, 1941 at 5 p.m.*)

Audited accounts for the year ended 31st December, 1940:—

	Rs.	A.	P.
The total revenue for the year 1940 from all sources amount to	1,87,04,808	0	0
Total expenditure amounted to	1,14,07,715	0	0
Net receipts from the year's working aggregated	72,97,093	0	0

From this balance the following items of expenditure have to be deducted before arriving at the net profit available for distribution:—

	Rs.	A.	P.
Provision for Depreciation	27,95,332	0	0
Provision for Reserve against fluctuations in value of assets	75,000	0	0
Provision for writing off rights and concessions ...	40,710	0	0
After making these deductions of	43,86,051	0	0
Paid Bonus to the Staff	1,35,000	0	0
Leaving a balance of	42,51,051	0	0
Amount brought forward from 1939	2,84,210	0	0
Leaving a balance for disposal of	45,35,261	0	0

The directors recommend that this sum be appropriated as follows:—

Dividend* for the year on the Cumulative Preference Shares	6,30,000	0	0
Divdend* for the year on the Ordinary Shares at Rs. 6 per share	35,90,476	0	0
To be carried forward	45,35,261	0	0

*Free of Indian Income-tax.

Note—Dividend on Ordinary Shares amount to a total payment of Rs. 6 per share for the year, of which half-yearly interim at Rs. 2½ per share was paid in October, 1940.

The effects of the war have been felt both directly and indirectly in the Company's business. The authorities have considered it necessary to impose restrictions on lighting, but the partial employment of some sections of industry in war production work has increased the level of industrial activity.

The lighting restrictions have directly reduced the supply revenues and this reduction has not been fully compensated for by increased industrial prosperity. War condtions have resulted in increased and increasing prices for most of the materials which the company uses in all branches of the undertaking, as well as delays and difficulties in obtaining supplies. Labour has demanded and obtaned a Dearness allowance on account of the increase in the cost of living.

From the middle of June, there was a setback in the sales of energy for lighting purposes. Industrial activity increased appreciably during the second part of the year.

No reductions in tariffs were introduced during the course of the year, but the reduced tariffs, which had effect from 1st April, 1939, involved a comparatve reduction in revenues from January to March, as this was a period of higher tariffs during the preceding year.

The total amount of revenue derived from the sale of energy (excluding traction) was Rs. 83,67,242. This is a reduction of only Rs. 2,82,026 on the previous year's figure.

Tramways.—The number of passengers increased by 21,61,469. The receipts at the end of July were down by Rs. 27,000; from August a steady increase was registered, the year finishing with an increase of Rs. 96,734 over the preceding year.

Buses.—The number of passengers increased by 4,416,939 and the revenue steadily increased by Rs. 4,10,008.

Secretary.—Mr. R. D. Kanga.

Authorised Capital—Rs. 3,90,00,000 in 6,00,000 Ordy. and 1,80,000 7% Cum. Pref., both of Rs. 50 each. Issued, Subscribed and Paid-up—Rs. 3,89,20,650 in 5,98,413 Ordy. and 1,80,000 Pref., both fully paid up.

(*Annual Meeting 23rd April, 1941 at 12 noon*)

Audited accounts for the year ended 30th June, 1940:—

	Rs.	A.	P.
The revenue account shows a profit of	87,052	8	10
After making the following deductions:—			
General Depreciation	13,091	10	4
Reserve for Taxation	12,000	0	0
Reserve for E. P. T.	14,000	0	0
	39,091	10	4
There is a net profit on the trading of	47,960	14	6
Brought forward	49,694	12	3
Leaving at disposal of	97,655	10	9
Dividend proposed at 2½ per cent	26,250	0	0
which is carried forward.	71,405	10	9

Considering the difficulties the company has had to encounter due to the war and a consequent extension of the delivery period of goods from England, the results may be considered satisfactory.

Taxation has absorbed a large proportion of the profits and in view of the possibility of a further rise in taxes and in the uncertainty of future trading the directors have proposed an increase in the amount to be carried forward to meet such eventualities.

The directors are pleased to report that their order book is a good one and the prospects for the next financial year appear very favourable.

During the year the directors opened an office in New Delhi to maintain closer contact with the Government and Army authorities and the results have been entirely satisfactory.

In South India marked progress has been made in the Electrical Engineering and throughout that area the Brook Electric Motors are now firmly established.

The steady increase in the business for Marshall's Tea Machinery and spare parts reflects the contact that is being made with managing agents and Estate personnel, and although owing to the existing circumstances the orders for new machines may be fewer, there is no doubt whatsover that the increased contact mentioned above will ultimately increase the turnover.

Managing Agents.—Messrs. Marshalls (Direction) Ld.

Authorised, Issued and Subscribed Capital—Rs. 10,50,000 in 5,25,000 shares of Rs. 2 each, fully paid up.

†Includes Bonus of 2 per cent.
‡Includes Bonus of 4 per cent.

(*Annual Meeting held 14th March, 1941 at Bombay*).

Audited accounts for the year ended 31st December, 1940:—

After making the necessary provisions for depreciation, Income-tax and Super-tax, the balance for the year is Rs. 6,53,896-6-10 to which has to be added Rs. 1,01,097-6-3 brought forward from last year's account, making a total of Rs. 7,54,993-13-1 available.

The directors recommend to declare from this balance a dividend of Rs. 25 per share, *plus* a bonus of Rs. 5 per share, both of free of tax, leaving a balance of Rs. 2,053-13-1 to be carried forward.

During the year under report, business was most difficult. Prices of cotton, cloth and yarn fluctuated violently, and in the months of June, July, August and September, owing to bad conditions, it was difficult to sell the Company's goods for the time being. However, after October the market improved and they have been able to make good sales.

The strike of the millhands, which was started from the 3rd March, came to an end on the 12th April, and since then the Company's Mills have been working satisfactorily.

Managing Agents.—Messrs. Nowrosjee Wadia & Sons.

Authorised Capital—Rs. 64,00,000 in 25,600 shares of Rs. 250 each. Issued and Subscribed—Rs. 62,74,500 in 25,098 shares, fully paid up.

Synopsis of the balance sheet as at 31st December, 1940:—

Liabilities.	Rs.	Assets.	Rs.
Capital paid up ...	62,74,500	Fixed Capital Expenditure ...	3,12,12,446
Reserves including Depreciation ...	3,82,02,359*	Stores ...	11,06,312

SASSON SPINNING & WEAVING COMPANY, LIMITED

	Year ended December			
	1940	1939	1938	1937
	Rs.	Rs.	Rs.	Rs.
Net Profit ...	−1,02,069	98,848	1,26,109	83,138
Allocation to funds including depreciation ...	96,071	1,00,366	1,04,426	1,07,251
Provision for taxation ...	Nil	Nil	Nil	Nil
Dividend amount ...	Nil	Nil	Nil	Nil
Carry forward ...	−1,19,234	78,907	80,425	58,742

Audited accounts for the year ended 31st December, 1940:—

	Rs.	A.	P.
The result shows a loss of	1,98,140	7	6
from which is deducted the balance profit bought forward	78,906	13	0
and to carry forward to next year the balance loss of	1,19,233	10	3

The directors regret the unsatisfactory result which the year's working shows. This was due to the general strike of millhands extending for about two months during which time the company incurred heavy losses in overhead charges, later to the partial working of the Mills due to the general depression which prevailed in the Textile industry during the period under review.

Managing Agents.—Messrs. David Sasson & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 25,00,000 in 2,50,000 shares of Rs. 10 each, fully paid up.

The only Indispensable & Authoritative Annual Reference Book & Directory for the Indian Sugar Industry

THE INDIAN SUGAR INDUSTRY

(1940 Annual)

Extract from a foreword by **Dr. Syed Mahmud, Ph.D**
Ex.Minister, Bihar Government.

Messrs. Gandhi & Co. deserve to be congratulated on this annual publication which is of great value to all interested in the Sugar Industry. This Annual which supplies a keenly felt want of an authoritative and indispensable survey of the Indian Sugar Industry complete with an intelligent discussion of the problems before the Industry and latest relevant and statistical meterial is referred to by officials and non-officials who attach considerable value to the views expressed therein.

Chief Features:

- Retrospect and Prospects of the Sugar Industry in India in 1939-40 & 1940-41.
- *Modus Operandi* of the Indian Sugar Syndicate, Cawnpore.
- "The Sugar Industry at a Glance", containing Statistical Tables pertaining to production and consumption of sugar imports and exports of sugar, production of Gur, Cane-crop, Duty & Revenue from Sugar, etc.
- The Sugar Industry (Protection) Act, 1932, (Temporary Extension) Act, 1938, and (Protection) Act, 1939.
- The sugar Factories Control Act, of U.P. and Bihar, as amended by the latest Amendment Acts, enacted in November, 1940, and January, 1941.
- Extracts of U. P. and Bihar Sugar Factories Control Rules, as amended, upto December, 1940.
- Details re: U. P. & Bihar Sugar Commission, Cawnpore.
- Criticism of labour Enquiry Committees' Reports.
- Discussion on Export Prospects, and Control of Industry.
- Comparative position of the Industry in various parts of India.
- Capital and Dividend Statement of Sugar Mills. (Latest).
- Complete and up-to date list of Sugar Mills, working and projected, with addresses of Managing Agents, etc.

ISSUED WEEKLY

VOL. XXVIII. No. 15 WEDNESDAY, APRIL 9, 1941 PRICE RE. 1

EAST INDIAN RLY.

AN APPEAL

FOR

CO-OPERATION

About 75% of consignments are tendered for booking at the Howrah Goods Sheds after 2 p.m. each day. This concentration of transactions within a limited period of the Working day leads to **delays** in the issue of Railway Receipts and inevitably a material proportion is carried over for issue the following morning.

Late booking on Saturdays in particular means many despatchers are not able to send for Receipts till Monday although the Receipt issue section works throughout Sundays.

Please book early in the day.

More receipts can then be issued on the day of booking. Consignors in turn will be able to *send* receipts to Consignees more quickly.

By Booking early you help us and yourselves.

IS IT NOT WISE TO INSURE NOW ?

With an uncertain future ahead Conservation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an inestimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

Write to us for further particulars or advice.

WORLD OF INDIAN FINANCE

SHORT credits are in abundant supply; but they are somewhat usuable. Banks are not unwilling takers of term money as the yield Treasury Bills is improving. The present is a transition from the busy to the slack season; and all the features of the slack season will be in full manifestation by the end of April. That is to say, whatever is still held up in produce finance will have returned to the money markets; and, with banks' advances going down, cash resources will mount up. There is reason, however, to think, that, as cash piles up in banking circles, it will be diverted into Government coffers through increased sales of Treasury Bills. In relation to the operations that have been put through in connection with the redemption of dated sterling loans, replenishment of Government's cash balance is urgent and imperative. Rs. 16 crores of ways and means advance has to be liquidated. The cash deposit of the Treasury with the Bank, which was Rs. 5 crores last week, needs to be strengthened. The indications are that these two objectives will be attained by recourse to larger sales of short-term bills.

It should be possible for the Government to achieve these ends without difficulty if they make clear that, while they welcome larger subscriptions to Treasury Bills, they are in a position to enforce and execute a *firm* and *confident* Treasury Bills policy. Sales of Treasury Bills are unsatisfactory during periods when the market is led to thinking that the next week's sales would be more favourable to it. By a firm Treasury Bill policy is meant that signal to the market which clearly indicates "Thus far, no further." Rejection of unsuitable tenders is the handiest method for providing clear clues of such a policy. The clearly defined momentary policy is cheap money. Cheap money is compatible only with a firm Treasury Bills policy.

So what will happen is that, while trade advances will raise investment problems for the banks, these problems will be simultaneously solved by Government's need for more and more cash. The adjustment must be allowed to take place in the smoothest way possible. For, it is against such a background that steps have to be taken for the Rs. 50 crore programme of new borrowings. This matter is discussed at length in the Editorial Section; in this context, we may underline the hope expressed there that a fifty crore programme is nothing stupendous given adroit handling and thorough self-assurance on the part of the Finance Member.

LLOYDS BANK LIMITED
INCORPORATED IN ENGLAND
1677

SAVING MADE EASY

Five Rupees will open a SAVINGS BANK ACCOUNT at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

This is a most convenient method of preparing for the payment of periodical demands, such as insurance premiums, income tax, medical expenses or school fees.

Interest allowed at 1½% per annum. WITHDRAWALS CAN BE MADE BY CHEQUE.

Branches in the East:
CALCUTTA, 101-1, Clive Street and 37, Chowringhee, DARJEELING, BOMBAY, Hornby Rd. and Princess St., RANGOON, 45, Phayre St. and 75, China St., KARACHI, RAWALPINDI, MURREE, AMRITSAR, LAHORE, DELHI, NEW DELHI, SIMLA, PESHAWAR CANTT., PESHAWAR CITY, SRINAGAR, GULMARG.

Last week we suggested that there had been a successive rise in the Treasury Bills rate with the resumption of the sale of intermediates and that though the higher discount rate could not be by any means considered onerous it was not quite in keeping with the conditions in the call money market. Happily, there has been a halt to the rise in the rate during this week. Perhaps, the attraction of the higher rate on treasury bills has been responsible for an increase in the amount of applications from Rs. 1,31.25 lakhs to Rs. 1,48.50 lakhs. The decline in the average discount is not much, the rate for this week being thirteen annas ten pies against thirteen annas eleven pies per cent per annum last week, but the reverse of the trend is certainly gratifying.

Three months intermediates sold from April 2, 1941 to April 5, 1941 amounted to Rs. 1,24.50 lakhs against Rs. 1,21 lakhs for the previous period. This is again suggestive of the fact that there has been some arrangement from a special quarter.

The soundness of the technical position of the giltedged market is clearly evident from its behaviour during the last three days. The news of the German invasion of Yugoslavia and Greece has not had any appreciable effect on prices. 3½ per cent. Paper was for a time inclined to be lower at Rs. 95-10 but the close has been better at Rs. 95-15. The upward movement in terminable loans has continued uninterrupted.

Banks sell T.T. 1 5/15/16 ready up to 6 months forward. Banks buy T.T. at 1/6 for the same delivery.

Banks buy 3 months D.A. bills at 1/6/32 first and second months. 1/6½ third month, and 1/6/32 fourth month forward. D. P. 1/32 higher.

Money Rates. Banks borrow Call and Short Notice ¼ per cent., one to five months ½ per cent.

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Monday, April 7, 1941. The total amount offered was Rs. 1 crore 48 lakhs and 50 thousand. Tenders at Rs. 99-12-9 per cent and above were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 73 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen and pies ten per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, April 15, 1941. Successful tenderers should make payment on Friday, April 18, 1941. Other conditions are as usual.

Three months' Intermediates will be sold on April 8 and 9, 1941 at Rs. 99-13-0 per cent. subject to the conditions previously announced (viz. sales can be stopped at any time without previously notice if Government think it necessary).

Three months' Intermediates sold from April 2 to 5, 1941, amounted to Rs. 1,24,50,000.

During the week ended April 4, 1941, Government of India Treasury Bills for Rs. 8,91,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

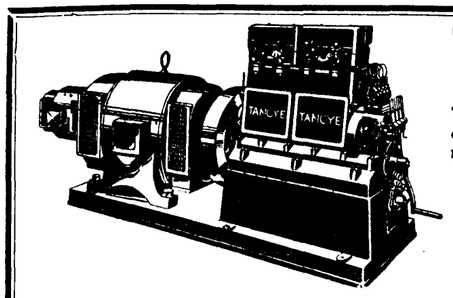
New Loans for 1941-42



We are not in a position to know whether the Government are likely to pay any heed to the suggestion which we made last week to the effect that the transactions connected with the sterling debt redemption scheme must be set out in a Notification in a way that can be easily comprehended by the general public. In taking up, as promised, the discussion of the plans that should be adopted for the issue of rupee securities as against the sterling securities redeemed, we are again handicapped by having to depend largely on surmises and probabilities. This handicap is increased greatly on this occasion as, owing to the publication of INDIAN FINANCE on Wednesday instead of Saturday because of the Easter holidays, we have to study this question without having in our possession this week's return of the Reserve Bank. It may well be that the figures disclosed in the statement to be issued on Thrusday may reflect further effects of the redemption of the sterling loans.

In view of these reservations, our discussion today has been based on certain assumptions. Firstly, we have to assume that sterling loans tendered for payment in cash amounted to £60 millions or the equivalent of Rs. 80 crores. Secondly, we have to assume that holders of loans to the extent of £30 millions or Rs. 40 crores have accepted payment in the form of rupee counterparts. In the light of these assumptions, the problem of issuing rupee securities is narrowed to a total of Rs. 80 crores. The immediate steps taken for the exchange of sterling obligations for rupee obligations to the amount of Rs. 80 crores are Rs. 38.26 crores by the issue of rupee securities to the issue department of the Reserve Bank; Rs. 16 crores as a ways and means advance from the Bank; and the balance from the Treasury's deposits with the Bank.

From the way in which the finances have been raised under these three heads, it is possible to draw one or two significant inferences. It is quite likely that the Government hope to be able to repay the ways and means advance by larger subscriptions to Treasury Bills and, perhaps, by any other payments that may fall due in respect of the financing which the Indian Government have done for the British War Office. As for the reduction in the Central Treasury's cash balance with the Reserve Bank, it was fortunate that it stood at the unusually high figure of 27¼ crores on the eve of these transactions. After these operations, the cash balance has declined to Rs. 5 crores. It is no matter of urgency that the cash kept by the Government with the Bank must be immediately replenished. Taking these two factors together, half the amount required for the sterling debt redemption has been found by means which may not involve anything more than increased sales of Treasury Bills to the public. Viewing the matter in another way, the problem so far as the issue of rupee securities is concerned, is confined to Rs. 38.26 crores representing *ad hoc* securities that have been delivered by the Government to the Reserve Bank. In simple terms, the ways and means position could be smoothly adjusted if rupee securities for a total of Rs. 40 crores are placed on the market.

Our contention all along has been that the *ad hoc* securities handed to the Reserve Bank must be Treasury Bills, and not rupee counterparts of the sterling loans. We have, however, reason to think that our views have carried no weight with the authorities. In the budget speech of Sir Jeremy Raisman, the impression is given that the immediate object of the transactions is the replacement of sterling by rupee obligations and that these will be in the form of rupee counterparts of the sterling loans they replace. He further refers to the alternative methods possible for the disposing of these liabilities, whether as rupee counterparts or in the form of a simpler scheme of converted loans of suitable maturity. Our case is that the scheme which should engage the immediate attention of the Finance Member is one of converted loans of suitable maturity.

So far as the plan of rupee counterparts is concerned we know that anything like Rs. 20 crores worth of such securities must have been placed on the market during the period when the Government were making open market purchases of sterling loans in London. We have also to assume that another Rs. 40 crores worth of rupee counterparts have now been issued in respect of those holders who

accepted payment in scripts. In other words, there are nearly Rs. 60 crores worth of various types of securities for which there is no regular market and no quotations can be obtained. If a bank or insurance company holds these securities, how are they to comply with the stipulation that the securities must be shown at cost or market value whichever is lower? It is a most unsatisfactory arrangement that large parcels of securities to the extent of Rs. 60 crores are being held by investors without their having any means to know their prices from time to time and without their being sure of their finding a ready market in case they have to sell.

What are the steps that must be taken to bring these new securities into active quotation in the various giltedged markets in India? This is a question which should be settled by the Reserve Bank in consultation with the stock exchange and the banking authorities.

From this point of view, we should deprecate any further sale of rupee counterparts through the tap. There is another important reason against the issue of the rupee-counterparts. We believe that it should be possible for the Indian Government to raise funds on far more favourable terms than they will secure by selling rupee counterparts on the present basis of value. Moreover, it will do a lot of good if the financing of the debt redemption is not treated as a separate entity but made part and parcel of the defence loan programme.

We may now proceed to estimate the amount which the Finance Member may require from new loans during the current year. 3 per cent. 1941 bonds for a total of Rs. 10½ crores fall due for payment on September 15. Funds for the repayment of this loan must be secured. As at the end of 1940-41, Treasury Bills have been reduced by about Rs. 8 crores, despite the large expansion in defence expenditure and the heavy outgo from postal savings banks and cash certificates which would ordinarily have necessitated a large increase in our floating debt. These factors were largely offset by the very favourable response given to the defence loan, the capital receipt of Rs. 12 crores from the Reserve Bank on account of the one rupee notes and silver rupees issued to them and the fact that the payment of Rs. 5 crores to the Reserve Bank provided for against a return of surplus rupee coin was not required. In the result, Sir Jeremy expects a decrease in Treasury Bills of Rs. 8½ crores taking 1940-41 and 1941-42 together. From these, it can be concluded that the Finance Member is not contemplating the raising of more than Rs. 10½ crores by new loans so far as the routine ways and means transactions are concerned.

To this Rs. 10½ cores has to be added Rs. 40 crores which may be said to arise from the extraordinary transactions connected with the sterling debt scheme. That is to say, the total funds to be raised from new loans in the current year are of the order of Rs. 50 crores.

It will be erring on the side of undue optimism to believe that such a large sum can be obtained from the 3 per cent. second defence loan 1949-52. The list for the second defence loan opened on February 1 ; and, between February, 1, and March 22, the total realisations came only to Rs. 3.38 crores. If this loan has fetched Rs. 3 1/3 crores in seven weeks, it is not a favourable augury that it will be a solution for a problem involving Rs. 50 crores. We may be told that the 3 per cent. first defence loan yielded Rs. 44.86 crores. But it must not be forgotten that the real flood in the case of that loan was towards the closing days. It was the anticipation that the list for the loan would be closed and that the terms of the second loan would not be as favourable, which was responsible for an accelerated flow of funds towards the end.

In our view, the entire question of keeping a defence loan available on tap in the peculiar conditions of India needs to be reviewed.

Our own plan will be to issue simultaneously three types of loans—a 3-5 year loan at 2 per cent, a 5-10 year loan at 2½ per cent. and a 10-20 year loan at 3 per cent. There should be both a limit as to the period during which the list remains open and a limit as to the total subscriptions that are invited.

The Government have been spending considerable sums of money of which we gratefully acknowledge we are one of the beneficiaries—on propaganda connected with the defence loan. We do not think that this propanganda has the right appeal. One need not be apologetic to have to admit that the appeal of a government loan in India must be to cupidity and not merely to patriotism. The investor applies with avidity, not when he knows that the money he subscribes is used for bombers, but when he knows that the security he buys today will rise to a premium by the time the Government come out with their next loan. The propaganda for the defence loan that we envisage has to be on the right lines.

Given right types of loans to satisfy differing tastes, given the right kind of propaganda, and given the right moment at which the issue is made, there is every reason to believe that the new loan programe of Rs. 50 crores can be smoothly executed. The supreme need is for Sir Jeremy Raisman to have as sturdy a faith in the security he puts out as INDIAN FINANCE has felt and inspired all through these years.

Editorial Notes

Fourth War Budget

SIR Charles Kingsley Wood's second budget has the authority of the war executive. The financial consequences of the war can be clearly discerned in the proposal to raise £250 millions more from taxation. The proposals in themselves lack the element of surprise and the rise in the standard rate of income-tax to 10 shillings in the £ has been regarded as inevitable. Expenditure in the first nine months of 1940-41 was running at a level that prompted inquiries in January itself about the probable calls on the taxpayer. The increase of 1/6 in the standard rate is accompanied by a further reduction in the reliefs usually provided in regard to lower incomes and earned incomes. The highest rate of tax inclusive of surtax works out to 19/6 in the pound, a figure which suggests that the highest rate often cited in this connection as 77 per cent. of the total income as paid by the man in the U.S.A. with an income of a million dollars a year is eclipsed by the wartime rates in Britain which until this year did not take more than 80 per cent. of the year's income. The more important point to note here is the total estimate of expenditure in the next year. The total exceeds the now familiar total of £4000 millions which is over four times the pre-war total though reference must be made to the growth of taxable capacity in wartime. This is certainly noticeable in company reports though the higher provision for taxation defeats the shareholder's hopes of increased dividends which are naturally restrained by legislative and other limitations.

The Budget problem has again been summed up as 'spend as little as possible and lend as much as possible.' The exhortation to the taxpayer will be reinforced by an appeal to subscribe for another issue of war loan, considered certain as the £1,800 millions voted by Parliament must have been spent, and a total tax revenue of under £1,500 millions will not be enough to meet the expenditure of £4,207 millions. The House of Commons is said to have heard him without a shock and the only regret possibly is that the taxpayer was not called upon to do the belt-tightening last year. The plain object is to draw off more than half the national income for the war expenditure, and taxation is applied as a check to inflation made possible by the wage increase and higher transport charges, levied under authority, though the ultimate consequence was apparent and warnings were uttered against any modification of control prices even in the case of raw materials. The annual borrowing programme cannot be met by anything but an extension of the borrowing programme. The floating debt is already over-large and the deposits, etc., made to help the government can only provide relief in regard to the disparity revealed by the Exchequer Returns from week to week. So one must expect a big increase in borrowing.

Voluntary saving can hardly be expected to meet the whole programme because the borrowing programme of something like £3,000 millions implies that saving must be seven or eight times the prewar quantum. Complete control of the new issue market by the Treasury will not help to provide the money, and the Government may stimulate the flow of investment into the war loan by adjustments of the currency and credit base, in spite of the inherent risks. The Chancellor's warning however is there and the alteration of the slogan from Produce for Victory to Save, for Victory is not without a special meaning. The wage-earner who is compelled to pay income-tax for the first time will, however, know that taxation is part of the all-in effort, and the graduation, so steep as to be expropriatory, proves that Socialism is an ideal not confined to one party. The most tantalising feature is the brief reference to the payment of income-tax out of the weekly wage though the interpretation is not difficult. The weekly deductions will be held to the credit of the individual in a P.O. savings account, but the question may be asked whether the deduction is to accumulate for the quarterly payment of income-tax or whether it is to be treated as deferred pay. The natural presumption is that taxation at source will be the rule applied to wage-earners' incomes, subject to taxation for the first time. The reduction of allowances will press on the middle classes but as the supertax exemption limit is not lowered to £1,000 the burden is not so great as was feared.

The plan for victory is translated into the Budget which evidently does not take into account probable benefits of Britain under the Lease and Lend Plan. The beginning of another war in the Balkans naturally makes the Chancellor reluctant to allow for the £1,825 million worth of equipment that can be lent by the U.S. Government out of existing resources or for the advantages obtainable under the scheme to help Britain with ships as part of the seven billion dollar programme. These benefits lie outside the Chancellor's field of vision, but they should help the Government to limit its borrowing and ensure thereby complete success.

Balkan Warfare

The attack on Greece and Yugoslavia began at the same time. Italy joined in declaring war and the reactions in the U.S.A. and Soviet Russia are such as to warrant the statement that German aggression is disapproved more than ever. While the attack was more or less inevitable, the delay and the previous fencing are such as to suggest that the Germans with Austria, Hungary, Rumania and Bulgaria available for troop movements were hesitant. The Germans do not expect an easy campaign though Field Marshal List is in command, and the first two days of fighting have not provided easy honours. There is also danger to the Italians in Albania. The oil and minerals acquired by the long dominance of Italian capital both in Albania and Yugoslavia will not be available as soon as the Adriatic is under the control of the British Navy, and the fall of Zara alone will give the Yugoslavs an advantage in holding the Dalmation coast. References to the Adriatic dispute at Versailles are not called for now but Italy's forcible acquisition of Fiume and her refusal to surrender the port made Yugoslavia unusually eager for the port of Baros. The islands of the Dalmatian coast are nearly all under Yugoslav control, and Italy will probably find that as in the Ionian islands new naval and air bases will help the British to make good the promise of help to Yugoslavia. The R.A.F. has not yet gone into Albania but help to the defenders of northern Greece is help to the Yugoslavs who have been wantonly accused of attacking the Bulgarian Capital whereas Bulgaria has invited German intervention in the Balkans by her animosity against Greece and Yugoslavia and allowing her territory to be used against Yugoslavia and Greece.

The Budget session in the Central Assembly

The Budget session of the Central Legislature concluded on April 4 with the passing of the Insurance Act Amending Bill by the Council of State. This has resulted in a considerable improvement on the original measure, but it is doubtful if the need for further amendment has altogether been eliminated. One important point which is a result of the discussions relates to the interpretation of the provision in the Act that 55 per cent. of the policy liabilities of an insurance company should under section 27 be invested in Government and other approved securities. The question asked was whether the deposits to be made by every insurance company and the amount granted as loans to insured persons on the securities of life policies were to be excluded from the 55 per cent. referred to. There is difference of opinion as to the correct interpretation between the insurance companies and the Government. The only satisfaction offered by the Commerce Member was that if the companies went to a court of law and had their interpretation vindicated, he was prepared to give the assurance that the Government would not have that section amended so as to restore the original interpretation. A more satisfactory course will be for the Government to get into consultation with the insurance companies and come to an agreement with them regarding the proper and equitable course in this matter—not the mere technical interpretation of the wording of a particular section—and amend the section so as to bring out this meaning. In view of the difficulties through which insurance business is now passing, it may not be too much to expect of the Government to stretch a point in favour of the companies.

It is not yet known when, if at all, the autumn session of the Central Legislature will be held. Even the term of the Council State expires this year, but the general anticipation is that it will also be given a year's extension. There is no inclination in official quarters to distract public attention by forcing a general election at a time when the war situation is threatening to assume serious proportions. As a matter of fact there is not much official work for an autumn session of the Central Legislature—unless the Finance Member finds it necessary to bring forward another Emergency Finance Bill. It is not expected that any of the five Labour Bills on which Sir Ramaswami Mudaliar has been engaged as a result of the last Labour Ministers Conference will be ready for introduction before the Budget session next year. One measure to which the Government appear to attach some importance is the Federal Court Bill introduced by a private member. The object of the Bill is to simplify the procedure of appeals to the Federal court, for it appears to be recognised that the present rules of procedure are complex, dilatory and expensive. The mover of the Bill, Dr. Banerji, stressed the desirablity of giving to the Federal Court full powers to regulate its own practice and procedure under section 214 of the Government of India Act. As the Home Member on behalf of the Government supported the measure as rightly conceived and favoured reference of the Bill to a select committee which is to meet in Simla, one may safely infer that the Government is anxious to get the Bill passed as early as possible.

Another important non-official Bill which was the subject of considerable discussion on the last non-official day of the session was the Bill of Sir Frederick James which seeks to limit to a maximum of Rs. 50 per annum the amount payable in respect of any person by way of tax on professions, trades, callings and employments. The Bill, though it is intended for general application, has particular reference to the Madras Presidency where as Sir Frederick pointed out, the maximum rate was as high as Rs. 1,000 per annum in the City of Madras and Rs. 550 per annum in the Districts outside the City. In his reply Sir Jeremy Raisman was candid enough to admit that the Government of India had for many years discouraged this type of tix. He went on to say that he had pointed out to the Provincial Governments that they were erecting a superstructure of local taxation on a foundation of doubtful validity and that it was highly objectionable that the field of incometax should be invaded in this surreptitious way. These strong words of the Finance Member made the Government's attitude abundantly clear. At the suggestion of the Finance Member himself it was agreed to circulate the Bill as time had to be given to Provincial Governments and local bodies to consider the possible effect of the Bill and state their views. The Finance Member added that a measure of this kind necessitated the survey of a number of existing taxes and the taking of action to replace these taxes by alternative sources of income. The Bill will not be ready for consideration before next year.

Britain's Shipping Strength

Notable efforts have been made by the U.S.A. in the last week to get more shipping released for the benefit of Britain. Consultations with the Chairman of the U.S. Maritime Commission have begun with references to a programme which embraces a shipbuilding plan at a total cost of $600 million and a repairs-plan for warships only estimated to cost $200 millions. Action taken against the German, Italian and Danish shipping in U.S. ports and in the Philippines too is largely directed towards augmenting U.S. tonnage, so that more ships could be sold to Britain. The action of the U.S. Government, taken principally to prevent sabotage in U.S. ports has procured over 300,000 tons of shipping already, and this tonnage has to be considered in relation to the weekly losses of Allied shipping. There is nothing to suggest that the threat contained in Hitler's speech of February 26, has materialised. The weekly losses after March 1st are by no means suggestive of total submarine warfare, and if the October figures are compared, one may conclude that the Battle of the Atlantic has not produced any striking figures of destruction though two German cruisers are still at large.

If Britain started the war with the leadership of the world's shipping, the losses at sea over a year have not impaired her position and only a loss of the entire mercantile fleet can give the Germans the power to say that their blockade has succeeded. A Swedish newspaper has said that Germany must sink more than ten million tons to win the Battle of the Atlantic. The figures quoted by the newspaper are at variance with British statistics, but the fact that only about 3 million tons were lost in the first year of war supports the official view that total losses of Allied shipping cannot exceed 5 million tons despite the German claim that 9 millions tons have been destroyed. At the outbreak of war, Britain owned 8.5 million tons of shipping plus 3 tons of Empire shipping in addition to 1½ million tons of newly built vessels plus 500,000 tons purchased from the U.S.A. making a gross total of 25.5 million tons. The total Norwegian tonnage of 4 millions as also 350,000 tons of Danish shipping and 3.5 million tons of French, Dutch, Belgian, Greek and neutral shipping brought up the total Allied tonnage to over 30 million tons, nearly equal to half the world's tonnage. After allowing for losses, Britain must now have a merchant fleet bigger than at the beginning of the war according to the Swedish paper wihch recognises that only 11 million tons of shipping were needed for the carriage of Britain's imports in the year before the war, the additional tonnage being used for the benefit of foreign countries. Though 2 million tons are still operated for the use of foreign nations and a million tons have been converted into armed merchantmen, while 2 million tons are classed as small vessels unsuited for ocean trade, Britain has at her disposal a total volume of shipping in excess of 11 million tons needed for the carriage of supplies. There can be no danger when tonnage is conserved, for instance, by reducing the trade in frozen meat from the Dominions and by the swift transfer of vessels to essential routes and trade. Allowance must, however, be made for the delays and difficulties occasioned by the convoy system and the use of the Cape route. This may lead to an increase of time and space so that Britain may require as much as 14 million tons for her own requirements. At present Britain has the ships needed and expects more the U.S.A. In no week this year has Britain lost more than in the first week of March, and even on that basis, the losses in a full year cannot be more than six million tons assuming that the Navy is idle and America does not provide any ships at all.

North-Western Railway.

Tender No. 212-S/2.

Code Word "ARTISTS"

Tenders are invited on rupee basis for purchase by North Western Railway of Tin-ware. Tenders must reach office of General Manager not later than 14 hours on 19th May, 1940; and will be opened in office of Controller of Stores, Lahore, at 11 a.m. on the following working day. Tender form and other relative documents can be seen at and obtained from office of Controller of Stores on and from 3rd April, 1941. The sale price of the tender is Rs. 2/- Local and Rs. 2/8/- Mofussil per set of 2 copies of tender and Rs. 5/- extra for complete set of drawing.

I did help a little..

We help to buy Bombs,
by each bond that we buy,
Every rupee we save,
helps a Bomber to fly.

So, save for the day,
when the day will be saved,
When the bells will be ringing
and the flags will be waved.

But don't let us say,
when we tot up the score,
I DID help a little —

..but.. I could have helped more

THE German attack on Yugoslavia and Greece has taken the tragedy of the present war nearer to the climax. What the average man wants is, no doubt, a glimpse of the denouement. That is still far off. But meantime, it is well to note that for the first time in the history of the war one gets a sense of movement. Many sensational events have happened. Poland was struck down and carved and partitioned between Germany and Russia, all in less than a fortnight. Before that, there was the Soviet-German Pact, itself a lightning development in a war in which, the term, blitz was to be so much in use. And after the conquest of Poland, though separated by months of dreary waiting, came the conquest of Norway and the occupation of Denmark. And these were duly followed by the march against Belgium and Holland. And, most amazing of all, the collapse of France. But at no stage did one feel that the crisis was being neared. There was many a dark hour for Britain. The sombre outlook after the evacuation of Dunkirk has hardly any parallel in the long history of Britain. But the crisis of a long struggle is something far different from a few tense moments. That crisis comes of a major clash between the forces which each side is able to minister to its support. It is not to be expected that either belligerent, would, even if he could, stake all his powers in the first onslaught. Reserves are naturally kept behind the line. Trump cards, or what are supposed to be such, are always kept up one's sleeve. Besides in epochal struggles like the present war, one can never foresee the alignment of powers. If at the beginning Russia went over unexpectedly to her historic enemy, there are bound to be equally surprising compensations towards the end. When the Battle of France was being fought along a two hundred mile front, one would have thought that its issue would decide the final event of the war. But nothing would have been more superficial than to think that the collapse of France would mean the end of the war.

Consider the war from any viewpoint you like, whether as an ideological war between Democracy and Dictatorship or as a crisis in the evolution of the human race, or as a fight for world dominion or as heralding a change in the relative importance of continents. In any of the views I have mentioned, the Battle of France would lose the importance which, from the narrow viewpoint of military technique, it might probably have had. If it was a war between Democracy and Dictatorship, there were other and far more powerful democracies which German Dictatorship would have to vanquish. Or if you regard it as a fight for world domination, Britain was untouched and the British Empire is spread over all parts of the world. And as for the larger evolutionary changes, much more had to be thrown into the boiling cauldron of war before any significant change would be effected.

If we are to follow the present war with intelligent interest, we have to be clear in our mind about what is involved in the present war, what are the forces that will range themselves on either side and how these forces can come to grips. Even on the narrowest view of the present war, it will be seen that Britain is not the only opponent of Germany and that a far wider theatre of war than the North Sea is necessary for deciding the issue.

Hitler must have had a terrible premonition of this when he started on his career of homicidal glory. And as a shrewd man of action, he tried, on the one hand, to provide for the contingency of a wide theatre of war and on the other, to prevent an uncontrolled spread of the area of conflict. The two are psychologically incompatible objectives, as the man who tries to prevent the spread is not likely to be very careful in providing for such a spread and *vice versa*. But the fact remains that Hitler has done both with amazing success till very recently. It is this conflict between the two objectives of his policy that, to my mind, invested the war with the character of a stalemate.

And that is why the war has taken nineteen months to reveal its potentialities for spreading towards the East and there were so many moments in the history of the present war when it seemed as though the honours of the last war as the biggest world war would continue unchallenged to the very end. It is useful to see how these two objectives were pursued. The formation of the Axis has been for years, so to say, the sheet-anchor of German foreign policy and an alliance between countries as far apart as Germany, Italy and Japan certainly meant that in a war of Germany's making, the aggressor would always have the power to expand the war over as wide an area as he chose. And all the discussions which took place in

the middle of the last decade about the next great war assumed without question that it was bound to rage over the widest expense of territory. But Hitler also provided for localising the war. When Germany attacked Poland on the last day of August 1939, and Britain and France declared war on Germany on the following day, it seemed as though the war might retain its character throughout as a straight fight between the two Western democracies and Nazi Germany.

The course of the war in the first five, six months also suggested that Germany's preparations in respect of alliances with the other Axis powers might be either superfluous or ineffective or both. The conquest of the whole of Poland and what was reckoned one of the best armies in the world, formed but a fortnight's job for Germany's military machine. Then came months of dreary waiting behind the fortifications of the Maginot and Siegfried Lines. Germany frequently disavowed all intention of bringing her Italian ally into the fray ; and even when she changed her tactics to one of over-running the countries that lay between her on the one side and France and Britain on the other, the need for spreading the conflict from the point of view of either side was far from obvious. The three great nations could not have gone into the war without dragging the countries that lie between them into it. In a sense, the German occupation of Denmark and German conquest of Norway, Holland and Belgium cannot be viewed as a spread of the war. If the countries, which managed to remain neutral during the last war, have during this been trampled underfoot by the might of Germany, the reason is to be found in the main in the fortifications of the Maginot Line and of the rise of the Air Force as probably the most potent element in modern warfare. In relation to the flood of German militarism the Maginot Line was like a strong bund which stemmed the waters, but only to force them to effect a breach at the end. Whatever that may be, the invasion of Holland and Denmark did little to shake the belief that the war might after all be localised in North-Western Europe. The trimph of German arms over the allied forces in France, in fact, strengthened such a belief.

Hitler, too, must have felt at one stage that his plan to localise the war had met with greater success than his efforts to provide for its contingent spread. But he suffers today for his over-anxiety to make the collapse of France doubly sure by inciting Mussolini to stab her from behind. For it is the entry of Italy that has led on, step by step, to an extension of the war in the Balkans and war in Africa and God knows where else besides. But the Battle of France had been won before Italy entered the war.

If, for the first eighteen months, the war seemed far from becoming a world war, it was no illusion. From the beginning, Hitler was quite determined that he would avoid the blunders of the Kaiser. He would avoid war on two fronts, at any cost. Allied diplomacy quite unexpectedly threw Russia into his arms; and he was determined to make the most of what was a fortuitous advantage. He shared Poland with Russia. He induced Roumania to consent to the cession of Bessarabia. In fact, Hitler's scheme for avoiding war on the Eastern Front was to placate Russia and to bully the small countries with a display, rather than the employment, of force. To overawe the small countries is something far different from making war on them. He must have counted on a peaceful, though hardly non-violent, penetration.

It is difficult to see where Italy comes in this plan. It is true that Italian help would be necessary for diverting a part of the British fleet to the Mediterranean, for forcing British ships to take the Cape route and to make supplies to Britain more and more insecure. If that is all the purpose—and nobody would have thought that it could ever be more—Italian intervention could have been postponed to a much later stage.

But the fact remains that Italy entered the war when France was on her last legs. Mussolini assumed an importance which can never belong to him legitimately. The terms with France were messed up. Any chance there was of persuading the French Government to co-operate with the Axis was dispelled.

EASTERN GROUP SLEEPER CONTROL

Tender No. 23/41-42

SEALED tenders are invited and will be opened at 3 p.m. (Calcutta time) on the 18th April, 1941, for 1,000 tons first class C. P. Teak Squares measuring 14 ft. and Up by 10 ins. by 10 ins. and Up averaging not less than 15 cubic ft. of the following specification:—

"The C. P. Teak (Tectona Grandis) Rough Hewn Squares should be straight and out of winding with faces square to one another, with not more than 25 per cent sapwood and wane across the width of any face, free from rot, serious heart shakes and cracks, split ends, large knots and other defects. It should be ready for immediate conversion into scantlings."

2. The rates quoted should be f.o.r. stations of delivery and the date of completion should be clearly indicated. 100 tons must be supplied immediately.

3. Tenders may be submitted on contractors' own forms accompanied by a cheque for Rs. 500 which amount will not be refunded if an agreement is not executed within two weeks of acceptance of an offer. Cheques should be made payable to the Chief Auditor, Bengal-Nagpur Railway.

4. Offers must be made in accordance with the provisions of the conditions appearing in the standard agreement form in use.

5. The undersigned reserves the right to reject all or any tender or a part of a tender without giving any reasons for such action.

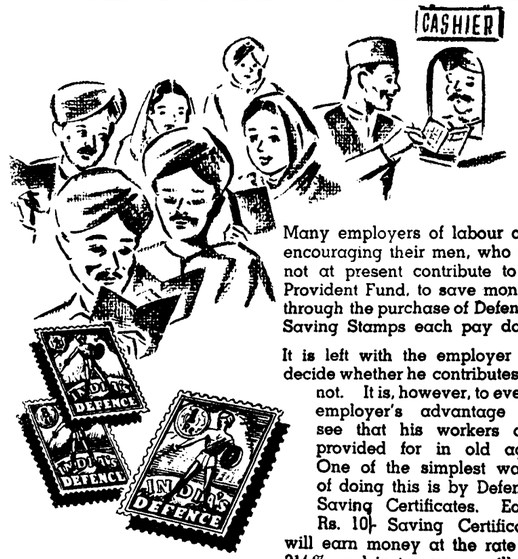
W. H. GILLON,
Sleeper Control Officer,
Eastern Group.

B.-N. Railway House,
Kidderpore, Calcutta,
Dated, 7th April, 1941.

While, at the same time, Mussolini was left with a feeling of injured pride for which he sought an outlet in the unprovoked attack on Greece. Hitler's neglect of Italy is a greater puzzle than his bringing her into the war. For months he allowed the Italian forces to be repulsed, beaten, and taken captive. In Africa, on the mainland of Europe, Italy suffered ignominious defeats, while Hitler looked on.

What is the secret of this strange behaviour? I, for one, believe that the explanations lies in Hitler clinging to the hope that war would be avoided in the Balkans and that help to Italy could be given after the policy of "peaceful penetration" was successfully worked out.

That hope has now been destroyed. The policy succeeded in the case of Roumania and even in the case of Bulgaria. Even in Yugoslavia it very nearly succeeded till King Peter upset the whole arrangement, "usurped" power and refused to play Hitler's game.



It is interesting to note that in regard to the war in Southern Europe, that is, the war between Italy and Greece, Germany has had the same relation which Italy bore to the war in the North till June last. There was no mistake about where German or Italian sympathies lay. But Italy did not come to the help of Germany—and she needed none—then; and Germany has come to the help of Italy. In both cases, the help came too late. Italian entry into the war with the Democracies and German entry into the war in the Balkans, both have had the same effect of widening the theatre of war.

The question now is: If Germany has failed to prevent the spread of the conflict, what about her provision for this contingency? I have said already that the Axis and Fifth Column activity in almost all the countries of the world formed the chief measure that Hitler took in this regard. We know the value of one Axis partner, Italy. It used to be said in the years before the war that one confident prediction could be made about it, that the Power which takes Italy for an ally would lose the war. Italy has not belied that prediction. As for the third partner Japan, Mr. Matsuoka has come back to Moscow after visiting Berlin and Rome. He has visited Moscow twice; and it is quite possible that he intended to clarify his position with Russia after seeing things for himself in Berlin and Rome. Whatever **Mr. Matsuoka's** impressions may be, it is impossible that Soviet Russia will be less unwilling than before to give Japan the freedom to play the Axis game in the East.

In fact, the estrangement of Russia naturally follows from the failure of Germany to avoid war in the Balkans. The Russian attitude has been too long an enigma to be clarified all of a sudden. But it is easy to trace the changes that have come over it. Let it not be forgotten that in the partition of Poland, Russia had an equal share. In the case of Roumania, Russia got only Bessarabia, while Germany obtained full control over the rest of the country. Bulgaria became German without yielding any advantage to the Soviet. It is too much to expect that this progressive dimunition of Russian gains to the point of actual harm to Russia will leave the Russian attitude to Germany unchanged. In fact, if one looks into it closely, it will be seen that the change in attitude also reveals a corresponding development. Poland was carved up neatly. In the case of Roumania, I am not sure that understanding about Bessarabia actually preceded Russian occupation of it. When Germany obtained control of Bulgaria the Russian radio denounced King Boris as a traitor. And when it came to Yugoslavia, Russia concluded a **pact of non-aggression.** In this position, **Russia can** hardly think of concluding **an understanding** with Japan **which will enable her to** start a war in the Far East. **Hitler has** on his hands most of **what he wanted to** avoid, a war on two **fronts, a broken** Axis and a Russia **who can no longer be** relied upon. On the opposite side, **the**

ORGANISE YOUR LABOUR TO SAVE

Your Staff Should Buy and Stick these Savings Stamps on their Defence Savings Stamp Cards until Rs. 10/- has been saved to buy a Defence Savings Certificate.

Many employers of labour are encouraging their men, who do not at present contribute to a Provident Fund, to save money through the purchase of Defence Saving Stamps each pay day.

It is left with the employer to decide whether he contributes or not. It is, however, to every employer's advantage to see that his workers are provided for in old age. One of the simplest ways of doing this is by Defence Saving Certificates. Each Rs. 10/- Saving Certificate will earn money at the rate of 3⅛% and in ten years will be worth Rs. 13|9|-, free of income-tax. If at any time the money is needed on account of sickness or other causes, the Certificates can always be cashed at the Post Office for the full value, plus the interest due. So your staff have all the advantages of a Provident Fund with good interest on the money saved and full protection.

(From Our Correspondent)

New Delhi, April 5.

CONSTITUTIONAL questions have again come to the forefront as a result of the Sapru memorandum which has now reached both the Viceroy and the Secretary of State. It now appears that the British Government are prepared to expand the Viceroy's Executive Council even if the Congress and the Muslim League decide again to keep out, according to the terms of the announcement contained in the August declaration. The question, however, is whether the British Government are prepared to go as far as has been demanded in the Bombay resolution. There seems to be some unwillingness as to the appointment of an Indian non-official as Finance Member. It is also not clear what exactly the position and powers of the Indian Defence Member, if there should be one, would be. The utmost limit to which the British Government may be inclined to go is to reduce the European official element to two members and increase the total strength of the Viceroy's Cabinet to eleven so that the Indian members will be altogether nine in number. On the question also of the joint and collective responsibility of the Cabinet so far as decisions on matters of policy and matters of day-to-day administration are concerned, it may not be easy to find a mutually acceptable formula. It was not possible for Sir T. B. Sapru to meet the Viceroy when he was here last week, but it is known that as soon as the Viceroy has had time to consult the Secretary of State and take the necessary instructions His Excellency will invite him to meet him and discuss the Bombay resolution. It will then be possible to state if there is any possibility of an understanding being reached with the organisers of the Bombay Conference.

A step forward has been taken in connection with the recent Bombay conference of moderate leaders. On Monday Sir T. B. Sapru, the President of the Conference, will be here in New Delhi as the Viceroy's guest to discuss the Bombay resolution and the memorandum submitted with it by Sir T. B. Sapru. In the meantime the statement made by Mr. Amery in Parliament has caused considerable disquiet, for if the Secretary of State means that there is no intention to go beyond the August proposals, there is little possibility of any useful result emerging from the coming Sapru-Linlithgow meeting. Still there is a hope that the British Government will not lightly throw away this chance to improve the relations between the Government and the people, for if this is missed, another may not present itself for a long time to come. Care has been taken by Sir T. B. Sapru to put forward only the irreducible minimum from the Moderate point of view and to make it abundantly clear that effect can be given to his arrangement without any disturbance of the constitutional structure as provided in the Government of India Act or of the Viceroy's existing responsibilities. The points of difference are apparently three—first, the retention of the European official element in the Viceroy's council which apparently the Viceroy still insists on, secondly, the transfer of the Finance and Defence portfolios to Indian members to which objection is evidently still being taken from the official side, and thirdly, the claim that the reconstituted Council should work as a single responsible cabinet without interference, ordinarily from the Viceroy or the Secretary of State. It would be a tragedy indeed if the coming meeting between Sir T. B. Sapru and the Viceroy fails to yield agreement on general principles.

An official announcement has lately been made to assure the public that the trade talks between India and Burma have ended in agreement on the general principles involved. The details are now being worked out and will soon be ready for signature. Despite certain alarmist reports, circulated on the basis of inaccurate information, it has been generally presumed that the negotiations were proceeding satisfactorily. There was an obvious desire on both sides to be as helpful and accommodating as possible. The anxiety of the Burma Government to replenish its own revenues by imposing import duties was appreciated by the Government of India, but a suitable arrangement had to be entered into in order to assist Indian exports on a fairly equitable basis. As it is not to Burma's interest to lose the advantage of a steadily growing trade between the two countries, the problem was to decide on the exact margin of preference which Indian goods should enjoy in the Burmese market. It is understood that India's claim to preference has been adequately recognised by the Burma Government's delegates. It is claimed on behalf of the Government of India that the trade agreement is, taking all circumstances into consideration, a fair one which will not handicap Indian interests. Credit is due to the Commerce Member, Sir Ramaswami Mudaliar, for the skilful way in which he handled the Indian case, particularly, for the care taken by him to consult the non-official advisers at all stages and respect their views. The successful conclusion of the trade negotiations between the two countries is regarded as a happy augury for the future.

The Burma Trade Delegation headed by the Commerce Minister left yesterday after concluding their work. In the course of a parting message the Commerce Minister of Burma summed up the results of their labours by saying that as a result of the new arrangement Burma would be able to obtain much-needed additional revenue to the extent of about Rs. 1 crore per annum from customs duties but Indian goods in Burma would nevertheless receive generous preferential treatment which would enable them to retain their dominant position in the Burma market. He further observed that apart from the expected benefits to the commerce of the two countries he welcomed the agreement as a symbol of the genuine desire of both countries to maintain friendly and neighbourly relations. The new agreement is expected to come into force within the next few days. The agreement is for an indefinite period, subject to six months' notice on either side, but the intention appears to be that as soon as the war is over, fresh arrangements should be entered into, taking into account, conditions then. According to the terms of the new agreement, Indian goods will in general enjoy in Burma a 15 per cent. preference over non-Empire goods and ten per cent. over Empire goods. Indian piecegoods are to enjoy a preference of 7½ per cent. over those of British origin. Full details are expected to be published early next week. Though it is admitted that compared with the old Indo-Burma Trade Regulation Order the new agreement involves sacrifices on India's part, the agreement taken as a whole constitutes a fair arrangement which is not likely to harm India's trade interests. From the revenue point of view there is a substantial gain for India, for subject to certain guarantees to protect Burma's exports to India, the Government of India have now the right to levy import duties on goods coming from Burma. It is not, however, likely that the Government of India will in the immediate future try to make any large use of this right.

Sir Archibald Carter who has settled down to his work as head of the Eastern Group Council took an early opportunity to meet the Press and explain the Council's policy. Two of the points emphasised by Sir Archibald Carter were the development of fresh industries and of fresh capacity, where necessary, to meet the war requirements of the troops in the Eastern Group, and secondly, the problem of post-war adjustment which will be helped by the experience gained in this organisation. Only as time goes on will the public be in a position to know to what extent the work of the Council will speed up industrial activity in the country, but the account given by the Australian representative, Sir Bertram Stevens, of the great manufacturing industries developed in Australia during the last twenty years, had its own lesson to convey to this country. "We quite realise of course," said Sir Bertram, "that the expansion of the work of this group will inevitably bring new trade to all of us but I want to emphasise that we come rather to give than to take." From India's point of view the importance of the Council's work lies in the extent to which the Government of India is prepared to use its energy and initiative to develop the industrial resources of this country and show that it can also develop great industries with the same success and speed as Australia. The assurance given by Sir Bertram that he as representing Australia will be glad to give other

(From Our Correspondent)

Bombay, April 5.

BOMBAY considers that the inclusion of a provision in the new trade pact with Burma giving Indian textile goods a 7½ per cent. preference over British imports is fairly advantageous to Indian shippers. The commercial community here has not expressed views pending the publication of the new schedule of duties leviable by the Burma Government. The general principle of the arrangement is that the imports from India are to get 15 per cent. preference over non-Empire goods and 10 per cent. over Empire goods. The margin in regard to textiles is 7½ per cent. only just as the standard margin of preference available for British goods under the Ottawa pact was reduced in the case of motor vehicles imported into India. The treaty which comes into force this week is not for three years but for an indefinite period, differing therein from the Indo-Japanese trade pact. Though India is not likely to levy duties on mineral oil, rice or timber imported into India the power reserved under the treaty to levy duties on goods from Burma will be of great value in the event of the Indian rice-grower asking for tariff protection. A recent notification draws attention to the fact that goods of non-Indian origin exported from India to Burma will become liable to duty at the full rates. Provision for shipment under claim for drawback or for shipment from bonded warehouses as in the case of exports to foreign ports has been made according to the notification. Locally, comment is favourable as the agreement in conceding Burma's right to levy duties secures important advantages for India. It is generally agreed that the basis of the agreement is reciprocity, and the lesson may not be lost on Ceylon whose copra has not been sent to India in increasing quantities without disadvantage to Indian coconut-growers. The immigration issue has been dissociated from the recent trade pact though the Burma delegation at one time insisted on the necessity of an omnibus agreement.

The Mayoral election this year has been keenly fought. While Mr. Mathradas Tricumjee's record as Mayor has been impressive, the Congress majority in the City Council has not been able to win the mayoral chair for its own nominee. The election of Dr. J. A. Colaco by a majority of three votes is regarded as a defeat for the Congress party because it put up a rival to Dr. Colaco and instead of allowing a free vote backed Dr. D'Souza. The Federated Group consisting of non-Congress members backed Dr. Colaco and until the day of the poll the result was uncertain. But the absence of some Congress councillors now in prison may have influeced the result so that Dr. Colaco's victory may be due not to a split Congress vote, but to the arrests of councillors who offered Satyagraha before the election. Dr. Colaco's election proves that the convention is respected by the City Council though the contested election this year strikes a discordant note. The election of a non-Congress mayor is used for preaching about the propriety of bringing politics into Municipal affairs. But Mr. Tricumjee who spoke up strongly whenever possible for the Corporation's rights will be remembered as a dignified occupant of the chair with impeccable knowledge of the limits to the privileges of the majority party.

A sensational report from Karachi refers to the smuggling abroad of sovereigns from India. The long-standing premium on gold coin is, therefore, understandable. The seizure of small quantities has engendered the report that many crores worth of gold is going out of India though export without the permission of the Reserve Bank is prohibited. It is stated an influential ring is behind the smuggling gang, and the newspaper report says that one man alone is responsible for the illegal export of some lakhs of gold coins. It is believed that the books of bullion dealers, when examined rigourously, may reveal the true scope and size of the smuggling carried out by men who live in places so far off as Dehra Dun. New Delhi has sent down a special officer to Karachi to investigate the shady business. The Customs and the C.I.D. are working together to unravel what is believed to be a gigantic and lucrative conspiracy. It is believed that smuggling to Gulf ports has been stimulated specially in the second year of war by the high price available. There is also a story that the coin bought for Rs. 29 in India goes to Germany via Middle Eastern states. As Rs. 40 per sovereign can be had, according to the report, in the black market, the question is whether there are private hoards in Germany and the illegal business flourishes there in spite of the strongest regulations. It has been said that the cushions of secondhand cars shipped from India to Iran and Iraq contained smuggled sovereigns. Where exports have gone by country craft it is not unlikely that there was undetected smuggling, but smuggling by aircraft too has not been unheard of.

A report from Mysore states that one of the leading sponsors of the motor factory scheme has announced that the factory will get going in eighteen months time if Government gives adequate assistance. It has also been stated that while the construction is going on the assembly plant will be in operation because assembling is described as easy and it can start before the factory proper is ready. The press report says that the observations of Mr. Halsted of General Motors (India) were contradicted. Mr. Halsted went wrong in stating that the new factory would like General Motors (India) import parts and assemble them according to the statement there was no reason to believe that automobile parts could not be manufactured in India. The statement given in Bangalore to the press also emphasises that 80 per cent of the material required could be obtained locally and Bombay workshops with their facilities at present could make 75 per cent of the parts needed for motors. It has been said that when a complete factory is erected independent plants turning out standardised parts would spring up in India because of the demand for replacements both for Indian made cars and for other secondhand cars.

The Government of Bombay is said to be concerned over the high price of rice, caused in the main, by the scarcity of imports. Reports from Madras agree with those available here as to the cause of the advance in prices. It cannot be the export duty or a short crop in Burma, but the rice situation is certainly causing discontent among wage-earners here. That there is a real grievance, is admitted on all hands. The Government however, recognises that prices are not wholly amenable to control, because available supplies may be reduced by sudden diversion to areas where there is no price control. As imports provide 45 per cent of the local consumption the shipping difficulties and the resulting reduction of seaborne imports exercise a very important effect on prices. The Government of India has already been asked to take note of the underling difficulties and make ships available for the urgent transport of rice from Burma. Imports here have made repeated representations about the difficulty created by a reduction of over 50 per cent. in the normal supplies, and stocks are known to have fallen in the last few months from 50,000 tons to 10,000 tons. The current demand is estimated at 75,000 tons a month as upcountry markets require stocks to be laid down before the monsoon. Their request and analysis may be forwarded immediately to the Government of India which must have been apprised of the keen demand for rice in Madras though the stock position there is not disturbing.

A Resume of Commodity Markets

As expected, the general reaction in the several commodity markets to the reports regarding the German invasion of Yugoslavia and Greece, has been rather bearish. It is, however, encouraging to note that, with the exception of the Bombay raw cotton market, there has not been any appreciable decline in prices in other markets. It will be remembered that it was pointed out last week that the position in the raw cotton market was rather vulnerable with the difficulties in the freight situation and the correction of the technical position.

The favourable developments in the jute industry have had a rather encouraging effect on the jute market and prices at the close are only slightly lower on balance. At the end of last week, mills decided that they should work right through May and June 45 hours per week to check any undue rise in prices for jute manufactures and be prepared for any extraordinary increase in demand on account of war orders. This decision to increase production for three consecutive months had naturally a slightly depressing effect on the goods market, but renewed buying by the Bazar caused a recovery though, there has been a relapse on the latest developments in the political situation. The undertone is steady in the several sections.

With the sharp decline in the raw cotton market, wheat prices tended to decline and on Saturday, low levels were recorded. On second thoughts, however, prices have recovered as it is expected that there will be greater government buying. The absence of panic is clearly borne out by the behaviour of the bullion markets. There has been only a small rise in gold prices while the flutter in the silver market has died down completely and there has been only a sympathetic rise in prices.

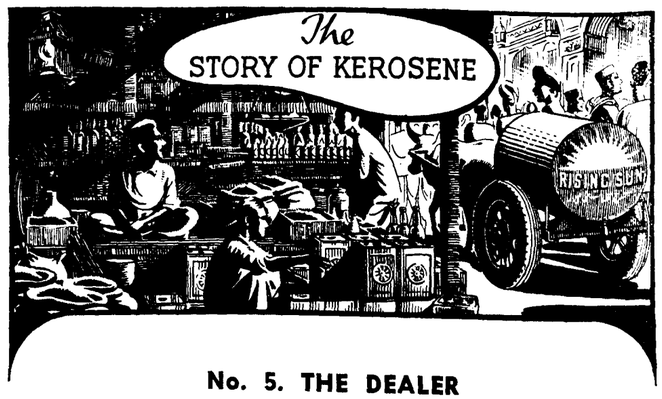
It is generally believed that with the possibility of an improvement in the freight situation and the likelihood of greater buying by Government, there will not be any appreciable decline in values.

Notifications issued in a *Gazette of Indian Extraordinary* on the evening of April 7, define the tariff position following on the Indo-Burma trade agreement.

The effect of the notifications is, first, to declare Burma ports as "foreign ports" instead of "Customs ports" as hitherto; secondly, to cancel certain exemptions including that relating to kerosene, which now becomes liable to import duty, while foreign goods imported from Burma also become liable to full Indian import duty; and, thirdly, to exempt from export duty raw jute, jute manufactures and rice exported to Burma from India.

It has already been notified that non-Indian goods re-exported from India to Burma are being made eligible with effect from April 7 for shipment under claim for drawback or for shipment from a bonded warehouse under the same conditions as apply to shipment for foreign ports.

Jute

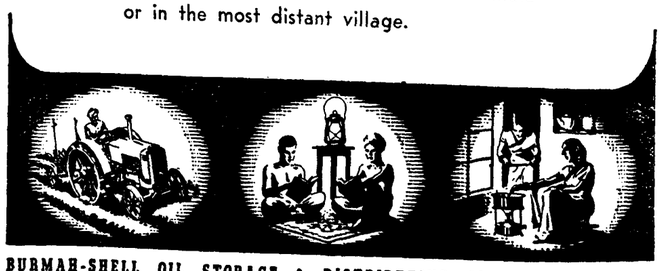


As pointed above, a firmer tendency was noticeable earlier in the week with the decision of mills to continue working throughout the next two months. The resolution passed at the special meeting of the Committee of the Indian Jute Mills Association that the bye-law fixing the minimum prices of jute and jute manufactures should be continued till June 30, 1941, was also an encouraging factor. This decision removes the uncertainty that at present prevails in the jute market regarding the position after April 15, upto which date the bye-law was previously effective. It may be noted in this connection that the extension of the bye-law does not involve any extension in the buying programme under the Delhi agreement.

Mill buying has not been satisfactory during the past few days and it is quite unlikely that with the present rate of buying, the quota under the agreement will be completed before April 15. Owing to the continued dry weather condition sowings in the jute districts have been progressing only at a slow rate.

Jute Manufactures

The hessian market has shown exceptional strength and prices of hessians have been held in spite of heavy mill selling and the latest developments in the international situation. 9 Porters ready came down to 16-1, but have subsequently improved to 16-8. There is some weakness for the forward positions but the decline in prices is not pronounced. Local stock figures at the end of March show that there has been a decrease in hessian stocks by 64 lakhs yards



(*Continued on page 687*)

No. 5. THE DEALER

To most of India's four hundred million people the strength or weakness of the monsoon is a matter of vital importance; many of the essentials of life depend upon it; the regular supply of kerosene is however never in doubt.

The Burmah-Shell system of distributing Kerosene guarantees that supplies will always be available to everyone. If a village has even one shop, Burmah-Shell Kerosene will be on sale. The past decades have brought the confidence that—happen what may—regular and ample supplies of Kerosene will be available to every Indian, no matter whether he resides in the cities of India or in the most distant village.

Jute and Jute Manufactures

(From Our Jute Correspondent)

THE principal item of information which has been given to the trade this week is the announcement that the quota period of agreed minimum rates both for loose jute and Pucca bales, which is to expire after the 15th April has been extended till the end of June. The Mills Association has also decided to work full hours for both May and June.

It has been a quiet period, which the proximity of the Easter Holidays shows no signs of disturbing. Generally dry weather conditions have prevailed upcountry but there has been some local rainfall in certain districts. The weather however shows every sign of pursuing its normal course and the incidence of storms points to more general rainfall. The only disturbing feature which is beginning to have some effect on the Jute harket is the communal tension which has shown dangerous erruptions and is causing alarm in a number of the moffusil districts particularly Dacca, Bhairab and Mymensingh. Indian Sellers have shown anxiety for their stocks and premises and in some cases have been pressing to try and liquidate their holdings in arrears where trouble is anticipated and danger from arson is apprehended. Mills have continued to show a preference for pucca bales and whilst the volume has fallen a limited business has been transacted. Reds were bought from Rs. 50 to Rs. 52 and special Firsts or free from Samla lots at Rs. 45 to Rs. 46. Ordinary firsts at Rs. 41 and Lightnings at Rs. 36. Outport Tossa was also purchased at Rs. 37. Dundee Daisee at Rs. 36 and a small lot of Dundee Lightnings was purchased at Rs. 70.

The only business for Export was small lots of N. C. Cuttings at Rs. 13 to Rs. 13-4.

Mills brought very sparingly of loose jute. Certain marks and Supervised lots have been done for District Bots. from Rs. 6 to Rs.6-2.

New Crop business of the "Lucky Day" variety has been done with Indian Mills and Balers at Rs. 7-5-3 and Rs. 5-13-3 for District and Northern Bengal, Indian Marks, Mids. and Bots.

Following a quiet opening, some early delivery covering 11 porter Hessians orders came on the market, having a temporary steadying effect. Later, the announcement of the mill's Stock figures of the end of March shewed a decrease in Hessian of 64 lacs, and in Heavy goods of 169 lacs, so the Mills Association decided on full working for May and June. As a result the market has ruled quiet; and quotations remain nominal in the absence of business.

Sales are reported in 9 porter Hessian at Rs. 15 July/Sep. and in 11 porter at Rs. 18 Oct./December, while in Heavy goods, a line is reported of Heavy Cee at Rs. 33 with Sacks at Rs. 34 for January March.

(*Continued from Page 683*)

Governments the benefit of their own experience and guidance in dealing with problems, which they have already had to face, is therefore welcome.

It is understood that the Central Advisory Council for Railways at its meeting yesterday approved of the Government's proposal to close the Morappur-Hosur and Tirupattur-Krishnagiri branches of the South Indian Railway as unremunerative. The reason for the Council's decision was that the gross earnings of these two branches, which together cover about 98 miles, have failed to cover working expenses since 1817-18. The closure is expected to result in a net annual saving of over Rs. 1 lakh. The lines, however, will not be closed without giving adequate notice to the public. Consideration of the DeSouza report was postponed to the next meeting.

HILL-BIRD.

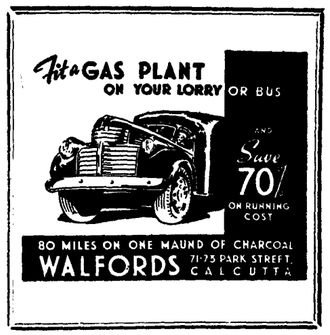
(*Continued from page 686*)

and sacking stocks by 169 lakhs yards. Hessian stocks at the end of March were 24.79 crores yards against 24.68 crores yards at the end of February. Sandbags on government account were higher at 5.11 crores yards against 4.36 crores yards. There was thus a net decline in stocks for ordinary consumption by 64 lakhs yards. Stocks of sacking cloth and bags at the end of last month were 12.55 crores yards against 14.23 crores yards at the end of the previous month. Out of the total March hessian stock, 1.81 crores yards weighing 4,018 tons represent 8 oz. 40 ins. cloth. The corresponding figures for February were 2.25 crores yards weighing 5,454 tons.

Cotton

A sharp drop in spot buying, the cancellation of shipments to Shanghai, the fears regarding the possibility of cancellation of shipments to the U. K. and the latest developments in the Balkans have been mainly responsible for the downward trend in the raw cotton market. The decline in prices is especially pronounced for Oomra and Bengal varieties, Oomra May being lower at Rs. 153 against Rs. 162-8 at the time of last writing and Broach April-May at Rs. 220 against Rs. 227.

Bullion



The bullion markets were absolutely uninteresting till Monday and a rather downward tendency was noticeable in both the gold and silver markets.

(*Continued from page 681*)

forces are gathering, from small states, which show resistance, to the great American republic which will not throw Democracy to the wolves.

It is still too early to venture on a full or final estimate of the important project with which Bombay has long been identified. The scheme for motor manufacture has long ago passed the stage of discussion: the stage of actual accomplishment is within hailing distance. If no special reference has been made here it was due to the feeling that the opinion in favour of the project had been summed up in the comments on the Government of India's decision. The most promising feature of the scheme is that the factory is to be located in the Mysore State; that doughty nurse of industrial enterprise will help the industry to establish itself firmly. Bombay correspondents have agreed on the nature of support available, but importing interests are still said to view the scheme askance. The report of an interview given by Mr. Halsted of General Motors did not refer to natural handicaps; the more, the merrier, it was said when the subject was mentioned, and compliments were showered on the efficiency and adaptability of the Indian worker. But the remarks which dealt with the achievements of assembly plants in India suggested that the Mysore factory would be another assembling place for imported parts. A statement issued from Bangalore promptly provides the necessary correction. The majority of the needed parts can be made in Bombay where munitions production, requiring great skill and precision, has been developing apace: that holds good of Bangalore too. Though U. S. factories can turn out parts more cheaply the new factory putting together its own parts will not use imported parts long. The proposed company indeed expects to get 80 per cent. of its material locally and manufacture nearly all the parts in the factory itself, and dependence on imports can only be temporary. If this point is grasped, there will be no misunderstanding as to the difference between an assembly plant and the factory which, of course, will have its own assembly plant, perhaps sooner than imagined because there is no need to wait for the completion of the factory in this case; and the co-operating foreign manufacturers will doubtless help to see that the assembling side gets going as soon as practicable.

Stock Markets to-day and to-morrow

MARKETS KEEP STEADY

THE general reaction to the developments in the Balkans during the last three days in both the commodity and stock markets has been rather unfavourable. On Monday morning there was an initial bout of selling and an all round decline in prices in the several sections on the Bombay Stock Exchange was recorded. In the Calcutta market, however, there has not been any appreciable change in the quotations and the undertone in the several sections today is definitely better.

* * *

The behaviour of the markets with the long approaching Easter holidays and the fresh complications in the war situation should be considered quite satisfactory. It is generally believed that there cannot be any big decline in prices.

* * *

The strength of the giltedged securities section and the absence of any panic in the bullion markets is fully indicative of the confidence that operators have in the ability of Britain to successfully oppose Germany. 3½ per cent. paper is not very much changed at Rs. 95-14 while terminable loans are actually higher on balance.

* * *

The improved conditions in the textile industry after September, 1940 have enabled the *Svadeshi Mills Company Limited*, to offset the decline in earnings in the earlier months of the year on account of the dull conditions in the piecegoods trade and the general strike in the mills for about a month and a half. The net profit, before providing for taxation and depreciation, for the year ended December, 1940 is Rs. 3,18,412 against 3,15,377 for 1939. The allocation to Depreciation Fund is unchanged at Rs. 1 lakh while the provision for Taxation is Rs. 5,000 against Rs. 2,000. Last year, there was a transfer of 15,000 from the Equalisation Dividend Fund. The ordinary dividend has been maintained at Rs. 7 per share.

* * *

The lower level of despatches has been mainly responsible for the decline in earnings of the *Rewa Coalfields, Limited* for the half-year ended December, 1940. Despatches during the last half-year were 134,146 tons against 166,684 tons in the previous half year and 145,993 tons in the corresponding period in 1939. It is significant that the net profit for the latter half of 1940 is higher than the profit for the corresponding period in 1939 in spite of the lower level of despatches. In anticipation of the excess surcharge on railway freight which was introduced in November, 1940 consumers laid in heavy stocks and in consequence there was a falling off in the demand during November and December.

* * *

The net profit, before providing for taxation, is Rs. 2,07,179 against Rs. 2,44,297 for the previous half-year. The amount set aside to depreciation is Rs. 51,026 (Rs. 52,468) while the provision for taxation is Rs. 65,379 (Rs. 60,000). There was an additional provision of Rs. 10,000 against depreciation of government securities and Rs. 15,000 to general reserve in the half-year ended June, 1940. The dividend has been maintained at 15 per cent. per annum. The amount carried forward is Rs. 16,856 against Rs. 21,951 brought in.

* * *

Thanks to higher dividends on the Corporation's investments, it has been possible for the *New India Corporation Limited* to report a higher level of earnings for the year ended December, 1940.

The net profit, before providing for taxation, is Rs. 1,22,545 against Rs. 1,03,050 for 1939. The allocation to General Reserve is Rs. 50,000 against Rs. 35,000 while the provision for taxation is Rs. 10,000 against Rs. 5,000. The dividend has been maintained at Rs. 2 per share.

Due to the war, share values have depreciated considerably, especially investments in sterling companies. The market value of investments was Rs. 24,04,524 as on December 31, 1940 against the book value of Rs. 25,07,072. There is a general reserve of 1,90,000.

Regarding the Company's investments, it is satisfactory to note that a greater portion of the available funds has been utilised, but it is difficult to understand why the directors have chosen to increase investments in sterling securities. Investments in ordinary shares show an increase from 69.84 per cent. to 87.37 per cent. and the bulk of the increase has taken place in investments in jute shares which are higher at 33.03 per cent against 17.72 per cent. One would have expected that with the possibility of a further increase in taxation the directors would have picked up an useful parcel of tax-free preference shares. There is actually a decline in investments in preference shares from 11.28 per cent. to 7.39 per cent.

* * *

A reduction in working expenses, in spite of war conditions, on account of a larger crop, has enabled the *Teesta Valley Tea Company, Limited* to maintain earnings for the year 1940 at the level of the previous year, even though there has been a decline in the average price realised from 11.48 annas to 11.43 annas per lb. The net profit, after providing for taxation, is Rs. 81,489 (Rs. 73,779). There is an allocation of Rs. 20,000 (Rs. 15,000) to General Reserve. The dividend has been maintained at 17½ per cent.

* * *

A higher average sale price, a further reduction in working expenses and a larger crop have been responsible for the rise in earnings of the *New Chumta Tea Company Limited* for the year ended December, 1940. The estate made a crop of 283,373 lbs. against 211,242 lbs. for 1939. The Company disposed of the export quota alloted under the Tea Control Act.

* * *

The net profit is Rs. 65,079 against Rs. 30,000 for 1939. There is a transfer of Rs. 20,000 (Rs. 10,000) to General Reserve. The final dividend of 20 per cent., makes with the interim dividend of 10 per cent., 30 per cent. for the whole year against 20 per cent for 1939. The amount carried forward is substantially higher at Rs. 25,193 against Rs. 10,114 brought in.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 8.

THE spread of the war into the Balkans, as expected, has had a slightly discouraging influence but there has not been any appreciable decline in prices. With the approach of the long Easter holidays and the uncertainty regarding the war situation, operators are inclined to adopt a cautious attitude. Owing to the generally bearish sentiment on the Calcutta Stock Exchange it was believed that a greater decline in prices would be recorded but with the existence of a large oversold position bears have not been aggressive and there has been only a precautionary marking down in values. The giltedged securities section has been very steady and 3½ per cent Paper is only a shade easier at Rs. 95-12. Among terminable loans, 3 per cent 1963/65 were Rs. 95-3, 3 per cent 1951-64 Rs. 99-10 and 4 per cent 1960/70 Rs. 109-2.

Bank shares have been steady with *Imperial Bank* fully paids at Rs. 1,550, contributories at Rs. 385 and *Central Bank* at Rs 44-4. Coal shares have been uninteresting with *Bengal* at Rs. 350, *Dhemo Main* at Rs. 12-12 ex-dividend and *West Jamuria* at Rs. 30 ex-dividend.

Jute shares have been quietly steady with *Howrah* at Rs. 51-4, *Adamjee* at Rs. 21-10, *Bally* at Rs. 225, *Kamarhatty* at Rs. 460 and *Nuddea* at Rs. 58.

In the Engineering section, *Indian Iron* and *Steel Corporation* came down to Rs. 31-7 and Rs. 18-8 respectively on some selling. The quotations are steady at the decline. *Britannia Engineering* were Rs 10-12, *Hukumchand Electric Steel* ordinaries Rs. 11-2 and deferreds Rs. 3-6. *Kumardhubi Engineering* were 4-4 and *National Iron and Steel* Rs. 8-9.

In the miscellaneous section, *Dunlop Rubber* are higher at Rs. 39-13 ex-dividend. and *Bararee Coke* at Rs. 21-10. *B. I. Corporation* were Rs. 4-5 ex-dividend, *Indian Wood Products* Rs. 27-8 and *British Burma Petroleum* Rs. 3-10. Among Paper shares, *Titaghur Paper* were Rs. 17-2, *India Paper Pulp* Rs. 136 and *Orient Paper* Rs. 12. The further rise in quotation for *Orient Paper* is significant. The decision of the British Government to increase the rate of income-tax from 8s. 6d. to 10s. in the £ should unfavourably affect sterling companies in India.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 7.

The local share market, after opening firm, developed a sagging tendency on nervous unloading following the news of the German invasion on Yugoslavia and Greece. All scrips suffered a heavy setback. Sentiment was bearish partly by the forthcoming Easter holidays and partly by the contemplated changes in the rules and regulations of the Stock Exchange in connection with which a meeting was held by the authorities on Thursday last week. The members of the Stock Exchange have agreed to the introduction of margin system with a view to avoiding crises generally caused by wide fluctuations in prices. Under the scheme, which should be in force for only one year, the authorities of the Stock Exchange have given the right to order a supplementary settlement of accounts whenever the share values decline by 10 per cent below the *budla* rates fixed by the previous settlement.

The President of the Stock Exchange informed the members that the above scheme would be brought into force only after the Government of Bombay gave their approval to it. He also added that it would be then possible to withdraw the existing restrictions on forward trading.

The securities market was comparatively dull, 3½ per cent Paper closing at Rs. 95-14. Other issues were quoted at last week's levels. Mill shares showed a downward tendency in sympathy with lower cotton rates.

(*Half-yearly meeting, 18th April, 1941 at 12 noon*).

Audited accounts for the half-year ended 31st December, 1940 :—

	Rs.	A.	P.
The balance available for distribution after the inclusion of the amount brought forward from previous half-year is	10,933	6	0
Out of which the directors recommend the payment of a Dividend on the Preference Shares at the rate of 7% per annum, free of Income Tax, absorbing	10,500	0	0
Leaving to be carried forward	433	6	0

Trading conditions.—During the half-year there was an improvement in trade, but prices were unremunerative.

Since the close of the year, however, there has been a general improvement in the Industry and the outlook is rather better.

In December the Supply Department of the Government of India took over the entire Net Plant Production.

The managing agents waived half of their remuneration for the period under review.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised, Issued and Subscribed Capital—Rs. 12,00,000 in 90,000 Ordy. of Rs. 10 and 3,000 7 per cent Cum. Pref. of Rs. 100 each, both fully paid up. Debenture Capital—Rs. 4,00,000 in 4½ per cent taxable bonds of Rs. 1,000 each, repayable at par on 15th November, 1956.

Synopsis of the balance sheet as at 31st December, 1940:—

(*Annual meeting, 16th April, 1941 at 12 noon*).

Auditer accounts for the year ended 31st December, 1940 :—

The gross profit for the year is Rs. 86,456-15-7 and after providing for the reserves shown, the net profit is Rs. 81,489-1-1. An interim dividend of 5 per cent, declared payable on the 16th December, 1940, absorbed Rs. 16,000, and there remains a final balance on the account of Rs. 98,049-15-3, which with the shareholders' approval the directors propose to deal with as follows:—

	Rs.	A.	P.
Pay a Final Dividend of 12½ (making 17½ per cent for the year)	40,000	0	0
Transfer to General Reserve (bringing this up to Rs. 2,50,000)	20,000	0	0
Carry forward to 1941	38,049	15	3
Total ...	98,049	15	3

Estimates for 1941.—Have been based on a crop of 4,000 maunds at a total cost of Rs. 1,62,514.

Secretaries.—Messrs. Davenport & Co., Ld.

Authorised Capital—Rs. 3,50,000 in 35,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 3,20,000 in 32,000 shares, fully paid up.

Synopsis of the balance sheet as at 31st December, 1940:—

Liabilities		Rs.	Assets		Rs.
Capital paid up	...	3,20,000	Fixed Capital Expenditure	...	3,20,000
Reserves ...	...	3,16,361	Stores and Supplies	...	34,043

Total	...	7,27,624	Total	...	7,27,624
			Total Liquid Assets	...	4,07,624

NEW INDIA INVESTMENT CORPORATION LIMITED

Audited accounts for the year ended 31st December, 1940 :—

After adding Rs. 6,293-10-7 brought forward from the last year the accounts show a credit balance of Rs. 1,28,838-10-7, which the directors propose to deal with as follows:—

	Rs.	A.	P.
To pay a dividend on the Ordinary shares at Rs. 2 per share	62,176	0	0
To transfer to General Reserve	50,000	0	0
To transfer to Reserve for Taxation	10,000	0	0
To carry forward	6,662	10	7
Total ...	1,28,838	10	7

While revenue profits show a satisfactory improvement on those of last year, due to the war, share values have depreciated considerably, especially, investments in sterling companies.

Managing Agents.—Messrs. Ramdutt Ramkissendass.

Synopsis of the balance sheet as at 31st December, 1940:—

Liabilities		Rs.	Assets		Rs.
Capital paid up	...	23,32,100	Furniture and Fixtures		2,204
Reserves ...	...	2,07,891	Outstandings	...	3,75,238
Current debts	...	3,73,342	Investments	...	25,14,472
Carry forward	...	6,663	Cash balances	...	27,582
Total	...	29,19,496	Total	...	29,19,496
			Total Liquid Assets	...	29,17,292

FORTHCOMING MEETINGS

Swadeshi Cotton Mills Co., Ld.—Meeting, 14th April, 1941 at 3 p.m. at Cawnpore. *Dividend proposed 50 per cent, payable on or after the 14th April, 1941.*

Century Spg. and Mfg. Co., Ltd.—12 per cent, for year ended December, 1940, payable on or after 15th April, 1941.

Central India Spg., Weaving and Manufacturing Co., Ld.—4 per cent, interim for year ended 30th June, 1941, payable on or after 12th May, 1941.

Central Kurkend Coal Co., Ld.—5 per cent, for half-year ended 31st December, 1940, payable on or after 22nd April, 1941.

(Continued from page 690)

Bombay Dyeing closed at Rs. 1,105 as against Rs. 1,148-12 on last Thursday. *Century* were at Rs. 418-8 ; *New Great* at Rs. 442 and *Swadeshi* at Rs. 298. The Hydro-electric section was characterised by fairly steady conditions. Steel shares met with nervous unloading and prices gradually declined, the ordinaries closing at Rs. 383 and the deferreds at Rs. 1,967-8. Bank shares were steady. In the miscellaneous section, *Associated Cement* were slightly lower at Rs. 142-8. *Bombay Burma Trading* closed at Rs. 547-8 as against Rs. 571-4 in the previous week. *Belapur Sugar* were lower at Rs. 216 ; *Scindia Steam* at Rs. 20-7 ; *Tata Oil* at Rs. 42-14 ; *Indian Iron* at Rs. 31-7 ; *Steel Corporation* at Rs. 18-9 and *Premier Construction* at Rs. 88. *Wimco* remained unchanged at Rs. 204.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, April 7.

There was a slackening of activity in the local market as usual before the Easter holidays. Prices showed slight changes.

Giltedged securities ruled very steady, 3½ per cent Paper being done at Rs. 95-13. There was a keen demand for State Loans with no sellers in evidence. Among Provincial Loans, 3 per cent 1952 *Madras* changed hands at Rs. 98-2.

Among Mill shares, *Buckingham and Carnatic* met with some sellers, the price closing slightly easier at Rs. 255. *Mettur Industries* were in good demand, being done higher at Rs. 144. In the Utilities section, *South Madras Electric* ordinaries ruled steady at Rs. 13-2. *Berhampur Electric* came to business at Rs. 10-8. Rubber shares maintained their previous levels. *Cochin Malabar* continued to be offered in small parcels at Rs. 6-12. *Coorg* were crossed at Rs. 30. Among Tea shares, *Periakaramalai* met with some demand at Rs. 17-10. Sugar shares were firm, particularly *Mysore Sugar*, being done at Rs. 52.

WORLD OF INDIAN FINANCE

WHILE, in the short loan market, demand is stilll poor, banks are showing definitely more interest in term money. Even as regards short credits, they are more usable in the currrent week than for a good many weeks past. Money rates as such are unchanged; but market sentiment seems to have had undergone a notable change. It has been suggested in some quarters that the tail-end of the busy season might experience a short spell of higher money rates. The main factor which has induced and fostered this sentiment is the rapid and rather headlong decline in the cash balances maintained by scheduled banks with the Reserve Bank. At the end of February, banks' balances with the central banking institution stood at Rs. 45.27 crores. In the week ended March 7, these had declined to Rs. 42.80 crores. Another big drop in the next week brought the figure down to Rs. 39.47 crores. Between the middle of March and April 11, the decline is from Rs. 39.47 crores to 24.64 crores. Cash resources in banking circles have, thus, been reduced by nearly Rs. 16 crores in less than a month. Such a heavy shrinkage in cash has occured during a period when conditions in the money market have been definitely quietish, when there has been no evidence of any special demand for finance from either the commodity markets or the stock exchanges. There has been hardly any appreciable rise in prices. Stock exchange activity has continued to be on a subdued scale. Nor have sales of Treasury Bill by the tap and by tender exceeded Treasury Bill maturities to such an extent as to cause any considerable drain from banking circles.

It is true that loans and advances made by banks show a rise during this week. At the time of writing, we have not received the statement, as on April 11, of the consolidated position of scheduled banks. We have, therefore, to base our calculations on the statement of April 4. Between March 14 and April 4, advances made by scheduled banks in India and Burma have risen from Rs. 118.57 crores to Rs. 127.76 crores. The increase is, thus, of the order of Rs. 9 crores. What are the various factors which have contributed to a sudden manifestation of trade demand for finance, is difficult to understand. We are, thus, left with a development which has been taking place quietly but with a strangely impressive cumulative effect. If such demand continues, the depletion of cash of scheduled banks may reach a point which cannot help inspiring a dear money sentiment in the minds of bankers themselves.

Before we discuss the full implications of this position, there is a significant link between this development and the Imperial Bank returns, to which we should make reference. Between March 14 and April 11, Imperial Bank's cash has shrunk from Rs. 18.16 crores to Rs. 10.47 crores. That is, the Imperial Bank has reduced its cash balance by nearly Rs. 8 crores. As, however, we have taken the figures for scheduled banks as on March 14 and April 4, it will be more useful if we study the Imperial Bank returns also of these two dates. Between March 14 and April 4, Imperial Bank's cash balance has dropper from Rs. 18.46 crores to Rs. 10.33 crores. The decline is Rs. 8.23 crores. This is largely accounted for by a rise in investments from Rs. 51.05 crores to Rs. 55.52 crores and in advances from Rs. 36.64 crores to Rs. 41.29 crores. Investments are, thus, higher by nearly Rs. 4½ crores. It is clear that, in these three weeks, the Imperial Bank has been lending powerful support to sales of Treasury Bills. Partly because of this and partly because of an increase in advances, the cash balance of the Imperial Bank has come down to roundabout Rs. 10½ crores. It is the biggest single contributory factor to the sharp fall in the cash balances maintained by scheduled banks with the Reserve Bank.

On our interpretation of the situation, it is the Imperial Bank which has recorded the biggest fall in cash while other banks must be showing only a moderate shrinkage in cash resources. This possibly explains why so big a drop in the total cash resources of banks has not been accompanied by any hardening in money rates. It cannot, however, be overlooked that the level that has now been reached is so low as to exercise a profound effect on money market sentiment. It may well be that devices for maintaining the present cash position will be found by the Imperial Bank and/or other scheduled banks rediscounting some part of their Treasury Bills with the Reserve Bank. It appears that already some such rediscounting has taken place. On March 28, Treasury Bills held in the banking department of the Reserve Bank were only Rs. 3 lakhs. On April 4, the figure had jumped to Rs. 97.90 lakhs. Treasury Bills as on April 11 were Rs. 94.90 lakhs. We shall not be surprised to see this figure showing further rises.

While the cash balances held by scheduled banks with the Reserve Bank are less than Rs. Rs. 25 crores, it is difficult to see how the Reserve Bank will be able to secure any large funds from sales of Treasury Bills through the tap. On April 15, the amount on offer of Treasury Bills was Rs. 1 crore. Tenders amounted to Rs. 1 2/3 crores. The average discount rate was annas 13 and pies 8 per cent per annum as compared with annas 13 and pies 10 in the previous week. Sale of intermediate Treasury Bills accounted for only Rs. 5¼ lakhs. While it is true that such poor sales are partly explained by the banks being closed for the Easter holidays, it may be stressed that, apart from helpful interest shown by special quarters when required to do so, general interest on the part of banks in Treasury Bills cannot be strengthened to the extent of copious purchases of tap bills until a reversal of trend in regard to bank's cash balances takes place and continues to be in evidence for a week or two. Meantime, the question may again be posed whether it is advisable or at all necessary to keep Treasury Bills on sale on tap. Treasury Bills are a market instrument which has to be used with an emphasis on resiliency and elasticity. The guiding principle is not only the requirements of the Treasury, but the temper and attitude of banks. So far as the Treasury's requirements are concerned, there are now available other sources for the smooth functioning of ways and means. But there can be no doubt about the present attitude and temper in banking circles towards Treasury Bills. The present tem-

(Continued on page 713)

Finance Abroad

Two new financial records have been created in the London money market. There has been a further increase in treasury bills borrowings to £75 millions. Note circulation is at a new high record level of £618.7 millions. It was pointed out in these columns two weeks back that there would be further need for expansion in the Treasury's floating debt to meet maturities. According to the new system introduced in July last, there must be heavier maturities from now onwards.

With rising defence expenditure and heavier maturities there has naturally been an increase in the weekly offerings. It is, however, satisfactory to note that last week's offerings of £70 million have been taken up without any appreciable increase in the average rate, being £1-0-2.72d. against £1-0-2.46d. in the previous week.

While on this question, attention was drawn to the fact that the repatriation of the sterling debt should have a relieving effect on U.K.'s finances, the amount of sterling debt repratriated during the last three weeks being about Rs. 90 crores or £66⅔ millions, but as the foreign balances of the Reserve Bank were mostly utilised in short-term bills in the London market the effect on the discount market was bound to be unfavourable.

The rise in note circulation to the new peak level of £618.7 millions is to be mainly attributed to the demand for holiday funds. However, with banks working throughout Good Friday the increase to above the level for last Christmas is not quite explainable except it be a move on the part of the authorities to maintain cheap money conditions.

The return of the Bank of England for the week ended April 11, 1941 indicates that there has been a sharp decline in the ratio of reserve to liabilities from 9.25 per cent. to 6.80 per cent. Public deposits are lower at £18.7 millions against £22.2 millions, while other deposits are higher at £163.4 million against £156.7 million. There is an increase both in government securities and other securities by £7.2 millions.

Increasing aid under the Lease and Lend Act is to be given to countries which are the victim of aggression. General Sikorski is at present in Washington conducting negotiations with President Roosevelt for aid under the Lease and Lend Act. It was only sometime back that it was announced that the Polish units that are now being trained in Canada were to be equipped with American money. Mr. Mackenzie King is now in Washington to see President for similar help. It is pointed that Canadian dollar resources are expected to run out in four to six months time and that Canada also should have recourse to American aid.

The promise of help to the new Yugoslavi Government by release of foreign assets of the former government, unfortunately, has been of no avail as the latest reports indicate that Yugoslavia has surrendered. Possibly, the Yugoslav army in Greece will be able to take advantage of the help.

The increase in aid under the Lease and Lend programme and the rise in U.S. defence expenditure have naturally in flated the figures of the U.S. budget and borrowing programme. To prevent any undue inflationary effects it is proposed to raise $350 millions by way of taxation. This increase in taxation has been found necessary to achieve the proportion of income from taxation to total expenditure of 66⅔ per cent. The total of the budget for the fiscal year 1941-42 is estimated at $19,000 millions. Tax revenue for 1940-41 is estimated at $9,000 million. With the expected yield from new taxation of $3,500 million, a total income of $12,000 millions would be achieved. Apart from these new taxes, the Treasury will have to borrow $500 million a month to meet the expenditure on defence and the Lease and Lend programme.

Some weeks back it was given out that the U.S. Treasury proposed to come in to the market as from the beginning of the next month. The lists will be so arranged that subscriptions from 10 cents to $1,000 will be accepted.

Meanwhile, Britain is trying her best to utilise her dollar resources in the United States. The United States is rendering all possible aid. The first instance of aid by the Reconstruction Finance Corporation in the liquidation of British investments is provided by the loan of $45 million to Messrs. Brown and Williamson, a tobacco corporation. After using $15 million to liquidate domestic assets the remainer will be handed over to the parent company, the British American Tobacco Company, which in turn will be paid to the British Governmeit. The net proceeds of the loan were estimated to be what the net available sum would be to the British owners if these investments in the United States were sold outright or the companies liquidated. The British American Tobacco Company retains its ownership of all Brown and Williamson stock which is being pledged with the R.F.C. as security. The loan will be repaid from the earnings of Messrs. Brown and Williamson. It is a four per cent. ten-year loan with an annual amortisation of not less than $2,000,000 for the first year and $3,000,000 thereafter.

Australian Industries

In the year 1939-40 good progress was made in industrialisation by the Dominions, Australia included. The shortage of imports stimulated the industries and import control gave a further stimulus. Assistance was derived in Australia from the previous stocks of imported goods and the arms programme provided a remarkable fillip to industry in general. In New South Wales especially industrial activity was marked and retail sales improved. Unemployment was reduced to a minimum and increased use of power machinery as also dilution of labour was noticed in Australia. An unknown but large amount of investment in Australian industries by oversea interests is also referred to in the monthly letter of the National Bank of Australasia. The balance of payments showed improvement owing to the curtailment of expenditure abroad by tourists and others, and national expenditure stimulated both production and consumption because the middle and upper classes displayed unwillingness to reduce expenditure. It is believed the Commonwealth Budget took about 30 per cent of the national income and if State Budgets are included Governmental expenditure must have taken about 50 per cent of the nation's income.

Buoyant conditions in Australian industries were remarked until recently though the outlook is by no means clear as export trade must suffer owing to the shipping difficulty and the extension of hostilities and agriculture will be handicapped in many ways. Defence expenditure is expected to increase but consumption and savings are expected to show the appropriate response. The agricultural situation in most States was decidedly encouraging but the wool clip valued in February at £39.29 millions is not expected to meet with the same demand as last year. Sales have however exceeded the million bale mark in Sydney in spite of the drought. The fall in wool exports caused by the war has been offset to some extent by the rapid growth of woollen manufacture. Exports of woollen goods have improved and the extension of rationing and control in Britain must, therefore, be of advantage to Australian industry. Higher prices have been fixed for home-grown wool in February by the Government in order to produce something like equality between the prices paid by the U.K. government and the local manufacturers. But the increase of 25 per cent in the cost of wool is restricted by conditions as to goods for consumption in Australia and to goods delivered for export on Empire government military account. It is believed that the wollen textile industry, benefitting greatly through a rise in home demand has a good chance of building up export trade connections. The industry in Britain can hardly work for export to markets other than the U. S. A. and the Australian industry has also the advantage of cheaper raw material.

India's External Reserves

It is now obvious that payments still continue to be made in respect of the redemption of the dated India sterling stocks. In the Reserve Bank returns for the week ended March 28, the first effect of these transactions was disclosed; and the general conclusion that we drew at the time was that payments in sterling were made on the notified date for about two-thirds of the total amount involved. The subsequent returns of the Bank have continued to reveal significant changes; and it will be useful to study, in the light of the last three returns, the progress so far achieved.

On March 21, sterling securities held in the issue department stood at Rs. 140.50 crores. Since then, there have been both addition and withdrawal in respect of these securities. But, so far as the purpose of our present study is concerned, it will be sufficient to take note of the net difference between sterling securities as they stood on March 21, and sterling securities as on April 11. The figure on the latter date was Rs. 109.76 crores. That is to say, the net withdrawal of sterling securities from the issue department in connection with the sterling debt redemption operations is Rs. 30.74 crores.

In addition, sterling securities have also been utilised from the banking department. On March 21, foreign balances in the banking department amounted to Rs. 78.35 crores. By April 11, they have declined to Rs. 28.35 crores. It may, therefore, be inferred that Rs. 50 crores from the foreign balances in the banking department have been diverted towards payment to holders of the sterling stocks. In this connection, we must not forget that, between March 21 and April 11, the Reserve Bank must have had considerable sterling receipts as a matter of ordinary accruals, especially as the closing days of March might have accounted for particularly heavy payments from the British Government to the Indian Treasury. What these routine accruals would be, is left to guesswork in the absence of any information furnished by the authorities. With reference to our present calculations, we have assumed that the Reserve Bank acquired sterling assets for Rs. 9.26 crores in the last three weeks.

We are now in a position to estimate the total sterling securities which the Reserve Bank has handed over to the Central Government for payment to holders of the redeemed loans. Sterling made available to the Government is, therefore, made up of Rs. 30.7 crores from the issue department; Rs. 50 crores from the banking department; and Rs. 9.26 crores being the Reserve Bank's acquisition of sterling in the week under review; or a total of Rs. 90 crores. This is equivalent to £67½ millions. This compares with £90 millions which was said to be the total amount involved in the redemption of the sterling stocks. The balance to be accounted for is, on this calculation, £22½ millions. A good part of this is no doubt accounted for by Indian holders of the sterling stocks in whose case payment was to be made in the form of rupee counterparts. It is also not unlikely that some of the British holders of the sterling stocks might have elected to accept payment in rupee counterparts. Taking all these factors into account, we are inclined to think that the amount of sterling stocks, still remaining to be repaid in sterling, must be on the small side.

The next question which must engage our attention is the ways and means problem in India arising from these payments in London. As we have pointed out, payments in sterling have been made in respect of stocks for a total of £67½ millions or Rs. 90 crores. The ways by which the Indian end of the problem has been tackled cannot be understood in their entirety as the published figures tell only a partial story.

In the first place, recourse has been had to *ad hoc* Government securities. Government of India rupee securities held in the issue department were Rs. 49.62 crores on March 21; and they have risen to Rs. 90.36 crores by April 11. It follows, then, that *ad hoc* Government securities, presumably in the form of rupee counterparts of redeemed sterling loans, have been created for Rs. 40.74 crores. In the second place, ways and means advances have been taken from the Reserve Bank. The original advance was Rs. 16 crores. On April 11, ways and means advance stood at Rs. 12.10 crores. In the third place, the cash balances of the Central Government with the Reserve Bank have been pressed into service. These balances, which stood at Rs. 27.30 crores on March 21, were only Rs. 6.98 crores on April 11. The decline in this period is, therefore, Rs. 20.82 crores. To sum up, ways and means operations in India as an offshoot of the payments in London are: Rs. 40.74 crores being the *ad hoc* Government securities newly created; Rs. 12.10 crores being the ways and means advance; and Rs. 20.32 crores being the reduction in cash balances; or a total of Rs. 73.16 crores. There is, thus, an unaccounted balance of Rs. 16.84 crores. It is possible that a portion of this is covered by the Treasury Bills sales of the last three weeks and by the receipts from the British Government.

As a result of these operations, there has been a considerable increase in the active note circulation. Active note circulation in India has risen from Rs. 238.99 crores on March 21 to Rs. 251.03 crores on April 11. The position in regard to note circulation in India is interesting as the latest figure is the record for India, coinciding with the achievement of a similar record in Britain.

In considering note circulation in India, it is always necessary to remember that rupee coin in circulation must be taken into account. From this point of view, the present occasion may be utilised for studying the persistent phenomenon of note expansion since the beginning of the war. On September 1, 1939, active note circulation in India was Rs. 172.37 crores; and that in Burma was Rs. 9.77 crores. Taking the two countries together, total active circulation of paper currency was, therefore, Rs. 182.14 crores at the beginning of the war. On April 11, 1941, active note circulation in India had risen to Rs. 251.03 crores and in Burma to Rs. 17.94 crores. The total for India and Burma as on April 11 was, thus, Rs. 268.97 crores. Active paper note circulation has, therefore, expanded by Rs. 86.88 crores between September 1, 1939 and April 11, 1941.

We have now to study the position as regards "silver notes." Rupee coin held in the issue department on

D. F. SANDERS, *General Manager.*

September 1, 1939 was Rs. 75.87 crores; the figure on April 11, 1941 is Rs. 34.98 crores. The conclusion to be drawn from this is that rupee coin of the value of Rs. 40.89 crores has gone from currency into the hands of the public. We must also remember that, during this period, the Government delivered to the Reserve Bank one rupee notes of the value of Rs. 12 crores. Under a Notification issued at the time one rupee notes were put into circulation one rupee notes to be shown under rupee coin. That is to say, the actual amount of silver coin (that is to say, inclusive of one rupee notes) which has passed into circulation from the issue department of the Reserve Bank is Rs. 40.89 crores *plus* Rs. 12 crores, or Rs. 52.89 crores in all.

Active paper note circulation has thus expanded by Rs. 86.83 crores; and active silver note circulation by Rs. 52.89 crores. Total expansion in circulation since the beginning of the war is, therefore, Rs. 139.72 crores.

We may conclude this study by a comparison of our external reserve at the beginning of the war with our present external reserve after these large sterling payments have been made. On September 1, the Reserve Bank held sterling securities for Rs. 69.58 crores, made up of Rs. 59.50 crores in the issue department and Rs. 10.08 crores in the banking department. On April 11, 1941, sterling securities in the issue department were Rs. 109.76 crores; and, in the banking department, Rs. 28.35 crores. Total sterling securities held by the Reserve Bank on April 11 were, therefore, Rs. 138.11 crores. That is to say, the Reserve Bank has made colossal payments in sterling in connection with the sterling debt redemption scheme, and, at the same time, strengthened its sterling assets by no less than Rs. 68.53 crores.

The external reserve is, as defined in the Reserve Bank Act, composed of gold and sterling securities held in the issue department. It has also to be added that gold, under the Act, is valued at the price prevalent before the delinking of the rupee from gold in September 1931. Interpreting external reserve in a wider sense, that is, as including sterling securities not only in the issue department but also in the banking department, and taking into account the value of gold stocks at current market rates, we arrive at the following position: Rs. 138.11 crores being the total of foreign balances in the banking department and sterling securities in the issue department; Rs. 44.41 crores being the book value of gold held in the issue department; and (approximately) Rs. 40 crores being the inner reserve on the gold stocks. The total is Rs. 222.52 crores.

The total note circulation on April 11 was Rs. 279.51 crores. In relation to this figure, gold and sterling assets amounting to Rs. 222.52 crores give a proportion of 78.57 per cent. for our external reserve. This is, indeed, as strong a position for a currency as should satisfy the strictest financial canons.

Reciprocity in Trade Pact with Burma

More is now known about the Burma tariffs which came into effect recently. The Indian tariff has now been replaced by another of Burma's own choice. The notifications prescribing the collection of duties have naturally preceded the publication of the trade agreement signed by the delegates of Burma and India. The previous notifications authorising the levy of duties on exports and re-exports from India entering Burma and providing also for the levy of full rates on non-Burmese goods indicated that the period of free trade provided for by the Order of 1397 had come to an end.

Reciprocal preferences are exchanged under the new agreement and the lower duties levied by Burma are not the only concession, secured under the treaty whose provisions merit attention. The existence of a duty-free list attests the care taken to procure advantages for India, while the preservation of a right of entry at guaranteed maximum rates of duty is not a privilege to be ignored by Indian exporters because it means that the rates on non-Indian goods must be fairly high. Should Burma keep down the level of tariffs the 10 per cent. or 15 per cent. margin of preference will enable Indian exports to get in either free or after the payment of nominal rates of customs duties. While the agreement introduces the principle of preference once again in a bilateral pact, the advantages secured to India at a time, when Burma is set on increasing her customs revenue, are not unsubstantial. The promise not to levy a duty on Burma rice is given in return for an assurance that export duties in Burma would not be increased in number or range since the export duties would have to be paid by the Indian consumer and not the Burmese producer. And Burma rice, if it is to be taxed in the future, can only be taxed at a lower rate than other imported foreign rice so that Burma too gets an advantage in the Indian market superior to that obtained by the Dominions in the British market because the principle of protecting homegrown wheat had been accepted in 1932 by the National Government.

The list of commodities to which free entry is assured is as follows: canned fish, fruit juices, fruits and vegetables (canned or bottled) lead pencils, paper, printing and writing paper, coir fibre, coir yarn, mats and matting, glass and glassware, globes and chimneys for lamps and lanterns, glass bangles, beads and false pearls, certain electrical instruments and instruments, apparatus and appliances other than electrical. The duty-free list contains several manufactures in addition to foodstuffs which have to be untaxed if the Burmese consumer is not to suffer. An important omission in the list is tea which is now liable to a duty of two annas per lb. There is, of course the principle of preference, but the question may arise whether Indian tea only recently subject to a tariff can compete with the cheaper product from the Dutch Indies.

The list of articles subject to a maximum of five per cent. is made up of potatoes and onions, coconuts, certain chemicals, drugs and medecines, magnesium chloride, toilet requisites, paints, woollen yarn, blankets, rugs and hosiery. The list of articles subject to a 10 per cent. maximum is made up of coffee, certain spices, cigars, toilet soap woollen carpets and boots and shoes. The following goods imported into Burma will be liable to duty at special rates; betel nuts att 20 per cent., ale and beer at the current rate of excise duty, drugs and medicines containing spirit at double the rate of excise duty in force; tobacco unmanufactured at the rate of one anna per lb.; film (exposed) at 15 per cent. with a separate tariff value for Indian films); silk fabrics at 15 per cent. as also rayon mixtures, cotton knitted fabric and electric bulbs. The rates leviable on cotton goods, iron and steel etc., are governed by other rules as shown by the summary of the agreement,.

The list of goods from Burma for which free entry will be accorded by India is long. It contains many important raw materials of which Burma is the most convenient source of supply; and the metals particularly are essential for India's war effort. Dyeing and tanning substances, gums, resins and lac, wood and timber, furniture and cabinet works, tea chests and parts thereof, raw cotton, iron and steel both old and unused, enamelled ironware, copper manufactures, copper, wrought and scap, German silver including nickel silver, aluminium, unwrought ingots, blocks and bars of aluminium, lead (wrought) lead sheet for tea chests, zinc or spelter (wrought manufactured) tin block, brass or bronze and similar alloys and manufactures thereof; all metals other than iron and steel.

The special rates obtaining for specified imports are in the nature of exchanges for similar privileges. Potatoes and onions at 5 per cent., coffee at 10 per cent., spices at 10 per cent., betelnuts at 20 per cent., cigars at 10 per cent. and unmanufactured tobacco at one anna per lb. are to be taxed by India at the rates in force at Burmese ports. Just as Burma gets extra revenue, India, too, should obtain additional customs revenue out of the new tariffs as also from the surcharge leviable on kerosene

from April 7. Few have stressed the point, but it is obvious that the miscellaneous imports from Burma helped by preference will contribute a not inconsiderable revenue to India's customs.

The taxation of cotton goods and kerosene is governed by other rules. The trade agreement provides for a margin of preference of 7½ per cent. only as against a general margin of 10 per cent. over other similar goods entitled to preferential treatment; the Burma Government pledges itself not to fix the duty on such goods at more than 10 per cent. It is obvious that the tariff on British and Empire goods will thus be 17½ per cent. at least and in case it is lowered, Indian goods will be subject to reduced duties. The tariff on Japanese goods will, probably, be left unaltered by the agreement while the duties levied on British goods will essentially be similar to those obtaining in India and presumably without the quota benefits provided under the Indo-British trade agreement. Indian textile manufacturers should certainly appreciate the concessions made by Burma which intends to levy a purely revenue duty. Further, the quota of Japanese textile goods imported into Burma will be limited to 42 million square yards as fixed under the cotton trade protocol negotiated in 1937. It is justly pointed out that the position of Indian textiles is strengthened by the retention of the quota limit at its present level. As regards kerosene, while the margin of preference is reduced to nine pies as against a former margin of eleven and a quarter pies per gallon, the Government of India obtains during the period of the war the right to impose a surcharge equal to the entire margin of preference. Burma kerosene will not have special advantages in the Indian market at present while the Government secures an abatement of the preferential tariff in the interests of the Indian revenue.

According to the summary of the trade agreement, published during the week, exports of timber from Burma and sugar from India have to be dealt with separately. A undertaking has been given by the Burma Government not to impose an export duty on timber during the period of the war should it do so after the war, the Government of India would be freed from the obligation to allow free entry. As regards sugar, the Burma Government undertakes to accord special privileges to Indian sugar in so far as the local capacity to meet demand leaves a margin to be filled by imports. The assurance is vague, but it is evident that Burma is committed to the principle of protection for home-produced sugar. The decision may not altogether be without effect on Indian tariff policy. As regards the quantity that is likely to benefit by any tariff concession on the part of Burma, nothing is said, nor is there mention of the rate of duty. Assuming that Java sugar is taxed at the rate previously in force, the margin of preference that will enable India to compete in Burma at any time must be very considerable. The 15 per cent. margin over non-Empire sugar will not be adequate. If the quantity that may be taken is left vague, it is perhaps due to a desire to limit imports of Indian sugar to the maximum of 50,000 tons for sea-borne exports as laid down by the international agreement of 1937. The modification of the agreement last year will not help in any way, as Burma is bent on helping her own industry to develop and limiting imports strictly.

The position as regards rice has been explained already. Rice and broken rice will remain on the free list and no duty will be levied in India on these commodities coming from Burma so long as they are imported free of duty from other countries. That is to say, there won't be a discriminative duty on Burma rice in the interest of the Indian rice grower and if a duty is levied at all, there will be preference for Burma rice. In regard to broken rice, the margin of preference promised is one not in excess of 10 per cent. or the amount of duty whichever is less but it is operative only in case the duty that has now lapsed is restored. The agreement will be considered unsatisfactory by the South Indian ricegrower who has long agitated for some measure of protection. But so long as India is not fully self-sufficient, the case for protection remains weak and the statistical position of Indian rice since 1937 has been such that but for cheap rice from Burma the population over very considerable tracts would have suffered. There is nothing to prevent the immediate extension of rice cultivation in India to the point at which imports are superfluous and additional production would of itself bring down prices to the Burma price level, enhanced as it is by an export duty, in many ways, corresponding to the export tax introduced in Indo-China in January. The point deserves special mention since Burma rice has to take the slack disclosed in bad years, and such privileges as are assured by the trade agreement do not affect the theoretical right to levy a duty on imports of rice into India from Burma. And if such action is at all forced by any unusual cheapening of imports, the import duty, which raises the price level in India, will affect the Burma price level to the extent of raising prices over there though the lack of alternative markets will be referred to, and it may be urged that prices must drop.

The trade agreement that came into force this month provides also for the levy of a customs duty corresponding to the level of the excise duty ruling in the country of import. The indigenous producer of exciseable articles cannot be prejudiced by any preferential tariff. Thus matches from Burma cannot compete on specially favourable terms while the Indian match industry is subject to the enhanced excise duty. The advantages of protection are retained as in the case of the sugar industry in Burma.

A study of Burma's trade in the month of January discloses that exports have been affected only slightly by the war while while imports have increased by comparison with 1939-40. The summary of the import tables discloses that textiles (imports in January exceeding Rs. 97.16 lakhs in value) were the chief item in the list of imports for January totalling Rs. 308.77 lakhs in value. The next most important item was food products, beverages and tobacco totalling Rs. 45.86 lakhs in value, all of which gain under the recent trade agreement. Moreover, the surplus of exports to the credit of Burma has been reduced considerably since July 1940 to judge by the trade returns of Burma. Imports from India constitute no small proportion of Burma's total imports and the takings from India have risen steadily since March 1940. And this fact should be given proper emphasis in any comments on the trade treaty, the work of skilled and patient negotiations to whom high praise is due.

Editorial Notes

British Banks Help

THE experience of the leading British banks in 1940 was not uniformly favourable, and a reading of the Chairmen's statements presented to the shareholders with the accounts, instead of being delivered as speeches at the annual meetings, gives one an idea of the contradictory influences to which banking was exposed, resulting in a fall in profits in spite of an apparent increase in gross earnings. There was danger from the air. Nine branches of the Midland Bank were completely wrecked and eight severely damaged according to the Chairman Mr. R. McKenna. But wartime strain was due also to the departure of 2,500 employees on active service, replaced since by 1900 temporary additions to the staff.

Deposits rose by £81 millions and this increase is reflected in the rise under cash and bank balances, Treasury Bills and Treasury Deposit receipts. The increase in deposits did not lead to a simultaneous rise in profits which were reduced by the higher taxation in force and the contraction of acceptances and credits. That the dividend is maintained in the case of the Midland and other banks will occasion no surprise because the bank's shareholders look forward to a fixed return of something like 4 per cent. per annum. Lloyds Bank also benefited from the increase in deposits. According to Lord Wardington the total deposits advanced by £57 millions over the previous year. It was pointed out that 'the feature is a sign of the times in which we live. It is the result of borrowing by the Government which spends the proceeds in paying for war weapons and contracts connected with the war and their payments come back to us from those who receive them and are deposited in their banking accounts.' So the banks have nothing to do with the expansion of credit which is due to the war, and higher deposits, if unemployed except for advances to the Treasury at 1⅛ per cent., do not lead to any rise in profits. Clearing Banks held £765 millions in investments of which £600 millions had gone into British Government securities. Advances totalled £941 millions at the end of the year, and Lord Wardington derived satisfaction from the way in which the nation's war effort was being assisted by the grant of credits to customers. Apart from this the Banks promoted the war savings campaign in many ways, and this like the other services of the banks should go far to strengthen the confidence for which Lord Wardington appealed.

The total deposits of the National Provincial Bank rose by £44 millions in 1940 to £380 millions. In this case too the deposits at a record high level led to an increase under investments which rose by £38 millions. The new type of advances direct to the Treasury for six months at 1⅛ per cent. led to an increase of £31 millions in the short-term advances made by the Bank. Mr. Colin Campbell explained that investments and short-term credits in the form of Treasury Bills and deposit receipts accounted for over 50.6 per cent. of deposits showing clearly that the Banks were helping to finance the war. The fall under Advances, which represented only 31.3 per cent. of Deposits, was reviewed in detail, and it was pointed out that the Bank was prepared to help farmers. References to the nation's wartime expenditure figured prominently in Mr. Rupert Beckett's address forwarded to Westminster Bank shareholders. The increase in national expenditure explains the rise of £437 millions in the deposits of Clearing Banks but Mr. Beckett added that £100 million of this increase is more or less fictitious. But total deposits in wartime have risen by 14 per cent. compared with the pre-war level and this increase was described as unwelcome. M. Beckett said that the proper outlet for increased resources is the Government loans. He advocated direct lending by the recipients of money from the Government. Total deposits of the Bank standing at £410.1 millions rose by £43.7 millions equal to 12 per cent. during the year. Advances fell from £141.4 millions to £134.5 millions while Investments in British Government securities rose by £7 millions to stand at £107.2 millions. These have to be added to the £50 millions in Treasury Deposit receipts, £34.6 millions in Treasury Bills and £28.6 millions in advances to the money market against Treasury Bills.

While the results of the Big Five showed a fall under both Advances and profits in 1940, the three banks centred in Lancashire did relatively well. A note in the *Economist* shows that after allowing for adjustments in regard to taxation, the District, Martins and Williams Deacon's Bank obtained an increase in profits. District Bank profits rose from £582,372 to £586,728 and Martins Bank profits rose to £791,029 from £776,025 while Williams Deacon's profits rose from £298,865 in 1939 to £301,418. The modest rise in District Bank profits is due to the enhanced provision (an increase of £10,000 is shown under this head) for the Staff Pension Fund.

The addresses of the Bank Chairmen say little about the outlook but stress the value of a conservative and cautious policy. Mr. Beckett's reference to the peril of inflation and advocacy of investment in Defence Loans was no accident. The need for maximum war effort was recognised in Mr. Campbell's address, and it was observed that consumption of goods for civilian use will be cut still further and labour and materials thus liberated devoted to war ends.

Another Pact

Mr. Matsuoka's sudden visit to Europe has not been without results. The belief that the principal shrine for this political pilgrim was Moscow has been confirmed by the publication of a pact of neutrality. The draftsmen of the Kremlin have put their best foot foremost to prepare a variant on the non-aggression model, and the document of four articles contains only one significant clause. Reciprocal recognition of Outer Mangolia and Manchukuo is provided for by the new treaty which is a formal recognition of the fact that the principals are more than the puppets. Russia, like the Axis, is prepared to recognise the Japanese protectorate and it is certainly not going to help China if objections are raised on the score that Manchukuo is the child of aggression. Comment since the announcement has generally taken the line of least resistance, but the U.S. State Department should not be unwilling to note that a trade pact and other agreements under contemplation will promote Russo-Japanese accord in the Far East. It is not difficult to see that such understanding is an effective answer at all times to the parallel policy in the Pacific, in operation since October 17 when the Burma-Yunnan Road was re-opened for traffic. It is evident that Russia is not going to help Britain check Japan. The second article of the pact of neutrality provides that in case either country becomes the object of military action by one or more third parties, the other party shall observe neutrality throughout the entire period of such conflict. The clause will help Japan to escape obligations to the Axis under the pact of September 26 and, in an indirect way, promote Russian security by securing neutrality in the Far East whatever happens in Europe. While Japan has no reason to regret the neutrality pact, which saves her from moving against Russia, there is nothing to suggest that Japan will not resist or discourage the entry of the U.S.A. into the war. It is difficult to say at present if the U.S.A. would move only in the Far East and refrain from acting in Europe and there is also the obvious anxiety of the Japanese Premier.

The neutrality pact however does not simplify Japan's major problem of avoiding a conflict in the Pacific Ocean with a Power overwhelmingly superior by sea and in air too and pursuing an active policy in the South Seas. In the background lies the problem of liquidating the China war. It is manifest that Russia in view of her desire to continue help to the Chungking Government is not going to mediate on behalf of Japan. And if outside diplomatic pressure is not forthcoming, there is little chance of Marshal Chiang accepting peace terms offered by Japan. One may deduce from the extension of the blockade of South China that Japan is set on subduing China rather than prosecuting her designs on the tropical colonies of Britain and Holland. The defensive precautions adopted in Hongkong and Singapore may, therefore, prove unnecessary, for the pact does not give Japan a free hand in the western Pacific but perpetuates a deadlock that can be resolved only by a prompt and satisfactory compromise with China. It is obviously to Japan's interest to end the China Incident before the war in Europe ends; for a British victory in Europe would mean that pressure cannot be successfully applied on China. Plans to frustrate aid to China under the Lease and Lend Plan have evidently taken shape quickly and the permanent occupation of the coast up to Pakhoi together with bases in the north of Indo-China gives Japan important advantages in dealing with China's exports to the U.S.A. and also the munitions supplies arriving from overseas. Since Russia has promised assistance as regards supplies, it is not certain if Japan will succeed in cutting at the roots of Chinese resistance though the neutrality pact will help her to avoid 'incidents' in the future, unpleasant reminders of the insecurity of her continental dominion.

RAIL-CUM-ROAD TICKETS

TO

SRINAGAR (Kashmir), MURREE and DALHOUSIE

Facilities are now available for through booking from all important stations on the N.-W. Railway on Rail-Cum-Road return tickets to the above places and from certain stations on the E. I., G. I. P., B. B. & C. I., B. & N. W., N. S. M. & S. M., E. B., and J. Railways to Srinagar (Kashmir).

For illustrated coloured pamphlets giving full particulars apply to the General Manager, N.-W. Railways Lahore.

ELECTRICITY

makes life easier

You won't remember those days, but it is not so very long ago that news went about the world in the satchels of dak runners and by mail coach. It took weeks to travel from Bombay to Calcutta. Electricity has transformed all this: by telephone, telegraph, and radio stop press news circles the globe in an hour. And the telephone and telegraph enable more business to be done today in a morning than could once be done in a month.

Paint Industry

At least a dozen paint factories are operating with indigenous raw materials on modern lines in India to-day. These are producing dry colours, paste and mixed paints, enamels, varnishes, and oils (excluding raw linseed oil)—virtually every kind of paint, from cheaper qualities to meet the demand of the Indian bazaars to the production of highly specialised qualities for use by railways, shipping, and other industries. They can also manufacture paints required for war purposes including anti-vesicant, camouflage, and fire-retarding paints. In addition to paints for such diverse purposes as the protection of bridges or the decoration of India's palaces, a wide range of specialized finishes is produced for industrial purposes. These include synthetic and natural gum enamels and varnishes, vegetable oils both heat- and chemically-treated and stabilized emulsions of various types, their application ranging from the painting of railway passenger coaches to the water-proofing of indigenous cotton canvas. Modern research is helping India's paint industry in many ways. In the laboratories of the Director of Scientific and Industrial Research has been developed a technique for manufacturing varnishes and paints from the bhilawan nuts to the satisfaction of the trade. The film is more flexible and resistant to shock than that given by any other product in the market.

The Indian Institute of Science has completed research on the manufacture of pigmented lacquers in powder form and the Department of Director of Development, Cuttack, for lacquers on wood. Bleached lac, an important article in the plate varnish and nitro-cellulose lacquer industries and hard lac resin for the varnish and electrical industries have been produced at the Indian Lac Research Institute.

As a result of researches carried out at London and Namkum, several processes of making varnishes from shellac and drying oils have been discovered. The College of Science in Nagpur, is making attempts to manufacture white lead paint, as well as metal and wood polishes. The indigenous product has many advantages over the imported articles, for Indian paints, enamels and varnishes are manufactured under the actual conditions in which they are ultimately intended to be used. The factories are now practically all equipped with chemical testing laboratories and control testing rooms, whose highly skilled chemists and other workers give specialised attention to each product and the particular problems arising in its general use. In addition to meeting the growing demand for paint and paint products in this country, Indian supplies have been regularly exported to Burma and Ceylon. With the outbreak of the war, however, additional demands are being made upon the Indian industry and in recent months exports have been going to the Near and Far East, to Iran, Iraq, Thailand, Malaya and the East Indies.

Employment in Britain

The crescendo of air attacks died down rather abruptly in the first three months of 1941 and Britain went forward with her plans for economic mobilisation of which Mr. Bevin's scheme for taking additional men for wartime employment in addition to a call-up of available women and Captain Lyttleton's scheme for industrial concentration and closure of non-essential factories we are the main features. The 'labour reserve' has fallen continuously from 705,000 according to the December count of the registered unemployed to 581,000 in February. The unemployment mark had fallen under the million before the autumn Britain but the decline since reflects the continued absorption of men in war work. It has been pointed out that henceforth the 'reserve' will be smaller and men will have to be drawn from non-essential and over-manned industries. It is known that the new plan for closing superfluous factories is concerned primarily with releasing man-power, and the *Economist* has concluded that between 500,000 to 750,000 men will be made available if men are released from the consumption trades. A reduction in the volume of total consumption is required also to permit the Government to draw more of the national income for its own use since the Budget envisages an increase of approximately £400 millions in expenditure private consumption will have to fall and the resultant unemployment is provided against by the plan to take on men thrown out into war employment. The *Economist* of March 29 has given some details of the plans to divert labour into war work. The Government has decided to combaout from unessential occupations men over the military age and women over twenty years old, and has curtailed the movement of labour out of essential industries by restricting the right of workers to leave their jobs and of employers to dismiss their workers. In view of anticipations expressed in January the employment regulations are not surprising, accompanied as it is by the revision of the list of reserved occupations, as war work entails a demand for more men. In view of the reduced level of shipping losses between December and February, the intake of essential raw materials was fairly substantial thus rendering possible a further increase in the output of munitions. The *Economist* has noted also that supplies of steel and other metals have, on the whole, been adequate for all essential needs. The flow of material to steel furnaces has been sufficient to enable them to operate not far short of capacity, and as the domestic output of steel has been supplemented by imports from America, there is no shortage for vital purposes. The heavy intake of essential materials has enforced a reduction of imports of cotton and other commodities used largely in the manufacture of consumer's goods. And the output of cotton and wool textiles and other civilian goods has been further diminished. The process of rationing has been carried far into industry this year by Limitation of

Supplies orders. But even at the reduced level supplies are ample for essential requirements. The *Economist* refers to the Bank of England's statistical summary for showing that the retail trade index for January 1941 has been only 0.3 per cent lower than in January 1940. But surely reference must be made to the effects of bombing on shopping activity in the preceding months though shopping did not fail to be conducted even when air activity was highest. There might have been a pronounced recovery in January and anticipated changes in rations may have contributed to the maintenance of activity referred to. The volume of sales according to the *Economist* has shown a marked fall compared with January 1941, but the scope for a further fall is recognised. During the first quarter transport was adequate, and such difficulties as were experienced were due to inadequate utilisation of facilities rather than any serious shortage of carrying capacity.

U. S. Automobile Industry

The American automobile industry is gearing itself into the war effort according to the *American Automobile* which notes that the 1941 motor show in New York has been cancelled. One-tenth of the new armament contracts have been allotted to the motor industry. They total a billion dollars worth of work. The huge Detroit plants are making air engines, tanks, ship and submarine engines, machine-guns, jigs and tools for aircraft factories, torpedo and gun parts, shells, bombs and radio instruments. Aircraft effort has been "channelised", so General Motors make parts for the B 25 two-engined bomber; Chrysler for Martin B 26 two-engine bomber; and Ford for B 24 four-engine bomber. Murray Corporation (body-builders) contracted to make bomber parts for the Douglas firm at a cost of $30,000,000.

Briggs (body-builders)—$20,000,000 worth of wing panels for Douglas bombers. Graham Paige—$6,000,000 worth of power-driven turrets for air-craft. Continental Motors—25-ton tanks in association with Chryslers. Autocar has a contract for $16,000,000 for armoured vehicles. Four firms (hitherto making spark plugs, steering gear and refrigerators have joined to take a contract for $61,000,000 worth of half-track military vehicles. Willys—contracts for $20,000,000 for cars, shells, navy gun parts, tank and plane parts. Buick—spending $24,000,000 on new plant for air engines. Studebaker—$36,000,000 contract for aircraft engines. Goodyear—$14,000,00 to equip powder-bagging plant. Packard—building 1,000 h.p. engines on the Rolls-Royce pattern and Hudson making gun mountings and torpedo tubes. Ford is opening an additional 24-hour-day plant (at a cost of $21,000,000) for plane engines; Chrysler a huge new plant for 25-ton tanks.

Ordnance Stores in India

India's potentialities as a producer of war supplies have been the subject of continuous investigation. The possibility of replacing imports by locally made ordnance stores has been examined, and the investigation is said to be nearly complete. It has been found that in the main India can produce miscellaneous stores hitherto imported. A comprehensive card index record of such stores is being prepared and the transfer of many items from the list of imported stores has been arranged. India is known to have produced in the first year of war 20,000 out of 40,000 items of ordnance stores. The list of stores required both in India and to meet oversea demand is constantly under review and items listed as Imported are continually being transferred to the other list as a result of discovering either of methods of producing them in India or of suitable domestic substitutes. Typical examples of items formerly imported and now being produced in India are web equipment, lubricating oil, bichromates and acetic acid. The process of substitution is discerned in the use of cotton canvas for flax canvas, fish oil for codliver oil and various Indian varieties of drugs for those previously imported. Reference may be made to a very useful list drawn up recently by the Indian Chemical Manufacturers Association of the Indian made equivalents of well known proprietary brands. The process of substitution has been particularly marked in the case of medical stores. It has been stated that prior to September 1939 of the items included in the priced vocabulary of medical stores 77 per cent was imported; the corresponding percentage after 18 months of war is only 46. Among the articles listed as ordnance stores previously imported but now made locally are spoons and forks, scissors, cups shields, leather cup goggles, smoked lenses and clasp knives. The inner man is not forgotten as tinned mutton and sausages, and milk steriliser are now classed as non-imported stores. But the great variety of articles produced in India for the war can be inferred from the following list. Combs, wire mesh gauze, benzol, disinfectors, mess tins, steel springs, electrodes, ebonite commercial rod, Europe twines and whipcord.

Dependent Hungary.

THE invasion of Yugoslavia dried up one source of supply of lead, zinc and copper for Germany. These three minerals are essential in time of war and the fruits of the trade treaty of October have been thrown away by the decision to invade the country. The exploitation of minerals in Croatia under the auspices of a new puppet government may not prove possible since foreign interests including Italian have long held the major interest in Yugoslavia's minerals though foreign companies were compelled not long ago to put up smelters for the reduction of native ores. The mines and smelters can have hardly been left for German acquisition, and the few ironworks, too, should have disappeared in the first week of war. Alone among the Balkan countries, Yugoslavia had minerals worth attention and German aggression has cut off a precious source of copper for which aluminium cannot always serve as a substitute. The result will be seen in a keener demand for minerals from Hungary and Spain. German interests are dominant in both countries, but in the former alone is the political subservience is as pronounced as economic dependence. The entry of German capital into Hungarian enterprises has been a notable feature of the past year and German ironmasters have virtually captured the infant steel industry. Moreover, Hungary's desire to develop manufacturing industries has been latterly restrained by German industrialists who think of Hungary as part of the Reich's *lebensraum* to serve merely as a reservoir of wheat and livestock. A survey of Hungarian industry at the end of last year revealed that after the recovery of the greater part of Transylvania with two million people added to Hungary opportunities had definitely shrunk because she was compelled to think more and more of agricultural exports to Germany. The programme of industrialisation that had carried Hungarian industry far was arrested. The growth of electrical and other industries had led to an increasing share of manufactured exports, particularly, to Balkan countries at the expense of Germany. But Germany checked the process by acquiring a firm grip of Hungary's foreign trade. It is estimated that in 1939 over 80 per cent. of Hungary's exports went to Germany, because Hungary after the disappearance of Austria and Czechoslovakia was compelled to export to Germany. The increasing importance of Germany in the trade of all Central European and Balkan countries gave Germany the chance to block a Danubian economic confederation and also to shut Hungary out of Balkan markets. Industrialisation has since been subordinated to the production of exports for German use. It has been said that some of Hungary's leaders disliked the spectacular expansion in trade with Germany as industrialisation is the only remedy for an agrarian problem that has been acute since 1919. But such leaders must be in a minority as the Admiral-Regent and the Government are enthusiastic upholders of the New Order. Hungary evidently looks to the acquisition of the Voyodina or Duchy through Hitler's good offices and excepts to get Yugoslavia's third largest town Subothica along with the territory. A share in the Banat, in the Backa and the Baranja are likely to figure in the list of Hungarian demands under the New Order. The existence of Magyar minorities gives some strength to the territorial claims. But frontier revision can only be obtained by putting the country's economy under German control. German banks have acquired considerable interests towards the end of last year in Hungarian companies, and the effects of economic tutelage are assuredly reflected in the acts of Count Teleki's successor. The repudiation of the agreement with Yugoslavia signed only in December like the too prompt recognition of the puppet state of Croatia suggests that Hungarian ambition has been diverted from industry into the wrong direction.

U. S. Steel Output.

Steel output in the U.S.A. during 1940 rose by 27 per cent compared with 1939 and total production of 66.5 million short tons exceeded the record output of 1929 by as much as 8 per cent. Some 18 per cent of the semi-finished steel produced in the U.S.A. was destined for export, and half the exports found their way to Britain. At the end of 1939, America's ability to produce crude steel was rated at 81 million short tons indicating a rise of 38 per cent as compared with the production capacity

FACTS nowadays are so far from being agreeable that one would gladly take refuge in fancy. Fancy is a wide and delectable domain. Over its vast expanse one can roam freely, seeing nothing but what one likes to see, under-going just those experiences which one has been hungering for and being what one loves to be. Too long have we lived in the thraldom of facts. And no benevolent despotism that, but a most oppressive tyranny. Keep a table of index numbers before you and try to make one generalisation. If you think of saying that prices show a downward trend since the beginning of the new year, a mild spurt in the last month will jab you on the side and laugh in glee at your futility. And figures are kindliness itself compared to the varied phenomena of life with which one has to deal. What with this war and its developments, and the Indian political situation and its distractions, there is no one to whom fancy is not a welcome escape. Every one, therefore, votes for fancy. The Gandhiites imagine a world of pure and absolute non-violence with only a few votaries of violence sufficient to demonstrate the value and power of non-violence. A competition in turning the other cheek rather than a race in rearmament would be the order of the day. Savarkar and his friends will have their dreams; only the dreams would be more hazy than even dreams are.

In this flight of fancy, no one soars higher than Mr. Jinnah. Not for him the tedious job of scrutinising the lists of volunteers for Satyagraha, or choosing names for the Central Cabinet or outlining political programmes or economic policy. Say, "Pakistan," and all at once is said. Hitler harangued, conspired, organised and fought his way to power in Germany. Churchill gave for years repeated evidence of his clarity of vision and the will to do before he was called to power. Mahatma Gandhi suffered both abroad and at home to become the head of the Congress. Only to Jinnah was it given to achieve leadership by starting a political hare.

Political leadership is so largely a matter of popular psychology that the man, who gives clarity to vague aspirations in the mass mind, has the best chance of winning them to his side. The Muslims were the immediate predecessors of the British in the overlordship of India. And nothing is more natural than that their mentality should be that of fallen angels. Scratch a Muslim and you will find a Mansabdar of Moghul times, if not exactly a provincial satrap. Nothing can satisfy that mentality better than this idea of Pakistan which, translated into the language of ordinary politics, means "completely independent Muslim States both in North-western and North-eastern India." European Liberalism sought to flatter the vanity of the average citizen by suggesting that he has an infinitesimal share of the sovereignty of the modern State. But Mr. Jinnah goes one better and suggests that the Muslim in India will be fractionally a ruler over other communities.

So Pakistan as a goal comes to stay. The Muslim League has formally changed its creed so as to make Pakistan its ultimate aim. I suppose there was immense rejoicing in the ranks of the Muslim League when the resolution was passed in the Madras session of the League without any dissent whatsoever. Pakistan opens up a wide vista before the mind's eye of the Muslim in India. All the old memories of Muslim rule over three Continents are recalled. A chain of Muslim States around the Mediterranean, the Indian Ocean and, perhaps, reaching from the Atlantic to the Pacific—such an ideal would leave no Muslim cold.

The non-Muslims, especially the Hindus, react somewhat violently to this idea of Pakistan. For my part, I would like to dwell in the realms of fancy in the company of the Muslim authors of Pakistan and follow this idea to some of its logical conclusions. One has, no doubt, to flit from fancy to fact and back again to fancy, if the idea of Pakistan is to be explored in some of its practical aspects. What may be called the political implications of it do not lend themselves either to speculation or to intelligent anticipation. What will happen to the non-Hindus in the areas in which independent Muslim States are to be established? Some would suggest an exchange of populations; some would assume that they are to stay where they are, content with being ruled by the majority, which will be an unchangeable communal majority. In independent Muslim States, there is no question of safeguards. For, if the non-Muslim is to have equal rights with the Muslims, they might just as well be members of an All-India Federation! These are, in the last resort, a question of the limits or limitations of Muslim power in the territories concerned. The limits may change with the moods of the domin-

ant party among the Muslims. The limitations are naturally determined by the relative strength of other factors in the national life of India and their attitude. It is idle to speculate on this aspect.

But what I may call the economic consequences of Pakistan are a different story. For here, there are certain imponderables which political power cannot change and which therefore furnish a sure basis both for speculation and for judgment. It is true that a change in frontiers is a change in the facts of international economic life. But the advocates of Pakistan have defined their ideas of territorial demarcations. "Independent Muslim States in the North-west and North-east" is a fairly clear idea. And one may take it that the advocates of Pakistan will not ask for the establishment of Muslim dominion in predominantly non-Muslim areas or that, even if they do, they will not gain their object. We may take it, therefore, that the "independent States" will be confined to the Punjab and Sind on the North-west and Eastern Bengal and Assam in the East. Parts of the U. P. may be incorporated into the State on the North-west. Nothing much has been said about the territory of the Native States. But the application of the principle of Pakistan to the Native States would not make much difference to the economic consequences of Pakistan.

For my speculation on this subject, it is necessary to assume that, whatever the extent of political power, whether in the form of agitation, demonstration or direct action, may be necessary to make others accept the idea of Pakistan, a lot of enquiry, negotiation, arbitration, agreement and the like will be necessary to bring it into being. We have had the case of Burma before us for the last four years. Burma was part of India till the mighty arm of the British tore her away from the parent body. If a dismembered limb has to live in isolation and function as a separate organism, it has to get its vital qualities from the parent body. But in the case of Provinces becoming separate units, the division of assets and liabilities comes first. We do not know whether the North-Western and the North-Eastern States will have links between them or will be just separate entities. In any case, the public debt of India, the liability for Home charges, and assets such as the Railways and the securities of the Issue Department of the Reserve Bank of India will have to be divided between the seceding provinces and what remains of the original federal unit. The Punjab has a large share of the public debt on account of Irrigation. The North-western Frontier Province has an immense liability in the shape of the strategic railways. Sind is a deficit province with a burden of debt which so far she has been unable to bear unaided. Bengal's liabilities in respect of the Public Debt of India have no unusual feature about them. The division of the debt between the Pakistan States and the rest of India of to-day will be no easy matter. The Boundary Commission will have no end of India of to-day will be no easy matter. which has so far been confined to Bengal, will no doubt spread to other provinces and districts in the north where a claim to incorporation in Muslim States could be made with some show of reason. But to divide the debt, to divide the Railway systems which run from one end of India to the other—these are not easy tasks. I shall not discuss details about the question of the Home charges. I shall leave this whole question of rights and obligations at this.

For rights and obligations are not half as important for independent States as the extent and variety of economic resources. How far will the Pakistan States be self-sufficient in the necessaries of national, not merely economic, existence? I suppose I should explain here that the necessaries of economic existence are bread and butter, while the necessaries of national existence, particularly when it is of a militant character, are guns. And here it is extremely important that neither the State in the North-west nor the State in the Northeast will have any iron ore or iron and steel factory. Jamshedpur is situated in the heart of an almost completely Hindu belt of lowlands, while Kulti and Hirapur are so far away from the Muslim areas that no claim can be made to control over this centre. In the

far South, the Bhadravati Iron and Steel Works are in the hands of a Hindu Native State, which has a hand in every industrial pie. Mysore has electric power and iron and steel. Mysore has a string of industries which are either managed or owned by the State or which are easily amenable to State control. One of the vital needs of existence as a separate state is thus denied to Pakistan. Of the new industries that are now being brought into existence, the seat of the automobile and aircraft industry is Bangalore.

I may turn now to a consideration of the resources in respect of foodstuffs and raw materials and fixed capital for the production of consumer's goods. In foodstuffs, both the Punjab and Bengal are now undoubtedly rich. In raw materials, Eastern Bengal has an incalculable advantage of its monopoly of jute. But trade in jute goods involves a high degree of dependance an external markets. There is also the fact that Bengal is not wholly self-sufficient in the matter of her require ments of rice. India's resources of mineral oil, such as they are, are confined to the North-Western and the North-Eastern corners. But the value of these sources is extremely limited. It would seem, therefore, that, rich as these Pakisthan provinces are, there is no special advantage for them as producers of foodstuffs.

If we turn to the industries producing consumer's goods, neither Bengal nor the Punjab has any considerable advantage over the other provinces of India. Both provinces produce cotton, and the Punjab is one of the more important producers. But the distribution of the cotton textile industry in India is not favourable to these two "Muslim" provinces. Bombay has the bulk of cotton textile production; and the lion's share of progress in recent times has gone to South India. The native States have made good progress. But in spite of a great deal of interest in cotton textiles shown of late in Bengal, very little has been done. Bengal and the Punjab are, therefore, importers of cotton goods on a large scale from other provinces. Their position is even worse in the case of the sugar industry. At present, a large part of the sugar mills are located in U. P. and Bihar; and mills in other parts of Northern India are naturally less able to withstand their competition than the mills in the South. The result is that Bengal and the Punjab have made little or no progress in the sugar industry. A similar examination of the position of other industries will show that, economically, the seceding states will find themselves in a very weak position. Political borders, even when they have a long historic origin, are very serious economic barriers. When they are deliberately created in defiance of deep-rooted sentiment, they are bound to introduce worse complications.

I have no desire to pursue this line of enquiry further. For what assumptions are we going to make about the economic relations between the parent State and the seceding units? I should be content to state here that the Pakistan states will present problems which are more than a combination of the problems which have been familiarised by Burma and those which Sind and Orissa presented at the time of their separation and which were solved only by the presence of a common central government. I have already hinted that in the case of Pakistan coming true, the North-Western State will have to bear the whole burden of the loss on the strategic railways. In fact, the whole burden of the military expenditure. Hitherto, the Punjab has had the advantage that the whole of our defence expenditure of 50 crores per annum has been disbursed in various works in that part of the country for over half a century. In the new conditions not only will that money cease to flow, but the new States will have to find about as much, unless, of course, the fraternal feelings of co-religionists obviate all need for fortifications and defence. The Punjab budget is one thing when it is a province of British India or a unit of the Indian Federation. It is far different when it is that of an independent State. If that State were to be what we would in present times call a deficit province, where is the subvention to come from, the kind of subvention which went to the creation of one more Province for the benefit of the Muslim community? Add to these the question of safeguards for foreign interests and superimpose on them the problem of trade relations, we have a fairly good idea of the financial mess which will wait ready-made for the first Government of the new independent States.

The position of the rest of India will have no problems or embarrassments to compare with those of Pakisthan. Whether the Hindu States of the U. P. and Central India will have to build a Siegfried line against contingent aggression from Pakistan is not a question which need detain us. Economically, they would depend on the Muslim States only in respect of jute, though probably intensive cultivation of Jute in Bihar and Orissa might meet their needs. With practically, the whole of the coastline in their hands, with the bulk of industrial equipment on their territory, with the variety of resources of raw materials and foodstuffs in their hands, the other Provinces and States of India will find themselves free to pursue the most amazing schemes of economic development.

But, then, these facts are, like most other facts, disagreeable. Pakistan is an enchanting castle in the clouds, the charming handiwork of Mr. Jinnah, the supreme architect of new worlds to come. We gaze in wonder at the sight; and thither shall we fly, those who have the wings of fancy, leaving the groundlings to crawl like worms on flat terrain.

The death in not-so-distant Shillong of Sir Darcy Lindsay makes me think of the quiet end of a long and tranquil career. Sir Darcy's real interests lay in sport and politics, but few held such a firm grasp of business. As the pillar of a great insurance company like the Royal he typified all that is best in British enterprise. All will remember his gentle unobtrusive ways, ways which made his opinions respected and won him the popularity that comes to the non-competitive. His record as a politician in the years before the Reforms was singularly effective; but in the autonomy period, he was more or less in the background. The European non-official community has not often had leaders more deserving of esteem among the other communities and to Sir Darcy's credit be it said, he discovered and applied the cement of friendship at all times at all points.

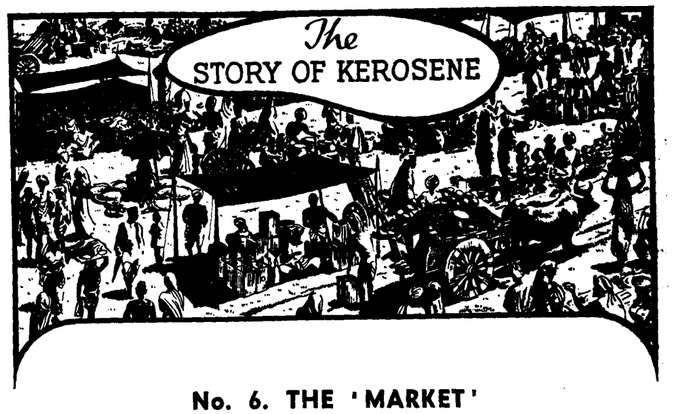
A LONG-WINDED statement on the alleged injustice to Indian shipping appeared in some papers last week as if to show that shipowners are quite different from the Silent Service. The statement cast in the form of a letter to the Government of India in the Commerce Dept. harps on the injury done to shipping under the commandeering procedure. A formal list of companies prejudiced by the control regulations appears in the representation, but who is behind the protest and why sticks out a long way. People here are puzzled by the surprise campaign. There is no disposition to call it a stunt because many feel that it is an attempted rejoinder to a recent publication of the main facts about the Indian shipping industry. The big to-do about grievances is merely in the nature of a deceptive smoke-screen. Attempts to enlist public support on the score of injustice are inevitable in view of the limited support given to the shipbuilding project. Enthusiasm is waning; hence the new drive against arbitrary control and regulation of rates and fares. After the outbreak of war, control on the lines adopted in Britain was necessary and inevitable: the regulation of fares and freights in the public interest soon followed. Efforts made in Australia and Hongkong to develop shipbuilding preceded the war and there is nothing to connect the development there with the inadequate compensation paid in India for shipping taken over by Government. The plea of an unsatisfactory return has been reiterated in the long admonitory statement published last week. There is much play with the rise in building costs and the changes are rung on the problem of replacement. Nor is an attempt to link the grievance with the existing rice shortage wanting. The letter raises again the question of the racial bias of certain business interests; the existence of which bias goes admittedly far towards explaining the imposition of the safeguards in the 1935 Constitution. The Governor was away on tour for a few days and the effort of the Presidency is taking another direction. The formation of Maratha battalions is generally considered probable and the Governor's visit to cantonement towns has made the public here recruitment-conscious. But the war in the Balkans may tax only the industrial potential, and that is why accounts of what is being done in the way of shell manufacture are of greater interest than stories of sudden enlistment. The way in which machine tools are being husbanded and reconditioned locally whenever necessary rouses more attention than the stories of the new feats of charitable societies. But the war is having unexpected effects.

The bringing in of newsprint under import control will raise questions in the minds of both newspaper readers and publishers, for Bombay has few paper mills and has learnt to get its paper from elsewhere long ago. But the demand for old newspapers is decidedly keener and salvage hardly keeps abreast of saving. There was quite recently a report that new telephone connections will not be given on account of the war. Instructions have been given to Government engineers in order to restrict new connections. The step is enforced by a desire to conserve stores and equipment. Only a certificate will secure for any new applicant a telephone connection. Subscribers to Government exchanges will be less lucky than those served by the private telephone companies which hold adequate stocks of stores and have a larger and more varied clientiele than the Government exchanges. The war has not affected the telephone business so much as the telegraphs but a continuous rise in revenue is hardly probable in view of the restrictions on giving new connections.

The Bombay market paid little attention to the details of the British Budget. One must presume that interest in compulsory saving is very slight here though the subject has been frequently discussed. The only thing that the Budget has done is to choke public interest in all sterling shares. Though it is recognised that the increase in expenditure is a consequence of the War Damage Bill introduced in December to provide compensation to injured householders few know what the tax-payer is in for. But the sacrifices made by the average citizen may well stir the imagination. The income-tax exemption limit has been further lowered to £110 per annum. A wage-earner getting 45s. per week will be liable to tax if he is single, but his contribution of 2s. per week will be treated as savings to be returned through the P.O. savings bank after the war. Sir Charles Kingsley Wood's statement that a man with a tax-free income of £5,000 per annum would have to get £66,000 as gross income gives an idea of the stringency of taxation of the rich, and Bombay whose rich men are still railing against the Property Tax should learn how the rich are soaked in Britain. One supposes that the credit entries from wages like the 20 per cent. share assigned out of the proceeds of the Excess Profits Tax will represent an addition to the national debt. But as new taxation will give only £150 millions more, borrowing will have to continue and if this is done at cheap rates, there can be no hope of any rise in interest rates in India. Though the response to the second Defence Loan remains disappointing, there is nothing to suggest that the lender will be offered more. While the savings campaign started by the Post Office may not provoke much interest amid different conditions, it is assuredly open to insurance companies to recapture the investing public. It is obvious that the contraction in new business reported by nearly all companies last year is due to the defence borrowing. If the companies fight the rival by fresh and vigorous appeals to the public, the insurance companies, which offer benefits, not available under the defence loan, will be able to progress, while Government too would obtain its requirements out of the funds available to the big insurance companies which must look to the gilt-edged market.

The severance of trade relations with Hungary means that nearly the whole of Europe is closed to Indian trade. The Middle East is about the only market where openings are discerned, but East Africa should be worth cultivating. The successive reports of the Indian Trade Commissioner at Mombasa have drawn attention to the opportunities existing in Kenya and other colonies. Bombay is naturally interested in selling textiles to Egypt, which is lately taking interest in Indian flue-cured tobacco, and the African colonies. The end of the Italian resistance along the Red Sea coast means that export trade is bound to improve but textile manufacturers have the problem created by the prevailing shortage of dyestuffs.



Reports from Cawnpore reveal that the situation is discouraging and the re-opening of the Red Sea to American shipping will not help shippers who have so far received no great support from overseas markets and merely hope that Government will launch an export trade drive. The bullion market alone has been active since the opening of warfare in the Balkans. The Commerce Member who is in Bombay to discuss the Merchandise Marks Act should learn something of the exporters' problems. The rice shortage has been met by the issue of a communique promising regulation of prices in consultation with the trade, but that is not going to help unless shipping control is modified. The importers are known to be against price-raising tactics, and the Government of India cannot do anything by intervening at present. Imports of rice by land from Burma through Calcutta are ruled out on account of the cost of transport. Ships alone will help.

The cottage industries of Bombay were well to the fore at the exhibition opened last week by Mr. Mahadev Desai. The Khadi and Village Industries Associations have organised a remarkable exposition of both living and dying handicrafts and the show has been played up in the local press as one more facet of the constructive programme of Gandhiji. The National week provided for the holding of the exhibition, the first after 1935, when the Jubilee session of the Congress was held. The A.I.S.A. was about the most important exhibitor, and Mr. Mahadev Desai spoke plainly and with feeling about the place of cottage industries. A factory civilisation could never satisfy the needs of the nation, and Mr. Desai quoted with approval the conclusions drawn in the report of the special Committee appointed by the Bombay Government. The B.P.C.C. was largely responsible for the exhibition which attracted many non-Congressmen interested in the survival of small scale industries.

A recent lecture by Mr. Clarke, the Industrial Planning Officer of Bombay, stressed the need for adequate machine tools in India. The war depends on the supply of proper tools for munitions production, and the lecture given under the auspices of the Industrial Safety First Association convinced many that local supplies are scanty. Mr. Clarke stated that the immediate need was for machine tools. Those made in India were not the types required for heavy duties. They were of light construction and unsuited for heavy cuts such as are required in the quantity production of shells. Mr. Clarke dealt with the technical side fully and described the growth of the tool industry in Europe and America. He referred to the acceptance test charts prepared by the institution of engineers and asked that Indian firms interested in machine tools should keep them as they were the most complete and authoritative as yet published.

At a special reception held in honour of Mr. G. F. Reardon on his return from Iraq by the Motion Picture Distributors Society there was mention of the facilities secured for Indian films in Iraq. Representations had been successful and more Indian films had been passed for exhibition according to Mr. M. B. Bilimoria. The Indian film industry has long looked upon Iraq as a legitimate market for Indian films, and the assistance of the Government of India in regard to the removal of restrictions in Iraq has been greatly appreciated. Mr. Reardon told the trade that misunderstandings had been cleared up and Indian distributors could hope for a good additional market for Indian films as screening would be easier. As the film industry hopes to develop in spite of the war, new markets will be always welcome and tariff preference in Burma will not be one of the advantages for an industry that claims to be old, efficient and resourceful.

No. 6. THE 'MARKET'

Wherever there is a market, you will find Kerosene.

Stage by stage Kerosene is distributed to reach the innermost depths of the country. The most remote villager is sure of a regular supply, if not actually to his door-step, then at his local 'Market'. Week in week out Kerosene is always available.

Over a period of many years, Burmah-Shell have built up not only a vast selling organization, but also a widespread service of Inspectors, whose main duties are to improve methods of distribution and to ensure that Kerosene is always available everywhere.

KBSK 5.

A Resume of Commodity Markets

FOLLOWING the German invasion of Greece and Yugoslavia and the conclusion of the Soviet-Japanese Neutrality Pact, it was generally expected that commodity markets would receive a setback, though with the declaration of Japanese friendship and peaceful aims in the Pacific by Mr. Kawai in Sydney and reports regarding the resistance in Yugoslavia and Greece, there was a tendency to await further developments and avoid panicky selling. The developments during the past two days, however, have been distinctly unfavourable and such as to induce panicky selling in most centres. But it is happy to note that beyond the sharp decline in prices in the stock markets, there has not been actually any spectacular decrease in values in commodity markets though there has been some nervousness and a tendency to exaggerate the decline in prices. On balance, values are not appreciably lower, and the undertone in several markets can be said to be quietly steady.

The rise in the bullion market with the fresh complications in the war situation is quite natural, though it is due more to speculative buying than to any genuine buying for hoarding purposes.

The effect of the Soviet-Neutrality Past was at first rather unfavourable, but after the receipt of reports that the United States was making every effort to relieve the shipping situation in the Pacific and that protection would be afforded to American merchantmen, operators were inclined to think that consumer buying would be accelerated order to lay in stocks in time and as the shipping situation allowed. This is the reason why the ute market has been relatively steady and only towards the close an easier tendency has been noticeable with the appearance of reports regarding the capitulation of Yugoslavia.

It is very difficult at the moment to take any definite view of the markets as everything depends on the progress of the war in the Middle East and the Balkans and the further developments in the Far Eastern situation. Few can weigh probabilities at present.

Jute

With the continued strength of the jute manufactures market and the reports regarding the prevalence of dry weather conditions in the districts, one might expect that the jute futures market would remain firm. The tone of the market during the past few days, however, has been otherwise. In spite of the fact that mills are fully sold up to June and have been selling freely for positions up to December, there has been no tendency to accumulate stocks on a large scale against purchases which have been made at fairly high levels. This, combined with the absence of any export business has been mainly responsible for the depression in several sections of the market. The expectation that the extension of the bye-law regarding the purchase of jute at minimum prices to the end of this season would result in increased buying by mills has not been justified. On the other hand, the tendency on the part of the mills now seems to be to purchase stocks in small quantities as and when they are required and to complete the quota in their own time. Two weeks ago it was given out that the extension of the bye-law regarding the purchase of jute did not in any way mean an extension of the buying programme of the mills. If that were so, mills should have completed their quota of 37½ lakhs bales under the Delhi Agreement by 15th April, 1941. Mill purchases during the past three weeks do not lead us to suppose that the quota could have been completed. It would be remembered that as on 15th March, 1941, there was a deficit of five lakhs bales against the purchases for the first three periods under the Delhi agreement. This deficit of five lakhs bales combined with the quota of 5 lakhs bales for the fourth period of the Agreement, necessitates a total purchase of about 10 lakhs bales. To judge from the rate of mill-buying during the past four weeks, it is extremely unlikely that this figure has been completed.

Jute Manufactures

As pointed out above the initial reaction in the jute manufactures market to the conclusion of the Soviet-Japan Neutrality Pact was rather unfavourable. But on second thoughts, the operators were inclined to believe that there would be an increase in buying by overseas countries for near positions, while it was still possible to carry goods safely across the Pacific. There could not be any undue rise in prices, however, as even if the demand were there, there was not the tonnage to carry their goods. A good premium was available for the near positions, nevertheless, for a short period. The reports regarding the activities of Japan in South China and the latest developments in the Balkan situation have had a discouraging effect and an all-round decline in prices is recorded to-day. 9 Porters Ready being quoted at Rs. 16 7 against the highest level for the week of Rs. 17. The slump in values for the forward positions is more pronounced. 9 Porters July-September being lower at Rs. 13 5 against Rs. 13-12 earlier in the week.

The earlier strength was due also to the publication of satisfactory stock and consumption figures in the United States for the month of March, the consumption figure for the month being 67 million yards against 60 million yards for the previous month and 50 million yards for the corresponding month in 1940. The seriousness of the shipping situation is evident from the further stock decline in stocks afloat. Owing to the inadequacy of fresh supplies, it has been necessary to deplete stocks on spot. In a radio talk, the Chairman of the Indian Jute Mills Association revealed that

(Continued on page 713)

☆ SIGNS OF STERLING QUALITY

A glance at the hallmark on silver and you are assured of genuine quality. This is no less true of steel, mighty basic medium of a thousand structural uses, indispensable factor in every phase of modern living. Wherever you see the sign "Steel by Tata" you see a hallmark which proclaims Steel of Sterling Quality.

Head Sales Office, 102A, Clive Street, Calcutta

Jute and Jute Manufactures

(From Our Jute Correspondent)

THE jute market has been featureless although in the earlier part under review there was a fair buying interest just prior to the holiday recess. Mills have allowed their purchases to tail away since that initial impulse and the quantities put through latterly are negligible. Loose jute generally has been neglected, Indian packing finding no favour whatever. Europeans took advantage of the early buying to dispose of limited quantities of stocks at the minimum rates on Low Assortment @Rs. 8-8, Rs. 6-12 and Rs. 4 for Mids., Bot. and X BOTS respectively. They have also cleared the small balance of their tossa holdings in Bottoms @Rs. 7-4 to Rs. 7-8 with Indian balers who have sales in hand to cover. Mills continued to show a preference for Pucca Bales which still form the bulk of their present purchases. Balers have been reluctant to sell the higher grade of which there is a scarcity whereas they are keen to dispose of the lower assortment of which they are carrying considerable stocks without finding buyers. Good quality in consequence has advanced in price although the pressure to sell the cheaper counters has increased.

The fair volume of such sales of Pucca Bales to mills however has since dwindled to a feeble trickle. Mills apathy towards any further interest in jute cannot be gainsaid so that dull off-season conditions are all that the trade now foresee till the prospects of the new crop may be gauged.

Rain was badly required in the jute districts where the drought has been prolonged but as we are going to press reports that rainfall has been more or less general, sufficient to allow for sowings in the midlands and preparation of the soil in the highlands are to hand. In spite of these conditions and the speculative squeeze in 40″ 8 oz. Hessians for the near position, which have jumped abnormally through manipulation, the jute futures market has quietly declined. This is not put down to the communal tension up-country forcing sellers to liquidate stocks for fear of arson but rather to the lack of further buying power to relieve the weight of the unsold stocks. Estimated Jute arrivals for the month to mid-April amount to 4,18,000 bales as opposed to 2,35,000 bales for the previous year. The total from July now amounts to 77,55,000 bales for the present season as against 94,86,000 bales for the same period last season.

The following prices in Pucca bale sales are recorded:

Dundee Firsts and Lightnings Rs. 78 and Rs. 68.

Special White Colour Firsts Rs. 50.

Free from Samla Firsts Rs. 46.

Firsts and Lightnings @ Rs. 41 and Rs. 36.

Cuttings N. C. and M. C. Rs. 12-8 and Rs. 12 and Superior Cuttings @ Rs. 17-8 and Rs. 16-8.

Special Tossa @ Rs. 51 and Rs. 52.

Tossa Lightnings @ Rs. 37 and Rs. 36

A small export business is recorded in group mark tossa Dundee 2-3 @ Rs. 47-4 and similarly for Daisee @ Rs. 36.

Fabrics

Our report of last week had just gone to the press, when the ready market in 9 porters Hessians took an upward turn from Rs. 16-3 to Rs. 16-10 but on demand being met, it declined to its original level of Rs. 16-3. Since then the Easter Holidays have intervened, with little or no business passing.

The New York stock figures for last month show a decrease of 2.8 crores yards and consumption an increase of 70 lacs.

The opening on Tuesday again showed interest in 9 porters and the market firmed up: rates rose from 9 porters Rs. 16-12 to Rs. 17-4 and 11 porters Rs. 22 on reports of fresh business from North America. At the close rates for ready 9 porters and 11 porters are back to Rs. 16-13 and Rs. 21-2 respectively.

Closing hessian quotation are:—

9 porters	16-13	16-3	14-8	13-8
11 porters	21-2	20-2	18-8	17-8

The Heavy goods section of the market rules very quiet, with prices quoted mostly nominal. Any actual business however, reveals the tightness for near deliveries. Sales are reported in Sacks Rs. 34-8 April, B. Twills Rs. 34-12 April, 2 lbs. B. Twills Rs. 33 May, Liverpools (Mills) Rs. 40 April. The closing was easier.

(Continued from page 712)

mills are at present manufacturing 18¾ millions sand-bags each month. He also revealed that although mills are at present working 45 hours per week, and owing to lack of shipping facilities, have been obliged to close down one week a month since last September with the exception of February, they can at any time immediately increase their production by about 50 per cent in order to meet any large urgent orders which might be received. The statement is rather significant. Only recently, it would be remembered that following the receipt of further orders from the Supply Department, it was decided to work mills throughout May and June.

Cotton

Having regard to the latest developments in the international situation, the behaviour of the raw cotton market during the past two weeks should be considered very satisfactory. It was generally expected that the conclusion of the Soviet-Japan Neutrality Pact should have a bearish influence on prices, as with the possibility of a southward drive by Japan, cotton exports were endangered. There has been no panicky selling however. Instead, prices have been rather steady, and quotations even higher on balance. With the seasonal rush in arrivals over and a high rate of buying by mills, operators have refrained from selling. American advices also have been satisfactory. Reports from the cloth market have been encouraging.

Bullion

There has been a mild rise in both gold and silver prices. As indicated above, it has been mainly due to speculative activity and the rise in prices has not been followed up on the second day (Thursday). Silver prices are higher only in sympathy with the gold market. In the London market, quotations have been for the most part of the week, quoting at the tap rate of the Government of India, viz., 23½d.

Rubber and Tin

Both rubber and tin are appreciably higher. There has been a scramble for buying up existing stock of rubber and tin in the Malay States. Tin, standard cash per ton, has improved from £267 to £271 in London while spot rubber is higher by ¼d. at 14⅝d. The tendency in both the markets is firm.

(Continued from page 695)

per suggests that the sale of Treasury Bills may be suspended until bankers show a more avid attitude.

There has been more demand for money during this week but business since the holidays has been very dull due to lack of shipping facilities to the U. K. Banks, however, were takers of term money at ½ per cent.

Banks were sellers of T. T. at 1s. 5 15/16d., ready up to six months forward. Banks were buyers of T. T. at 1s. 6d., for the same delivery.

Banks buy three months D. A. bills at 1s. 6 7/32d., first and second month 1s. 6¼d., third month; and 1s. 6 9/32d., fourth forward.

Interbank call money quoted ½ per cent.

Firms' money for call and short quoted ¼ per cent, and ½ per cent. from one to five months.

IS IT NOT WISE TO INSURE NOW?

With an uncertain future ahead Conservation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an inestimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

JUTE

Calcutta, April 17.

With the continued strength of the jute manufactures market and the prevalance of dry weather conditions in the jute growing districts, a generally firmer tone would have been noticeable in all the sections of the raw jute markets in normal times. However the tone in the futures market during the past few days has not been quite satisfactory and a rather quiet tone is noticeable towards the close with the reports regarding the worsening of the situation in the Balkans.

The extension of the bye-law of the Indian Jute Mill Association regarding the purchase of jute at minimum prices to the end of the season should have had an encouraging effect. But with mill buying on a poor scale and the difficulties in the shipping situation there is no disposition to enter into commitments. On account of the long holidays there could not be any fair amount of business.

Hot and dry weather conditions have continued in most areas and very little progress has been made with sowings. Condition of low-land plants is satisfactory, but rain is badly needed. Recently there have been reports regarding thunder-showers in several districts.

In the loose jute section, mills are not taking any interest. Sellers are pressing for business. Earlier last week, mills are reported to have bought European Jute Bottoms alone at Rs. 6-12 per maund.

In the pucca bales section, shippers have been inactive while balers are reported to have done some business with mills. Marwari cuttings N. C. and M. C. were done at Rs. 12-8 and Rs. 12 respectively while Dundee Firsts and Lightings were sold at Rs. 78 and Rs. 68 per bale respectively. Special Firsts were bought at Rs. 46 per bale.

In the futures market, rather quiet conditions have been noticeable during the past few days. The quotation for the most part has been fluctuating around Rs. 39-4. In sympathy with the weakness of the other markets there has been a decline in the quotation to-day Rs. 38-8.

JUTE MANUFACTURES

Calcutta, April 17.

The jute manufactures market reopened in a rather firm manner after the holidays. It was generally expected that the conclusion of the Soviet-Japanese Neutrality Agreement would have a rather bearish effect on the market. At first the reaction in the market was inclined to be unfavourable but there was a sudden emergence of demand for near positions and bazar operators pushed up prices. Owing to the possibility of fresh complications in the Far Eastern situation there is a tendency to accumulate stocks. But for the difficulty in getting shipment, prices would have been marked even higher. It is noteworthy that the recent rise in prices has taken place for the near positions.

A slightly easier tendency has been noticeable towards the close in sympathy with other markets but the undertone is very steady.

After being higher at Rs. 17, 9 porters ready are now quoting Rs. 16-12, May 16-5, June Rs. 15-15, July/September Rs. 14-12 and October/December Rs. 13-10. 11 Porters ready are Rs. 21-4, May Rs. 20-8, June Rs. 19-12, July/September Rs. 18-8 and October/December Rs. 17-4.

In the heavy goods section not much of business has been passing and quotations are lower. B. Twills for April shipment sold on the basis of Rs. 34-8, Liverpool Twills Rs. 39-12 and Cornsacks Rs. 34-6.

The U.S. stock and consumption figures for the month of March reveal that there has been an increase in consumption from 67 million yards for February to 67 million yards for March. The figure for the corresponding period in 1940 was 50 million yards. There has been an increase in consumption for the third successive month. The difficulty in shipping is responsible for the sharp decline in stocks afloat from 83 million yards to 64 million yards. Stocks spot are lower at 123 million yards against 132 million yards. Total stocks on the basis of last month's consumption are not even sufficient for three months. The figures are given above.

U.S.A. Trade Statistics:
Excluding Pacific Coast Business
Million of Yards.

	Stocks at the end of month			Consumption for month		
	Spot	Afloat				
Jan.	120	129	149	102	57	55
Feb.	132	139	83	74	60	52
Mar.	123	128	64	82	67	50

The production figures for the month of March show that there has been a decrease in hessian production by 2.34 crores yards. Sacking production shows a decline of 1.51 crores yards to 8.03 crores yards. The decline in production has been due to the shutting down of mills for one week in March.

COTTON

Calcutta, April 17.

The Bombay raw cotton market was rather uninteresting till Tuesday. The reports regarding the conclusion of the Soviet-Japanese Neutrality Pact did not have any discouraging influence as it was generally believed that there would not be any material change in the situation. The reports regarding the collapse of Yugoslavia and the news regarding Japanese activity in South China have naturally had a discouraging effect. There has been selling by commission houses. There has been also bull liquidation. Broach April/May are now quoting Rs. 222, July/August Rs. 216, Oomra May Rs. 157-8. July Rs. 158, Bengal May Rs. 124-8, and July Rs. 124.

American markets have been active on local trade buying. The quotation for May closed at 11.37 cents and July at Rs. 11.35 cents.

PIECEGOODS

Calcutta, April 17.

The piecegoods market has continued firm in spite of the apathetic tone of the raw cotton market. The fears regarding the possibility of fresh complications have naturally had an encouraging effect on bazar values. Dealers in the Japanese goods section are more than ever shy to operate forward. In the circumstances, indigenous mills have again been able to secure the bulk of the business. There is good enquiry from overseas markets. In the Japanese goods section, both dealers and manufacturers are inclined to adopt a cautious attitude and business has been confined only to ready lots.

The yarn market has remained firm, though in view of the recent sharp increase in values, buyers are rather hesitant.

GOLD

Calcutta, April 17.

The Bombay gold market has been absolutely uninteresting for the most part of the period under review. Only towards the close there has been an improvement in prices on speculative buying. Gold ready closed at Rs. 43-8-3, First settlement at Rs. 43-9-6 and Second settlement at Rs. 43-11. It is noteworthy that there has been a widening in the premiums for the forward positions. The London price for gold has remained unchanged at 168s.

SILVER

Calcutta, April 17.

With the stagnation in the raw cotton market rather dull conditions were noticeable in the silver market but in sympathy with the strength of the gold market, there has been a rally in prices towards the close. Indian Mint Silver ready were Rs. 63-5, First settlement Rs. 63-7 and Second Settlement Rs. 63-9.

The London market has been idle and featureless and quotations have been at the selling rate of the Government of India. Both spot and forward are quoting 23¼d. There was some selling on Government account to meet trade demand earlier in the week.

WHEAT

Calcutta, April 17.

The Karachi wheat market was inclined to be rather firm till Wednesday on reports of Government buying and a good increase in coastal demand. Towards the close, however, there has been a decline in prices for old crop position on Punjab selling. Prices for new crop have been well held. Choice White ready was at one time high as Rs. 35. The close has been easier at Rs. 33-8. July were quoted at Rs. 29-8. Spot demand continues to be satisfactory.

The local market also was higher with the quotation for May at Rs. 4-4-3. There has been a recession to Rs. 4-2-6 at the time of writing.

MADRAS GROUNDNUTS

The local market ruled steady at the lower levels during the week. Shippers' buying limits opened around Rs. 22-10 to Rs. 23-4 on Tuesday last for Machined (Per candy of 531 lbs. ex-coast godowns) and steadied to Rs. 22-4 and Rs. 23-10 on Wednesday and to Rs. 22-4 and Rs. 23-8 on Thursday. Subsequently, prices eased slightly to Rs. 23 and Rs. 23-14, but closed steady around Rs. 22-12 to Rs. 23-10 for Machined, per candy, ex-coast godowns. Local buyers' limits opened around Rs. 22-8 to Rs. 22-12 for Machined (Per candy of 531 lbs. ex-Madras harbour godowns), and after declining to Rs. 22 on Wednesday, improved slightly to Rs. 22 and Rs. 22-8 on Thursday, Friday and Saturday, and closed steady around Rs. 22-4 to Rs. 22-8 for Machined, per candy, ex-Madras harbour godowns. 'Offices' continue to buy freely in the Ceded districts, and are reported to have bought about 6,000 tons during the week. Local buyers have not been active as in the previous weeks, and only about 300 tons are said to have been purchased by Singapore shippers in Madras during the week. It is rumoured that advaloram duties of 10% and 15% will be levied on exports from India to Burma of Groundnut kernels and Groundnut oil respectively. In particular, the duty on oil exports will, it is feared, kill the export trade to that country. Rangoon shippers of both Kernels and Oil have now withdrawn from the market, and prices for both oil and for the quality of kernels shipped to Burma have declined. Groundnut oil prices have shed Re. 1 per candy on balance. Opening around Rs. 48-8 to Rs. 49, Rs. 50 and, Rs. 50 for "Chekku", "Produttur" and "Expeller" qualities respectively, prices eased to Rs. 48 and Rs. 48-8 in the case of "Chekku" quality on Thursday with other qualities unchanged. The market closed weaker around Rs. 48, Rs. 49 and Rs. 48-8 for "Chekku", "Produttur" and "Expoller" qualities respectively, for ready lots, per candy of 500 lbs. loose, ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

The proposed conference of representatives of the Madras Kip interests with the local Representative of the Ministry of Supply to discuss, among other matters, the question of quotas for shipments of Tanned Hides and Skins, has been adjourned until after the shipments in respect of quotas already awarded are completed in the coming weeks. It is reported that quotas for 2,000 tons have been issued for shipment in the coming weeks, and that at least 4,000/5,000 bales will be cleared in a few weeks. A boat due to clear a good portion of the allotment goods, it is understood, will not load Tanned Kips. Nevertheless, another one will be available later in the month to take this cargo. Altogether, it is confidently hoped that nearly the entire quantity of priority goods sold and awaiting shipment for months would have been cleared by early May, if not before the end of the current month. Once the priority goods are shipped, only the non-priority goods will have to be shipped for the rest of the allotted space. An intriguing situation will then develop as the market will be bare of priority goods and the tanneries considerably curtail their output, in the face of any restrictions on Non-priority goods. For the last few days, local dealers and MUNDIES have been reluctant to sell at the previous week's levels, and a steadier tone has developed, despite the Easter recess. Apart from the prospect of shipments leading to the reduction of local stocks, stocks in the hands of MUNDIES and tanners have been very much reduced without the possibility of replacing them in the same proportion. Indeed, tanneries have been reducing their 'soaks' by 50% to 70% of the normal, thus cutting down the input considerably. Until shipments of an appreciable quantity of sold goods are completed and the question of shipment of non-priority goods is settled, there will be no inducement for the tanners to increase their production. It is hoped that the forthcoming conference of the local Hide trade interests and the local Representative of the Ministry of Supply will, besides tackling the question of quotas, discuss and if possible, reach a decision on the question of the shipment of non-priority goods.

(*Continued from page 705*)

at the end of 1938 and 15 per cent greater than at the end of 1929. The scope for an increase, such as occurred in 1940 was recognised, and production capacity was rated at 83 million tons by the end of 1940. A subsequent estimate indicated a further expansion for Mr. W. S. Tower, President of the American Iron and Steel Institute, has assumed that it is possible for the U.S. steel industry to produce crude steel at the rate of 85 million tons per annum. During the past ten years the American steel industry has spent no less than 1,500 million dollars on modernising and extending plant, and further expenditure must result in an addition to potential output. These figures are of vast significance in view of the programme of aid to Britain. Anglo-American interdependence has been recognised in various recent decisions of the Administration, and help to Britain is most definitely on the way. The prompt settlement of labour trouble in the steel industry by conceding wage increases shows that nothing like the long coal-mining strike of last year will be allowed to hold up production for national and extra-national defence.

Automobile Manufacture in India

The forward industrial policy of the Mysore Government lending support to the proposed scheme to manufacture motor cars in India is probably responsible for flooding Bangalore with literature analysing the prospects of motor industry in India and also applications from prospective share-holders. Most of these comments emanate from industrialists of foreign countries, and automobile experts having vested interests in India. The majority of them are very critical of the Indian project. The burden of the song is that it would be uneconomical to attempt to manufacture motor cars in India.

Their slogan seems to be "better to buy than to build".

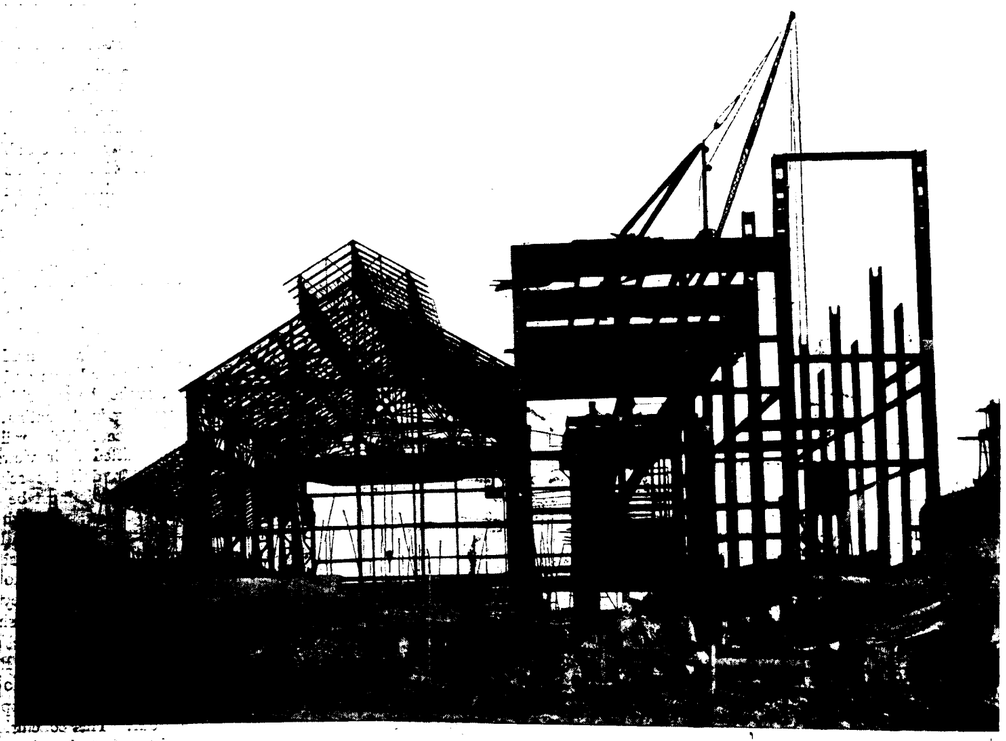
It is understood that a head of a prominent automobile firm recently interviewed the Maharaja. It is believed here that all this adverse propaganda will have no effort on the Mysore Government.

The potential importance of the automobile industry has been elaborately dealt with by industrial brains like Sir M. Viswesvaraya from time to time. He says that in United States of America the prosperity of the United States is held to be in direct relation to the volume of automobile sales. In the United Kingdom it is acknowledged that the motor industry is a great employer of labour and a consumer of raw materials. The promoters of the motor industry in India are of opinion that, with the establishment of a motor factory in India, this country would reach the top level of industrialisation. One of them says that the more he examines the question, the more he is convinced that automobile industry would contribute directly to the prosperity of the country. In his opinion so vast are the possibilities of the industry in India. While it is admitted that the mass production would contribute to the reduction in cost of manufacture, it is pointed out that small countries like Switzerland, who manufacture six thousand cars per annum and Belgium and Norway who manufacture similar quantities, are able to compete with American products imported into these countries.

Indian experts, who have investigated the question, have come to the conclusion that 85 per cent of the material required for the manufacture of motor cars are available in India and given a chance. Indian labour would also become very skilled in manufacturing motor cars. Labour in India has been found to be considerably cheaper than in any other part of the world.

In reply to the argument put forward by a few American Automobile experts that General Motors and Fords would have started their own maufacturing plants in India if it were found paying, it is stated that Americans are more interested in selling their home products in India than manufacturing motor cars here which is bound to affect their production in America and consequently their labour, shipping, insurance, banking etc. Therefore it pays the American to manufacture parts in their home factories and bring them to India for assembly, as it keeps the American factories busy, and gives enough freight to American shipping.

It is felt here that, if India misses this present opportunity of starting a motor factory, she would miss it for ever. Once the Indian scheme is killed, foreign interests would try to take advantage of the spade work done by the Indian promoters to start their own factories.



Lord Stamp

The most illustrious victim of Wednesday's savage raid was Viscount Stamp. A distinguished record in the English Civil Service carried Josiah Stamp far and those who think of him as the author of the 'Principles of Taxation' may well be advised to read his other books. Contact with the outer world of business and civil administration gave his book a value of their own, and that is why his later studies were studied as the work of one who was a humanist and economist. But Stamp was not the usual economist. As a member of the Dawes Commission he studied post-war European problems and the fruits of a wide official experience were applied to railway administration and on the Colwyn Committee earlier. Much has been said about the importance of the L.M.S. as an employer in Britain, second only to the Post Office and Lord Stamp, without being concerned with administration, directed the policy of that gigantic Corporation. But no man could bring back lost business to the railways, and Stamp's interest drifted latterly to the wider problems of economics. The war found him ready and able to help the Government on the Export Advisory Council and many other advisory bodies. Not long ago his views on private expenditure were quoted and examined in India to show that luxury imports could not come in volume as before. No business man's opinion could have been cited if it were not for the fact that as economist and statistician Lord Stamp had acquired an eminence denied to other Directors of the Bank of England.

Argentina's Debt

Another country besides Canada and has hopes of paying off part of her external debt. The *Economist* has drawn attention more than once to the revival of interest in the Argentine Congress in the suggestion that the Argentine external debt, including the railway capital, should be repatriated. The proposal was carried a stage further by its inclusion in the Pinedo Plan put forth mainly to counteract the economic dislocation resulting from the war and the closure of export markets. The Pinedo Plan was said, in January, to be under the consideration of a Senate Committee after obtaining the approval of the Cabinet. Since the greater part of Argentina's external debt and the control of the main railways are held in Great Britain the investing public in Britain has naturally great interest in all such reports or rumours. It is known that the British railway companies have no objection in principle to the plan for State purchase. It may be recalled that a tentative beginning in the direction of nationalisation was made in 1937 and in spite of its crudeness and uneven effects did not evoke the opposition of foreign capital operating in Argentina. It is now believed that the British railway companies have submitted their views to the Senate Committee, and if the scheme has not yet gone through, it must be due to difficulties in Argentina. Though the agricultural depression and reduced railway earnings will naturally militate against the payment of adequate compensation to the stockholders who have put up money for the development of Argentina, British shareholders in Argentine companies are decidely better off than the holder of Home Rails, particularly, of the junior stocks, who can hope for nothing out of the proposed fusion of the Big Four. This conclusion is justified in spite of the fact that Argentine Rails have been a bad market as traffic figures have inevitably reflected the deterioration in Argentina's export trade. Questions of compensation may not have been discussed by Lord Willingdon's trade mission but it is generally admitted that the repatriation of Argentina's debt would prove a valuable addition to British purchasing power in that country during the emergency. There has been so far no 'call-up' of Argentine stocks in Britain but the proceedure adopted in regard to U.S., Canadian and Indian securities will probably be followed, in case Argentina wants to put the Pinedo Plan through. There has been a report that the proceeds of Argentine exports to the sterling bloc would be used to purchase, on behalf of the Argentine Government, the outstanding sterling securities but there would be certain difficulties as regards the price to be paid ultimately to the private investor. Governmental intervention would be necessary. The purchase scheme should raise Argentina's credit status and help Britain to get back a considerable portion of the oversea investments for the Argentine is a country in which more British money has been invested than in British India. And borowing has been helped by Argentina's record as a borrower which is far more satisfactory than that of any Latin American country.

THE SKELETON

POWER HOUSE FOR THE INDIAN IRON & STEEL CO., LTD.

The steel structure, correctly used, provides a completed framework upon which walls, floors and fittings can be added at a maximum speed. Braithwaites are experts in all kinds of steel structures.

Stock Markets to-day and to-morrow

POLITICAL MARKETS

THE developments in the war situation and the conclusion of the Soviet-Japanese Neutrality Pact have naturally had a discouraging influence on both commodity and stock markets. It is satisfactory to note, however, that there has not been any panicky selling. The decline in prices in the Bombay market has been more pronounced. The advance in prices in recent weeks is perhaps responsible for the shake-out in that centre. Values in the Calcutta market also are lower, but the decline in prices has not been proportionate. It is pointed out that the condition of the market is rather oversold.

* * *

The war situation is very obscure. And unless there are some favourable developments there cannot be any improvement in values.

* * *

The behaviour of the giltedged market should be considered very satisfactory. There is a slight decline in the quotation for 3½ per cent Paper from Rs. 95-14 to Rs. 95-8 but rates for terminable loans, both short and medium-dated, have been fully maintained.

* * *

Further substantial progress has been made by the *Surat Electricity Company, Limited*, during the year ended December, 1940. The demand for motive power at low tension increased substantially due to improved trade conditions, with the result that the overall sales to these consumers improved by 28.5 per cent as compared with the previous year. The net profit, after providing for taxation, is Rs. 2,70,539 against Rs. 2,52,749 for the previous year. The provision for depreciation, new issue expenses, etc., is Rs. 1,47,465 against Rs. 1,33,103 previously. The net profit for 1940 includes a transfer of Rs. 4,000 from General Reserve and Rs. 3,000 from Reserve for Contingencies. The increase in earnings, however, has not enabled the directors to maintain the dividend at the previous level of 7½ per cent. Owing to the larger amount of ordinary capital ranking for dividend the total distribution for the year is Rs. 7 per share against Rs. 7½ per share on the former occasion. The amount required for the payment of the ordinary and preference dividends is Rs. 1,38,315 against Rs. 1,22,835.

* * *

In order to reduce the temporary borrowings by which the extensions of the company have been financed for sometime past and to provide further funds for the general development of the business, 5,000 ordinary shares of Rs. 100 each were issued and were offered at par to all the shareholders, irrespective of class, by whom the issue was over-subscribed. Shares of this new issue are now Rs. 25 called up and, excluding Consolidated (Coupon) Shares, rank for dividend on this amount as from 15th October, 1940.

In view of the progress made in recent years the shares are very good for the investor.

* * *

The changed conditions in the coal industry have made it difficult for coal companies to maintain their earnings. There is good demand for coal both for internal and external consumption, but so far as internal demand is concerned despatches have been affected by the difficulty in getting wagons. Production costs have also risen.

* * *

The decline in the earnings of the *Central Kurkend Coal Company, Limited*, for the half-year ended 31st December, 1940 is not, therefore, surprising. Sales have been well maintained, but increased production costs have cut into profits. The net profit, before providing for taxation, is Rs. 1,38,001 against Rs. 1,62,929 for the previous half-year. Provision for taxation is Rs. 43,000 (Rs. 75,000) while the amount set aside to depreciation is Rs. 42,000 (Rs. 50,000). The allocation to Capital Redemption Reserve is higher at Rs. 15,000 (Rs. 13,000). The ordinary dividend has been maintained at 10 per cent per annum.

* * *

Development operations are proceeding satisfactorily. It has been pointed out on more one occasion that the ordinary shares of this company are preferable to those of Dhemo Main Collieries, Limited. My recommendation has been justified by the fact that the dividend distribution of the Dhemo Main Collieries for the letter half of 1940 has been reduced to 5 per cent from 10 per cent per annum. Even with the lower level of earnings the dividend of the Central Kurkend Coal Company, Limited, is covered nearly one and a half times.

* * *

In spite of the fact that sales have been maintained at a high level, the lower margin of profit on sales has resulted in a substantial decline in the earnings of the *Hukumchand Jute Mills, Limited*, for the half-year ended 30th September, 1940. The net profit for the half-year is Rs. 3,70,[illegible] against Rs. 8,22,300 for the previous half-year. The decline in profits would not have been so pronounced but for the loss on transaction in gunnies to the extent of Rs. 2,69,453 against Rs. 1,38,752. The loss on transactions in gunnies during the six months ended September, 1940 includes Rs. 5,58,210 paid to Messrs. Shreeram Harjimull. It would be seen, therefore, that there has actually been a profit in respect of gunny transactions. Out of the earnings for the half-year ended March, 1940, the sum of Rs. 3,20,061 was provided for depreciation, while Rs. 1,17,500 was written off on account of loss on sale of investments. There are no provisions in this regard on this occasion. The debit balance carried forward is Rs. 20,98,484 against Rs. 24,68,797 brought in.

* * *

Besides this huge debit balance there is a contingent liability on account of arrears of dividend on shares to the extent of Rs. 9,80,000. It would be obviously impossible to wipe off the debit balance and clear the preference dividend arrears at an early date. The redemption of debentures and lower interest charges should improve the company's earning capacity but this cannot help the situation materially.

* * *

The need for a capital reconstruction scheme has been pointed out in these columns on more than one occasion. Without such a scheme it cannot be expected that it would be possible to presume early payment of dividends.

"WATCH-DOG."

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 18.

WITH the sharp decline in values in the Bombay market, there has naturally been a decline in values in the several sections in the local market also. But owing to the oversold position in the market there has not been any sharp setback. It would be remembered that operators on the Calcutta Stock Exchange were not inclined to follow up the recent upward movement in prices in the Bombay market. The relative steadiness of the Calcutta Stock Exchange is, therefore, explainable. Also, there has been no public selling and business done in the market at the present moment is mainly professional. The position is very obscure. Indeed, the developments during the past three days are very discouraging. It was never at any time expected that Yugoslavia and Greece would be able to stand up to the German onslaught but at the same time it was never expected that the collapse would come about so soon. The conclusion of the Soviet-Japanese Neutrality Pact adds to the uncertainties of the markets. In the face of these developments the behaviour of the markets should be considered rather satisfactory.

Giltedged securities were inclined to be easier but the recession in values has been confined only to 3¼ per cent. Paper. From Rs. 95-14 at the time of last writing, the quotation has come down to Rs. 95-8. Terminable loans are actually higher on balance, 3 per cent. 1951/54 being done at Rs. 99-9, 3½ per cent. 1947/50 at Rs. 102-14, 4½ per cent. 1955/60 at Rs. 113-6, 4 per cent. 1960/70 at Rs. 109-1 and 5 per cent. 1945/55 at Rs. 111-6. 3 per cent. Provincial loans 1952 are actually higher at Rs. 97-9.

There is no important change in the Bank section and *Imperial Bank* fully paids are now quoting Rs. 1,560 and contributories Rs. 886. *Reserve Bank* were done at Rs. 108-8.

Coal shares have been very uninteresting and transactions have been on a very small scale. *Bengal* were done at Rs. 350, *Dhemo Main* at Rs. 12-5, *Equitable* at Rs. 34-4, *Mundulpoor* at Rs. 9-8 and *West Jamuria* at Rs. 29-10.

Cotton shares have been easier in sympathy with the rest of the market though *Elgin* have been steady at Rs. 19. *Dunbar* were Rs. 192, *New Victoria* Rs. 2-2 and *Benares Cotton and Silk* Rs. 2-10.

Jute shares have not provided the exception and prices are generally lower. *Adamjee* were Rs. 21-6, *Agarpara* Rs. 25-14, *Howrah* Rs. 50-8, *Bally* Rs. 216-8, *Anglo-India* Rs. 305, *Birla* Rs. 26-13, *Budge-Budge* Rs. 347, *Hukumchand* Rs. 9-3, *Kamarhatty* Rs. 455, *National* Rs. 21-13 and *Presidency* Rs. 4-8. In a radio talk two days back, the Chairman of the Jute Mills Association took a rather optimistic view regarding the future of the industry. The increase in production during the next two months and the fairly high level of prices for jute manufactures should enable mills to earn good profits.

There has not been much of interest in the Engineering section. In the absence of any fresh buying a generally weaker tendency has been noticeable and quotations have been marked down. From Rs. 31-6 cum-dividend at the time of last writing there was a decline in the quotation to Rs. 29-2 ex-dividend. There has since been a recovery to Rs. 29-7. *Steel Corporation* have come down from Rs. 18-6 to Rs. 17-12. *Burn & Co.* were Rs. 370, *Hukumchand Steel* ordinaries Rs. 10-2 and deferreds Rs. 3-2. *Indian Malleable Castings* deferreds were Rs. 2-2. *National Iron and Steel* were Rs. 8-4.

In the Sugar section there has been little interest with *Carew & Co.* crossed at Rs. 9-4. *New Savan* were Rs. 7-1, *Buland* Rs. 15-14 and *Raza* Rs. 16.

Tea shares have been unaffected with *Bishnauth* at Rs. 25-4, *Hasimara* at Rs. 43-6 and *Dhekakhat* at Rs. 21-8. *Patrakola* were Rs. 880 and *Sapoi* Rs. 10-10.

In the miscellaneous section, sterling securities are lower with *Burma Corporation* and *Indian Copper Corporation* at Rs. 4-12 and Rs. 1-15 respectively. *B. I. Corporation* are slightly lower at Rs. 4-2 ex-dividend as also *Dunlop Rubber* at Rs. 37-8 ex-dividend. *Ganges Rope* were Rs. 262-8 and *Rohtas Industries* Rs. 20. *British-Burma Petroleum* changed hands at the lower level of Rs. 3-3. Paper shares too have been marked lower with *Titaghur Paper* 'A' and 'B' ordinary shares at Rs. 16-6. *Orient Paper* have been the exception, being higher at Rs. 12-2. *Mysore Paper* were Rs. 14. *Dalmia Cement* were Rs. 11-9, *Bararee Coke* Rs. 21-6 and *Alkali and Chemical* Rs. 17-6.

Among fixed-interest securities, there has been little business in public bodies' debentures. 3¼ per cent. *Howrah Bridge* debentures were done at Rs. 98-8. Among industrial debentures, 6 per cent. *Humayan Properties* debentures were Rs. 104-8.

Among first class preference shares, business has not been possible owing to the scarcity of sellers. *Hastings* preferences were dealt in at Rs. 136-8 and *Hukumchand* preferences at Rs. 117. *Dunlop* second preferences were Rs. 115, *Rohtas Industries* Rs. 116 and *New Victoria* Rs. 5-6.

Among Utilities, *Jubbulpore Electric* were Rs. 14-4 and *Upper Ganges Electric* Rs. 12-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 17.

Money.—The money market continued in its easy course, the rate for call money being quoted at ¼ per cent.

Exchange Market.—This section was steady, banks selling T.T. at 1s. 5 15/16d. and buying three months' bills at 1s. 6 7/32d.

Securities.—Giltededged securities were slightly marked down during the week following the latest developments in the European political situation. 3½ per cent. Paper was done slightly lower at Rs. 95-7. 1948/52 closed at Rs. 97; 1951/54 at Rs. 99-8; 1963-65 at Rs. 94-15; 1947/50 at Rs. 107-8; 1960/70 at Rs. 108-14; 1955/60 at Rs. 113-7; 1945/55 at Rs. 111-6 and 3 per cent. 1946 *Defence Bonds* at Rs. 101-7.

Shares.—The local share market opened easier on Tuesday and with sellers predominating, prices were marked down further. On Wednesday, however, prices slightly recovered at the opening, but again suffered a setback following the Balkan situation which had a restraining influence on the market. An all round nervous unloading and the weak tone in practically all the commodities were again responsible for another heavy setback on Thursday. Operators were adopting a cautious attitude. The closing tone was weak. Steels and Textiles showed a downward trend.

Textiles.—Cotton mill shares were weak in sympathy with lower cotton rates. The easir trend in linseed and wheat and the Balkan situation had a depressing influence on the cotton market. *Bombay Dycing* were marked down to Rs. 1,077-8, showing a drop of about 30 points over the previous week. *Central India* were lower at Rs. 310-8; *Century* at Rs. 408; *Colaba* at Rs. 175; *Gokak* at Rs. 211-8; *Kohinoor* at Rs. 419 and *Swadeshi* at Rs. 294. *New Great* were done at Rs. 418. At an extraordinary general meeting of the shareholders of the *New Great Eastern Spinning and Weaving Company, Limited*, held during last week, it was decided to divide the ordinary shares of Rs. 200 each, fully paid, into 2 fully paid up shares of Rs. 100 each.

Hydro-electrics : Andhra Valley were done lower at Rs. 1,870 as against Rs. 1,885 in the previous week, while *Tata Power* declined to close at Rs. 1,610 as against Rs. 1,650 in the previous week. *Tata Hydro* were, however, steady at Rs. 181.

Steels.—Steel shares opened the week with *Tata* ordinaries at Rs. 380 and the deferreds at Rs. 1,910. In mid-week prices were slightly better, the ordinaries touching Rs. 381-8 and the deferreds Rs. 1,925. This was, however, shortlived and as sellers predominated towards the close of the week prices again developed a sagging tendency, the ordinaries finally closing at Rs. 375 and the deferreds at Rs. 1,870.

Banks and Insurance.—Bank shares showed no change, *Bank of Baroda* being done at Rs. 107-8; *Bank of India* at Rs. 141-8; *Central Bank* at Rs. 44-8; *Imperial Bank* fully paids at Rs. 1,561-4; contributories at Rs. 386-4; *Reserve Bank* at Rs. 104 and *Union Bank* at Rs. 6-10.

In the Insurance section, *Oriental* were at Rs. 3,960; *New India* at Rs. 43-10 and *Jupiter* at Rs. 14.

Miscellaneous : Associated Cement were done lower at Rs. 138-4. *Bombay-Burma Trading* showed a further drop of Rs. 20 to close at Rs. 527-8 as against Rs. 571-4 a fortnight ago. *Belapur Sugar* were slightly lower at Rs. 211; *Scindia Steam* at Rs. 20-3 and *Tata Oil* at Rs. 41-8. *Wimco* remained, however, unchanged at Rs. 204, while *Premier Construction* were a shade easier at Rs. 87-12. *Shivrajpur Syndicate* were marked at Rs. 29; *Indian Iron* at Rs. 29-6 and *Steel Corporation* ordinaries at Rs. 17-12.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, April 17.

The local market opened very dull after the Easter Holidays and only a limited business was put through. Cotton mill shares were a shade easier, while select rubber shares met with good support. Sugars were steady.

Securities.—The securities market ruled slightly easier during the week on somewhat weak London advices, 3½ per cent. Paper closing at Rs. 95-10. 3 per cent. 1963/65 came to business at Rs. 94-15 and 4 per cent. 1960/70 at Rs. 108-14. Among State Loans, 3 per cent. 1952 *Mysore* changed hands at Rs. 97-12 and 4 per cent. 1953/63 at Rs. 115-4. Provincial Loans were in keen enquiry, 3 per cent. 1959 *Madras* being done at Rs. 95-14 s.l.

Mills.—Mill shares were a shade easier on lower cotton rates. *Buckingham & Carnatic* shed about Rs. 6 to close at Rs. 252, while *Madura* were done at Rs. 38. *Cambodia* were done at Rs. 8-8; *Pankaja* at Rs. 98 and *Vasanta* at Rs. 116-8. *Janardhana* were crossed at Rs. 36-8 x.d.

Utilities.—A fair amount of business was done in this section. *South Madras Electric* ordinaries were transacted at Rs. 13; *Vellore* at Rs. 12-2; *Kumbakonam* at Rs. 10-2; *Behampore Electric* ordinaries at Rs. 10-10 and preferences at Rs. 12.

Plantations.—Select rubber shares met with good buyers, *Cochin Malabar* being done at Rs. 6-12; *Tropical Plantations* at Rs. 19-10; *Klpetta* at Rs. 18-12 and *Midland* at Rs. 5-2. Tea shares were unchanged. *Peermade* were at Rs. 27-12; *Vellamalai* Rs. 15; *United Nilgiri* at Rs. 121 and *Nilgiri Neerugudi* at Rs. 1-8-6. *Highland Produce* were in good enquiry at Rs. 30-4.

Sugars : Mysore Sugar were a little lower at Rs. 54-8, while *Travancore Sugars* changed hands at Rs. 14-3.

Miscellaneous : Mysore Chemicals continued to be dull at Rs. 17. *Mysore Paper* were steady at Rs. 14-1. *Dalmia Cement* preferences came in for business at Rs. 114; *Indian Iron* at Rs. 31-4 c.d.; *Steel Corporation* at Rs. 18-6 and *Titaghur Paper* ordinaries at Rs. 17-4. *Asiatic Government Security Life Assurance* were in enquiry at Rs. 4-4.

LONDON STOCK EXCHANGE

The developments in the Balkans and North Africa have had a restraining influence on the London Stock Exchange and business has been on a restricted scale. Beyond a slight all-round decline in prices, however, there is nothing of importance to be recorded. Giltedged securities were easier with 3½ per cent Sterling Paper at 98⅞. Among British funds, 2½ per cent Consols were 77⅝, 3½ per cent Conversion 99, 3½ per cent War Loan 103¾ and 3 per cent War Loan 100¾.

Among other sections, rather easy conditions have been noticeable. Teas and Rubbers are quotably lower while there has not been any important change in Minings. Oils have been very weak with *Anglo-Iranian* were at 27s. 6d. and *Burmah Oil* at 46s. 3d. Home Rails are quiet.

NEW YORK STOCK EXCHANGE

The uncertainty regarding the war situation and the announcement regarding the possibility of a sharp increase in new taxation have been mainly responsible for the downward trend on Wall Street. Closing quotations are at the lowest levels for the week. *U. S. Steel* were $51½, *General Motors* $40 and *Anaconda Copper* $22⅞.

THE NUDDEA MILLS COMPANY, LIMITED

Notice is hereby given that the Half-yearly General Meeting of Shareholders will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 16th May, 1941 at 12-5 p.m., for the following purposes:—

(1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1941.
(2) To declare a Dividend.
(3) To elect a Director.

*The Stock Exchange remained closed from the 10th April to 14th April, 1941, both days inclusive, owing to the Easter Holidays.

MARKET POINTERS

Customs & Central Excise Revenue

ACCORDING to returns received in the Department of Commercial Intelligence and Statistics, India, the total gross Indian Sea Customs revenue, including land Customs but excluding salt revenue, collected in British India during March, 1941, amounted to Rs. 3,46 lakhs as compared with Rs. 3,27 lakhs in February, 1941, and Rs. 3,90 lakhs in March, 1940.

The total gross Central Excise duties on motor spirit, kerosene, sugar, matches, etc., amounted to Rs. 98 lakhs in March 1941, as compared with Rs. 1,60 lakhs in February, 1941, and Rs. 1,26 lakhs in March, 1940. The grand total of gross Customs and Central Excise Revenues realized in the 12 months ended March 1941, was Rs. 50,70 lakhs as compared with Rs. 57,22 lakhs during the same period last year. Of this amount, import duties accounted for Rs. 37,57 lakhs, export duties for Rs. 3,33 lakhs, land customs and miscellaneous for Rs. 44 lakhs and Central excise duties for Rs. 9.32 lakhs.

* * *

Indo-Burma Trade Pact

Notifications issued in a *Gazette of India Extraordinary* on April 7 evening define the tariff position following on the Indo-Burma trade agreement.

The effect of the notifications is, firstly, to declare the Burma ports as "foreign ports" instead of "Customs ports" as hitherto; secondly, to cancel certain exemptions including that relating to kerosene, which now becomes liable to import duty, while foreign goods imported from Burma also become liable to full Indian import duty; and, thirdly, to exempt from export duty raw jute, jute manufactures and rice exported to Burma from India.

It has already been notified that non-Indian goods re-exported from India to Burma are being made eligible with effect from April 7 for shipment under claim for drawback or for shipment from a bonded warehouse under the same conditions as apply to shipment for foreign ports.

* * *

Exports of Indian Tobacco

Egyptian firms and factories, which showed little interest in Indian tobacco in the early part of 1940, have now begun to examine the question of importing Virginia flue-cured tobacco from India.

Prospects are promising in view of the curtailment of other sources of supply and of the increasing popularity of Virginia cigarettes. Importers in Egypt have been introduced to exporters in India by the Indian Government Trade Commissioner, Alexandria. Much of course will depend upon satisfactory contacts to establish a good reputation for Indian tobacco and to make supplies according to samples.

* * *

Kerosene Prices raised

The prices of kerosene oil were raised in Bombay following the decision of the Government of India to withdraw, as the result of the new Indo-Burma Trade Pact, the preferential treatment in the matter of import duty given to kerosene imported from Burma.

The new prices represent an increase of four annas per unit of eight gallons in the case of white oil and five annas six pies in the case of red oil.

Since the outbreak of the war, the price of kerosene has been gradually going up owing to the increased cost of production and distribution. Only in January last, kerosene prices were raised by as. 1-6 per unit of eight gallons with the consent of the Government of India.

* * *

Control of Newsprint Imports

Further inquiries regarding the Government of India's decision to subject newsprint to import trade control show that the notification will not apply to newsprint despatched on through consignment to India before April 12, 1941.

It is understood that the Government's decision on the subject marks an interim stage during which it is intended to collect information, and that the licensing system would at present merely be used to prevent an expansion of newsprint imports beyond the current level. It is, however, contemplated to consult, as soon as practicable, newspaper interests regarding the possibility of reducing newsprint imports and thus conserving dollar exchange.

* * *

Figures of Revenue

Messrs. Tata Hydro-Electric Agencies, Ltd., Agents for Tata Hydro-Electric Power Supply Co., Ltd., Andhra Valley Power Supply Co., Ltd., and Tata Power Co., Ltd., report that the revenue for energy sales of the said companies for March 19, 1941, amounted to Rs. 3,08,436, Rs. 4,40,088 and Rs. 7,18,013, respectively, as against Rs. 1,92,209, Rs. 2,88,621 and Rs. 4,16,134, respectively, for March, 1940.

* * *

Increase in Railway Earnings

The total approximate gross earnings of all State-owned railways for the period (eleven days) ended March 31, 1941, amount to Rs. 378 lakhs.

This is Rs. 56 lakhs more than the approximate gross earnings for the corresponding period of the previous year, or Rs. 47 lakhs more than the actuals for the corresponding period of 1939-40.

The total approximate gross earnings from April 1, 1940 to March 1941 amount to Rs. 111.20 crores, which is Rs. 1,227 lakhs more than the actuals for the previous year.

* * *

Kolar Output

The total output of the four Kolar gold companies for the month of March was 24,321 fine ounces, comprising 23,995 ounces from 69,503 tons current ore crushed and 326 ounces from 8,563 tons old tailings treated. This compares with 24,463 fine ounces in January and 22,517 ounces in February.

THE SURAT ELECTRICITY COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the TWENTY-FIRST ORDINARY GENERAL MEETING of the Shareholders of THE SURAT ELECTRICITY COMPANY, LIMITED, will be held on Thursday, the 24th April, 1941 at 4-30 p.m. at the Registered Office of the Company, Home Street, Fort, Bombay, to transact the following business:—

1. **To adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1940.**
2. **To declare a Dividend.**
3. **To elect Directors in place of Sir Purshotamdas Thakuredas, Kt., C.I.E., M.B.E., and Rao Bahadur Natwerlal M. Jhaveri, B.A., LL.B., who retire by rotation, but are eligible and offer themselves for re-election.**
4. **To elect Mr. R. C. Lowndes, who retires under Article 98, as a Director.**
5. **To appoint Auditors for the current year and to fix their remuneration.**

By Order of the Board,
KILLICK, NIXON & CO.,
Agents.

Bombay, 26th March, 1941.

THE GOUREPORE COMPANY, LIMITED

NOTICE

Notice is hereby given that the Half-yearly General Meeting of Shareholders will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 16th May, 1941, at 12 noon, for the following purposes:—

1. **To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1941.**
2. **To declare Dividends.**
3. **To elect Directors.**
4. **To appoint Auditors and fix their remuneration.**
5. **To transact any other competent business that may be brought forward.**

The Share Transfer Books of the Company will be closed from the 3rd to 16th May, 1941, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividends, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 2nd May, 1941.

By Order of the Directors,
BARRY & CO.,
Secretaries & Agents,
The Gourepore Co., Ltd.

Calcutta,
17th April, 1941.

COMPANY REPORTS

SVADESHI MILLS COMPANY, LIMITED

	Year ended December

(Meeting, 25th April, 1941 at 4 p.m. at Bombay).

Audited accounts for the year ended 31st December, 1941 :—

The profit for the year, including income from the Girgaum Property, is Rs. 3,18,412. Adding the balance brought forward of Rs. 4,691 there is a total sum of Rs. 3,23,103 out of which the directors have carried Rs. 1,00,000 to Depreciation Fund Account and Rs. 5,000 to Provision for Taxation, leaving a balance of Rs. 2,18,103 from which the directors recommend the payment of dividend of Rs. 7 per Ordinary Share and Rs. 5 per Preference Share, carrying forward Rs. 3,103 to next year.

During the greater part of the year cloth and yarn markets remained dull, but conditions changed for the better after September, 1940. The question of the grant of Dear Food Allowance led to a general strike in Bombay and the Mill remained closed for about a month and a half.

Against the interest due on the Tata Mills Debentures held by the Company a sum of Rs. 82,687-8 was received during the year at the rate of Rs. 35 per Debenture, less income-tax.

The Debentures as well as the deposit with the *Tata Mills, Limited* of Rs. 1,50,000 (the latter secured by a second charge jointly with Messrs. *The Ahmedabad Advance Mills, Limited* and Messrs. *The Central India Spinning, Weaving and Manufacturing Co., Ltd.*, on the liquid assets of that Company) were due for repayment on the 31st December, 1940. Messrs. The Tata Mills, Limited requested the extension of the period of repayment by one year to enable a new scheme to be worked out. The managing agents agreed to guarantee repayment of the Deposit if the period was so extended.

Managing Agents.—Messrs. Tata Sons, Limited.

Authorised, Issued and Subscribed Capital—Rs. 35,00,000 in 20,000 Ordy. and 15,000 5% Cum. Pref., both of Rs. 100 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1940:—

Liabilities		Rs.	Assets		Rs.
Capital paid-up	...	35,00,000	Fixed Capital Expenditure	...	1,04,29,075

Allocation to funds including depreciation ...	Nil	75,000	65,000	Nil
Dividend amount ...	96,000	1,28,000	1,28,000	80,000
Dividend %	6	8	8	5
Carry forward	31,506	68,572	77,999	22,002

* Includes Rs. 30,000 from Dividend Fund.

(Annual meeting, 25th April, 1941 at 4-15 p.m. at Bombay).

Audited accounts for the year ended 31st December, 1940:—

The accounts show a profit of Rs. 58,934-3-0 which with the balance of Rs. 68,572-2-2 brought forward, gives a total of Rs. 1,27,506-5-2. Out of this the directors recommend to declare a dividend of Rs. 15 per share, leaving a balance of Rs. 31,506-5-2 which includes provision for taxes.

The results of the company's working were very adversely affected during the year by the high price of cotton during its buying season December, 1939 to April, 1940 and the subsequent severe fall in the price of cotton and cloth.

Secretaries, Treasurers and Agents.—The Bombay Company, Limited.

Authorised, Issued and Subscribed Capital—Rs. 16,00,000 in 6,400 shares of Rs. 250 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1940:—

* Includes Rs. 50,000 from Dividend Reserve Fund.

(Annual meeting, 25th April, 1941 at 3-30 p.m. at Bombay).

Audited accounts for the year ended 31st December, 1940:—

The accounts show a profit of Rs. 1,15,411-15-9 which with the balance brought forward from last year of Rs. 48,457-12-1 gives a total of Rs. 1,63,869-11-10. The directors have transferred from Dividend Reserve Fund Rs. 50,000, leaving an available balance of Rs. 2,13,869-11-10. Out of this the directors recommend to declare a dividend of Rs. 35 share, less income-tax, on the Preference Shares and a dividend of Rs. 40 per share, free of income-tax, on the Ordinary Shares and to carry forward a balance of Rs. 29,869-11-10 which includes provision for taxes.

Secretaries, Treasurers and Agents.—The Bombay Company, Limited.

Authorised Capital—Rs. 30,00,000 in 4,000 Ordy. and 2,000 7% Cum. Pref., both of Rs. 500 each. Issued and Subscribed—Rs. 24,00,000 in 3,200 Ordy. and 1,600 Cum. Pref., both fully paid up.

Synopsis of the balance sheet as at 31st December, 1940:—

Capital paid-up	...	24,00,000	Fixed Capital Expenditure	...	73,78,267
Reserves	...	67,46,297*	Stores	...	7,01,765

Carry forward ...	158	15,397	18,486	11,316

* Includes Rs. 4,000 transferred from General Reserve and Rs. 3,000 from General Contingencies Reserve.

Audited accounts for the year ended 31st December, 1940:—

The operations of the Company during the year have resulted in a profit of Rs. 1,63,113 from which appropriations for Taxation, New Issue expenses and Workmen's Compensation Reserve have been made. In accordance with the intention expressed in the annual report and accounts for 1939, a sum of Rs. 4,000 resulting from the conversion of certain lines from overhead to underground has been written off and a similar amount has been transferred from the General Reserve. A transfer to the Profit and Loss Account of Rs. 3,000 has been made from the General Contingencies Reserve, resulting in Rs. 1,23,074 being carried to the balance sheet.

Adding to this sum the amount of Rs. 15,399 brought forward from last year's accounts, a total of Rs. 1,38,473 is available for distribution, out of which Rs. 60,000 has been disbursed in paying an ad-interim dividend at Rs. 3 per share, on the Ordinary Shares together with the half-yearly dividend on the Preference Shares. This leaves a balance of Rs. 78,473 for disposal. Out of this the directors have recommended to pay the dividend for the second half-year on the Preference Shares and a dividend on the Ordinary Shares, making 7 per cent for the year, free of income-tax, leaving a balance of Rs. 158 to be carried forward.

Share Capital:—In order to reduce the temporary borrowings by which the extension of the company have been financed for some time past and to provide further funds for the general development of the business, 5,000 Ordinary Shares of Rs. 100 each were issued in terms of the Board Circular of the 22nd July, 1940 and were offered at par to all the shareholders, irrespective of class, by whom the issue was oversubscribed. Shares of this New Issue are now Rs. 25 called up and, excluding Consolidated (Coupon) Shares, rank for dividend on this amount as from 15th October, 1940.

Agents.—Messrs. Killick, Nixon & Co.

Authorised Capital—Rs. 30,00,000 in 25,000 Ordy. and 5,000 6½% Cum. Pref., both of Rs. 100 each. Issued—Rs. 25,00,000 in 20,000 Ordy. and 5,000 Pref. Subscribed and Called up—Rs. 21,24,835 in 14,998 Ordy. of Rs. 100 fully paid; 4,986 Ordy. of Rs. 100, Rs. 25 called up and 5,000 Pref., of Rs. 100, fully paid. Calls in advance Rs. 235 and amount forfeited Rs. 150.

Synopsis of the balance sheet as at 31st December, 1940:—

(Half-yearly meeting, held 27th March, 1941).

Audited accounts for the half-year ended 31st December, 1940:—

The half-year's working resulted in a profit of Rs. 71,746-14-5, after providing for depreciation and commissions.

After transferring this profit to Profit and Loss Account and making the necesary provision for Income-tax, and Excess Profits Tax the balance at credit of that account amounts to Rs. 50,287-9-3 out of which the directors recommend to declare a dividend of Rs. 1¼ per share, free of Income-tax, leaving a balance of Rs. 6,537-9-3.

Managing Agents—Messrs. Williamson Magor & Co.

Authorised, Issued and Subscribed Capital—Rs. 3,50,000 in 35,000 shares of Rs. 10 each, fully paid up.

WESTERN U. P. ELECTRIC POWER & SUPPLY CO., LTD.

Audited accounts for the year ended 31st December, 1940:—

The result of the year's working is a profit of Rs. 19,890-0-3 which, together with a carry forward of Rs. 1,720-15-1, gives a balance of Rs. 21,610-15-4 in the Profit and Loss Account.

The Board recommend that this amount should be disposed of as follows:—

	Rs.	A.	P.
Transfer to Depreciation Fund ...	... 15,000	0	0
Writing off against preliminary expenses	... 5,000	0	0
Carry forward	... 1,610	15	4

Every endeavour is being made to increase the sale of energy for domestic purposes, and although expansion is hampered by war conditions, the Board consider there is room for steady development.

The managing agents have voluntarily waived their remuneration during the year under review, as also their commission on profits.

Managing Agents.—Messrs. Alopi Parshad & Sons, Limited.

Authorised Capital—Rs. 20,00,000 in 1,00,000 Ordy. of Rs. 10 and 10,000 5½% Cum. Pref. of Rs. 100 each. Issued and Subscribed—Rs. 10,00,000 in 50,000 Ordy. and 5,000 Pref., both fully paid up.

BANK OF BEHAR, LIMITED

Report for the half-year ended 31st December, 1940:—

The income for the half-year was Rs. 3,21,814-12-9 and the expenses were Rs. 2,77,100-1-0, leaving a balance of Rs. 44,714-11-9. Adding the balance of last half-year of Rs. 3,940-1-11, there is a total of Rs. 48,654-13-8 out of which the directors have declared a dividend of 6 per cent p.a. and a Bonus of Rs. 1 per shares, making a distribution of over 9 per cent on these shares and 5 per cent per annum on the Preference Shares, all free of income-tax. The dividends were paid on the 28th February, 1941. The Bonus is to be paid as one Deferred Share with Rs. 1 paid up.

The Capital of the Bank was increased by Rs. 5 lakhs by the issue of Deferred Shares of Rs. 25. One Deferred share is being allotted to each holder of one ordinary share, crediting rupee one declared as Bonus in each. The directors expect that in future years more amounts will be declared as Bonus. The Capital position of the Bank is thus strengthened by this issue and the large addition to the Reserve Fund.

There was a very large demand from the shareholders for the forfeited shares, which were all allotted to them after restoring some.

Secretary.—Mr. N. R. Sinha.

Synopsis of the balance sheet as at 31st December, 1940:—

WORLD OF INDIAN FINANCE

INTERBANK call money has continued quiet, the quotable rate being ½ percent with no takers. Banks, however, continue to show interest in term deposits. The money and exchange markets during the current week have been entirely featureless. So far as Treasury Bills are concerned, the average rate of accepted tenders is unchanged at annas 13 and pies 8 percent per annum. Applications for tender bills were, however, larger at Rs. 1.84 crores. The tender offer for next week remains at Rs. 1 crore. The rate for tap bills is also unchanged at Rs. 09-13. Realisations from sales of Intermediate Treasury Bills between April 16 and April 21 make a better showing at Rs. 76 lakhs. In relation to current rates in the short loan market, and in relation to the rate paid by banks for fixed deposits, it should be possible for the Government to secure, from tap bills, far larger amounts at the present tap rate than is now actually the case. It is true that the deposits maintained by scheduled banks with the Reserve Bank are now only roundabout Rs. 25 crores; and that, from this point of view, banks cannot be expected to show any undue avidity for Treasury Bills. It is also true that the advances made by banks have shown a substantial rise in recent weeks. But, there has been considerable increase in the volume of paper notes and rupee coin in circulation; and Treasury Bill policy should be so designed as to liquify some of the hoards. This is possible only when steps are taken in India to transform the status of Treasury Bills from investment to a money market instrument.

The financial policy of the British Treasury has proved that weekly sales of bills can be expanded considerably without necessitating any unfavourable rise in the discount rate. Till a few months ago, weekly sales of British Treasury Bills were of the order of £50 millions. This figure was raised to £65 millions. In fact, at the present time, the British Government are in the market every week for three months accommodation to the extent of £75 millions. That is to say, compared to the position of a few months ago, the London market is being called upon to absorb 50 percent more of Treasury Bills. During this period, banks have also lent considerable sums to the Government in the form of Treasury deposits. It is estimated that the Government have borrowed as much as £200 millions in the form of Treasury deposits. While the Treasury Bill issue has thus been raised by 50 percent every week, and while there has been a big drain from banking circles in the form of Treasury deposits, the average discount rate on Treasury Bills is actually 2d. lower. The explanation for this is not bound merely with the higher patriotism of British bankers. These bankers were not less patriotic in the last war. Yet they mulcted onerous rates from the Government both in respect of short-term bills and war loans. The real change that has taken place is in the perfection of the technique as regards the direction and control of the money market. The basis of that reform is that Treasury Bills have become the most resilient money market instrument.

We should like to see a similar development taking place in India. We have advanced a plea in this regard all these years. The Central Banking Enquiry committee made significant recommendations on the question of Treasury Bills and a bill market. We understand that the matter has been engaging the attention of the Board of the Reserve Bank; but the conclusion which they have been asked to accept seems to be that nothing could be done to create a bill market in India. We suggest that we cannot rest content with such a conclusion. We also suggest that the present time is opportune for a reconsideration of the matter. For one thing, the Reserve Bank has now complete control of the money market. It has gathered experience during its five years of existence which must be valuable as showing the scope and objective of open market operations It may also be added that considerable expansion has taken place both in paper currency and in silver currency. Prices have not risen unduly; in many cases they are even lower. In such circumstances, the popularising of Treasury Bills will be at once a help to the money market and an increasing source of cheap accommodation for the Government.

The outstanding feature of the market in the current week is the intensification of the jittery feeling consequent upon Yugoslav's capitulation. The report of the surrender of the Greek divisions in Albania and Macedonia accentuated the nervousness. Today's news from China that Japan might attack Burma came as another shock. One can understand the relation between recurrent adverse news and market psychology. At the same time, market circles would do well to remember that this war had provided quite a few shocks in the earlier months; that these shocks had all proved short-lived; and that there has been quick recovery of more than the lost ground. Market circles will also do well to remember that panic has no meaning in the peculiar

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, April 22 1941. Total amount offered was Rs. 1 crore and 84 lakhs. Tenders at Rs. 99-12-9 per cent and above were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 40 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen and pies eight per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, April 29, 1941. Successful tenderers should make payment on Friday, May 2, 1941. Other conditions are as usual.

Three months' intermediates will be sold from April 23 to April 28, 1941, at Rs. 99-13-0 per cent subject to the conditions previously announced (viz sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold on April 16 to 21, amounted to Rs. 76,00,000.

MISRA HOSIERY
MILLS
CAWNPORE

Telegrams: MISRA, Cawnpore Telephone: 2336 Cawnpore

THE MISRA HOSIERY MILLS have, from the commencement of the war, been "on active service". Working day and night, the mills have been supplying essential requirements of the Army in the knitting line.

MISRA HOSIERY cater to the requirements of the general population and comprise socks, stockings, undervests, sports shirts, interlock underwear and outerwear, for men, women and children.

Production 8,000 Articles, daily.

Finance Abroad

MONEY conditions continue to be easy in London. There is a plenitude of funds. Loans are easily obtainable and accomodation whether overnight or for short periods is easily arranged. The short-term rate of interest is still low, the average rate of accepted tenders at last Friday's Treasury Bill offerings being £ 1-0-2.63d. per cent. which, incidentally, is fractionally in favour of the market. The increase in the total applications from £156.6 millions on April 12 to £161.8 millions on April 19, is but one sign of this plethora of funds. The keenness to buy bills by the Banks is another.

These easy conditions are accounted for by several factors. Investment possibilities are practically non-existent. Stock Exchange activity is extremely restricted. Trade is practically one-way-all imports and no exports, at any rate, the exports are neither frequent nor worth mentioning. The Cabinet is spending an astronomical sum daily on the War and that means increased disbursement of wages. The accumulated funds have two sources of investment—Treasury Bills for the Banks and bigger institutions and contributions to one or the other of the Savings and Loans Schemes for the less wealthy institutions and individuals. Both these outlets account for quite a good deal of the money spent daily. Heavier maturities of Treasury bills have to be met by increased offerings of new bills while the contributions made to the Defence Loans mount up. This State of affairs should be considered eminently satisfactory from the standpoint of War finance. War effort progresses. Money is plentiful. Interest is low. Inflation is checked. A Finance Minister cannot hope for better results.

By comparison, the conditions in France are pathetic. There was no war in that land. The finances, one would except to be more healthy and uninteresting. The facts, however, suggest that the situation is sad. The conventional distinction between Occupied and Unoccupied France has perforce to be drawn, though for practical purposes such a distinction has ceased to have any meaning. The money market as such has ceased to exist in that land. The banks though officially opened soon after the Armistice hardly function. The Bank of France has only one function to perform—to issue franc-notes against Reichsmark notes or other innumerable and disguised varieties of this genus. How far such a process of conversion can go? What exactly is to happen to the bundles and bundles of Hitler's I.O.U.'s that now adorn the investment portfolio of the Bank of France? How long can the Bank of France continue to deliver franc-notes? These and other questions hardly concern any. Neither Darlan nor Laval nor Hitler nor the Nazi Fifth Column Directors of the Paris Establishment of the Central Bank of France are interested in the day of reckoning.

A few statiscal details will illuminate the true financial position. Advances by the Bank to the Government—to which Government and for whose benefit one wonders—totalled 146 millions at the end of 1940 as compared to 30 millions nine months ago. Note circulation in this period rose from Frs. 156 millions to Frs. 218 millions. If the occupation marks are also taken into account, the total will be in the region of 300 million francs. What does this huge expenditure represent? Not the cost of any nation-building programme; not the cost of obtaining foodstuffs to feed the half-starved French populace; not the cost of building houses in the region bombed by the Nazis last June, but to defray the cost of the Nazi army of occupation. Why and for whose benefit? There is again no answer. It is plainly payment for subjugation.

Perhaps it may be tempting to read into the whole affair the hand of Nemesis. Clemenceau made the Republican Reich pay reparations for an imaginary war guilt. Hitler has made Petain pay him back for no guilt. The Reich had an era of unprecedented inflation. France is having inflation, whether it will be unprecedented, it is too early to say. At least, the French men will now have a practical experience of how the Germans felt in the twenties. Wartime inflation under Helferich was a flea bite because reparations was not mentioned until 1919.

The Thought is cruel; but there is no need for despair. The genius of Dr. Schacht was there to restore order out of financial chaos in Germany. The currency was established. It was a miracle of recovery. France too had her era of inflation. Poincare performed for France the cure Schacht did for the Reich. Another Poincare might a rise after this grim fight is over. The French genius for recovery, though failing to manifest itself in averting the catactrophe that befell her last June, will, one trusts, not fail in the field of economics.

Among the other important items of news of the week two deserve special mention—the declaration on U.S. Canadian co-operation and the proposals for increased taxation in the U.S.A. "It is agreed as a general principle," runs the joint statement issued by Messrs. Roosevelt and Mackenzie King, "that in the mobilisation of the resources of the North American continent, each country should provide the other with the defence articles it is best able to produce and produce them quickly." A corollary to this is the willingness of Canada to regard her purchases in the U.S.A. of component parts for defence weapons, as transfers to Britain under the Lease and Lend Act. Canada too, will supply the U.S.A. in the next year two to three hundred million dollars worth of defence articles such as ammunition, strategic materials including aluminimum and ships. This is a far-reaching development, as the process that started some months ago of closer co-operation between the two countries of North America has gone one step further. The burden which the American tax-payer will take on account of the war is estimated at 3,500 million dollars which is the price which the U.S.A. proposes to pay for her security. Mr. Morgenthau was emphatic and definite in his appeal. No specific tax was mentioned but he said that the tax programme will contain methods of "paying as you go" for a reasonable proportion of the expenditure, that it will be so designed that all sections of people would bear a fair share of burden, and that it will be so devised to prevent a general rise in prices. There is no half-heartedness in America's methods. Nor any going back, once a decision is taken.

(*Continued from page 743*)

circumstances of this war. The monetary authorities have proved their full ability and power to enforce their ideas of borrowing rates on the markets. They have fully demonstrated the ability to maintain gilt-edged at steady levels. This war is, without doubt, a 2½ percent war for Britain and a 3 percent war for India. From this point of view, 3½ percent Rupee paper is worth fully Rs. 100. If it is not worth Rs. 100, it is worth nothing. In simple terms, the whole basis of values is our confidence in final victory. If our confidence proves to be justified, all present values are fully justified. If, however, it turns out that our confidence was not well-grounded, a new set of values will arise. In that new set of values, each one of us may find that he has to begin anew. Why not be more prudent and patriotic by showing the fullest confidence in present values.

In the exchange market, business continued to be dull with no bills showing due to lack of freight. There was a small amount of remittance.

Banks were sellers of T.T. at 1s. 5 15/16d, for ready up to six months forward; and banks were buyers of T.T. at 1s. 6d. for the same delivery.

Banks were buyers of 3 months D.A bills at 1s. 6 7/32d., for the first and second months; 1s. 6¼d., for the third month and 1s. 6 9/32d., for the fourth forward.

Interbank call money quoted ½ percent with no takers.

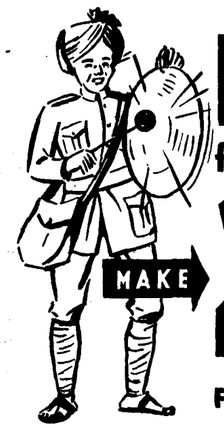
Firms' money for call and short quoted ½ percent and one to four months deposits ½ percent.

LLOYDS BANK
LIMITED INCORPORATED IN ENGLAND 1677

SAVING MADE EASY

Five Rupees will open a SAVINGS BANK ACCOUNT at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

This is a most convenient method of preparing for the payment of periodical demands, such as insurance premiums, income tax, medical expenses or school fees.



Interest allowed at 1½% per annum. WITHDRAWALS CAN BE MADE BY CHEQUE.

Economic Thought & Economic Policies

THE vicissitudes of the present war and the uncertainties regarding the various issues that are now involved and that may be thrown up in the future have not deterred the more prudent from bestowing careful thought on the nature of post-war economic problems. We have had occasion to consider these problems in some aspect or other in the past. And, doubtless, some at least of these problems may show surprising changes in their nature and import. As a rule, forethought helps only up to the point of avoiding mistakes which are likely to create impossible situations in the future. No problem can be solved before its emergence. The element of inevitability in most of the changes that are now occurring is so strong that the nations cannot, even if they would, avoid courses of action which, they know, will create complications in the future. While, thus, post-war economic problems cannot be solved to any considerable extent in advance, there is one thing that can be done even to-day, and delay in which may involve heavy handicaps for the future. To overhaul the general apparatus of economic thought or to replenish the stock of ideas regarding solution of particular economic problems, one need not wait for the end of the war. If there is one thing certain about post-war economic problems, it is that, with our present modes of thought and the ideas on economic policy to which we have till now been habituated, we shall be grossly unequal to the tasks that we shall have to face.

On what lines is this overhaul of the apparatus to be attempted? At the root of this question lies the relation between economic thought at any given time and the conscious formulation of economic policy by the government of the day. The activities of the State are rarely conditioned by the existent body of scientific knowledge in any sphere. For the State is a biological growth and what laws it obeys, it obeys out of compulsion, without knowledge, not to speak of deliberate adjustment thereto. To the extent there is truth in the Marxist maxim that the State is but an agent of economic exploitation, the State may have conscious economic policies determined primarily in the interests of the ruling classes. But that does not go far; and so long as economic life has to be adjusted to the essential scarcity of things, economic policies are determined by the necessities of particular stages of evolution rather than by a conscious apprehension of the laws of economics.

It is hardly surprising, therefore, that though economics as a science was conceived even as early as the time of the Greek philosophers, it did not emerge as a special branch of study till the end of the Middle Ages, when the ministers of autocratic monarchs felt the necessity for a better understanding of economic laws, so far as the question of devising the best methods of deriving revenue from the people are concerned. Economics, then, owes its origin to the exaggeration of the truths which to-day we may recognise in the mercantilist theories of the time. It was because the fallacies flowing from such exaggerations were found to be inescapable that a school of economists arose who were prepared to think out *a priori* the principles involved in a study of the ways by which man in society finds the requisites of his material well being. Ever since, economics has continued to be a science, with the scarcity of such material requisites as its major and almost all-sufficing premise. The very impressive system of economic thought, which to-day is known as the science of economics, is really based on certain presuppositions both of the objective facts of life and the comparatively less objective factor of man's powers of dealing with his environment. Both these are liable to change. But the possibility of change has never been adequately taken into account by academic economists. If one regards economics in the same light as say mathematics, it will be seen to be but a mere logical construction with nothing but premises and severe reasoning as its raw material. The usefulness of such a reasoning to the actual problems of life must naturally be extremely limited.

And yet, economic science would seem to have served as a judge and teacher of politicians and businessmen at least during the last two, three centuries. While this fact is indubitable, it would be fallacious to rush to conclusions on the strength of this fact. For the origin of economic science in a mere intuitive perception of the folly of exaggerated mercantilism, and the nature of developments in economic life as a whole and productive technique in particular, have combined to invest equilibrium economics with a practical value which as a science the academic economist is precluded from claiming for it, and which, in any other set of circumstances, would hardly belong to it. The value of equilibrium economics to economic policy lies in the extremely fortuitous coincidence that in the last two centuries and more, *laissez faire* has been both good policy and an adequate description of the conditions of economic life. The academic economist, for his part, has all along committed the mistake of regarding the conditions of free competition, not merely as a necessary premise and a vital part of his apparatus of thought, but also as a description of conditions that must remain universally true. When, therefore, under pressure of various circumstances, not all of which can be classed as economic motives, the world departed from the conditions of free competition and gravitated towards varying degrees of totalitarianism in economic life, the econo-

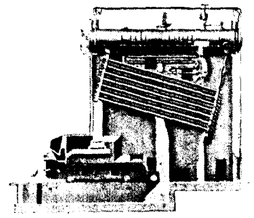
mist discarded his function of expounding a science in favour of delivering a *sermon*.

The present war, there is no doubt, will leave the world in a position in which it cannot derive any benefit whatsoever from such sermons on free trade and *laissez faire*, as academic economists have been delivering during the last few years. The phenomenon of economic policies being pursued by governments as sheer political expedients, and not as a result of conviction that the policies are sound, is by no means unfamiliar to the world. "Bread and circuses" of the last days of the Roman Empire was only a crude instance in point. The economic implications of any war must naturally be classed under the same head; and the same thing must logically be said of the wars that go on in peace time between the classes composing a political society.

It will be easily seen on a little reflection that such departures from free competition are usually the result not so much of the aggressiveness of any one section of the community but of misfortunes over which the society concerned has little or no control. Such misfortunes are usually of a political character. Some are also economic in their nature. But the State, which can never altogether flout the social conscience, cannot remain indifferent to them when they weigh too heavily on large sections of the community.



We have said that any departure from free competition is caused in the first instance by social misfortunes whether they take the form of natural phenomena like famine or comparatively less natural phenomena like war or a depression. Once the social conscience demands that their effects should be evened out over all classes of the population, free competition becomes more or less impossible. And the history of the last two decades, and more since the last war shows that the pressure which is driving the world away from free competition has been steadily increasing and may never diminish. The redistribution of productive activity resulting from the last war and the problems that faced war industries as a whole all over the world for the first time increased that pressure. Under the pressure of the problem created by the Depression, arose a system of controls over economic activity, that has served as invaluable scaffolding for building up war effort of a totalitarian kind.

No one will doubt that the ravages caused by the totalitarian war will strengthen and perpetuate the totalitarian economic system. If misfortunes have in the past been responsible for forcing an abandonment of free competition, then the war should prove the most powerful factor towards the same end. Rebuilding of vast cities, the recreation of a vast amount of plant, machinery and other equipment, the reclamation of lands for foodstuffs which cannot be bought with exports—these can hardly be left to be accomplished by the slow processes of free competition. Every problem has to be attacked by an entire society working together. It is doubtful if economists, who insisted that the problems of the depression ought to be solved by a return to free trade, will also insist in the post-war years that the ills of that period shall be cured by the same panacea. But it is certain that, if they do, their voice will be lost in the wilderness. The post-war world, especially that part of it which is now suffering from the ravages of war, will have bitter recollections of the opulence of the pre-war times. It will naturally refuse to wait for any solution which will not only involve delay in reaping the fruits but would also entail most provoking inequalities in suffering the results of the war. It will refuse to believe that with the control over Nature which man has achieved, post-war economic reconstruction cannot be accomplished without entailing prolonged suffering. What with the ravages of the war on the one side, and the understanding that productive capacity is quite equal to the maintenance of high standards of life, the masses are bound to insist on totalitarian economy being directed to well-being in preference to war.

In such conditions, all the presuppositions of economic science would be falsified by the objective conditions of the post-war world. For one thing, free competition will have ceased to be; and the old sermons can hardly be expected to serve their purpose. For neither people nor government will have the freedom, reasonably speaking, to return to free competition. For another, scarcity, that is, a natural scarcity, which could be reduced, but not substantially removed, would no longer exist. If it does obtain, it will only be as a malevolent creation of the powerful; and such malevolence cannot succeed indefinitely. With these two assumptions falsified, the whole edifice of equilibrium economics is deprived of all practical value.

The question, therefore, is: Is the economist's occupation gone? No; not if the economist realises that equilibrium economics is not falsified and can never be. Since it is a logical construction based on premises and reared on reasoning. The economist has also to understand that equilibrium economics is not the only possible system of economics that can be thought out and built up. The presuppositions of totalitarian economics and their possibilities have also to be explored. It is well to realise that the beginnings of these more fruitful studies are already seen in the outburst of new economic literature which followed the Great Depression. If these beginnings are to lead to anything substantial, equilibrium economists have to get over their fascination for free trade as a policy and those, who have been inclined towards totalitarianism, must learn to extricate the scientific part of their study from their personal preferences and predilections. It is, indeed, unfortunate, that Russian economic thought has not thrown off the weight of dogma handed to it by orthodox Marxism. Nevertheless, changes in scientific economic thought are being wrought by the penetrating essays that economists like Von Hayek have been publishing from time to time though they have been extremely critical of the objectives of totalitarian economics. The problems of a totalitarian economy may have a severely practical standpoint. But there is need for other scientific systems of economic thought than the tautology of equilibrium economics.

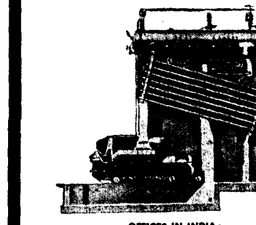
Editorial Notes



India at Westminster

THE Commons debate on India this week has not been overlooked even in the midst of surprising war developments. That the Government took the initiative in launching a discussion may be easily explained by the necessity of securing Parliamentary sanction every six months for the continuance of Adviser regimes in seven Provinces. If Parliament has said ditto to Mr. Amery's resolution, it has not been without a good deal of explanation on *many sides*. The Commons discussion may or may not promote unity in India, but it is sure to upset many backbenchers. Members with Indian experience like Sir Stanley Reed and Sir George Schuster have not intervened without misgivings though the effect of their speeches may be slight. Few in India can conceal disappointment with the stand-pat views of Colonel Amery. If Mr. Amery wants to throw cold water on the Bombay Conference purposely, it could have been done more gently when the Viceroy had his interview with Sir Tej Bahadur Sapru.

If the Pakistan scheme figures in Colonel Amery's speech nothing is said as to H. M. Government's view on the whole fantastic scheme. The subject is mentioned to justify the inference that there is no agreement among the Indian parties and hence constitutional progress is ruled out. If the logic is not unimpressive, the statesmanship for which Mr. Amery stands, is not going to provoke a vigorous exhibition of India's ability to help in the war. But politics apart, the main result of the speech must be to promote the do-nothing policy at the Centre. Federation is gone, even as an ideal ultimate aim and that naturally stimulates the sponsors of schemes for new independent states. In the Provinces where autonomy survives the gulf between rulers and ruled has widened of late and the absence of any reference to the elector's rights in the debate inevitably produces the feeling that Parliament will reach a snap decision towards the end of this year and deprive the Indian electorate of an opportunity to pass judgment on the conduct of the Adviser Governments and also of their own Members who have chosen to obey party rather than people. If no defence of the Adviser regimes was entered upon by Col. Amery in the course of the debate it was not from the feeling that they are wholly blameless. If annual administration reports have been turned into apologias for a stand-still policy as in Madras the existence of critics is not ignored. And the caution that characterises the provincial administration in seven Provinces springs mainly from a realisation of the want of the essential popular basis. If the indefinite countinance of Adviser rule is envisaged by Colonel Amery and by the House of Commons in which dissentients are altogether absent the only consequence can be stagnation. But such stagnation must react on the war effort for which the Governers, if not the Advisers, are anxious. this aspect of the matter has escaped the attention of many who admire the simplicity and efficiency of the Adviser regimes and commend them as the modern version of the paternalistic rule for which Victorian India sighed. The non-official European in India is among those who uphold the Adviser regime as the ideal of emergency government for the Provinces.

Openings in East Africa

The Indian Trade Commissioner at Mombasa in his report for December refers to the interest shown by East African merchants in a wide range of manufactures previously supplied by foreign countries but which have to be procured from India or other sources. Statistics relating to imports of builders' hardware are furnished to show that Kenya, Uganda and Tanganyika offer openings. Rim locks, mortice locks, casement stays and fasteners, hinges, bolts etc. of certain descriptions are said to be in demand in these colonial markets as also screws in large quantities. The rate of import duty on hardware is 10 per cent *ad valorem* plus a 10 per cent surcharge thereon making 11 per cent. The total value of the imports in 1938 and 1939 has been about £35,000 per annum and the trade was divided largely between Britain and Germany. The report also refers to the chances of building up a trade in brooms and brushes as Germany and Belgium are out of the colonial markets. Samples of supplies from India did not impress the local importers as rates quoted were too high, and the report advises that Indian manufacturers should quote specially reduced rates with a view to creating a market for brushware. Types of the brushes required by the market figure in a list published in *the Indian Trade Journal* last week. India has also a chance of getting a share of the market for sanitary ware. Hand basins; sinks etc. are said to be in demand. The import duty inclusive of the surcharge is stated to be 11 per cent. Paints and colours worth over £60,000 annually were taken by British East Africa mainly from Britain, U.S.A. Belgium and Germany. India can provide paint in paste and powder form. The types needed are listed and the import duty is said to be 11 per cent inclusive of the surcharge. The colours required are also mentioned and the packing needed by East African markets is described. In view of the development reported by the Indian paint industry despite the war, the new Colonial markets may be more than promising.

The World's Oil Supplies

The contraction in export trade affected the majority of crude oil producers last year. The 1940 production statistics disclose that the blockade reduced production in all countries except the U.S.A. and the U.S.S.R. since other producers, cut off from former markets, could not afford to increase output. But more than two-thirds of the world's oil production is accounted for by the U.S.A. where output rose by 7.2 per cent. to 1,345.8 million barrels. Total world production rose by 4 per cent. only to 2,151 million barrels. Though the totals are not precise they indicate that production in the U.S.S.R. rose despite the complacent prophecies of many. Rumanian production declined by 7 per cent. while Venezuela fell away further to take the third place among world producers. Almost exceptional is the rise in Mexican output showing that the nationalised industry made a better showing. Noteworthy changes are the rise in the shares of Colombia and Argentina. Among Empire sources, Trinidad claims the only increase but the figures for Iran and Iraq show considerable falls in production explained in one case by the dispute over the increased royalty payable to the Iranian Government, and in the case of the latter by the stoppage of supplies by the pipe line leading to Tripoli and fact that the other line opening into Haifa could not carry all the oil available. Exports for France ceased after the Armistice but Iran's oil met with a satisfactory demand from India and other consuming countries. The fall in exports had little or no effect on the U.S.A. where home demand sustained a large production. There was no need to revive the rationing procedure though crude oil prices failed to pick up. Russian output is said to have fallen behind schedule, and it is believed that the rise in output went to satisfy a larger home demand. Venezuelan production which had risen steadily over the last five years met with a serious check when exports dropped, and other Latin American suppliers increased their output. Shipment difficulties explain the slight fall in Iranian output from 77 million barrels in 1939 to 76.3 million barrels last year. The oil production of the Dutch East Indies including British Borneo estimated at 68.7 million barrels is not known to have undergone any change on account of the war. The anxiety of Japan to obtain normal requirements is not surprising. Rumania's seaborne exports almost stopped towards the latter half of the year, but the earthquake of November last was admittedly a factor in the fall of production to 42.5 million barrels. Mexico, in spite of being cut off from many European markets increased her output because some American oil companies contracted to buy her oil. A further rise in output is highly probable in view of the reported agreement between the U. S. Government and the new President who is said to be moving to the Right. New fields came into production in Argentine, and among the minor producers Canada and Egypt reported larger production.

Analysis of Rumanian production and exports has revealed that as much as 2.5 million tons of oil were available for Germany and the home production of 3.5 million tons of oil from coal provided Germany with more than half the oil needed. German consumption should have benefited also from the acquisition of stocks in countries overrun last year and by the severe rationing of civilian requirements in all countries under German control. Reference was made last week to the difficulty encountered by Hungary in getting fuel for her industries, and the cessation of private motoring is not peculiar to the belligerent countries. European consumption may be expected to fall further as the 1940 statistics should have included fairly large imports by Italy until her entry into the war. But synthetic oil production should increase in Britain where taxation has been modified to stimulate the making of oil from coal as in Germany though regular raids must have interfered considerably with the production and transport of oil from the distillation plants. It has been said not long ago that an annual total of about 8½ million tons is available to Germany at war. This is a total in excess of peacetime consumption and not very much below the computed total of wartime requirements, estimated variously between 9 and 12 million tons. It is apparent that the deficiency in oil is not such a great chink in the German armour, as imagined by many for long after the outbreak of war. But prolonged dependence on synthetic sources and the extension of Balkan warfare are negative factors. With the entry of Bulgaria as an ally of the Axis the air screen has disappeared and Rumanian oil-fields and the adjoining refineries alike are obvious targets for the R.A.F. Supplies from Russia too may be affected by attacks on barges on the Danube because oil from Batoum has to pass by way of Varna.

Industries in Bengal

Two interim reports were submitted by the Industrial Survey Committee appointed by the Government of Bengal, says the Industries Department's annual report for 1939-40. The Department continued to provide information and advice to the public interested in trade and industry and cottage industry workers all over India turned to the Department's Intelligence section during the year. The other sections were kept busy by the addition of equipment. The chemical section obtained an end runner mill, a hydraulic press and a steel intermittent ball grinding mill. Experiments on cold process soap were continued and also on the reverse graining of soap. The manufacture of sealing wax and the experimental production of starch were undertaken. The latter was done with a view to determine the suitability or otherwise of the different root starches which were available in commercial quantities for the manufacture of fluid adhesives. The preparation of dextrine from different starches was undertaken, as from potato, wheat, maize and rice. The starch industry may be established in Bengal in the not distant future if the experiments yield satisfactory results. The Department's work may interest the factories already established in other parts of India and add to the output of indigenous starch products at a time when imports are likely to fall away owing to the war. Examination of gallnuts, divi-divi, myrolabalan, babul pads and other raw materials was conducted with a view to show that ink manufacture on the basis of local raw material offered great possibilities. Training in soap manufacture was given by the Department, which conducted also the Bengal Tanning Institute and retained the Silk Conditioning warehouse.

The report refers to the research into paints and varnishes and investigations into the commercial value of a number of raw materials and the scope for utilising them. Experiments in order to improve the existing process of electroplating and research on electro-gilding were undertaken. An exhaustive survey of the position and prospects of electroplating followed. The Industrial Research laboratory helped by demonstration etc. in advising a private businessman to set up a modern paint and varnish factory in Calcutta. A number of students trained in the laboratory found employment in the new concern. Pottery, cutlery, and umbrella making were among the manufactures in which the Department continued to evince keen interest, and the unemployment relief scheme run by the Department, and as before training preceded employment in the case of more than half the boys who sought the help of the engineering branch. The textile industries including jute (though the weaving plant needed by the Institute cannot be had for some time) received due attention, resulting in the establishment of new factories. Reference may also be made to the continued efforts to develop coir weaving in Bengal. Peripatetic parties organised demonstrations and men trained by this branch of the Department found employment in new factories making goods from coir. Central Government grants for handloom weaving and the development of sericulture were administered by the Department with a view to aid and improve the local industries. The grants helped to expand the demonstration and other assistance previously afforded. The Departments report refers to the improvement in the tanning and leather industries following the outbreak of war, but all such observations can only have an historical interest. The Tanning Institute is to be reorganised according to the report, which states that a three-year course leading to a university certificate, is to be instituted. Boot and shoe manufacture, through demonstration by moving parties, formed part of the work carried out by the Department in the year before last. The Department carried out routine surveys of minor industries like glass, cutlery, and handmade paper in addition to regular work for the development of textile cottage industries. It is claimed that the Department sought to give wide publicity to the products of Bengal and to the activities of the Department, with the result that it was possible to raise public consciousness to the need of supporting home industries.

Stimulus to Glass

The total value of glass produced in Indian factories is estimated at Rs. 2 crores. According to a recent press note, India's glass factories numbering 101 are able to satisfy the country's requirements to the extent of 50 per cent. The proportion is expected to increase further since the results of further research will be communicated to the industry. The grant of protection as recommended by the Indian Tariff Board was not considered necessary by the Government of India. But the glass industry has derived since 1938 important advantages owing to the contraction of imports. The war in the Far East has helped greatly and sheet and plate glass drawn from Belgium must be replaced by indigenous production to a great extent. War has favoured the industry also in regard to prices also, and it is possible to regard the advantages in the Burma market as a factor designed to increase exports. A new factory is expected to start production at Ghaziabad shortly. Two years ago an improved furnace was made available, originally through the continuous research of Burn and Company. The improved furnace was recommended by the Research Bureau and further improvements are said to be under consideration at present. The improved furnace was adopted by many factories which were enabled to start making and marketing China glass (a decorating material used mainly for glass bangles) and imported from abroad. Information was made available by the Industrial Research Bureau through the provincial Departments of industries and locally made China glass is said to be now cheaper than the imported article. In recent months the possibility of making liquid gold (in request by makers of glass bangles) has been discussed. Ferozabad, the home of the bangle industry, consumes 18,000 ounces of liquid gold worth more than Rs. 3 lakhs. That it can be made out of indigenous material in India has been shown in a recent bulletin of the Industrial Research Bureau dealing with this branch of manufacture.

The electric lamp industry is known to have benefited from the development of glass manufacture locally and the advice of the Industrial Research Bureau was forthcoming for lamp makers. The industry has developed rapidly, and one factory alone is able to manufacture as many as 1,500 bulbs per diem. Neutral glass, both tubes and bottles, are being manufactured in Calcutta. Indian glass factories have thus helped the manufacturers of drugs and chemicals, and

the manufacture of good neutral glass resulted from a suggestion made by the Medical Stores department. The manufacture of beads, false pearls, ornamental plate, lampware, phials and tableware can be attempted in view of the improvements in production. A special committee of the Board of Scientific and Industrial Research has examined the possibilities of making optical glass. Samples prepared in this connection have been passed as suitable for binoculars and lenses. A small type furnace for the cottage industry (domiciled in Bombay and the U. P.) is being evolved in Bombay by the Industries Department. Glass factories in India, which helped the Munitions Board in the past, have not been neglected by the Supply Department which has placed substantial orders. One of the many consequences of the war is a big fall in imports. During the first nine months of 1940-41 the total value of imports dropped to Rs. 68 lakhs from Rs. 75 lakhs in the corresponding period 1939-40. A beginning in regard to exports was also noticed as the value of shipments rose from a little over Rs. 96,000 to Rs. 3 lakhs nearly.

Soap Industry's Development

The information on the soap industry in India by the well-known bulletin issued by the Industrial Research Bureau needs to be supplemented by the facts and figures made available in a press note issued last week. Soap factories in India produce over 75,000 tons of soap of all kinds in a year valued at over Rs. 3 crores. Over a thousand factories are at work and they have managed to reduce India's dependence on foreign soap by 87.5 per cent. since 1923-24. The march of the Indian soap industry is not due to tariff protection, but merely to such advantages as a large home market and an assured supply of most raw materials needed. Technical progress has been great, to judge by the improvement in quality, and the soap industry, in spite of the entry of foreign enterprises, has not been unduly handicapped in winning a fair share of the export markets open to Indian factories. Better soap plants are being set up, and the manufacture of accessories such as dies for stamping soap has been taken in hand. A few workshops in South India specialise in the production of machinery for milling soap and other operations. The machinery can stand comparison with imported machinery as regards price and quality of design and workmanship. This development of the soap industry has given a stimulus to a number of other industries, oilseeds, paper and pasteboard for cartons and boxes, chemicals, essential oils, the printing trade and the timber trade. Recent research has certainly opened up new fields of development. Transparent soaps by cold and semi-boiled processes have been made under the direction of the Department of Industries, Madras, while the H. B. Technological Institute has studied the sweating of soaps, one of the problems with which the soap industry in India is faced. Washing soap has been made from a compound oil stock consisting of mahua, polang and karanja oils

"Britain and her Empire to-day are the spearhead of resistance to world conquest. They are putting up a fight which will live forever in the story of human gallantry."

—PRESIDENT ROOSEVELT

But gallantry is not enough: in modern war it must be backed by money and machines. And one thing all of us can do is to send a monthly subscription, however small it may be, to the EAST INDIA FUND for BRITISH WAR SERVICES.

Monthly subscriptions may be sent through your Bank, many Employers and Clubs, or direct to

The Hony. Treasurer:

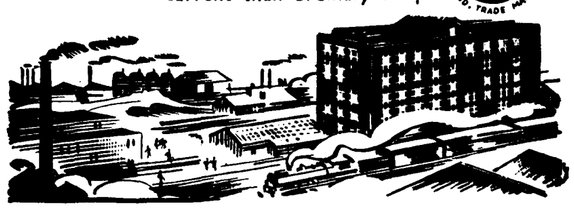
under the auspices of the Development Department, Orissa. Experiments have been completed in the Punjab on the recovery of soda, ash and caustic soda from the earths known as *Reh*. Particularly useful in the last war were the *Reh* deposits of the U. P. Essential oils for scents and perfumes are now produced and distilled in India. New factories have been started to distil other perfumes and also to manufacture certain synthetic aromatics. The enlarged demand for essential oils has led to the increased cultivation of certain plants in different parts of the country. Some of the synthetic substances in demand by the industry are no longer available in India owing to the war. The new Board of Industrial Research has set up lately an exploratory committee to report on the essential oil industry in India. The committee is expected to submit a programme of investigation which may lead to the establishment of a new industry. Oil-bearing raw materials have to be examined in this connection.



Larger Tin Consumption

Tin production in 1940 is estimated at 236,600 tons by the Tin Research Institute. The world output of tin during the last month of 1940 totalled 28,000 tons, and the increase in output must be attributed to successive changes in quota at the instance of the International Restriction Committee. Under the five-year restriction programme, renewed by agreement in 1937, the world production of tin is sought to be kept down in order to let prices go up. With war creating an almost inexhaustible demand there is hardly any problem for the producer and 1940 saw a quota greater than 100 per cent. fixed for producers. The higher quota restrained the rise in prices that should have followed the jump in consumption. Total output in 1940 shows an increase of over 50,000 tons over the total of 184,300 tons for 1939 equal to an increase of nearly 30 per cent. attested also in larger exports from all countries except Siam and Indo-China. The increased output was absorbed largely by the increased consumption reported by the U.S.A. Total deliveries amounted to 115,497 tons in 1940 showing that the U.S.A. is the most important consumer of both tin and rubber, and hence has an interest in Malaya and the Indies. The increase in U. S. consumption is largely due to the decision to build up emergency stock in that country. The plan to put up a domestic smelter for the reduction of Bolivian ore is also due to a desire to become independent of foreign smelters and supplies. Deliveries to the U.S.A. have gone up by 61 per cent. compared with 1939, and the tin mining industry, if it has not benefited as much as anticipated, has certainly no reason to complain, for the average price of the metal in London was £256.6 per ton as against £226.3 per ton in 1939. The average price in New York namely 49.82 cents per lb. shows a reduction compared with 1939 when the average price was 50.2 cents per lb. The slight fall may be readily explained as due to the building up of local stocks and the receipt of direct supplies. World stocks at the end of 1940 stood at 60,982 tons as against 50,407 tons at the end of 1939. The increase is warranted by the rise in consumption noticed over the world, in spite of the fact that Germany and several other countries are cut off from supplies.

EARLY this week, I received a call from an official of an Indian life insurance company; and, this mid-week, I had occasion to discuss current insurance problems with the head of a life office. Both of them referred to the shrinkage of new business in the case of Indian companies. While the latter was apologetic about his company not maintaining the record of the previous year, the earlier visitor sought to impress on me that the real achievement of his company during 1940 was in pursuance of the deliberate policy of the Directors to go slow with new business. He said that, early in the year, his directors came to the conclusion that to force the pace of business during a period when general conditions are adverse, would only result in poorer quality of business and higher ratio of expense. Acting on this view, the company issued instructions to its agents to concentrate on the quality of business rather than the volume of business. The result was, he proudly pointed out, a considerable reduction in total expenses as well as in the expense ratio and an all-round strengthening and consolidation of the intrinsic position of the company. To the 1940 accounts of this company, I shall have occasion to refer later in my gossip today; but, at this point, I should like to dwell, at some length, on the special problems which war conditions have posed for Indian insurance companies.

As soon as the war began, insurance officials realised that there was likely to be a setback to the steady progress which, year after year, Indian insurance companies had been making for nearly a decade and a half; and that, while everything had been going on more or less smoothly all these years, they would soon be confronted by quite a few conundrums. The war itself has passed through various phases; but suspense and uncertainty have been the dominant features in each phase of the war. Uncertainty is a graver handicap to business than even positively adverse factors. For, in the case of adverse factors, you know what they are and you are in a position to forearm yourself suitably as you are forewarned previously. During a period marked by uncertainty, one's will is paralysed and one is not able to plan at all. It is in such circumstances that life offices have had to carry on their business. At the threshold of the war, such insurance men as have given serious thought to the present and prospective position of business, had misgivings regarding four distinct aspects of insurance. Mr. T. C. Kapur of the Lakshmi Insurance Company discussed, in the early months of the war, the various problems that must engage the anxious concern of the heads of Indian insurance. And I should like to refer my readers to refer to his speech for a more detailed exposition of this subject.

In the first place, it was realised that administrative expenses were bound to rise rapidly. The Insurance Amendment Act has imposed upon the companies more detailed work and more elaborate bookkeeping; and, in other ways too, the general effect of the new insurance law is to cause an increase in the cost of management and administration. Higher prices of stationery, allowances that have to be paid owing to dearer war conditions, and many other factors have combined to add further to administrative charges. The foremost and constant care of insurance executives has, thus, been to keep the most alert watch on expenditure.

In the second place, the attitude of the prospective insurer is distinctly less agreeable when approached by the agent. See me after the war"—is the curt greeting which insurance canvassers get. It is true that the insurance companies have been trying to impress upon the public that, particularly during a war period, insurance is the safest investment. It is also true that, to an insurer of judgment and knowledge in such matters, the claim of safety by insurance companies would appeal as fully justified. But a large part of insurers in this country are moved less by intrinsic criteria of insurance and more by the kind and degree of persuasion. This class of insurers will prefer to wait till they can see the world and its prospects in a clearer light. Indian insurance offices had, therefore, to make such adjustments in their organisation as to bring in line with the reduced volume of business which they knew to be inevitable. Any failure or delay in making such adjustments would mean that a small volume of business would have to sustain the same scale of expenses.

In the third place, investment problems came to be a constant vexation. So far as as the function of investment is concerned, Indian insurance companies have had difficulties of various kinds in the past ten years or so. At the beginning of the last decade, the colossal depreciation in giltedged values confronted insurance companies with anxious problems regard-

ing actuarial valuation and bonus declaration. The law demanded that all securities, for which quotations are available, must be shown at market values at the time of the annual balance sheet as well as of the periodical valuations. If it was a case of securities for which no quotations were available on the stock exchanges, or if it was a case of loans which might be good, bad or indifferent, the company could show them at book value. That is to say, companies, which follow a *bonafide* policy of investing in stock exchange securities including giltedged, were penalised while those whose investments could not satisfy similar strict criteria, were lightly let off. That was the anomalous position which the Indian life offices had to cope with at the beginning of the 'thirties. This was followed by a period of continuous rise in giltedged securities, following the delinking of the rupee from gold in September 1931 and the consequent expansion of currency that was made possible. What then worried and perplexed insurance officials was not any depreciation on the old investments, but the poor yield on new investments. The yield on giltedged came down to round about 3 per cent. If the new investments could fetch only such a poor return, how was it possible to maintain the bonuses at the old levels? This difficulty was further enhanced when the Insurance Amendment Act made it compulsory for life companies to keep invested 55 per cent of their funds in authorised investments. The scope for diversifying investments was thus greatly narrowed down; on 55 per cent of the investment portfolio, insurance companies had to resign themselves to the prospect of an yield of no more than 3 per cent.

This was the position on the eve of the war. The general expectation as soon as hostilities began was that there would be complete disruption in giltedged values; and insurance officials began to apprehend a state of affairs even more acute than they experienced in 1930-31. With the ever-present apprehension of every adverse political development administering a shock to the giltedged market, the tendency on the part of insurance companies was to postpone investment as far as possible until the accumulation of idle funds drove them to invest in the best way one could. If, at the beginning of the war, insurance officials could have been imbued with the same optimistic outlook about giltedged as *Indian Finance* has been, life offices in India would have done very well, indeed, by availing of the opportunity provided by the big setback in giltedged which occurred on the declaration of war. But the investment policy of companies has had necessarily to be marked by hesitancy, uncertainty and vague fears about the future. Nor was it easy for the companies to build up a hedge against giltedged. The same uncertain outlook prevailed in the market for equity shares.

In the fourth place, companies were not sure what their mortality experience under war conditions was likely to turn out to be. If the territories in which insurance companies transact business become actual theatres of war, the mortality experience is bound to be adversely effected. Even otherwise, the extreme nervous tension under which people have been living since the war began, is by no means a favourable factor from the point of view of mortality experience.

Confronted with such anxious and baffling problems, the heads of insurance companies had to decide on the best policy and plan they could adopt while these critical conditions continue. It was clearly inadvisable to chase the will-o'-the-wisp of bigger and bigger new business. It will be far more prudent to concentrate on the strengthening of existing business and on the securing of new business with a strict eye on the quality of business. While the companies had thus to be prepared for a smaller turnover, the necessary pruning of the organisation had to be speedily effected. Above all, it was imperative that a firm brake be kept on expenses. Meantime, such adjustments as are possible and desirable, so as to diversify investment risks and so as to secure a higher yield on the total funds must be taken on hand. I have before me the 1940 accounts of the Lakshmi Insurance

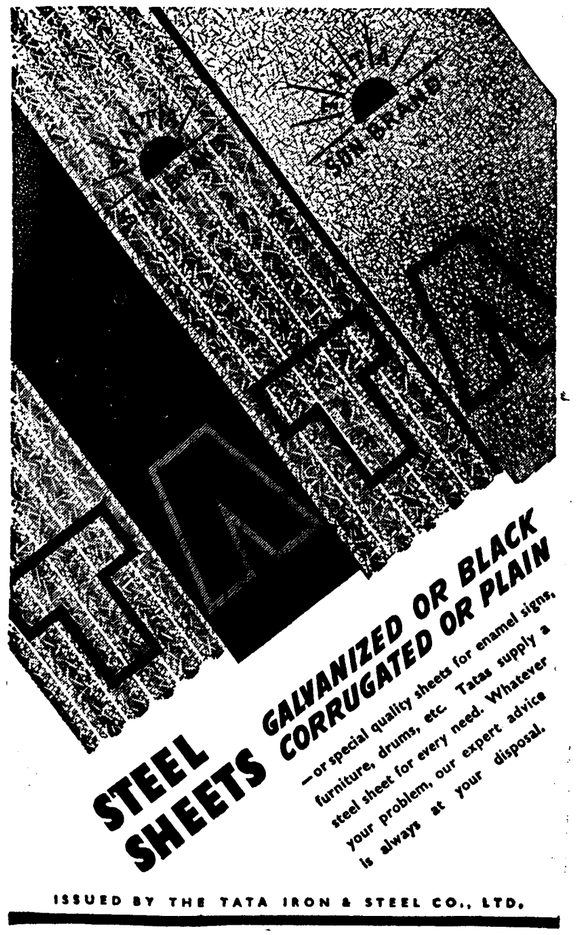
Company; and my first comment is that these wise precautions have been taken and, as a result, the company emerges out of 1940 in finer fettle than ever. The decline in the new business of the Company in the last year is a right step. 4,153 policies assuring Rs. 82,69,125 were issued during the year. The directors point out, in the report, that the decline in the business is mainly due to the difficult situation created by war conditions. In the best interests of the company, it has been considered more advisable to consolidate the business in the prevailing uncertain conditions than to force up the volume of new business.



The total receipts for the year amounted to Rs. 43,34,355, of which Rs. 36,96,058 was derived from premiums. The outgo was Rs. 21.61 lakhs. The surplus over expenditure of Rs. 21.73 lakhs has been added to the life fund which now stands at Rs. 1.55 crores. The expenses for the year amounted to Rs. 9.47 lakhs against Rs. 11.72 lakhs for the previous year. There has been a successive decline in the over-all expense ratio in recent years. The reduction in 1940 to 25.77 per cent. from 31.54 per cent. is particularly gratifying. The uncertain insurance outlook is reflected in the increase in policy-holders' loans from Rs. 9.24 lakhs to Rs. 12.88 lakhs and in loans under non-forfeiture clause to policyholders within their surrender value to Rs. 4.75 lakhs from Rs. 3.30 lakhs.

The policy of the directors with regard to investments is in the best interests of the company. At the end of 1939, an amount of Rs. 13.68 lakhs was invested in Treasury Bills; and the intention of the directors was, perhaps, to get in the market at the lower levels. The depreciation in the book value of securities as compared with market value was then Rs. 1,02,847. At the end of 1940, the deficiency was only Rs. 54,756. There is a noticeable increase in mortgages on property within British India from Rs. 28.04 lakhs to Rs. 33.36 lakhs. This move is welcome at the present moment, especially as there has been an appreciation in values of real property. House property in India at cost is also higher at Rs. 33.95 lakhs against Rs. 29.04 lakhs. The Investment Reserve Fund stands at Rs. 4,86,579. The total of assets has increased to Rs. 1,69.59 lakhs from Rs. 1,49.41 lakhs.

Commenting on Lakshmi's progress at the end of the second year of its career, I described it as an Infant Prodigy. A year or two thereafter, the *Policy* paid Lakshmi a most flattering, but most richly-deserved tribute. The *Policy* wrote: "What must almost amount to a record event in the life assurance history, and what is certainly an unprecedented event in the history of life assurance in India has been accomplished by a native Indian Office, the "Lakshmi Insurance Company, Ltd." The Lakshmi to-day is no longer an infant; but it is a prodigy alright. And it has maintained its career of record events. I hardly know of another company whose life-fund has passed the Rs. 1½ crores mark and whose annual income has exceeded Rs. 40 lakhs mark at the end of seventeen years; whose expense ratio has recorded a fall of eleven points in the space of two years; and which can claim proud ownership of its own office buildings in the more important centres of India. Verily the Lakshmi has been beloved of the Goddess of Wealth.

(From Our Correspondent)

New Delhi, April 23.

THE Viceroy's departure from New Delhi on Tuesday this week marks the close of the New Delhi season. Today, as a sad ending to this uneventful season, has come the speech of the Secretary of state in the Commons, the importance of which lies in the reply which it gives to Sir T. B. Sapru and his supporters represented by the Bombay conference. This speech rules out for the present any possibility of reconstruction at the Centre—or even "expansion—on the lines proposed at the Bombay conference. The possibility which was in the minds of many people in New Delhi was that even if it was impossible for the British Government to go to the full extent demanded in the Bombay resolution there might be some indication in the Secretary of State's speech of a desire to move forward at the Centre for the purpose of associating non-officials in larger number and in a more influential capacity with the Government, but little hope is held out by Mr. Amery in his speech. It is evident that just as the British Government is so well satisfied with the Adviser *régime* in the provinces that it has no desire to think of any alternative for the present, so also it prefers to carry on with the present arrangement at the Centre also. The culmination of events shows that even the modest scheme of "expansion" announced in August last has been indefinitely suspended. One gathers from the speech of the Secretary of State that unless and until there is a sufficient measure of support from political groups like the Muslim League, the Hindu Mahasabha etc. even leaving the Congress aside —there can be any expansion. This means that the alternative proposal placed before the viceroy by many including Sir T. B. Sapru that he should leave political parties aside and appoint instead to his Executive Council eminent Indians who though not belonging to any political party command respect and confidence in the country has not commanded itself to the Secretary of State.

* * *

The speech of Sir George Schuster who was one of the prominent speakers in the Commons debate has drawn particular attention. His candid statement that it is ridiculous to suggest that no Indian can be the Finance Member of the Government of India has been widely welcomed. Sir George was himself one of the most successful Finance Members of the Government of India and served in this country at a time when many intricate financial problems were before the country. Owing to his personal experience in the country no one is in a better position to know than Sir George the capacity of Indians to hold the important portfolio of Finance. This timely declaration of Sir George which may be said to be in favour of appointing an Indian as Finance Member has received some attention in New Delhi. Experience has shown that the Commerce Department, thanks to the energy, initiative and imagination shown by Sir Ramaswami Mudaliar, has risen in prestige and importance. As a measure of winning public confidence—all the more necesary in war time—the question of transferring other important portfolios like Finance to Indian members deserves therefore to be considered in a sympathetic spirit. Are there not men like Mr. N. R. Sarker and Sir Manohar Lal who have distinguished themselves as Finance Ministers in the provinces? One hears this question repeatedly in the course of discussions in New Delhi. Unfortunately the authorities seem to think that there is an element of risk involved in transferring this important portfolio to an Indian non-official. Without taking risks, however in a spirit of courageous statesmanship no great progress can be made—and that is the reason for the "status quo" policy of the Government of India which is still persisting.

* * *

An important subject discussed at the meeting of ths Advisory Board of the Imperial Council of Agricultural Research which met this week was the collaboration and co-operation of the Universities especially in regard to items of fundamental research. It is well-known that in the past great interest has been taken by Universities such as those of Calcutta, Bombay and Benares, in agricultural research. The Advisory Board discussed certain subjects suitable for research at Universities and decided to circulate them among different research workers for eliciting their suggestions. Among the new schemes which the Advisory Board has decided to recommend are an investigation into the diseases of poultry in Bengal and an enquiry into the causes of certain serious diseases of sheep and goats known as "gillar" which are prevalent throughout North India and which are responsible for the loss of several thousands of sheep and goats.

* * *

The war has not interfered with the Government of India's programme for financing the activities of the Delhi Improvement Trust. Already more than half a crore has been spent by the Trust in housing and extension schemes for the benefit of the Imperial Capital. A further sum of Rs. 1½ crores has now been sanctioned by the Government of India for four more schemes which are expected to be completed within the next three years. One explanation given in official circles for this large expenditure is that these schemes will serve as a model to other cities and also as an incentive to improve their housing conditions on similar lines. The most striking feature of the Delhi scheme is the rehousing of poor people dispossessed by Trust schemes. It is said that this is the first time that the State has admitted partial liability for the rehousing of poor people. For the present the Trust has undertaken the responsibility of slum clearance affecting nearly 24,000 people and providing them with about 3,700 houses. Low rents averaging between one rupee and three rupees a month have been fixed. There is also an alternative scheme which provides that if for 20 years a monthly rent of Rs. 3-8 is paid the house should become the property of the lessee. Another interesting experiment is the industrial area scheme costing nearly Rs. 17 lakhs. It is proposed to sell the land for factories on a seven year hire-purchase system charging interest at 5 percent. Sites for residential houses and shops will be sold on six year lease purchase.

It is not yet known when the Government will be able to issue its final orders on the report of Mr. De Souza relating to the representation of minorities in Railways though it has been in the hands of the Government for well over six months. The report could not be discussed either by the Assembly or the Central Advisory Council for Railways owing to various reasons. It was included in the agenda for the last meeting of the Council, but as the replies of Railway administrations on the matters referred to them had not been received consideration of, the subject had to be postponed. An Important recommendation of Mr. De Souza is to the effect that there should be an independent organisation on the lines of the Federal Public Service Commission for the recruitment of subordinate staff for the four State Managed Railways. As there are about 50,000 applications annually for at least 1,300 permanent vacancies to be filled every year his view is that there will be sufficient work for a seperate independent body taking the place of the present selection boards in the various Railways. Mr. De Souza's scheme is that this independent body which will be presided over by a Chairman with the rank of a Head of a Department should hold competitive examinations and also interview candidates. Such information as is available shows that this recommendation of Mr. De Souza is not finding much facour with the authorities owing to certain practical difficulties which they apprehend. Questions like the cost of the proposed organisation and the reasibility of centralisation as suggested by Mr. De Souza, have, it is said to be considered.

* * *

The new procedure adopted by the Government of India filling a vacancy in the Feredal Court by requesting the most senior of the Chief Justices in India, Sir John Beaumont to serve on the Court for dealing with urgent pending cases, has raised the question whether as a war measure and owing to the indefinite postponment of Federation, the whole question of the constitution of the Court itself should not be reviewed. At present there is very little work for the Court so little that the judges themselves must find the position very awkward. The suggestion made is that if immediate arrangements cannot be made to extend the appellate jurisdiction of the Court and make it hear those appeals which are now going to the Privy Council, for which, it would appear a reference has been made to the Secretary of State, the best procedure would be to have no permanent judges of the Federal Court as at present but to constitute *ad hoc* benches of judges drawn from the different High Courts for hearing cases as and when they come up for hearing at the Federal Court.

* * *

An official notification announces the retirement of Mr. T. S. Sankara Iyer, C.I.E., Director of Railway Finance. He had a very distinguished career and acted more than once as Financial Commissioner of Railways. Apart from the valuable work which he did for the Railways during the last several years, he had such exceptionally fine social qualities that he was one of the most popular figures in New Delhi.

(From Our Correspondent)

Bombay, April 23.

COMMUNAL rioting in two large cities serves to remind the public that the urban masses can sometimes go astray. Whether such disturbances is the product of inflammatory speeches in other cities is outside present speculation because Bombay has known such troubles before Mr. Jinnah started talking of Pakistan. Owing to the adoption of special precautions, the trouble in the city was less serious than apprehended. The armed police were very much in evidence on Monday and lorry patrols were common in areas that were badly affected by communal fever in the 1936 riots. The magistracy issued enough orders relating to meetings, curfew and weapons mainly to put down street congregations, and the trouble has been got over quickly enough compared with Ahmedabad. After the Governor's visit there in addition to the despatch of troops trouble is said to persist in Ahmedabad. If the city proper is free from trouble latterly, the mill areas have reported many incidents and trade is at a standstill. Shops have been closed in most areas and stray cases of arson have been reported in the press. Not all the appeals and interviews have worked to advantage and it is the local officers who have to deal with the situation competently. The Governor has expressed his opinion that officers were equal to their responsibilities but the citizens will not be happy over the developments that have put them to unprecedented strain. Many mills have been rendered idle as the work people have departed in panic. Municipal services are on the minimum basis and the survey of the damage done has inspired valiant local efforts to organise relief. Supplies of foodstuffs are none too plentiful and it will take many days before Ahmedabad reverts to normal. By comparison the rioting in Bombay was brief and slight but more interest attaches to this on the score of the fact that the mill industry here showed a notable freedom from the ill-will to which others have pointed. The rioting may not be without effect on local markets, enveloped in gloom, on account of the untoward but not wholly unexpected developments in the Balkans.

The announcement from New Delhi that Indian troops have moved into Iraq by virtue of the treaty of alliance under which Iraq must afford the right of passage to British troops, has been received with real relief in Bombay. This is a real link with Basra and Bagdad and the Iraq Government's complaisance has shown that the *coup d'etat* early this month will make no great difference in foreign policy. That the troops have gone up to guard the oilfields, still a potent magnet for less fortunate nations, is obvious and the importance to Britain of the oilfields, much larger than those lying in Trinidad, the only considerable Empire producer, is generally recognised. As the Mosul fields are not fully developed their real importance may be greater than those of Iran but that they are vital to the British Navy in the Mediterranean is a statement that is at all times acceptable. As the new Iraq Government has issued no statement except to record the entry of troops, there is reason to say that the British Minister in Bagdad may be induced to revise his views of the new Premier's proceedings. These proceedings have the sanction of parliamentary approval and of support from the Army. The despatch of troops is a reminder that the Kingdom of Iraq, a privileged ally allowed to borrow in London when all foreign lending was prohibited, is part of the Middle East over which Britain mounts guard.

The report that U. S. motor output is to be reduced by 20 per cent. this year has not led to misgivings in the motor trade. The decision may not apply to exports at all and is perhaps the consequence of a diversion of productive capacity to the demands of aircraft production of late. The decision has come as no surprise to those who urge that India should develop a motor industry with such facilities as exist immediately. Reports from Bangalore agree that with the promise of Governmental assistance, the new enterprise sponsored by leading Bombay businessmen will give India a factory that will help to reduce dependence. The advent of petrol rationing may not upset production because smaller vehicles may be available to replace those which go out of use, and if imports fall because prices are too high or supplies irregular, locally made vehicles have a better chance. In view of a recent ban on the movement of trucks from assembly plants to distributors' establishments, there is real reason to fear that enough road vehicles are not to be had. Owing to the congestion on the railways, motor trucks are described as essential. Only recently traders in Bombay made representations to Government that the City's food supply was endangered by the restrictions on long distance lorry traffic. For defence and economic development alike, motor vehicles are necessary as has been pointed out in the latest statement issued by Mr. Walchand Hirachand. It may be observed that shipping and other difficulties will reduce imports of vehicles by sea and curtailed production in Britain and America offers an advantage that should be grasped because the demand for spares for vehicles in use will keep the factory going. Opinion has moved far since the Chrysler Company's representatives visited Bombay in 1939. No longer is there any disposition to take the views of motoring correspondents about costs and comparisons for granted. Australia's policy is not regarded as a conclusive objection to the Indian scheme, and whatever he said about the difficulties of importing certain parts, it is realised that a beginning must be made at once. The formation of the company and the collection of the greater part of the capital needed inspire confidence, and not all stories in New Delhi of potential difficulties and probable handicaps, can persuade the Indian investor that a pioneer venture has no prospects.

Prohibition is still criticised by those who urge that the Government of Bombay should go back on the Ministry's policy. A recent High Court decision, directing the Collector of Bombay to issue a licence for tapping coconut trees in a private garden, has provoked anti-prohibitionists to a furtive display of temper. Officials have been reminded that Prohibition is illegal in the opinion of the High Court and they should remember that the statement issued in August last promised that Government would not embark on enforcement of the amended Abkari Act. The High Court has just handed down another decision telling the Government that the Abkari Act is a revenue measure but Government will probably issue a notification soon limiting the right of the private citizen to tap coconut palms. It is appre-

NORTH WESTERN RAILWAY

Tender No. 212-S/Adv./1/P.3.

Tenders are required for supply to N. W. Railway of 40,000 Beater Handles 36″ long of Kow-wood, Sundri or similar suitable timber. Quotations should reach office of Controller of Stores, N. W. Railway, Lahore not later than 16 hours on 5-5-1941. Quantity to be delivered weekly should be stated.

Successful tenderers will have to execute a contract agreement and deposit security amounting to 5% of the total value of contract.

A Resume of Commodity Markets

It was pointed out last week that it was difficult to take a definite view of the future of commodity markets with the prevailing uncertainties in the war situation. Unfortunately, there has been a worsening in the Greek situation since then. The surrender of twelve Greek divisions, and the latest guesses regarding the possibility of a Japanese invasion of Thailand and Burma have naturally had a depressing effect.

The jute market is very quiet while in the absence of any business in the jute manufactures market there has been a sharp decline in the quotations for near positions. The bullion markets have been inactive. In the wheat market while the quotations for new crop positions have been fully maintained there is an appreciable drop in the quotation for ready position. Raw cotton was inclined to be irregular for the most part of the week but the tendency towards the close is firm.

Jute :

The Jute market has been absolutely dull and uninteresting. Export business has been totally absent. Mills also have been buying only in small quantities and it is reported that there is a short fall in the quota under the Delhi Agreement. The recent showers have been beneficial to the jute districts and substantial propress has been made with sowings. These factors have naturally led to a fall in prices but the decline in the jute futures market cannot by any means be considered excessive. The quotation at the time of writing is Rs. 37-10.

Jute Manufactures :

The jute manufactures market was inclined to be relatively steady but the continued nervousness regarding the war situation and reports about the small volume of shipments have pushed down prices. There has been a drop of nearly one rupee in 9 Porters ready. On Friday, the discount for May and June positions over ready has widened on reports regarding the possibility of fresh complications in the Far Eastern situation. The tone in the afternoon, however, is better. There is an anomalous situation in the jute trade. The demand is there but there are no ships to carry the material.

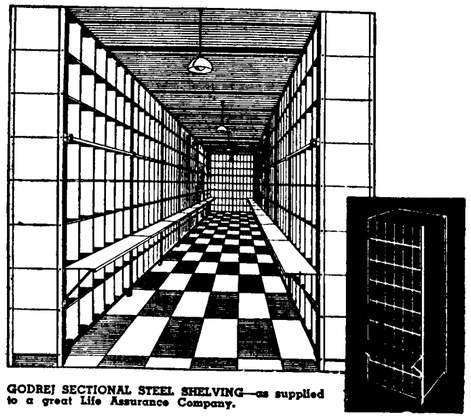
Bullion :

Gold and silver prices have been lower and quotations are at the lowest levels for the week. This would seem surprising for, the tendency of these two markets in such times is to move against the general trend.

Wheat :

The premium for old crop positions has been nearly wiped out in spite of the fact that there has been large buying. The third All-India forecast for 1940-41 estimates the area under the crop at 34,108,000 acres against 33,465,000 acres (revised) in the corresponding forecast for 1939-40, or an increase of 2 per cent. But the yield is lower by 2 per cent., being 10,233,000 tons against 10,489,000 tons (revised).

Cotton :



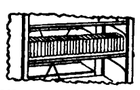
The raw cotton market was inclined to be irregular and there was some selling on fears regarding bearish crop estimates. The publication of the forecast, however, has not had any effect on the markets. The possible increase in both area and yield had been already discounted. The tendency of the raw cotton market today is firm. It is interesting to note that there has been a widening in the discount for Broach July/August position from Rs. 5 Rs. 13. The quotation is now around Rs. 207.

According to the supplementary All-India forecast, the area is estimated at 22,902,000 acres and the yield at 5,785,000 bales. There is an increase of 6 per cent. in area and of 18 per cent. in yield as compared with last year.

STEEL FOR GOOD STORAGE

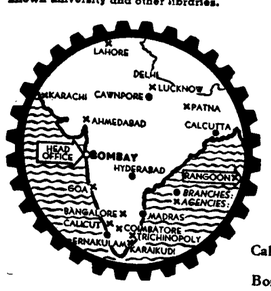
by Godrej

For durability, space-saving and planned efficiency in storage, steel is unrivalled. It cannot rot or warp, nor be eaten by white ants, like wood. But it must be of first-class fabrication, in accurately fitting units and with full protection against rust.



GODREJ SECTIONAL STEEL SHELVING—as supplied to a great Life Assurance Company.

EVERY GODREJ ARTICLE IS AN ACCURATE ENGINEERING JOB



GODREJ STEEL SHELVING CUPBOARD — with adjustable shelves, and secured with a Godrej unpickable Lock. Example, 48 x 24 x 18 inches costs only Rs. 47 net, ex-works, Bombay.

PORTION OF LIBRARY STACK BY GODREJ—as supplied to well-known university and other libraries.

- Godrej use none but best tested sheet steel and sections, pickled and machine-scrubbed for *anti-rust* before the successive coats of hard-baked enamel are applied: Godrej alone, in India, have facilities for such thorough treatment.
- Godrej Shelving offers a variety of different types, shapes and sizes in shelf and locker accommodation, and is erected, taken down, or rearranged easily with a spanner and a screw driver.
- The colossal Godrej Presses turn out sheets self-braced with cold-bent flanges—so that the maximum strength, rigidity and load-capacity are secured with minimum weight and cost.

Jute and Jute Manufactures

(From Our Jute Correspondent)

The Jute market has been very dull and off season conditions which were predicted in our last report have taken complete hold. Since the Easter Holidays buying has waned until it is now conspicuous by its absence, even Pucca bale business with mills which still held some favour at the opening has practically ceased.

Last week prices in the moffussil eased principally as the result of the lack of buying power. Sellers are finding great difficulty in disposing of their stocks at this end so that the presure to sell has doubly increased. Lower rates would gladly be accepted by sellers were mill buyers prepared to operate below the agreed minimum terms which have been extended to apply till the end of June. The agreement however is being honoured by the mills so that what was once an avenue has now the deserted appearance of a cul-de-sac. The lure of such forbidden fruit is not so appetising at this juncture as mills are now heavy with stocks, some of them actually are suffering from that full feeling as lack of godown space has caused them to defer or postpone deliveries. This however does not help the seller who has stocks to dispose of and is prepared to cut his loss so that, save for chancing his luck by despatching his goods to the Bazar in the hopes of effecting a quick sale in this precarious and overworked market he is faced with no other alternative but to hedge in the dangerous currents of the Futures market. The latter has consequently declined again the lowest break being down to Rs. 37 but this severe setback has been relieved by sligtly more favourable fluctuations. The only legitimate business which mills have indulged in at lower rates owing to selling pressure has been in Bots, the price of which is not subject to artificial regulation. European Sellers have in some cases shown the most anxiety to dispose of their stocks and have in consequence met buyers for this low type of fibre down to Rs. 3-12. Indian sellers who are now anxious to follow suit have met with little response as there is still European on offer at the same rate without finding further buyers.

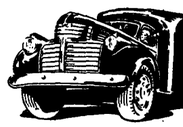
Rainfall has been general, throughout the Jute Districts assisting sowings which are proceeding rapidly on mid and high lands. The low land crop has also profited considerably from its beneficial effects, the growth making marked progress.

The chief item of interest centres round the figures which are now available concerning mills purchases since the agreement between the I.J.M.A. and the Government came into force. Between the 10th of December 1940 and the 15th April 1941 the total purchased by mills amounts to 168,27,658 mds. as against the figure 187,50,000 mds. which was proposed to be bought by them. The shortage at one time was in the region of 25 lakhs of maunds but this has been materially reduced and now only amounts to 18¼ lakhs maunds.

Except for the sale to Mills of X Bots already mentioned from Rs. 4 to Rs. 3-12 there is little to record even in Pucca Pales beyond further small lots of special Tossa at Rs. 52 and Tossa lightnings at Rs. 36.

The closing continues dull in the entire absence of business with sellers pressing sales.

FABRICS REPORT



Hessians:—The week under review has shewn a steady decline from its opening at Rs. 17, 9 porters and Rs. 21-12, 11 porters to Rs. 15-8 and Rs. 19-4 ready. Over the weekend some business in 40"—10 oz. Plate hessian was reported at Rs. 17-14 basis July/September.

The Heavy goods section of the market has ruled dull with a lower tendency, and in some fabrice the minimum rate has been touched. Sales are reported Liverpools near at Rs. 37 down to Rs. 36-8 and B. Twills from Rs. 34-4 April down to Rs. 33-4 April.

Closing quotations being now:—

	Ready	May	June	July-Sep.	Oct.-Dec.
9 Porters	15 8	15 5	14 12	13 10	12 12
11 Porters	19 4	18 15	18 6	17 6	16 8
Heavy Cees	32 4	32 4	32 4	32 0	32 0
B. Twills	33 0	32 12	32 8	32 4	32 0
Liverpools	36 8	36 8	36 8	36 8	36 8
Sacks	33 8	33 6	33 4	33 4	33 0

JUTE

Calcutta, April 24.

Even at the end of last week a generally easier tendency was noticeable as reports regarding the progress of the war in the Balkans were definitely unfavourable. The further deterioration in the Greek situation during this week and the nervous liquidation from Bombay have had a discouraging effect and there has been an all round decline in values. The reports regarding the presence of favourable weather conditions in the jute growing districts and the progress of sowings have also been not quite helpful to the market. The decline in values, having regard to the weakness of the jute manufactures market, should not be considered as anything severe. From Rs. 38-8 at the end of last week there was a decline to Rs. 37-7 and the quotation is slightly better at the time of writing at Rs. 37-10.

Mills purchases under the Delhi agreement are reported to be short of the quota by about 5 lakhs bales. The absence of any mill buying and the arrival of imports in fairly large quantities has led to selling pressure in the loose jute section. Sellers are pressing for business in the lower grade jutes. European Tossa Bottoms were done at Rs. 6-12 per maund. Balers are reported to have bought Indian District Tossa Bottoms.

In the pucca bales section there has been little activity and quotations have been moving in sympathy with the futures market. Shippers have been inactive as it has been impossible to get shipments. Mills have bought Special Firsts at Rs. 41 per bale and Lightnings at Rs. 36 per bale. Otherwise, there is nothing important to report.

The jute futures market has been rather weak There has been some speculative selling. In the earlier part of the week the tendency was irregular. In sympathy with the weakness of the other markets there was a decline towards the close yesterday to Rs. 37-10. The quotation was further lower this morning at Rs. 37-6 but in the afternoon it is a shade better at Rs. 37-10. The undertone is quiet.

JUTE MANUFACTURES

Calcutta, April 24.

The jute manufactures market has been definitely easier during the past two days and the decline in prices is especially pronounced for the near positions. There was a tendency to resist selling pressure earlier in the week but the continued discouraging reports regarding the war situation and the fears regarding the ability to get shipments have led to selling and the lowest levels for the week were touched on Wednesday. A slightly better tendency has been noticeable to-day but in view of the uncertain outlook it is impossible to take any definite view. Shipments during the current month have so far been disappointing and it is feared that with the need for shipping tonnage in other directions there will not be any appreciable increase in exports for some time. The demand is keen for near positions and shippers have got orders on hand without being able to execute them. 9 Porters ready are now quoting Rs. 15-12, May Rs. 15-9, June Rs. 15, July/Sept. Rs. 13-12 and October/December Rs. 12-14. 11 Porters ready are quoting Rs. 19-6, May Rs. 19, June Rs. 18-8, July/September Rs. 17-8 and October/December Rs. 17-8. There is a drop in the quotation for 9 Porters ready by nearly a rupee over last week. The decline in the quotations for farther positions is about twelve annas.

In the heavy goods section there was a sharp decline even earlier in the week. B. Twills for April shipment sold on the basis of Rs. 55 Liverpool Twills for the same position Rs. 46-8 and Cornsacks for the same position Rs. 53-4. The decline in the quotation is particularly pronounced in the case of Liverpool Twills.

COTTON

Calcutta, April 24.

The developments in the political situation have been responsible for the decline in prices in the latter half of the period under review. Earlier in the week there was a tendency to resist selling pressure but the absence of any mill buying and the speculative selling by commission houses have been responsible for the downward trend in values. The tendency during the course of to-day is slightly better. Having regard to the decline in prices in other markets it should be said that raw cotton values are not very much lower on balance. Broach April/May were Rs. 214-8, July August Rs. 204, Oomra May Rs. 152-12, July Rs. 152-12, Bengal May Rs. 122 and July Rs. 122-8.

American markets have been rather quiet. The delay on the part of the Administration regarding farm legislation has had a slight discouraging influence. The general expectation, however, is that a higher loan will be granted. Mill buying during the past week has not been quite satisfactory. Quotations, as a consequence, are slightly lower. The quotation for May closed at 11.28 cents against 11.37 cents and July at 11.24 cents against 11.35 cents.

PIECEGOODS

Calcutta, April 24.

There has been a smaller turnover in the piecegoods market during the past week. The uncertain outlook, with the deterioration in the political situation, has not been conducive to free trading. There is some hesitancy on the part of buyers to enter into fresh commitments as with the accumulation of stocks for export and the irregular tone of the raw material market it is generally believed that prices will be marked lower. It is unlikely, however, that mills decide to reduce their heats as they are well sold forward. Business in the Japanese goods section has been on a small scale and confined to ready lots. Forward business has been extremely restricted owing to the uncertain outlook.

In the yarn market, the undertone is steady but business has been restricted. South Indian mills have been offering to accept sales for special counts.

GOLD

Calcutta, April 24.

In view of the panic in the markets it would have been generally expected that the precious metals would have been marked higher. There has not been any activity, however, in the bullion markets. Far from there being any appreciation in values a rather easier tendency has been noticeable towards the close and quotations are around the lowest levels for the week. Gold ready were Rs. 42-10, First Settlement Rs. 42-11 and Second Settlement Rs. 42-12-0. The London price for gold has remained unchanged at Rs. 108.

SILVER

Calcutta, April 24.

In sympathy with the weaker tone of the gold market silver prices also have been marked down. Indian Mint Silver ready were Rs. 62-0, First Settlement Rs. 62-10 and Second Settlement at Rs. 62-11.

There has been no change in the quotations in the London market and both spot and forward have been steady at 23¼d. The Indian Government satisfied small trade demand.

WHEAT

Calcutta, April 24.

Heavy Punjab selling early in the week accounted for the sharp decline in the premium for spot position. There has been good buying for May and new crop positions. As a consequence, there is not much change in the quotation for July position. Choice White ready are nearly three and a half points lower at Rs. 30-4. There is good export demand and it is pointed out that the recent heavy buying by European firms is possibly in connection with government purchases. Choice White ready are quoting Rs. 30-4 and July Rs. 29-1. The quotations at the end of last week were Rs. 33-8 and Rs. 29-8 respectively.

In the local market, easier conditions have been noticeable but there has not been any sharp decline in the quotation for May which is quoting around Rs. 4-2 against Rs. 4-2-6 at the end of last week.

MADRAS GROUNDNUTS.

Madras, April 22, 1941.

After ruling steady during the early half of the week, the local market improved later in the week and closed firm. Shippers buying limits opened around Rs. 22-12 to Rs. 23-10 for Machined (Per candy of 531 lbs. ex-coast godowns), and advanced slightly to Rs. 22-12 and Rs. 23-12 on Friday, to Rs. 23 and Rs. 24 on Saturday and to Rs. 23 to Rs. 24 at the close. Local buyers' limits opened around Rs. 23 to Rs. 22-8 for Machined (per candy of 531 lbs. ex-Madras harbour godowns), and after easing to Rs. 22 and Rs. 22-4 on Wednesday and Thursday and to Rs. 22 on Friday, improved to Rs. 22 and Rs. 22-12 on Saturday and closed weak around Rs. 22. Owing to the cancellation of sailings to Burma and Straits during the week and the scarcity of tonnage available for Straits ports and Hongkong, local buyers have withdrawn from the market. Up in the Ceded districts, only a six annas crop remains yet to be marketed, and it is reported that stocks are in the hands of strong holders, who are holding out for better prices. This probably accounts for the improvement in shippers' buying limits at the close. This is in striking contrast to the downward trend in the Bombay Seeds markets. In the southern districts and the Circars area, the major portion of the crop has been sold and marketed. According to the first report on the Madras Groundnut crop for the 1st quarter of the year issued by the Government Industries Department; the estimated area is 33,500 acress, representing a decrease of 21.7 per cent, compared with the same period last year. The Groundnut oil market ruled quiet during the week, owing to the slowing down of export demand. Prices for "Chekku" and "Expeller" qualities opened around Rs. 48 and Rs. 49 respectively and closed easier around Rs. 47 and Rs. 48 to Rs. 48-8 for "Chekku" and "Expeller" qualities respectively, per candy of 500 lb. loose, for ready lots, ex-Madras sellers' godowns.

MADRAS HIDES AND SKINS

Madras, April 22, 1941.

The shipment position is still obscure and both shippers and dealers are having an anxious time. The two boats that have cleared with Kip cargoes from Madras during the past week, have loaded only 1,550 bales, although the allotment was for 2,900 bales. The action of the authorities in providing only for a portion of the allotment at the time of shipment has introduced an element of uncertainty as regards clearances of sold goods. It is reported that fixtures have been made for end April/Early May loading, when fairly large quantities are expected to be cleared. The moment such large clearances are effected, confidence will return and a fillip given to the market in Madras. The attempts of some local shippers to ship their goods from Bombay and Calcutta have been given the quietus by the announcement of the British Ministry of Supply cabled to a leading Madras shipper that the Ministry will allow shipments of Tanned hides only from Madras. The shipping difficulties and the uncertainty of clearance even in regard to cargoes alloted space in particular vessels have acted as a damper on local buying activity. European shippers have been inactive in the local bazaar, and only a few Indians are operating on a small scale at last week's levels—½d. to a penny per lb. below the schedule limits. Sellers too are not anxious to extend their commitments, as they hold only limited stocks that are insufficient, in some cases, even to cover contracts already concluded. With the tanneries practically closed and little stocks in the hands of dealers with no chance of replacement, there is no possibility of Madras showing any easiness unless the shipping position fails to improve. For the past few days, offers from London have been coming in for goods in the priority list, and it is reported that some business has been concluded. As for raw hides, good pelts are not available, and Madrassees are not buying. Only chrome tanners are reported to be active and buying at considerably higher prices on account of War orders.

(*Continued from page 759*)

hended that many people will put in applications for licences to tap trees merely by tendering the fee, and attention may be rightly drawn by Government to the rules which govern the issue of licences. It is pointed out that tapping must be controlled, and not all applicants can become licensees, even if they want to make toddy for their own consumption. The Government may not appeal against the order of the High Court but may choose to amend the Abkari Act so as to regulate the grant of licences under the previous procedure. The local press is not showing much interest in Prohibition cases, but the few references to the subject show that papers cling to the view that Government should raise the ban on liquor advertising.

A new sport, baseball, counts many followers. There was a match on the Cooperage ground and American citizens made up the two teams. Those who had seen the game in Sportoscopes saw a new game played on Sunday morning for the benefit of the local War Gifts Fund. In spite of a late start and a big crowd, the teams showed the proper spirit. But the American substitute for cricket puzzled Bombay which has seen more than one American sport on the screen and does not like the way it is run. There was, however, nothing to spoil the game on Sunday and the old amateurs who wore the gloves for the day showed that the American in India has not forgotten the big game that keeps American youth happy.

Life insurance agents take their profession rather seriously after the introduction of licensing. They are nowadays busy discussing their rights and duties, hopes and grievances to judge from a conference held not long ago in Bombay. The Conference passed a resolution drawing attention to the discontent manifested by the field force and asking the Life insurance companies not to dock commissions because reduced commissions slow down the normal expansion of life business in India. The President, Mr. Ghosh Dastidar of Calcutta, reviewed events in the insurance world and described what happened at the Simla conference last year. He welcomed the amended Act which maintains the *status quo* and has merely increased the fee payable by agents. The suggestions of the companies in regard to Agencies have not been accepted and that is regarded as satisfactory. Mr. Dastidar spoke up for Chief Agencies and described them as cheaper than branch offices. Anyway, he asked that branch office expenses should be limited like the commission payable to Chief Agencies if economy is the object of the reformers who object to Chief Agents.

Stock Markets to-day and to-morrow

JITTERY MARKETS

MARKETS have been rather nervous during the past week. The riots in Bombay and Ahmedabad and the worsening in the war situation, following the surrender of part of the Greek forces, have had a demoralising effect. With heavy bear selling there was a headlong decline in prices in Bombay. *Tata* deferreds are nearly 100 points lower at Rs. 1,773-12. Mill shares also have been weak. The Calcutta Stock Exchange showed a tendency to resist selling pressure early in the week, but during the last two days operators have succumbed to the panic of the Western Centre. Indian Irons came down to Rs. 26-8 and Steel Corporation to Rs. 16-4.

It is gratifying to note, however, that there has been a recovery since the close of yesterday. The reports regarding the tightening of regulation relating to deliveries have led to some covering. There has also been some investment buying. Indian Irons are now quoting Rs. 27-10 and Steel Corporations 16-14.

* * *

Giltedged securities also have been affected. 3½ per cent Rupee Paper has shed nearly one and a half points to Rs. 94. Terminable loans are lower in sympathy. There has, however, been no heavy liquidation.

* * *

On an earlier occasion it was pointed out that the earnings of jute companies for the latter half of 1940 would make very bad showing and that shareholders should not be surprised if there was a reduction in earnings and dividends as well. It would be remembered that the jute manufactures market was depressed following the fall of France and that it was only with the strenuous efforts of the Indian Jute Mills Association that it was possible to raise prices above the minimum levels agreed to between the Bengal Government and the Indian Jute Mills Association. After the middle of November mills started selling and there were heavy unsold stocks at the end of December. There was a mild rise in prices early in January and February and in their anxiety to dispose stocks mills unloaded their stocks. With the lower level of production and the smaller margin of profits on sales it could not have been possible, therefore, for mills to earn any high level of profits. It is, however, satisfactory that there has not been any decline in profits to below the levels for the standard period.

* * *

It is now known that three important companies have decided to reduce their dividends. *Bally* is to declare a dividend of 8 per cent against 10 per cent, *Gouripore* 17½ per cent against 27½ per cent and *Nuddea* 4 per cent against 5 per cent.

* * *

The net profit of the *Bally Jute Company, Limited* for the half-year ended March, 1941 is Rs. 2,96,768 against Rs. 9,38,073 for the previous half-year. The sharp decline in earnings for the half-year under review has reduced the liability of the company in respect of the Excess Profits Tax. The provision for taxation, therefore, is only the small amount of Rs. 25,000 against Rs. 4,50,000. The amount set aside to depreciation is unchanged at Rs. 70,000. There was a provision of Rs. 1,00,000 to General Reserve on the last occasion. The ordinary dividend has been reduced to 8 per cent against 10 per cent.

* * *

Even on the basis of the latest dividend the yield is satisfactory, being 8 per cent, tax-free.

* * *

The record figures for output and despatches from the collieries during 1938 and 1939 were once more exceeded in 1940 in the case of the *Singareni Collieries, Limited*. Owing to the increase in costs of production, however, there could not be any substantial increase in earnings. The net profit for the year ended December, 1940 is Rs. 9,54,952 against Rs. 9,25,926 for the previous year. The amount set aside to depreciation is the same at Rs. 5,80,000, but the transfer to Contingent Reserve is higher at Rs. 50,000 against Rs. 30,000. The dividend has been maintained at 5 per cent. The amount carried forward is Rs. 1,10,220 against Rs. 1,01,341 brought in.

* * *

A lower level of despatches is responsible for the decline in the earnings of the *Standard Coal Company, Limited* for the half-year ended December, 1940. 96,016 tons were raised and 100,374 tons despatched during the half-year against 112,594 tons raised and 107,763 tons despatched during the previous half-year. The net profit, before providing for taxation, is Rs. 72,930 against Rs. 89,709 for the previous half-year. The provision for taxation is Rs. 10,000 against Rs. 17,000 while the charge on account of depreciation is Rs. 28,898 against Rs. 25,687. The smaller provision for taxation and depreciation, however, has enabled the maintenance of the dividend at eight annas per sare.

Besides the difficulties on account of the present conditions in the industry the directors indicate that mining difficulties being met in areas now in process of development may lead to further reductions in output.

* * *

Thanks to a larger crop, the *Rungiee Rungliot Tea Company, Limited* has been able to report a higher level of earnings in spite of the decline in the average price for the year ended December, 1940. The net profit is Rs. 63,465 against Rs. 45,759 for 1939. The final dividend of 35 per cent., with the interim dividend of 5 per cent. already paid, makes 40 per cent., against 35 per cent. for 1939.

The crop made was 2,009 mds. compared with 1,784 mds. in 1939. The average selling price was 14 annas per lb. against 14 annas 9 pies per lb. in the previous season.

* * *

The peak levels for the recovery period after the publication of the Central Budget were touched on March 21, 1941. *Indian Finance* Daily Index of All-shares stood on that date at 121.08. Till April 5, 1941 markets were fluctuating in narrow limits. After the Easter Holidays there has been a sharp decline in prices and the Index for All-shares had shed more than five points at 115.41. The decline in prices has been pronounced on the Bombay Stock Exchange. A glance at the table published elsewhere in this issue will reveal the progress of the markets. The lowest level for the war period after the boom of end 1939 was touched by the index for All-shares at 110.14 on September 24, 1940.

* * *

Commenting on the results of the *New India Investment Corporation, Limited* for the year ended December, 1940 two weeks back it was mistakenly pointed out that

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 25.

The Calcutta Stock Exchange was dull and uninteresting in the early part of the period under review. During the last two days a weaker tendency was noticeable in sympathy with the fall in prices in the Bombay market. It is satisfactory to note, however, that there has been a steadying tendency during the course of to-day and quotations are higher than the lowest levels for the week on some investment buying and bear covering. The fall in prices during the week, it is unnecessary to point out, has been mainly due to Bombay liquidation and the fears regarding the possibility of a further worsening in the war situation. Giltedged securities were inclined to resist selling pressure earlier but during the last two days there has been an appreciable drop in values following the reports regarding the capitulation of the North Greek army. Business is on a very restricted scale and there is a complete lack of investment buying. It could hardly be expected in the present circumstances that investors would choose to increase their commitments. The undertone is quiet in the several sections. The recovery during the course of to-day is quite welcome. There has been considerable bear covering and there are reports that the Committee of the Calcutta Stock Exchange would enforce delivery on the third day. At the present moment eight days' grace is allowed.

Giltedged securities, as pointed out above, have suffered some decline. There has been some selling. 3½ per cent. Paper has come down to Rs. 93-10 from Rs. 95-8 at the end of last week. There has since been a slight recovery to Rs. 93-14. Terminable loans also have been marked lower, 3½ per cent. 1947-50 being Rs. 101-14 against Rs. 102-14, 3 per cent. 1963/65 Rs. 94-4 against Rs. 95-1, 4 per cent. 1960/70 Rs. 108 against Rs. 109-1, 4½ per cent. 1955/60 Rs. 112 against Rs. 113-6 and 5 per cent. 1945/55 Rs. 110-1 against Rs. 111-6. Among the provincial loans, 3 per cent. 1952 issues have been marked lower at Rs. 97.

There has been little doing in public bodies' debentures with 3½ per cent. *Howrah Bridge* at Rs. 97-12. Among industrial debentures, 6 per cent. *Chowringhee Properties* debentures were Rs. 102-8, 5½ per cent. Second Mortgage debentures *Carew & Co.*, Rs. 104-8 and 5½ per cent. *Rohtas Industries* debentures Rs. 102-8.

Among preference shares, there has been little doing with sellers reserved. *Alexandra* preferences were higher at Rs. 126 ex-dividend. *Craig* preferences were Rs. 44-6, *Howrah* 'A' preferences Rs. 163, *Hukumchand* preferences Rs. 114-8 and *Birla* Rs. 129-8. Among others, a small lot of *Burn & Co.* was done at Rs. 140 while *Steel Corporation* were very steady at Rs. 119. *Indian Standard Wagon* were noted at Rs. 162.

There has been little doing in Cotton mills shares and *Elgin Mills* have been marked down at Rs. 18-1. *Dunbar* were Rs. 180 and *New Victoria* Rs. 1-14.

In the coal section there has very little activity and in the absence of any business prices have been marked down very much lower. *Amalgamated* were Rs. 25-4, *Bengal* Rs. 340, *Equitable* Rs. 33-4, *Burrakur* Rs. 12-5, *Bokaro and Ramgur* Rs. 13-9 ex-dividend, *Dhemo Main* Rs. 12-5, and *West Jamuria* Rs. 27-10.

The results for the half-year ended September, 1940 of some jute companies published during the week reflect in full measure the difficult conditions experienced by the jute industry. *Bally Jute Company* has reduced the dividend from 10 per cent. to 8 per cent. while the *Gourepore* and *Nuddea* companies are also declaring lower dividends of Rs. 17-8 and Rs. 2 per share respectively. The lower dividends and the weakness of other sections have had a chilling effect on the jute section. *Howrah* are lower at Rs. 47-12 by more than 2½ points. *Alliance* were Rs. 230-8, *Anglo-India* Rs. 299, *Bally* Rs. 207, *Bengal* Rs. 13-6, *Champdany* Rs. 151-8, *Hukumchand* Rs. 8, *Kamarhatty* Rs. 437, *Kanknarrah* Rs. 341, *Nuddea* Rs. 51 and *Reliance* Rs. 51-8.

In the Engineering section, *Indian Iron* were at one time nearly two points lower at Rs. 26-8. There has since been a recovery to Rs. 27-4. *Steel Corporation*, likewise, receded to Rs. 16-4 from Rs. 17-12 at the end of last week. They are now slightly higher at Rs. 16-12. *Burn & Co.*, have been noted at Rs. 348, *Braithwaite & Co.*, at Rs. 9 and *Indian Standard Wagon* at Rs. 57-5. *Hukumchand Electric Steel* ordinaries have displayed some resistance to selling pressure and are quoting around Rs. 10-1. The deferreds are appreciably lower at Rs. 2-0.

Electric supply shares were very steady with *Jubbulpore Electric* at Rs. 14-12, *Upper Ganges* at Rs. 12 and *Upper Jumna* at Rs. 10-12. *Bengal Telephone* were unchanged at Rs. 18-12.

Among Sugar shares, *Carew & Co.*, were noted at Rs. 8-10, *Murree Brewery* at Rs. 14--4 an *New Savan* at Rs. 6-12.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* are lower at Rs. 4-3 an Rs. 1-12 respectively. *B. I. Corporation* have been dealt in at Rs. 3-10, *Dunlop Rubber* at Rs. 37-8 after being lower at Rs. 36-10 and *Indian Cable* at Rs. 19. Among Paper shares, *Titaghur Paper* 'A' and 'B' ordinary shares were Rs. 16, *Mysore Paper* Rs. 13-6, *Orient Paper* Rs. 10-12, *Star Paper* Rs. 10 and *Shree Gopal Paper* Rs. 9-11. *Indo-Burma Petroleum* were Rs. 100-8 ex-dividend, *B. Petroleum* Rs. 2-15, *Assam Saw* Rs. 3-2 and *Bararee Coke* Rs. 20-12.

Tea shares have not been quite weak, *Hasimara* being Rs. 42-4, *Baradighi* Rs. 42-12, *Bishnauth* Rs. 24-12 and *Killcott* Rs. 49-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 24.

Money:—Money conditions are practically unchanged, the rate for call money being quoted at ¼ per cent.

Exchange Market:—Banks are selling T.T. at 1s. 5 15/16d. and buying three months' bills at 1s. 6 7/32d.

Securities:—The reports of the capitulation of Greek forces in Epirus and the events in North Africa imparted a rather hesitant tone to the local giltedged market and an easier tendency was noticeable during the week under review. 3½ per cent Paper, which stood at Rs. 95-7 in the previous week, closed at the time of writing at Rs. 94. Other issues were also marked down a little. 1951-54 Loan changed hands at Rs. 99-6 as against Rs. 99-8 in the previous week; 1963-65 at Rs. 94-4 against Rs. 94-14; 1947-50 at Rs. 102-2 against Rs. 102-8 ; 1960-70 at Rs. 108 against Rs. 108-14; 1955-60 at Rs. 113 against Rs. 113-7; 1945-55 at Rs. 110-2 against Rs. 111-6 and 3 per cent Defence Loan at Rs. 101-4 against Rs. 101-7. 1948-52 were, however, unchanged at Rs. 97.

Shares:—The local share market witnessed further drop in prices in the absence of any encouraging foreign reports. There were no buyers. Nervous unloading was in evidence owing to the Balkan situation and the communal disturbances. The weakness of other commodities coupled with the liquidation of a general character had a depressing effect on prices which showed a downward trend. Steel shares were the worst to suffer in the absence of purchasers, while textiles shared in the general weakness of the market. The sentiment was bearish and selling pressure continued. Towards the close of the week, however, there was a slight turn for the better. Operators are, however, adopting a cautious attitude and keeping aloof for the time being.

Textiles:—The setback in prices of mill shares was comparatively small. *Bombay Dyeing* touched a low of Rs. 1,027-8 in mid-week, but closed better at Rs. 1,035 showing a drop of Rs. 40 over the previous week. *Central India* were done at Rs. 292-8 as against Rs. 310-8 in the previous week; *Century* at Rs. 382 against Rs. 408; *Gokak* at Rs. 198 against Rs. 211-8; *Kohinoor* at Rs. 388 against Rs. 419 and *Svadeshi* at Rs. 277-8 against Rs. 294. In the cash list, *Sholapoor* closed slightly higher at Rs. 2,910.

Hydro-electrics:—This section was a dull market with *Andhra Valley* declinning from Rs. 1,870 to Rs. 1,881-4; *Tata Power* from Rs. 1,610 to Rs. 1,572-8 and *Tata Hydro* from Rs. 181 to Rs. 175.

Steels:—Steel shares were the first to suffer due to selling pressure by weak holders. Opening at Rs. 1,870, *Tata* deferreds touched a low of Rs. 1,780, but closed better at Rs. 1,783-12. The ordinaries closed at Rs. 361 as against Rs. 375 in the previous week.

Banks and Insurance:—Bank shares were quiet, *Central Bank* being quoted at Rs. 49-14; *Imperial Bank* fully paids at Rs. 1,528-12; contributories at Rs. 386-4; *Bank of India* at Rs. 140-4 and *Reserve Bank* at Rs. 103-4.

In the Insurance section, *New India* changed hands at Rs. 11-12.

Miscellaneous: *Bombay Burma Trading* showed a drop of about 15 points to close at Rs. 481-4. *Belapur Sugar* were done at Rs. 201; *Shivrajpur Syndicate* at Rs. 27-8; *Premier Construction* at Rs. 85-8 and *Scindia Steam* at Rs. 19. *Bombay Steam and Bombay Telephone* remained, however, unchanged at Rs. 308 and Rs. 86 respectively. *Wimco* were a steady feature, closing slightly higher at Rs. 205. This Company has declared a dividend of Rs. 7 plus a bonus of Rs. 2 per share, making on the whole Rs. 9 per share for the year ended December, 1940 against only Rs. 7 in the previous year. *Indian Iron* came to business at Rs. 27-2 and *Steel Corporation* at Rs. 16-9.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, April 24.

Business in the local market continued to be restricted and in the absence of fresh buying support prices showed a sagging tendency. Cotton mill shares were again easier, while planting issues met with continued support.

Securities: The securities market was rather quiet, 3½ per cent Paper being done lower at Rs. 94. 3 per cent loan 1963-65 came in for business at Rs. 94-6 and 3½ per cent 1947-50 at Rs. 102-4. State Loans were not much in prominence during the week under review. In Provincial Loans, 3 per cent 1959 *Madras* were marked at Rs. 95-12.

Mills:—*Buckingham and Carnatic* were done again lower at Rs. 247-8, showing a further drop of about Rs. 6 over the previous week. *Mettur Industries* were put through at Rs. 146. *Cambodia* were quiet at Rs. 8-4. *Pankaja* were done at Rs. 98 and *Radhakrishna* at Rs. 129-8.

Utilities:—*South Madras Electric* were steady at Rs. 13. *West Coast* were wanted at Rs. 5-12 and *West Ramnad* at Rs. 7-10.

Plantations:—Rubber and Tea shares continued to be steady. *Cochin Malabar* were done at Rs. 6-12; *Vaikundam* at Rs. 8-4 c.d.; *Ayer Manis* preferences at Rs. 103 and *Rajagiri* at Rs. 5-1. Among Tea shares, *Peermade* were transacted at Rs. 27-12 and *Periakaramalai* at Rs. 17-14. *Chembra Peak* were in good enquiry at Rs. 3-8.

Sugars:—Steady conditions were witnessed in this section. *Mysore Sugar* were dealt in at Rs. 54-8 buyers. Business took place in *Travancore Sugars* at Rs. 14.

Miscellaneous:—*Andhra Cement* were in enquiry at Rs. 70. This Company, it is reported, is likely to issue a First Mortgage Debenture Loan of Rs. 4,50,000 at 4½ per cent, free of income-tax, repayable in 10 years with the option of repayment, in whole or part, at any time after 7 years. The directors are also contemplating to raise a Second Mortgage Convertible Debenture for Rs. 2 lakhs for the purpose of finding further working capital for their factory. It is also reported that if arrears of call money pending are received, there will be no need for the issue of the Second Mortgage Debentures. *Dalmia Cement* ordinaries came in for business at Rs. 11-13. *Mysore Paper* changed hands at Rs. 13-10. *Singareni Collieries* were done at 10 e.d. This Company has maintained the dividend at 5 per cent for the year 1940. *Mysore Chemicals* continued to be steady at Rs. 16-15. *Tata Chemicals* were marked at Rs. 13-6 and *Mettur Chemicals* at Rs. 16-15.

LONDON STOCK EXCHANGE

Quietly steady conditions have been noticeable on the London Stock Exchange. The war situation has had a restraining influence and business has been on a very small scale. Giltedged securities were irregular. Among British funds, 2½ per cent. Consols were 77¼, 3½ per cent. Conversion 99, 3½ per cent. War Loan 104 and 3 per cent. War Loan 100¾. Among Indian loans, 3½ per cent. Sterling Paper were slightly better at 99¼.

Among other sections, Rubbers and Teas have been better but Minings have been irregular. Among Oil shares, *Anglo-Iranian* are higher at 28s. 1½d. while *Burmah Oil* are further lower at 45s. Home Rails have improved and substantial gains have been recorded.

NEW YORK STOCK EXCHANGE

Wall Street has been rather quiet and price fluctuations have been confined to very narrow limits. *U. S. Steel* were 56½, *General Motors* 37½ and *Anaconda Copper* 22⅞.

(*Continued from page 765*)

there had been an increase in investments in sterling securities. Actually, there is a decline from 17.31 per cent. of the total investments at the end of 1939 to 10.78 per cent. at the end of 1940. Only there is an increase in holdings in British securities from 7.41 per cent. to 10.07 per cent. Empire securities show a decrease from 5.43 per cent. to 2.56 per cent.

MARKET POINTERS

Supplies of Cotton Textiles

The Government of India, it is understood, purpose to adopt a new policy for securing their requirements for war supplies of cotton textiles.

In order to explain this proposition, the Director-General of Supply has convened a meeting of all millowners' associations in the country at Bombay on May 9 in the premises of the Bombay Millowner's Association.

All the associations have been invited to send their representatives to the meeting. These representatives will not be expected to commit their associations in any way.

* * *

Jute Purchase by I. J. M. A.

The member mills of the Indian Jute Mills Association purchased 1,68,69,088 maunds of jute up to April 15, which is short of the actual quantity they were to have purchased according to the arrangement between the Government of Bengal and themselves, by 18,80,962 maunds. Government have been informed of this shortage in the purchases by mills and whilst expressing a hope that this deficit in their purchase will be made up by mills at a very early date, Government, it is learnt, have decided not to exercise their right to call upon the Association to purchase these 18,80,962 maunds on Government account.

* * *

Railway Earnings Increase

The railway earnings for the first ten days of the new financial year show the same upward trend as in the previous year. The total approximate gross earnings of all State-owned railways for the period (ten days) ending April 10, 1941 amount to Rs. 345 lakhs. This is Rs. 52 lakhs more than the approximate gross earnings for the corresponding period of the previous year and Rs. 48 lakhs more that the actuals for the corresponding period of 1940-41.

* * *

B. B. and C. I. Railway

The approximate traffic returns of the *B. B. & C. I. Railway* for the period ended April 10 amounted to Rs. 46,58,000, as compared with Rs. 37,50,000 for the corresponding period of 1940. The increase for the period amounted to Rs. 9,08,000.

* * *

B. E. S. and T. Co., Ltd.

The gross receipts of the *B. E. S. and T. Co., Ltd.* for March, 1941, amounted to Rs. 7,32,965 from electric supply (exclusive of supply of tramways) and Rs. 8,21,015 from traction (trams and omnibuses). The total receipts up to the end of March amounted to Rs. 22,10,239 and Rs. 23,77,616, respectively, showing an increase of Rs. 3,32,919.

SAMLA COLLIERIES, LIMITED
NOTICE

is hereby given that the Twenty-sixth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 10th day of May, 1941, at 12 noon for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1940, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 3rd May to 10th May, 1941, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta,
The 21st April, 1941.

Leaving a balance at credit of			42,171	14 5

to be carried forward to next account.

The Indian Jute Mills Association have regulated working hours to meet the exceptional circumstances affecting the trade, and in accordance with this policy the Mill worked 54 hours per week until the 17th August, 1940. Thereafter it worked 45 hours per week until the end of January with the Mill closed for one week in each month.

Reconstruction of Capital.—The accounts for this half-year include the terms of the Reconstruction Scheme passed by the shareholders of the Company at the Extraordinary General Meeting held on the 5th July, 1940 and confirmed by the Calcutta High Court Order dated the 19th August, 1940.

Owing to the fact that the Court Order was not received until after completion of the accounts for the half-year ended 31st July, 1940 it was not possible to give effect to the authorised reconstruction scheme in those accounts. The accounts now submitted incorporated the authorised reconstruction of the company.

The reconstruction proposals were based on the debit on Profit and Loss Accounts as at the end of the half-year ended 31st January, 1940, and the total amount written off was Rs. 7,80,580-11-2. Fortunately, from the end of that half-year to the end of the half-year dealt with in these accounts, the financial position has improved to the extent of Rs. 1, 68,680-15-3 which is surplus to the amount necessary to give effect to the authorised reconstruction in the present accounts for the half-year ended 31st January, 1941. The directors have transferred this amount to Reserve.

Managing Agents.—Messrs. Begg, Dunlop & Co., Ld.

Authorised Capital—Rs. 16,50,000 in 3,00,000 Ordy. of As. 8 each and 30,000 9% Cum. Pref. of Rs. 50 each. Issued and Subscribed—Rs. 6,50,000 in 3,00,000 Ordy. and 10,000 Pref., both fully paid up. Debenture Capital—Rs. 10,00,000 in 2,000 7% debentures of Rs. 500 each, repayable at par on 31st July, 1945.

to be carried forward.

Reconstruction of Capital.—The accounts for this half-year show the effects of the reconstruction scheme as passed by the shareholders of the Company at the Extraordinary General Meetings, held on the 5th July 1940, and confirmed by the Calcutta High Court Order dated the 12th August, 1940.

The reconstruction proposals were based on the debit on Profit and Loss Account as at the end of the half-year ended 31st January, 1940 and the total amount written off was Rs. 8,13,891-12-11. Fortunately from the end of that half-year to the end of the half-year dealt with in these accounts the financial position of the Company has improved to the extent of Rs. 1,58,325-14-11 which is surplus to the amount necessary to give effect to the authorised reconstruction in the present accounts for the half-year ended 31st January, 1941.

Managing Agents.—Messrs. Begg Dunlop & Co., Ld.

Dividend % ...	5	5	5	6
Carry forward ...	1,10,220	1,01,841	1,01,487	83,089

(*Meeting, held 16th April,* 1941 *at Deccan*).

Audited accounts for the year ended 31st December, 1940:—

After providing for the payment of debenture interests and placing Rs. 5,80,000 to depreciation, the net profit amounts to Rs. 3,74,951-12-10 which with Rs. 1,01,340-11-8 brought forward from the previous account, leaving an available balance of Rs. 4,76,292-8-6. Out of this sum the directors have placed Rs. 50,000 to Contingencies Reserve and recommend the payment of a dividend of 5 per cent for the year. This will absorb Rs. 3,16,072-8-0 leaving a balance of Rs. 1,10,220-0-6 to be carried forward to the next account.

No further debentures have been redeemed during the year and the balance outstanding against the debentures issued to the public in 1933 remains at Rs. 9,51,200.

The directors are pleased to report that the record figures for output and despatches from the collieries during 1938 and 1939 were once more exceeded in 1940. Despite delays in the arrival of plant and machinery consequent on the war, the progress of development at the Company's Kothagudium Colliery has been maintained in accordance with programme, and daily raisings from this source are now in excess of the scheduled figure.

Secretaries.—Messrs. Best & Co., Ld.

Authorised Capital—Rs. 90,00,000 in 8,00,000 Ordy. and 1,00,000 Pref. both of Rs. 10 each. Issued—Rs. 63,21,450 in 6,32,145 shares, fully paid up. Debenture Capital—Rs. 24,51,200 in 24,512 6% debentures of Rs. 100 each.

Synopsis of the balance sheet as at 31st December, 1940:—

IT NOT WISE TO INSURE NOW ?

With an uncertain future ahead observation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an estimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

Write to us for further particulars and advice.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been definitely more usable; and at the quoted rate of ½ per cent. for interbank call money, there have been quite a few takers. Banks are also takers of firms' money, both renewal and new deposits. At the fag-end of the busy season, this spurt of demand is connected with the last minute movement of crops such as cotton and rice. Sugar has also accounted for some demand; and Calcutta has been called upon to send some funds to the mofussil. Another reason for this change in the attitude of bankers is, perhaps, connected with the psychological effect of the decline in the cash balances maintained by the banks. We pointed out, three weeks ago, that the low level of banks' cash might revive the interest of bankers in deposits. The present position is that after the steep drop to Rs. 24.64 crores on April 11 in the deposits of scheduled banks with the Reserve Bank, there has been a gradual rise to Rs. 26.77 crores on April 18 and to Rs. 28.41 crores on April 25. There has, thus, been an improvement of nearly Rs. 4 crores; but cash roundabout Rs. 28½ crores induces the feeling in the minds of bankers that it is still on the low side. This revival of activity in the short loan market is welcome. There is, however, no ground to hope that this activity will continue for some time. Finance involved in the movement of crops must start returning in a flood; and the piling-up of cash in the hands of banks is inevitable.

While bankers have been takers of call money as well as term deposits, it is curious that they have also shown increasing interest in Treasury Bills. Bidding at the auctions this week was on a fairly large scale. Against Rs 1 crore on offer, tenders came to Rs. 2,62.50 lakhs. And this compares with Rs. 1,84 lakhs on April 22, and Rs. 1,66.75 lakhs on April 15. There is also a slight reduction in the average discount rate from annas thirteen and pies eight per cent. per annum to annas thirteen and pies five. Sales of tap bills, however, are lower at Rs. 54.75 lakhs, comparing with Rs. 76 lakhs last week. In spite of the fall in the average discount of tender bills, the tap rate for intermediate Treasury Bills between April 30 and May 5, has been kept unchanged at Rs. 99-13-0 per cent.

The statements of the Reserve Bank for the week ended April 25, do not call for any special comment. In the issue department, sterling securities and rupee securities are unchanged. Rupee coin has again risen; and the latest figure is Rs. 36.06 crores. During March and April, there has been a continuing return of rupee coin from circulation; and it is most significant that, while the stock exchanges, giltedged market and commodity markets have been adversely affected by the grave phase of the war situation, the position as regards rupee coin is most reassuring. Far from there being any panicky run for coin, the public have actually been returning coin. This is most satisfactory; and there is reason to believe that there is now more awareness on the part of the public of the suicidal aspect of the run on the Reserve Bank for coins. On the Reserve Bank's liabilities side, active note circulation is lower by Rs. 1½ crores at Rs. 249.27 crores. Notes held in the banking department have risen from Rs. 11.23 crores to Rs. 13.48 crores. The return for the banking department shows a sharp rise in Burma Government's deposits of Rs. 1.86 crores to Rs. 3.89 crores and in banks' deposits of from Rs. 26.77 crores to Rs. 28.41 crores.

There continues to be a lull in the sterling exchange market. Freight for the United Kingdom is most difficult. Owing to the regular express shipping service between America and India, there is more activity in the dollar exchange market. Sentiment in the money market is distinctly less easy.

Banks were sellers of T.T. at 1s. 5 15/16d., for ready up to six months forward; and banks were buyers of T.T. at 1s. 6d., for the same delivery.

Banks were buyers of 3 months D.A. bills at 1s. 6 7/32d., for the first and second months; 1s. 6⅛d., for the third month; and 1s. 6 9/32d., for the fourth month.

Interbank call money quoted ½ per cent. with no takers.

Firms' money for call and short quoted ½ per cent., and ½ per cent. for one to four months deposits.

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, the 29th April 1941. Total amount offered was Rs. 2 crores, 62 lakhs and 50 thousand. Tenders at Rs. 99-12-9 per cent. were accepted in full and those at Rs. 99-12-6 per cent. were allotted approximately 23 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen and pies five per cent. per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, the 6th May, 1941. Successful tenderers should make payment on Friday, the 9th May, 1941. Other conditions are as usual.

Three months' Intermediates will be sold from the 30th April to 5th May, 1941 at Rs. 99-13-0 per cent. subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from the 23rd to 28th April, 1941 amounted to Rs. 54,75,000.

During the week ended the 25th April, 1941 Government of India Treasury Bills for Rs. 2,06,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

MISRA HOSIERY
MILLS
CAWNPORE

Telegrams: MISRA, Cawnpore Telephone: 2336 Cawnpore

THE MISRA HOSIERY MILLS have, from the commencement of the war, been "on active service". Working day and night, the mills have been supplying essential requirements of the Army in the knitting line.

MISRA HOSIERY cater to the requirements of the general population and comprise socks, stockings, undervests, sports shirts, interlock underwear and outerwear, for men, women and children.

Production 8,000 Articles, daily.

Finance Abroad

If the British were ruled by the unholy gang of criminals that hold sway in Berlin or Rome, their morale would have by now sunk so low as to be virtually non-existent. The odds that are ranged against them are so heavy; the handicaps they had to get over so many, the reverses they have had to face so large. The repetition of the Dunkirk performance in the Peloponesian peninsula would certainly have proved to be the last straw. The British, fortunately are governed by no Hitler; nor are the Dominions under any Quisling. And so morale does not deteriorate; on the contrary it is heightened. Instances, Canada and Australia.

The Canadian Finance Minister presented his third war budget on April 29, and since he had heard Mr. Churchill survey the war events the day before, he had the opportunity of framing his budget proposals suitably. As a matter of fact, his budget speech and proposals should have been got ready well in advance; but the determination of the Dominion to help the mother country is so pronounced that it looks as if the Dominion budget is an answer to Mr. Churchill's call for "more blood, more sweat and more toil." For, Canada has pledged herself to finance the bulk of the British purchases in that country, estimated at $1,500 millions. Britain's difficulty in obtaining Canadian dollars for making her purchases is obvious and the deficit for the current year is estimated at $795 millions. Mr. Illsley, the Finance Minister spiritually said that it was unthinkable that Britain should be unable to purchase vitally needed supplies in Canada because of the lack of Canadian dollars. Canada has only one way to follow, to meet the deficit herself.

That is what she is doing. Her total war bill for the current fiscal year is estimated at $1,450 millions and the revenue receipts total 871.6 millions, itself an unprecedented figure. The deficit is of the range of $395 millions. What if? New taxes and heavy increases in existing taxes make it up. Personal income-tax will start at 15 per cent for the first thousand dollars of taxable income and increase by five per cent for each succeeding thousand dollars. Among new taxes are one to twenty per cent on cinema admission prices, five per cent on race track wagers and ten per cent on railway and aeroplane tickets. Coming on top of last week's announcement of U. S. Canadian co-operation in the matter of producing war materials, the Canadian budget is an example of what real war effort is.

The cynical among us in this country may point out to the immense advantages that Canada has gained from her war effort, suggesting naively that it pays for Canada to be enthusiastic about her war effort. The industrial boom generated by war orders continues. The primary iron and steel industries are working nearly to capacity. The earnings of the two railway systems have shown remarkable improvement, again of 20 per cent. Industrial activity is now at the highest level and the following data culled from the Economist are highly significant:

Periods		Wholesale prices	Weekly Index
14-10-39	...	78.0	101.9
14-9-40	...	83.0	104.6
21-9-40	...	83.0	104.6
28-9-40	...	82.8	105.3
5-10-40	...	82.9	105.4
12-10-40	...	83.1	104.9

Progress however creates problems. A very serious shortage of skilled labour has developed in certain industries with the result that employers have been competing for the available supply with offers of extravagantly high wages, so much so that the Government had to pass an Order-in-Council providing for fines up to $500 on firms found guilty of enticing workers away from other firms engaged in the production of war materials. An example of the acuteness of labour shortage is provided by the aircraft industry where in spite of a 40 per cent. increase, misgivings are expressed whether there is enough skilled labour in Canada to man effectively all the new plants which are projected.

Conditions in India are a chapter in pathos in comparison, but that need not detract from the merit of the Canadian performance. The spirit behind the war effort is the thing and Canada is displaying it in ample measure. Advantages accrue incidentally. It cannot be helped.

Australia is another example. The disaster in Greece, in which Australian soldiers suffered particularly heavily, has heartened the Dominion immeasurably. She has promptly started a recruiting campaign at the rate of 10,000 men a week, besides announcing a new loan of £35 millions. There is hardly any doubt that both will be a success. The former is governed only by one consideration, the population of Australia, by no means large, but there are no such obstacles to the latter. Mr. Menzies has been a tower of strength of late to Premier Churchill though he has also had plans for the transfer of some at least of the aircraft factories of the United Kingdom to Australia, incidentally saving them from the Nazi bombs. Here again Dunkirk II has had a vitalising effect.

In the Far East, with the battle of the Banks proceeding in the Shanghai International Settlement, the stability of the Chinese currency is attracting attention. Both the U.S.A. and the U.K. have come forward with substantial loans to China for this purpose and one instalment of such assistance perhaps not the last of its kind, was sent last week by Great Britain. The reinforcement of the Chinese Stabilisation Fund no new phenomenon has perforce to be accompanied by some sort of precaution designed to ensure the sterling not making its way to the Free Market in Shanghai and becoming ultimately converted into dollars, thus involving the British Treasury in a corresponding loss of gold. But it can be presumed that the technical problem involved would not be beyond the ingenuity of the Exchange Fund Committee. With sterling at a slight discount as against the dollar in Shanghai, it is clear that any addition to the supplies of sterling at the disposal of the Stabilisation Fund would, if no restrictions were placed on its employment, rapidly disappear into the bottomless sink of local arbitrage operations. The rate for the Chinese dollar remains steady at 3 3/32d. and it is a healthy sign that the exchange value has not shot up.

How heavily Italy's financial resources have been taxed by the war is revealed by the budget figures cabled by Reuters. The deficit at 720 million sterling is forecast, to be met by loans mainly, and according to Signor De Revel, the Finance Minister, the war expenditure hitherto has been at the rate of £61 millions monthly. To study the Italian budget figures in terms of sterling conveys little or no impression, but figures in lire are either hopelessly distorted or unavailable. There is, however, one consolation. Rome spends about ten million pounds a daily as against London's bill of £14 millions and it has only one meaning. Either Rome has reached the end of her tether or will be reaching ere long. If the bombing of Rome is not a mere threat, the results will not be confined to the morale of the population.

The juiciest part of the week's news is the announcement that President Roosevelt has asked Congress for a two-year extension of his power to revalue the dollar and the continuance of the Stabilisation Fund of $2,000 millions, both of which would otherwise expire on June 30, 1941. Perhaps it may be premature to read much into it, but should the President be serious about putting the reserve powers to use, the economic background in the U.S.A. may not be wholly against it.

LLOYDS BANK

Much Thanks

COMMENTING, in our issue of April 5, on the Reserve Bank returns which reflect the changes consequent on the payments made to the holders of the redeemed sterling loans, we suggested that the Government should issue a Notification setting out the salient features of the various operations that had been put through in connection with the sterling debt repayment scheme. Early this week, a press *communique* from New Delhi gave particulars of the transactions in this regard. Apart from our special gratification that our suggestion has been heeded the public have cause to feel grateful to Sir Jeremy Raisman for this further evidence of his desire to carry the public with him in his policies and operations.

In our study of April 5, we drew attention to what we described as unsolved conundrums. We extract below the observations we made in this connection :

> "The first of these is, as we have said, whether the sterling payments have been made in full. The second is what proportion of the total holdings was held by Indian investors. The third is what proportion of the Indian holders accepted payment in rupee counterparts and what proportion demanded by payment in cash."

We also posed another question as to whether the rupee securities issued to the Reserve Bank were *ad hoc* Treasury Bills or rupee counterparts of the redeemed loans. The Government's notification, now issued, provides complete solutions for these conundrums. We now know that there is still £14 millions of sterling loans outstanding; and that this apparently represents stock held by non-residents outside the United Kingdom and British India. We also know that the stocks cancelled so far in respect of Indian holders is Rs. 11.27 crores (£8.45 millions); and that a further Rs. 3 crores may have to be paid in the same manner. The answer to the third conundrum is that cash payments in respect of Indian holders are less than Rs. 1.1 crores so far and are not likely to exceed Rs. 1.5 crores. As for the question about the type of rupee securities delivered to the Reserve Bank, we now know that they are rupee counterparts of the redeemed sterling stocks.

Our first comment on the operations connected with the sterling debt repatriation was made on the basis of certain assumptions. To the extent that we could not answer to our satisfaction questions like those which we have set out at the beginning of this article, our observations on April 5 could be considered to be only of a tentative character. Nevertheless, the main conclusions stressed in these columns in our issue of April 5 and the subsequent issues are more or less confirmed by the facts given in the press *communique*. The salient features of the transactions connected with the debt redemption may now be summarised as under :—

(1) The face value of the dated sterling loans was £84 million.

(2) The market value of these loans was £89 million.

(3) Of the loans of the face value of £84 million, holdings already dealt with under the redemption scheme are roughly £70 million.

(4) Of this £70 million, £59 million represented holders in the United Kingdom; and £11 million represented holders in British India.

(5) The balance of about £14 million apparently represents stock held by non-residents outside the U. K. and British India.

(6) £62 million has already been paid to holders in the U. K. Another £3 million will, perhaps, have to be paid.

(7) £8.45 million has already been discharged or is due to be discharged in respect of holdings in India. This is equivalent to Rs. 11.27 crores. A further Rs. 3 crores will, it is expected, be tendered to the Government. Most of the Indian holders have accepted rupee counterparts. Cash payment made so far is only Rs. 1.1 crores and is not likely to exceed Rs. 1.5 crores.

(8) The rupee finance required applies only to the sterling loans redeemed in the U. K. and to that portion of the loans paid for in cash in India. Those who accepted rupee counterparts do not come into this calculation. The total rupee finance involved in this transaction was of the order of Rs. 88 crores.

(9) Of this Rs. 88 crores, for the time being, roughly half has been paid for by the issue of rupee counterparts to the Reserve Bank and half from Government's balances with the help of temporary ways and means advances from the Bank which are being gradually liquidated.

We may now examine the Reserve Bank's position as regards sterling assets. Sterling payments already made to holders in the United Kingdom amount to £62 million. It is expected that a further £3 million may have to be paid. £62 million is equivalent to Rs. 82 2/3 crores. How do the figures tally with those disclosed in the Reserve Bank returns? Between March 21 and April 25, sterling securities held in the Issue Department have fallen from Rs. 140.50 crores to Rs. 108.80 crores. The decline is, thus, Rs. 31.70 crores. Between the same dates, foreign balances in the Banking Department have declined from Rs. 78.35 crores to Rs. 28.73 crores or by Rs. 49.62 crores Taking the two figures together, the Reserve Bank has lost Rs 81.32 crores in its total holdings of sterling securities. This figure is short of Rs. 82 2/3 crores by only Rs. 1 1/3 crores. This may be construed as indicating that the Reserve Bank has not acquired sterling for any considerable amount since March 21. We had assumed that, in the closing days of the financial year, the British Government might have made large sterling payments to the Indian Government. This assumption is not borne out by the facts now revealed.

From the trend of the exchange market, it is clear that the Reserve Bank may not be able, for some time, to secure sterling from the open market. This means that the only source open to the Bank for strengthening its sterling assets is the payments in respect of inter-governmental transactions.

Be this as it may, there is surely great cause for satisfaction that, after one of the biggest sterling debt repayments ever effected, the ratio of the Reserve Bank's external reserve to liabilities stands at nearly 55 percent. The intrinsic position is, as we have often pointed out, much stronger than this. For, the currency gold is held at a low book value; and revaluation at current market rates will disclose a substantial hidden reserve.

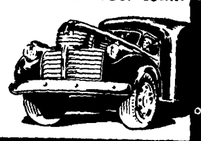
AUTOMOBILE INDUSTRY'S PROSPECTS

(BY A SPECIAL CORRESPONDENT)

THE statement of Mr. Knudsen, formerly Chief of General Motors Corporation and now Director-General of the Office of Production Management and head of the Defence Department in the United States, about the voluntary reduction by the automobile industry of its production of motor vehicles by 20 per cent in the year beginning from August next is of more than ordinary significance. Its importance and implications should be adequately realised by the Government, industrial leaders and the public in India. This restriction is being made to accelerate the production of war materials, and it has been estimated that it would amount approximately to 1 million cars and lorries. The total export of motor vehicles by the U.S.A. to all countries of the world is less than 20 per cent of the production, and it would, therefore, seem that normally there would be no American automobile available for export as a result of the decision of the automobile industry to concentrate on defence orders. Moreover, as the war is prolonged and intensified, and the U.S.A. is increasingly drawn into it, the reduction in automobile production would presumably increase still further. As India is one of the largest importers and biggest markets for motor cars from America, she is vitally interested in this decision and would suffer by any restriction in the production of automobiles, either by paying continuously higher prices or by her source of supply being seriously threatened, unless she is able to establish her own automobile industry. The automobile industry took considerable time to switch back from munitions production to car manufacture after the last War. And apart from the question of reduction in production which has a serious import for India, there is likely to be a considerable diminution in imports and enhancement in prices of cars even after the termination of the present hostilities.

The automobile, even in an undeveloped and poor country like India to-day, is not a luxury but a useful and recognised means of transport. Road development demands speedy and economical transport, and in recent years the progress of bus traffic, both for the carriage of passengers and goods, has been remarkable. Without dealing here with the question of co-ordination between road and railway traffic, it can be broadly stated that motor transport has not only established itself but has immense possibilities of development, both complementary and alternatively to the railways. Particularly is this the case at present when motor trucks are required for normal commercial transport, especially, of agricultural products like cotton, grains etc. owing to the larger demand for railway wagons for war purposes. Every kind of trade is to-day complaining of wagon shortage while coastal shipping which also carries traffic on the Indian coast is unable to meet the existing requirements owing to the diversion and requisitioning of ships for war requirements. Road vehicles are, therefore, a vital economic necessity and the demand for motor vehicles is bound to grow with the expansion of road mileage and road traffic.

In the last few years Indian industrialists have been considering the project of establishing an automobile industry in India but the credit for rousing public interest in this important industry goes to Sir M. Visvesvaraya. In a lucid and informative brochure published some time ago, he has dealt with the salient points of this scheme and has explained its prospects, stressed the difficulties of the promoters and given interesting information about the output of automobiles and the measures adopted for its development in other countries. This scheme has been taken up with his usual enterprise and grit by Mr. Walchand Hirachand who has been a pioneer in Indian shipping and is the founder of the aircraft industry. When the Congress Ministry was in office, Mr. Walchand was not only able to get the services of Mr. Advani, Director of Industries, Bombay, for investigating the possibilities of this industry, but was also able to secure from the Provincial Government an undertaking about a guarantee of interest for the new venture. Unfortunately, however, the Congress Ministry resigned and neither the Government of India nor the Government of Bombay have been inclined to assist or encourage the industry. Before the war, the Government felt bound by the conditions laid down by the Fiscal Commission and could not, therefore, guarantee protection before the establishment of the industry. Nor did they agree to maintain the revenue duties in force on cars or commit themselves to the purchase of any of the products required for Government use. It is an eloquent, if unfortunate, illustration of the rigid and halting attitude of the Government towards industrial development which has made even Mr. Amery acknowledge that India has still to make good "what ought to have been made good in previous years". India ought, indeed, to have started an automobile industry long ago just as she should have had a modern shipbuilding industry. The scope offered by the war for establishing this industry would be evident from the statement of the Finance Member when he introduced the emergency budget last November:—



> "Before the war we had something like 5,000 motor vehicles. Now we have actually in service or on the way approximately 30,000 and by next year these figures will be doubled."

According to Sir M. Visvesvaraya, the eventual cost of these vehicles will be in the vicinity of Rs. 24 crores. On the basis of replacement of these 60,000 vehicles at the rate of even 6,000 vehicles a year, an industry could well be built up and this has been the demand of the promoters of the automobile industry. This proposal deserves all the more earnest consideration of the authorities after the recent statement of Mr. Knudsen announcing restriction of production because altogetner apart from any question of starting an essential industry of this character within the country, the present economic conditions as well as defence requirements necessitate the immediate establishment of such an industry which should, in fact, be deemed a part of the war effort. It has been repeatedly said by Government spokesmen inside the Legislature and outside that the Government do not wish to adhere rigidly to the conditions laid down by the Fiscal Commission and that they would be prepared to encourage even new industries, especially, if they are helpful to the prosecution of the war. Here then is a specific example of a vital industry which could be established provided the Government energetically backed the proposal through grant of priorities and by placing necessary orders for purchase. One may cite the example of Australia where in December 1939, the Commonwealth Government entered into an agreement with a local company, under a Motor Vehicle Engine Bounty Act, for the payment of a bounty of £1½ millions for the first 60,000 motor engines manufactured by the company. The Australian Government have not only agreed to grant a subsidy, provide tariff protection and other assistance but have also promised to purchase a substantial portion of their requirements from the Australian company for five years from the date of commencement of manufacture.

Most of the objections raised against establishment of this industry in India are known and one need hardly examine them at length. Similar objections have always been raised whenever Indians have tried to establish industries within this country whether it was steel, textile, sugar or anything else. Even taking as the basis the criteria of the Fiscal Commission, the scheme can be sopported on economic grounds. According to Mr. Walchand, nearly 85 per cent of the materials required for manufacturing motor cars are available in India. There is also a large market in India, the average number of motor cars and omnibuses imported into India during the ten years from 1929-30 to 1938-39 being about 20,000 and their value nearly Rs. 3.6 crores per annum. But the demand for automobiles will actually grow with the increase in road transport and a reduction in the price of the manufactured vehicles, while increased industrialisation itself is bound to react favourably on the demand for motor vehicles which in highly industrialised countries constitutes a kind of economic barometer for measuring prosperity. The automobile industry is closely allied to the aircraft industry and as the *Statesman* in a leading article recently observed, it is somewhat strange that "official backing should be forthcoming for aircraft construction and yet be withheld from an enterprise which would represent a striking industrial advance and at the same time appeal strongly to the imagination of the Indian public". It may be noted in this connection that the site of the automobile factory like that of the aircraft factory is to be in Bangalore because of the active support and encouragement given to both the projects by the Mysore State. It may well be said that owing to the unsympathteic attitude, mainly of the Bombay Government and the Government of India, British India will have lost two such vital key industries. But such disappointment need not cloud the hope that before long both these industries will have completely established themselves in the country.

New War Executive

Dissatisfaction generally expresses itself in demands for cabinet changes. That war demands a specilised executive is universally admitted, and critics of the National Government have merely dwelt on the size of the war cabinet and the absence of a perfect link between the inner war executive and the outer cabinet. Since the year began the defects of the existing arrangement have been criticised even after the assignment of the problems of the future to the Minister without Portfolio, Mr. Arthur Greenwood. That the demand for a Deputy Prime Minister has appeared lately may not be due wholly to the war. While the Prime Minister has to look after the war, the work of separate Cabinet Committees has to be examined frequently, and the arrangement under which the Lord President of the Council, Sir John Anderson, has been entrusted with the chairmanship of several committees responsible for policy as distinct from administration did not give entire satisfaction. The overt demand for a Deputy Premier has been indeed slow in coming. The adverse developments of last week may have quickened public feeling on the subject, though the demand was not prominent among those listed by *Reuter's* Lobby Correspondent last week as exercising the attention of Parliamentary circles. One may naturally link the demand for a full statement on the war situation with another for a reconstruction enabling Empire statesmen to join the Cabinet. Australian feeling would be stired in this connection and *the Daily Telegraph* and *Morning Post* has deprecated the plea for the inclusion of Empire statesmen, stating in this connection, that the presence of Mr. R. G. Menzies since February has been invaluable. If the demand for cabinet changes has been quickly stilled, for Parliament and public alike know now how the war is shaping, that for an Imperial war cabinet will persist. India, of course, has very slight interest in the subject in spite of the memories of what was done by Mr. Lloyd George in 1917 to associate India's representatives with Dominion statesmen. Owing to the deadlock very little interest will be taken at present in efforts to demonstrate the unity and strength of the Commonwealth. *The Times* has asked for the selection of General Smuts. It is evident that the difficulties of the Union Government which has not got a very big majority over an Opposition identified with a demand for neutrality are ignored by the paper. It will be difficult for South Africa to carry on without General Smuts, and Afrikanders would be among the first to say that with the new turn of the war, he should strive to reinforce by his sagacity and experience, the defences of North Africa.

While the *Times* expression of confidence in Mr. Churchill's leadership is superfluous (in everybody's opinion there is no alternative Premier), the paper has rightly drawn attention the fact that problems of organisation particularly at home require a special duty. Mr. Bevin as Minister of Labour cannot assume responsibility and the inadequacy of Mr. Greenwood as the so-called Minister of Production has revealed that a special Minister is needed. That Sir John Anderson as chairman of the various committees will not fill the bill is tacitly admitted in the cry for new blood. The *Times* leader is, in its way, a *Cri de coeur*. It is recognised that the existing cabinet has no *pares* for the *primus* of Mr. Churchill, and the admission of Dominion representatives too is favoured for the same reason. The Continental practice of picking a Vice-Premier (Vichy has had Darlan after Laval) may be difficult to graft on to the British Cabinet system. But Mr. Churchill, with three defence departments to supervise, has naturally a claim to be relieved of duties in connection with certain departments. Supply and trade are relatively unimportant, compared with production, and the demand for a Deputy P. M. who will take over not only supervisory duties but the duty of laying down a policy for the home front may be justified. The exclusion of some members of the war cabinet may be entailed by the acceptance of a demand for an Imperial War Cabinet but the appointment of a Deputy Prime Minister may give rise to party and personal jealousies. The demand for changes has been satisfied with the minimum disturbance. It has been done by raising the Minister for aircraft production to a new post, shifting the Minister of transport and sending the Minister of Shipping to Australia as High Commissioner. The arrival of another business expert may not be a surprise as Sir Andrew Duncan and Lord Woolton have been distinct successes. Lord Beaverbrook too has among the outstanding successes and his promotion means that unlimited energy and vision will be available for what is now the most important job in the Cabinet.

Canada to Spend More

In the first year of war expenditure, if not taxation, in Canada was almost double the prewar level. The appearance of new taxes in last year's budget was inevitable and a graduated sales tax was a newcomer to the list of Federal taxes. Total revenue in the eight months ended November 30, 1940 amounted to $506.89 millions. Expenditure in the period, inclusive of a war appropriation of $409.13 millions, amounted to $685.32 millions showing an increase of over $310 millions compared with the eight months of 1939-40. The figures give an idea of the budgetary problem in Canada, and one can see that is essentially the gap between revenue and expenditure plus borrowing that presented the Finance Minister with his problem. While production may be expected to respond to any new drive undertaken in conjunction with the U.S.A. the major problem of finding the money for the Dominion's war contribution could only be solved by copying the British example. As the general index of Canadian idnustrial activity rose by over twenty points in the year 1940 after registering an increase of over twenty-three points in 1939, the growth of taxable capacity must have made the Ministers problem easier. Taxation has the further merit of reducing non-essential consumption and part of the shock will have to be taken by the import trade either through new taxes or increases in old taxes. Taxation has also the merit of eliminating excessive borrowing which tends to have inflationary effects. Moreover, voluntary loans may not give all the money needed or divert to the war effort the money from private sources, and the increase of taxes reported this week meets previous criticism on more than one point. The new rates for income-tax will take 15 per cent out of a taxable income of $1000 per annum and the principle of progression applied to the next slab of $1000 will make the rate 17½ per cent. In the case of a man with a salary of $3000 and without dependents, the total tax payable in a year would be $400 as against $195. The Budget is thus not kind to the middle classes but the cable suggests that the exemption limit has not been lowered. It may be mentioned that the Dominion has, until recently, obtained more revenue out of excise than incometax, and the increase will put the latter into the lead. The total yield in 1941-42 should be well over $250 million on a rather rough estimate and the comparison with the tax burden in Britain may suggest that taxation is not too onerous. The Dominion is said to be unmoved by the budget. An increase in Corporation tax with the rate starting at 40 per cent is announced and the appearance of various surcharges, one of 20 per cent on cinema tickets, of 5 per cent on betting and 10 per cent on railway and aeroplane fares may indicate that taxes on consumption, as distinguished from sales turnover, figure in the armoury of modern financiers. It is not surprising to find that expenditure is sought to be discouraged by new taxes and the minor taxes may be devised to stimulate saving rather than to produce revenue. That Canada is prepared to spend an increasing proportion of the national income is certain, but the Provinces may have difficulties on account of the steady increase in Dominion taxes, though contentious points and grievances alike may

have been settled in a fashion by the special commission on Dominion-Provincial relations, the steady contraction of sources of taxation may upset the Prairie Provinces. But no resort has been made to compulsory saving as in Britain, and the Dominion is still far from a capital levy, the propriety of which is more readily conceded in Britain than in 1920 when Mr. Pethwick Lawrence suggested it.

Jute's new rival.

Brazil has not merely encouraged the use of substitutes but has also tried to grow jute meeting with success at long last. According to the latest issue of the Indian Jute Committee's bulletin for April, the private secretary of Mr. Takahashi, late Finance Minister of Japan is credited by Japanese papers with the distinction of being the first to succeed in growing Indian jute out of India on a commercial basis. The Brazilian Government had almost abandoned its experiments which had been carried on since 1925. Then in the spring of 1936 an attempt was made under Mr. Uetsaka's guidance. The jute plants sown in the experimental forms in Brazil grew higher than the original Indian species and afterwards resulted in a fine jute field along the Amazon river. The new variety that developed there is called the Oyama species. It is apparent that the diligent Japanese immigrant has taken up jute cultivation; crops have been increasing and this year 50 bands of Japanese farmers expect to get more than 1500 tons. It is even said that at this rate 50,000 tons, a quantity enough to make bags for a whole year's coffee crop in Brazil, may be produced in a few years more. It is not only in Brazil that jute cultivation is favoured. According to plans announced by the Iran Department of Agriculture, the outturn of jute in that country during the next five years is to be increased by 2000 metric tons and that of flax by 600 tons. The present output of either crop is not known but flax has been taken up only recently. In South Australia attempts are being made to utilise the big deposits of marine fibre as a substitute for jute in making cornsacks. The revival of previous attempts is explained by wartime uncertainties and these limitations and uncertainties of jute imports. Marine fibre has never been produced in sufficient quantity to interest textile manufacturers. Samples submitted in the past contained too much sand and shell but later samples are said to be free from impurities. The fibre is stated to match well with lower quality wool or shoddy for the making of lower grade material cheaper than woollen goods. As the fibre possesses excellent non-conducting qualities and also has the power of taking wool dyes, it is suitable for making cloth of different kinds. Experiments are being made with this fibre as a substitute for jute in the manufacture of backings for oil-cloth, linoleum, carpets and rugs. The only cheerful item is a report that coffee importers in Britain and elsewhere have demanded that their purchases should be packed in bags made from hessian cloth and not in bags made from other materials. The action has been undertaken in an endeavour to safeguard the jute industry against the use of substitutes which received a great impetus when the price of jute soared high during the early months of the war.

Indegenous Dyes

Dyestuffs have been a problem since war broke out and attempts to solve it by keeping stocks and distributing them carefully have been closely followed. Local production too has been attempted not without success, and a recent account of developments states that India can manufacture all the khaki and greyish blue shades from indigo, myrobalans and other tanning materials. Scientific and industrial research has resulted in progress in making vegetable dyes particularly useful when German dyes cannot be had and British imports are irregular if not insufficient. New natural dyestuffs have been proluced from the barks of mango, babul, jamun, dhak, pipal and other trees at the Government Silk Institute at Nathnagar. These dyestuffs are obtained in both powder and paste form. By using different fixing agents with the same powder different shades have been obtained. Work in derivatives from Kamla flowers for use as edible colouring materials has been completed at the H. B. Institute, Cawnpore. The Indian Jute Mills Association is said to be investigating the possibilities of special dying methods and intends to produce sack-marking ink; the University of Mysore is trying to make Myrobalan serve for the manufacture of dyes. Experiments at the Textile Institute, Madras with several dye-yielding products have progressed. The indigenous materials which have been elbowed out by synthetic dyes have received attention. The process of extraction has been studied and recipes for obtaining various shades have been prepared. Shade cards have been prepared for cotton, silk and wool. The Board of Scientific and Industrial Research, which has lately, directed a special committee to survey the field, has shown great interest in the subject of dyes, because Indian textile manufacturers long dependent on foreign supplies, have experienced great difficulty in getting dyes and are interested in the revival of local sources of dyes and colours. Attempts to discover new sources of colouring matter and evolve new processes in standardised forms have progressed. Other industries besides the

Office workers, from senior executive to junior clerk, need efficient lighting for efficient work. The best and most economical way of achieving good lighting is by using MAZDA Pearl coiled-coil lamps with the wonderful non-sag filament. More light for the same current as you use today or the same light for less current.

textile require vegetable dyes; cosmetics, confectionery, food and drink are regular users of dyes as also leather, paper, paint and varnish manufacturers. While the drive for vegetable dyes continues, attempts to develop aniline dye manufacture in India are not wanting. The concerns with coke-ovens which can produce benzine, toluene and phenol can actively co-operate in the manufacture of coal tar dyes and it is generally believed that the installation of a big plant at Jamshedpur for the recovery of these products will lead to the production of various organic compounds and drugs and may help in the establishment of a new industry producing synthetic dyestuffs.

Monetary Ease in the U.S.A.

The growth of credit in the U.S.A. is likely to be checked slightly this year as the inflow of gold is expected to diminish. During the last year monthly imports of gold averaged about 360 million dollars in value but the imports in January and February have declined to 120 million dollars and 115 million dollars respectively. It is said that new-mined gold from the British Empire will account for gold imports, it will no longer be fugitive capital moving towards a safe centre. If gold imports were to diminish by two-thirds or three-fourths U.S. bank reserves will not rise in the same manner as in the past three years. Excess reserves are also expected to be reduced by an increase in circulation. It is estimated that total circulation, that is money outside the Treasury and the Federal Reserve Banks, increased by a billion dollars in 1940 and has continued to rise since the end of 1940. This should not have affected the increase in deposits with the Federal Reserve System made by member banks. The base for credit expansion is secure as deposits of member banks rose by 1,400 million dollars in the fourteen months ended February, 1941. If the rise in circulation and the broadening of the credit base are trustworthy guides the proposal for higher compulsory reserves made by Mr. Eccles had its justification. But the growth of credit is but a consequence of a rise in the national income, as measured by a rise in the profits of more than 71 per cent. of important manufacturing corporations last year: only 29 per cent. of reporting corporations admitted a fall in receipts. The increase was quite marked in the case of textile and other consumers' goods though inconsiderable in the food and drink-producing group. But if the national income leads to a further rise in bank deposits there is the certainty of higher taxation and reduced gold imports. The banks, however, are likely to attract increased deposits followed by higher balances with the Reserve Banks as compared with last year, but the excess reserves will not be so high as to tempt banks to increase loans to their customers but rather to assist the defence programme for which purpose the weekly Treasury Bill offering has been increased to 2,000 millions in March, the rate for three months bills being well below ½ per cent. (fairly low because banks have also taken up new Treasury Notes repayable in two years at ¾ per cent.) though a trifle high compared with last year. If bank advances have risen sharply of late, it is a natural result of the economic activity behind the arms programme. The New York Correspondent of the *Times* cabled on April 18th that four new plants will try to produce 3,600 heavy bombers in a year and the U.S.A. according to Mr. Knudsen looks forward to a total output of 33,000 planes by December 31st. Of which 14,000 would go to Britain. The automobile and aircraft industries are busy with war orders. The former has decided to reduce output by 20 per cent. voluntarily in the year commencing on August 1st. Total value of orders placed with the automobile industry is said to be 1,500 million dollars.

Work for the Treasury

The departure of Professor Keynes on a mission to Washington raises questions as to the purpose. One may hope that he would not terminate his present connection with the Treasury as abruptly as he severed his ties with the Supreme Allied Council when he realised the folly of reparations and came out to publish the *Economic Consequences of the Peace*, a book which made him famous overnight though many publishers turned it down. Mr. Keynes is not the only representative of the Treasury. Sir Frederick Phillips and Sir Edward Peacock are evidently still in Washington and the Government's Economic Adviser Sir Frederick Leith Ross has made the trip to Washington more than once. It may seem surprising that with the Lease and Lend appropriations already in force there should be any need for representations as to British requirements. It is, however, certain that the last items of business in connection with the vesting orders relating to dollar securities have not been put through, and the acquisition of the "Bats" subsidiary reported two weeks ago does not mean that the work is over. The latest vesting order applying to such companies as Shell Union shows that the dollar reservoir is to be replenished again, perhaps with a view to acquire some of the gold lost by the Exchange Equalisation Fund after the outbreak of War. All such speculation must, however, be restrained by certain new considerations arising from Canada's decision to meet

North-Western Railway.

Applications from Anglo-Indians and Domiciled European candidates are invited for appointment as a temporary Journeyman Electrical Class I Grade 2 Rs. 65-5/2-85. Age limit 21 to 25 on 1-7-41. Last date for receipt of applications on prescribed forms 16-6-41. Only those who have qualified from recognised technical institutes or colleges and in addition undergone practical training in regular workshops for at least three years need apply. Men in service may also apply. Full details will be furnished if stamped and addressed envelope is submitted to General Manager, N. W. Railway, Lahore, superscribed in left hand top corner "vacancies for Journeymen Electrical."

General Manager.

the deficit of Canadian dollars (estimated at 795 million dollars by the Finance Minister while total purchases amounted to 1500 million dollars) out of her own resources without asking for gold or U.S. dollars. There is also the important point that the Canadian adverse balance (that for 1940-41 is put at 487 million dollars) would be reduced by the new agreement concluded by Mr. King with the U. S. President in regard to defence production. There is however the possibility that Professor Keynes' mission, apart from its connexion with the liquidation of dollar investments acquired compulsorily by the British Treasury, may be concerned with the promotion of contacts with investment institutions in the U.S.A. to take over by treaty the stocks on offer. Open sale or transfer through the intermediacy of the R.F.C. may not be altogether advantageous, and the rather temperamental behaviour of Wall Street indeed rules out chances of getting the best value for such investments as can be sold.

There is also the possibility that American investors may be more interested in getting control of British investments in South America. It is perhaps in regard to these that America may manifest great interest. Bolivian tin companies and Chilean nitrate are more important in the eyes of the American government and investors too than textile or petroleum interests wailing to be bought out. Payment in bolivars or pesas or even in sterling for the share of Venezuelas oil may not be what Britain wants and only an exchange in terms of U.S. currency may be deemed advantageous. This is only a guess, but it is not too farfetched. It has always been plain to many that British investments in South America must go the way of investments in the United States. The countries concerned cannot buy up the shares of sterling companies or even pay off their oversea debt because they do not have either sterling assets or dollar assets. The Argentine has a plan to guy out the railways, but perhaps does not have the money. If the U.S.A. lends the money to the Argentine, British investors would benefit because they can lend to the Government for the war. And the replacement of Argentina's external debt by the indebtedness within the New world may be regarded as a new departure in Pan-American economic co-operation. One may assume that over a thousand million sterling are invested in the South American Continent. Not all this money can be taken out, but if the U.S.A. is willing to take over British capital investments the major portion can be turned into money useful for the prosecution of the war. It is possible to state that Mr. Keynes' visit may in reality be a prelude to the unfreezing (using the word in a wide sense) of British assets in many South American republics. And the U.S.A. too will benefit in some ways if the pressure of funds seeking investment at home is reduced. While the benefits, tangible and intangible alike, of economic supremacy in the New World may be readily discerned bythe U.S.A. the terms must be settled by negotiation, and Britain will have to take care that her trade interests in South America are not prejudiced by the liquidation of investments. The future has to be considered in these matters.

Marketing Progress

War produced many problems referred for advice to the staff of the Agricultural Marketing Adviser. According to the sixth annual report for 1940 issued last week, information and assistance was provided by the Advisers to the Department in the Provinces and others too. The question of freights, import duties and of reasonable and subsistence prices for certain commodities were examined and certain practical steps were taken to develop an export trade in eggs with the U. K., to encourage the of Indian kapok in liefbelts and to improve the quality of hemp for export. Marketing problems, it may be assumed, are likely to increase in number and importance on account of the surplus stocks of commodities arising from the loss of many export materials, and the report states that the provincial staffs will have to work in closer collaboration. Central and Provincial staffs finished marketing surveys and prepared reports dealing with sugar and other commodities. The issue of a preliminary guide to Indian fish, fisheries and fishing and curing methods preceded the survey undertaken in connection with the marketing survey of fish. It is claimed that by the end of 1940 as many as thirty marketing surveys had been completed or had reached an advanced stage.

The report draws attention to the importance of standardisation. It is observed that methods appropriate to the village market are out of place in regard to widespread distribution of goods to distant markets. This alone can give the best possible price in the best possible market, and buyers, too, will be able to quote terms without viewing the goods. Grading and marketing methods make for standardisation and the progress of the *Agmark* is reviewed. The quantity of

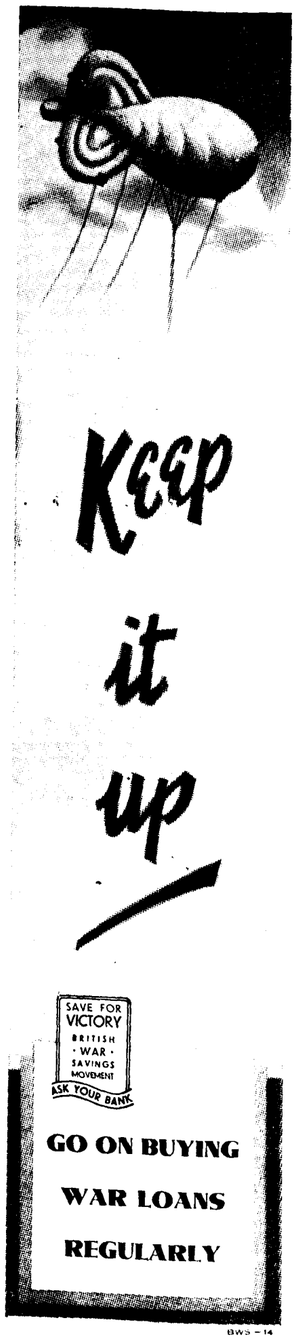
SAVINGS BANK DEPOSIT ACCOUNTS—Sums of Rs. 500 and over accepted at 1½ per cent. by transfers from Savings Bank accounts, subject to three months' Notice on withdrawal. Rules on application.



W. G. GROUNDWATER, *General Manager.*

marked produce sold exceeded by two-thirds the quantity in the previous year. The authorised packer has quickly emerged in many trades and 363 packers at as many grading stations were in operation by the end of 1940. Co-operative associations in Madras decided to grade and mark rice for sale. Grading was extended to fruits and a new product was cotton. Buyers paid a premium for cotton thus marked in Baroda. A.L.F. cotton with the *Agmark* paid the producers Rs. 10-6-9 per candy over the local Surat cotton representing a premium of 3.5 per cent. for the quality as guaranteed by the mark. Rice marked and packed by grading unions secured a premium ranging from 1 to 4 per cent. over ungraded rice. The premium is not invariably obtained by the intermediary, for it is noted that in Gwalior the premium paid for graded ghee goes to the producer. The marking system has been helpful in checking adulteration and other malpractices. And marketing staffs were often enjoined to supervise the control of quality in regard to a wide range of products.

Standard contracts remain an ideal since provincial variations in regard to the leading commodity markets represent an insuperable obstacle. But the contract devised as regards wheat and linseed may well find wider acceptance as the experience of the Marwari Chamber, Bombay, suggests that disputes were reduced to a minimum by the acceptance of the improved contract. A conference held in August reached a decision as regards the terms for groundnut contract and it has been pointed out that if exporters accept the terms laid down it may be possible to win a bigger share for India in the U. K. market. Standard and uniform weights are yet to come, but the report notes that action is being taken under the Act of 1939. Proposals for the control of futures trading were deferred but the report dwells on the action taken to avoid a crisis in the Bombay cotton market and also of the reforms in procedure introduced by the Hapur Chamber of Commerce. References to the Coffee Control Ordinance and the Bengal Jute Restriction Act show that State intervention far beyond the market control acts passed in many produces has already become familiar. The virtues of a long-term marketing policy, however, remains unappreciated, and after a passing mention of collective bargaining, the report passes on to deal with what marketing can achieve for the agriculturist. In the post-war period difficulties will not be absent and better produce should therefore be sold for better prices at present.

A Cawnpore Jubilee

Chambers of Commerce in India are not too many and jubilees, too, are not so frequent that one can miss the celebrations in Cawnpore connected with the U. P. Chamber of Commerce last week. The occasion was not marred in any way by the display of temper in the city, and one may gauge what part the Chamber has played in the economic life of the United Provinces by a reference to the illustrated souvenir dealing with the growth and work of a Chamber that has at all times claimed a distinctive and influential membership. If the jubilee did not have great importance of its own, there is the fact that Cawnpore shows the greatest growth of any Indian city between 1931 and 1941 and it is only necessary to look back on the record of the U. P. Chamber to realise how much the business community has contributed to such growth. Twenty-five, or to be precise twenty-seven years, of useful service have earned for the Chamber and its spokesmen a high reputation, and what the U. P. owes to the Indian Industrialists, who have either alone or in co-operation with British interests, developed industries that through organised effort are affording valuable support in the war, is widely known. But as Mr. Tennant Sloan

has pointed out in a congratulatory message to the Chamber, there is a long way to go before the industrial resources of the U. P. are fully developed. And the need for rapid industrialisation therefore figures largely in the speech of Sir J. P. Srivastava who has played a great part in the political and commercial life of Upper India. The brief passage from his address telegraphed to the press last week emphasised the need for further rapid advance in spite of such progress as has been reported since the outbreak of war as also the need for Indo-British co-operation in every phase. Political troubles may persist but industrialisation and defence are paramount needs, and if taxation hampers development, there is admittedly a need for relief and adjustment. Sir Jwala Prasad stressed the prevailing unanimity of opinion on the subject. Prolonged dependence on imports had only served to reveal the need for new industries; unlike the Commerce Member, Sir Jwala Prasad has seen no danger in further industrialisation. He does not foresee a contraction of imports as a direct consequence of industrialisation, such contraction leading to a lesser offtake of India's commodities by outside markets. Sir Jwala Prasad supports also the widely held view that industrialisation resulting in a higher standard of living cannot but have favourable effects on India's foreign trade. A forward industrial policy is then recommended but the means are wanting. A readjustment of fiscal policy may provide in its way a stimulus, and the plea of Sir Jwala Prasad that machinery must be set up immediately to determine afresh the conditions on which industries may expect to get postwar protection.

If Sir Jwala Prasad is acutely conscious of the danger of imperfect industrialisation, he is aware, too, of the dangers of haphazard development. It is not without significance that almost all recent addresses have dealt with the problem of postwar adjustment. Wartime expansion is not all jam and the advent of peace will present a serious problem for the most secure or the most prosperous of industries. The rectification of defect visible at present will ease to some extent the difficulties of post-war adjustment. But the devising and application of new policies and new methods, to be evolved in relation to circumstances as they develop, is a task not only for the Government, but for leaders of industry. A certain amount of heterodoxy, such as no mere inter-departmental committee such as the one contemplated by the Government could hope to develop, must offset official expertise. One is, therefore, not surprised to hear Sir Jwala Prasad voicing the current demand for the association of business interests, and academic talent too, with the proposed official investigations of economic problems *in esse* and *in posse*.

Sir Jwala Prasad conformed to precedent in criticising the taxation policy of the India Government and the working of the Supply Department (which is considered a little remote from businessmen owing to then knowledge of immediate requirements) the justification must be sought in the widespread representation that a part of the tax in profits must be returned to the assessee to help pay for the difficulties in the bleak period after the war. Rather plaintive questions are addressed on the subject without any realisation that British industry has no freedom of action after the Emergency Powers Act of May last and the refund of tax is small consolation for the hardships of to-day. The comb-out of men and women too, the conscription of workers for fire fighting and the new concentration of industry schemes are not likely to have any parallel in India. And the case for relief is to that extent weaker. There was also a plea for a higher rate of depreciation allowances in view of extra wear and tear in wartime. British procedure even before the war was more enlightened and the new rates introduced after the Income-tax Amendment Act can be suitably modified for it is not only the extra wear and tear that has to be taken into account but the higher cost and the other difficulties of procuring machinery to replace worn-out plant during or immediately after the war.

NOT once or twice, but many times have I written in these columns about post-war economic reconstruction, the nature of the problems and the lines on which their solution is likely to be attempted. And it is generally agreed, I believe, that neither these problems, nor the mood and temper of the common people, will allow these problems to be tackled in the old, old way of niggardly provision for public works, small increases in taxation, meticulous division of charges between revenue and expenditure, and cold calculations of the return on capital and the like. People will insist on a terrific broadside on every problem; and governments would be carrying out such an attack either under pressure of popular opinion or under orders of a dictator anxious to keep the goodwill of the populace. There will thus be no practical alternative left. There is no question about that. But that of itself can be no solution. The solution of any practical problem depends upon the hard facts of the situation we are to tackle. What idea have we of the facts which will face us? How will those facts change on the initial impact of the polities that may be brought into force? It may be that the first stage of the working of those policies will be found to be exhilarating. But any policy takes time to work to a successful conclusion. Initial success is no guarantee of ultimate success. The facts, if they change at first, may also prove to be most intractable towards the end. Can we evolve economic plans, the ramifications of which at every stage could be clearly and comprehensively seen and carefully provided for, so that no unforeseen factor can wreck it when it nears the port?

All these questions have to be posed and answered, if we are not to be guilty of living in a fool's paradise. So far as India is concerned, these problems are, if anything, more complicated than elsewhere in the world. Most of us are apt to assume that, because ours is an agricultural country, our needs are few and the masses can live a life of Arcadian simplicity, an economic plan that can meet the needs of the whole population is easy to formulate. These are generalisations, easy enough to make, and easy, too, perhaps, to substantiate in arm-chair argumentation. But get to brasstacks. Imagine yourself the Chairman of a Sub-Committee of the Planning Committee entrusted with the task of ensuring adequate food supplies for the four hundred millions which we have succeeded in peopling the country with. Ask yourself what are the various kinds of foodstuffs grown in this country. What is the acreage under each crop? What is the number of cattle reared and slaughtered for purposes of food? What is the extent of land necessary for the grazing of such cattle and for growing fodder for such cattle? Then, proceed to take stock of your requirements. How much more of wheat and rice, pulses, and sugar do you need? How many head of cattle? Can you take all the land you have for growing foodstuffs? What about cotton, jute, oilseeds and what are called cash crops? To what extent will you meet your increased needs from increased acreage and to what extent from intensive cultivation?

Now you have had a fusillade of questions. It is time I try to be less liberal in the use of the mark of interrogation. Obviously, I cannot answer these questions to a nicety. I am more concerned at the moment to say that a great deal of study is called for. A mass of data, a mass far larger than any that has yet been thought of by any economic enquiry, has to be gathered. The data have to be handled, put side by side with other data that other sub-committees will have to gather. Certain ideas, however nebulous, have to be formed in the first instance about the relations between one set of data and another, between one set of objectives and another. On the basis of such ideas, plans have to be made on a frankly tentative basis. And the effect of each such plan on other plans has to be nicely calculated to detect the degrees of conflict that may develop in the later stages of the plan. And the plans have to be revised in the light of these calculations and with a view to minimise and ultimately eliminate such conflict.

Now the question I would like everyone to consider is whether all this is the work merely of a cost accountant or a works manager, or that of one who is more accustomed to thought of a more abstract and more disciplined kind. In other words, is it at all the work of an economist? In an address to the Bengal Economic Conference last week, Mr. Nalini Ranjan Sarker affirmed that it is the work of the economist. Though a businessman himself, Mr. Sarker had no hesitation in inviting economists to address themselves to the task of building a new science of economics, one that will be capable of affording guidance, at once useful and reliable, to the authorities

entrusted with economic planning. Mr. Sarker said a great deal indeed to show that, even as economic life all over the world is taking a new aspect, economic science, too, has to have a new orientation, new methods and new aspirations.

I do not know how the economists who were gathered at the Conference reacted to this appeal of Mr. Sarker. But I am sure that those, whose academic training has been one of the orthodox kind, must have felt inclined to treat the appeal with a somewhat lofty indifference. It would be no surprise to me if they felt that an insidious attempt was being made to hitch the wagon of economic science not to a star in the heavens, but to a shrub in a valley. Clearly, here are two questions involved in this, the future of economic science and the future of economic studies, which I consider to be different from economic science as such. The economist would not resent a request to make a special study of the position of say, cotton-growing in India and the means by which the annual output of cotton in this country can be doubled without prejudice to the requirements of other crops or the fertility of the cotton-growing tracts in the future. But he would certainly resent being told that the processes of his scientific thinking should be overhauled so as to suit the requirements of the National Planning Committee.

To any such suggestion, the economist would react most violently. He would consider that such a change would involve his losing his equality with other scientists. "Why," he would ask most indignantly, "should economics alone be asked to subserve any given purpose? Is not science the pursuit of knowledge for its own sake? Have not other sciences progressed because they have been free from immediate purposes. No! The good or evil that science may bring to man is incidental. The economist will refuse to work with a view to produce cocoa or carrot". This indignation is, superficially, quite justified. Do we under-rate Einstein's Relativity merely because no American or German firm can perfect a productive process thereon and acquire patent rights for it? Science is concerned with truth; and the utilisation of the discoveries is the job of some one else.

I should be the last not to sympathise with this view. But we should know exactly what we mean when we call economics a science. The economist himself is most halting and apologetic when he claims the name of science for his study. And where the social sciences differ from the physical sciences is the commonplace of all text-books of economics. But it is time that students of social sciences were not content with claiming the privileges of the scientist, but sought to deserve them. Though it is somewhat parenthetical, I may permit myself to say, that the economist can take comfort only from the political scientist. For the latter is in a worse plight than the former. The economist at least could cite a few laws like that of demand and supply. But the political scientist cannot state one natural tendency with any degree of confidence. He cannot say in what conditions democracy or dictatorship will arise. He cannot say anything of the relations between economic organisation and political organisation. But the political scientist talked of constitution-making checks and balances and all the rest of it, without a thought of the debacle of democracy that we are seeing to-day.

Now the economist is not as vulnerable as the political scientist, not because he has greater insight, but because he has been more cautious and appended an "if" to every statement. *Ceteris paribus* is his philosopher's stone. All that may be good. But the time is come when economics has to outgrow the stage in which it is merely a thought structure with "ifs" as its basis and *ceteris paribus* as its superstructure. As Mr. Sarker pointed out in his address to the Bengal economic conference, *laissez faire* is no longer a description of existing conditions. And *laissez faire* cannot for that reason be good policy.

The post-war world will have a huge number of tasks. It will have a number of objectives not all of which will be permitted to an equal extent by objective conditions. Economics, which till now dealt with conditions of free private enterprise and a variation of the law of the jungle, must now visualise the impact of common social purposes on the resources with which nature has endowed human societies. Till a few years ago, it was hopeless to expect economics to rise equal to its new tasks. But the position is slightly, why, appreciably, different to-day. Of all the developments of economic science during the last ten years, the most significant and the most far-reaching is the definition of economics by Lionel Robbins as the science which deals with the distribution of scarce means among competing ends. It is as such that economics has to tackle its problems. In every question of national planning, this question of scarce means and competing ends is involved. And we in India have even greater need to regard it in this aspect than others. I hope Mr. Sarker's appeal has gone home to economists in this country.

New forms of organisation have taken root but their work is little known and little can be said about the advantages derived by India. One has the Eastern Group Council in mind in regard to this observation, and after the torrent of criticism splashed by the Federation people in Delhi one turns to the reasoned judgment of Seth Maganlal Ghia with something like pleasure. He, too, shares the public distrust of the mystery-making at Delhi, and one hopes official feelings are not hurt by his

appeal for fuller information. There is an Indian official representative on the new Supply Council, Members of which gave press interviews expressing intelligent interest in India's industrial aspirations; but nothing is known about the schemes before it. The diversion and distribution of orders through appointed channels can only be part of the Council's work. Surely it must have a long-term policy after all the oratory in October about India's ability to serve herself and the Empire. Representatives are shy; and without non-official Indian representation on the body, nothing can be known of what the Council intends or has so far accomplished. If it is to serve as the agent of the Ministry of Supply, it may be said plainly and people will be content to register disappointment. But there are the vague and familiar promises and so there is a hope that India will be given a chance to know how India's representations have impressed on the Council the need for reporting on the progress made till now. Surely it is in the public interest to give a little information, and the appeal of the President of the Indian Merchants Chamber should be heard. If the members of the Eastern Group have their own projects —South Africa and Australia want to put down aluminium production plants—and want to go on with them, the idea of co-operation for mutual advantage does not seem to have struck root. There is no long-term planning for the benefit of India or the Group as a whole and a welter of individual plans will result neither in harmony nor maximum production. That is a point that has been taken well by Mr. Ghia who has clinched the arguments by adverting to the general desire for industrial progress up to the point of self-sufficiency. Representative businessmen are not a little surprised to find that industrialisation is still an object rather than an achievement, and the organisation of resources for war production admittedly the main object of the Supply Council has not been carried out with any reference to India's own obvious needs and desires. Seth Maganlal reflected both the local and national point of view in urging that all wartime opportunities should be explored with an eye to ultimate advantage. A judgment on the work of the Council in and for India is possible only on the basis of what may be called progress reports, and the request of the business bodies for information is both timely and reasonable, for India may be called upon to undertake new and immense responsibilities with the widening of the war in the Middle East.

(From Our Correspondent)

New Delhi, April 30.

A FAIRLY detailed account of the Allahabad meeting has now reached New Delhi. It appears that Mr. Amery's speech came as a complete surprise to Sir T. B. Sapru, for the impression which his talk with the Viceroy hal left on his mind was that a fresh attempt would be made to alter the composition at the Centre, and that though they might not get all that they asked for in the Bombay resolution, "a move on" would be recommended by the Viceroy. Those connected with the Bombay conference think that the Viceroy would have been very sympathetic in his despatch to the Secretary of State, but the decision to do nothing for the present was taken by His Majesty's Government. Two facts have been forcibly brought out, firstly that the British Government is unwilling to hand over the Defence and Finance portfolios to Indian members and even though it may agree to a substantial Indian majority in the Council there is no intention to depart from the present position so far as the working of the Council is concerned, and secondly, that even these changes can only be contemplated if the Congress and the Muslim League agree to come in or at least if the Muslim League and the Hindu organisations are prepared to accept the expansion scheme and agree on their respective proportion of seats. This means that there is no possibility of any early attempt to end the deadlock.

* * *

It appears that Sir T. P. Sapru revealed at the Allahabad meeting the British Government's provisional plan for expanding the Viceroy's Council according to the August offer beyond which it is still not prepared to go. The Viceroy's Council was to consist of eleven men of whom four will be officials—viz., the Viceroy himself, the Commander-in-chief, the Home Member and the Finance Member. The Muslim League's demand was that if the Congress did not come in, the Muslim League should have a majority of seats and if the Muslim League accepted office and the Congress did not, and later on the Congress changed its mind and desired to come in, the Congress should not be allowed to do so without the consent of the Muslim League. To this the Viceroy would not agree—nor would the leaders of the Hindu Mahasabha agree to the proportion demanded by the Muslim League. The result was that the scheme for expanding the Viceroy's Council while the Congress stayed out failed. That appears to be the position even to-day.

* * *

Sir T. B. Sapru is reported to have stated at the Allahabad meeting that as a result of his talk with the Viceroy he expected that least the majority of the portfolios would be handed over to Indian members. He thought, however, that the Commander-in-Chief would continue to be a member of the Viceroy's Council, that Sir M. Zafrulla and Sir Ramaswami Mudaliar would also continue as members and that for the present the Defence and Finance portfolios would remain in official hands. That was his expectation which he informed his committee at Allahabad, but Mr. Amery's speech has removed all these hopes. It is said that Sir T. B. Sapru discussed at great length with the Viceroy the question of transferring the Finance portfolio to an Indian member. He assured the Viceroy that there were Indians available with the required technical knowledge and that there was no reason to apprehend any risk or danger. The consideration which he urged the Viceroy to bear in mind that the transfer of an important portfolio like this, carrying real power, would have a great moral effect on the minds of the people and their whole psychology would change when they see this sign of the sense and sincerity of the British Government in their pledge about Dominion Status. The concrete suggestion which he made to the Viceroy was that the present Finance Member, Sir Jeremy Raisman, could be made Financial Adviser for which the new Government of India Act had already provision.

* * *

Great sympathy is felt for Sir Ramaswami Mudaliar, Commerce Member, in the tragic domestic bereavement which he had to suffer last week. It came as a cruel blow after the extremely trying period of stress and worry which he had in connection with the Indo-Burma Trade talks. Sir Ramaswami Mudaliar has returned to his work after his visit to Madras and will leave for Simla on Saturday. He is meeting an important deputation to-day of newspaper proprietors in connection with the difficulties which have arisen in connection with the supply of newsprint. The price of newsprint has already soared abnormally high. Owing to increasing shipping difficulties latterly and the recent restrictions imposed against imports from the United States (with which Canadian imports have to be tacked) newspapers are threatened with practically a newsprint famine. It appears that the Government of India has already suggested to newspaper proprietors that they should restrict their consumption by cutting down the number of pages in their issues and by other measures. This matter has already been taken up by the Indian and Eastern Newspaper Society. The other question which the Commerce Department has raised is with reference to the proposals for the manufacture of newsprint in this country. Unfortunately there has already been great delay in dealing with this question so that any scheme for starting newsprint factories, even if the Government of India are prepared to provide the necessary facilities, cannot help newspapers to tide over their immediate difficulties. What is required at the moment is assistance from the Government to get regular supplies from abroad of the country's minimum needs.

* * *

A serious situation has developed in the Punjab threatening the province with a four week economic strike as a protest against the Punjab Government's two new measures —the Markets Act and the Sales Act. There is to be complete cessation of business from to-morrow throughout the province for one month in all those concerns affected by the Sales of Tax Act. There will be no sales, retail or wholesale, and all further orders of purchase of every kind of commodity will be stopped forthwith. Manufacturing concerns may continue to convert raw material at present in stock into finished product but can neither sell nor export. In answer to this threat of a deadlock the Punjab Premier, Sir Sikandar Hyat Khan, said in the Punjab Assembly that the Government were always prepared to listen to legitimate grievances and meet them as far as possible, but the Government would not allow themselves to be browbeaten or coerced. Sir Sikandar said that every step would be taken to help the growers and the consumers ot tide over their difficulties. As Simla, where the summer offices of the Government of India open to-morrow, will be affected by this general hartal ordered by Punjab traders, it is a matter of some concern to the Government of India also. It is not yet known what plans the Punjab Government have in view to meet this unprecedented situation. The only hint is the recent reference by Sir Chhotu Ram to arrangements whereby some of the biggest dealers in the country would buy the present harvest and if necessary the next. So far all compromise efforts have failed. In the course of its comments on the Punjab Government's policy, *the Civil and Miitary Gazette*, says: "It is, however, still open to grave doubt whether honesty can be inculcated by means of legislation and whether the many open and hidden forces at work for centuries to make the Punjab marketing system what it is to-day can be eradicated by a series of "thou shalts" and "thou shalt nots" . . . those burdens will be borne by the consumer." There is little doubt that the Punjab Government has not handled the problem with tact and wisdom.

* * *

Certain administration reports of the Government of India are so late in coming that often they have no practical value. Only to-day is the report available for 1939 of the working of the Factories Act. As compared with the previous year the number of factories rose by nearly a thousand. The number of operatives employed is over 1¾ millions. Among the new industrial enterprises are a paper mill in Orissa, a match factory in Lahore, a motor tyre factory in Bombay, and a hydrogenation plant for the manufacture of vegetable ghee in the United Provinces. There was expansion among cotton spinning and weaving mills, but it is revealed in the report that the number of workers employed in the cotton textile industry shoyed a decrease.

Bombay, April 30.

LOCALLY all events are unimportant compared with the street fighting that was a feature of the week. Things are not quite what they should be after the adoption of unusual precautions, and many localities that never saw rioting in 1936 were exposed to the attentions of hooligans. Casualties have not been high but property has suffered. An advertisement in the press calls attention to the fact that a mill company's clerk was relieved of a bag with Rs. 83,000 in a not-too-busy thoroughfare. That would not be the only case of open theft reported, and the average man's disposition to regard the riot as a question for effective work by the police is reflected in the press. Not all however are satisfied with the firmness displayed by the police, and the efforts of non-officials to promote public confidence suggest that something was wrong. If law enforcement were quite effective the troublesome elements would have been got rid of. One need not hear so much of preventive arrests. The fond belief that the trouble would not affect the mills has been exploded. Communal strife has upset the mills who have found that hardy millhands too are afraid of hooligans. The emergence of acute communal trouble in the middle of a war naturally has accentuated anxiety among the well-to-do who are more concerned with the rounding up of suspicious characters than discussions on what Mr. Amery said and what others say.

The opening on Monday by Sir P. Thakurdas of the new building of the Warden Insurance Company is meant to be a visible mark of the rapid progress made by the Ahmedabad company. The new building in the insurance quarter of the city is a worthy addition to the imposing offices in Pherozeshah Mehta Road. There will be tenants in the building but Warden House is going to be the Head Office with the board room in a tower. For a young life office Warden must be deemed to have made great progress. Business expanded consistently for a company aged eight years and the first valuation showed a surplus available for distribution to policyholders. New business figures show healthy growth in the case of the Warden and with a lower expense ratio progress would be more certain. The Warden has developed a comparatively large agency organisation and connections in East Africa were initiated after a visit of Mr. J. C. Thakkar. I should also mention that Mr. K. S. R. Iyer, for years known as the bustling chief of the Jupiter, is joining Warden as General Secretary. Prominent in the South Indian Community and the insurance world, Mr. Ramachandra Iyer brings a wide experience of general insurance to a Company that intends to underwrite fire and accident business after putting through the necessary formalities with the Insurance Department and the Tariff Associations.

The repeal of two sections of the Abkari Act prohibiting the appearance of liquor advertisements falls due for mention in this correspondence. This week one can read beer and whisky advertisements in the local press, though a few papers may make it as before a principle to refuse liquor advertisements. So one more grievance has disappeared, and I should also mention that the Parsee applicant has got from the Collector of Bombay his licence for tapping toddy palms and so in spite of all the worry occasioned by the riots some people must be happy. The Governor's Act permitting the appearance in newspapers of liquor advertisements is one of the shortest statutes on record. In this case at least, proper respect is being shown to the High Court which has repeatedly declared that Prohibition must go because it cannot stand. But for the fact that the price of foreign liquor has gone up one could predict a prompt splash of advertisements in the papers here. There is also the fact that Scotch whisky is destined for the U.S.A. where dollars can be had, and the supply may influence the volume of advertising, so that advertising men's hopes are rather restrained.

The Bombay cotton market has not watched without interest a brisk advance in exchange permits without resulting in marked fluctuations in the rupee-yen exchange rate. It is clear that with the yen linked to the dollar fluctuations cannot be avoided altogether but last week's movement suggested that the movement was almost independent of any change in the sterling-yen rate as indicated by the London-Kobe rate. The general belief that Japan is ready to buy when cotton prices sag, and can produce funds when it suits her, has been illustrated by the rapidity with which previous liabilities were arranged for in order to secure 40,000 bales of Indian cotton for which payment may be delayed if Indian shippers are involved. The revival of buying may suggest that the Far Eastern tension is exaggerated and the existing trade relations may even be expected to continue. But it is rash to dogmatise on the export outlook and well-informed people prefer the astrologer's reading to that of any newspaper commentator. The continued decline in prices is due to the war news and the riots in two cities. That Japan has been reducing her foreign indebtedness mainly by buying sterling for the purchase of getting hold of short-dated bonds in the London market has been reported. It may be interpreted to mean that a Far Eastern war is more a hypothesis than a certainty. Japan bought the bonds cheap because jobbers were pessimistic. Why Japan should have tried to buy them is not hard to explain. And the cotton market does not ignore the possibility that Mr. Matsuoka may venture on another journey, this time to the States. The support latterly forthcoming for ready cotton may be put down to the feeling that newspaper stories are treated far too seriously and textile activity at home may provide adequate compensation. The conference on textile supplies with reference to prices payable and profit margins may determine to some extent the future of textile shares. It is realised that pessimism has been overdone of late. In fact, so cautious an observer as Sir Sorabji Saklatwalla views the future as bright. Speaking at the Svadeshi Mills meeting he referred to the improvements to the plant carried out by the company and to the more efficient working of the mills. He stated that the company had secured a fair quantity of war orders and had established direct contacts with Australia which was one of the biggest export markets at present. His forecast may not accord with the reports that trading in the Bombay market has been meagre and that mills are eager sellers because exports are difficult owing to the freight position. There is, however, a possibility that Italian East Africa may figure among new export markets since press reports suggest that Indian trade will be encouraged.

Local government still stands in need of drastic reforms. The annual report issued lately rubs in the fact that elected authorities are not up to their work mainly because their finances are not in order. The improvement noted under education is reflected in the increased provision of funds for education. In certain districts real progress was made and a satisfactory beginning was made as regards physical training. In respect of medical relief only slight improvement was noticed but the interest displayed in Ayurvedic medicine shows that interest in indigenous systems and drugs has not died out.

Objection has been taken in several quarters to the Bombay Corporation's suggestion that the representation of special interests should cease after the broadening of the electorate. That adult franchise will render the special seats for Commerce and Labour unnecessary is the view sponsored by the Corporation but there is a danger that important minorities and interests may suffer by any swamping of the electorate. At any rate, in an industrial city, there is a real need for special representation of chambers of commerce which under every electoral system have been shown special consideration. The

A Resume of Commodity Markets

THE outstanding feature of the week is the accession of strength to the jute manufactures market. It was pointed out last week that a rather anomalous situation existed in the jute trade, the demand being there with no ships to carry the materials. The developments during the week have been distinctly encouraging for the hessian market, and the bears who had sold heavily on the deterioration in the Greek and Eastern Mediterranean situation were caught napping this week. The strength of the jute manufactures market has not been without influence on other sections. For instance, the jute futures market, in spite of the absence of any interest on the part of the mills and balers too, has been definitely better. Linseed has been naturally steady, while wheat has not declined proportionately. In the Western Centre, the technical position in Broach crop has reasserted itself and there has been an abrupt rise in prices in the early days of the week. It is interesting to note, however, that the advance in prices has been confined only to Broach positions, particularly for Old crop April-May. The discount for July-August over April-May has widened to 23 points from 13 at the end of last week. While Oomras are inclined to be slightly higher on balance, Bengals have been neglected, and quotations for the forward positions are even lower.

The continuance of communal riots in both Ahmedabad and Bombay has been responsible for the dull tone in the bullion markets. For the fourth week in succession, prices have been maintained at relatively low levels without any appreciable volume of business passing. There has been no activity in the silver market even after the firming up of raw cotton. The sharp fall in wheat prices in the Karachi market, by nearly seven points during the course of two weeks, for old crop May position, has been due to the growth of interest in the new crop positions and holders of stocks are only too anxious to dispose of their holdings. The premium for old crop over July position is therefore only a very small amount.

The general outlook, as pointed out on previous occasions, remains difficult: it is not possible to take any definite view. Everything is dependent on the freight situation. If there has been a substantial improvement in values for near positions in the hessian market, it is mainly due to the shortage of ready goods, renewed demand from overseas countries and the more hopeful view taken regarding the freight situation in May.

Jute :

There is very little activity in the jute market at the moment. Mills are not interested in accumulating stocks in any considerable quantity in spite of the large sales made in recent weeks. The undertaking given in regard to their purchases for the whole of this season at minimum prices has been mainly responsible for the slowing down in the rate of buying. In this connection, it is very important to note that the member mills of the Indian Jute Mills Association purchased 168.69 lakhs maunds of jute up to April 15 towards the quota fixed under the Delhi agreement. The sharp fall under the quota which the mills were to have purchased according to the arrangement was 18.81 lakhs maunds. The Bengal Government has been informed of this shortfall in the purchases by mills. And it is learnt that the Government has not decided to exercise its right to call upon the Association to purchase these 18.81 lakhs maunds on Government account in view of the assurance of the mills that this shortfall will be made up by mills at an early date. It is significant that the extension of the bye-law seems to have been made only with a view to enable the mills to spread their purchases under the quota over the whole of the season. For, there is no mention of any additional purchases hitherto. And we have only two months more of the season.

The recent showers have been quite helpful to the midlands and sowings are reported to have progressed very well. Sellers are pressing for business in low grade jute. The quotation in the futures market touched a high level of Rs. 38-2 during the week.

Jute Manufactures :

The sharp increase in values in the several sections of the jute manufactures market was perhaps unexpected. For it was observed only last week that with the disappointing shipment figures, there was a tendency to sell stocks and 9 porters ready came down to as low as Rs. 15-5. The announcement of a new order for hessian cloth for one crore, eleven and a half lakhs yards for July-September delivery on Monday this week provided the signal for the upward movement of prices. There were also reports that there would be greater shipments in May. South American buying is also noticed on a large scale. 9 Porters ready have improved from Rs. 16-5 early this week to Rs. 17-10 today with bulls still having the upper hand. The improvement in prices is pronounced only in the near positions. While 9 porters ready are nearly two points higher on balance over the week, 9 porters October-December show a rise of only about one point. It is evident that with the further improvement in the freight situation, prices would stage yet further rises and if these conditions continue for long, the Jute Mills Association would be obliged to increase working hours at least for the sake of keeping prices from rising abnormally. Already Hessian prices are considerably above the official minimum prices while jute is quoting below the minimum rates reached under the agreement between the Bengal Government and the Association.

In his latest Report the Argentine Correspondent of the Indian Central Jute Committee states that transportation is the major problem of the Republic. She has great stocks of primary products such as grain and seeds for sale but no shipping facilities ; the British ships are only available to a limited extent for moving Argentine produce.

As a result of the recent negotiations with the British Government more activity is visible in the meat packing plants, but jute requirements will be governed by the change in the form in which much of the meat will be shipped.

The present position of the alpargata business is quite satisfactory. The capital stock of the most important firm engaged in manufacturing alpargatas is being increased by 1.5 million pesos.

Stocks of canvas, tarpaulin, bags and sacks as at 31st January, 1941 and the corresponding figures three months ago are given below:

	31st January, 1941.	31st October, 1940.
Canvas (in metros) ...	7,132,930	45,955,776
Tarpaulin (in metros)	4,012,593	3,422,180
Sackings (in No.) ...	4,043,466	5,226,136
New Bags (in No.) ...	3,143,954	52,251,917
Old Bags (in No.) ...	5,071,794	20,881,515

To the above stocks of bags should be added 999,300 which have been acquired in Uruguay on behalf of the National Textile Container Commission which is also studying the requirement of bags for handling the next grain crop.

1,299 bales of raw jute and 10,097 bales of jute goods were imported into Argentine during February, 1941.

Cotton :

The jump in the Broach April-May contract from Rs. 214-8 to Rs. 247 on Wednesday this week was mainly due to the technical position. It would be remembered that nearly a month back, there was almost a squeeze in the Bombay raw cotton market and Broach-April-May in the course of a short time shot up to Rs. 241. There was a setback to below Rs. 215 on heavy selling by commission houses and option dealers but the scarcity of contracts and buying by mills have forced bears to cover their open positions. This gave the bulls their opportunity and they lost no time in pushing up the quotations to Rs. 247, a new level for the recovery period. There has since been a reaction to Rs. 239 but the quotation has been well held, being at the time of writing around Rs. 242.

Jute and Jute Manufactures

(From Our Jute Correspondent)

Calcutta, 1st May.

THE most notable, in fact the only feature of the past week has been the remarkable recovery in hessian prices. The pinch has been mainly in near at and nine porters where apparently some people had been caught short and had to cover up at rapidly advancing rates. Mills have benefited only to a minor extent as they have had little to dispose of in the May/June positions and it is mostly Bazar holders who have scored. On the other hand it is mostly Bazar buyers who have had to pay through the nose for their urgent needs. A considerable order of 111 lakhs 7½ oz hessian cloth from Government for delivery May/September helped to firm up the position which was also supported by orders from the Plate and from North America. These spasmodic movements of the markets however are rather to be regretted than otherwise. Any feature, whether Bull or Bear, is given exaggerated importance and causes fluctuations far wider than its intrinsic importance deserves. One definitely Bear feature in to-day's news does not seem yet to have been appreciated as such. This is the announcement that President Roosevelt has ordered his Maritime Commission to impound two million tons of shipping for implementing the Lease and Lend programme. Presumably such requisition will override any existing bookings or charters and it is highly probable than many U.S.A. vessels ordinarily devoted to the Calcutta run will be diverted to the Atlantic for War cargoes to the inevitable detriment of the local export trade.

While on the subject of freight space, we might congratulate a presumably mountainous Committee at home on the birth of a peculiarly minute mouse. This is the recommendation that, in order to save freight space, merchants in England who normally place orders in Calcutta for 8 oz. material should henceforth utilise 7½ oz. material. As neither description can be packed to within a considerable margin of the deadweight basis without the risk of press cutting, and as the difference between the two descriptions is mainly one of shotting, it follows that a bale of 7½ oz. cloth is scarcely perceptibly smaller in dimensions than one of 8 oz. And as freight space for such goods is calculated by measurement and not by weight, the saving in freight by this portentuous resolution so far as goods shipped from Calcutta are concerned must be almost negligible.

It is understood that the Jute Mills Committee, having given due consideration to the question of Loose Jute Standards for the coming season, has decided that the grades of Tops, Middles and Bottoms shall remain as at present, with the existing guarantees attached, except that the Bottom is to contain only straight morahed jute. A lower mark has been recognised, to be described as a "X" mark which is to contain all jute, other than stick and hunks, unsuitable for the higher marks. The only question which now anises is, are these specifications to be adhered to? Because at the present time "X Bottoms" are being freely offered around Rs. 4 and even Rs. 3-12 which easily measure up to the official specification of a "Bottom," the lowest official minimum price of which is buyers of any decent Tossa available at Rs. 6. Much will depend on whether minimum prices are to be maintained on new crop jute after 30th June, and it is almost inevitable that, if minimum prices are to be maintained on manufactured goods, raw material rates will not be allowed to run loose. At the same time it is palpably impossible to stabilise standards if the official minimum prices do not conform much more closely than they do at present to market values. It will be remembered that, several months ago, a special *ad hoc* sub-committee representing all sections of those interested in loose jute, was appointed to study the question of stabilising standards and to make recommendations. Amongst their recommendations were two which would have proved very salutary in preventing the chronic rise in standards. These were that Mills should at no period during the season be permitted to purchase the lowest mark (Bottom) alone, and that it should be at the option of the Seller to deliver a varying proportion, according to the period of the season, of the lowest mark against a contract for a higher grade, at a fixed difference in price. These recommendations however were completely ignored at the time and apparently have been again, and the Mills have once more succumbed to the temptation to leave things as vague as possible in the hope of getting something for nothing. Doubtless we shall be told that the dealer is a fool if he delivers to a Mill jute which will yield anything beyond the official specification. The reply to that is that the dealer will never have an opportunity to deliver another maund to a Mill unless his first tender is up to the standard the Mill thinks it ought to be, quite regardless of what the official specification may be. So far there has been very little business done in new crop jute, but sellers are quite prepared to trade in it and at any time mills may come out as buyers for it. So, to avoid endless trouble when deliveries fall due, it is eminently desirable that the position should be clarified without delay by a specific official statement from the Mills Committee whether the official specifications are to be accepted as proper tenders on new crop deliveries. If so, then the new "X" mark will be only *habi-jabi* and nothing else for there will be nothing else inferior to a "Bottom" to put into it.

It has been officially announced that the Bengal Government do not intend to exercise their right under the Jute Purchase Agreement to come into the market as buyers for the 18½ lakhs of maunds by which the actual purchase by mills fell short of the quantity aimed at. This is a wise decision, though the question of cash was doubtless the determining factor. The purchase of another 18 lakhs of maunds would not materially affect the market as it stands at present and it would have led to endless complications if done by Government.

There has been an almost blank week in Export Jute. Freight, or the lack of it, is still the dominating factor and the only business reported is some inter-baler sales of Dundee Group Tossa assortment and 4s. for May at Rs. 47-8 and Rs. 36-12 respectively.

The Loose Jute market has been similarly bare of business. Mills have shown no interest while Balers have been consistent rates from Rs. 7-8 upwards, but the quantities offering have been inconsiderable.

New Crop prospects have further improved with rain where it was wanted, and sowings have progressed rapidly towards completion. The restriction programme appears to be effective, assisted as it has been by Providence. There must of necessity be some heart-burning in the border districts between Bengal and Assam, cultivators in the latter Province being entitled to go ahead, and are going ahead with the sowing of a full crop while their brethren across the border have to confine themselves to an eight anna sowing.

As noted above, the hessian market has registered substantial advances in all positions, though most markedly in the near positions. Little was recorded in forward nine porters, but quite a fair business was put through in forward elevens, though Mills were left sellers over. From Rs. 15-8, ready nines reached Rs. 17-8 to close slightly lower, while in eleven porters sales were recorded from Rs. 19-8 to Rs. 21-4 near, Rs. 19-2 June, Rs. 18-12 July, Rs. 18-2 to Rs. 19 July/September, Rs. 17 October/March and January/March, and Rs. 17-8 October/December. Heavy Goods after sagging to minimum rates, staged a sympathetic but not nearly so substantial a recovery and turnover has been on a limited scale. Heave Cees have been dealt in around Rs. 32-12 for May and June, Liverpools sold earlier at Rs. 36-12 June, and Cornsacks at Rs. 33 October/March.

	May.	June.	July-Sept.	Oct-Dec.
	Rs. A.	Rs. A.	Rs. A.	Rs A.
9 Porters ...	17 5	16 7	15 4	14 2
11 Porters ...	21 0	20 5	19 2	17 12
"B" Twills ...	33 10	33 8	33 2	32 10
Liverpools ...	37 6	37 4	37 2	36 14
Cornsacks ...	34 4	34 4	34 0	33 8
Heavy Cees ...	32 12	32 12	32 10	32 6

(*Continued form page* 808)

There has been only a sympathetic rise so far as other varieties are concerned, Oomras being only a few points higher on balance while Bengals were mostly unchanged. Concerning the revival of fears regarding a further deterioration in Far Eastern situation, it can hardly be expected that there will be any noticeable improvement in values for the short staple varieties.

JUTE

Calcutta, May 1.

THE jute market has been absolutely uninteresting during the past week and only towards the close a slightly firmer tendency has been noticeable in sympathy with the strength of the jute manufactures market. Mills are taking very little interest in the market while there is absolutely no business for export.

The member mills of the Indian Jute Mills Association purchased 1,68,69 lakhs maunds of jute upto April 15, which is short of the actual quantity they were to have purchased according to the arrangement between the Government of Bengal and themselves by 18.80 lakhs maunds. The Bengal Government has been informed of this shortage in the purchase by mills and whilst expressing a hope that this deficit in their purchase will be made up by mills at a very early date, the Bengal Government, it is learnt, has decided not to exercise their right to call upon the Association to purchase these 18.81 lakhs maunds on Government account.

The recent showers in the jute growing districts have considerably helped the progress of sowings. Sellers of low grade jute are pressing very much for business.

In the loose jute section only a very small amount of business has been passing. Earlier in the week, European Tossa Bottoms were done at Rs. 7-8 per maund.

In the pucca bales section also not much of business has been passing. Mills have bought only in small quantities Special Firsts at Rs. 41 per bale. Dundee Group Tossa 2/3 for May shipment were done at Rs. 47-8 per bale.

The futures market was rather uninteresting in the early days of the week and quotations were inclined to fluctuate in narrow limits. During the last three days, however, a better tendency has been noticeable in sympathy with the better goods market and the quotation at the time of writing is at the highest levels for the week, being at Rs. 37-15. The undertone is steady.

JUTE MANUFACTURES

Calcutta, May 1.

The jute manufactures market has been very firm during the latter half of the week. The heavy bear selling last week, it is now revealed, has been overdone. The placing of a new order for hessian cloth, the large buying from the Americas and the prospect of an improvement in the freight position in May have been mainly responsible for the sudden rise in values Bulls have now the upper hand and as mills are unable to sell any quantities so far as the near positions are concerned bazar operators have taken full advantage of the situation. The quotations in the hessian market are at the highest levels for the week. Rather, they are at the peak levels since June last year. 9 porters ready are quoting Rs. 17-6, May Rs. 16-12, June Rs. 16-6, July/September Rs. 15-6 and October/December Rs. 14-6. 11 porters ready are Rs. 21-4, May Rs. 21, June Rs. 20-12, July/September Rs. 19-6, and October/December Rs. 18-2.

In the heavy goods section there has not been appreciable rise in prices, and the quotations are sympathetically higher. B. Twills for May shipment have been sold on the basis of Rs. 33-12, Liverpool Twills at Rs. 37-4 and Cornsacks at Rs. 34-2.

The new order for hessian cloth is for 1 crore 11½ lakhs yards for delivery July/September.

COTTON

Calcutta, May 1.

There has been a sharp increase in values for Broach crop especially for old crop. Oomras and Bengals also tended to improve but quotations are now lower on balance. The sharp improvement in values was due to the oversold position of the market and the need for covering. Broach April/May touched a new high level this week, being at one time as high as Rs. 247. There has been a further widening in the discount over April/May. Broach April/May are now quoting Rs. 242. July/August Rs. 218-8, Bengal May Rs. 122-8, July Rs. 124, Oomra May Rs. 157-4 and July Rs. 158-4. The quotations at the end of last week were Rs. 214-8, Rs. 204, Rs. 152-12, Rs. 152-12, Rs. 122 and Rs. 122-8 respectively. It will be seen that Bengals are not very much higher on balance. There has been some buying of Oomras for export. American markets have been rather uninteresting and quotations have been moving irregularly downward. The difficulties in the way of granting a higher loan have been responsible for the lower trend of the markets. Exports are at very low levels. In New York, May closed at 11.15 cents and July at 11.18 cents.

PIECEGOODS

Calcutta, May 1.

In sympathy with the firmer tone of the raw material market the piecegoods market has been firmer and a greater amount of business has been reported during the week. Indian mills have again accounted for the bulk of the turnover. Mills are not prepared to reduce their limits. Forward business has not been on a large scale. In the Japanese goods section, business has been confined mostly to ready lots. Forward business has been very restricted owing to the uncertainty of the future outlook. The Lancashire goods section has been neglected.

The yarn market has continued firm and business has been done mostly by South Indian mills in medium and coarse counts.

GOLD

Calcutta, May 1.

The gold market has been rather quiet and business has been considerably affected by the riots. Gold ready is quoting Rs. 42-12-9, First Settlement Rs. 42-12-6 and Second Settlement Rs. 42-13-9.

The London price for gold has remained unchanged at 168s.

SILVER

The silver market also has behaved likewise and quotations are only slightly higher on balance. Indian Mint Silver ready are Rs. 62-12, First Settlement Rs. 62-12 and Second Settlement Rs. 62-14. The London market has been steady with the quotation for both spot and forward unchanged at 23½d, and the Government of India have met trade demand by selling at the tap rate.

WHEAT

The Karachi wheat market has moved further lower and quotations are easier on considerable selling from the Punjab. The weight of the new crop is now making itself felt. The absence of any trading in the Punjab, consequent on the passing of the Marketing Bill, has also had a restraining influence. Quotations, for both old and new crop position, have been marked down. Choice White ready were Rs. 28-9 and July Rs. 27-9 against Rs. 30-4 and Rs. 29-1 at the end of last week.

In the local market prices are lower in sympathy with the Karachi market. The quotation for May position is Rs. 4-1. The undertone is quiet.

MADRAS GROUNDNUTS

The market ruled erratic during the week, although the undertone is steady. Opening around Rs. 23 to Rs. 23-6 for Machined (Per candy of 531 lbs. ex-coast godowns), shippers' buying limits advanced to Rs. 23 and Rs. 24 on Wednesday, eased slightly to Rs. 23 and Rs. 23-8 on Thursday and improved to Rs. 23-8 and Rs. 23-14 on Friday. A slightly easier tone developed later with buyers at Rs. 23 and Rs. 23-10 yesterday and Rs. 22-10 and Rs. 23-4 at the close. Local buyers' limits ruled easier during the week, owing to the absence of buying by Burma and Straits shippers. Prices opened at Rs. 22 for Machined (Per candy of 531 lbs. ex-Madras Harbour godowns), and eased to Rs. 21-12 and Rs. 22 on Thursday and Friday and to Rs. 21-8 and Rs. 22 at the close. It is reported that shippers were active in the Ceded Districts during the week, and are reported to have bought fair quantities. The riot situation in Bombay has unnerved Bombay operators, but it is reported that in the past few days, some of the Bombay houses have commenced buying. The Groundnut oil market has been steady during the week, despite poor export demand, as local crushing by country mills has been curtailed in the southern centres on account of paucity of kernels and the slump in oil prices. Groundnut oil prices opened around Rs. 47 and Rs. 48 for Chekku" and "Expeller" qualities respectively on Tuesday last. The price of the latter advanced slightly to Rs. 48 to Rs. 48-4 on Thursday and to Rs. 48-8 and Rs. 49 on Friday, and closed steady at Rs. 48 to Rs. 48-8 for ready lots per candy of 500 lbs. loose, ex-sellers' Madras godowns. The price for "Chekku" quality, however, eased to Rs. 46-12 and Rs. 47 on Saturday and closed at Rs. 46-8 to Rs. 47 for ready lots, loose, per candy of 500 lbs. ex-sellers' Madras godowns.

MADRAS HIDES AND SKINS

Madras, April 30.

It is now reported that there will be a boat in the first week of May that is expected to take a full cargo of about 5,000 bales of Kips and that two other fixtures are likely in the first half of that month. But unless and until an appreciable quantity is shipped at least next month, the market will be faced with a crisis of the first magnitude. Shippers holding unshipped stocks and MUNDIES carrying stocks are hard put to it to find financial accommodation for, what looks like, an indefinite period. Shippers are, at the moment, hesitating to commit themselves in the way of fresh business, until definite news is made available as regards freight space on the ships scheduled to load in May. Moreover, a rumour is circulating in market circles that the Ministry of Supply have temporarily suspended issuing fresh import licences for E. I. tanned Kips. If this news is confirmed, much unhealthy competition will be eliminated and genuine traders and shippers enabled to clear their holdings. If definite news about allotment of shipping space in May is made available, MUNDIES expect that shippers may operate on the local market, as most of them may not be able to complete their full quotas with the help of their present stocks. Locally, one or two Indian shippers are reported to have bought small quantities of Bangalore hides at about 1½d. to 2d. below the schedule limits. A European buyer is reported to have been vainly bidding for Coast hides at about 1d. to 1½d. below the schedule prices. The Raw hide markets are higher, as Chrome tanners are buying freely. Arrivals are scarce in all centres, and prices in upcountry markets have likewise advanced owing to paucity of goods.

(*Continued from page* 807)

city owes much to Commerce because the rates are paid largely out of trading profits, and secondly, because its special point of view may help in civic progress. In the case of Labour the growth of strong trade unions can be helped by affording privileges in regard to representation, and co-operation is essential if the needs of Labour are to be properly appreciated.

The discussion concerning the prospects of car manufacture continues here too. Conclusions drawn almost casually by writers of motorists' columns have been given undue weight and a refutation of points raised in recent correspondence has appeared. It has been pointed out that the demand for cars in India is not inelastic, that road transport is bound to develop. And if cars can be had cheaper, the market can be trusted to grow. And one big step towards cheapening will be taken by local manufacture. And a small output will not be necessarily uneconomic. Beginnings in other countries with small production have been reported without any prejudice to ability to sell at competitive prices. Russian experience is quoted to show that in regard to parts and complete cars alike the situation is distinctly promising. And there is a stiff revenue duty to operate to the advantage of a local factory.

One of the first modern large-scale factories to manufacture glue and gelatine has been set up recently in Bombay. Though India has a plentiful supply of the necessary raw material from tanners and butchers the industry has hardly got going. There are half a dozen factories but the output is not satisfactory and the first efficient factory with a daily outturn of half a ton alone will have commercial importance. A well-known inventor is said to be behind the new factory which will employ steam heating and use machinery. According to credible reports an ample margin of profit is assured while regular working is ensured by a vast demand.

Trade with America

India is becoming more important in the U. S. market according to the Trade Commissioner in New York whose report for the third quarter of 1940 appeared lately. This is only to be expected in view of the drastic curtailment of trade with Europe and the increasing need for raw materials intended for the U. S. arms programme. The report supports the somewhat optimistic inferences drawn in the Meek-Gregory report. Comparative figures do not have any great bearing, but the conclusion drawn from the trade returns of recent months, that the present war like the war of 1914-18 has given a great fillip to India's trade with the U. S. A. is warranted by the accumulating evidence of India's larger imports from the U. S. A. over the war period as also the requirements of the U. S. A. which is interested in building up stocks of essential commodities. The increase in imports of mica, manganese and shellac may be explained by the plan to build up stock-piles. It is, however, not without significance that the other suppliers of raw materials to the U. S. A. like the Dutch Indies and British Malaya have a greater share of the import trade than India since they provide the tin and rubber wanted for both defence and industry. The percentage share of India of the total import trade (under 4 per cent of the total U. S. imports) suggests that the exchanges are altogether in favour of the U. S. A. which may well try to increase further the offtake of Indian goods as imports from Britain must have shrunk since last year. But Indian manufacturers must also acquire a knowledge of what is wanted, and in this connection, reference may be made to the suggestions addressed to the jute industry and also to manufacturers of art-craft wares about building up connections with the United States market. The reduction in imports reported during the third quarter by the Trade Commissioner under several heads may, however, spring from other causes such as shipping difficulties, export restrictions in India and diversion of supplies to Britain as in the case of pig iron. But the monopoly which India holds in regard to myrobalans, shellac and mica represents a valuable advantage, and the implications of the U. S. aid to Britain plan for India's Trade are as yet unrecognised. There is bound to be a big increase in U. S. imports of manganese, ilmenite, chromite and other strategic materials, though the current trend is opposed to any expansion in Mica shipments, and the release of tonnage for British use by way of the Far East up to the Red Sea may further stimulate trade with India for return cargoes will be required for U. S. ships at Indian ports.

Spain Stands Out

In spite of the thick haze that envelops European diplomacy, Spain looms more large than ever. Propaganda has converged on the Iberian peninsula again and the British Premier's references to the country in recent speeches only reveal that the situation is depressing. German infiltration is a fact but German propaganda has not had its way all along since the public is evidently convinced that Britain has no malignant designs and that the German stories are imaginative rather than good-natured. Recent reports agree that the Germans may be playing Senor Suner as their trump card at some time but not all agree that Suner is a potential rival to the Caudillo. The building up of food stocks by Germans in Spain cannot have an innocent purpose and a report cabled by Martin Moore from Lisbon to the *Daily Telegraph and Morning Post* last week referred also to the diversion of a part of an Anglo-American consignment of wheat into German hands. The purpose of such secret purchases is plain but Spain may yet shape her policy in accordance with the coming harvest rather than the crude propaganda which encourages the naive ambition to take Gibraltar by force. The presentation of Italy's bill for assistance over three months ago informed the world that Spain was in debt and also that the funding process applied only to a part of the debt. Recovery from the Civil War has not been complete, and if Spain has made money out of potash, she has not been able to run up the price of mercury and squeeze her customers. Neutrality is still known to have stimulated recovery, and General Franco realises that war will interrupt it in a cruel way. After various reports and admissions that Germans in Fr. Morocco have spilled over into the Spanish zone, little is known about the exact game that the Nazis want to play. It is still thought that with Dr. Salazar talking firmly about Portugal's independence, there can be little scope for intrigue in the Peninsula which in spite of the maintenance of intercourse with the U.S.A. is affected by the war. It is now realised that Balkan developments—apart from leading to stories of tourists and their designs—have not had any effect on Spain. Neither the meeting with Hitler nor Mussolini has had any effect on Spain's leader. The Falangists may be in a majority in the ministry and talk of national glories and ambitions but the cabinet is not prepared for a departure from non-belligerency approved by the Army and the Church. And Spain can hope to make more out of trade than through the recovery of Gibraltar. An assault on a highly fortified place without adequate naval support is predestined to failure and the rulers of Spain must also be aware of the penalties of aggression, two-fold in this case because the Axis ally may dupe and despoil while the enemy in the field will be forced to take action for her own good. That Sir Samuel Hoare has obtained satisfactory results from his eleven-months' stay in Madrid may be inferred from the from the Premier's vigorous defence of the two and a half million loan to Spain last week. Like the last payments agreement which arranges for an exchange of goods without reference to the older clearing agreement the loan is a token of British goodwill.

Stock Markets to-day and to-morrow

JUTE MILL COMPANY RESULTS ANALYSED

A definitely firmer tendency has been noticeable in the stock exchanges, both in Calcutta and Bombay. But the improvement in values, such as has taken place, has been mostly due to bear covering and not to any appreciable broadening of interest. There was, of course, some investment buying at the lower levels.

The worst fears have been discounted, but there is still considerable anxiety regarding the war situation. The correction of the technical position and the absence of any fresh buying have been responsible for the sagging tendency of markets on Friday. The undertone is hesitant.

* * *

Commenting on the results of the *Hastings Mills, Limited* for the half-year ended August, 1940, I pointed out that there was every possibility of arrears of dividends being paid out of the earnings for the half-year ended February, 1941. And the accounts for that half-year published recently indicate that the arrears of dividend in respect of one half-year ending February, 1937 is to be paid. It would have been possible to pay the dividend on the preference shares for one full year but the directors have chosen to carry forward a big sum at the credit of profit and loss account. The net profit for the half-year before providing for taxation is Rs. 2,77,317 against Rs. 8,37,696 for the previous half-year. Provision for taxation is Rs. 71,015 against Rs. 4,00,000 and depreciation Rs. 77,888 against Rs. 79,304. The amount carried forward is higher at Rs. 93,620 against Rs. 40,207 brought in.

* * *

There are still arrears of dividend to be paid for four years. As there is every likelihood of a greater portion of the arrears of dividends being paid out of the earnings for the current half-year the shares are very good at the current quotation of Rs. 137-8 cum-dividend.

* * *

The results of the *Naskarpara Jute Mills Company, Limited* for the half-year ended October, 1940 are very satisfactory. The net profit, before providing for taxation, is substantially higher at Rs. 3,13,486 against Rs. 2,19,309 for the previous half-year. The amount set aside to depreciation is Rs. 58,623 against Rs. 63,562 previously. The allocation to Taxation Reserve is Rs. 1,75,000 against Rs. 1,00,000. The dividend has been maintained at 7½ per cent. The earnings for the current half-year should be much better as there has been a substantial improvement in prices since October, 1940.

The shares around Rs. 16 cum-dividend afford the substantial yield of 9.7 per cent tax-free.

* * *

The results of the *Bally Jute Company, Limited* for the half-year ended March, 1941, published last week, tended to give the impression that there could be a drastic, though not unexpected, decline in earnings on account of the difficult conditions in the industry. Fortunately, however, it has not been the case. There has certainly been a decline in earnings but it has not been such as to bring about any big reduction in the ordinary dividends distributed. The balance-sheets of six important jute companies received during the week indicate that the aggregate profit for the six months ended March, 1941 was Rs. 36,37,981 against Rs. 53,70,248 for the previous half-year, and that the decline in earnings was mainly due to the relatively poor showing of the accounts of the *Gourepore* and *Nuddea Mills*. The position will be clear from the table given below.

Despite the fact that the aggregate profit for the half-year ended March, 1941 shows a decline of 32.26 per cent over the figure for the previous half-year the total amount distributed by way of dividends shows a decline of only 22.04 per cent.

Three companies have been able to maintain dividends, Fort Gloster at 12½ per cent. Fort William at 5 per cent and Anglo-India at 10 per cent. Gourepore has been able to pay a dividend of only 17½ per cent against 27½ per cent.; Nuddea 4 per cent against 5 per cent and Khardah 10 per cent. against 15 per cent.

* * *

Provision for taxation is Rs. 17,90,000 against Rs. 10,40,000. On the basis of the latest dividends the shares afford a very good return. Anglo-India 6.5 per cent; Fort Gloster 6.25 per cent; Fort William 4.76 per cent; Gourepore 5.38 per cent; Khardah 5.16 per cent and Nuddea 7.69 per cent. With the exception of Fort William it will be noted that the yield in all cases is satisfactory.

NET PROFIT BEFORE PROVIDING FOR TAXATION AND DEPRECIATION

	Half-year ended 31-3-1941	30-9-1940
	Rs.	Rs.
Anglo-India ...	6,73,353	8,72,532
Fort Gloster ...	6,98,519	8,33,446
Fort William ...	2,76,600	2,94,339
Gourepore ...	6,95,185	12,81,479
Khardah ...	6,81,900	9,50,159
Nuddea ...	6,12,424	11,38,293
Total ...	36,37,981	53,70,248

With such satisfactory results even with difficult trading conditions during the last half-year it is unnecessary to point out that the prospects for the current half-year are distinctly encouraging. The easier freight situation in May has revealed that the position in the market is full of possibilities. If only, there are no fresh complications on account of the Far Eastern situation it would be justifiable to take a more liberal view of the future.

* * *

The hessian market has been very active during the past week and with greater buying from overseas markets and mills unable to sell for any position before June, 9 Porters ready are quoting on Friday at the highest level for over one year at Rs. 18-8.

"WATCH-DOG"

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 2.

It was pointed out last week that a firmer tendency was noticeable in the several sections as the worst fears had been discounted and there was a tightening of the regulations regarding deliveries. There has since been a further improvement in prices on Bombay covering. The deterioration in the war situation in North Africa, however, has had a restraining influence and quotations are lower than the highest levels for the week at the time of writing. The rise in prices till Thursday was mainly due to techcal reasons. Outside buying has been very poor. Giltedged securities showed a tendency to recover and both irredeemable and redeemable loans are quotably higher. The undertone is quietly steady. If there are no serious complications in the war situation markets will remain firm.

As pointed out above, with the prevalence of easy conditions and the more hopeful view taken regarding the situation, quotations are slightly higher. 3½ per cent Paper is now quoting Rs. 94-4 against Rs. 94 at the end of last week. 3 per cent Paper is unchanged at Rs. 81. Among terminable loans, 3 per cent 1963/65 were Rs. 94-1, 3½ per cent 1947/50 Rs. 102, 4 per cent 1960/70 Rs. 107-14, 4½ per cent 1955/60 Rs. 112-6 and 5 per cent 1945/55 Rs. 110-7. Among provincial loans, 3 per cent 1952 issues were slightly better at Rs. 97-2. The Treasury Bills rate has come down from thirteen annas and eight pies per annum last week to thirteen annas and five pies per cent per annum.

Business in public bodies' debentures has been rather restricted. Small lots of 4 per cent *Calcutta Port Trust* 1943 debentures were done at Rs. 103-4. 5½ per cent *Calcutta Municipal* debentures were Rs. 115-12. 3½ per cent *Howrah Bridge* were Rs. 97-10, 3¼ per cent *Rangoon Municipal* debentures Rs. 100-12, and 5 per cent 1957/87 *Calcutta Port Trust* debentures Rs. 114. Among industrial debentures, 5¼ per cent *Rohtas Industries* debentures were Rs. 102 and 4¼ per cent *Hukumchand Jute* third mortgage debentures Rs. 102-4.

Bank shares have remained unchanged with *Imperial Bank* fully paids at Rs. 1,575 and contributories at Rs. 379. *Reserve Bank* were Rs. 103-8.

Coal shares are inclined to be slightly easier with *Bengal* at Rs. 341, *Central Kurkend* at Rs. 13-12, *Equitable* at Rs. 33-7, *New Beerbhoom* at Rs. 14, *North Damuda* at Rs. 5-4 and *West Jamuria* at Rs. 27-8.

The sharp rise in prices in the hessian market has been responsible for a slight improvement in values for jute shares. A longer list of transactions has been recorded. *Agarpara* were Rs. 24-12, *Anglo-India* Rs. 302, *Champdany* Rs. 153, *Clive* Rs. 21-8, *Kamarhatty* Rs. 477, *Kanknarrah* Rs. 354, *National* Rs. 20-15, *Nuddea* Rs. 53-12 and *Reliance* Rs. 52-12. *Howrah* have improved from Rs. 47-12 to Rs. 49. The quotation now is easier at Rs. 48-12.

In the Engineering section, Indian Irons and Steel Corporations were marked higher on bear covering and some buying by Bombay operators. But in the absence of fresh support and the need for covering over, quotations are easier to-day, *Indian Iron* and *Steel Corporation* being quoted at Rs. 27-6 and Rs. 16-6 respectively at the time of writing. *Burn & Co.* have been done at Rs. 350, *Braithwaite & Co.* at Rs. 8-9 *Indian Malleable Castings* ordinaries at Rs. 6-8, *Indian Standard Wagon* at Rs. 60 and *National Iron and Steel* at Rs. 7-14.

Sugar shares have been easier with the quotation for *Cawnpore* at Rs. 15-8. *Buland* and *Raza* were Rs. 15-12. *Carew & Co.*, were Rs. 8-10 and *Champarun* Rs. 12.

Tea shares were easier but they have been better during the latter half of the week. *Banarhat* were Rs. 390, *Hasimara* Rs. 42-4, *Killcott* Rs. 49-4, *Patrakola* Rs. 872-8 and *Teliapara* Rs. 407-8

In the miscellaneous section, there has been a sharp recovery in the quotation for *Dunlop Rubber* to Rs. 39-4. Base metal shares are weak with *Burma Corporation* and *Indian Copper Corporation* at Rs. 4 and Re. 1-14 respectively. *B. I. Corporation* were Rs. 4, *Balmer Lawrie* Rs. 324, *Indian Cable* Rs. 19-10, *Indo-Burma Petroleum* Rs. 98-8, *Tide Water Oil* Rs. 15, *Titaghur Paper* Rs. 15-10 and *Bararee Coke* Rs. 21-2.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, May 1.

Money.—The money market was again easy during the week under review, the rate for call money being quoted at ¼ per cent.

Exchange Market.—There was little activity in the rupee-sterling exchange market. banks selling T. T. at 1s. 5 15/16d. and buying three months' bills at 1s. 7/32d.

Securities.—Prices of government securities showed little or no change during the restricted week as business was greatly following the developments in the war situation. 3½ per cent Paper, after opening at Rs. 94-4, touched Rs. 94-2 in mid-week and closed again at Rs. 94-4. 1948/52 Loan were slightly better at Rs. 97-2; 1951/54 at Rs. 99-7; 1963/65 at Rs. 94-1; 1947/50 at Rs. 102-2; 1960/70 at Rs. 107-14; 1955/60 at Rs. 112-8; 1945/55 at Rs. 110-4 and 3 per cent 1946 Defence Bonds at Rs. 101-5.

Shares..—The local share market showed signs of further weakness during the week. Apart from the absence of any encouraging war news, the communal disturbances in various centres induced operators to liquidate their holdings whenever the market is slightly better. Sellers predominated with the result that there was an alround decline in prices. At lower levels buyers were in evidence and prices recorded small gains. The slight improvement in prices towards the close of the week was, however, short-lived owing to profit-tabing. Sentiment continued to be bearish, the closing tone being weak. Buyers are still keeping aloof.

Textiles.—Following lower cotton advices this section ruled dull with a declining tendency. *Bombay Dyeing* touched a low of Rs. 972-8 at one time, closing better at Rs. 1,005. *Gokak*, after touching Rs. 184 Rs. 191-8 following the declaration of a dividend of 7 per cent. *Central India* came to business at Rs. 287 against Rs. 292-8 in the previous week; *Century* at Rs. 373 against Rs. 382. *Kohinoor* at Rs. 378 against Rs. 388 and *Swadeshi* at Rs. 264 against Rs. 277-8. In the cash list, *Shola-poor* declined from Rs. 2,910 to Rs. 2,8[illegible]. *Vishnu* were done at Rs. 1,245 and *Ahmedabad Advance* at Rs. 275 x.d.

Hydro-electrics.—Steady conditions were noticeable in this section owing to some investment demand. *Andhra Valley* improved slightly to Rs. 1,840 from Rs. 1,831-4. *Tata Power* were, however, slightly lower at Rs. 1,565, while *Tata Hydro* were unchanged at Rs. 175.

Steels.—Prices in this section suffered a heavy setback owing to nervous unloading. *Tata* ordinaries opened lower at Rs. 347 and deferreds Rs. 1,695. Towards the close of the week, however, there was some buying at lower levels, the ordinaries improving to Rs. 356-8 and the deferreds to Rs. 1,750.

Banks.—Bank shares were on offer at lower rates. *Bank of Baroda* were done at Rs. 106-8; *Bank of India* at Rs. 137-8, *Central* at Rs. 39-14; *Imperial Bank* fully paids at Rs. 1,515; contributories at Rs. 377-8; *Reserve Bank* at Rs. 103-8 and *Union Bank* at Rs. 6-5.

Miscellaneous.— *Associated Cement* were an active market during the week owing to the rumours of a higher dividend for the current year. The price after touching Rs. 131-8 closed higher at Rs. 134. *Tata Oil* were marked down to Rs. 38 on rumours of strike at the mills. *Bombay Burma Trading* showed a further drop of 60 points to close at Rs. 423-12 as against Rs. 526 a fortnight ago, the lowest level touched during the week being Rs. 392-8. *Belapur Sugar* were a weak spot at Rs. 200. *Shivrajpur Syndicate* were done at Rs. 26-8; *Premier Construction* at Rs. 84 and *Scindia Steam* at Rs. 18-12. *Wimco* were remarkably steady at Rs. 204. *Indian Iron* came in for business at Rs. 27-13 and *Steel Corporation* ordinaries at Rs. 16-12.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, May 1.

The local market continued to be dull, little fresh enquiry being noticeable. Rubber shares were marked lower, while sugar shares closed steady. Cotton mill shares were unchanged.

Securities.—The turnover in the local giltedged market continued to be restricted, prices closing better on firm advices from London. 3½ per cent Paper closed at Rs. 94-4 after touching Rs. 93-14. 3 per cent 1951/54 were at Rs. 99-7; 3 per cent 1963/65 at Rs. 94-1-6 and 3½ per cent 1947/50 at Rs. 102-6. State Loans met with small business, 5 per cent 1955 *Mysore* being done at Rs. 126-2. Among Provincial Loans, 3 per cent 1952 *Madras* were in enquiry at Rs. 97-8.

Mills.—*Buckingham & Carnatic* continued to meet with sellers at Rs. 242. *Cambodia* were done as low as Rs. 7-10; closing slightly better at Rs. 7-12. *Pankaja* came to business at Rs. 97; *Lakshmi* at Rs. 62 and *Vasanta* at Rs. 114. *Kohinoor* were crossed at Rs. 374-8 May.

Utilities.—*Vellore* were in favour at Rs. 12-4. *South Madras Electric* ordinaries met with sellers during the week, the price closing lower at Rs. 12-12. *South Arcot* preferences were done at Rs. 121-8.

Banks.—*Indian Overseas Bank* remained steady at Rs. 50-8. *Bank of Hindustan* changed hands at Rs. 25-12 and *Reserve Bank* at Rs. 103-8.

Plantations.—Rubber shares were slightly marked down in the absence of support. *Cochin Malabar* closed at Rs. 0-8; *Kalpetta* at Rs. 18; *Midland* at Rs. 5; *Tropical Plantations* at Rs. 19-8 and *Peninsular Plantations* at Rs. 3-12. *Vaikundam* were in good enquiry at Rs. 8-9 c.d. following the declaration of a final dividend of 7½ per cent, making 10 per cent for the year. Among Tea shares, *Devon* preferences met with buyers at Rs. 114; *Peermade* at Rs. 27-12 and *Periakaramalai* at Rs. 17-12.

Sugars.—*Mysore Sugar* continued to be steady at Rs. 54-4 and *Travancore Sugars* at Rs. 14.

Miscellaneous.—*Mysore Paper* were a dull market at Rs. 13-2, while *Mysore Chemicals* declined from Rs. 17 to Rs. 16-6. *Spencer 'A'* preferences were transacted at Rs. 9-8; *Indian Steel Rolling Mills* preferences at Rs. 11-10 and *Tata deferreds* at Rs. 1,755 cash. *Hindustan Investment Trust* after a long time came in for business at Rs. 13-10.

LONDON STOCK EXCHANGE

The Premier's speech regarding the war situation and the later developlents in Greece and Egypt have had an encouraging effect on the London Stock Exchange. Though there has not been any appreciable increase in the volume of turnover, giltedged securities are appreciably higher. Among India loans, 3½ per cent. Sterling Paper was 99⅜. Among British Funds, 2½ per cent. Consols were 78¼, 3½ per cent. Conversion 104⅜, 3½ per cent. War Loan 103⅜ and 3 per cent. War Loan 100⅜.

Among other sections, both Tea and Rubber issues are easier. In the latter group, *Anglo-Dutch* especially are lower at 13s. 10½d. Minings have been firm while among Oil issues, *Anglo-Iranian* are again lower at 27s. 6d. Home Rails have been steady.

NEW YORK STOCK EXCHANGE

Wall Street has been rather quiet and quotations are around the lowest levels for the week. The fears regarding fresh taxation and the tendency to await fresh developments have had a restraining influence. *General Motors* were $37⅝, *Anaconda Copper* $23¼ and *U. S. Steel* $50⅜.

HOWRAH MILLS COMPANY, LIMITED

NOTICE is hereby given that the One hundred and first Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 30th May, 1941, at 12 o'clock noon, for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 31st March, 1941.

To facilitate the issue of Dividend Warrants, Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Friday, the 16th May, 1941, to Friday, the 30th May, 1941, both days inclusive.

By Order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 25th April, 1941.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Sixty-ninth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 30th May, 1941, at 12-5 p.m., for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 31st March, 1941.
(2) To declare Dividends.
(3) To elect a Director.
(4) To elect Auditors and to fix their remuneration.
(5) To propose as a SPECIAL RESOLUTION:—

That the Directors be and they are hereby authorised to make donation from the Company's assets to the East India Fund for British War Services of the sum of Rs. 6,380/- (being at the rate of Rs. 5/- per loom).

(6) To transact any other business that may be brought before the meeting.

On application, Dividend Warrants will be made out in favour of Shareholders whose names are in the Company's Books on the 15th May, 1941 or their Attorneys authorised to receive them. Holders of Scrip under blank transfer are reminded to send in their shares for registration in the Books of the Company as soon as possible, but not later than Thursday, the 15th May, 1941.

To facilitate the issue of Dividend Warrants Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Friday, the 16th May, 1941, to Friday, the 30th May, 1941, both days inclusive.

By Order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 25th April, 1941.

MARKET POINTERS

Cotton Forecast

India's cotton crop is estimated at 5,785,000 bales, an increase of 18 per cent. over last year's according to the supplementary cotton forecast for 1940-41 issued by the Director-General of Commercial Intelligence and Statistics. The area under cotton is estimated at 22,902,000 acres, being six per cent. more than that at the corresponding period last year.

Tht forecast refers to the entire cotton area of India and deals with both the early and late crops of the season. The following table shows the present estimates of area and yield classified according to the revised trade descriptions of cotton:—

Trade descriptions.	Area (In acres	Yield. (In bales of 400 lbs. net.)
Bengals ...	2,807,000	1,176,000
Americans ...	2,505,000	1,092,000
Oomras ...	6,597,000	1,489,000
Broach ...	888,000	223,000
Surti ...	656,000	142,000
Dholleras ...	2,050,000	314,000
Others ...	7,399,000	1,349,000
Total ...	22,902,000	5,785,000

Sugar Production Report

The production of sugar in India by refining 'gur' during the year 1941, has been estimated to be 42,700 tons, which is 44 per cent, above the actual production in the previous year.

This is revealed in the first memorandum submitted by the Director of the Imperial Institute of Sugar Technology, Cawnpore, on the production of sugar refined from 'gur' in India during the current year.

This increase, the memorandum states, is entirely due to increased productcion in the United Provinces, where the output of 'gur'-sugar this year is estimated to exceed the actual output in the last year by 86 per cent. As a result of the restriction on cane sugar production, the memorandum points out, there is expected to be a very heavy output of 'gur' in the Province duing the current year, which will result in the abundance and cheapness of the raw material for the refining industry. Ten refineries are reported to be working during the current year, of which seven are pure refineries, and three cane sugar factories, refining 'gur' in the off-season. No refinery is expected to work in Bihar during the year.

Sugar Sales Quota

The Sugar Commission of the U. P. and Bihar Governments has released a fresh sales quota for the members of the Indian Sugar Syndicate. The net quota comprises two per cent. of the total production of the season 1939-40 ended on April 11, 1940, and 40 per cent. of the production of the same season between April 11, 1940, and the end of the season. Three per cent. of the production for the season 1993-40 up to April 11, 1940, now remain sto be released.

Bombay Telephone Co.

The Bombay Telephone Co., Ltd. has informed the Bombay Shareholders' Association that the offer of the Government Telephones Board Ltd. to purchase the shares of the Bombay Telephone Company will expire after August 15.

In view of the inquiries received by the association from shareholders as to whether they should accept the offer or not, the committee of the Shareholders Association states that it is in correspondence with the company with a view to eliciting information on certain material points. The final decision will be taken thereafter.

RESERVE BANK OF INDIA,
CENTRAL OFFICE,
BOMBAY.

28th April, 1941.

NOTICE.

It is hereby notified that the Share Registers of the Bank will be closed and the registration of transfers suspended from the 16th June, 1941 to the 5th July, 1941 (both days inclusive).

MANILAL B. NANAVATI,
Deputy Governor.

THE KALACHERRA TEA CO., LTD.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 16th day of May, 1941 at 3-15 p.m. for the following purposes:—

1. To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December, 1940.
2. To declare a dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year, and to fix their remuneration.
5. To transact any other business that may be brought forward.

The Share Transfer Book of the Company will be closed from 8th May, 1941, to 16th May, 1941, both days inclusive.

OCTAVIUS STEEL & CO., LTD.

(Half-yearly meeting, 16th May, 1941 at noon).

Audited accounts for the half-year ended 31st March, 1941 :—

The accounts show a profit on Revenue Account of Rs. 5,21,578-6-2. On transfer of this sum to Profit and Loss Account and after reserving Rs. 25,000 for taxation there is a balance at credit of that account of Rs. 7,24,687-14-10 which the directors recommend should be disposed of as follows:—

	Rs.	A.	P.
On Ordinary Shares at Rs. 10 per share ...	4,92,070	0	0
On Preference Shares at Rs. 3½ per share ...	96,677	0	0

leaving a balance of Rs. 1,35,940-14-10 to be carried forward.

The company's mills worked a 45 hours' week throughout the period and were closed down for a week each month with the exception of February.

Trading conditions have recently improved on good demand from consuming centres and have enabled the company to secure remunerative forward sales, and, while much will depend upon war developments and shipping facilities, *prospects for the current half-year may be regarded as satisfactory.*

Managing Agents.—Messrs. Duncan Brothers & Co., Ld.

Authorised Capital—Rs. 76,82,900 in 50,000 Ordy. and 50,000 Pref., both of Rs. 100 each. Issued and Subscribed—Rs. 76,82,900 in 49,207 Ordy. and 27,622 7 per cent Cum. Pref., both fully paid up.

(Meeting, held 30th April, 1941.)

Audited accounts for the year ended 31st December, 1940:—

The accounts disclose a profit of Rs. 16,701-2-5 on the season's working. On transfer of this to Profit and Loss Account, and after sundry adjustments there remains at credit of that account a balance of Rs. 24,606-14-9 from which the directors have transferred Rs. 5,000 to Reserve.

The directors have proposed to declare a dividend of 50 per cent and to carry forward Rs. 9,606-14-9.

Estimates for 1941 provide for a crop of 1,325 mds. at an outlay of Rs. 48,006, including inland freight and sale charges.

Managing Agents.—Messrs. Duncan Brothers & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 20,000 in 1,000 shares of Rs. 20 each, fully paid up.

(Half-yearly meeting, 15th May, 1941 at 11-10 a.m.).

Audited accounts for the half-year ended 31st December, 1940 :—

Owing to the recent increase in the surcharge of Income-tax it has proved necessary to provide in this year's accounts for additional taxation payable in respect of previous half-year's profits.

The Profit and Loss Account, after making provision for taxation, providing Rs. 23,187-0-6 for depreciation, writing off Rs. 2,500 from Prospecting and including the sum of Rs. 7,362-14-3 brought forward from last half-year, shows an available balance of Rs. 44,605-10-1, which the directors propose to dispose of as follows:—

Dividend at 10 per cent per annum, free of incometax 40,000-0-0 leaving a balance of Rs. 4,605-10-1 to be carried forward.

Raisings and Despatches.—Despatches to the Indian Iron & Steel Company, Limited were made in full throughout the half-year.

Sand-stowing.—Work is proceeding in connection with the erection of the Ropeway for the transport of sand from the Damodar River to the Colliery. It had been hoped to have this Ropeway in operation by December, 1940, but owing to unforeseen delays due to war conditions, it is now unlikely that the Ropeway will be working before the end of 1941.

Market.—The market remained quiet throughout the half-year with a tendency to a fall in prices during the end of the period. *The outlook for the coal industry owing to surplus production and shortage of freight is most unsettled.*

The mines and machinery were maintained in good order.

Managing Agents.—Messrs. F. W. Heilgers & Co.

Authorised, Issued and Subscribed Capital—Rs. 8,00,000 in 80,000 shares of Rs. 10, fully paid up.

(*Half-yearly meeting, 13th May, 1941 at noon*).

Audited accounts for the half-year ended 31st January, 1941 :—

The balance available for appropriation after the inclusion of the amount brought forward from the previous half-year is Rs. 20,320-8-1. Out of this the directors recommend a dividend of 12½ per cent per annum, free of income-tax, leaving a balance of Rs. 4,695-8-1 to be carried forward.

Sales.—Raisings and despatches were well maintained throughout the period under review.

Since the close of the half-year there has been an acute shortage of wagons which has interfered with deliveries, and stocks have accumlated in consequence.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised, Issued and Subscribed Capital—Rs. 2,50,000 in 1,00,000 shares of Rs. 2½ each, fully paid up.

NASKARPARA JUTE MILLS COMPANY, LIMITED

BALANCE SHEET AS AT 31st OCTOBER, 1940

GENTLEMEN,

We beg to submit the Audited Accounts of your Company for the half-year ended 31st October, 1940 which after writing off depreciation, amounting to Rs. 58,622-9-0 and deduction of interest, commission and other charges show a profit of Rs. 3,08,353-2-6.

We now propose to deal with the profit as detailed below:—

	Rs.	A.	P.
Dividend at 15 per cent per annum, free of income-tax	90,000	0	0
To Reserve for Income, Super and Excess Profits Tax	1,75,000	0	0

leaving a balance of Rs. 43,353-2-6 to be carried forward.

The company has done fairly well, but most of the profit has been absorbed by heavy taxations.

Your Mills have been working in accordance with the Schedule of the Indian Jute Mills Association.

Mr. Gokulchand, in terms of the Articles of the Company, retires this time and being eligible offers himself for re-election.

Messrs. S. R. Batliboi & Co., Auditors of the Company, retire this time and being eligible offer themselves for re-appointment.

For and on behalf of—
HOWRAH TRADING CO., LTD.
K. D. JALAN.
Director,
Managing Agents.

Authorised Capital—Rs. 25,00,000 in 1,80,000 Ordy. of Rs. 10 and 7,000 Pref. of 100 each. Issued and Subscribed—Rs. 12,00,000 in 1,20,000 shares, fully paid. Debenture Capital—Rs. 5,00,000 in 4½ taxable bearer bonds of Rs. 1,000 each, repayable at par on 31st March, 1947 with the option of repayment, in whole or part, at any time after 31st March, 1944 on six months' notice.

IS IT NOT WISE TO INSURE NOW?

With an uncertain future ahead Conservation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an inestimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

Write to us for further particulars or advice.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been less usable and more abundantly available. At the quoted rates of ½ per cent in Calcutta and ¼ per cent in Bombay for interbank call money, lenders are many and borrowers are few. Banks, however, continue to be takers of firms' money at ½ per cent for deposits up to four months. Except for the low level of deposits maintained by scheduled banks with the Reserve Bank, the sentiment prevalent in the money market during the current week may be said to be what is proper and normal in a period which is the transition from the busy season to the slack. Even with respect to the low cash balances of member banks, the main contributory factor is the Imperial Bank. At the end of February, Imperial Bank's cash stood at Rs. 22.09 crores. On May 2, this had dropped down to the low watermark of Rs. 8.09 crores. During this period, the Imperial Bank has expanded its investment portfolio from Rs. 47.26 crores to Rs. 57.02 crores. It is obvious that the Imperial Bank has been adding to its holdings of Treasury Bills on a substantial scale. Advances have also risen, in the same period, from Rs. 35.47 crores to Rs. 43.15 crores. The expansion under loans is only roundabout Rs. 60 lakhs. But cash credits and overdrafts have risen from Rs. 23.10 crores to Rs. 27.88 crores. It may well be that industries engaged in producing war supplies have had to take more accommodation from the Imperial Bank on account of the considerably accelerated activity of the past few months.

What is even more significant, increase in bills discounted and purchased is from Rs. 4.03 crores to Rs. 6.55 crores. In this connection, we would like to draw special attention to the sharp jump which took place, between April 25 and May 2, from Rs. 5.08 crores to Rs. 6.55 crores. That is to say, there has been, in the short space of a week, a rise of nearly Rs. 1½ crores in bills discounted. Those who have any intimate knowledge of the market for trade bills in India will feel quite sure that it is beyond the capacity of this market to put up as much as Rs. 1½ crores of trade bills for discount with the Imperial Bank. In other words, we believe that a good part of the fluctuations that have taken place under the heads of bills discounted is accounted for, not by trade bills, but by the transactions which the Imperial Bank puts through, from time to time, in the discounting of Treasury Bills. It is, therefore, our view that, by the enormous support which the Imperial Bank has given to Treasury Bills, its own cash balance has sunk to the low level of Rs. 8 crores.

The shortage of cash of the Imperial Bank stands on a different footing from the shortage of cash of any other bank. Owing to the facilities which the Imperial Bank enjoys in respect of currency chests in most of its wide-flung branches, the Imperial Bank can conduct its business on a lower margin of cash than any other bank. The psychological effect, which the low cash balances of scheduled banks with the Reserve Bank have in regard to the future of money market sentiment and rates, has, therefore, to be qualified by two important factors: (1) a good part of the shrinkage of the cash resources of banks is attributable to the Imperial Bank; (2) so far as the Imperial Bank is concerned, it need not be unduly worried by its cash sinking too low. We have discussed this matter at some length as we know, for a fact, that some of the bankers have construed the present position of low cash balances as an indication that the slack season may begin this year later than usual. If our line of reasoning is correct, there is no reason to think that the slack season will be unduly postponed.

It is true that activity in certain industries connected with war supplies has extended vastly; and that the increased production and quickened turnover must account for higher financial outlay. To the extent that the tempo of production is higher, active note circulation has also expanded greatly. Dearer money rates are not caused by increased demand for money but by supplies of money being inadequate for the demand. Since the war began, there has been substantial expansion both in note circulation and in

(Continued on page 859)

LLOYDS BANK
LIMITED INCORPORATED IN ENGLAND 1577

SAVING MADE EASY

Five Rupees will open a SAVINGS BANK ACCOUNT at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

This is a most convenient method of preparing for the payment of periodical demands, such as insurance premiums, income tax, medical expenses or school fees.

Interest allowed at 1½% per annum. WITHDRAWALS CAN BE MADE BY CHEQUE.

Branches in the East:

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, May 6, 1941. Total amount offered was Rs. 2 crores, 18 lakhs and 75 thousand. Tenders at Rs. 99-12-9 per cent were allotted approximately 83 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being annas thirteen per cent per annum.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received on Tuesday, May 13, 1941. Successful tenderers should make payment on Friday, May 16, 1941. Others conditions are as usual.

Three months' Intermediates will be sold from May 7 to May 12, 1941 at Rs. 99-13-0 per cent subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from April 30 to May 5, 1941, amounted to Rs. 1,53.75.000.

During the week ended May 2, 1941. Government of India Treasury Bills for Rs. 3.60.00.000 were sold in favour of the Issue Department of the Reserve Bank of India.

Save Daylight

"SAVE the scrap" is a cry typical of the age of totalitarian war. Thrift is a capitalist virtue; but in these days, when capitalism is attacked from all sides, saving has gained, rather than lost in glamour. What former generations threw away, we garner. What they hoarded, gold, for instance, we part with, without much regret, and feel the lighter for it. We treasure instead everything that, a few years ago, would have gone to the scrap-heap. Waste paper, wrappings of every kind, biscuit tins, all these have value, even in the eyes of the well-to-do. "Save, save, save anything—save gold." That seems to be the new cry. In fact, saving is so much of a virtue, that it has become part of that minimum morality which it is the function of law to impose on the citizen. In Germany, we believe, it is an offence to throw any piece of metal away. Britain has been entertaining the idea of compulsory saving; and measures equivalent to it have been adopted in the last war budget. All this is quite natural. When the corporate sense grows stronger, individual savings have to be viewed as social conservation.

In India, the saving movement never gained in strength. We hoard, we rarely save. Hoarding is the result of the less praiseworthy instincts, an undue craving for security, the selfishness that recks little of others. While, saving is a social instinct; though, doubtless, the desire for security motivates saving, too, there is consideration for the rest of society. For, saving implies investment, the harnessing of the surplus to the production of recurrent income, the employment of the factors of production in productive activity. Saving denotes confidence, continuity and progress, while hoarding connotes fear, a break in the even tenor of life, a possibility of confusion. We in India have clung to the latter and shied at the former. We hoard gold and silver, in time of peace, rice and wheat, *dal* and sugar in time of war. The co-operative movement languishes after three, four decades of incessant effort. We have not got even the beginnings of a building movement. Insurance companies carry, as a rule, large loans to policy-holders. Collectively, we are strangers yet to the virtues and benefits of saving.

But there is one branch of this saving movement which ought to appeal to India more effectively than any other. The Bengal Chamber of Commerce has addressed the Government of Bengal a memorandum urging them to take the lead in "daylight saving." One would think that in a land of blazing sun, daylight is the one thing we can be prodigal with. We have no need for bottled sunlight, any more than tinned fruits. But daytime is different; and there is good reason always, and particularly at the present time, to get home well ahead of dusk. For our part, we should prefer to see this question of daylight saving considered quite apart from the state of emergency which may arise in the near future. The plea for an earlier start in the working day and a correspondingly earlier close must rest on the fact that the extra time available in the morning tends almost invariably to be wasted. The same leisure, if it is made available at the end of the day, after the day's work and all its cares and pre-occupations are done with, can be put to effective use in genuinely recreative activity. In a country like India where day time does not vary widely from season to season, the demand for seasonal changes in the clock may not have the same force as in countries far north or south. But even here, in Northern India where the difference comes to nearly two hours between midwinter and midsummer, it is irrational that office hours should begin throughout the year at 10 or 10-30 a.m. There is no reason why in winter we should not turn up at the office at 8-30 or 9 in the morning and leave office at 4 or 4-30 in the evening. Winter gives the painful feeling of being all the time at work except for the half-day break on Saturday and the off-day on Sunday. Even those fortunate individuals, who can leave office on the stroke of five and race home in a high-powered car, will find the lights on and night closing in on all legitimate recreation. Even in summer, daylight is thrown away with a prodigal hand. A comparatively late riser finds himself awake before seven in the morning. The morning paper and the physical routine of life might take an hour and a half. But one hour is bound to be wasted in leisurely movement before one gets to office. If in winter, sunrise is later, there is the compensating advantage that sleep is more restful and one gets up earlier and fresher in the cold season.

It is not alone on grounds of convenience that the plea for daylight saving need rest. The morning is in every way a better time for work. One feels fitter, fresher, more alert mentally than after the hot sun has played on one's jaded nerves. There are few who would not put in a good brace of hours in the morning for two hours of leisure while it is yet day. In fact, the leisure should be more, judging that the output in the morning is bound to be more in quality and quantity than at any later stage in the day.

The wisdom of daylight saving is obvious. And yet, we need the threat of emergency to awaken us, and that all too slowly, to the virtues of an early start in the day's work. Even in a country like England, William Willett had to carry on a campaign for years before there was a bill before the House of Commons for putting the clock on. Mankind hates nothing so much as a new idea. When the calendar was first changed, workers got the idea that somebody cheated them of twelve days' wages. They did not stop to think that they did not owe any one twelve days' rent or boarding charges. And riots did occur. It is no surprise, therefore, that the movement for daylight saving was opposed by farmers who grumbled about having to milk the cows when it was still dark. But this obvious reform was not effected till the third year of the war and summer time had to be renewed after the war by a series of Acts of Parliament.

In India, as we have remarked already, it is not summer time, so much as daylight saving that is important. It may be that in the effort to co-ordinate the working hours all over India, changes in time and appropriate statutory sanction therefor may be found to be necessary. The Bengal Chamber is well-advised in insisting that Calcutta should act independently, if, for any reason—the commonest reason is, of course, just inertia—the authorities cannot bring about the necessary changes. We are glad to note that the members of the principal Chambers are already agreed on this; and we trust that the Government will help other centres to get the same benefits as Calcutta is determined to secure for itself.

Capital Market Trends

Students of banking have often devoted considerable attention to the growth of capital in India. Capital market activity is not always the most accurate guide to the volume or velocity of saving, but it is the most intelligible and obvious sign of the way in which the margin between production and consumption is applied either for new enterprises or for supplementing existing capital resources. It may be said that the volume of savings which governs naturally capital market activity is a co-efficient of the national income. If such a connection is seldom recognised, it is not surprising that the logical connection between the growth of savings and the growth of income is yet to be appreciated. The volume of investment is never static; it is one of the commonplaces of modern economic life that new issues are in direct proportion, not only to the volume of investible funds, but also to the openings available. But even if there are plentiful openings and opportunities too are abundant, the general economic outlook will exercise a determining influence.

Capital issues, their number, variety and volume are, in the last analysis, regulated by market psychology. The surveys of the year 1940 have not bestowed much attention on this aspect of financial activities during the last year, but it was never forgotten that the capital market was virtually in a state of suspended animation. The contrast between the initial war boom, effectively deflated by the inopportune appearance of the E. P. T. and the succeeding depression, is reflected in the statistics relating to jointstock company registration. These statistics compiled up to the end of October 1940 enable one to reach the conclusion that the growth of currency in circulation and the additions to bank deposits found no parallel in regard to new enterprises.

It may be argued that figures relating to jointstock companies cannot give anything more than an inadequate view because partnerships and one-man businesses represent the majority, but the jointstock company, has, in the last twentyfive years, become the typical form in which enterprise takes shape and times without number, the figures have been analysed to establish the presence of significant trends.

The dominant influences in the period covered by the available statistics were altogether unfavourable. It is only necessary to recall the grave loss of market morale last June to show that the stock exchange depression was in itself a potent limiting factor. If the statistics of a past period are only of academic interest, an analysis of those available rounds off the familiar surveys of the year published in this journal, and presents also interesting data which shed some light on the growth of banks' funds and the limited employment available for such funds owing to the absence of stimuli. There was nothing to suggest last year that spells of activity would supervene as before. What was obvious was a settled depression and the boredom and lethargy of the market was unbroken by the usual offers to investors. Such a state was not without advantage to Government which naturally dominates the capital market in wartime. It is certainly correct to say that the seven months' total is a small proportion of the subscriptions to the first Defence Loan. The total paid-up capital of companies registered between April and October in British India and the States of Hyderabad, Baroda, Mysore, Cochin and Travancore amounted to Rs. 3,86,000 only while subscriptions to the Defence Loan over the same period commencing June amounted to over Rs. 35 crores. Allowance must be made for the moderate success of the Defence Loan campaign because the three per cent. loan offer appealed primarily to institutional savers who had also elected to take the Defence Bonds in lieu of the 5 per cent. 1940-43 loan redeemed last year.

Before embarking on anything like a detailed analysis here it is essential to make two points plain. One, of course, is that the grave shock to confidence had a damaging effect all over the period and nothing like a recovery was to be seen until after the first half of the year was past. The second is that the Government was a powerful and more than successful competitor for the favours of the investor last year. If Treasury control over the capital market has not been adopted as in Britain, there is little doubt that the prevailing uncertainty proved a valuable ally to the giltedged market, and hence of the Government which had to resort to new borrowing on account of the war. Such conclusions expressed without the appropriate qualifying clauses might appear picturesque exaggerations, distorted if not false. But they certainly accord with the general impression that there were few traces of wartime prosperity in 1940 whatever might have been the case in the last quarter of 1939. And the reason must be sought not only in the disturbing events of the time but the political situation at home. The August Offer did not stimulate the imagination of entrepreneurs and the deadly, dismal boredom of the period can be measured not only in the swings of chain indices but the collapse of the capital market.

If there is no rigid control as in Britain, there is no overwhelming reason for such control in India and suicide, such as was committed, appears better than murder. That the secular trend since 1937 is unfavourable does not detract from the validity of the conclusion that the war has been a decisive check to investment in jointstock companies either old or new since the prevailing instinctive preference for liquidity not only leads to liquidation of existing investments but is responsible for a tragically poor response to such prospectuses as are presented. Not so in Britain where control is relaxed and an appeal to the investor is permitted on special grounds. The response is almost sensational, for the relaxation is in itself a guarantee of exceptional success in the past, and the man in Britain buying the new shares of an established machine tool company allowed to increase capital for plant extensions is in a different position from a man in India trying to exercise his judgment in relation to some new venture. The Indian investor does not enjoy any of the advantages under which he can be trusted to make a safe choice, and so we come back to the conclusion that strict control is not without advantages while socialised saving as for the prosecution of the war has no parallel in India.

The 1939-40 figures on analysis yielded the conclusion that the war engendered little optimism as regards new ventures, and the illimitable hopes held out by those discussing eagerly the prospects of new industries on the eve of the Eastern Group Conference must seem Dead Sea fruit to those acquainted with the market blight that is proved by the figures. For the seven months only 557 companies with a total authorised capital of Rs. 18.19 crores, and a paid-up capital of Rs. 3.86 lakhs were registered. It may be remarked that in October alone 86 companies with a total authorised capital of Rs. 2.02 crores were registered while the paid-up capital of all the new companies totalled only Rs. 33,000. The figures indeed suggest that only in Bombay and Bengal did the embers of activity remain. But even such a conclusion is not warranted by the statistics. It is noteworthy that out of the total of Rs. 3.86 lakhs returned Baroda claims Rs. 2.16 lakhs and Mysore claims Rs. 40,000 leaving Delhi with Rs. 90,000 Madras with Rs. 25,000 and Cochin with Rs. 15,000. The other Provinces and States show nothing as regards paid-up capital though a total of 113 companies with an authorised capital of Rs. 7.52 crores puts Bombay in the lead.

If the figures afford only a partial view, one may turn to the changes in the capital of existing companies. The net addition to the paid-up capital of companies was Rs. 6.73 lakhs only though the subscribed capital in the aggregate received an addition of over Rs. 7.19 lakhs. The actual increase in the total paid-up capital without deducting the capital reductions effected in the seven months ended October was Rs. 7.9 lakhs. The total modest as it is, indicates that the average investor or shareholder displayed more faith in the future of proved ventures than of pioneer enterprises. If the total is added to the sum of Rs. 3.86 lakhs returned as the paid-up capital of the companies floated during the first seven months of 1940-41 the gross total of moneys put into jointstock companies for seven months is Rs. 11.05 lakhs giving a monthly average of less than Rs. 1½ lakhs for 11 Provinces and 6 States in addition to 3 Centrally Administered areas. The figures may well provoke melancholy reflections, especially, if we set against them the particulars relating to companies that were defunct in the same period. The company mortality statistics suggest that the rate of natural increase is small. As many as 374 companies went out of existence. Their total paid-up capital was Rs. 1.25 crores. It is not suggested that the investors lost as much, for liquidation or dissolution might have provided them with the greater part of the original capital, but the disparity between the losses sustained by winding-up and the amount put into new companies or even old companies is striking enough to merit emphasis.

The disparity underlines the fact that losses exceeded the gains in the war period and the safety first policy of investors is mirrored in the reviving passion for giltedged. It is difficult to resist the further conclusion that the persistent depression in the new issue market was no sign of economic health. The regular type of issue has become a *rara avis* over a year. The depression in interest rates has not stimulated any increase in the offer of preference shares or debentures, and the field has been open for the Provincial and Central Governments. The success of Government borrowing is satisfactorily explained by the virtual disappearance of the private issue during the war period. It is true that the investor gains to some extent, but the absence of risk-taking reduces the natural additions to capital out of profits. It is possible to affirm that with the yield on giltedged falling, the return to the investor and *ergo* the rate of net future additions to capital will progressively diminish.

This is a condition at which the imagination may not boggle, but it certainly suggests that the scope and pace alike of industrial development will be severely limited by the supply of capital. If jointstock companies have shown no vigorous expansion it is due largely to the realisation that the war offers few opportunities for new ventures unless they are of a specialised type. If the quality of new issues presented has not gone up, the actual variety of companies according to formal official classification is almost bewildering. The rapid decline in the old familiar forms, mills, presses etc., is mirrored in the statement and what is most striking is that Agencies (including managing agent companies) floated in the seven months were as many as fifty-seven. There is indeed reason to say that industrial production as such will not gain from the emergence of such new companies. Only four new banks were registered but investment and trust companies numbered thirteen in the seven months, obtaining however a capital of Rs. 8,000 only. The success of most companies registered in the war period must be deemed very moderate indeed, first because promoters could not communicate confidence to the investing public and secondly because the Government was a powerful and tenacious rival. The success of the Defence Loans is to some extent an index of the defeat of the promoters.

But one cannot be content with such a lame conclusion at present, one defective too because defence loans help industry in many ways. If comparisons with a full year are not possible to prove that jointstock enterprise has suffered a great setback, there is little doubt that hopes of rapid progress were nipped in the bud. But the amount of new money put during the seven months into chemicals and allied trades, though inconsiderable, being just over Rs. 1.65 lakhs out of a total of Rs. 6.73 lakhs, exceeded that put into cotton mills. The figures convey the impression that the prospects of chemical companies were assessed as brighter than those of other industrial concerns.

If new issues have had a fair field because registration can be conducted as usual and the stock exchange too has not been fettered as regards listing, placing or introduction, the extreme paucity of new capital suggests that the reversal of trend, noticed since 1937, is almost complete. One can hardly suggest that there has been any improvement since October. That Defence Loans offer an alternative to the investor may be easily suggested. That they too will help industrial progress as much as capital put up for private industrial ventures need not be doubted after the Budget statements of Sir Jeremy Raisman. So one may deduce that the State takes its place both as the principal borrower and the principal investor, for ordnance factories expansion schemes in their ultimate effects on the business world are essentially like the plant extensions of engineering companies. That the money raised through the Defence Loans has helped India to manufacture munitions etc., in wartime and provide for the expansion of the defence forces is a point to be remembered in any discussion of the effects of war finance on enterprise.

MISCONCEPTIONS as to the relations between exports and industrialisation lie at the root of controversies over India's industrial future. The divergence between official opinion and that of non-official representatives has been plain enough in the past, and this year's debate in the Assembly, which led to a long statement of the policy of the Central Government, resulted also in the tacit endorsement of the views as regards post-war reconstruction. The Commerce Member's speech does not satisfy the Indian Chamber which has lately issued a long memorandum traversing the arguments and inferences of the Commerce Member. Lengthy or late criticism is seldom fruitful, but the main point which the Indian Chamber, in common with other organs of non-official opinion, seeks to make is that industrialisation will not lead to a fall in imports resulting in a fall in exports also. The Committee declare that industrialisation will release the large potential purchasing power of the nation and also increase production, both agricultural and industrial, thus giving a fillip to the import and export trade. This is borne out by the fact that although India has developed some important industries like textiles, iron and steel, cement, sugar and paper the import trade of the country has not diminished but has continued at the same level in spite of industrial advance. The Committee give figures to show that the average annual value of imports into India during both the periods 1911 to 1915 and 1935 to 1940 was Rs. 150 crores. Moreover, there are the 'invisible' items and imports of treasure to be considered. The cry for a balanced adjustment as between agriculture and industry has often been raised by opponents of protection claiming to speak for the agriculturist, and the Chamber emphasises that only industrialisation will bring about the right kind of balance. The committee's memorandum points out that if self-sufficiency is not desirable for India industrialisation is a much-needed corrective. It is urged that India's raw materials are being absorbed in increasing quantities in her own industries at present. Assuredly, the ample supply of raw materials is an advantage as regards further industrialisation. And the admission that there are gaps of various kinds should serve as a spur to effort. The natural advantages should be exploited, even if the import trade suffers, and it is noted that imports of capital goods should increase if a programme of industrialisation is accepted. The gains from industrialisation cannot be precisely measured against any probable decline in imports or exports. A further useful point is made in regard to the cheapening of various manufactures as a result of increased internal production. Both cotton goods and sugar are cheaper now than in 1930 and there will also be no difficulty as regards supplies as during the last war. Industrial development has operated to the undoubted advantage of the country.

The nature and content of India's export trade is analysed to show that the post-war requirements of Europe would be large. Jute and other produce cannot be had from alternative sources, and an export trade may also be developed in manufactures to replace the raw materials which have bulked largely in India's exports. The representation stresses, what has long been admitted, that no cut and dry conclusions are valid in wartime, while new export connections too are growing apace. And the Indian Chamber is right in saying that the import and export position will adjust itself to further industrialisation in the country as it has done hitherto. Industrialisation cannot be premature or injurious at any time. And that appears a conclusive reason for relaxing the conditions governing the grant of protection. Attention is called to the plea made by Dr. John Matthai in February for a new formula and the creation of a sense of security among protected industries. Government would assuredly gain in revenue and the new industries would help in the war effort.

The Broken Treaty

Happenings in Iraq have surprised Bombay which was content to imagine that stories of Nazi intrigue were just travellers' tales. The press has been restrained in its comments on events but many naturally express surprise that Saiyid Rashid should think of taking Axis assistance. The Treaty of June 1930 was ratified in January 1931 and the fourth article specifically lays down an obligation to act as an ally in the event of either side being involved in war. Iraq is expected to give territorial and other facilities to the British Government in the event of war or the imminent menace of war; aerodromes, railways and ports should be made available under Article Four. The responsibility for law and order in Iraq is not altogether Iraq's own concern because the safety of Imperial communications demands that Britain should have the power to act for herself or on behalf of Iraq. The sites for air bases at or near Basra, and one to the west of the Euphrates, were ceded in accordance with the treaty on the understanding that the presence of these forces shall not constitute any manner of occupation and will in no way prejudice the sovereign rights of Iraq. The annexure provides that after a period of five years from the time the treaty came into force, it shall be open to the British Government to station forces in the localities referred to, and the King of Iraq is to grant leases for the duration of the alliance (twenty-five years) so that accommodation of British troops presents no problem. An earlier article of the treaty also stipulates that the King of Iraq should agree to afford when requested to do so by His Majesty's Government all possible facilities for the movement of the forces of His Majesty of all arms in transit across Iraq and for the transport and storage of all supplies and equipment that may be required during their passage across Iraq. These facilities shall cover the roads, railways, waterways, ports and aerodromes in Iraq and His Majesty's vessels shall have general permission to visit the Shatt-el-Arab on the understanding that the King of Iraq is given prior notification of visit to Iraq ports. That the breach of the treaty is unpardonable is recognised by Egypt like Transjordan. The Prince-Regent, now in exile, has denounced the treaty-breaking Premier, and Turkey too has not concealed her distrust of the proceedings. That the unlawful acts do not affect the position of the Iraq Legation in London has been stated and the Habbaniya episode may not poison Anglo-Iraqi relations.

The Year in Retrospect

HIGH praise has always been given to the annual review of Messrs. Premchand Roychand. The English Press has always noticed it as a full and reliable record of all financial and economic developments in India, and the 1940 edition certainly preserves all the merits associated with the publication. The account is never weighed down by sheer detail, and balance is always preserved in the evaluation of adverse developments. The Review does not blink the fact that the increase in India's export trade was largely illusory. The primary producer had to contend against a catastrophic slump in prices, chronic shipping difficulties and a jungle of restrictions. The result is to be seen in the disheartened condition of all commodity markets, and the rural masses have so far derived no benefit out of the wartime activity that made Mr. Amery claim that India was prosperous and prepared. The review does not support such a comfortable conclusion. The statistical information is as always an essential part of the annual surveys. If the information presented overlaps to some extent that available in various yearbooks, the commentary is much more detailed for the bare bones of figures relating to currency, exchange and banking are clothed in the flesh of a simple and lucid narrative. The essential comparisons with the Dominions in wartime have not been omitted. They illustrate what has long been plain, that industrial expansion on an unprecedented scale has taken place and that foreign trade too reflects the increase. The Review rules in the point that only the raw materials were wanted from India and only a select few of existing industries found increased demand for their products.

The activities of the Supply Department have not been ignored in the review which notes that war orders are issued with an eye to keep prices at a desired level. The stimulus of a rise in prices has been lacking says the Review, but the developments in the jute industry since the beginning of 1941 suggest that the conclusion must be modified. The hessian market owes much to the war orders received by the mills at a time when normal export trade has been hampered. On the question of India's foreign trade the conclusions presented in the annual review will not accord with most estimates. It is claimed that the terms of trade have moved against India and prices in India have been kept down as much by policy as by natural causes. A sharper conflict of opinion is apparent as regards the views on taxation for the purpose of financing the war. It is held that increased taxation is not justifiable in view of the fact that taxation has been continuously rising in the last decade. The opinion is a measure of the divergence between official theory and the arguments of non-official leaders of business. It is perhaps unusual for the Review to discuss matters in a critical temper, but the war has evidently led to a change in the way in which conclusions are set out while the conclusions themselves are influenced by events and public opinion.

The giltedged market forms the subject of a specialist survey. The decline in security prices was on occasions promptly checked by open market purchases by the authorities. The fact that the recovery was immediate shows not only the success of such operations but the inherent strength of giltedged. Institutional buying also sustained giltedged prices over the year and new borrowing has not been attended with any unusual effects. An opinion or two of high interest is set on record in the Review. Referring to the 50 percent fall in gold exports as compared with 1939, it is said that it is largely due to the popularity gained by gold amongst local investors. It is evident that a strong hoarding movement emerged last summer and local demand has since maintained prices at a high level. The trend after

the end of the year is upward. The reduced fineness of the Rupee leads to a plea that 'after the war the question of restoring the original content will be considered so as to increase the monetary use and thus keep up the price of the metal, particularly, in view of the fact that silver is used in this country as a store of value.' The control of the silver market has been preceptible and uniform, but as in the case of gold internal absorption of silver has increased. It is estimated that the total absorption of India during 1940 was as large as 50 million oz. almost double that for 1939. That Indian silver prices were out of line with London and New York did not affect buying but stimulated the hoarding of silver coin last year, when silver rupees were preferred to silver bars. The market review for 1940 presents opinions well-considered, acute and striking without any departure in regard to arrangement or material included. It is evident that the Review has gained in interest by the abandonment of a wholly neutral standpoint and the next edition, therefore, will be studied with greater interest than any reference book.

VICHY'S GAINS

THE effects of unremitting pressure on the Vichy government can be discerned in the agreement made by Admiral Jean Darlan with the German envoy in Paris, Herr Abetz. Unoccupied France gains, presumably for a promise of collaboration, and if the press report says little of what the Germans are getting out of the agreement the reason is not far to seek. Collaboration is distasteful to Britain and the U.S.A. which has indicated through Admiral Leahy that food imports are conditional and that the Colonial empire must have nothing to do with the Nazis. According to the agreement announced on Wednesday the line of demarcation between occupied and Vichy-controlled France will be open for passage of goods and securities. Persons will be allowed to travel between the two zones in the event of serious illness or the death of a relative. Free correspondence by plain postcards will be allowed. The terms suggest that the Petain Government cannot go to Paris and that Unoccupied France will also have to put up with rationed transport and censored communications. The most impressive gain is the reduction in the cost of occupation, lowered from 400 to 300 million francs per diem. The Bank of France has lost its reserves, including part of its gold, and by unlimited advances alone has the Vichy Government met the bill under the armistice. What the franc is worth in terms of sterling is not known but it must have depreciated heavily and a £ may now be equal to 300 francs or more, so that the daily bill, for the German army may be put at £ 1 million or so. It is, of course, difficult for a country which has lost the Northern and Western Provinces in addition to Alsace-Lorraine to find the money, and the reduction has been regarded as inevitable for another reason. Troops must have been sent to the Balkans, and the replacement of German troops by Italian troops has indeed been mentioned by many papers last month. The reduction may also be due to the fact that the second year is coming. The regulations governing exchange will help Unoccupied France to make use of the Paris Bourse which reopened in October last, and to use also the Brussels and Amsterdam stock markets, working now under German supervision. The gradual acquisition of Dutch and French holdings of shares has been facilitated by the emission of notes and the rise in prices, precipitated by the removal of goods from the Occupied Countries. The relaxation of the strict regulation may increase agricultural supplies from the north for Unoccupied France but transport is in a bad way and the enlarged offtake of industrial goods from Unoccupied France will result in no great addition to supplies. The discreet omission of any reference to the Mediterranean ports or the fleet has made many doubt if Vichy has been let off lightly. Admiral Darlan may not entertain the same ideas as Marshal Petain, and the Germans must have extracted some agreement as regards North Africa where they have already been making themselves felt.

That Marseilles has become a port for German vessels plying between Spanish ports and France has been mentioned in a Zurich paper. The railways are almost in the exclusive possession of Germany which has bullied Vichy into making an agreement that promotes German interests. If it were a treaty ending the war that Petain can show to the French people now there would not be much complaint, but all that can be had after four months of feverish negotiations and rapid Cabinet shuffles is a permission to use postcards. It means that censorship continues for Unoccupied France and the voice of protest will not be heard. Letters that reached England after six or seven months showed what France was thinking and the words will not be forgotten easily.

Banking Progress

That the Allahabad Bank in common with all leading jointstock banks acquired an addition to its funds through an increase in Deposits is not surprising to anyone acquainted with the main features of the banking year. The expansive trend is not however reflected in the profit and loss statement since one of the items, Advances, shows in nearly all cases a decline as compared with the previous year. A marked rise in the cash ratio is obviously one of the traits of wartime banking. And the increase of over Rs. 1½ crores under the Allahabad Bank's Investments as compared with the total shown in the balance sheet published last year suggests that another familiar feature of wartime is reproduced in the balance sheet published to-day. Such changes as occur are normally the effect of war conditions. The fall under advances, loans and bills alike calls for notice as indicative of the reduced profitability of banking in the year ended March. The generic features of all bank statements published this year are, in the main, the result of war conditions. If the progress of past years is not to be measured as before in profit statements, the very large margin retained by the leading banks, whose position is fortified by the existence of large reserves, is a wholly reassuring feature. As regards the Allahabad Bank attention may be drawn to the rise in total deposits from Rs. 11.87 crores as on March 31st 1940 to Rs. 12.36 crores as on March 31st 1941. Reserves are up by Rs. 2 lakhs while the capital of this, the oldest Indian jointstock bank, is unchanged at Rs. 40 lakhs. The fall under savings bank deposits may suggest that a certain class of accounts are fewer, but the increase under Fixed Deposits shows that the great age and prestige of the Allahabad Bank invite, and deserve, the confidence of the public in Northern India where the bank is very strongly entrenched. Students of the balancesheet will not miss the features of the classification of Advances. The entry against Bad debts and Debts on single account is nil. The great care always taken to maintain the reputation of the Bank is reflected also in the regular appropriation to Depreciation as also in the disposition of the year's profits. Though the net profit for the year is slightly lower at Rs. 9,71,075-5-2 the allocation for Contingencies Reserve is higher at Rs. 2 lakhs. As the Budget proposals are known, there is obviously no need for providing against additional taxation. The amount retained in the books is naturally higher even after providing for ordinary and preference dividends as in the last year. The only change in the Board is that Mr. A. B. Mallet has taken the place of Mr. A. K. G. Hogg. The balancesheet changes, taken by and large, are not unexpected, and the uninterrupted growth of the Bank amid the difficult conditions of the war period shows that the Allahabad Bank continues to be in the van of Indian banking. Like all Banks in India the Allahabad Bank has increased the proportion of liquid assets and the rise in the cash ratio answers to general expectations. The only other point to mention here is that salaries etc. have risen ; otherwise, a rise in net profits would have been reported for the year 1940-41 also. That the actual decrease is inconsiderable shows that in spite of the larger interest payments, due largely to the rise under Fixed Deposits, the Bank has almost stabilised the level of profits. Exceptional we may say in view of the considerable fall recorded under Advances.

ORGANISE YOUR LABOUR TO SAVE

Many employers of labour are encouraging their men, who do not at present contribute to a Provident Fund, to save money through the purchase of Defence Saving Stamps each pay day.

It is left with the employer to decide whether he contributes or not. It is, however, to every employer's advantage to see that his workers are provided for in old age. One of the simplest ways of doing this is by Defence Saving Certificates. Each Rs. 10/- Saving Certificate will earn money at the rate of 3⅛% and in ten years will be worth Rs. 13|9|-, free of income-tax. If at any time the money is needed on account of sickness or other causes, the Certificates can always be cashed at the Post Office for the full value, plus the interest due. So your staff have all the advantages of a Provident Fund with good interest on the money saved and full protection.

Your Staff Should Buy and Stick these Savings Stamps on their Defence Savings Stamp Cards until Rs. 10/- has been saved to buy a Defence Savings Certificate.

ALLAHABAD BANK, LIMITED.

AFFILIATED TO THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

Registered under Acts XIX of 1857 and VII of 1860.

ONE HUNDRED AND EIGHTEENTH REPORT OF THE BOARD OF DIRECTORS TO THE PROPRIETORS

TO BE SUBMITTED AT THE

Ordinary Meeting to be held on Thursday, the 22nd May, 1941, at the Bank Premises, 6, Royal Exchange Place, Calcutta, at 3 p.m.

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts duly audited showing the position of the Bank's affairs as on the 31st day of March, 1941, together with their report.

	Rs.	A.	P.
The result of the working for the twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of	14,84,577	4	10
Out of this there has been paid Dividend and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 18 and 6 per cent per annum, respectively, for the six months ending 30th September, 1940, absorbing ...	2,29,500	0	0
Leaving an available balance of	12,55,077	4	10
which your Directors recommend should be disposed of as follows:—			

	Rs.	A.	P.	Rs.	A.	P.
In payment of a Dividend (free of Income-tax) on the Preference Shares for the six months ending 31st March, 1941, at the rate of 6 per cent per annum ...	45,000	0	0			
In payment of a Dividend (free of Income-tax) on the Ordinary Shares for the six months ending 31st March, 1941, at the rate of 12 per cent per annum ...	1,23,000	0	0			
In payment of a Bonus (free of Income-tax) on the Ordinary Shares at the rate of 6 per cent per annum, for the six months ending 31st March, 1941	61,500	0	0			
Transfer to Reserve Fund ...	2,00,000	0	0			
Transfer to Contingencies ...	2,00,000	0	0	6,29,500	0	0
Carry forward to next account ...				6,25,577	4	10

Under Article 102 one of the Directors, Dr. Sir Jwala Prasad Srivastava, Kt., D.Litt., D.Sc., A.M.S.T., retires from office by rotation but is eligible for re-election.

Mr. A. K. G. Hogg, having resigned from the Board, **Mr. A. B. Mallett** has been appointed to fill the vacancy and under Article 108, retires, but is eligible for re-election.

Auditors will have to be appointed for the year ending 31st March, 1942.

By Order of the Board,
R. R. HADDOW,
Chairman.

W. LOTHIAN BROWN,
General Manager.

ALLAHABAD BANK, LIMITED,

DID I look like talking big in my last week's gossip? I am quite aware that the theme I chose was not a simple one. But I am not at all conscious of having made it abstruse or otherwise difficult of ordinary understanding. The points I made were quite simple, that the problems of post-war economy are bound to be very difficult and will not admit of a solution on the usual lines, and that economists must find new bases for their science and seek to draw conclusions more useful to the problems with which we shall be faced. There is nothing in this to puzzle the average reader. But it has been suggested to me that the gossip was unduly bookish, not to say academic, that, though the main points are clear enough, it is by no means clear what I would like the economists to do. I am asked, for instance, whether what I want is not a mere collection of facts relevant to the problems with which we may be faced in the future. If that is so, it is argued, is it not very different from the kind of reasoning and the discovery of economic laws with which the scientific economist is concerned?

The implications of these questions are clear enough. In the post-war period, the belligerent nations will have to undertake the reconstruction of devastated areas on a large scale. The ravages of the present war are bound to be far greater in some important respects than those of the last war. For the last war was kind to the world, in the sense that not only was the destruction of property less, but the casualties were greater. Now there will be more men and far less of the instruments of production and wealth of other kinds. If is true that the problems cannot be solved in the time honoured way of allowing each person to take care of his own interests, then it only means that every nation will have to form an economic plan for itself and adjust the various objectives to their relative importance and to the resources at its command. For the formation of such a plan, what is wanted is a careful estimate of these resources and the relation of the various objectives to such resources. Now, where does the change in the nature of economic science come in, in this task of formulating such a plan or working it successfully?

In this form, the question is sound, and, to some extent, even unanswerable. I shall not attempt to make out that this line of argument is fallacious or that no economic plan can be worked without an overhaul of the structure of economic science. The formation of an economic plan is a task for what the Americans would call the technocrats. No mere economist can make the estimates which enabled American technocrats to conclude that, with the capital equipment which the U.S.A. possesses, the States can, with a rational economic organisation, maintain, and even improve upon, the existing standard of living with a considerable reduction in the number of working hours per day and the number of days per week. The authors of the Five Year Plan in Soviet Russia were not first rate economists. The Fascists in Italy and the Nazis in Germany did not wait for a committee of economists to overhaul their science before they put through their programmes of production. And what is true of totalitarian governments is also true of big business corporations, the trusts and cartels which operate over wide Empires and the small individual entrepreneurs and humdrum businessmen.

All this is true. But one cannot rush from this to the conclusion that a change in the content of economic science is of no importance to the vast changes in economic policy which, we know, will become expedient before long. The relation between economic thought and economic policy is a somewhat difficult subject. For, whether or not economic policy is shaped by prevalent economic thought, it is certain that economic thought is influenced to a great extent by economic experience. In fact, all thought has its origin in experience. Man likes to think that he is the master of his thought, that he is free to think what he likes, that, in the language of the philosopher, he is the subject and all this vast illimitable universe, but an object. But the truth is, as the materialist never wearies of telling us, we are prisoners of our experience. Economic thought is not the same during a boom in a regime of international free trade as during a depression in a period of multiplicity of national controls and quotas. The Depression did more to turn men's minds away from boom and slump than all the writings of socialists and communists. Economic experience acts on economic thought both directly and through the kind of problems that it creates for the future. And policies, which are based on the thought of the time, determine to some extent not only the experiences of the moment and the immediate past, but also the problems of the future. This triangle of economic thought or policy, economic experience and economic pro-

blems constitutes the crux of the problem we are considering.

It would be wrong, therefore, to conclude that the authors and executors of an economic plan have only to go about like census commissioners and census enumerators. Their task is far different. Much more is involved in it than an exhaustive inventory of things a nation has, or a complete list of things it wants. A plan may work for five years or even fifty. But it should not be assumed that mankind can go on for ever making its demands on Nature and continuing to extract everything that it wants of it. Each plan, every stage of a plan, leaves a situation different from what it started with. The relation between the needs, and aspirations of the community on the one hand, and the resources of Nature on the other, is a vast subject which human intelligence will, perhaps, never be able to comprehend in full. Hitherto we have been content to assume that what man wants from Nature, not to speak of what man is able to get out of it at any time, is but an infinitesimal fraction of what Nature has in store. We believe we can go on digging out of Nature without the least fear of depleting the stock. We are more worried about leaving some of the hidden sources untapped, than of coming up against the remotest possibility of a shortage. And yet economic planning brings us face to face with this problem, while *laissez faire* appeared to solve it by its failure to raise it in any form. I say, failure, because the equilibrium economist did not refuse to raise that problem. He was even anxious that we should be aware of this problem. For only if we are aware of this problem, shall we be ready to recognise that the conservation of comparatively scarce things is being achieved automatically in a free economy through the differences in costs and prices. The price of coal in a country, in which coal reserves are nearing depletion, is bound to go up, and the mechanism of prices forces the community to economise in the use of coal. A free economy, we have been told, inevitably contains the safeguard, that scarce things will be used sparingly. When the waste of the competitive system became even more glaring than its powers of conservation, the need for special enquiries into the position of wasting national assets was generally recognised.

But coal is only an instance. There is nothing in Nature which is so abundant that it is available for mankind for all conceivable purposes. It is said that for every triumph that man has over Nature, Nature wreaks a terrible revenge. Supposing India is in a position to air-condition all the homes and factories in the country, I am not sure that this will not affect the climatic conditions, to the point of effecting large-scale atmospheric changes and a disastrous diminution in rainfall. This may have adverse or favourable effects on the position and prospects of other countries. It is something like the Hydro-Electric project in Mysore affecting the agriculturist in Tanjore District. Every step in what we call economic progress has its repercussions in other departments of economic life, in other spheres of life, on other countries, and on the position of a later period. I believe economics, rightly conceived, must be concerned with this far larger problem of the relation, on the one hand, between the needs, wants and aspirations of mankind both in the present and in the future, and on the other, the resources of Nature as they are and as they may be capable of being transformed.

Such a study is not for the technocrats or for a committee of representatives of industrial associations and chambers of commerce. It is, legitimately, the task of the economist. For the economist has now, after more than a century of groping, defined the scope of his science; and if the study falls within the scope as defined by him, he cannot reasonably refuse to undertake it. No practical difficulty, not even any theoretical difficulty can be a valid objection to the economist accepting it as the legitimate field of his study. The consequential changes are, indeed, vast. They may scare away even the most versatile minds. But, as I said, this can be no answer to my contention that economics can no longer be content with the kind of hypothetical and tautological statements that it has so far been making. No body of reasoning, however acute it may be, can stand as a science. Science pre-supposes the study and apprehension of objective facts. Its essence lies in the perception of relations between such facts, a perception which, in most cases, enables man to alter those facts to his advantage. Every science has its allied art, which is nothing more than its counterpart in the sphere of intelligent action; and a science, which is nothing more than pure reasoning, can only be an intellectual luxury and not an aid to action, and what is worse, like idealist philosophy, to which it bears close resemblance, it can be a very attractive argument for inaction. It is not an accident that academic economics has put forward in the shape of the doctrine of *laissez faire* the most plausible pleas for inaction. Science, on the other hand, induces informed action. The moment mankind is able to visualise common purposes in all departments of social and individual life, there has to be a science which can afford guidance in the pursuit of new purposes. As things stand to-day, there is guidance for every specific purpose taken by itself and without any relation to other purposes.

Does man want to ride the air, to cross the oceans, to build skyscrapers, to blow up whole cities, to condition the air? For all these purposes, science affords ample guidance. But what of a number of purposes taken together? How many of them will Nature suffer us to pursue at a time? And what will be the result? For such a purpose, there is no science to afford the necessary guidance.

I have not shown that the study falls within the scope of economic science as defined by a modern economist. We are familiar with the wide variety of definitions of economic science; but there was none till recently which did not involve a few logical inconsistencies and contradictions. The common point of all those was the insistence on the material, and on the freedom from ethical considerations. They all, to put it crudely, looked on the parson and the prostitute as equally an economic goad. But to differentiate between one aim and another has always been a fundamental difficulty. There was the old fallacy which considered the making of a violin a productive activity, but not playing on it. The economists of later days got over it by talking of "felt wants". But what about a country like Germany which will sacrifice all for world domination, or Russia which at one time wanted nothing but civil commotion all over the world? It is a "felt want", no doubt. But what is its relation to ordinary economic life? It does not merely impinge on economic life by asking people to look at guns when they want to eat butter. What about India where we are asked to contemplate the glory of non-violence when people think of their skin and the empty stomach which it envelops? It is obvious that economics has to outgrow the stage of a "science of material well-being." Well-being depends on more things than "the material" dreams of. The science has to run through the whole gamut of the needs, wants and aspirations of man as an individual and in society.

Economics cannot do that, if it dwells within the mathematical formulae of equilibrium economics. For these formulae are mere abstractions which have the faintest touch with the realities of life. They confine life to the production and consumption of things. If the definition of economics as the science which deals with the distribution of scarce means among alternative ends is to have any practical meaning, the economist must not only synthesise the findings of other sciences from the point of view of human well-being, but he will also have to make demands for more light from other scientists on problems which will begin to worry him after this new orientation of his studies. No science can be said to grow when it does not make demands on other sciences. Economics not only makes no demand on other sciences, but tries to keep other sciences at arm's length. It tells Ethics that it is an unwelcome and hated intruder. It begs the political scientist not to complicate his simple world. It tells the technocrat not to foul people's minds with their calculations of possible plenty. To the student of a comprehensive sociology, the economist does not know what to say. It is time that the economist rescued himself from this position. I am not sure I am equal to the task of indicating, however vaguely, the lines on which a more scientific economics should develop. But I hope to essay it some day.

Simla, May 7.

THE opening of the Government of India's offices in Simla for the summer season last week coincided with the commencement of a province-wide hartal which directly affected Simla. All the main and markets in Simla were closed as a protest against the Punjab Government's policy in connection with the sales tax legislation. The hardships to which the Simla public, especially, those who had newly come from the plains, were put were considerable, but fortunately the Punjab Premier showed himself both tactful and accommodating in his negotiations, though belated, and succeeded in effecting a settlement with the leaders of trading community. It was only at the last stage, when the trade deadlock was complete, that the Punjab Premier realised the wisdom of entrusting the conduct of the negotiations to Sir Manohar Lal, the Finance Minister. As a result of the latter's intervention it has now been agreed that the Punjab Government should enter into consultations with the leaders of the trading community to mitigate the rigours of the Act and ensure liberal application of the rules to be framed. One leading issue still remains to be settled—the demand of the traders that the levy of the tax should be confined to only one stage in the course of business. But there is little doubt that if Sir Manohar Lal continues to be in charge of the negotiations, a satisfactory solution will be found. So complete was the hartal throughout the province that the strength and unity displayed by Punjab traders found striking expression. The suspension of business meant considerable loss to themselves, but they were determined to go on until the Government saw the justice of their demands and were prepared to give the necessary assurances.

Political speculation has again revived in an acute form following the return of the Viceroy from his tour and the significant comments which appeared in the London "Times". There is a general belief that another attempt will be made to resolve the deadlock in the spirit of the appeal made by the "Times". The unfortunate controversy between Sir T. B. Sapru and Mr. Jinnah shows that the latter is still in an intractable mood, but there are many here who think that if an honest attempt is made to find a practical formula by piecing together the three sets of proposals—the Congress offer at Poona, the August declaration and the Sapru scheme a way can be found out of the present deadlock. What is wanted is the willingness from the Government's side to effect big changes. There is considerable support for the proposal that the Viceroy should convene a conference of Provincial Premiers, including the Congress Premiers in jail, and take their advice both for reconstruction of the Central Government and for reviving autonomous Ministries in the Provinces. It is difficult to say whether any such proposal is being seriously considered by His Majesty's Government at all, but the lead given by the "Times" is taken as an indication that something may soon be done to conciliate political India and prevent matters from getting worse in this country. Questions of detail, such as the composition of the Cabinet, the distribution of portfolios and the like can be easily settled if the principle is conceded—the principle that it should be an Indian Cabinet which is free from outside dictation and has the right and authority to follow policies acceptable to the people of this country. The report that a Parliamentary delegation may shortly leave for India has been received with great satisfaction, for it may help to secure a fresh approach to the Indian problem.

An interesting report has been issued by the Textile and Technical Institutes Inquiry Committee appointed by the United Provinces Government. The committee which consisted of leading businessmen like Sir Shri Ram, Lala Padampat and others has several caustic things to say of the system of industrial education in the United Provinces. The general line of criticism taken in the committee's report is that no consideration has apparently been given to the needs of trade and industry and that the institutes have not adapted themselves to the requirements of industry. Commenting on the futility of the system of training at present adopted it says: "A noble effort in spending on an average not less than Rs. 1,500 per pupil to equip him to earn his living and to improve the country's economy has been, in our opinion, wasted." The committee has made several valuable recommendations for reorganising industrial education in the province to fulfil its fourfold objective—to train cottage workers and other artisans in improved methods and help in the improvement of their technique, to enable middle class young men to secure employment in industry, to supply industries with trained men to take charge of industrial work in various capacities and to help middle class young men to set up their own industrial businesses. One of its main recommendations is that they should seek to import the factory atmosphere into these institutes.

It is now practically certain that the term of the Central Assembly and the Council of State which are both due to expire next October will be extended by another year. The autumn session of the Central Legislature will meet in New Delhi either in the last week of October or early in November. As there is not much legislative business it is not likely to be a long session—and it is far from likely that the Finance Member will come forward with any Emergency Finance Bill.

Bombay, May 7.

PEOPLE dealing in drugs and medicines may be inclined to look upon the war as a heaven-sent opportunity to make their pile; but representatives and distributors of manufacturers object to profiteering. Price control is favoured on all counts, and buyers should be pleased that the members of the trade retain their scruples about overcharging. An efficient system of control is needed but it does not exist even after twenty months of alarm and confusion; otherwise Mr. Fairbrass would not be arguing out the case for pegging down prices. Manufacturers do not like profiteering, and Mr. Fairbrass explained what happened at his interview with the Controller of Prices, Bombay. He said that he made certain suggestions. He had also acquainted the Surgeon-General with the problems before manufacturers and buyers. He had indicated the need for a committee to examine and report on the best way to keep prices at a reasonable level. Nothing had happened and dealers were allowed to do what they liked. Manufacturers and agents alike were in difficulties because of hoarding and profiteering.

For some months dealers in iron and steel manufactures have experienced difficulties. The state of the market cannot be pictured in the brief occasional reports. The situation is not one for which the trade is responsible because steel supplies are short and conditions regarding rates and deliveries have been modified after the first year of war. Forward business remains suspended though rates are unaffected in most categories. Because the demand at present is acutely concentrated in Britain, there can be no hope of getting imports and the pressure on supplies in India at present explains the disinclination to accept forward business. Production is earmarked for Government. Spot orders remain rather small and business has been patchy over a month. Prices remain unaltered in consequence and except for galvanised sheets the stocks of most materials are not inadequate. In the case of mild steel rods prices have receded owing to poor demand.

An event of some importance to investors was the special meeting of the Andhra Valley Power Company. The meeting was held in order to approve a resolution recommending the increase of the capital to Rs. 8½ crores by issuing 14,000 additional ordinary shares of Rs. 1,000 each, ranking equal to the existing shares in all respects. Mr. J. R. D. Tata presided over the meeting, which accepted the resolution regarding the new shares, which do not confer any right to any dividend before the date of the ordinary general meeting to be held in 1941 and the dividend on ordinary shares to be declared at that meeting. The meeting agreed to the proposal that 5,319 ordinary shares be offered to existing shareholders in the first instance in proportion to the number of ordinary shares held by them and upon the condition that the full amount of each shares taken up shall be paid to the company on acceptance of the offer. If the offer of shares made by the Directors was not accepted within a limited time by the shareholder, the Board is empowered to dispose of the shares as expedient. The Chairman of the Company described these proposals as sound and in the interests of the share holders.

Considerable interest has been manifested locally in the plans regarding the issue of shares by the proposed motor company. That the Government of Madras would dissociate itself formally was only to be expected but the Indian Automobile Company Limited, assured of the backing of the Mysore Government, does not stand in need of outside help. The promoters' plans have matured and details furnished this week show that the new company will have an issued capital of Rs. 225 lakhs. Mysore State will provide Rs. 40 lakhs and other States will put up Rs. 50 lakhs. The managing agents (a new firm consisting of Mr. Walchand Hirachand, Tulsidas Klachand and D. M. Khatau) will provide Rs. 30 lakhs. Firms representing motor dealers have promised to provide Rs. 30 lakhs and the balance of Rs. 75 lakhs will be secured from the public through brokers who have promised to underwrite the issue. The Directorate will be representative in every sense. Sir Sriram, Mr. G. D. Birla and Seth Kasturbhai Lalbhai reinforce the original selections, and the Mysore Government too will have two nominees on the Board. The factory will be laid out to secure an annual output of 15,000 vehicles per annum. Chrysler Corporation is going to provide all the technical assistance and the Corporation's existing organisation for the assembling and sale in India of cars and lorries will be taken over. The second year will see an output of 7,000 vehicles and production of spares up to 60 per cent. of what is wanted will be attained in the next year. The powerful arguments adduced by the sponsors have naturally stimulated interest in the forthcoming issue. That more than half the capital is secured and that arrangements with Chryslers are complete show that the plans are well advanced. Prospects are said to have improved after the news of curtailed output in the automobile industry after August in the U.S.A.

Bombay has reason to endorse the views of Seth Maganlal Ghia expressed at the last meeting of the Indian Merchants Chamber. Seth Maganlal sketched in the political background rather firmly, and expressed what has long been apparent, that a responsible Centre is wanted at least in the interests of Britain's war effort. Mr. Ghia referred to the increases in taxation in no carping spirit. Adverting to the burden of Rs. 22½ crores thrown on the Indian tax-payer and the more recent addition of Rs. 6.6 crores by way of taxation, Mr. Ghia thought that the country would strain its utmost to foot all the war expenditure and accept also the fresh borrowing contemplated, if the political situation were happier. Mr. Ghia referred to the work of the non-party leaders and regretted that Mr. Amery's statement had accentuated differences. Previous agreement was scarcely possible, and there was only more reason to try a new line of argument and action. The efforts of the Government of India to stimulate industrial research were acknowledged, but Mr. Ghia argued in favour of a comprehensive programme spread over a ten-year period so that development was not sketchy or limited.

The speaker's references to the work of the Eastern Group Council suggested that the mercantile community does not feel happy about the representation. How much the Dominions have benefited has been discussed frequently and Mr. Ghia merely asked that in the development of Indian resources in wartime foreign interests should be excluded. Mr. Ghia remarked 'we do not want in the name of Empire co-ordination any joint attempt for the development or exploitation of the potential capacity of the country for supplying industrial and war needs because foreign capital brings in its train foreign capital and creates foreign vested interests within the country.' The vagaries of income-tax officials were mentioned and he said that summary powers left the assessees with little time to complain or appeal. As regards war risk insurance Mr. Ghia argued that the restrictive clauses tended to raise the cost of the scheme and he recommended that war risk policies should be made transferable like fire insurance policies, and that provision should also be made for issuing declaratory policies. Mr. J. C. Setalvad dealt with the questions raised by the requisitioning of ships on the Indian register. He said that India's trade suffered unnecessarily and he made particular reference to the shortage of imported rice. The distress occasioned by the inadequacy of rice supplies was explained by Mr. Mathuradas Matani who advocated that priority certificates should be issued. The work of the Export Advisory Council was reviewed by Mr. Chunilal Mehta who observed that the oilseeds market had benefited from the adoption of minimum prices.

A Resume of Commodity Markets

THE outstanding feature of the week is again the strength of both the raw cotton and hessian markets. The continued strength of these two markets has not been without its influence on other markets as well. Only the bullion markets have been absolutely uninteresting on account of the riots in Bombay and Ahmedabad.

The strength of the hessian market during the week is due mainly to the shortage of ready goods and the improvement in the freight situation followed by good buying from the American countries. As mills are absolutely short of stocks for the near positions, speculators have lost no time in pushing up values which are quoting at the present moment at the highest levels for the recovery period. Even after the substantial improvement in values in recent weeks, there is no suggestion of weakness and good business has been reported done up to March 1942. While good premium for near positions has not been in any way advantageous to mills, the sympathetic rise in values for the further positions has enabled mills to fill their order books for a considerable time ahead. It had been expected that with large forward sales in the hessian market, mills would have adopted a more liberal policy in the matter of their own purchases of jute against their sales. There has been, however, no such buying; mills have been content to eat into their stocks which can last them till the end of July for fear that the present level of minimum prices may not be obtainable after the end of the current season. The rise in the jute futures market during the week in spite of the inactivity in the other sections, has been mainly due to the reports regarding excessive rain affecting the progress of sowings and the growth of the standing crop.

In the Bombay market Broach cotton has recorded a substantial improvement for old crop positions. A sharp rise has been recorded owing to scarcity of contracts and the relative cheapness of Broach cotton in relation to foreign growths and also to the reports regarding the higher loan in the U.S.A. following the passage of the Fulmer Bill by Congress.. The rise in the prices for short staple varieties has been only in sympathy with Broach. In view of the difficult export outlook, advances have not been fully held.

The Linseed and Wheat markets too are better in sympathy with cotton and hessian. There has been a cessation of Government buying in the wheat market possibly on account of the difficulties in obtaining tonnage earlier and the accumulation of stocks at ports. In view of the large reinforcements in the Middle East and the possibility of a further extension of the area of hostilities, a resumption of buying on Government account is expected any moment. The linseed market has been firm mainly on speculative buying.

Jute

As pointed out above, there has not been any substantial increase in buying of jute on Government account and it is clear that mills will rest content with buying the deficit under the quota reached at the Delhi Conference, which is now estimated at about 18¾ lakhs maunds. It will be remembered that at the time the bye-law regarding the minimum price for jute was extended to the end of the season, it was pointed out that there was to be no extension of the buying programme by jute mills under the Delhi agreement. It now, however, transpires that beyond the assurance that mills will endeavour to make up the shortfall in quota and that Government will not be obliged to make good the deficit, there will be no extra effort to make additional purchases. This is possibly due to the fears regarding depression in the value of stocks after the end of the season. For, hitherto no measures have been taken to penalise ryots who have failed to conform with the rules for regulation of crop for the next season and estimates regarding the size of the crop for 1941-42 go to show that instead of the crop being one-third of the size for 1940-41, it will be at least half. However, it will not be proper to conclude that just because the area under the crop for the next season seems to be half instead of one-third of the area for the previous season the yield also will be the same.

Jute Manufactures.

The shortage of raw materials and the recent order for 7½ ounces hessian cloth have been responsible for a speculative ramp in the hessian market and bazar operators have had their revenge. It was only in November 1940 that operators suffered heavy loss on account of the large forward sales made earlier and it was only with the co-operation of mills and the lower volume of production that it was possible to improve slowly the difficult position. From February this year, they have been experiencing very good times as mills in their anxiety to dispose off their stocks sold freely. Bazar operators anticipating a further improvement in prices, bought freely from mills for the forward positions and sold their holdings of ready stocks. This policy has proved to be very profitable, as purchases early in the year have stood them in good stead. With fresh buying by American countries and the easier freight position in May, holders have been able to demand their rate, so that the premium for ready as against October/December is as much as four points what time it was only one and a half points two months ago.

Rice.

It will be remembered that the Government of India issued a *communique* some-time ago regarding the possibility of an increase in the price of rice temporarily on account of the diversion of shipping for more important purposes at a time when there used to be a seasonal increase in shipments of rice from Burma to India. The shortage of rice arising as a result of the decrease in imports from Burma is now making itself felt on prices for rice. There has been a gradual improvement in values in recent weeks and there is a suggestion that prices will stage yet further rises. While the situation in India is due to the shortage in imports of rice and the increase in prices is due to the fall in imports, it was largely expected that there would be a depression in the Burma market in view of the fall in exports. It has not been, however, the case ; demand from other countries has maintained the rate of exports or even been responsible for a slight improvement in sales. As a consequence, values in the Burma market are also higher. On March 5, white rice was quoted at Rs. 290. The quotation has improved to Rs. 327-8 on March 7. In Calcutta Seeta No. 1 has improved from Rs. 5-14 per maund to Rs. 6-8 per maund.

(From Our Jute Correspondent)

Calcutta, 8th May.

THE Indian Jute Mills Committee has now somewhat amplified the fiat which it announced last week with regard to Loose Jute Standards for the coming season, in a circular issued to the trade. The Committee calls for co-operation in the endeavour now being made to stabilise marks, but a careful scrutiny of the circular fails to bring to light any evidence of such endeavour. Admittedly, member mills are called upon most rigorously to observe the standards laid down, but there is no mention of what, if any penalties, are to be enforced if they do not. On the other hand, infringements appear to be expected only on the part of sellers and the names of any offending sellers are to be removed from the Register. Now it is only human nature that the offence of a seller in the eyes of a buyer is that of delivering something inferior to what is contracted for. It is seldom, if ever, considered an offence if a seller delivers something *better* than what is contracted for. But, if any serious endeavour is actually to be made to secure stabilisation of grades, this latter offence, venial though it may appear in the eyes of the buyer, is the one to be reported to the Special Sub-Committee to be dealt with. Over a lengthy experience of the Jute trade in Calcutta, it is difficult to call to mind any case where a buyer has complained of a tender being too good, and it is equally difficult to visualise the leopards changing their spots so suddenly, even at the behest of their Committee. With the best will in the world we find it hard to believe that the pious sentiments in this circular were not dictated with the tongue in the cheek. If there are motes to be removed from the seller's eye, one beam at least calls for removal from para 2 of the circular. It reads :—"The fact that three has been such a great difference in the quaities *properly* tenderable against "middles" and "bottoms" as previously defined, is to the Committee's mind one of the principal reasons why there "have been evidenced departures from these standards in the past." (Incidentally, was the Committee of one mind? We have very good reason to believe not). First, take the word "properly" which we, not the Committee, have put in italics. Even under the specifications of past standards, which incidentally differ very minutely from those proposed for the coming season, surely anything which did not conform strictly to the standards laid down could only be described as an *improper* tender, whether the tender was too good or too bad. And if such too good tenders were "proper" in the past, their condonation is poor encouragement to endeavours to secure stabilisation in the future. Next we would draw attention to the significant omission of "Tops" from the paragraph. The official specification for a "middle" does not call for any colour and describes merely sacking warp jute, and it is notorious that mills, or very many of them, seldom buy anything higher in quality than a middle." The average balance of mill production is one-third hessian and two-thirds sacking. Of the hessian, very nearly one-half is warp jute. Still, mills in the past have contrived to produce their (say) 15% of hessian warp yarn without the necessity of purchasing a maund of "top" jute. They have got, and expected to get, all the hessian warp jute they required out of "improper" tenders of "middles." And even out of "bottoms" if the truth be told. It is instructive therefore that, while the circular expends ink and paper about the new "X" mark, there is no exhortation to member mills that the most probably effective endeavour to attain stabilisation is to include, particularly in early new crop purchases, a reasonable proportion of "top" jute. Another exhortation, or rather it ought to have been a definite prohibition, might well have been against the purchase of "bottoms" alone, at least for the first four months of the season. The primary causes of the failure to stabilise grades in the past have been (*a*) failure on the part of mills to buy any "tops" to speak of and (*b*) the purchase of excessive quantities of "bottoms" for early delivery. In each case the result is obviously and inevitably a rise in the standards and no so-called endeavours to stabilise standards can be considered genuine unless something is done to remove these primary causes. The circular under discussion gives no lead in the matter whatever.

The sharp increase in Sacking stocks shown in the returns for April must be causing the Mills some unease. Hessians, though superficially half a crore higher, are actually 40 lakhs yards lower, the difference being accounted for by an increase in Government holdings. Sacking however shows a rise of 3¾ crores yards or 17,000 tons, a jump of 30% from the March figures. Already many sacking looms must be employed on the manufacture of narrow hessian cloth, and with the market still evincing a keen interest in hessians while heavy goods remain neglected, the possibility must be kept in view of increasing working hours while shutting down a considerable proportion of sacking looms to adjust the balance.

Export jute remains a dead letter. The only cheering feature in the market is the arrival of a steamer to lift some 26,000 bales for Spain. But all this jute was placed in February and March and has been awaiting shipment since. Mills are reported to have done a small business in Lightning grade at Rs. 36 and Cuttings sold at Rs. 12, N. C., Rs. 11-8 M. C. and at Rs. 11 Tossa Cuttings.

Jute Fatka, after hovering between Rs. 37-8 and Rs. 38, hardened on the less satisfactory crop reports to a high of Rs. 39-12, but closes easier at about Rs. 39.

Loose jute has also been a very inactive market with sellers pressing for business in low grades but only being able to sell very limited quantities of "X" Bottoms at Rs. 4 to Rs. 3-12. Jute arrivals up to the end of April total 81,68,000 B/s against 96,52,000 B/s at the same time last season. The arrivals in April itself were more than double last years' figures, due to shipments of "quota" jute.

News from the mofussil is not so satisfactory. There has been heavy and incessant rain in most districts resulting in delay to weeding operations and in cases where the new plants were at an earlier stage, possibly necessitating re-sowing.

The hessian end of the Fabrics market has experienced an active week. Covering requirements for the near position have resulted in new high rates being recorded, and though there have been days when the market sagged somewhat, demand has always come on again and the close is firm at around the highest prices paid. Holders releasing near goods have replaced with forward positions which have been standing at an attractive discount, while some shipment demand also encouraged speculative buying. Altogether the trading must have put mills in a strong position right on to the end of the year. Sales recorded in nine porters run from Rs. 17-5 to Rs. 18-5 for near-at-hand, Rs. 15-8 to Rs. 16 July/Sept., Rs. 14 Oct./March and Rs. 13 Jan./March. Eleven porters were dealt in more freely even at Rs. 21 to Rs. 22-4 May, Rs. 20 to Rs. 21 July, Rs. 19-4 to Rs. 20 July/Sept. Rs. 17-8, Oct./Dec. and Oct./March and Rs. 17 Jan./March. Heavy Goods on the other hand have met with little attention and only small sales were recorded in Cornsacks at Rs. 34 to Rs. 34-4 June and Rs. 34-4 July/Sept. "B" Twills at Rs. 34 ready and Rs. 34-2 May, Liverpools at Rs. 38 July and Woolpacks at Rs. 1-11-8 June. Heavy Cees were dealt in both plain and striped at Rs. 33 May.

	Ready May	June	July/Sep.	Oct./Dec.
9 porters	18 3	17 11	16 1	14 10
11 porters	22 2	21 12	20 0	18 2
"B" Twills	34 4	34 4	33 10	33 0
Cornsacks	34 12	34 12	34 8	33 12
Liverpools	38 0	38 0	37 12	37 4
Heavy Cees	33 4	33 4	33 2	32 12

JUTE

Calcutta, May 8.

In view of the recent increase in prices in the hessian market, it would have been generally expected that the jute futures market would have shown a proportionate improvement in values. That has not been the case, however, and whatever rise in prices has taken place in the jute futures market is due more to the reports of excessive rain in the jute districts and the delay in weedings. Mill buying has been very poor and confined only to small quantities. Export business has been at a standstill.

Heavy rain fall has fallen in most districts. While good progress has been made with sowings, a spell of dry weather is essential before sowings can be completed in some districts and also for the benefit of the standing crop.

In the loose jute section, sellers have been pressing for business. Balers are reported to have bought Tossa qualities at varying rates while mills have bought Supervised Cross Bottoms at Rs. 3-12 per maund.

In the pucca bales section, shippers have done some busines in Dundee Daisee 2/3 for May shipment at Rs. 47-8 per bale. Mills have bought cuttings N.C.'s at Rs. 12, M.C.'s at Rs. 11-8 and T.C.'s at Rs. 11. Some business has also been done in special Firsts at varying rates.

The futures market has been rather firm during the latter half of the week. With the exceptional strength of the hessian market and the reports regarding continuous rain in the jute districts, which may prove harmful to the standing crop, there has been some speculative buying and quotations are at the highest levels for the week. From Rs. 37-15 at the end of last week there has been a rise to Rs. 39-11 to-day. The quotation at the time of writing is Rs. 39-6. The undertone is steady.

JUTE MANUFACTURES

Calcutta, May 8.

There has been a further improvement in the jute manufactures market during the past few days. Continued Plate enquiry and the easier freight situation have encouraged bazar operators to push up values. The improvement in values is particularly pronounced for the near positions. Mills have been selling freely for positions beyond September and a good business has been reported done upto March, 1942, 9 porters May are now quoting Rs. 18-3, June Rs. 17-9, July-September Rs. 15-12 and October/December Rs. 14-6 against Rs. 16-12, Rs. 16-6, Rs. 15-6 and Rs. 14-6 respectively. There has also been a good demand for 11 porters during the last two days. 11 porters May are now quoting Rs. 22, June Rs. 21-10, July/September Rs. 19-12 and October/December Rs. 18-6 against Rs. 21, Rs. 20-10, Rs. 19-6 and Rs. 18-2 respectively.

The local figures for the month of April at first had a slightly discouraging effect, but it was only temporary. With the placing of the large war orders, it was decided that mills should work 45 hours per week throughout April, May and June. An increase in total stocks was, therefore, expected but the actual increase has been above market expectations.

Hessian stocks for ordinary consumption were lower at 19.28 crores yards as against 19.68 crores yards at the end of March 1941. Sacking cloth and bags, on the other hand, show a big increase to 16.20 crore yards from 12.55 crore yards. Stocks of 8 oz. 40 in. cloth are appreciably lower at 1.03 crore yards against 1.81 crores yards. There is a shortage of light material and stock holders are not willing to part with their holdings. The figures are given above.

The increase in sacking stocks is due to the poor export business. Owing to the weight of the goods involved and the scarcity of shipping space, very little business has been passing in the heavy goods section. Despite the improvement in the hessian market no appreciable rise in values for heavy goods has been recorded. B Twills for May shipment are sold on the basis of Rs. 34-4, Liverpool Twills for the same position at Rs. 37-12 and Cornsacks at Rs. 34-12.

The following is the memo of total reported stock of manufactured goods as at 31st March and 30th April, 1941.

		31st March	30th April
Hessian Cloth and Bags*—			
Yards	...	24,78,50,827	25,23,49,218
Tons	...	60,072	63,581
Less Sandbags on Govt. Account	...	5,11,00,930	5,94,54,641
		19,67,55,897	19,28,94,577
Sacking Cloth and Bags—			
Yards	...	12,54,84,351	16,20,39,767
Tons	...	55,012	72,058

* These figures include the returns of Gagalbhai in addition to those of members. The returns of Maheswari Devi have not been received and are excluded.

* Out of the total April hessian stock 1,02,81,006 yards weighing 2,301 tons represent 8 oz. 40 in. cloth. The corresponding figures for March were 1,80,53,559 yards weighing 4,018 tons.

COTTON

Calcutta, May 8.

The strength of old crop Broach position and higher overseas advices have been mainly responsible for the sharp improvement in values during the past week. The disparity in values for Broach between Oomras and Bengals is usually wide but having regard to the poor export outlook for short staples and the reasonable price for Broach in relation to the foreign growths the recent improvement in values can by no means be considered exaggerated. However, the sharp premium for old crop positions has discouraged buying by mills. In fact, the cheapness of new April/May induced some bull buying in mid-week. The discount over old April/May to July/August was only 16 points three weeks back. It has now widened to 20 points. Broach April/May were as high as Rs. 263-8 on Wednesday morning. There has since been a set back to Rs. 256. The quotation at the end of last week was Rs. 242. July/August are Rs. 228-12 against Rs. 218-8, and April/May 1942 Rs. 211-8 against Rs. 201-12. Oomra May and July are Rs. 160 and Rs. 161-4 against Rs. 157-4 and Rs. 158-4 respectively and Bengal May and July Rs. 122 and Rs. 125 against Rs. 122 and Rs. 122-8 respectively.

American cotton exchanges have been firm. The approval by the Senate Committee of the 75 per cent parity loan has had an encouraging effect. Latest advices indicate 85 per cent parity loan or 13.60 cents. Internally bullish sentiment is increasing. In New York, values are more than a cent higher on balance, May being quoted at 12.14 cents against 11.15 cents and July at 12.15 cent against 11.18 cents.

PIECEGOODS

Calcutta, May 8.

While the Western centre was inclined to be irregular with the nervousness regarding the riot situation and the poor offtake from consuming centres, the local piecegoods market has continued rather firm though business passing has been on a restricted scale. Buyers are hesitating to operate at the present levels as there is considerable disparity between sellers and buyers ideas. In the Japanese goods section not much of business has been passing. The Lancashire goods section has continued idle.

The yarn market has been fairly active. Business has been mostly in indigenous counts.

GOLD

Calcutta, May 8.

There has been little change in the Bombay gold market. Business is on a very restricted scale. This inactivity in the market is rather surprising. Gold ready are quoting Rs. 42-12-6, First settlement Rs. 42-12-6 and Second settlement Rs. 42-13-9.

SILVER

Calcutta, May 8.

With the activity in the raw cotton market the silver market was a shade better, but there has been no appreciable increase in the volume of business. Indian Mint Silver ready were Rs. 62-15, first settlement Rs. 62-15, and Second settlement Rs. 63.

In the London market, quotations for both spot and forward have remained unchanged at 23⅜d. There was a little selling by government to satisfy trade demand. During the latter half of the period under report production sales have been enough to satisfy demand.

WHEAT

Calcutta, May 8.

The wheat market is higher in sympathy with the raw cotton market. The general undertone is steady.

Buying on government account has ceased for the present moment, and the lull in buying is perhaps due to the accumulation of stocks awaiting shipment and lack of early tonnage. Resumption of buying is expected any moment. Prices are higher on balance. Choice white ready are Rs. 29-10 and July Rs. 28-8 against Rs. 28-9 and Rs. 27-9. There has been a narrowing in the discount for July position.

In the local market also quotation are higher with Cawnpore and Punjab for May position at Rs. 4-1-9.

(*Continued from page* 839)

rupee coin circulation. With the increased demand for currency, adequate supplies have been maintained. On balance, it has been possible to adhere and enforce the avowed policy of cheap money. In the week ended May 2, active note circulation rose as high as Rs. 251.58 crores. It is mainly due to a reduction from Rs. 13.48 crores to Rs. 11.00 crores in notes held in the banking department.

The return from the banking department reveals interesting and significant figures. Foreign balances disclose a sharp rise from Rs. 28.73 crores to Rs. 35.13 crores. So large an increase must be, presumably, connected with a big payment made in London by the British Government to the account of the Indian Government. That the payment must have been on the account of the Indian Government is confirmed by the fact that it has been possible to reduce the ways and means advances from Rs. 11 crores to Rs. 4½ crores. After effecting such a big liquidation in their ways and means loans with the Reserve Bank, and after meeting the usual month-early disbursements, the Central Treasury has managed to improve its cash balance with the Reserve Bank from Rs. 5.17 crores to Rs. 6.02 crores.

The deposits of the Government of Burma with the Reserve Bank have presented a curious problem in the last two or three weeks. Burma Government's deposits with the central banking institution stood at Rs. 1.86 crores on April 18, by April 25, there was a big bulge to Rs. 3.39 crores; on May 2, there is a big drop to Rs. 1.66 crores. The explanation for these wild oscillations, perhaps, lies in the annual payment which the Government of Burma have to make to the India Government. Between April 18 and April 25, the Burma Government must have been accumulating funds for the impending instalment; how, within a week, so big an expansion in cash could have taken place, is another problem. It is not likely that the Burma Government have availed themselves of a ways and means advance from the Reserve Bank. Be this as it may, out of the funds thus accumulated in the week ended April 25, payments must have been made on May 1. The Burma Government must also have made their usual month-early disbursements; and, in the result, after, a temporary shoot-up, cash balance in the latest return of the Reserve Bank is actually lower than what it was a fortnight ago.

The exchange market has been quietly steady. Owing to the stoppage of air mail communication between India and Britain, it has been apprehended, in some quarters, that exchange banks might put up the rate for export bills. Induced by this view, those who had any bills on hand were inclined to discount it. There were a few straggling bills of this kind in the current week; and they are mainly responsible for the somewhat steadier feeling in the exchange market. It is difficult to say at the moment whether air mail communication will be resumed, and when. If the stoppage of air mail proves to be more than short-lived, the upward revision of export bills is not unlikely. The freight position with respect to Britain continues difficult.

Banks were sellers of T.T. at 1s. 5 15/16d, for ready up to six months forward; and banks were buyers of T.T. at 1s. 6d., for the same delivery.

Banks were buyers of three months D.A. bills at 1s. 6 7/32d., for the first and second months; 1s. 6¼d., for the third month; and 1s. 6 9/32d., for the fourth month.

Interbank call money quoted ½ per cent with no takers.

Firms' money for call and short quoted ¼ percent; and ½ percent for one to four months deposits..

EASTERN GROUP SLEEPER CONTROL

Tender No. 28/41-42.

Sealed tenders are invited and will be opened at 3 p.m. (Calcutta time) on the 6th June, 1941 for the supply of 500 (Five hundred only) tons of selected Indian First class quality Burma teak squares. Alternative quotations for Indian First class quality Burma Teak squares may also be submitted. Full particulars may be obtained from the undersigned on payment first of Rs. 5/- (Rupees five), being the cost of tender documents, to the Chief Auditor, B. N. Railway House, Kidderpore whose receipt for the amount must be produced before such documents can be issued. This sum will not be refunded.

Stock Markets to-day and to-morrow

IMPROVEMENT FOLLOWS U. S. NEWS

STOCK markets have been encouragingly firm during the past two weeks. Mr. Stimson's speech regarding immediate U. S. naval aid to Britain and the more confident undertone in Mr. Churchill's speech have had a distinctly encouraging effect. There has been a technical recovery in prices in the several sections though there has not been any broadening of interest. Indian Irons are steady at Rs. 28, while Steel Corporations are fully one point higher at Rs. 17-6. Tata deferreds have been steady during the last two days at Rs. 1,775.

During the course of Friday there has been a sharp jump in the quotation for 3½ per cent. Paper to Rs. 95-8 from Rs. 94-15. Even otherwise, there was a gradual rise in the quotation in the early days of the week from Rs. 94-4 to Rs. 94-15. Friday's rise in 3½ per cent. Paper is attributed to Bombay buying.

* * *

Two more important jute companies which have been able to maintain ordinary dividends at the level of the previous half-year are the Howrah and Reliance Jute Mills. The earnings of these two companies for the half-year ended March, 1941 have also been adversely affected by the difficult trading conditions in the latter half of 1940, but the decline in profits has been such that with a smaller provision for taxation it has been possible to recommend the same ordinary dividend.

The net profit of the *Howrah Mills Company, Limited* for the last half-year is Rs. 8,98,922 against Rs. 12,74,355 for the previous half-year. The provision for taxation is Rs. 3,01,534 against Rs. 4,97,465 for the previous half-year. The transfer to Taxation Reserve is Rs. 50,000 against Rs. 1,00,000 previously. No provision has been made for depreciation against Rs. 1 lakh previously. The ordinary dividend has been maintained at Rs. 1-12 per share, while the amount carried forward is not very much changed at Rs. 1,72,906 against Rs. 1,76,768 brought in.

* * *

The *Reliance Jute Mills Company, Limited* is able to report a net profit of Rs. 5,34,313 for the same half-year against Rs. 8,18,212 for the previous six months. The provision for taxation is Rs. 1,82,722 against Rs. 2,62,753 while the transfer to Taxation Reserve is Rs. 25,000 against Rs. 50,000. There is no transfer to Replacements and Renewals Reserve against Rs. 1 lakh previously. The amount carried forward is lower at Rs. 1,34,824 against Rs. 1,66,483 brought in after maintaining the dividend on ordinary shares at Re. 1-12 per share.

* * *

In the last week's issue I stressed on the definitely encouraging prospects of jute mills so far as the working of the current half-year is concerned. The conclusion was drawn on a study of five mills belonging to four different managing agents. The position in this regard must be considered even more satisfactory if a comprehensive analysis were made of the profit per loom of each mill for a period of years. I give below in tabular form the results of such a comparative study. The most noteworthy point is that jute mill profits make good showing since the war began, though the half-year ended last March discloses a decline in profits owing to the generally difficult trading conditions. The second important point is that Gourepore and Nuddea have done exceptionally well. In this case, the sharp decline in the last half-year is only apparent. The decline looks sharp only because the previous half-year for these two companies was exceptionally good.

The altered conditions in the engineering industry reported as a result of the war are reflected in the substantial increase in the earnings of the *Indian Galvanizing Company (1926) Limited*. The recent extensions to plant have considerably increased the company's potential earning capacity. In spite of the fact that the works of the company have been working day and night they have been unable to cope with orders. The shareholders of the company, however, do not derive full advantage from the increase in earnings. The net profit before providing for taxation for the year ended December, 1940 is Rs. 5,48,277 against Rs. 1,01,194 for 1939. As it is unlikely that it will be possible to keep special equipment employed after the war an exceptionally large sum has been provided against depreciation. Thus the provision on this account is Rs. 1,09,989 against Rs. 25,181 previously. The provision for taxation is the big sum of Rs. 2,77,000 against Rs. 22,000. Besides these provisions the sum of Rs. 50,000 has been transferred to General Reserve and Rs. 16,845 to Reserve for stock. The dividend recommended is higher at 20 per cent. against 15 per cent. The shares at Rs. 28-8 cum-dividend are very attractive.

The announcement by the *Steel Corporation of Bengal* regarding the payment of the half-yearly dividend of 5 per cent. per annum for the half-year ended May, 1941 and the balance of 1 per cent. in respect

(*Continued on page 868*)

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 9.

The Calcutta Stock Exchange has continued firm during the past few days. Though there has not been any appreciable broadening of interest in the several sections the undertone is generally steady and values are higher on balance alround. The improvement in values has again been due to technical factors. Public buying is on a very small scale and trading is mostly on jobbers account. The general tendency is to await further developments. The outstanding feature of the week is the strength of the Engineering and Jute sections. With Bombay buying and forced covering by bears Indian Irons and Steel Corporations are quoting higher at Rs. 28 and Rs. 17-4 respectively against Rs. 27-6 and Rs. 16-6 at the end of last week. There has been greater interest in the jute section on account of the better showing of the results of jute companies for the half-year ended March, 1941. Giltedged securities have been generally firmer. The tone in the several sections is quiet but steady.

Giltedged securities have been better with greater buying and the easier conditions in the money market. The Treasury Bills rate has come down from thirteen annas five pies per cent. per annum to thirteen annas per cent. per annum this week. During the course of to-day there has been a sharp rise in the quotation for 3½ per cent. Paper to Rs. 95-8 from Rs. 94-15 on Thursday evening. The reason for the sharp improvement in the quotation is due to the scarcity of scrips in the Bombay market and heavy buying from that quarter. The quotation at the end of last week was Rs. 94-4. Terminable loans are higher in sympathy with 3 per cent. Defence Bonds at Rs. 101-8, 8½ per cent. 1947-50 at Rs. 102-10, 4 per cent. 1960-70 at Rs. 112-10, 4½ per cent. 1955-60 at Rs. 112-10, 5 per cent. 1945-5 at Rs. 110-7 and 4 per cent. 1948 at Rs. 104-4. The provincial loans also are higher with 3 per cent. 1952 issues at Rs. 97-4.

Only a small amount of business has been passing in public bodies' debentures. 8½ per cent. *Howrah Bridge* debentures were Rs. 97-12. 4 per cent. *Calcutta Port Trust* debentures were Rs. 108-4, 4 per cent. *Calcutta Municipal* debentures Rs. 102 and 5 per cent. *Calcutta Municipal* debentures 1957 at Rs. 115-4.

Among preference shares, a smaller amount of business has been reported and the tendency is slightly easier. *Kelvin* and *Reliance* were Rs. 172. *Cheviot* were Rs. 159-5, *Khardah* Rs. 150 cum-dividend and *Gourepore* Rs. 151. *Hukumchand* were unchanged at Rs. 115. Among other sections, *Alkali and Chemical* were lower at Rs. 117, *New Victoria* Rs. 5-4 and *Darjeeling Himalayan* Rs. 102. *B. I. Corporation* were slightly easier at Rs. 176 and *Dunlop Rubber* Second preferences at Rs. 113-8.

Bank shares have been lower with *Imperial Bank* fully paids Rs. 1,525 and contributories Rs. 372-8. *Reserve Bank* are now quoting Rs. 10 after being lower at Rs. 101.

In the Textile section, *Dunbar* and *Elgin* have been marked higher at Rs. 188 and Rs. 18-6 respectively. *New Victoria* were Rs. 2-1 and *Cawnpore Textiles* Rs. 5-8.

Interest in the coal section has been very limited and transactions have been on a smaller scale. *Amalgamated* were Rs. 25, *Bengal* Rs. 345, *Burrakur* Rs. 12-6, *East Indian* Rs. 16-2, *Mundulpoor* Rs. 9-11 and *Pench Valley* Rs. 32-10.

Thanks to the steadiness of the jute manufactures market jute shares have continued firm. From Rs. 300 at the end of last week there has been a rise to Rs. 310 in *Anglo-India*. *Budge-Budge* have been dealt in at Rs. 340 and *Hukumchand* at Rs. 8-11. *Howrah* are now quoting Rs. 49-12 against Rs. 48-12 at the time of last writing. *Kamarhatty* were Rs. 458, *Kanknarrah* Rs. 364, *National* Rs. 21-8, *Nellimarla* Rs. 7-8, *Presidency* Rs. 4-2 and *Standard* Rs. 246-8.

In the Engineering section, bear covering and some investment buying have been responsible for the improvement in Indian Irons and Steel Corporations. The improvement in the quotation for Steel Corporations is more pronounced. The payment of part of the arrears of dividend on the preference shares has perhaps given rise to the hopes regarding an ordinary dividend for the year ended December, 1941. *Indian Iron* are now quoting Rs. 28, *Steel Corporation* Rs. 17-4 after being higher at Rs. 17-7, *Burn & Co.* at Rs. 353 and *Indian Steel and Wire Products* ordinaries at Rs. 52. *Hukumchand Electric Steel* ordinaries were Rs. 10-12 and deferreds Rs. 2-6. *Braithwaite & Co.* were lower at Rs. 8-10.

In the Sugar section, *Basti* were dealt in after a long time at Rs. 145-8. *Bharat* were Rs. 7-12, *Buland* Rs. 15-8, *Raza* Rs. 15-14 and *Murree Brewery* Rs. 14-4.

Greatest interest has been in tea shares. The popular shares have been marked higher. *Bishnauth* were Rs. 24-14, *Dauracherra* Rs. 9-12, *New Chumta* Rs. 29-4, *Tezpore* Rs. 7-12, *Baradighi* Rs. 43, *Hantapara* Rs. 346 and *Sonai River* Rs. 16-12 cum-dividend.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have been uninteresting with the quotation at Rs. 4-2 and Rs. 1-15 respectively. *B. I. Corporation* are slightly better at Rs. 4-1, *Bararee Coke* at Rs. 20-14, *Indian Cable* at Rs. 19-11 and *Bengal Chemical* at Rs. 385. *Dunlop Rubber* are further higher with the quotation at Rs. 40-8. Among Paper shares, *Titaghur Paper* were rather uninteresting at Rs. 16-7, *Bengal Paper* at Rs. 116 and *Shree Gopal Paper* at Rs. 10-10. *Mysore Paper* were Rs. 13-12 and *Star Paper* Rs. 10. *B. B. Petroleum* were Rs. 3-5, *India General Navigation* Rs. 79 and *Bengal Aerating Gas* Rs. 75.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, May 8.

Money.—Money continued to be easy, call money being quoted at ¼ per cent. (unlendable).

Exchange Market.—Banks selling T.T. at 1s. 5 15/16d. and buying three months' bills at 1s. 6 7/32d.

Securities.—The securities market took a turn for the better, the weak tone witnessed last week giving way to a steady trend. 3½ per cent. Paper improved by about 1 point to close at Rs. 95. Among other loans, 1948/52 were done slightly higher at Rs. 97-5 against Rs. 97 in the previous week; 1951/54 at Rs. 99-10 against Rs. 99-7; 1963/65 at Rs. 94-2 against Rs. 94-1; 1947/50 at Rs. 102-5 against Rs. 102-2; 1960/70 at Rs. 108-1 against Rs. 107-14; 1955/60 at Rs. 112-10 against Rs. 112-8 and 1945/55 at Rs. 110-12 against Rs. 110-4. 3 per cent. 1946 *Defence Bonds* were also higher at Rs. 101-10.

Shares.—Prices in the local share market opened better and recorded substantial gains on scattered buying during the week under review. Operators are unwilling to increase their commitments in view of the war developments. The authorities of the local stock exchange have taken steps to stop jobbing business. With a view to restore normal conditions the authorities have banned short sales, but the move, it is reported, is now found inaffective and if the Board persists in its present policy they may have to ban even long interest. The undertone of the market seems to have improved.

Textiles.—Barring minor fluctuations, owing to alternative selling and buying, cotton mill shares ruled steady. There was an all round rise in prices following higher cotton advices. *Bombay Dyeing* were done higher at Rs. 1,017-8 as against Rs. 1,005 in the previous week. *Central India* were, however, steady at Rs. 285. *Century* improved by 10 points and *Kohinoor* by 12 points to close at Rs. 383 and Rs. 390-12 respectively. *Colaba* were done at Rs. 165-8 and *Swadeshi* at Rs. 276. In the cash list, *Ahmedabad Advance* came to business at Rs. 278-8; *Sholapoor* at Rs. 2,910 and *Vishnu* at Rs. 1,246-4.

Hydro-electrics.—Prices in this section suffered a slight setback owing to the lack of support. *Tata Power* were lower at Rs. 1,560, while *Tata Hydro* remained unchanged at Rs. 175. *Andhra Valley* declined by about Rs. 80 to close at Rs. 1,793-8. At an extraordinary general meeting held on Monday the Chairman of the *Andhra Valley Power Supply Company, Limited* passed a resolution increasing the authorised capital of the Company to Rs. 3,50,00,000 by creating 14,000 additional ordinary shares of Rs. 1,000 each, ranking *pari passu* with the existing ordinary shares in all respects, but excluding the right to any dividend payable on ordinary shares before the date of the ordinary annual general meeting of the Company to be held in 1941 and the dividend on ordinary shares to be declared at the meeting.

Steels.—*Tata* deferreds opened at Rs. 1,695 and improved to close at Rs. 1,776, while the ordinaries closed at Rs. 364-8, showing a rise of Rs. 17 over the previous week. The price levels of Tata Steel products continue to be steady though there is no forward business.

Banks.—Bank shares were steady with a slight improvement in prices in sympathy with the securities market. *Central Bank* were done at Rs. 41-10; *Imperial Bank* fully paids at Rs. 1,532-8; contributories at Rs. 372; *Bank of India* at Rs. 136 and *Union Bank* at Rs. 102-12.

Miscellaneous.—*Bombay Burma Trading* were slightly better at Rs. 440 as against Rs. 428-12 in the previous week. *Associated Cement* recorded a small rise, closing at Rs. 136. *Belapur Sugar* were slightly better at Rs. 204; *Premier Construction* at Rs. 85-8; *Shivrajpur Syndicate* at Rs. 30 and *Scindia Steam* at Rs. 19-6. *Wimco* remained unchanged at Rs. 204.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, May 8.

Prices in the local market generally showed a further tendency to sag in spite of more encouraging news from other markets. Textiles and Rubbers met with sellers, while Teas were quiet.

Securities.—There are more buyers than sellers in this section during the week under review and as a result the price of 3½ per cent. Paper improved to close at Rs. 95. Among other loans, 3½ per cent. 1947-50 were quoted at Rs. 102-4 and 5 per cent. 1945-55 at Rs. 110-15. There was not much business in State Loans. Among Provincial Loans, 3 per cent. 1959 *Madras* changed hands at Rs. 95-12.

Mills.—The shares, which were once eagerly bought, are now on offer. *Buckingham and Carnatic* continued to meet with sellers, the price closing lower at Rs. 248. *Cambodia* at Rs. 6-10; *Madura* at Rs. 36 and *Radhakrishna* at Rs. 128. *Bombay Dyeing* came in for business at Rs. 994-4 May.

Utilities.—*South Madras Electric* were a shade better at Rs. 12-13, while *Vellore Electric* were done lower at Rs. 12.

Plantations.—Prices of Rubber shares were more or less unchanged. *Cochin Malabar* were done at Rs. 6-8; *Malankara* at Rs. 84-14 and *Tropical Plantations* at Rs. 18-12. *Vaikundum* were at Rs. 8 x.d. Among Tea shares, *Chembra Peak* were steady at Rs. 8-6 and *Periakaramalai* at Rs. 17-4.

Sugars.—In sympathy with other sections, sugar shares were also slightly easier. *Mysore Sugar* were slighty done lower at Rs. 58-12, while *Travancore Sugars* had sellers at Rs. 14. *United Breweries* came to business at Rs. 88.

Banks.—*Bank of Hindustan* changed hands at Rs. 25; *Indian Bank* big shares at Rs. 118-8 and *Imperial Bank* fully paids at Rs. 1,525.

Miscellaneous.—*Mysore Paper* met with some support and closed slightly better at Rs. 13-4, while *Mysore Chemicals* were a dull market at Rs. 16-6. *Tata Chemicals* met with business at Rs. 12-8; *Mysore Tobacco* at Rs. 9-14; *Indian Iron* at Rs. 27-10-6; *Steel Corporation* at Rs. 16-11 and *Tata Iron deferreds* at Rs. 1,725 June.

LONDON STOCK EXCHANGE

The London Stock Exchange has been steady to firm during the latter half of the week under review. Mr. Stimson's speech regarding U.S. Naval aid to Britain has had an encouraging influence on the market and giltedged securities are higher on balance. Among British loans, 2½ per cent. Consols were 78⅞, 3½ per cent. Conversion 99, 3½ per cent. War Loan 103⅞ and 3 per cent. War Loan 100½. Among sterling loans, 3½ per cent. Sterling Paper was quoted at 99⅞.

Among other sections, Tea issues were firmer while Rubber issues were irregular. Oils were inclined to be easier earlier in the week but later there has been a recovery in *Burmah Oil* to 46s. 3d. and *Anglo-Iranian* to 26s. 1½d. *Mexican Eagle* also are higher on reports of the purchase of a large quantity of oil by the British Government. Home Rails are easier towards the close as also Japanese and Iraq bonds. Among industrials, *Courtaulds* and *Cable and Wireless* were the outstanding features.

NEW YORK STOCK EXCHANGE

A firmer tone has been noticeable on Wall Street and a larger volume of turnover has been recorded. The tone towards the close is easier. *U. S. Steel* were $58¼ against $50⅝ at the end of last week, *Anaconda Copper* $24½ against $23½ and *General Motors* $88 against $87⅝.

BENGAL SHARE DEALERS' SYNDICATE, LTD.

Head Office :—3 & 4, Hare Street, Calcutta.

The ordinary General Meeting of the shareholders of the above company will be held at the above address on Monday, the 26th May, 1941, at noon for the purpose of receiving the Directors and Auditors Report, passing the accounts for the year ended 31st March, 1941, declaring a dividend, electing Directors and Auditors in place of those retiring and transacting such other business as may be brought before the meeting. The share transfer books of the Company will be closed from the 12th May to 26th May, 1941 inclusive.

By Order of the Board,
S. CHATTERJI,
Managing Director.

(*Continued from page 861*)

of the year ended May, 1938 have given rise to the expectation regarding a dividend on the ordinary shares.

It was remarked in these columns some months ago that there was every possibility of the arrears of dividend on the preference shares being paid in full. The dividend of 5 per cent. per annum was paid out of earnings for the first time on the last occasion. Till May, 1940 the dividend of 4 per cent. sanctioned by the Court to be paid during the period of construction was paid out of capital.

The shares at Rs. 117 cum-dividend are quite good from the investment point of view.

* * *

The annual meeting of the *Ouchterlony Valley Estates Limited* would be important if only for the observations of Mr. Langley on the Coffee Control Scheme. Mr. Langley is by no means enamoured of state control and his views are certainly entitled to respect at any time. What many have missed that the internal market's development may be prejudiced by price-rising tactics. It is this aspect which has been touched in the very penetrating speech of Mr. Langley. That the largest producer of coffee in India is not a whole-hearted supporter of the Cess and Pool Scheme may surprise some, but the reasons are set out and they are admittedly convincing. Restrictionism has no virtues of its own and the official controllers are not always mindful of the consumer and the producers too do not benefit. Those, who have been told much about the ordinance and the communiques of the new committee should read Mr. Langley's trenchant speech to realise that there is another side of the medal that one should not omit to look at.

* * *

Few Chairmen's speeches can compare with the careful survey of the year made by Mr. N. R. Sarker at the annual meeting of the Bengal Central Bank, Ltd. The extremely favourable results, reflected immediately in the balance sheet and profit statement alike, afforded a favourable background for a speech that took in its sweep the events of a momentous year and essayed more than a peep into the future. The new Chairman's speech will interest the shareholder and constituent alike who must be aware that the new order is enthroned firmly after the changes in the Board last year. Mr. Sarker's appreciative reference to Mr. J. C. Das shows that the Managing Director has contributed in no small measure to the progress made last year. Many will note with interest that Mr. Sarker looks forward to a postwar boom like the Lord Privy Seal. The tasks of reconstruction will call for assistance from banks, and the Bengal Central Bank is decidedly preparing to play its part. Banking consolidation in Bengal has been discussed often of late more particularly by Dr. N. N. Law and the case for reform was presented once again convincingly. Though these considerations may not apply to the old and well-established Bengal Central Bank the duties of leadership may well include assistance in the reconstruction and mergers recommended to small banks and loan offices. Mr. Sarker discussed balance-sheet changes with the distinction of the trained analyst to put before the shareholders how in the last 16 months deposits have risen by Rs. 30 lakhs.

Company Meeting

BENGAL CENTRAL BANK, LIMITED

LARGE INCREASE IN DEPOSITS

MR. N. R. SARKER ON THE YEAR'S RESULTS

GENTLEMEN,

I assume it will be your pleasure that the Directors' Report and the Audited Accounts of the Bank for 1940, which have been in your hands, will be taken as read. The report covers a full year of the War period with all its attendant uncertainties, but notwithstanding the difficulties of the present times, the Directors are pleased to be able to place before you a Statement which they consider to be satisfactory in every respect when compared to the position in the year previous.

This is the first meeting at which I have the honour of addressing you as the Chairman of the Bank. When, a few months ago, I was invited by your Board to become a Director and accept the Chairmanship of the Bank, I was sensible both of the honour and the responsibility. To be associated with an institution intended to strengthen the financial foundations of our business and to be able to do one's bit for ensuring the further success of such an indigenous institution is indeed a great honour. But with this honour is also bound up a great responsibility. These are days of hard competition, the times, moreover, are uncertain and difficult; and the difficulties of a Bengali bank are further accentuated by the unhelpful legacies of the past. In such circumstances to be at the helm of an institution like this and to have to steel its course with an eye not only to its own success and prosperity but also in a manner that it may become an example and encouragement to others, is undoubtedly a great responsibility. It is a task and a responsibility which calls for devoted attention, and I have throughout been deeply conscious of this; and with that consciousness in my mind I have been trying to serve the Bank to the best of my humble abilities. In the same spirit, and actuated by similar motives, Mr. Satish Churn Law of the well-known Law family of Calcutta also joined the Board. To the Bank it was a great accession of strength that Mr. J. C. Das, was persuaded to rejoin the Bank. It was very largely through Mr. Das's efforts and industry that the Bengal Central Bank had been able to establish its position. These changes in the Board have, I am happy to report, already received appreciation at the hands of the public as reflected in the increasing support extended by the public to the Bank in every way. From the indications available I think one may reasonably hope that 1940-41 may well mark a new starting point in the progress and development of the Bengal Central Bank.

The working of a financial institution; whatever its status and magnitude, is unmistakably influenced by the prevailing political and economic conditions. I consider, therefore, that in presiding at this Annual General Meeting, it would not be out of place to give a brief resume of the political and economic conditions, at home and abroad, amidst which our business has had to be conducted. It will be commonplace to say that we have been passing through one of the most critical and anxious phases in world's history. The Hitlerian war has been developing both intensively and extensively in strange and unexpected ways. Looking back it now seems that the last war was a world war only by facile description; and that it is this war which will be entitled to be known as the world war. Every country, be it in any continent, be it in the new hemisphere or the old, be it powerful or weak, is being dragged into the vortex of war repercussions and war preparations, if not into the vortex of war itself. It is, therefore, intelligible that India has had to revise her ideas of her outposts. Egypt and Palestine in the West and Singapore in the East are our outposts in the conditions of the present war and Indian troops have had to be sent to these distant territories. India's forces have also been despatched for the strengthening of the defences of Burma.

The strategic situation which India thus occupies has led to her becoming the core and centre of what has been called the Eastern Group. India is not only the granary but the arsenal of this part of the Empire. Whether the will of the people is for the war or against the war, the fact is undoubted, that the contribution which India has made in the supply of both men and materials has been of a most valuable kind to Britain.

All this has meant increased military budget, increased tempo of production in certain fields, and much dislocation in others. I cannot help remarking that even this ill wind of a war could have been made to blow a lot of good if only the British Government and their representatives in India had not succumbed to their age-long complacency but bestirred themselves, actively and sincerely, to secure the good-will and co-operation of the Indian political leaders. The political situation in India has added to the anxieties caused by the war in the economic sphere. And, so far as we can see, it looks as though this stalemate will continue.

Speaking to the shareholders of a financial institution, I must needs refer to the war repercussions in the money, gilt-edged and exchange markets. As soon as the war began, the Government entrusted to the Reserve Bank full power to control the various markets. We are, therefore, having our first experience of the working of complete control in money and exchange. Official policy has, following the policy in Britain, stood for cheap money; and, but for occasional trends of an opposite nature, India has enjoyed cheap money conditions during the twenty months of war. It has also been the official policy to prevent the repetition of the conditions of the last war during the Government could raise their defence loans only at onerous rates of interest. Many in this country had foretold, at the outset of the war, that this would be a three per cent war. That is to say, a three per cent. war for India. For Britain, it has been a 2½ per cent war. In my opinion, this enormous saving in defence loan charges is one of the most profoundly significant developments of this war, which is bound to cast a shadow on the post-war world.

Ever since the War, the balance of trade has been heavily in favour of India. This enabled her to amass large quantities of sterling balances in London which has considerably facilitated the redemption of dated India sterling loans. The Rupee-Sterling Rate has also continued steady. From May 1940, a system of licensing imports was introduced in order to conserve foreign exchange. Early in January, the Reserve Bank prohibited the transfer of rupees from the account of London banks to the account of non-Empire banks in India except against an undertaking that the rupees had been obtained at 'control' rates. This measure along with others adopted by the British exchange control authorities had struck a serious blow at the un-official market in sterling. This put a stop to the practice under which American importers of Indian goods were often able to pay for these goods in "free" sterling while the Indian merchant had to do all his business at "control" rates.

Contrary to our earlier experiences, this war has witnessed cheap money, steady exchange and well maintained gilt-edged prices.

Also contrary to experience, this war has not seen the materialising of anything like artificial booms. Prices are more or less strictly controlled; the scope for extravagant profits is severely limited; and control of various kinds is working more effectively in to-day's conditions. If this war is different from previous wars in the sense and to the extent that it has produced no booms, I am led to the view that the post-war period will also differ from its predecessors in that there may be no slump after this war. I have not the time to develop this theme at any great length on an occasion like this. But I wish to administer a corrective, in time and with effectiveness, to the opinions, emanating even from official sources, that a post-war slump is inevitable. I cannot see that a slump is inevitable; on the contrary, I feel that there may be a tendency towards boom. Look at the wide-spread havoc to properties that this war has caused. Imagine to yourself the size and extent of the reconstruction programme that has to be taken on hand. It is only natural that the large scale reconstruction operations should encourage boom tendencies rather than a slump.

When I see the post-war world in my mind's eye, I realise that it can be a more orderly and a better planned world in finance and industry, in social welfare and general productivity. If India is to take the fullest advantage of the changed situation in the post-war world, and to build up a more efficient and balanced economic system, it is necessary the leaders in this country as well as the Government should from now show an interest in the important problems of getting together the machinery and the personnel which can ensure the utmost advantage being taken.

To turn now from international developments to matters that affect us directly. Here I should like to say a few words about the position and prospects of banks in Bengal under Bengalee management. This is a very delicate problem to deal with by one in my position, yet it is one which affects us vitally. And this is further a matter which, we in Bengal, should have the courage and determination to face squarely and deal firmly with. And I do hope that I shall not be misconstrued in what I shall say.

It is no good denying the fact that all is not well with many of the smaller type of Banks. By that I do not of course mean that there are not a good few sound and stable indigenous institutions, but there are unfortunately many more which are not in as satisfactory a condition as one would wish. In fact, it was the unsatisfactory position of smaller banks, not a few of which are situated in Bengal, that impelled the Reserve Bank to draw up rather stringent rules for the regulation of banking in India. These provisions were embodied in the Draft Bank Bill, which however appears to have been dropped for the time being owing to the prevailing emergent conditions. I do not propose on this occasion to examine the Draft Bill. But I have referred to it only to draw attention to the unhappy condition of many of the smaller banks.

The unsatisfactory condition of things has two aspects. There is, in the first place, the question of the Loan Offices. After the last war a large number of loan offices were started, but most of them came into serious trouble because the investments they made became frozen. Many of these Loan Offices are now in a moribund condition. Instead of going into liquidation altogether they just exist by taking advantage of Section 153 of the Indian Companies Act. Even if in certain cases there was the hope of a substantial portion of the assets of the offices being realisable, now after the passage of the Agricultural Debtors' Act and Moneylenders' Act, that hope too is gone. For loan offices, in general, I do not see that the position is wholly retrievable. In a small number of cases only can the loan offices be saved if certain conditions are satisfied. In the first place, there must be a process of amalgamation: secondly, the depositors of these offices must agree to a scaling down of their deposits in proportion to the amount of the assets that may be realisable and accepting shares equivalent to the value of their deposits thus reduced, and, thirdly, if the government were to agree to incorporate in the rules to the Moneylenders' Act, provisions under which loan offices amalgamating and scaling down their deposits in the manner referred to and which have the chance of developing into sound commercial banks, would be allowed facilities to realise their assets. By this process where we now have hundreds of banks in a state of stagnation worse than lingering death we should have a score of strengthened and revitalised banking institutions in the countryside. The Government have a duty and responsibility to see that the structure which had grown up and which, if rightly directed, would have been an asset to our financial fabric, should not be allowed to go altogether waste. If Government take a determined stand and extend reasonable assistance, a part of this structure might be saved. Unfortunately however, government do not evince the desired determination or interest in this matter. They have not yet evinced sufficient interest even in re-

Company Meeting

THE OUCHTERLONY VALLEY ESTATES (1938) LTD.

INCREASED OUTTURN OF BOTH CROPS

MR. LANGLEY ON COFFEE CONTROL SCHEME

Proceedings of the Third Annual General Meeting of the Company held at Glenview, Coonoor, at 10-30 a.m. on April 18th 1941.

Mr. W. K. M. Langley, C.B.E., M.L.A. presided.

The Representative of the Managing Agents and Secretaries having read the Notice convening the meeting and the Auditors' Report, the Chairman addressed the meeting as follows:—

Gentlemen,

The Directors' Report and audited Accounts for the year ended 31st October 1940 have been with you for the requisite time now, and with your permission I will take these as read but will be glad to reply to any queries later.

You will notice that for the convenience of Shareholders and investors generally, comparative figures for 1938/39 have been given in red in the Balance Sheet and Profit and Loss A/c.

ACCOUNTS

	Rs.	A.	P.
The net profit for the year amounted to ...	1,34,752	14	10
To which has to be added the balance brought forward from 1938-39 ...	56,164	4	0
Making a total of ...	1,90,917	2	10

Out of this the Directors have transferred Rs 9,215-7-0 to a Taxation Reserve Account and Rs. 1,00,000 to a Debenture Redemption Reserve Account.

The Directors have decided that at present it is not advisable to recommend the payment of any dividend. While profits and the cash position of the Company improved considerably during the year it has to be borne in mind that the debenture stock begins to fall due for redemption in December 1943, and it is advisable to build up a cash reserve in preparation for this redemption. Also the coffee market position is still far from being satisfactory and at present this Company has lost its best market, the United Kingdom.

Like most other Tea Companies who sold tea to the U. K. there was considerable delay after the outbreak of war in realising proceeds of tea sold and shipped to the U. K. If you will refer to the Balance Sheet you will see:—

1938/39 stock was ...	1,23,903	lbs.
In 1939/40 we received payment for	59,565	,,
leaving ...	64,338	lbs.

which had not then been paid for. This has now been accounted for and we have realised Rs. 43,993-15-7 against the valuation in the Balance Sheet of Rs. 25,725-5-4.

Since its incorporation the Company has written off out of profits:—

	Rs.	A.	P.
Preliminary Expenses ...	32,538	7	9
Brokerage	1,123	4	0
	33,661	11	9

The Company has also spent during the same period Rs. 31,265 in supplying new lines for labour, latrines, piped water supplies, cattle shed etc., besides considerable sums on the prevention of malaria. The Company continues to maintain two doctors and two hospitals.

COFFEE

The coffee crop amounted to Tons 547 as against Tons 461 in 1938/39. Quantity and quality were satisfactory.

I feel it my duty to the shareholders of this Company to make a few observations on the working of what is known as the Coffee Control. I feel it is particularly appropriate at this meeting to do so, seeing that this Company, in which my Firm and myself hold a considerable interest, is the largest single proprietor of any Coffee property in Southern India. I think we are all agreed that that some sort of control of the industry is necessary during this period when our normal channels of export are almost entirely cut off. Fortunately, Indian Coffee has at the back of it a large internal demand, though this demand is of course not nearly enough to take care of a normal crop. But it is obvious that when export is almost at a stand-still, we must depend mainly on the internal market and this market could not be depended upon for a reasonable price if the whole of a normal crop were let loose on it without any form of control. So far, it is evident to anybody with any experience of the coffee industry that the system of control which has been adopted has not yet been really tested, as even without control, owing to the exceptionally short crop harvested over the whole of Southern India, there is very little coffee in excess of normal internal requirements. It is this, and no other reason, which has caused the fairly satisfactory internal prices which have obtained during most of the current season. The testing time for the present system of control will come when South India as a whole harvests a normal crop. But, while I think most of us accept control as a war measure, I do not suppose that anybody who stops to think will want to see it continued for a day longer than is absolutely necessary.

In think most of us have seen enough of Government control of one kind or another to view it with the utmost suspicion. The basic weakness of all Government control of any industry is that such control inevitably gets into the hands of people who are asked to control something that they have not created and this surely must be distasteful to such strong individualists as the planters and planting proprietors of this country. I read somewhere recently the following very pertinent remarks:—

"In a world where no one can grow a cabbage without a permit the man who can issue the permit comes first, the man with the type of ability to get a permit comes next (although he may not necessarily nor even probably be the best market gardener), and the ordinary consumer of cabbages comes nowhere at all: he is not even a necessary evil, since if he refuses to buy the cabbages the surplus will be given away at his expense."

I do not think that we need bother ourselves very much about the consumer. There are already a large number of producers in this country who, owing to control or protection of one kind or another, are doing extremely well out of the consumer and I see no reason why the Coffee industry should not do likewise.

The main objection that I have to control in normal times, and especially in the case of the coffee industry in Southern India, is that it tends to reduce the whole industry to the lowest common denominator. This is all very well while war is going on, but I am convinced that, if continued beyond that period, it would inevitably be the death of the coffee industry. East Inida Coffee in the export market depends entirely on quality and if it did not have exceptional value as a high quality product, it obviously could not exist in competition with the enormous production of Brazil, Columbia, Java and elsewhere. It is therefore producers like this Company, who are in a position to produce a real quality article, who stand to lose, and do lose, very heavily by any measure of control.

The present Control Ordinance under which the industry is controlled, and any other system of control which has been advocated, cannot secure for proprietors like this Company the return to which they are entitled for producing a high quality article. I hold therefore, and I feel sure that all the proprietors of this Company must hold the same view, that this present system of control should be regarded purely as a war measure and continued under Ordinance from year to year and should on no account become the subject of permanent legislation.

There is in my opinion far too much talk nowadays of various forms of veiled collectivism which would spell death to such parts of the coffee industry as are worth saving and we should be constantly on our guard against being hustled into any such system. A very prominent and successful English businessman, who is also a strong individualist, Sir Ernest Benn, wrote an interesting article recently in "Truth" which included the following remarks:—

"Being mere human sheep, we pick up a smattering of the current fashionable jargon and talk of "collective" this, that and the other, of "co-ordinating," of "organising," of "co-operation" and "planning," all of which in plain English means giving the job to somebody else who will operate without any personal responsibility, with no regard to economy, generally without any practical experience and more often than not without adequate qualification."

I think that the coffee industry will do well to ponder on this warning and remember before it is too late that it is the individual who has made and maintained the reputation of East India Coffee and that the idea of handing the industry over to the State, which is what control means, would be the beginning of the end of an industry which has owed everything to the hard work and skill of the individual.

TEA

The tea crop amounted to 3,57,124 lbs. as against 3,10,479 lbs. in 1938/39. Maanufacture has improved considerably and may now be considered satisfactory.

STAFF

Four members of the Staff have left for military service and I much regret to say that one has since died of wounds while on active service.

1940/41

It seems must unlikely that 1940/41 will be as good a year as 1939/40. The coffee crop is smaller, not being likely now to exceed 325 tons, while the average price is likely to be considerably lower. The tea crop, however, promises to be very satisfactory.

Before closing I would like to thank the V. A., the Managers, the Estate Staff, and our Managing Agents for the good work done during the year under difficult conditions.

I will now formally move:—

"That the Directors' Report and audited Accounts for the year ended 31st October 1940 be and hereby are approved and adopted."

Carried unanimously.

Board.—Mr. Langley proposed and Mr. Thorne seconded that Mr. Pittock be re-elected as a Director. Carried unanimously.

Auditors.—Mr. Setlina through his proxy proposed and Mr. Northey through his proxy seconded that Messrs. Fraser & Ross be reappointed as Auditors at a fee of Rs. 500 plus Rs. 100 for Income-tax work. Carried unanimously.

The Meeting terminated with a vote of thanks to the Chair, and to the U. P. A. S. I. for the use of a room.

CALICUT,
21st April, 1941.

THE STEEL CORPORATION OF BENGAL LTD.

Notice is hereby given that the Directors have sanctioned the half-yearly payment of dividend due on the 5 per cent. Cumulative Preference Shares of the Corporation for the period ended 31st May, 1941 plus 1 per cent. arrear dividend up to the 31st May, 1938.

The Share Transfer Books for the Preference Shares of the Corporation will remain closed from the 17th May to 31st May, 1941 both days inclusive. Payment will be made only to those Members whose names are registered in the books of the Corporation on the 16th May 1941 or to their Mandatees.

No applications for warrants will be necessary. Claims on behalf of holders of shares held on blank transfers will not be entertained.

By Order of the Board,
BURN & CO.,
Managing Agents.

12, Mission Row,
Calcutta,
The 9th May, 1941.

(*Half-yearly meeting, 19th May, 1941 at 3 P.M.*)

Audited accounts for the half-year ended 31st March, 1941 :—

After writing off for depreciation Rs. 2,00,000, the accounts show a profit of Rs. 4,98,159-2-10. To this is added the balance brought forward of Rs. 45,082-15-2, making a total of Rs. 5,43,242-2-0 from which is deducted the amount set aside as a Reserve for Taxation of Rs. 2,75,000, leaving a balance of Rs. 2,68,242-2-0 for disposal.

The directors recommend to declare a dividend of Rs. 12½ per Ordinary share and Rs. 3½ per Preference share, leaving a balance of Rs. 44,242-2-0 to be carried forward.

The Company's mills have continued to work 45 hours weekly throughout the period under review and except during February, the monthly stoppage of one week has remained in force at all Association mills. It was notified in March, however, that in consequence of an improvement in the stock and trade position there was no necessity for a closure in April, whilst the Committee have since decided that full time should also be worked in the months of May and June.

As the result of the conference held at Delhi in December to discuss the problem of how to deal with the current season's surplus jute crop an agreement was reached between the Indian Jute Mills Association and the Governments of India and Bengal to the effect that mills would endeavour to make purchases up to a specified quality before the 15th April, 1941, it being stipulated that they must not buy raw jute or sell manufactured products below certain minimum rates.

An appreciably better demand was experienced in the Calcutta goods market towards the close of the half-year causing a corresponding rise in prices, though the question of sufficient freight space for overseas remains difficult and prospects, therefore, continue to depend largely on developments in the war with their effect on shipping or other trading facilities.

Under the provisions of the Indian Finance Act 1941 the Excess Profits Tax which was imposed last year has been increased from 50 per cent to 66⅔ per cent as regards all profits accruing or arising after March.

Managing Agents.—Messrs. Kettlewell Bullen & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 28,00,000 in 14,000 Ordy. and 14,000 Pref., both of Rs. 100 each, fully paid up.

Exports to U. S. A.

India is now seventh in importance as a source of imports into the United States, says the Indian Government Trade Commissioner in his third quarterly report for 1940.

India accounted for over $23,000,000 of the approximately $648,000,000 of total United States imports during the third quarter of 1940, while the corresponding figures for 1939 were approximately $16,000,000 and $526,000,000. Imports from India for the nine months of 1940 ending September amounted to $79,709,396 which was considerably more than the total figure for 1939.

India, as usual, was the sole source of supply of myrobalans, lac, crude, seed, button and stick and shellac and a major source of ilmenite.

Andhra Valley Power Supply Co., Ltd.

An extraordinary general meeting of the *Andhra Valley Power Supply Company, Limited,* held at the Office of the Company in Bombay, on Monday, with Mr. J. R. D. Tata in the chair, passed a resolution increasing the authorised capital of the Company to Rs. 3,50,00,000 by creating 14,000 ordinary shares of Rs. 1,000 each ranking *pari-passu* with the existing ordinary shares in all respects, but excluding the right to any dividend payable on ordinary annual general meeting of the Company to be held in 1941 and the dividend on ordinary shares to be declared at the meeting.

The meeting also agreed to the proposal that 5,319 ordinary shares be offered in the first instance at par to the members of the Company on the register on May 6, 1941, in proportion to the number of ordinary shares held by them respectively, and upon the footing that the full amount of each share taken up shall be paid to the Company on acceptance of the offer. If the offer of shares made by the Board of Directors was not accepted within a limited time by the member, the Board of Directors were empowered to dispose of the shares as they considered expedient in the interests of the Company.

The Chairman described the proposals as sound and in the interests of the shareholders. The capital had to be increased because of expansion of the Company's activities. He could not accept the suggestion made by a shareholder to offer the new shares to preference shareholders as well, because the equity of the Company belonged to the ordinary shareholders and their interests demanded restriction of the new shares to them.

South Indian Railway Earnings

The approximate traffic earnings of the *South Indian Railway* for the period ended Apr. 30 were Rs. 18,31,644 as against Rs. 16,79,482 for the corresponding period last year.

THE MOZUFFERPORE ELECTRIC SUPPLY CO. LTD.

The Annual Ordinary General Meeting of the Shareholders will be held at the Office of the Company's Managing Agents, No. 14, Old Court House Street, Calcutta, on Friday, the 30th day of May, 1941, at 3-15 p.m. for the following purposes:—

1. To receive and pass the Directors' Report and the audited Accounts for the year ended 31st December, 1940.
2. To declare a dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year, and to fix their remuneration.
5. To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 19th May, 1941, to 30th May, 1941, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

Managing Agents.

Calcutta, 2nd May, 1941.

(*Continued from page 805*)

gard to the revitalisation of Co-operative Banks, with which they are so closely identified.

The other aspect relates to the growth of a large number of small banking institutions during the last 10 or 12 years. I do not deny that the country-side has a need for the growth of banks, nor do I suggest that small banks cannot be sound ones, but when a great many of the small banks which have sprung up are very much undercapitalised, when they have recourse to unhealthy and uneconomic competition manifesting itself in attempts to attract deposits at very high rates of interest, rates which they can never hope to earn by any sound investments, in the indiscriminate opening of branches in order merely to attract public gaze and the employment of untrained personnel, these conditions are such as to occasion grave anxiety. This is a situation which must engage our serious thought and attention, or else the future will be beset with difficulties and disappointments. I think that small banks must unite by a process of amalgamation and make their position strong.

Even among the comparatively bigger and sound banks, there is often cut-throat competition. Having to work side by side with the strong and well established foreign banks and banks from other provinces of India, circumstances not unoften drive them to a cut-throat competition that cannot of course be conducive to their healthy growth. This is not the place or occasion to go into these problems in details, but there are various questions to which serious thought must be given if indigenous banking in this province is to develop along right lines and if the unfortunate catastrophes of the past are not to be repeated again.

I will now turn to our own affairs. I am happy to be in a position to report all-round improvement in the working of the bank during the past year. This is all the more gratifying as the conditions in which banking business had to be conducted were none too favourable during the last year. The Bank's profit in 1940 was Rs. 40,248 compared with Rs. 34,292 in 1939 and Rs. 32,425 in 1938. lakhs in 1938 to Rs. 6.20 lakhs at the end of 1940. The reserves have also shown a rise from Rs. 2.73 lakhs to Rs. 3.10 lakhs. The progress under deposits is the best sign and symbol of the increasing confidence on the part of the public in the working of this institution. Deposits at the end of 1940 were Rs. 106½ lakhs as compared with Rs. 85½ lakhs at the end of 1939. I may add that, since the balance-sheet date, deposits have advanced by a further Rs. 10 lakhs.

With the increase of the Bank's resources, particular care has been taken to maintain an increasingly liquid position. Cash in the till and cash balances with other banks are now at the high level of 32 per cent of the deposits. Investments in Government and other authorised securities are 15 per cent of the deposits. Investments in other stock exchange securities are 1.5 per cent of the deposits. It will, thus, be seen that the liquid assets are near about 50 per cent of the deposits, cash alone being nearly one-third of the deposits.

The proper conducting of a bank in these difficult times and in the face of the serious competition from strong and well-entrenched rivals is no easy task. But on behalf of my colleagues as well as on my own I may say that no effort on our part will be wanting to enable the Bengal Central Bank to increase its prosperity from year to year, nor shall we relax in our vigilance to ensure that the Bank may become increasingly sound as it marches onward.

(*a*) Carry preferential claim to dividend of 7%. Rank equally with "A" shares for further distribution after similar distribution. (*c*) Carry no preferential claim to repayment of capital. (*d*) Carry right to fixed cumulative preferential dividend of 5% per annum and to a noncumulative dividend of 3% per annum. After dividend of 8% on ordinary shares also participate in a further dividend of 2% per annum rateably with the ordinary shares in proportion with the respective capital thereon. Before December, 1938 may be converted into ordinary shares with equal rights. (*e*) Holders have option to exchange holding to fully paid ordinary shares at par on six months' notice expiring at the end of any half-year. (*g*) Redeemable at par between 1955—1966. (*h*) Redeemable from 1st January, 1943, by 12 annual instalments. (*i*) Repayable at par by 12 annual instalments from 1st January, 1944, with the option to redeem one six months' notice after 1st January, 1939.

IS IT NOT WISE TO INSURE NOW ?

With an uncertain future ahead Conservation and Consolidation of resources are the prime needs every individual should assiduously strive after.

If you already have Life Insurance, hold on to it. Don't allow it to lapse. If you haven't, go in for it right now. A Life Policy gives an inestimable protection and it will cost you less now than later. It is cent per cent true that to be forewarned is to be forearmed.

Write to us for further particulars or advice.

WORLD OF INDIAN FINANCE

Friday Evening.

BOTH the money and the exchange markets have been dull in the extreme. Interbank call money has been going abegging at ½ per cent; and there are no takers. Firms' money can, however, be placed at ½ per cent for one month to four months. The cash balances maintained by Scheduled Banks with the Reserve Bank are again down this week to Rs. 25.52 crores as compared with Rs. 26.74 crores on May 2. The decision on the part of banks to strengthen their cash position is, therefore, quite intelligible. Apart from this, there has not been anything like real demand for money. In such circumstances, the average Treasury Bill rate on the weekly tender day showed a decline to annas twelve and pies nine per cent per annum as compared with annas thirteen on May 6. While the amount for which tenders were invited on May 13, was Rs. 1 crore, applications came to Rs. 2,36.75 lakhs. Tenders at Rs. 99-13 per cent. were accepted in full. Those at Rs. 99-12-9 per cent were allotted approximately 77 per cent as compared with 88 per cent in the last week. The offer of tender bills for next week has now been raised to Rs. 2 crores. Sales of tap bills between May 7, and May 12, came to Rs. 1,52.50 lakhs. Tap bills will continue to be sold at the unchanged rate of Rs. 99-13. In relation to current short-term money rates, the increase in the weekly Bill offer from Rs. 1 crore to Rs. 2 crores is justified. It remains to be seen what effect this increase in the offer of tender bills and the redemption, at the same time, of the sale of Intermediate Bills through the tap will have on (*a*) the volume of future applications received on the auction day; (*b*) the average rate of accepted tenders; and (*c*) the amount secured by sale of Intermediate Treasury Bills. If the mere rates current in the money market are the main criterion, there should be no adverse effect in these respects. One has, however, to remember that the deposits of member banks with the Reserve Bank are still only round about Rs. 25 crores; and that this induces in the minds of bankers a feeling that they should replenish their cash position. What should have weighed with the authorities is the large scale maturities of Treasury Bills from the middle of May to the end of June. Taking the six weeks period as a whole, Treasury Bill maturities are nearly Rs. 20 crores. This gives an average of Rs. 3 1/3 crores per week. With a total absence of demand for call money, those who are in receipt of funds on the maturity of Treasury Bills will be largely inclined to reinvest the proceeds in purchases of fresh bills. The increase in the weekly offer of Treasury Bills from Rs. 1 crore to Rs. 2 crores will thus provide Rs. 2 crores out of the Rs. 3 1/3 crores needed to repay the maturing Treasury Bills. The balance of Rs. 1 1/3 crores will, it is hoped, be found from sale of tap bills. With this rhythmic adjustment between the issue of fresh Treasury Bills and repayment of maturing bills, the money market will be left to make its own adjustments without any adverse reactions from Treasury Bill transactions. That is to say, the larger offtake now proposed to be obtained from sale of Treasury Bills need not cause any hardening of money rates or any change in cheap money sentiment. On the other hand, with the slack season definitely established, banks may be increasing their cash resources owing to return of produce advances.

Cheap money is further emphasised by active note circulation recording its highest watermark in the week ended May 9. During that week, there was effected an expansion of currency for the amount of Rs. 5 crores by transfer of sterling securities from the Banking Department to the Issue Department. This expansion of currency has resulted in active note circulation in India touching the high level of Rs. 256.31 crores. Currency expansions in recent months have been largely connected with the decline, to an unduly low level, of notes held in the Banking Department of the Reserve Bank. It will be remembered that, while sterling securities in the issue department stood at Rs. 140.50 crores on March 21, the operations connected with the redemption of the dated India sterling stocks brought down the figure to Rs. 102.24 crores in the week ended March 28. Since then, however, there have been constant additions to sterling securities in the Issue Department. In the week immediately following that ended March 28, sterling securities for Rs. 2½ crores were transferred from the Banking Department to the Issue Department. Again, in the following week, a further Rs. 5 crores was so transferred. On both these occasions, the main purpose of such expansion of currency was the depletion in the notes held in the Banking Department. On April 18, however, there was a reversal of trend; and sterling securities in that department rose to Rs. 113.90 crores. Turning to the Banking Department, foreign balances which stood at Rs. 35 crores on

TREASURY BILLS

India

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills were opened on Tuesday, May 13, 1941. Total amount offered was Rs. 2 crores 36 lakhs and 75 thousand. Tenders at Rs. 99-13-0 per cent were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 77 per cent. Lower tenders were rejected. Total amount accepted was Re. 1 crore, the average rate of accepted tenders being annas twelve and pies nine per cent per annum.

Tenders for Rs. 2 crores of three months' Government of India Treasury Bills will be received on Tuesday May 20, 1941. Successful tenderers should make payment on Friday. May 23, 1941. Other conditions are as usual.

Three months' Intermediates will be sold from May 14 to May 19, 1941 at Rs. 99-13-0 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from May 7 to May 12, 1941 amounted to Rs. 1,52,50,000.

During the week ended May 9, 1941 Government of India Treasury Bills for Rs. 81,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

MISRA HOSIERY
MILLS
CAWNPORE

Telegrams: MISRA, Cawnpore Telephone: 2336 Cawnpore

THE MISRA HOSIERY MILLS have, from the commencement of the war, been "on active service". Working day and night, the mills have been supplying essential requirements of the Army in the knitting line.

MISRA HOSIERY cater to the requirements of the general population and comprise socks, stockings, undervests, sports shirts, interlock underwear and outerwear, for men, women and children.

Production 8,000 Articles, daily.

Finance Abroad

In an effort to obtain a greater allotment of Treasury Bills the discount houses in the London market have been obliged to force up their bids. This has naturally resulted in a decline in the rate from £1-0-3-16d. to £1-0-0-17d. per cent. Discount houses obtaining 40 per cent. of their applications against 11 per cent. in the previous week have something to show this week. There is a decrease in the total of applications from £170 millions to £160 millions but that means little.

In spite of the recent increase in Treasury Bill offerings, it has been possible to secure a lower rate. This clearly shows that with the expansion in note circulation and a thoroughly elastic credit system banks have been forced to seek for new investments which in the present controlled capital market are confined only to Government issues. Further the competition for bills by discount houses is governed more than ever by the anxiety of discount houses to be eligible for Bank money.

Professor Keynes's visit to Washington has been the subject of considerable speculation in recent weeks. As readers must be aware he has been asked by the British Government to consult U.S. Treasury Officials in connection with the financing of operation under the Lease and Lend Act.

One direct result of the passing of the Lease and Lend Act was the resumption of loans by the Reconstruction Finance Corporation against British interests in the U.S. and direct investments made in the past by Britain in the United States. While much is expected of Professor Keynes's mission to the United States, the Profesor during his stay will not be the only British Treasury representative as Sir Frederick Phillips is still there being busy with the liquidation of British dollar assets. Mr. Keynes will also be in close touch with Sir Edward Peacock, Director of the Bank of England, who is engaged in connection with the sale of Britain's direct investments in the United States.

President Roosevelt's speech to the Pan American conference is eagerly awaited as it is generally expected that there would be an order for "freezing Axis funds" and imposing an embargo on financial and other relations with Japan.

Tre drive against German interests in the United States is being carried out vigorously. The funds of the great German dye trust, I. G. Fareenindustrie have been attached. Mr. Jackson, the U.S. Attorney-General described the trust as "probably the most powerful single factor of German influence on American industry." The funds were attached because it failed to appear in court in response to an indictment under the Anti-Trust Law, claiming to be not subject to United States law, because it was not doing business in America. As payments to the German trust under licenses issued to American Corporations totalling $250,000 in all were made recently, the action was taken so that the court could get the money.

Besides the problem of providing credit to the Allies, the U.S. Administration has to look to affairs within the country. The huge increase in defence expenditure and the big government borrowing programme have given rise to fears regarding inflation. It will be remembered that Britain was slow to take any measure in this regard. No efforts were made until a late stage to restrict the production of consumers' goods and discourage consumption. The suggestion of deferred pay by Professor Keynes was not also accepted at the time it was made.

The U.S. Treasury, however, is in a position to profit by the experience of Britain. The Federal Reserve Board revealed this week that it was prepared to curb the sale of motor cars and other consumer goods on the instalment system in order to prevent inflation and conserve industrial resources. The Board is waiting for legal sanction. There is need for immediate action as with the larger amount of people employed in industrial production and the wage increases allowed this year too, there will have to be some device for encouraging saving. This would prove to be advantageous to the Administration both in finding its own requirements as well as those of the aggrieved democracy.

The Bullion market has been dull during the past few weeks and closing prices are at the lowest levels for sometime. Even the strong upward movement in other markets has not had any effect on the silver market. In view of the uncertainty regarding the future the absence of any interest in both the silver and gold markets is rather puzzling. There has been very little buying for hoarding purposes.

(*Continued from page* 887).

March 21, sharply fell to Rs. 42.25 crores —this fall also being due to the operations carried out in connection with the repayment of sterling loans. There have been both credits and debits to foreign balances since then ; and they stood at Rs. 35.13 crores on April 18. Owing to the transfer of sterling securities for Rs. 5 crores to the Issue Department in the week ended May 9, foreign balances in the Banking Department have been reduced to Rs. 30.83 crores. It is curious that the total of sterling securities taken to the Issue and Banking Departments together was on May 9, more or less the same as it was on March 28. On the latter date, the total was Rs. 144.49 crores made up of Rs. 102.24 crores in the Issue Department and Rs. 42.25 crores in the Banking Department. On May 9, the total of sterling securities was Rs. 144.73 crores made up of Rs. 113.90 crores in the Issue Department and Rs. 30.83 crores in the Banking Department. Between March 28 and May 9, some payments have definitely been made in respect of the sterling debt redemption scheme. It is also quite possible that the Reserve Bank might well have had to pay out sterling in respect of sales of reverse councils. Whatever payment was involved in these two operations has been found by the sterling securities during this period, such sterling receipts being presumably in connection with inter-government transactions. Between March 21 and May 9, the active note circulation in India has risen from Rs. 238.99 crores to Rs. 256.31 crores.

The statement of the Imperial Bank for the week ended May 9, shows a considerable fall in advances from Rs. 43.15 crores to Rs. 41.99 crores. The main contributory cause for this decline is the item, Bills discounted and purchased which show a fall from Rs. 6.55 crores to Rs. 5.35 crores. It will be remembered that there was a sharp bulge of nearly Rs. 1½ crores in the week ended May 2. And there is now as sharp a depletion. This may be said to confirm the view advanced in these columns last week that the more marked changes in the Imperial Bank return under the head Bills discounted and purchased are connected not with trade bills but with Treasury Bills.

The exchange market has been altogether lifeless. Remittance was sparse ; and bills were nil.

The freight position with respect to Britain continues difficult.

Banks were sellers of T.T. at 1s. 5 15/16d for ready up to six months forward ; and banks were buyers of T.T. at 1s. 6d., for the same delivery.

Banks were buyers of three months D.A. bills at 1s. 6 7/32d., for the third month , and 1s. 6 9/32d., for the fourth month.

Interbank call money quoted ½ per cent with no takers.

Firms' money for call and short quoted ¼ per cent; and ½ per cent for one to four months deposits.

LLOYDS BANK
LIMITED INCORPORATED IN ENGLAND 1677

SAVING MADE EASY

Five Rupees will open a SAVINGS BANK ACCOUNT at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

This is a most convenient method of preparing for the payment of periodical demands, such as insurance premiums, income tax, medical expenses or school fees.

Interest allowed at 1½% per annum. WITHDRAWALS CAN BE MADE BY CHEQUE.

Prices and Note Circulation

THE rise in the total note issue to Rs. 285 crores in the last statement of the Reserve Bank of India as compared with Rs. 255 crores at the beginning of 1941 and Rs. 180 crores at the outbreak of war, brings to the fore the place of currency circulation in the economic life of the country in the conditions of the war period. For the increase in the note issue as compared with the beginning of the war comes to as much as fifty per cent. Every war of modern times carries with it the danger of inflationary additions to currency. And as inflation brings in its train the vicious spiral of increasing prices and costs, so large an increase in our note circulation calls for a careful examination of its place in our economic life in general and its relation to prices in particular. Such examination is all the more necessary, as the course of prices at every given stage in the last one year and more has been contrary to the anticipations of the period immediately preceding. Not that any specific forecasts were made or that they proved untrue. Public anticipations are as a rule, based on the experiences of the immediate past and on the expectation that prevalent trends would continue for some time more to come. And there is also the confident assumption that in so costly a war as the present one no belligerent country can altogether escape inflation. But if the present war has given, us many a surprise in the military sphere, it has also tended to upset the usual economic calculations. Who would have thought that within much less than a year of the war, international trade would be so thoroughly paralysed by the German conquest of the whole of the European Continent and its consequential inclusion within the scope of the British blockade? The course of prices has been cut up only too frequently by the operations, in the earlier stages, of different systems of price control and in the later by the tide of German conquest and the inaccessibility of an increasing number of foreign countres.

The examination of the trends of prices in India during the war period must, therefore, to undertaken with the full knowledge that what is examined is not the working of the mechanism of free prices. For free prices, as academic economists understand it, presuppose wider markets than the purely national one. There is also the assumption that no attempt is made by any authority to cushion the impact of demand on supply or *vice versa*. But neither pre-supposition is valid in the present conditions of India. Not only has the whole structure of prices in India been distorted by the inaccessibility of foreign markets either through the blockade or through the lack of shipping facilities, but even within the country the enormous importance of war orders and the working of the Supply Department with their nice calculations of costs and their ability to determine prices militate against an unrestricted movement of prices either way. Even if we dismiss the latter on the supposition that the influence of war orders on prices may be exaggerated, the process of our internal economy adjusting itself to the changed conditions of the war following the disorganisation of our foreign trade has coincided with large-scale changes in financial policy and currency circulation.

It is a question how far the increase in note circulation is necessitated by the execution of the policy of repatriating our sterling debt. Though, in the first instance, the repatriation of the sterling debt is only a particular mode of solving the transfer problem arising from the accumulation of large foreign balances, it also gives rise to a problem of internal distribution, namely, that of giving the individuals, to whom the favourable balances are due, the proceeds of their claims abroad. The effect of these additions to currency from this process are the same, whether or not they are occasioned by the repatriation of the sterling debt.

We have said all this, as we believe that the apparatus of thought furnished by the familiar monetary theories is not quite suited to the case on hand. While it would, no doubt, be fallacious to assume that the general relation between the stock of money and the stock of goods and services can be invalidated by any set of conditions, however unique, it would be equally wrong to take up the relevant data with the pre-conceived idea that this general relation has manifested itself in the conditions of the last one year. If we examine the active notes in circulation, the index numbers of wholesale prices and the cost of living indices in the various centres of India it will be seen that, while the changes in notes in circulation are not accurately reflected in either the wholesale price index or the cost of living index, the general trend of prices and cost of living during the war period has followed the rise in notes in circulation. What is even more important is that the price trends had by the beginning of 1941 recovered from the effects of the disintegration of our foreign trade caused by the surrender of France and the over-running of the Continent by the German forces. It is also noteworthy that the cost of living index shows no fluctuations comparable to those that are discernible in the wholesale price index number during this period. That is by no means an uncommon phenomenon; but it may be held to argue against any pronounced inflationary trends. It must be remembered in this context that the period following the surrender of France was also the period of comparatively low levels of notes in circulation.

A bird's eye view of monetary circulation and prices, therefore, gives no challenge to established theories. Nevertheless, it is well to be wary in drawing specific conclusions. The circumstances that argue against regarding changes in circulation as the primary factor in prices are of an important kind. And there would still seem to be no warrant for assuming that the additions to currency, large as they are, have any pronounced inflationary significance. Looking at the position of the commodities, they would appear to be sharply divided between those whose prices no inflation can pull up and those, which deflation cannot depress. If it is remembered that no monetary changes can help the price of jute or groundnuts and that the position of cotton in the country is sound and safe we have some idea of the position in the country. Likewise, if we look at it from the money end, we must remember that some of the principal channels into which the additional currency must inevitably flow are firstly, hoarding, secondly, the increase in capital equipment necessitated by the war orders and thirdly, the increase in the output of goods and the general turnover of business. All this notwithstanding, it would appear that the stage in which the cost of living has to be carefully watched on account of its broadly social significance has arrived and that both the currency authorities and the Government would be well advised to prevent further rises.

Pleas for Joint Effort

WHILE industrialisation is held desirable on all counts, not many assign proper importance to co-operation at present. If the limits and limitations of economic planning are obvious to orthodox economists the significance of the co-operation practised since the advent of Protection by the British Iron and Steel industry since 1937 especially under central direction with improved powers of negotiations at home and abroad has seldom been missed. The most impressive achievement of the policy that goes back to the Import Duties Act of 1931, is the development of the cartel in a new form. The new development has its interest for all who want that the best European practice alone is good enough for India in her circumstances. If the implications are fully grasped the acceptance of effectual co-operation may have consequences in regard to the redirection of investment now in a most melancholy state of stagnation. Such a break in investment activity after a bleak spell may promote new industries either in regard to replacing imports or supplementing the production of key industries, existing and potential.

The co-operation envisaged is one of producers, but it is necesarily different from the self-governing workshop to which the phrase usually applies. It may be regarded as a variant of rationalisation, a pillar of the reorganisation that followed the post-inflation crisis in Germany. What is attempted in neutral Sweden is referred to below in connection with experiments in the direction of autarchy, but the attempts to set up alluminium production, now that Norway cannot help with her remarkable metal industries, have their lesson for India. The efforts to develop lead, zinc, cobalt and nickel production interacted in Sweden are largely at the instance of the Federation of Swedish industries conscious of two-fold obligations to the State and the public and engaging in the investigations designed to adapt arms production to immediate requirements and to develop a new type of national self-sufficiency that deserves to be noticed as finance and industry have been close allies in Sweden and financial policy has been at once prudent and advanced.

It may be remembered that the President of the Federation of Indian Chambers of Commerce, in his address at the last annual meeting of that body laid special emphasis on the necessity of co-operation among Indian industries in consideration of the difficulties anticipated in the post-war period. The case for the development of a co-operative spirit amongst Indian businessmen, at a time when Government help is meagre grudging and intermittent, need not be argued out at length, in view of the striking success that has attended industrialists in other parts of the world in this direction, particularly in Britain and Sweden.

The present war certainly, has led to a situation in which such co-operation amongst Indian businessmen is immediately called for. The stoppage of raw materials from foreign countries, on which some of the old and many new industries are dependent, has made it both necessary and profitable to undertake the production of those raw materials here within this country itself. In Sweden for example, various industries have by co-operative endeavour set up domestic production. Before the war, Sweden's output of aluminium, zinc, lead, magnesium and nickel, was hardly sufficient for her domestic requirements. She was, in the main, dependent on imports from abroad. The British blockade by itself has forced on Sweden, the production not only of these materials, but the better utilization of the country's resources. Likewise in the case of the inorganic chemical industry, Sweden is trying to produce various sodium and potassium salts herself. According to the Federation of Swedish Industries it would appear that industrial investments in 1941, would in amount and value be reckoned as 86 per cent of the corresponding amount for 1940. One seventh of the new plants represents the early fruition of schemes intended for the manufacture of new products. It is significant, however, that certain of the new enterprises, are declared to be specially dependent on concessions and claims for certain alleviations in Costs and Taxes more especially in the excess profits tax are to be obtained. The supply of textiles that had become a pressing problem in view of the blockade, has been taken up in earnest. Swedish textile industry, which previously used to import cotton has now dispensed with the use of that material altogether: the production of artificial fibres, according to the acetate process, has been taken up in hand, though misgivings were expressed about its commercial possibility, at first.

Two important aspects of co-operation practised by British industrialists are in regard to the various schemes for restriction of output, many of them organised on an international scale in the production of plantation crops and more recently the various devices adopted with the co-operation of the British Trade Unions, to reduce to a minimum, the labour force employed in the production of living goods for civilian consumption hardly demand attention as they are not wanted here. The pace of such co-operation amongst British industrials has been quickened partly by the pressure of increasing tax rates in recent months and partly by the export drive inaugurated by the British government.

It must always be remembered that in an old industrial country like Britain, dependent largely on imports from abroad of necessary raw materials, with a continuous tradition of Trade Union opposition, towards all schemes of mergers or restriction of output public opinion has acquiesced in the closing down of superfluous plant largely because of the emergencies of war at present. The pressure of war on Indian economy is not so oppressive as it is in Britain. But if the war should last much longer, and should lead to manifold restrictions on imports not only of necessary raw materials and chemicals for India's manufacturers and luxury products as well, a magnificent opportunity would be provided for Indian Industrialists, which if only they care to exploit as their compeers in Britain and Sweden, the face of India's economy, might be transformed in a short while. It seems to us that equal, if not more beneficent results are likely to accrue from such co-operation among Indian industrialists as from reliance on the generosity of the Central and Provincial Governments, that has marked the efforts of certain Indian industrialists in recent months. Obstacles such as those presented by redundant plant or excess capacity are fortunately neither many, nor formidable if we take Indian industries as a whole. Restriction schemes might be of course forced upon Indian industrialists in the immediate future, in the case of the production of such goods as sugar cement and jute. The present moment with its comparative freedom from restrictions as to export trade seems to us to be most opportune for the establishment of new industries through joint effort, and through the pooling of resources of India's industrial magnates. If the present opportunity is allowed to slip by Indian manufactures later on

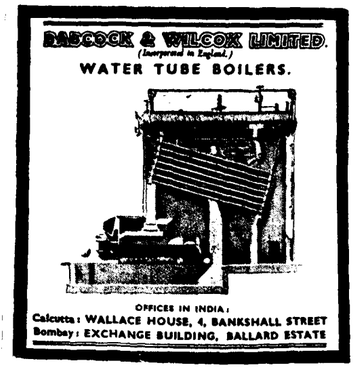
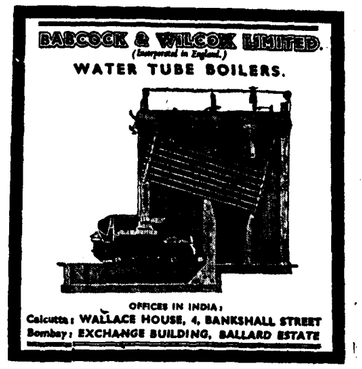
they might be forced to practise co-operation merely to ensure economy of raw materials; co-operative endeavour amongst different industrialists would have to be prepared then and immediately. The existing high rates of taxation have not sufficiently stimulated progress amongst similar undertakings in India. Indian industrial magnates would do well to take the press and the general public into their confidence and indicate quite early that any plans contemplated are not ultimately likely to injure permanently the interests of labour: the task is immense but goodwill on the part of both labour and capital in promoting which the Indian financial press would play its own part would show it is not difficult of accomplishment. There is however one great danger, which Indian industrialists, would have to steer clear of from the outset. The warning may seem superfluous but is always justified. Nationalistic endeavour ought not to raise feelings of racial jealousy directed against the British industrial enterprises already established in India. Collaboration rather than opposition, should be the object of Indian industrial magnates, for the British industrialist with his access to the London money market is familiar with joint participation in India's older industries over a long period and his excellent longstanding distributive organization represents an element of advantage that ought not to be set aside at any time, much less the present.



CAST IRON PIPES



For Gas and Sewage Mains the superiority of Cast Iron Pipes over all other forms of piping remains unchallenged. Impervious to rust and the corrosive effects of gases and chemicals, Cast Iron Pipes have almost a limitless life, which makes them the most durable and dependable of all underground conveyors. Engineers know that by specifying Cast Iron Mains they are safeguarding a city's vital services against risks of sudden breakdowns and expensive replacement costs.

Editorial Notes

Burma's Trade

BURMA'S export trade underwent little improvement in February. It is not only the longer month that explains the larger total for January. But the returns suggest that the improvement noted in December continues. Total exports at Rs. 5.27 crores and total imports at Rs. 2.7 crores show that total trade turnover fell off only slightly. No reason can be given but that the war explains such monthly variations. It has been pointed out that the usual analysis of the monthly Indian trade returns is difficult on account of very irregular rises and falls, but the Burma trade figures certainly indicate that in spite of a limited range of goods the export trade of Burma has suffered no decrease in 1940-41 while the value of imports too has been increasing since September last. Due allowance must, however, be made for the price factor as also the fact that trade with India imparts an unusual degree of stability to Burma's foreign trade. Further, the trade with China by the new road and the other routes does not figure in the totals so that over Rs. 1 crores of re-exported goods is classified and tabulated in detail elsewhere in the *Burma Trade Journal*. Imports from HongKong, Java, Borneo and Malaya are sent by the Burma road along with the goods consigned from the U. S. A. and a peculiar feature of such trade is that imports from China figure as imports once and are described as exports to China when sent back and classed as re-exports in Burma's trade returns. One may notice a very wide range of goods manufactured and other in the classified trade returns and the value of motor vehicles, chassis and parts constitutes the single largest item in the long list appearing in the latest issue of the *Burma Trade Journal*. In comparison the value of Chinese exports through Burma may seem small, but it may be observed in passing that tung oil evidently forms the backbone of export trade by the new road from Yunnanful The Trade Journal contains a list of goods which are exempt fron customs duties on import into Burma in addition to a notification modifying the rates and schedules following the conclusion of the new trade treaty. The extent of exemption on linseed oil taxable at 25 per cent. *ad valorem* is retained and the concession limiting the customs duty on steel imports to the level of the excise duty collected in Burma has not been touched. The standing rules as regards exemption are varied now not only by the additions made since August 1939, making broadcasting records and A. R. P. equipment duty-free by the new amendments to the Sea Customs Act announced so that immediate effect was given to the Indo-Burma Trade agreement concluded in April.

Banking Progress in India

It is not necessary to wait for the Reserve Bank's annual report to learn how far Indian banking progressed during the last quarter. While the growth of deposits and the rise in cash balances alike have indicated that war has not interfered with normal expansion the comparative figures made available by the Reserve Bank in a review of financial conditions are illustrative of other trends. Recently compiled Banking statistics show that two more banks have been added to the Second Schedule to the Reserve Bank of India Act. At the end of March there were 14 Exchange Banks and 44 other banks in the schedule. Since the end of June 1940 as many as four new banks have been added to the Schedule. The expansion in the number of institutions during the war period is reflected also in the number of branches including pay offices which at the end of December 1940 totalled 1351 as compared with 1322 at the end of June. While the number of the branches of the five leading joint stock banks went up by three only those of Scheduled banks increased by 28. The addition to the number of Imperial Bank offices was only 1 during the same period and the increase under Exchange Banks was 2 only. If the number of offices increased despite the war, the marked increase in funds in the first quarter of this year illustrates what has been observed over the whole war period. The first quarter of 1941 certainly witnessed a healthy expansion of banking activity which is reflected in the reduction in the excess of balances over the statutory minimum with the Reserve Bank. The position at the end of March as compared with that at end of December may be summed up here without a detailed tabular statement. Deposits held by Scheduled Banks rose by nearly to Rs. 10 crores. Demand deposits alone rose by Rs. 6 crores. Time Deposits rose by nearly Rs. 4 crores, and their percentage ratio to total deposits showed little alteration. Cash and balances with the Reserve Bank declined to Rs. 44 crores from Rs. 57 crores. The cash ratio of all banks also dropped from 20.7 per cent. to 15.44 per cent. The fall under cash is adequately explained by the rise under the total for Bills and Advances which has risen after three months by nearly Rs. 27 crores. The proportion of Advances to total Deposits has risen correspondingly from 37.67 per cent. to 45.79 per cent. But the falling away in banks profits last year can be gauged only by comparisons with the position at the end of March 1940 when total Advances of Scheduled Banks stood at Rs. 163.11 crores indicating an advance of over 53 crores in the war period. The flatness of the money market since last March is not only indicated by the rise under Bank Deposits in the statements of the banking department of the Reserve Bank over a year, but also in the marked decline in both deposit and call rates as compared with rates a year ago. The main conclusion to be drawn from the statistics prepared for the first quarter of 1941, is that of a very mild recovery. That demand for funds was, and is slack, is revealed by a large rise under the Deposits held by Scheduled Banks indicative in turn of the public's desire to keep as much as possible of liquid funds and the Banks' own reluctance to take deposits. The reduction in the rates paid on various classes of Deposits last year was parallelled by the fall in the Treasury Bill rate both before and after the turn of the year. One might argue that monetary case is not peculiar to any one country. India shares in full the benefits of a cheap money policy which promotes banking expansion though other figures might suggest at times that a minor recession is at work.

Profits in U.S. Industries

U. S. business has long been independent of the export trade, and if manufacturing activity has moved in the same way as the export trade in 1940, in the States the actual measure of improvement has varied as was only to be expected. It may be broadly said that the growth of profits in Britain as analysed in February by the *Economist* is not without a parallel in the U. S. A. But the major difference is that the rate of progress in the U. S. A. was uneven and large pockets of depression existed even after the arms programme was mentioned last year. The significant point to take in here is that the arms programme belongs properly to 1941 and U. S. manufacturing industry as a whole did not get much of a stimulus from war orders last year. A detailed analysis of corporation profits is hardly possible but the rise in sales and consumption of most goods was followed by a rise in profits as compared with 1939. This rise in profits was general owing to the high rates of production in several industries and was obtained though taxes and wage rates moved against the manufacturers. But there were many exceptions and a large

WITH A

DUCKBACK

selection of company reports proves that experience was not uniform. From an analysis of the accounts of 925 manufacturing companies it has been said that profits rose from 1225 million dollars in 1939 to 1554 million dollars in 1940. The increase of 27 per cent nearly in net profits took place in spite of the Federal Excess Profits Tax and the higher income tax. The return on the total capital of the companies grouped for the purpose of such analysis works out to 10.5 per cent. as against 8.4 per cent. in 1939. But this statement must be qualified by a reference to the fact that only manufacturing industries are considered and trade, mining, transport etc. are left out. The most significant conclusion is that profits in industries producing capital goods for example hardware and tools, electrical equipment and even office equipment grew steadily whereas profits in the consumers goods industries remained stagnant. An important exception to the last conclusion is, however, provided by the textile group where corporate earnings advanced from 5.9 to 7.7 per cent. A fall in earnings is also reported by certain other industries: sugar, baking, leather and tanning and brewing are in the list that reports reduced profits but brewing has always been prosperous and the fall in the percentage of profits does not matter much. The high light is naturally the advance in profits in the iron and steel group from 4.4 per cent to 8.5 per cent. The metal group as a whole shows a rise of 3.7 per cent. from 5.9 per cent. in regard to company profits whereas profits in the automobile industry rose from 17.2 per cent. to 18.4 per cent. The largest increase in profits is reported by the aircraft industry benefiting naturally from large British orders in 1940. A significant point that emerges on any examination of profit statements is that the 1929 level was passed in several cases. A more difficult and as yet hardly known fact is that the trend of Company profits was unfavourable as compared with the last quarter of 1939 though the major trend was not reversed in the first quarter of 1940. Though gross profits rose steadily many companies reported a fall in net profits. The experience here was identical with that of several leading British companies. Peak profits in the first four months of war could not be obtained in the last year, and tax increases in June and October operated as much to the disadvantage of the companies as a rise in U. S. wages to an all-time high in December, the average for hourly earnings showing a rise of 3.2 per cent over December 1939.

Remittance Difficulties

The stay of Mr. Jinnah in the Nandi Hills explains the appearance of a press message regarding the freezing of Indian assets in Indo-China. During the budget session Mr. M.S. Aney drew attention to difficulties of Indian citizens in Indo-China as regards transfer of funds. Compared with the difficulties experienced by Chettiars in Saigon in 1934-35 the troubles may not be great but the position is somewhat obscured by the emergence of Japanese domination in Indo-China. The delinking of the piastre from the franc and the new connection with the yen have been referred to in order to show that Japanese ascendancy was established. Though the replies to the questions in the Assembly suggested that the position was not so serious as pictured, the reply of the Government of India to a letter of Mr. Jinnah drawing attention to a ban imposed by the Government in Hanoi on rupee remittances to India shows that Indians have suffered for no fault of their own. This was retaliatory action taken because the assets of the Bank of Indo-China in India were frozen. British Indians were prevented from sending money to India for no fault of their own. The letter states that the Defence of India Rules warrant the action taken and the bank's assets now vest in the Custodian of Enemy Property. The action taken in Indo-China is described as the result of the sequestration of assets here. It is, however, pointed out that the Government of India does not object to remittances from Indo-China if permitted by the authorities over there and has even agreed to pay small drafts for family maintenance drawn on the Pondicherry branch of the Bank of Indo-China, thus reducing the assets of the Bank which have been frozen in India. But the letter admits that the office in charge of the Exchange or the Bank of Indo-China will not permit the issue of drafts for remittances to India. Efforts are being made to remove this ban according to the letter to Mr. Jinnah but the issue depends on a change in the attitude taken up by the Government of Indo-China. The letter makes it plain that what led to the ban was the action taken against the Bank of Indo-China in India. Why the action was taken though French India adheres to General de Gaulle and the Pondicherry branch may be treated as altogether friendly appears surprising and it is certain that Mr. Jinnah will not forget to put questions again as to the compensation to be given to Indian nationals who suffer through the action taken under the defence regulations. If Indo-China has begun to practise such control, it may occur to some Indians at least to transfer their accounts to Japanese owners and ask them to convert into rupees. But the Japanese are not likely to help unless it suits their book and the only conclusion to be drawn is that the Government of India should

try to give financial relief, to be adjusted later on, to the dependants of those who are unable to send money to India.

More spoils of war

Many do not know how much Germany has lost by her Balkan adventure. The conquest of Greece has left the mercantile marine entirely with Britain. It is not likely that Germany will make anything of such resources as are left to Greece. If imports into Greece cease because she is an Occupied Country, the Germans stand to lose. The Nazis will not find it easy to feed and find work for six and a half million people. Fertilisers for the farmers and raw materials for the factories are greatly needed. Greece does not produce enough grain either and stocks of foodstuffs are scanty. No fuel for industries can be had hence imports of coal and oil. No colonial produce either for the German larder. Greece has a small iron and steel industry using imported coal but that will suffer like the rest. Before the war Greece took about one-third of her imports of essentials from Germany and obtained 20 per cent. of her imports from the Balkan and Mediterranean countries. But Germany cannot provide supplies as before mainly because German industry is already starved of raw materials. The blockade has put many German factories out of work and exports to Greece on an increased scale are therefore out of the question. But Germany will demand food and raw materials from the Balkans so that the standard of living in Greece must suffer in Greece as in every Nazi-controlled country. During the last war, though Greek neutrality was violated slowly and with due care there was no hardship. The British Empire helped Greece in every way and the Navy assured the maintenance of supplies. The Greeks felt happy about the larger imports which helped the big towns to make good progress. Now with German occupation on the usual lines the most frugal peasanty will have to go on short rations. The experience of Denmark and Holland proves that the promises to the puppet regime will not be kept. The peasants are in for a bad time because the livestock will be rapidly reduced. And factory workers will suffer because there will be no fuel or raw materials. The railways are known to have suffered great damage on account of the war and it is not likely that Germany will repair or replace railway material without exacting a stiff price. The only pleasing feature is that wealthy Greeks abroad can keep their money and add it to the money earned by the ships. But shipping receipts too will not be on the same scale for Greece is not a neutral but vanquished country and Levantine trade will cease to matter. Germany can get raisins and other fruits and tobacco. Olive oil too, may be a pleasant change for the monotonous diet of the German but no meat can be had regularly. Greece produces a few minerals but Germany has enough trouble as it is to carry Rumanian oil to Germany. The transport barges rather than the refineries present easy targets for British bombers and whatever may be got out of Yugoslavia's mines may be regarded as more valuable than Greek minerals. The iron ore is of low grade, hence not worth the trouble: pyrites and bauxite are not very valuable. Germany has other sources and rail transport is too precious after vulnerable factories have been shifted to Poznan and Austria. Greece produces a little chromite of indifferent quality and such magnesite as can be had will not be wanted as Austria provides enough. It is believed that prospecting for minerals will be carried on in the many maintain ranges at the same time as conquest as Germany wants nickel and manganese very badly. A great deal of investigation has been conducted, and if the future witnesses thorough research into Greece's mineral resources, the beneficiary will be Greece rather than Germany.

Wartime Re-organisation

About fortnight ago, there was a reference to the progress made with reference to the new schemes in Britain for industrial concentration; one of these will throw out of use a million spindles. The primary purpose of the scheme is to reduce the demand for labour which is being diverted to war work and another aim is to reduce non-essential consumption so that taxation and borrowing alike are rendered easy. The Board of Trade has prepared plans within two months of the suggestion. According to Oswald Dutch over 500 proposals for concentration have already been submitted. It is expected that 200 out of 500 schemes will be accepted and the rest deferred. The principal industry affected is the cotton textile industry. It is apparent that there is no place for hundreds of competitive mills. There are approximately 400 spinning mills alone and so far it has been decided that 111 mills are to carry on as so-called nucleus mills and that 61 mills should go out of work by the end of April. As regards the other 229 mills it is believed that about one-third

will close down and that two-thirds will go on working. The result will be that the number of mills will be reduced by about one-third. Re-organisation is contemplated in the hosiery industry also. Large firms are prepared to close down some of the mills they own. The textile industry will have four units and the result will be much the same as that proposed in the Bill which Mr. Oliver Stanley introduced in 1938 in order to secure for the cotton industry the advantages of rationalisation. It has been long apparent that the Lancashire cotton industry contains far too many establishments and the division of functions has not made for efficiency or economy. What the proposal for a pool under a statutory commission could not accomplish in peace-time has been achieved under the stress of war and the re-organisation will be carried out not only with due regard for labour requirements but also in the light of the findings of the Royal Commission on Industrial Location.

The woollen textile industry also has various branches and a reduction of establishments and workers in the Yorkshire industry may come if output is reduced by the drastic curtailment of consumption. Reference has been made to the scheme put up by knitting factories. Nottinghamshire will become a more compact industrial unit if the cotton industry's example is copied. "Nucleus mills" will be favoured as regards raw material supply and their workers will not be drawn out. The actual saving in manpower effected by the reduction in factories and the maximisation of output may not be great. It is, however, computed that if the 500 proposals put up by Industry of its own accord go through at least 100,000 workers would be available for heavy industries. The concentration of light industries, particularly, the food industries, should proceed rapidly as there are few unemployed workers who can be turned to, in order to meet the demand for men. The March employment returns showed that on the day of the count the labour reserve had fallen by 123,000. The number of workless in March totalled 172,000 only and of these 36,000 were described by the Ministry of Labour as unsuitable for normal industrial employment. Whether the rise in employment is altogether independent of the rise in wages is a difficult point to settle but the drafting of more and more men into the armed forces furnishes an explanation. The actual need for men remains undiminished, for the Battle of Britain has been resumed and the nation has again 'gone to it.'

Help from America

Colonel Stimson has not added greatly to the world's knowledge of the origin and nature of the present war. But he has certainly succeeded in making it plain that America's interest in the war is real and continuous. That the U.S.A. wants to see Britain victorious may be deduced from the various measures adopted after the passage of the Lease and Lend Act on March 15. The President's speech in remembrance of Woodrow Wilson showed

that the U.S.A. is pledged to uphold democracy and the Secretary's speech seemed dry in comparison with the President's pointed utterance earlier. But it is more important in some ways because it shows that like Colonel Knox, the other Republican in the Cabinet, he is convinced that the strength of the Nazi is a direct menace to the U.S.A. The purpose and functions of the British Navy are now appreciated. The Royal Navy stands between the Republic and the New Order in Europe and that is the reason for increasing and quickening such assistance as America can give. The aid is given within the framework of existing laws. That Congress is behind the Administration's policy may be inferred from the defeat of a resolution deprecating the use of the convoy system in any form. The defeat has made Col. Knox enter a vigorous plea. Public opinion has already run ahead of Congressional opinion; this may be inferred from the great majority shown in favour of active intervention in the poll taken by the monthly magazine *Fortune*. Colonel Stimson was then speaking for the nation and not the President's privy council when he denounced the New Order and advocated all aid to Britain. Such aid is limited not by the means or methods of production. Mr. Willkie has answered Colonel Lindbergh as regards the potential output of aircraft last week, but by the pace at which factory expansion can be carried out. Estimates of total aircraft capacity vary and of probable exports too differ. The spokesman of the aeronautical industry put the figure rather high as compared with the total exports to Britain in March. As the figures of exports in succeeding months will not be made known, one must assume that the U.S.A. will produce and arrange also for the transport of a huge number of aircraft. Both sides are now reconciled to the prospect of a long struggle and Herr Hitler has been answered within a few days by America's own spokesman. Colonel Stimson's speech was more reassuring than the speeches in Parliament last week. Mr. Churchill was set on suppressing incipient defeatism and also on getting a vote of confidence as he has been Prime Minister for nearly a year and a vote may serve as the approval of the nation which did not enjoy a general election last year.

Mr. Lloyd George's questions on the diplomatic situation have been left unanswered and that is why the press discusses the effects of official changes at the Kremlin. The long narrative of Mr. Eden contained few references to Russia, and it may be inferred that little progress has been made since Sir Stafford Cripps became the Ambassador in Moscow. The situation in the Middle East demands, according to many, a new approach to Russia which is different from making much of fanciful reports of disagreement between Russia and Germany. Perhaps the most satisfactory feature of Mr. Churchill's speech was that he revealed that Egypt and the Suez Canal will be defended by an army of half a million. It is doubtful if the enemy has more. That is our reason why the advance has been held up and Germany is obviously finding it difficult to send reinforcements. Seapower is more than ever essential for Hitler who has learnt not to lean on the broken reed of an Italian fleet.

THE LAKSHMI INSURANCE CO., LTD., LAHORE

Report of the Directors for the period from 1st January, 1940 to 31st December, 1940.

To

THE SHAREHOLDERS,

THE LAKSHMI INSURANCE CO., LD.

DEAR SIRS,

The Directors have great pleasure in submitting to you their report along with the Balance Sheet, Revenue Account and other Statements for the year ending 31st December, 1940.

L. BALAK RAM

Before proceeding with the report we have to mention with great sorrow and regret the lamentable and untimely death of our valued and respected colleague L. Balak Ram. We place on record our appreciation of his valuable services to the Company as a Director for a period of about 11 years and 9 months and have great pleasure in acknowledging that he took a very keen and intelligent interest in the Company's affairs, and contributed a good deal to its success.

NEW BUSINESS

In this year 4683 proposals were received for assurance amounting to Rs. 94,05,375. Out of this and those pending from the previous year 4153 policies assuring Rs. 82,69,125 were issued. Proposals of the value of Rs. 24,36,600 were either rejected or postponed or accepted on terms which were not agreed to by the proponents or which are awaiting completion. In addition to this one Annuity Contract was also issued during the year. There is a noticeable fall in the business. It is mainly due to the difficult situation created by the war conditions and the Directors and management considered it preferable, in the best interests of the Company, to consolidate the business in the prevailing uncertain conditions rather than to force up the volume of new business.

ACCOUNTS

The Life Assurance Fund at the beginning of the year as ear-marked for business in India and outside India is different from the corresponding figures at the end of the last year. The difference is due to the adjustments necessitated by the amendments in the Insurance Act by the Insurance Amendment Act No. XX of 1940.

INCOME AND OUTGO

The total receipts for the year amounted to Rs. 43,34,355-3-4 of which Rs. 36,96,053-3-9 are derived from premiums. The outgo is Rs. 21,60,557-10-6. The excess of income over outgo being Rs. 21,73,797-8-10 has been carried to the Life Assurance Fund. The expenses for the year amount to Rs. 9,47,122-15-6 and the over-all expense ratio (after providing 7½ per cent of the single premiums and consideration for annuity for expenses on that class of business) amounts to 25.77 per cent as against 31.54 per cent in the previous year. We are confident you would appreciate the efforts made to reduce the over-all expense ratio by 5.77 per cent.

CLAIMS

Our traditions regarding the prompt settlement of claims have been fully maintained. During the peroid under report claims of the value of Rs. 5,70,265-5-0 accrued by death and Rs. 4,41,836-8-6 accrued by maturity. These include bonuses but exclude amounts re-insured. Out of these and those which were outstanding from the previous year, claims to the extent of Rs. 10,43,555-8-0 have been paid during the year under report leaving a balance of Rs. 2,36,264-5-3 which is less by Rs. 31,453-10-6 of the previous year's outstanding.

RESERVES

Investment Reserve.—The investment reserve which at the end of 1939 stood at Rs. 5,00,666-12-6, now stands at Rs. 4,86,578-14-8. The difference represents the shortfall due to sale of sterling securities and a small deficiency in another investment. Market value of the investments in stock exchange securities on 31st December, 1940, is lower than the book value by Rs. 54,755-13-8. This shortfall and the probable deficiency in other assets and other unforeseen circumstances are fully provided for by the amount standing in this account.

BUILDING DEPRECIATION RESERVE

This reserve has been further increased by the addition of Rs. 35,717-9-0 and it now stands at Rs. 1,03,681-9-0.

FURNITURE AND FITTINGS DEPRECIATION RESERVE

Reserve for depreciation in the furniture, medical instruments and motor cars has been further increased by transfer to it of a sum of Rs. 14,769-8-0.

GENERAL RESERVE

The General Reserve Account stood at the end of the last year at Rs. 75,636-6-0. The amount was reserved at the time of the last Valuation for payment of Income-tax and Super-tax. Assessments for the years 1939-40 and 1940-41 have not so far been made and the expected liability on this account is fully covered by the amount in this Reserve.

A further sum of Rupees One Lakh has been transferred to this account to provide for future contingencies, if any.

DIRECTORS

According to Articles 121 and 122 of the Articles of Association as modified by the Indian Companies Act 1936 and as laid down in the Indian Insurance Act, 1938 and the rules framed thereunder, Dr. Nihal Chand Sikri, Lala Jagan Nath Aggarwal, Dr. Dhan Raj Bhasin and R. B. Lala Ishar Das, M.L.A. (Frontier), who was appointed in the vacancy caused by the death of Lala Balak Ram, are retiring this year. These four Directors are eligible and offer themselves for re-election.

AUDITORS.

Due to the appointment of Mr. P. N. S. Aiyar as a member of the Income Tax Appellate Tribunal, he retired from the firm of Messrs. P. N. S. Aiyar & Co. The remaining partners are carrying on the business in the name and style of Messrs. Aiyar & Co. The Directors appointed Messrs. Aiyar & Co. as Auditors of the Company in place of Messrs. P. N. S. Aiyar & Co. Messrs. Aiyar & Co. have, therefore, signed the Balance Sheet, Revenue Account and have also submitted their report.

Messrs. B. M. Chatrath & Co., and Messrs. Aiyar & Co. Auditors are retiring this year. They are eligible and offer themselves for re-election. The name of Messrs. Aiyar & Co. has also been duly proposed for being elected as Auditors.

GENERAL

The Directors place on record the valuable services rendered by the General Manager, Managers, other employees of the Head Office and Branches, Chief Agents and other Agents of the Company.
